INVESTOR

Apprehensions

Investment Gossip:

WITH the commencement of the New Year, operators seem to have come to the unanimous conclusion that the time has come for a reappraisal of the investment outlook. If, this year, thoughts about the immediate future have come much sooner than usual, it is because this year's budget is expected to bear the impress of the fact that, perhaps for the first time in the history of independent India, there is a hostile force sitting on our northern borders claiming a large portion of our territory. The Chinese aggression has imparted a new sense of national preparedness and there is hardly any one in the country who does not want our armed forces to be kept in fighting fettle. It is no doubt true that operators have been expecting a heavy defence budget for some months but now that there are only a few weeks left for the presentation of the budget, apprehensions about additional levy have revived.

Investment Special:

A direct result of the rapid industrialisation of the country is the sizable increase in the demand for special kinds of steel and products of non-ferrous metal. Most of these products are now being imported as we have no adequate installed capacity in these items. It is, therefore, in the fitness of things that new engineering units are set up with a view to filling the gap in the indigenous supply of special kinds of steel. Published elsewhere in this issue is an announcement regarding Chase Bright Steel Limited, a public limited company which will manufacture Mild Steel, Bright Bar Shaftings, etc. The plant to be set up by the company can also be used for products of non-ferrous metal.

Sugar Results

Balance-Sheet Reviews:

Phalton Sugar

THE Phalton Sugar Works Limited has reported satisfactory working results for the year ended 30th September 1959. The gross profit is Rs 30.60 lakhs against Rs 30.70 lakhs, sales having risen to Rs 1.78 crores from Rs 1.69 crores. After providing Rs 3.55 lakhs for Depreciation against Rs 3.30 lakhs; Rs 1.45 lakhs for Development Rebate Reserve against nil and Rs 9.25 lakhs for Taxation (Rs 14.50 lakhs), the net profit is higher at Rs 13.64 lakhs as compared with Rs 10.02 lakhs in the previous year. The directors have provided Rs 1 lakh for additional provision for tax in the previous year. The Ordinary dividend is Rs 13.50 per share, subject to tax. The company is understood to have made an application to the Government for increasing the crushing capacity from 850 tons to 1,000/1,200 tons a day and the Government's sanction is awaited. The factory crushed 120,881 tons of sugarcane and the sugar produced was 144,671 bags as against 129,325 tons of cane and 127,151 bags of sugar.

pared with Rs 10.02 lakhs in the previous year. The directors have provided Rs 1 lakh for additional provision for tax in the previous year. The Ordinary dividend is Rs 13.50 per share, subject to tax. The company is understood to have made an application to the Government for increasing the crushing capacity from 850 tons to 1,000/1,200 tons a day and the Government's sanction is awaited. The factory crushed 120,881 tons of sugarcane and the sugar produced was 144,671 bags as against 129,325 tons of cane and 127,151 bags of sugar.

New Swadeshi Sugar

The New Swadeshi Sugar Mills Company Limited has reported encouraging results for the year ended 30th June 1959 with the gross profit showing a substantial increase from Rs 10.32 lakhs to Rs 23.75 lakhs. After providing Rs 2.26 lakhs for managing agents remuneration (Rs 96,221) and Rs 1.15 lakhs for depreciation (Rs 1.80 lakhs), the net profit amounts to Rs 20.32 lakhs against Rs 7.55 lakhs in the preceding year.

Sales have gone up from Rs 1.11 crores to Rs 1.63 crores. The provision for Taxation amounts to Rs 9.84 lakhs against Rs 4.25 lakhs. The General Reserve claims Rs 3 lakhs against nil and the Renovation and Renewals Reserve Rs 2.50 lakhs against nil.

The factory crushed Rs 43.14 lakh maunds of sugarcane against 38.52 lakh maunds in the previous year. The average recovery is slightly lower at 9.88 per cent against 10.08 per cent and this is attributable to longer duration of the season and comparatively low sucrose percentage in cane. A crushing of about 43 lakh maunds of sugarcane is expected during the current season.

Balrampur Sugar

The working of the Balrampur Sugar Company Limited, for the year ended 30th June 1959, has resulted in a profit of Rs 1.08 lakhs as against Rs 1.28 lakhs in the previous year after providing Rs 1.08 lakhs for Depreciation (Rs 1.23 lakhs) and Rs 1.30 lakhs for Taxation (Rs 2.43 lakhs). The company has already paid an interim dividend of 40 p per share, subject to tax, and this will be treated as final for the year. The Rehabilitation Reserve absorbs Rs 70,000 against Rs 1 lakh and the Development Rebate Reserve Rs 42,000 against Rs 30,000. After making necessary adjustments, a sum of Rs 45,327 is carried forward against Rs 59,415 brought in.

Hindustan Sugar

Despite a rise in sales from Rs 3.85 crores to Rs 4.31 crores, the Hindustan Sugar Mills Limited has reported a setback in its gross profit, which has declined by Rs 3.54 lakhs to Rs 43.82 lakhs for the year ended 30th June, 1959. This

is probably due to a reduction in the total quantity of cane crushed during the season, which has fallen from 1,03 crore maunds to 95.36 lakh maunds. The recovery of sugar has also been lower at 9.83 per cent against 10.49 per cent in the previous year.

After providing Rs 2.71 lakhs for managing agents' remuneration (Rs 3.70 lakhs); Rs 11.85 lakhs for Taxation (Rs 6.25 lakhs); and Rs 17.25 lakhs for Depreciation (Rs 10.70 lakhs), the net profit is only Rs 12.01 lakhs as against Rs 26.71 lakhs in the previous year. The Development Rebate Reserve gets Rs 1.05 lakhs against Rs 18.50 lakhs and General Reserve Rs 4.00 lakhs against nil. The directors have recommended a dividend of Rs 15 per share, subject to tax, as against Rs 15 net in the previous year.

Total quantity of cane crushed is 9,538,453 maunds with sugar recovery of 9.83 per cent as against 103,23,849 maunds with sugar recovery of 10.49 per cent. According to the directors' report, the Government's incentive scheme will assist in increasing sugar production in the company's factory as well as in other factories. But, they add that, under the present control, the capacity of the factories vis-a-vis gur and khandasari in the matter of payment of competitive price of cane to the cane-growers, is impaired as the mills are not able to attract maximum cane.

Upper Ganges Sugar

The working of the Upper Ganges Sugar Mills Limited has resulted in a higher profit of Rs 11.45 lakhs for the year ended 30th June 1959 as against only Rs 5.51 lakhs in the previous year, after providing Rs 7.36 lakhs for Depreciation (Rs 8.90 lakhs); Rs 1.95 lakhs for Development Rebate (Rs 2.75 lakhs); Rs 18 lakhs for managing agents' remuneration (Rs 3.40 lakhs) and Rs 8.83 lakhs for Taxation (Rs 19.50 lakhs). The directors have recommended a dividend of Rs 7.25 per share, subject to deduction of tax. The net dividend works out at Rs 5.075 against Rs 5 in the previous year of the company.

Sales have amounted to Rs 3.25 crores against Rs 3.75 crores. A sum of Rs 4.11 lakhs is transferred to General Reserve, against Rs 25,000. The company's mill worked for 106 days against 158 days in the previous years and crushed 60.70 lakh maunds of cane against 94.47 lakh maunds. The recovery is lower at 9.44 per cent against 10.14 per cent. A crushing of about 90 lakh maunds of sugarcane is expected during the current year.

The working results of the Chemical department are not satisfactory as sales are adversely affected on account of keen competition in the market. From April 1, 1959, the distillery has been let out to Alco-Chem Limited, a subsidiary of the Company.

Basti Sugar

During the year ended 30th April 1959, the Basti Sugar Mills Company Limited crushed 6,760,329 maunds of cane as against 5,055,150 maunds in the previous year. After meeting all charges, the accounts reveal a profit, before taxation, of Rs 9.07 lakhs. With Rs 10.49 lakhs brought in from the previous year, there is an available balance of Rs 19.56 lakhs. This is disposed of as follows:—Rs 1.50 lakhs in paying a dividend of 10 per cent; Rs 6.80 lakhs in providing for Taxation; Rs 30,211 in transferring to Charity account; Rs 98,000 in transferring to Investment Depreciation Reserve Fund and Rs 10 lakhs in carrying forward to the next account.

Associated Cement Companies

Although sales by the Associated Cement Companies Limited have increased by Rs 1.21 crores to Rs 25.55 crores for the year ended 31st July 1959, the gross as well as the net profit have turned out to be lower. The gross profit has gone down by Rs 17 lakhs to Rs 5.54 crores, while the net profit, after providing for managing agents' commission, Depreciation, Taxation and Development Rebate, works out at payment of gross dividend of Rs 11 per share, the directors have drawn Rs 79 lakhs from General Reserve, as larger provision for Development Rebate has to be made due to coming into operation of various expansion and rehabilitation projects.

In regard to allocations, a sum of Rs 37.13 lakhs (Rs 41.01 lakhs) is provided for managing agents' commission; Rs 2.12 crores for Depreciation (Rs 1.80 crores); Rs 1.19 crores for Taxation (Rs 1.96 crores); and Rs 74.15 lakhs for Development Rebate Reserve (Rs 21 lakhs).

The directors have pointed out that there is a sharp decline in the rate of increase in the demand for cement in India, while installed capacity continues to expand. The installed capacity of the company's factories in India, as on the 31st July 1959, was 34.42 lakh tons as against 31.27 lakh tons a year ago, while despatches amounted to only 31.47 lakh tons, i.e. 91.43 per cent of the installed capacity, as against 30.69 lakh tons or 98.15 per cent in 1957-58. The directors add that there are indications that the demand in India may pick up again; but it is unlikely that it will, in the near future, exceed or even catch up with the installed capacity, which continues to expand steadily. Costs with regard to packing, coal, railway freight, wages, electricity duty, have increased around. With the result, the price increase of Rs 3.50 per ton is more than neutralised and the company has been compelled, once again, to approach the Government for a suitable enhancement of the retention price of cement.

Gross block has increased by about Rs 4 crores, at Rs 40.30

crores. The net block, with the depreciation of Rs 14.66 crores provided so far, stood at Rs 25.64 crores as against Rs 23.53 crores. With certain equipment in transit and unallocated capital expenditure, the net block comes to Rs 27.20 crores as against Rs 24.35 crores. Current assets are valued at Rs 13.99 crores against Rs 16.60 crores. Loans and advances are lower by Rs 6 lakhs, at Rs 1.21 crores. Cash and bank balances stood at Rs 1.45 crores against Rs 1.33 crores. Out of this, Rs 1.14 crores was accounted in Pakistan against Rs 85 lakhs a year ago.

CRS

New Central Jute

The New Central Jute Mills Company has reported encouraging works results for the year ended 31st March 1959 with the surplus amounting to Rs 53.50 lakhs against Rs 47.88 lakhs in the preceding period of 15 months. The directors have recommended a dividend of Rs 1.50 per share without deduction of tax on the increased capital. The company paid a dividend of 15 per cent for the preceding period of 15 months. The yield works out at 7 per cent.

Sales have amounted to Rs 7.16 crores against Rs 15.96 crores. The managing agents' remuneration absorbs Rs 2.53 lakhs against Rs 1.34 lakhs. The provision for Depreciation amounts to Rs 9.32 lakhs against Rs 13.38 lakhs and that for Taxation Rs 9 lakhs against Rs 4.25 lakhs. The Development Rebate Reserve claims Rs 2.83 lakhs against Rs 1.20 lakhs. A sum of Rs 7 lakhs has been transferred from General Reserve No. 1 against Rs 15.71 lakhs and the allocation to General Reserve No. 2 is nil against Rs 15.51 lakhs.

It may be added that the company issued 4,27,500 Ordinary shares at Rs 10 each and were issued during the second half of the year. These shares rank pari passu with the existing ordinary shares in all respects except the right to the dividend declared at the recent annual meeting.

The installation of Sahu Chemicals plant has been completed. Trials and initial adjustments are going on. Production is picking up and a steady space is expected within a short time. Profits of this unit will be reflected in the next year's working results.

CRS

Steel Products

Steel Products Limited has earned a net profit of Rs 79,904 for the year ended 30th April 1959 as against Rs 75,007 in the previous year, after providing Rs 12,392 for Depreciation against Rs 10,299. Out of this profit, the Development Rebate Reserve absorbs Rs 8,100 against nil. Arrears of dividend on the preference shares for the year 1945-46 and the half-year ended 31st October 1946, amounting to Rs 22,500, have already been paid, leaving a balance of Rs 49,302 against which the directors have recommended payment of a dividend on the preference shares at the rate of 5 per cent, subject to the deduction of tax.

After adjusting the arrears of dividend, payable for the accounting half-year ended 30th April 1947 and accounting year 1947-48 at the rate of 50 p per share per year amounting to Rs 22,500 as mutually settled at the extraordinary meeting of the company held in April 1959, the remaining amount of Rs 11,803 will be adjusted against the debit balance in the Profit and Loss Account.

The Congress Session

ATTEMPTS to invest the Sadhasivnagar session of the Indian National Congress with historic significance have been half hearted and are hardly likely to succeed. This circumstance is a virtue since dramatic shifts in policies would indicate the opposite of political health.

The Avadi session looks in retrospect as a decisive turning point in Congress thinking, though Mr Nehru would like to think that it is implicit in the policies of the Congress before independence. But implicit or not, its clearest articulation came at the Avadi session and in that sense the Avadi session was historic. There have been attempts to provide the Nagpur session of last year with a similar historic uniqueness. These attempts have come as much from Congressmen as from those who, both within and without the Congress, considered certain policy decisions taken there as fundamental. But the Nagpur session was a much less decisive moment in the Congress party's life than in that of the Swatantra Party. The year that has since passed has seen many important events in our history and these have been summarised in a competent though combative report of the General Secretaries of the Congress. The three main events dealt with are: the emergence of the Swatantra Party, the trouble in Kerala and the border incidents. These, especially the first and last, have certainly given a new sharpness to the Congress party and have helped in concretising its purposes, but there have been no basic departures. At the same time, the Swatantra party's criticisms have, for the Congress party, the value of isolating for it the areas of its own failures and dangers. Thus, it cannot be denied that co-operative farming and State Trading are policies on which the Congress is now much less inclined to take success for granted than when the Nagpur session met. On the other hand, the border incidents have given a new raison d'être to its adherence to a policy of basic industrialisation.

Thus, except for the slight changes in the contexts, there is no likelihood of any discontinuity in policies adopted heretofore and therefore nothing very dramatic or startling is likely to emerge from the present session. Moreover, subjects that are likely to come up for discussion during the session have been discussed so continually and at so many contexts during the year that we are hardly likely to be taken by surprise. On the other hand, the repetitiveness has a danger to which we would like to draw attention. The same problems, the same solutions and the same patterns of controversies are aired in Parliament, in speeches by the Prime Minister and others in authority and in the Press. So, as far as the general public is concerned, these things have all been said before and said a hundred times. In a sense, the Congress, the Government and the Planning Commission have a basic identity of not only views but personnel, and there is a good deal of avoidable repetition. Even in the narrowly party contexts, these subjects have been dealt with often. Planning and the economic situation, the subject of a resolution before the session, for example, has already been dealt with comprehensively by the

Dhebar Sub-Committee on planning. Its report was discussed at Chandigarh. At Chandigarh, there was also a discussion of the Sino-Chinese border incident—the subject of another resolution during this session. Moreover, even the processing of the draft resolution for the annual session at the meeting of the Congress Working Committee got wide publicity. Therefore, the general public gets the impression of an almost incessant chatter which takes the edge off the very call to concrete action contained in the resolution.

We agree that a certain amount of repetitiveness is unavoidable in a democracy where consent has to be obtained in various contexts for the same action. The Prime Minister was certainly right in saying it would be wrong to face the public with the fait accompli of a plan fully formulated by the Planning Commission and that the public has to be taken into confidence even before the plan is formulated. But, so far, we are let into only generalities on which there is not much scope, pace Swatantra Party, for discussion. What the public would like to know about the plan would be the Planning Commission's ideas on concrete tasks and their estimates of the available resources for these tasks and their notions of how one should set about both the tasks and the resources for them. On these, we have very little to go on.

The official resolution on planning and the economic situation discussed at the session was for this reason necessarily unrewarding. Possibly, the only new note struck in the resolution is the need for gearing the administrative machinery for the tasks and even this has been said in a general way before. At the back of the minds of the delegates, however, must have been present the related problems of administrative "corruption" about which there has been much talk recently. It seems to us that there is a good deal of hypocrisy and even frivolity in the discussion on the subject. Paradoxically, a heightened public sense of corrupt practices among public servants and men in power need not imply a pretty parlous state of administrative and political health. Conversely, absence of articulate protest need imply neither a pure administration nor cynicism on the subject. There can be no quarrel with the principle that administrative purity is a basic requisite of not only a democratic but any administration and the public has a necessary duty in being vigilant about it. But the question is one of fact and practical ingenuity. It is a question of fact in so far as it is an appraisal of the precise extent of malpractices. It is a question of practical acumen in so far as it involves the devising of a method of dealing with the problem. On the first, we have no doubt in our mind that the extent of financial corruption, in the sense of bribe taking and illegal gratification, is exaggerated. But influence-peddling and "fixing" are probably widely prevalent. Thirdly, there is a certain atmosphere in which the general public has the impression that the possession of certain kinds of power is valuable, that such powers can be propitiated; and, indeed, that, unless they are propitiated, you cannot get things done. Lastly, there is the offshoot of our

traditional ways of life in which family and local obligations have exercised a compulsive (and originally beneficent) power. But for the competitive scramble, the public may not be too exercised by what is called nepotism. While it is possible to deal with financial corruption and even particular instances of misuse of power for the advantage of particular individuals or groups (if there is evidence) the last two are more difficult to combat. From the point of view of practical steps, the important thing to bear in mind is that we should not empty the baby with the bath. If distrust of officials is to be the starting point, then there is every likelihood of their desisting from taking any action that could remotely be a handle to those suspicious of their conduct. And this would be the most unfortunate thing that could happen and wholly detrimental to the new tasks of the nation. As the resolution pointed out, the need is for greater expedition and more continual and efficient execution and diffusion of responsibility. But if the man responsible is inhibited, that every action of his is being watched, and feels even bona fide acts of his are likely to lend themselves to plausible interpretations of favouritism, he would hardly be willing to act. On the other hand, the really guilty cannot be allowed to go unpunished. Sir Chintaman Deshmukh's suggestion of a permanent tribunal to deal with cases of corruption not only among officials but also among holders of political office has no doubt the attraction of a high-minded idea, but has many practical drawbacks.

The other aspect of practical implementation of the Plan would be the necessity for concrete shapes of public cooperation. Reference was made to the more continuous association of the members of the public in the Plan's tasks and in this respect reference was also made to the experiments in what has come to be called "Panchayat Raj". The results of the experiment will no doubt be watched with interest, and such organised local initiative coupled with local power would be the ideal basis for a self-reliant society.

From the narrow party context, the session has postponed one of the more embarrassing tasks: the discussion of the Hanumanthayya Sub-Committee's report on organisational problems. In a sense, there has been a continual discussion of organisational problems in the Congress ever since it has come to power. Like the problem of administrative purity, the extent of dissatisfaction can also be indicative of an articulate idealism. Factionalism and other evils that are the fruits of a situation in which there are few high offices and far too many contestants, have been discussed time and again by the Congress. The Sub-Committee's report is pretty scathing about some aspects of the behaviour of Congressmen. But some of the solutions it suggests, like compulsory retirement after a bout of high office, may send most of the present leaders of the Congress into a political Vanaprastha. This is hardly a practical proposition and indeed is the essence of the dilemma. The training of a second line of leadership is no doubt essential, but that will have to be devised by less desperate methods.

Indian Finance

Established 1929

January 16, 1960

"The Wise Man in his attitude towards the World has neither Predilections, nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

The State of Industrial Financing

BY all accounts, the multi-sided structure of industrial financing appears to be in better shape today than ever before. In the first place, the scheduled banks' advances to industry at the peak of the last busy season ending April 1959 approximated Rs 470 crores. In the last six months of that period, the seasonal increase in advances to industry was about Rs 25 crores more than the seasonal increase in the corresponding six months of the previous year. The increased advances were granted mainly to the iron and steel, engineering, vegetable oil crushing and refining, cement and jute textile industries, in view of the completion of expansion programmes (in the case of the iron and steel industry) and in view of increased production or an increase in stocks.

The fact that an appreciable increase has taken place in spite of a certain slow-down in the rate of increase of industrial production due to the fall in production and stocks of the cotton textile and sugar industries, justifies the inference that, by and large, the assistance rendered by banks to industry has been satisfactory. The ceilings on overall bank credit, which the Reserve Bank has been trying to enforce for the purpose of curbing inflationary tendencies and speculative activity, do not seem to have resulted in the denial of credit facilities for legitimate needs. It has also been estimated, on the basis of a sample survey, that bank advances to small-scale industrial units (with a capital of Rs 5 lakhs and less) and to medium-sized undertakings (with a capital investment of between Rs 5 and Rs 20 lakhs) together amounted, as at the end of September 1957, to approximately Rs 46 crores. The corresponding figure at the end of June, 1959 is estimated at a little less than Rs 50 crores. While this is not, perhaps, very impressive in comparison with the loans granted to the bigger-sized industrial undertakings, the figures nevertheless indicate that the role played by commercial banks in financing small and medium-sized industrial units is not negligible.

Bank loans to industry are generally repayable on demand or at the end of short periods. The Industrial Finance Corporation, the State Financial Corporations, the Industrial Credit and Investment Corporation and the National Industrial Development Corporation are intended to meet the specialised needs for long-term finance by new industries or existing units which have undertaken substantial expansion or modernisation. As for the IFC, total loans sanctioned and outstanding on 31st October 1959 were respectively Rs 66.9 and Rs 43.6 crores, as against Rs 62.9 and Rs 34.8 crores respectively at the end of June, 1958. The corporation has, besides, participated, along with other organisations or individuals, in underwriting debenture and preference share issues amounting to Rs 2.1 crores and in guaranteeing deferred payments for imports to the extent of Rs 4.3 crores (as at the end of June, 1959). The loans granted by the State Financial Corporations and outstanding towards the end of September, 1959, amounted to Rs 12.7 crores as compared to Rs 9.4 crores at the end of March, 1958. The total financial assistance which the ICICI had agreed to make available at the end of June 1959 amounted to Rs 16.1 crores as compared to Rs 13.4 crores at the end of 1958. Advances, subscriptions and underwriting commitments utilised by 30th June 1959 amounted to Rs 7.7 crores and in addition Rs 41.8 lakhs were guaranteed under letters of credit. Upto March, 1959, a sum of Rs 3.3 crores was drawn

and disbursed by the NIDC to the jute and cotton textile industries towards modernisation of their machinery and mills.

Some noteworthy attempts made recently to increase and extend the scale and nature of the assistance rendered by these Corporations are: (i) Provision has been made for lending to the Industrial Finance Corporation, as and when needed, a sum of Rs 10 crores from out of P.L. 480 funds; (ii) in view of the difficulty which has been experienced by some industrial undertakings on the score of the fact that they are called upon to pay in full the cost of equipment obtained on credit by the Government of India from abroad (foregoing credit or deferred payments terms which these industrial undertakings might normally have enjoyed) the IFC has recently announced a change in its margins for lending to concerns getting their equipment from abroad from 50 per cent to 40 per cent (or with the permission of the Central Government, slightly less) of the value of assets pledged to it; (iii) arrangements are being made to enable the State Financial Corporations to function as agents of the State Governments, so that loans under the state-aid-to-industries schemes may be more fully utilised; and as far as the State Financial Corporations themselves are concerned, the State Bank of India is being appointed as the agent of the Corporations at an increasing number of places, so as to enable the Corporations to function more effectively at all the centres where the State Bank has branches; (iv) the Industrial Credit and Investment Corporation has recently been granted a loan of Rs 10 crores by the Government of India from out of P.L. 480 funds, and has also obtained a fresh line of credit of \$10 million from the IBRD on the guarantee of the Government of India; (v) in response to demands from the cotton textile and other industries, the NIDC has introduced a scheme for making indigenous machinery available on credit to industrial undertakings against the deposit of 25 per cent of the cost and repayment of the balance in five instalments; (vi) the State Bank of India's pilot scheme for assistance to small-scale industries has been extended to all its branches with effect from January 1, 1959, and it is proposed that the subsidiaries of the State Bank, which are in the process of being constituted, should also offer similar assistance to such industries.

Notable among the further steps, under Government's consideration, to liberalise the assistance available to industries are: (i) a scheme for the Central Government guaranteeing a portion of the loans by commercial banks to small-scale industrial units, with a capital of Rs 5 lakhs or less, the risk in respect of the balance of the loans being by the banks themselves, has been announced in outline by the Reserve Bank in a press communique, and is now being finalised by the Central Government; (ii) the question of making some P.L. 480 funds available to the State Financial Corporations and of amending the Reserve Bank of India Act, so as to enable the Bank to grant medium-term loans to the S.F.Cs. pending a permanent increase in their resources is being examined; (iii) as a result of the recent discussions at Puri of the Small Scale Industries Board, the possibilities of establishing small industries corporations in the various States, liberalising the terms for the sale of machinery on hire purchase, and the extension of this hire purchase scheme to cover indigenous machinery are also being considered.

It is authoritatively stated that the facilities available to industrial undertakings, at all levels, whether by way of bank accommodation or term loans by specialised institutions, are not inadequate and that these facilities are also being improved in several directions. The demands which are still being made on behalf of industry seem to relate to such matters as a further reduction of margins or relaxation of standards for lending, the need for making loans available in foreign currencies, a reduction in the rates of interest, the extension of underwriting arrangements and the adoption of schemes for repayment from out of profits. It is further stated that these suggestions involve some risk to the lending institutions and have to be examined carefully by the authorities concerned to see how far they can be met.

Besides the Corporations mentioned above, the Refinance Corporation also has now come into the picture. Between September 1958 when it started receiving applications and the end of October, 1959, 18 applications have been received, out of which 17 have been sanctioned by the Corporation for a total of Rs 3.7 crores. The industries assisted by the Corporation and the loan amounts sanctioned are indicated below:

Industry	Applications sanctioned	Amount sanctioned
	Rs lakhs	Rs lakhs
Ferro-Manganese	.. 2	70
Cotton Textiles	.. 2	47
Cement ..	.. 1	50
Pharmaceuticals and Pharmaceutical Chemicals	.. 1	11
Electrical manufacturing	.. 3	34
Engineering ..	.. 1	50
Ceramics ..	.. 1	15
Automobile ancillaries	.. 1	10
Acids and fertilisers	.. 1	17
Wires and cables	.. 1	6
Sugar manufacturing	.. 2	24
Staple fibre & yarn spinning	1	35
Total	.. 17	3.69

A sum of Rs 50 lakhs out of these loans has been disbursed so far to two concerns engaged in the ferro-manganese industry. The question of taking steps to enable the Corporation to expand its activities has also been under Government's consideration for some time now.

As for the finance provided by the Life Insurance Corporation to industry, the latest figures available show that in the period from September 1956 to August 1959, its net investments, i.e., purchases less sales and redemptions, in the private sector have averaged Rs 6.5 crores as against Rs 27.2 crores in the public sector. The figures collected on investments made in the private sector during the two-year period prior to nationalisation show that, on an average, Rs 6.8 crores per annum was being invested in that sector. This small shrinkage (to the tune of Rs 0.3 crore per annum) of investments in the private sector may well be partly offset when the Corporation begins to grant loans on the mortgage of properties.

Complications about the age of Retirement

M. SUR

RELYING on Standing Orders which fix the age of retirement can put an employer in difficulty. This has been the experience of Guest, Keen, Williams (Private) Ltd, who recently appealed to the Supreme Court and lost their case. Before discussing the details of the case, it is pertinent to remember that under the definition of "retrenchment" in the Industrial Disputes Act retirement might be treated as retrenchment unless it is voluntary or according to the contract of employment, or on medical grounds. The contract of employment can refer either to a letter of appointment which states retirement terms, or company standing orders which lay down the age of retirement. Retirement terms, however, are not scheduled as one of the items to be covered by standing orders under the relevant Act, although the Governments of Bombay and West Bengal have added this item to their requirements. But it is quite common for employers to include retirement terms in standing orders—and indeed necessary if employers are to avoid the retrenchment clause.

The firm of Guest, Keen, Williams (Private) Ltd drew up standing orders and had them duly certified on 19th December, 1953, and among the provisions was one that required workmen to retire on reaching the age of 55 years. Copies of draft standing orders are always submitted to the union concerned by the Certifying Officer before certification, and in this case no objection was raised by the union against the retirement clause. The next year in accordance with the standing orders 47 workmen were retired as having passed the age of superannuation. They received their retiring benefits and also presents in appreciation of their long services, and in most cases the company appointed their relatives in their place. Subsequently a dispute was raised by the union concerning the alleged forced retirement of these men. The industrial tribunal held that their retirement was perfectly justified, and that the workmen, having failed to raise any objection at the time of certification of standing orders, could not later challenge their fairness. On appeal, however, the Labour Appellate Tribunal reversed the award and directed the reinstatement of the 47 men, holding that the retirement provision in the standing orders should not apply to workmen employed by the company before the framing of standing orders, as there was no age of superannuation fixed when they joined their services.

The Supreme Court has now confirmed the finding of the appeal court, holding that the fixing of the age of superannuation at 55 could not be said to be reasonable and fair for those who had entered service when there was no such limitation. The Supreme Court pointed out that before the amendment of the Industrial Employment (Standing Orders) Act in 1956 the Certifying Officer was not required to consider the reasonableness of the standing orders before certifying them, and the only course open to the employees if they wanted to challenge the reasonableness of the standing orders was to raise an industrial dispute. Subsequent to the amendment workmen had the right to raise a dispute with the certifying officer before certification, so the position was different.

In the case of the 47 workmen and all, others employed before the operation of standing orders the Supreme Court decided that it would be fair to fix the age of retirement at

60 years (although they added that this conclusion should not be taken as a decision on the general question of fixing the age of superannuation for all industrial employees). We therefore have the anomalous position in this particular company that a man who joined on 18th December, 1953, will be able to work up to the age of 60, whereas the man who joined on 19th December, 1953, will only be allowed to work up to the age of 55. Where is the reasonableness and fairness in such a decision, and will it not lead to a great deal of bad feeling?

Government has just turned down the Pay Commission's suggestion that the age of retirement in Central Government service should be increased from 55 to 58, on the ground that it would block the advance of younger men and reduce the opportunities for employment. The same argument has been

Technical Training

IT is a good sign that much closer attention is now being given to the development of technical diploma courses. Our universities are already over full, and too many undergraduates have not the mental equipment for higher studies. They will not benefit from the academic approach of the universities, whereas they might do well at the more practical courses for technicians which technical colleges can supply. In other countries the school leavers divide naturally into three streams: those who go straight into unskilled and semi-skilled jobs from school; those who take technical courses to equip themselves for skilled work; and those of an academic bent who go on to the university. India has been slow to develop the middle stream because of the attraction of the university, but the middle stream is essential to an industrial economy. We have too many graduates who cannot find employment because they are not suitable for technical jobs. Now at last the balance is being redressed by the provision of more courses for practical technicians.

At the opening of the Ramkrishna Mission Shilpapiitha in Belghoria, Calcutta, recently Professor Humayun Kabir announced that it was the intention of the Government of India to set up a polytechnic institute in each district of the country. Out of 338 districts, he said, 200 already had their polytechnics, so good progress has been made. The Union Ministry of Scientific Research and Cultural Affairs has also formulated a scheme for over a thousand "merit-cum-means" scholarships for technical study in the current financial year, and of these 347 will be awarded to students at polytechnics.

Scarcity of Coal Causing Concern

COAL must claim first attention", declared the Planning Commission in 1955 while formulating the Second Five Year Plan. The Commission, of course, was right in giving high priority for the development of this industry which is of strategic importance to the country. But unfortunately, in actual practice, not enough attention appears to have been paid to this industry in recent years. As a result, on the eve of the Third Five Year

Plan, we are confronted with an acute shortage of coal. The Second Plan has laid down a target of 60 million tons per year for the coal industry to be achieved by 1960-61. This target was based on the assumption that the various industries would require a steadily increasing quantity of coal. But it now seems that the output in 1960 is not likely to be more than 49 million tons. The trend of production is

repeatedly used by industrial tribunals when fixing the retirement age at 55, as they have done in a large number of companies. When a tribunal fixes the retirement age at 55, there is apparently no injustice done to employees who joined their service years before. It is difficult to see where the line of distinction lies, except that Supreme Court took into account the fact that the employees as represented by their union wanted the age fixed at 60. Unions seem to be strangely inconsistent about this question of age of retirement. In the past it has been the unions who demanded and obtained from tribunals rulings that the retirement age should be 55. Now some are arguing for a higher age, and in Bombay they have persuaded the government to put the age at 58 in the Model Standing Orders.

As a result of this decision employers, whose standing orders were certified before the amendment in 1956, will have to be very careful about retirement before the age of 60 of men engaged before the standing orders came into operation. Those with recognised unions will do well to make and register an agreement on the point, rather than rely upon their standing orders.

A new Technological Institute for training a large number of technicians in the designing of light, medium and heavy machine tools is to be set up with the help of Czechoslovakia, according to a recent statement by the Minister of Industry.

With all this increase in opportunities for technical study it is now more than ever important to see that those who complete their training courses find openings for suitable employment. This calls for special liaison work between the technical colleges, the Government employment service and the employers. Nothing could be worse than to turn out trained men to languish in unemployment. The solution may be to have in each district special branches of the employment exchanges for technicians and highly skilled workers. The diploma holder will not like to jostle in with the crowd of ordinary job seekers at the employment exchanges; nor will employers normally consult the exchanges before filling technical posts. Obviously some special provision has to be made, and made quite quickly, if valuable skilled men are to be properly used. A step in the right direction has been made by the Union Government in Calcutta where it is proposed to have an employment exchange attached to the University, in which the present Appointments and Information Board of the University will be merged. The new University Employment Bureau will help graduates expecting an initial salary of not less than Rs 150 a month, and apprentices, trainees and probationers for executive positions. Similar arrangements now need to be made for the students in the polytechnics and other technical colleges in the districts.

coal since the commencement of the Second Plan is shown below:—

Year	(000 tons)
1955	38,208
1956	39,432
1957	43,500
1958	45,324
1959 (estimated)	47,000

Considering the rate of increase in production, it will appear that in 1960 as compared to the Second Plan target of 60 million tons, there will be a shortage of as much as 11 million tons.

This is, indeed, a serious matter. Already the steel industry is facing a critical situation because of inadequate supply of coking coal. Sir Biren Mookerjee pointed out in last November that steel production was being threatened by "the alarming position that has been allowed to develop in the country in regard to the supply of suitable coking coal". As a result, the steel industry is obliged to consume coal of inferior quality which is likely to have an adverse impact on output. He said, "Every increase in the ash content of the coke means a reduction of blast furnace output, an increase in production cost and increased operational difficulties which become more and more pronounced as the content of the coke rises until a point is reached where for technical reasons the operation of the blast furnace becomes impossible". Sir Jehangir Ghandy in his speech at the Engineering Association of India last week also referred to this problem and pointed out that the demand for steel plants had already outstripped the supply of good coking coal. "Something seems to have gone seriously wrong", Sir Jehangir is reported to have said, "for, three out of the five projected washeries will not materialise for sometime, particularly the two at Bhojudih and Patherdih, earmarked for supplying washed coal to Burnpur and Jamshedpur".

The five steel plants are estimated to require 8 million tons of coking coal but only 7.25 million tons of Selected Grade coal are available and the shortfall is being met by using Grade I coal with 17 to 20 per cent ash. This is not a satisfactory state of affairs for, as Sir Jehangir said, given this coal supply, the result, inescapably, will be both the curtailment of production and an increase in costs. The steel industry is expanding in a big way and we are likely to have a target of about 10 million tons of ingots in the Third Plan. It is necessary therefore that measures should be taken to step up the output of metallurgical coal as rapidly as possible. At the same time the railways and other consumers of coking coal will have to confine themselves to the use of non-coking coal so that the former can be diverted for the steel plants.

Coal is also required in large quantities by various other industries such as fertilizers, chemicals and textiles as well as for domestic purposes and the demand in the coming years is bound to increase substantially. Efforts should therefore be made to increase the production to a considerable extent. The Planning Commission is reported to be contemplating a target of 110 million tons for coal in the Third Plan. But it is impossible to achieve this target if production increases at the present rate.

So far as the Second Plan is concerned, there is no doubt that if only the Government had allotted a larger share to the private sector the production of coal today would have been much higher. Actually the private sector had represented to the authorities that in spite of many obstacles it was willing to produce much more coal than was allotted to it under the Plan. But the Government did not agree. On the other hand, purely from

the ideological point of view, the Government decided, to quote the Planning Commission, "that in future the policy of retaining all new undertakings of coal in the public sector should be more strictly followed and that the additional coal production required to meet the increased demand during the Second Plan should be raised to the maximum extent possible from the public sector".

In the light of this policy the private sector was called upon to increase its production from 33.8 million tons in 1955 to 45 million tons in 1960 while that of the public sector was to be increased from 4.4 million tons to 15 million tons. But it now appears that while the private sector will be able to produce about 42 million tons in 1960 the production of the public sector will not be more than 7 million tons resulting in a shortfall of 3 million tons for the former and 8 million tons for the latter.

Here is a glaring example of a major industry whose growth is being stifled because of excessive adherence to ideological pursuits. But the country cannot afford to have a policy which is far from being based on realism. It is necessary that the difficulties of the coal industry should be sympathetically considered and the necessary measures should be taken promptly so that output can be stepped up as quickly as possible.

One of the measures is to enable the coal industry to work on an economic basis. For a long time the industry had been representing to the Government that on account of the steady rise in labour charges, cost of stores and equipment and other factors, the mines were not in a position to conduct their operations efficiently and to attract capital for expansion purposes. The special studies carried out by the Reserve Bank of India from time to time on company finances have also brought out clearly that the coal industry is finding it difficult to obtain adequate funds. But unfortunately the industry's plea did not receive a sympathetic hearing. The Government's decision on the recommendations of the Coal Prices Revision Committee came as a great disappointment to the industry; for while it had asked for an increase of Rs 3.50 per ton

to make up for higher costs and to facilitate expansion, Government granted an increase of only 50 p per ton. Moreover, the then existing prices of Grade IIIA and IIIB were notified as "ceiling prices". The industry has appealed to the Government to reconsider its decision in this important matter but so far there has been no response.

It should, however, be emphasized that the official attitude to the coal industry should change if we are not to be confronted with a critical situation. The Third Plan target cannot be achieved unless we realise the need for giving the maximum incentive to the mines to expand output. Investment in the coal industry during the Third Plan is estimated at between Rs 175 to Rs 200 crores and sums of this order will not be forthcoming unless the industry is enabled to operate on a profitable basis. Government should recognise that coal does not lose its strategic importance merely because more of it is produced in the private than in the public sector. The Government today has vast powers of control and one cannot understand how the country's interests will be affected by encouraging the private mines to increase their production and expand their capacity. The Industrial Policy Resolution should be suitably amended to give greater scope for the private sector. The latter should be permitted and encouraged to develop even those areas which are not immediately contiguous to the existing mines.

Further, the question of transport should receive greater attention. The availability of railway wagons for coal despatches has shown some improvement in recent months; but there is no room for complacency. Adequate provision should be made for the transport not only of the existing volume of traffic but also for the increasing output in the coming years.

With the inauguration of the Third Five Year Plan India will enter a phase of intensive industrialisation. Coal is of basic importance to our economy and unless the problems of this industry are considered from a practical angle, our efforts to plan in a big way will not be successful.

Glimpses of Foreign Agriculture—I

BY any standard, the World Agriculture Fair in New Delhi is a mammoth show which is as spectacular as it is fascinating. It could easily have been "the greatest show on earth" if its sponsors, the Bharat Krishak Samaj, had succeeded in making it more fully representative of world agriculture. As it is, the Fair covers only a dozen foreign countries—the United States of America, Soviet Russia, Communist China, East Germany, Poland, Mongolia, South Viet Nam, Burma, Ceylon, Afghanistan, Iran and Iraq. It has thus happened that the Central Ministries, the State Governments and the quasi-governmental organisations in India are over-represented in the Fair. Even in the foreign sector, American agriculture and Communist agriculture, with some unmistakable 'cold war' undertones, virtually monopolise the show, thereby detracting somewhat from its educative value to the Indian farmer. But, at the same time, it is not difficult to see that, shorn of their ideological slants, the Amriki Mela and the two leading Communist pavilions alike bring some valuable lessons—both positive and negative—which have a deal of significance in the context of Indian agricultural practices and agrarian conditions. It may be that, here, the typical Hindu mind may also look out for the substance more than the form, for the synthesis more than the antithesis. This article is, however, concerned only with such lessons from both American and

Communist agriculture as are relevant from the point of view of production and productivity.

It would be appropriate to deal with the Amriki Mela first not only because it is by far the biggest and, from the architectural point of view, the most beautiful pavilion, with its 32 enchanting golden domes, in the entire Fair but because it is "the most complete agricultural exhibit ever attempted" by the United States whose agricultural performance is no less remarkable than her industrial. What it brings vividly to one's eyes is individualist agriculture, par excellence, of the most scientific, mechanised and commercialised type involving a whole range of heavy physical inputs which are rendered possible as much by that country's massive industrialisation as by the comparatively large size and creditworthiness of its farms. That 65 per cent of America's farms are of the size of 50 acres and more and that an average farm in that country has, besides the value of land, assets worth Rs 80,000 are the two most significant facts which highlight the prosperity of American individual farming.

These facts, incidentally, also mark out American individual farming as infinitely superior to the kind of individual farming in India where only one per cent of all farms are of the size of 50 acres and more and where an average farm has, besides the value

of land, very little assets worth the name. This basic structural difference between American agriculture and Indian agriculture will soon become all the more glaring when large-sized farms in this country are broken up by land ceilings legislation of the kind which, ironically, the Americans themselves have all along advocated—and implemented wherever they had the chance—for the purpose of stemming the tide of Communism in backward agrarian economies. That many non-political agricultural specialists in the United States have come to recognise that contradiction in their country's approach to the problems of agricultural production in densely-populated under-developed countries receiving its aid and thus to advocate a whole range of cooperative methods having, for all practical purposes, the effect of treating an entire group of small farms as a single large-sized unit for most, if not all, agricultural operations, are also facts of no mean significance. These facts would appear to suggest that American methods of scientific, mechanised and commercialised farming may not lend themselves to easy large-scale application on the small individual farms of this country unless some kind of 'scale' organisation is brought into play.

Even if it is assumed that a 'scale' organisation on co-operative lines which may not ultimately involve pooling of individually-owned land or collective ownership or nationalisation of land is possible, there is still the problem of practical application of American agricultural practices in the Indian context. For example, the use of heavy-yielding strains of seeds has necessarily involved the increased use of chemical fertilisers in the United States. Such heavy fertilisation has thus got the best out of improved seeds evolved by plant breeding research with the result that the unit-area yields of corn, wheat, barley, rice, potatoes, cotton, groundnut, sorghum (jowar) and tobacco, for example, have increased by varying percentages ranging from 50 to 200 since 1930 in that country. This American agricultural experience would no doubt lend itself to emulation on irrigated lands and on lands watered well by rain in this country.

But that would involve the establishment of an infinitely bigger fertiliser industry than what exists now—a proposition which raises questions of priorities in the Third Plan. Even if that is taken for granted, there is still the open question whether, any intensive use of inorganic fertilisers on Indian lands with their thin soil cover otherwise than in accordance with the requirements as revealed by tests and analyses of the innumerable soil types may not lead to erosion of soils. It is here that the T.C.M. project, under way in 20 soil regions of India, for determination of soil fertility and fertiliser use may be expected to pave the way for the most judicious and beneficial use of chemical fertilisers in the light of soil characteristics which are anything but uniform in Nature. Till such time as more soil testing laboratories (besides the 22 already set up) begin to function effectively and on a large scale, the use of fertilisers may have to be limited to mild (and safe) doses by way of top-dressing and the use of improved seeds limited mostly to strains which are drought-resistant, or disease-resistant, or flood resistant, rather than heavy-yielding. After all, a heavy-yield can yield heavily largely by drawing on the nutrients in the soil; where the nutrients are not artificially replenished by external sources, a heavy-yielder will have depleted soil fertility as quickly as any injudicious use of chemical fertilisers will destroy the delicate organic composition of soils.

That is not to suggest that plant breeding research with its emphasis on heavy-yielding

characteristics should go slow on its evolution of improved seeds in this country. If anything, there is a case for speeding up that research by learning from American experience in radiation genetics. This experience today, which is so well presented in that unique section (of the Amriki-Mela) devoted to the uses of atomic energy in agriculture, is that successful methods have been evolved to induce plant mutations with nuclear radiations, the more successful mutants being a better variety of peanut, stiff-stalked rice, rust-resistant wheat, some early and late-breeding fruits and some flower mutants. If plant breeding research in this country which has already some outstanding achievements to its credit in that field comes to be stimulated by American research in radiation genetics, it will be all to the good, for the evolution of better seeds and plants is a continuous process which must always be well ahead of the institutional and material preparations for making use of its results.

Another American experience in agricultural techniques is to be found in the use of insecticides and pesticides which, like fertilisers, can be provided on a large scale only by a highly developed chemical industry. "A penny saved is penny got"; even so, a ton of crop saved from loss is as good as an additional ton of crop produced. But crop protection on such scientific lines as those prac-

tised by American farmers would be beyond the capacity of the majority of farmers in this country unless, of course, this particular service is provided by the State or, if possible, by a cooperative organisation. The difficulties in the way of organising a plant protection service would, incidentally, appear to suggest the need for energetic research, based on American experience, in the field of insects and pests with a view to eradicating them, by stages, through sterilisation of whole swarms of them, by the technique of controlled gamma radiation. It is here, again, that the section (of the Amriki Mela) devoted to the use of atomic energy in agriculture is of absorbing interest.

To sum up, the most relevant lesson this country can draw from American agricultural experience is that absolute production can be increased greatly by an increase in per-acre productivity through the use of heavy-yielding strains, fertilisers and plant protection techniques. The basic requirement, of course, is more water which would have to be provided by both major and minor irrigation schemes. India's vast resources of manpower and bullock power will do the rest on the millions of small farms if improved ploughs, improved seeds, fertilisers, insecticides and irrigation water are more abundantly and easily made available to them.

Economic Growth: Its Meaning, Its Measurement and Its Cultivation

By Professor W. ALLEN WALLIS

The Meaning of Economic Growth:

THE American standard of living is characterized as much by its rapid rate of improvement as by its high level. For at least three of four generations—as far back as the records go—the material level of living of the average American has nearly doubled each generation.

This unparalleled improvement in the material level of living is only part of the story of American economic growth. There have also been great increases in leisure and betterment of the conditions of work, improvements in the quality of life, and such broad sharing of the gains of progress among all Americans—urban and rural, young and old, workers and managers, white and coloured, eastern and western—that we have become the nearest approach to a classless society.

The American people take great pride in, and strive hard for, the assurance that their children will have richer, fuller lives than they themselves enjoy. To continue to fulfill these expectations of increased welfare, while also fulfilling the overriding requirements of national security, will require sustained and substantial expansion of our economy. Economic growth, therefore, is one of the highest and most widely recognized goals of American economic policy.

But growth is not our only goal. We do not live to grow; we grow to live better.

True growth in economic welfare involves both material and non-material benefits to the people. If growth in material production were our only economic aim, we could reduce our current consumption to a minimum and use all the rest of our output for producing "growth," erecting more and more massive industrial plants and public works as monuments to our determination.

This is what people under communist domination are compelled to do, with terrible sacrifices of life, liberty, and welfare; yet it is doubtful whether the growth rates thus obtained have exceeded, except perhaps briefly,

the rates achieved in free countries at comparable stages of development.

Our economic growth in the United States is largely the result of the free choices and the relative priorities set by millions of individual citizens. The chief role of government in our country is to create an environment in which decisions about growth can be made by individuals on the basis of their own preferences and priorities and the technological possibilities of the time.

The government does not produce "growth" directly; it cultivates growth by promoting efficiency and productivity and by providing special services that people cannot well provide for themselves. As our record shows, these indirect policies of relying on the free choice of individuals have had a degree of success in bringing about genuine growth in social welfare that has not been matched by policies of governmental direction and control.

The Measurement of Economic Growth:

Growth may be measured in many different ways. Different methods are useful for different purposes, but the wide differences in the figures cause much confusion and misunderstanding. None of the figures is more than a rough approximation.

The simplest and most familiar measure of over-all economic growth is the average annual percentage increase in total national output, eliminating the effects of price changes. In the United States this measure of growth has averaged over 3½ per cent a year (that is, doubled about every 20 years) for the last 30 years or so. Broadly speaking, this represents the rate of change in our aggregate output, and it is perhaps the best existing measure of growth of the total size of our economy, and therefore of the underlying support for our national security.

Part of the growth of total output is due merely to population growth. This can be allowed for by measuring growth by the percentage rate of increase in output per capita.

For the past 80 years or so, this figure has averaged about 2 per cent per year (that is, doubled about every 35 years).

On the other hand, output has grown less than it otherwise would have because in America we work shorter hours, take longer vacations, start work at later ages, and retire earlier. These increases in leisure represent important increases in our real welfare, yet they tend to decrease the numbers which measure economic growth by increases in total output or per capita output.

Accordingly, a better measure of the improvement in welfare and levels of living is the growth of output per man-hour of work. Output per man-hour has grown in the United States at a rate averaging just below 3 per cent per year (that is, doubled about every 26 years) for the last 80 to 90 years.

To measure improvements in efficiency we need to take account not only of labour but of other inputs required to produce the output. This is done by calculating output per unit of combined inputs—capital as well as labour. Growth in overall productivity in the United States, measured in this way, has been proceeding at a rate of over $\frac{1}{2}$ per cent per year (that is, doubling about every 41 years) for the last 60 or 70 years.

Even when the measure used is the right one for the purpose in hand, the figures must be used with caution, because the data are at best rough approximations. Some growth fails to be included and some is exaggerated. In the United States, the understatements are almost certainly much more important than the overstatements, so the figures understate our growth to a significant degree.

In discussing growth, it is important not to get caught in a futile "numbers game," talking about rates of growth whose meaning is not clear or which are not strictly comparable between countries or between times. It would be unwise to attach great importance to attaining any particular figure for the rate of growth, not only because the figures are too inexact, but also because growth is too complex and too poorly understood a process for precise planning or projection. The numbers purporting to measure growth may be raised by activities that in reality do not contribute to growth, or even by activities that retard it.

For example, the contribution of governments to national output can be measured, as a practical matter, only by the inputs—the labour, capital, and materials used up. Unfortunately, using up inputs sometimes fails to produce useful outputs. This is the case with government programmes that encourage the production and storage of some commodities in wastefully large quantities, and with the enforcement by local governments of obsolete building construction codes that needlessly raise housing costs. In such instances, increases in the inputs, though they result in higher numbers purporting to measure output, really reduce output.

Over our history, the US rate of growth of total output has fluctuated widely, even after full allowance is made for booms and depressions. For some periods of five years or more, the rate has averaged scarcely more than 2 per cent per year (a rate at which output would double every 35 years); whereas for some periods of 10 years or more the rate has averaged 4 per cent (a rate at which output would double every 18 years) and even higher.

The causes of these variations are still not fully understood. Periods of rapid economic growth have occurred both when prices were rising and when they were falling; and the same is true of periods of less rapid growth.

The US economy has never failed to grow. In 1959 our rate of output surpassed the previous peak rate, reached in 1957; the peak of 1957 surpassed the peak of 1953; that surpassed the peak of 1949; and so on, almost without exception, as far back as the records go. (Growth must be distinguished from economic cycles, just as on the ocean, tides are distinguished from waves. Even when a tide is rising, the troughs between waves may cause temporary falls in the level, but these falls are less than they would be if the tide were not rising.)

But the rate of growth is uncertain and variable, and its causes are difficult to determine. We must assume that variations are likely to continue, in a largely unpredictable way, at least until the process of growth is better understood. Accordingly, we cannot glorify any particular magic number as the rate of growth that we can or should achieve. Rather, we must strive to create conditions which will be favourable for the highest rate of growth consistent with our other objectives.

The Cultivation of Economic Growth

Although the factors determining percentage rates of growth over spans of a few years are not fully understood, certain things can definitely be identified as affecting, and others as not affecting, growth and growth potential over the long run.

In the United States there is no basis in our history for believing that growth is facilitated by inflationary policies or by rising price levels. From 1865 to 1900 the level of US consumer prices fell by nearly half, while US industrial production rose by a multiple of seven and total output tripled. In the present century we have also witnessed periods of substantial growth combined with virtual price stability, particularly in the 1920's.

On the whole, experience suggests that growth is healthiest when it is accompanied by stable prices, rather than by marked changes in the price level. Price stability thus powerfully promotes the welfare of all.

Growth has undoubtedly been due in large part to the flexibility and adaptability of our economy. New industries have sprung up to replace declining ones, and new methods have been accepted to replace old ones, with a degree of ease and cooperation by all concerned that is unexcelled. The combination of an abundant flow of new ideas for progress with willingness to take the risks of trying new methods and to adopt speedily those that are successful is the key to our high rate of growth.

The translation of new ideas into practical processes is speeded by a high rate of saving, through which new equipment can be financed and put into use. Saving also contributes to growth even where new methods are not involved, since it makes possible a larger stock of plant and equipment, housing, and other physical capital, which add to our potential supply of goods and services.

The underlying forces that promote national economic growth are basically the same as those that account for the economic progress of individuals. An individual's desire for a higher and more secure standard of living for himself and for his family is the basic stimulus. To this end he studies, plans, works, saves, and invests. He searches out new ways of doing things, and develops new techniques and processes.

Hence, one of the most effective means of stimulating economic growth—and at the same time one of our fundamental objectives in seeking economic growth—is to provide expanding opportunities for every individual

to realize his own potentialities to the utmost and to open wider vistas for his children; to encourage initiative, independence, and integrity; to preserve and enlarge the moral worth of the individual; and to approach more closely to our ideals of personal freedom, justice and fair play, broad and equal opportunity, the rule of law, and mutual respect and charity.

Economic growth, it must be recognised, entails certain costs. New machines may reduce prematurely not only the value of old machines but also the value of human skills acquired through long training and experience. New products may reduce the incomes of those producing old products. New industries in new locations may uproot homes and communities near old industries.

Unless the costs of economic growth are equitably distributed, it is only reasonable to expect strong resistance to growth and its accompanying changes. Here again breadth of opportunity facilitates economic growth, for there is less resistance to changing old ways when new opportunities are widely available.

All of this requires an economic environment and atmosphere that can be brought about only by positive and progressive governmental actions. The government must manage its monetary, budget, and debt policies so as to assure reasonable price stability; it must arrange its taxes and spending so as to promote rather than to stifle growth; it must deal effectively with problems of recession, so as to assure a continuity of maximum employment opportunities; it must alleviate the consequences of such unemployment as occurs, some of which may result from the very processes of economic growth; it must promote science, technology, and education; it must provide the public works needed by a growing economy; it must act to maintain competition and restrain excesses and abuses in the private economy; and it must provide various services which, while valuable to the nation as a whole, do not offer sufficient rewards to induce private groups to provide them for sale or do not offer sufficiently direct benefits to induce private groups to buy them.

Anti-Semitism

A strange and inexplicable wave of anti-Semitism seems to be sweeping through not only Germany but other parts of the world as well. Swastikas have made their appearance; demonstrations have been seen. It must be said to West Germany's credit that its Government is trying its very best to stamp out such evidences of anti-Jewish behaviour before the movement, if it can be called such, can take root. A clerk, just out of his teens, had the dubious distinction of being the first German to draw a deterrent prison sentence for painting anti-Jewish slogans. There have been vague attempts to put down such incipient neo-Nazism, but the mechanisations of East Germans. This, clearly, is a theory which will not hold water—unless it is a plausible hypothesis that the world-wide incidents are themselves symptomatic of international communism doing its bit to queer the pitch of the summit meeting. In any case, the reason is unimportant. That the world should again be the scene of an intolerance which, less than thirty years ago, set the stage for World War II to break out, is most deplorable and disquieting. It is to be hoped that authority in each country will deal firmly and resolutely with what surely is a threatening situation. For if steps are not taken expeditiously, it would not be Cassandra-like to foretell the probable advent of a second Hitler.

Durgapur

THE year 1959 was rightly described as one of substantial achievement for the public sector in the iron and steel, by Sardar Swaran Singh, while inviting the President to open the first furnace at Durgapur. The year began with the blowing in of the blast furnaces at Rourkela and at Bhilai, and has ended with the inauguration of the blast furnace at Durgapur, the last of the three steel projects included in the Second Plan. The greatest satisfaction will be felt over the achievement at Durgapur, particularly because of the various difficulties which threatened to upset the time schedule.

The first blast furnace was to have been ready by October 31 according to the original time table. But work was almost brought to a standstill by the floods which occurred in the early part of the month and submerged the entire area of the works. All concerned with the project can take legitimate pride in the fact that the greatest floods in living memory, which ravaged nine districts of West Bengal, did not delay the formal inauguration by the President for more than eight weeks.

The satisfaction that is felt in this country over the successful completion of the first phase of the project is also shared by British Steel Industry and by the British Government.

Durgapur has been described as the biggest single overseas operation that British Industry has ever undertaken, and to make it possible thirteen British firms teamed up to form a consortium. From the beginning the British Government has taken keen interest in the progress of this venture in Commonwealth cooperation, to which they have extended financial assistance. Evidence of that interest was the presence of Mr C. J. M. Alport, the British Minister of State for Commonwealth Relations, at the function held at Durgapur on December 29.

Two points made by Mr Alport in his speech on the occasion deserve special mention. The training programme arranged under the Technical Cooperation Scheme of the Colombo Plan to which he referred is a reminder that the vast structures of steel and concrete which make a modern integrated steelworks, are the product of human creative skills built up by years of tradition. Mr Alport's assurance, that their aim is "to transmit to India, not only the machines and furnaces, but those very skills and knowledge which make their building and operation possible" will be received with redoubled satisfaction, as there has been a tendency in some quarters to take a dubious view of the value of the training.

In an undertaking of such magnitude accidents are unavoidable. Considerable relief was felt at the official announcement that the accident which resulted in the furnace going off blast within a week of its formal commissioning, was not such a serious affair as first reports led one to think. As Mr Alport observed, "a great work, like a newly commissioned ship, takes time to shake down into the new rhythm of the work for which it is created; in the next few months this process will be in train."

With the steel plants at Bhilai and Rourkela entering the last stages of construction, which there is every likelihood will be completed ahead of schedule, discussion has already started for their expansion during the next Plan. A Soviet team now in India to review working of projects built with Soviet assistance has already held discussions on the doubling of the capacity of the Bhilai plant. As for Rourkela, it may be taken that the foreign exchange requirements of the expansion that is envisaged, have been virtually underwritten by the firms which have put up the plant. Both Mr Alfred Krupp and Mr Hitzinger, told a press conference which they addressed on the day the L.D. converted started producing steel, that they would be prepared to give liberal, and flexible credit arrangements for the expansion of the project.

The successful conclusion of Indo-Pakistan talks over the Punjab-W. Pakistan border disputes, is a pleasant sequel to the earlier satisfactory outcome of the financial talks. The agreement signed on January 11 covers all the outstanding disputes except one, relating to the West Pakistan border with the Bombay State, which has been held over pending receipt of further information. The agreement over the Western border has been preceded by a satisfactory settlement of India's border with East Pakistan. With the canal waters dispute on the way to a satisfactory settlement, thanks to the good offices of the World Bank, the only major item in dispute is Kashmir. The facility with which the border dispute, a chronic source of annoyance, has been settled inspires the hope of a fresh effort to reach agreement on Kashmir, in the favourable atmosphere for negotiation created by President Eisenhower's visit. Foreign commentators have linked the settlement of the Indo-Pak dispute with Chinese aggression which they regard as a contributing factor. As far as this country is concerned, the general feeling is that the manner in which the dispute with Pakistan was settled should serve a precedent for a similar happy outcome of the current border disputes with our neighbour across the Himalayas.

Border Settlement

The fact that the proposal for a bridge at Pandu, which was given up during the war as too difficult, is now being taken up seriously, is convincing evidence of the priority given to the development of Assam by the Government and the Planning Commission. The future of the State should be bright indeed, if those who are in a position to mould its destinies heed the Prime Minister's warning against parochialism, which is as relevant to economic development as to national defence.

Since the attainment of independence the people of Assam have been nursing a grievance that their State has been neglected in the programmes of national industrial development. This has led in the past to an agitational approach to the problems of economic development. Assam is richly endowed with natural resources which can support a variegated industrial complex on a prosperous agricultural base. Alone among Indian States it has extensive areas under forests. So far Assam remains India's only source of indigenous oil.

Rourkela

If 1959 was an year of achievement for the iron and steel, the omens are even better for 1960. Rourkela has rung the bells for the New Year with the commissioning of a bunch of new installations of which the most important is the commencement of the L.D. process of steel making, which was formally inaugurated by the Union Minister for Steel, Mines and Fuel. Those who are not steel technicians or metallurgists, may not be interested in the technical details which establish the superiority of the new process over conventional methods, but no one will miss the significance of the occasion. Those responsible for planning the Rourkela project can take legitimate pride that they were alert enough to seize the advantages of this new process as soon as it was put into commercial operation in Austria and took a bold decision to produce 75 per cent of the total steel output of Rourkela by the L.D. Process.

Two functions, whose importance from the national point of view was highlighted by the Prime Minister's participation, promise a new deal for Assam. The first was the inauguration of work on the Rs 705 lakh hydel project on the River Umiam which is expected to be completed by 1963. The other was the ceremony, at which Mr Nehru officiated, of the laying of foundation stone of the Rs 10-crore rail-cum road bridge across the Brahmaputra.

Assam is richly endowed with natural resources which can support a variegated industrial complex on a prosperous agricultural base. Alone among Indian States it has extensive areas under forests. So far Assam remains India's only source of indigenous oil.

In spite of all these advantages, the economic development of the State has been slowed down by lack of communications. The Partition left Assam practically cut off from the rest of India. The metre-gauge line skirting the Himalayan foothills is undependable and inadequate, while the northern and southern halves of the State are separated by the turbulent Brahmaputra. While the hydel project will augment power resources and speed up the development of the oil industry, construction of the bridge will eliminate the principal impediment to rapid economic development.

The fact that the proposal for a bridge at Pandu, which was given up during the war as too difficult, is now being taken up seriously, is convincing evidence of the priority given to the development of Assam by the Government and the Planning Commission. The future of the State should be bright indeed, if those who are in a position to mould its destinies heed the Prime Minister's warning against parochialism, which is as relevant to economic development as to national defence.

World of Finance in 1959

THE few banking results for 1959 so far published have failed to bear out our apprehension that profits in 1959 would show a calamitous drop. Our conviction in this behalf was based on the fact that, during 1959, the weekly average of Time Liabilities, or higher costing Deposits, exceeded the weekly average of Advances, or the higher earning assets. The detailed figures, in respect of 1959, which we shall now be analysing, suggest reasons why, in some cases at least, banking profits would not have unduly suffered. The assessment now being made is of the World of Finance generally during the year just ended.

The expansion in active note circulation was, during 1959, of a size that had, since planning endeavours began, been exceeded only in 1955. The increase during the last year has amounted to Rs 141 crores as against Rs 83 crores in 1958. The figure for 1958 itself was more than double

the expansion in active notes in 1957; and the reason was that, during 1958, the decline in the foreign exchange holdings of the Reserve Bank was much smaller. Thus, the contractionist impact of a fall in foreign exchange reserves was less during 1958 than had been the case in 1957. In 1959, the foreign exchange holdings of the Reserve Bank rose by Rs 24 crores, even after Rs 25 crores had been spent on gold purchased for making over to the International Monetary Fund. It is thus that, with foreign exchange reserves rising instead of declining, there was an expansionist, and not contractionist, impact upon note circulation. Indeed, it is noteworthy that the rise in active note circulation has occurred despite what is presumably a lower quantum of deficit financing. For, Rupee Securities held by the Reserve Bank in both departments are higher only by Rs 102 crores as against a rise in 1958 of Rs 219 crores. (The magnitude of deficit financing during 1959 is, however, rather higher than as suggested by the size of the rise in the holdings of the Reserve Bank; this is, firstly, because entities other than the Reserve Bank are also investors in the ad hoc Treasury Bills, and, secondly, because the Reserve Bank has figured as a considerable seller of marketable securities through its tap). The expansionary trend in money supply is also indicated by the outflow of Rupee Coin during 1959 for Rs 3.66 crores, as against Rs 3.53 crores

in 1958. (The extent of outflow of Rupee Coin is measured by the actual decline under this head plus Rs 5 crores representing tender of Rupee Coin by the Central Government in exercise of their right in this behalf in the second week of April 1959).

The changes relating to Deposits of Central and State Governments do not need to be commented upon. On the other hand, it is intriguing to find that the Reserve Balances of member banks, for the first time since the Second Plan began, are shown to have declined over the year. That, despite an increase in Deposits that was bettered only in 1957, Scheduled Banks have kept the level of their balances with the Reserve Bank rather low is a significant indication of the banking system's anxiety to utilise all possible resources in gilt-edged or in advances. (During the week ended January 1, 1960, a sharp increase was recorded in the Reserve Balances of member banks; and that this was clearly due to year-end window-dressing was confirmed by a sharp decline being registered during the week ended January 8). The Other Loans and Advances of the Reserve Bank are sharply higher by Rs 27 crores; but the Scheduled Banks were responsible but to a negligible extent in this respect. It is the increased borrowings of cooperative banks and other entities, which are eligible to borrow from the Reserve Bank under this head, that raised the level of the Reserve Bank's Other Loans and Advances. Indeed, as at the end of November, borrowings of State Cooperative Banks from the Reserve Bank had risen over the year by Rs 24 crores. It is noteworthy that the Reserve Bank's advances against usance bills were at the nominal figure of Rs 0.11 crores on the last Friday in 1959. Neither against usance bills nor against Government securities have the Scheduled Banks been a great borrower from the Reserve Bank. (Again, however, for purposes of year-end window dressing, Scheduled Banks borrowed heavily, during the week ended January 1, 1960; but they liquidated almost the whole of such borrowings in the week thereafter). Other liabilities are practically unchanged, suggesting the Reserve Bank's profit is also more or less unchanged.

The main points, thus, to be noted in the Reserve Bank returns are as follows:

- (1) The expansion in Active Note circulation has been of very large dimensions, because there was no decline in the foreign exchange holdings of the Reserve Bank to cause a contractionist impact upon currency circulation.
- (2) The quantum of deficit financing during 1959 has been much smaller.
- (3) There has been a fair sized increase in the foreign

exchange holdings of the Reserve Bank.

- (4) Despite a new accretion of considerable dimensions to Deposits, Scheduled Banks have kept their balances with the Reserve Bank at a figure which is lower than the one obtaining at the end of the previous year.

The State Bank figures for 1959 suggest that the rise in Deposit Resources was more or less maintained during 1959. But, for the first time since the Second Plan began, Advances of the State Bank declined over the year by Rs 8 crores. Thus, the State Bank has contra-invested not merely the whole of its rise in Deposits but also that element relating to its decline in Advances. We may take it that, according to its practice, the State Bank would have contra-invested against the special deposits accruing under Public Law 480; but the fact that, over and above this figure, there has been further investment in gilt-edged would indicate that the State Bank, with excessive resources that it could not profitably use, was compelled to increase its gilt-edged portfolio in order to offset the decline in earnings consequent on the lower volume of Advances.

It is in the figures relating to Scheduled Banks for 1959, read in conjunction with the relative figures for the State Bank, that we can plumb the reason for the quite respectable banking profits so far announced. Firstly, gross deposits have risen by Rs 249 crores, of which Rs 107 crores are traceable to the State Bank. This means that the increase in Deposits of other Scheduled Banks works out to Rs 142 crores. This represents an improvement on the performance in 1958 of other Scheduled Banks by something like Rs 27 crores. It would appear, however, that the other Scheduled Banks had better use for their accruing deposits than did the State Bank. In 1958, it may be recalled, advances of Scheduled Banks other than the State Bank rose only by Rs 4 crores, against an increase in Deposits of Rs 115 crores; the experience of the other Scheduled Banks during 1959 has been an expansion of Rs 107 crores in Advances against a rise of Rs 142 crores in Deposits. That is to say, Scheduled Banks other than the State Bank did have a more remunerative utilisation of their deposit resources than was the case in 1958. Furthermore, while, in 1958, other Scheduled Banks added to their gilt-edged portfolio by Rs 104 crores, the relative figure for 1959 is rather lower at Rs 34 crores.

However, the rise in deposits of Scheduled Banks other than the State Bank has again been almost entirely under the head of Time Liabilities. This works out to something more than the rise in the total of advances. Consequently, we may conclude that performance of banks during 1959 will be a mixed one.

Indian Finance

January 16, 1960

Mounting Busy Season Pressure

MOUNTING busy season pressure is clearly indicated in the returns of the Reserve Bank for January 8. There has been a steep rise of Rs 32.41 crores to Rs 1775.08 crores in active note circulation. Moreover, outflow of Rupee Coin during the week has been in the considerable amount of Rs 2.62 crores. Currency has been expanded for Rs 40 crores against Rupee Securities by transfer from the Banking Department. In the result, the Reserve Bank's cash in the till has improved from Rs 8.01 crores to Rs 12.93 crores.

The transfer to the Issue Department is reflected in a decline of Rs 42 crores in Investments in the Banking Department. However, with the State Bank figuring as a purchaser of gilt-edged during the week for Rs 15 crores, it would appear that deficit financing of this order was instituted by the Central Government and has been concealed by the fact of State Bank purchases through the tap. The proceeds of such created money have helped to increase the Central Government's balances by Rs 8.81 crores to Rs 64.37 crores. Meantime, some element of inter-governmental transactions is also suggested by the decline of Rs 8.22 crores to Rs 12.50 crores in the balances of State Governments, who have, besides, increased their borrowings from the Reserve Bank by Rs 4.61 crores to Rs 24.55 crores.

Scheduled Banks, which had apparently, during the week ended January 1, borrowed substantially from the Reserve Bank in order to add to their cash balances and to deposits with the Reserve Bank, for purposes of year-end window dressing, have restored normalcy in their figures vis-a-vis the Reserve Bank. The Reserve Balances of member banks are sharply down by Rs 38.33 crores at Rs 68.25 crores, of which only Rs 29 crores is traceable to the State Bank, part of this last being, we may assume, for purchase of securities by that institution through the Reserve Bank tap. At the same time, it is to be noted that Scheduled Banks have reduced their indebtedness to the central banking institution, as shown by the decline of nearly Rs 10 crores to Rs 102.89 crores in the latter's Other Loans and Advances.

The Reserve Bank's portfolio of Government Treasury Bills purchased and discounted marks a further rise of Rs 6.78 crores to Rs 48.12 crores, allowing the presumption that State Governments have in this wise sought to replenish their balances.

It is intriguing to find a rise of Rs 6.67 crores to Rs 122.43 crores in Other Deposits. This may conceivably relate to transfer of the Reserve Banks accrued profit for the half-year, though Other Liabilities are, it may be noted, practically unchanged.

BANK PROFITS

The first banking results for 1959 have been published, but space permits only the reference to what is an incredible performance of United Commercial Bank. The net profit, after tax, has risen by more than Rs 24 lakhs to Rs 60.42 lakhs. The appropriations are equally spectacular. The Reserve Fund receives a massive Rs 27 lakhs, raising the Fund to Rs 1.75 crores, or just Rs 25 lakhs short of the capital. The dividend is raised from 7½ per cent free of tax to 11 per cent subject to tax. Bonus to staff absorbs more than 50 per cent more at Rs 11 lakhs against Rs 7.25 lakhs. UCO's results may be described as Gargantuan figures in what, for banking generally, may have been a Lilliputian year.

+

Assistance to Backward Countries

By Paul Einzig

TWO conflicting and mutually exclusive currents of thought have been gaining publicity in Britain and other industrialised countries in recent months. On the one hand, there is unquestionably a growing realisation of the urgency to increase economic assistance to underdeveloped countries; on the other hand there is a revival of

the drive on the part of organised labour in Britain, as in other industrial countries, to secure for themselves an improvement of their standard of living by means of higher wages and/or shorter working hours.

Even if those concerned are utterly ignorant, or pretend to be ignorant, of the economic problems involved, surely they have no right to try to ignore out of existence the arithmetical aspects of the problem. The basic fact of the situation is that there are some 1,800 million underdeveloped peoples, so that any assistance on a worthwhile scale would involve considerable efforts and sacrifices on the part of the advanced nations whose total population only represents a fraction of that number. Yet those who are the loudest in agitating for increased assistance to backward peoples appear to imagine that the resources for that purpose could be forthcoming out of the resources of a mere fraction of the peoples of advanced countries. Being very generous with other peoples' money Socialists in advanced countries imagine, or pretend to imagine, that all that is needed is another turn of the taxation screw on upper incomes to provide the necessary funds for the capital requirements and current consumption of the 1,800 million underdeveloped peoples.

S. N. K. SUNDARAM,
Managing Director.

The only suggestion by Socialists I have ever come across to the effect that industrial labour too ought to contribute toward the assistance of underdeveloped peoples, came from the late Maurice Webb who suggested some years before his death that for some time to come the working classes in Britain should renounce a further improvement in their standard of living, so as to give the entire benefit of technological progress and expanding production to those who were in greater need of it than themselves. His propo-

sal met with no response in the quarters to which it was addressed.

One way in which Socialists in advanced countries seek to defer the day when the implications of the problem would have to be faced squarely is by conveying that disarmament resulting from a relaxation of tension with Soviet Russia would provide the necessary means for assisting backward peoples. Yet a little simple arithmetic is sufficient to expose the falsity of this argument. Britain's total expenditure on national defence has been running at the

annual rate of £1,500 million in recent years. Even if Britain were to disarm stark naked (which is of course, inconceivable), the complete abolition of defence expenditure would only contribute 43. a week per head of population of the underdeveloped countries towards raising their standard of living. At the cost of exposing herself to enemy domination Britain could secure for backward peoples an extra cup of tea every week, and nothing more.

One should have thought that since the spokesmen of the British

Labour Movement professed to be so keen on assisting underdeveloped peoples they would be in favour of embarking on a production drive for the benefit of those peoples. Instead, the Trade Union Council inaugurated the New Year by pronouncing itself in favour of a drastic reduction of the working week.

In answer to my denunciation of the inconsistency between the two objectives the argument was put forward that a cut in the standard working week would not really mean that less work would be done, but merely that more overtime would be paid at increased rates for the same amount of work. This argument, even to the extent to which it is correct, does not answer my charge. To the extent to which the reduction of the working week would be merely a concealed form of wage increase, it would increase consumer demand and would reduce any surplus available for assisting underdeveloped countries. Moreover, many industries would not be able to afford to pay increased overtime rates and would prefer to work shorter hours and allow their output to decline. Whether by increasing consumer demand against an unchanged output, or by maintaining consumer demand unchanged against a reduced output, a cut in the standard working week would reduce our capacity to assist backward peoples.

It is for the Labour movements in underdeveloped countries to bring these facts home to the more fortunately placed workers in Western countries and, for that matter, to the Soviet Government. The latter by declaring recently its policy of drastically reducing the working week, gave a powerful stimulus for similar demands by trade unions in Western countries. Even the more statesman-like among the Western trade union leaders are now liable to feel impelled to yield to pressure by their rank and file in favour of cuts in working hours, for fear that, should they try to resist it, the Communist influence in their unions would increase.

Strangely enough it does not occur to anyone to inquire whether the standard of living of Russian workers is really as high as to justify at this stage, or even in the foreseeable future, a relaxation of productive effort by means of more leisure and less work at this stage. And even if the answer to that question were in the affirmative there is still the question whether the Soviet Government has no intention of helping to raise the deplorably low standard of living of 700 million Chinese—apart from hundreds of millions of other underdeveloped peoples whose interests it pretends to have at heart—before decreeing a drastic relaxation of productive effort. It is for the underdeveloped peoples themselves to press for an answer to these questions.

Firm Undertone in Jute Markets

THE jute goods market continues to show a firm undertone although prices during the past few days have been moving within wide limits. The main governing factor still seems to be speculation about raw jute supply during the current jute season. This is not understandable because it has been clearly stated by authoritative sources that supplies of raw jute will be plentiful. Even a conservative estimate of the new crop together with the carryover from last season gives a total availability of over 80 lakh bales. Government have quickly followed up their assurance that the industry will be enabled to maintain a high level of production by issuing licences for the import of 2 lakh bales of cuttings from Pakistan. The improvement in raw jute arrivals in uncountry centres noticeable in recent weeks should also help discourage ideas about shortage. But it would appear that in common with many other commodities raw jute also has come into the grip of speculators. With a view to check unbridled speculation margins have been revised upward three times within the space of a fortnight in the futures market.

It is, however, to be admitted that the outlook for jute goods is good. The jute industry has commenced the New Year with a very satisfactory statistical position. Total stocks at the end of December 1959 were at 58,700 tons comprising 22,100 tons of hessian, 25,700 tons sacking and 10,900 tons other varieties. At the end of November 1959, total stocks were 65,200 tons. The low level of sacking stocks has imparted fresh strength to the bullish fervour even though there is no likelihood of a squeeze in this category of goods as mills continue to work with 90 per cent of their looms with the 24 per cent looms unsealed since last August entirely devoted to sacking production. Moreover, it is not as though foreign demand for sacking goods is strong now or that the next few months will witness heavy enquiries.

A firm undertone is noticeable in hessian too because of expectations of improved US offtake in coming months. The large burlap consumption during November coupled with the anticipation that consumption may record a further rise in view of the end of the steel strike are keeping up the

price level in this section. But even here it will be prudent to avoid overenthusiasm. For, burlap stocks in US at the end of November show a sizable increase over the previous month's level.

The sizable increase in production of jute goods during December is another factor that should discourage a rise in price levels. Output in December has totalled 93,600 tons showing a rise of 5600 tons over production in the previous month. The higher production is the result of an increase of 17 hours in mills' working during the month as compared with the previous month. Output of hessian has increased to 38,800 tons from 36,600 tons, that of sacking to 47,900 tons, from 45,700 tons and that of other varieties to 6,900 tons from 5,700 tons.

It is clear that despatches of goods during December have been quite good—they must have been over 100,000 tons. It is no doubt an encouraging factor that offtake has been high despite an increase in production. But that is no reason why prices should be pushed up to uneconomic levels. The fact that the rise in price levels in the domestic market has not been followed by sustained foreign enquiries should serve as a warning to the trade. With the growing competition from Pakistan and the trend toward self-sufficiency in jute goods in most of the Asian countries, uneconomic price levels will only make our jute goods unpopular with overseas consumers.

The jute goods market opened firm but in later dealings sentiment was rather depressed due to selling pressure. B Twills January opened at the high level of Rs 115.50 but was soon pushed down to Rs 114.62. Monday, however, witnessed revival of support and once again B Twills January was done up to Rs 116. The recovery proved shortlived as on Tuesday prices lost ground under speculative selling pressure. B Twills came back to Rs 114.10. A quiet tendency continued to persist on Wednesday with further losses in rates but at the lower levels there was some support and the market closed slightly better with B Twills at Rs 113.75. Hessian was comparatively steadier to be finally placed at Rs 42.60.

In the futures market Hessian 40" x 10 oz February closed on Wednesday at Rs 42.56 as against Monday's opening rate of Rs 42.90. B Twills February closed at Rs 113.80 as against Monday's opening rate of Rs 115.00.

The raw jute market ruled firm in early dealings but turned quiet later on due to lack of mill interest. It would appear that sellers were beginning to realise that high prices would become untenable in the face of improved arrivals. Assam Bottoms Jan-Feb delivery receded to Rs 31 from Rs 32.75 earlier in the week. In the futures market Assam Bottoms March was finally placed at Rs 30.60 on Wednesday.

Shortfall in Production

ACCORDING to latest indications, production of Tea, in the major producing countries, after successive increases, is expected to show a decline for last year. The net shortfall is now estimated at 11 million pounds, while total world absorption has probably increased by about 30 million pounds, assuming that the British consumption is running at last year's level.

Although tea production in North-East India and Pakistan during the first eleven months of last year, at 545 million pounds and 53.5 million pounds, showed increases of 1.9 million pounds and 1.0 million pounds respectively, total production is not expected to exceed 1958 level in view of the early onset of the cold weather.

The Tea crop in South India and Ceylon has been affected by unfavourable weather conditions. In the South, some parts of Annamalais have just caught up with last year's levels and so have some estates in Nilgiris. But, all other districts are behind and some very far behind. Production totalled only 121.6 million pounds in the first ten months of last year as against 135.4 million pounds in the corresponding period of 1958. Production in Ceylon amounted to 338.5 million pounds, showing a decline of 13.9 million pounds over the ten-month period of 1958.

While the Indonesian crop is running nearly 4.0 million pounds behind last year, production in British East Africa at 56.6 million pounds, during the first ten months of 1959, showed an increase of 5.4 million pounds over the same period of 1958.

Georgia, which accounts for most of the tea production in the Soviet Union, has substantially expanded its output. Over 140,000 tons (about 300 million pounds) of top quality tea leaf were reported to have been sold to the Government last year. Georgia's tea-growers have resolved to attain the harvest level to 200,000 tons by 1965.

In general, optimism is entertained with regard to the outlook for the industry during the current year. In view of the development plans like the Second and Third Plans, a substantial increase in the purchasing power of the community and simultaneously a marked rise in internal tea consumption are expected.

Tea shipments from Cochin, in the first eleven months of 1959, were lower at 78.3 million pounds as compared with 89.6 million

pounds in the corresponding period of 1958. Exports from Ceylon, in the first ten months of 1959, have also fallen to 311.53 million pounds from 346.01 million pounds in the corresponding period of the previous year.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 76,316 packages. There was a good general demand and "teas for price", plain, medium BPs and PFs were fully firm to dearer. Medium Orange Fannings weakened during the sale and BOPs were the weakest feature of the sale.

CTC Assams were little irregular and often 5 nP to 10 nP per pound easier, while Legg-cut teas were sold readily. The poorer and medium Whole Leaf grades were sold well; but the better sorts were at times neglected. Darjeelings and Tippy sorts met with only a limited demand. Following rates were quoted:—Clean Black Pekoe Rs 2.20 to Rs 2.26; Plain BP Rs 2.10 to Rs 2.16; Plain Fannings Rs 2.16 to Rs 2.24; Medium BP Rs 2.04 to Rs 2.12; Medium Fannings Rs 2.20 to Rs 2.28; Best Assam CTC BP Rs 2.40 to Rs 2.60 and Best CTC Assam Fannings Rs 2.45 to Rs 2.60.

In the Internal Sale, offerings consisted of 23,277 packages of Dusts and 871 packages of Leaf grades. There was a strong general demand for Dusts. Orthodox types met with keen enquiry and were sold at dear rates, the black exportable types advancing by up to 8 nP per pound. Legg-cut teas were fully firm and sometimes dearer. Darjeeling teas were firm and often dearer with the exception of the grainy sorts which declined in price. Following rates were quoted:—Medium Doars Dust Rs 2.22 to Rs 2.34; Medium Assam Dust Rs 2.16 to Rs 2.28; Medium Assam CTC Dust Rs 2.20 to Rs 2.23 and Best CTC Assam Dust Rs 2.50 to Rs 2.90. There was a good demand for Leaf grades, but at irregular rates.

In the Cochin market, about 1,050,000 pounds of Leaf grades were offered. Against good general demand, Low Medium and Medium sorts were fully firm. Good Medium teas were steady; but the high-grown sorts attracted very little demand. Whole Leaf grades were strong and dearer.

The auction on the London Tea market opened the New Year on much the same pattern as the weeks preceding Christmas, with demand being centred on the plainer descriptions. The overall price, however, did not show much change. With the catalogue next week and the week after containing around 75,000 packages, it remains to be seen whether prices can be maintained.

Tea stocks in London, as on the 1st January 1960, totalled 123.46 million pounds as against 120.65 million pounds in the previous week. Total amount to be landed on the same date was 34.36 million pounds.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE New Year has ushered in a rather clearer picture of the American political scene than we might have hoped would obtain, say, 3 months ago. What promised to be an exciting tussle, later this year, for the Republican nomination for the Presidential elections, has now totally fizzled out; Mr Rockefeller, whose political fortunes were so triumphantly on the ascendant in the last election, has stated categorically that he does not intend to seek office as President in behalf of the Republican party—at least, not in 1960. This leaves the field clear for Vice President Nixon, who, in any case, was supposed to have the best chance of being the Republican candidate. There don't appear to be any other Republican aspirants; and, almost as if by default, the "mantle" falls upon the young Mr Nixon. The implications of Mr Rockefeller's decision to keep aloof from the 1960 presidential elections are manifold, not only for Mr Nixon but also for the Democratic party.

What, we may ask ourselves, caused Mr Rockefeller, who, by all accounts, was known to have been vigorously campaigning for the nomination all of last year, suddenly to make up his mind that he should stay on in New York as Governor? It is not, I am sure, that Mr Rockefeller thinks he is too young to seek so high a post; it is not, either, that he felt that he would be bested by Mr Nixon when the time came for the Republicans at their convention to nominate the man of their choice. My own feeling is that the conviction grew on him that 1960 would prove to be a Democratic year. And Mr Rockefeller had no desire to earn for himself the reputation of a "defeated" candidate. Whatever your qualifications, and whatever the quirk of fate that might have conspired against you, if you have been defeated at a Presidential election, you have, in America, received the kiss of death. So found Mr Dewey some years ago. So, it appears, is the case with the Democratic nominee of the last two elections, Mr Adlai Stevenson. When the stakes are the White House, caution and circumspection are necessary. In exercise of that caution, Mr Rockefeller has sized up the situation, and come to the conclusion that it will profit him little, and may lose him a lot, if he should be the Republican nominee for 1960. So, gracefully, and well in time, for "adequate" reasons, Mr Rockefeller bows out; and, in so doing, has presented Mr Nixon with a Grecian gift.

The trouble is, as Mr Nixon will be finding, that a one-horse race arouses no interest; and, since he is the only runner from the Republican stable, tipsters and punters both are critically examining the

many starters (though some may be scratched before the Democratic convention meets) in their study of form. (I hope, incidentally, that a friend who shall remain anonymous, very fond of the sport of Kings he is, will be pleased with such description of the presidential election). Competition is the spur that makes a race-horse great; a pacer from the same stable will inestimably improve both its chances and its speed. Mr Nixon, unfortunately, will suffer from such lack of competition. More than his relief that the "outsider" Rockefeller will now not be able to nose past him in a photo-finish, will be his anxiety that there will be no cheers from the crowd to put that little extra into his stride.

All that is certain about the Democratic party is that, at its convention, it will choose its nominee. Nobody knows who it will be; nor am I familiar with all the thoroughbreds that the stable contains. There are only two with which I intend to concern myself, partly because it is they that I personally favour, and much more because I am relatively ignorant about the pedigree and staying power of the others.

The first, of course, is Senator Kennedy. If I may be permitted racing parlance for the last time, the only thing almost that makes him suspect is the presence of Roman (Catholic) blood. This is not supposed to be a good thing, in an American Presidential race. His other so-called handicaps do not amount to much. He is rich; he is young. Mr Kennedy has been strenuously trying to build up a picture of himself as a modest crusader in internal affairs, and a man of the world in international affairs. For India's part, the initiative he has taken in the Senate endears us to him; he thought, it may be recalled, of a Marshall Plan for India. Nothing, of course, has so far come of it, but it is the implicit sympathy with Indian aspirations that forges a link between Senator Kennedy and this country. Unfortunately, the party machine may well think, though it may not give expression to it, that a Catholic cannot win; and, if so, whatever may be Mr Kennedy's intrinsic merits, the prospect is that he will quite heartlessly be "refused" nomination.

The other Democrat whom I would like to see as President is

Mr Adlai Stevenson. But he is a two-time loser, and the party machine anyway does not take kindly to such evidence of inability to win. It does not matter, in its calculations, that, in losing, Mr Stevenson had won more votes (if I remember right) than any elected President—other than, of course, Mr Eisenhower. Nor does it matter that three out of the four Congresses to serve Mr Eisenhower were controlled by the Democrats. It does not matter at all that Ike was unbeatable. Mr Stevenson lost twice; and he may not be given a third chance. There is, however, a very big "unless". Mr Stevenson, it is true, has been saying all along that he will not seek nomination this year. But all this means is that he will not enter into the fray himself. So, it would appear that he would be willing to be "drafted". That is to say, he would not be averse to the nomination being thrust on him. The "unless" that I mentioned a few sentences ago relates to the prospect that, with a strong body of opinion against Mr Kennedy, the Senator may be unable to get the nomination. And none of the other candidates may be strong enough to command the number of votes necessary to "nominate". So, unless the convention is deadlocked, and unless at that stage Mr Stevenson is "drafted", the chances are that Mr Stevenson can hope at best to be Secretary of State—provided, of course, there is a de-

mocrat living for the next four years at the White House.

My own preference is for Mr Stevenson to be the presidential candidate, with Mr Kennedy as his running partner for the Vice-Presidency. It would be a sad thing if both are side-tracked, with the statements that the one has proved, in the last two elections, he can't win and that the other, being a Catholic, can't win, either. But this is only a personal viewpoint; I am sure that the other Democratic prospects have virtues of their own.

At this juncture, it seems to me that the Democratic candidate, whoever he may be, will be elected President. This is because the Republicans do not have a personality to take the place of Mr Eisenhower; Mr Rockefeller would have been a poor substitute, and Mr Nixon is no substitute at all. Surely, the fact that three Congresses under Mr Eisenhower were Democratic is significant; it means that Ike the man, not Mr Eisenhower the Republican candidate, came out successfully at the polls. And hence Mr Rockefeller's wise decision to bide his time.

And yet, in all this, we should not under-estimate the impact that Mr Eisenhower may have upon the voting public, in his role as elder statesman of the Republican party. As it is, Mr Nixon is known to have been groomed assiduously by Ike. Again, Gallup polls show that Mr Nixon does command a fair nation-wide popularity. So, it would not do to under-estimate Mr Nixon's vote-getting ability. Indeed, the situation in 1960 is

somewhat parallel to the one in 1948, when the complacency of the Republican party won the presidential election for Mr Truman. It is barely possible that the same kind of inaction in the Democratic party could hand over the White House on a silver platter to Mr Nixon.

I was just in the mood for a week-end vacation, when along came an invitation, at Oil India's behest, to visit Assam, and I gladly accepted it, with the feeling that it would anyway be a pleasant interlude. Little did I realise what I was letting myself in for. In rather less than two days, and that includes sleeping time, the attempt was made to explain upon a lay audience the whole gamut of oil from prospecting for it to the pro-

cess of taking it cross-country by pipe-line. I don't pretend to have learnt an awful lot; and, in any case, I am leaving the technical aspects of the trip to be dealt with on a suitable occasion and by an appropriate pen. I am concerned, shall I say, with the politics of oil. The whole thing started more than a hundred years ago, when, in 1828 (exactly a hundred years before Indian Finance was to make its appearance), a young officer recorded evidence of having found oil. But nothing much happened for a good while thereafter. It was only with the turn of the century that methodical drilling of oil had commenced. And it was only in the 'twenties that the Burmah Oil Company took over the Assam Oil Company; that up-to-date equipment was purchased; and

that the refinery was built at Digboi. We shall now skip a few decades, say, to the time when oil was struck at Nahorkatiya; for, it was only then that India began to figure on the world oil-map. The next step was the formation of Oil India, a venture in which The Burmah Oil Company and the Indian Government are partners. Oil India was simply to produce the oil and make it available through pipe-line to the two public sector refineries at Gauhati and Barauni. Foreign exchange assistance for the pipe-line project was forthcoming both from the Burmah Oil Company and the UK Government, amounting in all to £23 million. And what I saw in the Digboi region and thereabouts was evidence of the work speeding apace. In due course, 2.75 million tons of

crude oil will be made available to the two refineries. (Rana Singh, a Government-appointed Director to Oil India, has hopes of raising the capacity of Gauhati in the not too distant future). On the basis that the prudent oil company seeks to take out not more than 1/15th of the oil present in any particular well, the already proved reserves must be of the order of 37.5 million tons, although the conservative estimate vouchsafed to the press in Digboi was in the environs of 30 million tons. But the most important thing is that the oil industry is based on hope, and every one that I talked with in Digboi was bubbling over with enthusiasm and optimism. Such, then, a new era for oil in India. Yes, and they were very hospitable hosts.

ROURKELA

introduces a new
steel making process
in India...

steel produced
in 40 minutes!

first L.D. PLANT
commissioned on January 12

A ball of flame with the brightness of the sun... a shower of sparks...and inside the L.D. Converter, in place of molten pig iron and scrap there bubbles 40 tons of high quality steel...all within 40 minutes.

At Rourkela, now, this means a ton of high grade steel per minute per Converter—steel suitable for finishing into flat products, like wide and narrow heavy plates, hot-rolled and cold-rolled sheets, strips and tin-plates, products needed for the manufacture of automobile bodies, railway wagons, ships, fans and other articles of daily use.

Three 40-ton L.D. Converters have been set up at Rourkela. These will produce 750,000 tons of ingot steel annually. Thirty-four L.D. Converters are at present operating in 16 different locations in various parts of the world. The L.D. plant at Rourkela is one of the largest in the world and the only one of its kind in India. Steel-making by the L.D. Process has come to stay.

HOW STEEL
IS MADE BY
L.D. PROCESS

A jet of oxygen of 99.5% purity, produced in an adjacent Oxygen Plant, is blown at supersonic speed onto the molten bath of hot metal. The high temperature burns away impurities like carbon, nitrogen, phosphorus and sulphur, leaving low-carbon, high-purity steel.

GATEWAY GOSSIP

WITH the sizable improvement in offtake of cloth noticeable during the past few months, the cotton textile industry has slowly regained its lost position among investors. The change for the better has stemmed both from the increase in internal offtake and an uptrend in exports. For the industry the year 1958 may be termed the "crisis" year. During this year there had been an allround decline in offtake and mounting unsold stocks with mills were a source of constant worry both to the industry and Government. Exports of mill made cloth declined to a low of 582 million yards in 1958 as compared with 840 million yards in the previous year. The position underwent a dramatic change in 1959 as exports are estimated to be of the order of 750 million yards. Stocks of both sold and unsold cloth have also recorded a substantial decline as they are placed at around 3 lakh bales as against 5.8 lakh bales at the end of 1958 and 6.6 lakh bales at the end of 1957. It is, however, to be noted that upto the end of the first half of the past year the industry's performance in the export field continued to cause a great deal of worry as total exports of cotton piece goods from India during the first six months of the year were running below those for the corresponding period of 1957. Exports in the second half of the year looked up to give a satisfactory overall picture for the year. This fine performance of the industry in the second half of the year has

Cotton Textile Industry

revived the hope that it will be possible for our country to reach the target of 1000 million yards of cloth export envisaged in the Second Five Year Plan.

But the picture of cotton textile industry as it obtains at the present moment is not all bright. Apprehensions have come to be expressed about the ability of the industry to meet the improved demand in full without a radical change in Government's textile policy. In the first place after the crisis of 1957 and 1958 output of the industry has begun to show a declining trend. It is claimed that this reactionary tendency has been brought about largely by the serious blow dealt to the industry in 1956 in the shape of heavy excise duties. Be that as it may, it cannot be gainsaid that there has been a coincidence of the excise levy and the accumulation of stocks with mills. There had been mill closures with consequent unemployment in the organised sector. All that resulted in a reduction of entrepreneur interest in the industry as a whole. And at a time when the industry was emerging into the light of improved offtake it has come to be plagued with ideas of scarcity of raw cotton. The sizable fall in domestic cotton production during the current year has aroused genuine apprehensions about a shortage of the raw material for the industry. The plea by the spokesmen of the industry quite early in the season about the need for larger cotton imports was

not taken seriously at first but soon enough Government woke up to the realities of the cotton supply situation by agreeing to increase imports. A categorical assurance has been given to the industry as regards supplies of raw cotton as also for maintaining cloth production at the required level. Speaking at the All India Textile Conference in Bombay early this month, Mr Manubhai Shah, Union Minister of Industry, has made it clear that there is no need for concern as the situation is well in hand. "One disturbing factor which has of late caused some concern has been the apprehension over inadequate availability of cotton owing to fears of comparative reduction in the out-turn of the crop this year, with the result that prices of Indian cotton have registered a sharp upward trend. Several steps have been taken and are being taken to halt this trend. Government on its part has given a categorical assurance that production to meet the full needs of the Indian economy, both for internal consumption and external demands (exports) will not be allowed to suffer for lack of cotton supplies. It is to be hoped that with this assurance, the industry should be in a position to adjust matters in such a manner that neither cloth production nor the improved trend in exports of textiles receives any setback."

Mr Shah has also countered the argument that there will still be a need for substantially increasing

the output of the organised sector to meet the growing domestic demand by pointing out firstly that "consumer demand is not altogether too elastic to warrant wide fluctuations" and secondly that the Indian cotton textile industry even as it stands today can produce over 6000 million yards and more if necessary.

But the ordinary consumer in the country is still made to pay high prices for the cloth he buys in the retail market. It is undeniable that talks about a growing shortage of cloth in the press and platforms have accelerated the pace of consumer buying with the trade taking advantage of the situation to put up prices. But it would appear that unsocial elements are also exploiting the situation to their nefarious ends by holding up the normal flow of supplies to the retail markets. This is a matter for immediate Government action as otherwise the assurances of adequate supplies of cloth in the country will have no practical significance to the ordinary consumer.

It cannot, however, be denied that the cotton textile situation is far from satisfactory. It is true that the industry will be able to produce over 6000 million yards but the fact remains that output in the past two years has declined sizably from the high level attained in 1957. It may not be practicable for the industry to increase its output sizably, overnight as it were, as many mills have passed through various vicissitudes since 1956.

GATEWAY NOTES

Economic Development of Gujerat

The business community of the Gujerat region has started deliberations well in advance on the economic problems they have to tackle with the formation of the new State. Inaugurating the Convention held at Ahmedabad, Mr G. L. Mehta emphasised the need for rationalising the administration of industrialists and businessmen of the proposed State. He dwelt at length on the changes that have manifested in the concept of business practices and objectives which arose out of the changing pattern of economy and outlook in the country and exhorted the delegates to adjust their own thinking in such a way as to assist the nation in achieving a speedy growth of economy. Mr Mehta also deprecated the general practice of the businessmen to find fault with the authorities and pleaded for paying more attention to eliminate the drawbacks found in the industrial and business systems.

At the concluding session, the delegates assured the Government of their whole-hearted support and fullest co-operation in all programmes that are to be adopted for the general development of the State. The Convention also appointed an Expert Committee consisting of leading industrialists and educationalists to render adequate help to the Planning Commission and the Central Government on the proper utilisation of the resources of the new State and the implementation of the various plan schemes. They, however, expressed great distress at the slow progress in exploiting the vast resources of the region and hoped that the formation of the new State will create the necessary conditions for the general development of the region.

It is appropriate, in this connection, to recall that the new State will have several economic assets. The textile industry of that region is of vast size. Oil has been discovered at Cambay and other areas of Gujerat and if the deposit is found in abundant quantity it can be fully exploited to the benefit of the State. The Convention urged the Union Government to speed up the oil exploration programme and establish a refinery in that region. The State also possesses a major port at Kandla and there are natural facilities for developing more ports along the coastline. The delegates called upon the authorities to take appropriate steps in this direction. They also laid great emphasis on the development of rail and road transport in the proposed State.

The two serious handicaps which the new State will have to overcome are the deficit budgetary position and the power shortage. Regarding the first it can be expected that adequate financial assistance will be rendered by the Bombay State. The latter can only be solved by developing hydro-electric resources of the region. It is indeed heartening to note that the Convention has decided to set up a development and research council for Gujerat for carrying out statistical and techno-economic surveys. The setting up of a fertiliser plant in that region will be of immense help in improving the agricultural yield. A proper dispersal of industries in the new State can go a long way toward expediting the all-round development of Gujerat at large.

★

LIC Loans

Mr P. A. Gopalakrishnan, the Chairman of the Life Insurance Corporation of India, has at a recent press conference held at Bombay, disclosed the new proposal of the Corporation to grant loans for the construction of houses. The scheme formulated by the Corporation can be conveniently grouped under three heads: loans to co-operative housing societies, loans to public limited companies, and loans to individual policy holders. The new proposal of the LIC to finance housing schemes marks a significant departure in emphasis from the investment policy hitherto pursued by the Corporation.

The grave housing shortage in the country for all classes has been causing a severe head-ache both to the public and to the authorities and the attempt of the LIC to relieve the present situation will be appreciated. Though the conditions and terms prescribed by the Corporation for granting the loans do not appear quite unreasonable, it will be appreciated if the LIC endeavours to make the scheme more attractive by lowering the minimum amount of Rs 20,000 and by extending the scheme to medium sized cities and big towns so that the lower middle class will also be benefited.

The offer to the public limited companies for housing their employees appears to be more useful and practicable. The new arrangement can be of immense relief and attraction for those companies to start new industries in new areas where the housing situation is none too happy.

This is not the first time the Corporation has come out with a scheme to help tackle the housing problem of the country. Last year, the Corporation offered to the State Governments loans to the tune of Rs 3 crores for financing the middle income groups. But it is distressing to point out that not a single building has been constructed under that scheme mainly due to the inefficiency of the State Governments to farm out the loans to prospective borrowers.

GATEWAY MARKETS

Bullion Prices React after Touching a New High

THE upward trend in prices, noticed on the Bombay Bullion Exchange in the previous week, gathered fresh momentum this week with Gold futures rising to a new high level. The spurt in both the metals was attributed mainly to a further tightening of the bull grip over the market. While the "shorts" were obliged to cover their sales at rising prices, the bull operators from North India and Rajasthan became more aggressive. But the rise in both the metals was steep enough to attract profit-taking, being influenced by the subdued sentiment prevailing in the spot section.

In the Gold section, arrivals were higher at 4,000 tolas as against an offtake of only 2,000 tolas. Unrefined metal receipts amounted to 3,900 tolas. Spot gold changed hands at Rs 128.22 to Rs 128.65, to finish at the former level.

Sentiment in the Silver section was influenced by the reported increase in arrivals in Bombay as well as in Delhi, while offtake remained normal. Arrivals amounted to 20 bars as against an offtake of only 8 bars. Spot rates moved between Rs 213.56 and Rs 213.31 to close at the latter level.

★

Yarn

Conditions in the Bombay Yarn market remained generally firm. There was a further rise in the prices of all yarns on account of good upcountry demand. Excellent reports from the rayon cloth market also aided the bullish sentiment. Acetate yarn was the only exemption to the general trend. A section of the trade feared that the supplies of rayon yarn would fall short of demand. Fears of a shortage, therefore, led to a sudden rise in prices.

During the January-June 1960 period, staple-fibre yarn will be allowed for export on a "first-come-first-served" basis within a ceiling of 1½ million pounds to all permissible destinations excluding Tibet and the Portuguese possessions in India. The licensing will be done on shipping bills, which will be made valid for a period of three months from the date of posting or till the 30th June 1960 whichever is earlier. Licensing will be stopped as soon as the ceiling is reached.

★

Oils & Oilseeds

A sharp rise in Groundnut prices provided the main feature

of trading on the Bombay Oilseeds Exchange. The recent upward trend gathered fresh momentum with spot as well as forward prices rising to new high levels in the current season. Buyers were inclined to be aggressive following reports of insufficient arrivals of the crop in major growing areas. The supply position also continued to be tight with crushers and vanaspathi manufacturers eagerly lifting the available stocks. Consequently, the February contract was pushed up to Rs 204.25, showing a rise of nearly Rs 5 over the week-end level. In the Spot section, bold quality was quoted at Rs 41.12 and Groundnut Oil at Rs 21.19.

Trading in the Castorseed section was featured by a marked revival in the operators' confidence in the export outlook for castor oil. It was felt that India would not be hit substantially in view of the fact that Brazil had already disposed of the bulk of its castor oil surplus and that it would not be a free seller till it received the fresh harvest some time in October. Ready was quoted at Rs 32.37 and Castor Oil, commercial quality, at Rs 17.62.

The behaviour of the Linseed and Cottonseed sections was generally bullish. Linseed ready was quoted at Rs 34.25 and Linseed Oil at Rs 16.37.

★

Non-Ferrous Metals

Conditions in the Bombay Non-Ferrous Metal market remained generally dull with prices displaying a slightly easier tendency. It appeared that outside interests, who had stored ready goods in the rising market, came in as sellers against their stocks. This affected market sentiment.

Major manufacturers of copper and brass sheets have announced a moderate reduction in their prices for January. Prices of copper sheets have been reduced from Rs 502 to Rs 490 per 100 kg and those of brass sheets from Rs 384 to Rs 376. Copper scrap is quoted at Rs 206 per cwt.

Zinc is quoted firm at Rs 173 on reports of shortage of the metal. It appears that the State Trading Corporation, which was to provide a substantial portion of the requirements of the scheduled industries, has failed to release the metal for nearly three months now. This is probably due to the delay in the receipt of Russian zinc under rupee payment. Again, the supplies imported by the manufacturers directly have also dwindled sharply. With the result, their dependence on the STC has increased.

Lead was devoid of any interest, being quoted at Rs 75 per cwt.

Due to rumours that unutilised tin licences would be allowed to be utilised against imports of the metal, Tin price advanced to Rs 144 from Rs 134.50 per quarter quoted in the previous week.

WORLD OF COTTON

AFTER a spell of hesitancy observed last week, prices in the Bombay cotton futures market have resumed its upward march with Jharilla March contract shooting up from the week-end level of Rs 764.50 to Rs 774.25. The series of measures taken by the authorities to check the rising trend in prices and to ensure adequate supply of cotton to the mill industry at the ceiling level seem to have failed.

The latest advance of the market is attributed to hectic short-covering and aggressive buying, induced by the strengthening belief that, even after resort to quality control, the cotton situation will continue to be bullish. A section of the trade has been obliged to get out of the market in view of the persisting reports of mill purchases of spot cotton at sizable premia. The latest adverse turn in weather in Gujerat and Saurashtra has also contributed to the firmer trend in prices.

It appears that, for the time being, the Textile Commissioner has asked the mill to put up with the present supply position as best they can. In case, however, they find difficulty to obtain cotton at ceiling prices, they are advised to report to the Textile Commissioner who will requisition from merchants such stocks as are held by them.

Informed quarters believe that, in view of the genuine shortage of supplies, there is no possibility of any easing in prices in the near future. The Government decision to allow substantially larger quantities of cotton for import during the present season has also failed to arrest the soaring prices. This is largely because of the fact that, in the first place, foreign prices are rapidly advancing and, in the second, non-exporting mills are finding it difficult to buy cotton at a premium of 20 per cent over the ruling prices abroad.

Meanwhile, quality survey of Indian cotton had been introduced from 1st January. Initial quotas have been fixed for mills at 50 per cent of the consumption during the cotton year 1958-59. For certain upcountry mills, the quotas will be allocated at 60 per cent. The earlier notification, prescribing the maximum limit for stocks of Indian cotton to be held by the mills, has been cancelled.

Individual quota letters for Indian cotton for the 1959-60 season will be issued separately to the mills in due course. The issue of further quotas will be related to the actual production in the units and will be related also to the consumption of foreign cotton in a manner which will be decided hereafter. But, opposition to the Government measures, such as quality control on cotton and res-

trictions on mill buying is growing especially among farmers.

x

SPOT MARKET:

Trading in the Spot market has tended to be very dull. Although mills are eager to buy, sellers are hesitant to offer owing to the hardening trend in upcountry centres. In view of the marked resistance from farmers and the genuine scarcity of supplies, it is difficult to imagine how mill buyers are going to be provided with adequate supplies of suitable quantities of indigenous cotton. The Government have held out assurances of making proper arrangements to get supplies from abroad. Apart from this, Government decisions are generally so much delayed that hardly any purpose is served when they are actually made.

On the export front, they were no fresh developments. Shippers were not in a hurry to cover their requirements, as a large part of the export business was reported to have been put through for distant deliveries. In view of the very tight domestic supply position of cotton, there was little hope of any further export quotas of Bengal Deshi for the current season.

As a matter of fact, the Cotton Advisory Board has recommended

to the Government of India that no further export of cotton should be allowed in view of the continued shortage of Indian cotton in the country. The Board has decided to meet again in March to reassess the cotton supply position.

On the import front, mills showed good interest in East African cotton. A small turnover also took place in Egyptian Menoufi and Karnak and also in new crop Gezira Sudans. In this connection, it may be added that an agreement under PL-480 for the import of 3 lakh bales of cotton has been signed with the USA. This quantity will be in addition to 1.20 lakh bales covered by the agreement signed in November last and which has already been released for import. Out of the 3 lakh bales covered by the new agreement, 1.80 lakh bales will be of staple length below 1 1/16". This quantity is being released for licensing with immediate effect.

x

WORLD COTTON OUTLOOK:

Earlier apprehension over the short-term outlook for cotton has now given way to greater confidence. The supply, this season, is expected to be much larger. There has been a reduction in the carry-over stocks by over a million

BOMBAY REVIEW

bales as on the 31st August, 1959. Production is likely to go up by at least 3 million bales. Thus, the supply will be the largest in several years. The increase is mainly in the United States where, as a result of a much larger crop, supply is estimated at 23.6 million bales as against 20.2 million bales last season.

The US cotton consumption is on the increase; and there is also an assurance of larger export market this season. Disappearance, presently estimated at about 14.5 million bales, therefore, should be about equal to current production and any variation in the end-season stocks in the USA is likely to be relatively minor.

Production outside the USA is expected to decline to around 17 million bales against 17.4 million bales in 1958-59. Production is lower in Mexico, Central America, Uganda, Syria, Greece and India, which will only be partly offset by increases in Brazil, Sudan and Pakistan.

As for consumption, there are chances of consumption outside the USA exceeding the record of 21 million bales, reached in 1956-57. The consumption, last season, was 20.3 million bales. The overall trade outlook, however, remains favourable.

SANFORIZED
MADE IN INDIA

IT is one of the tragedies of our times that food as a problem of shortage has to be discussed almost daily even as it has to be eaten daily. While the discussion continues, producing at times some food for thought, as many as 25 million people continue to be condemned to a ship-to-mouth existence. Most certainly this situation is galling to national self-respect although the food shortage, euphemistically called 'marginal', is only of the order of 3-4 million tons a year. That reminds one of Micawber who said: "Income £20, expenditure £19-19-6, result happiness; expenditure £20-0-6, result misery". He could not have possibly thought that kind of misery was only 'marginal' and so not unbearable. Even so, there is nothing marginal about the misery caused to the nation by the food shortage which has already loaded it with a fantastic debt.

This national debt on account of food alone, which does not include the loan part of the counterpart funds under the latest (November 1959) P.L. 480 Agreement with the United States, has by now reached a total of about Rs 260 crores, of which two-thirds have been incurred since 1956. While it is a redeeming factor that the rupee proceeds of this food, sold largely to urban consumers,

More Domestic Food Through P.L. 480 Food

have financed development in general, they cannot be said to have financed agricultural development in particular. To say that if these funds had not been available the Second Plan provisions for agriculture (including community development) and irrigation would have been cut down would be to ignore the fact that the five-year provision for agriculture was actually reduced from the original figure of Rs 625 crores at 1957-58 prices to Rs 510 crores at the same prices and that for irrigation by more than Rs 100 crores. But to say, on the other hand, that if these funds had not been available the allocations for agriculture and irrigation might well have been cut down further would also be wrong for the reason that the Government could not, in any case, have found it physically possible to reduce further the provisions which, together, were already at the barest minimum level.

It would appear that the loaned counterpart funds under the P.L. 480 deals since the first year of the Second Plan have not benefited, even in a remote sense, the related sectors of agriculture and irrigation. If, however, a policy decision to the effect that the larger part of these funds would be earmarked for agricultural development had been taken and implemented, the original Plan allocations could have been mostly retained with a view to reaching the revised (but later forgotten) target of about 80 million tons of foodgrains production by the end of the Plan. But that unfortunately was not to be, with the result that development could not be stepped up to the point of enabling the country to achieve complete food self-sufficiency by 1961 and the Government threw up their hands in despair and proclaimed from the house-tops that self-sufficiency was an 'ever-receding deal'. The sequel of it all was that the Government had to go in for a fourth P.L. 480 deal, this time as recently as November 1959.

It is too late in the day to plead for an appropriate policy which could turn this latest P.L. 480 deal to the direct benefit of Indian agriculture, because the counterpart funds thereof, accruing by stages till March 1961, are probably intended for general development purposes. But it is still early enough to plead for a new policy which could provide for the utilisation of P.L. 480 food that is most likely to be imported under a future deal, in the financing of a whole range of labour-intensive projects in the related sectors of agriculture and irrigation. This journal, it may be recalled here, has already canvassed, in brief outline, an appropriate programme for the purpose of producing more domestic food with the help

of P.L. 480 food. (Vide: Leading Article entitled 'The Achilles Heel of Developing Economics' in the 'Indian Finance' issue of October 17, 1959). The main element of this programme which has been described as "a practical crash programme for Indian agriculture covering a short period of, say, three years" are reproduced below in their entirety:

(1) Mobilisation of surplus rural labour, at wages which would be a third more than the prevailing agricultural wage rates in the respective localities, (i) for completing the construction of canals, distributaries and field channels in the commanded areas of all major and medium irrigation projects, (ii) for renovation of all older irrigation tanks which have silted up and for transfer of as much of the silt as possible to the fields in the surrounding villages, (iii) for construction of new tanks, wherever possible, without detriment to the flow of rain water into existing tanks, (iv) for construction of tens of thousands of small masonry wells and big or small kutchas wherever sub-soil springs are copious at depths ranging up to 50 feet, (v) for planting widely certain varieties of quick-growing trees (taking no more than three years) which can supply green manure as well as firewood and for planting on the fences certain varieties of green manure plants which can grow luxuriantly within a year or two and (vi) for work on the making and burning of bricks required for masonry wells.

(2) A scheme to bring about the cultivation of green manure crops on all irrigated lands and lands well watered by rain, either on the bunds of fields during the crop season itself or as catch crops in the off-season.

(3) Concentration of resources in chemical fertilisers and heavy-yielding strains of seeds in irrigated areas in judicious combination with organic manures in the form of cowdung, green manure and compost.

(4) A scheme for the supply of improved implements, locally made plunger pumps, persian wheels, etc., on the basis of instalment credit.

(5) A scheme for expeditious distribution of credit for short-term and medium-term cultivation expenses directly through the agency of extension Services wherever supervised credit through cooperatives is not possible.

(6) A Scheme for renovating old weirs or constructing new ones along with the take-off channels, wherever possible in the river systems.

(7) For the exclusive purpose

of supporting this short-term programme, a fresh deal to be negotiated with the United States (which, this year, has all-time record stocks of 35 million tons of wheat and 63 million tons of coarser grains) for securing, over the three-year period, six million tons of foodgrains for distribution to selected retail shops, cooperative stores and fair price or informal ration shops.

(8) Payment of wages to the labour force working on this programme in the form of grain coupons to the extent of 60 per cent, handloom, khadi or mill cloth coupons to the extent of 30 per cent.

(9) A policy declaration to the effect that there will be no increase, during the three-year period, in the combined incidence of land revenue, agricultural income-tax and cesses, water rates, commodity taxes and betterment levies.

(10) A scheme for the indigenous production of chemical fertilisers on the required scale.

The implications and potentialities of the suggested programme bearing on construction would need to be presented here. In the first place it has to be noted that this is, by and large, a labour-intensive programme which is both employment-oriented and production oriented. The annual employment potential of this programme can be as much as 3 million workers who now constitute a sizable part of the virtually unemployed segment of the rural labour force and are thus a drag on the agricultural employment market in the sense of depressing wages all round. If the daily foodgrains requirement for 4 adult consumption units of an average worker's family is fixed as 5 lbs representing the kind part of his daily wage, it will mean that, on the basis of 300 day's work in a year, 2 million tons foodgrains would be sufficient to employ about 3 million workers.

On the wages side, the implication is that if the kind part of the daily wage is fixed as 5 lbs and this is taken to represent 60 per cent of that wage, it will be the equivalent of 14-15 annas on the basis that 5 lbs. of imported P.L. 480 food would cost that much.

In which case, the daily wage will amount to Rs 1/8 which, broadly speaking, will represent a third more than the present average level of agricultural wages for the more exacting operations. A general minimum wage of Rs 1-8 per day, fixed under this programme, may also have the effect of raising the agricultural wages all around. The total annual wages bill under this programme would amount to Rs 135 crores, of which Rs 100 crores would be the money equivalent of 2 million tons of P.L. 480 food-

January 16, 1960

grains. Payment of an adequate part of the wage in kind has the advantage that it will obviate the need for an initial outlay of money which will have to be later recovered by the sale of foodgrains to workers if they are paid wholly cash wages. Payment of 10 per cent of the wage in the form of cloth coupons has the advantage that the worker-family's minimum requirement of cloth (roughly 50 yards) will be met at fair prices; this, in turn, will provide a substantial market, of the value of Rs 13.5 crores, for the handloom or the cotton mill industry. And the inflationary impact of the balance of the annual wages bill will also be negligible over the country as a whole.

On the major irrigation side, the programme visualises the completion of canals, distributaries and field channels in the commanded areas of all major and medium projects. It may be recalled here that the new irrigation potential of about 7 million acres at the headworks at the end of the first Plan was reflected as irrigation potential at the outlets only to the extent of about 3 million acres; this disparity was mostly due to the fact that distributaries and field channels were not fully completed. Although this backlog of construction of distributaries and field channels may have been cleared by now, the problem will continue because it may be expected that the likely creation of a new irrigation potential of about 10 million acres at the headworks at the end of the Second Plan will be reflected as irrigation potential at the outlets only to the extent of 4 million acres. That will mean that distributaries and field channels to an aggregate length of 75,000 miles for the remaining 6 million acres will have to be expeditiously constructed. At the rate of 37,500 miles of distributary and field channel construction every year by an appropriate number of labourers under this programme, this work can be completed in two years. Assuming that actual utilisation of the irrigation facilities will cover at least 5 million acres, the additional annual food production potential on this account alone will be a million tons, at a conservative estimate from the third year onwards.

On the minor irrigation side, the work on renovation of tanks can be aimed at creating an additional irrigation potential of at least 5 million acres which may be expected to be fully utilised from the third year onwards, adding an annual food production potential of another million tons at a conservative estimate. The well construction programme can be aimed at creating an additional irrigation potential of at least 2.5 million acres with an additional food production potential of 0.5 million tons, at a conservative estimate, from the third year onwards. This will involve the

construction of 500,000 masonry and kutchas wells of different capacities, each well having, on the average, an irrigation potential of 5 acres and costing, again on the average, Rs 1,000.

As for the green manure part of the programme, its food production potential can be substantial. If the target of irrigated area to be covered by green manuring is limited to a modest figure of 37.5 million acres in two years, even that will mean an additional food production potential of 1.5 million tons.

Altogether, the construction part

of this programme covering distributary and channel construction, tank renovation, well construction and green manure planting can be expected to create a total additional food production potential of upwards of 4 million tons from the third year onwards. At a rough estimate, the value of that much output will be Rs 300-320 crores. If the non-wage cost of the construction programme is broadly assumed as Rs 50 crores for the first two years together, the total two-year outlay would come to about Rs 320 crores. An outlay valued at Rs 300-320 crores for

an outlay of Rs 320 crores should be pretty good performance in the sector of agriculture. If this programme is entrusted to the Community Development agency which is now covering just under two-thirds of all villages in the country and to the Public Works and Revenue Departments in the rest of the countryside, it can be easily and cheaply carried out. There will, therefore, be no need for a new machinery or organisation for executing this programme covering the kind of construction activities with which the Departments concerned are all too familiar.

Businessmen are Invited to Attend THE ALL INDIA BUSINESSMEN'S CONVENTION (Organised by the Federation of Indian Chambers of Commerce and Industry) NEW DELHI

Sunday, the 24th and Monday, the 25th January, 1960
You can become a Member of the Reception Committee by paying a fee of Rs. 1,000/., or Rs. 500/., or Rs. 100/..

You can attend as a Delegate by paying a nominal fee of Rs. 5/-

You can attend as a visitor without payment of any fee.

Invitations will be issued on request

For other particulars please contact:

The Secretary
ALL INDIA BUSINESSMEN'S CONVENTION
FEDERATION HOUSE, NEW DELHI-1.

Space donated by:

NORTH INDIAN NOTES

Bihar's Development

Though noted for her mineral wealth, Bihar has been trailing behind other States in industrial development. Progress under the first and second plans was modest because of the limited outlay incurred for industrial development. One significant thing that had been done by the State Government in the course of the Second Plan was to order a techno-economic survey of the State by the National Council for Applied Economic research. The survey since completed has revealed vast potentialities for industrial development of the State.

The survey has aroused interest among the business circles in the State for a realistic plan, based on the recommendations of the report, for the industrial development of the State. At a recent meeting held by the Bihar Industries Association, it has been urged upon the State Government to take early decisions on the findings of the survey so that the advantage of being first in the field with a detailed survey of industrial potential shall not be lost. The Association urged the Union Government and the Planning Commission to accept the view of the techno-economic survey and to grant additional outlay for the development of the State as envisaged by the survey team.

In pointing the scope for development, the Association has laid special emphasis on the development of small-scale industries, and toward this, preferential treatment has been urged. In this connection it is pointed out that in giving incentive for the setting up of small-scale industries provision should be made that for a fixed period after their establishment these industries would be exempted from certain provisions of Labour laws in order to help develop their industrial programmes.

High rates for electricity at present charged by the State Electricity Board is a factor that hinders industrial development. The association has pleaded for necessary revision of rates with a view to equalising advantages in respect of electricity rates.

Another matter in respect of which action has been sought by the Association relates to the impact of the multiplicity of sales taxes now in force in the State. Sales tax on basic raw materials used in industries constitutes a major disincentive to prospective industrialists to take up new schemes for industrial production. The Association has strongly urged the State Government that the raw materials consumed by the industries should be exempted from the levy of sales tax.

Industries in U. P.

The Progress Review of the Directorate of Industries Uttar Pradesh for 1958-59 highlights the industrial achievements the State has made under the First and Second Five Year Plans. One of the developing States in the country, UP has made progress only in the direction of light industries of which the State has a fair proportion. It is the leading producer of sugar and during 1957-58, 68 sugar factories (excluding the experimental sugar factory attached to the National Sugar Institute) were functioning in the State. The power alcohol industry operating on the basis of sugar industry's by-product molasses is also concentrated in the UP. During 1957-58, 12 distilleries were engaged in the production of power alcohol. Four new distilleries are also likely to be set up in the State in the near future.

UP contribute about 50 per cent of the total production of glass and glasswares in the country. In the large-scale sector there are 30 glass factories which manufacture variety of glass articles including lantern chimneys, globes and shades for electric lights, glass tumblers, bottles and phials, glass sheets, window panes etc. During 1958, 25 glass factories having an installed capacity of 6,640 tons per month produced approximately 40,000 tons of goods valued at Rs 5 crores.

Other major industries of the State are cotton textiles, jute, woollen textiles, paper and straw board, etc. The cotton textile industry is one of the most important industries in the State. The total number of mills in the State is 31 consisting of 18 composite mills, 10 spinning mills and 3 weaving mills with 8,25,000 spindles and 13,000 looms. Heavy accumulation of stocks and uneconomic working of old machinery caused a setback to the textile industry in the State during 1958.

While these are established industries, the state has also been making progress in the production of heavy chemicals such as sulphuric acid, hydro-chloric acid, nitric acid, sodium sulphate, sodium and potassium dichromates, sodium thiosulphate, sodium silicate and potassium nitrate. There are three sulphuric acid plants and four plants for the production of nitric acid.

An important factory to be set up in the private sector in the second Five Year Plan was the one for manufacturing eveready brand torches. The factory employs nearly 224 workers and produced 17,16,400 pieces of torches worth about Rs 40 lakhs.

The State Government are planning for more rapid industrial development under the Third Plan. The aluminium plant to be set up by the Birlas would be the first major factory in the heavy industry. The Rihand Project when it is completed would provide further scope for the development of industries in the State.

NORTH INDIAN MARKETS

FMC Warning to Gur Traders

It would be recalled that Gur futures in Delhi and Uttar Pradesh centres had been persistently rising during the past few days. An idea of the extent of the rise can be had from the fact that gur Phagun in Delhi touched a new high level of Rs 17.95 last week and Rs 16.90 in the Hapur market; but have since reacted to Rs 17.74 and Rs 16.55 respectively. The Forward Markets Commission has taken a serious note of this spurt in gur futures. Taking into account the sugarcane crop, arrivals in the market and the supply and demand position, the Commission considers that there is no justification for such a rise in gur prices.

Heavy arrivals of new production usually keep the market down during the October-March period. Reports about gur production are generally satisfactory, although a section of the trade fears that more cane will be diverted to sugar and khandasari units on account of higher returns.

The FMC has now warned the trade that it will not hesitate to take further stringent action, such as effecting modifications in the scheme of special margins of current contracts, fixing ceilings, suspending trading and even closing out outstanding contracts at any rates which it might consider appropriate in order to curb speculative excesses.

In the ready section, gur pan-sera quality is quoted at Rs 16.75 to Rs 17 per maund. At Hapur, daily arrivals averaged 5,000 maunds. Most of the arrivals were of Balti quality, which was very much in request from Gujarat and Saurashtra. *

Sugar

Sugar markets are ruling quiet. In Delhi, prices have shown a welcome drop of 50 nP to 62 nP a maund in the last few days. For instance, Simbhauli sugar, which was quoted at Rs 41 before the Government announced the release of 1.75 lakh tons, is now quoted around Rs 40.37 per bag.

Following the reports of decontrol of sugar, prices had been showing an upward trend in the past few weeks. On the basis of the ex-factory controlled price of sugar, produced by the vacuum-pan factories in Uttar Pradesh and North Bihar (Rs 37.85 for D-29), the standard variety of sugar should be available to the consumer in Delhi at Rs 40 a maund, which includes an octroi duty of Rs 1.75 and freight and cartage of about 37 nP. As the reports of decontrol, which induced the traders to withhold stocks in anticipation of a higher price, have not materialised so far. Instead, the status quo is maintained; and the

market has naturally reacted as it should.

Despite good demand, the Khandasari market is ruling quiet due to loading restrictions.

Foodgrains

Quiet conditions have been witnessed in the Hapur Foodgrains market during the week, thanks to slack demand and comfortable stock position accompanied with bright prospects of "rabi" crops. The market for Pulses has continued to be dull and featureless.

Wheat prices have remained almost unchanged, to be quoted at Rs 18 for the average quality and Rs 19.25 for the farm variety. The Rice section rules quietly steady. Gram prices have declined modestly due to good stock position and quieter advices from the Punjab. Barley and Dejher have sought lower levels in the absence of any demand. Maize and Bajra have, however, continued to attract good consumers' support, while the supply position is reported to be satisfactory. The Peas and Arhar markets remain depressed on lack of demand coupled with fair standing crops.

Meanwhile, India is reported to have bought one lakh tons of wheat from Australia. This wheat purchase is against sterling payment and totals about £2 million. It is understood that 60,000 tons of the one lakh tons bought from Australia are under the new PL-480 agreement with the USA, which requires the Government of India to purchase 400,000 tons of wheat through normal commercial channels from the wheat-producing countries.

According to the present indications, the remaining 340,000 tons of the stipulated quantity of wheat will be bought in quantities throughout the new year to fulfil the requirement of the food agreement with the USA. India had also proposed to Australia, some time ago, to import wheat against purchase by Australia of Indian goods; but the informal soundings in this context did not produce satisfactory results. *

Shellac

In the Calcutta market, prices of Shellac have developed a hardening tendency with Pure TN. quoted at Rs 1400 per maund with buyers at this level. Although it is known from where the demand is, it is generally thought that Britain should be in the market for substantial quantities, as stocks in London are reported to be considerably low.

Stocks in London, as at the end of December, showed a further decline and, with deliveries exceeding landings by 1,582 packages, the overall stock is down to 6,491 packages. Only once in the past seven years have the stocks dropped below this level. This was in November 1956 when, due to exceptional demand at that time from the gramophone records industry, stocks dropped to 6,263 packages. Normal stocks in London are reckoned at 20,000 packages.

THE PENINSULA

THE third All-India Labour Economics Conference which was held in Madras in the first week of this month, has served to spotlight the growing concern at the peculiar problem presented by industrial relations in the country. Though inherent in an industrial society, labour-management estrangement often resulting in the disruption of industrial production has particularly severe repercussions on a developing economy. Past experience has not been particularly pleasing and recurring labour strikes and lock-outs has often kept the problem at boiling points.

For the country, which is poised for big strides in economic development, industrial peace is of extreme importance. This necessarily calls for a definite and co-ordinated labour policy which would subserve industrial peace by minimising possible occurrences of trouble in the industrial front. The policy has necessarily to be comprehensive to take into account the complaints relating to inadequacy of wages, lack of incentives, excessive appropriation of profits by management, unsatisfactory working conditions etc, voiced by labour on the one hand, and those relating to low productivity, growing indiscipline, soaring labour costs, unchecked absenteeism, etc voiced by capital on the other.

In the context of the low standard of living of workers, the problem of industrial relations boils down to a question of promoting labour welfare. The Government of India's policy has also been oriented along this line. A lot of legislation aimed at protecting workers' rights to decent salary and working conditions has been passed. However, as Mr Jagjivan Ram, Union Minister for Railways, observed in his address which was read out at the conference, it is a moot point whether the totality of its impact has led to greater consciousness and made labour realise its own responsibility and creative role in the building of a new social order.

It is of course true that, as pointed out by Dr Lakshmanaswami Mudaliar, there is still vast scope for improvement of labour conditions in the country. Measured by what are generally recognised to be the elements of good living, labour has to go a long way to achieve better living condition. Against this, it has to be pointed out that the progress of labour to higher standards of living has to be related, particularly in an under-developed economy, to efficiency and adoption of better techniques in production. It is of the character of democratic planning in a country in the initial stages of industrialisation, that progress has to be slow and gradual. The scope for improvement of workers' lot is, therefore, limited by

the sacrifices which all the sections of the population could make. It is this truth that is highlighted by recurring industrial disputes.

Recurrence of labour troubles in spite of the legislative measures reflects much that is rotten in the trade union movement in the country. The multiplicity of trade unions coupled by their ideological basis is a factor that contributes to inter-union rivalry and industrial unrest. The pro-labour proclivities assumed by the Congress during the freedom fight were in no small measure responsible for the existing ideological cleavage between capital and labour. In the circumstances, a proper solution could be sought only by reconciling their conflicting interests on the basis of mutual understanding, goodwill and co-operation.

It was this aspect of the problem that was stressed by Mr Giri, in the course of his inaugural address to the conference. As Mr Giri pointed out, the real test of industrial peace was not just the absence of industrial unrest but the presence of harmonious and good industrial relations generating amity and goodwill between the partners in an industry. The granting of full recognition to trade unions by employers is of course essential in as much as it would create a machinery for collective bargaining. When the working of trade unions tends to fall into political lines ways have to be explored to arrest the tendency. The infiltration of political influence in the working of the trade unions in the country presents a ticklish problem for which no rough and ready remedy is available.

Recurring disputes that take a violent turn points to the need for a more rigorous enforcement of the existing measures against violation of industrial peace, as also to the creation of more effective machinery which could settle disputes in a peaceful atmosphere, without involving interruptions to industrial production. The code of conduct for industrial discipline that was drawn at the Naini Tal labour Conference held two years ago aroused great expectations about an improvement in industrial relations. However, without proper sanctions the code had proved ineffective in preventing industrial disputes from breaking out into violence. It is however heartening that Mr G. L. Nanda has held out hopes at the recent conference of State Labour Ministers at New Delhi of a more rigorous enforcement of the code.

For all products manufactured by us

PRECISION IS THE KEY-NOTE

and included in our wide range of production are Tea and Jute Machinery, Steel Structural, Railway Signalling and Interlocking Equipments, Screw Couplings, Carriage and Wagon Forge Fittings, etc.

Yet, another item included in this list is the manufacture of Printing Machinery on a phased schedule in collaboration with a U.K. firm.

MADRAS REVIEW

MADRAS REVIEW

Indian economy in the long run would be hit by the problem of the balance of payment in which case it would be difficult to expand her sales abroad. Therefore she would have to work hard to increase her exports and find efficient substitutes for her imports.

This was the advice given here during a talk in the Madras Secretariat by Mr W. R. Reddaway, Director, Department of Applied Economics, Cambridge University, Tuesday evening. The talk was given under the auspices of the Indian Institute of Public Administration.

The Madras State Finance Minister seems to hold the opinion that it would be good to hear views of eminent economists from abroad on India's planning, and this Cambridge economist gave his views, however blunt they were to the planners of this country.

The theme of the talk was "What limits the pace of Expansion in an under-developed Country." Mr Reddaway interpreted expansion as increase in output of goods and services measured in physical terms. This in turn, he stated, would increase the total income of the country.

But the extra income of people employed in the developing industries did not always go to stimulate

any industry, but largely to buy more food and those articles in short supply. Ultimately, Mr Reddaway stated that demands were not generated for things which were in adequate supply but always for things in short supply and which were being imported. He felt that compulsion on retention of surplus labour by industry would not be conducive for stimulating industrial expansion.

Mr Reddaway told one questioner that he was staggered to find that India was in short supply of fertilizers. He thought that Indian plans should have gone wrong. Increase in knowledge was equally important as capital particularly in agriculture. In India, it seemed to him that the position was difficult with backwardness in agriculture because her traditional exports had been from the agricultural side.

Mr Reddaway suggested that India could advantageously embark upon the supply of metal goods to her neighbouring countries. India was a big country and she could very well develop machine goods manufacture.

A few of the questioners obviously wanted Mr Reddaway to say something about cooperative farming. He readily obliged them though it should be to the dissatisfaction of the official spokesmen

Economic Development

for cooperative farming. Mr Reddaway stated that cooperation could do a great deal if people wanted to cooperate. It would be excellent, for example he said, to have one well for a small holding; but cooperative farming, if forced on people who did not want to cooperate would definitely "prove disastrous."

Regarding the feasibility of borrowing gold from people as was suggested recently by New Delhi and as is the French practice, the Cambridge Economist observed that India was now facing serious foreign exchange problem. Her gold was doing nothing and she had more of it. If people were prepared to part with gold bars for a piece of paper, that precious metal could be used to import machinery. France was an advanced country where even electricity loans were raised with future promise of power supply.

★

Full Employment

There was a seminar on "Full employment in a developing Economy" under the auspices of the Labour-Economic Conference inaugurated last week by Mr P. C. Mahalanobis. Dr P. S. Lokanathan's inaugural address suggested that it would be wise to migrate some people from what he believed very congested regions to regions with prospects of employment.

At the commencement of the Third Plan of India, Dr Lokanathan calculated, there would be a backlog of 7,000,000 unemployed and during the plan itself they would have no less than 14,000,000 added to the big labour force in the country. To achieve full employment by the Third Plan period end, there should be employment opportunities for 23 to 25 million people during the plan period, itself.

Dr Lokanathan observed that the unemployment problem was caused by structural and social factors. He was hopeful that a solution of this question could be found by a series of plans spread over a period of years. He regretted that even the modest estimates of the Second Plan had not arrested the deterioration of the under-employed. The total number of job opportunities, he stated, was failing to keep pace with labour force, and there was also shortage of skilled craftsmen. At the "take off" stage, both of these factors would also grow. Thus the problem of full employment is a question pertaining to social change and adjustment of the development skills.

Fast growing population has also added to this problem, and in the context of modern technological development a vast number of the 55 million registered with the unemployment exchanges would be

SOUTH INDIAN NOTES

unemployable. Dr Lokanathan stated that only a dynamic growth of the nation's economy could provide employment to them. In other words, this vast number could be employed only through learning-by-doing. It was Dr Lokanathan's view that though the Planning Commission was not unaware of the problem, it had failed to face up its dimensions.

Intensive agricultural improvement no doubt would create a large volume of employment in the rural areas. Unfortunately, however, the extent to which such intensified agricultural operations through diversified production could create demand for more labour and provide employment opportunities in the rural sector had not been correctly estimated. He thought that improvement of village industries through proper use of tools should increase employment opportunities.

He suggested increase in productive capital by small factories in rural parts to increase employment opportunity. The question of financing need not be staggering since bulk of it could come through voluntary labour, compulsory levy of labour hours and some taxes.

He warned against excessive mechanisation in the context of scarce capital resources and a surplus labour, and pointed out that the economic system should be run in the interests of all citizens, and if part of them were excluded from the production process, serious strains might occur in the long run in the political and economic structure of the country.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED (Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Ordinary Stock at the rate of £3½ per cent net (tax applicable at 7s. 9d. in the £) for the year ending 31st March, 1960. Payment will be made on 15th February, 1960, to those stockholders whose names are registered in the Company's Stock Register on 30th January, 1960.

Applications for transfers received in this Office before 12 O'Clock noon on Saturday, the 30th January, 1960, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,

D. H. P. HENDERSON,
Agent.

Victoria House,
Calcutta,
15th January, 1960.

January 16, 1960

59

THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS AND APPLICATIONS ARE INVITED ON THE BASIS OF THE PROSPECTUS COPIES WHEREOF ARE AVAILABLE FROM THE COMPANY'S REGD. OFFICE AND THE MANAGING BROKERS, BROKERS, MENTIONED HEREIN.

A copy of the Prospectus having attached thereto the documents mentioned below has been duly delivered for registration to the Registrar of Companies, Bombay, as required by Section 60(2) of the Companies Act, 1956. Consent of the Central Government to the issue and a Licence for the establishment of a new industrial undertaking have been obtained, copies of which are open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting the consent and Licence, the Government of India do not take any responsibility for, the financial soundness of this undertaking or for the correctness of any of the statements made or opinion expressed in regard to them.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON MONDAY THE 18TH JANUARY, 1960 AND WILL CLOSE AT THE CLOSE OF THE BANKING HOURS ON MONDAY THE 25TH JANUARY, 1960 OR EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON FRIDAY THE 22ND JANUARY, 1960.

CHASE BRIGHT STEEL LIMITED

(Incorporated under the Companies Act, 1956 on 16th October 1959)

AUTHORISED CAPITAL:

10,00,000 Equity (ordinary) shares of Rs. 10/- each Rs. 1,00,00,000/-

ISSUED CAPITAL:

3,00,000 Equity (ordinary) shares of Rs. 10/- each Rs. 30,00,000/-

ALREADY SUBSCRIBED:

1,800 Equity (ordinary) shares of Rs. 10/- each Rs. 18,000/-

(Subscribed by the Signatories to the Memorandum of Association and fully paid).

45,000 Equity (ordinary) shares of Rs. 10/- each Rs. 4,50,000/-

(allotted to the Promoters, Directors, and their friends and associates) on which Rs. 5/- per share payable on application has been paid and the balance of Rs. 5/- is payable on 1st August, 1960.

CAPITAL AGREED TO BE TAKEN UP:

OBJECTS OF THE COMPANY.

The Company was incorporated on the 16th October, 1959, generally with the aims, objects and purposes, set forth in its Memorandum of Association and in particular

"To carry out in India or elsewhere the industry, trade or business of manufacturers, fabricators, founders, smelters, engineers, converters, repairers, producers, importers, exporters, dealers, agents and suppliers of special steels, mild steel, B.S.S. En. steel, bright bars, shaftings and bright steel or its products or by-products, of every description, nature or form in all its branches".

COMMENCEMENT OF BUSINESS.

The Company has already obtained a Certificate dated 30th October, 1959, for commencement of Business from the Registrar of Companies, Bombay.

SCOPE AND PROSPECTS.

Most of the bright bars are at present imported in India and there is hardly any up-to-date factory producing such type of Bright bars to meet the requirements of the country.

The plant that will be set up will produce cold drawn and turned Bright Bars of mild steel, B.S.S. En. steel, including high carbon, free cutting, Alloy and special steels. The bright bars will be produced in rounds, hexagons, square and flats of minute tolerances in different sizes, which are mainly used by Loco Builders, Railway Workshops, Ball Bearing, Electric Motors, General Engineering, Automobile, Cycle and Ancillary Industries, Ship Building Yards and Ship repair workshops, Jute Textile and Agricultural Machinery Manufacturers, Shaftings for Textile Mills, Machine Tools, Nuts and Bolts Manufacturers, etc.

The plant can also be used for product of non-ferrous metal.

The installed capacity of the plant will be 1,000 tons of Bright Steel bars in different sizes per month on single shift basis. At present, the production is taken at about 300 tons per month on the basis of licence. But the Company is confident that the balance productive capacity will be made use of by utilising the raw materials which will be available from local sources and a number of industries on conversion charges also.

When the steel plants in the third 5-year plan come into production several of the steels such as E.N., free cutting, high carbon and silver steels also will be made available in the country.

The demand for bright drawn and centreless turned steel bar has increased tremendously throughout the world today, and in view of the ever-

CHASE BRIGHT STEEL LIMITED—(Contd.)

increasing demand in India a Bright Bar Plant is essential to India's industrial progress and not only foreign exchange will be saved but it may also earn foreign exchange for India.

ESTIMATE OF PROFITS

After a thorough investigation into the manufacturing ranges of different sizes, the Company is confident that within a short period of working of the factory, the profits will be sufficient to provide an attractive return to the Equity Shareholders.

MACHINERY & TECHNICAL SERVICES

The plant will be supplied by a U.K. firm, manufactured by one of the leading fabricators of this type of Machinery, Messrs. Sir James Farmer Norton & Co., Ltd., Manchester, U.K. They will render the necessary technical assistance in making the plants and supervising the erection and the installation as well as commissioning of the plant.

The Company is also negotiating for the services of a qualified, experienced technician who is an expert in this Line, from abroad and hope to finalise the same soon.

The first shipment of the complete one unit is expected by early 1960 and the shipment of the second complete unit is expected by the end of May, 1960.

LAND

After a careful investigation a favourable site near Thana has been selected for the factory.

WATER & ELECTRICITY

Water supply at a reasonable rate will be available from the Municipal Authorities. Arrangements have also been made to obtain electric power from Tata Power Supply Company, Limited.

SPECIAL BENEFITS

The Company will be entitled to the Special Benefits under the Indian Income-tax Act with respect to Development Rebate. It will also enjoy the benefits of Section 15C of the Indian Income-tax Act, whereby profits upto 6 per cent on the employed capital will be exempted from tax for the first five years of operation.

PRELIMINARY EXPENSES

The total preliminary expenses including commission and brokerage are estimated to be Rs. 1,00,000/-.

ESTIMATED FINANCIAL REQUIREMENTS

The financial requirements of the Company will be about Rs. 40,00,000/- made up as under:—

1. Purchase price of land, plant, machinery and equipment including cost of erection of machinery, construction of factory, building, power house, etc.	Rs. 29,00,000.00
2. Preliminary expenses including Commission, Brokerage and expenses of this issue	Rs. 1,00,000.00
3. Working Capital	Rs. 10,00,000.00
	Rs. 40,00,000.00

MINIMUM SUBSCRIPTION

The minimum amount which, in the opinion of the Directors must be raised by this issue in order to provide the sums required to be provided as per paragraph 5 of Schedule II of Companies Act, 1956, upon which Directors can proceed to allot shares offered by this Prospectus has been fixed at 75,000 Equity shares of the nominal value of Rs. 750,000/-, being only a part amount of this issue, out of which Rs. 6,50,000/- will be utilised

towards part payment of the purchase price of the land, buildings, plant and machinery, motor vehicles, etc. and Rs. 1,00,000/- will be for preliminary expenses including commission, brokerage and expenses of this issue. The balance amount upto Rs. 17,50,000/- including working capital of Rs. 10/- lacs will be arranged by borrowings from Banks, and/or other sources against the fixed and other assets of the Company in the ordinary course of business.

BROKERAGE

Brokerage at the rate of 18 nP. on the nominal value of each Equity Share will be paid to recognised Brokers and Bankers on allotment being made in respect of applications bearing the stamp of such recognised brokers and bankers on 1,50,000 shares issued to the public for subscription.

Messrs. Place Siddons & Gough (Private), Ltd.,
Lewis & Jones, and D. S. Purbhoo Das

are the Managing Brokers to this issue and will be paid a commission of 12 nP. per Equity share, on the said 1,50,000 Equity shares.

MANAGING DIRECTOR

The Board of Directors have, subject to the approval of the Central Government entered into an agreement dated 10th December, 1959, with Shri Sajjan Kumar Jajodia for the appointment of the said Shri S. K. Jajodia as Managing Director of the Company. An application in this behalf is being made to the Central Government for sanction for such appointment under the provisions of the Act.

The agreement between the Company and Shri Sajjan Kumar Jajodia provides inter alia that Shri Sajjan Kumar Jajodia be paid an annual remuneration of 5 per cent commission on net profits of the Company as computed in the manner laid down in Section 198(1) of the Act and that in the event of the Company having no profits, or its profits being inadequate, in any financial year, he is to be paid a minimum remuneration of Rs. 24,000/- per annum, provided nevertheless the said Shri Sajjan Kumar Jajodia shall be entitled to draw a sum of Rs. 2,000/- per month towards his remuneration as Managing Director.

PAYMENT TO PROMOTERS

Messrs. Chase Brothers (Private), Limited, the Promoters of the Company, have to be reimbursed in respect of a payment of 10 per cent deposit for the order of plant and machinery made to the suppliers, amounting to Rs. 1,39,976.35 nP. plus Rs. 4,411.42 nP. paid for Letter of Credit, Insurance Charges, etc., total amounting to Rs. 1,44,387.77 nP. They have also to be reimbursed for other actual expenses incurred towards foreign travelling, registration of the Company, and other incidental charges amounting to Rs. 18,496.34 nP. to the date of Commencement of Business i.e. 30th October, 1959.

DIRECTORS' INTEREST

The Directors are interested in the remuneration payable as fees of Meetings attended and travelling expenses. Shri Sajjan Kumar Jajodia who is the Managing Director of the Company and Shri S. L. Jajodia, the Director are interested in Messrs. Chase Brothers (Private), Limited, the promoters of the Company, as Shareholders and Directors and as such they are interested in the reimbursement of expenses hereinbefore referred to the promoters. The said Shri S. K. Jajodia is also interested in the remuneration payable to him as Managing Director.

AUDITORS REPORT

The following is a copy of the report of the Company's Joint Auditors, Messrs. Nanubhai & Co., and Messrs. C. L. Saraf & Co., Chartered Accountants:—

"In accordance with the provisions of Clause 24 of Part II of Schedule II of the Companies Act, 1956, we report that no accounts of 'Chase Bright Steel Ltd.' have been made up in respect of any period since the incorporation of the Company".

Dated 2nd January, 1960.

January 16, 1960

Recovery After
A Sharp Setback

Watch-Dog Writes:

STOCK markets are now in an uncertain mood with values fluctuating in an irregular fashion. Since the beginning of the year, the undertone is subdued in distinct contrast to the bullish sentiment which prevailed in the last week of 1959.

With prospective buyers loath to commit themselves, persistent long liquidation on fears of heavier taxation in the forthcoming budget caused prices to fall sharply all among the list. There was also an anxiety to await the deliberations at the Bangalore session of the Congress. Thanks to some replacement buying at lower levels, the closing tone was better.

Equities on the Calcutta Stock Exchange, after suffering a sharp setback early in the week under the lead of speculative issues, recorded a modest recovery at the close.

On the Bombay Stock Exchange, the recent decline in equities seemed to have temporarily halted and steadiness returned to the market.

Although the Madras Stock Exchange remained fairly active, profit-taking was noticed in most of the scrips on lack of sustained support.

The London Stock Exchange managed to make a steady progress.

Prices on Wall Street showed an irregular lower tendency.

Calcutta

Calcutta, Thursday Evening.

THE New Year does not seem to have brought any fresh cheer to the local Stock Exchange. Although trading was rather brisk during the first three days of the year, there was a sudden turn in market sentiment thereafter with prices displaying a steady decline due to sustained selling pressure, being induced by various rumours with regard to the forthcoming Budget. Fears were entertained that there would be heavier taxation, both direct and indirect, and there might be a possibility of dividend limitation. It was also felt that the decisions taken at the Bangalore session of the Congress would have considerable bearing on the budget, particularly in view of the defence needs of the country.

Bank shares showed a mixed trend on the announcement of the working results for last year. Dealings in United Commercial were very prominent following the increase in dividend from Rs. 3.75 to Rs. 3.85 (net) and the scrip was taken up to Rs. 71.50 from Rs. 68. Punjab National were however, quiet at Rs. 21.25 against Rs. 21.37.

Although there was not much improvement in values, Jute shares ruled generally steady due to firmer advices from the gunny market on reports of a fall in stocks with the mills for the tenth month in succession. It was also felt that the recent propaganda with regard to the shortage of raw jute was exaggerated.

Of all the sections, Tea fared better and selected scrips met with good demand at improved levels following the optimistic outlook for the industry during the current season. The latest crop figures for Northern India for December also induced a feeling that the entire output of 1959 was likely to be sold at remunerative

prices and the world supplies during the 1959-60 seasons would be well in balance with requirements.

Thanks to the reports of an increase in cloth prices, Textile scrips presented a firm front; but higher levels attracted some profit-taking at the close.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement considerations till Wednesday this week. Moreover, the lead to the reactionary tendency in equity prices from the beginning of the year was mainly given by this scrip. Despite the fact that this company was able to report a record output in December, the shares met with sustained selling pressure. This was mainly due to the pessimistic view taken by the company's chairman with regard to the future outlook and the fear of even a temporary glut in steel supplies in view of the coming into operation of the steel plants in the private sector. From the opening level for the year of Rs. 23.40, Indian Irons were gradually pushed down to Rs. 22.02 at which level some replacement buying caused the scrip to close better at Rs. 22.58. In sympathy, TEXMACO was marked down at one time to Rs. 25.40 from Rs. 26.10; Jessop to Rs. 23.69 from Rs. 25 and Kumardhubi to Rs. 6.62 from Rs. 6.94, to finish at Rs. 26.40; Rs. 24.12 and Rs. 6.75 respectively. G. K. Williams turned at Rs. 44 against Rs. 48.25 touched in the first week of the year, mainly due to the absence of any news with regard to the bonus issue was originally rumoured.

Upper Ganges Sugar has raised the dividend from Rs. 5 to Rs. 7.50 per share for the year ended 30th June, 1959.

Alliance Jute has passed over the dividend again for the year ended 31st May, 1959.

In Briefs

Upper Ganges Sugar has raised the dividend from Rs. 5 to Rs. 7.50 per share for the year ended 30th June, 1959.

Alliance Jute has passed over the dividend again for the year ended 31st May, 1959.

Waverley Jute has announced a dividend of 25 nP for the same year as against nil in the previous year.

The Kalapahari Coal Company has declared an interim dividend of 75 nP per share, subject to tax deduction, for the year ended 29th February, 1959.

Bank of India has proposed to pay a final dividend of 10 per cent, making a total of 16 per cent, subject to deduction of tax, for 1959. This works out to a net dividend of 11.2 per cent against 16 per cent paid in the preceding year.

The Devkaran Nanjee Banking Company Limited has recommended a final dividend of Rs. 2.52, making a total of Rs. 4.38 per share of Rs. 50 each for 1959. This works out at a net dividend of Rs. 3.07 against Rs. 3.00 paid in the preceding year. The shares are quoting steady at Rs. 53.

THE AMALGAMATED
ELECTRICITY COMPANY
LIMITED

CONTROLLER OF STORES

Investment Notes:

The Ordinary shares of the National Carbon Company, which is now to be known as Union Carbide India Limited, have firmed up to Rs. 43 from Rs. 41 during the past few days on an optimistic appraisal of the company's outlook. The company has, under construction, a plant at Trombay for the manufacture of organic chemicals and polyethylene resin, which is nearing completion. This unit involving a capital investment of Rs. 4.5 crores will have a combined annual output of about 15 million pounds of chemicals and polyethylene. The directors of the company have announced that the name has been changed to Union Carbide India Limited in order to more closely identify its expanding activities in India with those of Union Carbide Corporation, New York, USA.

Wakchandnagar Industries Limited has proposed to issue Debentures amounting to Rs. 75 lakhs. The terms of the issue have not yet been finalised; but these are expected to be announced in the course of the next few weeks. The Debentures will be offered, in the first instance, to the shareholders of the company. Such part of the issue, as is not taken by the shareholders, will be offered to the public for subscription. The fund will be utilised for financing the company's expansion programme, covering the manufacture of sugar machinery and boilers and repaying the loans already borrowed in this connection.

The Hindustan Construction Company Limited and Acrow Engineers Limited of the UK have jointly sponsored a new company called Acrow India (Pri-

vate) Limited. The new company will undertake the manufacture of the full range of acrow steel formwork, scaffolding and other construction equipment. Both the companies will participate in the share capital of Acrow India (Private) Limited on an equal basis. The factory of the new company will be situated near Bombay.

It is understood that the Premier Construction Company Limited, which is holding the bulk of the shares of its subsidiary company (Indian Hume Pipe Company), has released about 10,000 old Ordinary shares of the Hume Pipe company on the market at Rs. 150, at a premium of Rs. 50. The shares are meeting with very good demand and they have been absorbed fully.

The Associated Battery Makers (Eastern) Private Limited, manu-

facturers of silver oxide, oxide-ironclad, chloride and batteries, will shortly make a public issue, subject to the sanction of the Government, of 680,000 Ordinary shares of Rs. 10 each at Rs. 15 per share. Out of this, the present shareholders in the UK have been allotted 200,000 shares.

The Government of India have fixed the 27th January as the last date for receiving requests from the shareholders of the Travancore Bank Limited to have their amount of compensation, if any, referred to a Tribunal.

Calico Mills have announced an interim dividend of Rs. 14 per share, subject to deduction of tax, for the half-year ended 30th September, 1959. This works out at a net interim dividend of Rs. 9.8 per share against Rs. 10 in the preceding year.

A—Excluding borrowings from R.B.I. also.

For them the magic of light ...and power!

As the evening shadows deepen, twinkling electric lights turn the village into a fairyland...so beautiful now, so different from the dark, dreary nights that were theirs before.

Gigantic thermal and hydro-electric projects—the Tungabhadra Scheme, the Damodar Valley Corporation, the Bhakra Nangal Project to name a few—while bringing the convenience of electric lighting to more and more people, are producing much needed power to run our new, wealth-producing industries.

The success of these...and other...multi-crore-rupee projects depends among other things, on quality electrical installations—many of which have been supplied by Larsen & Toubro Limited.

Supply and Manufacture of Electrical Equipment
Representing four leading foreign electrical manufacturers, Larsen & Toubro Limited have supplied ESCHER WYSS water and steam turbines; OERLIKON high-tension switchgear, generators, synchronous condensers, transformers and rectifier plants; HALFELY coupling capacitors and high voltage testing plants; and LAUR KNUDSEN low-tension switchgear to many of our national projects and industries.

Manufacture of heavy duty low-tension switchgear and motor starters will commence in a few weeks—in technical collaboration with LAUR KNUDSEN of Denmark—at the L & T Works at Powai, Bombay

Indian Finance

INVESTOR'S SUPPLEMENT

Markets Steady in December

EQUITY values maintained a steady undertone during December although activity was rather restricted most of the time. In earlier dealings sentiment was rather quiet as the more speculative counters were under selling pressure. With operators reluctant to extend commitments in pivotal shares following the announcement that the Government had decided to charge interest at the rate of 5 per cent on the special advances granted to the steel companies, activity on the stock markets was at a low ebb. Other factors which contributed to the slackened interest were the continued uncertainty regarding the Sino-Indian relations, the possibility of increased taxation as a result of heavy outlay on defence, Government's decision on the Pay Commission's recommendations, and the reduction of the selling prices of paper. The proximity of the Assocham meeting was another important restraining influence during the first week of the month.

The second week of the month witnessed a revival of buying support and the return of confidence was aided by the absence of any shock in the Finance Minister's Assocham speech. It would appear that the very fact that Mr Desai had been mainly concerned with outlining the tasks completed and still ahead seemed to have contributed toward around satisfaction. The improvement in sentiment would appear to have stemmed from the visit of the American President to India and the unambiguous declaration by Pandit Nehru about the future of private enterprise at his monthly press conference. The clarification that the Government's decision to charge interest on the loans to the steel companies would not affect their normal profits reduced the bear pressure on the more speculative counters while bulls derived some encouragement from the report that the Indian Iron and Steel Company had a proposal to diversify its activities.

Round about the second half of the month buying fervour received a setback following rumours about fresh Chinese incursions but with the lower levels attracting considerable short-covering coupled with the sustained support for investment counters the undertone steadied up. Thereafter the market was in a confident mood for a few days as both operators and investors were encouraged by the expectations of further large-scale financial assistance from the US and the general belief that the next Central budget would not impose any fresh tax burden on the corporate sector. Although the market closed the month on a confident note it was evident that investors were rather worried about the rise in the cost of production

of some of the major industries partly on account of the spiralling wage levels and partly because of the rising trend of raw material costs. Sectionwise cotton textile shares fared well and toward the close of the month prices of a number of shares recorded sizable gains thanks to the fresh measures taken by Government to check the rising

age of cloth if urgent steps were not taken to increase cloth production in the organised sector, apprehensions about shortage of cotton persisted.

The jute goods industry was plagued throughout the month by a steep rise in the prices of both the raw material and finished goods. Despite authoritative indi-

trend in cotton prices. Despite the stern measures price of cotton however continued to shoot up to uneconomic levels. Even though the high raw material cost seemed to have been somewhat compensated by the continued good offtake of piecegoods so much that it was feared that there would be a short-

cation that there would be adequate raw jute in the current season to meet the requirements of mills, speculators continued to push up the price of raw jute. Margins were revised three times during the month in the futures market but the speculative influence on prices continued unabated.

Apart from ideas about a shortage of raw material, sentiment in the jute markets was encouraged by the excellent statistical position of jute goods as at the end of the month. With the steady decline in sacking stocks from month to month in the second half of the year, the IJMA decided that the consideration of the resealing of the 2½ per cent looms unsealed in August should be deferred to 1st February 1960 instead of 2nd January 1960 as originally indicated. Demand for heavy goods was at a satisfactory level and it was generally believed that with the end of the steel strike, burlap consumption in US would increase in coming months. Hessian has another important buyer in Argentina which is yet to lift a large portion of its normal requirements. Already there were indications that the pent up demand was reflected in higher offtake. For, burlap consumption in US during November rose to 80 million yards compared to 65 million yards in the corresponding month of the previous year and 69 million yards in the previous month. Despite such encouraging indications it was apprehended that steep rise in prices of jute goods noticeable during the second half of the month would result in a reduced offtake in the immediate future and the loss of further overseas markets in the long run.

Steel shares were generally subdued during the month following the statement of the IISCO chairman as regards the difficulty of disposing of the larger quantities of steel that would be available with the bringing into commission of the three steel plants in the public sector and the completion of the expansion programme of the two plants in the private sector. Sir Jehangir Ghandy, Managing Director of Tata Iron and Steel Company Limited also disclosed in the course of his speech toward the close of the month at the Engineering Association of India that the state of the order book for some categories of steel was alarming. He had further pointed out that if there was no immediate improvement the operation of the structural mills would have to be restricted both at Burnpur and Jamshedpur.

Tea shares reported fair activity but the undertone was subdued. Although both the trend of auction prices and production of North Indian tea were favourable, interest in tea shares slackened toward the close of the month on indications of dividend distributions for 1959 would not be encouraging. Coal shares were listless as it was believed that with the prevailing uneconomic prices for coal most of the companies would not be able to record any appreciable change in their financial position.

The hard iron lay dead in slumber deep
And we stirred it to life, ho!

In the dark depths of a million years it lay hid
And we stirred it to life, ho!

Tamed by our strong hands
It sings to the tune we call.

Its silence of long years have we broken, ho!
The dead doth stir with new life today

And rushes forth the wide world to conquer.
Fearless with our two hands today

Its reins we hold strong, ho!

FOR THE INVESTOR

Investment Gossip:

Improved Sentiment

ALTHOUGH trading in the stock markets during the week just ending has continued to be rather subdued, there is now discernible a more constructive sentiment than had been the case most of the time in the previous week. Not only have the more speculative counters staged a moderate rally from the low levels touched during the early part of the week but once again investors have begun to evince interest in the general list. Perhaps the main helpful influence has been the fact that the Sadashivnagar session of the ruling party's annual meet has, contrary to general expectations, produced no untoward worry to the private sector. Operators have evidently found little cause for fresh anxiety in the Indian National Congress deliberations during the past week. There is, however, no gainsaying the still prevalent apprehensions about the coming Central Budget. While it would appear that some addition to the taxes is generally considered inevitable in view of the rising tempo of defence expenditure, operators seem to be confident that the burden on the corporate sector will not be increased in the interest of efficient working of private sector industries which will continue to have a major share in the industrial development. And a rapid development of industries is one of the main aims of official policy. The subdued optimism latterly noticeable seems to have also stemmed from indications of increased foreign assistance for our Five Year Plans.

The past week has also been productive of encouraging developments as regards two of the major industries. Thanks to effective Government intervention indications are that the output of the cotton textile industry will be stepped up in coming months thereby contributing to an easing of the scarcity conditions currently noticeable in the cloth markets. Meantime news from the export front is also quite good. The jute goods industry is now having greatly reduced anxiety about the depredations of unbridled speculation thanks to effective Government action. Both raw jute and goods prices are coming back to realistic levels. Burlap consumption in US during 1959 has touched an all time high for the post-war period and expectations are that provided our goods prices are

economic prospects for exports in the current year will be quite good.

Even so, there is a general disinclination to extend commitments and this trend is likely to continue till the Central Budget is safely out of the way. Money is also more stringent now than a few weeks ago and this accounts for the cautious approach of most operators. The proximity of the flotation of some big new issues is yet another restraining influence in the current investment situation as investors have derived considerable profit from similar investments in the recent past.

ER\$

Investment Notes:

It is learnt that all the formalities regarding the issue of the Hindustan Aluminium Corporation have been completed and the sponsors, will be in the market during the first week of February. To be precise, the subscription list will open on the 8th February and close on the 18th February, if not earlier. The authorised capital of the company is Rs 20 crores, consisting of Rs 10 crores of equity capital in shares of Rs 10 each; Rs 2½ crores of Cumulative Preference shares of Rs 100 each earning a tax-free dividend of 6.3 per cent and the balance of Rs 7½ crores in unclassified shares. The Preference shares are redeemable after a period of 20 years.

The directors have proposed to issue, at present, Rs 8.35 crores—Rs 5.85 crores in Ordinary shares and Rs 2.50 crores in Preference shares. Out of this, Rs 1.56 crores of equity capital is reserved for the Corporation's technical collaborators, Kaisers and their friends and another Rs 2.13 crores will be taken up by Birla Gwalior Private Limited and its directors and their friends. The remaining equity capital of Rs 2.15 crores and the whole of Rs 2.5 crores of preference capital will be offered to the public.

The response to the issue of new capital by the Chase Bright Steel Limited, the subscription list for which opened on Monday, is reported to be encouraging.

The outlook for the Raymond Woollen Mills Limited, appears to be good. It is reported that the company has fared better last year than in 1958. There are indications that a net dividend of 8 per cent will be maintained.

Kerala will soon have one of the biggest tyre-factories in the country. The new factory in a joint enterprise by the Kerala Government, Premier tyres, a public concern receiving technical assistance from the well known Dayton Rubber Company of U.S. The target of output after completion of this plant is 240,000 tyres and an equal number of tubes annually.

ER\$

Investment Briefs:

Union Bank of India has recommended a dividend of 11-2/5 per cent (Rs 1.57 per share), subject to deduc-

tion of tax, for 1959. This works out to a net dividend of 40 nP against 44 nP per share for 1958.

Oudh Sugar has recommended a dividend of Rs 18.25 per share, subject to deduction of tax. This works out to a net dividend of Rs 12.75 per share against Rs 12.50 paid in the previous year.

ER\$

Angelo Brothers Raise Dividend

Balance-Sheet Reviews:

THANKS to the stabilising effect on shellac prices of the decision of the Indian Lac Exporters' Association to maintain the minimum export selling prices, Angelo Brothers Limited, dealing mainly with the shellac trade, has reported excellent working results for the year ended 31st August 1959. Despite a decline in sales from Rs 1.78 crores, the net profit for the year, after providing for Depreciation and Taxation, is substantially higher at Rs 6.18 lakhs against Rs 3.37 lakhs in the previous year, mainly due to a reduction in production costs from Rs 1.57 crores to Rs 1.49 crores.

Despite increased profits, all allocations have been reduced: Depreciation from Rs 1.05 lakhs to Rs 97,414; Taxation provision from Rs 6.85 lakhs to Rs 5.40 lakhs and Development Reserve from Rs 8,484 to Rs 5,467. But the dividend is raised from 15 to 20 per cent (including a bonus of 7½ per cent).

The directors have confidence in the future of the company, whatever the outside circumstances, and the policies which have served so well in the past will be maintained with all suitable modifications.

ER\$

Bharat Sugar

The Bharat Sugar Mills Limited has raised the ordinary dividend from Rs 1.00 to Rs 1.50 per share following an increase in the net profit from Rs 1.21 lakhs to Rs 3.27 lakhs for the year ended 30th June, 1959. Sales have risen to Rs 71.40 lakhs from Rs 64.07 lakhs. The Depreciation amount is raised to Rs 1.01 lakhs from Rs 48,600; Taxation provision to 2.26 lakhs from Rs 2.10 lakhs and Development Rebate Reserve to Rs 96,000 from Rs 7,400.

The quantity of cane crushed is higher at 18.75 lakh maunds against 15.97 lakh maunds, although the recovery is lower at 10.15 per cent against 10.29 per cent.

ER\$

United Breweries

Sales of United Breweries Limited have recorded a further rise in the year ended 31st March 1959 to Rs 42.72 lakhs from Rs 36.42 lakhs in 1957-58. The net profit, before providing for Depreciation and Taxation, has, therefore, risen rather significantly to Rs 19.01 lakhs from Rs 14.82 lakhs. The amount set aside to Depreciation is lower at Rs 2.83 lakhs against Rs 4.48 lakhs; but the provision for Taxation is much higher at Rs 9 lakhs against Rs 6.5 lakhs. The General Reserve gets Rs 1.2 lakhs (nil). The transfer to Development Rebate Reserve is Rs 99,900 (Rs 20,100). A final dividend

of Rs 52.50 per share is to be paid which, with the interim dividend of Rs 7.50, makes a total of Rs 60 per share for the whole year against Rs 60 per share previously on a smaller capital. An interim dividend of Rs 25 per share, subject to deduction of tax, has been declared in respect of the year ended 31st March, 1960.

In order to keep the paid-up capital in balance with the capital employed in the business, the directors have decided to issue additional shares. It is proposed that, out of the dividend of Rs 52.50 per share, now proposed, a sum of Rs 50 per share should be applied toward the allotment of five fully paid-up equity shares. The new shares rank equally with the existing shares in all respects except that they shall not participate in the first interim dividend declared in respect of the current year.

ER\$

Kamani Metals

With rigorous restrictions on imports, the output of Kamani Metals and Alloys Limited was badly affected in the year ended 30th June 1959. It is stated that the shortage of virginial metals, coupled with non-availability of good quality scrap, affected considerably the working of the company.

The net profit, before providing for Depreciation and Taxation, is therefore much lower at Rs 14.48 lakhs against Rs 20.83 lakhs in the previous year. The provision for Depreciation is Rs 2.98 lakhs (Rs 4.38 lakhs). The arrears of depreciation have been provided to the extent of Rs 7.30 lakhs (Rs 11.40 lakhs). The provision for Taxation is Rs 99,404 against Rs 30,000, while the General Reserve gets Rs 25,000 (Rs 40,000). A dividend of 7½ per cent is to be paid on the equity shares.

A new strip mill, which is most modern in design and which is the first of its kind to be used in India for rolling copper and brass strips of thinner gauge and very close tolerances mostly for catering to the needs of industrial users, is expected to go into production during the current year.

ER\$

Willcox (Buckwell-India)

It is understood that Larsen & Toubro Limited of Bombay, jointly with Tractors India Limited of Calcutta, has acquired the controlling interest in Willcox (Buckwell-India) Private Limited of Delhi.

Messrs Willcox (Buckwell-India) Private Limited is a well-established organisation in Delhi. They are the authorised dealers for Northern India for the famous 'Caterpillar' tractors and other earthmoving equipment. They maintain an extensive service and spare parts organisation, and modern workshop facilities. The Company has been supplying 'Caterpillar' earthmoving equipment to a number of important projects. It has expanded considerably during the last years and has increased its paid-up capital from Rs 2.30 lakhs to Rs 15.00 lakhs. It has paid an average of 17 per cent dividend, free of income-tax, for the last 10 years. It is expected that the Company,

under the control of the above mentioned public companies, experienced and well-known in the field of Engineering, will expand its activities considerably.

Khardah Jute

The profit earned by the Khardah Company Limited is higher at Rs 10.04 lakhs for the year ended 31st March 1959 as against Rs 5.69 lakhs in the previous year. An ordinary dividend of 20 per cent has been recommended against 8 per cent.

The provision for Taxation amounts to Rs 3.93 lakhs against Rs 21,128 and that for Depreciation Rs 5.51 lakhs against Rs 4.94 lakhs. After other adjustments, a sum of Rs 10,158 is carried forward against Rs 45,833 brought in.

The third and fourth phases of the modernisation programme have been completed according to schedule. Arrangements are being made to implement the last two phases, which will completely modernise the preparing and spinning sections of both the mills.

Alliance Jute

The plentiful supply of raw jute and the better conditions that prevailed in the jute trade are fully reflected in the working results of the Alliance Jute Mills Company Limited for the year ended 31st May 1959. Although sales are lower at Rs 2.00 crores against Rs 2.52 crores, the net profit for the year, after providing for Depreciation, amounts to Rs 6.75 lakhs as against a loss of Rs 2.52 lakhs incurred in the previous year, mainly due to a cut in manufacturing expenses. Apart from providing a sum of Rs 29,200 for Development Rebate Reserve, the Depreciation amount is reduced to Rs 1.84 lakhs from Rs 1.95 lakhs. The dividend on the Ordinary shares is passed over again. The profits earned are adjusted against the debit

balance of Rs 8.46 lakhs brought forward from the previous year, leaving a debit balance of Rs 1.88 lakhs, to be carried forward.

According to the directors' report, partial modernisation of the Warp side Spinning Machinery is in progress. It is expected that 21 Spinning Frames will be installed and working by the end of February, 1960.

Waverley Jute

In spite of a decline in the net profit from Rs 3.46 lakhs to Rs 2.99 lakhs, the Waverley Jute Mills Company Limited has recommended a dividend of 25 nP per share for the year ended 31st May 1959 as against nil in the previous year. Sales of loom-hours are higher at Rs 7.11 lakhs against Rs 6.26 lakhs. A sum of Rs 9,400 (Rs 21,000) is provided for Taxation and Rs 1.14 lakhs (Rs 1.25 lakhs) for Depreciation.

According to the directors' report, the mill was closed down on the 17th June 1957; but the working loom-hours were sold to other mills within the McLeod group, which has enabled the company to show a profit.

Kalpeta Estate

The annual report for the year ended April 30, 1959, for the Kalpeta Estate Limited, disclosed a better profit of Rs 2.2 lakhs against Rs 1.98 lakhs in the year 1957-58. The rubber crop was 271,700 lbs against last year's 268,600 lbs. Tea crop declined to 317,627 lbs against last year's 345,543 lbs.

The Company has set aside Rs 42,220 for Depreciation. In the previous year, the amount for this item was Rs 42,767. Taxation took up Rs 65,000 against Rs 75,000. A dividend of 12½% gross is ordered to be paid against 10% previously. Current year's tea crop is estimated at 310,000 lbs and rubber crop at 265,000 lbs.

"The Wise Man in his attitude toward the World has neither Prejudices nor Prejudices. He is on the side of what is Right"—The Analects, of Confucius.

The Russian Guests

INDIA will this week be welcoming President Voroshilov of the Soviet Union. The distinguished guest and his entourage will be in India for over a fortnight and visit various parts of country. The ostensible occasion is the Indian Republic Day at which the Soviet President will be an honoured guest. His visit is a symbol of the growing intimacy between the two countries, of which we have had another recent example in the visit of the delegation of Soviet jurists, headed by the President of the Supreme Court of the Soviet Union. That the Soviet President's visit is not entirely a gesture seems to be borne out by the fact his entourage includes some other important political figures in the Soviet Union. Mr Kozlov, the first Vice-Chairman of the Council of Ministers, and Mr Kuznetsov, a First Deputy Foreign Minister, are among the delegation and both are considered to be "Khrushchev men". Besides the official and formal functions, the delegation will evaluate the fruits of Indo-Soviet cooperation and investigate the possibilities of further collaboration in the future.

Comparisons are inevitable, but neither in its intention nor in its likely results is the Soviet President's visit comparable to that of the American President last month. The Constitutional position of the two dignitaries alone would make the comparison pointless. Under the US Constitution, the President is the chief executive of the nation, mentor and watchdog of the legislature and the conscience of the nation, all rolled into one. The comparable figure in the Soviet Union is, of course, Mr Khrushchev, who is also coming to India next month, though the actual dates have yet to be fixed.

Mr Khrushchev's visit can hardly be a coincidence. The Soviet leader's original destination (which it is still) was Djakarta. But soon after Mr Eisenhower left India last month, feelers regarding the Soviet leader's visit to India were sent out and were promptly acted upon by the Government of India. A formal invitation was extended and accepted and the details of the actual length of stay are being worked out. It is obvious that Mr Khrushchev is anxious to have detailed discussion with Mr Nehru on subjects on which Mr Eisenhower also had exchanged ideas with Mr Nehru. There can hardly be any doubt that India is being sought by both sides as the best mirror through which each may see the other's point of view reflected without distortion. There is no question of "mediation" or "broking" by India: Mr Nehru is too conscious of the magnitude of the problems, to offer his services lightheartedly for such purposes. But both leaders have the confidence that Mr Nehru will be able to do two things that their own advisers and allies will not be able to do. First, he will be able to interpret each to the other without indulging in any special pleading or distortion. He has the necessary detachment and integrity. Secondly, uncommitted as he is, he will be able to bring his own particular political sagacity to bear on both so that each is brought a little nearer the other. In the heart of their hearts, both leaders wish precisely for such a coming together. Each would, of course, wish to give away as little

as possible, but each is probably willing to make real concessions, if necessary, provided he is assured that it will be worth while. Mr Khrushchev's discussion with Mr Nehru will largely be concerned with finding out Mr Nehru's appreciation of American intentions. Mr Khrushchev knows that Mr Nehru has no axe of his own to grind and that he holds no brief for the West any more than he does for the Communist bloc. He knows that Mr Nehru wears no ideological goggles—an impediment from which even he is not free. It is to Mr Khrushchev's credit that he should have the shrewdness to see this particular equipment—or rather absence of one—in Mr Nehru and characteristically benefit by it without standing on ceremony. There can be no doubt that Mr Khrushchev's talks with Mr Nehru will give him a deeper understanding of the American position than what would have been possible otherwise. His own friends would have had no opportunity to hear Mr Eisenhower express himself unreservedly. Nor would his own personal discussion with Mr Eisenhower have served him much better, for, in the nature of things, there would have been certain inevitable inhibitions. This would have been so even when both the American and the Soviet leaders are personally convinced of the other's sincerity as they now seem to be. For, personal sincerity cannot bridge entirely the chasm that divides them. Moreover, both have difficult allies whom they cannot (and probably do not want to) desert; and, since the real negotiations are still ahead, both will be unwilling to show their hands completely to the other. Mr Nehru, of course, cannot give to Mr Khrushchev anything except a broad indication of the way the mind of the US President is working, but he will be able to give an idea of the particular obstacles in the way of settlement and his own appreciation of how powerful such obstacles are. This should be of inestimable value to Mr Khrushchev.

We commented some time ago on the emergence of the New Eisenhower. It seems to us that there has emerged a New Khrushchev in the last two years. Even as recently as 1957, when he, alone with Mr Bulganin, flooded the post offices with letters, there was a feeling that it was all part of an elaborate propaganda stunt. But in the last two years, Mr Khrushchev has shown such tenacity of purpose in bringing about a detente as to have worn out even the resistance of Mr Dulles. This he has done at considerable risk to his own position, for, it is no secret that his personal ascendancy during this period was the culmination of a struggle with the more rigid and unbending section of the ruling clique that came into being after Stalin. It is paradoxical, but true, that the displacement of the "collective leadership" by a "one-man" rule has been coincidental with greater liberalism inside the Soviet Union and a greater readiness to come to terms with the West in international affairs. In the internecine struggle, Mr Khrushchev's position was often precarious, but he has been able to carry the country (and what is more important, the party) with him. The most serious, though indirect, challenge to his position came from the rigid

dogmatism of the Chinese Communists, which threatened a whole series of disasters for him personally and for the whole Communist bloc. Even now, the Chinese Communists are looking with barefaced concealed disfavour on his attempts to bring about an East-West settlement. It is no secret that, at crucial moments in the internal power struggle in the Soviet Union, the more dogmatic anti-Khrushchev clique was able to look for support from Mao and his friends. In fact there was at one time a powerful "Mao-mystique" in the Communist world and there were even hints of Mao being the real successor of Stalin, which, in a sense, he is.

The circumstance of the real Communist power still residing in Moscow indicates the relative irrelevance of ideology in politics. For, if ideology were all powerful, then the technological circumstance should have made no difference to the inevitability of the power shift to the more ideologically conscious Peking. It is Mr Khrushchev's recognition of this comparative unimportance of ideology (and the failure on the part of his rivals to do so) that gave him the decisive edge in the struggle. This is not to say that Mr Khrushchev has ceased to be a Communist, but only to recognise the fact that he has loosened himself comparatively free from the strait-jacket of ideology. This has enabled him to see the possibility of many things, including a world in which rival ideologies can co-exist. From this, as also from the realisation of the "balance of nuclear terror", has sprung Mr Khrushchev's determination for coming to terms with the West. There can be none so indifferent to the future of mankind as not to wish Mr Khrushchev success in his new endeavour.

It is inevitable that we, in India, should speculate about what Mr Khrushchev is likely to tell Mr Nehru about the recent Sino-Indian quarrels. Probably, there is very little that Mr Khrushchev can do beyond what he has already done, which, considering the relationship between the two Communist countries, is farther than anyone else would have dared go. Mr Khrushchev's attitude to the question is another indication of his emancipation from ideological meshes. But the coming Delhi talks may not bring about any dramatic changes in the Sino-Indian relations and we may have to reconcile ourselves to an uneasy coexistence with a predatory neighbour.

It is not out of place to mention here that there may be a more immediate significance for India in the forthcoming visit of Mr Khrushchev. We refer here to the reaction, as it were, that the state of the Indian economy produced by Mr Eisenhower. There can be no doubt that the American President went away convinced that India deserved every assistance that America could give in respect of our development programmes. It may not be too much to hope that, whether or not motivated by a sense of friendly competition in this sphere, the Russian leader will feel that it is also up to him to give Mr Nehru every assurance of the Soviet Union's desire to help as much as it lay in its power in the implementation of India's development programmes.

Engineering Industries Production Below Capacity

ENGINEERING industries occupy a prominent place in our economy. They produce capital equipment and consumer goods. From the defence point of view, these industries are of considerable significance. It is therefore important that they always function at a high level of efficiency.

The progress of engineering industries since the achievement of independence has been impressive. Production of many items has shown a remarkable increase. Not only the output of light engineering goods like bicycles, sewing machines and electric fans but also that of capital goods like textile machinery, tea machinery, and machine tools has shown a steady and substantial improvement. The development of these industries has helped to displace imports and save foreign exchange. What is even more significant is that the export of engineering goods is also gradually picking up. The value of such exports is now of the order of Rs 6 crores a year. Engineering goods are exported not only to the countries of South East Asia and West Asia but even to Europe and the USA. In 1959, it is interesting to note, the United Kingdom was the biggest customer for Indian sewing machines!

However, it is a matter of concern to note that many engineering industries are working much below the installed capacity. It is estimated that 43 out of 63 industries are unable to make effective use of their capacity. Some of these industries are railway wagons, steel furniture, typewriters, automobiles, domestic refrigerators, radio receivers, razor blades, carding engines, electric lamps, dry cells, steel files, complete ring spinning frames, grinding wheels, etc. The figures in respect of some industries for 1958 are given below:

Items of Production.	Pro- duction.	Installed capacity.
Railway Wagons (No.)	16,506	20,135
Steel furniture (Tons)	20,400	31,020
Typewriters (Nos.)	16,610	33,000
Automobiles (Nos.)	25,805	49,800
Domestic Refrigerators (Nos.)	2,000	7,600
Radio Receiver (Nos.)	195,100	240,600
Razor blades (million Nos.)	340.0	629.0
Carding Engines (No.)	1,152	3,000
Electric Lamps (million No.)	29,30	43,13
Dry Cells (million cells)	166.00	224.50
Steel files (Dozens)	240,357	348,000
Complete Ring Spinning Frames	876	2,784
Grinding Wheels (Tons)	1,186	2,470

Figures for the full year 1959 are not yet available. But the situation does not appear to have shown any appreciable improvement. For example, the production of railway wagons in September 1959 was only 850 compared with a monthly capacity of 1688. The number of automobiles produced in October 1959 was 3,018 against a monthly capacity of 4,150. For carding engines, the industry has a capacity to make 250 (numbers) per month but output in October was only 41. Similarly, the production of ring spinning frames amounted to 86 in October against a monthly capacity of 232.

A Fair Deal for our Scientists

By M. SUR

THE Third Five Year Planners have to think very seriously about the terms and conditions of scientists employed in Government undertakings, if they are to find men of sufficient calibre to fill these posts. The problem has been pinpointed recently by the Prime Minister's outburst against those who go abroad for further training and do not re-

The capacity of a number of other industries also in the engineering group remained considerably under-utilised in 1959.

Such a situation is clearly undesirable. It is necessary to enquire into this matter and adopt the necessary measures as early as possible so as to enable these industries to increase their production. Obviously, short supply of steel was largely responsible for this situation. The indigenous production of steel in 1958 was practically the same as in the preceding year, namely, 1.3 million tons while imports amounted to 1.1 million tons as compared with 1.7 million tons in 1957. The availability of steel both from indigenous and imported sources did not show any material improvement in 1959. The position will, of course, improve gradually with the commencement of regular production by the steel plants in the public sector and the completion of the expansion schemes in the private sector.

The question of prices is also very important. Indian steel may be the cheapest in the world, but the equalisation surcharge as well as the stiff excise duty has made the cost of steel prohibitive. At present, the surcharge works out to an average of Rs 115 per ton while the excise duty amounts to Rs 53 per ton in terms of finished steel. It is, therefore, necessary to reduce steel prices. As Sir Jehangir Ghandy recently pointed out:

"A reduction in selling prices will not only stimulate the consumption of steel within the country, but has also become necessary in consequence of the fact that the selling price, for instance, of bars and rods in India is Rs 645 per ton, or Rs 39 more than in the USA, Rs 76 more than in Japan, and as much as Rs 119 more than in the UK. As a matter of fact, the purpose of Government's price equalisation fund is not being fulfilled in the case of these products because bars could be imported from Belgium or Japan at a landed duty paid cost of Rs 28 and Rs 42 respectively lower than the official selling price in India. The position is similar in the case of joists, plates and a few other products."

We are planning for the expansion of the steel industry in a big way. A target of 10 million tons of steel ingots is being suggested for the Third Five Year Plan. But such large quantities of steel can be consumed only if the steel-using industries are enabled to function to their full capacity. This aspect should receive immediate attention so that the increasing output of steel in the coming years can be readily absorbed within the country.

Apart from steel shortage, other factors like the non-availability of capital equipment from abroad may be responsible to some extent for the under-utilisation of capacity in the engineering industry. In any case, the problem calls for prompt attention so that this vital section of our economy will be in a position to function effectively.

turn, and by the tragic suicide of Dr M. T. Joseph, senior scientific assistant at the Indian Agricultural Research Institute. The underlying causes in both cases are not far to seek; they can be traced to the low salaries obtainable in Government service even for highly qualified and experienced specialists. We read every day in the press of the urgent need

for more scientists and engineers, and more and more young men are studying science and engineering in India and abroad, and yet while qualified men remain unemployed we hear that suitable candidates cannot be found for the vacant posts. It is not that candidates are not available in many instances, but that the conditions of employment are not attractive.

From the preliminary report on Dr Joseph's suicide, we learn that, according to his own letter, the cause was "frustration". As a senior scientific assistant, with 15 years' experience, he was drawing a basic salary of only Rs 160 a month, on which he had to support his wife and five children. He had been offered a job at the Haffkine Institute on much better remuneration, but the time limit for acceptance had expired before a decision on his request for permission to change his job had been taken by the Union Finance Ministry. He is stated to have applied in more than 10 instances for permission to apply for a better post, but in only two or three cases was the permission given. He was under a contractual agreement to serve the Government for a 3-year period because he had received help from them to complete his doctorate in the USA.

It is unfortunately only a typical instance: A scientist with specialist knowledge and an American doctorate, who could not earn more than a basic salary of Rs 160 in his own country, but who, if he had stayed in the States, could probably have made a comfortable living for himself and his family. A case was quoted in the press only recently of a research scholar who was returning to the USA because he despaired of finding reasonable employment in his own country. With 9 years' research experience, a doctorate, and knowledge of six Indian and European languages, the only post he could obtain in India was that of senior scientific assistant in the grade of Rs 250-500 in a national laboratory, whereas he had been offered a salary of over \$450 a month in the States. Is it any wonder that India should be losing many of its best scientists and engineers? Almost anyone with whom one discusses the problem can quote similar cases.

It is surely not just a question of patriotism, although even the Prime Minister seemed to imply this. A young man studies or does research for 4 or 5 years in a Western country. They are the formative years of his life. He becomes used to certain standards of living, and to an independence seldom enjoyed in his own home. He makes friends and enjoys their hospitality. He comes home and finds that the only way he can possibly live is as a member of the joint family, for, otherwise the meagre salary he obtains cannot support him. He cannot easily settle down again to the life of the joint family; he misses his privacy and independence, he cannot entertain his friends. If he has a wife and family, it is even more difficult. If his wife has been abroad with him, she, too, will find life in the joint family irritating and frustrating. If he brings home a foreign wife, the problem of adjustment is greater. The joy of returning home is marred by finding that he can no longer settle down in the old conditions, and by the harassing process of finding a job. It is not just a matter of snobbery on the part of those returning from overseas training. They have a psychological problem of re-adjustment. They have been shaken out of their old ways and cannot return to them. They cannot face the prospect of living on Rs 150 a month—and why should they? A completely illiterate, but skilled workman, with a little overtime, may earn as much as that. If we do not want to lose our brightest men, then, we have only two alternatives. Either we must stop sending them abroad unless they have private means

to support them on their return, or we must offer them jobs on sufficient remuneration so that they can live at a reasonable standard and can keep their minds free from financial worries.

What are the present starting salaries offered by Government to scientists? Class II employees of national laboratories on contracts of 5 years may have to start in the grade of Rs 160 to Rs 275. A recent advertisement offered a vacancy for a senior chemical assistant in a Government undertaking, qualifications: good B.Sc. or M.Sc. with 2/3 years' experience of analysis of fuels—grade Rs 150 to 250. The States offer such jobs as Lecturer in Agricultural Chemistry, qualifications: 2nd class M.Sc. or equivalent foreign degree, 2 years' experience grade Rs 150-350; or Special Officer (Sericulture) with M.Sc. Entomology or Biology and specialist training in Sericulture with at least 2 years' experience—grade Rs 200-700. DA is too low to make much addition to these basic rates. Even Class I research jobs in Government institutes do not carry a starting pay of more than Rs 350.

The question of wage differentials needs the most careful study if good candidates are to be attracted to the more important posts. Even in UK, in recent years, it was found that wage differentials were not sufficient to attract men to more responsible jobs. Something seems really wrong with wage differentials when, in the same newspaper that contained the advertisements quoted above, one finds an advertisement for a Diesel Foreman in a State Electricity undertaking: qualifications—"must be literate", 5 years' experience of diesel

India's Trade with Western Europe

Scope for Increased Exports

THE declining or static trend of exports from India to the West European countries during recent years induced the Government of India to send a mixed Trade Delegation to those countries at the fall of last year, to explore the possibilities of increasing this trade. As a result, Trade Agreements have been concluded with West Germany, France, Italy and Switzerland which, broadly speaking, have created a favourable climate in those countries for a greater flow of trade with India. Under each of these Agreements, a Joint Commission is to be set up, to consider questions relating to the removal of impediments to this trade and the provision of facilities for increasing its flow.

Each one of these Agreements specifically refers to the scope which exists in the country concerned for more exports thereto from India. This scope has reference to conditions in general; it also refers in some cases to specified commodities which have been listed together and enumerated as appendix to the Agreement. Generally, these Agreements indicate the possibilities of co-operation between industrial enterprises and trading organisations on either side in meeting each other's requirements and effecting sales to each other on a basis of reciprocity. It is expected that understandings to this end would make possible imports of raw materials and developmental goods into India against supplementary sales to West European countries.

WEST GERMANY ENUMERATES ITS NEEDS

The West German Agreement speaks of a wide and growing market for Indian goods in that country. "Efforts should be made," it says, "to utilise the undoubted possibilities of

generating sets—grade Rs 150-250. Is it worth while for any man to spend 5 or 6 years obtaining an M.Sc. and further years training in some specialist line if, at the end of it, he is not going to be any better off than a "literate" man with 5 years' experience? This comparison is within governmental service, but the contrast is greater when it comes to comparison with private industry. Scales are much more variable in the private sector, but, in the larger companies, executive jobs for graduates with special qualifications often start at Rs 300 or Rs 500, plus substantial DA, and more specialised jobs may carry a starting pay of Rs 800 or more. A graduate in a large commercial company as an ordinary clerk can start at a salary of over Rs 200 (including DA). Hence, the better candidates inevitably search for employment first in the private sector.

Jobs in the private sector for scientists, however, are limited. Where they will be required in much greater number is in the rapidly expanding public sector, where few large-scale projects call for engineers and scientists with knowledge and experience that they can apply to the practical problems of rapid expansion. It is not possible for Government to obtain for these posts the right type of candidate—men with broad outlook, able to think for themselves and apply their knowledge in a practical way—if these men are to be constantly worried and frustrated because they do not know how they can provide a decent livelihood for their families. Patriotism does not really come into the picture at this stage, for, a man's first loyalty is to his family.

respective areas." In respect of the former, it observes: "The French representatives declare their firm determination to abolish progressively in respect of India and all the other member-countries of the GATT discrimination in the application of quantitative restriction on imports into France, with a view to furthering the expansion of international trade on a sound and durable basis." Questions of interest to the two parties to the Agreement in regard to the extension of liberalisation on a non-discriminatory basis will be examined by a Joint Commission of the two Governments, to be set up to consider this and other questions relating to trade promotion. In addition, France has expressed its readiness to examine, in this connection, ways and means of facilitating importation into France of products of special interest to the export trade of India, "in a manner compatible with the best interests of the two countries."

ITALY REQUIRES NUMEROUS INDIAN PRODUCTS

It is understood that there are no quantitative restrictions on the import into Italy of goods which India is in a position to supply; Italian authorities would welcome, within the limits of the Italian regulations concerned, any improvement of imports of Indian goods into Italy. Under the Agreement, Italy has undertaken to give to imports from India (or exports thereto) the same treatment as is accorded to Sterling exchange area group of countries in the Italian foreign trade regulations. In other words, applications for licences for import of goods from and to Italy will be treated equally favourably, except in cases of specific commitments to the contrary, with similar applications from any other members of this currency group. Both the Governments have agreed to give all facilities to promote trade between the two countries and treat fairly and equitably all questions arising therefrom.

While this favourable treatment has been assured to imports from India generally, the Agreement with Italy has specified, in a schedule attached thereto, about 50 products which are available for export from India to that country. These products are: tea, coffee, tobacco, spices, cigarettes and cigars, dried fruits, coal, preserved fruits, fish and tinned prawns, hides and skins raw and tanned, hydrogenated vegetable oils, bones, sheep casings, animal hair and animal horns, vegetable and essential oils, pig iron, mica, groundnut, cotton raw and waste, silk waste, raw wool, myrobalam and extract, drugs and medicines and other pharmaceutical products, cotton and jute twist and yarns, cotton fabrics mill and handloom, jute gunny bags and cloth, woollen, art silk and rayon fabrics, ethyl alcohol, leather footwear, carpets, collyer and manufactures, bristles, fibres, brushes and brooms, certain types of wood and timber, railway rubber components, linoleum, sports goods, handicrafts, exposed Indian films, gums and resins other than gum arabic and resin, lac and shellac, canes and rattans, shells, carding engines, glassware and oilseeds. Exporters to the Italian market are advised to pay particular attention to these products.

SO ALSO SWITZERLAND

There are no quantitative restrictions in Switzerland, too, on imports into that market of commodities which India is in a position to supply.

In the case of the Agreement with that country also, besides a general assurance that all facilities would be given "for the promotion of Indo-Swiss trade, within the framework of their respective laws or regulations",

FRANCE ASSURES NON-DISCRIMINATION

The Agreement with France not only assures non-discrimination between India and all the other member-countries of the GATT, but also promises to "examine with the authorities of the different States in the French Community the possibilities of freer importation of Indian products into their

about 30 commodities have been listed together, in an annexure thereto, which are considered particularly to have considerable scope in the Swiss market. These include manganese and ferro-manganese, pig iron and steel tubes, shellac, jute manufactures, raw wool, leather manufactures, mica, essential oils, tobacco, cotton and silk waste, pharmaceutical raw materials, bristles, precious stones, tea, coir manufactures, spices, cashew and walnuts, carpets, textile manufactures, hydrogenated vegetable oils, pickles and chutneys, mangoes and bananas, tinned fruits and brassware. The particular attention of exporters to the Swiss market is invited to these products.

All-India Businessmen's Convention

Aims and Objectives Examined

THE All-India Businessmen's Convention to be held in New Delhi on the 24th and the 25th of this month will be a unique event. The Convention is expected to be attended by more than 10,000 businessmen. Last year, regional Conventions were held in Bombay, Madras and West Bengal. The Convention of West Bengal was, of course, the most impressive. It was attended by nearly 5,000 businessmen from various parts of the State. The West Bengal Convention has now set up a permanent organisation to give advice and assistance to people in establishing new industries or in expanding the existing industries and also for promoting the growth of trade associations in the mofussil areas. It is understood that the sponsors of the Business Conventions in Bombay and Madras have also set up some machinery more or less with similar aims.

Having thus successfully organised regional Conventions, it has now been decided to hold a Convention on an all-India basis. The initiative has been taken by the Federation of Indian Chambers of Commerce and Industry, the central organisation of the Indian business community. The Convention will provide opportunity to all categories of business-manufacturers, distributors, importers, exporters, wholesalers, retailers, etc.—to come together to discuss problems of common concern.

The objectives of the Convention are:

- To bring about a feeling of greater harmony, sense of unity and co-operation among the businessmen of all classes operating in different parts of the country;
- To create an atmosphere of purposive activity in the commercial and industrial community in the task of further progress and economic development of the country;
- To promote a spirit of constructive enterprise among the younger generation;
- To bring to the notice of the unorganised section of the business community the role of chambers of commerce and associations, etc., and the contribution they make to the solution of problems confronting the interests they represent; and
- To provide an effective medium of focusing attention on the general difficulties experienced by businessmen.

It is true that the problems confronting all businessmen are not identical. For instance, the interests of the manufacturers and traders may not be the same. The difficulties confronting importers belong to a different category. Besides, the big industries and the smaller industries sometimes are not well disposed to each other. But it should be remembered that, fundamentally, the problems of the business community are the same. For

Thus, liberalisation and favourable treatment have been assured under all the Agreements. Except in the case of France, commodities have been specified in which the respective markets are particularly interested. While the West German list is small, the Italian and Swiss lists cover a very wide field and include commodities in the increased exports of which India is particularly interested. It is now up to the exporters concerned to take the fullest advantage of this favourable opportunity and endeavour to export to these markets as much as possible, particularly in respect of the scheduled commodities, and thus help to realise a higher level of trade.

destructive way. Businessmen should acknowledge the fact that, in an underdeveloped country like ours, the public sector has a crucial role to play. It may, because of inexperience, make mistakes occasionally, but that should not be used as an argument to run down the public sector as such. At the same time, Government and the Congress leaders should realise that the private sector will continue to play a vital role in economic development. It is futile to believe that problems like poverty and unemployment can be solved merely by enlarging the sphere of the State. Our economic condition as compared to that of advanced countries is far from satisfactory, and rapid progress will be possible only when the public sector and the private sector work in a spirit of maximum co-operation and understanding.

The agenda for the Convention includes many items which are of considerable importance to the business community. Some of the items are: greater use of normal trade channels by manufacturers for internal distribution and export and import; assisting the development of small scale industries; ways and means of strengthening trade and industrial associations; needs for simplification of the procedure for collection of sales tax, professional tax, income tax; and the desirability of streamlining various pieces of legislation, such as Shops and Establishments Act and the Industrial Disputes Act, which are found cumbersome and difficult, especially by smaller establishments.

The utility of the Convention will, however, depend on the extent to which the sponsors carry out its objectives. A great deal of good can be done if the various chambers of commerce and similar bodies make a genuine attempt to help the small businessmen. The difficulties of the latter at present are broadly of two categories—lack of financial assistance and lack of technical help. Although the centre and the States have set up several institutions like the Industrial Finance Corporation and State Financial Corporations, the small businessmen have not been able to take full advantage of them because the rates of interest are very high (the West Bengal Finance Corporation charges 7 per cent) and the procedure for getting loans is rather cumbersome. Similarly, the Small Scale Service Institute and its connected agencies are doing useful work, but it is reported that these institutions are not quite helpful to the small businessmen. The chambers of commerce, therefore, should undertake this aspect of the work in such a way as to avoid the rigidities usually associated with official agencies. The chambers, in consultation with the banks, should devise the necessary measures by which they can be of assistance to the small businessmen in regard to the provision of finance.

Chambers of commerce have been in existence in India for over 30 years and, by and large, they have rendered useful service to the business community and to the country at large. But now that the country is entering a period of intensive industrialisation, it is necessary that the chambers should adjust themselves to the new situation. Apart from representing effectively the grievances of trade and industry as in the past, they should now play a more active and positive role by assisting and encouraging more and more young men to take to the business line. It is only when educated men in large numbers give up their craze for service and enter the business sphere that we can solve the acute problem of unemployment. The first All-India Businessmen's Convention will have rendered a useful service to the country if it succeeds in creating a more favourable atmosphere for business activity in this country.

EDITORIAL

NOTES

Materials for Steel

It is disturbing that, while the importance of increased production of iron and steel as the base of industrialisation is now generally accepted, and the massive effort made in the last few years in that direction is bearing fruit, the industry producing the principal raw material, namely, Coal, should be lagging behind. Drawing attention to this in his address at the last annual dinner of the Geological, Mining and Metallurgical Institute of India, Sir Jehangir Ghandy urged a "thorough-going review of the policies governing the industry to eliminate the present disincentives and brakes in production." Sir Jehangir estimates that, according to present indications, the coal industry is unlikely to achieve more than fifty per cent of the 22 million tons of additional output envisaged in the Second Plan. Unless effective steps are taken to step up output, shortage of good coal, which is "already proving an increasingly serious drag on industrial development", will seriously handicap the expansion of the iron and steel industry.

It is not alone in respect of coal that difficulties are being experienced. Accessible supplies of limestone, of which half a ton is required for every ton of steel, are limited and it will be necessary to build up Railway facilities in order

to open up new deposits. With three plants in the public sector and two in the private sector producing six million ingot tons of steel a year by the end of the Second Plan, and the further expansion envisaged in the Third Plan, the problems of supplies and transport of materials to each of the plants require to be tackled with provision.

In this context, Sir Jehangir has suggested the setting up of an Iron and Steel Board, competent to anticipate the problems that are likely to arise and with sufficient authority to take appropriate action. The question may be raised whether the Ministry of Iron & Steel could not perform these functions. But with plants in both the public sector and the private sector standing in the queue for the materials and facilities in short supply, there will be no scope for complaints of partiality toward the public sector, which are heard from time to time, if a Board, consisting of representatives of Hindusthan Steel, Tatas and Indian Irons, does the job for the Ministry.

Another point made by Sir Jehangir relates to the export of iron ore. An objective assessment of the raw material position clearly shows that the country can afford to export iron ore in substantial quantities without prejudice to the indigenous steel industry. This is a theme which Indian Finance has been plugging for the last dozen years. If the Government had come round to this view a few years earlier than they did and taken the necessary steps to promote exports that are now being taken, it is possible that the country could have avoided the foreign exchange crisis which threatened to throttle the Second Plan. It is rueful to reflect that a proposal by Tatas for exporting four million tons of iron ore a year to an American German Combine in 1952 had to be dropped for want of official support.

Another Ministry

The President of the Coal Consumers' Association of India has necessarily to be interested in the problems of coal, but it is the distinction of Mr. Darab. Cussetji Driver that he is able to infect others with his own enthusiasm for the subject. His addresses to Coal Consumers' Association of India is an yearly event, which not only ticks off the problem that face the rather shaky coal economy of the country, but is also teeming with fertile suggestions.

The problems of coal ramify in all directions—Railways, power generation, Engineering, Public health, Street lighting etc. The programme to step up supply of coking coal for the steel industry, through setting up washeries, will leave the latter with huge quantities of middlings and rejects on their hands. And unless some economic use

could be made of the middlings, Power Generation for instance, the heavy investment on the washeries will not pay off. The programmes for expansion of the steel industry will have to be coordinated with a programme for electrification of railways. The latter will also serve to release part of the limited supplies of selected grades, now consumed by the steam locomotive, for industrial users.

The splendid panegyric with which Mr. Driver has saluted the great achievement of the Railways should put the authorities in a favourable frame of mind to take note of this suggestion, as well as some of his "minor misgivings" regarding inadequate attention to small projects like provision of colliery sidings, or prompt payment of bills. But with all respect for Mr. Driver, it is not possible to follow him when he goes on to suggest the creation of a new Ministry of Coal. How is a new Ministry going to eliminate the difficulties created by what Mr. Driver calls lack of cooperation between the "Ministry of Labour and Unemployment" and the Ministry of Steel, Mines and Fuels? On the other hand, is not another Ministry more likely to complicate the problem?

How Much Sugar?

The rise in sugar prices, followed by the disappearance of the commodity from the retail shops, has been causing anxiety and has also led to a variety of suggestions for dealing with the situation, ranging from Decontrol to Total Rationing. Government, for their part, seem to be experimenting with half-measures, while the "cup that cheers" is day by day getting more and more bitter, and even infants are alleged to have become allergic to the feeding bottle. The hunt for the culprit has elicited a chorus of those most closely concerned shouting "Not Me". It is quite likely that they are not to blame, but are just victims of the operations of the market and of Government policies as much as any ordinary consumer.

The diagnosis that shortfall in production in the last two years is responsible for the dizzy rise in prices has been automatically followed by the prescription that increase in production will offer a permanent cure. That production has slumped, for whatever reason, admits of no argument. But under conditions of planned economic growth, is it possible to envisage any period when this country will be able to produce as much sugar as its growing population will be able to consume? The experience of the last decade in which, while production has doubled, consumption has increased at an even faster rate, should be a warning against any such dangerous illusion. There may be temporary breaks when production

may appear to catch up with consumption, but not for any length of time. Consumption would soon recover the lead. The problem is whether, making all allowances for technological improvement in cultivation of sugar cane for increasing yield and sugar content, we have enough land to spare after providing for food grains, milk (that is pasture), oil seeds, cotton, jute and other essential raw materials for industry? This problem has not so far received the attention of the planners and the food administrators that it deserves.

The plan for sugar, including both production and distribution, will be successful if it is drawn up on the assumption that special efforts would be required to equate supply and demand. This may be done in two ways—rationing, which will take all the sweetness out of sugar, or, in the alternative, complete decontrol accompanied by a sustained campaign to persuade the public to reduce the consumption of sugar. It may not be as difficult as it appears, if all the resources of propaganda, including medicine men and revivalists, are pressed into service. The Tea Board and the Coffee Board can help by popularising ways of preparing the beverages with smaller quantities of sugar or with no sugar at all. And VIPs can perhaps set a patriotic example of ostentatious austerity by taking their tea with salt.

We still feel that it is not too late for going ahead with a plan for the export on a considerable scale of iron ore. Japan, Germany, America, and much of Europe, both eastern and western, would probably be interested in a steady and assured supply of India's quality iron ore.

Misleading Bank Profits?

BANKING results that are being published for 1959 are strange, mystifying and paradoxical. With rare exceptions, the "quick communiques" of profits indicate a level of earning that is, if anything, slightly better than the relative figures for 1958. True, there have been instances where a decline in profit has been reported; and it is also true that we have yet to hear from such entities of importance as the Central Bank and the Punjab National Bank. So, it is barely possible that we may still have a confirmation of trends as to a lower level of earnings from banks as a whole. However, on the available evidence, the conclusion is not unwarranted that 1959 may not have proved so terrifying a year for banking as we had feared it might be. Why?

We may state at the outset that the "quick communiques" may be misleading. We do not know as yet the components of the income on the basis of which profit figures have been struck. For example, it is not unlikely that surplus on investments has figured as an important contributor to profit. Indeed, it may be recalled that such strategy had had to be adopted by some institutions in 1958. If, indeed, the balance-sheets in due course show that, in a number of instances, recourse has been had to such subterfuge, it would be true that the 1959 profits look respectable only because profits that are not, strictly, banking-derived have inflated the income side of the profit and loss accounts. So, in order to get at the real banking profits of individual institutions, we have to wait for the publication of the balance-sheets.

We may now refer to the reason for puzzlement that, in regard to the published results so far, we confess to. It is that, during 1959, banks undoubtedly had a larger proportion of their Deposits in the form of the higher-costing Time Liabilities; that, relatively, banks experienced a lower ratio of the higher-earning assets, Advances, to Deposits; and that, indeed, the weekly average of higher-costing Deposits exceeded the weekly average of higher-earning assets. In such a situation, it was all too clearly inferable that banking profits (sic) would have been adversely affected.

There was, of course, the mitigating factor of the bulk of available resources of banks, other than that aspect of it lent out as

Advances, being invested in gilt-edged. That is to say, in relation to the increase in Deposits recorded in 1959, banks did not correspondingly augment their cash balances, and instead insured the earning of around 3½ per cent by purchasing gilt-edged through the Reserve Bank tap. But, then, a reduction in the maximum rate in terms of the inter-bank agreement was effected only as from the beginning of September in 1959. So, until then, a good part of the money for which the banks were paying, and paying through the nose, was at a rate of interest that exceeded the return on their gilt-edged investments. This will have surely meant a "loss" on every rupee of such Deposits.

But there is, in all this, another complication. This relates to the position of the State Bank. It is true, the State Bank has had during 1959 both an unduly low ratio of Advances and an unusually high ratio of Investments to Deposits. But, in the case of the State Bank, the higher costing Deposits has not entailed a loss, since a large parcel of Deposits (now said to be in the environs of Rs 200 crores) relating to counterpart funds lodged with the State Bank bears a rate of interest that is fully one per cent below the average yield on Government securities.

So, in the case of the State Bank, and at least as relating to the Rs 200 crores of special Deposits, the higher-costing Deposits have not tantamounted to a liability, but have instead been an asset earning a clear one per cent. The static nature of Advances that has been experienced by the State Bank might, therefore, have not had much of an impact upon the State Bank's earnings for 1959. On the other hand, we must not forget that the State Bank has simultaneously been preoccupied with a considerable programme of branch expansion. In the first ten months of 1959, the number of new offices opened by the State Bank is placed at 92; and the point need hardly be laboured that each such new office would have entailed a "loss" for the State Bank. Thus, the adventitious and fortuitous profit that the State Bank has been enabled to earn on counterpart funds will have come in useful in defraying the loss consequent on the branch expansion programme.

But, if the State Bank figures are excluded, it will be found that Scheduled Banks were, in fact, able to utilise a satisfactory proportion of their funds in the higher earning Advances. But, again, meantime, operating expenses of banks have generally been on the rise. So, the fractionally improved earnings from Advances in 1959, it seems to us, will have been fully absorbed by the higher operating costs during the year.

We are, therefore, left where we started. Incredible, fantastic, impossible: but the published bank figures do not make such dreary

reading as we had apprehended. At the moment, meanwhile, the money market is feeling the strain of a busy season pressure that is considerable. It is not at all unlikely that expansion in Advances of Scheduled Banks during the current busy season will amount to Rs 200 crores. Banks are consequently happy.

We suggest that the present experience of optimum utilisation of resources on the part of banks will prove ephemeral. Although the busy season, strictly speaking, is supposed to last until the end of April, we have seen in the last two years that the spate of Governmental disbursements at the fiscal year-end endows the banking system with such vast new resources as to succeed in considerably mitigating busy season pressure by the first or second week of April. It is too early to predict now whether the 1960 slack season will witness as substantial a contraction in bank Advances as we have had in the last year or two. But, undoubtedly, the Reserve Bank will direct the banking system to use restraint in Advances, in manner patterned after the central banking institution's action in this behalf in February last year. So, it may be safe to assert that, for its part, the Reserve Bank will "persuade" Scheduled Banks to effect a reduction of at least Rs 100 crores in Advances during the 1960 slack season. Meantime, it may also be safely assumed that Deposits accretion during the 1960 slack season will be as pronounced as was the case in recent years. Against such a background, inevitably, there will be a steady accumulation of banking resources which cannot be profitably utilised. It may well happen that, in manner similar to last year and the year before, banks will add considerably to their gilt-edged portfolio. This, however, will not solve the problem of banking earnings during 1960. It is our view that, in the light of the experience of recent years, the banking system should plan on the basis that it will have an embarrassment of riches on its hands as from, say, May. Accordingly, the Indian Banks Association would be well advised, in the midst of busy season pressure, to consider the question of further revising downward the maxima on deposit rates at least for the currency of the 1960 slack season.

Steep Rise in Bank Advances

THE returns of the Reserve Bank for January 8 are practically featureless, although there is evidence of inter-governmental transactions. Active Note circulation has expanded by Rs 2.82 crores to Rs 1777.90 crores. There has been an outflow of Rupee Coin for Rs 0.32 crores. Consequently, the Reserve Bank's cash in the till is lower by Rs 3.14 crores at Rs 9.79 crores.

Bank Profits

Andhra Bank Limited has reported a substantially higher profit of Rs 12.12 lakhs for 1959, subject to tax, against Rs 8.26 lakhs in 1958.

The profit of the Bank of Baroda for 1959 is placed at Rs 28.89 lakhs against Rs 27.42 lakhs. The provision for tax has been reduced by Rs 1.50 lakhs to Rs 4 lakhs. Including interim dividend, the distribution to shareholders for 1959 is put at 14 per cent, which works out to 9.8 per cent net as against 12 per cent tax free paid in 1958.

The dividend paid by Bank of India is also reduced. Earnings for 1959 show a drop from Rs 85.77 lakhs to Rs 82.68 lakhs. The provision for tax has been reduced by Rs 7 lakhs to Rs 18 lakhs. Although the rate of dividend has been maintained, the shareholder receives less since the net dividend is 11.2 per cent against 16 per cent in the previous year.

Bank of Maharashtra has reported a profit of Rs 9.89 lakhs for 1959. The provision for tax is placed at Rs 3.40 lakhs. The taxable dividend of 9 per cent is being paid on a capital higher by Rs 6.46 lakhs against the dividend of 6½ per cent free of tax on the old capital of Rs 25.22 lakhs.

Union Bank has reported a sharp rise in profit from Rs 14.75 lakhs to Rs 24.30 lakhs. Reserves get Rs 1 lakh more at Rs 4 lakhs. The provision for tax has been doubled to Rs 8 lakhs. Bonus to staff absorbs Rs 5 lakhs against Rs 3.15 lakhs. The dividend has been paid at 11.25 per cent, subject to tax, against 8½ per cent free of tax.

The State Bank of Shaurashtra has reported a profit of Rs 18.01 lakhs, including the carry forward, for 1959 as against Rs 16.38 lakhs being the relative figure for the previous year.

Dena Bank has done exceedingly well in increasing its Deposits during 1959 by Rs 5.02 crores to Rs 35.02 crores. The net profit for 1959, after providing Rs 2.25 lakhs (Rs 1.80 lakhs) for bonus to staff and including Rs 3.02 lakhs (Rs 2.80 lakhs) brought forward from the last accounts, amounted to Rs 16.07 lakhs against Rs 17.02 lakhs in 1958. The transfer to Reserve is maintained at Rs 6 lakhs. It has been pointed out that no provision for tax is necessary as tax paid at source on investments is enough to cover the liability. The dividend declared has been stepped up from 6 per cent to 8.76 per cent which implies an increase of 0.14 per cent in the net dividend payable.

"Same service everywhere"

How do you mean, Bhai Sahib? Are you saying that all tea shops are supplied direct by Brooke Bond?

Precisely—and they are supplied at least once a week. It used to be different in the old days. Small traders had to fend for themselves...no one bothered whether they received regular supplies or not. But Brooke Bond changed all that. Today a Brooke Bond salesman visits each single shop selling Brooke Bond Tea every week and delivers the shopkeeper's requirement right at his doorstep.

Do you mean to say that even a small village shop buying, for instance, a pound or two of tea, is visited regularly by a Brooke Bond salesman?

Yes—I mean just that. No matter how small the shop, how far the place or how little the quantity bought, a Brooke Bond customer gets the same frequent and courteous service as the largest shop in the cities.

Is this system of direct distribution peculiar to Brooke Bond, then, Bhai Sahib?

Yes and no, my friend. Whilst Brooke Bond were the pioneers in introducing this radical system of direct distribution, it soon proved so successful that many others have followed suit. You might say that Brooke Bond blazed the trail.

Well, they say a good idea is always catching, Bhai Sahib!

Brooke Bond India Private Limited

The sharp rise of nearly Rs 30 crores to Rs 213.03 crores in Investments is symptomatic of deficit financing incurred by Government during the week, for, State Governments have very substantially improved their balances, which have been marked up by Rs 27.83 crores to Rs 40.36 crores, even after their Ways and Means borrowings from the Reserve Bank had been reduced by Rs 3.76 crores to Rs 20.78 crores. It is thus that the Central Government's Deposits, in spite of being replenished by the proceeds from deficit financing, have been marked down by Rs 14.95 crores to Rs 49.41 crores.

There is an increase of Rs 8.56 crores in the Reserve Bank's portfolio of Government Treasury Bills purchased and discounted, and this relates presumably to transactions in this behalf carried out with the State Bank of India, whose Investment portfolio is lower by Rs 10 crores. Similarly, the rise of Rs 12.44 crores to Rs 88.69 crores in the Reserve Balances of

member banks is traceable to the State Bank. The continuing busy season pressure is suggested by the small rise of Rs 2.65 crores to Rs 105.54 crores in the Other Loans and Advances of the Reserve Bank.

Finally, Balances Held Abroad have fallen further by Rs 1.57 crores to Rs 46.78 crores.

According to the return of the State Bank for January 15, Deposits have improved by Rs 6.55 crores to Rs 585.67 crores. Advances are higher by Rs 1.32 crores to Rs 173.45 crores. There has been disinvestment in gilt-edged for Rs 10 crores and, consequently, cash in hand and with the Reserve Bank has moved up by Rs 14.74 crores to Rs 35.05 crores.

During the week ended January 8, the superimposition of month's early disbursement upon busy season demand has caused a steep rise of Rs 20.53 crores to Rs 997.19 crores in the Advances of Scheduled Banks. Besides, constituents also drew down on their Deposits,

which are lower by Rs 10.82 crores to Rs 875.77 crores. Gilt-edged Investments have been marked up by Rs 12.03 crores, reflecting purchases made by the State Bank during the relevant week. With window-dressing completed, cash balances have been drawn on steeply in order partially to reduce indebtedness to the Reserve Bank, which is lower by Rs 10 crores to Rs 22.21 crores. Cash Balances are almost exactly Rs 44 crores lower at Rs 155.89 crores against Rs 199.87 crores.

Britain, and US Inflation Prospects

By Paul Einzig

THE terms of the settlement of the steel wages dispute in the United States have caused considerable concern in Britain, because they foreshadow a resumption of the non-stop inflation with world-wide consequences. In itself, the addition of \$1,000 million to the consumer purchasing power of a nation such as America would not necessarily be inflationary. But the impending increase in the price of production of a wide-range of consumer goods as well as capital goods. And the terms conceded to steel workers will set the pace of other wage demands, leading to an all-round increase of wages.

The United States authorities are certain to make an effort to prevent or reduce the inflationary effects of the steel settlement. They will keep money tighter than they would have kept it in the absence of such an inflationary decision. In any case, since the balance of payments of the United States is bound to be affected by the revival of inflation, the resulting effect on the gold reserves might compel the United States authorities to adopt defensive monetary measures in order to check the drain.

The possibility of dearer and tighter money in New York is causing some concern in London. The business situation in Britain does not call for higher money rates, but a further decline in the British gold reserve might force the hand of the authorities. It would be a pity, because capital good industries are only just beginning to benefit properly by the revival, and any dearer money is bound to check the expansion of industrial capital investment programmes. There is no reason to believe that the British authorities envisage raising the Bank Rate just yet, but if, in spite of the end of the adverse season, the outflow of gold should continue, they might decide in favour of such a step.

One of the reasons why the British authorities are reluctant to raise the Bank Rate is that they have no wish to impede the efforts of the United States authorities to reverse the outflow of gold. In this respect, history may repeat itself, even though in a modified form. It will be remembered that, in 1927, the Federal Reserve authorities lowered their

bank rate, even though it was considered necessary to check the Wall Street boom, in order to make things easier for Britain. The British gold reserve was declining, and it was inexpedient to check the outflow by means of raising the Bank Rate, which would have caused an increase of unemployment. In order not to force the British authorities to raise their bank rate, the United States authorities lowered their money rate. Likewise, the British authorities are now endeavouring to keep down money rates even at the cost of losing more gold, for the sake of facilitating the task of the United States authorities to check their gold outflow.

In a letter to *The Times*, Sir Ralph Hawtrey, one of the leading monetary economists formerly Economic Adviser to the Treasury, strongly urged the Government to detach sterling from the dollar in order to prevent American price and wage inflation from spreading over Britain. He suggested that, should inflation in the United States be resumed, sterling should be allowed to depreciate above its present upper "support point" of \$2.82. Interesting as the suggestion is, it is not likely to be followed. The Government are firmly wedded to the principle of maintaining existing exchange parities, and nothing short of some major emergency would induce them to depart from the present parity.

In any case, there is no reason why inflation in the United States should necessarily cause inflation in Britain. On the contrary, if money rates should be raised in New York, the resulting dearer money in London would check inflation in Britain. Any artificial appreciation of sterling would be detrimental to the British balance of payments. The United States is not the only industrial country whose competition British exporters have to face. Even if the adjustment of the sterling dollar rate to the rise in American prices would do no more than relinquish the advantages Britain would gain over American competitors through higher costs in the United States, it would place British industries at a disadvantage against competition by German, Japanese, etc., rivals.

In the absence of any adjustment in the exchange rate, inflation in the United States would mean an increase of the British gold reserve as a result of a favourable change in the British balance of payments. It would be a pity to prevent this by means of a revaluation of sterling. The British gold reserve is still far from being adequate, especially after its decline largely as a result of debt repayments last year. There is every reason to welcome an increase of the gold reserve through an improvement in the balance of payments. This would be something quite different from an artificial improvement through attracting or retaining foreign balances with the aid of raising the Bank Rate. Any part of the gold reserve acquired or retained by such means is not a source of strength but of potential weakness. There is everything to be said in favour of building up a large gold reserve as a result of a genuine improvement of the balance of payment.

Easier Trend in Jute Markets

THE jute markets displayed a quiet trend during the past week ended Wednesday. While sentiment had been subdued due to lack of fresh foreign interest speculative fervour had also considerably lessened. It would appear that at long last marketmen have realised that the bogey of raw jute shortage would not bring mills rushing to augment their stocks of the raw material at any price. There is no plausible reason to believe that raw jute availability in the current jute year would be inadequate to meet mills' requirements and leave a sizable quantity to be carried over into the next season. Reports from upcountry markets indicated arrivals and there was a sizable increase in raw jute arrivals in Calcutta and mill stations during last month. Arrivals of raw jute in December totalled 8.24 lakh bales comprising 7.65 lakh bales of jute of Indian origin and 0.61 lakh bales of Pakistani. This compares with the total of 7.80 lakh bales received during the previous month. Of the November arrivals, 7.46 lakh bales were of Indian origin jute and 0.34 lakh bales came from Pakistan. In the first six months of 1959-60, arrivals totalled 31.43 lakh bales comprising 29.81 lakh bales of Indian jute and 1.63 lakh bales from Pakistan. During the corresponding period of the previous season, arrivals totalled 35.10 lakh bales of which Indian jute amounted to 32.93 lakh bales and imports from Pakistan were 2.17 lakh bales.

Up to the end of December 1959 about 30 lakh bales of out of the total Indian crop of 57 lakh bales have reached mill centres leaving about 27 lakh bales yet to be moved. The trend of arrivals of Indian jute in the past two or three months shows that crop movement is getting into its normal stride. Moreover, this year imports from Pakistan is expected to total 5 lakh bales as against 3.4 lakh bales in the previous season. Of this quantity only about 1.63 lakh bales have been received so far.

The decline in jute goods prices noticeable during the past few days has stemmed partly from lack of speculative support and partly from the continued absence of any sizable overseas enquiries. It is evident that the declining trend in the raw jute market where sellers have become keen for business is primarily responsible for the reluctance of operators to lend support at the higher levels. Even

hessian has developed a sagging tendency despite encouraging US burlap consumption during December. US burlap consumption was slightly higher at 80 million yards during last month as compared with November. Burlap consumption in US during 1950 touched a new post-war high of 897 million yards. Stocks of burlap in that country at the end of December were also lower than at the end of November. Now that the steel strike is over it may be expected that burlap consumption will continue to record an uptrend. Even so, stocks are still large enough to meet three months requirements. It is therefore unlikely that US burlap consumers will evince much interest in the market if prices continue to rule high.

The jute goods market opened last Friday on a quiet note in the absence of buying interest. Even the news that US burlap consumption during December had been maintained at around the previous month's level with a reduction in stocks failed to check the declining trend. At the end of the day B Twills January was placed lower at Rs 113.15 as against previous closing of Rs 113.80. Hessian too was rather quiet at Rs 42.20. The trend continued to be downward next day also and by close of transactions B Twills stood more than a rupee lower on balance at Rs 112.50. Hessian followed a similar course to be finally placed at Rs 41.20. After ruling slightly better on Monday the market once again turned easier in the next two days with heavy goods meeting with heavy selling pressure on Wednesday to be finally placed on that day at Rs 109.50. Hessian was also lower in sympathy at Rs 41.50. In the futures market B Twills February declined to close on Wednesday at Rs 109.45 from Rs 113.15 at the beginning of the week. Hessian February was placed at Rs 41.22 from its opening level of Rs 42.60.

Sentiment in the raw jute market was easy with sellers keen for business. As mills did not evince any interest, prices declined from day to day and Assam Bottoms was finally placed at Rs 30.25 per maund as against Rs 31.25 a week ago.

Production and Prospects

WITH the release of the output figures of the major tea-producing countries, it is now possible to say that world supplies, during the 1959-60 season, will be well in balance with requirements. The latest crop estimate for Northern India for December indicates that the entire output of last year is likely to be sold at remunerative prices. Total output for last year has risen by only 2.15 million pounds to 557.96 million pounds as compared with 1958.

Following are the output figures (in million pounds) for the other producing countries:—South India, January-November, 137.7 against 148.1 in the corresponding period of 1958; Pakistan, April-December, 56.8 against 56.3; Ceylon, January-November, 377.9 against 375.3; Indonesia, January-October, 77.5 against 84.4; Nyasaland, January-November, 12.00 against 20.1; British East Africa, January-November, 40.9 against 36.2.

Russia is reported to have withdrawn from the Calcutta market and it is believed that this country may not buy any more tea during the current season. Buying from the UK, Egypt, Turkey and other countries is expected to broaden in the near-term. Apart from the external enquiry, domestic buyers are expected to take bigger quantities. If foreign demand for the plainer varieties is maintained, as is expected, their prices might develop a hardening tendency.

According to trade sources, stocks of tea in Calcutta warehouses totalled 1.14 million pounds at the end of last month as compared to 1.18 million pounds at the close of 1958. While stocks in public warehouses declined from 867,917 packages at the close of 1958 to 765,014 packages at the end of last year, those in private warehouses increased from 310,071 packages to 375,652 packages. Teas afloat, at the end of 1959, totalled 12,011 packages as compared with 6,207 packages at the end of last year.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 74,368 packages. There was a fair demand; but prices for plain and medium BPs and Fannings were generally 4 nP to 10 nP per pound lower although some of the blacker and cleaner Fannings showed little change. Medium BOPs, especially the higher-priced ones, were a weak feature and there were frequent withdrawals. There was, however, a fair demand for Orange Fannings at generally lower rates.

CTC Assams were irregular and these declined by 5 nP to 10 nP, there being a little more interest in BPs than in Fannings. Non-wither leg-cut teas were generally sold at 4 nP

to 6 nP below last week's levels; but there were a number of withdrawals of higher-priced autumnal descriptions. Whole Leaf grades were steady and occasionally dearer; but there was only a limited enquiry for Tippy sorts. The demand for Darjeeling teas was selected and prices were irregular, the more flavoury kinds selling well. Following rates were quoted:—Clean Black Pekoe Rs 2.22 to Rs 2.26; Plain BP Rs 2.04 to Rs 2.10; Plain Fannings Rs 2.10 to Rs 2.16; Medium BP Rs 2.00 to Rs 2.08; Medium Fannings Rs 2.16 to Rs 2.26; Best CTC Assam BP Rs 2.40 to Rs 2.60 and Best CTC Assam Fannings Rs 2.40 to Rs 2.60.

In the Cochin market, ten and a half lakh pounds of Leaf tea were offered for exports. Against good general demand, low medium and medium sorts were fully firm. Good medium teas were steady; but the high-grown sorts attracted very little demand. Whole Leaf teas were strong and dearer.

In the Colombo market, offerings were 5,802,852 pounds. There was good general demand for high-grown teas, which were dearer following quality, by approximately 5 nP to 10 nP per pound. Medium Broken were 5 to 10 cents dearer; but low-grown and "tea price" were rather easier.

In the Internal Sale, offerings were 22,726 packages of Dusts. Orthodox teas were sold at up to 8 nP per pound below last rates, while leg-cut teas followed this trend and were also up to 8 nP easier. The few Darjeeling dusts, on offer, were well supported and often sold appreciably above last rates. Medium CTC dusts were irregular and sometimes easier. The very best CTC types were also easier by up to 10 nP. Following rates were quoted (per pound):—Medium Doosars Dust Rs 2.16 to Rs 2.26; Medium Assam Dust Rs 2.10 to Rs 2.20; Medium Assam CTC Dust Rs 2.18 to Rs 2.28 and Best Assam CTC Dust Rs 2.50 to Rs 2.80. Also 1,530 packages of Leaf grades were offered for internal consumption. There was a fair demand for these at lower rates.

The Ceylon Government have announced that the total quota of high-grown tea, to be sent for auction in London in 1960, will be the same as last year—32 1/2 million pounds. For the first three months of the year, there will be no quantitative control on the medium teas going to London auctions. Quantitative restrictions are imposed on quantity teas sent to London for auctions in order to develop Colombo as an auction centre for Ceylon teas.

In the Internal Sale held in Chittagong, offerings, were 14,656 chests of Leaf grades and 5,269 chests of Dusts. Leaf offerings met again with a very strong demand and there was a general advance of a further As 12 to As 14 per pound. Leg-cut Fannings quoted between Rs 5.50 and Rs 5.80 a pound. There was a strong demand for Dusts with prices generally showing a rise of one to two annas a pound. Plain Sylhet Dust was quoted at Rs 5.06.

In Mincing Lane, offerings were 24,965 packages of North Indian and other miscellaneous growths, which were sold readily. Prices were fully steady on previous rates with any change in seller's favour.

Indian Finance

January 23, 1960

Britain

Britain's steel production in December averaged 432,900 tons a week—38 per cent more than a year earlier and the highest rate for any December in London today (January 14).

In the first three weeks of the month, steel output averaged 474,300 tons a week, or 3.4 per cent higher than in November. This production rate continued the rise of between 3 and 4 per cent a month begun in October.

Output in 1959, which was 52-week year, totalled 20,200,000 tons, compared with 19,600,000 tons in 1958 (a 53-week year).

The Iron & Steel Board estimates that production is currently running at about 23,500,000 tons a year.

Britain's exports in December were valued at £297,100,000, her imports at £371,900,000, and her re-exports at £10,700,000, according to provisional figures issued on January 13 by the Board of Trade in London.

After allowing for the normal seasonal variation, United Kingdom exports in the fourth quarter of 1959 were 5 1/2 per cent more than in the previous quarter on the same basis. Imports were 8 1/2 per cent up, and re-exports showed an increase to £12,000,000 a month, compared with £11,000,000 a month in the previous quarter.

Taking 1959 as a whole, Britain's exports were 5 per cent greater (at £3,326 million) than in the previous year, and 1 per cent greater than in 1957, the previous best year. Imports, at £3,993 million, exceeded 1958 imports by 6 1/2 per cent, but were still 1 per cent less than in 1957. Re-exports amounted to £130,000,000, compared with £141,000,000 in 1958 and £130,000,000 in 1957.

France

In November 1959, French factories produced 7,500 tons of spun jute and 6,100 tons of woven jute, compared with 7,839 and 6,335 tons respectively in October, and with 6,862 and 5,465 tons respectively in November 1958.

During the first eleven months of 1959, the total output of jute was 74,372 tons of spun jute and 59,880 tons of woven jute, compared, respectively, with 86,354 and 67,431 tons during the corresponding period of 1958.

During the first eleven months of 1959, the Peugeot factories manufactured 186,114 vehicles, compared with 171,314 vehicles during the corresponding period of last year. Of this production, 142,287 units were pleasure vehicles, compared with 131,883 units in 1958.

The French consumption of gasoline and high-octane fuel during November totalled 523,000 cubic meters, compared with 480,000 cubic meters in November 1958, which is an increase of almost 9%. Last October, the 587,000 cubic meters of fuel consumed was slightly less than the 592,000 cubic meters used in October 1958.

A similar trend was evident in the consumption of fuel oil with an increase of nearly 8% in November 1959 compared with the corresponding month of 1958 (154,000 cubic meters against 145,500 cubic meters). Last October, only 166,000 cubic meters were consumed, compared with 174,500 cubic meters in October 1958.

There was also a considerable increase in the consumption of heavy fuel compared with November 1958, which was a sign of increasing economic activity. For domestic fuel the figures were, respectively, 398,500 tons compared with 296,600 tons, which is an increase of more than 30%; for light fuel, 250,000 tons compared with 210,000 tons, which is an increase of 19%; and for heavy fuel, 509,000 tons compared with 568,000 tons, which is an increase of 9%.

At the beginning of December, the planting of cereals was carried out under normal conditions and the first harvests of both wheat and secondary cereals should be good.

The surface area planted with wheat is slightly higher than that planted on 1 December 1958 (40.3%) and 1.1% higher than the average surface area planted between 1954-58. Surface area planted with other cereals is generally lower than that of last year at the same period: oats—11.8%; and barley—9.2%.

Because of heavy rain, the maize harvest has not yet been completed. The yield has been irregular.

The rice harvest is almost finished. Despite the increase in surface area planted, the harvest, less than that of last year, should total 1.3 million quintals, including 1.1 million quintals of round grains and 0.9 million quintals of long grains. The average yield per hectare is 40 quintals of rice.

Planting has been hindered by the dry condition of the ground. Certain fields have had to be returned. As a result, the surface area reserved for fall rape has been reduced by 42% compared with last year and by 3% compared with the period 1954-1958. The surface area reserved for turnips has been reduced by 38%.

The production index for October showed a considerable increase. It was 168, excluding construction, compared with 160 in September and 157 in October 1958.

As a result, the increase was approximately 7% compared with last year. Including construction, the increase was 6%, with an over-all index of 161 in October compared with 154 in September and 152 in October 1958.

Considering the seasonal variations, the corrected index increased only 1.2% to 165 in October compared with 163 in September.

A mission consisting of four civil servants from the Indian Ministry of Trade recently arrived in Paris. The purpose of their voyage is to meet with French authorities in order to

study the details concerning the manufacture of industrial equipment prototypes by an industrial training center in Madras in southern India. The Madras center will deliver prototypes of precision machines and equipment for small industry.

The Ministry of Finance announces that foreign currency reserves in the franc zone totaled 1,793.3 million dollars as of 30th November, 1959.

Foreign currency reserves have decreased 117.7 million dollars. This decrease is the result of an excess of \$2.3 million dollars in foreign accounting operations and an anticipated reimbursement to the International Monetary Fund of a sum of 200 million dollars. This last payment reduces the French debt to this organization to 181.2 million dollars.

In November foreign currency receipts were higher than in October (67 million dollars), but compared with the receipts for August and September which were 82 and 84 million dollars respectively.

The actual pace of foreign currency receipts is considered by the Finance Ministry as very satisfactory although it is less than that of the first half of 1959 during which monthly receipts totaled an average of 150 million dollars.

The breakdown of French reserves is as follows:

—Gold in the Bank of France: 875.5 million dollars;
—Accounts at the Bank of France available for foreign transactions: 794.8 million dollars;
—Gold and convertible currencies of the Stabilization Exchange Fund: 123 million dollars.

Sweden

Stockholm—Sweden's industrial production in October was 6 per cent larger than in the same month a year ago, including a 6 per cent rise for capital goods and 5 per cent for consumer goods. The index of the Federation of Swedish Industries was registered at 269 points (1935=100), as compared with 253 in October 1958.

The seasonally adjusted figure for October was 254 points as against 251 for September. Breakdown figures for the various branches show a 20 per cent increase in iron-ore mining over the figure for October 1958. For the steel and other metal manufacturing industry and for paper and pulp the rise was about 15 per cent. The timber industry, on the other hand, fell short of last year's figure by 7 per cent. Employment in the engineering industry was up 3 per cent on the figure for October last year.

The marked upturn in business trends in 1959 brought about a heavy rise in production in Sweden, it is said. In the preliminary National Budget Report submitted together with the State Budget at the opening of the Riksdag on January 12. The increase in overall production is estimated at 4-5 per cent, which is above the average for the 1950s. A continued rise is likely to take place in 1960, a particularly strong stimulus being expected from industry's

purchases of machinery and means of transport.

Behind the increased activity in 1959 was in the initial phase the favourable development of exports. Increases were registered for all export groups except agricultural products, and an especially large upswing was noted for forest products and for iron and steel. Overall exports rose by 5 per cent in value and by 7 per cent in volume.

Imports, on the other hand, remained more or less unchanged in value, while an increase of 2 per cent was recorded in volume. Sweden's balance of payments showed a favourable development, and for the first time since 1953, there was a surplus preliminarily estimated at Kr.150,000,000 (£10,345,000; \$30,000,000).

A forecast for the first half of 1960 seems to indicate an increase in the volume of exports of 5 per cent. Imports are likely to grow, but to remain within the framework of current export revenues, the report says.

Investments rose more steeply than consumption in 1959. Government investments were up 12 per cent, while private and municipal investments increased by 1 per cent each. The number of housing units completed reached a new peak level of close on 70,000.

Public consumption showed a rise of 7 per cent during the past year, most of the increase being accounted for by defence, education and hospital care. Private consumption rose by 3 per cent. In both cases the rate of increase was larger than in the immediately preceding years.

The nominal incomes of the households showed an increase of 4.5 per cent in 1959. Higher direct taxes and other contributions to the Government and the municipalities reduced this figure to less than 4 per cent, while price increases during the year amounted to close on 1 per cent.

The rapid improvement in economic trends during the past year is perhaps most clearly reflected in developments on the labour market, the report says. Unemployment, which reached a peak at the beginning of the year, fell behind the figures of 1958 already during the spring months and at the end of the year, it had been reduced to the low levels prevailing in 1956. Although the labour market situation may be said to be balanced, there are signs of a shortage of labour in certain sectors, particularly the metal industry and the building trade.

In 1960 the strongest economic stimulus, besides exports, is likely to emanate from the demand for investment goods from some sectors of private industry and business, the report continues. Industry's investment plans for 1960 show a steeper rise for investments in machinery and means of transport than in any year, of the past decade. The increase has been estimated at 13 per cent. The gradual depletion of stocks during the past year seems now to have turned into a need for building up inventories, which means a further stimulus to demand. Housing and road construction, on the other hand, is expected to be somewhat smaller than in 1959.

that's Burmah-Shell Service!

January 23, 1960

THE Department of Economic Affairs of the Finance Ministry has brought out an extremely interesting and useful brochure on the subject of External Assistance received by India up to 30th November last. I spent some exciting time leafing through it. Normally, figures leave me bored, but I could visualise the multi-lateral idealism and purposefulness behind the figures collated in this volume. Reading through the descriptive portions, I could see the variety of purposes for which assistance was rendered, adding up to a pattern and spelling a qualitative change in the economy and life of India. There are significant differences in the emphasis in the purposes for which assistance has come from particular countries, and the formal agencies devised for the purpose of routing the assistance would offer an excellent subject for detailed study. Above all, the book gathers up conveniently all the relevant facts about external assistance, which we had often in the past to piece out from a variety of sources. Here, at last, is an authoritative source to which we can go, when discussion of the extent of assistance from abroad, either retrospective or prospective, crops up.

Let me give you some figures. The total assistance from inception up to 31st of November 1959 from all sources adds up to Rs 1760 crores. Of this, Rs 1438 crores are in the form of loans and the rest in the form of outright grants. This does not include the assistance received in the form of suppliers' credit from certain countries; nor does it include receipts from the Rockefeller Foundation (amounting roughly to over Rs 4 crores) or the private voluntary assistance from the US (amounting roughly to Rs 50 crores). The assistance that was available for the Second Plan was (up to 31-3-59) Rs 1158 crores (of which Rs 198 crores was in the form of grants.) This figure includes the spill-over from the First Plan authorisations amounting to Rs 196 crores (of which Rs 72 crores were in the form of grants) out of a total authorisation for the period of Rs 392 crores. Incidentally, this unspent authorisation over-flowing from the First Plan is a much larger figure than what was envisaged in the Second Plan, which put it at Rs 100 crores. The utilisation of the Second Plan authorisation has been better. With two years of the plan still to go, the utilisation up to the end of March 1959 totals Rs 462 crores. Considering that the tempo of activity has increased in the last year, the utilisation in the rest of the plan period would be more rapid. Indeed, we have had to ask for further assistance, and a further authorisation between

1st April and 30th November 1959 of Rs 405 crores (including Rs 178 crores from the USSR meant for the Third Plan) has been made. The position, therefore, is that, as on 31-3-59, we have total unused foreign assistance amounting to Rs 1158 crores. But, as I said, earlier, the bulk of it is likely to be used up before March 1961.

One or two facts stand out. The total foreign assistance available for the Second Plan has outstripped the plan's expectation of Rs 800 crores and is almost the figure that I had indicated in these columns. It is true that certain special efforts had to be made for securing this, and the good offices of the World Bank were lent for two crucial decisions by friendly countries in 1958 and 1959 to underwrite India's foreign exchange requirements. It is also true that increased allocations were swallowed up by increases in costs. Nevertheless, the lively interest in Indian development of friendly foreign countries has been repeatedly demonstrated.

There are as many as thirteen entities listed in the table as sources of assistance; and, of these, eleven are friendly foreign governments. This list does not include all the UN agencies that are rendering help, the only agency shown being the World Bank. Besides the World Bank (its associates which will play an increasing part in financing development projects in the coming decade) there are other agencies which are rendering significant help. For instance, the UNESCO is providing technical equipment worth 10 million roubles (about Rs 1,20,00,000) for the Indian Institute of Technology, Bombay (a beneficiary also of the Soviet Union) and sundry other assistance in the form of expert services for translation and technical training. The UNICEF has been carrying its unostentatious service for the underfed children of the world, and though its services are hardly measurable in monetary terms, the amount spent is not inconsiderable (Rs 12.18 crores). Its assistance for basic maternity and child welfare schemes in community development project areas—it aids with supplies and equipment 5,306 health centres throughout the country—is more qualitative than quantitative. It also provides for

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

a training centre in Calcutta at a cost of about Rs 5 crores for training maternity and child welfare. Besides, the UNICEF cooperates with WHO in malaria control, a blessing that those whose memory of the Bengal of the old days is not blunted will be able to appreciate. There are a dozen other humanitarian endeavours of the UN through its other agencies, described in the brochure, and all of them are of basic importance from the point of view of essential human amenities.

The World Bank's assistance to India is well known. India is probably the greatest single beneficiary of World Bank's assistance. The total receipts from the IBRD for public sector projects up to the end of November 1959 comes to Rs 186 crores. The private sector has obtained a total of over Rs 95 crores. The beneficiaries are mostly Railways, private sector steel plants, River Valley projects and ICIC. The World Bank's interest in Indian development has been demonstrated in other ways than direct loans. In the years to come, the assistance from this source is bound to be considerable in view of its more overt commitment to its responsibilities to under-developed nations.

Of the individual countries assisting India, the US stands out

both in the quantum of aid given and the variety of agencies devised for the purpose. Total US aid up to the end of November 1959 comes to Rs 777 crores, of which Rs 210 crores are outright grants. This does not include the assistance rendered by private philanthropic agencies like the Ford Foundation (nearly Rs 10 crores, all of which is an outright grant) and the Rockefeller Foundation (over Rs 4 crores) and innumerable individuals and organisations. The assistance takes the form of complicated agreements designed to serve several purposes at once. For instance, the PL 480 agreements over surplus agricultural commodities give us much needed food supplies and the sale proceeds of the commodities are to be put to a variety of uses in the form of loans to the Refinance Corporation of India for loans to medium sized industries in the private sector, to River Valley projects, and to the ICIC. This has the advantage of saving foreign exchange on import of food, and of providing a cushion against inflationary pressures and at the same time providing internal resources for development projects. The deployment of funds thus secured into special institutional agencies like the Refinance Corporation is imaginative. For one thing, it helps solve a problem for medium-term credit that commercial banks were not able to provide. It also stimulates production in a sphere which tends to get neglected in the plan's pre-occupation with basic industrialisation, on the one hand, and social services and employment problems, on the other. Incidentally, it provides funds for the private sector or projects for which finance is a problem. Another feature of US assistance is its attempt to provide third currency

... a medium of progress

CALCUTTA BOMBAY MADRAS NEW DELHI

assistance by a process of triangular agreement. And, finally, a proportion of the returned loans is to be spent in India itself by the US with all the attendant economic advantages of such activity.

In comparison to the Russian assistance, the interest terms of the US loans are onerous, but against this should be set down the fact that, unlike the Russian credits, the period of repayment is long. They are mostly of 15 or 20 years' duration. Difficulties have

from time to time been expressed about the utilisation of these loans because of the requirement that the purchases should from the US where the prices are uncompetitive. This may explain the fact of meagre utilisation of the Exim Bank credit line. Of a total authorisation of Rs 71 crores, only Rs 1 crore has been utilised upto the end of March 1959. Mr Vance Brand, who was recently in India, tried to allay Indian misgivings that the recent requirement of the utilisation of DLF credit in the

US might make it difficult for India to derive the full benefit of such assistance.

Now that President Eisenhower has had a personal glimpse of what is going on in India, we may confidently expect that the coming years will see the intensification of US interest in Indian development. One curious omission in the pattern of American assistance is noticeable. America's direct participation in Indian industrialisation is, compared to that of Russia, or

Germany or the UK somewhat meagre. This may be due to American prejudice against public sector projects. Otherwise, it is hard to explain the fact that there is no American equivalent to Bhilai or Durgapur or Rourkela. (The participation of Kaiser Corporation in the Tata expansion scheme is not the same thing as the others.) The Third Plan should see a more direct collaboration between India and the US in basic industrialisation.

Next to the US, the USSR has made, monetarily speaking, the largest contribution to Indian development plans. The total authorisation up to 31-11-59 of Rs 324 crores includes an authorisation of Rs 178 crores for the Third Plan.

We may take up, finally, the kind of assistance that we have received from the United Kingdom. In terms of money, as at the end of November 1959, loans and grants from the United Kingdom exceed Rs 103 crores. Something more than a third of this is in respect of the Durgapur Steel Plant. On the one hand, the Export Credits Guarantee Department, UK, has extended credit of Rs 20 crores, the loan being repayable in four annual instalments, which will coincide with the first four years of the Fourth Plan. On the other hand, the loan of Rs 15.3 crores from Lazard Brothers, also for Durgapur Steel, is due for repayment in five half-yearly instalments commencing from 1st January 1962. Then, there are credit lines for a further Rs 87 crores, also from the Export Credits Guarantee Department. The second of the credit agreements envisages repayment, according to a formula, commencing in 1964 and ending in 1979. It will be seen, thus, that the credits are over a fairly long time. Then, in terms of technical assistance, the United Kingdom has given facilities for the largest number of trainees among the eleven entities which have extended such facilities to India. Moreover, the Delhi Engineering College is to be assisted as to half a million pounds for being set up. In all this enumeration of assistance from the UK, however, I find no mention of the fact that we have received from the UK advance instalments in respect of sums payable under the Pensions Agreement. I do not quite remember the exact figures, but my impression is that advance payment of instalments amounting to perhaps Rs 30 crores has been received by India. Certainly, such advance payment by the UK helped India in its foreign exchange position.

Thus, in broad terms, the variety and range of assistance, from friendly foreign Governments, that India has received so far. It seems to me that the record is such that we may be reasonably confident of securing such external assistance as would be necessary for putting through the Third Plan.

EAVESDROPPER.

GATEWAY GOSSIP

THE only tangible result that the Air India International pilots' strike, which has ended after lasting eight days, seems to have achieved is the demonstration of the solidarity of the AII airmen and the abundant support they have among airways employees in the country in particular and the working class in general. The All India Pilots' Guild, which gave the strike call, is, however, unlikely to accept this view for obvious reasons. The Guild has maintained throughout its negotiations with the Corporation that it has a compelling reason for embarking on so extreme a step as a strike. A pilot from among the pilots selected to undergo training in connection with the Corporation's forthcoming jet service has been sent to Seattle (USA) out of his turn, and this particular gentleman has recently resigned from the Guild. It was the contention of the Guild that this act of the AII management was in direct contravention of the agreement reached between itself and the AII management in the matter of promotion by seniority. In this view, it was demanded that Captain Gilder, the pilot who had already left for the USA, be recalled. At a later stage, it was further demanded that one of the Guild pilots be sent to Seattle. The Corporation contended that the Guild's charges were totally unfounded. For, the agreement with the Guild was only in regard to the selection of pilots on the basis of seniority and Captain Gilder was one of the 22 pilots

selected in accordance with the agreement. There is no reference in the agreement as to which of the pilots would be trained in Seattle or Bombay.

The AII management had said that the deputation of Captain Gilder to Seattle did not violate any of the undertakings given to the Guild. While declaring that the management could on no account agree to recall Capt. Gilder, Mr J. R. D. Tata, Chairman of the AII Corporation, had pointed out that he would be ready to refer the matter for arbitration, although he considered that there was no valid dispute between the pilots and the Corporation. The management had chosen Captain Gilder, it was pointed out, because no other pilot possessed the requisite preliminary training. The Guild pilots were themselves to blame because they had failed to report for training when notified to do so. The management had also made it clear that, because of his training in Seattle, Capt. Gilder would derive no extra benefit. During the period of the strike, it became clear that the Guild pilots had genuine apprehensions about seniority as a result of the deputation of Captain Gilder who is not the senior-most pilot. They made no secret of their apprehension as they charged the Corporation as having given preferential treatment to Captain Gilder because he was not a member of the Guild. The management on the other hand charged the Guild that it had engineered the strike just to show

The Pilots' Strike

that a non-member could not do far.

Anyway, one would have expected the pilots to have called off the strike immediately after the clarifications were made, but that was not to be. Even the advice of the Union Transport Minister went unheeded at first, but wiser counsels had evidently prevailed ultimately as the Guild at long last decided to advise its members to go back to work from last Sunday unconditionally on the assurance from the management that there would be no victimisation and that the January agreement on salaries, etc., would stand unaltered.

Although both sides had said some harsh things against one another during the pendency of the unfortunate strike, the fact that matters is that the AII services are once again on. Even so, there is that point about the management's right to select whom it pleases for training which still stands out. The AII management has noted that there might be some connection between the strike and the fact that the Corporation's nominee for undergoing Boeing training first at Seattle is not a member of the All India Pilot's Guild. Perhaps the AII is quite justified in asking whether it is reasonable to embark on an extreme measure to redress imaginary grievances especially when such a measure as a strike is bound to result in sizeable financial losses to the company and much inconvenience to the users of the airline. It is,

however, evident that the Pilots' Guild had felt that the management's action in deputing Capt. Gilder constituted a vital departure from the relationship of its members with the management.

It is easy to succumb to the temptation of characterising the short-lived pilots' strike as much ado about nothing. But a closer look at the statements made on behalf of the Guild and the Corporation would show that there are some points, despite the January agreement, on which the management and the pilots do not see eye to eye with each other. Even so, the fact remains that a strike is a weapon which should be sparingly used and this should be particularly so in undertakings such as the Air India International which caters to the needs of quick international air transport.

Now that the strike is over, concerted efforts should be made both by the management and the All India Pilots' Guild to clear up whatever misunderstanding that may be still there. Even in the international sphere, the trend is toward settlement of disputes through peaceful negotiations. It cannot be contended seriously, therefore, that for workers to get their due a strike now and then is necessary. The All India Pilots' Guild cannot escape the charge that, in declaring the recent strike, it has not examined carefully whether a drastic measure as a strike would be needed to achieve the limited purpose on hand.

A PARTNERSHIP helping to build Durgapur for India

The joint effort of thousands of hands is raising a tracery of steel against Durgapur's skyline. It is a joint Indian and British effort...the building of a great new steel-works that will make more than a million tons of steel every year for India.

CEMENTATION-PATEL—its 13,500 Indian and 75 British engineers, technicians and workers—are part of this effort. They have shared the task of turning sparse jungle

into foundations of concrete for most of Durgapur's plant and buildings. Together, they are building 140 miles of railways, roads and pipelines.

CEMENTATION-PATEL, the project's civil engineers, were first to arrive at Durgapur three years ago. In this time, they have moved enough earth and used enough concrete to build a small city...an achievement that crowns THE CEMENTATION COMPANY'S 30 years of service in India.

GATEWAY NOTES

Nagpur Corporation

Presenting the annual budget of the Nagpur Corporation, Mr D. J. Madan, the Municipal Commissioner, disclosed the various activities the Corporation proposes to conduct in the new year for enhancing the civic amenities and accelerating the development of the city. The expenditure of the Corporation is estimated to be Rs 3.37 crores while the income to be derived will be Rs 3.11 crores, showing a deficit of about Rs 26 lakhs.

One of the methods suggested for meeting the deficit is to float public loans. The Corporation has to resort to this step for continuing the development programmes of the city since all possible scope for raising money by taxation has been fully exploited. That there will be no additional tax this year will be welcome news to the citizens, and the authorities of the Corporation can expect good response from the public for the public loans since the amount is to be utilised for the implementation of new schemes. Mr Madan also revealed that the unspent balance has been exhausted for making up the slow pace of development during the previous years. Diversion of some amounts which are earmarked for capital projects is also under the consideration of the authorities.

The commissioner elaborated the brisk and beneficial activities that will be carried out this year. It is to be admitted that a great deal has been done by the Corporation for the city's betterment; but there remains much to be done. Top priority must be given to water supply, slum clearance and underground drainage which constitute the basic requirements for public health and hygiene. Substantial progress has been made in expediting the completion of the Kanhan Water Supply Scheme. A provision of Rs 10 lakhs has been made for remodelling the water supply system of the city. An amount of Rs 21 lakhs has been allocated for completing the drainage scheme by the end of March 1961. Expenditure for other works requires an amount of Rs 60 lakhs—the highest during the past five months. It is gratifying to note that Rs 15 lakhs have been earmarked for executing the slum clearance schemes. Major works that are to be completed this year include the construction of the Town Hall, Temple Bazaar Market, Employees quarters and Chitnis Park. The other activities of the Corporation will include the building of beggar homes and the free supply of text books to the students of the Corporation Primary Schools. In short, as stated by the Commissioner, the Corporation will attend to all the needs of the city with the fullest support and good-will of the public.

Report on Bombay Port

According to the annual report of the administration of the Bombay Port, the total cargo handled at the docks and bunds during the year

1958-59 amounted to 11,751,601 DW tons which indicated a decrease of 1,358,075 DW tons as against the traffic of the previous year. The volume of exports declined from 1.87 million tons in 1957-58 to 1.64 million tons while the volume of imports decreased from 4.42 million tons to 3.70 million tons.

The General Account for the year under review registered a surplus of Rs 183.50 lakhs in contrast to the surplus of Rs 93.34 lakhs envisaged in the Budget Estimates and of Rs 39.61 lakhs in the Revised Estimates. From the point of revenue earned, machinery formed the largest single item in the foreign import trade passing through the docks.

Considerable progress has been recorded in the programme of modernisation of the Princes and Victoria Docks. The total expenditure for the scheme for modernising these docks has been estimated at Rs 20 crores. The attempt of the Trustees of the port to secure a grant of about half the cost of the scheme from the centre proved infructuous.

The report also revealed that labour unrest, which was acute at the beginning of the year, culminated in a general strike which lasted for twelve days. However, it is heartening to point out that, after the settlement of the general strike, no major stoppage of work has been reported in the port.

*

The US Trade-Mission

THE recent tour of the US Trade Mission for promoting and facilitating trade between the United States and India has evoked great interest among both the politicians and the industrialists of the country. The team, led by Mr James McNally, Assistant Director of Business Economics Department of Commerce, consists of experts in modern business and is the fourth of its kind sent to India in connection with the United States Small Industries Exhibits.

In a press conference held at Nagpur, a member of the Trade Mission highlighted the strategic importance of the city which has close proximity to the country's steel centres and other advantages of location. With these advantages, there is immense scope for developing a host of ancillary industries in that area and the additional production of steel from the neighbouring steel plants can be fully utilised for productive purposes. The mission also revealed that considerable interest has been evinced by the industrialists of their country to invest more capital in India to help it in the task of economic development.

The visit of the Trade Mission is significant in more than one respect. It affords considerable scope for exchange ideas through mutual discussions and for establishing closer contact between the industrialists of the two countries. The Government of India have recently entered into an Investment Guarantee Agreement with the United States to encourage the participation of American private enterprise in India's industrialisation.

It can be reasonably hoped that, as a result of the tour of the Trade Mission, the flow of US capital to India will increase.

GATEWAY MARKETS

Hectic Week for Zinc

AMONG Non-Ferrous Metals, Zinc has experienced a hectic week. The price of this metal, which has been ruling firm during the past many weeks on reports of shortage, has experienced a sharp setback with the rate quoted around Rs 133 per cwt. against Rs 144 in the previous week, thanks to the Government decision to import substantial quantities. The Government of India have made arrangements to import about 10,000 tons of zinc from abroad in the next two months. Part of the imports will be effected through the State Trading Corporation, which has already entered into arrangements with foreign suppliers. A portion of this has already been shipped and will be available in the market very shortly. The balance will arrive before the end of the current licensing period, viz., March 1960.

Besides this, supplies will also be augmented through imports under the quota licences granted to established importers and also the licences granted to actual users during the current licensing period. Although the quantity to be imported is not much when compared with the imports of as much as 57,750 tons in 1958, it is bound to have a salutary effect on the speculative activity in the metal.

Meanwhile, the outlook for the metal abroad is still clouded by the production cutback scheme, which has created an artificial scarcity. Despite the sale of 3,000 tons of stockpile metal last month by the British Board of Trade and an equal quantity expected to be released at the end of this month, the London Metal Exchange has not witnessed any sizable reduction in the price of zinc. At the most, the recent stockpile release has reduced the risk of some of the works closing down for the time being; but there is still a shortage of all types of zinc, particularly of the highest grades.

Among other non-ferrous metals, Copper wire-bars remained steady around Rs 254 per cwt. Sheets were easy with less offtake.

The market for Lead ruled weak throughout the week with the rate quoted around Rs 74.50 per cwt. Not much of consumption is taking place, as outside orders are going mostly to Calcutta where the price is a rupee below.

The offtake of Tin was not encouraging; but purchases by influential circles did not permit any sharp break in prices. The rate was quoted around Rs 141 per quarter.

Oils & Oilseeds

The overall tendency of prices, on the Bombay Oilseeds Exchange, has continued to remain upward, although a section of the trade is inclined to be cautious at higher levels in view of the imminent marketing of the new crop.

Groundnut prices, after touching fresh higher levels, reacted slightly

toward the close. Reports of insufficient arrivals and higher up-country advices have continued to excite the market. Crushers and vanaspathi manufacturers have also continued their purchases at successively higher prices. Above all, there has been a good deal of buying of spot supplies by the dealers, who feel that the prices may go up further during the lean months.

In the absence of fresh quotas for groundnut oil and expeller cake, the activity in the export section is confined largely to HPS groundnut. The UK is stated to have bought 400 to 500 tons at prices ranging from £82½ to £83½ per ton. There are also reports of some business in groundnut extraction with some of the Communist countries.

In the Castorseed section, the nervousness caused by the recent reports of Brazilian devaluation in respect of its castor oil exports, has tended to subside, as the operators feel that Brazil has little supplies to offer to the UK. It is believed that the USA will have to enter the Indian market sooner or later in view of the fact that the Brazilian supplies will be available freely only after the receipt of the new crop in October, 1960. There is little important business with the UK, and the USA appears to be unwilling to buy commercial oil at 15 cents per pound.

With US consumption running at a fairly high level, exporters here continue to be optimistic about the revival of American demand for Indian castor oil. Total imports into the USA, in 1959, are placed at 96,700,000 pounds of castor oil and 25,958,250 pounds of castorseed against 71,685,000 pounds and 18,136,500 pounds respectively in 1958. This suggests a substantial improvement in US consumption last year.

Yarn

Prices in the Bombay Yarn market developed a reactionary tendency due to profit-taking following consumers' resistance at higher levels. Business was, therefore, limited as many up-country weavers were not inclined to augment their stocks of yarn.

Cotton yarn lacked support on reports of subdued conditions in the cloth market. Poor enquiries for handloom and powerloom textiles compelled weavers from Surat, Banaras and other centres to keep away from the market. The Government's announcement of liberal import quotas of cotton to mills also induced bear operators to push down prices.

The export trade in rayon textiles has revealed a fresh improvement with shipments in November 1959 amounting to Rs 38 lacs against Rs 31 lakhs in the previous month. Total exports, during the first eleven months of 1959, have been estimated at Rs 3.71 crores. Exporters feel that the trade can improve further if some of the present difficulties are overcome.

For instance, pre-shipment inspection facilities are not considered to be satisfactory and the issue of inspection certificates is stated to take a long time. This delay prevents exporters from applying for import licences for yarn and results in avoidable locking up of funds.

WORLD OF COTTON

IT has been the Government's policy to encourage increased production of long-staple variety cotton. As world prices of such staple have now gone up considerably, the Government feel that it is desirable to secure for the grower at least a share of the increase in the international prices. They have, therefore, decided to refix, with immediate effect, the ceilings of long-staple cotton 1 1/32" and above.

It is understood that the effect of the Government order will mean increase in the price of certain varieties of cotton which the mills are likely to pay to the growers. The increase, according to authoritative circles, will range from Rs 100 to Rs 200 per candy of raw cotton. It would have been far better if the Government had announced such an increase in the ceiling prices at the beginning of the season. In fact, a rise in the ceilings was overdue, as the prevailing prices of the long-staple cotton bear no relation to those of foreign growths, which are much higher.

Market circles feel that the above step is timely and is bound to help toward higher production of long-staple cotton next season. A section of the trade, however, fears that it will indirectly push up the prices of other varieties also. A large part of the medium-staple crop grown in Saurashtra and South India, it is pointed out, is likely to be bracketed with Rajapalayam, CO2, MA5 and other long-staple varieties grown simultaneously.

Meanwhile, spinners have welcomed the import quota of three lakh bales of American cotton.

Refixation of Ceiling Prices

Reports are current that about 30,000 bales have already been bought by needy mills for the March-April delivery. There are indications that the mill response to long-staple varieties from America will also be good.

Cotton houses are, however, perturbed to find that all the import quotas have gone directly to mills. Imports of cotton have been allowed to the extent of 10 lakh bales this season against earlier estimates of only six lakh bales. There is, therefore, a valid case for providing the trade an opportunity to show its skill in putting through business on terms most advantageous to the country. The Cotton Advisory Board has also recommended that the trade should get a reasonable share in the import business of cotton.

Again, the Textile Commissioner has announced a revised plan of distribution of foreign cotton to the mills. This is expected to be followed by a detailed circular on the distribution of Indian cotton to the industry. The Indian cotton crop, which will be available to the textile mills, has been placed at 40 lakh bales. Inevitably, a large quantity of foreign cotton will be required.

According to the plan which is going to be enforced, foreign cotton is divided into two categories: Foreign 'A' and Foreign 'B'. Foreign 'A' consists of cotton of staple length 1 1/16" and above and Foreign 'B' will consist of cotton below 1 1/16". Indian cotton is not, however, sub-divided into any categories and a quota for a total quantity will be issued from time to time.

The actual user mills will get a quota for 100 per cent of their basic consumption. This category will include mills to which actual user quotas are granted on a pro rata basis for their new spindleage. The actual user quota-holders will be expected to consume, during the year 1959-60, their full quota for a year and reduce their Indian cotton consumption proportionately. Any shortfall in the requirement of Indian cotton will be made good by additional allocation of foreign cotton of staple one inch and below.

As regards Foreign 'A' cotton quota for the mills other than actual user mills, quotas have already been granted and there will be no addition to these quotas during the current year. The retention quotas for the exporting mills will be allowed as at present.

Demands for 'B' cotton from mills will be registered immediately. Such demands should be made in respect also of additional production over and above that of 1958-59 which mills expect to

achieve. So far, 20,000 bales of Pakistani cotton and 180,000 bales of American cotton of one inch and below have been made available. Additional quantities of cotton of one inch and below will be made available, if necessary.

*

SPOT MARKET:

Liberal imports, announced by the Government, failed to impress the domestic market, where Jharkhand March contract shot up further to Rs 778 per candy, showing a rise of Rs 14. The spurt was attributed to hectic short-covering and aggressive buying, being induced by the strengthening belief that, even after resort to quality control, the cotton situation would continue to be tight.

On the export front, conditions remained active. Superior and choice short-staple varieties from the Punjab and Rajasthan shot up by about Rs 60 per candy on reports that Japan was an anxious buyer of Indian cotton at 25d per pound against 22d quoted last month.

In the import section, the principal demand was for US growths. Good business took place in California cotton of staple 1 1/16" in Good Middling quality. Mill interest in Egyptian and Sudanese growths was limited on account of

a sharp rise of about Rs 75 per candy in their prices. Small transactions were reported in AR-Uganda.

*

According to the International Cotton Advisory Committee, the total world supply of cotton, during the current season, is placed higher at 67.7 million bales against 66.3 million bales in 1958-59. While stocks were lower at 20.9 million bales at the outset of 1959-60 against 21.8 million bales in the previous season, production is placed higher at 46.8 million bales against 44.5 million bales. With an estimated increase of 2.8 million bales in production, the supply of cotton in the free world is estimated at 49.2 million bales in 1959-60 against 47.5 million bales in the previous season.

While stocks of cotton at the beginning of the current season were lower at 17.5 million bales against 18.6 million bales in the previous season, production is expected to increase to 31.7 million bales against 28.9 million bales.

The improvement in the free world cotton supply position is mainly attributed to the USA where the supply is estimated at 23.6 million bales during the season under review against 20.2 million bales in 1958-59.

DELHI REVIEW

Report on External Assistance

THE Department of Economic Affairs of the Union Ministry of Finance has just issued the third annual report on external assistance received by India, generally up to November 1959, from various sources and in different forms. A general table, given in the report, is suitably condensed and presented in this despatch to show at a glance the total aid authorised from different sources upto 30th November, 1959, and utilised upto 31st March, 1959. It will be seen from this table that, up to the end of November 1959, American aid (including grants given by the Ford Foundation) has totalled Rs 786 crores, made up of Rs 566 crores by way of loans and Rs 220 crores by way of grants. Assistance from the Soviet Union, on the other hand, has been almost entirely in the form of loans; this

has totalled Rs 324 crores (including Rs 179 crores authorised for the Third Plan). In the same way, assistance from the United Kingdom has been almost entirely in the form of loans; this has totalled Rs 103 crores. And assistance from other countries (Canada, Australia, New Zealand, West Germany, Japan, Norway, Rumania and Czechoslovakia) has totalled Rs 256 crores, made up of Rs 166 crores by way of loans and Rs 90 crores by way of grants. It is noteworthy that Canada has provided assistance mostly in the form of grants and Australia, New Zealand and Norway have given aid entirely in the form of grants. The grand total of external assistance (which does not include suppliers' credit from Japan, France and Rumania, grants from the Rockefeller Foundation and gift

shipments from private philanthropic agencies in the United States, assistance under Title II and III of PL 480, third country assistance from the United States, and technical assistance by the United Nations Organisation and its specialised agencies) authorised from inception to 30th November 1959 comes to Rs 1,760 crores, covering both loans and grants.

The report is also notable for its coverage of the assistance received from the United Nations Organisation and its specialised agencies. This assistance has come in the form of technical experts, training of Indians abroad and equipment for a number of development programmes. Particulars of the aid received from some of the specialised agencies are as under:

(1) The UNESCO has agreed to

provide technical assistance for the establishment and development of the Indian Institute of Technology, Bombay. Supply of equipment costing 10 million roubles is covered by this aid.

(2) The United Nations International Children's Emergency Fund has been providing valuable assistance since 1948, for various development programmes chiefly in the fields of public health and nutrition. The assistance is given in the form of supplies and equipment as well as technical experts and facilities for the training of Indian personnel abroad. The total amount of funds allocated by the UNICEF since the inception of the programme to the 31st of March 1959 including ocean freight was \$25.57 million (Rs 12.18 crores). Noteworthy among the schemes assisted by the UNICEF is the one covering basic maternal and child welfare services. UNICEF is providing equipment and supplies for 1,160 primary health units and their 3,220 sub-centres as well as for the hospitals and laboratories, which support them. With an average of 65,000 persons served by each primary unit, these rural health services will put elementary health services within reach of 22 per cent of the entire population of India. The BCG vaccination campaign is another. The goal of this campaign is to test 170 million children and vaccinate the negative reactors. By the end of 1958, 120 million tests and about 42 million vaccinations had been performed. The plan for 1959 is to test 22 million children. It is expected that, at this rate, the campaign target will be reached by March 1961. UNICEF is also providing skim milk powder for supplementary feeding. About 1.5 million children and mothers were reached in 1958 through health centres and schools, and it is expected that 1.9 million will be reached in 1959.

There is a separate section dealing with technical assistance received not only under the UN Expanded Technical Assistance Programme but also under bilateral arrangements with a number of countries. This assistance has been received in the form of services of foreign experts (and related equipment) and training facilities abroad for Indian nationals. Experts have been obtained for working in advisory capacity in projects, institutions and departments in those fields in which qualified Indians of the required calibre are not available. Training facilities have been obtained in subjects in which a higher standard of training is available in foreign countries.

The number of experts obtained and the number of persons sent for training are shown in the Table that follows:

OLYMPUS

January 23, 1960

United States of America	31-3-59	486*	738*

*Represents number of experts who arrived in India and trainees returned to India after completing their course.

The United Nations have also recently set up a Special Projects Fund with the object of enlarging the scope of the existing technical assistance activities and to finance such special projects, in approved fields, as would contribute to the economic development of recipient countries. Assistance will be given mainly in the form of teams of experts with adequate provision for equipment and supplies to deal with all the related aspects of a given problem on a sustained and

continued basis so as to pave the way for productive capital investment. The fund will primarily assist projects in the following fields:—(a) Assessment and development of manpower; (b) Industry, including handicraft and cottage industries; (c) Agriculture; (d) Transport and Communications; (e) Building and Housing; (f) Health; (g) Education; (h) Statistics; (i) Public Administration. The following five projects have been sponsored for inclusion

in the 1959 programme of the Special Projects Fund:—(1) Power Engineering Research Institute, Bhopal & Bangalore; (2) Central Mechanical Research Institute, Durgapur; (3) Three Regional Labour Institutes, at Kanpur, Calcutta, and Coimbatore; (4) Central Training Institute, Howrah; (5) Higher Institute of Fisheries Training in India. Out of these, the project relating to the Central Training Institute, Howrah, has been accepted for assistance so far. There are indications that some of the remaining projects will also be accepted.

This statement excludes:—(i) Assistance received in form of suppliers' credit, e.g., from Japan, France and Rumania. (ii) Rockefeller Foundation. (iii) Gift shipments from private voluntary agencies in USA. (iv) Assistance under title II and III of PL 480. (v) Third country assistance from the USA.

*This includes the amount of Rs 32.3 crores being the rupee equivalent of the dollar value of agricultural commodities imported under PL 665. Out of this, a sum of Rs 19.00 crores is to be received as a part of the three Development Assistance Loans and the rest in the form of grants for agreed projects. This excludes amounts obligated towards US Technicians.

†This excludes Cooley funds and amounts retained by the US Government for their own purposes.

LET US DELIVER LETTERS QUICKER

GIVE POSTAL ZONE NUMBER IN ADDRESS

Khadilkar, as Road, Bombay 24

Most large towns have been divided into postal delivery zones.

By decentralising detailed sorting and reducing the distance to be covered by a postman before he starts his beat, the zonal system seeks to speed up the delivery of mail.

Postal articles carrying 'zone number' in the address are sent directly to the delivery post office serving that area.

Absence of this number reduces the speed of sorting and increases the chances of delay. If you live in a town divided into postal zones, tell your correspondents to add the zone number to your address.

Problem of Inflation

Inflation in a developing economy was the subject of a speech delivered by Mrs Tarakeswari Sinha, Union Deputy Minister for Finance at the PDM Commerce College, Rajkot. According to Mrs Sinha, the country today was in what corresponded to the first phase of an inflationary economy that could be seen in all developing economies in the world. Inflation in this phase of development is inevitable in view of the huge investments that have to be made for the creation of capital assets which, however, remain unmatched by corresponding creation of consumer goods.

The inflation that now prevails in the country is of this developmental type and is of short term character, being attributable to the lag between the creation of capital assets and the time they take for production. How short this period of developmental inflation is, would necessarily depend upon the measures taken by the country to produce goods to absorb the increased purchasing power that had been released in the course of financing the new capital assets. In such a situation, it is important that a proper relation should be maintained between productivity, wages and prices. As pointed out by Mrs Sinha, if there were claims for higher wages on the basis of rise in prices without reference to productivity of labour, and there was insistence on maintaining or enlarging the share of the total national cake, there will be a wage spiral, costs will go up and this in turn will affect adversely the country's competitive position abroad. A proper national wages policy related to productivity and prices become an essential condition for the successful implementation of a development plan involving large-scale investment which remains unproductive in the short-run.

Availability of sufficient foreign exchange is another factor that determines the duration of inflation in the developing phase of an economy. The impact of inflation in the developing phase, could either be escaped or mitigated with adequate availability of foreign exchange, which could be used to import consumer goods not producible within the country. There are, however, few instances of countries in the modern world which are so placed as to obtain their requirements through imports. On the contrary, as Mrs Sinha pointed out, in the case of many countries, pressure on balance of payments arising from internal inflation became the most important

argument in favour of controlling inflation.

India's difficulties in fighting inflation in the initial stages of development were aggravated by the shortfall in foodgrain production while shortage of foreign exchange rules out reliance on imports. In this situation, investment and consumption become alternatives to each other. A proper balance has to be struck between these two, taking into account the needs of development and the sub-standard of living of the majority of population.

UNESCO Plan for Primary Education

The recent conference of Asian member states on primary education convened at Karachi marked a significant development in the evolution of a common and comprehensive plan for spreading primary education in those countries where mass illiteracy is pronounced and common, being an aspect of the general backwardness that underlies their economies. Though the national plans of these countries give priority to spread of education, scarcity of resources and personnel is a factor that limits immediate possibilities. International cooperation involving aid in money and resources is an obvious necessity for accelerating progress in primary education.

It is this objective which is sought to be subserved by the plan which the Karachi conference has prepared. Dr V. Veronese, Director-General of UNESCO, explaining the features of the plan to newsmen at New Delhi, observed that the Plan would be submitted for consideration by UNESCO at its general conference.

The plan would involve a total cost of 64 billion dollars for the entire period of 20 years for which it is to run, and aims at increasing the number of school children seeking primary education from 65 million in 1960 to 90 million in 1965, 125 million in 1970, 167 million in 1975 and 220 million in 1980. It visualises enrolment of 156 million additional children, the construction of 55 million additional classrooms and 2 million additional houses for teachers. The plan, Dr Veronese assures, has been drawn taking into account the rapid growth of population in these countries.

While the greater part of the resources for the plan would have to be provided from the national budgets of member countries, it also calls for external assistance of about 10 billion dollars during the 20 year period, or 500 million dollars annually. This is a challenging demand which could be met only through the beneficence of the advanced countries. The UNESCO should find it possible to negotiate with the advanced countries for such aid.

NORTH INDIAN MARKETS

No Decontrol of Sugar

THE expectations of early decontrol of Sugar seem to have been belied by the reported decision of the Government to wait and watch the situation for some time more in view of the increase in sugar production registered so far this season. The industry, on the other hand, contends that, although the overall trend of production has been upward so far, the aggregate increase for the whole season will be relatively small as the current season is likely to prove shorter on account of the continued diversion of cane to the gur and khand-sari units.

The industry has pointed out that unless sugar factories are enabled to offer competitive cane prices to save diversion of cane from their areas, it will not be possible to raise production substantially. This, the industry adds, can be done by removing the present stifling controls on the factories.

The industry maintains that the present crushing season is already two and a half months old and, if decontrol has to be effective in yielding higher production, no time should be lost by the Government in taking necessary and effective action in this behalf. It is also pointed out that, after allowing for the high tax rate of Rs 13.15 per maund of sugar, factories actually realise only Rs 24.69 per maund of sugar, whereas the net realisation of a khand-sari manufacturer, after paying the nominal excise duty of Rs 3.25 to Rs 4.16 per maund, comes to as much as Rs 33.34 to Rs 38.16 per maund. Similarly, the gur producer who, in normal times, realised only 40 per cent of what the sugar manufacturer produced, now gets Rs 16.50 to Rs 18.50 a maund of gur.

According to the industry, the answer to the present malaise of high prices can be found only in maximising production. While the incentives recently announced by the Government of higher cane prices and rebate in the basic excise duty for the surplus sugar production during the current season are expected to improve the production to some extent, they are not expected to go far so long as the gur and khand-sari prices continue ruling at the present high levels.

The industry has, therefore, urged immediate decontrol, enabling the factories to offer competitive cane prices and to attract cane supplies for increasing production. While this will solve the immediate problem, more concerted attention has also to be given to the poor cane yield and quality.

Meanwhile, sugar markets remain depressed with prices displaying a slightly easier tendency due to better supply position. In the Hapur market, the rate for the commodity is quoted at Rs 115 per bag.

Khandsari

Khandsari prices have recorded handsome gains of about Rs 3 to Rs 5 per maund during the week on reports of no early decontrol on sugar. Demand is fairly heavy from the consuming areas of the South; but despatches are hampered due to restricted loading facilities.

Production is being continued vigorously; but there are reports of shortage of cane supplies to some of the crushers at the prevailing prices of Rs 1.50 to Rs 1.62 a maund of cane. The rate is quoted at Rs 35 to Rs 43 per maund, according to quality.

Gur

Although there is a fall of a rupee per maund during the week, Gur markets have continued to rule steady due to good outside demand. Despatches are hampered by loading restrictions, while arrivals have dropped due to rains. Total arrivals, in the Hapur market, in the current season, are put at 3.9 lakh maunds as against 3.75 lakh maunds in the corresponding period of the previous season. Pansera quality is quoted at Rs 16.25 to Rs 16.50 and Balti at Rs 17.25.

Foodgrains

Quiet conditions were noticed in the Hapur Foodgrains market. Demand is slack against comfortable stocks. Wheat prices are quoted at Rs 18.25 per maund for the average quality and Rs 19.25 for the farm variety. Maize and Bajra have been attracting good demand. The Rice situation remains quietly steady. Thanks to favourable rains, which have brightened the prospects of the standing crops, Gram prices have been displaying a slightly easier tendency. Although Maize continues to meet with good demand, prices are pulling easy due to the comfortable supply position. Among Pulses, some gains were recorded in Arhar on reports of some damage to the standing crops. The market for pulses are ruling quiet, as demand is being met with arrivals from outside.

After remaining quiet for the major part of the week, foodgrains prices in Delhi improved slightly on fresh demand from neighbouring mandies coupled with higher outside advices. Wheat and farm prices have remained unchanged with satisfactory turnover. Bajra is in good demand, while gram has firmed up by 50 nP on higher Punjab advices.

THE PENINSULA

IT is for the third time in recent years that the annual meet of the Congress has been held in the South. Though the attainment of Independence has had drained the annual meet of the Congress of the old glamour and sparkle, it is still an event of national importance in as much as it is at these sessions that the social and economic principles that are to govern Government's policy are laid down. At the Avadi Congress, the country adopted the Socialistic pattern of society as the goal toward which the nation's efforts should be bent. The Nagpur session of the Congress, held last year, committed the Government to the principle of land ceilings and also gave the slogan of cooperative farming. In comparison, the recently concluded session at Sadasivnagar was free from ideological preoccupations and was devoted to consideration of the more important problems connected with planning. Mr Nehru himself rang this change when he observed that the time had come for "doing a thing" and not for ideological philosophising. However, the challenge posed by the Swatantra party, which has sprung up as the rightist reaction from the Congress, called forth a reaffirmation of the Congress's faith in its ideology which was sought to be justified in terms of the Directive Principles of State Policy embodied in the Constitution.

Thus, it was on implementation rather than on policy that the accent of the discussion on economic matters fell. However, there was no denying of the progress that had been made in both the agricultural and industrial sectors, which was considered to have justified the general policies and programmes laid down by the Congress as well as the Planning Commission. But, in view of the magnitude of the problems and the growing population, there was need for faster progress. Gaps in achievement are an additional reason for stepping up implementation of programmes. The resolution

on implementation of programmes of planned development, which was adopted, therefore, underlined the need for speed, efficiency and integrity in the administrative set-up at all levels and called for a change in the rules and procedures which impede scheduled implementation of plan programmes. Closer contacts between the administrative officials and the people as well as a change in temper was also emphasised as being essential for proper implementation of development schemes. The basic consideration was to keep progress well ahead of the growing population so that the self-propelling stage of growth could be reached soon.

It was in the perspective of this need for faster progress that the problems relating to the different sectors of the economy were discussed at the session. Increase in agricultural production, vital to the progress of the country, was considered to have been not sufficiently rapid to meet the requirements of the plan and the people. For stepping up production, intensification of efforts along known lines is called for. Among the methods for achieving better results the resolution lists full utilisation of available irrigation facilities, better agricultural tools, use of good seeds, soil conservation especially contour bunding, use of fertilizers, green manure and compost, reclamation of water-logged areas and saline and USAR lands through established methods.

The resolution recognises that the co-operation of the peasantry is basic to the success of the agricultural programmes. This it hopes to ensure by giving scope for peasants' participation in the laying down of the programmes and targets relating to production. In this connection, the resolution mentions that "it is essential that officers of all grades in rural areas should keep in intimate touch with the peasantry, take them into their confidence and learn from them what their problems and difficulties are".

The resolution also underlines the need for releasing the enormous un-

utilised productive power in the vast rural population of the country and points out that this should be done by the exercise of the peasant's own initiative. The Community Development movement is considered to need revitalisation by making the workers engaged in it individually responsible for the tasks that are allotted to them.

The other parts of the resolution related to the importance of institutional changes in land ownership and the development of the heavy side of industries. After reaffirming the legitimacy of the pattern of agrarian organisation envisaged at the Nagpur Congress session, the resolution stresses that the pace of organising service co-operatives should be speeded up so that every village would have an efficient service co-operative which, besides helping agriculture, would also play an ever-increasing part in the development of animal husbandry, and in processing, marketing, consumer industries and consumer trade.

In so far as it recognises gaps in plan performance and underlines the need for speeding up implementation of programmes, the resolution would seem to mark a refreshing change from the usual idealistic fare served at the annual Congress sessions. Even those aspects of policy which form part of the Congress's ideology came for a realistic assessment of the prospects for their implementation. Mr A. P. Jain, for example, cautioned against optimism in respect of going headlong with the policy of service co-operatives and state trading. The scheme of state trading would, according to Mr Jain, involve irksome controls at various levels and would restrict the scope for free market operations. He asked the Congress to clarify its mind as to what extent State trading could be carried out. He also dismissed the idea of one co-operative society for one village as an extravagant dream. Whether the doubts expressed by Mr Jain would influence the Governmental decisions, remains to be seen.

Mr Jain was supported in his arguments regarding state trading and service co-operatives by Mr B. R. Bhagat, Union Deputy Minister

for Finance. According to Mr Bhagat, while the Nagpur resolutions were revolutionary, no attempt had been made to educate the masses as to their implications. Therefore, neither State trading nor the establishment of service co-operatives could be implemented with success.

Apart from these criticisms of Congress policy, the resolution itself does not seem to have evoked much enthusiasm among those present at the session. The resolution is, in effect a call to action to the people and particularly congressmen to bend their efforts to the mighty task of development. But the absence of a chart for action to mobilise people's efforts was a point that was picked up for criticism by Mr S. N. Misra, Union Deputy Minister for Planning. Mr Misra confessed himself to be unenthused by this omission, though he agreed that the resolution was tolerably good. He has therefore suggested the appointment of a committee for drawing up a concrete operational chart.

Another point of criticism against the resolution was that it did not put forward any specific plan for the emotional integration of the administrative and the organisational wings. Mr K. P. Tripathi, Labour Minister, Assam, who made this criticism pointed out that without a change in the outlook of both the administrative and organisational wings, it would be difficult to achieve anything concrete. Several other members expressed similar views on the question of emotional integration.

The Third Plan also came up for discussion. Though the resolution itself has not mentioned anything about the target or outlay for the Plan, Mr S. N. Misra, expressed doubts whether the outlay of Rs 10,000 crores would result in the increase of 6 per cent in national income which the planners wanted to bring about. Mr Babubhai M. Chinal, who also referred to the Third Plan said the rural sector should be made to pay more by way of taxes. This according to him could be justified for the reason that the rural section had benefited most by the implementation of the First and Second Five Year Plans.

Problem of Inflation

Inflation in a developing economy was the subject of a speech delivered by Mrs Tarakeswari Sinha, Union Deputy Minister for Finance at the PDM Commerce College, Rajkot. According to Mrs Sinha, the country today was in what corresponded to the first phase of an inflationary economy that could be seen in all developing economies in the world. Inflation in this phase of development is inevitable in view of the huge investments that have to be made for the creation of capital assets which, however, remain unmatched by corresponding creation of consumer goods.

The inflation that now prevails in the country is of this developmental type and is of short term character, being attributable to the lag between the creation of capital assets and the time they take for production. How short this period of developmental inflation is, would necessarily depend upon the measures taken by the country to produce goods to absorb the increased purchasing power that had been released in the course of financing the new capital assets. In such a situation, it is important that a proper relation should be maintained between productivity, wages and prices. As pointed out by Mrs Sinha, if there were claims for higher wages on the basis of rise in prices without reference to productivity of labour, and there was insistence on maintaining or enlarging the share of the total national cake, there will be a wage spiral, costs will go up and this in turn will affect adversely the country's competitive position abroad. A proper national wages policy related to productivity and prices become an essential condition for the successful implementation of a development plan involving large-scale investment which remains unproductive in the short-run.

Availability of sufficient foreign exchange is another factor that determines the duration of inflation in the developing phase of an economy. The impact of inflation in the developing phase could either be escaped or mitigated with adequate availability of foreign exchange, which could be used to import consumer goods not producible within the country. There are, however, few instances of countries in the modern world which are so placed as to obtain their requirements through imports. On the contrary, as Mrs Sinha pointed out, in the case of many countries, pressure on balance of payments arising from internal inflation became the most important

argument in favour of controlling inflation.

India's difficulties in fighting inflation in the initial stages of development were aggravated by the shortfall in foodgrain production while shortage of foreign exchange rules out reliance on imports. In this situation, investment and consumption become alternatives to each other. A proper balance has to be struck between these two, taking into account the needs of development and the sub-standard of living of the majority of population.

UNESCO Plan for Primary Education

The recent conference of Asian member states on primary education convened at Karachi marked a significant development in the evolution of a common and comprehensive plan for spreading primary education in those countries where mass illiteracy is pronounced and common, being an aspect of the general backwardness that underlies their economies. Though the national plans of these countries give priority to spread of education, scarcity of resources and personnel is a factor that limits immediate possibilities. International cooperation involving aid in money and resources is an obvious necessity for accelerating progress in primary education.

It is this objective which is sought to be subserved by the plan which the Karachi conference has prepared. Dr V. Veronese, Director-General of UNESCO, explaining the features of the plan to newsmen at New Delhi, observed that the Plan would be submitted for consideration by UNESCO at its general conference.

The plan would involve a total cost of 64 billion dollars for the entire period of 20 years for which it is to run, and aims at increasing the number of school children seeking primary education from 65 million in 1960 to 90 million in 1965, 125 million in 1970, 167 million in 1975 and 220 million in 1980. It visualises enrolment of 156 million additional children, the construction of 55 million additional classrooms and 2 million additional houses for teachers. The plan, Dr Veronese assures, has been drawn taking into account the rapid growth of population in these countries.

While the greater part of the resources for the plan would have to be provided from the national budgets of member countries, it also calls for external assistance of about 10 billion dollars during the 20 year period, or 500 million dollars annually. This is a challenging demand which could be met only through the beneficence of the advanced countries. The UNESCO should find it possible to negotiate with the advanced countries for such aid.

NORTH INDIAN MARKETS

No Decontrol of Sugar

THE expectations of early decontrol of Sugar seem to have been belied by the reported decision of the Government to wait and watch the situation for some time more in view of the increase in sugar production registered so far this season. The industry, on the other hand, contends that, although the overall trend of production has been upward so far, the aggregate increase for the whole season will be relatively small as the current season is likely to prove shorter on account of the continued diversion of cane to the gur and khand-sari units.

The industry has pointed out that unless sugar factories are enabled to offer competitive cane prices to save diversion of cane from their areas, it will not be possible to raise production substantially. This, the industry adds, can be done by removing the present stifling controls on the factories.

The industry maintains that the present crushing season is already two and a half months old and, if decontrol has to be effective in yielding higher production, no time should be lost by the Government in taking necessary and effective action in this behalf. It is also pointed out that, after allowing for the high tax rate of Rs 13.15 per maund of sugar, factories actually realise only Rs 24.69 per maund of sugar, whereas the net realisation of a khand-sari manufacturer, after paying the nominal excise duty of Rs 3.25 to Rs 4.16 per maund, comes to as much as Rs 33.34 to Rs 38.16 per maund. Similarly, the gur producer who, in normal times, realised only 40 per cent of what the sugar manufacturer produced, now gets Rs 16.50 to Rs 18.50 a maund of gur.

According to the industry, the answer to the present malaise of high prices can be found only in maximising production. While the incentives recently announced by the Government of higher cane prices and rebate in the basic excise duty for the surplus sugar production during the current season are expected to improve the production to some extent, they are not expected to go far so long as the gur and khand-sari prices continue ruling at the present high levels.

The industry has, therefore, urged immediate decontrol, enabling the factories to offer competitive cane prices and to attract cane supplies for increasing production. While this will solve the immediate problem, more concerted attention has also to be given to the poor cane yield and quality.

Meanwhile, sugar markets remain depressed with prices displaying a slightly easier tendency due to better supply position. In the Hapur market, the rate for the commodity is quoted at Rs 115 per bag.

Khandsari

Khandsari prices have recorded handsome gains of about Rs 3 to Rs 5 per maund during the week on reports of no early decontrol on sugar. Demand is fairly heavy from the consuming areas of the South; but despatches are hampered due to restricted loading facilities.

Production is being continued vigorously; but there are reports of shortage of cane supplies to some of the crushers at the prevailing prices of Rs 1.50 to Rs 1.62 a maund of cane. The rate is quoted at Rs 35 to Rs 43 per maund, according to quality.

Gur

Although there is a fall of a rupee per maund during the week, Gur markets have continued to rule steady due to good outside demand. Despatches are hampered by loading restrictions, while arrivals have dropped due to rains. Total arrivals, in the Hapur market, in the current season, are put at 3.9 lakh maunds as against 3.75 lakh maunds in the corresponding period of the previous season. Pan-sara quality is quoted at Rs 16.25 to Rs 16.50 and Balti at Rs 17.25.

Foodgrains

Quiet conditions were noticed in the Hapur Foodgrains market. Demand is slack against comfortable stocks. Wheat prices are quoted at Rs 18.25 per maund for the average quality and Rs 19.25 for the farm variety. Maize and Bajra have been attracting good demand. The Rice section remains quietly steady. Thanks to favourable rains, which have brightened the prospects of the standing crops, Gram prices have been displaying a slightly easier tendency. Although Maize continues to meet with good demand, prices are ruling easy due to the comfortable supply position. Among Pulses, some gains were recorded in Arhar on reports of some damage to the standing crops. The market for pulses are ruling quiet, as demand is being met with arrivals from outside.

After remaining quiet for the major part of the week, foodgrains prices in Delhi improved slightly on fresh demand from neighbouring mandies coupled with higher outside advices. Wheat dara and farm prices have remained unchanged with satisfactory turnover. Bajra is in good demand, while gram has firmed up by 50 nP on higher Punjab advices.

THE PENINSULA

IT is for the third time in recent years that the annual meet of the Congress has been held in the South. Though the attainment of Independence has had drained the annual meet of the Congress of the old glamour and sparkle, it is still an event of national importance in as much as it is at these sessions that the social and economic principles that are to govern Government's policy are laid down. At the Avadi Congress, the country adopted the Socialistic pattern of society as the goal toward which the nation's efforts should be bent. The Nagpur session of the Congress, held last year, committed the Government to the principle of land ceilings and also gave the slogan of cooperative farming. In comparison, the recently concluded session at Sadasivnagar was free from ideological preoccupations and was devoted to consideration of the more important problems connected with planning. Mr Nehru himself rang this change when he observed that the time had come for "doing a thing" and not for ideological philosophising. However, the challenge posed by the Swatantra party, which has sprung up as the rightist reaction from the Congress, called forth a reaffirmation of the Congress's faith in its ideology which was sought to be justified in terms of the Directive Principles of State Policy embodied in the Constitution.

Thus, it was on implementation rather than on policy that the accent of the discussion on economic matters fell. However, there was no denying of the progress that had been made in both the agricultural and industrial sectors, which was considered to have justified the general policies and programmes laid down by the Congress as well as the Planning Commission. But, in view of the magnitude of the problems and the growing population, there was need for faster progress. Gaps in achievement are an additional reason for stepping up implementation of programmes. The resolution

Plan Implementation

on implementation of programmes of planned development, which was adopted, therefore, underlined the need for speed, efficiency and integrity in the administrative set-up at all levels and called for a change in the rules and procedures which impede scheduled implementation of plan programmes. Closer contacts between the administrative officials and the people as well as a change in temper was also emphasised as being essential for proper implementation of development schemes. The basic consideration was to keep progress well ahead of the growing population so that the self-propelling stage of growth could be reached soon.

It was in the perspective of this need for faster progress that the problems relating to the different sectors of the economy were discussed at the session. Increase in agricultural production, vital to the progress of the country, was considered to have been not sufficiently rapid to meet the requirements of the plan and the people. For stepping up production, intensification of efforts along known lines is called for. Among the methods for achieving better results the resolution lists full utilisation of available irrigation facilities, better agricultural tools, use of good seeds, soil conservation especially contour bunding, use of fertilizers, green manure and compost, reclamation of water-logged areas and saline and USAR lands through established methods.

The resolution recognises that the co-operation of the peasantry is basic to the success of the agricultural programmes. This it hopes to ensure by giving scope for peasants' participation in the laying down of the programmes and targets relating to production. In this connection, the resolution mentions that "it is essential that officers of all grades in rural areas should keep in intimate touch with the peasantry, take them into their confidence and learn from them what their problems and difficulties are".

The resolution also underlines the need for releasing the enormous un-

utilised productive power in the vast rural population of the country and points out that this should be done by the exercise of the peasant's own initiative. The Community Development movement is considered to need revitalisation by making the workers engaged in it individually responsible for the tasks that are allotted to them.

The other parts of the resolution related to the importance of institutional changes in land ownership and the development of the heavy side of industries. After reaffirming the legitimacy of the pattern of agrarian organisation envisaged at the Nagpur Congress session, the resolution stresses that the pace of organising service co-operatives should be speeded up so that every village would have an efficient service co-operative which, besides helping agriculture, would also play an ever-increasing part in the development of animal husbandry, and in processing, marketing, consumer industries and consumer trade.

In so far as it recognises gaps in plan performance and underlines the need for speeding up implementation of programmes, the resolution would seem to mark a refreshing change from the usual idealistic fare served at the annual Congress sessions. Even those aspects of policy which form part of the Congress's ideology came for a realistic assessment of the prospects for their implementation. Mr A. P. Jain, for example, cautioned against optimism in respect of going headlong with the policy of service co-operatives and state trading. The scheme of state trading would, according to Mr Jain, involve irksome controls at various levels and would restrict the scope for free market operations. He asked the Congress to clarify its mind as to what extent State trading could be carried out. He also dismissed the idea of one co-operative society for one village as an extravagant dream. Whether the doubts expressed by Mr Jain would influence the Governmental decisions, remains to be seen.

Mr Jain was supported in his arguments regarding state trading and service co-operatives by Mr B. R. Bhagat, Union Deputy Minister

for Finance. According to Mr Bhagat, while the Nagpur resolutions were revolutionary, no attempt had been made to educate the masses as to their implications. Therefore, neither State trading nor the establishment of service co-operatives could be implemented with success.

Apart from these criticisms of Congress policy, the resolution itself does not seem to have evoked much enthusiasm among those present at the session. The resolution is in effect a call to action to the people and particularly congressmen to bend their efforts to the mighty task of development. But the absence of a chart for action to mobilise people's efforts was a point that was picked up for criticism by Mr S. N. Misra, Union Deputy Minister for Planning. Mr Misra confessed himself to be unenthused by this omission, though he agreed that the resolution was tolerably good. He has therefore suggested the appointment of a committee for drawing up a concrete operational chart.

Another point of criticism against the resolution was that it did not put forward any specific plan for the emotional integration of the administrative and the organisational wings. Mr K. P. Tripathi, Labour Minister, Assam, who made this criticism pointed out that without a change in the outlook of both the administrative and organisational wings, it would be difficult to achieve anything concrete. Several other members expressed similar views on the question of emotional integration.

The Third Plan also came up for discussion. Though the resolution itself has not mentioned anything about the target or outlay for the Plan, Mr S. N. Misra, expressed doubts whether the outlay of Rs 10,000 crores would result in the increase of 6 per cent in national income which the planners wanted to bring about. Mr Babubhai M. Chinal, who also referred to the Third Plan said the rural sector should be made to pay more by way of taxes. This according to him could be justified for the reason that the rural section had benefited most by the implementation of the First and Second Five Year Plans.

MADRAS
REVIEW

AT the annual general meeting of the Madura-Ramanad Chamber of Commerce held in Madura, severe criticism was voiced against the fiscal policy of the Government which almost everywhere is being viewed with grave apprehension by the business community. Addressing the meeting, Mr A. M. M. Murugappa Chettiar, Vice-President of the Federation of Indian Chambers of Commerce and industry, alleged that considerations other than purely economic had been influencing the policy of the

Government and that this clouded proper consideration of the real effects that flowed from the policy being pursued by the Government.

Government taxation of industries is a subject in respect of which industrialists have special grievance in view of the crushing burden it has worked up for the business community. In pleading for tax concessions, Mr Murugappa Chettiar pointed out that the motive of the business community was not personal gain but increase

in investible surplus which could be ploughed back into business enterprises. Mr Murugappa Chettiar also sought to refute the argument of the Government spokesmen that the inhibitive legislative measures including the heavy taxation had not had a deterrent effect on productive enterprises, and pointed out that the progress achieved through the initiative and resources of businessmen could have been better but for the disincentives inherent in the fiscal measures of the Government.

SOUTH INDIAN
NOTES

A plea for providing the private sector with a larger share in the Third Plan than in the Second. Plan was made by Mr T. Manickavasagam, Director of the Sri Meenakshi Mills Ltd, and President of the Chamber, in the course of his speech. World monetary conditions and the past experience of the public sector would, according to Mr Manickavasagam, warrant such a step on the part of the Government. It was however necessary that the proper atmosphere was created so that businessmen could discharge their obligations. This calls for relaxation of the present fiscal pressure on industries.

Mr Manickavasagam also expressed dissatisfaction at the slow progress of industrial development in the Madras State and pointed out that, compared with more advanced States in the North, progress in the South was not commensurate. Therefore, he pleaded for a substantial increase in the total outlay for the Third Plan for the State. The contemplated outlay of Rs 250 crores appeared to him to be inadequate in relation to the new industrial potential of the State.

Areca nut Production

Self-sufficiency in areca nuts production has been urged upon the growers by Dr Punjabrao Deshmukh, Union Minister for Agriculture, in his inaugural address to the 11th annual general meeting of the Indian Central Areca nut Committee held in Coimbatore early this week. The present shortfall in production reflects a situation in cultivation which is characterised by uneconomic methods. Cultivation is predominantly in the hands of small growers and this fact would seem to suggest that there is great scope for improvement of cultivation by the adoption of scientific practices. Dr Deshmukh himself pointed out that, by regular manuring alone, 43 per cent of the area can be made to bear more.

The present area under areca nuts is 2,62,616 acres while production is of the order of 23,66,990 maunds. The Second Plan had envisaged extension of areca nut cultivation to an additional area of 9,200 acres. The problem with regard to improving the yield of areca nut is that of supplying seedlings of the right type. Nurseries for supplying the seedlings of the various types required had been set up in various parts of the country under the Second Plan. The targets and production of areca nut seedlings were 91,62,000 (target) and 28,69,207 seedlings raised in 416 nurseries. There is obvious need for more intensified efforts to make up for the slow progress, so glaringly evident in the wide gap between target and performance.

SOUTH INDIAN
MARKETS

Madras, January 20.

All hopes of prices receding in the groundnut oil and groundnut market have receded. Manipulated by bulls, there has been a phenomenal increase in the price of groundnuts. Anticipating higher and still higher prices stockists are reluctant to sell while producers are equally hesitant to unload their stocks.

Today the market closed with the following rates for groundnut oil and groundnut kernels: Groundnut oil per candy of 500 lbs ex-Madras godown 3% F.F.A. expeller ready: Rs 372 (done); January Rs 375 and March Rs 380 (done). Kernels per candy of 531 lbs: Coromandel Rs 202.

(All Southern market centres had put up their prices to Rs 200 per candy under the knowledge that prices in the City and exporting centres are going up).

There being no workable parity, shippers are not quoting for U.K. or Burma shipment. U.K. price quotation is around £117 and Burma Rs 1,640 per ton, but this could not work and therefore export to these places are unthinkable at the present prevailing prices.

Castor oil was quoted at Rs 320 per candy of 500 lbs; Coconut oil per tin Rs 40; Gingelly oil per maund Rs 20/4; Gingelly seed per bag Rs 66/67; Groundnut cake per bag Rs 26/12.

One should say that price increase in this front in Madras has been spectacular ever since the turn of the year. This increase is indeed unheard of in the history of the Madras oil and seeds market. These commodities here not even during the war period, particularly the groundnut touched the level of Rs 202 per candy or oil ever sold at 372 spot and Rs 376/380 for forward positions. True, January is always the rush part of the season, when shippers and other vanaspathi interests used to fulfil their near and future commitments. Shippers and vanaspathi interests sat with fingers crossed. Consuming public too did not bother much when the level was hovering higher and higher. Despite all this inactivity, prices continue to soar. There is also the mistaken notion that crop this season has not been good, which is not a fact. Bullish interests elected to lend support to the market at higher levels, and the daily increase in price levels encouraged the primary producers too to hold back stocks to realise a better price. Naturally groundnuts should have gained about Rs 80 per ton while oil recorded a gain of about Rs 75 or so per ton this week.

Local arrivals of groundnut seemed to be small averaging 45/50 tons daily. Big and small local crushers absorbed this quantity at Rs 195 or so. Small crushers invariably were to suffer the high prices because they had no other go. For these traders, there is the relief by way of excise duty exemption and that way they would not mind this high price for a while.

Local arrivals of groundnut seemed to be small averaging 45/50 tons daily. Big and small local crushers absorbed this quantity at Rs 195 or so. Small crushers invariably were to suffer the high prices because they had no other go. For these traders, there is the relief by way of excise duty exemption and that way they would not mind this high price for a while.

Hectic Rise in Groundnut

In oil, Calcutta interests came into the picture. They bought good quantities daily. Local vanaspathi interests did not care to look up to oil deals as much as they were with buying of kernels. Till last week-end the price of oil verged around Rs 367 per candy but Tuesday's closing showed a higher tenor. Today's spot closed at Rs 372.

Substantial business is reported in February and March positions. Naturally January transactions would be of a squaring up nature. While the price per candy was quoted at Rs 363 last Saturday, Monday opening was far higher and on Tuesday closed with Rs 367. January was offered and business was done at Rs 375 today toward close. A few deals materialised at Rs 374 in the forenoon session.

In February position the turnover was better even at Rs 376 today. Tuesday closing was only around Rs 368. The jump of Rs 8 per candy is indeed spectacular. But better still was March position which closing at Rs 375 Tuesday opened around Rs 378 and closed firm at Rs 380 today. Operators hope that this trend may continue and nobody knows how long.

Naturally groundnut oil cake followed the line of oil and kernels when the price of this commodity too jumped up to Rs 26/12 today per bag of 160 lbs ex-gunny exmill.

Hides and Skins

There was nothing much in the Hides & Skins market. Very little business could be confirmed with U.K. due to higher prices still prevailing.

Inferior fifts 5/5½ lb average between 46d to 48d were negotiated with Britain. However Madras shippers quoted far higher prices than the U.K. conditions could make them buy.

Arrivals were not much in tanned buffalo hides. Prices remained firm in tanned cow calf due to small arrivals.

Due to unchanged conditions in prices in tanned goat skins the turn over remained the same at about 1,000 pieces and market quality sheep skins changing hands were only in the neighbourhood of 8,000 pieces. While goatskins left was about 5,000 sheepskins remained at 30,000 pieces. Heavy weight goats had been in good demand in export section. Export was meagre due to resistance from U.K. and continental buyers.

The raw skin prices were (last week's prices within brackets):

Bangalore raw goatskins Rs 650/715 (Rs 640/655): White wool sheep Rs 640/690 (Rs 610/660): Black wool sheep Rs 485/520 (Rs 470/505): Bezvada raw goatskin Rs 630/635 (Rs 615/620): He sheep Rs 576/585 (Rs 570/575): She sheep Rs 475/485 (Rs 470/475).

Quotations per lb tanned cow Prime 5/5½ lbs Rs 3 to Rs 3.37; 6/6½ lbs Rs 2.81 to Rs 3.00; 8/8½ lbs Rs 2.31

to Rs 2.50; 10/12 lbs Rs 1.91 to Rs 2.06; Tanned Buffalo hide 12/13 lbs Rs 1.56 to Rs 1.75: Cow calf 1½/2 lbs Rs 5 to Rs 5.37: Buffalo calf 1½/2 lbs Rs 3.25 to Rs 3.62: Goat Prime 8/9 lbs Rs 9.25 to Rs 9.37: 5½/6 lbs Rs 10.50 to Rs 10.75: Sheep ordinary 6/7 lbs Rs 8.25 to Rs 8.62: Sheep Prime 6/7 lbs Rs 10.75 to Rs 10.87.

Bangalore Silk

Conditions in respect of the prices of silk and silk products in the Bangalore silk market, during the week ended 7th January, 1960, were practically similar to those that prevailed in the earlier week. Demand for both Charka and Cottage Basin silk was moderate while that

for Filature silk was slack. There was no change in the prices of Filature silk. Charka raw silk prices too remained unchanged unlike in the previous week, even though the supply of raw silk in the market was understood to be moderate.

With regard to Reeling Cocoons the prices indicated a general upward movement taking up the prices of Channapatna by 25 nP. per lb. and of Mugur by 18 nP. per lb.

Mysore Seed Cocoons ruled at between Rs 4.00 to Rs 5.50 as against Rs 4.00 to Rs 5.25 during the previous week. There was no change in the prices for Foreign Seed Cocoons, which remained at Rs 6.00 to Rs 12.00.

FOREIGN TRADE OF INDIA IN NOVEMBER 1959.

The provisional figures of foreign trade of India by all routes, i.e., sea, air and land, on private and Government accounts during November, 1959, according to information available to-date in the Department of Commercial Intelligence and Statistics, Calcutta, are given below:—

Merchandise, excluding overland trade with Nepal, Tibet, Sikkim and Bhutan: Exports Rs 61.26 crores, re-exports Rs 50 lakhs, imports Rs 69.99 crores. The import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment and of private merchandise under reference to Customs for verification.

Treasure: Exports (including re-exports) of currency notes Rs 89 lakhs, gold negligible and current coins (excluding gold coins) negligible. Imports of currency notes Rs 37 lakhs, gold Rs 11 lakhs, current coins (excluding gold coins) negligible.

Balance of Trade: Subject to the limitation in import figures mentioned above, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs 8.34 crores.

A comparative table showing the trade in November, 1959, October, 1958 and the eleven months ended November, 1959 and 1958 is given below:—

Foreign Trade in	Month		(In Lakhs of Rupees)	
	Nov., 1959.	October, 1959.	Nov., 1958.	Eleven months ended November 1959.
A. Merchandise—				
Exports	61.26	59.56	49.24	550.08
Re-exports	50	18	33	5.07
Imports	69.99	65.03	68.65	798.92
Balance of Trade in Merchandise	-8.23	-5.29	-19.08	-243.77
B. Treasure (Gold)—				
Exports	...	...	...	1
Re-exports	...	...	...	5
Imports	11	8	4	58

MANUFACTURE OF METRIC WEIGHTS

One hundred and six factories in the States of Andhra Pradesh, Bombay, Kerala, Madras, Mysore and Punjab and the Union Territory of Delhi have so far been granted licences for manufacturing metric commercial weights. There are about 305 factories, including some units in the public sector, which can manufacture metric weights and measures in adequate numbers to meet the demand in the country.

According to an estimate made by the National Sample Survey, at present there are about 54 million weights and 1 million measures in use all over the country. These will have to be replaced by metric weights and measures during the next two years or so.

The sale of new weights and measures will be through licensed dealers.

INCREASED CANADIAN ASSISTANCE

The Canadian Secretary of State for External Affairs, Mr Howard C. Green, announced in Ottawa on 18th January, 1960, that Canada's capital assistance programme for India under the Colombo Plan for the fiscal year 1959-60 would amount to \$25,000,000.

This represents an increase of \$8,000,000 over that allocated to India for the previous fiscal year, but does not include the amount set aside to provide Canadian experts and training facilities under the Technical Co-operation programme which will be continued and expanded during the coming year.

The announcement comes during the week when the tenth anniversary of the Colombo Plan is being celebrated in all the member countries.

The Ottawa announcement explains that in order to assist India to carry forward her programme of economic development, it has been decided to allocate a sum of \$11,500,000 for the provision of urgently needed non-ferrous metals. An additional \$7,000,000 is made available as a wheat grant and \$2,550,000 for the provision of fertilisers of various types which would assist in increasing food production. A sum of \$2,000,000 would be devoted to the provision of diesel switching locomotives to facilitate handling of cargo in India's major ports. An amount of \$750,000 is set apart to cover the initial expenses of a hydro-electric project to be agreed upon by the two Governments. A further sum of \$130,000 is to be used for cobalt beam therapy units for cancer treatment.

The Canada-India Reactor at Trombay, which will be opened during the present year, is allocated an additional \$700,000 towards its completion. Of the remainder, \$250,000 will be used to provide radioteletype equipment and \$120,000 for the provision of raw asbestos used in the construction of factories and industrial housing.

The foregoing allocations have been agreed to after lengthy discussions between Canadian and Indian officials during the past six months. In all cases where Canadian aid is

taking the form of commodities, the Government of India has agreed to establish counterpart funds from the sale proceeds of the commodities. These counterpart funds, as in the past, will be used to cover the local costs of economic development projects agreed upon by the two Governments.

CHEMICAL TREATMENT PLANT INSTALLED IN HINDUSTAN HOUSING FACTORY.

A chemical treatment plant for timber has been installed in the Hindustan Housing Factory and has had a successful trial run. The total cost of the plant works out to about Rs 72,000. The plant can be charged thrice a day and each charge can treat about 175 cft. of timber in two hours. The timber treated in the trial runs has been put to various tests and the results have been found to be satisfactory.

Treatment of timber is done under pressure. The timber is loaded in the pressure cylinder through trollies and the chamber is then closed. After sealing, Ascu solution is pumped into the chamber from the storage tank till it penetrates to the requisite degree.

CUSTOMS DUTY ON INCOMPLETE SETS OF IMPORTED MACHINERY

The Government of India have decided to consider bona fide cases for suitable relief in customs duty on incomplete sets of imported machinery.

Under the Indian Customs Tariff, plant and machinery in general are assessable at a low statutory rate of 10% ad valorem. Where, however, the articles imported as parts of machinery do not constitute a whole piece of machinery, they cannot be assessed as such and have to be assessed individually on merit under the appropriate items of the Tariff. Under this mode of assessment, some of the articles fail to qualify for assessment at the machinery rate and have to pay duty at higher rates.

In order to encourage manufacture of machinery and other capital goods in the country, Government have, of late, been permitting import not of complete machinery/plant but only of such portions and parts thereof as cannot be manufactured locally. It is not, however, the intention of the Government that such incomplete sets of machinery should be deprived of the benefit of the machinery rate merely because the entire machinery is not being imported from abroad in the interest of the indigenous industries. The Government of India have, now decided to consider hard cases of this kind in order to grant suitable relief in customs duty.

Imports are therefore, advised that if they have a bona fide case for concessional assessment on the grounds mentioned above, they may make an application well in advance of the importation of the goods, to the Central Board of Revenue through the Development

Wing of the Ministry of Commerce and Industry, New Delhi for necessary relief furnishing full data to prove that the imported portion of the goods forms, with the locally manufactured portion, a complete plant or machinery which if imported wholly from abroad would have been assessed at the machinery rate. On receipt of the application, it will be open to Government at their discretion to grant suitable exemption from duty so that the rate applicable to the imported articles is not in excess of that leviable on the complete machinery, subject to such conditions and procedural safeguards as may be considered necessary to check abuse of the concession.

IMPORT OF COMPLETE WATCHES

The Government of India have decided to permit import of complete watches during the current licensing period. Gold watches and watches of c.i.f. value of more than Rs 150 will, however, not be permitted for import.

The following is the Import Trade Control Public Notice issued today regarding import of watches during October 1959—March 1960 period:

"During the current half year, import licences for 'Parts of watches' are being granted to Established Importers of 'Watches and parts thereof' on the basis of a quota of 7½% General and 7½% Soft. These licences are valid for import of 'Parts of watches or complete watch movements' only.

These additional licences to be granted to Established Importers will be valid only for import of complete watches. These will not, however, permit import of Gold watches and/or watches with a price of more than Rs 150 per watch.

The basic period for watches and parts thereof has already been extended so as to include the year 1957-58.

Established Importers should submit their applications for additional licences for 'watches' in the prescribed form and manner to the licensing authorities at the ports as soon as possible but not later than 16-2-60."

PRODUCTION IN HMT TO BE DOUBLE

The Government of India have approved a proposal of the Hindustan Machine Tools (Ltd.), Bangalore, to double its capacity from 1000 machines to 2000 machines per annum.

The capital expenditure on the expansion programme will be Rs 280 lakhs of which the foreign exchange component would be approximately Rs 115 lakhs.

HMT's production has substantially increased in the last few years. In fact, the second Plan target of reduction had been achieved as early as 1957-58 when 402 machines valued at Rs 1.4 crores were manufactured. The realisation of the Plan target, three years ahead of schedule, was made possible by reorganisation and multiple shift working in the factory.

During the current year (1959-60) production will be about 700

machines valued at Rs 2.5 crores. The annual production is expected to reach 1,000 machines valued at Rs 3.5 crores by the end of the second Plan (1960-61). When the proposed expansion to 2,000 machines per year will materialise in 1963, the value of annual production will be over Rs 7 crores per year.

The company has already started making profits. Even after providing for the payment of 4½ per cent as interest on the loan of Rs 1.87 crores which Government had made available to the Hindustan Machine Tools and after providing for a fair return on the share capital, it is expected that the company will be able to finance a part of the capital cost of the expansion programme from its internal resources.

Substantial reduction has also been achieved in production costs of HMT machines. The benefit of this has been passed on to the buyers through reduction in sale prices. The sale price of 1,000 mm lathe, for example, was first brought down from Rs 39,000 to Rs 36,000 and then to Rs 29,500 with effect from June 1, 1958. The landed cost of imported machines of equivalent quality is around Rs 40,000.

PRODUCTION OF MACHINE TOOLS.

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 13 leading member-firms during the month of November, 1959, was:—

Description	Quantity Nos.	Value Rs.
Lathes	168	26,12,730
Milling Machines	20	7,60,000
Drilling Machines	57	1,51,320
Shaping Machines	6	1,50,400
Plate Bending Machines	2	34,000
Radial Drills	8	20,000
Hacksaw Machines	10	17,300
Furnace	1	5,150
Miscellaneous	4	3,600
Bandsaw Machines	2	1,900
Lathe Chucks	447	1,27,595
Drill Chucks	349	13,190
Total	1,074	38,97,190

AUTOMOBILE PRODUCTION IN 1959.

The production of automobiles in the country showed an appreciable rise in 1959, the main contributing factors being the rapidly increasing indigenous content of cars, trucks and vehicles and liberal imports of components allowed to the manufacturers.

The total production of cars, trucks, buses and jeeps in 1959 amounted to 36,468, the highest recorded so far. Production in the three previous years, 1956, 1957 and 1958, had been 32,138 33,058 and 26,788 respectively.

A break-down of the 1959 figure shows that production of cars (including station wagons), trucks (including buses) and jeep vehicles amounted to 11,993, 19,099 and 5,376 respectively.

The total car production in 1958 was 8,113. Car production in November and December, 1959, totalled 1,321 and 1,600 respectively.

For
thousands
of young men
a new life

begins at Durgapur

Training completed, this young apprentice in Durgapur is on his first practical survey job in the field. When he becomes an experienced hand, efficient at his work, he will command a good salary and will have a future ahead, bright with promise.

In Durgapur today, ISCON, who are entrusted with the construction of the giant one million ton steel plant, have already helped to train up a large group of young Indians

in the technical field. This is part and parcel of the ISCON scheme of collaboration—to work side by side with Indian technicians and workers, to instruct them on

the spot and in steel factories in England so that in the future India will have, not only her steel plants but also technicians to run them.

State of Public Law 480 Counterpart Funds

A decline of over Rs 150 crores in Govern-
ment of India Treasury Bills outstanding
during the week ended December 25, 1959 has
so far passed unnoticed. This is a change
which normally should be of considerable
significance to the money market, since it is an
indication that the reverse of deficit financing
was instituted in so large an amount. Such
cancellation of ad hoc Treasury Bills has
happened off and on, as and when the Central
Government's balances were so bountiful as to
allow the "retirement" of created money. In
the past, the new loan week of the Centre has
usually witnessed the institution of reverse
ad hocs on a considerable scale. Both in 1958
and in 1959, the amount involved in each case
was around Rs 100 crores. At other times,
when Central revenues are particularly good,
a drop in the outstandings of Treasury Bills
has been noticed. The most important such
decline, however, occurred when the Central
Government "funded" Rs 300 crores of deficit
financing, in 1958, by the creation of a special
issue of Rs 300 crores of the 4 per cent 1973
loan, this parcel being handed over to the
Reserve Bank in cancellation of ad hoc Treas-
ury Bills for corresponding amount. There
was, finally, one other situation in which the
Central Government might prove to have a
plethora of cash; and this was when the
Centre received, from the US embassy accounts
on deposit with the State Bank, counterpart
funds under Public Law 480 in the form of
loan or grant. Does the fall of Rs 154 crores
to 1177.44 crores of outstanding Treasury Bills
as at December 25 indicate any one or combi-
nation of transactions that we have described?

The first transaction that we may rule out
any possibility of is embarrassment of Central
Government balances owing to a new loan;
there hasn't been one, or we surely would
have heard of it. Even so, no State Govern-
ment or Governments have come on the mar-
ket for so large an amount of money, that
Rs 150 crores could be paid over to the Centre.
(Madhya Pradesh, it is true, did come on the
market; but that was well after December 25,
and the amount sought—and obtained—was
somewhat small, Rs 2 crores). As far as we
know and can surmise, Central Government
revenue, despite tax receipts in December, by
no means exceeded revenue expenditure by so
colossal a sum as Rs 150 crores. We did con-
sider the possibility of a funding operation,
but, if there has been any such move, we do
not know of it. All that remains to be ex-
amined is whether payments have been received
against the Public Law 480 counterpart fund
loans and grants.

In this context, the figures relating to the
Public Law 480 Agreements are worth recapitu-
lation. Under the First Agreement of Sep-
tember 1956, India received commodities (in-
cluding ocean transportation) worth some
Rs 169 crores. A supplementary agreement of
June 1958 was worth Rs 26 crores. The
Second Agreement of September 1958 is worth
a total of Rs 124 crores. The latest available
figures show that, as at the end of June 1959,
the Indian Government had received and paid
for commodities worth Rs 265 crores against

the total of Rs 319 crores for the three agree-
ments. Meantime, in November 1959, a Third
Agreement was entered into for a value of
about Rs 114 crores; and a supplement to the
Third Agreement has also since been signed,
being worth Rs 9 crores. Thus, the total value
of Public Law 480 Agreements would be as
under:

	Rs Crores
First Agreement	168.83
Supplementary Agreement	26.32
Second Agreement	123.71
Third Agreement	113.71
Supplement to Third Agreement	8.80
Total	441.37

It may be repeated, however, that consign-
ments till the end of June 1959, had still to
cover the commodities under the Second
Agreement. Even if, subsequently, transac-
tions relating to the Second Agreement have
been completed, the counterpart funds should,
at the present day, be of the order of Rs 319
crores. The allocation of this sum of Rs 319
crores is as follows:

	Rs Crores
Loans to India	185.40
Grants to India	43.57
For US Embassy	52.19
Against Cooley Amendment	37.71
Total	318.87

We have no means of knowing whether and
to what extent the US Embassy has spent from
the fund set apart for its use; however, it is
known that such funds are on deposit with an
exchange bank, and need not concern us now.
As far as the Cooley Amendment amount is
concerned, according to the official figures on
the subject, only one loan of Rs 10 lakhs has
been authorised—but we do not know whether
it has been disbursed; subsequently, however,
another loan under the Cooley Amendment is
reported to have been finalised.

The moneys earmarked for loan or grant to
India are, however, done so only against spec-
ific agreements that need to be negotiated
and executed with the American Government.
As at the end of August 1959, such specific
agreements had been signed for a total amount
of Rs 146.26 crores, all of it save the following
for river valley projects:

	Rs Crores
Refinance Corporation	26.19
Industrial Finance Corporation	10.00
Industrial Credit & Investment Corporation	10.00
Malaria Eradication Programme	8.00

Against this, all that had at that date been
drawn was Rs 9.80 crores for the River Valley
projects and Rs 5 crores for the Refinance
Corporation. So, it is clear that, in respect of
agreements that have been completed, the
Central Government may at any time draw
on the loans already negotiated. It is at this
stage that we may revert to the subject of
reverse ad hocs instituted by Government dur-
ing the week ended December 25. Is it pos-
sible that the Centre will have drawn such an
amount against the negotiated agreements?
The answer to this question is, unfortunately
in the negative, for, the State Bank (with
which institution it is that the bulk of coun-
terpart funds are being kept) has shown no
change in its Deposits. But, then, couldn't the
Central Government have drawn the money,
but continued to keep it on deposit with the
State Bank? The answer is again no, since
the State Bank cannot keep the Central Gov-
ernment's cash where there is a branch of the
Reserve Bank and, in every other case, to
render account each week.

It is thus that we suggest that there must
have been some funding operation to account
for the steep decline in the outstandings of
Government of India Treasury Bills. It would
be helpful if the Reserve Bank could shed light
on the subject.

We may round off this article with a few
further figures about Public Law 480. The
amount that India would get, as loan and
grant, from the Third and the Supplementary
Agreements, would be around Rs 100 crores.
In broad terms, therefore, against Public Law
480 Agreements so far negotiated, the amount
that India will get as loan and grant is in the
neighbourhood of Rs 330 crores. And specific
agreements in respect of more than half this
amount have yet to be discussed. So far, it is
possible that counterpart funds on deposit with
the State Bank (covering up to the Second
Agreement) have aggregated Rs 230 crores,
of which perhaps Rs 15 crores have so far been
drawn. Chances are that, by the time the
Central Government draw on the agreed proj-
ects, the State Bank will start to benefit from
the next tranche of Public Law 480 assistance,
in an amount of Rs 100 crores. Indeed, atten-
tion may be drawn to the successive rises in
Deposits of the State Bank in the last two
weeks; may be, this marks the beginning of
the Rs 100 crore tranche.

Bank Advances Cross the Rs 1000 Crore Mark

A contra-seasonal contraction of Rs 10.58
crores to Rs 1767.32 crores has been re-
gistered in active note circulation, according to
the returns of the Reserve Bank for the week
ended January 22. Such contra-seasonal ten-
dencies are also, as we shall presently see, re-
flected in the statutory statement of the
State Bank for the same week. Moreover,
there has in the latest week been inflow of
rupees coin for Rs 0.33 crores. In the result,
the Reserve Bank's cash in the till has im-
proved by Rs 10.89 crores to Rs 20.68 crores.

There is not, in the Banking Department,
any indication of deficit financing, though the
considerable receipts to the credit of the State
Governments would strongly hint at recourse
to created money by the Central Government
for meeting this commitment in respect of the
monthly instalment payable to the States. The
answer is partly to be found in the State
Bank's return, wherefrom it is clear that the
latter institution has figured as having pur-
chased Rs 15 crores of securities through the
Reserve Bank tap. That this transaction is
not reflected in a drop of this size in the
Reserve Bank's holdings of Rupee Securities
makes it clear that the Central Government
should have instituted deficit financing in an
amount of Rs 15 crores, this, however, having
been concealed by the Reserve Bank's tap
sales in like amount. Such replenishment of
resources was necessary on the part of the
Centre to effect payments to the States, whose
balances have improved significantly by
Rs 15.62 crores to Rs 24.76 crores; and the
Centre's Deposits are only nominally higher by
Rs 0.78 crores at Rs 52.20 crores.

A slight "slack" in the current busy season
is also insinuated by the increase of Rs 2.33
crores to Rs 78.36 crores in the Reserve Bal-
ances of member banks; in the relative week, the
State Bank, partly to finance the purchase of
gifts from the Reserve Bank, had run down its
cash in hand and with Reserve Bank by over
Rs 4 crores; and this means that the Other
Scheduled Banks added to their Reserve Bal-
ances by nearly Rs 7 crores. Similarly, the
Other Loans and Advances of the Reserve
Bank show a small drop of Rs 0.60 crores to
Rs 104.94 crores.

Obviously, some Rs 20 crores worth of Treas-
ury Bills purchased and discounted by the
Reserve Bank matured during the week; and
this commitment, too might have entailed def-
icit financing on the part of the Government.

though it is in the nature of a counter-vailing transaction.

Lastly, the foreign exchange deficit continues; Balances Held Abroad have again declined by Rs 2.76 crores to Rs 44.02 crores. Does this mean that exports are tending to be sluggish?

The return of the State Bank for January 22 shows the disposal, as it were, of the bank's profit for 1959. Other Liabilities, under which presumably the accruing profit was being shown, have declined by Rs 3.46 crores to Rs 1.44 crores. The Reserve Fund and Other Reserves are, by dint of the transfer from the last year's profit, higher by Rs 20 lakhs at Rs 7.20 crores. For the second week in succession, Deposits have been marked up, in rising by Rs 6.74 crores to Rs 592.42 crores—perhaps the beginning of another tranche of Public Law 480 counterpart funds. That such may be the case is suggested by the increase of Rs 15 crores roughly to Rs 388.22 crores in the ill-fledged portfolio of the State Bank. The acquisition of gilt-edged has caused cash in hand and with Reserve Bank to drop by Rs 4.39 crores to Rs 30.65 crores. Suggestive of a slack week in the busy season is the decline of Rs 1.89 crores to Rs 171.57 crores in Advances.

Continued busy season pressure is shown in the return of Scheduled Banks for January 15. The total of Advances has, in rising by Rs 5.89 crores, pierced the Rs 1000 crore mark to be placed at Rs 1003.08 crores. It may be recalled that, during the last busy season, Advances had similarly passed the level of Rs 1000 crores, only to decline thereafter during the 1959 slack season. Deposits, it is true, are higher by Rs 2.76 crores; but the State Bank having figured during the relevant week as having added to its Deposits by some Rs 64 crores, it is clear that Other Scheduled Banks have experienced some drain. Similarly, though cash balances are higher by Rs 6.33 crores, the extent of the State Bank's accretion in that week was around Rs 15 crores. Disinvestment in gilt-edged has occurred for Rs 12 crores, the bulk of this, or Rs 10 crores, being ascribable to the State Bank. Busy season pressure consequently compelled the banking system to have greater recourse to borrowings: those from the State Bank have moved up from Rs 10.89 crores to Rs 12.94 crores, while indebtedness to the Reserve Bank has risen by Rs 3.04 crores to Rs 25.25 crores.

The Bank Rate at 5 per cent

By Paul Einzig

SINCE the Bank rate inquiry in 1957, the Treasury and the Bank of England have got into the habit of aiming at changing the Bank rate when it is not expected, so as to avoid any suspicion of leakage of information. This may quite conceivably mean that the authorities feel obliged to abstain from making the change at the most suitable moment because too many people expect them to make it, and that they may choose less suitable moments for the change for the sake of catching the markets unawares. Although the risk of changing the Bank rate at a wrong time is therefore undoubtedly present, the increase to 5 per cent on January 21 was certainly made at the right moment. Having abstained from raising the Bank rate on several successive Thursdays when it was widely expected, the Bank of England acted after the markets had given up expecting it.

From the point of view of the international aspects of the situation, a higher Bank rate may have been deemed expedient because of the recent losses of gold. Even though the

amounts lost have been moderate if we allow for debt payments to the United States and Canada, the fact that sterling remained weakish even after the turn of the year must have contributed toward the decision to try to check the drain. Since the United States authorities were expected to raise their Bank rates, and since this would have accentuated the gold outflow, the British authorities may have felt impelled to take action before they have lost much more gold.

In any case, the balance of payments outlook is causing some concern, owing to the wage increase conceded or about to be conceded by important industries. For that reason alone, the adoption of dear money must have been considered advisable, in order to check the rise in costs and prices. This brings us to the domestic aspects of the change. Its main object was probably to discourage trade unions from pressing excessive claims and to discourage employers from conceding such claims too lightheartedly. It was the 7 per cent Bank rate in 1957 that induced the trade unions to restrain their greed during 1958 and 1959. But the effect of that action is now wearing off, and it is evident that there is need for another lesson, even if it does not have to be so drastic.

During 1959, many views were expressed to the effect that the 7 per cent Bank rate and the credit squeeze had failed in their objective, for they had checked the increase of the output at the same time as discouraging wage demands. In many quarters, the view gained ground that the authorities would therefore never repeat the experience of 1957 again. This, the trade unions inferred that they were now safe in pressing forward with demands for large wage increases and shorter hours. The Government may possibly have intended the Bank rate shock for the purpose of making the unions realise that the authorities are quite ready for administering another dose of deflation if it becomes necessary for checking the inflationary wages spiral.

Anyhow, since a higher Bank rate was vaguely anticipated since before the turn of the year, it is now out of the way. If it should lead to a moderation of wage demands, it would enable industry to continue to increase output without causing inflation. In that case, no further disinflationary measures would be considered necessary, especially if the higher interest rates prevent a further substantial outflow of gold. Judging by the favourable effect of the change on sterling, the foreign exchange market took an optimistic view of the effects of the change. Of course, we have to await the reactions to Bank rate increased in the United States and other countries that may possibly follow the increase of the British Bank rate. But the immediate impression is that the 5 per cent rate will be fully adequate to cope with the situation, both in its domestic and international aspects. (Copyright)

Anniversary Week

THE last week in January each year serves to bring poignant memories of the past. It was on the 23rd of the month, many years ago, that Subhas Chandra Bose was born, and this is the first of the anniversaries that we mark and celebrate. For, in so doing, we pay homage to the memory of the man who marshalled India's, first national army in modern times. Such a commemoration is perhaps more necessary this year than in years past, in the light of the aggressive tendencies that China has been showing. We would do well to remind ourselves that the times in which Netaji built up his army were more parlous than today, when the nuclear age has almost made a mockery of war. But prepared we must be for aggression, and there can be no better preparedness than the emulation of the courage and resoluteness that Netaji so richly displayed. There have been, it is true, military heroes—and heroines—before. But Netaji's example is green in our memories, and it is proper therefore that his birth anniversary stirs us to a realisation of our duty to defend this land of ours, if that need should arise.

Freedom may have been our birthright, but independence was not won without a fight. It was on the 26th of January, in 1950, that India became a Republic; and this, too, is a day of significance. That freedom will have meant nothing, if the masses of the Indian people did not with Swarajya have a glimmering of hope for a future in which, slowly perhaps but surely, they would be ridden of the poverty and squalor in which they lived. Equality of opportunity is the objective of republican India. Much has been done since that fateful January day in 1950. The era of planning has started. There is a zealous anxiety to help people at the grass roots level. Perceptible evidence is available of the hard work undertaken and done to raise the standard of living. But what has been accomplished is as nothing, compared to what remains to be done. And so, it is fitting that on Republic Day we rededicate ourselves to the cause of the Indian people, so that economic progress can ensure that the political freedom that we have won will not be lost.

It was on the 30th of the month, twelve years ago, that Mahatma Gandhi achieved the honour of martyrdom. It was almost as if, his job of work done with the winning of Indian independence, the Mahatma departed in manner befitting a saint. But this is a day to remember, both for the way, in which he lived and the manner of his death. Gandhi's life was as model as any mortal man's can be. There are his precepts and his examples, most of all his humility, as his rich legacy to us. His was a life to inspire the nobler attributes of man. Who but he could have publicly confessed to a Himalayan blunder? Or undertaken a fast of penance for the failings of, not himself, but of his brethren? In the India of today, with our preoccupation with the economic advancement of man, the danger there is that we shall lose sight of the moral progress of mankind. So it is, that we should be grateful for Martyrs' Day, that we may freshly remind ourselves of the traits and attributes that we

should persevere to own for ourselves. The manner of his death, though it was a fitting one for Gandhi, should be a warning to us. The father of this country was lost to us because of the baser passions of man. Intolerance, prejudice, racialism and communalism—these are what the weapon was made of that killed Gandhiji. The Mahatma would perhaps have been with us today, but for base attributes such as these. And in the India of the last twelve years, there has been sporadic evidence of the rise of such passions. Even as we could not have afforded the Mahatma's taking off, so would it be ruinously costly for us to be parochial and communalistic. Martyrs' Day, therefore, should each year be time for the resolution that we shall

forever those traits that can place our freedom in jeopardy.

Last of all, there is a personal anniversary of our own. It was thirty-two years ago, that C. S. Rangaswami, prodded by his friends, published the first issue of Indian Finance, on January 28, 1928. Until then, the freedom fight was preoccupied with political issues, the Swadeshi movement notwithstanding. Indian Finance's was the first attempt to imbue the economy and matters economic with a nationalistic content. Today, it is economic progress that is uppermost in our minds. We remember C. S. Rangaswami today, his courage and vision, as this journal dedicates itself ever, without predilections or prejudices, to the cause that is right.

Sugar Prices

A FACTUAL analysis of the present position regarding the production and prices of sugar is contained in an excellent brochure brought out by the Indian Sugar Mills Association. The concern of the Association is not unnaturally to refute the ill-informed criticism which blames the Mills for the present unsatisfactory position. In this respect, the Association, as all fairminded observers will be ready to concede, has been completely successful. Price control was imposed on July 30, 1958. It has been acknowledged by Government spokesmen that prices continued to be at a reasonable level till May 1959. In July, the entire stock with the Mills in the controlled area (that is UP North Bihar and the Punjab) was taken over by the Government and distributed through their nominees. If at all there was any profiteering by Mills, it could have taken place during the two months of May and June 1959. During this period, the Association points out, the quantity released for sale by Mills in the controlled area was only 1.20 lakh tons against total release of 3.75 lakh tons. Out of the balance, 1.31 lakh tons was allotted by Government to their nominees and 1.24 lakh tons was given for sale by factories outside the controlled area. It does not stand to reason that, with an allotment of less than a third of the total supply, the sugar mills in the controlled area could have manipulated the prices or indulged in profiteering. It is more probable that "while the fall in production created fears of shortage, the manner of timing of control and the faulty distribution arrangements taken thereafter turned this into a scare of scarcity and resulted in the present debacle."

While the Mills may be absolved of the charge of profiteering, it may be thought that they are at least responsible for the fall in production which has led to the current shortage. Production, which stood at 20.29 lakh tons in 1956-57, had dropped to 19.18 lakh tons by 1958-59, in spite of an addition of 3 lakh tons to installed capacity during the same period. Taking the additional capacity into account, the actual shortfall during the last two seasons is really of the order of 4.11 lakh tons. During the same period, production of khandasari had increased from one lakh tons to 3.50 lakh tons. The diversion of cane

supplies from sugar Mills to khandasari and gur manufacture, it is pointed out, is the reason for the drop in mill production. The controlled prices at which Mills are obliged to sell sugar are fixed on the basis of the minimum prices of cane. With the heavy burden of taxes and rising costs, the Mills have little room for manoeuvre. In this context, it has been pointed out that, while prices of sugar per maund have risen only two and a half times since 1933, cost of sugar cane has increased fourfold, wages have risen five times and the cost of machinery seven times. It is also relevant to mention that the ex-factory price includes a tax component of Rs 13.16 per maund. The total incidence of taxes and Cooperative Societies' Commission has increased from Rs 2.97 per maund in 1946-47 to Rs 13.16 in 1958-59. The Mills therefore are not in a position to bid for sugar cane supplies against gur and khandasari manufacturers who are free of such handicaps. At the present levels of gur and khandasari prices, it is possible for manufacturers of these products to outbid the sugar mills for supplies of cane. The Association has, therefore, urged immediate decontrol of sugar prices. This will enable sugar factories to offer higher cane prices in order to prevent diversion of cane to other uses.

An unbiased survey of the facts will bear out the claim that the industry cannot justly be either blamed for the fall in production or charged with exploiting the shortage to push up the prices. But that does not mean that the solution that they have put forward will be readily acceptable. Even if it is accepted as reasonable in theory, it may not be practically feasible. It is only a week ago that the Food Minister of West Bengal announced a new scheme extending the area of control of distribution. The system of "approved wholesalers" introduced last year is to be reinforced by a new cadre of "approved retailers". It seems the authorities are not quite confident about the result, for, the Minister, while announcing the new scheme, also added that, in case the new scheme did not function satisfactorily, Government would consider the question of rationing. That seems to be the direction which policy is likely to take.

The only way to equate supply and demand

when the gap is large is by rationing, either by purse or through a system of physical controls. It is not realistic to expect the Government to accept an unabashed policy of rationing by the purse which is what decontrol would amount to in the estimation of the general public. It is quite possible that this impression may be wrong. Decontrol, as the Association claims, may help to increase production by enabling the Mills to pay competitive prices for cane, and this may help to ensure a stable level of prices. It would have been really helpful in countering the natural apprehensions of the public, if the Association, which has presented much revealing statistics of sugar manufacture, had projected the estimates into the future and given an indication of the level at which the price of sugar is likely to be stabilised. For instance, by how many annas per maund will it be necessary to increase the prices paid for cane and how far will it tend to increase sugar prices? According to the concessions allowed in October last, an increase of three annas in the price per maund of cane, it may be noted, was linked with an increase of Rs 1.85 per md. in the ex-factory price of sugar. A market survey of the prices paid by khandasari manufacturers for their cane should give a reliable indication

Glimpses of Foreign Agriculture—II

[The first instalment of this article dealing with the World Agriculture Fair was published in the issue of "Indian Finance" dated January 16, 1960—Ed.]

IF India can learn some relevant lessons—relevant from the point of view of production and productivity—from American agricultural experience, it can learn some equally relevant ones from Communist agriculture also, especially that of the People's Republic of China. If the basic structural difference between China's collectivist agriculture and India's small-scale individualist agriculture is relegated to the background, the characteristics common to both are easily brought into their proper focus. These common features are that, in either country, the agricultural economy is a largely rice economy, cultivation is mostly of the intensive type, especially on irrigated lands, the impact of industrialisation by way of mechanisation and chemical fertilisation is just incipient and there is a plenitude of manpower and cattle power available for agricultural operations. Though this country shares these characteristics with China, it is far behind the latter in the matter of unit-area yields as it has always been.

If China continues to maintain its traditional lead in the matter of agricultural productivity, it is because that country's technique of soil management is still solidly based on the sound dictum that what is taken out of land must be returned to it. Even the substantial increase, in recent years, in the use of inorganic fertilisers in China appears only to supplement, not supplant, the traditional organic manurial practices which, thus, continue to be of basic importance in that country. Any discerning observer may learn, by patient interrogation and otherwise, from the rice and wheat sections of the Chinese pavilion in the World Agriculture Fair that some very high yields of paddy and wheat are being obtained through a judicious combination of traditional and modern cultural practices, with the emphasis still being on the traditional.

This supremely relevant lesson from Chinese agricultural experience would need to be illustrated by a reference to the wet cultural practices pertaining to early rice, middle season rice, late rice and wheat. In one Chinese country, for example, consisting of

of the extent to which sugar prices are likely to rise, on the assumption that the khandasari manufacturers are already paying the maximum prices they could afford to pay. But, considering the great disparity in the tax burden borne by Mills and khandasari, it does not seem likely that they have no reserve power to raise the price in order to retain their cane supplies. Competitive bidding by Mills in such circumstances can only result in pushing the price of sugar to a level which would cause acute popular dissatisfaction.

It is rather surprising that the Indian Sugar Mills Association should have put forward the proposal for decontrol, at this juncture, without necessary safeguards. Decontrol could be attempted with success if Government are prepared to build up a buffer stock out of imports for controlling prices. Though at present Government policy appears to be firmly set against any move which would mean expenditure of foreign exchange on sugar imports, the question deserves careful re-examination. It should by now be clear to the Food Minister, who has displayed remarkable insight in his handling of the problem of food grain shortage, that it will not be possible to build up a buffer stock out of indigenous supplies of sugar.

thousands of acres of irrigated paddy land, early rice has registered in 1959 an average yield of 6,694 lbs in terms of paddy per acre. Here, the improved practice is deep ploughing to a depth of 17 to 23 cms as against a depth of about 10 cms formerly. Such deeper ploughing is being done by improved ploughs drawn by buffaloes and is integrated with mostly compost manure and about 200 lbs of ammonium sulphate per acre, the latter depending on the fertility of the soil. Transplanting is done at the rate of 91,000 to 151,000 hills of seedlings per acre, each hill having 7 to 10 seedlings. Manurial top-dressing is done with oil cakes. The outturn of cleaned rice is as much as 75 per cent of the weight of paddy. This high outturn appears to be due as much to the fact that the variety of paddy in question is an improved one as due to the fact that it is a coarser strain.

In another Chinese country, consisting of thousands of acres of canal-irrigated paddy land, middle season rice has registered in 1959 an average yield of 8,899 lbs per acre in terms of paddy. Here, the two noteworthy improved cultural practices are deep ploughing to a depth of 26 to 33 cms and elimination of pests and insects. The simple equipment used for spraying 666 insecticide is made locally by the commune concerned. In another country, middle season rice has registered in 1959 an average yield of 7,792 lbs per acre in terms of paddy. Here, the improved cultural practices are the keeping of the distance between hills (of seedlings) and rows at 10×20 cms and 10×17 cms in the field and application of three to five times the usual quantity of organic and inorganic manures. Ammonium sulphate is not used for top-dressing because part of the Nitrogen goes into air and is thus wasted; it is therefore used at the stage of ploughing itself. But potash, superphosphate and soyabean cake are applied as top-dressing.

In yet another country, late rice has registered in 1959 an average yield of 6,359 lbs per acre in terms of paddy. Here, the improved cultural practices are shallow irrigation, manurial top-dressing at the stages of tillering, jointing and earing in the growth of the paddy plant, use of improved seeds,

transplanting 1.2 million seedlings per acre and application of 300 tons of river mud (comparable to tank or channel silt in India), pig dung and compost per acre. As for winter wheat, one Chinese country has registered in 1959 an average yield of 4,037 lbs per acre under irrigated conditions. Here, the improved practices are deep ploughing to a depth of 33 cms and garden style cultivation on fields, each measuring 2 metres × 8 or 10 metres.

The normal dose of compost (made of dung, urine, night soil, mud and vegetable wastes and containing 0.4 to 0.5 per cent Nitrogen, 0.2 per cent phosphorous and 0.5 to 0.8 per cent potash) used on paddy and wheat lands in China is 30 to 60 tons per acre. Besides compost, in some areas other organic manures like mud manure, peat (a certain vegetable which turns into a kind of mud), guano (the dung of some seabirds accumulated over the centuries in the West Sand Islands), halsi (a sea plant found in some places in large quantities), etc., are being used. Green manures are also being extensively grown in China, covering in winter alone more than 10 million acres, as of 1959. It is stated that as a result of applying 1.35 tons of green manure per hectare in the wet field for two years in succession, the organic material goes up by 0.17 per cent, the nitrate content by 0.006 per cent, and the yield of paddy by 760 Kg per hectare. It is significant that as many as 11 varieties of green manures with varying contents of Nitrogen, phosphorous and potash are grown in China.

The great advantage of organic and green manures is that, with their own water content, they help retain soil moisture longer at a time of drought. When secure irrigation is also available, the results flowing from the massive use of organic manures are truly spectacular. When some inorganic fertilisers are also used in judicious quantities, the results are even more so. This is the supreme lesson that Indian agriculture can learn from Chinese experience. And the other equally significant lesson that needs to be learnt is in respect of irrigation which has registered phenomenal progress in China in the last ten years, covering as it does 177 million acres in 1959 as against 40 million acres in 1949. Even if some allowance is made for mistakes in official statistics, it is within the realm of probability that as much as 150 million acres may have by now come to obtain the benefits of some kind of irrigation or other.

If irrigation has been so rapidly extended in China, it is due to the fact that, besides big reservoir projects, medium and small barrages, small retarding dams, tanks and ponds, underground wells and river channels have been constructed and renovated on a far larger scale than in India. Unfortunately, the Chinese Pavilion has not displayed a break-up of the total irrigated area under major, medium and minor projects. Despite this statistical omission, it is possible to figure out that the irrigated area under local minor irrigation works must have increased greatly in recent years. This can be indirectly inferred from the fact that one People's Commune alone, for example, covering an area of 238 villages with 45,000 people, has completed 57 small reservoirs on small streams, 696 ponds for irrigation and fish rearing, 1,460 wells for irrigation and 279 miles of main canals. As a result, the area under irrigation in that Commune has increased from 6,270 acres to 16,220 acres in a year's time. While this Chinese experience cannot be obviously copied in India, it is difficult to believe that a Community Development Block in this country cannot do in at least two or three years' time what a Chinese Commune, with its disciplined mobilisation of labour, can and does do in a year's time.

Question Mark in Kerala

With the approach of polling day, it is not surprising that an election campaign should get hotter. But the campaign in Kerala has also developed some alarming features. The violent clashes resulting in loss of life of which reports are too frequent, fall clean outside the democratic pattern. All may be fair in elections, as in war. But the line has to be drawn at homicide. The leaders of the two contending parties seem to have thrown the burden for maintenance of peace on the Administration. But the strain may prove too great, unless the party leaders co-operate by keeping the exuberance of their partisans under control. Without such cooperation, the Administration may not be able to maintain both peace as well as the democratic freedom essential for free elections. As a result of the violent incidents, which raise apprehensions of mob violence on polling day, the main question now is not about the outcome of the elections but whether the rival parties will at all allow a free election to take place.

From the very outset, the campaign in Kerala has taken a direction which provokes disturbing

thoughts about the prospects of parliamentary government in that State. The United Front is practically an extension of the Vimochana Samarak Samiti, both in objectives and political alignments, with the difference that the Congress is now formally in the picture as the dominant partner. With the benefit of hindsight, it is possible to wonder whether Congress could not have served its ideals better by following the same policy in respect of the election as it did during the Vimochana Samara, especially as the main objective, to judge by statements made by Congress leaders, is to keep the Communists out. Mr. Mannath Padmanabhan, who so ably led the Vimochana Samara, could have been trusted to accomplish this task, and the Congress would have remained free of compromising entanglements which do not add to its strength in accomplishing its historic task of ushering in the Socialist Pattern of Society in India.

Not many in the Congress could be happy over the circumstances which forced an alliance, or understanding, with the Muslim League. No amount of sophistry can disguise the surrender of basic principles involved in this opportunistic alliance, which is the greatest among the many disservices that the Kerala Congress has done to the national organisation. That the Communists have tarred themselves with the same brush, by organising parties like the "Progressive Muslim League" or "Progressive Catholics", does not improve matters. The communal graft on the Communist stalk can yield nothing but bitter fruit.

Those responsible for shaping Congress policy cannot also be happy over the alignment of economic interests and classes behind the communal facade. The United Front is being projected before the people by cunning Communist propaganda, as the party of the propertied classes of all communities, with the result that have-nots irrespective of community are being persuaded that their only salvation lies in lining up behind the Red Flag. This may or may not help the Communists in the current elections. But the Congress cannot afford to ignore the significance of the portent.

Ayub's Offer

The successive clarifications that President Ayub Khan has given of his proposal of a joint defence, taken together with the statements he has made in a television interview, confirm the impression that it has no relevance to the present situation. It is equally clear that those politicians who fall foul of the Prime Minister for not jumping at the offer have not cared to study its detailed implications.

The statements he had made recently in Chittagong, in answer to questions, implied that a settlement of the Kashmir dispute was

the condition for the adoption of any of the three alternatives he suggested for joint defence. This could be "of the nature of a pact; it could be a mere understanding between the two countries; or it could be that there was peaceful relations between the two countries on the basis of each defending its own borders." This point regarding Kashmir he has made explicit in the television interview, in the course of which he declared that he did not think that a defence pact was possible with India before a solution was found of the Kashmir problem. The advantages of an early settlement of this long standing dispute for both India and Pakistan are too obvious to need reiteration. But, unfortunately, his emphatic rejection of the proposal that the dispute could be frozen along the present cease fire-line has not brought the countries any nearer to a settlement.

Timely Aid

Three announcements made in the course of the last fortnight, coming at a time when the outlines of the Third Five Year Plan are being finalised, are of happy augury as regards its foreign exchange requirements. The first was the announcement, made in Ottawa on the tenth anniversary of the Colombo plan, regarding allocation to India of 25 million (Canadian) dollars during the fiscal year 1959-60. This will bring the total assistance received from Canada during the Second Plan period to over 75 million dollars, including the two wheat loan agreements concluded in 1958 for a total of 33.8 million dollars and authorisation of 17 million dollars under the Colombo Plan made in February 1959. The aid from Canada is for the fourth year of the Second Plan, but it may be regarded as an indication of the scale on which assistance will be available during the Third Plan period.

On the other hand, the credit of \$ 40 million offered by Yugoslavia under an agreement concluded on January 21 is linked to the requirement of the Third Plan. The credit is intended to cover purchases of capital goods, heavy electrical and other equipment and ships for projects included in the Third Plan. One distinctive feature of this agreement is the arrangement under which repayment will be effected through exports of Indian commodities. The Three-Year Trade Agreement concluded simultaneously provides for payments of all commercial and non-commercial transactions between the two countries in non-convertible Indian rupees. This facility, of payment in Indian rupees, enhances the value of the assistance for the economic development of the country.

The third aid offer is the announcement made by Dr. Reinhard Karmitz, the Austrian Finance Minister, on January

20, of a long-term credit of \$ 20 million during the current year, for promoting trade between India and Austria. He also indicated that similar aid might be available during the next four or five years. The announcement is of particular significance, because this is the first time that Austria is embarking on a policy of trade expansion after the end of the Occupation. The fact that the Austrian Government have chosen to make a beginning with India will be greatly appreciated as a token of friendship and closer economic relations between the two countries. Austrian steel-makers are already participating in the Rourkela Steel Project. The credit offer now made should put technical and trade cooperation on an enduring basis.

More Steel

While the debate over the steel target for the Third Plan—whether it should be ten million tons or nine—is being carried on from a number of platforms, Government have not allowed the grass to grow under their feet so far as the immediate programme is concerned. Whatever the ultimate target that is decided upon, and this will depend on the size and contours of the Third Plan, action has to be taken now, if any target that is fixed is to be reached by 1967. The announcement made by Sardar Swaran Singh at Bhillai, during the visit of Soviet Deputy Prime Minister Kozlov to the steel town, makes it clear that Bhillai will get off to an early start with its programme for expansion of output to two and a half million tons, against the capacity of one million tons at end of Second Plan.

The Union Minister for Steel also revealed that, following his visit to Moscow last year, the Soviet Union had agreed to extend a line of credit "as a first gesture of cooperation to assist India in its Third Five Year Plan."

There are also indications that formulations of concrete proposals for expansion of the Rourkela steel plant may also be taken up without delay. The plans are now being discussed between the representatives of VOEST, the Austrian steel makers, and the Government of India. The Austrian Finance Minister indicated that the plan, now being worked out, envisaged an expenditure of twenty to thirty million dollars, which may form part of the long-term loan offered by Austria. Once the plan is settled, Rourkela should be able to make rapid progress, for provision has been made in the design of the plate mill and other accessory installations for subsequent expansion.

It may be too early to think of expansion schemes at Durgapur

before it has got over its teething troubles. But the Steel Ministry is confident that the schedule for the commissioning of different units will be maintained, and we may expect that plans for expansion will be taken up before the end of the current year. As the capital cost of expanding the capacity of existing plants will be much less compared to new projects, it is elementary common sense that the scope for expansion of steel plants already in existence should be exhausted before investing on a substantial scale on new projects. The claims of the producers in the private sector, to participate in the programme for expansion of steel production, can be set aside only at the risk of inflating the cost of the programme.

*

Businessmen's Credo

If Mr G. D. Birla gave the Delhi Businessmen's Convention the inspiring slogan, "Security of the Country and Prosperity for All",

Mr Madanmohan Ruia, President of the Federation of Indian Chambers of Commerce and Industry, made an emphatic affirmation of the progressive businessman's credo. It was at the same time an effective plea for the elimination of the conditions which frustrated the businessman's efforts to live by this credo.

Mr Ruia made a point, which needs reiteration, that businessmen are not interested in maintaining an economy of scarcity for taking advantage of the opportunities it may offer for profiteering. They are interested in ensuring larger production and economic distribution, but the all-round expansion of the national economy was stifled by the complex system of controls and the heavy burden of taxes. In this context, Mr Ruia drew pointed attention to the failure to make full use of resources during the Second Plan, with the result that unemployment persisted in a "psychologically aggravated form" in that expectations had been

roused which could not be satisfied.

Unemployment cannot be effectively dealt with by increasing the numbers on the Government payroll. The answer, both to the problem of economic expansion as well as of increasing employment, must be sought in a policy which will make a career in business more attractive to young men of ability and enterprise than a desk job in Government service.

*

Helping Small Industries

The need for a rationalised and systematic approach for developing small scale industries in the country, particularly in the under-developed areas, has been increasingly felt by all concerned. Small scale undertakings have a vital role to play in the nation's economy not only in facilitating large scale employment but also as an effective instrument for ensuring a more equitable distribution of national income. After the attainment of independence, increased attention has been paid to improving the techniques of production and the quality of the products. It may be recalled that the production of small scale industries covers a wide range of consumer goods like leather goods, cutlery, housing utensils, sports goods, machine tools and also ancillaries, spare parts and component parts required by large undertakings.

The development of small scale industries in India is hindered by a variety of factors such as the lack of adequate working capital, good factory accommodation, modern machinery and equipment, the generally low standard of production, lack of adequate marketing facilities and their organisational incompetency to cope with the competition from the large scale undertakings.

The Board has recommended that the Industrial Extension Service run by the Government should be continued on a large scale. Provision should be made for establishing adequate common service facility shops and at least three well-equipped tool rooms in each state along with the existing facilities.

To help the entrepreneurs to start new units and run the existing ones efficiently, the State Governments should take the responsibility for developing credit institutions and utilising the existing organisations including banks to the maximum. To improve the marketing facilities, the Government should try to purchase as far as possible manufactured goods from the small units. Besides, the setting up of several sales emporia in the country can be of immense help. The desired end can be achieved only if the small units produce standardised goods which will also help to boost exports of manufactures from the small scale sectors.

*a mason
shows
the way*

In the steel-making furnaces at Jamshedpur, the temperature is around 3200°F. The brick-lined doors of the furnace required frequent repairs because the tremendous heat burnt out the lower part of the door lining and the frames.

It was left to Zahir Hussain, a 43-year old mason in the Brick Department, to devise a new method of lining which has increased the life of the furnace doors. Zahir Hussain's achievement won him acclaim and a cash reward of Rs. 5,000—one of the 435 suggestion awards made since 1945.

This is one of the many examples of initiative from the shop floor benefiting the whole enterprise—another industrial tradition being laid in Jamshedpur, where industry is not merely a source of livelihood but a way of life.

Annual Plans

With the last year of the Second Five Year Plan due to commence in about two months, State Governments' proposals for the Year 1960-61 are being finalised. During the past few days, the annual outlays for five States have been announced and it is now possible to form a fairly clear idea about the progress of plan expenditure in these States. In all the five States, Assam, Bihar, Orissa, Madras and Kerala—the actual expenditure is likely to fall short of the original outlay. This is perhaps largely due to the pruning of the original allotments as a consequence of the pruning of the National Plan itself from Rs 4,800 crores to Rs 4,500 crores. If this limiting circumstance is taken into consideration, it will be seen that the States have, by and large, fulfilled the tasks given them in a satisfactory manner. In all these States under review, the planned development undertaken is reflected in increased outturn of agricultural production, development of industries, spread of literacy and technical education and the creation of various other facilities for the immediate and long-term improvement of the material and other conditions of the people as a whole.

ASSAM

Assam was originally allotted Rs 56 crores under the Second Plan. It is estimated that the expenditure in the first four years of the Plan will be about Rs 39 crores. It has now been decided that the annual plan of Assam for 1960-61, the last year of the Second Plan, will have an outlay of Rs 14.4 crores. On the assumption that this amount will be spent in full, the total expenditure during the whole of the Second Five Year Plan will amount to Rs 53.4 crores. Commendable headway has been made in several directions in the past four years and it would appear that the emphasis in the final year of the current Plan will continue to be an improvement of the living conditions of the people in the State. More than one third of the next year's allotment goes to Social Services, excluding education. The next two important development programmes are Agriculture and Irrigation and Power, each involving an expenditure of Rs 2.3 crores. The progress in the agricultural sector can be measured by the fact that already 122 seed farms out of the Second Plan target of 144 farms have been set up. During the final year the State proposes to distribute 150 power pumps to develop paddy cultivation in the upland areas.

there is a great demand for such pumps. Another important aspect of the Irrigation and Power programme is the proposal to instal diesel sets in eight localities to meet the urgent demand for power to enable an uninterrupted development of industries since power from the Barapani Hydro-Electric scheme would be available only two or three years hence. Education is to get Rs 1.9 crores while the provision for transport development is Rs 1.4 crores. The total allocation for industries is Rs 1.2 crores and under this head are included provisions for the cement, spun-silk and cotton spinning industries. A techno-economic survey is also proposed to be undertaken.

BIHAR

As at present estimated, Bihar's total outlay during the Second Five Year Plan may total Rs 170.8 crores as against the original allotment of Rs 190.2 crores. It is estimated that, at the end of the first four years of the current plan period, the State would have spent about Rs 125.2 crores. The outlay decided upon for the annual plan for the State for 1960-61 is Rs 45.6 crores. Out of the annual plan provision, the bulk is shared by Irrigation and Power and Agriculture with Rs 13 crores and Rs 8.1 crores respectively. Another Rs 13 crores go to Social Services. The other sizable allotment goes to Education which gets Rs 6.6 crores. A significant feature of the education programmes is a scheme costing about Rs 2.9 crores for universal and free compulsory education. This is intended to be a preliminary scheme for the Third Five Year Plan. The pace of implementation of the Minor Irrigation programme has been satisfactory and this explains the fairly large allocation that has been decided upon for this programme in the next year. Irrigation and Power programmes have been forging ahead during the past few years in Bihar, bringing more and more land under irrigation and extending power supply to large new areas. In the annual irrigation and power programme, a provision of Rs 1 crore has been made for the Gondak project. As a result of the increase in irrigation facilities, an additional irrigation potential of 2.9 lakh acres of land has been created and 2.85 lakh acres of additional land have been brought under the plough during the Second Plan period so far. Up to the end of 1958-59, a production potential of 5.85 lakh tons out of a target of additional food production of 15 lakh tons has been created. It is expected that, by the end of the current financial year, a further potential of 5.39 lakh tons will be created. Under industries, which get a total provision of Rs 2 crores in the annual plan, the development of the 3 industrial areas of Patna, Ranchi, and Adityapur is envisaged and a provision of Rs 10 lakh is made for the expansion of the Bihar super-phosphate factory.

KERALA

With an outlay of Rs 21 crores now decided upon for the annual plan of the Kerala State for 1960-61, the total expenditure on plan programmes during the Second Five Year Plan in the State may be expected to amount to Rs 78 crores as against an original outlay of Rs 87 crores. From the progressive increase in the annual expenditure from year to year (the annual expenditures for the first three years of the Second Five Year Plan are Rs 10 crores, Rs 13 crores, and Rs 16 crores. The anticipated expenditure for 1959-60 is Rs 18 crores) it is evident that the State has been able to maintain a satisfactory pace with regard to implementation of Plan projects. The pace is obviously to be quickened further in the last year of the Plan, as the allotment has now been stepped up to Rs 21 crores. In the final year's programmes, Irrigation and Power get the pride of place in Kerala as in most other States. The allocation under this head is Rs 8 crores, of which a substantial portion is earmarked for the Panniar Hydro-Electric Scheme and Stage I of the Pamba Hydro-Electric Scheme. Social Services come next with an outlay of Rs 5.7 crores. Among the Agricultural programmes, which involve an expenditure of Rs 2.6 crores, seed farms continue to engage concerted attention and 16 out of a total target of 24 such farms will have been established by the end of the current year. The remaining eight are expected to be established next year. Minor irrigation schemes are making good progress and several more schemes are ready for implementation as the necessary investigations have been completed. In the industrial sector, the provision for next year is Rs 1.7 crores and the industries that will be receiving special attention are tyres and transformers. Provision has also been made for the modernisation of machinery for soap and plywood manufacture.

ORISSA

The Second Plan expenditure in Orissa may total Rs 92.26 crores as against the original outlay of Rs 99.97 crores. The expenditure up to the end of the 1959-60 is likely to be Rs 69.86 crores. Orissa can no longer be called a backward State as far as industrialisation is concerned. Though it is undeniable that much remains to be done before the State can justly claim that all its resources have been fully utilised, significant beginnings have already been made with the commissioning of Hirakud and Rourkela. The former is now under the direct control of the State Government and power and water from this project are sustaining quite a number of industries as well as providing much required irrigation facilities. As the full utilisation of the facilities available from Hirakud should continue to be the main preoccupation of the State, Irrigation and

Power programmes naturally get the biggest share of the final year's outlay. The allocation under this head is Rs 8.83 crores and the major schemes that will be taken up are the Hirakud Stage II and Delta Irrigation. The State proposes to complete the distribution system for utilising Hirakud power during 1960-61. Minor irrigation also is to get increased attention as the tube well projects have become quite popular in areas where there are no other means of irrigation. Production of commercial crops like jute is being stepped up and the annual plan for 1960-61 includes a scheme for jute retting tanks and a cocoa development scheme. One of the sectors in which the State has had to bestow special attention is education and it is expected that the targets set out in the Education Plan will be achieved and in the case of girl's education the target is likely to be exceeded. The emphasis placed on educational schemes is borne out by the fact that, out of a total of Rs 5.05 crores for Social Services and a number of other allied sectors, Education alone gets over Rs 2 crores. In the industrial sector, industry and mineral development get an allocation of Rs 98.96 lakhs; but, out of this, as much as Rs 92.89 lakhs are for village and small industries.

MADRAS

The annual plan of Madras for 1960-61 as finalised after discussion with the Planning Commission is Rs 37.52 crores and most of the amount is absorbed by three items, Agriculture, Irrigation and Power and Social Services. The large allocation of Rs 13.7 crores for Irrigation and Power is because power transmission and distribution works have to be completed together with the works connected with the Kundah project, which is fast progressing. It is but natural that agriculture is given as big an allotment as Rs 6 crores of which Rs 1.73 crores is given to Minor Irrigation because the State has made good progress in food production during the past few years. It is now confidently expected that the State will achieve the food production targets set for the Second Plan. The allotment of Rs 10 crores under Social Services is for a large number of items such as education, health, housing, social welfare, labour, etc. Under Education, a scheme has been included for affording relief to the educated unemployed. Expansion of compulsory primary education with a view to attaining complete coverage in the Third Five Year Plan is also envisaged in the final year. In the industrial sector, as much as Rs 2.11 crores out of a total allotment of Rs 2.46 crores go for small industries. Among the small scale industries a sum of Rs 103 lakhs is earmarked for handloom industry, indicating the important place occupied by this industry in the State.

CD in Mysore

The Mysore Government, it is understood, have requested the Centre and the Planning Commission to allocate Rs 20 crores to Community Development schemes under the Third Plan. The Second Plan allotment was nearly Rs 10 crores against which expenditure incurred in the first four years adds up to more than Rs 8 crores. As regards physical achievement, it is claimed that nearly 163 blocks have been organised in the course of the first four years while 99 blocks have to be opened to cover the entire State with development blocks. In terms of area and population, the movement covers 69 per cent and 30 per cent respectively. On the basis of this performance, there should not be much difficulty in covering the entire State by community development blocks by the target date of 1963.

While the progress is commendable, it offers no real test of the success of the movement. For, setting up of community development blocks represents only the minimum preliminary groundwork for the organisation and initiation of development works. The real test of the movement lies in the extent to which economic standards in the countryside have been improved. On this consideration, there does not seem to be much to praise the work done in the community development areas. Though seven years have elapsed since the movement was initiated, the results are yet to be reflected in a tangible improvement of living conditions in the rural areas. The ambitious appraisal of the potentialities of the movement in the initial stages and the consequent lack of viability in community development schemes were factors that held up progress in the direction of economic improvement. This entailed rephrasing of the movement which provided for the creation of a three-tier system of development units for accelerating implementation by demarcating fields of responsibility. This new set-up is in the process of being implemented and only a few States have completed the necessary legislation. Before this administrative and organisational setup is completed, the community development movement could not be expected to do anything substantial in developing local resources.

Mathematical Studies

THE advancement of scientific and technological studies forms part of the general educational policy of the country. It is only in the fitness of things that the authorities should lay special stress on promoting scientific and technological teaching, for, the country is in dire need of sufficient technically trained personnel. In their eagerness to develop all branches of technological studies, the authorities have evinced keen interest in the development of Mathematics

as well, as is evidenced by the deliberations of the Conference on Mathematical study held at the Bombay University Convocation Hall under the auspices of the Tata Institute of Fundamental Research. The conference was attended by the leading scientists of the country and prominent delegates from abroad.

In his inaugural address at the conference, Dr H. J. Bhabha, the Chairman of the Atomic Energy Commission stated that adequate financial assistance will be forthcoming for promoting the study of Mathematics in the country. Any worth while project in this field will be sponsored by the Department of Atomic Energy, which has been allotted the task of promotion of advanced study and research in Mathematics in India. The Chairman expressed grave concern at the problem of finding qualified mathematicians who can enrich the field with substantial contributions. A more practical approach to the problem, than what has hitherto been pursued, seems to be the pressing need of the hour. Increased attention should be paid at the school level to imparting more theoretical knowledge and, if possible, practical training to the students, for, university education is largely dependent on school education. "Catch them young" must be the objective behind all the schemes to be initiated in the educational system. The lack of proper training at the school level is also evident in the low standard of the education at our universities. Along with the creation of research facilities, due care must also be taken to provide the scholars with proper employment facilities on the completion of their research work.

Fish for Food Value

Addressing a fishermen's gathering near Calicut, Mr M. V. Krishnappa, Union Deputy Minister for Food and Agriculture, stated that Rs 40 crores were proposed to be provided in the Third Five Year Plan for the development of fisheries. This would work out to a four-fold increase in outlay as against the Second Plan figure, which was Rs 10 crores. Such an enlarged outlay would seem justified in view of the scope for development and the benefits that would accrue.

With a coastline which runs to more than 3,000 miles, the scope for fisheries development is almost limitless and the First and Second Plan schemes represent only a small beginning. Apart from marine sources, there are inland sources, constituted by rivers, lakes, tanks, etc, which could be successfully exploited to increase the output of fish.

On the side of benefits, exports hold out great possibilities. It has been estimated that, by incurring the expenditure now provisionally envisaged for the Third Plan,

foreign exchange to the tune of Rs 25 crores could be earned in the first year of the Fourth Plan itself. Moreover, there is the consideration of the dietetic value of fish consumption, especially for a people the majority of whom are under-nourished. All these point to the need for effective measures for stepping up fish output.

For stepping up fish output, mechanisation is the obvious need, and the present under-exploitation of fishery sources reflects the prevalence of crude and antiquated methods and equipment in the industry. The limited resources would preclude large-scale mechanisation in the short run. However, as Mr Krishnappa observed, organisation of cooperatives for fishermen would facilitate progress mechanisation and enable the fishermen to own a mechanised boat for a group of four or five.

Irrigation in MP

The discussions held and the preliminary thinking done on the Third Five Year Plan by the members of the Planning Commission reveal that top priority will be given to increase agricultural production in the country. The importance of increased food production for the success of any large scale plan for social and economic development of a country need hardly be over-emphasised.

Some of the states have started deliberations well in advance for effecting improvements in their agricultural yield. The Standing Committee on Irrigation in Madhya Pradesh has already sanctioned an outlay of Rs 62.90 crores for the development of the irrigation schemes in the state during the next plan period.

Mr Shankarlal Tiwari, Minister for PWD, in the course of the discussions, which touched almost all important problems relating to irrigation in the state, stressed the need for launching a number of minor and medium irrigation schemes. The advantages of such schemes are obvious: they can be executed in a relatively short period with limited expenditure. At the same time, they yield quicker results. Along with the starting of new works, the improvement of the existing ones should also be carried out efficiently at an early date so that the crops are not affected by the lack of adequate water supply. One broad factor that emerged from the discussions of the Committee was that about eleven new projects would be started during the next plan. The task of conducting surveys and investigations on these projects has already been entrusted to the Central Water and Power Commission.

The Committee also dwelt at length on the rates charged for the supply of water for private tanks from the irrigation works and on the ad hoc rates to be charged on water supply to be supplied for Kharif (paddy) crops this year.

The Committee also dwelt at length on the rates charged for the supply of water for private tanks from the irrigation works and on the ad hoc rates to be charged on water supply to be supplied for Kharif (paddy) crops this year.

FOREIGN NOTES

US Economic Development

IT is pretty well agreed among those who read the economic signs that the United States in 1960 will be enjoying its highest level of prosperity yet. This conclusion is based on all sorts of portents, to each of which the economists' fraternity assign a particular importance. Among these are the rising incomes of the American people, the ambitious investment plans of American business, the growing community programmes for public services and facilities, etc., etc.

While there is no reason to take issue with any of these widely accepted judgments, there is one question that is rarely answered: how do the American people feel about all this?

If one subscribes to the commonly held (and undoubtedly valid) view that in a free economy people, through their consumption of goods and services, are the final arbiters of business trends, then their own economic appraisal assumes a more than casual significance.

In the light of this, two little-noticed surveys made public last week assume an interesting significance.

The first is one of the nationwide studies of consumer opinion periodically undertaken by the Survey Research Centre of the University of Michigan. The second is a report on the views of retailers throughout the country, as expressed by 200 members of the National Retail Merchants Association. Both are undeniably optimistic, and fully in keeping with the confidence so much in evidence among professional economists.

The consumer survey comes up with these basic findings: the American people, by and large, are

In the State of Kerala, the irrigation and power development programmes received the highest priority in 1960-61. During the discussions held at New Delhi last week, the representatives of the State and the Planning Commission have agreed that an amount of Rs 8 crores should be earmarked for irrigation and power schemes in the State. Two major projects that will attract increased attention this year are the Pamba Hydro Electric Scheme and the Panniar Hydro Electric Scheme. Other minor and medium works will also be carried out for facilitating regular supply of water to the various agricultural crops in time.

satisfied with the state of their personal finances, anticipate further improvements in their financial positions in the course of the year, and evince a continuing interest in making major purchases. It is in order here to recall that record in correctly calling the turn on consumer attitudes and probably buying patterns.

It should also be noted that this survey actually was conducted last October and November, with nearly half of the 1,300 participating adults interviewed at a time when the steel mills were still shut down as a result of the lengthy labour-management dispute in that key industry. This inevitably led some caution in the assessment of the business future and of individual spending plans.

Significantly, however, there was a noticeable increase in optimism among consumers questioned after the steel mills resumed operations nearly in November. This leads the centre to conclude that "now that the steel controversy has been settled, a major source of uneasiness among consumers has been removed and a further improvement in consumer optimism is in prospect."

The steel shutdown, of course, was not the only thing that bothered Americans. The survey also disclosed a somewhat greater concern about inflation than in the past, with a consequent resistance to higher prices that was stated openly in many cases and implied in others.

But this, interestingly enough, has its favourable aspect. For the apparent resistance to inflationary forces could conceivably be highly instrumental in keeping those very forces under control.

Emerging, then, is the picture of a confident consumer ready, willing and able to spend more money, thus lending new strength to the national economy, but at the same time loath to embark on the kind of uninhibited spending spree that could become a seriously unsettling factor.

This sort of confidence shows up, from the viewpoint of the seller rather than the buyer, in the survey conducted among retailers from coast to coast. According to the Retail Merchants Association, all but five of the 200 department stores and specialty shops participating in the survey expect their sales in the first half of 1960 to "meet or beat 1959."

While the precise reasons for the expected rise in sales totals were not detailed in the report, the survey results point to a variety of factors, among them are the prospects for rising consumer incomes and hence and expanded purchasing power, the growing population and indications of increased employment.

Another factor which was favourably noted, one that lends particular substance to the results of the consumer opinion survey, is the retailers' belief that prices will be firm and generally stable.

WORLD OF BUSINESS

Development of Handicrafts

THE All India Handicraft Board, which met at Madras, expressed grave concern at the deterioration in the designs of Indian handicrafts. Handicraft in the country was flourishing under the able patronage of princes and local chieftains. The decline of the Mughal Empire saw the beginning of the deterioration of Indian Handicrafts. The indifferent or rather the inhuman treatment meted out to the artisans and the craft in general by the British accelerated the decline while the impact of the industrial revolution on the economy had also its share in the sudden fall.

The need for reviving the handicrafts in India arises mainly from the fact that they help to rehabilitate our economy. They also afford employment for the unemployed, especially in the rural areas. It is gratifying to note that greater attention has been paid by the authorities to promoting handicrafts in the country. The establishment of the All India Handicrafts Board to encourage the craft can be considered a step in the right direction. Indian handicrafts enjoy a monopoly throughout the world and there is no stiff competition abroad. They possess a great reputation in almost all the overseas countries and our Embassies are organising exhibitions in those countries to give greater publicity. The establishment of the Handicraft Development Corporation has also been helping in boosting exports of handicrafts.

The meeting of the Board has been convened to consider, inter alia, the report of the Evaluation Working Group on Handicrafts and the programme for the Third Five Year Plan. The members of the Board also discussed the recommendations of the Sub-Committee for the survey of Associations of Handicrafts Artisans, Dealers and Exporters. Mr Bhaktavatsalam, in the course of his address, laid stress on the need for adjusting the mode and varieties of production to suit the needs of modern times and to compete with the machine-made goods. It is to be admitted that the Board has been making fairly good progress and has established numerous training centres for imparting training to the artisans in the country. More skilled instructors should be appointed to be in charge of these training centres. Handicraft products must be made in such a way as to suit the taste of foreign

consumers. A good foundation for the promotion of this trade has been laid during the Second Plan. It is necessary to make a determined and concentrated effort to organise production and control quality so that the desired aim can be achieved at least by the end of the next plan. A vigorous drive should be made for expanding both the external and internal market for the articles. The Board has formulated a scheme on the lines of the recommendations of the Evaluation Group, and Rs 27 crores has been allocated for the development of handicrafts during the Third Plan. Out of this, Rs 21 crores will be spent on schemes of the State Governments while the remainder will be utilised for running the schemes which are under the direct control of the Union Government. The State Governments have already started discussions for formulating plans to encourage handicrafts in their respective states.

Housing

Judged by the amount of work involved and the resources required, housing constitutes a problem of challenging magnitude, which the schemes undertaken in both the First and Second Plans have in no way mitigated. Conditions in the rural areas are particularly depressing. A sample survey of about 943 villages of the country has brought the fact to light that only 7 per cent of the houses in the rural areas have plinths and walls of bricks, cement or stone, and roofs of corrugated sheets, tiles, etc. The rest are hardly habitable, being made of mud, bamboo and reed. 50 million of our of the 54 million houses in the rural areas have been found to require substantial improvement.

The total sum required, on the basis of a conservative estimate of Rs 500 for every house, adds up to the colossal figure of Rs 2,500 crores. Against this, the First Plan allocated a sum of Rs 33 crores for housing, while the Second Plan outlay, originally fixed at Rs 120 crores, was later whittled down to Rs 84 crores. There are also other aggravating elements, particularly the existence of slums which have become a growing menace to industrial health.

The problem evidently does not admit of a solution on the basis of unilateral responsibility on the part of the Government or private enterprise. In fact, the uneconomic nature of work involved would seem to preclude scope for private enterprise in schemes for rural housing. More reliance has to be placed on schemes of self-help and cooperation, which could utilise the surplus productive labour force now lying unused in the countryside.

One such scheme has been formulated by Mr B. L. Jalan for mobilising the surplus labour force for the production of bricks to be utilised for house construction. Mr Jalan assumes as a fun-

damental condition for the successful implementation of his scheme that all the working adults in the village should contribute daily one hour of extra work in the busy season and two hours in the slack season for the manufacture of bricks and other assets of local importance. On the basis of an adult population at 110 million, average man hours which each could put in every year at 480 hours, and the average wage-rate at Rs 1.50 per man day, Mr Jalan estimates that the contribution would add up to Rs 1,000 crores a year. Similarly, he takes credit for another contribution of Rs 3,000 crores through implementing minor irrigation schemes on the basis of voluntary work done by people in the villages.

Mr Jalan has proposed a miracle of a solution to solve the housing problem in the rural areas, and the first reaction would be to dismiss it as fantastic. The existence of practical difficulties in the way of the implementation of the scheme would also take away much of lure with which it has been presented by Mr Jalan. Transport and marketing difficulties are obvious obstacles to large-scale application of the scheme.

However, Mr Jalan's scheme is not without practical utility. This has been borne out by its successful implementation on a pilot project basis in certain parts of the country, notably West Bengal. On this evidence, the scheme would deserve wider implementation. The interest it has aroused in both Dr B. C. Roy and Prime Minister Nehru is a favourable portent.

Asian Cables Issue

The Asian Cables Corporation Limited is scheduled to enter the market for raising new capital early next month. The subscription list will open on the 5th February. Out of the issued capital of Rs 50 lakhs, the company proposes to offer to the public for subscription share capital amounting to Rs 25 lakhs, comprising 25,000 equity shares of Rs 100 each. The promoters, directors and their friends have subscribed for share capital amounting to Rs 25 lakhs. The public issue has been underwritten by the United Commercial Bank and the Dena Bank.

The company will manufacture rubber insulated wires and cables and the factory will be located at Thana, near Bombay. The plant is expected to go into production early next year. When the plant achieves the normal level of production, the company's output is expected to be of the order of Rs 1.25 crores a year. The net foreign exchange savings are placed around Rs 75 lakhs. Enfield Cables Limited, England, will be the technical collaborators in the project. The company has finalised orders for machinery, which will be imported mostly from the UK and Germany. The cost of the machinery will be covered by a long-term foreign exchange loan of about Rs 21.50 lakhs from the Industrial Credit and Investment Corporation of India Limited. The loan will be repayable in 8½ years.

SELF-SUFFICIENCY IN TUBES

When, on 7th March 1956, Dr. Shri Krishna Sinha, Chief Minister, Government of Bihar, inaugurated the Fretz Moon Mill at the Jamshedpur Works of The Indian Tube Company (1953) Limited, we published an announcement of the Company's plans for expansion. These plans have now been fulfilled.

The present capacity of our Jamshedpur Works is approximately 1,40,000 tons of steel tubes per annum, manufactured by three processes—the Fretz Moon, the Electric Resistance Weld and the Pilger.

The Company has also established capacity at Jamshedpur for the manufacture of approximately 30,000 tons per annum of cold rolled steel strip for use in tube-making and for sales as strip. In addition, a plant has been installed for the fabrication of upto 1,50,000 Tubular Steel Poles per annum.

On 28th January, Shri Morarji Desai, Finance Minister, Government of India, performed the official opening ceremony of the Seamless Tube Mill. The completion of this means that India has achieved self-sufficiency in all sizes of steel tubes from $\frac{1}{8}$ " upto and including 6" nominal bore.

The Company's production so far has already saved India Rs. 26 crores of valuable foreign exchange and, with its present capacity, the annual saving in a year of full production will amount to approximately Rs. 20 crores.

Further expansion will be undertaken to keep pace with the growth of the Indian economy.

INDIAN TUBE

THE INDIAN TUBE COMPANY (1953) LIMITED
A TATA-STEWARTS AND LLOYDS ENTERPRISE.

MANUFACTURERS OF: SCREWED AND SOCKETED TUBES, SCAFFOLDING TUBES, BOILER TUBES, FLUE TUBES, STRUCTURAL TUBES, MECHANICAL TUBES, FURNITURE TUBES, CYCLE TUBES, TRANSFORMER TUBES, ELECTRICAL CONDUIT, STEAM PIPE, OIL LINE PIPE, DRILL PIPE, CASING PIPE, TUBULAR STEEL POLES, COLD ROLLED STEEL STRIP, BOX STRAPPING, TUBULARS.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

THE twenty-eighth of January, in 1928, was the first occasion when there was a Clive Street Gossip to read; exactly thirty-two years later, as I was sitting down to write my piece for the week, the Finance Minister, Mr Morarji Desai, was inaugurating, at Jamshedpur, a seamless tube plant—the first of its kind in India. Such a coincidence, of course, befits the inauguration ceremony as subject eminently proper for a Gossip. But, before I review briefly what this new plant is supposed to do, and before I touch as lightly as I can on the controversy that was rejoined at that function, I crave pardon to reminisce a bit—just a bit. Much has happened in these thirty-two years. A depression, an awakening to the economic issues inherent in the fight for freedom, a world war, the attainment of independence, the inauguration of the planning era, the quickening of industrial endeavours, all these the last three decades have seen. And yet, for me, what matters most is something I haven't mentioned. For the first time since Indian Finance was born, the original Eavesdropper is not here to write or to read the commemoration of the birth anniversary of this journal. He is not here to see the re-ordering and re-arrangement of features, in a manner that he would doubtless have approved. For him, the World of Finance was of paramount importance. Learn to understand it, he would tell me, and you have an invaluable key to the Indian economy as a whole. Thus, World of Finance becomes the feature with which Indian Finance begins. The Leading Articles section is unchanged. After that, all the notes have been brought together. Notes of national importance lead the section; then, you have foreign notes, states' notes and business notes. After which you get the opportunity to read the Gossip. Next in line are Gateway Gossip, Olympus and Peninsula. The commodity markets (which will shortly be enlarged) are grouped together, Jute, Tea and Cotton being featured. Last of all, you have, for the Investor, a conveniently homogeneous section. Henceforth, Company Reports and Balance-sheet Reviews will be clubbed together, so that the figures and the comments are side by side. As a postscript—but, I hope, as lengthy as the post-script written by a woman normally proves to be—will be a marshalling of facts and figures. From time to time, as before, the "occasionals" will be published. I have no doubt that the new arrangement of features will make for much easier and much more convenient reading.

Now, to Jamshedpur. If ever there was an example of the steel industry making for ever widening concentric circles of prosperity,

Tata Steel it is. The number of important industries that have been located in and around Jamshedpur is not inconsiderable. Telco, Indian Steel and Wire, Tinplate Company and, I suppose, a host of others. (I don't think I can honestly defer a visit to Jamshedpur; it is years since I went there last, and I expect I will be amazed at the changes that have taken place—not least Tata Steel's own TMTP). The latest and newest in the way of ancillary industries is Indian Tube. Here is a lesson for us: create the steel-making capacity, and you will inevitably have the growth of the industries that use steel as a raw material. Of course, there may be a time-lag between the availability of steel and demand for it; it is on this point that a significant controversy exists today. We shall presently have something to say about the how of setting a target for steel over the Third Plan period. At this stage, we may content ourselves with a word of encomium for the initiative shown by Steward and Lloyds in less than Tata Steel in bringing the tube plant into being. This is the kind of endeavour that our industrialists should address themselves to, and this the sort of partnership that is desirable between Indian and foreign interests. The pioneering spirit has always been strong in the Tata species; and the seamless tube plant is merely another "first" for the Tata house. We may now see what this project is, of which we have been speaking in rather general terms.

The tube plant that Mr Morarji Desai inaugurated is the third and final phase, costing Rs 3 crores, of an eight crore project, an Indo-British endeavour, undertaken in 1953 by Stewarts and Lloyds and Tata Steel. I might point out that the foreign exchange content of the scheme was roughly fifty per cent, and this was forthcoming from the British partners, who are, incidentally, the largest manufacturers of steel tubes in Europe. The steel tube capacity at Jamshedpur is now, I understand, some 140,000 tons a year. The first of the plants came on production in November 1955; before this was completed, the second phase was taken up and came into operation in April 1957; and, simultaneously, work began on the seamless tube plant, an undertaking that was "ready" by April 1959. Thus, one more addition to the industries located around the nucleus that is Tata Steel. The labour force of workers

and supervisors numbers 1,700 at the plant, which sprawls over 72 acres. The output already achieved represents a saving in foreign exchange of some Rs 28 crores, and rated production would annually be of the value of 2½ times the cost of the project, or Rs 20 crores. The manufacturing process may be described as follows:

Steel "blooms" in long lengths up to 30 feet constitute the raw material from which seamless steel tubes are made. This raw material is supplied by the Tata Steel works practically next door to the tube plant. After cutting, the cut lengths are heated in a gas-fired furnace to a temperature of 1,250 degrees centigrade. After preliminary processing, the lengths of steel are fed into a hydraulic piercing press which transforms them into a cylindrical hollow. These pass next into the rotary elongator, which reduces the diameter and thickness. Now comes the main operation on the Rotary Forge mill, where the finished tube is forged, step by step, on a mandrel, at the same time as grooved rolls reduce the outside thickness. The capacity of the mill is approximately 30,000 tons a year on full 3-shift operation. Nine basic sizes of tubes are produced, ranging from 3.1/4" to 6.5/8" in outside diameter, while other intermediate sizes are obtained by reduction in a reducing mill.

So much for the how of the seamless tube plant. I am under commitment to examine the how, as it were, of the steel target for the Third Plan. Sir Jehangir Ghandy, Chair-

man of Indian Tube, both implicitly and explicitly, both on previous occasions and at last week's ceremony, has come out with a case for moderating our steel ambitions for the Third Plan. He does not deny that steel does not have a key role in economic development; but, he adds, with the quadrupling of steel capacity during the Third Plan, "it would be advantageous for the economy as a whole to opt for a smaller increment in steel production in the Third Plan but give greater emphasis to the development of secondary industries." One of the considerations advanced is that the ancillary industries are, relatively speaking, more labour-intensive. Mr Morarji Desai bluntly disagreed with such a point of view. In his extemporaneous speech, he said that India must concentrate on the development of steel, power and oil. There is, I suggest, something to be said on both sides. The position today is that, in some quarters, and not without justification, there is the anxiety that the secondary sectors necessary to use steel will not have come up by the time the additional steel output, consequent on the Second Plan schemes, will become available. Sir Jehangir's fear, rightly, is that, without planning for the secondary sectors, high target thinking on steel is futile. On the other hand, the cause of industrial development would be retarded, if the supply of the basic raw materials, such as steel and power, is not assured. So, it seems to me that the planning of steel production and of the ancillary industries must go hand in hand. This means that Government must give every encouragement to the setting up of the secondary industries—and I am afraid that there is not, today, sufficient incentive for such units being set up.

If the inauguration of the seamless tube plant at Jamshedpur is symptomatic of Indian progress in industrialisation, it is, I think, interesting to juxtapose here the achievements of another kind of

... the synthesis of elegance
and utility

CALCUTTA MADRAS NEW DELHI

More Industries

Go METRIC

On October 1, 1958, when the change-over to the Metric System began, a number of important industries—jute, iron and steel, textiles, cement, paper, salt, engineering, coffee, non-ferrous metals, raw rubber etc.—started adopting Metric weights and measures.

Since then the transition has begun in more industries.

Use of the Metric System was permitted in the COIR industry from October 1959. In the SUGAR industry the change-over started from November 1, 1959.

The pace will further quicken from April 1960, when the VANASPATI and PAINT industries 'go metric'.

The entire distribution of PETROLEUM and PETROLEUM PRODUCTS will be in litres and metric units from April 1, 1960.

Another Major step will be taken when the Customs and the Central Excise adopt the Metric System from August, 1960.

CHANGE TO METRIC SYSTEM

FOR SIMPLICITY & UNIFORMITY

ISSUED BY THE GOVERNMENT OF INDIA

DA 59/432

economy in every way—that of Soviet Russia. Figures just released paint the following picture of the USSR.

The review of economic activity for Soviet Russia for 1959 discloses a heightened tempo in all sectors. The growth in industrial output was particularly remarkable and it is claimed that the rate of output in 1959 considerably exceeded the average annual pace of growth envisaged by the Seven Year Plan. Progress has been uniform region wise and sector wise and it is reported that all the Union Republics and all the economic councils have fulfilled their annual plans for gross output and for most of the key items including most of the consumer goods. A notable feature of this expansion in production was the designing and completion of over 2,000 new machines, mechanisms, apparatuses and other equipment of the most important type. The year also witnessed the completion of the phase of reorganisation of the machine and tractor stations.

Increase in the number of workers and employees in the national economy and rise in labour productivity were factors that contributed to expansion of industrial production. The average annual number of workers and employees in the Soviet Union, which was 56.3 million, increased by 1,700,000 during 1959. Further, labour productivity in industry grew by 7.4 per cent in comparison with 1958.

The rise in labour productivity to the extent of 7 per cent is particularly remarkable considering that the work-day has been reduced in many industries to 6 to 7 hours a day. The number of workers who have been brought under the shorter work day is 13 millions. That the normal earnings of workers have not been affected by the introduction of the shorter work-day is to be explained in terms of the rise in productivity which the short work-day has induced. The progress achieved by the USSR during 1959 is reflected in the rise of the country's national income by 8 per cent which, according to the review, works out to 100 billion roubles more than in 1958. The cash incomes of the collective farms during 1959 are estimated at 140 billion roubles.

Expansion in social security benefits constituted another noteworthy development in the Soviet Union during 1959. Such benefits, which include pensions, grants, scholarships and free medical aid, according to the review, totalled about 230 billion roubles in 1959 as against 215 billion in 1958. Lastly, another sector to participate in the general expansion was foreign trade. The volume of foreign trade is reported to have exceeded 41 billion roubles in 1959 as against 34.6 billion roubles in 1958.

GATEWAY GOSSIP

IMC Memorandum on Third Plan

THE latest important contribution to current thinking on the Third Five Year Plan has come from the Indian Merchants' Chamber, Bombay. In a 125 page memorandum submitted to the Planning Commission, the IMC have presented a broad frame-work of the Third Five Year Plan which will require an outlay of Rs 8,500 crores at the most. It is, however, pointed out that, "on the present resources position and under the conditions that exist today, the economy does not show any response to the building up of resources of the order of more than Rs 7,500 crores without stress or strain."

While fully recognising the tremendous national urge unleashed after the attainment of political independence to raise sizably the standard of living of the people, the IMC have emphasised the need for determining first and foremost what will be the resources that can be sustained by the economy without bringing any undue strain on it. It is only proper that, in assessing this capacity, reliance is placed on the experience of the Second Plan and the current economic trends. So far in the second Plan period, domestic resources (including borrowings, taxation, small savings, etc.) have amounted to less than one-third of the total outlay. In estimating the domestic resources for the Third Plan, there are the new factors such as the expenditure for the maintenance of social services built up during the Second Plan and the cost of servicing the increased internal and external debts. There is also the question of repayment of foreign loans that will fall due during the next few years to be taken into consideration. Not much help can be expected in the shape of return from the Second Plan projects for various limiting factors. This leaves only one source, taxation, and here, too, it is accepted on all hands, not excluding Government, that taxation in our country has already reached its peak.

The IMC have, therefore, reached the conclusion that a range of outlay between Rs 4,800 crores and Rs 5,500 crores for the Public Sector and a range of outlay between Rs 3,000 crores and Rs 3,700 crores for the Private sector only will be within the realms of possibility, the higher outlays, however, depending on the speed with which appropriate changes in policy and methods for capital formation are carried out by Authority. The IMC rule out the possibility of any increase in direct taxation. Deficit financing is similarly held out

of the question as it has already been utilised in full. Even the targets of Rs 7,500 crores or Rs 8,500 crores, rely on a fairly heavy receipt of foreign assistance, improved efficiency in the collection of taxes at existing levels and a sizable reduction in non-investment expenditure. It is pointed out that, in the event of a shortfall in resources, especially in the direction of external assistance, there should be no hesitation in pruning the size of the Plan to conform to the firm available resources.

Perhaps the most significant contribution of the IMC memorandum is the suggestion regarding the use of the vast manpower resources at various levels of activity. In view of the urgent need for increasing the employment potential in the country, any scheme for opening up fresh vistas for gainful employment should be welcome to the Planning Commission. It is rightly said that the Third Plan should pay considerable attention to this problem as progress in other directions would be rendered meaningless if unemployment continues to increase. The rapid growth of population in the country also should serve to emphasise the fact that the problem can brook no delay. In the opinion of the IMC, surplus labour should be considered as really the "savings potential." This can be mobilised for the investment effort through a "technique of drafting surplus labour to such uses which will create and at the same time will not involve additional investment in terms of finance and will not reduce output in agriculture or consumer goods." The technique suggested envisages the conversion of surplus unproductive labour which is already consuming primary consumer goods like food to productive agents. This, it is claimed, can be achieved by enabling the investment workers (surplus labour who will be engaged in the manner envisaged by the IMC) to make their own tools. The adoption of this technique, however, presupposes the position that, in our country, "the same capital intensity as in economically advanced countries should be neither desired nor promoted."

Referring to the approach to the problems of planning and particularly to the Third Five Year Plan, the IMC are rather concerned about the trend of thinking in the ruling party as revealed in the report of the Planning Sub-Committee of the AICC. The approach to the Third Plan of this body appears to be doctrinaire rather than pragmatic. The Congress Party's proposal for an outlay of Rs 10,000 crores for the Third Plan has derived further strength from the Chinese aggression, necessitating as it does an urgent need for national preparedness. Mr Nehru has himself seen in the new situation, created as a result of the Chinese aggression, an urgent need

for building up heavy industries. He has equated the establishment of basic industries with the problem of enduring national defence. Apart from the defence aspect, the Congress Planning Sub-Committee has pointed out that, for it, the objective of planning is not merely the economic development but also to bring about a socialist society. It must be said in fairness to the Congress that it has not attempted to belittle the task involved in planning for a big Third Plan. It is no doubt a stupendous task requiring enormous resources to be mobilised. It would appear that the Congress is placing much reliance on the willingness of the people to take big sacrifices in order to take the country forward to a stage where further development will automatically ensue. In so far as the capacity of the economy under what may be called normal conditions is subordinated to the compelling national urge for a sizable increase in the standard of living of the people without much delay, the Congress Sub-Committee's proposals are not closely related to the resources position. What seems to be really worrying the IMC, however, is the logical result of the doctrinaire approach of the Congress to planning. In the Congress proposals is seen a continuous reduction of the sphere of operation of the private sector and its ultimate extinction altogether. It is averred by the IMC that a clear assurance that no discriminatory procedures will be followed in regard to the development of the private sector is a felt need. Moreover, it is to be authoritatively reiterated that there is in reality one sector—that is, the national sector—in

which both public and private enterprises are complementary to each other.

Coming back to the Third Plan, it may be noted that the Federation of Indian Chambers of Commerce and Industry, New Delhi, have said that a Rs 10,000 crore Third Plan is 'feasible' provided conditions conducive to capital formation are created by appropriate changes in Government policies. Even for the reduced outlay envisaged, the IMC also want Government to make suitable changes in their various policies so as to enable the growth of resources. Although the IMC's plan-frame is based on an appraisal of resources that are likely to be available without bringing about undue strain on the economy, it is to be expected that the FICCI's acceptance of the figure of Rs 10,000 crores will be cited to show that businessmen have already approved of a higher target.

OLYMPUS

Businessmen's Convention

DELHI'S Ramlila Grounds, where mass political meetings are usually held, appropriately constituted the venue of the first All-India Businessmen's Convention, representing a broad-based mass mobilisation of businessmen-big, medium and small. It appeared that the Convention's unstated objectives were as important as the stated ones. The unstated objectives which could be figured out are: (1) To demonstrate that the Federation of Indian Chambers of Commerce and Industry, which has normally been caricatured as an organisation representing the interests of Big Business, has the backing of a wider mass of medium and small businessmen; (2) to counter the political (Congress) strategy of isolating big businessmen from the larger mass of medium and small businessmen through greater incentives to the latter; (3) to create sanctions, through a mass mobilisation of businessmen, for the Federation's demand for a reorientation of fiscal and administrative policies so as to provide greater incentives to the private industrial sector; and (4) to get the required concessions by pledging all-out support to the Government at a time when the Forum of Free Enterprise and its "political projection," the Swatantra Party, seem to be gaining ground and causing anxiety to the Congress.

It was not entirely fortuitous that Mr G. D. Birla, an astute politician

S. E. RLY TENDERS TENDER FOR CONDUCTING AUCTION

The General Manager invites tenders for conducting sales by Public Auction of Scrap, unserviceable and Surplus Railway Materials on the entire system of the South Eastern Railway for a period of two years from 1-4-1960.

Tender forms (GM/S1/S2/F) are available from the Controller of Stores (Sales Section), South Eastern Railway, Garden Reach, Calcutta-23 at Rs 5/- (not refundable) to be paid by money order to him direct in case of outside firms and on production of Cash Receipt from the Railway's Chief Cashier by local firms. Tender forms should accompany the receipt for earnest money of Rs 2,000/- from Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected.

Tenders will be opened at 12-00 noon on 29-2-1960.

GENERAL MANAGER
S93

among businessmen, laid down the political "line" for the Convention. This "line" was one of support to the Government in return for tax concessions and liberalisation of controls. He described the business community as essentially patriotic, and his reference to "black sheep" was significant. This "line", however, did not appear to have been wholly appreciated by the Prime Minister, who told the Convention that controls were the result of shortages and not of socialist ideology and that there were more controls in the United States than in India. The only heartening admission that Mr Nehru made was that controls should be at the minimum level required to meet the compulsions of a situation. Mr Nehru's remarks, however, were only general, for, he did not appear to have rejected offhand the concrete grievances of businessmen on the score of laws, regulations and administrative procedures.

These grievances, expressed at the Convention, are summed up as follows: (1) The difficulties of businessmen engaged in trade and small-scale industries are particularly great because they have capacity either to understand the implications of the intricate and complex laws or to comply with them. (2) The incursions by the State in trading activities through the State Trading Corporation, co-operative agencies and fairprice shops have distorted the normal trade channels. (3) Commodity controls such as those on sugar and iron and steel are not called for in the present context. (4) The present sales tax policies pursued in different States result in the levy of tax on the same product more than once. (5) The intricate procedural formalities prescribed under the sales tax laws hamper the day-to-day working of traders and businessmen. (6) Lack of co-ordination in the sales tax policies pursued by the different States and lack of uniformity in their administration result in conditions conducive to malpractices and corruption. (7) Medium and small-scale industries face numerous difficulties in respect of procurement of raw materials, finance, labour legislation and taxation.

The Convention has also made a number of concrete suggestions which are: (1) Sales tax may be merged with excise in the case of a number of commodities besides cloth, sugar and tobacco. (2) The assistance and facilities currently offered to medium and small-scale industries be given a more concrete shape so that a larger number of people might take advantage of them. (3) Red tape should be reduced to the minimum and direct contacts between the different governmental agencies and potential entrants in the industrial field be maximised. (4) Trade and industrial associations at different levels may be recognised so that some of the functions discharged by Government in respect of manufacture and distribution could be decentralised and entrusted to such associations so as to be discharged by them in an autonomous and self-regulatory manner.

In organising the Businessmen's Convention, which has given expression to the concrete grievances and

expectations of small businessmen, the Federation of Indian Chambers of Commerce and Industry has thus come out as representing their interests also. The Federation's effort at harmonising the interests of big business with those of small business appears to be slowly but

surely succeeding. As Sir Shri Ram, Chairman of the Reception Committee of the Businessmen's Convention, has rightly stated, the Federation is becoming broad-based in its operations, and this is implicit not only in its increasing membership but explicit in its expanding activities.

THE PENINSULA

All-India Women's Conference

THE All-India Women's conference, which met at Madras early this week, is an expression of the solidarity of Indian women in the face of continuing social prejudices and other disabilities which impinge upon them and which keep them backward economically and socially. Both by modern ideas of citizenship and the ideals of Indian thought and culture, the position of women in the country is hardly enviable. For the greater part of world history, women in all countries had been treated as a class inferior in social and political status to men. Democratic ideas brought about a change in this system of values, and freed women from the clutches of social customs which confined them to an inferior status in society. In India, however, special factors were at work tending to immobility in social thought. For a long period in the country's history, women had been subjected to special restrictions and taboos which being given a wrong religious and moral sanction, were found hard to break.

Foreign domination and the flames of nationalism it kindled brought about the first awakening in women to their social and political rights and responsibilities. Nationalism sowed democratic ideas and the freedom movement gave opportunities to women to defy customs which barred them from public life and to come into the

open on a footing of equality with men.

Attainment of Independence opened up a new era for women in the country. The Constitution guaranteed equality of status for women with men.

Constitutional guarantee of equal rights has been followed by legislation seeking to remove special disabilities under which women suffer. Right to property, which had been denied to women under Hindu Law, has been conferred by legislation. Another measure which seeks to give more economic protection to women is the anti-dowry bill which is now before Parliament. The appointment of women to positions of responsibility is yet another proof of the change that is sought to be given to the conditions of women in the country.

While independence has opened a new era, the task involved in improving the economic and social conditions of women is of stupendous dimensions. At the time of independence, only about 6 per cent of the women in the country could read and write. Though, under the First and Second Plans, considerable expansion in facilities for education has taken place, there has also been a simultaneous widening in the disparity in the education of boys and girls. The Second Plan, for example, aims at an increase of only 7 per cent in the enrolment of girls in the age group of 6-11 as against 17 per cent for boys. There is a similar disparity of target in respect of the age group of 11-17. Referring to this, Mrs Raksha Saran, who presided over the Conference, appealed to the Government to take steps for reducing the gap and for implementing the recommendations

of the National Committee on Women's Education.

Mrs Raksha Saran also complained of lack of proper vocational and technical training facilities for women in the country. This, according to her, makes up for the phenomenon of educated unemployment among women. This, however, is a grievance which would apply equally to men, being a reflection of the leeway to be made up in technical education and general economic development. However, continuing discrimination against women in the matter of employment opportunities, as alleged by Mrs Saran by the Government is hardly fair and would only aggravate the problem of educated unemployment among women. Provision of cheap housing was another suggestion made for improving the conditions of women.

While asserting the rights and privileges of women, the Conference was not unmindful of their duties and responsibilities in the building up of the country. Mrs Saran referred to the difficult times through which the country was passing and the challenges and dangers which women had to face. Mr C. Subramaniam, the Madras Minister for Finance, underlined the responsibility of women for child welfare and observed that this work should be the particular concern of women. Care in child welfare would, by itself, ensure equal development of boys and girls and enable them to take their rightful place in society. The suggestion made by Dr A. Lakshmanaswami Mudaliar for entrusting primary education exclusively to women also deserves consideration. Besides increasing employment opportunities for women, this

would also obviate the need for separate schools for boys and girls.

An interesting speech was made by Madame Furtseva, Deputy of the Supreme Soviet of the USSR. Dealing with the role and position of Soviet Women in the public and cultural life of their country, Madame Furtseva observed that Soviet women had all the rights and engaged in social and political activity, without any restrictions, on an equal footing with men. She disclosed that women members in the supreme Soviet of the USSR constituted 26.4 per cent of the total membership, while the number elected to the Supreme Soviets of the Union Republics in the USSR was 1,718. Conditions in India are far from comparable. However, the increasing participation of women in public life and the growing number of women seeking education and employment are signs of the new social awakening among women which, with the political and social rights conferred by Government, should facilitate a gradual transformation of the conditions of women.

However, it cannot be overlooked that no amount of special measures could improve women's welfare in conditions of general economic backwardness which impinge upon all sections of people equally. On this consideration, it is general economic development of the country which holds the key to the economic and social uplift of women.

Progress necessarily calls for unremitting endeavour and sacrifice from all sections of the people not excluding women. Both the First and Second Plans have opened up fields for women's participation in their welfare work on the basis of voluntary service. Social

welfare and education constitute two such fields. Much valuable work is already being done under official auspices. Though not above criticism, the Central Social Welfare Board, directed by Mrs. Durgabhai Deshmukh, has been making fair progress in extending social welfare

activities to cover a larger number of women. Under its patronage and encouragement, a number of centres to impart training in arts and crafts to women has sprung. The scope of such work could be expected to be enlarged in the course of the Third Plan which envisages substantially

larger outlay than that which had been incurred in the Second Plan. The All-India women's conference has also been carrying on commendable work in social welfare and educational fields. Pioneering work in this line was started by the Women's Indian Association now a part of the All-

India Women's Conference. But, the greatest contribution that the All-India Women's Conference has made was in the educative role it has played in breaking the general prejudices entertained about the position of women and to rouse social conscience to the inequities subjected upon them.

WORLD OF JUTE

Revival of Bullish Fervour

A sharp uptrend in prices, especially in the sacking section, has characterised trading in the jute goods market during the past few days although, on Thursday, the high levels have induced some selling. The revival of bullish sentiment at a time when indications appeared to be toward realistic price levels stemmed mainly from fresh enquiries for goods. Following the announcement last Thursday of a Government tender for about 28,000 bales of B Twills, partly for ready delivery and partly for February-March position, drooping spirits revived. It appeared that the market had been waiting for just some such order to materialise to rig up the prices once again. When the Government tender was quickly followed by enquiries from Indonesia and Burma, largely for heavy goods and for a small quantity of hessian, the firm undertone was well maintained in subsequent trading. Thus, during the period from last Friday to Wednesday this week, prices of heavy goods advanced by more than 3 rupees while the hessian section also steadied up in sympathy. With the smart rise in goods prices, the raw jute market, too, recorded a sizable rise in rates. Sellers in the raw jute market, who were till the other day very anxious to conclude business even below prevailing market rates, became reserved.

The return of bullish fervour on the strength of orders which can by no means be described as big would seem to indicate that the earlier apprehension of a scarcity of ready heavy goods had revived, notwithstanding the fact that no business of note had passed during most of the time this month in this category of goods. Further, it is to be noted that mills have continued to work with 90 per cent of their looms during January. And it would appear that this proportion will continue undisturbed during February also. Hence, it is rather difficult to believe that there can be a squeeze in heavy goods.

Prospects for hessian also cannot be deemed to be bright in the event of a continuance of high price levels. The enthusiasm that has been generated by the fact that burlap consumption in US has touched a new post-war high in 1959 is now tempered by the knowledge that burlap stocks in

that country are large enough to meet three months' demand even at last month's rate of consumption. This is not to say, however, that US offtake of hessian may not be at a fairly satisfactory level if our prices are stable. For, with the end of the steel strike, US burlap consumption is likely to be high for some months to come, even though this is usually the part of the year that is marked by a fall in burlap consumption.

The improvement in goods prices seems to have been partly aided by renewed attempts to revive the bogey of raw jute shortage. There are still whispers that, although arrivals in upcountry centres have no doubt been large in recent weeks, there is little jute left in the hands of cultivators. Some seem to nurture the hope that the scarcity will make itself felt toward the closing months of the current season. Such a belief cannot stand close scrutiny as both official trade opinion agree that there will be enough raw jute in the country during the current season to meet the requirements in full. And we have this year the assurance that more jute will be imported from Pakistan, if need be.

After a quiet opening, the futures market firmed up in later dealings last Friday on the announcement of the Government tender. The firm undertone continued for some time on Monday but, by close of the day, higher price levels could not be maintained. The undertone was again firm in later dealings on Wednesday but, during Thursday's trading, sentiment was somewhat quiet. B Twills February opened on a quiet note at Rs 110.40 but firmed up to Rs 113.50 the next day to close at Rs 113.45. The highest level touched on Monday was Rs 113.70 but, by the close of the day, the rate came back to Rs 112.60. At the end of Wednesday, the rate improved to Rs 113.05. Sentiment turned quiet on Thursday with the closing quotation much lower at Rs 112.35. Hessian 40" x 10 oz February was comparatively stable with the rate fluctuating between Rs 41.02 and Rs 42.06. Assam Bottoms March moved between Rs 30.48 and Rs 29.48 to close on Thursday at Rs 29.60.

In the jute goods market, B Twills January was done at Rs 110.25 last Thursday. With the announcement of the Government tender, prices rose steeply on Friday and at the end of the day B Twills were placed at Rs 113.40. Although the trend was rather quiet on Monday in the absence of foreign enquiries, reports that Government had made some purchase against their earlier tender pushed up B Twills January to Rs 114.20 by close on Wednesday. The trend was downward on Thursday in sympathy with the futures market and B Twills closed the day at Rs 113.40. Hessian

40" x 10 oz January moved within a narrow range to close at Rs 41.10.

In the raw jute market, Assam Bottoms Jan-Feb was taken to Rs 30.50 on last Friday from the previous closing of Rs 30.25 following some buying interest evinced by mills. The steadiness in the goods section also helped the uptrend. The rate further improved to Rs 30.75 the next day and continued at that level up to the close on Wednesday, though mills largely kept out of the market after prices began to take an upward course. The effect of the continued lack of mill interest was, however, to be seen on Thursday, when the rate declined to Rs 30.25.

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the service the Bank has provided from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

Demand Weakens

DEMAND at this week's auction, held in Calcutta, has slackened off somewhat and the market has shown a general decline of 6 nP per pound for teas of orthodox manufacture. BOPs were again a weak feature of the sale and there were a number of withdrawals; but there was a fair enquiry for BPSs and Orange Fannings. CTC Assams were irregular, while the poorer mediums were often easier. Non-wither legg-cut teas were also somewhat irregular, but generally showed a decline of 4 nP to 8 nP.

Whole Leaf grades were irregular and sometimes easier, although there was fair enquiry. The demand was again limited for Tippy teas and for Darjeelings although any with flavour were sold well. Following rates were quoted:—Clean Black Pekoe Rs 2.18 to Rs 2.22; Plain BP Rs 2.00 to Rs 2.04; Plain Fannings Rs 2.04 to Rs 2.08; Medium BP Rs 1.96 to Rs 2.02; Medium Fannings Rs 2.10 to Rs 2.20; Best Assam CTC BP Rs 2.40 to Rs 2.60; and Best Assam CTC Fannings Rs 2.45 to Rs 2.65.

HEAD OFFICE
4, CLIVE GHAT STREET
CALCUTTA

In the Internal Sale, offerings consisted of 22,602 packages of Dusts. The market opened showing a decline of about 6 nP to 8 nP per pound for Dusts for orthodox manufacture; but strengthened as the sale progressed. At the close, these types were only 4 nP to 6 nP easier. Legg-cut teas were also about 4 nP to 6 nP easier. Darjeeling dusts were irregular and sometimes sold below last rates. Flavoury kinds, however, met with keen competition.

Medium CTC dusts were irregular, but were well supported at about last rates, with the exception of a few lines which were about 4 nP easier. The very best CTC types were generally up to 10 nP easier. Following were the rates:—Medium Doors Dust Rs 2.14 to Rs 2.22; Medium Assam Dust Rs 2.08 to Rs 2.16; Medium Assam CTC Dust Rs 2.18 to Rs 2.66 and Best CTC Assam Dust Rs 2.45 to Rs 2.75. Also, 1,215 packages of Leaf grades were offered for internal consumption. These met with a fair demand at lower rates. The few chests of Green Tea, on offer, were keenly competed for and sold above last rates.

Ceylon produced 35,315 million pounds of tea during December, making the total of 413.01 million pounds for the year 1959. The highest figure for any year was in 1958 when 413.1 million pounds was produced.

Pakistan tea exports beyond previous commitments have been stopped in view of the scarcity and high prices of the commodity in the internal market. Disclosing this, the Pakistani Commerce Minister has stated that there will be no further export auction this season and stocks purchased at export auction may be sold internally. This will give about 2.5 million pounds for internal consumption. About 16 million pounds had already been exported out of an export quota of 20 million pounds. The present area of 77,000 acres will be expanded by about 10,000 acres for tea cultivation and another 10,000 acres will be available in the Dinajpur district.

In Mincing Lane, values for the plainer descriptions are generally holding up satisfactorily. The spread between the bottom and top grades continues to narrow, ranging now from 3sh 11d to 5sh 9d per pound as compared with 3sh 10d to 5sh 10d in the previous week. The level of weekly offerings suggests that the regulation of supplies on a weekly basis is in abeyance for the time being.

Commenting on the above, one trade quarter says that anything, which tends to put up the price of tea to the consumer, is not in the best interests of the trade. However, heavier weekly offerings now can result in smaller offerings later on when supplies normally shrink around mid-year before the larger quantities of north Indian tea begin to arrive.

In the above connection, the Chairman of the Indian Tea Asso-

ciation has stated that, although the comparatively strong demand for tea may be expected to continue this year, at least until the 1959 crop has been sold, there is no room for complacency as consumption is increasing. He adds that what is needed is a steady and gradually expanding market at a price which will cover the cost of production and yield a modest profit.

Planters in North India feel disappointed that more progress has not been made toward the renewal of the International Tea Agreement. They also feel that it will strengthen their positions if the machinery of control is at least seen to be in existence, ready to be brought into use only when the market positions require it.

Meanwhile, tea shipments have shown a decline in 1959 as compared to 1958. With shipments of 54.76 million pounds last month, total exports of North-East Indian tea have declined to 385.07 million pounds from 409.6 million pounds in the previous year. The setback is mainly due to the fall in the UK offtake from 270.65 million pounds to 234.1 million pounds. Exports to the USA and Canada have also declined from 17.51 million pounds and 12.05 million pounds to 16.59 million pounds and 9.57 million pounds respectively. Exports to Russia are maintained around 20.22 million pounds.

In the Dust Sale held in Cochin, offerings were 500,000 pounds. The quality of the offerings was well maintained. The market met with a strong general demand and prices were dearer for all descriptions. There was a keen competition for a small selection of CTC types. Legg-cut dusts were sold above last rates.

In the Chittagong market, prices have continued to rise, common tea being sold at Rs 4.8.0 to Rs 5.00 per pound and the quality tea being freely available at Rs 3.0.0 to Rs 3.4.0 per pound. In this connection, the Pakistan Industries Minister has indicated the possibility of re-imposing control on tea prices which, he feels, is the only answer when things are not going well under free trade in tea.

Again, effective steps will be taken by the Pakistan Government to expand the area under tea and improve the yield under an Ordinance promulgated last week. Under the Ordinance, the Central Government have been empowered to issue directives to existing tea gardens to plant or replant tea in specified areas from year to year under the penalty of fine. The Government will also render assistance to the existing tea gardens to improve their production and issue loans to finance the development of tea production. These measures are considered necessary to increase Pakistan's tea production, which has remained almost static around 56 million pounds during the past three years.

Sizable Decline in Prices

A HALT has been cried to the protracted firmness in Cotton prices on the Bombay market, thanks to the prompt measures taken by the Government by liberalising imports of foreign cotton, by as much as 12 lakh bales to meet the shortage of supplies of indigenous growth. Sentiment was also affected by the pronounced weakness in the cotton piecegoods market.

It is significant to note that the cloth market has not only lost its cheer noticeable until the beginning of the year, but has actually turned easy. According to indications available, there has been a marked setback in the offtake, both by the wholesalers and the retailers.

In fact, those who had hoarded cloth with a view to making some profit would appear to have been disappointed and are now keen to dispose of their stocks. Presumably, they seem to have realised that the Government mean business in allowing liberal imports of foreign cotton to meet the threatened crisis in the industry. The cumulative effect of these factors has indeed told upon the futures, which have to find their bottom. Jharilla March contract closed at Rs 752.50, showing a decline of more than Rs 25 per candy over the previous week.

In the Spot section, activity was restricted, as most of the mills did not show interest, having covered their requirements for the next three months. Wagad, Kalyan and Kala Gin came down by about Rs 20 per candy. Exportable growths also lost about Rs 25 to Rs 30 per candy.

On the export front, Bengal-choiced cotton was in keen demand. But, due to scarcity of supplies, prices were hardening.

In the foreign cotton section, most of the mills appeared to be eager buyers of lower types of American cotton. Fresh business for about 40,000 bales was put through with US shippers, subject to licences. The Government of India have, however, warned importers of lower type American cotton that no commitments should be made by them until the new purchase authorization was announced and until after the expiry of the usual waiting period.

It is reported that US cotton exporters are asked to quote firmly prior to issuance of purchase authorization and the contracting

period thereunder. All sales will be rendered ineligible for financing if contracts are concluded prior to January 22, 1960. Moreover, the Joint Chief Controller of Imports and Exports has announced that the quota fixed for the import of American cotton stapling one inch and below had been reached and hence no further applications will be entertained with immediate effect.

As mills are reported to have purchased 40,000 to 50,000 bales, the US authorities appear to be seriously perturbed over this. It is learnt that the US authorities have issued instructions to the effect that any business done earlier than seven days after the issuance of the purchase authorization will not be eligible for registration with the Commodity Credit Corporation for purposes of procuring the benefit of the 8 cent subsidy. It is further learnt that any violation of this regulation will be investigated by the authorities and the offenders will be brought to book.

Meanwhile, available information suggests that a purchase authorization No. 39-38 has been issued in Washington for \$19.7 million to enable India to buy cotton stapling one inch and below. The contracting date under this authorization is January 22 to May 31, 1960 and the shipment period is January 22 to June 30, 1960.

India is also expected to buy about 200,000 bales of East African Cotton this year.

Thus, the measures taken by the Government to arrest the rising trend in cotton prices are having their effect. With the marked change in the mood of the market, traders also seem inclined to revise their ideas about the 1959-60 crop. Many say that the crop may not be really so poor as generally talked about at 41 to 42 lakh bales. It is not improbable that crop estimates might have been considerably deflated to persuade the Government to release larger import quotas for cotton at a time when it was still seized with ideas of a scarcity of cloth. Time alone will reveal the correct position.

CLOTH AND PIECEGOODS:

An increase of about 100 million yards in the production of cloth was recorded in 1959 as compared with the total output of 7,056 million yards in 1958. The cotton textile industry, including the handloom and powerloom sectors, produced 7,153 million yards during 1959. Of this, 2,228 million yards of cloth was produced by the handloom and powerloom sectors and 4,025 million yards by the textile mills.

The estimated production of yarn, during the year 1959, was about 1,721 million pounds of which 550 million pounds was consumed by handloom, powerloom and hosiery and other units. The monthly average supply of yarn to these industries was about 46 million pounds.

MARKETS

Rise in Sugar Output

ACCORDING to the Indian Sugar Mills Association, Sugar production has amounted to 4.27 lakh tons in December 1959 as against 3.57 lakh tons in the corresponding month of 1958. This brings the total production, for the 1959-60 season up to December 31, 1959, to 6.38 lakh tons as against only 4.77 lakh tons in the corresponding period of the previous season. Offtake of sugar from factories, during December 1959, is 1.65 lakh tons as against 1.41 lakh tons. Thus, total despatches, up to 31st December 1959, are 2.96 lakh tons as against 3.06 lakh tons in the corresponding period of 1958. The closing stock with the factories, as on the 31st December 1959, was 4.85 lakh tons as compared to 5.00 lakh tons on the corresponding date of 1958.

The Governments of Uttar Pradesh and the Punjab have decided to take certain administrative measures to ensure adequate supply of cane to sugar mills throughout the season and also encourage power-crushers and khandasari units to operate increasingly away from the factory areas. It was also agreed that, in order to maintain and achieve a better production, certain administrative and other steps should be taken. Steps will also be taken to reduce the diversion of cane to khandasari and power-crushers.

Meanwhile, sugar prices have improved by about Rs 3 a bag in sympathy with the sharp gains in the prices of Khandasari following the Government decision not to decontrol sugar for the present. In the Hapur market, the rate is quoted at Rs 120 a bag.

World production of sugar in 1959-60 is placed lower at 49.59 million metric tons as compared to 50.94 million metric tons in the previous season. While the production of cane sugar is expected to rise further from 29.41 million metric tons in 1958-59 to 29.57 million metric tons during the season under review, that of best sugar is expected to fall from 21.58 million metric tons to 20.02 million metric tons.

Cuba is placed at the top of the list of producers with an output

With consumption of cloth steadily rising and production barely maintained, the prospects of any drastic change in the textile situation are generally discounted. The immediate outlook is, however, viewed with caution.

million metric tons in 1958-59. Russia's sugar output, which was the highest (6.26 million metric tons) in 1958-59 is expected to decline to 5.88 million metric tons in the current season.

Production in China was well maintained. While production declined in Brazil, West Germany, France, Australia and Formosa, it improved in Mexico, Italy and the USA.

Shellac

Conditions in the Calcutta Shellac market have continued to rule firm with the Pure TN quality quoting now at Rs 78 as against Rs 73 a maund quoted at the beginning of the year. This firmness in price is expected to be maintained for some time to come as foreign enquiries are running at a fair level. Considering the substantial decline in stocks in the UK, it is believed that enquiries from there may soon broaden.

An encouraging factor is that supplies to Calcutta from the up-country centres have been maintained at a fair level. As there is reported to be a shortfall in the output as well as the quality in the Siamese crop, the increase in the production of the Indian Katki and Kusmi crops should prove useful. The Katki crop is estimated at 233,000 maunds against 265,000 maunds in 1958. The Kusmi crop is believed to have increased from 52,000 maunds to 110,000 maunds.

It may not be out of place to mention here that the present steadiness in prices is mainly attributed to the export price minimum scheme sponsored by the Indian Lac Exporters' Association. The flow of increased foreign enquiries in recent months indicates that overseas buyers have turned their attention to the Indian produces to a greater extent. The price stability has encouraged the use of the commodity in preference to substitutes.

Yarn

While it is gratifying to note that yarn production in 1959 has risen from 1,685 million pounds to 1,725 million pounds, it does not seem that the improvement has helped in relieving the scarcity of yarn in the country and this, too, notwithstanding the fact that exports have fallen from 31 million pounds to 18 million pounds.

Despite increased availability, yarn prices have been consistently rising for some time past, which appears to have caused serious concern to handloom and powerloom weavers. It is stated that chances are that prices may appreciate further due to the fact that there has been a known shortage of cotton in the country.

Meanwhile, fears are being expressed in certain quarters that the firm prices of yarn will have an adverse effect on cloth production. The immediate outlook is, however, viewed with caution.

particularly bad in the South, in that the handloom weavers there have urged the Government of India to stop forward trading in yarn on the ground that speculative tendencies have caused a sharp increase in prices. Weavers' Societies have appealed to the Government to ban further exports of yarn.

Imports of Art Silk yarn, in Bombay, during the year 1959, increased to 362 lakh pounds from 274 lakh pounds in 1958; of synthetic yarn to over 22.87 lakh pounds as against 18.88 lakh pounds; and of cotton yarn to 4.93 lakh pounds against 14.63 lakh pounds.

Zinc

Sales of Zinc by the Board of Trade in London have succeeded in keeping the price of the metal down to the high levels reached by early December of last year and traders do not expect any new rise in the near future. It is generally accepted that the future of zinc may depend on the international conference that is to be held in Geneva.

The commitments, accepted by producers last April, automatically expired at the end of last year and any producer was free to expand output from January 1 of this year. Trade sources believe that some have already begun to do so and some are known to have begun building extensions to their capacity. It is believed, in London, that the Geneva conference will have to raise the limits agreed upon last April and immediate impact is likely to be an easing of the currently tight supply position. This is assuming that producers will agree to accepting output restrictions. They did so last year under the threat of a continuing heavy surplus of zinc. Now, that threat has disappeared and some producers may not feel the same compulsion.

Bullion

Prices on the Bombay Bullion Exchange, after recording new peak levels, developed a reactionary tendency toward the close of the week, thanks to the imposition of heavy margins on purchases. The initial firmness of the market was mainly due to the firm grip of the bull operators who were encouraged to be active in their dealings for the increasing demand in the ready section following the busy season.

Silver met with heavy bull unloading, being induced by the heavy margin of Rs 750 per bar, which will be applied on all the purchases that remain outstanding at the end of the day's session. The offtake in the ready section was also moderate, which aided the sentiment. Arrivals amounted to 18 bars as against an offtake of 24 bars. Unrefined metal receipts totalled 18 bars. Ready rates (.996) moved between Rs 213.75 and Rs 214.10.

Gold also met with heavy profit-taking and selling from bulls. The new contract "Fagun", which will be opened shortly, it was feared, would become operative with higher margins as per the amended bye-laws of the Association. The final approval of the Government of Bombay would be sought after the meeting of the general body of the Bullion Association. Ready rates moved between Rs 132.56 and Rs 133, to finish at Rs 132.81. Sovereign remained very firm at Rs 83.75.

Foodgrains

Steady to firm conditions prevailed in the Hapur Foodgrains market following better demand on the belief that "rabi" arrivals would start only after two months. Wheat prices remained almost unchanged. Arrivals in the open market continued to be small; but supplies were augmented by sales through fair price shops. Prospects for wheat and other "rabi" crops have brightened following the recent rainfall.

Gram prices improved slightly on higher Madras advices. A large quantity of gram was reported to have reached Hapur on Government account for stock purposes. Barley and Bajra prices sought higher levels in sympathy with gram although demand was poor. Maize and Bajra continued to attract good consumer demand. While maize prices were steady Bajra improved fractionally due to good demand in the light of the poor supply position. The market for Peas remained depressed following slack demand in the face of comfortable stock position and bright prospects for the new crop.

Khandsari

The firm trend in Khandsari prices has continued unabated and prices have touched new high levels of the season on brisk outside buying support. Railway loading facilities are restricted; but despatches are being made by trucks. It is reported that khandsari producers are buying cane, at certain places, at higher prices than paid by the sugar factories. Production is expected to touch a new high in the current season.

Rates are quoted at Rs 43 to Rs 50 per maund for the superior quality.

Gur

In the Hapur market, ready Gur prices have advanced by about 75 nP to Re 1 a maund, thanks to continued buying support from Gujarat and Saurashtra, as prevailing prices in the South are about 50 per cent higher than those ruling at Hapur. Daily arrivals are small following the recent rainfall and have totalled about 10,000 maunds. Following good despatches to outside stations, stocks at Hapur are estimated at only 10,000 maunds against 28,000 maunds at this time last year. Gur Pansera quality is quoted at Rs 17 a maund as against 15.75 in the corresponding period of last year. Balti quality is quoted at a premium of Re 1 a maund over Pansera quality.

Pepper

In the Cochin market, the price of Pepper has declined to Rs 1,850 from Rs 2,000 a candy in the absence of foreign demand. Fair average quality is quoted at Rs 1,850 and the light variety at Rs 1,000.

India's exports of black pepper, during the first eight months of last year, fell by about 2,000 tons as compared to the quantity exported during the same period in 1958. As against 8,743 tons exported during January to August 1958, exports during January to August 1959 totalled only 6,751 tons. The decrease was mainly attributed to less offtake by the Soviet Union, the USA, West and East Germany, Egypt and the Netherlands. Exports, however, increased appreciably to the East European countries of Czechoslovakia, Poland, Rumania, Bulgaria and Hungary as well as Pakistan.

Cashew

According to the Cashew and Pepper Export Promotion Council, exports of Cashew kernels from India, in the first eight months of 1959, improved to 533,027 cwts valued at Rs 10.61 crores as compared to 485,227 cwts worth Rs 9.53 crores in the corresponding period of the previous year. Cashew

shipments to the USA improved from 348,492 cwts to 363,839 cwts as did those to Russia from 52,046 cwts to 69,915 cwts. Notable increase took place in exports to West Germany from 4,927 cwts to 17,857 cwts; East Germany from 830 cwts to 4,504 cwts and Canada from 14,979 cwts to 18,122 cwts. Exports to Australia were well maintained at 18,122 cwts; but those to the UK declined to 31,206 cwts from 35,806 cwts.

Rubber

According to the figures released by the Rubber Board, stocks of rubber in the country have shown an improvement at the end of November 1959, thanks to a substantial increase in production and imports. Production, during November 1959, was higher at 3,037 tonnes as compared to 2,459 tonnes in the previous month. Imports also rose to 1,054 tonnes from 939 tonnes. Consumption by manufacturers, in the month under review, was also higher at 3,434 tonnes against 2,618 tonnes.

Stocks of rubber in the country increased to 10,467 tonnes at the end of November from 9,810 tonnes at the previous month-end. Out of the total stocks during the month under review, estates and dealers held 5,004 tonnes and manufacturers 5,463 tonnes against 4,426 tonnes and 5,384 tonnes respectively at the close of October, 1959.

During November 1958, production and consumption were 2,855 tonnes and 2,649 tonnes respectively, while the month-end stocks totalled 12,500 tonnes.

Bangalore Silk

In general, conditions in the Bangalore Silk market, during the week ended January 21, in respect of silk and silk products, were more or less similar to those in the previous week. There was practically no change in the prices of Filature and Charka raw silk varieties. Cottage Basin, however, rose by 50 nP per lb.

As regards the prices of Reeling Cocoons, the movement was equally steady.

Oils & Oilseeds

The markets for Oils and Oilseeds continued to display a buoyant appearance with groundnut and castor registering fresh gains. The upward trend in Groundnut gathered fresh momentum with the spot as well as forward prices touching successively higher levels. The sustained shortage of spot supplies accentuated the feeling of nervousness among the sellers, who were obliged to get out of the market at rising prices. Buyers, on the other hand, tightened their grip in view of the favourable conditions.

While arrivals of groundnut continued to be small, the pressure of available supplies increased with the crushers and vanaspati manufacturers making steady purchases.

Besides, there were frequent rumours that the Government were likely to extend the period of validity in respect of unutilised export quotas for groundnut oil. In these conditions, groundnut bold quality remained very firm at Rs 43.25 and groundnut oil at Rs 21.87.

Trading in the Castorseed section was highlighted by significant revival in the operators' confidence in the outlook for exports of castor oil. The feeling, that India need not be alarmed by Brazilian competition, gained strength, as most of the operators were inclined to believe that Brazil would not be an aggressive seller of castor oil in world markets till it received its fresh crop of castor in October, 1960.

The decision of the West Coast of India, Pakistan and USA Conference to allow its members to quote freight rates for castor oil without restrictions, also imparted a bullish tone to the market. Above all, rumours of business in castor oil with America pushed up the rates. Castor ready is quoted higher at Rs 33.50 and Castor Oil, commercial quality, at Rs 18.

The Linseed section was devoid of interest, although the overall trend is upward in sympathy with the firmness in groundnut and castorseed. Shippers are somewhat worried about the continued silence of Australia in respect of linseed oil, while business with the UK and the Continent continues to be difficult. Moreover, operators are somewhat cautious to enter into commitments in view of the approaching movement of the new crop. Linseed ready is quoted at Rs 33.87 and Linseed Oil at Rs 18.31.

Last week's boom conditions in the Madras groundnut and groundnut oil markets continuing this week resulted in the vaida market being closed due to default. Mention was made in the last week's report that the price line was being deliberately held high by bull operators at Bombay due to reckless speculation. The fear, that there would be the possibility of the future positions being affected, materialised today when defaulters could not negotiate for future positions at the same increasing trend.

In the middle of last week, the Madras Oils and Seeds Association represented to the Central Government the deterioration caused by speculators and requested them to intervene. Up to the time of making this report, no response has been visible from New Delhi and the Secretary of the Association told Indian Finance today that, if prices of both oil and groundnut were not brought down immediately, even the few mills working hand-to-mouth would have no option but to close down. Consumers, too, would be affected badly by this step. But no positive steps had yet been taken. (Similar was the case in respect of bullion, too, early this month, and due to Bombay speculative inter-

ests bullion registered a new high price level in Madras.)

High prices as such have paralysed the oil milling and vanaspati industry. The prices of kernalis per candy at Rs 207 and oil per candy at Rs 380 were unheard of.

Today, the market was quite inactive and the rates were only nominal. Groundnut oil per candy of 500 lbs ex-Madras godown exporter ready 3 per cent FFA was quoted nominally at Rs 385-386. There are no buyers.

Castor oil per candy of 500 lbs Rs 320.

Gingelly oil per maund Rs 21. Groundnut oil cake per bag Rs 27. Coconut oil per tin Rs 41.

Arrivals of kernalis in the local market were around 50-60 tons daily.

United Kingdom groundnut oil (Indian) was quoted at £117-119 per ton, while for Burma the quotation was Rs 1750 per ton.

No signs were visible, in the past fortnight, of any downward trend in the price of both groundnut and kernalis. Exporters kept quiet ruling out the argument of excessive export for this increase in prices.

Those who are keen on the restoration of normalcy in the trade are aware that the groundnut harvest has not been exhausted. The season has started just now. At the very start, when prices begin to go high, the producer is afraid of unloading the stock lest he should lose more with a quick sell off. That arrivals are meagre and so prices should go up is not an acceptable argument, because in the producing centres large stocks of kernalis, both husked and unhusked, are still held back by the ryots or the middlemen. They state, it is reported in the Oil Exchange Association, that so long as the price curve tends to climb, they would be unwise to get rid of their stocks. Any downward tendency would induce the stockist to unload, facilitating normal trade and better marketing within reasonable margins based upon supply and demand.

Therefore, last week, when the market operated for four days, groundnuts marked a gain of

Rs 50-55 per ton, and oil gained Rs 70-75 per ton.

The plight of the small-scale crushers was none the happier, because they had to buy at the abnormal rates.

Calcutta interests were watching the market level in oil and bought in small quantities after realising that, in other Andhra or upper India centres, the prices had become uneconomic. Middle of last week, a few candies were absorbed at Rs 377, but with the tone firm, another 150 candies at Rs 380 were dealt with by very needy extreme southern side mills. Having initially satisfied their urgent requirements, they would make no more offers. But market remained at the same rate at last closing and today also it was nominally quoted at Rs 380 Ready per candy.

Forward positions registered big jumps. The three vaidas has placed the shorts in a predicament, and naturally they proved unequal to the task and today there were many defaulters resulting in closure of the transactions in these positions. Since kernalis arrivals came to nothing practically, they could not honour their oil contracts. Therefore, the situation was that they had to buy back those contracts at terms dictated by the bulls, who, under these circumstances, certainly exploited the position to their best advantage. An indication of this squeeze was available on 25th January, and Bombay bulls simply ran through the chaos to reign supreme. In these circumstances, a few mills have begun to contemplate on the worthwhileness of Hedge trading in April vadia, particularly now, when there is nothing to hedge for millers or shippers or other regular traders in the field.

The January vaida was around Rs 375-379 towards the end of last week, but had to be bought back at Rs 380-382 per candy. Despite this, some closed a few deals at Rs 381 per candy.

A small number of transactions were put through at Rs 379 or even at Rs 380 in February vaida. March Vaida too recorded sizeable gains at Rs 382 and it was not possible to bargain at the last closing for less than Rs 385 per candy and naturally none was bold enough to do the deal.

Groundnut oil cake too was quoted higher at Rs 27 per 160 lbs bag with gunny, ex-mill.

Upcountry markets recorded practically no arrival of kernalis. Both South and North Arcot districts, as well as Tanjore, reported strikingly small arrivals. Stockholders were apparently deterred by the high prices. Even in these places, the price levels spurted to Rs 203 per candy. Crushers of oil were hesitant to commit themselves since most of them in the districts were bidders only for lower rates.

Gingelly seed price has also gone up, due to reported small arrivals.

The prices were:

Gingelly Seed:	Rs. per bag.
Mysore quality	67-68
Rajasthan quality	69-70
Local varieties	65-66

Gingelly Oil:	Rs per maund.
On wholesale basis	21
On Retail basis	21-4

Coconut oil was quoted at Rs 41 per ton locally. At Cochin, the price was Rs 662 per candy for Ready and Rs 654 for February.

Burma January shipment G. nut oil Rs 1750 per ton in drums and Rs 1800 in tins.

The following prices prevailed in the other markets in the South of oil and kernalis.

	(1)	(2)
Guntur/Bezwada	204	375
Vidhachalam	202	376
Madhyal	200	368
Villupuram	203	374
Guddappah/Vengal	195	370
Polachi superior nominal	205	370
Tanjore	200	370
Tiruvannamalai	200	372
Salem	202	374

(1) Groundnut seeds per candy of 531 lbs.

(2) Groundnut oil per candy of 500 lbs.

Hides and Skins

Both tanned cow hides and buffalo hides did not change in prices. The former had moderate demand and sales with fair arrivals. Though increased prices were quoted due to UK demand, business was confirmed with United

Kingdom importers one to two pence lower than the quotations given out by the local export houses. Inferior Fifths had good internal demand and at about 46d United Kingdom completed some deals.

Tanned cow calf arrivals were not much and prices were strong. Tanned goatskins sold were about 1,000 pieces and tanned sheepskins sold numbered as much as 51,000. Bazar had 4,000 tanned goat and 25,000 tanned sheep skins. Prices advanced between 6 and 12 nP in this section per lb. but sheep skins were dearer by 25 nP per lb.

Raw skin prices advanced this week also. The following are the rates prevailing: Last week's are quoted in brackets:

Bangalore raw goat skin	Rs 665-750 (Rs 650-715);
White wool sheep	Rs 630-750 (Rs 640-690);
Black wool sheep	Rs 490-530 (Rs 485-520);
Bezwada Raw Goat skin	Rs 645-680 (Rs 630-635);
He sheep	Rs 580-600 (Rs 575-585);
She sheep	Rs 485-500 (Rs 475-485).

January first fortnight's shipments were: To United Kingdom: cow hides 1750 bales, calf skins 158 bales, buffalo hides 4 bales, calfskins 266 bales, goatskins 362 bales, and sheepskins 391 bales.

To the Continent: cowhides 10 bales, calfskins 24 bales, buffalo hides 3 bales, goat skins 382 bales and sheep skins 184 bales.

To United States: Buffalo hides 75 bales; calf skins 2 bales and goat skins 70 bales. Eastern Europe: Cowhides 184 bales, and goat skins 21 bales. Aden imported 3 bales of cow hides. The total was 3,913 bales exported from Madras.

The prices in hides and skins market were as follows:

Per lb tanned cow prime 5½ 5½ lbs Rs 3 to Rs 3.37; 6½ lbs Rs 2.81 to Rs 3.00; 8-8½ lbs Rs 2.31 to Rs 2.50; 10-12 lb Rs 1.94 to Rs 2.06; Buffalo 12-13 lb Rs 1.56 to Rs 1.75; cow calf 1½-2 lb Rs 5 to Rs 5.37; Buffalo calf 1½-2 lb Rs 3.25 to Rs 3.62; Goat prime 8-9 lb Rs 9.25 to Rs 9.37; 5½-6 lb Rs 10.50 to Rs 10.75; Sheep ordinary 6-7 lbs Rs 8.25 to Rs 8.62; sheep prime 6-7 lb Rs 10.75 to Rs 10.87.

ESTD.—1906

(H.O.—UDUPI (S. India)

54 years strong

The Canara Banking Corporation Limited

is today working with a fine network of 53 branches spread over the States of Mysore, Madras, Andhra Pradesh, Kerala, Bombay and West Bengal and agency arrangements throughout the Country.

Careful and cautious in following its advances policy and guaranteeing cent per cent safety and security for the hard-earned money of all its depositors, it is well suited to all your Banking requirements.

Its branch in Calcutta City:

3/1/2 (First Floor) ARMENIAN STREET

(Phone No. 22-6263)

It's the oldest of all the Scheduled Banks founded in the State of Mysore!

SOUTH EASTERN RAILWAY

Sl. No.	Tender No.	Brief Description.	Specification.	Quantity.	Due date of opening.	Earnest money.	Cost of Tender Form.
1.	OT/PA/1751/GB10	Slacked Lime for water softening plants containing 75-85% Calcium Hydroxide Moisture 5% maximum to be supplied in 1 cwt suitable gunny bag.		460 tons.	19-2-60 at 12 noon.	Rs. 412/-	Rs. 2/-
2.	OT/PA/582/GB9	(i) Shoes Black Leather. (ii) Capplis Black Leather		8 pairs. 952 pairs.	26-2-60 at 12 noon.	Rs. 230/-	Rs. 2/-

Tender forms are obtainable from Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 on remittance of cost

of tender form (not refundable) by Money Order direct to him in case of outside firms and on production of cash receipt from the

Chief Cashier, S.E. Ry., Garden Reach, Calcutta-23, by local firms. Firms not on the Railways list of approved contractors must enclose

a valid Income Tax Clearance Certificate along with the Earnest Money receipt with the tender.

CONTROLLER OF STORES

Marketmen Preoccupied with New Issues

Investment Gossip:

SENTIMENT on the stock market this week has been generally dull. At the time of writing, however, a more confident undertone seems to be prevailing. It would appear that this late revival of activity in the stock market has largely stemmed from the sudden firmness of one or two prominent shares which have been the centre of attraction in the past few days.

This special interest apart, marketmen appear to be slowly regaining confidence in equities as rumours that have percolated to the market place in the past few days about the coming central Budget do not refer to any fresh direct imposition. It is of course generally agreed that some additional levies are inevitable, but they are expected to be in the shape of excise duties on a number of consumer items. Direct or indirect, additional imposts will have their repercussions on industry. But operators seem to be satisfied with the prospect held out by the rumours that there may not be any direct taxes. There are some who draw the inference that, far from imposing new burdens, the corporate sector may be given some relief at least from some of the restrictive tax measures. Optimists seem to have derived some comfort from the Prime Minister's speech at the Businessmen's convention in New Delhi, as he has agreed that tax levies are heavier in India than in most other countries. It is also hoped that the fervent appeals

made by captains of industry for the relaxation of restrictions on private enterprise in order to enable this important sector to function efficiently will not after all go unheeded by authority.

The absence of much activity in the stock markets at the present juncture is not anything unnatural, because both operators and investors are understandably preoccupied with the new issues that have already come and are due to come in the coming weeks. The fact that almost all the new issues that have recently been placed in the market have been heavily oversubscribed shows why old equities are being somewhat neglected. The list of new issues is by no means exhausted yet. For instance, the subscription list of the long awaited issue of Hindustan Aluminium is opening on the 8th February. This is to be followed closely by other prominent issues.

£R\$

Investment Notes:

With the gradual transformation of the country's economy, there has been a shift in emphasis in the activities of Larsen & Toubro Limited. The company has received a licence from the Government to undertake the manufacture of heavy machinery. The company is also considering a number of small manufacturing schemes which are associated with heavy machinery. A suitable site for the factory will be selected either in Orissa or in Bihar.

Negotiations with the Government have reached an advanced stage. The technical collaborators are GHI, a leading West German firm, which will participate in this project on a 50-50 basis. The value of manufactures is expected to increase from Rs 70 lakhs in the current year to Rs 1.45 crores in 1960-61 and to Rs 2 crores in 1961-62. The company has been paying a steady dividend of Rs 12.5 per share even with progressive increases in capital. The outlook for the company is, therefore, bright.

The directors of the West Coast Paper Mills Limited are actively considering a scheme for expanding substantially the production capacity

of the company's plant. The proposals include the doubling of the capacity from the present level of 60 tons a day. The question of a still higher capacity is also under consideration. The details of the scheme are being worked out. The production trend at the factory is reported to be encouraging.

The outlook for Shree Niwas Cotton Mills Limited appears to be encouraging. In view of the substantial programme of renovation carried out by the company during 1959, its working results for the year are expected to be considerably better than in 1958. The working of the company's subsidiary, Shree Madhusudan Mills, is also reported to be improving and considerable progress has been made in the modernisation of the machinery.

Efforts are under way to put up a textile mill in Pondicherry with the assistance of Japan. Negotiations will commence shortly between the Japan Machinery Export Association and some business interests in Kerala, who are believed to be sponsoring this project. It is stated that, while the Kerala interests will construct the mill, Japan will provide the machinery and the technical know-how, as also the operating management. The mill will have some 40,000 spindles and 1,000 looms. It is further stated that the Japanese collaborators in the project will be entitled to receive all profits in the first six years of operation toward payment of machinery and services and that, thereafter, ownership and all other benefits will revert to Indian interests.

As a result of a reorganisation of the shareholdings of the Binny group companies, which was carried out in 1959 with the approval of the Reserve Bank of India, Binny and Company (Madras) Limited, the managing agents, became the holding company of the Buckingham & Carnatic Company, the Bangalore Woollen, Cotton & Silk Mills Company and Binny & Co. (Madras) Limited. The Companies Act, 1956 has imposed various restrictions on managing agents and further restrictions are contemplated by the Companies (Amendment) Bill, 1959. In view of these restrictions, Binny & Co. (Madras) Limited have informed the directors of the Buckingham & Carnatic Company of their desire to relinquish the office of managing agents of the company and this they propose to do with effect from 1st January, 1961.

£R\$

Investment Briefs:

The State Bank of India has recommended a dividend of Rs 20 per share, subject to deduction of tax, for 1959 against Rs 18 paid in the previous year.

Canara Bank has proposed a dividend of 15 per cent, taxable, for 1959 against 10 per cent paid in 1958.

£R\$

Balance-Sheet Points:

The Standard Batteries Limited has reported a net profit of Rs 11.69 lakhs for the year ended 30th June 1959, as against Rs 6.17 lakhs in the previous year. The Ordinary divi-

dend is Rs 14 per share, subject to deduction of tax, on the increased capital against the tax-free dividend of Rs 8 paid in the previous year.

The Textool Company Limited has done much better in the year ended 30th April, 1959. The net profit amounts to Rs 12.73 lakhs as against only Rs 7.53 lakhs in the previous year. A dividend of 15 per cent, less tax, is to be paid against 10 per cent tax-free previously.

The working of the Kirloskar Electric Company Limited has resulted in a profit of Rs 5.82 lakhs for the year ended 30th June 1959, as against Rs 6.46 lakhs in the preceding year. The directors have recommended a dividend of 10 per cent, subject to deduction of tax.

For the year ending March 31, 1959, the Karaikal Electric Company Ltd., had made a profit of Rs 33,907 after providing Rs 17,670 for depreciation. The carry forward amount from the previous year was Rs 36,339. A sum of Rs 70,446 was available for appropriation. The previous year's profits were Rs 33,812. Tax paid was Rs 2,726. Contingency Reserve was Rs 48.0, Development Reserve was Rs 1,705, and Income-tax reserve was Rs 22,000. A dividend of 8%, tax-free, has been recommended on the shares, absorbing Rs 16,781. The balance of Rs 26,775 is carried to the current year. Previous year's dividend was also 8%.

Cowooddy Estates Limited has reported a fall in its net profit before providing for taxation and depreciation for the year ended June 30, 1959. The profits were Rs 1.28 lakh against Rs 4.75 lakhs in 1957-58. Depreciation allocation is Rs 14,760 against Rs 11,993 last year. Taxation allowance is Rs 27,200 against Rs 1.68 lakhs, while the general reserve gets Rs 25,000 against Rs 21,952. The final dividend of 15% along with the interim dividend makes the total 25% for the whole year taxable. Last year the dividend was 56%. Smaller coffee crop of 101,457 kilos against 177,805 kilos previously was stated to be responsible for lower profits. Working expenses also are reported to have increased. The current year's estimate of coffee crop is 115.8 tonnes.

£R\$

New Issue Notes

The Kirloskar Company Limited has proposed to increase its authorised capital from Rs 50 lakhs to Rs 1 crore by the creation of further 5 lakh equity shares of Rs 10 each. The present authorised capital is Rs 60 lakhs, divided into 5 lakh equity shares of Rs 10 each. Out of this, the company has already issued capital amounting to Rs 45 lakhs, leaving a balance of only Rs 5 lakhs available for further issue.

The response to issue of fresh capital to the public by the Premier Tyres Limited has been overwhelming. It is understood that the issue has been over-subscribed by about 6½ times. Applications from the interior have yet to arrive. The company will now proceed with the allotment of shares in consultation with the Bombay Stock Exchange authorities and hope to complete it before the middle of next month.

January 30, 1960

Improved Recovery, Profits Reported by Champarun Sugar

Balance-Sheet Reviews:

A SUBSTANTIAL improvement in recovery has enabled the Champarun Sugar Co Ltd, under the managing agency of Begg, Sutherland, to report a sharp increase in its earnings during the year ended June 1959. It is to be noted, however, that cane crushed in 1958-59, though higher at 5.79 million maunds as against 5.42 million maunds in the previous year, is still rather lower than the 6.29 million maunds crushed in 1956-57. The contribution of higher recovery to the better profits is disclosed by the fact that, despite a lower volume of cane crushed in the latest year, the outturn of sugar, at 569,720 maunds, is higher than the relative figure for 1956-57 by more than 10,000 tons.

In this context, the Directors' Report points out that the crush at Chanpatia was the highest in the last twenty years. The recovery at Barrah was 9.81 per cent, and 9.86 per cent at Chanpatia.

However, sales are somewhat lower in the latest year, having declined from Rs 2.13 crores in 1957-58 to Rs 2.03 crores, though showing considerable improvement over the relative figure for 1956-57, which was Rs 1.78 crores.

The net profit, before tax and depreciation, has risen steeply from Rs 9.95 lakhs to Rs 13.55 lakhs. The provision for tax has been quintupled to Rs 5 lakhs. Depreciation, on the other hand, is a lesser charge at Rs 1.75 lakhs against Rs 3.25 lakhs. Development Rebate gets a nominal Rs 1,944 as compared with Rs 13,000 in 1957-58. Other Funds receive rather more at Rs 3.98 lakhs against Rs 0.27 lakhs. The dividend payment has been stepped up from 10 per cent to 15 per cent, the latter, however, being subject to deduction of tax. But, in any event, the effective return to the shareholder, in just recognition of the better performance, is somewhat marked up.

The paid-up capital of Champarun Sugar, all ordinary shares, is at Rs 18 lakhs. The share premium account is shown at Rs 2.10 lakhs. The amount to the credit of Capital Reserve, at Rs 18.87 lakhs, exceeds the paid up capital. There is, besides, a Reserve Fund to the tune of Rs 14.40 lakhs, and Other Funds total Rs 7.08 lakhs. Secured loans are a heavy item on the liabilities side of the ledger at Rs 42.19 lakhs, though they show a drop of over Rs 5½ lakhs from the previous year's figure.

The gross block of the company has been showing little change in the last three sets of accounts, and in the latest balance-sheet is placed at Rs 84.99 lakhs. Accumulated depreciation totals Rs 63.38 lakhs, the net block consequently being placed at Rs 21.61 lakhs. There are few other changes of significance in the accounts, except perhaps for a rise of Rs 1.43 lakhs to Rs 3.55 lakhs in cash balances.

ORISSA CEMENT LIMITED

Regd. Office:

RAJGANGPUR, S. E. Ry. ORISSA

This is to inform to all the applicants who have applied against new issue of 7,50,000 ordinary shares of Rs. 10/- each of the Company that the Allotment Letters in respect of the shares allotted to them have been despatched from the Registered Office of the Company on 25th January, 1960 "UNDER CERTIFICATE OF POSTING" at their respective addresses recorded in the Company's Books.

S. KEDIA
Assistant Secretary

Dated, 26th January 1960.

A State of Uncertainty

Watch-Dog Writes:

DEALINGS in stock markets have been characterised by a state of uncertainty during the week under review. Talks of increased taxation and the prevailing monetary stringency are holding the speculative operators in check, while investors seem to be pre-occupied with taking up new issues. The only relieving feature of trading is that the pace of decline is relatively slow and the selling pressure is less around the lower levels.

Trading on the Calcutta Stock Exchange was dull with prices drifting to lower levels.

The publication of the Wage Board report for the textile industry had a

STATE BANK OF INDIA

A Meeting of the Central Board of Directors of the State Bank of India was held at Calcutta on Friday, the 22nd January 1960.

The following is a note of the net profits declared at the Meeting for the year ended the 31st December 1959 and their distribution:

Net profits for the year ..	Rs. 187,10,400
Brought forward from last year ..	Rs. 55,73,200
	Rs. 242,83,600

Dividend to Shareholders at the rate of Rs. 20/- per share, subject to deduction of tax (made up of Interim Dividend at the rate of Rs. 10/- per share Rs. 56,25,000 and Final Dividend at the rate of Rs. 10/- per share Rs. 56,25,000)	Rs. 112,50,000
Transferred to Reserve Fund ..	Rs. 20,00,000
Transferred to Pension Funds ..	Rs. 6,96,100
Bonus to Staff ..	Rs. 40,00,000
Transferred to Welfare Fund ..	Rs. 2,50,000
Transferred to Staff Co-operative Housing Fund ..	Rs. 5,00,000
Carried forward	Rs. 55,87,500
	Rs. 242,83,600

depressing effect on the Bombay Stock Exchange.

Activity on the Madras Stock Exchange was mostly confined to the Planting issues.

Uncertain conditions prevailed on the London Stock Exchange.

Wall Street closed heavy with price changes either way ranging to about one dollar or so.

Calcutta

Calcutta, Thursday Evening.

ACTIVITY on the local Stock Exchange was restricted last week when price movements were rather irregular on alternate buying and selling. The main factor responsible for the present phase was the Budget, which continued to cast its shadows. There was a general disposition on the part of professional operators to lighten their commitments on the feeling that a recovery might not be possible till the presentation of the Budget. Investors, too, tried to liquidate some of their holdings in order to subscribe for the new capital issues.

Budget thoughts apart, one factor restraining activity in the market was the stringency in the money market where demand had been steadily increasing. The fact that operators were in no mood to extend support to the market even around the lower levels, but strength to the theory that there was no possibility of any major rally before the presentation of the Budget.

The Giltedged market continued to remain dull. With the money conditions remaining tight, institutional enquiry was lacking and prices tended to ease further on small offerings. The volume of business was meagre in the extreme and the tone was subdued. 3 per cent 1988 Conversion Loan changed hands at Rs 74.05 to Rs 74.25, to finish at Rs 74.23.

The only section, which was practically neglected throughout the week, was Jute. Operators seemed to be in no mood to enter into any commitments on the feeling that even the present decline in raw jute prices was not enough to enable the mills to make a sufficient margin of profits on account of the poor demand for jute goods from abroad. The news of the strike at the Howrah mills was also a contributory factor. Howrah, for obvious reasons, were offered at as low as Rs 23.87 against Rs 24, while Bally were marked down to Rs 210 from Rs 217 and New Central to Rs 22.25 from Rs 23.06. India were, however, maintained at Rs 16.06 and so also National at Rs 30.87. Kamarhatti changed hands at Rs 170 to Rs 173 against Rs 176.

Although a few selected Coal shares continued to meet with good demand on the hope of an increase in demand for the commodity in the coming months, there was a general disposition to book profits at bulges in view of the anxiety with regard to the transport situation. Reports of lower production last year were another contributory factor. Bengal continued to be supported up to Rs 300; Western Bengal up to Rs 6.62; Equitable up to Rs 30.50 and Central India up to Rs 8.87. Burrakur moved rather irregularly between Rs 18.31

and Rs 19.50, to finish at the last quoted level.

Tea shares became extremely susceptible to the fluctuations of rates at the auctions and recorded business at reduced levels. Shares of the Cachar gardens were freely offered on fears of increased costs of production as a result of higher wages. Banarhat changed hands at Rs 318 to Rs 320; Bormah Jan at Rs 18.69 to Rs 18.81; Grob at Rs 13.75 to Rs 13.87 and Dhelakhat at Rs 22.06 to Rs 22.37. Jayshree were on offer at Rs 15.69 against Rs 16.25 and Killcott at Rs 20.50 against Rs 20.87.

Sugar shares came in for good demand, but at lower levels. Operators were inclined to await further developments in the sugar situation. Raza/Buland met with business at Rs 12.69 to Rs 12.94 (Rs 12.75); Carew at Rs 12.12 to Rs 12.37 (Rs 12.37); Cawnpore at Rs 15.19 to Rs 15.81 (Rs 15.75) and Darbhanga at Rs 18.69 to Rs 19.06 (Rs 18.69). Figures shown within brackets were the week's closing rates. The only firm feature were Balrampore, which met with sustained support up to Rs 4.16 from Rs 4.06.

Textile scrip displayed an easier tendency as operators were inclined to book profits at the recent high levels, pending further developments in the cotton situation. The publication of the Wage Board report also had a depressing effect on sentiment. The only exceptional feature were Cawnpore, which were barely maintained at Rs 6.50. Elgins were, however, marked down to Rs 17.06 from Rs 17.50 to finish better at Rs 17.31. Kesoram, after touching a low of Rs 21.69 from Rs 22.12 closed better at Rs 22.00. Jayshree moved between Rs 12.37 and Rs 12.50.

In the Engineering section price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to sustained selling pressure till Thursday on lower advices from Bombay. Against the week-end closing of Rs 22.15, Indian Irons opened lower at Rs 21.95 and receded further to Rs 21.85 at which level some bear-covering coupled with replacement buying pushed up the scrip to Rs 22.16, closing finally at Rs 22.14. TEXMACO were marked down at one time to Rs 25.45; Kumardhubi to Rs 6.50 and Marshalls to Rs 5.04, to finish better at Rs 25.55; Rs 6.69 and Rs 6.00 respectively. Braithwaite were, however, a firm feature at Rs 28.69 and so also Britannia at Rs 12.12. Burn were quiet at Rs 438 against Rs 441.

Miscellaneous issues moved with the general trend of the market. Following were the price trends of a few selected scrip:

	Week's High	Week's Low	Week's Closing
Orient Paper	37.80	37.50	37.65
Shree Gopal	22.50	22.19	22.50
Sirpur	13.62	13.31	13.50
Rohtas	27.56	27.00	27.31
Dunlop	36.25	35.87	36.25

Bombay

ALTHOUGH sentiment was quite constructive at the start of the week, not much improvement obtained at the end of the week on Thursday, mainly due to the lack of fresh buying. In earlier dealings there was considerable resistance to lower levels but there was also a marked tendency to refrain from fresh commitments at the higher levels. It would appear that the Central Budget is inducing its usual effect on the market but it would appear that this year rumours have ruled out any additional levies in the shape of direct

THE INDIA JUTE COMPANY, LIMITED.

NOTICE OF INTERIM DIVIDEND

Notice is hereby given that the Board of Directors of the above Company have sanctioned payment of an Interim Dividend on the Ordinary Shares at 75 Naye Paise per share (less tax to be deducted in accordance with the provisions of the Finance Act, 1959) in respect of the year ending 31st March, 1960, payable to those members whose names appear in the Company's registers on the 27th February, 1960, as the Registered Holders of Ordinary Shares. The above dividend will be paid on or after 14th March, 1960.

The Share Transfer Books of the Company will be closed from 17th February, 1960, to 27th February, 1960, both days inclusive.

By Order of the Board,

A.D.A. ALEXANDER,
Secretary.

16, Strand Road, Calcutta.
Dated the 28th January, 1960.

THE MEGNA MILLS COMPANY, LIMITED.

NOTICE OF INTERIM DIVIDEND

Notice is hereby given that the Board of Directors of the above Company have sanctioned payment of an Interim Dividend on the Ordinary Shares at 60 Naye Paise per share (less tax to be deducted in accordance with the provisions of the Finance Act, 1959) in respect of the year ending 31st March, 1960, payable to those members whose names appear in the Company's registers on the 27th February, 1960, as the Registered Holders of the Ordinary Shares. The above dividend will be paid on or after 14th March, 1960.

The Share Transfer Books of the Company will be closed from 17th February, 1960, to 27th February, 1960, both days inclusive.

By Order of the Board,

A.D.A. ALEXANDER,
Secretary.

16, Strand Road, Calcutta.
Dated the 28th January, 1960.

taxation. Excise duties on a wide front is generally anticipated but these do not seem to worry the operators very much. The budget apart, there are two other important limiting factors in the situation, the growing stringency in the money market and the investors' continued interest in new issues of which more are due in coming weeks. It is generally believed that activity would continue to be somewhat restricted till the budget is out of the way.

In the steel section, conditions were irregularly easier. Tata Steel declined from Rs 147.50 last Friday to be finally placed at Rs 143.75 this Thursday. Indian Iron reacted to Rs 21.83 from Rs 22.28. Mukund Iron was likewise quiet at Rs 17.52.

Textile shares met with selling pressure in earlier dealings following indications that the Wage Board had recommended. Increased wages for textile workers. Though lower levels attracted renewed interest the close was easier in tune with the rest of the market. Bombay Dyeing receded to Rs 65.60 from Rs 67.50. Century was sold down to Rs 438 from Rs 442.50, Kohinoor lost ten points to be placed at Rs 307 as did Svadeshi at Rs 252. Standard was lower on balance at Rs 755. Gokak moved down to Rs 163 from Rs 168, Indore Malwa to Rs 110 from Rs 114 and Tata Mills to Rs 45.75 from Rs 47.50.

Among Miscellaneous issues automobile shares met with support in later dealings. Hind motors moved up to Rs 15.88 from Rs 15.40. Premier automobiles gained nearly three points over the week to be done at Rs 148. Among Engineering shares Larsen Toubro was a steady feature at Rs 26.65 on expansion prospects. Cement shares were irregular with ACC quiet at Rs 145.25 and Ashoka unchanged at Rs 8.76.

Madras

DUE to selling pressure, the stock exchange here today showed an extremely weak tendency. In many counters, there was much of inactivity, resulting in prices being quoted considerably lower. In contrast to last week's undertone, textiles exhibited particular selling pressure with no buyers. Sugars followed the same trend. Plantings were irregular and also shedded values. Little business, if at all, was transacted in the miscellaneous section, which also remained inactive.

Banks: Bank of Mysore improved to Rs 385.00 from the last closing of Rs 359.00. Indian Bank Rs 100 paid was lower today at Rs 183.00 and Rs 80 paid was 50 nP higher at Rs 149.00. Indian Overseas slid down to Rs 175.00 from the previous closing of Rs 177.25. Punjab National was stable at Rs 21.50 and the Travancore Forward at Rs 6.20.

Electric: Cochín was unaltered at Rs 10.25, but Kumbakonam went up by 10 nP at Rs 10.70. South Madras was weaker by 10 nP at Rs 10.15. Vellore and West Coast were the same at Rs 13.00 and Rs 12.50 respectively.

Plantings: Amalgamated continued at Rs 13.75 and Anandam at Rs 15.50. Badra was quoted at Rs 3.97 and Be Be shares were raised to Rs 3.63. Blue Mountain was lower at Rs 3.40 and Chandramalai was unchanged at Rs 3.03. Chembra, too, was lower at Rs 4.28. Cochín

Malabar was at Rs 7.05. Both Coffee Lands and Consolidated Coffee shares were available cheaper at Rs 23.00 and Rs 21.75 respectively. Coonoor and Cocrg were unchanged at Rs 26.50 and Rs 5.20. Cowcoody was maintained at Rs 6.10. Highland was quoted at Rs 14.65 and Kailas at Rs 4.90. Karikode was steady at Rs 9.45. Kil Kotagiri was lower than the last closing at Rs 465. Kumer-gode was at Rs 6.10. Lingapur shares were transacted 5 nP lower at Rs 6.90. Malankara was at Rs 18.12. Mercara, following others in the line, was available at Rs 12.15,

being lower than the last level of Rs 12.20. Mysore Coffee was no better than Rs 5.03, and Nellithanam at Rs 12.05. Ossoor was at Rs 3.68 and Oucherlony Valley did not change at Rs 5.75. Peermade was at Rs 20.25 and Periakaramalai at Rs 3.72. Pullangode at Rs 1.95 was not fancied. Rajagiri at Rs 20.25 changed hands while Shevroy at Rs 1.63 attracted little business. T.R. & T. also was lower today at Rs 7.90. Wartyhully had offers at Rs 3.65 and Waterfall at Rs 3.70 had no buyers.

Miscellaneous: Aluminium Industries was enquired at Rs 21.80.

Andhra Cement and Andhra Scientific did not alter at Rs 9.30 and Rs 9.50 respectively. In Ashok Leyland, no business could be done even at Rs 6.80. Binny continued at Rs 160.00, as well as F.A.C.Ts at Rs 9.77.

Hindustan Lever at Rs 34.98 remained untransacted. India Cement too was unattractive at Rs 6.19. Indian Steel Rolling was quoted at Rs 12.40. Kinloskar Electricals at Rs 12.75 was not prominent. Manikar was quoted at Rs 48.00. Mysore Chemicals and Fertilisers were not in demand, though at the price of Rs 9.9.

good
advertising
means
more goods
at less cost

M. L. Khaitan, Chairman, Bata Shoe Co. Ltd.

A popular fallacy about Advertising is that it increases the price you pay. Surely, people say, money spent on advertising an article must be added to its cost.

In fact, nothing could be further from the truth... as we in the Shoe Manufacturing Industry have good reason to know! Our aim is to bring good, well-made footwear within the reach of millions... within reach of the man-in-the-street, the factory worker, the villager, the farmer. Obviously, this means our prices have to be low enough for them to be able to buy our products.

Through advertising, we offer our footwear to hundreds of thousands of our present and potential customers. To meet the wide and expanding demand thus created,

we mass-produce shoes by employing modern large-scale production methods. This results in savings in purchase of raw materials in bulk, achievement of high efficiency in production, rapid output of products of uniform and standardised quality and elimination of waste. All these factors help to lower the cost of production per unit, which enables us to pass on this benefit to our customers in the form of lower selling prices.

Thus, money spent on advertising instead of adding to costs and prices actually helps to cut them down. Advertising is an important reason why goods are now available in quantities never known before, and at prices which enable more people to buy them.

Good advertising serves you

Some of Britain's most famous engineering and electrical firms are grouped together in the Consortium known as ISCON for the purpose of building the Steelworks at Durgapur. Each of these firms is a leader in its own field and the integrated Steelworks when completed will compare favourably with the largest and most modern in any part of the world.

More Industries

Go METRIC

On October 1, 1958, when the change-over to the Metric System began, a number of important industries—jute, iron and steel, textiles, cement, paper, salt, engineering, coffee, non-ferrous metals, raw rubber etc.—started adopting Metric weights and measures.

Since then the transition has begun in more industries.

Use of the Metric System was permitted in the COIR industry from October 1959. In the SUGAR industry the change-over started from November 1, 1959.

The pace will further quicken from April 1960, when the VANASPATI and PAINT industries 'go metric'.

The entire distribution of PETROLEUM and PETROLEUM PRODUCTS will be in litres and metric units from April 1, 1960.

Another Major step will be taken when the Customs and the Central Excise adopt the Metric System from August, 1960.

CHANGE TO METRIC SYSTEM

FOR SIMPLICITY & UNIFORMITY

WORLD OF FINANCE

Broad Features About Bank Profits for 1959

WITH the release of the working results of the Punjab National Bank for 1959, a fairly comprehensive picture of banking profits during the last year is now available. While the analysis in this respect will be published next week, certain broad features may here be mentioned. The first point to note is that the bigger banks—with one remarkable exception—have generally reported decline in earnings and a reduction in the net dividend received by the shareholder; even the State Bank has reported a fall in profit, and the dividend it is distributing is lower. Secondly, and surprisingly, the smaller banks appear almost uniformly to have done better; and in this category may be included the medium-sized banks as well. Thirdly, snap judgements as to performances in 1959 should be avoided, since it is only the detailed figures of the profit and loss account which will give a clear indication of banks' working in that year. Our own view, fourthly, is that a fair number of banks would have found it necessary to take credit for profit on investment to boost their earnings figures. Fifthly, as a result of the higher deduction of tax on the interest receivable from gilt-edged investments, it is possible that a fair number of banks will be able to show their balance of profit as being clear of any tax liability. Lastly, the published accounts should impel the banking system to take early action about the maxima fixed under the inter-bank agreement in respect of interest that may be paid on Deposits.

It is at this juncture that we may also mention that 1960 has commenced on an extremely heartening note for the banks. Expansion in Advances, though not meteoric, is steady and sustained; prospects are that the industrial demand for funds will be maintained throughout the year. Thus, there is every likelihood that banks' resources will be more profitably utilised in 1960 than has been the case in the last two years. But such a state of affairs, or such an expectation, should not, we emphasise, deter banks from taking concerted action to reduce the charge postulated by what we consider to be a still too high maximum as the interest that may be payable on Deposits.

Meantime, the money market is tight; and the returns for the latest week of both the State Bank and the Scheduled Banks bear testimony to the considerable busy season pressure being experienced.

State Bank Again Buys Gilts from Reserve Bank

THE Reserve Bank returns for January 29 are featureless, though there is evidence of deficit financing. Active note circulation is nominally higher by Rs 0.12 crores at Rs 1767.44 crores. Rupee Coin, however, has returned from circulation for Rs 0.17 crores. With minor adjustments under the head of Rupee Securities, there is practically no change in the Reserve Bank's cash in the till, which is placed at Rs 20.67 crores.

Investments in the Banking Department are shown higher by Rs 4.50 crores at Rs 217.33 crores; and the State Bank is also known to have purchased through the Reserve Bank tap for Rs 5 crores. The inference is, therefore, that deficit financing has been instituted in roughly this amount of Rs 10 crores. However, presumably because the Central Government's disbursements have been on the heavy side, their balances have, despite the created money, moved down by Rs 2.42 crores to Rs 49.78 crores. State Governments may have somewhat benefited from Central Government payments, since their borrowings from the Reserve Bank are shown nearly Rs 2 crores lower at Rs 20.27 crores; but, then, their balances have been drawn on to the tune of nearly Rs 2½ crores from Rs 24.76 crores to Rs 21.27 crores.

The busy season pressure appears nevertheless to have been influencing the situation of the Scheduled Banks. Borrowings against advance bills have again moved up from Rs 3.43 crores to Rs 4.31 crores; the Other Loans and Advances of the Reserve Bank are higher by Rs 2.86 crores at Rs 107.80 crores; on the other hand, the drop in Reserve Balances from Rs 78.36 crores to Rs 73.75 crores is wholly due to the State Bank utilising its balances with the Reserve Bank for purchase of gilt-edged.

It is possible that deficit financing was incurred by Government for meeting the maturing liability in respect of Rs 20 crores odd worth of Treasury Bills purchased and discounted by the Reserve Bank.

Finally, Balances Held Abroad have again declined, though by the nominal amount of Rs 4 lakhs to Rs 43.98 crores.

It may be taken as certain that expansion in currency circulation will prove to be hefty in the next week, since month-early disbursements will be super-imposed upon the normal busy season pressure.

If the Reserve Bank returns for January 29 fail to give any considerable indication of the pressure of the busy season, the statement of the State Bank for the same week does do so in an emphatic manner. The total of Advances has expanded by Rs 5.43 crores to Rs 177.00 crores. Deposits have moved up by Rs 0.90 crores to Rs 593.32 crores. But, since cash was also drawn on for purchase of gilt-edged for some Rs 5 crores from the Reserve Bank, borrowings are shown to have gone up slightly from Rs 2.17 crores to Rs 2.40 crores. It is to be anticipated that a brisker increase in Advances will be registered in the next return of the State Bank, relating as it will to a week when busy season pressure will be aggravated by beginning of the month disbursements; and, unless 'windfall' Deposits come the way of the State Bank, it may also happen that a decline occurs under this head in the next week.

Deposits of Scheduled Banks show promise, in the return for January 22, of presently crossing the Rs 1900 crores mark. In the week under review, a rise of Rs 15.19 crores has been registered, and only Rs 6.74 crores of this can be traced to the State Bank, which takes gross Deposits of Scheduled Banks to Rs 1893.72 crores. The total of Advances has expanded by another Rs 3.65 crores to Rs 1006.73 crores. There is a contra-seasonal increase of Rs 15 crores in Investments, but this is wholly on account of the State Bank. Cash balances have moved up by Rs 1.66 crores to Rs 163.88 crores.

When figures for January 29 are available, a picture can be formed of the first half of the 1959-60 busy season. This will presumably show that the strains thrown up in the current busy season are somewhat more severe than was the case in 1958-59; but the mitigating factor has this time been that the busy season

started out with a low ratio of Advances to Deposits.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 2nd February 1960. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.365 were accepted in full. Total amount accepted was Rs 2,00,00,000; the average rate of accepted tenders being 99.365 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 8th February 1960. Successful tenders should make payment on Friday, the 12th February 1960. Other conditions are as usual.

91 days' Intermediate Treasury Bills will be sold from the 3rd to 6th February 1960 at Rs 99.381 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from the 27th to 30th January 1960 amounted to Rs 2,01,00,000.

Govt. Securities—Payment of Interest

Government Promissory Notes of the following loans (Central and State Governments) interest on which falls due for payment during the months of March and April 1960 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from the 16th February and 16th March 1960 respectively.

Holders of the loans are advised to lodge their securities well in advance of the due dates to facilitate delivery of the securities and interest warrants on the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest on the above loans may be extended to five clear working days.

Economic Aspects of the French Crisis

By Paul Einzig

DEVELOPMENTS in France cast gloom on an otherwise cheerful Britain. On the basis of the progress achieved toward consolidation since General de Gaulle assumed power in 1958, it did seem reasonable to hope that, once more, the world would witness a French miracle such as was staged by M. Poincare in 1926 and was almost staged by M. Reynaud shortly before the war. Confidence in French economy and finance increased considerably during 1959. It was widely assumed that political stability would enable the French Government to achieve financial stability, with a balanced Budget and with a sound currency. The replacement of the inflated monetary unit by the "heavy" franc, worth 100 old francs was a gesture implying that the time has now come to turn a new leaf and eradicate from Frenchmen's mind that memory of inflation and non-stop currency depreciation.

Only a few days ago, the Finance Ministry announced far-reaching relaxations of the exchange control. There is reason to believe that this measure was arranged before the outbreak of the crisis over Algeria, and that it was carried out in spite of the changed situation either through the operation of the law of inertia making for time lags between decision and execution, or as a gesture to show that the Government do not consider the outlook to have changed for the worse. Unfortunately, while, a few weeks ago, a relaxation of the exchange control would have been welcome as a sign of strength, today, many people shake their heads gloomily about the move which would facilitate the flight of capital in case of major trouble.

Whether or not there will be such trouble, it is impossible to foretell. But the events of the last week have shown that the degree of optimism that existed until a week ago about the French outlook was unwarranted. Very few people outside France realised until now the full difficulties of finding a solution for the Algerian problem. Now, all of a sudden, a wave of pessimism is developing about France. The possibility of a civil war, or of a military coup to seize power from de Gaulle, is freely envisaged. Either solution would inevitably give rise to a flight of French capital and to acute distrust in the franc abroad.

At the time of writing, it seems that nothing short of a miracle could prevent the French crisis from developing into a major disaster, or at any rate from causing a major setback in the French economy. While, until recently, the question of the international effects of a wholesale repatriation of privately-owned French dollar balances was subject to much speculation, today, nobody thinks on those terms any longer.

It is an ill wind that brings no one any good. There can be no doubt that pessimism toward the franc has resulted in a revival of confidence in the dollar. Until recently, the possibility of heavy American gold losses that might result from French repatriations caused much concern in Washington, and even in London. Today, that problem no longer exists. Considering that such an outflow would have induced many foreign non-French holders of dollars to follow the French example, the removal of the threat must be viewed with some relief—if only the circumstances of its removal were not so tragic.

On the other hand, the outlook has changed for the worse not only for France but also for the whole of Western Europe and the free world. The French recovery has been one of the most promising features of the situation, not only from a political point of view but also from an economic point of view. There was every reason to expect the whole of Western Europe to benefit economically by the consolidation of the French economy. A prosperous France would mean a prosperous European Common Market. And even the rival group of countries, the European Free Trade Association, would stand to benefit by it, if only because de Gaulle would be in a position to adopt a less intransigent attitude toward collaboration between the Six and the Seven.

The economic recuperating power of the French nation compels admiration. But it stands no chance of prevailing amidst grave political difficulties. If de Gaulle is superseded by a nominee of the Army who does not command the same confidence, the psychological foundations for economic consolidation would cease to exist. And if de Gaulle succeeds in retaining his position with the aid of support from the Left—which is a possibility, since the sympathies of the Right are with the Army—this would generate distrust not only among the wealthy and in the French business community but also among the millions of middle classes. Thus, even in the absence of a civil war, there may be an outflow of French capital, all the more so as the powerful French Communist Party is bound to try to fish in troubled waters.

The American-Canadian attempt to build a bridge between the Common Market and the European Free Trade Association made a good start at the recent Paris meeting, but now no progress can be made until the French situation has cleared up. And if de Gaulle has to make major concession to the Army, he is likely to try to restore his prestige by being even more difficult in international relations than he has been until now.

The outlook is utterly perplexing, and all we can do is to await developments and hope for the best—as much for the free world as a whole as for France itself.

Kerala's Verdict

THE people of Kerala have endorsed by a conventional and constitutional act what they tried to express by an inchoate mass upsurge about a year ago. With four results still to be announced at the time of writing, the Communists have won only 28 seats, against the 65 that they and their sympathisers had in the last election. They have so far lost 27 seats to the Congress, 11 to the PSP and 2 to the Muslim League, while they have wrested two new seats from the Congress and two from independents. The United Front of the Congress, PSP and the Muslim League have so far won 92 seats and the Congress itself has won 61 seats. Polling has been remarkably high, reaching an average of 85 per cent. The next few days will find party leaders busy analysing the results in greater detail, in complacent or, consoling self-justification. The Communists will, for instance, draw such comfort as they can from the fact that they have increased the proportion of the votes polled from 35 per cent in 1957 to 43 per cent. This may even make them fall temporarily in love with the principle of proportional representation. But, by all the normal rules of the parliamentary game, the Communists have suffered a decisive defeat in Kerala.

It is important that the right morals are drawn from this fact, particularly by the constituents of the victorious United Front. Almost the only indisputable conclusion that can be drawn from the results is that Kerala has had, for the time being at any rate, enough of Communism. In other words, the Communists can no longer pretend that the events of last year were the machinations of a group of vested interests. When the interests so vested are as large as reflected by the results of this election, the expression loses the odium attached to it. The vote is decisively anti-Communist; but it is little else. Herein lies the snare for the victors, for, they may be rash enough to read more into results than would be warranted by facts. For instance, they may be tempted to think that it is not so much a defeat of the Communists as a victory for them, which is not the same thing. Particular constituents of the alliance will also do well to bear in mind that the individual successes would not have been so flattering to their self-esteem, if the elections had been a free-for-all. Finally, they should also remember that the elections were fought at deeper (and in some respects, dangerous) levels than that of relative political programmes or performances. In the peculiar circumstances that were responsible for this election, these considerations, normally so important, were strangely irrelevant.

But, then, ideological clashes are exhilarating wine, but hardly human nature's daily food. It will not be possible, therefore to sustain the electorate with pre-election memories or bogeys. It may be hard on politicians, but the electorate will judge them by their performance in practical tasks, though the election itself was won on other considerations.

In a sense, the Kerala election was not a normal democratic election at all. The motives behind the voter's choice were, in detail,

widely different and even contradictory, but they all converged on anti-Communism. Observers have been troubled not only by the negative and uneasy nature of the anti-Communist alliance, but also by the ulterior immediate motivation of the voters. Patterns of loyalties behind the voting have disturbing implications, which are in no way mitigated by the fact that they have their unity in anti-Communism. In themselves, they are corrosive of some of the bases of our democratic ideals. Should these pre-election motivations persist even after the elections, there will be not only awkward movements for the alliance, but also a serious challenge to the stability of a sorely tried state. Kerala has the unenviable reputation of a State that has had the largest number of governments and elections since independence—a rather ironical comment on the unexamined general correlation between literacy and political maturity. Meantime, the basic problems which are economic have had to mark time for the attention they deserve. The Congress and the PSP would do well to recall not only the Communist but also their own past record in the State, which, by all accounts, has not been so resplendent as to make any one assume automatic success for the coalition to

Finance for Third Plan Different Approaches by Businessmen

IT is unfortunate that the organised sector of the business community is unable to speak with one voice on a vital matter like the Third Five Year Plan. Last September, the Federation of Indian Chambers of Commerce & Industry brought out a brochure giving a tentative outline of the Third Five Year Plan. At that time, it was believed that the Federation's approach was endorsed by important sections of businessmen all over the country. But the seminar on planning, which the Federation organised in November, revealed, for the first time, the existence of strong differences of opinion among businessmen regarding the approach to the next plan. The differences are now widely made known with the publication last month by the Indian Merchants' Chamber, Bombay, of its memorandum submitted to the Planning Commission. The Chamber is one of the most respected commercial organisations of Western India, and it is therefore important to understand where it differs from the Federation and why.

Both the Federation and the Chamber have agreed on the need to accelerate the country's economic development and to raise the living standards of the people as rapidly as possible. Both have also urged the need to give the maximum incentive to the private sector and to effect the necessary changes in fiscal policy with a view to promoting savings and investment. The difference between them relates mainly to the size of the Third Five Year Plan.

The Federation holds that an investment of Rs 10,000 crores during the next phase of

come. Understandably, the coming weeks will be devoted to not very edifying attempts to share the fruits of victory. Admittedly, the United Front was a marriage de convenience, but arranged marriages have often proved successes. There is no reason why the United Front should come off at the seams, provided the leaders of the constituent units show the necessary self-abnegation in common interest and address themselves to the real tasks of improving the lot of the people. They will, no doubt, have a trying time, what with having to keep under control the more clamorous of their own followers and to meet Communist-inspired difficulties. But they have one great advantage in the fact that the Communists have been decisively disowned by the people, and the masses are willing to give them a fair try. The one temptation that they should avoid is to be merely popular, without attempting to deal with basic problems in a practical and realistic way. Above all, they should establish a reputation for personal integrity and administrative purity, which will win half their battle. The fact that the general elections are only so far away from the corner as to give them a chance to prove their mettle is a sobering thought.

planning is necessary to produce an appreciable impact on the living conditions of the people in a short period. The net investment of Rs 10,000 crores will mean an overall investment outlay of around Rs 11,000 crores to Rs 12,000 crores. The Federation has, however, pointed out that capital formation of this order is possible only "if certain conditions of economic policy and administration are satisfied".

The Indian Merchants Chamber, on the other hand, argues that, on the present resources position and under the conditions that exist today, the economy does not show any response to the building up of resources of more than Rs 7,500 crores without the strain which has been experienced in the Second Five Year Plan. However, it may be possible to project the size of the Plan to a higher figure of Rs 8,500 crores, provided the appropriate policies are followed to encourage capital formation. We shall now consider some of these differences in detail.

The Federation has estimated that the finances for the public sector may be raised in the following manner:

	(Rs crores)
Surplus from current revenue	900
Surplus from Railways	500
Borrowings and small savings	900
Other Capital Receipts	175
Profits of other State enterprises	375
External earnings and assistance	1,550
Deficit Financing	1,100
Total	5,500

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in Hong Kong with Limited Liability)

Head Office: HONG KONG

Chairman and Chief Manager: The Hon. MICHAEL W. TURNER, C.B.E.

Deputy Chief Manager: G. O. W. STEWART

London Office: 9, Gracechurch Street, E.C.3.

Capital Authorised ... Hong Kong \$ 100,000,000
Capital Issued and Fully Paid up ... Hong Kong \$ 62,311,375
Reserve Fund ... Sterling £ 8,000,000

Banking and Exchange Business of every description transacted with the principal commercial centres of the world.

A comprehensive service as Trustees and Executors is also undertaken by the Bank's Trustee Companies in Hong Kong, London, and Singapore.

16, Veer Nariman Road, Fort Bombay-1
Manager: P. R. BURCH

31, Dalhousie Square Calcutta-1
Manager: S. P. T. B. LEVER

In arriving at this figure, the Federation has assumed "a flexible tax policy for attracting resources and a more active conception of the role of public enterprises. Under this policy, the rates of taxation on both companies and individuals will be appreciably reduced without detriment to the exchequer".

The Chamber's estimate of finance for the public sector for a plan of Rs 8,500 crores is as follows:

	(Rs crores)
I. Domestic Budgetary Resources:	
(i) Balance from current revenues (at existing levels of taxation) 1,000	
(ii) Railways' contribution .. 350	
(iii) Loans from the public (net) and small savings .. 1,400	
(iv) Profits of State enterprises .. 200	
(v) Miscellaneous capital receipts .. 50	
II. External assistance (net) .. 2,400	
III. Deficit financing	
Total .. 5,400	

It will be seen that, so far as the balance from current revenues is concerned, there is not much difference between the two approaches. As regards the railways' contribution, the Federation estimates it at Rs 500 crores while the Chamber puts it at Rs 350 crores. The Chamber's comments on this aspect are worth quoting:

"The contribution of the Railways to the depreciation reserve has remained constant while there has been a significant increase in additional investments. It is a matter for careful investigation and examination whether the revenue surplus from the Railways is a real surplus or is merely in the nature of a book entry. However, there is need for a review of the present position in regard to the finances of the Railways so as to ensure increasing surplus being made available for Plan projects".

With regard to borrowings and small savings, there is wide difference between the two, the Federation placing the figure at Rs 900 crores and the Chamber at Rs 1,400 crores. According to the Federation, it is desirable for a healthy development of the money market that it should not be dominated by Government borrowings which at present absorb most of the available funds; the Chamber says that "it would not be reasonable to project beyond Rs 1,400 crores".

From the profits of State enterprises the Federation estimates that it would be possible to obtain about Rs 375 crores. But the Chamber considers that it would not be possible to obtain more than Rs 100 to Rs 200 crores from this source during the Third Plan. The Chamber asserts that the performance of the Government undertaking "does not encourage any improvement in the efficient working of the same, and therefore, sizeable profits being made available for further investment."

In the sphere of external finance, the Federation and the Chamber estimates the resources at Rs 1,550 crores and Rs 2,400 crores respectively. Both of them, however, emphasize the need for creating favourable conditions within the country for the participation of foreign private capital in Indian industries.

On the question of deficit financing, the organisations differ widely. The Federation says:

"We have suggested that deficit financing should be made at the rate of about Rs 220 crores per annum. This rate will not be higher than the average annual deficit financing conducted in the last two years of the Second Plan. We feel that it should be possible to maintain this rate without incurring risk of any runaway inflationary

situation; in fact, this deficit financing should be a constructive method to deal with the larger problems of unemployment and under-employment during the Third Plan."

The Chamber, however, has completely ruled out deficit financing. It observes:

"Deficit financing has exerted itself to the full on the economy and there is very little scope to this source of financing, if further increases in prices are to be avoided and inflationary pressures kept under manageable control. In the absence of foreign exchange reserves which ran down to the lowest post-war level at Rs 177.8 crores as on July 21, 1959, in the view of the Committee, the possibility of suggesting the use of deficit financing for fixed investment is completely ruled out for the Third Plan. The Committee, however, add that credit creation through the banking system should be permitted to provide the increasing requirements of working capital. This should be considered safe and feasible in a process of development."

For the corporate private sector, the Federation's plan envisages an investment of Rs 3,000 crores to be financed as follows:

	(Rs crores)
New Issues .. 500	
Retained Profits, Reserves and other Savings .. 1,000	
Commercial Banks and Refinance Corporation .. 600	

Should Conditions of Service be Standardised?

By M. SUR

SHOULD we aim at standardised conditions of service throughout the country? This is a question that springs to mind on studying a recent Supreme Court decision in the case of Dunlop Rubber Company (India) Ltd., which upheld the principle followed by the industrial courts that adjudication should be on "an industry-cum-region basis".

Central legislation has standardised working conditions through the Factories Act, and industrial relations machinery through the Industrial Disputes Act; it has laid down standard conditions governing retrenchment and lay-off throughout the country, and required standing orders which on the whole follow the Central Model, though there are some variations in State Rules. But when it comes to service conditions, such as remuneration and superannuation, then there is no standard. Industrial courts have brought about some degree of standardisation of pay within a local industry or between industries within an industrial region, but there has been no attempt at national standardisation, and for the obvious reason that the standard of living and cost of living vary widely from one region to another. All attempts to consider a national minimum wage have foundered on the same rock: Government service, by means of varying allowances, recognises these regional variations. Presumably, it will take a very long time before conditions in the different regions become sufficiently uniform to admit of national wage rates.

That this creates problems for the all-India industrial organisation is admitted. Said the Supreme Court:

"There is no doubt that in the case of an all-India concern it would be advisable to have uniform conditions of service throughout India and if uniform conditions prevail in any such concern they should not be lightly changed".

Indian Finance

	(Rs crores)
Government Finance Corporations and other Institutions .. 175	
Investment Corporations and Unit Trusts .. 25	
Foreign Loans and Investments .. 300	
Other Credits and Mortgages .. 400	
Total .. 3,000	

The Chamber is firmly of the view that an investment of Rs 3,000 crores in the private sector is impossible. If, however, suitable changes are made in fiscal and monetary policy, it is perhaps possible to have an investment of Rs 2,000 crores to be financed as follows:

	(Rs crores)
Paid-up Capital New Issues .. 300	
Retained profits, reserves and other savings .. 600	
Borrowings—Commercial Banks and Finance Corporation .. 500	
State Finance Corporations .. 150	
Foreign loans and investments .. 150	
Other credits and mortgages .. 300	
Total .. 2,000	

Such, then, are the broad differences between the Federation of Indian Chambers of Commerce & Industry and the Indian Merchants' Chamber in their approach to the Third Five Year Plan.

But Their Lordships went on to say:

"However desirable uniformity may be in the case of all-India concerns, the tribunal cannot abstain from seeing that fair conditions of service prevail in the industry with which it is concerned. If therefore any scheme, which may be uniformly in force throughout India in the case of an all-India concern, appears to be unfair and not in accord with the prevailing (regional) conditions... it would be the duty of the tribunal to make changes in the scheme irrespective of the fact that the demand is made by only a small minority of the workmen employed in one place out of the many where the all-India concern carries on business."

The Supreme Court therefore upheld the tribunal's changes in the retirement and gratuity scheme for Dunlop employees in the Bombay Branch, although they had been covered hitherto by a scheme of all-India application, and although they represented only small minority of the total number of employees.

This decision has a double-edged effect. Obviously, the company had been anxious to maintain standard terms of service throughout India, and must be disappointed in the result. On the other hand, in many all-India concerns, where there have hitherto been variations in terms between one branch and another, trade unions have been agitating to raise the conditions in the lower level region to the standard of the higher level region, and they, too, will be disappointed.

Now, whilst it seems obvious that, for the present, we must accept this regional variation so far as remuneration is concerned, are we not making a mistake in extending it to

*Labour Law Journal, Dec. 1959, p. 628.

other conditions of service, such as retirement terms? A man grows old at the same rate, wherever he may be, and his responsibilities for his dependents do not vary regionally. Is there then any justification for retiring an employee in one region at the age of 55 and in another at the age of 60? Similarly, since gratuity is calculated always in terms of a percentage of basic pay, regional variations in the cost of living are taken care of, where is the justification for paying a gratuity of half a month's basic pay for each year of service to staff in one region and three-quarters of a month's basic pay to staff in another region? There appears to be little logic in this; yet, on the basis of the "industry-cum-region" principle, this is what has been confirmed by the Supreme Court in the case of Dunlop clerical staff.

In Indian Finance of January 16, certain complications about the age of retirement arising out of tribunal awards (although not this particular one) were discussed, and it was mentioned that the Government of Bombay had put the age of retirement at 58 in its Model Standing Orders. The tribunal, in the case of the Dunlop Rubber Company, found that the retirement age was fixed between 55 and 60 years in various concerns in Bombay and was of opinion that 55 years was too low an age for retirement of clerical staff and that the trend in all the awards in recent times had been to fix it at 60 years. With the clerical staff are included certain supervisory and technical staff coming within the salary limit of Rs 500 set by the Industrial Disputes Act. Now, while clerical staff are seldom transferred from one region to another (although this is not unknown), supervisory and technical staff, sales staff and others may be so transferred. This award has the effect that a man due to retire at 55 in Calcutta may, on transfer to Bombay, find that the length of his working life has been increased to 60—or will he? Will some other tribunal find that his conditions of service are still governed by Calcutta conditions? Whichever way the decision goes, it will cause heart-burning.

Future Steel Demand

THE National Council's study* of future steel demand in the country adds a new dimension to the current debate on the content and the size of the Third Plan. Its publication, happily synchronising with the visit to this country of the Steel delegation from the United States, which is reportedly interested in building the fourth public sector steel plant at Bokaro, is not only bound to sustain public interest in the steel target in particular but to advance the chances of creating as much new capacity as possible for steel while the going in terms of foreign assistance is good. And it may even be that a higher Third Plan target for finished steel than what the National Council's estimated demand at 7.2 million tons suggests will come to be canvassed inasmuch as the defence potential of the steel industry, which is basic to a number of other heavy industries, is expected to command greater consideration at the hands of planners than it did before the Sino-Indian border dispute came to the fore. Any fear of

*Steel Demand Appraisal: A study carried out last year by the National Council of Applied Economic Research on behalf of the Council of Scientific and Industrial Research. A Government-appointed expert committee with Dr P. S. Lokanathan as Chairman, representatives of the Ministries of Steel and Commerce & Industry and of the main steel producers in the country as members and Dr B. Natarajan as Member-Secretary was in charge of the study. Dr A. K. Mukherji of the National Council was principally responsible for the study proper.

Surely, it is possible to decide on an all-India basis what the normal age of retirement should be for a particular type of job. In this case, only clerks and supervisory staff were concerned; other workmen were left with a retirement age of 55. The tribunal and the Supreme Court both held that 55 was too low an age for retirement for clerks—and this apparently had no reference to the climatic conditions of Bombay or Calcutta, but was a decision arrived at in relation to the type of work required of clerks in general. The recent Pay Commission also had the feeling that 55 was too low an age for retirement of Government employees. They suggested 58 years, but the Central Government rejected this recommendation on the ground that it would have an adverse effect on employment opportunities, and might lead to the retention of inefficient people beyond the age of 55. The Supreme Court has no such doubts, apparently. To whom is industry to look for guidance in this matter—the Central Government, the State Government, or the Supreme Court?

Closure of Business:

Section 25FFF of the Industrial Disputes Act lays down that where closure of a business is on account of "unavoidable circumstances beyond the control of the employer", retrenchment compensation should not exceed average pay for three months. The words "unavoidable circumstances beyond the control of the employer" came up for interpretation in the Calcutta High Court last week in the case of Bhattacharya Rubber Works Ltd., which had gone into liquidation. The High Court held that no extraordinary effort to keep the establishment open was required of the employer, who must confine himself to what a reasonable man in normal circumstances might be called upon to do. It must be remembered, however, that, by an explanation in the Act, the phrase "unavoidable circumstances" does not include closure "by reason merely of financial difficulties (including financial losses) or accumulation of undisposed of stocks."

a possible distortion of the goals of the Third Plan by an "ambitious" steel target may also be readily discounted because the existing plants, too, can be easily expanded at a relatively small capital cost.

If, thus, the likely increase in the steel requirements of defence industries is fully taken into account, it would appear that the Council's estimate of steel demand by 1965-68 is rather on the low side. This inference is suggested by the following figures which do not specifically cover the consuming sector of "defence and defence industries":

NCAER'S Estimate of Steel Demand by Consuming Sectors.				
(In '000 tons)				
Consuming Sector	1960-61	1965-68	1970-71	
1. Transport and Communications .. 772	1,515	1,993		
2. Large and Medium Industries .. 1,571	3,599	7,970		
3. Small Scale Industries .. 300	450	800		
4. Housing & Construction .. 107	268	379		
5. Power Projects .. 158	221	208		
6. Irrigation Projects .. 320	435	610		
7. Agriculture .. 35	50	75		
8. Others				
Grand Total .. 3,613	7,168	12,856		

It may not, however, be possible to figure out the additional steel requirements of the "defence and defence industries" sector. Whatever they be, there can at least be no doubt that the consequential gap between estimated production at full capacity of exist-

ing plants and expected higher demand will be somewhat wider than the Council's estimate of 2.6 million tons emerging from the following figures:

Categories	Estimated Production at full capacity of existing plants	Estimated demand NCAER 1965-68	(+ or -)
1. Heavy structurals .. 584	524	+ 60	
2. Light structurals .. 600	616	- 16	
3. Rails & fishplates .. 345	700	- 355	
4. Sleeper bars, etc. .. 156	215	- 59	
5. Tinplates .. 150	190	- 40	
6. Sheets .. 740	1,050	- 310	
7. Plates .. 300	666	- 366	
8. Bars and Rods .. 1,305	2,229	- 924	
9. Wire .. 55	212	- 157	
10. Tools and Alloy Steel .. 69	276	- 207	
11. Wheels, tyres and axles .. 70	80	- 10	
12. Skelp .. 168	330	- 162	
13. Hoops and strips .. 28	80	- 52	
Total .. 4,570	7,168	2,598	

Since the Council's study has taken into account the possibility of the fourth public sector steel plant being able to turn out finished steel by the end of the Third Plan and since the expansion of the Bhilai plant is a certainty, the balance of the gap of 2.6 million tons may not be of such magnitude as to call for the expansion of, possibly, more than one existing steel plant. Where the gap is conceivably wider, it should be possible to cover it fully by expanding the other existing plants, preferably in the private sector in the first instance so as to maintain a continuing balance between the two sectors. If the National Council has made no such suggestion, it is because its study is objectively concerned more with the appraisal of steel demand than with its supply or with the ways and means of ensuring that supply.

It is, therefore, as a demand appraisal study that its value would need to be judged. What is noteworthy here is that the appraisal of steel demand has been made in the most scientific manner possible. By combining the "end-uses method" (which generally gives the most reliable estimate of demand for a basic commodity like steel) with the "national estimates method", the Council's study has arrived at estimates which are manifestly dependable for the broad purposes of planning. If the study has not adopted the "trend method" of estimation fully, it is because "it is not valid to project the demand solely on the basis of the past trends, when the base of steel production and consumption had been as narrow as it was in the past in India, and when large investment is contemplated in establishing a solid base for the industrialisation of the country and in increasing the output of the steel consuming industries."

Estimated Requirements of Categories of Finished Steel in 1960-61, 1965-66 & 1970-71.

Categories	1960-61	1965-66	1970-71
		(In '000	Tons)
1. Heavy Structural	270	524	874
2. Light Structural	330	616	1,202
3. Rails & Fishplates	311	700	931
4. Sleepers and Sleeper Bars	98	215	249
5. Tinplates	140	190	243
6. Sheets	582	1,050	2,335
7. Plates	300	666	1,274
8. Bars & Rods	1,092	2,229	4,066
9. Wire and Wire Products	126	212	346
10. Special Steel (including Tool and Alloy Steel)	107	276	514
11. Skelp	168	330	590
12. Wheels, Tyres and Axles	49	80	112
13. Hoops & Strips	40	80	120
Total	3,613	7,168	12,856

Pragmatic Socialism

The country is indebted to the Union Finance Minister for a new concept to serve as the directive principle of economic planning. The economic policy pursued by the Government with its emphasis on the Socialistic pattern has been increasingly assailed both on the ideological plane as well as on the level of practical action. Since India seeks to follow the West in economic development, attention has been naturally drawn to current trends in the industrialised nations of the West which indicate an unmistakable retreat from orthodox concepts of Socialism. A pointed reference to these developments was made in the Presidential address of Mr K. J. Cleetus to the annual meeting of the Indian Electrical Manufacturers' Association, which was inaugurated by the Union Finance Minister. Mr Morarji Desai was on strong ground when he advised Indian industrialists not to press the theme too hard. Socialist programmes have become out of date in West, because the aims for which they stood which have relevance for the common man have been realised as the by-product of increased prosperity. But, in India, where the per capita income after eight years of planning is still less than Rs 300 a year, and where glaring inequalities persist

in spite of rates of taxation which are the highest in the world, it would not be realistic to suppose that socialistic ideas had lost their revolutionary impulse. Mr Desai, therefore, recommended his audience of businessmen to take a pragmatic view on Socialism.

The term pragmatic socialism can open up a fascinating vista of ideological speculation on its implications. But Mr Desai left no room for doubt about what he actually meant. In all policies, the interest of the common man should be the main guiding factor. If this was conceded, the area of controversy would be narrowed and discussions can therefore be more purposive. It should then be possible to ensure that the practical difficulties of manufacturers, to which Mr Cleetus had referred in his address, would receive more effective attention than Mr Desai could possibly give in an extempore address.

Mr Cleetus had referred in particular to the difficulties on account of shortages of essential raw materials, fuel and power. A large programme for increase in the output of steel, power and oil will not be particularly helpful, unless the requirements of industry are taken into account in working out the details of the programmes. While the climate for foreign investment has no doubt improved, there is still room for speeding up the processing of proposals for foreign technical collaboration. A pragmatic approach implies greater attention to practical details than to doctrinaire considerations. And if Government policy is guided by this principle, as desired by Mr Desai, many of the difficulties experienced by industrialists should be automatically eliminated.

Hasty Legislation

The All India Businessmen's Convention served as a powerful sounding board for broadcasting the views of the business community on the systems of taxation and controls obtaining in this country. That these often result in needless vexation and harassment is not in dispute. But the general approach so far has been one of helplessness, both on the part of the authorities as well as of the victims of their policies. The elimination of the hardships experienced by businessmen would be feasible if the underlying causes were clearly understood. The role of hasty legislation in creating needless difficulties for businessmen was spotlighted by Dr A. Ramaswami Mudaliar on the second day of the Convention. He gave effective expression to the widespread feeling that the pace at which legislation is being enacted did not allow sufficient time for careful examination of the drafts of the bills in relation to existing laws. The result was more work for the courts which,

Dr Mudaliar said, were "completely confused by this plethora of laws which they try to adjust as far as possible". The difficulties are further aggravated by the tendency to keep the accredited organisations of businessmen at a distance. Lack of precision in laws was responsible to a large extent for procedural delays. This, as Dr Mudaliar shrewdly pointed out, was one of the reasons why industrialists and businessmen have to station permanent liaison officers in Delhi for "tracing files that pass from one person to another".

Voroshilov in Calcutta

If the welcome accorded to President Voroshilov and his party was less hysterical than the one accorded to an earlier visit of Soviet leaders, it was nonetheless heart-warming and should have given the visitors an insight into the mind of the Indian people. The visitors have come to Calcutta on the last lap of their Indian tour. At all places visited by them, two themes have been emphasised in the addresses of Marshall Voroshilov and his companion, Deputy Premier F. R. Kozlov, namely, disarmament and economic co-operation. On both these issues, they can be sure of the enthusiastic support of the Indian people. There is great appreciation in this country of the very fruitful assistance rendered by the USSR for economic development which is symbolised by the steel plant at Bhilai. Other big projects, made possible by Soviet assistance, are also coming up at Durgapur and at Hatia in Bihar. It is also confidently expected that economic cooperation between the two countries will increase during the Third plan period. It will be noticed that the welcome accorded to our guests cuts across party lines. The visitors also should have no reason to think that the cordiality of the welcome they have received in Calcutta, as in other parts of the country, had anything to do with ideological affiliations.

Friendship Reinforced

The visit of Nepal's Premier, which coincided with the Republic Day, has induced a new awareness in this country of our northern neighbour. The joint communique emphasises the close friendship and the community of culture and outlook subsisting between Nepal and India. In fact, the traditional bonds of culture which bind the two countries together has itself, on occasions, been the source of misunderstandings. For, it is not always easy to keep in mind that Nepalis are not Indians but are the citizens of an independent country jealous of its sovereignty. The greater, therefore, should be the satisfaction that the joint communique, issued by the Prime Ministers of the two countries, has reiterated

that "Nepal and India have a united interest in each other's freedom, integrity, security and progress and that the two Governments should maintain close consultation in matters of common interest."

The joint communique also refers to the new treaty of trade and commerce that would replace the existing one which would expire in April. The expansion of trade, for which the treaty can create favourable conditions, depends ultimately on the economic development of Nepal. It is a matter of considerable satisfaction that, in spite of pressing demands for development at home, Government of India have found it possible to afford financial assistance to Nepal's development programmes to the extent of Rs 14 crores, in addition to undertaking construction of the East Kosi Canal at a cost of about Rs 4 crores. It is only in the fitness of things that the new treaty should also provide for separation of Nepal's foreign exchange account and the regulation of Nepal's foreign trade by the Nepal Government.

While in Madras, President Voroshilov recalled Russia's own backwardness forty years ago and expressed sympathy with India's difficulties in forging ahead. He was, of course, pleased at India getting rid of the "yoke" of imperialism, and was all praise for the post-Independent record of the Indian Government and their foreign policy. It was interesting to hear from him that Russian aid was without "strings", in that the USSR did not stipulate the conditions whereunder that assistance could be used.

FOREIGN NOTES

US Capital Expenditure

THE resurgence of capital expenditures by business is among the factors most often cited as supporting the anticipated record level of United States economic activity in 1960, and evidence of the strong upturn in these expenditures continues to mount steadily.

The most recent, and so far this year the most significant, evidence is found in reports by two leading private business groups in the United States. The National Constructors Association, an organization of industrial builders, notes "a definite pickup" of activity plant design and planning by American businessmen in a wide range of industries, pointing to a broad-based "upturn in industrial construction." The American Iron and Steel Institute, one of the nation's leading trade associations, reports plans for a sharp expansion in capital spending this year by companies in the industry it represents—certainly, one of the key industries in the economy.

Thus, it appears that the revival in business outlays for net plant and equipment, which rose only moderately last year after a relatively sharp 1958 dip, is gathering momentum. This would in line with normal past experience, since these outlays often show a stronger than expected rise during periods of vigorous economic growth, as at present.

A rundown by the newspaper 'Journal of Commerce', reflecting the opinions of executives in the construction industry, turns up a number of interesting reasons for the high level of plant and equipment spending by American companies. First, and probably most important, is the high level of general business activity and the rising demand for goods. This trend seems to be encouraging company officials to go ahead with expansion and modernization moves.

Second, is the need to make up for the lag in capital spending of the past few years. Third, competition for business is expected to remain keen, with consequent pressure to keep costs down and productivity up. One of the most efficacious means of accomplishing these ends is through the building of new and better plants and the modernization of existing facilities.

Finally, the recent settlement of the steel labour-management dispute appears to be laying the basis for uninterrupted production by American steel mills for the next

two years. This should result in adequate supplies of that key material which is basic to construction and to many other industries.

One adverse factor that may have to be dealt with during 1960 is the high cost of raising money. But this is not expected to be a major obstacle to capital investment if the need for facilities is strong enough. Moreover, much of the money to finance new plants and equipment normally comes from internal rather than external sources, largely from retained earnings.

The National Constructors Association, whose members build such facilities as power plants, chemical plants, petroleum refineries and steel mills, notes that its clients are doing a lot more talking about expanding and modernizing, and are signing more contracts for these purposes, more than they were at this time last year.

While it takes some time to translate engineering work into construction, a significant upturn in actual building, according to the association, should be well under way later this year.

It is interesting to note, incidentally, that the new work for association members is coming from foreign as well as American companies—further indication of the international character of the current economic rise.

The importance of the capital investment rise to the construction industry and the US economy as a whole also is seen in the fact that the increased outlays for new facilities will more than offset an anticipated dip in housing, which constitutes the largest single segment of the construction industry.

The Department of Commerce expects construction expenditures in the United States to reach \$55,300 million this year, about two per cent above the 1959 level, despite the housing dip.

Steel modernization and expansion evidently will be playing a big part in the upthrust of capital investment. The latest figures of the American Iron and Steel Institute, now indicate that in 1960 iron and steel companies in the United States will be spending a near-record \$1,600 million for new plant and equipment. This outlay would be \$640 million larger than the 1959 spending, and only \$150 million below the record annual total spent during 1957.

Through the 14 post World War II years of 1946-49, inclusive, American iron and steel companies spent a grand total of more than \$12,000 million to build up the efficiency and expand the productive capacity of that industry. During that time, US steel-making capacity grew from less than 92 million short tons a year (one short ton equals 0.91 metric tons) to nearly 148 million short tons a year, a total gain of about 56 million tons or 60 per cent.

Now, the industry's projected 1960 spending on plant and equipment would bring the capital investment

vestment total to \$13,700 million for a 15-year period, assuring a further significant advance in the steel-making potential of the United States.

Sino-Burmese Agreement

The Sino-Burmese border agreement, which has been reached with surprising expedition, is satisfactory in so far as it lays down firm principles for the delimitation of a disputed frontier. Settlement has been reached on the basis of the recognition of the customary frontier between the two countries, which follows the watersheds of rivers specified in the agreement, except for certain small tracts where adjustments have been made on the basis of mutual accommodation. The Chinese claim to the three villages on the Kachin border, which are to be handed over to China, had already been conceded by U Nu in 1956. On the other hand, China has agreed to turn over to Burma a tract of land which had been leased to Burma under a convention entered into with the British in 1897, in return for areas under the jurisdiction of the Panlung and Panlao tribes on the border of the Wa State. The cession of the Namwin tract is a valuable gain for Burma as the existing road link with Shan states passes through this area. The basis of the settlement agreed to in principle appears to be more favourable to Burma than what the former Burmese Government would have been prepared to accept. This must have been one of the reasons that prompted Premier Ne Win to speed up the settlement on the eve of general elections in Burma.

It is obvious that the continuing dispute over the Indo-Tibetan border has provided the incentive to China to straighten its relations with its other neighbours in South East Asia, forestalling any possible hostile grouping of countries in this region which are apprehensive of Chinese expansionism. The fact that the border agreement is accompanied by a treaty of non-aggression leaves no room for doubts on this point.

The dispute over China's border with Burma has been settled on the basis of principles which India has all along been suggesting should be adopted in delimiting the border, that is to say, the recognition of the customary frontier along the water sheds, with minor adjustments of disputed points. There would have been no dispute over the Sino-Indian border, if China had been prepared to abide by this principle, not to speak of Panch Sheel, which has been reiterated in the Sino-Burmese agreement. Can we assume on the basis of the record, that the Chinese would be as reasonable over the frontier dispute with India as they found expedient in negotiations over the Sino-Burmese frontier?

IDA: Before the Year end

The International Development Agency, the brain-child of President

Eisenhower, has grown with reassuring rapidity, strengthening the hope that it may, yet prove an effective instrument for accelerating the economic development of underdeveloped countries. This faith, it may be conceded, was at a very low ebb when the last UN, Assembly approved the proposal in a rather attenuated form. The hesitant approach of the countries of Western Europe raised doubts whether the institution would be able to serve the purpose for which it was intended. Though these have not been completely dispelled, it is gratifying to note that the blue-print for the organisation has been drawn up with remarkable rapidity and, barring unexpected delays, the IDA should be launched before the end of the year.

The Articles of Agreement, along with a commentary by the Executive Directors of the World Bank, have been sent out to the 68 member Governments of the Bank. The IDA will become "formed" when Governments, whose subscriptions aggregate at least 65 per cent of the total initial subscriptions, have accepted membership, but not earlier than September 15, 1960. The IDA will supplement the services provided by the World Bank, by providing finance to meet important development requirements of less developed areas of the world "on terms which are more flexible and bear less heavily on balance of payments than those of conventional loans".

Membership is open to members of the World Bank, who will raise the proposed initial resources of \$1,000 million through subscriptions proportionate to their subscriptions to the World Bank's capital. A distinction has been made between the seventeen industrialised countries which are members of the Bank, and the remaining fifty-one countries, in the matter of payment of their initial subscriptions. Whereas the former will pay their total subscription in five equal instalments in gold or freely convertible currencies, the 51 less developed countries will pay 90 per cent in their national currencies, which the IDA will not be able to convert into other currencies without the consent of the countries concerned, and only 10 per cent in gold or freely convertible currencies. This concession will relieve to a great extent the strain on the second group of countries in finding resources for the initial capital of the institution.

The Articles allow considerable latitude as regards the terms and purposes of financial assistance that may be granted by the IDA. The IDA is authorised to finance any project of a developmental nature, whether or not it is remunerative or directly productive. This will put the IDA in a position to help in building the economic infra-structure, for lack of which industrial development is held up in many parts of the world. The flexibility of operations indicated by the Articles should make the IDA an important addition to international financial agencies and mark it out as an effective channel for international aid programmes.

Human Capital and National Wealth

Speaking at Bhopal, Mrs Tara-keswari Sinha, Union Deputy Minister for Finance, underlined the importance of "human capital" for economic development. Of this, no better evidence exists than the impressive contribution being made by human capital to the national wealth of USA, the most highly mechanised economy in the world. Against 10 per cent, which is claimed to be the contribution of machines, the share of human capital in the national wealth of that country is estimated at 90 per cent. Even as the economic prosperity of the USA reflects the efficient utilisation of human resources, the economic backwardness of India is a reflection of the superabundance of unproductive labour engaged in agriculture. Progress in development calls for diversion of this surplus agricultural population through the creation of channels of productive enterprise.

This inevitably raises the question of accelerating capital formation, which provides the only basis for new economic activity. As Mrs Sinha pointed out, capital formation involves two stages—(1) the accumulation of savings of the people, which represented the surplus of current production over current consumption and (2) the savings being pooled by requisite institutions for their investment in the national economy. In so far as capital formation has been hindered by lack of appropriate institutional agencies for mobilising the savings of the people, the setting up of such agencies should provide more funds for development. However, the scope for stepping up capital formation in this way is very limited, since a low margin of savings is the characteristic feature of such economies. In our country itself, the margin of savings at present is, according to Mrs Sinha, less than 8 per cent, while the minimum margin considered necessary for reaching an advanced stage is 15 per cent.

Mrs Sinha has prescribed diversification of production on the basis of smaller and larger units. For absorbing the surplus productive labour force, the importance of small and labour-intensive units of production should be obvious.

Planning in Under-Developed Economy

Planning for economic development has now come to be accepted

as the only way to quicken the pace of progress, at least in under-developed countries. Faced with a huge backlog of development work and the new-found urge for a rapid improvement in the standard of living of its teeming millions, the underdeveloped countries are gravely handicapped for want of modern machines and the technical know-how, which alone can help utilise the available indigenous resources. We in India have come up against similar obstacles during the current plan period. It has been forcefully brought home to us that ambitious development plans in our country, for some time to come at least, will have to depend on the availability of large amounts of foreign exchange. The crux of the problems that are facing our planners is how to reconcile the need for a rapid industrial development with the acute stringency in our foreign exchange resources.

The difficulties encountered during the Second Plan have led to the demand for what is called a pragmatic approach to planning. That there are other equally valid approaches to the problems of planning in an underdeveloped country has been shown the other day in Patna. Speaking at a college symposium on "Planning in Mixed Economy", Dr B. R. Misra has indicated that allocations of resources in planned development in an underdeveloped economy can be divided into three main heads, which he terms as overheads—the economic overheads, social overheads and borderline overheads. Economic overheads are those which, on fruition, begin to yield profits in the shape of increased production. Social overheads comprise the projects for the development of education and other allied subjects which, while quite essential to the community, take a long time to yield results. The borderline overheads may fall either into the one or the other of the categories. Transport falls under this category, and Dr Misra says that transport, when it directly helps the economic overheads, will be included in this category; but such of those transport developments as merely add to the convenience of people will have to be tagged on to the social overheads. It would appear therefore that, if the main objective is rapid economic development, there can be no question as to the priorities in allotment among the three sectors. He has illustrated his thesis by pointing out that, if the effect of planning has been slow in reflecting in the economy, it is because the allocations have not been made with a view to attaining an optimum economic growth.

Slow Progress of Small Industries

The report of the Small-scale Industries Board, which was published last week, makes disappointing reading in so far as it has revealed unsatisfactory progress in

the implementation of Second Plan schemes during 1959. Madras, Uttar Pradesh and West Bengal were the only exceptions and, in these States, encouraging work in connection with organisation of industrial estates, marketing emporia and servicing centres is reported.

This gap in performance is particularly deplorable, considering that the financial assistance to small-scale industries is reported to have been considerably enlarged through various agencies. Larger disbursements have been claimed by all important channelling agencies such as State Governments, State Financial Corporations and the State Bank. The amounts disbursed by the State Governments and the State Bank are put down at Rs 7.8 crores and Rs 4 crores respectively. In the face of such increased disbursements, lagging progress in implementation could only point to lack of concern and enthusiasm on the part of the Government in the matter of small-scale industries development.

In so far as shortage of raw materials has hindered progress, it is necessary to ensure adequate supplies. That the position continues to be unsatisfactory is evident from the report. Shortage has been reported in respect of essential items such as iron, steel, copper, zinc, and basic and heavy chemicals.

Against such unsatisfactory facets of progress, the report has also revealed other encouraging developments, which include setting up of model schemes, opening of training centres, preparation of distribution-aid centres etc. These schemes, together with the initiation of the intensive campaign for developing small-scale industries in the backward areas, should provide the impetus for the rapid development of the small-scale sector.

Jan Sangh's Growth

The Nagpur Convention of the Jan Sangh held last week marks the completion of 8 years since the party was formed. It was evident from the report of the Secretary that, notwithstanding the stigma of communalism with which it was born, the party has gained in strength and popularity. The report points to rise in membership and notable successes achieved in civic elections in the Northern States of Uttar Pradesh, Madhya Pradesh, Rajasthan and Punjab. Though without a large following in the South, in the course of the last 8 years, it has grown to become one of the four major national parties in the country.

The resolution passed at the conference underlined the difference between the policies and programmes of the Jan Sangh and those of the Congress. The party has called for radical changes in the economic policy of the Government and particularly wants the domination of the economy by the State to end. Nationalisation and

State trading and such other avenues of State participation in economic activity are disfavoured. The opposition to these policies is explained and justified in terms of the dilution of democratic principles that such policies involve. In this, the policies of the Jan Sangh and of the newly formed Swatantra Party closely resemble. Opposition to cooperative farming figures prominently in the resolution on the economic situation. However, it is interesting that the party has proclaimed itself as not allergic to ceilings on land.

The party favours a decentralised pattern of industrial development, gigantism being approved only in respect of defence and basic industries. However, the concern evinced by the party for increasing the military strength of country seems rather out of accord with its own prejudices against big industries.

The party expressed general approval of the policy of non-alignment, being followed by the Government in their relations with other countries. However, dogmatic fidelity to non-alignment was disavowed. A "firm, honourable and realistic" China policy is advocated and, in the context of the Chinese incursions into Indian territory, this, according to Mr Pitambar Das, the President of the Sangh, calls for serving an ultimatum on China to quit Indian territory. With a view to containing Chinese aggression, rapid improvement and intensification of border arrangements in respect of defence, transport and communications are urged.

By the principles of its birth and origin, the Jan Sangh is committed to a policy of reciprocity toward Pakistan. Hence, it sees no justification for the soft policy pursued by the Government toward Pakistan in the face of continuing irritations caused by that country.

Exploiting Alcohol in UP

The Uttar Pradesh Government have set up a working group to formulate a programme for exploitation of alcohol during the Third Plan period. The group has indicated the possibilities of starting fifteen large and medium industrial units, which can use industrial alcohol for producing several useful commodities, most of which are now imported. The State produces 12 million gallons of alcohol a year, nearly equal to the production of all the remaining States. The 63 sugar mills in the State are the main producers of industrial alcohol.

A sum of about Rs 60 crores is proposed to be invested. The capital investment of the alcohol-based industries is estimated at Rs 8 crores. The synthetic rubber plant, which is being put up at Bareilly in the private sector, is the first major move to utilise industrial alcohol, and the project may cost Rs 42 crores.

Indian Finance

February 6, 1960

According to the working group, the demand for alcohol, during the Third Plan period, is expected to rise to 27 million gallons a year. Bareilly's synthetic rubber plant alone will consume 14 million gallons for producing 20,000 tons of rubber. When the factory's capacity is increased to 30,000 tons, its requirements are expected to be 20 millions. There is, therefore, every possibility of doubling UP's output of industrial alcohol in the near future.

MP's Mineral Resources

The Madhya Pradesh Government have proposed to set up a Corporation in the public sector to exploit the mineral resources of the State. In disclosing this, Mr H. V. Pataskar, the Governor of the State, has added that the Government of India have decided to license the setting up of three sulphuric acid and superphosphate plants in the private sector in the State. The possibility of a fertilizer plant being established in the State has also been hinted at.

Madhya Pradesh would have utilised a little under 80 per cent of its Second Plan allocation. The outlay fixed for the final year of the Plan is Rs 35.5 crores.

West German Investment

After conducting an extensive tour of the country, Mr Alfred Krupp, the well-known West German industrialist, expressed great satisfaction at the favourable industrial climate in India and revealed that it would facilitate an increased flow of German capital to help it in its industrial programme.

Addressing a press conference at Bombay, Mr Krupp disclosed that the signing of the Indo-German agreement on avoidance of double taxation had removed some of the hurdles to West German investment in this country. The German magnate stated that, during his stay in India, he had received several proposals for establishing new plants in the country on the basis of Indo-German collaboration. He thought that some of these proposals were sound and profitable and that they would be given due consideration.

Mr Krupp's views clearly reflect the growing interest evinced by West German industrialists in helping our country to accelerate the pace of industrialisation. It may be recalled that the representatives of the two countries are negotiating an investment guarantee agreement between the two countries and it is reasonable to hope that such an agreement will entice German industrialists to invest more capital in India.

Higher Output in Rajasthan

According to the official estimates, agricultural production in

Rajasthan has recorded a substantial increase during 1958-59 as compared to the output of the previous years. Marked improvement has been registered in the production of pulses, oilseeds, cotton, sugar-cane and other cash crops.

Food production reached a record level of 3,588,000 tons in 1958-59 as against 881,000 tons in 1951-52. The total production of pulses and oil seeds reached the peak level of 1,483,000 tons and 266,000 tons respectively during the period under review.

Unprecedented increase has been shown in the output of cotton, the production of which was estimated at 147,000 bales in contrast to 86,000 bales in 1951-52. Sugar production also shot up to 13,910 tons from 8,229 tons in 1951-52.

Similar increase has also been made in industrial output, the most important that deserves special mention being cement, the production of which rose to 765,240 tons in 1958 from 272,852 tons in 1952.

This increase in food production is a creditable achievement for the state. In spite of the record food production in the country last year, there was shortage in food. An all out effort all over the country is required for easing the food scarcity. The main handicap for Rajasthan in the agricultural field is the lack of irrigational facilities. More land can be brought under the plough if water is supplied in time to the agriculturists. Besides use of better seeds, improved implements and fertilisers will immensely improve the agricultural yield in the state.

Irrigation in Madras

The Madras Government have finalised the programme for the development of minor irrigation schemes in the State during the Third Five Year Plan, at the cost of about Rs 12.5 crores, to increase the agricultural yield. The food production in the State was never in a satisfactory position and it is but natural that the authorities are paying increased attention to stepping up food production during the Third Plan.

The programme drawn up for the next plan marks a departure from the policy hitherto pursued by the Government. It is evident that the Government have been giving great attention to developing the major projects in the State. It seems that the water potential to be utilised for such projects in the State is already exhausted and the development of minor works is the only alternative to facilitate regular and timely supply for the agricultural crops in the State. Moreover, improvement of minor irrigation works is considered to be an effective means for increasing food production within a limited time with minimum expenditure.

The proposals of the Government, among other things, include the launching of new projects all

over the State and the renovation of the existing ones. Increased attention will be given to the desilting of tanks, raising bunds of tanks and extending the scheme of subsidising well-sinking to other parts of the State as well. The tempo of the well-sinking scheme will be accelerated during the next plan and a programme is being drawn up to fix the target at double the number set down for the Second Plan.

The advantages of enhancing the irrigation facilities in a State need hardly be emphasised, especially in a deficit state like Madras. It is estimated that, as result of the schemes implemented during the Second Plan, food production in the State will improve to the tune of 900,000 tons and it is expected that, by the end of the next plan, the food position will be satisfactory with the completion of the minor schemes contemplated by the Government.

Mysore's Annual Plan

Mysore State has planned to make a big effort in the last year of the current five year plan to increase its power potential and to augment irrigation facilities. This is evident from the fact that nearly half of the annual outlay of Rs 39.63 crores is allotted for the Irrigation and Power sector. Out of a total allocation of Rs 16.25 crores for this sector, irrigation gets Rs 6.75 crores while Power gets as much as Rs 9.50 crores.

Out of the Second Plan outlay of Rs 145.13 crores, an expenditure of Rs 99.07 crores has been incurred up to the end of 1958-59. The revised budget for 1959-60 is Rs 39.82 crores and with the outlay for 1960-61, now approved by the Planning Commission, of Rs 39.63 crores, the total expenditure on Second Plan Projects may be expected to be in the environs of Rs 138.70 crores.

As a result of the implementation of projects in the Agricultural and allied sectors in the first four years of the Second Plan, an additional foodgrains production potential of about 4.2 lakh tons has been achieved. A further additional potential of 1.38 lakh tons is expected to be reached by the end of 1960-61. Agriculture and allied sectors get a total provision of Rs 5.80 crores in the annual plan and among the programmes to be taken up are scheme for cocoa development and a provision for the Coorg Fruit Research Scheme. Social services get an allocation of Rs 7.75 crores and the biggest beneficiary will be education with an allotment of Rs 3.39 crores. Transport gets Rs 2.29 crores and a State Road Transport Corporation is expected to be set up during the next year. Out of an allocation of Rs 2.11 crores for Industries and Minerals, small scale industries figure prominently with a share of Rs 1.26 crores.

Rajasthan's Third Plan

The State's people's urge to accelerate the region's all-round development is reflected in the big outlay planned for the Third Plan by the Rajasthan Government. According to the tentative Plan, a total outlay of Rs 279.38 crores is envisaged. The major task will continue to be one of improving the living conditions of the generality of the people and, as such, the allocation of Rs 91.32 crores for social services including education is quite appropriate. Nearly half of this amount is to be spent on education, as the task that faces the State in this field is enormous. The aim is to attain a very high percentage of coverage under primary education and the age group that will come under the scheme is 6-11. There will be a corresponding increase in the facilities for secondary education.

As is to be expected, food production is to receive special attention during the next plan period. The aim is to double foodgrains production from the 1957 level of 29 lakh tons to 66 lakh tons. The task, however, may not appear too big if it is noted that the State expects to attain a food production target of 48 lakh tons by the end of the current plan period. Generation of Power gets as much importance as agriculture, and rightly so, as there is a large unsatisfied demand for power in the State. Moreover, it is one of the aims of the State Government to foster the growth of industries in the private sector. Recently, Government have announced concessional power rates for industrial consumers. As against an allotment of Rs 51.75 crores for agriculture, the provision for power schemes is Rs 55 crores. The next biggest allocation is in regard to transport at Rs 35.35 crores. Industries and Minerals receive Rs 11 crores, and the emphasis in this sector will be on mineral-based industries.

Punjab's Plan for 1960-61

Punjab has programmed for a big outlay in the final year of the Second Plan. The annual plan for 1960-61 as finalised envisages a total expenditure of Rs 35.8 crores and the bulk has been allotted for power and irrigation schemes. Out of the total apportionment of Rs 15.6 crores under this head, as much as Rs 10.5 crores is to be spent on Bhakra Nangal. The State's agricultural schemes included in the Second Plan have made good progress and efforts in this direction are to be further intensified in the next year as will be evident from the large provision of Rs 4.7 crores for this sector of activity. Education and health programmes are to absorb the major portion under Social Services which get a total allotment of Rs 7.8 crores.

WORLD OF BUSINESS

Stress and Strain for Cement

The cement industry seems to be passing through a period of stress and strain. The main deterrent to profitable working of the industry would appear to be the fact that consumer demand is not catching up with the increase in the installed capacity of the industry. According to Mr Dharamsey M. Khatau, Chairman of the Associated Cement Companies Limited, there is no early possibility of an improvement in this regard. Besides the problem of production outstripping demand, thereby resulting in the accumulation of unsold stocks, the industry is troubled by financial stringency largely brought about by the fiscal and regulatory measures initiated by Government in the course of the past year. The increase of Rs 3.50 in the retention price granted to ACC by Government on the recommendations of the Tariff Commission has been found to be inadequate to cover the increase in the cost of production since 1957. In his speech at the annual meeting of the shareholders of ACC, Mr Khatau has pointed out that the Tariff Commission have made a basic error in assuming, in their computation of costs, that production will be equal to installed capacity. The ACC's actual performance does not support this thesis as production has been only 95 per cent of the effective installed capacity.

Mr Khatau is all praise for the Finance Act 1959 in so far as it has greatly simplified the cumbersome procedure connected with company taxation. But the assurance that the status quo will be maintained as far as the financial obligations of companies are concerned has been falsified in its actual application. In short, the new system takes from companies more than it gives, with the result that the Exchequer is enriched by increased yield which is largely to be borne by companies. This is in direct contradiction to the Finance Minister's statement that the new system will neither result in bringing additional revenue to Government nor increase the burden on companies. Mr Khatau has said that only if the aggregate rate of income tax and Corporation tax under the new system does not exceed 40 per cent will the Finance Minister's declared objective be fulfilled. Yet another drawback in the new system has come to light in its actual working. Even to pay its reduced dividend, the ACC has been obliged to draw heavily from

its reserves. Under the new dispensation, such amounts as have been drawn from taxed reserves will automatically lose the tax credit. This, as Mr Khatau has noted, will amount to imposing a penalty on companies for following a conservative financial policy.

Shareholders of ACC can, however, look to the future with confidence because the company, despite financial stringency, is going ahead with its expansion and diversification programmes. Mr Khatau has also spoken in appreciative terms about the more realistic Government approach to the problems of fixing the target for cement production during the Third Plan. He is of the view that a production of 45 million tons is an achievable target.

Modifying Trade Policy

The discussions of the Export and Import Advisory Councils to be held at Delhi on February 13 and 14 on the modifications that are to be carried out in the country's export and import policies during the first half of the fiscal year 1960-61 have already attracted the attention of industrialists in the country. The Bharat Chamber of Commerce has submitted two notes to the Government of India containing its suggestions to be brought before the Councils at their sittings. The main idea contained in these notes is the need for gearing all policy measures, including foreign trade policies, so as to accelerate the collective buoyancy in the business activities in the country, so that the country can launch the Third Five Year Plan with increased economic stability.

Before the implementation of the next plan, a thorough probe should be conducted into the techniques of foreign exchange budgeting, working of the Import Trade control policy and procedure. The Chamber pleaded for the stabilisation of the licensing procedure for industrial consumers and for enforcing a uniform basis for taking decisions about the need for new enterprises to be started in the different states. The modification of the import policy for at least some of the items contained in the Import Trade schedule has also been suggested by the Chamber.

Effective steps should be taken to boost exports on long term programmes so as to achieve an export surplus. This is particularly important when the country is confronted with the repayment of debts incurred for launching Five Year Plans. Other suggestions advanced by the Chamber that deserve mention are the relaxation of the rules governing exports, the declaration of guarantee taken by the Government at least for the next fifteen years so as to ensure further investments for the development of the country's export industries and exports markets. The notes also stressed the need for adopting the necessary measures to step up the export of

at least some of the traditional items like tea, jute manufactures and cotton manufactures.

ITA

At the annual meeting of the Indian Tea Association, Mr D. L. Betts the Chairman, expressed the view that, although the comparatively strong demand for tea might be expected to continue this year, at least until the 1959 crop had been sold, there was no room for complacency. He believed that, with Government encouragement by way of extensive propaganda and abstention from over-hasty greed for taxation revenue, with patience from labour and moderation in their demands for a rising standard of living, with hard work, increased productivity per capita, and with attention to quality and intelligent management all round, there was still a hopeful future for Indian tea, including the plainer grades. In this connection, he made a plea for equitable distribution of the revenue collected between the Central and State Governments, avoidance of multiplicity of taxes and support for attempts to codify the relationships which should exist between employer and employee.

The sale of residue tea, even to places far away from Calcutta auctions, had undoubtedly a depressing effect on the market for Common tea. The temptation to make easy and immediate profit by such sales must be resisted. In this connection, Mr Betts has the feeling that complete destruction of residue and waste tea is one way in which, without waiting for an international agreement or regulatory system, there can be a control on crops. Finally, Mr Betts has expressed the view that, in the Third Plan, India must set "market" targets to increase the demand in foreign countries, and the Tea Board's efforts in that direction must be encouraged.

Refractory Materials Plant

The inauguration of the Refractory Materials Plant at Bhilai by Mr Morarji Desai, the Union Finance Minister, is another milestone in the industrialisation of the country. The plant has been constructed at a cost of about Rs 1.7 crores and is manufacturing burnt dolomite and other materials required for various industries, and it is estimated that the annual production of the plant will be worth Rs 50 lakhs. The authorities are also considering plans to start production of bricks in the plant.

In the course of his address, Mr Desai paid a glowing tribute to the efficiency and enthusiasm evinced by the technical staff working at the plant and expressed the hope that their labour will help to eradicate poverty in the country in the long run.

With the installation of the Steel Plant at Bhilai, the place has become a hive of industrial activity.

The supply of steel from the plant will increase the tempo of industrialisation of the country at large. Another product of the plant which is in great demand is ammonium sulphate. And there are ample reasons to expect that, with the abundant supply of raw materials, a host of subsidiary industries will be established around the plant in future.

Indo-Japanese Endeavour

In collaboration with the Japanese Government, the Government of India have decided to establish a prototype and training centre at Howrah, in West Bengal. It is the third of its kind in the country. The cost of the project is estimated to be over a crore of rupees. According to the agreement reached by the representatives of the two governments at New Delhi last week, the plant and other machinery required for the installation of the centre will be supplied, free of cost, by the Japanese Government, along with the services of some expert technicians, while the other expenses will be met by the home Government.

The project, which is expected to start production early next year, will undertake the development of prototype of machines, tools and other accessories for commercial exploitation by the various small scale undertakings of the country. It will also develop special purpose machinery to help the small units to improve their production techniques. Moreover, the centre will impart instructions to the technicians employed in small industrial units, state industries and the Central Small Scale Industries Organisation. The establishment of similar centres in other states will be helpful in accelerating the industrial programme of the country.

NEI Locomotives

The National Engineering Industries of Jaipur have entered into an agreement with the Maybach firm, West Germany, for the manufacture of high speed engines of 400 to 3,000 hp. in India. The NEI, the leading ball bearing and roller bearing firm in Asia, as a preliminary step, will install factory at Jaipur for assembling locomotive engine parts, and it is expected that, within a period of five years, with the help of German technicians, the firm will be able to start manufacture of the entire engine in this country.

A similar agreement has been entered into by the NEI with the MAK, a noted German firm, for the manufacture of diesel locomotives at Sawai-Madhopur. No financial partnership has been reached by the two firms with the Indian firm and royalties will be paid only after fifty per cent of the parts have begun to be manufactured in India. It is estimated that a Maybach locomotive, to be manufactured by the NEI, will cost about Rs 12 lakhs.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It

of defence with industrialisation is a long-term project, and cannot make much difference to the deployment of funds and effort for our immediate purposes. And God knows that the immediate purposes are pressing enough. With the Chinese still on Indian soil, even an increased alertness about our frontiers is going to involve considerable expenditure, and this has to be found.

The extent of the outlay on the Plan in the final year is likely to be evident in the next few days, when we shall have some data to go on on the actual performance in the current year. But it is safe to assume that it is not likely to be less than what it has been for this year. The finding of the money for it, without having a budgetary deficit—for which there seems to be hardly any scope any more—is a problem that must be exercising Mr Morarji Desai. Likewise, Government's commitment on the Pay Commission's recommendations is another imperceptible pickle that will swell the mickle.

Where is Mr Desai going to find the wherewithal for these additional burdens? In school-boy slang, I might say, "Search me!" I doubt whether he can do anything at all in the field of direct taxation except for marginal adjustments. He may be tempted to fiddle with rates, especially of Wealth Tax and the taxation of capital gains. But he would do well to resist the temptation, for, the tax accretion will be negligible, and the upset it will cause quite disproportionate. I shall come to corporate taxation in a moment, about which I have a suggestion to make. In the field of indirect taxation, which has the dubious honour of slowly ousting direct taxation from its pride of place, there will doubtless be some attempts at increases. Ever since TTK's Budget in May 1957 imposed excise duties on a wide range of commodities, the revenue from this source has been increasing. Attempts at rationalising the imposts by eliminating sales tax on such commodities should be carried to their logical conclusion.

In respect of corporate taxation, Mr Desai has a ticklish problem on hand. He began very well last year with clearing up the proce-

dural jungle that had grown around it. And he also abolished certain levies which had little fiscal or other justification. And he indicated a rate of taxation on companies which was nominally lower than what companies were paying all along. Above all, he claimed that he had done this without any loss to the exchequer. The first reaction to the proposals was one of incredulous wonderment. It sounded too good to be true. Sure enough, snags began to appear.

First, it became evident that the lesser nominal rate of taxation on companies was offset by the denial of the benefit of "grossing up" of the dividends that the shareholder was having, and this meant either that the shareholder was to have a substantial reduction in his net return from investment or that the company would have to pay a larger dividend to give him the same net return on his investment. When the calculations were made in detail, it was found that the professed purpose of leaving everybody where they were before, but at the same time obtaining a welcome simplification of procedure was unlikely to be realised at the proposed rate. It was stated at the last annual meeting of the Associated Chambers of Commerce that studies showed that, in the majority of cases, the company and the shareholder taken together would be worse off than before, unless the rate of tax on companies was reduced to 40 per cent instead of the indicated probable rate of 45 per cent. Readers may recall my discussing this question in this column last December. It must be said to the credit of the Finance Minister that, on this question, he has set about in a very sensible and open-minded way. When he brought these new proposals, there was no facing the country with a fait accompli. The rate of 45 per cent was merely the rate at which the companies were to pay their advance taxes under Section 18A of the Income-Tax Act. The actual taxation under the new system was to commence only with 1960-61. The Finance Minister must, therefore, have wanted to have fuller data regarding the likely impact of this new system before he made up his mind about the rate. Without being uncharitable, one may even suggest that the 45 per cent rate was an error on the "safe" side, from the point of view of the Government. In justice to him, it must be admitted that, if he had

erred the other way, and wanted to increase the rate of actual taxation now, there would have been an adverse reaction (to put it mildly). On the other hand, should he now be convinced that 45 per cent is excessive in the light of the professed principle behind the changes, he could reduce the rate and gain a correspondingly favourable reaction. (Let no one think that there is anything narrowly personal about these calculations. A "favourable" or "adverse" reaction has notorious repercussions on the state of the economy, and, in deliberately engineering a "favourable reaction", a Finance Minister is only doing his plain duty of being the watch-dog of the economy).

But the question is—and it is some question!—whether Mr Morarji Desai would relent and reduce the rate, or would plead that the increased commitments make it impossible for him to do so. If he does not increase the rate beyond 45 per cent, he would not be doing anything unexpected. But it seems to me that, if Mr Desai does reduce the rate, even though not to the full extent demanded by the corporate sector, he would be not only backing the principle he enunciated but also making a fine gesture that would be reciprocated by industry.

There is another suggestion I should like to make. It seems to me to have advantages both to Government and the tax-payer. Of course, there may be snags in the idea that I have not spotted, for, I have not examined it in detail. But I am making the suggestion for precisely such an examination. The idea is this: Development Rebate, which is being now allowed in one year, should be spread over three or four years. From the point of view of Government, it has the advantage of immediate increase in current receipts since the quantum of rebate is reduced correspondingly for each of the years of the spread. From the point of view of the tax-payer, the pressure on his funds for the creation of the qualifying reserve (75 per cent of the Rebate allowed) is reduced. It is true that he pays immediately a higher amount of tax, and, in the case of assesseees other than companies, this may make an enormous difference because of the slab system—this is one of the snags. But, since the reserve to be found is more than the tax relief obtained, he may not mind. And since, in the case of a company, the final tax result would be the same, the idea has obvious attractions.

So, my suggestions for the Budget would involve (a) the status quo being maintained in personal taxation, with any temptation to raise the rates on either Wealth Tax or Capital Gains Tax, or on Estate Duty, rigorously resisted; (b) the explicitly promised relief being given to the corporate sector, by suitably scaling down the rate of tax to 42½ per cent, as against the 45 per cent rate at which advance payment of tax has been made; (c) the imposition of the usual array of excise duties, with consolidation in suitable cases of sales tax with excise duty; and (d) the

amendment of the conditions under which the benefit of Development Rebate may be gleaned, so that both Government and the company are immediate beneficiaries. I realise that what I have asked for may conceivably mean a reduction in governmental revenues; and this runs counter to the undoubted need of Government for finding, if anything, even more money for the increased defence costs, the higher civil administration bill and the accelerated tempo of plan expenditure in its last year. I realise, also, that, in view of the disquieting price situation, Government will scarcely find it possible

to budget for any large-scale revenue deficit being covered, in the overall budget by deficit financing. And it is important to appreciate that, in the context of the price situation, Government may decide upon anti-inflationary measures as part and parcel of the 1960-61 Budget. Where do we go from here?

To, I suggest, market borrowings. The last two years have been fantastic from the point of view of realisations from new loans. So, what

remains to be borrowed, in order to achieve the Second Plan target under this head, is somewhat less than the annual average for the 5 years as a whole. If the Centre and the States no more than maintain the magnitude of their borrowing during the next year, I should think that market loans can contribute in no small measure to covering the overall deficit. In other words, after the first attempts to make up the revenue deficit by new taxation, Government policy has been to leave the gap to be covered by ad hoc Treasury Bills; and it should be the intention. In 1960-61, to have the revenue deficit met, in the overall Budget, largely by realisations from market loans.

In any case, I think it is high time for Government to pay some heed to that intangible, "climate". When the general feeling is one of a back-breaking burden of taxes, and when the official hope is to induce more industrial activity, care must be taken to ensure that a Budget is not framed as will be destructive of morale. What is more, even in respect of inflation, the only answer is production; the Plan aims at augmenting production; and it is clear that diversified industry is going to be possible only if the individual uses initiative. Perhaps no more incentives are necessary than obtain today. But, most certainly, development will be retarded if more disincentives make their appearance. Most important of all, Government should surely believe that a dynamic economy is in the making; if so, tax revenues even on the present rates should be consistently improving; and, in that case, where is the need for disincentive taxes? Perhaps it is no more than wishful thinking, but I am hoping that we may have a Budget which for once does not unduly tax the tax-payer, but instead even offers him a morsel of relief.

One final comment. In discussing the prospects of funds for the Third Plan, we often hear of expectations from state enterprises. I have had serious reservations about hopes in this regard, but, if there is any substance to them, it seems reasonable that they should show some earnest of their promise for the Third Plan by starting to yield something for the last year of the Second Plan. It would be interesting to look for indications of this in the coming Budget.

However, it may be premature to look for any significant signs in this regard in the next Budget; all you can have is an indication. For, the steel plants, on which presumably the Government will mainly rely for their profits from State enterprises, are expected to go into full production only by the end of next year. So, it will be the Budget for 1961-62 which can be counted upon to be portentous in respect of profits from State enterprises.

EAVESDROPPER.

Electricity Supply Industry in Distress

THE new system of company taxation as adumbrated in the Finance Act 1959 is no doubt an overdue reform and it has met with general approval. The unnecessary complications connected with the grossing up of dividends in the hands of shareholders have been eliminated and the whole process has been brought to an easily understandable level. But while there is no gainsaying the simplicity of the new procedure, it is doubtful if its repercussions are as harmless as Mr. Morarji Desai said they would be, when he announced the new scheme at the time of presenting the Budget for 1959-60.

In actual working, the reduced flat rate of tax on profits with the implied need to compensate shareholders for the loss of the tax credit which they were hitherto enjoying is said to have turned out to be more irksome than the previous system. The consensus of opinion is that the hope that companies will be enabled to pay higher dividends will be falsified if the flat rate is not further reduced.

Under the new dispensation, the electricity supply industry seems particularly to have been reduced to an unenviable position, in as much as it has also to conform to the regulations of the Electricity (Supply) Act. Even without the Finance Act 1959 this industry has not been very popular with investors as many of the concessions available to other industries have been denied to it. The reasons for the comparative sluggishness of shares of electricity supply companies were ably analysed in a memorandum submitted to the Government in June 1958 by the Federation of Electricity Undertakings of India. The memorandum had pointed out that, while the basic remedy lay in the upward revision of the Standard Rate, the grossing of dividend in the hands of shareholders, as was allowed in the case of the shareholders of other companies, would go a long way toward reviving investor interest in the industry. With the restoration of the confidence of the investor, the industry would be enabled to attract more funds and thus solve to a great extent its perennial problem of resources for modernisation and expansion.

The Finance Act 1959 has abolished all grossing up, but with the assurance that shareholders of companies will not be any the worse for the loss. But indications are, I repeat, that, without a suitable amendment, the new dispensation is unlikely to fulfil the expectations of the Finance Minister

in so far as the return to the shareholders is concerned. When it comes to be applied to the Electricity industry, the new system makes further inroads into the already much depleted return to the shareholders. Shareholders in other industrial enterprises, if they have been deprived of the credit for the tax paid by the companies, are compensated by the abolition of Excess Dividend Tax. Further, they can at least hope to get the same net return as they were getting under the old system. But the shareholders in electricity supply companies do not derive the benefit of the lower tax on companies, because the advantage is passed on to the consumer. The net result is that the previous tax credit enjoyed goes and the shareholders are obliged to carry the tax on dividends without any compensation for their loss.

It is not in the least surprising, therefore, that shares of electricity supply companies have continued to be neglected at a time when most other equities have been booming. Apart from the higher dividend potentialities, one of the main reasons for the revival of investors' interest in industrial equities during the past year or so is the growth prospects of many an enterprise. Thanks to the abiding interest shown in the rapid industrialisation of the country both by Government and private enterprise, many new industrial units have sprung up in the past eight or nine years. The two Five Year Plans have greatly accelerated the growth of industries, old and new, and investors have rightly been enthusiastic in lending support to these industrial enterprises. A look at the comparative prices of equities now and a year ago will bear eloquent testimony to the sizable improvement in the investment climate in the country. A solitary exception to the general buoyancy is the electricity supply industry. For, the shrewd investor knows that, apart from the severe limitation in their dividend paying capacity, the electricity industry companies offer little in the shape of growth prospects. Caught between the Electricity Supply Act and the Income tax Act, the industry is hemmed in on all sides by regulations and disabilities, which leave little scope for it either to save or borrow. Thus, it suffers from a chronic shortage of funds even for modernising its equipment, let alone for embarking on expansion programmes.

Why is so essential an industry, as electricity supply, is, being crippled, as it were, and prevented from growing to its full stature? It is true, the Electricity Supply Act is designed primarily to protect the interests of the consumers of electricity—an item that is becoming as essential as water or clothing. Moreover, electricity has a vital role to play in the industrialisation of the country. It stands to reason, therefore, that

Government should ensure that, in the supply of this essential item, there are no frequent and wide fluctuations in the price that consumers are asked to pay. There can only be the fullest support for such a principle. At the same time, however, is it not also incumbent on Government to ensure that the electricity supply industry expands rapidly, so that the additional electricity capacity that is being built up daily can be effectively and efficiently purveyed to the villages and new industries?

I am afraid that, perhaps unintentionally, Government have failed to foster the steady growth of this key industry. It surely is not Authority's desire that the Licensees should shift for themselves as best as they could under whatever laws that may be enacted from time to time in the country, just because they come under the category of essential service. It is a safe presumption that Government do not at all intend, through the Finance Act 1959, to bring the industry into the disfavour of the shareholders of electricity companies, and that the representations that have been made to the Finance Minister on behalf of the industry will receive sympathetic consideration. It would appear that a lasting remedy to the ills of the industry lies in suitably raising the rate of return to the industry. In a recent memorandum, the Federation of Electricity Un-

dertakings of India has pointed out to the Finance Minister that the Finance Act 1959 would bring the industry to the verge of collapse, as the shareholders will, while losing the credit for the tax paid by the companies, have to carry the additional liability for tax on the dividends received by them. The FEU have calculated that this liability may amount to something like 42.85 per cent of the net dividends in the shareholders' hands. I shudder to imagine what the reaction of shareholders to such a prospect will be. It is, I hope, not merely a pious wish that the Government of India, in their Finance Department, will be able to realise in time the great harm that the Finance Act 1959 is doing to the electricity industry. For, it is quite possible that the fact that the probable repercussions of the new change in undertakings which are already labouring under a different set of laws under the Electricity Supply Act have escaped notice, even as its full implications on the general run of companies do not seem to have been fully studied. The FEU has suggested several methods by which the disabilities of electricity supply companies can be mitigated. One remedy will be the revision of the Standard Rate of return in such a manner as to compensate fully the loss that may be incurred by the shareholders under the new, rationalised tax scheme.

REVISED CONCESSIONAL RATES FOR TRUNK TELEPHONE CALLS

EFFECTIVE FROM FEBRUARY 1, 1960

The concessional rates for telephone trunk calls, available during various periods of the day, have been revised with effect from February 1, 1960. The new rates and the periods during which these are applied from that date are as follows:—

All days other than Sundays and Telegraph Holidays

PERIOD	RATE
00.00 hrs. to 05.00 hrs. ...	Full rate
05.00 hrs. to 06.00 hrs. ...	40% of full rate
06.00 hrs. to 09.00 hrs. ...	70% of full rate
09.00 hrs. to 20.00 hrs. ...	Full rate
20.00 hrs. to 23.00 hrs. ...	70% of full rate
23.00 hrs. to 24.00 hrs. ...	40% of full rate

Sundays and Telegraph Holidays

00.00 hrs. to 07.00 hrs. ...	Full rate
07.00 hrs. to 24.00 hrs. ...	50% of full rate

All rules regarding the facilities available during the concessional periods remain as before except that there is no advance booking for concessional rate trunk calls.

Rehabilitation of Displaced Persons

IT should be a matter of some relief to the public in West Bengal to know that the pace of rehabilitation of displaced persons from East Pakistan—a problem which, incidentally, has been a persistent headache to the Central Government—has been stepped up during the first eight months of the current financial year (1950-60). During this period, the work of dispersal of camp families for settlement has been speeded up;

	Camps	Homes	Number of Camps	Homes
Population on 1-4-1950	1,85,656	55,237	132	39
Population on 15-11-1959	1,52,231	50,223	91	32
Total reduction	33,425	5,014	41	7

The reduction of 38,439 persons in the number of inmates of camps and homes being maintained by Government has resulted in a saving of about Rs 35 lakhs in relief expenditure during the last eight months. This also reduces the recurring monthly expenditure on maintenance of inmates in these institutions by about Rs 10 lakhs every month from 1st December, 1959.

The closing down of 48 camps and homes during this period of eight months as against the total closing of 28 camps during the whole of 1958, apart from the economy in maintenance expenditure referred to above, has also resulted

a beginning has been made in the process of integration of the work of rehabilitation with the normal departments of the State Governments concerned; important decisions have been taken to determine the size of the residuary problem of rehabilitation in the eastern States by completing the elimination of the factors responsible for keeping the same indefinite until now; and a start has been made to tackle the residual problem in some parts where assessment of the final size of the same has been determined. The details of the progress made and the present position are covered in this despatch.

During the period April 1959—15th November 1959, 43 camps and homes were closed. The net reduction in the population was 38,439 as indicated in the following table:—

	Camps	Homes	Number of Camps	Homes
Population on 1-4-1950	1,85,656	55,237	132	39
Population on 15-11-1959	1,52,231	50,223	91	32
Total reduction	33,425	5,014	41	7

in substantial economy in expenditure on camps establishment. A saving of about Rs 15 lakhs is anticipated over the total expenditure of about Rs 55 lakhs on camp establishment incurred last year. This has been made possible not only due to the dispersal of inmates from camps for rehabilitation, etc., but also on account of the amalgamation of the smaller camps with the bigger ones.

There were about 45,000 displaced persons of the long-term liability category residing in 24 Homes/Infirmaries in West Bengal on 31st August, 1959. Though some of these institutions cater for displaced women and children,

others have all categories of displaced population including the rehabilitable category. It was therefore desirable that the position should be reviewed. A committee of the officers of the Union Ministry of Rehabilitation and the State Government has accordingly been set up to review the position.

Since 1st April, 1959, sanctions amounting to Rs 6.34 crores have been issued for rehabilitation schemes. 27,351 displaced persons were dispersed from camps to sites of rehabilitation in the undermentioned States during the period April 1959-15th November 1959:

West Bengal	5,123
Tripura	7,125
Orissa	800
Bihar	6,395
In other States, viz., Uttar Pradesh, Madhya Pradesh, Rajasthan from West Bengal camps	6,357
Dandakaranya upto 30-11-1959	1,551
Total	27,351

It has been decided, in consultation with the West Bengal Government, that a displaced person living in a camp may be given the choice either to rehabilitate himself within the State of West Bengal through his own private initiative with rehabilitation assistance from Government or to take advantage of the rehabilitation schemes formulated by the Government either within the State of West Bengal or in Dandakaranya. To a non-agriculturist family, the following three options have been given:—

- To take a plot and housing loan in one of the colonies.
 - To take on rent a tenement in one of the housing colonies.
 - To make arrangements for himself under the "Bainanama" Scheme.
- To an agriculturist family, the options are as under:—
- To make arrangements for himself under the "Bainanama" Scheme.
 - To move for rehabilitation to Dandakaranya where it will be provided with work in the initial stages.

Each family is given three months notice to take advantage of Government schemes, or to make arrangements for itself, failing which the names of the family members will be removed from the camp register and the family dispersed with six months maintenance grant. Notices are being issued to 2,000 families each month from September, 1959. Up to the 30th November, 1959, notices to 7,422 families have been issued.

The maintenance assistance will hereafter be given to the inmates of camps on their dispersal from camps to rehabilitation sites, in the form of grant and not loan. According to the practice followed in the past, displaced families on their dispersal from camps for rehabilitation were given maintenance loans for varying periods ac-

cording to their professional categorisations. These maintenance loans were intended to assist the families for the short period which must necessarily intervene within the time of their dispersal from camps and the time when they began to earn. It was represented to the Government that, as there was no substantial change in the circumstances of the camp families between the time of their leaving camps and the time they began to earn, and as no assets could be created by a displaced person out of the loan meant for his maintenance, this assistance should be treated as "grant" and not as a "loan". Government of India have agreed to this with retrospective effect. The financial implications of this remission are likely to be about Rs 5 crores.

With a view to expediting the setting up of industries for affording employment to displaced persons, an industrial corporation known as "Rehabilitation Industries Corporation Ltd", with a capital of Rs 10 crores, was promoted by Government under the Chairmanship of Mr. G. D. Birla. The Corporation was registered in April, 1959. So far, 107 applications have been received by the Corporation, out of which 26 were considered and loans amounting to Rs 22.65 lakhs sanctioned to 5 industrial concerns. These schemes are likely to provide employment to 1,000 persons. The Corporation have also decided to set up two industrial estates near Calcutta.

The problem of clearing Sealdah has received consideration at the highest level from time to time. Both the State and the Central Governments expressed their anxiety that the Sealdah Station should be cleared of the squatters. It was also realised that, as a corollary to the clearing of Sealdah Station, arrangements would have to be made by the State Government to prevent further squatting. There are at present 889 squatter families at Sealdah. Of them, 479 are displaced families. The squatters from Sealdah Station are being dispersed progressively. More than 50 per cent of the squatters have already been removed.

Roads Congress

THE formation of the Indian Roads Congress 25 years ago was a landmark in the annals of the country's transport system. Before its birth, very little was known of the science of road construction and maintenance in the country. Road engineers formed a class who were seldom utilised for improving roads. Standards and designs in road construction were far from uniform. Research in road construction was conspicuously absent. Progress in the midst of such pitifully bad conditions was impossible without an organisation which could give the lead in the science and practice of road construction and which could, by its representative character, make itself heard in road development. It was such an organisation which the Indian Roads Congress represented. By providing a forum for road engineers in the country for collaboration and discussion on matters pertaining to road development, the Congress has considerably enriched the science of road development. In the progress that had been made during the last 25 years in road development in the country, the work done by the Congress has been a telling factor.

The meeting of the Congress last week at Bangalore marked its silver jubilee session. It was an occasion to assess its contribution to the development of roads in the country, and for projection of its own duties and responsibilities in the context of the unfulfilled task of road development. That the Congress was inclined to emphasise the latter aspect is a reflection of its concern at the task that lies ahead. This is to be appreciated in the perspective of the Second 20-year (1961-81) Road Plan formulated by the Congress and which is now before the Government for consideration and adoption.

This plan, formulated by the Indian Roads Congress, aims at an increase of the total road mileage in the country from 379,000 miles as at the end of the Second Five Year Plan to 657,000 miles by 1981. National Highways will increase from 13,800 miles to 32,000 miles, State Highways from 35,000 miles to 70,000 miles, Major District Roads from 95,200 miles to 115,000 miles, other District Roads from 78,300 miles to 180,000 miles and Village Roads from 156,700 miles to 225,000 miles. The target it is clear, involves practically a doubling of the mileage in each sector.

The total outlay, that such a target in mileage would involve has been estimated by the Congress at Rs 5,200 crores for the 20-year period, which works out to an annual outlay of Rs 260 crores. Against this, the total outlay for

the five-year period of the Second Plan would amount to Rs 224 crores only. Thus, from the point of view of the outlay involved, the target does look ambitious. However, from the standpoint of the country's own needs in the context of the growing volume of traffic which development in other sectors would generate, it is the minimum below which the country cannot afford to go without causing bottlenecks in transport. It has, for example, been estimated that, between 1950 and 1930, agricultural produce would increase from 68 million tons to 150 million tons. The produce of industry is similarly expected to increase. The impact of this increase in production and other development activities would be to raise the long distance traffic from 93 million tons in 1950 to 800 million tons in 1980. Development and expansion of railways to carry even half of this traffic is not a feasible proposition. Shortfall in traffic capacity could be obviated only by providing for expansion of road traffic. An outlay of Rs 5,200 crores is therefore inescapable.

That it should not be beyond the means of the country to find this outlay was explained by Mr U. J. Bhatt, Chief Engineer, PWD, Bombay State, and President of the Road Congress in the course of his presidential address. In fact, on the basis of the revenue estimated by the Chief Engineers at Rs 6,150 crores as derivable to Government from road transport during the 20 year period, Mr Bhatt is even confident of meeting the expenditure of Rs 6,550 crores estimated by the Chief Engineers for road construction and maintenance during the 20 year period. The gap of Rs 400 crores could, according to Mr Bhatt, be met by levying some minor taxes, like betterment levy on roadside property, road cess on land revenue, etc. For the most part, therefore, the Second Road Plan of the Congress is a self-financing scheme. However, Mr Bhatt was particular that a beginning should be made in right earnest and adequate funds be made available in the Third and subsequent Five-Year Plans sufficiently in advance to allow orderly planning and the most economical use of manpower and materials.

An important consideration which, in present conditions of the country, requires to be kept in view in implementing a large-scale road development programme is economy in execution. The use, as far as possible, of locally available materials should conduce to this end. The existence of such materials and their value for road construction have to be examined. Research is therefore essential.

Apart from mileage, the other aspects of road development which deserve attention are capacity and maintenance. Capacity is a question of both number of vehicles and their speed. So far as speed was concerned, it was pointed out by Mr Bhatt that a figure of 40

to 50 miles per hour was the accepted standard. Indian traffic rules should be brought to conform to this norm. This would require the segregation of slow-moving traffic from important highways. Increase in the number of vehicles is even more important for increasing road traffic capacity. On this consideration, the reported fall in the production of automobiles should be a matter for concern. Development of the automobile industry will have to go hand in hand with the road transport programmes. Truck-trailer combinations offer another means of increasing traffic capacity on roads. The general disavowal with which truck-trailer combinations are viewed by State Governments is a little difficult to appreciate in view of their wide prevalence in advanced countries.

Maintenance of roads also calls for vigilance and care. In this connection, Mr Bhatt voiced the complaint that district roads entrusted to the care and maintenance of District Local Boards are being neglected and that the surface is fast deteriorating. He has suggested transfer of this function to State Highways Departments even at the cost of taking away from the autonomy of local self-Government.

In view of the huge arrears of development work that remain to be wiped out to ensure a self-sufficient road transport system, the need for a separate Highways Department as proposed by Mr Bhatt is obvious and justified. Mr Raj Bahadur, Union Minister of State for Transport and Communications, who inaugurated the conference, was also inclined to agree with this suggestion. The

advantage of having such a separate department should be evident from the excellent network of roads which the Madras Highways Department maintains. In the interest of proper development, it is necessary that other State Governments also follow the example of the Madras Government, and take early steps for setting up separate highways departments which could give undivided attention to road transport development.

The Conference thus considered almost every aspect of road development and underlined the importance of stepping up outlay so as to reach the target indicated in the 20-year Plan of the Congress. This plan, it would appear from present evidence, would form the basis for road development schemes for the next two decades. No definite commitment was available from Mr Raj Bahadur. This however was understandable in view of the fact that a thorough examination of the implications of the Plan is yet to be made by the Government. Mr Raj Bahadur, however, disclosed that the State Governments had been advised to follow the broad order of priorities indicated in the report for purposes of formulating road schemes to be included in the Third Five Year Plan. The Third Plan itself is expected to lay greater stress on road development than the Second Plan. About this Mr Raj Bahadur himself left no doubt. In his own words there was "in-escapable need for according a relatively much higher priority to the needs of road transport in the Third Plan in order to ensure an adequate and balanced development of the various forms of transport".

WORLD OF JUTE

New Outlet for Hessian

CONDITIONS in the jute goods market were quiet during the past week ended Thursday. In the absence of fresh buying interest, prices especially in the sacking section developed a sagging tendency to finish the week lower on balance. As indicated in this column last week, the question of resealing the 2½ per cent looms reopened on 24th August last was again been deferred. According to authoritative indications, the existing position, that is, 90 per cent of looms in commission, would continue at least up to the end of February. So it is clear now that the additional sacking supplies will continue to be available to the market for another month.

In the meantime, the raw jute market has also turned soft due to the cumulative effect of the continued large arrivals of raw jute in Calcutta and Mills stations, the effective measures taken to curb unbridled speculation, the general realisation that raw jute availability will be adequate to meet demand in full and the absence of any undue haste on the part of mills to buy their requirements at the enhanced levels. The fact that Pakistan has decided to lift the restriction on jute acreage

seems to have somewhat unnerved sellers in the raw jute market. One of the probable implications of the new Pakistani raw jute policy is that, in the next season, world raw jute supplies may increase with a consequent reduction in price. This is a matter for serious consideration because, with raw material costs for jute industries elsewhere in the world reduced, the Indian industry will be placed in an unenviable position if it is obliged to pay uneconomic prices for its requirements of raw jute.

Hessian prices have been maintained, though, for the most part of last week, there was no sizable foreign business. It would, however, appear that marketmen have still not abandoned the hope that US demand would pick up. The hope about improved offtake was partly stemmed from the fact that a new organisation called the Jute Carpet Backing Council has lately been formed in the USA with the express objective of promoting and expanding the use of hessian cloth by the carpet manufacturing industry. During the past year, wide looms for the production of burlap backing for tufted carpets have been installed in the USA. These looms have consumed last year nearly 100 million square yards of hessian. Toward the close of the week, there were indications that Argentina had at long last begun to show interest in the Calcutta market. Latest reports speak of a sizable order for hessian from this country having been received by the market.

While the prospects for increased exports to the main hessian consuming countries are thus quite satisfactory in the current year, the continued efforts to quicken the modernisation of the industry

should further help increase the competitive position of the Indian industry in world markets. The modernisation of the spinning section is going on apace and, as on March 31, 1959, 190,200 spindles on the fine side and 34,400 on the coarse side of the modern sliver spinning type are reported to have been installed in 51 out of the 82 mills. This would mean that about 55 per cent of the installed looms are now being fed by sliver-spun yarn. The Government of India are now believed to be considering proposals to enable the jute industry to take up modernisation of the weaving sections, including the installation of shuttleless looms during the Third Five Year Plan. In the modernisation programme of the jute industry, the National Industrial Development Corporation is playing an active part. The Corporation has so far granted loans to the tune of Rs 4.6 crores to 22 jute mills. It has also introduced a scheme to provide short-term loans to jute mills to facilitate the purchase of indigenous machinery.

The jute goods market ruled quiet during the past week. Hessian 40"x10 oz February was quiet last Friday with the quotation for Ready delivery at Rs 40.90. Saturday witnessed narrow fluctuations and sentiment continued to be rather subdued when the market opened after the holidays on Tuesday. There was no marked change in the trend on Wednesday when Hessian ready closed at Rs 41.05. In the heavy goods section, B Twills started on a quiet note, but, by close of last Friday, showed some improvement at Rs 113.40 for ready delivery. In the subsequent days, the trend was downward and the rate closed easier on Wednesday at Rs 112.70.

The distant deliveries continued to be quoted at a sizable discount over the ready position. Raw jute prices declined by 50 nP since 1st Friday to be finally placed on Wednesday at Rs 29.50 for Assam Bottoms. Mills generally were out of the market, although sellers were keen for business even at below prevailing levels.

In the futures market, 40"x10 oz Hessian February closed at Rs 41.06 on Wednesday as against last Friday's opening rate of Rs 41.18. 3 Twills February, after having been done down to Rs 110.80, recovered to close on Wednesday at Rs 111.55. Assam Bottoms March closed at Rs 28.98 after touching a low of Rs 28.46.

Burma's Jute Production:

Jute production in Burma has been showing a steady uptrend during the past few years. The main incentive for the jute production programme is derived from the increasing demand for raw jute from the domestic manufacturing industry whose output in 1959 is estimated at 20 million bags as against 15 million bags produced in 1958. As it is expected that mill capacity will increase to 60 million bags in the near future, concerted attention on the production of jute has become necessary. Already the effect of the encouragement given to jute cultivators is evident as jute production in 1959 is estimated to be in the environs of 8,000 long tons as compared with 6,000 long tons produced during the previous year. It is estimated that the domestic industry comprising at present the Government-owned mill will need a total of 24,000 long tons of raw jute annually under full production. Although the immediate objective may be the meeting of the domestic demand for the raw material in full, export possibilities are also likely to be considered. Already some jute from Burma is finding its way into world markets. A few months ago a consignment of jute from this country was sent to the UK and was well received by the trade.

WORLD OF TEA

Irregular Trend in Prices

THERE is a significant development in the tea situation, which may strongly influence price movements in the coming months despite the report of a ten-million pound fall in British consumption and the absence of the Russian buyer from the market. It is the falling stock position in warehouses, whether at Calcutta or at Cochin, which will influence the market.

North India ceases to produce tea toward the end of December; but South India continues its plucking round the year. Some of the best producing areas of the South, the Nilgiris and Anamallais, are affected in various degrees by the breakdown and reduction of power supply. On the Nilgiris, several estates have been notified restricted hours of power supply.

Again, the London tea market is moving toward the end of the current season in excellent shape. Stocks in the UK were about 35 million pounds smaller as the New Year opened and the tea trade there cannot look forward to the smaller production and export from the East during the early months without showing their concern in the sales room. Provided world production does not rise sharply, the outlook is regarded in London trade circles as promising.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 56,592 packages. After a hesitant opening with rates 6 nP to 10 nP per pound below last levels, the market showed some improvement; but later eased again and prices generally showed a decline of 4 nP to 8 nP as compared with last week. Selected lines of PFs came in for keen competition and there was a better enquiry for medium orthodox BOPs, while any bright liquoring sorts with improved quality were well supported.

There was a good demand for CTC teas at or a little below last rates and the best were sometimes dearer, there being a little more interest shown in Fannings than in broken grades. Non-wither legg-cut teas shared in the general decline and were irregular 4 nP to 6 nP easier.

The lower-priced Whole Leaf grades showed little change; but the better sorts came in for less competition and generally tended

easier. There was a very limited and selective enquiry for Darjeelings and Tippy teas were practically neglected. Following were the rates (per pound):—Clear Black Pekoe Rs 2.18 to Rs 2.22; Plain BP Rs 1.98 to Rs 2.02; Plain Fannings Rs 2.00 to Rs 2.08; Medium BP Rs 1.92 to Rs 2.00; Medium Fannings Rs 2.06 to Rs 2.16; Best Assam CTC BP Rs 2.40 to Rs 2.60 and Best Assam CTC Fannings Rs 2.45 to Rs 2.65.

In the Internal Sale, offerings were 22,376 packages of Dusts and 899 packages of Leaf grades. The sale opened to a strong and active demand, which quietened somewhat toward the close although prices still remained at or above valuations. Orthodox dusts, particularly the grainy sorts, met with keen competition; but prices were very irregular and ranged from valuation upto 10 nP per pound dearer and sometimes more. Legg-cut Dooars also met with good competition at irregular rates.

CTC types shared in the demand with prices for the better sorts ruling fully firm to dearer. Poorer descriptions in this category met with keener competition and were generally firm and sometimes dearer. The few Darjeeling teas, on offer, were irregular with quality. Following were quoted:—Medium Dooars Dust Rs 2.20 to Rs 2.32; Medium Assam Dust Rs 2.14 to Rs 2.26; Medium Assam CTC Rs 2.24 to Rs 2.30 and Best Assam CTC Dust Rs 2.55 to Rs 2.85.

In the Colombo market, offerings were 7,438,016 pounds. There was less demand than of late and high-grown broken were irregularly easier by 10 nP to 15 nP per pound except for a few selected best Dimbula/Dickoya broken orange pekoes. Mediums were also easier by 5 to 10 cents. Low-grown encountered a strong demand at fairly firm rates. Common teas were easier.

According to trade sources from Colombo, tea shipments from Ceylon in the January/November 1959 period declined to 350.16 million pounds from 379.04 million pounds in the corresponding period of 1958. The UK was mainly responsible for the decline in exports with its offtake falling from 154.07 million pounds in January/November 1958 to 127.15 million pounds during the period under review. Shipments to Continental countries, too, fell from 17.52 to 14.27 million pounds as did those to Canada from 15.96 to 14.78 million pounds.

In Mincing Lane, 24,930 packages, including 17,104 packages from Northern India, were offered. The opening demand was good. But, as the sale progressed, there was a noticeable falling away in the bidding and, toward the close, prices were very irregular and ruled easier for most descriptions. Very little of plain teas were on offer and prices for these grades showed little change.

RESERVE BANK OF INDIA

Applications are invited for the posts of Probationary Assistants in the Department of Banking Operations of the Reserve Bank of India.

(A) SCALE OF PAY: Rs. 250-25-450 E. B. 25-650.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time. A higher starting pay upto Rs. 350.00 may be given to well-qualified and well-experienced candidates.

(B) AGE LIMITS: Candidates should be between 21 and 25 years age as on the 1st February 1960. The maximum age limit is relaxable but not beyond 30 years, in the case of (i) candidates with approved war service, (ii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation, (iii) personnel retrenched from Government offices after at least one year's service, applying through Employment Exchanges, (iv) candidates possessing special qualifications and experience of value to the Bank and (v) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(C) QUALIFICATIONS: Applicants should have a brilliant academic record with a first or high second class Master's degree of a recognised Indian or Foreign University in Economics, Commerce, Banking, Accountancy or Law as a special subject. Educational qualifications may be slightly relaxed in the case of candidates who have passed the Institute of Bankers Examination and possess practical experience of commercial banking and/or of foreign exchange business in a supervisory capacity in a good commercial bank.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS GOOD ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

2. Applications should be in the candidate's own handwriting and in the prescribed form obtainable from the Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Madras, Bangalore, Nagpur, Lucknow and Trivandrum. All applications should be accompanied by copies of certificates regarding age and educational qualifications, marks lists in respect of graduate and post-graduate degree examinations and two testimonials (originals should not be sent; the Bank does NOT accept responsibility for returning the originals if sent through oversight) and should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay-1, so as to reach him on or before the 29th February 1960. Candidates already in service must submit their applications through their employers. Candidates belonging to the Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

3. Applicants must remit along with their applications an application fee of Rs. 7.50 (Rs. 1.75 in the case of Scheduled Castes/Scheduled Tribes candidates) by Postal Order, Cheque or Bank Draft on a Scheduled Bank payable at Bombay. The application fee is in no case refundable. Bonafide unemployed refugee candidates applying through any Employment Exchange are exempted from payment of the application fee.

4. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

5. Appointments will be subject to the candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

6. If any candidate desires to have his application acknowledged he should send it by "Registered Post—Acknowledgment Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

7. Canvassing will be regarded as a disqualification.

CONSENT:

The consent in writing of the Bankers, Solicitors, Auditors, and Brokers to act in their respective capacities have been filed with the Registrar of Companies.

DIVIDEND AND CAPITAL:

The Company in General Meeting may declare a dividend to be paid to the members according to their right and interest in the profits of the Company and may, subject to the provisions of the Companies Act, 1956 or

any statutory modification or re-enactment thereof, fix the time of payment.

No dividend shall be payable except out of the profits of the Company during the year or any other undistributed profits and no dividend shall carry interest as against the Company.

Preference share: Preference Shares will confer upon the holders thereof the right out of the profits of the Company determined to be divided to a fixed cumulative preferential dividend to accrue from date of allotment at the rate of 6.3% (free of tax) per annum on the capital for the time being paid up (payable on the day specified in the declaration of dividend and in case a dividend is not declared then the dividend to be deemed to be payable on the sixtieth day after the Annual General Meeting which considers the accounts for the relevant period), and in winding up, to a payment of such capital and arrears of such fixed dividend accrued up to the commencement of the winding-up (whether earned or declared or not) in priority to the Equity Shares, but shall not confer the right to any further participation in either profits or assets.

VOTING RIGHTS:

So far as Equity shares are concerned every member present in person or if a body corporate through a representative or by proxy, is entitled to have one vote. On a poll, the voting right of such member whether present in person or by representative or by proxy is to be in proportion to his share of the paid-up Equity share capital of the Company.

So far as Preference shares are concerned, every member of the Company holding such Preference share capital will in respect of such capital have a right to vote only in resolutions or questions placed before the Company which directly affect the rights attached to the Preference shares. A resolution for winding up of the Company or for repayment or reduction of its share capital is to be deemed directly to affect the rights attached to Preference shares. Every member of the Company holding any Preference share capital is also entitled to vote on every resolution or question placed before the Company at any meeting if the dividend due on such capital or any part of such dividend has remained unpaid, in the case of cumulative Preference shares in respect of an aggregate period of not less than 2 years preceding the date of the commencement of the meeting.

Where the holder of a Preference share has a right to vote, he shall, if present in person, have one vote upon a show of hands and upon a poll, he shall whether present in person or by proxy have a voting right in the same proportion as the capital paid up in respect of the Preference shares bear to the total paid up Equity share capital of the Company.

HINDUSTAN ALUMINIUM CORPORATION LTD., ANNOUNCEMENT—(Contd.)**BORROWING POWERS:**

The Board of Directors of the Company is by Resolution of the company passed on 4th September 1959 permitted to borrow monies from time to time for and on behalf of the Company so that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) may exceed the aggregate paid-up capital of the Company and its free reserves, that is, reserves not set apart for any specific purpose, provided the amount of the monies so borrowed at any particular time shall not exceed in the aggregate Rs. 15,00,00,000/-

OBJECTS OF THE COMPANY:

The Company was incorporated on 15th December 1958 with objects mentioned in the Memorandum of Association of the Company and in particular to undertake the manufacture or production of alumina, aluminium, aluminium products and by-products.

HISTORY OF THE COMPANY:

This Company is the result of collaboration between the Kaiser Organisation of the United States of America and the House of Birlas of India, and the personal interest taken in by Mr. Edgar F. Kaiser and Mr. G. D. Birla, both of whom are leading industrialists in their respective countries.

It has long been known that there are in India large deposits of bauxite, which is the principal raw material required in the manufacture of aluminium, and that India's requirements of aluminium are such that existing indigenous manufacturing capacity is unable to meet them, with the result that large amounts of foreign exchange are spent in the importation of this metal.

The formation of the Company is the result of this Indo-American collaboration. The decision to establish an integrated alumina and aluminium plant near the Rihand Dam in District Mirzapur in the State of Uttar Pradesh was taken after Kaiser Engineers Overseas Corp., a subsidiary of Henry J. Kaiser Company, the well-known American consulting engineers and contractors had prepared a confidential study of the feasibility of the project which was found satisfactory.

MANUFACTURING LICENCE:

The Government of India has issued under the Industries (Development & Regulation) Rules 1952 (as revised) a Licence No. L-1B(1)/N-3/59, dated the 26th September 1959 for an integrated plant of an installed capacity of 20,000 metric tons per annum on continuous working for the manufacture of aluminium ingots at least one-third of which is to be of electrolytic grade suitable for making conductors.

PLANT SITE AND POWER

The Plant will be located near the Rihand Dam where there is ample land available as well as attendant facilities. A railroad to serve the Rihand Dam site is under construction to the Plant site area. Agreement has been signed with the Govt. of Uttar Pradesh for supply of Power.

LAND:

It is proposed to acquire 2,000 acres or more of land in the vicinity of Rihand Dam site for the factory housing, etc. on suitable terms.

WATER SUPPLY:

Adequate water supply for the factory is available in the Rihand area.

BAUXITE:

Good commercial grade Bauxite deposits are to be found in Lohardaga area in Bihar and agreement has been concluded with Minerals & Minerals Ltd., Calcutta, for supply of the same. Good commercial Bauxite is available in Amarkantak area of Madhya Pradesh and the M. P. Govt. has granted a lease for mining Bauxite over 1236.20 Acres of land in that area.

MARKETABILITY:

The Plant is expected to go into operation in 1962 when it is estimated that the requirements of primary Aluminium in India will be some 52,500 tons. Existing manufacturing capacity of Aluminium in India is approximately 17,500 tons per annum and the existing concerns may expand their organisations to produce another 12,500 tons annually. It, therefore, appears reasonable that a market will exist in India for the absorption of the full output of this Company's proposed 20,000 tons Plant when it is able to work to capacity.

COLLABORATION AGREEMENTS:

The Company has entered into agreements with the following:—

1. **Kaiser Aluminium & Chemical Corporation.** This agreement provides for the assignment and sale of Know-How to the Company. In consideration of transfer and assignment of Know-How the Company is to allot to the said Corporation 4,80,000 Equity shares of Rs. 10/- each credited as fully paid up.

2. **Kaiser Aluminum Technical Services, Inc.** Under this agreement provision is made that qualified technicians and engineers will be supplied to the Company and provision is also made to train Company's employees in the operation of Plant. Qualified technicians and engineers will also be supplied to the Company to render technical advice to the Company and assist it in operating the plant including aluminium fabrication whenever the Company undertakes the operation of fabricating facilities. Provision is also made for the supply of information for a period of 20 years on all technical matters. This Company has to allot in consideration of what it gets to Kaiser Aluminum Technical Services Inc. 1,20,000 Equity shares of Rs. 10/- each credited as fully paid up and has also to reimburse Kaiser Aluminum Technical Services Inc. for all its expenses incurred in rendering the assistance as set forth in the agreement.

3. **Henry J. Kaiser Co.** For such design, engineering procurement and related services with regard to the construction of the plant at Rihand as are to be performed outside the Union of India, The fee to be paid to Henry J. Kaiser Co. is \$1,083,000 payable in U.S.A. Over and above this fee, the Company has agreed to reimburse Henry J. Kaiser Co. for all costs and expenses of every kind incurred by it in the performance of work and services under the contract.

4. **Kaiser Engineers Overseas Corp.** This agreement is in regard to engineering, procurement and construction services to be rendered within the Union of India. The fee payable for these services by the Company is U.S. Dollars 217,000 payable in U.S.A. Besides the fee, all costs and expenses of every kind incurred by Kaiser Engineers Overseas Corp. in the performance of the work and services under the contract are to be reimbursed to them.

INTEREST OF DIRECTORS:

(1) Mr. G. D. Birla is a Director and Chairman of the United Commercial Bank

Ltd., which is one of the Underwriters of this Issue and one of the Bankers of the Company.

(2) Mr. Edgar F. Kaiser is President of Henry J. Kaiser Company, President of Kaiser Engineers Overseas Corp. and Chairman of the Board and a stockholder in Kaiser Aluminum & Chemical Corporation. He is therefore interested in the transactions with these Corporations and such other Corporations as are described in the Prospectus.

(3) Mr. Thomas K. McCarthy is Vice-President and Counsel of Kaiser Aluminum & Chemical Corporation and a stockholder of that Company and a Vice-President of Kaiser Aluminum Technical Services Inc., and is therefore interested in the Agreements with those Corporations and with other Associated or Subsidiary Corporations.

(4) Mr. M. P. Birla is a Director of Birla Gwalior Private Limited, the Managing Agents of the Company.

(5) Mr. D. P. Goenka is a Director of Industrial Credit & Investment Corporation of India Ltd., which is one of the Underwriters of this Issue.

(6) Mr. Arvind N. Mafatlal is a Director of the Bank of Baroda Ltd., which is one of the Underwriters of this Issue and one of the Bankers of the Company.

(7) Mr. N. K. Petigara is a partner in the firm of Messrs. Mulla & Mulla & Craigie Blunt & Caroe, the Solicitors of the Company who will be paid the professional charges payable to Solicitors. He is also a Director of the Bank of India Ltd., which is one of the Underwriters of this Issue and one of the Bankers of the Company.

(8) All the Directors will be interested to the extent of the shares subscribed for by and allotted to them in the Company.

PRELIMINARY AND OTHER EXPENSES

Rs. 53,619.14 n.p. is the amount shown in the Statutory report as preliminary expenses. These have been incurred in connection with the formation of the Company and the first issue of Capital. A further sum of Rs. 11,07,494.20 has been expended towards fees for the Feasibility Report, stamp duty on Know-How Agreement, Prospecting, Drilling and Operating expenses, expenses for chemical analysis and Bauxite analysis and travelling and other expenses.

UNDERWRITING COMMISSION

The entire 2,50,000 Preference Shares and 21,56,000 Equity Shares now intended to be issued and offered to the Public have been underwritten for a commission of 2½ per cent. on Preference Shares and 1 per cent. on Equity Shares as set out hereafter.

In the opinion of the Directors, the resources of the underwriters are sufficient to discharge the underwriting obligations. The usual arrangements have been entered into with the underwriters for underwriting the shares.

BROKERAGE

Brokerage will be paid by the Company to members of the recognised Stock Exchange and to Banks at the rate of One per cent on the nominal value of the aforesaid 2,50,000 Preference Shares and at the rate of 18 n.p. per Share in respect of the aforesaid 21,56,000

HINDUSTAN ALUMINIUM CORPORATION LTD., ANNOUNCEMENT—(Contd.)

Equity Shares allotted in respect of applications bearing their stamps.

Brokerage on the same basis will be payable to the Underwriters in respect of applications made or procured by them provided that the relative forms of application bear their respective stamps and in such case no brokerage will be payable to any other party.

Brokerage will also be paid by the Company to the Managing Brokers referred to in this Prospectus, at the rate of 7 n.p. per Equity Share on all the 21,56,000 Equity Shares

PAYMENT TO PROMOTERS AND COMPANIES IN WHICH THEY ARE INTERESTED.

CAPITAL OUTLAY & MINIMUM SUBSCRIPTION

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 4,65,60,000/-

The capital required to reach the stage of production of 20,000 Metric tons a year based upon the feasibility report is estimated to be as follows:

(a) Land, buildings and cost of engineering acquisition and construction of plant and facilities as estimated in 1958-59

Rs. 15,51,11,000

(b) Cost of "Know-How" and Technical Services (by issue of Equity Shares)

Rs. 60,00,000

(c) Expenses of the issue.

(i) Brokerage and underwriting

Rs. 17,92,100

(ii) General Expenses

Rs. 3,50,000

(d) Working Capital

2,00,00,000

(e) Pre-Operating Expenses

83,64,000

19,16,17,100

The capital structure of the Company as envisaged is as follows:—

Equity Shares

6,00,00,000/- (Six Crores)

Preference Shares

2,50,00,000/- (Two Crores)

Fifty Lakhs

8,50,00,000/- (Eight Crores)

Fifty Lakhs

Applications have been made for long term Loans from the Export-Import Bank, both in Dollar currency as well as in Rupee currency as follows:—

(a) Loan to the extent of Rs. 650 lakhs equivalent to U.S. Dollars 13,650,000/- and

(b) Rupee Loan under Public Law 480 of the United States to the extent of Rs. 1,00,00,000/- equivalent to \$2,100,000.

offered to the public, the Managing Brokers being entitled thereto in equal shares.

Brokerage will also be paid by the Company at the rate of 25 n.p. per Equity Share to members of the recognised Stock Exchanges against applications bearing their stamps in respect of the 6,50,000 Equity Shares which are agreed to be taken up by the nominees of Birla Gwalior Private Limited out of the 21,33,000 Equity Shares which have been allocated to Birla Gwalior Private Limited and its nominees.

DECLINE TO REGISTER ANY TRANSFER OF SHARES TO A TRANSFEREE OF WHOM THEY DO NOT APPROVE.**INSPECTION OF DOCUMENTS**

Documents mentioned in the prospectus can be inspected at any time during the usual business hours at the Registered Office of the Company until fourteen days after the opening of the subscription lists.

APPLICATION FOR SHARES AND ALLOTMENT:

Applications for Equity shares must be for 50 shares or multiples of 50 shares. Applications for Preference shares must be for 5 shares or multiples of 5 shares. All applications must be made on the form accompanying the prospectus which can be had from the Company's Bankers and Managing Brokers. All application forms properly completed must be lodged together with the amount payable on application with any of the following Banks, namely:

1. The United Commercial Bank Ltd., Bombay.
2. The Central Bank of India Ltd., Bombay.
3. The Bank of India Ltd., Bombay.
4. The Bank of Baroda Ltd., Bombay.
5. The Union Bank of India Ltd., Bombay.

or with any of their existing Branch Offices at the following places:

Ahmedabad	Gwalior	Patna
Baroda	Kanpur	Varanasi
Delhi	Nagpur	Bombay
Jaipur	Trivandrum	Coimbatore
Madurai	Amritsar	Indore
Surat	Calcutta	Madras
Allahabad	Hyderabad	Rajkot
Bangalore	Lucknow	

The remittance should be made by cheque or draft which, if it is desired to avoid payment of Bank charges, must be drawn either upon any of the above Banks to which the application form and cheque or draft are being sent or upon a Branch of any of the above Banks situated in any of the aforesaid towns.

All cheques or drafts drawn on Banks situated at places other than those mentioned above should include a sum at the rate of 25 n.p. per cent. (minimum 62 n.p.) of the amount remitted to cover all the commission and bank charges; otherwise, the application is liable to be rejected.

Cheques or drafts should be drawn in favour of "Hindustan Aluminium Corporation Ltd." and should bear the words "A/c. Equity Issue" in the case of application for Equity Shares and the words "A/c. Pref. Issue" in the case of application for Preference Shares. For the applicant's protection, cheques or drafts should be crossed "Account Payee Only". A separate cheque or draft must accompany each application.

Allotment will be notified by the despatch of an allotment letter, but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part, in either case without assigning any reason. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant in which event Bank Commission, if any, will be payable by the applicant.

SHARE CERTIFICATES:

The share certificates will be issued within nine months of the date of allotment.

Bombay,

Dated 19th January 1960

AUDITORS' REPORT

The Auditors' Report has been attached to the copy of the prospectus filed with the Registrar.

MANAGING AGENTS:

The Govt. has approved the appointment of M/s. Birla Gwalior Private Ltd., Gwalior, as the Managing Agents of the Company. They are appointed Managing Agents of the Company for a period of 10 years on the remuneration of 4% commission on the net profits of the Company with such minimum remuneration for each financial year as Govt. may decide at a later date. No compensation is payable to the Managing Agents for loss of office.

POWER OF BOARD TO REFUSE REGISTRATION OF TRANSFER:

The Directors may, subject to the right of appeal conferred by the companies Act, 1956,

THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS

A formal Prospectus, dated 21st January, 1960 has been delivered to the Registrar of Companies, Bombay, for registration and copies thereof, along with application forms, are obtainable from the Banks and Brokers mentioned hereunder.

The consent of the Government of India has been obtained to this issue of Capital by an Order No. R. 145-CCI/59-828 dated 9th June, 1959 issued by the Ministry of Finance, a complete copy of which is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

Licences have been obtained from the Government of India for effecting substantial expansions to the Company's existing industrial undertaking at Bhandup, Bombay-78, as described in the Prospectus. Copies of these licences are open to public inspection at the Registered office of the Company. It must be distinctly understood that in granting these licences the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

An application is being made to the Bombay Stock Exchange for permission to deal in and for an official quotation of the Equity Shares of the Company.

AUTOMOBILE PRODUCTS OF INDIA LIMITED

(Incorporated under the Indian Companies Act, 1913).

SHARE CAPITAL

AUTHORISED		Issued, Subscribed and Paid Up
Rs. 50,00,000	Equity Shares of Rs. 10/- each	Rs. 17,00,000
Rs. 28,00,000	5% Redeemable Cumulative Preference Shares of Rs. 100/- each	Rs. 28,00,000
Rs. 22,00,000	6% Tax-free Redeemable Cumulative Second Preference Shares of Rs. 100/- each	Rs. 5,00,000
Rs. 1,00,00,000		Rs. 50,00,000

LOAN CAPITAL

The Company has no debentures. It has a mortgage loan for Rs. 50 lacs from the Industrial Finance Corporation of India under two mortgage deeds, one for Rs. 30 lacs and the second for Rs. 20 lacs. The full amount of Rs. 30 lacs under the former has been drawn and a sum of Rs. 6 lacs still remains to be drawn against the second mortgage deed. The Company has repaid the first instalment of Rs. 2 lacs against the first mortgage deed. Thus the amount outstanding as on date to the Industrial Finance Corporation of India is Rs. 42 lacs. Messrs. Innocenti S. G. Milan, Italy, and Messrs. Cimat S.P.A., Torino, Italy have agreed to supply machinery for manufacture of Lambretta Scooters on deferred payment basis to a value of Rs. 17½ lacs and Rs. 4 lacs respectively. The repayment of these deferred payments, both principal and interest, will be guaranteed to the extent of Rs. 28 lacs by the Industrial Finance Corporation of India and in consideration thereof the Company has created a further charge by way of an equitable mortgage by deposit of title deeds.

ISSUE OF

2,50,000 Equity Shares of Rs. 10/- each at par payable Rs. 250 nP. on application and Rs. 250 nP. on allotment and the balance of Rs. 5/- as and when called.

However no call shall exceed Rs. 250 nP. per share or be made payable within 3 months after the last preceding call was payable.

Of the shares now being issued, His Highness The Maharajah Fatehsingh Gaekwar of Baroda has agreed to take up 50,000 Equity Shares of Rs. 10/- each for cash and 25,000 Equity Shares of Rs. 10/- each will be issued at par to Messrs. Innocenti S. G. of Italy, against supply of machinery.

REMAINING 1,75,000 EQUITY SHARES OF Rs. 10/- EACH ARE OFFERED AT PAR FOR PUBLIC SUBSCRIPTION.

Applications for Shares from the public must be for a minimum of 50 Shares or for multiples of 50 shares.

The shares now being issued will not confer any right to any dividend that may be declared on the Equity Shares in respect of the Company's Financial Year ending on 31st July, 1960.

The Shares now being issued will rank pari passu in all other respects with the existing Equity Shares of the Company.

HISTORY, BUSINESS & PROSPECTS:

The Company was incorporated in September 1949 by Rootes Limited for the phased manufacture of Hillman Cars and Commer Trucks. After the report of the first Tariff Commission Enquiry on Automobiles, Rootes had to submit a revised programme of manufacture before the time stipulated by Central Government, viz. September 1953. For various reasons, they could not do so and the manufacturing licence was withdrawn. Rootes Motors sold out their interest in May 1954 and thereafter the Company secured manufacturing licences under the Industries (Development & Regulation) Act, 1951 for the following products:—

1. Lambretta Motor Scooters and Three-wheelers.
2. Henry Meadows Automotive Diesel Engines.
3. Borg & Beck Clutch Assemblies.
4. Lockheed Brake System.
5. Firestone Brake Linings.

The Company has also a concessionaire licence from Rootes Motors Limited for the manufacture of Hillman Cars and Commer commercial vehicles and for distribution of Rootes Group vehicles and spare parts in this country.

Under the First and Second Five Year Plans, the Government of India has given considerable attention to the development of road transport. The

February 6, 1960

AUTOMOBILE PRODUCTS OF INDIA LIMITED—Contd.

accent on road transport will be further heightened in the Third Five Year Plan period both from its employment potential and the necessity to open out the interior of the country. This Company which has been granted licences for the manufacture of Automotive Diesel Engines to be fitted on motor trucks and other essential ancillary parts and accessories has a very important place in the automotive industry. In addition, with its Lambretta Two-wheelers and Three-wheelers, the Company caters to the needs of the personal transport of the common man and the small trader. It is intended to carry out substantial expansion of its business.

Lambretta Scooters & Three-wheelers: There is a great demand for these vehicles. The Company has a sanctioned and installed capacity of 12,000 units per annum. The demand for these vehicles has been estimated to reach 20,000 units a year by the end of the Second Five Year Plan and treble itself to 60,000 units per annum in the Third Five Year Plan. The Company, if considered advisable, will apply for expansion of capacity in due course.

Meadows Diesel Engines: This Company is one of the two units licensed to manufacture Automotive Diesel Engines for fitment to commercial vehicles and for industrial purposes. The demand for commercial vehicles is expected to reach 40,000 units by the end of the Second Five Year Plan of which a large majority will be fitted with diesel engines. The requirements of the two vehicle manufacturers who have no diesel engines of their own thus will be over 12,000 units per annum. This demand is confidently expected to go up further during the Third Five Year Plan period of which a large majority will be fitted with diesel engines. The Company expects to increase the installed and sanctioned capacity of 3,000 engines in a couple of years to 6,000 units per annum and will be taking necessary steps in this connection in due course if considered advisable.

Borg & Beck Clutch Assemblies: Borg & Beck Clutch Assemblies being standard equipment for very many of cars and trucks running in this country, the demand for these is expected to rise to about 1,00,000 units per annum during the Third Five Year Plan period. If considered advisable steps will be taken in due course to raise the present installed and sanctioned capacity of 15,000 units per annum.

Lockheed Brake System: Lockheed Brakes are also standard equipment on very many of the vehicles running in this country, and demand for these is also likely to expand to about 1,00,000 units per annum before long against the installed and sanctioned capacity of 15,000 units. Steps in this connection also will be taken in due course to raise the present installed and sanctioned capacity if considered advisable.

Firestone Brake Linings: With the increase in the number of vehicles running in this country, the demand for Brake Linings is also expected to expand. Here again, the Company will have to increase its present installed and sanctioned capacity of 3,12,000 running feet per month.

Spare Parts: In addition, the Company's sale of Spare Parts in the above lines is likely to go up with the increase in the number of vehicles running in the country.

Thus, each of the above five projects on which the Company is engaged shows excellent potentialities for the future as there is a growing demand for the articles manufactured.

TECHNICAL FACILITIES:

The standard of production required in the automotive industry is of a high degree of precision and skill. The Company is fortunate in having secured the technical collaboration of the following leading firms in the industry in foreign countries:—

- (i) World Bestos Division of the Firestone Tire & Rubber Co. of Akron, U.S.A.
- (ii) Henry Meadows Limited, Wolverhampton, England.
- (iii) Innocenti S.G., Milano, Italy.
- (iv) Borg & Beck Co. Ltd., Leamington Spa, England.
- (v) Borg-Warner International Corporation, Chicago, U.S.A.
- (vi) Fichtel & Sachs, A.G., Schweinfurt Am Main, West Germany.
- (vii) Automotive Products Co. Ltd., Leamington Spa, England.
- (viii) Alfred Teves, Frankfurt Main, West Germany.
- (ix) Fiat S.P.A., Torino, Italy.

These firms have also been sending to the Company technicians from time to time to set up the plant and train its personnel.

LAND, PREMISES, PLANT AND MACHINERY:

The factory is situated on 30 acres of land within the city limits of Greater Bombay on the main Bombay/Agra Road with a second road frontage on its southern boundary connecting Bhandup Railway station to the Bombay/Agra Road. The Company has also an assisted Railway Siding.

The administrative office and the Plant are located in these premises. The factory has over 2,00,000 sq. ft. of first-class covered accommodation. The Company proposes to extend buildings by further 20,000 sq. ft. in the next two years to accommodate the plant and machinery expected to be imported under its present expansion schemes.

Heavy machinery, presses etc. to a value of about Rs. 60 lakhs have been added in the course of the last three years and the Company hopes to add further plant and machinery to an extent of about Rs. 40 to Rs. 50 lakhs in the course of the next two years.

The cost of the fixed assets of the Company as at 31st July 1959 was about Rs. 125 lakhs and the written down value about Rs. 98 lakhs.

MANAGEMENT AND STAFF:

The Company has in its staff an Engineer with considerable experience in the Automotive Industry in the U.K. Representatives from Henry Meadows Ltd., Innocenti S.G., and Borg & Beck Co. Ltd., Automotive Products Co. Ltd., are working with the Company. The Company has developed a well-trained management Engineering and Sales staff with extensive experience in all aspects of automotive industry.

The total number of employees including the management staff and operatives employed by the Company is 1100 approximately. The efficiency and continuity of management at all levels are maintained by the Company's practice of promotion wherever possible and within the organization. Labour relations have, in general, been satisfactory.

OBJECT OF THE ISSUE

The object of this issue is to enable the Company to purchase machinery to expand the various programmes mentioned above.

FINANCING AND FINANCIAL INFORMATION

The amount required for the expansion programme undertaken by the Company amounts to about Rs. 52½ lakhs which will be financed as under:—

	Rs.
Balance of Mortgage Loan to be drawn from Industrial Finance Corporation of India	6,00,000
Deferred Payment from Innocenti & Cimat	21,50,000
Fresh Capital (including Rs. 2,50,000 to be issued to Innocenti S.G., in lieu of supply of machinery)	25,00,000
Total	52,50,000

The Directors are satisfied that adequate working capital will be available by means of normal borrowings from Banks.

The following is a condensation of the Auditors' Report by the Company's Auditors, Messrs. A. F. Ferguson & Co., as published in the Prospectus.

	Sales of Vehicles and Parts	Net profits/losses after depreciation and taxation	Net profits/losses after depreciation and taxation
	Rs.	Rs.	Rs.
Year ended 31st July 1955	77,54,433	6,95,969	2,80,557
Year ended 31st July 1956	1,33,92,472	8,65,029	2,85,805
Year ended 31st July 1957	1,74,03,915	3,55,493	(1,08,443)
Year ended 31st July 1958	1,68,07,181	(70,512)	(6,31,975)
Year ended 31st July 1959	1,99,02,874	(2,48,469)	(10,07,994)

Note: The figures in brackets denote losses.

Assets and Liabilities as at 31st July 1959:

	Rs.	nP.
Fixed Assets—at original cost less depreciation	98,63,372.40	
Current Assets	1,03,44,989.35	
Total Assets	2,02,08,361.75	
Less: Liabilities and other provisions	1,66,23,804.47	
Net Assets as at 31st July 1959	35,84,557.28	

DIVIDENDS ON PAID-UP CAPITAL:

	1955	Years ended 31st July 1956	1957	1958	1959
	Rs.	Rs.	Rs.	Rs.	Rs.
Ordinary Shares	Nil	Nil	Nil	Nil	Nil
28,000 5% Redeemable Cumulative Preference Shares of Rs. 100/- each	*1,40,000	*1,40,000	Nil	Nil	Nil
6% (Free of Tax) Redeemable Cumulative Second Preference Shares			Nil	Nil	Nil

*5% p.a. (Without deduction of tax due to the Company having no tax liability) sanctioned at the Annual General Meeting held on 17th April 1957.

The period covered by the Auditors' Report includes the five years ending 31st July 1959.

FUTURE PROSPECTS AND DIVIDENDS:

The Company was originally started for assembly of the well-known Rootes products, viz., Hillman cars and Commer commercial vehicles. The business so carried on was more or less in the nature of trade and since then the various manufacturing programmes have been taken up and the Company has converted its activities from trade into that of industrial manufacture. It had to develop the Lambretta which was a vehicle practically unknown in the country by establishing a series of service and dealer cally throughout the country. It had to introduce and popularise a new diesel engine in the three years. Consequently, the Company had to spend a lot of its revenue towards developmental and sales promotion purposes. Net Block which was about Rs. 40 lacs on 31st July 1955 has increased to about Rs. 98 lacs on 31st July 1959. Sales have gradually progressed from about Rs. 72 lacs in 1954 to nearly Rs. 2 crores on 31st July 1959. The Company expects to increase its turnover in the current year to about Rs. 3 to 3½ crores. Based on the previous operating costs, the Company expects to make a profit in the current year of say about Rs. 15 lacs on a turnover Rs. 3 to 3½ crores assuming present conditions of trade and industry (including foreign exchange allocations) continue. This would wipe out the carried forward losses. With the profits for the year ending on 30th July 1961 on the same assumption the Company hopes to resume payment of dividends on its Equity Shares.

PROSPECTUS AND APPLICATION FORMS:

Copies of Prospectus, on the terms of which alone applications will be considered and Application Forms may be obtained from the Registered Office of the Company or from the office of any of the Company's Brokers or Bankers and Underwriters named in the Prospectus.

SUBSCRIPTION LIST:

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON THE 15TH FEBRUARY 1960 AND WILL REMAIN OPEN UNTIL THE CLOSE OF BANKING HOURS ON THE 18TH FEBRUARY 1960.

The Associated Cement Companies, Limited

Year of Mixed Fortunes for Cement Industry

Error of Tariff Commission's Approach to Costs

Speech Delivered by the Chairman, Mr Dharamsey M. Khatau

PRODUCTION AND PROFITS

Speaking at the 23rd Annual General Meeting of the Associated Cement Companies Limited, the Chairman, Shri Dharamsey M. Khatau, said: "The year under review has been one of mixed fortunes for the cement industry. While the pace of expansion of installed capacity was maintained, the industry was confronted with a sudden drop in the demand for cement, particularly for Government requirements, with the result that despatches failed to keep pace with increasing installed capacity. In the case of your Company, the installed capacity of our factories in India increased during the year from 31.27 lakh tons to 34.42 lakh tons; but the despatches amounted only to 31.47 lakh tons compared with 30.69 lakh tons during the previous year. Though the situation improved somewhat in the latter half of the year, it is unlikely, despite the most intense and sustained sales efforts, that demand will catch up with installed capacity in the very near future."

"The turnover of cement and other products showed an increase of about Rs. 133.00 lakhs. A substantial part of this was accounted for by the price increase of Rs. 3.50 per ton ex-Works which was operative throughout the year under review. As this price increase was merely designed to counteract the cost increases already established by the end of 1957, there was naturally no increase in the profits. On the contrary, the ratio of gross profit to turnover after payment of all expenses other than depreciation and taxation was actually lower, and the amount of gross profit was also down by about Rs 13 lakhs due mainly to lower income under other heads. The provision for depreciation increased by about Rs. 33 lakhs and the statutory Development Reserve absorbed about Rs 53 lakhs more than last year. Consequently, despite the lower incidence of direct company taxation, the net distributable profits after providing for depreciation, development rebata, taxes and other charges, were considerably lower than in the previous year."

"Your Directors sincerely regret that due to these and other circumstances beyond their control, it has been necessary to lower the rate of dividend from slightly over Rs. 12/- per share (subject to tax)

declared last year to Rs. 11/- per share (subject to tax) proposed this year. They also deeply regret that for the same reason, it was necessary to scale down the rate of bonus payment to employees."

TARIFF COMMISSION

Commenting on the meagre price increase of Rs. 3.50 per ton allowed to the Company by the Government on the recommendations of the Tariff Commission, the Chairman observed: "In the industry's representations to Government it was pointed out that the price increase granted was quite inadequate, particularly as it ignored various elements of cost such as the commission to stockists, the annual bonus payments to employees and the remuneration payable to Managing Agents; but these representations were summarily rejected. Moreover, simultaneously with the price increase, Government imposed a ban on the use of second-hand bags for packing cement, which item alone has put your Company to a loss of as much as Rs. 1.50 per ton. Furthermore, subsequent to the completion of the Tariff Commission's enquiry into costs, there have occurred several increases in specific items of cost during the year under review, such as the upward revision of railway freight, rise in the pit-mouth price of coal, rise in wages consequent upon wage settlements and adjudications, new levies and increases in the rates of duty on power, revision of Electricity Tariff, etc."

Pointing out the major basic error in the Tariff Commission's approach to the problem of costs, Shri Khatau stated that while computing the Company's manufacturing costs, the Commission proceeded on the assumption that despatches, and therefore production, would be equal to the installed capacity. "Even apart from market considerations resulting from slackness of demand, the Company had strongly urged the Commission not to equate attainable production with installed capacity, since experience had shown, that over a period of time actual production was technically incapable of being maintained at a sustained level of 100 per cent of installed capacity. Taking the performance of all the factories of the Company into account, it was a virtual certainty that production could not be continuously sustained at the maximum level

for any appreciable length of time. And this technical situation was re-inforced during the year under review by commercial considerations, because the poor offtake due to slackening of demand did not, in any event, warrant full capacity production. All this has been borne out by the fact that the Company's total output in India was only 95 per cent of the effective rated capacity, resulting in a production of only 32.11 lakh tons during 1958-59 as against an estimated 34.71 lakh tons assumed by the Tariff Commission. Consequently, the cost of production 'per ton' was naturally higher than it would have been, had production and despatches been fully up to installed capacity."

"In the circumstances, your Company was compelled to make a fresh representation to Government urging them to allow an increase in the retention price of cement sufficient to offset the various post-1957 increases in costs to which I have referred. Government's attention has also been pointedly drawn to the present unsatisfactory position of the industry generally and of your Company, in particular. It has been made clear to Government that unless the retention price is suitably increased,

- It would not be possible for the Company to earn even the meagre 'return on capital' which was recommended by the Commission and accepted by Government as a fair return;
- the capacity of the Company to maintain dividends even at present low levels would be gravely impaired; and
- there would hardly be any 'surplus' left to be ploughed back into the business to finance, at any rate partly, the further expansion of installed capacity so necessary for the Third Five-Year Plan.

It is hoped that Government will take early action in the matter. Their decision is anxiously awaited."

TAXATION

Turning to the fundamental changes in the structure of Corporate Taxation introduced by the Finance Act, 1959, the Chairman welcomed it as a long overdue change in the right direction.

Commending it both for its simplicity and for the logicity of its main conceptions, Shri Khatau observed that judging by the experience of its incidence upon the Company—a not untypical case in the field of basic industry—there were at least two directions in which second thoughts were necessary.

"The first concerns the aggregate rate of Income-tax and Corporation Tax. While this has been reduced from 51.5 per cent to 45 per cent and the Wealth Tax and Excess Dividend Tax on Companies have now been abolished, the shareholders have lost the benefit of "tax-credit" hitherto enjoyed by them in respect of Income-tax paid by the Company. As a consequence, every Company is now obliged to declare a considerably higher "gross" dividend under the new system than the "net" dividend under the old system, so that after deducting tax at the prescribed rates from such gross dividend at the time of payment, the shareholders may get a net (tax-free) dividend more or less on the same basis as under the old system. So far as your Company is concerned, the resultant gross burden on the Company under the new system, that is to say the combined burden of Income-tax and Corporation Tax at the new rates on its own profits, together with the provision of the "tax credit" for the shareholders in the new form on the net dividend paid to them under the new system, considerably exceeds the aggregate burden under the old system. In other words, the saving to the Company resulting from the lowering of the rates of Income-tax and Corporation Tax and the abolition of the Wealth Tax and Excess Dividend Tax, falls short of the amount required to make good the loss of tax credit to the shareholders. This means, in effect, that the net yield to Government, at a given level of income of your Company, under the new system will be more than under the old system, even though this was explicitly not desired by the Finance Minister. It is interesting to note here that the same conclusion emerged from a study carried out by the Associated Chambers of Commerce of India concerning the net incidence of taxation under the new system upon a large number of representative companies chosen at random. When these findings are

February 6, 1960

considered in the light of the undoubted fact that "profit ratios", especially in basic industries, have shown a downward trend since 1957, the conclusion is inescapable that the aggregate rate of Income-Tax and Corporation Tax under the new system ought not to exceed 40 per cent at the most if the declared objective of the Finance Minister, namely, not to get a higher net yield merely by the change in the system of Corporate Taxation, is to be fulfilled."

"The second major defect in the new system concerns the virtual confiscation of tax credit on the taxed reserves of companies. This has already affected your Company with special severity in the year under review because of the operation of the new system of Corporate Taxation, of having to draw heavily upon Reserves to pay anything like a reasonable rate of gross dividend this year compared with that paid last year. It seems to me plain that where Reserves have to be drawn upon in circumstances such as these, the Company concerned ought to get credit in some form, preferably in its own assessment, for the tax credit already accrued in the past upon the amount of reserves so utilised, subject of course to an upper limit set by the extent of taxed reserves available with it. What matters, however, is not so much the mechanics of the relief operation as the need for the unquestioned acceptance of the principle that tax credits of this kind should not be confiscated. Any other course would be indefensible on grounds of public policy, for it would spell bad faith with the shareholders of precisely those companies whose managements have followed sound conservative financial policies by building up reserves in the past, reserves which would normally remain deployed in industry, but which could be drawn upon in lean years."

EXPANSION AND REHABILITATION

Despite the adverse conditions under which the Company had to operate, the Chairman reported that the Company had gone ahead with its planned expansion and had spent during the year considerably more on expansion, rehabilitation and modernisation than the Rs. 31.49 lakhs net received as rehabilitation allowance in the price of cement. Giving details Shri Khatau mentioned that the expectations that the Dry Process plant at Mencherial would be more economical in operation than the conventional Wet Process plant had been justified in spite of the fact that optimum conditions of production have yet to be reached. The duplication of the Mencherial plant as well as the extensions at the Company's Kymore and Shahabad Works were progressing satisfactorily, while work on the slag cement project at Chaibasa and on the slag processing plant at Jamshedpur was proceeding according to schedule.

The Chairman also announced that the Company's new firebricks plant at Katni was now also manufacturing two special refractory cements marketed under the trade names of ACCOSET-50 Refractory Cement and ACCOCID Acid-proof Cement. The Company's white cement, currently being produced at the Porbandar factory, and marketed under the trade name of SILVICRETE, was becoming increasingly popular with consumers.

THIRD FIVE-YEAR PLAN

Discussing the problem of setting an achievable target for the cement industry in the Third Plan, Shri Khatau continued: "I should like to take this opportunity to express our appreciation of the more realistic way in which the Government and the Planning Commission are tackling the problem of setting the cement target for the Third Plan compared with the manner in which it was approached for the Second Plan. On this occasion, all aspects of the problem have been discussed at a meeting held in November last between the Planning Commission and the Industry, at which the Ministry of Industry was also represented; and a target of 15 million tons has been tentatively fixed as a result of these deliberations."

"This, in my judgment, is an achievable target, both financially and technically. It is unlikely to lead us into the unfortunate position of excessive capacity in which the Industry found itself during 1958 and 1959. In saying this I am not unmindful of the possibility that recent disturbing developments on India's northern frontiers may give rise to a situation of national emergency in which *inter alia* the demand for cement may suddenly shoot up. Should such a contingency unfortunately arise, I should like to assure the Government, without qualification, that we in the A.C.C. shall again readily shoulder the primary responsibility for expanding cement production as fast as we possibly can, to the utmost of our financial and technical resources. We shall be ready and willing, if so required, once again to shoulder the responsibility for ensuring the fair distribution of cement throughout the country. I do not say these things in any boastful way, but merely to reiterate our humble duty."

ACC-VICKERS-BABCOCK LTD.

Continuing, the Chairman stated that the work on the design and construction of the ACC-Vickers-Babcock Heavy Engineering Project at Durgapur was proceeding according to schedule. "The land for the factory site and the housing colony has been acquired; and contracts for a substantial portion of the structural steelwork for the Shops have been placed. The requirements of plant, machine tools and equipment have been finalised and orders are to be placed very short-

ly. The Works is expected to be ready during the latter half of 1961 enabling pilot production to commence. Full-scale production will start from early 1962."

LABOUR-MANAGEMENT RELATIONS

Commenting on labour-management relations, Shri Khatau observed:

"This year, while the labour situation at the Collieries unfortunately continued to be unsatisfactory, our efforts to maintain good relations with the workmen at our Cement Works have been subjected to great strain at the Kymore and Banmor Works by factions and internal rivalries for the control of the Labour Unions. There was also unrest at Mancherial. Despite these shortcomings, I may state with some pleasure that there was no major stoppage, strike or lock-out at any of our factories to mar the good employer-employee relations which your Company has so assiduously endeavoured to cultivate over the years."

"I would on the whole like to congratulate the workers and their leaders for their goodwill and co-operation which have enabled the management to enter into long-term settlements at practically all our Works. This is a notable achievement and is bound to have beneficial effects on the future relations with our workmen. It should certainly lead to greater prosperity for the Company as well as for its employees."

Referring to the Central Wage Board for the Cement Industry constituted by the Government of India, the Chairman mentioned that the Wage Board had now submitted its report to Government and the publication of the report as well as the Government's decision on the recommendations made were awaited.

Shri Khatau also stated that in the bonus dispute with the Company's employees for the year 1953-54, the Industrial Tribunal's decision awarding one month's additional bonus was reversed by the Supreme Court in the Company's favour. "The Supreme Court's judgment had laid down certain major guiding principles for the determination of bonus and is, therefore, important not only for our industry but also for other industries. While this decision will not, of course, obviate disputes regarding payment of bonus for subsequent years, it should act as a deterrent against unreasonable demands and will make the resolution of such disputes easier in future by restricting their scope."

ACC VILLAGE IMPROVEMENT SCHEME

The Chairman also mentioned the Company's efforts to assist the people who live in the villages near its factories from where it draws the major portion of its labour force to improve their living conditions through self-help, with the Company providing free

advice and guidance. Started in a few villages around Balasor, the Company's Village Improvement Scheme now served nearly 100 villages at seven centres at Sevalia, Balasor, Chaibasa, Shahabad, Khalaria, Kymore and Lakheri, and has received enthusiastic response from the villagers.

The Chairman concluded with an expression of warm appreciation of the hard work and unstinting co-operation of all the Company's employees.

Note: THIS DOES NOT PURPORT TO BE A REPORT OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETING WHICH WILL BE SENT SEPARATELY TO SHAREHOLDERS ON REQUEST.

Prospects for Spices

THE Central Spices and Cashewnut Committee has made several recommendations to augment production, home consumption and export of spices. The question of price stabilisation in regard to pepper and other spices has been discussed by the Committee and some of the members have urged the setting up of a machinery similar to the one set up in the case of coffee in order to give the necessary incentives to growers.

With a view to checking adulteration and enhancing the prestige of Indian goods abroad, quality control is also proposed to be introduced soon for cashew kernel and pepper. A separate export promotion body is now being formed for pepper and other spices. The Cashew and Pepper Export Promotion Council, which has been functioning in Cochin for the past four years, will be rededicated to a promotion body for cashew alone.

The progress so far made in the development of pepper has been reviewed by the Committee, which has approved of the proposal to increase the export target of pepper from 15,000 tons to 20,000 tons during the Third Plan period. Meanwhile, Indian pepper is now selling at prices three times higher than the prices prevailing at this time last year. The peak price realised, since the beginning of the new season, is Rs 2,150 per candy for ungarbled variety.

The trade attributes this unusual leap in prices to continuous buying by the largest consumer of pepper, the USA, even at steadily increasing prices. It offered as much as 84 cents a pound, although the rate has subsequently come

down to 79 cents. Russia has recently lifted about 1,000 tons. Its allies in Eastern Europe also are showing interest in Indian pepper. With strong buying trend in favour of India, and commitments extending up to May, the immediate outlook for Indian pepper is considered to be bright.

Rubber

The increase in production of Rubber has been very slow, rising from 17,148 tons in 1951 to 24,327 tons in 1958. Output, last year, is estimated around 25,000 tons. But, according to the estimate made by the Rubber Board, consumption in the country is expected to rise to 55,000 tons in 1961 from 44,000 tons last year.

The cost of natural rubber and similar gums, imported in the first ten months of 1959, rose sharply to Rs 4.21 crores from Rs 2.55 crores in the corresponding period of the previous year. This was due to the marked increase in consumption of rubber, which was running about 3,500 tons a month last year against a monthly average production of 2,000 tons only.

Gur

On Wednesday last week, the Hapur Chamber of Commerce decided to fix a ceiling of Rs 16.50 per maund for Gur futures, subject to the approval of the Forward Markets Commission. And on Thursday came the Commission's directive suspending trading in gur futures in all the five principal markets of the country, viz., Delhi, Hapur, Meerut, Muzaffarnagar and Agra. Business was suspended to enable the traders to reassess the market situation. These developments reflected the serious concern with which the market authorities seemed to view the trend in gur prices.

The lowest price recorded by ready gur, last season, was Rs 13.62 per maund. The highest ready price touched, during the season, was Rs 23.50. Again, over the past two years, ready gur prices have ruled above Rs 20 per maund for most of the time except perhaps for a month or so when the mar-

ket was depressed by the pressure of arrivals. Under the circumstances, gur traders are of the opinion that anxiety on the part of the authorities about the prevailing gur prices is unwarranted.

According to the latest news, the FMC have approved a ceiling price of Rs 16.50 a maund for gur futures at Hapur; and the ceiling has come into force from the 1st February. The Commission have also issued a fresh directive, enhancing the special margin from Rs 800 to Rs 1,500 per unit at or above the price of Rs 16.25 and to Rs 1600 at or above the price of Rs 17.75. Further, the limit of outstanding transactions is fixed at 40 units for an individual.

In the Muzaffarnagar market, trading has been resumed after remaining suspended for two days. The FMC have made some amendments to special margins which were imposed in the middle of January. According to the latest order, longs having closing open positions of 11 units and above shall pay a special margin at Rs 675 per unit. Whenever the rate of Gur Fagun 2016 delivery is or exceeds Rs 16.40 and when the closing price is or exceeds Rs 17.80, longs having closing open position of 11 units and above shall pay a special margin at the rate of Rs 725 per unit. The Commission have further directed that no member shall be allowed to increase its long position beyond 70 units during 2016 delivery and those having short open positions may acquire long open position up to 70 units.

Sugar

Despite better supply position, Sugar prices are ruling steady in the Hapur market. Production of crystal sugar is reported to be higher than in the corresponding period of last year. The Union Government, in consultation with the Punjab and Uttar Pradesh Governments, are taking steps to ensure regular cane supplies to the factories. The rate is quoted around Rs 120 a bag.

When prices in India are developing a steadier tendency, world

prices remain weak. In the past fortnight, the New York market, which sets the price pattern throughout the world, has slipped back again to 2.90 cents a pound —0.25 cents below the minimum of 3.15 cents at which the International Sugar Council aims.

Khandsari

After registering sharp gains in the previous week, the Khandsari market has since turned quiet. There is, however, brisk demand from the consuming areas of Gujarat, Saurashtra and Rajasthan.

Production of khandsari is reported to be in full swing and is expected to touch a new high this year. Dry quality is quoted at Rs 40 to Rs 48 a maund, according to quality.

Foodgrains

In the Hapur market, prices of Foodgrains have developed a slightly firm tendency on reports of adverse weather conditions and lack of adequate winter rains and hailstorms in some areas which have affected "rabi" crop prospects. Demand has, therefore, been on the increase on fears that the new grains will not reach the market before the middle of March.

Wheat prices have gained about Re 1 a maund, to be quoted at Rs 19 for the average quality and up to Rs 20.25 for the farm variety. Rice prices, too, have recorded gains in sympathy with the rise in the prices of other cereals. Firmer advices from Madras and the Punjab have induced fractional rise in Gram prices. Maize and Bajra have continued to attract good consumer support, resulting in prices recording further gains over last week. In the Pulses section, Peas and Arhar have advanced by about 75 nP a maund on reports that the crop has been adversely affected by heavy frost.

Oils & Oilseeds

THOUGH it was announced last week that the forward position dealings in groundnut oil would recom-

February 6, 1960

mence today, it was not resumed. Reason for this seems to be the that, since forward contracts remain unfulfilled, ready market quotations are still high and have scared the buyers. Market continued inactive though, in a few cases, inevitable spot dealings had to be done.

Today's rates. Groundnut oil per candy of 500 lbs ex-Madras godown expeller ready 3% F.F.F. Rs 393. (No quotations for forward positions).

Kernels per candy of 531 Coromandel Rs 206/207.

UPPER GANGES VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the above-named Company will be held at its Registered Office at 12, Mission Row, Calcutta, 1, on Tuesday, the 1st March, 1960 at 11-0 A.M. to consider and, if thought fit, to pass the following subjoined resolutions:

As Special Resolutions

1. "That UPPER GANGES VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED be wound up voluntarily as a members' voluntary winding-up and that Messrs. A. B. Bhattacharyya and L. H. Das of 12, Mission Row, Calcutta, be and they are hereby appointed Liquidators for the purpose of such winding-up with joint and several powers at a remuneration of Rs. 1,000/- each, exclusive of actual expenses".

2. "That the Liquidators be and are hereby authorised to exercise all or any of the powers given by clauses (1) to (iv) (inclusive) of sub-section (2) of Section 457 of the Companies Act, 1956".

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta.
4th February, 1960.

NOTE: (1) The Share Transfer Books of the Company will be closed from the 23rd February, 1960 to the 1st March, 1960, both days inclusive.

(2) A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend, and on a poll, to vote instead of himself.

(3) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

Castor oil per candy of 500 lbs. Tirupattur Rs 325.

Coconut oil per tin Rs 21/25; Gingly oil per tin Rs 20/12.

Ground oil cake Rs 27/8 per bag.

Quotations for foreign countries: United Kingdom remained at £119 per ton and Burma Rs 1,650 per ton.

Arrival of groundnut in local market was better at 60/70 tons daily.

Last Wednesday, the groundnut oil and seed market was in great confusion with an impending closure. The next day, all forward transactions were closed with the intent apparently to bring down prices. The Oil Exchange found that closure had some effect in changing the price levels suitably. Only on account of this closure, the Exchange claims, prices of oil and seeds were brought down to the day's level as reported above. It was quite possible the spiralling would have taken oil go beyond Rs 400 per candy and seeds Rs 215 per candy.

Madras market closure also affected sentiment in other centres. The Forward Markets Commission's imposition of heavy special margins on outstanding long positions in groundnuts February and May voided at Bombay should have helped Madras negotiations to a good extent. Bulls' activities were restricted by this margin.

Even at the level of Rs 205 or Rs 206 for groundnuts, buyers were not forthcoming. The rate of Rs 208 per candy was rather stiff. Small crushers had inevitably to buy at the rate of Rs 208 per candy. Today, groundnut naturally opened at Rs 208/207. The market trend was quite subdued.

In groundnut oil, sellers were willing to unload at prices around Rs 390/391 per candy. Bazar interests feel they could not usefully operate at today's closing of Rs 393 per candy and are willing to offer only Rs 383 per candy. But sellers were firm at Rs 386 last week-end. With transactions steadily gaining volume, the price level went up. Offerings at Calcutta and Hyderabad were heavy. Spot goods there were quoted at a slightly higher rate than Madras.

Since there was no transaction in forward positions, there is nothing to report in this front.

Groundnut oil cake was firm and early quotation of Rs 27 per bag increased to Rs 27/12 per bag ex-mill, with gunny.

In the upcountry markets, arrivals were small in both North and South Arcat districts. In these places, groundnut price level is reported at Rs 200/202, per candy pucca basis and oil at Rs 385 per candy at Vriddhachalam. Villipuram and Tindivanam. At Guntur, groundnut is quoted around 207 per candy while oil was quoted around Rs 385 per candy.

There was no change in other seeds and oils prices in the market today.

The following are the foreign markets ruling today, but the quotations for Indian stock remained nominal.

	per ton
Groundnuts	£ 77
Castor seed	£ 61/ 10
Niger seed nominal	£ 59 1/2
Groundnut oil spot (Indian)	£119/120
Groundnut oil African Feb.	
March	£122/
Castor oil bulk BSS Jan.	
February	£126 1/2
Castor oil Commercial	£120
Coconut oil Straits	£135
Coconut oil Colombo	£141

The following prices ruled today in the upcountry market in seeds and oil:

	Kernels per 531 lbs.	G. Nut oil per candy of 500 lbs.
Guntur/Bezawada	207	385
Vriddhachalam	202	385
Nandyal	200	385
Villipuram	202	386
Cuddappah/Yerraguntla	198	380
Pollachi superior nominal	202	388
Tanjore	198	385
Tiruvannamalai	198	384
Salem	200	390

Hides and Skins

With good arrivals in tanned cow hides, prices remained firm. In ordinary marks 5/5 1/2 lb some negotiations were done at 71/75d. 8/8 1/2 lb, however, were dealt with at 55/57d. In premium marks 5/5 1/2 lb average were negotiated at 82/84d. and 8/8 1/2 lb at 60/62d. Semi-premium was in good demand at 78/80d. per 5/5 1/2 lb and 8/8 1/2 lb average fetched 56/58d.

In fiths there was good local demand as also in inferior. United Kingdom offered 47/48d. for 5/5 1/2 lb averages.

There was no change in tanned buff hides with fair arrivals.

Tanned cow calf met with good inquiry with small arrivals. Local prices given below remained unchanged.

In tanned buff calf, the premium mark was offered and absorbed at 96/97d.

In the c.l.f. section, there is much speculation resulting in high prices which could not be followed by buyers.

In tanned sheepskins, 87,000 pieces were cleared, indicative of the good activity in the market. There were still 42,000 pieces left for clearance. There was an increase of 25 to 35 nP for best marks while in other sections the increase in prices was 12 nP.

Raw skins prices were not stable, and no quotations could be relied upon since prices went up steadily.

Quotations for tanned skins: Tanned cow prime 5/5 1/2 lb Rs 3.37; 6/6 1/2 lb Rs 2.81 to Rs 3; 8/8 1/2 lb Rs 2.31 to Rs 2.50; 10/12 lb Rs 1.94 to Rs 2.06; Buffalo 12/13 lb Rs 1.56 to Rs 1.75; Cow calf 14/2 lb Rs 5.00 to Rs 5.37; buff calf 14/2 lb Rs 3.25 to Rs 3.62; Goat prime 8/9 lb Rs

9.25 to Rs 9.37; 5 1/6 lb Rs 10/50 to Rs 10.75; Goat prime 8/9 lbs Rs 9.25 to Rs 9.37; 5 1/6 lb Rs 10.50 to Rs 10.75; Sheep ordinary 6/7 lb Rs 8.25 to Rs 8.62; Prime 6/7 lb Rs 10.75 to Rs 10.87.

Bangalore Silk

It was noticed that the prices for silk and silk products in the Bangalore Silk market registered a distinct rise during the week ended January 28, particularly so in respect of Kisan Filature silk and Reeling as well as Seed Cocoons. Filature raw silk produced in Government Filatures is not reached in the market from January 25. Kisan filatures, however, quoted at Rs 43.00 per lb as against Rs 41.00 per lb during the previous week.

According to market circles, the offtake of Charka and Cottage Basin silk was reported to be moderate during the week although the Charka silk prices continued to rule steady during the week under review.

With regard to Reeling Cocoons, in Channapatna area, the price was quoted at Rs 2.75 per lb. There was a similar rise in the prices for cocoons in Siddlaghatta and Mugar areas too.

In general, prices of seed cocoons also tended to rise. Foreign Seed Cocoons were sold at prices ranging from Rs 10.00-20.00 per 1000 cocoons as against Rs 9.00-16.00.

THE TATA IRON AND STEEL COMPANY LIMITED

Bombay House, 24, Bruce Street, Fort, Bombay 1

NOTICE

Issue of 511,628 Ordinary (Bonus) shares of Rs. 75/- each credited as fully-paid up.

Delivery of Share Certificates.

Shareholders are hereby advised that the certificates for the shares of the above issue will be delivered within fifteen days from the date of presentation to the Company of the Allotment Letter duly discharged.

As no intimation will be sent to the shareholders individually, delivery may be taken of the certificates by presenting the Allotment Letters duly discharged at the Registered Office of the Company between 10.00 a.m. and 1.00 p.m. and 2.30 p.m. and 3.30 p.m. on any working day other than Saturday.

Dated the 3rd day of February 1960.

For and on behalf of
The Tata Iron and Steel Company Limited,
Tata Industries Private Limited,
Managing Agents,
J. J. Bhabha
Agent.

of tender form (not refundable) by Money Order direct to him in case of outside firms and on production of cash receipt from the

Chief Cashier, S.E.Ry., Garden Reach, Calcutta-23 by local firms. Firms not on the Railways list of approved contractors must enclose

a valid Income Tax Clearance Certificate along with the Earnest Money receipt with the tender.

CONTROLLER OF STORES

Outlook for Equities

Investment Gossip:

With Government faced with the necessity of mobilising enough resources to provide funds for the implementation of schemes under the Second Plan, which enters its final stretch in the coming financial year, stock marketmen have perforce to pay special attention to what the Finance Minister is going to produce from out of his bag on the last day of February. In this task, they have already certain unmistakable leads. The Planning Commission have long ago noted that, since foreign assistance has been more or less forthcoming in the required measure, it is incumbent on the people to fill the gap in internal resources. Since then a very important new element has entered the picture. I refer to the Chinese aggression and the consequent consensus in the country that our defence must needs be kept in fine fettle to meet any possible aggression. This in effect means increased outlay on defence.

As against the insatiable Government need for funds and more funds, we have an already overtaxed economy. That taxation in our country is heavier than in most countries of the world is not merely the interested businessmen's view. Prime Minister Nehru himself has admitted it to be a fact. And there are very few in our country, or elsewhere for that matter, who think that the corporate sector can bear further tax and still continue to work profitably and efficiently. It is also the declared aim of our Government,

NOTICE

STATE BANK OF INDIA, Calcutta, the 22nd January 1960.

The Fifth Annual General Meeting of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Friday, the 4th March 1960, at 4 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1959 and the Auditors' Report on the Balance Sheet and Accounts.

P. C. Bhattacharyya,
CHAIRMAN.

their socialistic bias notwithstanding, that private enterprise should continue to have a very important place in the economy and by this token should be enabled to function efficiently if only for the national good.

It would appear that the Central Government, fully appraised of the present position of private enterprise as they should be, are unlikely to clamp any further throttling taxes on the corporate sector. Speaking in Calcutta the other day, Mr. Morarji Desai has said that he finds nothing wrong in the profit motive. He has further declared that foreign investors will find the investment climate in India quite attractive since Government are to do everything in their power to attract foreign capital. It is a legitimate expectation that he will not hesitate to apply the same principle to the needs of indigenous investors also.

But new levies may be in the offing, largely in the shape of excise duties. Although these so-called indirect taxes will become direct in the shape of demands for higher wages from labour, it is expected that the general investment climate will not be unduly affected by this kind of levy. Optimists go to the extent of expecting some minor but significant concessions to the corporate sector.

To the many silver linings in the investment horizon in our country today must be added the resounding victory of the United Front in the mid-term elections in Kerala. This will impart further strength to the ruling party which is giving us a stable government these past twelve years—no mean achievement, considering the state of affairs around us in this subcontinent. Secondly, there is the report in this week's press about American aid. President Eisenhower is reported to have asked Congress for increased aid to India and it is said that such increase may amount to 50 per cent of what we have been getting so far.

But all this does not mean that the Budget can be ignored. Then, there is the growing stringency in the money market and what may be termed the giant new issues that will be in the market this week and early next week. It would appear that investors will take some time to revert to "old" shares. By the time this happens, the Budget will be out of way. In view of the further growth prospects that many of the existing companies offer, buyers may once again throng the market places around the first week of March. If Mr. Morarji Desai springs no nasty surprises, there may verily be a buying spree immediately after the Budget.

ERs

Hindustan Aluminium: The Biggest New Issue

Investment Special: One

THE response to new capital issues has been enthusiastic for quite sometime now. This is perhaps due to a feeling that new companies have an assured future and that the prospects for capital appreciation by 25 to 30 per cent

in the next few years will more than offset the loss of current income in the case of equity shares.

The issue, totalling Rs 8.35 crores in equity and preference shares, by the Hindustan Aluminium Corporation Limited, is one of the biggest of its kind. The special attractions of this issue are that it relates to an industry, viz., aluminium, the growth potential of which is considerable; it has the advantage of being associated with the Kaiser Aluminum and Chemical Corporation of the US which is a leader in the industry and which, besides placing its technical resources at the disposal of Hindustan Aluminium, is also participating appreciably in the capital; and the Uttar Pradesh Government have taken up an active interest in the setting up of the plant in that State and extended all the necessary facilities.

The capital now offered to the public amounts to Rs 4.63 crores, comprising 21,56,000 equity shares of Rs 10 each (Rs 2.15 crores) and 2,50,000—6.3 per cent (free of tax) Redeemable Cumulative Preference shares of Rs 100 each (Rs 2.50 crores). Of the balance of equity capital of Rs 3.69 crores, the company's American collaborators, Kaisers and their associates, will subscribe Rs 96.10 lakhs and will be allotted six lakh shares of Rs 10 each, amounting to Rs 60 lakhs, credited as fully paid-up for consideration other than cash for the "know-how" and for rendering technical and consultative services, making a total of Rs 1.56 crores. The managing agents, Birla Gwalior Private Limited, Gwalior, and its associates and friends will subscribe for 21,33,000 equity shares of Rs 10 each for cash amounting to Rs 2.13 crores. Out of the shares to be offered to the public, the LIC has agreed to take up 35,000 preference shares of Rs 100 each.

It is of interest to note that Indo-American collaboration in Hindustan Aluminium represents the largest single US private investment in this country. While the Export-Import Bank has already sanctioned the dollar loan for Rs 6.50 crores (\$13.65 million), the approval for the rupee loan to the extent of Rs 1 crore (\$2.1 million) under the US Public Law 480 from Cooley Amendment funds is expected shortly. Together with this, the total amount available to the company will be Rs 16 crores against the estimated capital requirement of Rs 19.16 crores to reach the stage of production of 20,000 metric tons a year. The balance of Rs 3.16 crores or more, if there is an increase in the actual cost of the plant and facilities, is intended to be raised by loans from the company's bankers and, if necessary, other sources.

The subscription list for the issue will open on the 8th February and close on the 18th February or earlier, but not before the 15th February. The entire public issue has been underwritten by a

number of prominent banks and the Industrial Credit and Investment Corporation of India. With Mr G. D. Birla as the Chairman of the Board of Directors, Hindustan Aluminium has also the further advantage of being promoted by one of the leading business houses in this country.

ERs

Automobile Products' New Issue for Expansion

Investment Special: Two

The Automobile Products of India Limited has undertaken a substantial expansion of its existing lines covering the manufacture of motor scooters and three-wheelers, diesel engines, brake linings, clutch assemblies and hydraulic brakes. The company has been permitted to increase the installed capacity in respect of Lambretta motor scooters and three-wheelers from 6,000 to 12,000 units a year.

This company is now coming out with the issue of Rs 25 lakhs equity capital in the form of 2.50 lakh equity shares of Rs 10 each with a view to financing the expansion programme. The shares will be issued at par, payable Rs 2.50 on application and Rs 2.50 on allotment and the balance of Rs 5 as and when called.

Of the shares now being issued, His Highness The Maharajah Fatehsingh Gaekwar of Baroda has agreed to take up 50,000 equity shares of Rs 10 each for cash and 25,000 equity shares of Rs 10 each will be issued at par to Messrs Innocenti S. G. Milano, Italy, against supply of machinery. The remaining 1.75 lakh equity shares of Rs 10 each are offered, at par, to the public.

The working of the company, for the year ended 31st July 1959, has resulted in a loss of Rs 10.07 lakhs against Rs 6.31 lakhs in the preceding year after raising the provision for Depreciation from Rs 5.61 lakhs to Rs 7.59 lakhs. The company now expects to make a profit in the current year of about Rs 15 lakhs on a turnover of Rs 3 crores, assuming present conditions of trade and industry continue. This will wipe out the carry-forward losses. With the profits for the year ending 31st July 1961, on the same assumption, the company hopes to resume payment of dividends on its equity shares.

The demand for the company's products is expected to reach 20,000 units by the end of the Second Five-Year Plan and 60,000 units in the Third Plan. The company may also apply for further expansion of capacity in due course. It expects to increase the installed capacity in a couple of years to 6,000 units per annum and will take necessary steps in this connection.

The shares now being issued will not confer any right to any dividend that may be declared on the

equity shares in respect of the company's financial year ending 31st July, 1960. The equity shares, now being issued, will rank pari passu in all other respects with the existing equity shares. Applications for shares from the public must be for a minimum of 50 shares or for multiples of 50 shares. The subscription list will open on the 15th February and will be closed on the 18th February.

Following are the directors of the company:—Mr Muthiah Annamalai Chidambaram; H. H. The Maharajah Pratap Singh of Nabha; H. H. The Maharaja Sir Pratap Sinha Gaekwar; H. H. The Maharajah Sir Jiwajirao Madhavrao Scindia; Price, Khanderao Raja Gaekwar; Dr Jayanand Moreswar Rane and Mr Pouloué Matthen.

ERs

New Issue Notes

The West Bengal Financial Corporation is offering Bonds for public subscription, to augment working funds. The Bonds are being issued in an amount of Rs 50 lakhs and carry interest at 4½ per cent. The issue price is Rs 100 per cent and they are redeemable, at par, on 1st March, 1972.

In view of the increasing industrial developments in the company, Jayashree Tea Gardens Limited has decided to offer right equity shares of the face value of Rs 10 each in the ratio of one right equity share for every five existing fully paid-up equity shares to these shareholders registered as on the 10th March 1960.

Transfer Books will remain closed from the 25th February to the 18th March, 1960. Meanwhile, the directors have declared an interim dividend of Rs 1.40 per share for 1959, subject to deduction of tax, payable on or after the 10th March, 1960. This will also be the final dividend for the year under review.

Dyer Meskin Breweries Limited has decided to issue 1,62,060 Ordinary shares of Rs 5 each to meet the extension programme of the company. These shares will be offered to the existing shareholders, as on the 26th February 1960, in the proportion of two for every five existing ordinary shares, at a premium of Rs 2 per share.

It is learnt that the issue of Rs 80 lakhs worth of equity shares of the nominal value of Rs 10 per share at Rs 15 per share to the public by the Associated Battery Makers (Eastern) Limited has been substantially oversubscribed. The subscription list was closed on the 22nd January.

ERs

Investment Notes:

National Rubber Manufacturers Limited has proposed to start a new company to produce automobile tyres in West Bengal in technical collaboration with Techno-Export of Czechoslovakia. The entire plant and machinery for the project, costing about Rs 80 lakhs, will be supplied by Techno-Export in non-convertible Indian rupees. It has also been agreed that, for a period of four years after commencement of produc-

tion, Techno-Export will take 5,000 tyres worth about Rs 10 lakhs for export to Czechoslovakia or elsewhere. The total capital outlay is estimated at Rs 1.60 crores against which ordinary and preference shares will account for Rs 75 lakhs and Rs 25 lakhs respectively. The balance of Rs 60 lakhs will be met by loans for which the company is understood to have approached the Industrial Finance Corporation of India. The managing agents are expected to take up Rs 10 lakhs of ordinary shares.

According to the figures released by the Indian Iron & Steel Company Limited, production of saleable steel amounted to only 59,108 tons (semis 21,498 tons and finished steel 37,610 tons) in January 1960 as against 62,237 tons in December, 1959. Production of Steel Ingots has declined to 77,043 tons from 77,323 tons. Pig Iron production has, however, risen to 91,790 tons from 82,295 tons. Despatches of saleable steel are lower at 58,328 tons against 59,789 tons.

ERs

Investment Briefs:

The following jute mills in the Bird-Hellgers group have announced interim dividends (subject to tax) for the year ended 31st March 1960:—Auckland Rs 7 per share; Kinnison Rs 7; Lawrence Rs 7; Union Rs 7 and Northbrook 75 p.p. Dividends are payable on or after the 15th March 1960. Transfer Books are closed from the 18th to the 29th February, 1960. India Jute has recommended an interim dividend of 75 p.p. and Megna 60 p.p. per share.

Voltas Limited has recommended a dividend of 13 p.p. subject to deduction of tax. This works out at a net dividend of 9.1 p.p. for the year ended 31st August, 1959 as against 9 p.p. paid for the previous year.

Investment Corporation of India Limited has proposed to pay a dividend of Rs 9.25 per share, subject to tax, for the year ended 30th June 1959. The net dividend works out at Rs 6.475 against Rs 6.50 per share in the preceding year.

Nellampathy Rubber has recommended 10 per cent (taxable) for the year ended 30th June 1959 against 15 per cent (net) for the previous year.

Pandyan Bank Limited has recommended a dividend of 14 2/7 per cent (taxable) for 1959 as against 10 per cent (net) for 1958.

Canara Bank has decided to pay 15 per cent (taxable) for 1959. This works out to a net dividend of 10.50 per cent against 10 per cent for 1958.

Bank of Mysore Limited has recommended a final dividend of 14 1/2 per cent (taxable) for 1959 against 16 per cent (net) for 1958.

ERs

Balance-Sheet Briefs:

Madura Mills Company Limited has reported a net profit of Rs 40.51 lakhs for 1959 as against a loss of Rs 53.99 lakhs for the previous year. A dividend of 12½ per cent (gross) is recommended. There was no dividend for 1958.

Lull in Activity

Watch-Dog Writes:

THERE have been no new developments in stock markets during the week under review. There is a fresh break in equity values and a shrinkage in the volume of business. The spate of new issues, which have already been made and which are yet to be offered, has also contributed, to some extent, to the downward trend in prices. Thanks to some replacement buying on reports of US decision to increase foreign aid, the markets staged smart recovery at the close.

Conditions on the Calcutta Stock Exchange showed little change and, in the absence of any incentive, price movements were confined to narrow limits.

The Bombay Stock Exchange failed to consolidate its recent gains owing to lack of follow-up support and profit-taking.

The encouraging trend of results of the elections in Kerala had a salutary effect on the buying pattern in the Plantation shares on the Madras Stock Exchange.

The London Stock Exchange finished the week on a subdued note.

Wall Street closed heavy with losses ranging to two points or so.

★

Calcutta

Calcutta, Friday Evening

TRADING on the local Stock Exchange was devoid of any particular feature last week. With interest lacking, price movements were confined to a narrow range in restricted activity.

Although the encouraging trend of results for non-Communists in the Kerala elections caused a slight improvement in prices in mid-week, it was proved short-lived, as operators were inclined to be rather cautious and investors' attention was directed toward the new capital issues. Added to this, Budget uncertainties restrained the prudent in the market to take a holiday till the Budget Day.

Some of the operators, however, held the belief that, despite the possibility of increased taxation, necessary incentives might be provided. It was also felt that there would be a further increase in foreign aid in view of the end of the Communist rule in Kerala. Had it not been for these factors, the downward would not have been interrupted too often by a rallying tendency.

The Gilt-edged section continued to remain dull with the volume of

business reduced to small dimensions. With monetary conditions stringent, institutional investors kept out of the market and prices tended to sag on small offerings. Only short-dated issues evoked a little enquiry. 3 per cent 1966 Conversion Loan, after being marked up to Rs 74.75 from Rs 74.10, receded toward the close to Rs 74.85.

Bank shares were rather quiet in view of the satisfactory results of most of the banks for last year. Punjab National moved narrowly between Rs 21.12 and Rs 21.25, while United Commercial remained steady at Rs 70, thanks to increased dividend.

Jute shares continued to remain depressed. The absence of any foreign enquiry for jute goods and the consequent possibility of an increase in stocks at the end of last month were responsible for the complete lack of buying interest in the section. Howrah were on offer at Rs 23.94 to Rs 24.12; National at Rs 30.87 to Rs 31 and New Central at Rs 22.50 to Rs 23.00. Thanks to the announcement of satisfactory interim dividends for the year ended 31st March 1960, the shares of the Bird-Hellgers group of jute mills maintained a steadier tendency with Kinnison having support up to Rs 172; Lawrence up to Rs 143 and Union up to Rs 208. Ganges met with some enquiry at Rs 8.81 to Rs 9.06.

Coal shares were subdued on rumours of reimposition of the ban on coal exports in an attempt to overcome the existing shortage. Anxiety was also shown with regard to the transport situation. East Indian changed hands at Rs 25.12 to Rs 25.37; New Beerbhoom at Rs 22.50 to Rs 22.75 and Western Bengal at Rs 6.62 to Rs 6.75. Equitable were well maintained at Rs 30.50 with Burrakur moving irregularly between Rs 18.37 and Rs 18.50 on alternate buying and selling.

Only limited interest was shown in the Tea section where dealings were few and far between. Lower prices obtained at this week's export auction coupled with the reports of the downward trend in UK consumption induced the operators to go in for selective buying. Banarhat changed hands at Rs 322.50 to Rs 324; Brooke Bond at Rs 17.44 to Rs 17.62; East India at Rs 24.50 to Rs 25.12; Grob at Rs 13.81 to Rs 14.12; Hasimara at Rs 22.50 to Rs 23; Methdil at Rs 23.50 to Rs 23.75 and Jayshree at Rs 18.12 to Rs 18.31.

Sugar shares came in for selective enquiry although there was a general reluctance to extend commitments in view of the fears with regard to the possibility of the mills meeting with shortage of cane supplies due to the continued diversion to gur and khandsari units. Balaramore were a steady feature at Rs 4.12, while Carew hardened to Rs 12.44 from Rs 12.37 and Cawnpore to Rs 18.25 from Rs 15.75. Raza Buland were, however, quiet at Rs 12.69 against

Rs 12.75 and Ramnugger at Rs 20.69 against Rs 21.

Fears of an increase in the wage burden on the textile industry appeared to have depressed Textile shares. It was felt that the industry might not be able to pass on the increase to the consumer. The only exceptional features were Kesoram, which met with sustained support from influential quarters up to Rs 22.06 from Rs 21.75. Jayshree turned quiet at Rs 12.19 against Rs 12.31 and Cawnpore at Rs 6.12 against Rs 6.50.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to stray liquidation following the news of lower production in January. Some of the operators also seemed to be apprehensive of the future capacity of the steel units in the private sector to maintain their profitability to distribute dividends at even the present rates. Against the week-end closing of Rs 22.20, Indian Irons opened better at Rs 22.24 and, after improving further to Rs 22.27, receded gradually to Rs 22.08, to recover again at the close to Rs 22.34 on higher Bombay advices. TEXMACO touched at one time a low of Rs 25.35 from Rs 25.60, to close better at Rs 25.45. G. K. Williams were firm feature at Rs 44.37 with Indian Standard Wagon changing hands at Rs 91 to Rs 94.50. Jessop were on offer at Rs 23.37 against Rs 23.75 and so also Braithwaite at Rs 28.75 against Rs 29.

Miscellaneous issues ruled generally quiet on lack of fresh support. Following were the price movements of a few selected scrip:

	Week's High	Week's Low	Week's Closing
Orient Paper	37.80	37.45	37.80
Shree Gopal	22.50	22.31	22.37
Rohas	27.44	27.06	27.37
Dunlop	36.37	36.12	36.25
A. Chemical	23.56	23.00	23.37

BIC	5.81	5.69	5.81

★

Bombay

THE Bombay Stock Exchange, during the week under review, endeavoured to stage a rally, but the attempts did not quite succeed, despite the triumphant victory of the United Front in the Kerala elections. General feeling remained diffident, in view of the Budget uncertainties. Moreover, apprehensions were held that Railway freights might be raised in the Railway Budget, which is to be presented on the 17th February. If these fears turn out to be true, it will mean an increase in production costs, as well as higher prices for manufactured goods,

which will provide a somewhat disquieting feature in the light of the prevailing economy and the inflationary tendencies. Anyway, more than the Railway Budget, the general Budget will have a decisive effect on the pattern of the investment market in the next few weeks. The Chinese situation continues to exercise a restraining influence, as defence expenditure in 1960-61 will be stepped up considerably. In the meanwhile, the professional operators are playing a hide-and-peek game, taking quick turns, despite the feeling that the overall outlook does not appear to be bearish at the prevailing levels.

Production at the Tata Steel Works for the month of January has turned out to be satisfactory all round, with pig iron at 140,700 tons, steel ingots at 140,100 tons and saleable steel at 109,800 tons. The aggregate production for the ten months compares very favourably with output in the previous year. Comparative figures:

	10 months 1959-60	10 months 1958-59	1959-60	1958-59
Pig Iron	1,310,900	901,900	1,131,000	
Steel				
Ingots	1,256,300	918,000	1,148,000	
Saleable				
Steel	986,500	697,200	885,000	

Steel shares did not react favourably to be higher production as general sentiment for this group is still not friendlier, despite the low prices. This is mainly due to the view that the steel industry would not be able to render a good account of the profit performance in view of the fact that the retention prices are not being fully compensated for the rise in the various items of cost of production as well as the excise duty.

Cotton mill shares staged some improvement, but the gains were not fully maintained due to lack of follow-up support as well as some profit-taking. However, India United Mills, Morarji Mills, Mafatlal Fine and Standard Mills provided bright features.

Cement shares were sluggish with ACC meeting with scattered selling pressure as the Chairman of the company did not strike an optimistic note. Engineering shares met with selective buying. Larsen & Toubro were prominent in the rise on buying induced by various expansion plans. Voltas have declared a dividend of Rs 13 subject to tax which comes to Rs 9.10 net against Rs 9. Motor shares were steadier. National Rayon rebounded to meet with some profit-taking, but again forged ahead on optimistic outlook. Tata Chemicals were easy. Bombay Burmah attracted a good deal of support, but reacted to a small extent. Hindustan Aluminium is placed at a premium of 25 nP. Allotment of the equity shares of Premier Tyres Ltd. will be made next week. Applications for the public issue amounted to well over eight times

The week's movements in prices of a few representative scrip are as follows:

	High	Low	Close
	Rs.	Rs.	Rs.
B. Dyeing	66.50	65.50	68.10

Madras

Thursday.

IN the absence of buying support, the stock exchange was quiet today. A few planting shares were prominent, while industrials proved of little interest. There was practically no turnover in textiles.

Government Securities: All papers in this list remained at the market rates. Madras Government 4% 1967 was quoted at Rs 100.40, 1968 at Rs 100.35 and 1971 at Rs 100.20. 4% 1970 was available at Rs 102.00. 4% 1969 Mysore loan was available at Rs 102.00, 1970 at Rs 102.00 and 4% 1971 remained at Rs 100.10. 4% Kerala 1971 was quoted at Rs 99.90.

Banks: Bank of Mysore rose to Rs 373.00. Rs 100 paid Indian Bank was quoted at Rs 181.00 and Rs 80 paid share of the same bank was available at Rs 148.00. Pandyan Bank (12-2/7% tax-free cum dividend) was quoted at Rs 35.25, Punjab National Bank was available at Rs 21.40. Travancore Forward Bank remained at Rs 6.20.

Electrics: There was no change in this section. Cochín was marked at Rs 10.25, Karakkal at Rs 9.95. Kumbakonam at Rs 10.70, Negapatam at Rs 10.00, Salem-Erode at Rs 12.50, South Madras at Rs 10.15. Tinnevely-Tuticorin at Rs 12.25 and Vellore at Rs 13.00. West Coast was also the same at Rs 12.50.

Sukars & Breweries: Andhra was unchanged at Rs 23.90, Cauvery at Rs 12.40, Deccan shed some points at Rs 12.78 as also EID at 43.50. India rose in value to Rs 12.25. KCP at Rs 17.00 was unaltered and Kirlampudi was at Rs 69.00. Mysore Sugars remained stationary at Rs 56.75. Travancore increased to Rs 10.20. United Breweries was quoted at Rs 46.00.

Plantings: This was a very quiet section today. Anandam was available at Rs 15.50, Bababudin at Rs 9.55. Balanoor went down to Rs 17.65. Balmadies was quoted at Rs 2.95. Blue Mountain did not change at Rs 335. Chandramalai (with 12% taxable cum dividend) was quoted at Rs 3.00. Chembra showed better at Rs 4.23. Cochín Malabar also was lower at Rs 7.10. Coffee Lands was unaltered at Rs 22.90, while Consolidated lost 8 nP from previous

quotation and was sold at Rs 22.20. Devashola remained quiet at Rs 32.00, Haileyguria was available at Rs 16.10. Highland at Rs 14.65 was the same as the last closing. Kalpetta went down to Rs 12.60 and Karikode was unchanged at Rs 9.45. Kil Kotagiri was also the same at Rs 4.75 and Kurchimala at Rs 8.75. Lucky Valley was quoted at Rs 13.00, Malankara was unchanged at Rs 18.12. Mercara, however, improved to Rs 12.25. Mysore Amalgamated and Mysore Coffee was respectively available at Rs 6.00 and Rs 5.05. Neelamalai was unaffected at Rs 4.90. Nelliampathy was quoted at Rs 2.90, lower than the last closing, which was Rs 3.00. Nilgiri was at Rs 7.35, Nonsuch at Rs 25.80 and Ouchterlony at Rs 5.75. Panchur went up by 10 nP at Rs 4.50 but Peermade went down to Rs 25.10. Periakaramalai was unaltered at Rs 3.78. Savamalai improved to Rs 4.10 and also Stanes Amalgamated to Rs 15.25. TR&T went up to Rs 8.15. Waterfall was lower at Rs 3.60 and Woodcote at Rs 1.67.

Textiles: Anglo-French gained one rupee in value at Rs 99.50. Bangalore Woollen and Buckingham were respectively at Rs 199.00 and Rs 200. Cauvery Spinning was the same at Rs 14.25. Dhanalakshmi was quoted at Rs 233.00. Hemalata at Rs 8.05, Janardana at Rs 64.00, Jawahar at Rs 9.45, Kadri at Rs 120, Kasthuri at Rs 24.75 and Kothari at Rs 11.80. Lakshmi did not change at Rs 149. Madura was lower at Rs 31.65. Mettur kept the same trend at Rs 422.00. Radhakrishna was at Rs 29.25. Rajalakshmi was unaltered at Rs 69.50. Tirumurti was quoted at Rs 95.00. Travancore Rayon went down today to Rs 25.35. Vijayakumar was quoted at Rs 127.00.

Miscellaneous: Aluminium Industries was quoted lower at Rs 21.80. Andhra Cement went up by 5 nP to Rs 9.30. Ashok Leyland too was better at Rs 6.90. Bangalore Printing at Rs 15 was quiet. Hiny proved to be stable at Rs 163.00. Dalmia Cement was quoted at Rs 11.10. FACTS was lower at Rs 9.65. Hindustan Lever went up to Rs 35.50. Mettur Chemicals improved by a small margin at Rs 12.05. Mysore Lamp was unaltered at Rs 20.52 and Mysore Paper shed a few points to be quoted at Rs 23.80. Orissa Cement improved to Rs 12.75. Parrys Confectionery was available at Rs 435. Railis improved to Rs 84.50. Ruby Rubbers was the same at Rs 10.00. Sen-Raleigh at Rs 21, Singareni at Rs 16.55, Spencer at Rs 20.10 were unchanged. Standard Motors was a little lower at Rs 14.47. Textool gained one rupee at Rs 145.

★

London

TRADING on the London Stock Exchange remained dull. With the persistent decline on Wall Street, there was a general reluctance to enter into commitments. Nevertheless, a selective demand persisted in Industrials as a result of favourable statements. Imperial Tobacco shares responded to the company's new sales expansion move. Fine cotton spinners were a good market following a property deal and Watney Mann showed useful gains on favourable Press comment.

COMPANY REPORTS

Impressive Rise in Profits of Indian Oxygen

Balance-Sheet Reviews:

A FURTHER improvement in the demand for the company's products, as a result of the continuing increase in the industrialisation of the country is fully reflected in the working results of the Indian Oxygen Limited for the year ended 30th September, 1959. Total sales for the year have recorded a further increase of Rs 68 lakhs to Rs 5.54 crores, while the net profit, after providing for Depreciation and Taxation, is substantially higher at Rs 53.07 lakhs against Rs 37.97 lakhs in the previous year.

It is encouraging to note that these results have been achieved despite shortages of steel and delays in the implementing of development plans of the company's customers. A further factor has been a progressive increase in the local manufacture of items previously imported, thereby mitigating the effect of continuing import restrictions.

In respect of allocations, the Depreciation amount is raised to Rs 31.69 lakhs from Rs 24.93 lakhs and Taxation provision to Rs 34.63 lakhs from Rs 28.90 lakhs, apart from providing a sum of Rs 9.50 lakhs for General Reserve and Rs 22.695 for Fixed Assets Replacement Reserve. The Development Rebate Reserve is, however, reduced to Rs 9.80 lakhs from Rs 13.20 lakhs.

The directors have recommended a dividend of 15 per cent, subject to deduction of tax, as against 10 per cent in the previous year. The present dividend of 15 per cent (gross) will fully compensate the shareholders for any loss they might suffer as compared with the previous year as a result of the abolition of the system of gossing up of dividends consequent on the revision in the corporate tax structure.

The balance-sheet, as at 30th September 1959, shows a paid-up capital of Rs 2 crores in shares of Rs 10 each. Against this, General Reserve is shown at Rs 70.50 lakhs; Capital Reserve at Rs 6.42 lakhs and Development Rebate Reserve at Rs 23 lakhs. Loans secured are at Rs 49.97 lakhs and unsecured at Rs 75.13 lakhs. The gross block at Rs 5.26 crores is depreciated by Rs 2.15 crores to show a net block value of Rs 3.12 crores.

According to the directors' report, the replacement and expansion programme, which was taken in hand in 1957, is expected to be completed on schedule in 1960. In connection with the formulation of the Third Five-Year Plan, an assessment is being made by the company of the likely demand for its products in the next Plan period and consideration is being given to the necessary arrangements for further expansion and the financing thereof.

Fresh capital expenditure, including capital projects in progress, during the year, amounted to Rs 64.28 lakhs and related mainly to further progress on the new Oxygen and Dissolved Acetylene factory at Bumpur, provision of additional Oxygen and Dissolved Acetylene capacity at Jamshedpur and additional Cylinders.

Indian Oxygen, it may be recalled, was converted into a public limited company hardly two years ago; and it was only thereafter that the investing public became, as it were, part owner of this successful industrial enterprise. It is figures such as these, and a performance as good as the one in the year ending September 1959, which have swiftly raised Indian Oxygen to the status of an investor's blue-chip.

The company was converted into a public limited company on January 15, 1958.

Scindia Steam's Higher Dividend

Despite lower earnings, the Scindia Steam Navigation Company Limited has recommended a slightly higher dividend of Rs 1.30 per share for the year ended 30th June 1959 as against Rs 1.25 in the previous year. Carry over is shown higher at 24.54 lakh tons against 20.73 lakh tons and freight earnings at Rs 16.87 crores against Rs 13.96 crores. The increase in these two items is mainly due to additional ships employed during the year.

But unremunerative freight rates, coupled with the continued increase in the operating costs, have reduced the profit margin to a very narrow limit. The net profit, after providing for Depreciation and Taxation, works out to Rs 51.12 lakhs against Rs 91.21 lakhs in the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 2.44 crores from Rs 2.34 crores and Taxation provision to Rs 4.40 lakhs from Rs 24 lakhs. The Debenture Sinking Fund is maintained at Rs 10 lakhs, while a sum of Rs 95,338 is transferred to Capital Reserve. The surplus realised on sale of assets and investments comes to Rs 24.77 lakhs. Due to inadequate profits for the year, the directors have considered it advisable to take this amount directly to Profit and Loss Account, and not to Reserve as was being done so far.

The balance-sheet, as at 30th June 1959, shows a paid-up capital of Rs 11,27,98,680 in shares of Rs 20 each. The Share Premium Account stands at Rs 10.38 lakhs; Fleet Reserve at Rs 2.16 crores; General Reserve at Rs 80 lakhs; Special Depreciation Reserve at Rs 3.21 crores; Dividend Equalisation Reserve at Rs 37 lakhs and Annual and Special Survey Reserve at Rs 50 lakhs. The gross block of Rs 32.02 crores is depreciated by Rs 8.36 crores to show a net block value of Rs 23.66 crores.

Out of the two ships on order with the Lubeck Yard, one ship has been delivered. The other ship is expected to be delivered in July, 1960. A preliminary contract with the Kobe Shipyard has been signed for building another vessel under the Yen Loan Scheme, subject to the approval of both the Government of India and the Government of Japan.

that's **BURMAH-SHELL** Service!

CONDITIONS in the stock markets remained subdued during January. Apart from a feeling that most shares had already been pushed up to unprofitable levels, there was the general apprehension that the Central Budget would impose more taxes. The expectations about additional levies sprung from the belief that Government would have to plan for increased outlay on defence in order to cope with the situation created by the Chinese incursions on our northern borders. Even so, operators were not unduly perturbed because the scope for new taxation on the corporate sector seemed to be extremely limited as the existing level of taxation was admitted to be very high. Further, there was the hope that Authority would not be unmindful of the need for fostering capital formation in the country if industrialisation was to progress rapidly. But it was generally agreed that some amount of additional levies was inevitable and that it would come in the shape of indirect taxation.

The stringency in the money market where demand for funds had been steadily increasing during the month was another important restraining influence. It would appear that much of the funds seeking investment was taken up by the new issues or was reserved for the issues in the offing. It was evident that investors were pre-occupied with new issues. For, almost all new issues that were placed in the market during the month and earlier had been heavily over-subscribed. Even at the end of the month interest continued to centre round them as some of the big new issues like Hindustan Aluminium were yet to come.

Toward the close of the month, there were indications that operators were slowly regaining confidence in equities as the belief gained that the corporate sector might not be put to undue hardship by the Central Budget. Optimists believed that far from imposing new burdens, the corporate sector might be given some relief atleast from some of the restrictive tax measures. Indications of increased foreign aid to India were also responsible for the improved tone.

Sectionwise, textile shares were an irregular market although the undertone was steady. Thanks to effective steps taken by Government the cotton textile industry was assured of adequate supplies of new cotton. At one time it was feared that mills would have to curtail working due to shortage of the raw material. It was argued that if the consumer demand was to be met in full the organised sector of the industry should be allowed to increase its production

Subdued Trend in January

beyond the stipulated level. As a result of the measures taken both by Government and the industry, however, the confidence was slowly restored that there would be adequate supplies of mill cloth. As exports were also running at a satisfactory level, textile shares appeared to be becoming popular with investors. Toward the close of the month, sentiment was rather

depressed on the report that cotton textile Wage Board has recommended an increase in wages.

Jute shares generally ruled steady but buyers' interest considerably diminished toward the close of month. In earlier dealings selected shares were in request following a fall in raw jute prices. Moreover, the fact that burlap

Expectations were that provided Indian goods prices were economic, prospects for exports in the current year were good. The jute industry had commenced the New Year with a very satisfactory statistical position and sacking were very low. In view of the small stocks of heavy goods, the IJMA had earlier decided that the question of resealing the 2½ per cent looms unsealed in last August should be deferred to 1st February from 2nd January as originally fixed. Although there had been a fall in raw jute prices, there was a feeling that even at prevailing raw jute prices mills would not be able to make a sufficient margin of profit. Presumably because of the high prices ruling in the previous month overseas buyers evinced little interest during January and consequently jute shares were also neglected.

Selected coal shares met with keen demand in earlier dealings on expectations of good demand for the commodity. Toward close, however, interest in the section somewhat slackened on reports of lower production last year coupled with the anxiety about the transport situation.

In the Engineering section, Indian Irons continued to rule subdued as operators were reluctant to extend commitments in view of the confused outlook for the scrip. Despite the fact that output in December had touched a record level, the share met with selling pressure as there were apprehensions about a glut in steel supplies in the country in coming months as a result of the steady increase in production from the public sector steel units.

Tea shares maintained a steady trend in the first half of the month following the optimistic outlook for the industry during the current season. It was also expected that the entire output of Northern Indian tea in 1959 would be sold at remunerative prices. Following the declining trend in auction prices for tea, interest in the section slackened in later dealings and by close of the month sellers predominated.

Several firm features were noticeable in the sugar section on indications of an increase in production in the current season. The undertone turned cautious toward close as operators were inclined to await further developments in the sugar situation.

Although the miscellaneous section reflected the general trend of the market, selected shares in this sector witnessed considerable activity. The automobile group was prominent with wide fluctuations in Hindustan Motors.

(a) After transferring Rs 6,26,601 from Depreciation, Renewal and Extension Fund and Rs 80,000 from Reserve Fund.
(b) After transferring Rs 45,153 from General Reserve; Rs 35,000 from Machinery Replacement Reserve and Rs 6,000 from provision for taxes.
(c) After transferring Rs 625,000 from General Reserve and Rs 500,000 from Dividend Equalisation Reserve.
(d) After transferring Rs 50,000 from General Reserve.
(e) After transferring Rs 120,000 from Reserve Fund Rs 268,000 from Reserve for Taxation and Rs 25,890 from excess provision not required.
(f) After transferring Rs 120,179 from Reserve for Taxation and Rs 299,043 from General Reserve.
(g) After transferring Rs 2,656,522 from General Reserve.
(h) After transferring Rs 80,000 from Reserve Fund.
(i) After transferring Rs 319,687 from General Reserve.
(j) After transferring Rs 841,193 from General Reserve.

(m) After transferring Rs 3,02,261 from General Reserve.
(n) After transferring Rs 120,000 from Dividend Reserve.
(o) After transferring Rs 2,978,000 from General Reserve and Rs 1,000,000 from Dividend Equalisation Reserve.
(p) After transferring Rs 5,27,612 from General Reserve.
(q) After transferring Rs 400,000 from General Reserve.
(r) After transferring Rs 2,50,000 from Income-tax Reserve and Rs 3,70,712 from Raw Materials Fluctuation Reserve.
(s) After transferring Rs 3,22,599 from General Reserve and Rs 75,000 from Depreciation Reserve.
(t) After transferring Rs 9,50,000 from General Reserve.
(u) After transferring Rs 200,000 from General Reserve.
(v) After transferring Rs 100,000 from General Reserve.

(w) After transferring Rs 670,000 from General Reserve and Rs 76,805 from Excess Provision for taxation.
(x) After transferring Rs 1,814,832 from General Reserve and Rs 592,584 from Dividend Equalisation Reserve.
(y) After transferring Rs 255,000 from General Reserve.
(z) Includes Rs 668,325 being amount drawn from extra excess provision made for depreciation on plant and machinery for the year ended 31-3-53.
(a1) After transferring Rs 9,00,000 from Reserve for taxation.
(a2) After transferring Rs 331,426 from General Reserve.
(a3) After transferring Rs 350,000 from General Reserve and Rs 165,000 from Machinery Rehabilitation Reserve.
(a4) After transferring Rs 4 lakhs from Reserve for fall in price.
(a5) After transferring Rs 100,648 from General Reserve.
(a6) After transferring Rs 268,000 from General Reserve.

How much
 $C_6 H_{10} O_5$
do you use
in a month?

TITAGHUR PAPER consists like all paper,
mainly of cellulose for which the chemical
formula is $C_6 H_{10} O_5$. You, the consumer,
are now using every month more Titaghur
paper than at any time since our Mills
were founded 77 years ago. Continuous
research during those years has helped us
to produce the widest range of quality
paper and you can rely on Titaghur to give
you the right paper for the job. Today, the
Titaghur Mills produce more bamboo pulp
and paper than any other mills in the world.

Germany, Norway, Sweden, Switzerland, Italy and Japan.

WORLD OF FINANCE

The Significance of the 1959 Banking Profits

A MONG the big nine Scheduled Banks, for
such of those as have published their
summarised results for 1959, one alone has
been able to keep intact the effective return
to the shareholder; this exception is United
Commercial, which indeed has somewhat
increased its payment to the investor. In
varying degree, the other banks in this cate-
gory have sought partly to offset the impact
of the system of deduction of tax on dividends,
and consequently the amount utilised for
dividend has gone up. Thus, Bank of Baroda
has utilised Rs 2½ lakhs more for dividend;
and the State Bank Rs 2½ lakhs more. Finally,
there are some among the Big Nine which
have not even tried to increase the rate of
dividend, and in this class belong Bank of
India and Punjab National. A nominal increase
in profit has been disclosed by Bank of Baroda;
and a spectacular rise by United Commercial;
others frankly confess to some element of
decline in earnings. Without exception, the
provision for tax has been reduced, with
United Commercial joining the ranks of State
Bank, Allahabad Bank and United Bank in
the matter of showing its profit as net of
taxation. What are the lessons to be learnt
from the foregoing?

In the first place, the reduced charge of
taxation may be attributed to the fact that
credit in respect of tax deducted on the inter-
est on Government securities has, with the
raising of the rate of deduction as from
April 1959, so risen as to lessen the liability
that needed to be shown in the appropriation
account. Indeed, it may have been possible
for most banks to have provided fully for tax
from such tax deducted at source; and the
reason why this was not perhaps universally
done may have been that the balance of profit
as shown would then have revealed a cala-
mitous fall. If there should be, during 1960,
even some small improvement in banking
profits, and if the rate of deduction of tax is
unchanged, it is likely that more banks will
henceforth choose to show their balance of
profit as net of taxation.

In the second place, the decline in banking
earnings during 1959 generally is clear and
uncategorical. But we will have to wait for
the balance-sheets to discover whether it is
gross income which is placed lower, or whether
it is the heads of expenditure which have
eaten more deeply into the gross income,
thereby reducing the balance of profit. For
reasons that we have advanced from time to
time in this column, we believe that gross
income as such would have increased; but, to
the extent that income from investments in
gilt-edged may be shown in the profit and loss
account as net of taxation, it is possible that
the published figures of gross income may be
unchanged, or even somewhat lower. On the
other hand, there can be no doubt at all that
the two main heads of expenditure would
have been marked higher. In the one case, a
larger quantum of higher-costing Deposits
would have raised the charge of interest paid
on Deposits. In the other case, the branch
expansion programme, on which banks were

embarked in strident manner during the last
year, would have put up establishment costs.

In the third place, it is not to be doubted
that, relatively disappointing though the
banking profits may be, the banks will have
found it possible to add to their inner reserves
by virtue of the rise in prices of gilt-edged;
and our feeling is that some banks may find
it necessary to take credit for such surplus on
gilts for causing the profit figure to make
respectable showing. Where profit on invest-
ment does not figure in the profit and loss
account, it may safely be assumed that inner
reserves have been strengthened.

In the fourth place, though expansion in
Advances during 1959 will not have amounted
to a considerable figure, banking earnings
may conceivably bear the favourable impress
of the increase in the export trade during the
last year. Such of the exchange banks and
Indian Scheduled Banks as were able to
"acquire" a piece of this improved export
trade may have shown a particular increase in
gross earnings.

In the fifth place, as we stated last week,
the smaller banks have come off much better.
We wonder whether this is symptomatic of the
development of small and medium industry,
which was able to obtain its greater needs of
banking finance from the smaller and the
medium banks.

As pointing to trends in banking profits in
1959 brief analyses of other results which
have since been published are presented on
page 292.

Mid-way Mark of the 1959-60 Busy Season

WHILE the explosive expansion in active note
circulation in the first week of February is a
pointer to the severity of the current busy
season, figures for the first half, now available,
indicate important differences as compared
with the 1958-59 busy season. It will be seen
that the rise in Active Notes is somewhat
smaller this season, as also the increase in the
Other Loans and Advances of the Reserve
Bank. What is of particular interest is the
manner in which the task of providing the
busy season finance has so far been accom-
plished by the banking system. For, save in
this respect, the 1959-60 busy season seems to
be closely patterned after the preceding one.

The expansion in the Advances of the State
Bank is Rs 3 crores lower, but the rise in the
accommodation given by the other Scheduled
Banks is, though by a fraction, higher. In
broad terms, therefore, it is very likely that
the total expansion in bank credit during the

current busy season will be of the same order
as was the case in the last one. While, if
figures for all Scheduled Banks are taken to-
gether, it appeared that the banking system,
on the busy season's eve, was better equipped
to handle the demand that might be thrown
up, the separation of the State Bank figures
more than somewhat changes the picture. For,
the State Bank started the 1959-60 busy sea-
son with a volume of Advances slightly lower
than on the corresponding date of the previous
year; and, meantime, Deposits had mounted.
So, in the first half of the current busy season,
the ratio of State Bank Advances to Deposits
has risen only from 28.3 per cent to 29.8 per
cent, whereas the rise over the same period in
1958-59 was from 33.8 per cent to 38.2 per cent.
In fact, therefore, the Other Scheduled Banks
commenced the 1959-60 busy season from a
slightly less comfortable position, with Advan-
ces standing at 60.7 per cent of Deposits on the
last Friday in October 1959 against 58.2 per
cent of Deposits as on the last Friday in
October 1958.

However, while the banking system experi-
enced a decline in Deposits over the first half
of the 1958-59 busy season, the reverse is true
of the current one. The State Bank's increase
in Deposits more than covers the expansion in
its Advances. In the case of the other Sched-
uled Banks, though there was a rise of Rs
21.59 crores against a fall of Rs 6.53 crores in
Deposits, this was not sufficient to take care
of the rise in Advances. Borrowings from the
Reserve Bank were stepped up by Rs 10.77
crores. (In the previous busy season, the in-
crease in the recourse to central bank credit
was even higher, because Deposits, instead of
showing a rise, had moved down). Secondly,
there was disinvestment in gilt-edged in the
considerable amount of Rs 17.51 crores. How-
ever, because of the accretion to Deposits, the
Advances/Deposits ratio of the Scheduled
Banks has moved up only from 60.7 per cent
to 64.5 per cent (as compared with a rise from
58.2 per cent to 63.9 per cent in the corres-
ponding period of 1958-59), in spite of the
fact that quantum of rise in Advances in both
periods has been roughly the same.

It is reasonable to assume, on the basis of
the first half, that the 1959-60 busy season will
prove to throw up as large a demand for funds
as was the case in 1958-59. To the extent
that, in the meanwhile, Deposits also rise, the
problem of finding the money will be easier
for the banking system. Nevertheless, it is to
be expected that, in order to finance the
balance of over Rs 100 crores in busy season
demand for funds, Scheduled Banks, in the
next two months or so, will be compelled to
borrow more extensively from the Reserve
Bank and/or disinvest in gilt-edged.

BUSY SEASON—FIRST HALF

Need for Easier Loans from Refinance Corpn.

THE question of enlarging the activities of the Refinance Corporation has been engaging the attention of the Government of India for some time past. But it is not yet clear when and in what directions it is proposed to extend the Corporation's sphere of work. The Corporation, it will be recalled, came into existence in June, 1958 and up to March 1959 the amount of loans sanctioned by it was Rs 2.43 crores, of which only Rs 0.29 crores was actually drawn. Perhaps, in the early stages, the Corporation had certain difficulties in undertaking its work in a big way. But now the time has come when the Corporation should play a more active role in industrial development. We are entering a phase of intensive industrialisation and the need for funds by industrial units is being keenly felt. The amount of money available with the Corporation at present is about Rs 38 crores and it is necessary that the terms and conditions should be liberalised so as to enable industries to make better use of its resources.

The high rate of interest charged by the Corporation appears to be an important reason for the slow utilisation of its funds. The interest charged is 5 per cent on loans granted to member banks. The rate charged by the banks, in turn, on loans granted by them to industrial concerns is 1½ per cent higher than the rate charged by the Corporation. Thus, the rate of interest payable by borrowing industrial units is usually 6½ per cent. This is considered to be rather excessive and the Ministry of Finance should examine seriously whether this rate cannot be reduced to more reasonable levels.

The Corporation's rules require that loans to be eligible for refinance must be for (i) a concern whose paid-up capital and reserves (other than reserves for the payment of taxes and normal depreciation reserves) are not less than Rs 5 lakhs and do not exceed Rs 2½ crores; (ii) amount not in excess of Rs 50 lakhs to any one party and (iii) periods between 3 and 7 years. In every one of these respects, liberalisation is necessary. Industrial units whose total paid-up capital and reserves do not exceed Rs 5 crores may also be made eligible for the Corporation's loans. Similarly, the upper limit for loans to any one party may also be raised substantially. Further, the period for which loans are given should be increased from 7 to 10 years.

The Corporation has been set up for providing re-lending facilities to industries included in the Second Five Year Plan and the succeeding Plans. But it is reported that the Corporation does not entertain applications for loan assistance against capital expenditure on expansion which has already been incurred. This difficulty should be removed and loans should be given even in such cases. It is also stated that the Corporation does not accept property when the assets of the concern asking loans are mortgaged with the Industrial Finance Corporation or similar institutions. There is no justification for the procedure. The Corporation should work in close co-operation with the Industrial Finance Corporation and similar bodies so that their combined resources can be effectively used for the country's economy. The Federation of the Indian Chambers of Commerce & Industry has suggested to the Union Ministry of Finance that the Refinance Corporation should even consider granting loans without having the property mortgaged if the Corporation is satisfied that the financial position of the company is otherwise sound. In any

case, according to the Federation, the Corporation should be satisfied with a second mortgage.

With the commencement of the Third Five Year Plan and the receipt of a steady inflow of foreign aid, the Indian economy will be in a position to make rapid progress in the coming years. But, to facilitate this process, it is necessary that the various financial institutions set up under official auspices should suitably liberalise their terms and conditions so that industries will be able to take the fullest advantage of their facilities and resources.

Steep Expansion in Active Notes: Outflow of Rupee Coin

IN the week ended February 5, with the super-imposition of beginning of the month disbursements on busy season needs, active note circulation has risen steeply by Rs 29.35 crores to Rs 1796.80 crores; and Rupee Coin has gone into circulation in the sizable amount of Rs 2.79 crores. Currency has been expanded against Rupee Securities for Rs 30 crores, half of this by transfer from Investments in the Banking Department and half representing recourse to deficit financing by the Central Government in the week under review. Foreign Securities are unchanged, and, as a result, the Reserve Bank's cash in the till is Rs 2.16 crores lower at Rs 18.51 crores.

By dint of the transfer to the Issue Department, Investments are lower by Rs 15 crores. Notwithstanding the created money, the Centre's balances are lower by Rs 0.52 crores at Rs 49.25 crores, indicating thereby the pressure upon the Centre of the beginning of the month disbursements. There may also have been some element of payment to the State Governments, since the latter's balances are marked higher by Rs 4.47 crores at Rs 25.74 crores. The ways and means advances of the Reserve Bank to the State Governments are, however, higher by Rs 1.48 crores at Rs 21.75 crores.

The strain felt by the banking system during the week is suggested by the fall of Rs 7.46 crores to Rs 66.29 crores in the Reserve Balances of member banks, with only Rs 5 crores of this being traceable to the State Bank. Moreover, the Other Loans and Advances of the Reserve Bank are substantially higher by Rs 13.24 crores at Rs 121.04 crores, and a quarter of this is ascribable to the State Bank's increased borrowings from the central banking institution. Lastly, Balances Held Abroad have improved by Rs 0.36 crores to Rs 44.34 crores.

The State Bank's return for February 5 shows that busy season pressure and month early disbursements have had a combined impact on both Deposits, which have declined, and on Advances, which have been marked up. Deposits are shown to be lower by Rs 4.69 crores at Rs 588.63 crores, while Advances have gone up by Rs 4.47 crores to Rs 181.47 crores. Cash balances have moved down by Rs 5.05 crores. In consequence, the State Bank has increased its borrowings from the Reserve Bank by Rs 3.90 crores to Rs 6.30 crores. The Giltedged portfolio is unchanged at Rs 393.88 crores.

Scheduled Bank Deposits are now in sight of the Rs 1900 crore mark, though it may be another two weeks before the "break-through" is in fact recorded. In the week ended January 29, a further rise of Rs 4.35 crores takes

gross Deposits to Rs 1898.07 crores. But the rise in Advances has been sharper still, with an increase during the week of Rs 12.19 crores to Rs 1018.92 crores. Consequently, borrowings from the State Bank and the Reserve Bank in the aggregate have risen by more than Rs 4 crores. The rise of Rs 5.76 crores to Rs 784.63 crores in the investment portfolio is directly ascribable to the State Bank. So, cash balances have also been drawn down by Rs 4.37 crores to Rs 159.51 crores.

Mercantile Bank's New Madras Branch

The opening of a branch of the Mercantile Bank in Sowcarpet on February 18 is a clear indication that the Exchange banks are now putting their best foot forward. The Mercantile Bank, now under the wing of the Hongkong and Shanghai Banking Corporation, which has presumably completed its acquisition of the British Bank of the Middle East, will certainly be in the City of Madras and give an extra-cosmopolitan tinge to an area in which Gujaratis, Marwaris, Arya Vysias and latterly Nadars, have combined to make a polyglot pocket in which brokers contrive to speak in a mixture of English, Hindi, Telugu and Tamil. All major Banks have long striven to get and keep a foothold in Sowcarpet—the part of Madras City where the Gujarati bankers in the 18th century maintained financial and trade links with distant Poona as well as nearby Arcot as the diary of Anandaranga Pillai indicates. Among banks that have lately started operations in Sowcarpet are the Dena Bank and the Bank of India, and present indications are that there is enough business for the new concerns as well as the old stagers. And the Mercantile Bank, which has shed "of India", will perhaps get its share of business to prove that it is in India's life and part of it, as the advertisements say. Whatever be the fall in import trade, there is perhaps good reason for the Mercantile Bank to follow National and Grindlays and Lloyds in maintaining more than one office in a City that is still growing.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 9th February 1960. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.355 were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.580 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 15th February 1960. Successful tenders should make payment on Friday, the 19th February 1960. Other conditions are as usual.

During the week ended the 5th February 1960 Government of India Treasury Bills for Rs 84,60,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 10th to 13th February 1960 at Rs 99.371 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 3rd to 6th February 1960.

By
Paul Einzig

Admittedly it is no easy decision for manufacturers to cut their prices on the eve of another substantial wage demand. It would increase the difficulty of meeting the wage demands and would increase the chances of costly wage disputes. Even so the realisation that the profit margin has become narrower might go a long way towards moderating wage claims. For this reason Mr Amory is right in pressing forward with his campaign in favour of lower prices.

Unfortunately price reductions are still rare exception, while the prices of many essential goods continue to creep up. Most people feel that, even though the cost of living index has remained stable since the middle of 1958, their personal cost of living has never stopped rising. There can be no doubt that this is correct to a large degree. In many instances price stability has been maintained at the cost of some slight deterioration of quality of the units.

On the other hand there can be no doubt that to a large extent the upward trend in the prices of consumer goods has been fictitious. Goods cost more because more expensive packing materials are used. Cardboard containers have replaced the old paper bags in which sugar is sold. This more sophisticated packing material must represent a much higher proportion of the price. Cellophane bags are now used for the sale of vegetables and fruit. All this costs money and the consumer has to pay for it in the form of higher prices. If only it would be possible to publish the extent to which the increase in the cost of living up

to 1958 was due to the use of more expensive packing materials, and to which the stability of the index since 1958 conceals a decline in prices if we allow for the higher cost of packing materials, the case against wage increases would gain in strength.

There has been some publicity recently about the accumulation of considerable fortunes by a few individuals since the war. Beyond doubt such examples do not help towards inducing workers to practice restraint in their wage demands. What should be made clear that to a very large degree the creation of new fortunes has been the result of the contrast between wage inflation and the practice of firms to plough back a very large proportion of their profits instead of distributing them in the form of higher dividends. Since dividends in general have not kept pace with the wage inflation, the Stock Exchange prices of equities are, or were until recently, undervalued compared with the intrinsic value of the assets they represent. Hence the opportunities for take-over bids and the building up of big fortunes.

Moreover, while much publicity is given to the isolated instances of wealth creation, little attention is paid to the decline in the wealth of the overwhelming majority of pre-war wealthy classes. Very few of the pre-war stately homes are still in private hands, and the pre-war wealthy families have been taxed out of existence. Generally speaking it is true that in Britain the contrast between riches and poverty is much less pronounced today than it was before the war. The standard of living of the lower income groups has increased very considerably and is still increasing. But the millions of wage-earners are not satisfied with the pace at which their real wages have been rising and are determined to speed up pace.

Even if Mr Amory succeeded in bringing about a perceptible lowering of prices it is doubtful whether the trade unions would moderate their wage demands to any noteworthy degree. They would want to benefit by higher wages in addition to the benefit they would derive from the lower cost of living. And in doing so they would check and reverse the lowering of prices.

It is therefore highly probable that the stability of prices will not continue for much longer. Wage demands have been stepped up, and in face of such demands the exhortations of the Chancellor of the Exchequer are not likely to prevent a resumption of price increases. Even so the fight he is putting up is well worth while, and even a limited success tends to slow down the upward trend to which our generation seems to be fated.

The Budget Session

THE President's address to Parliament last Monday provided not only a comprehensive survey of last year's events and trends, but also an indication of the tasks of coming year. Reference to Sino-Indian disputes could hardly have been avoided in such a survey, and the President's was both firm and dignified. He did not hesitate to describe the Chinese action as "breach of faith"—a characterisation that appears to have pained Communist spokesmen in Parliament. What make these wanton provocations so exasperating is not only their implications of territorial aggression but their repercussions on our plans of economic development. The President pointed out the serious diversion of effort and concentration from our principal tasks that this new development involves. One cannot entirely escape the suspicion that the Chinese actions have as their purpose precisely such an interference. However that may be, it cannot be denied that the fortunes of our future plans have become inextricably bound up with the necessity for meeting these new challenges to our nationhood.

new challenges to our nationhood. It is no use pretending, as is done in some quarters, that this does not constitute a setback. For, though the defence needs may impart an urgency to the principal aim of basic industrialisation, there is no denying that, in so far as such needs use up funds and productive resources, satisfaction of the purely economic needs of the people are either denied or postponed. Mr Nehru is reported to have informed the Parliamentary Congress Party that it is no longer possible to impose the psychology of economy in defence expenditure. This compulsion, unevidable as it undoubtedly is, is unfortunate. In the first place, there is a tragic irony in the fact that India should be obliged to spend more on its defence at a time when disarmament on a world-scale is being seriously discussed by the super-powers. Secondly, one of our principal hopes all these years for greater funds for the Plan was a reduction of defence expenditure. When last year's Budget allocation for defence showed a downward trend, it was hoped that it was but the beginning. But such hopes are entirely forlorn now. This means that serious inroads will be made into our meagre resources (both indigenous and foreign) for defence purposes.

At a time when we have, after a good deal of effort, succeeded in rousing serious international interest in our developmental plans, fresh demands on our foreign exchange resources for defence purposes is depressing. Likewise, even minimum military preparedness would involve sizable increase in domestic expenditure, much of it not productive. All these are sure to add to the strain of finding the resources of the order of Rs 10,000 crores for the Third Plan, however ingenious we show ourselves to be in dovetailing at least part of the defence requirements within the Plan allocation itself. It is this gratuitous forcing of such a situation on us that makes Chinese aggression so reprehensible.

Members of Parliament no less than the rest of the country are sure to be wondering how the Finance Minister is going to perform

his unenviable task of accommodating these fresh demands on his slender resources. Budgeting for the last year of the Second Plan is certainly going to be a ticklish business. Apart from the new demands from defence, the Finance Minister has to find an extra Rs 31 crores (and not Rs 17 crores, as originally hoped) as a consequence of Government's acceptance of the recommendations of the Central Pay Commission. Thus, another hope for increasing the resources for the Plan has been extinguished. Reduction in non-Plan expenditure is more of a will-o-the-wisp now than ever before. And considering that there is little room for further taxation, it will be interesting to see how the Finance Minister proposes to tackle his task.

The session will also probably see the first draft of the Third Plan. The Third Plan will have the same set of problems, but it will have a larger perspective in which to place them. The President had some pertinent things to say on the shape of the Third Plan, and there is little difference of opinion on the broad approach to it. That an economy about to "take off" requires that extra bit of momentum to keep it in the air is not denied. Nor can it be a matter for argument that greater attention should be paid to agricultural production and food requirements, to heavy machine-building and to the development of basic resources like steel, fuel and power. But there is much scope for discussion on detail, and such discussion would include an assessment of the efficient use of existing resources no less than the scope for expansion. What is perhaps even more important is the need for coordinated development and quickness of execution. The time-lag in the progress of various related projects—like the one between coal and steel, for example—is a more serious failure of planning than a simple deviation from targets.

Among particular legislative preoccupations of Parliament will be the bill to bifurcate the Bombay State. The decision of Government to review the question was undoubtedly sound. For, beneath surface acquiescence lay easily stirred sullen discontent. The original bilingual formula was a compromise devised by a sudden accord among various parties, and was something that the people of

Excises in the Next Budget

ADVICE tendered by the Planning Commission in regard to additional taxation is by no means new. In recent months, suggestions have been frequently made for an early increase in Indirect taxation on the ground that the people at large must make their proper contribution to the big outlay required for the Third Plan. It is now clear that official thinking will be guided less by the AICC's Ooty seminar than by the advice tendered by experts, including those coming from abroad, about the financing of big plans for both agriculture and industry. While Professor [Name] offered no advice except as regards

the State had no time seriously to repudiate. The uneasy peace that has since been subsisting was not stable enough to support the theory of democratic acceptance; and, therefore, despite considerable administrative success of the Chavan Government, the decision has now been taken to split the State into two. On the principle, there is near-unanimity among the parties as such, but local opposition, as in Vidarbha, and minor quarrels over details are likely to create some unpleasantness. But, by and large, the bill brought forward is a true reflection of the largest consensus and is sure to find general acceptance.

Another bill proposed that has roused wide interest is the one that seeks to remove the secrecy clause in the Income-tax Act. We do not have before us the actual method by which this amendment is sought to be effected, but the idea has dangerous implications. The motivation behind it also seems somewhat muddled. Exposure and ostracism of the tax-evader, who now smugly enjoys the social advantages of such secrecy, is probably a desirable aim. But this could be better served by the device of publishing the names of known tax-evaders periodically. Such a procedure will spare the honest taxpayer the embarrassing curiosity of his neighbour. If, on the other hand, this decision is obscurely connected with much inchoate worry about corruption in public life, it is not seen how public access to the income-tax file of a person is going to help. Such access may conceivably give free play to all manner of anti-social impulses, and some of the privacies still allowed the citizen will be invaded by people whose motives may not be worth a moment's scrutiny. Corruption can be tackled only by patient investigation and ceaseless vigilance, and not by devices that look perilously like stunts.

Indeed, in the light of such readiness for desperate remedies, Authority's aversion to Sir Chintaman Deshmukh's idea of an administrative tribunal sounds curious. The danger of a general atmosphere of unsubstantiated accusation is greater when information is to be made available, not to a judicial body, but to all and sundry. We would suggest to Government, to reconsider their decision on the matter.

The extension of both excise and sales taxation in order to increase revenue steadily was frankly recommended by the Matthai Commission, and it has been pointed out that a systematic scheme of taxation of necessities of life is an admirable alternative to inflation. There is no point in fixing a precise ratio between indirect and direct taxation, and a comprehensive study of indirect taxes undertaken in the Tata Quarterly, the last issue of which deals with the history of excises at some length, affords some guidance to those in charge of the Exchequer. It is fairly clear at present that the limit of direct taxation, including that on unearned incomes, has been reached, and the theoretical justification for an additional dose of indirect taxation is obvious, because the customs revenue has become inconsiderable under the present regime of restricted imports. The growth of Central Excise revenue in the last decade contains a clear hint in relation to the deepening and widening of taxation and the apportionment of indirect revenue to the States, although limited by the liberal Award made by the Second Finance Commission, gives the States a definite interest in the upward adjustment of excise duties which, being collected from producers, are less onerous than sales taxes.

It may be noticed that suggestions made by the Matthai Commission for excise duty on locally manufactured articles have been implemented, and, so far only sewing machines, biscuits, aerated waters, glass and glass-ware and ceramics are now outside the scope of excise duties. Since 1954, the list of excisable articles has been extended and intermediate products like rayon and synthetic fibres as well as vegetable oils now come within the purview of excise duties. Whether the net will be cast wider to include amenities like bicycles and raw materials like pig iron or copper remains to be seen. But it might be claimed that the revenue from luxury goods like motor-cars is inconsiderable as compared with the revenue derived from an article of general consumption like tobacco. After last year's increase in excise duties on diesel oil and tyres, it is almost certain that what are called intermediates will be exposed again to taxation. The Government will be on strong ground in extending excises, because many industries which have benefited long from generous tariff protection are now enjoying additional advantages, through the rigorous import control adopted to defend the country's balance of payments. How far the cost of production, for instance, of rayon fabrics will be raised by an increase in excise duty will appear debatable; but the capacity to export might be reduced in some cases.

The growth of internal consumption in regard to tea and coffee alike may warrant a fresh approach toward the subject of commodity taxation which, in all countries under a federal system of government, has begun to play an important part, not least because financial relations between the federal Centre and the States require regular and recurring grants. Excises are now well established in the USA, Canada and Australia, protectionist to the core. Since the States are already collecting taxes on motor spirit, motor vehicles and entertainments, it is obvious that a division of the field of taxation has already been accepted, and inter-state relations need not be affected to any extent if an assurance is given that a share in the additional excise revenue will be made available to the States. The imposition of excise does not seem to have hampered the growth of companies engaged in manufacturing batteries, electric fans and lamps; and the expansion of radio manufacture in recent years may well justify the imposition of a similar duty on local manufactures. This will, of course, be passed on to the consumers, who are at present enjoying the advantage of relatively low prices for Swadeshi radios. Such a suggestion made in Radio Week may strike a discordant note.

One further point may well be put forward, namely, the virtual elimination of export duty. The public has come to accept Central excises as the counterpart of import duties while export duties were widely regarded as a necessary brake on any advance in prices, although India is not in a position like Malaya, which is able to make the most out of its large and regular exports of tin and rubber to many countries. The imposition of a tax on salt has long been canvassed and the weight of expert opinion is certainly in favour, although the Taxation Enquiry Commission argued that the political implications of the restoration of the salt tax are not irrelevant. On the other hand, it may be argued that the price of salt has not varied, and there is a substantial surplus for the use of industry as well as the general public, and there is no reason at all summarily to reject the reimposition of a tax that can produce a few crores because the administrative framework already exists and the manufacture of salt is, to a large extent, subject to official supervision. A further point that requires to be dealt with is the exemption of small-scale manufacturers of soap, vegetable oils and footwear from excise. There is perhaps no justification for specific preference, since small scale manufacturers have derived reasonable advantage already and are now assured of financial facilities from both official and private agencies.

What Are Reasonable Profits?

INAUGURATING the annual meeting of the Indian Electrical Manufacturers' Association in Calcutta last week, Mr Morarji Desai, the Union Finance Minister, made some important observations regarding the role of profits in the country's economy. He admitted that there was nothing wrong with the profit motive in businessmen. But he added that the profit should be "reasonable" and "what is reasonable would be decided by the large majority of people in a democracy".

It is true that, in a democratic country, the people's will is supreme and that all major issues of policy should be approved by them through the legislatures. But, at the same time, it should be realised that questions involving technical matters and vitally affecting the future of the nation should be decided

dispassionately and by people who are fully conversant with the relevant facts. Particularly in an underdeveloped country like ours, where the vast majority of the people are illiterate, and where even the educated persons are not generally well acquainted with economic problems, it will not be prudent to allow the masses to decide issues connected with high finance.

So far as the profit motive is concerned, it is well known that, since the Government of India announced their intention to establish a socialist pattern of society, the official approach to this question came to be influenced by political ideology rather than by economic considerations. The vital role played by profits in an industrial economy was underestimated or distorted, and an impression was

sought to be created that it was something wrong and unpatriotic for anybody to think in terms of profits. Profit-making was considered to be synonymous with profiteering, which the State, in the interests of the society, should effectively curb by all the means at its disposal. It is only recently that change in the official attitude is noticeable. It is now realised that the profit motive as such is not bad and that what is essential is that it should be kept at a reasonable level.

This change in outlook is welcome, but it does not go far enough. There seems to be no clear recognition yet on the part of the authorities of the fact that the profit motive is the very basis of economic activity in all countries which cherish individual initiative and enterprise. It is the profits made by individuals and companies that swell the savings of the community and release funds for further investment. The larger the profits, the greater is the revenue derived by the Exchequer in the form of taxes. Indeed, a modern democratic Government cannot find adequate resources for its multifarious tasks unless it gets a steadily increasing revenue from taxes. Nor is it possible to give workers better wages, bigger bonus and higher living standards unless the industry or the undertaking concerned makes substantial profits. Similarly, in the interests of the consumers also, profits are essential because, without the latter, industries cannot modernise their machinery from time to time and reduce the costs of production and lower the prices. In fact, in a free economy, the success of an enterprise depends on the extent to which it is able to make profits. Although it is the reward for the risk and initiative shown by the entrepreneur, in reality it is the society as a whole which stands to gain by the profits made by individuals or corporations. The tremendous progress made by America, Britain, West Germany, Japan and other nations has been made possible only because these countries realised long ago the powerful part played by the profit motive and accordingly devised measures which, while checking tendencies to profiteering, positively encouraged the people to earn profits.

It will now be worth while to consider the implications of what constitutes reasonable profits. The report of the Congress Planning Sub-Committee reveals some light on this matter. The report says: "In a planned economy, high profits are not required as a return for risk and uncertainty; nevertheless, substantial profits are bound to accrue in the private sector, the bulk of which would really be due not to the special efforts of private enterprise but due to social conjuncture and the pressures of a developing economy. It is, therefore, but right for the State to appropriate a substantial portion of such excess profits."

It should be realised that the State already takes away a substantial portion of the profits earned by trade and industry. Moreover, is it possible to demarcate clearly how much of the profits is due to the "special efforts" of the entrepreneur and how much is due to "social conjuncture and pressures of a developing economy"? The Congress says that high profits are not required in a planned economy. But what exactly constitutes "high" profits? Who will determine it?

The report of the Congress adds, "It is also important to realise that profits, after making allowance for cost of production and normal profits and dividends, etc., constitute a surplus which is essentially social in character and really belong to the society as a whole rather than merely to the workers or the shareholders. The claims of labour for higher wages and bonus have to be recognised. The claim of

reinvestment within industry has also a certain precedence. Further, a part of the surplus should be available for meeting the increasing development expenditure of the State. Finally, the consumer also is entitled to a share in the form of reduction in price."

The Congress, of course, is right in saying that profits should benefit not merely the shareholder and the worker but the society as a whole. This is already the case, as we have pointed out in an earlier paragraph. What the Congress, however, forgets is that the society can benefit only when, in the first place, profits are actually made and this will be possible only when people are actively encouraged to work harder and save more.

The recent studies made by the Reserve Bank clearly show that, on account of high taxation and other adverse factors, the industrial sector is unable to earn enough profits to plough back into business. It is pointed out that, in the UK, approximately 50 per cent of the total finance required by the corporate business sector was in the last few years found from internal sources, i.e., from retained profits and depreciation. It has been much higher in the USA, the average over the last few years being over 60 per cent. In Japan, it has been of the order of 33 per cent. In India, during the years 1951-55, it was 60 per cent; it slumped to 37 per cent in 1956 and to 27.6 per cent in 1957.

The financial condition of many industries in India today is far from comfortable. Industries like cotton textiles, cement, tea and coal, which occupy a prominent place in our economy, are in need of vast sums for modernisation or expansion. But the analysis recently made by the Reserve Bank of India about the trend of profits in 1001 public limited companies shows that the picture is

Development of Oil in Assam

RANKED as a major discovery, oil has, with the growing use being made of it as a fuel, become the main basis of industrialisation all over the world. For our own country, the correlation between industrial backwardness and the low per capita consumption of oil is obvious and significant and points to the prominent role which oil has to play for the country's industrial progress. Recognition of this role of oil by the Government led to the setting up of a separate Ministry for Fuel and Oil to undertake planning in respect of prospecting and exploration. The work done by this Ministry covers one of the most expansive facets of industrial activity in recent times. This has been reflected in the intensive exploration carried out in various parts of the country to discover possible oil-bearing areas. Most importantly, a new body, the Oil and Natural Gas Directorate, was created with responsibility for prospecting and exploration. On the distributional side, the efforts of the Ministry were bent to achieve a measure of rationalisation through price reductions.

The manner of birth of the industry, which came as a result of accidental discovery of oil in Assam, provides a sharp contrast to the intensive and purposive planning that now characterises the oil industry today. Oil seepages occurring in Assam had long been an object of curiosity with foreign visitors and had been reported as early as 1828. But the idea of drilling did not take shape until 1866 when the first well was drilled near Nahorkatiya. However, drilling remained sporadic till 1888 when the Assam Railway and Trading Company entered the field. In its search

not at all satisfied. The Reserve Bank study says: "The cotton textile industry suffered a loss of Rs 1.8 crores in 1957 in contrast to a profit of Rs 3.7 crores in 1956. It may be mentioned, that in 1956 itself, profits after tax of the cotton textile industry had recorded a decline of 8.1 per cent as compared to 1955, while profits after tax in respect of all industries had recorded a rise of 4.5 per cent. Profits earned during the year were lower in the case of many other industries like tea, mineral oils, cement and trading, the fall in these, however, being partially counterbalanced by the improvement recorded, among others, by jute textiles, shipping, electricity, coal, paper and sugar groups. The fall in profits was particularly marked in tea, where profits after tax declined from Rs 4.1 crores in 1956 to Rs 1.4 crores in contrast to the increase of Rs 2.1 crores recorded in 1956. Fairly sizeable declines were also recorded under matches (55.6 per cent), mineral oils (34.3 per cent) other plantations (33.3 per cent), trading and cement (17.1 per cent)."

It should be noted that because of the fall in profits, the Exchequer, too, lost a great deal. The provision for taxation by these companies was Rs 51 crores in 1957 against Rs 58 crores in 1956—a loss of Rs 7 crores.

The Third Five Year Plan is being drawn up on a vastly bigger scale than the preceding plans. The private sector will have a very important part in its implementation. It is necessary, therefore, that fiscal policy should be suitably adjusted so as to enable the private sector to function effectively. Arbitrary limitations on profits based on ideological considerations will definitely harm the economy by discouraging the flow of capital, both Indian and foreign, into productive enterprises and by slowing down the rate of economic expansion.

for coal, the company stumbled on oil and was attracted by it. Oil was struck at Digboi at a depth of 662 feet. Further drilling proved the existence of more oil reserves. To look after their oil interests, the AR&T Company formed a separate company, the Assam Oil Company. The latter built the first refinery at Digboi in 1899 with a capacity of 17,000-20,000 gallons a day. The assumption of control of the Assam Oil Company by the Burmah Oil Company in 1921 marked an important turning point in the production of oil at Digboi.

Digboi is the only current source of crude petroleum in the country. So far, about 1006 wells have been drilled at Digboi, of which about 600 wells are on production. Daily production averages about 3,700 barrels a day. A remarkable feature of the Digboi refinery is the production of a wide range of petroleum products which include special boiling point solvents, mineral turpentine for the paint industry, jute batching oil, tea drier oil, lubricating oil, bitumen for road making, wax for home and export markets, coke for aluminium companies, etc.

The enterprise of the Assam oil Company has given the country two more prospective sources in Nahorkatiya and Moran. At Nahorkatiya, oil was struck in 1953 at a depth of 10,000 feet, while at Moran oil was struck in 1956 at a depth of 13,739 feet. Both of them have been proved to be satisfactory producers. At Nahorkatiya, over 50 wells have been drilled so far, while at Moran some dozen wells have been drilled.

The discovery of oil in these two places has heralded a new development in that a

new company with joint participation by the Government and the Burmah Oil Company has been formed to produce oil from Nahorkatiya and Moran. Oil India Ltd, which is the new Company, has an authorised capital of Rs 50 crores which is owned by the Burmah Oil Company and the Government of India in the ratio of 2:1.

The refinery side of the industry is also poised for expansion. Two refineries in the public sector have already been planned and will be located at Noonmati in Assam and Barauni in Bihar. The anticipated throughput in these two refineries, which will operate on the basis of the crude oil supplied from Nahorkatiya and Moran, is 2.75 million tons a year. With the three refineries set up in the private sector, the total refining capacity will go up to 7 million tons by 1963.

While these are no doubt remarkable developments, the dominant feature of the situation in respect of oil is the extreme inadequacy of present production, which is hardly of the order of 0.5 million tons. Against this, imports have averaged more than 3.5 million tons. The total import bill traceable to oil and oil products is of the order of Rs 100 crores annually. In the face of the growing demand for oil, even the prospective production from Nahorkatiya and Moran will not be adequate to meet requirements. While internal production is expected to be of the order of 4 million tons by the end of the Third Plan, demand would have gone up to 14 million tons. Intensification of drilling is the only answer to this unhappy prospect.

A hopeful vista has been opened by the discoveries of oil at Nahorkatiya and Moran. By proving the possibilities of oil reserves in alluvial areas it has lifted the veil that obscured a realistic assessment of the country's oil reserves. Before Nahorkatiya and Moran, Assam was supposed to be the only oil-bearing area. Cambay and Jwalamukhi have confirmed what Nahorkatiya has revealed. Cambay has shown evidence of oil at a depth of 5,000-6,000 feet. At Jwalamukhi, natural gas has been struck at a depth of 2,500 feet. On the basis of these developments, an area of nearly 40,000 sq miles would seem to need surveying to ascertain the existence of oil. Growing demand and the new possibilities opened up are the two factors that should be taken into account in planning for oil.

In the Oil and Natural Gas Commission, the country has a planning machinery which has already shown itself to be quite competent to handle the multifarious problems involved in the development of the oil industry. The setting up of the Commission was a step that was necessary to streamline the work relating to oil exploration and prospecting. The conferment of autonomous status to the Commission should further tend to expedition in their work of prospecting and exploration.

Oil has been accorded high priority in the industrial policy of the Government and this provides a measure of the anxious interest evinced by the Government to step up internal production. However, in the face of the growing demand for oil, a basic consideration for policy should be that it should ensure quick results. In the oil industry, this involves work of stupendous dimensions and calls for colossal capital. Drilling a test well itself is a tremendous undertaking and involves great quantities of machinery and equipment. Exploration is conditioned by the uneven distribution of oil underground which generally does not collect in large pools but is found with a quantity of salt water. The application of even the best geological and geophysical methods and instruments has not eliminated the element of uncertainty that surrounds oil exploration. The cost of successful exploration is also forbidding. An average

exploratory well is estimated to entail an expenditure of Rs 30 lakhs, considering that several barren wells have to be drilled before a successful strike is made, the amount involved would reach a rather high figure. In the circumstances, nothing would conduce to progress so much as foreign collaboration and participation of the private sector. This would enable the country to bring to bear on oil exploration the technical experience that it lacks. The saving in foreign exchange that would result is another important considera-

Future Demand for Paper

A COMPARATIVELY young industry which has nearly trebled its production since 1950, the paper and paperboard industry is now poised for some very dynamic expansion during the Third Plan period. What will impart the dynamism will be as much the demand generated by expanding education as that generated by the growth of industries in general and the newspaper industry in particular. Noteworthy in this context is a recent projection study carried out by the Economic Intelligence Unit of the Indian Institute of Public Opinion to estimate the most likely demand for paper by 1966. According to this valuable and timely study, the demand for paper and paperboard will increase from the 3.6 lakh tons actually consumed in 1958-59 to 12 lakh tons (made up of 3.8 lakh tons of printing and writing paper, 3.4 lakh tons of wrapping paper, 2.0 lakh tons of newsprint and 2.9 lakh tons of paperboard and miscellaneous types of paper) by the end of the Third Plan and their per capita consumption from 2 lbs in 1958 to 4.9 lbs in 1966. Considering the fact that the Institute's estimate has been worked out, with scientific care, in the light of long-term (1923-58) and short-term (1955-58) growth trends, it would appear that it is more likely to be nearer the mark than what is suggested by the Government's target of 7 lakh tons production for the paper industry in the Third Plan. In which case, there will be a gap of 5.0 lakh tons between domestic production and expected demand of 12 lakh tons in 1965-66 as against the 1958-59 gap of 0.8 lakh tons.

It is not theoretically inconceivable that the expected gap can be covered by a higher target capacity than 9 lakh tons proposed by the Commerce and Industry Ministry for the Third Plan. Such a higher target capacity would have to be 15.3 lakh tons as against the present capacity of 5.3 lakh tons covering schemes already in operation and those for which import licences for plant and machinery have been issued. Since, however, the total capacity of the industry is expected to reach 6.9 lakh tons by the end of the Second Plan, an additional capacity of 8.4 lakh tons will have to be created during the Third Plan period, involving a capital investment of around Rs 150 crores on plant and machinery alone. The question is whether such a heavy outlay on one industry alone can be fitted into the Third Plan's structure of investments. That it may not be possible to do so is obvious.

But, at the same time, it is also obvious that the expected demand for paper will be much more than the Commerce and Industry Ministry seems to have estimated it to be. This, incidentally, underlines the need for greater reliance on the small industries sector for obtaining more production at less capital cost. The official proposal that a large number of small units of 5 to 10 tons per day capacity be set up throughout the country is, therefore, a worthwhile proposition. The only difficulty here, according to

tion. A policy which would provide for such participation is the prime requirement for the development of the industry. Though Government's policy tended at one time to be needlessly doctrinaire, a welcome change was inaugurated a few months ago. The decision of the Government to invite foreign oil companies for exploration work was announced by Mr K. D. Malaviya in November. The crystallisation of such a policy holds the most hopeful prospect for the oil industry in the country.

The President of the Indian Paper Mills Association, is that such small units cannot be run as integrated plants since they will have no pulp plants attached to them. If a few large pulp mills are established, the small-scale paper units will not have to depend imported pulp. Where a large number of small paper making units and a few large pulp units may, together, involve a considerably less capital outlay than a certain number of large-scale units, it is not difficult to see the economic justification for greater encouragement to the small industries sector of the paper industry.

Whatever be the estimated demand for paper and the ways and means of obtaining greater production, the more crucial problem facing the industry would appear to be on the score of raw material availability. If the paper industry is estimated to consume 12 lakh tons of bamboo a year by the end of the Second Plan, it will require upwards of 25 lakh tons of that raw material by the end of the Third Plan. On present indications, the availability of bamboo will, however, be no more than 18 lakh tons a year. It is by no means clear how this difficulty can be overcome. If, as the President of the Paper Mills Association has suggested, the forest areas are leased to the mills for a longer period than at present, they could be properly developed both by way of economic exploitation and planned afforestation. But afforestation, if there is to be any, is not a short-term affair in the case of bamboo which takes a number of years to grow. If the country's existing bamboo resources are considered vast, they are vast enough to supply only 18 lakh tons at the most a year, and this fact should not be forgotten.

As for bagasse, which is a substitute raw material, its availability on any substantial scale cannot be taken for granted for the simple reason that it is now largely burnt away as fuel in the sugar mills themselves. To the extent it is used as fuel, it reduces the coal requirement of sugar factories. Whether a much larger quantity of bagasse than at

present can be released from the sugar mills is, therefore, a moot question. As for the other substitute raw materials like "Selai", sabai grass, rags, waste paper sweepings, etc., their availability will only be in relatively limited quantities. So, in the ultimate analysis, what will set the limits to the expansion of the paper industry in both the sectors—large-scale and small-scale—is the availability of raw materials unless, of course, it is decided to spend foreign exchange on imported pulp. Since the foreign exchange requirement of imported pulp will be substantially less than that of imported paper, pulp imports would be preferable to paper imports if the gap between expected demand and planned production is to be bridged.

Such pulp imports may be particularly necessary in the case of the newsprint section of the paper industry. The present notoriously inferior quality of Indian newsprint would appear to underline the need for importing good quality pulp to produce newsprint comparable in quality to the imported one. If, as Mr Manubhai Shah has recently stated at the first meeting of the Development Council for Paper, Pulp and Allied Industries, "the raw materials used in the manufacture of newsprint at NEPA are not similar to those used in foreign countries as we have no fir, spruce or coniferous wood in our country in large quantities for a newsprint mill", how "the experience gained therefrom (from the use of imported pulp) should put them (NEPA mills) in a better position to produce newsprint from indigenous raw materials of the quality equivalent to the imported one" is anybody's guess. Perhaps, it would be more advantageous, from the point of view of quality, which is all important in the case of newsprint, to develop that section of the paper industry on the basis of imported pulp and to utilise the indigenous raw materials exclusively in the manufacture of other types of paper and paperboard.

PRODUCTION AND CONSUMPTION OF PAPER AND PAPER BOARD.

Year.	(In '000 tons).

New IBRD Bonds

Mr Eugene R. Black, President of the International Bank for Reconstruction and Development, announced in New York last week the Bank's proposal to offer, during the second week of February 1960, a new issue of 100,000,000 principal amount of 5 per cent twenty-five year Bonds of 1960 due February 15, 1985, through an underwriting group of dealers and commercial banks under the joint management of Morgan Stanley & Co and The First Boston Corporation.

The Bonds will be non-callable for the first ten years and will have a sinking fund commencing from August 15, 1970, calculated

to retire 50 per cent of the issue prior to maturity. In addition to offering Bonds for regular delivery, the Bank will extend to certain institutional purchasers the privilege of making delayed payments, giving them the selection of specified quarterly delivery dates upto February 15, 1962.

It is anticipated that, in order to broaden the market, the managers of the underwriting group will reserve a portion of the bonds for subscription by underwriters and dealers to sell to institutions which have not previously bought World Bank securities.

Steel Prices

By a strange coincidence, the firm rejection by the Union Minister of Steel, Mines and Fuel, of suggestions for reducing the selling prices of iron and steel has almost synchronised with the announcement of price cuts of iron and steel products in the United Kingdom. But the circumstances in the two countries are radically different, so that it cannot be reasonably argued that price cuts in Britain should be treated as a precedent in India.

The problem in the one case is to find outlets for all the steel that the British Steel Industry is able to produce, especially since the adoption of new practices, like sintering in blast furnaces and use of oxygen in open hearths, has made it possible to increase output without adding to the existing equipment. The problem in India, on the other hand, is to build up productive capacity to meet the overall demand likely to develop in the course of the next few years and, in the meantime, to direct the available supplies for essential uses.

Despite apprehensions entertained by spokesmen of the private producers, there is no reason to anticipate that the country will, in the near future, be faced with a surplus of iron and steel which it cannot utilise. The recent investigation by the National Coun-

cil of Applied Economic Research of the demand for steel during the Third Five Year Plan should be enough to exorcise such fears. But this does not mean that temporary maladjustments are not likely to manifest as a result of either lapses in control or lack of correspondence between the pattern of production and demand. It is in this aspect that steel control in future should be increasingly directed.

The plea for reduction in prices that was made with influential backing has also contributed to the dislocation of the market. Expectation of price reduction has apparently induced dealers to postpone their purchases of sections of which there is no shortage. This is another reason why the Minister found it necessary to make a firm statement rejecting the suggestions for price cuts at the meeting of the Iron and Steel Advisory Council.

The discussions at the Council contain more than a suggestion that even if prices are slashed, the benefit will not go to the consumers. The representative of the All India Manufacturers' Organisation, as well as a member from the South, pointed out that steel processing industries and consumers were very often at the mercy of the black-market. In these conditions, neither the producer nor the consumer nor Government could hope to derive any benefit from price reductions which would only go to swell the illegal profits of the old bandicoots of the black market. But the decision to maintain prices at the existing levels strengthens the case for increasing retention prices, so that the industry may be enabled to build up resources for further expansion of productive capacity.

Practical Approach

The programme for increasing agricultural output and for price regulation, announced by Mr S. K. Patil at a Press Conference last week, has the merit of a practical approach toward the solution of a problem that has been bedevilling the economic progress of the country for a decade and a half. The factual basis for the targets of production proposed for the major crops as well as the programmes of action has been provided by the investigation conducted by the Ford Foundation Team.

The measures that should be taken both for increasing output, as well as for dealing with marginal shortages, have been clear as early as 1943 when the spectre of food shortage began to haunt the country. The proposal for building up a buffer stock was one of the important recommendations of the Gregory Committee. But, so far, no Minister of Food has been able to implement that recommendation. Food Administration has been mostly limited to a "ship to mouth" programme, which gave little scope for broad views or long term policies. To Mr Patil must go the credit of lifting it out of the rut in which it had got stuck.

Not only has he made the buffer stock the corner-stone of his food policy, but he has also increased its size ten-fold. It may be conceded that circumstances are also now more favourable than they have been, till the very recent past, for building up an adequate buffer stock without straining our limited resources of foreign currencies. But the capacity to recognise the opportunity is the hall mark of effective administration.

As regards agricultural policy, something similar to the package programme, under which facilities and resources will be concentrated in promising areas, has been tried during the Grow More Food campaign of the war years. It is expected to double the output in the 5.8 million acres to be covered by the programme in the seven districts that have been selected for the purpose. While the package programme has its own value, there is also need for investigating the reasons for the large disparities in the yields per acre among the different States and among the different districts in the same State.

Indo-USSR communique

The joint Indo-Soviet communique issued on the conclusion of the Soviet Goodwill mission consisting of President Voroshilov, Mr F. R. Kozlov and Madame Furtseva, underlines the similarities in the approach of the two countries to problems like disarmament and suspension of nuclear tests. This was only to be expected. But it is more interesting that the communique should have noted that the prospects for international agreement on disarmament seemed at the present time more favourable than ever before, and that it has also reaffirmed the conviction of Soviet Russia, as of India, that disputes between nations must be solved by peaceful means alone and not by recourse to arms. The political thinking of Indians at present is dominated by the fact of Chinese aggression, and future developments will inevitably be influenced by the manner in which it is found possible to induce the Chinese to respect the integrity of the territories of their neighbours. In this context, the joint statement's emphasis on the solution of disputes "by peaceful means alone" is not without its significance, though the Russian leaders naturally were unwilling to be drawn out by press correspondents. The visit has strengthened the cultural relations between the two countries as evidenced by the decision to conclude a scientific and cultural agreement. It has also enabled the Russians to see for themselves the fruitful results of Russian financial and technical aid in the economic development of the country. It has also cleared the ground for Mr Nehru's discussions with the Soviet Premier, Mr N. S. Khrushchev, who has now arrived in our country on a five-day visit in the course of a tour of Asian capitals.

Swatantra Mysteries

The central organising committee of the Swatantra Party, which held a three-day meeting in Bangalore last week, is reported to have finalised, among other things, the draft constitution of the party, a draft statement of policy, and the party flag. Of these three items, more information is available about the party flag than about either its policy or constitution. The public has been informed that the Swatantra Party flag will consist of a white, five pointed star on a sky-blue background. Detailed specifications regarding the dimensions of the flag, and of the star in the centre, are also available; but there is no indication of how the twenty-one cryptic principles adopted at Bombay last August have been amplified, a subject in which the public is far more interested than in what Mr Masani himself described as just a party flag. For, it is the content of the policy statement still to be approved at Patna, and not the flag, which will determine whether the Swatantra Party develops into a convincing alternative to the party in power, or merely serves as a platform for all and sundry to let off steam against the Congress Governments. To judge by the uninhibited statements of the founder of the party, the outlook is not very encouraging. It is possible to sympathise with Mr Masani, who was cagey when asked about the party's policy. He, along with others entrusted with the amplification of the original principles, has the unenviable task of reconciling the run-away enthusiasm for primitive free enterprise displayed by the party's founder with the facts of economic life in the twentieth century.

De Gaulle's Triumph

In bringing about the collapse of the insurrection of the French settlers against his policy of self determination for Algiers, General de Gaulle has acquired tremendous prestige which should facilitate the pursuit of his chosen policies in the domestic sphere as well as on the international stage. The circumstances in which de Gaulle, as the Army's choice, put an end to the Fourth Republic twenty months ago, gave rise to the legitimate feeling that his regime under the thin veneer of constitutionalism was nothing but an army dictatorship. By the firm stand he has now taken, the President has shown that he is not the Army's playboy. The immense moral strength he has shown in the crisis should consolidate support for his Algerian policy.

Hitherto, the two parties most closely concerned, the French settlers and the Moslem Nationalists, have refused to fall in line with his plans for self-determination, which has been recognised by objective observers as a just and reasonable policy deserving a fair trial. While the former staged an abortive revolt in a desperate bid to reverse the policy, the Nationalists have been standing out for negotiations to settle the terms for calling off their struggle. This, General de Gaulle has consistently refused, and it is not clear that the latest turn in events will induce him to modify his stand or make his offer more acceptable to the Nationalists. Unless the counsels of moderation of well-wishers like Bourguiba weigh with the FLN, the indications are that the tempo of the war in Algeria may be stepped up in a bid to bring it to a speedy end.

U Nu's Comeback

The results of the elections in Burma will be received with general satisfaction in India where U Nu, who has staged a resounding comeback, is well known and widely respected. The impartial conduct of the elections is a signal tribute to General Ne Win, who has honourably discharged the mandate under which he was inducted to office by his country's Parliament. From the very beginning, there were features which set apart the Burmese experiment in handling a crisis of democracy from the military dictatorships which had seized power elsewhere in similar circumstances. The appointment of the army leader as head of Government was made within the terms of the Constitution and with the unanimous approval of the elected representatives of the people. Though there were reports at that time of pressure from the Army, what happened had none of the features of an army coup. The crisis was precipitated by the split in the AFPFL,

which placed U Nu in a dilemma. To maintain his parliamentary majority against the opposition led by his erstwhile colleagues, the Premier had to lean increasingly on the support of the Communist-sponsored National United Front. But this weakened the administration of law and order. U Nu displayed rare foresight and understanding of national interest by deciding to step down and ask the army to take charge of the Government and to conduct the elections. By all accounts, the Army has done a good job of house cleaning. The question now is whether the "clean" AFPFL, which has now been returned in an overwhelming majority, will be able to maintain the same standards of cleanliness. The eclipse of the Stable faction of U Ba Swe has also raised doubts whether, without the restraining influence of an effective opposition, the history of the recent past may not be repeated.

Freedom for the Congo

The act or fact of liberation announced from Brussels leaves the nationalist leaders now free to shape the destiny of the Congo. The round table talks produced no agreement, and a snap decision was forced on Belgium, whose King toured the Congo only to find the natives hostile. The general boycott made an impression and the rulers have only to depart with grace. The parallel with India in 1947 can scarcely be pressed, but it is open to assume that the remodelling of the French empire last year by de Gaulle made Brussels sensitive to the winds that blow over black Africa. Congolese leaders still obsessed with tribal memories have to prepare for freedom soon, and the world will see how the largest colony fares—whether it can hold its own with Nigeria, promoted to self-government by stages, or sink to the state of Liberia.

The economic implications can only be glimpsed. A lot of foreign capital is in the Congo, and the biggest and richest mining enterprise in the world—the Union Minière—will have to adjust itself to drastic political changes. The Congo has everything from uranium to diamonds and Britain, too, will have to see if the copper belt in North Rhodesia is affected by the transformation of the neighbour. If the legacy of King Leopold has been suddenly surrendered, there is no problem of Colons to complicate matters, but Belgium minus its empire will certainly lose much of its present financial power, and it is even possible that the French Congo—grimly pictured by Andre Gide—will be drawn toward its big neighbour with its new Atlantic ports, plus the River. Maintenance of the Open Door under the Congo Basin treaties might be attempted under the new order which will perhaps lead to a big thrust by US capital into the heart of Africa. Mr Nixon has secured the promise of vast open spaces containing many minerals and still underpopulated on current reckoning.

Windsor-Mountbatten

A change of royal title is contemplated in the UK. The House of Windsor, which shed its Hanoverian complexion in 1917, is to link up with Mountbatten (originally Battenberg). The Act of Settlement passed in 1702 is being further modified, though Prince Philip is not raised to the rank of Prince Consort like Queen Victoria's consort Albert—an immigrant from Coburg. The hyphenation proposed may seem strange in a royal family that has links with the Stewarts as well as the Danish dynasty transplanted into Greece by the Concert of Europe in the last century. The Privy Council's consent to the change of title means that the Tory Government, too, are ready to let the dynasty in the next century acquire a double-barrelled title and the mixture will only reflect the altered character of the Commonwealth. The aura of Mountbatten will help what may be called a Combined Operation which commands the support of the Seven Nations or more today. South Africa may not relish the change, but India perhaps will approve the happy inclusion of Mountbatten with Windsor—the place will remain a Royal Borough with tradesmen prizing warrants of appointment far above the possession of super-market facilities.

"Century of Economic Hopes"

ONE of the most penetrating pieces written on the subject of private foreign investment appears in what normally would be considered a most unlikely place—that citadel of cultural commentary, the Saturday Review. Yet every once in a while the Review devotes an issue largely to economic matters, on the theory no doubt that they are part of civilization and culture.

The article in question is a "guest editorial" by New York stock exchange President G. Keith Funston. It bears a little both apt and stimulating—"The Century of Economic Hopes."

As Mr Funston points out, "it is the world-wide emergence of economic hope—the vision of realizable material progress—which more than anything else gives our age its particular importance in world history."

Let us examine his reasoning.

"If this vision of economic advance is to be translated into a world reality," he says, "it will have to come about in large part by transferring capital from our more advanced economies to those which have been crippled by its absence."

One important part of this transfer, of course, is government-to-government aid such as loans, grants and technical assistance. But, as virtually all economists acknowledge, public capital cannot do all, nor perhaps even most of the job. This leaves, says Mr

Funston, a "dynamic opportunity" for private capital.

Mr Funston looks at this opportunity from every angle.

First of all, private capital goes abroad for the same healthy reason for which it is invested at home—the promise of a reasonable profit. This at once places on the realm of the "economically fruitful"—a term used to convey something larger than mere "profit"—the job that private capital sets out to do. This is essential to real economic advancement, even though and because not all the tasks of development capital—such as the building of roads and hospitals—can be weighed on the profit-and-loss scale.

Second, private capital can provide a relatively large boost to the well-being of developing areas. Here, Mr Funston cites the example of South America. He notes that on that continent the total direct investment of US corporations stands at about \$6,000 million. It is responsible for approximately 10 per cent of all the goods and services produced in South America, and the taxes it pays provide nearly 13 per cent of all South American revenues. What is more, the industries in which American investment is concentrated are the fastest growing in South America—indicating, in the author's words, that "private capital tends to be high growth-promoting capital."

Finally, Mr Funston says, private capital investment helps to dispel any lingering image of an exploitative capitalism. That, in fact, has long been outmoded.

While the accomplishments of the modern US economy and the personal benefits which Americans derive from them, it may some times be difficult to understand abroad—the plants which American companies build abroad, the goods they produce, the employment they offer are tangible evidence of the social and economic progress enlightened free enterprise can bring in its wake.

Private investors in capital-exporting nations should realize, of course, that some restrictions on the use of their capital may be unavoidable in a nation that needs capital. With this, Mr Funston readily agrees. But he also emphasizes that investors have a right to expect these regulations to be intelligently devised, to be kept to a necessary minimum, and not to be subject to arbitrary change without notice. For on their part, capital-importing nations should recognize that undue restrictions will inevitably choke off the contribution which foreign investment can make to their economic growth.

It is only natural that, as head of the largest stock exchange in the United States, Mr Funston also should stress the role which US capital markets can play in enlarging the world-wide flow of needed private capital. He notes that more than 300 foreign governments and corporations use the resources of the New York stock exchange to attract American in-

Indian Finance

February 13, 1960

vestors, that trading in foreign shares on the exchange has jumped 247 per cent in the last six years and now accounts for four per cent of the exchange's total volume.

One notion Mr Funston is particularly eager to dispel is an unfounded capital seeks to "impose" American ways and policies on its host nations. He sees the world inevitably made up of many systems, as it is of many peoples. He characterises the primary aim of the United States as that of spurring the "healthy development" of other countries—of helping to close the gap between "aspirations and actualities."

It is in this light that Mr Funston sees our times as a "century of economic hope." In it, he believes, private capital can play a decisive role. It is this, he says, "that makes the thoughtful and creative flow of capital across international boundaries so very vital."

UK Economic Developments

ACCORDING to the Trade and Navigation Accounts issued by the Board of Trade in London, exports of UK electrical equipment, in spite of stiff competition from abroad, reached a record figure of £285,000,000 in 1959. India was the biggest customer of these goods, its purchases during the year under review totalling £20,700,000. After India, leading buyers were Australia, South Africa, the United States, Canada, New Zealand and Rhodesia. The items exported included rotating electric machinery, batteries and electric lamps, radio electronic and nucleonic equipment, television, telegraph and telephone equipment, domestic appliances, cables and wires and water turbines.

Britain's industrial production during 1959 showed a marked increase by about 6 per cent compared with the previous year. This rise in output, according to the estimates of the London Treasury, is the largest since 1954. The increased momentum of production, which gathered pace particularly in the closing stages of the year, is illustrated by the fact that, in the fourth quarter, output was between 2 and 3 per cent up on the third quarter, and was between 8 and 9 per cent up on the fourth quarter of 1958.

Weekly wage rates in the United Kingdom recorded a slight increase of about one per cent in 1959 as against the 3½ per cent increase in 1958. The movement in wages during the period under review was lower than in recent years, mainly due to the absence of general increase in many of the important industries. However, the average weekly earnings of workers in manufacturing industries reached a record level. This has been facilitated by the increased output and rising productivity.

British aero-engines and spares in 1959 earned nearly £64,500,000 in overseas business. This, as re-

vealed by the Society of British Aircraft Constructors, showed an increase of 30 per cent as against the figures in 1957. The £300,000,000 mark for the sale of spares and aero-engines and parts since the end of the war is expected to be reached in April or May. There are today 55 types of overseas aircraft and missiles powered by engines manufactured by six British manufacturers, namely, Alvis, Blackburn, Bristol Siddeley, Napier, Rolls-Royce and de Havilland.

The London Treasury in a recent announcement, disclosed a decline in the gold and convertible currency reserves of the sterling area by about £18,000,000, in January, bringing down the level of the reserves to £959,000,000. The two special payments made in January—£7,000,000 paid in respect of European Payments Union bilateral debts and £5,000,000 utilised for the outstanding balance of the December 1956 drawing from the International Monetary Fund—were mainly responsible for this fall in the reserves, for, without these special payments, the fall would have been only £6,000,000. However, this is contrary to the usual result in January, when the tide of commercial payments is normally flowing in favour of the central reserves. This is probably due to the fact that, up to January 21, when the Bank rate was raised to 5 per cent, credit was more easily available in London than abroad, and international short term funds were still moving to other financial centres to take advantage of the higher interest rates offered.

According to the latest issue of the Economic Review published by the British National Institute of Economic and Social Research, total demand in the UK is likely to rise by 4 per cent in 1960 if there is a no-change Budget and no further change in the Bank rate or credit policy. The capacity of the UK economy is adequate for the expected rise and the balance of payments prospects are also favourable. The Review also pointed out that the rise in investment in the country will be to the tune of 8 to 9 per cent. Investment in the manufacturing industry is also expected to rise substantially this year. The recent increase found in the industrial capacity is also quite favourable to permit a four per cent rise in national product. The United Kingdom has come out as the world's biggest exporter of tractors during 1959, its exports totalling £105,000,000. British tractor exports during the year under review recorded an increase by 16 per cent, and its exports exceeded total export of the rest of the world.

Representatives of the industry give three reasons for British superiority in the tractor market.

The British tractors are designed to suit all climates and conditions. The second reason given for the worldwide success of the British tractors relates to the recent advances in Diesel engine and hydraulic design. The third reason can be attributed to the fact that, with rationalisation of production, there is the comparative cheapness of UK vehicle and spares.

The British aircraft industry, as revealed by the Society of British Aircraft Constructors in London, has reached a record export total of £156,056,000 in 1959. This has brought total earnings from aviation exports since the war to £942,000,000. Of these totals, spare aero-engines and parts accounted for £282,000,000 and £205,000,000 respectively.

The figure in 1959 exceeded the previous record, achieved in 1958, by nearly £2,000,000. India was the biggest customer for aircrafts and parts in the year under review while the other leading customers were Switzerland, Canada, the United States, the Federal Republic of Germany and Argentina.

Good Year for France

1959 has turned out to be a good year for the French economy, which has registered marked gains in both the industrial and financial sectors. With an increase of 8 per cent over October's index, French industrial output touched an alltime high in November when the general index for industrial output, calculated on the base of 100 in 1952, rose to 181. As compared with November 1958, the increase in industrial production works out to 11 per cent.

Reflecting this increase in industrial production, automobile production also went up, the total number of vehicles manufactured at the end of November being estimated at 1,157,598 against 1,023,515 during the same period last year. Growing export demand

provided the chief stimulus for this rise in production. During the first eleven months of 1959, 514,135 automobiles were exported compared with 337,991 during the corresponding period of last year.

The financial recovery was also marked and rapid. While, in December 1958, French foreign currency reserves had dropped to 73.5 million dollars, 1959 has ended with an increase of 670.2 million dollars worth of foreign currency. Including the repayment abroad of 1,008.6 million, the total financial gain aggregates 1,678.8 million dollars during 1959.

Swedish Trade in 1959

The 1959 trade figures for Sweden, published by the Swedish Board of Trade, reveals a narrowing of the country's trade deficit by Kr 400,000,000. While imports went up by Kr 200,000,000 to Kr 12,449,000,000, exports recorded an increase of Kr 618,000,000, reaching a total of Kr 11,417,000,000.

Most of the major items have contributed to this rise in exports. Shipments of timber rose from 821,200 stds to 973,000 stds while pulp exports were up from 2,358,000 tons to 2,679,000 tons. Other articles which participated in this increase were newsprint, iron ore, machinery and apparatus. But the most notable rise occurred in respect of automobiles, which went up by nearly 30 per cent.

On the side of imports, rises were recorded in oil, iron and steel as well as machinery. Against this, a decline was noted in respect of imports of car, ships and aircraft.

The capital exports of Sweden during 1959 totalled Kr 179,400,000. Sale of securities rose from Kr 145,400,000 in 1958 to Kr 160,600,000 in 1959 while purchases went up from Kr 160,500,000 to Kr 179,400,000.

STATES NOTES

More Problems for Cotton Textiles

A feature of the working of our cotton textile industry in recent years is that it is continuously claiming urgent public attention. The imposition of the heavy excise duties on cloth in 1956 proved the last straw on the camel's back and soon after started a period of acute trouble for the industry. Unsold stocks began to accumulate in mill godowns, and, with exports also showing a declining trend, the situation deteriorated into a veritable crisis. Various explanations were given for the sorry state of affairs, but all seemed to be agreed that the heavy excise duties clamped on cloth were one of the main causes of the textile crisis. And when, thanks to the improvement in domestic offtake and exports, there were indications that the industry was at long last on the way to recovery, it began to be plagued by a shortage of raw material. Domestic production of cotton during the current season is sizably lower than in the previous season and the only hope for the continued full working of the mills, seems to be larger imports. Government, too, although they have taken considerable time to size up the needs of the situation, have been quite helpful once they have found that raw cotton was in short supply. The position at present is that the industry is assured of adequate supplies of raw cotton for maintaining or even increasing production, if need be.

In the meantime, the public have been the worst sufferers, having been made to pay daily increasing prices for their requirements of mill-made cloth. But the industry and Government are doing their best to dispel the scarcity scare; but the position as far as the consumer is concerned is yet to show a marked improvement. The remarkable pick-up in domestic consumption in recent months has led some to advocate the plea that immediate steps should be taken to increase production in the organised sector. The Government rejoinder is that, if need be, the mill sector even with its present installed capacity can step up its production to meet any further increase in demand.

But the consumer's hope of getting his requirements easily and at reasonable prices may yet remain unfulfilled as the reported recommendations of the Textile Wage

Board have brought strong protests from a section of the mill owners. It is said that, as a result of the increase in wages recommended by the Board, the industry may have to bear an additional expenditure of Rs 8 crores per annum. Labour is unlikely to yield, especially as the Wage Board recommendations are said to be unanimous, and also since there have been representatives of the industry on the Board. It will not be surprising if, ultimately, the new burden is passed on to the consumer.

Engineers and Costs

Inaugurating the annual general meeting of the Institution of Engineers at New Delhi, Prime Minister Nehru spoke on the role which engineers have to play in the development of the country. Mr Nehru minced no words in stressing the need for rapid technological and scientific advance and observed that India's poverty was not soluble except on the basis of progress made along technological and scientific lines. From the point of view of development, engineering constitutes the most important line of the scientific and technological progress in which the country has been lagging.

The massive development schemes initiated by the Government have considerably enlarged the demand for engineering resources and personnel. Growing demand has set a premium on engineering education. Though engineering education has witnessed considerable expansion, current facilities are short of the country's requirements. Shortage of engineers is a current bottleneck in the way of the progress of many development schemes.

In his presidential address, Dr K. L. Rao suggested that engineers in the country should try to reduce the cost of construction. This should go to relieve the problem of building and construction which absorb a substantial share of total developmental outlay. This could be achieved only if, as suggested by Mr Nehru, the engineers cast off their foreign methods and evolve methods suitable for India. The designing and construction will have to be undertaken in the context of the Indian conditions and, toward this, research on the basis of specialisation should be intensified. Dr Rao made an important suggestion for the setting up of a designs organisation in the country. This should be acted upon without delay.

Comparative Cost and Industry

Delivering a lecture on the "Role of Industry in Economic Growth" in Calcutta last week, Dr John Perry Miller, Professor of Economics, Yale University, made some interesting points which have relevance to the problems involved in industrialisation. According to

Dr Miller, the basic problem in choosing industries for development is choosing those industries in which the country has a long-run comparative advantage. To quote him, "the rationale for choosing an industry such as steel—other than considerations of national defence—is to be found not in the fact that the industrialised countries normally consume large amounts of steel, but in the fact that a country has the resources which should enable it in the long run to produce steel more cheaply than it can import it." In making this point, Dr Miller was but restating the doctrine of comparative cost popularised by classical economists on international trade. As applied between countries, this should result in international specialisation. Free flow of international trade follows as a natural assumption. However, in the tangled international politics of the present day, and in conditions of growing domination by the State in economic activities, there seems to be little room for the application of this principle. Within a particular country, however, the principle should be valuable for selecting industries for development. Even here, there are definite limitations placed by inter-industrial relations.

Another point Dr Miller made was that there should be an appropriate relation between the agricultural and industrial sectors for effective growth. In a developing economy, this implies a mutually expensive relationship, industry providing employment opportunities for the underemployed population on land, and agriculture supplying raw materials and food for the urban population.

Dr Miller also underlined the need for stimulating private enterprise and observed that the existence of a large and viable private sector would contribute to induced investment in the wake of Governmental activities at selected points in the industrial front.

Gujarat's Problems

That the new Gujarat State will not be financially viable for a considerable time after its formation is not a new finding. For, one of the main reasons for the ruling party's earlier opposition to unilingual States in the Bombay Region was the calculation that unilingual reorganisation would place Gujarat in a financially unfavourable position. But a bilingual state has been found to be to nobody's liking, whatever may have been the economic advantages. So the idea has to be given up and bifurcation of the Bombay State will soon be a reality.

The people of Gujarat are also aware that their State will be in an unenviable position as far as its finances are concerned. It would appear that the annual deficit may be in the environs of Rs 9.5 crores. This is the estimate said to have been arrived at

by the committee set up by the State Government to report on the division of the assets and liabilities of the bilingual State between the two new States. The Committee is reported to have further suggested that the Maharashtra State should make an annual payment to Gujarat for the next ten years to meet the latter's budget deficit. As Gujarat has no city suitable to be made into its capital, a sum of Rs 10 crores may have to be set apart for the construction of a capital from the cash reserves of the old State.

But these disabilities do not seem to cause much worry to the Gujaratis. The people of Gujarat are well-known for their enterprise not only in agriculture but in trade and industry. Speaking at the Gujarat Businessmen's Convention held at Ahmedabad early last month, Mr G. L. Mehta mentioned an interesting fact to illustrate the entrepreneurship of Gujaratis in the field of investment: "There is perhaps hardly any company in the country whose shares are not held by citizens of Gujarat." This is not, however, to belittle the task facing the new State. Many of the problems to be tackled have been noted by Mr Mehta in his speech. In the sphere of transport and communication, for instance, there is the question of adequate port facilities to be tackled. At present, Gujarat has only one major port in Kandla, but even this is yet to be properly linked with cities like Ahmedabad. The finding of oil at Lunej has improved the economic prospects of this region, but there is still need for much more systematic investigation. Perhaps one of the problems that have to be solved expeditiously is the provision of cheap electricity to the backward region of the State. But at least here Gujarat may not have to worry over much because of the Centre's proposal to set up an atomic plant in this region.

MP's Third Plan

If the proposals that are being put forward to the Planning Commission by the Madhya Pradesh Government in regard to projects under the Third Plan are accepted, activity in all spheres in the State will have to be greatly accelerated to achieve the targets. A Rs 400 crore Third Plan as against the outlay of Rs 130 crores only in the current plan may at first sight appear very ambitious. But it is to be noted that the Central Third Five Year Plan, as officially envisaged, will involve an outlay of Rs 10,000 crores. The second and the most important reason for setting the sights high both in the National Plan and the States' Plans is evidently the pressure from the people for a sizable improvement in their standard of living within a short time. In a State like Madhya Pradesh, the need for a large outlay springs also from the fact that it has vast untapped re-

sources waiting to be put to productive use.

With the establishment of Bhilai, the State's industrial potential has greatly increased. The existence of extensive iron ore deposits has encouraged the State Government to think in terms of another steel plant in the State. In the present controversy regarding a large increase in the steel production potential, and in view of the fact that Government have already decided to double the production at Bhilai, the request for another big steel plant may not find favour with the Planning Commission, but the proposal for a small plant, which the State Government are said to have advanced, may have better luck. Apart from steel production, the State Government are expected to bestow considerable attention on the development and expansion of a number of industries in the Gwalior region. Among the new industrial units that are likely to get a good deal of attention during the Third Plan are two proposed paper mills, a hardboard manufacturing factory and an aluminium factory.

It is gratifying to note that top priority in the Third Plan is to be given to agriculture. By the end of the current plan, food production in the State is expected to reach 86 lakh tons. This is to be increased to 106 lakh tons by the end of the Third Plan. One of the Second Plan's lessons is that, so long as food production in the country is running below requirements, other plan projects will inevitably be made to feel the repercussions of a large food import. The Union Food Minister has recently issued a warning to the State Governments that the responsibility of meeting the food needs of the people is, primarily that of the States. Therefore, it is incumbent on the States to try their utmost to increase food production and approach the Centre for assistance only when all their efforts to meet the demand in full from their own production have failed.

An indication of the quickening tempo of planned activity in the State is the large-sized expenditure programmed for the final year of the current Plan. An outlay of Rs 37 crores has been approved for the annual plan for the year 1960-61 by the State Government after a discussion with the Planning Commission. Irrigation, and power gets about one third of the total outlay. But nearly half of the expenditure under this head is to be incurred in connection with the multi-purpose Chambal project. Power projects will absorb Rs 4 crores, but this amount again includes a provision of Rs 1 crore for the scheme to supply power for Bhilai from Korba. Finances permitting, the State Government propose to take up a scheme for the supply of power to Central India coalfields from Korba during the next year. There is hard work ahead in the coming year and

in succeeding years for the State Government in the sphere of irrigation. As the total area under irrigation in the State is much less than the cultivated area—in this regard, the State is very much behind the all India average—it is but natural to expect that a rapid extension of irrigation facilities will be one of the main aims of the development programmes of the State. Considerable work has, however, been done in this direction and recently the organisational work to implement

irrigation schemes has been completed. Other important provisions in the annual plan are Social Services with Rs 9.06 crores, Community Development with Rs 3.23 crores, transport with Rs 1.81 crores and industry with Rs 1.39 crores.

UP's Plan for 1960-61

The general pattern of the annual plan for Uttar Pradesh is more or less similar to those of

the other States, reviews of whose plans for 1960-61 have appeared in this column in the past two weeks. The total outlay decided upon for UP after discussion with the Planning Commission for next year is Rs 55 crores. As in most other States, the bulk of this expenditure is to be incurred in connection with the development of power and irrigation facilities. The allotment under the head is Rs 16.18 crores subdivided as follows: Power Rs 11.18 crores and Irrigation Rs 5 crores. The higher allot-

Named after the ancient Chera Kings, Kerala dates back to a mythological past. This land of palm-fringed lagoons and lush vegetation has a close-knit cultural heritage which is best expressed in its theatrical art.

Every year the Velakkali dancers stage the battle of Kurukshetra in commemoration of the martial past of the country—

elaborate dress, make-up and dance-drama are fused in an epic grandeur of mood and movement.

Diversity is the keynote of your journey through India, from the emotional grandeur of Kathakali to the exquisite restraint of the Manipuri Ras dance.

AND WHEREVER YOU GO, there is the full, rich flavour of Wills' GOLD FLAKE to enhance the pleasure of travel.

Wherever you go... they're good

ment under Power is because considerable expenditure is to be incurred (about Rs 600 lakhs) next year on the Rihand Hydro-electric Project, which is the biggest project in the State. It may be noted that a big aluminium plant has been planned in this region based on the power supply from this project.

Next to Irrigation and Power, Agriculture received special attention with a planned expenditure in the next year for Rs 11 crores. When the schemes included in the programme are completed, an additional foodgrains production potential of 2.8 lakh tons will have been created. Development of fisheries is also to be given considerable importance, especially in the eastern districts of the State. The Community Development Programme is to receive sustained attention, as will be evident from the provision of a large sum of Rs 7.5 crores in the annual plan. Under Cooperative Development, plans are drawn up for the establishment of 1,500 new cooperatives and the reorganisation of 3,500 existing village cooperatives. Health and education schemes are to get prominence, absorbing nearly Rs 8 crores under Social Services, which get a total allotment of Rs 11 crores. The emphasis is to be on the development of village and small industries in the final year under Industries and Minerals which get an allocation of Rs 2.50 crores. The two other important items of expenditure in

this section are a provision of Rs 57 lakhs for the expansion of the Government Cement Factory and Rs 4 lakhs for the expansion of the Government Precision Instruments Factory.

Jobs Still Wanted

The Report of the Directorate of National Employment and Service, West Bengal, reviewing the employment situation in the state in 1959, provides disappointing reading in so far as the rate of creation of employment lagged behind expectations or requirements. The tempo of growth of employment in the private sector remained more or less unchanged while that of the public sector slowed down.

The rate of creation of employment in the public sector, in the second and third quarter of the year under review, as revealed by the report, was not more than 2 per cent, while in the private sector it was above 5 per cent. The number of vacancies notified by and the number of employments secured in the private sector recorded a slight increase. This is in striking contrast to the fall in the public sector.

The shortage of foreign currency leading to, drastic import control had a dampening effect on trade and commerce in the state and on the expansion schemes of existing industries. This also caused considerable delay in establishing new industrial undertakings in the state.

The problem of educated unemployment continues to be baffling. The number of job seekers in the state is estimated to be more than one lakh at the end of the current year. As opportunities for employment in the state are few and far between, it is apprehended that these educated job hunters will only swell the live registers of the Employment Exchanges.

More Nuclear Power?

The Atomic Energy Commission, in its report submitted to the Planning Commission, have recommended the installation of three to six atomic power stations in the country by the end of the Third Five Year Plan. The second power station will be set in the Delhi Bhakra Nangal area, while another will be located in the Bombay-Ahmedabad region. Other areas found suitable for the establishment of similar stations are Western UP and the Madras State.

The nuclear power development programme in the country, according to the original report of the Atomic Energy Commission, will cost about Rs 250 crores. The mining operations for uranium and thorium, the establishment of power stations and plants and other development activities are also included in the proposed programme. This estimate is likely to be revised in keeping with the country's overall plan targets.

The Atomic power station at Trombay has already started the manufacture of a small prototype nuclear power station designed by its scientists. An attempt has also been made to use water as a moderator and to extract heat by organic liquid. If the experiment in producing the prototype is proved successful, the country will be in a position to develop a new type of nuclear power station.

East German Investments?

India's huge development programme provides ample scope for other nations to help in its industrial progress. The general attitude of foreign countries to help solve India's innumerable problems has been both encouraging and favourable. The preparedness of the German Democratic Republic to help establish new industries in Madras and other places was brought to light by Mr. Heinrich Rau, Deputy Prime Minister and Minister for Foreign Trade, in his address to the members of the Southern India Chamber of Commerce in Madras. Mr. Rau spoke at length on the improved scope for expansion of trade between India and East Germany, especially after the conclusion of the Trade Agreement between the two countries. He also added that, in future, East Germany would be ready to import goods from India as much as they exported.

It will be appropriate, in this connection, to recall that, in recent years, a host of industries has been set up in India with the collaboration of other countries. It can reasonably be anticipated that the visit of the East German delegation led by Mr. Rau, on the eve of the Third Five Year Plan, will result in the installation of a number of industries in India in collaboration with the industrialists of Germany.

Bihar Sugar in Crisis

The sugar industry in Bihar seems to be passing through a crisis. The Government have expressed grave concern at the growing competition that the industry has been facing from other sugar producing States like Bombay, Madras and Mysore. The authorities have decided to set up a committee to conduct a probe into the working of the sugar industry and to recommend measures to save the industry from the present stress and strain.

It may be recalled that Bihar stood second only to UP in the production of sugar in the country. But it has recently been pushed down to the third place. The prolongation of crushing periods in the 28 factories of the State led to a fall in average sugar recovery during the last three or four years. It can be reasonably hoped that the suggestions of the Committee which is going to be appointed will help the Government to adopt adequate measures for assisting the industry to get over the present difficulties.

Fertiliser Factory in Rajasthan

The Union Government's Fertiliser Technical Committee has recommended the establishment of a 347,000 ton capacity ammonium sulphate plant at Hanumangarh in Rajasthan at a cost of Rs 25.7 crores. The abundant supply of raw materials, the easy accessibility to the place by water and the availability of power are the main factors which led the Committee to select this place for the installation of the plant. The daily output of the factory will be 1052 tons and the annual production will be worth about Rs 10 crores. The Committee has suggested that additional funds be invested to manufacture about 40 tons of ammonia per day during the initial stage.

The other recommendations of the Committee, which need immediate attention are the conversion of the metre gauge line connecting Hanumangarh and Bhandinda into broad gauge to facilitate transport of raw materials to the factory site, the construction of a large reservoir for providing water during canal maintenance periods and the speeding up of mining of gypsum at Nagpur.

Paper's Dynamic Development

In common with most industries, the paper industry also witnessed dynamic development under the Second Plan. The entry of new units together with the expansion of old ones has considerably added to the production capacity of the industry. The Second Plan target for capacity fixed at 450,000 tons has already been exceeded and current capacity stands at 530,000 tons. Similarly, production target fixed at 350,000 tons is also expected to be fulfilled in time. However, in the face of growing demand, the growth of the industry under the Second Plan has not availed in easing the position in respect of supplies. Development has, therefore, to be expedited to ensure self-sufficiency.

The task involved in reaching this stage of self-sufficiency was set in clear light by Mr. Manubhai M. Shah when he addressed the meeting of the Development Council for Paper, Pulp and Allied Industries held in New Delhi last week. As shown by M. Shah, the problem, which is essentially one of increasing production capacity for various items of the industry, has various aspects. In respect of ordinary writing paper, it is creation of capacity for production of pulp which is the crying need. The paper industry now imports about 10,000 tons of imported pulp grade pulp for meeting its requirements and spends nearly Rs 75 lakhs toward this. Newsprint production is characterised by extremely meagre capacity and is handicapped by lack of conventional raw materials. Lack of rayon grade pulp required for the production of viscose yarn staple fibre and cellophane is another glaring gap in the paper industry.

In all these sectors, developments are afoot which promise a material improvement of the present situation. For paper grade pulp, an additional capacity of nearly 75,000 tons is expected to be created in the course of the next few years. The Assam Pulp Mill, with a capacity of 30,000 tons a year, is already under implementation. In respect of rayon pulp production, one scheme has already taken shape in Kerala with a capacity of 100 tons a day. Another scheme based on the bamboo resources of the North Canara forests of Mysore State has been approved by the Government. Three more schemes for rayon grade pulp manufacture are under negotiation. Self-sufficiency in this is expected

to be reached by 1963. In the field of newsprint manufacture also, a spurt in activity has been witnessed. There are 3 or 4 proposals for newsprint mills with an output of 100 tons a day being considered by the Government.

Manufacture of machinery for the paper industry has also made headway. In this connection, Mr. Shah disclosed that six schemes for the manufacture of large-scale paper plants of 50 to 100 tons a day capacity have been approved by the Government.

The prospects for the industry, which thus appear bright, is marred by exhausting supplies of bamboo, which is the main raw material used in the paper industry. This sets the need for looking for alternative materials which could replace bamboo. Mr. Shah has in this connection referred to the value of bagasse, a by-product of the sugar industry. Experiments conducted in other advanced countries have confirmed the utility of bagasse as a raw material for paper manufacture. The utility of bagasse has, however, to be examined in the context of the use currently being made of bagasse by the sugar industry for which it is the primary source of fuel.

Normalcy in Cotton Textiles?

RIISING prices would seem to be giving the cotton textile industry no respite from problems of which the industry has had more than its share in recent years. Coming after the long spell of depression into which the industry was thrown consequent on overproduction and accumulation of stocks, the new development should be viewed with concern.

The Government have reacted with extreme alacrity by importing large and unprecedented quantities of foreign cotton. This was necessary for the reason that it was the serious shortfall in the production of cotton within the country that lay at the root of the present troubles of the industry. The measures taken by the Government have not failed of effect, and a downward trend in cotton textile prices is already discernible. Further improvement should follow the arrivals of foreign cotton in the next few months.

The Cotton Textiles Consultative Board, meeting at New Delhi, has expressed satisfaction with the improvement already recorded in respect of prices. Normal conditions are expected to be restored in the near future. But normalcy would not be considered to have been reached until the speculative elements, which are now active in the cloth and yarn markets, are eliminated. The reported assurance of the textile industry spokesmen that they would, if the situation warrants, institute measures for stamping fair prices on textiles and open depots for supplies of yarn is therefore welcome.

Adaptations of production levels and patterns to the new situation caused by shortage of Indian cotton should also prove useful in bringing down prices.

Wheat for Ore

An Indo-US barter deal involving exchange of American wheat against Indian Manganese ore and ferro-manganese is scheduled to be concluded this week. Under the terms of the deal, India will acquire 450,000 tons of US surplus wheat and in turn would part with 100,000 tons of ferro-manganese and 175,000 tons of manganese ore. The State Trading Corporation will sign the agreement on behalf of India while, on the other side, the contracting party is the US Commodity Credit Corporation.

The conclusion of this agreement mark a significant success in the negotiations for obtaining US surplus wheat which date back to 1949. Protracted negotiations met with qualified success in 1951 when the US Government sanctioned a wheat loan for an amount of 90 crores dollars. That India should have been able to obtain American wheat on the basis of barter deal is a sign of the improved American outlook toward Indian problems.

The new deal is advantageous to India from many points of view. First of all, it does not involve the expenditure of foreign exchange which has to be incurred if American wheat were to be obtained in the way of ordinary trade. Considering the need for conserving foreign exchange reserves needed for financing major developmental schemes, the barter deal represents an important gain for India.

The other advantage is that it enables India to dispose of manganese ore, which has been meeting with considerable resistance in foreign markets. This should stimulate production of manganese ore which has been adversely affected consequent on the setback in export. The opportunity afforded for disposal of Indian manganese ore should be taken advantage of to improve the quality of the Indian finished product. One of the main deterrents to Indian export of manganese ore has been the lack of consistency in grades and quality.

Coal in Assam and Andhra

The Coal Price Revision Committee, appointed by the Government of India to study the price structure of coal in the collieries of Assam and Andhra, has submitted its report to the Government. The Committee's recommendation for the continuation of the existing price of soft coal in these collieries has been accepted, while the recommendation on the price structure of hard coal is under the consideration of the Government.

It has been reported that, making allowance for a reduction in expenditure incurred under the heads "salaries and administration", "stores" and "repairs and maintenance", the current F.O.R. price of Rs 28.44 per ton in the case of the Margherita collieries of the Assam Railways and Trading Company is sufficient, and the Committee found no reason for revision.

As regards the Dilli, Joypore, Kollajan, and Nazira collieries, if the element of road transport from pit-head to rail-head was excluded, the existing price of Rs 25.94 could be regarded as reasonable and fair. The Committee, however, recommended a revision of the F.O.R. price, as the element of transport cost appeared to be too high. For this purpose, the Committee has taken the transport charge as 50 nP per ton, barring the Nazira colliery, where a ropeway is used and where the transport charges will be fixed at Rs 3 per ton. The Committee suggested the revision of the transport charges, if any of the collieries was able to convince the Coal Controller that the transport charges fixed by the Committee were inadequate.

Another recommendation of the Committee was that grading of coal, on the lines of that in the case of the outlying fields of Madhya Pradesh, Bombay and Orissa, should be introduced in Singareni also. The coal from these collieries was being marketed in seven sizes, and as customers have become accustomed to these different sizes, the Committee expressed the need for fixing a price for the different sizes. The Committee also suggested a grade-wise price structure which would provide an average sales realisation only 2 nP more than the existing realisation. The profit margin of other collieries can also be improved upon by the companies taking advantage of the scope for increased output of the largest sizes and by effecting economy in operations, especially in the context of expansion.

Lord Tedder on the Small Car

Lord Tedder's remarks about the Jha Committee's industry into the possibility of making cheap small cars in India may strike some as discordant, but it is clear that the Standard-Triumph merger last year justifies his view that one company cannot go it alone, when it comes to making economical cars. Only when output is raised can costs be reduced and unit costs really rest on sales in volume as proved by the example of Volkswagen and of Citroen much earlier. The Government of India, which have to decide on the information assembled by the Jha Committee about plans and prospects, will have to take note of the judgment that it is not realistic to let one company or factory get special preference on the basis of future connections. The Standard Motor Products of India has already offered its own version of a cheap car. But what matters now is the success in making locally components and spares on a large scale, and Standard's associates have already entered the field of ancillary manufacture. The South has certainly not lagged behind in producing automobile spares and expert witnesses last year told the Jha Committee that there has been substantial progress in light engineering, and that the automobile industry, like cycle manufacture, has established itself. It may be mentioned that Lord Tedder as

Half-year Accounts of IBRD

According to the statement issued by the International Bank for Reconstruction and Development, its Reserves had risen by \$42 million in the first six months of the current financial year to a total of \$462 million. The addi-

tions to reserves, in the six-month period ending 31st December 1959, are made up of net earnings of \$28.8 million, which were placed in the Supplemental Reserve against losses on loans and guarantees, and loans and commission of \$13.2 million which were credited to the Special Reserve. Thus, the Supplemental Reserve totalled \$310.9 million and the Special Reserve \$151.1 million. Gross income, exclusive of loan commissions, was \$71.4 million, while expenses totalled \$42.6 million.

During the period, the Bank made 15 loans totalling \$349.1 million, bringing the total number of loans to 249 in 51 countries and raising the gross total of commitments to \$4,871 million. Disbursements on loans were \$213.8 million, making total disbursements \$3,591.2 million as on December 31.

The funded debt of the Bank amounted to \$1,989.8 million, reflecting a net increase of \$84.6 million over the past six months. Outstanding debt increased by a

further \$23.8 million. Pursuant to the increase in the Bank's authorised capital from \$10 billion to \$21 billion on September 15, 1959, the subscribed capital had been increased to \$18,614.4 million by December 31, 1959.

Troubled Oil

The disaster which occurred at Cambay in the early hours of a Monday morning last week, resulting in the tragic death of four expert technicians—two Rumanians and two Indians—is indeed shocking. It is reported that the technicians who lost their lives were repairing a damaged wall of the test well when the wall blew off under terrific pressure of the gas emanating from the well, causing instantaneous death to the technicians and seriously injuring another expert who was standing nearby. Even though similar accidents are not uncommon in the country, the unfortunate incident in the well site, which, according to the Director of Drilling Operations, is a rare occurrence, clearly symtomises the insecure conditions under which many employees will have to work in such undertakings. Mr K. D. Malaviya, the Union Minister for Oil and Mines, has ordered a top level enquiry into this accident, and the findings will be of immense help to the authorities to adopt relevant precautionary measures to avert such accidents in the oil sites and other undertakings in future.

The strike of the employees of the Burmah Shell Refineries at Trombay and the threatened strike of the employees of the State Bank are also quite distressing. The main demands of the workers of the Shell Refineries are, among other things, the payment of 4 months' bonus, increase in wages and dearness allowances and the recognition of the Union by the management. The threatened strike of the State Bank employees, according to Mr S. M. Joshi, the President of the All India State Bank of India Staff Federation, is the direct result of the failure of their talks with the authorities and the unwillingness of the management to refer the charter of demands to voluntary arbitration. Whatever may be the reasons for these strikes, it is high time that such unhealthy practices are eschewed for the general progress of the nation.

No License for Small Industries

In order to encourage the development of small and medium-scale industries and reduce the formalities with which they have to comply, the Government of India have decided that industrial undertakings, which employ less than 100 persons and whose fixed assets will be less than Rs 10 lakhs in value, can proceed without applying for a licence. This

will apply to new units as well as schemes of expansion of the existing units. If the undertakings concerned want to import either plant and machinery or raw materials, they should, unless they are small-scale industries, apply to the Development Wing of the Ministry of Commerce and Industry of the Government of India. Small-scale industries will continue to approach the State Director of Industries or the Development Commissioner, Small-scale Industries as in the past.

The Licensing Committee, set up under the Industries (Development and Regulation) Act, has further decided to place a number of industries on the list of free licensing. The most important industries on this list are Industrial Machinery and Machine Tools. The intention is to give the maximum possible encouragement to the development of machinery industries in the country. The effect of this decision is that the production of industrial machinery, in general, including components and parts thereof, can be undertaken from existing installed plant and equipment as well as indigenous machinery without any sanction at all. Where the import of plant is required, an application for that purpose will have to be made.

Industrial Disputes

According to figures released by the Government of India, there were 93 fresh industrial disputes in November 1959, bringing the total number of disputes, current at any time during the month, to 139 as against 131 fresh disputes and 168 disputes current in the previous month. The average duration of disputes current was 5.3 days as compared with 4.0 days in October. Out of 96 disputes, which terminated during the month, 73 lasted not more than 5 days each and 6 lasted more than 30 days each.

During the month under review, time-loss of 189,372 man-days, out of a total of 254,426, was accounted for by the "Manufacturing Industry" group. In "Mining and Quarrying" and "Transport and Communication (other than workshops)", time-losses were 24,427 and 24,175 man-days respectively. Time-loss in other major groups of industries was comparatively low. West-Bengal recorded the highest time-loss of 130,770, followed by Rajasthan (39,598); Bombay (34,039) and Bihar (22,778).

Random Notes

The Dow Chemical International Limited SA, which is one of the world's leading manufacturers of chemicals, plastics and magnesium, has announced the formation of a new company, Dow Chimica Italiana S.P.A., and the construction of a multimillion dollar manufacturing plant in Italy. Though the details of the manufacturing plan are yet to be worked out, it is known that a number of products

are being considered for production, one of which is the entire Styron line (Dow Polystyrene). While the opening of the production plant will bring to Italians the benefits of faster delivery and better technical service, it would also enable the company to participate in the growing West European Market.

Union Carbide International Company, whose branches are also located in India, has reported completion of its expansion plan which covers both the technical and production wings. On the side of

production, a new Epoxy Chemical unit has been erected at the Institute, West Virginia, plant with facilities for producing more than 10 million pounds (4,500,000 kg) a year of epoxides and other oxygenated chemicals. The new epoxy chemicals planned to be produced include Epoxide-201, Epoxide-206, Epoxide-207 and Flexil Flexol plasticizer EPO.

The creation of a new technical centre marks a major link in the chain of facilities available at the Chemicals Technical Centre of Union Carbide Corporation. The

scope of activities at the centre ranges from theoretical studies on molecular structure and basic research in chemical reaction mechanisms, to pilot-scale production of new products and the subsequent engineering and design of commercial production facilities.

At the world Agricultural Fair now being held at New Delhi, one of the most attractive and educational sections is covered by the US show on "Atoms on the Farm." The exhibits in this section, which number many, have provided a visual demonstration of the differ-

WHY WE ADVERTISE... 5

improving
products...
reducing
prices...

Mr. S. H. Turner, Chairman,
Hindustan Lever Limited.

Like any progressive company which manufactures and markets consumer goods, we in Hindustan Lever spend a great deal of time and money in seeing that the goods we produce will suit the needs of the consumer. Having produced such goods we feel that it is only sensible to tell the consumer that they are available to make her life easier, happier and more satisfying. Advertising provides the means of communication with the consumer.

Active brand advertising stimulates people to improve their standard of living and so leads not only to increased sales of an individual product, but to an expansion of the market as a whole—and in the case of our products that means an improvement in the nation's health and hygienic standards.

It is sometimes said that the cost of advertising has to be borne by the consumer. That is, of course, true. Advertising is part of the cost of a product, like raw materials, transport, distribution, etc. But it is wrong to believe that advertising increases the cost of the product. On the contrary, it can frequently bring down the cost of the individual item because of the economies accruing from an expanding market and large-scale production.

To our way of thinking advertising benefits the consumer in two ways—firstly, it informs her of the availability of products which will raise the living standards of her family; secondly, it acts as an incentive to manufacturers in a competitive market to improve their products and reduce their prices.

Good advertising serves you

TEAM SPIRIT helping to build Durgapur for India

A partnership of 30,000 Indian and British people is completing a jigsaw of concrete and steel at Durgapur—building a vast new steelworks for the nation.

By their team spirit, the men of CEMENTATION-PATEL are helping this partnership—and the plan to make over a million tons of steel every year for India.

Together, they work on a site the size of a small city: 13,500 Indian and 75 British engineers, technicians and workers.

Together, they have built foundations for the greater part of the project's seven square miles of buildings and plant. Together, they are laying a network of roads, railways and pipelines.

CEMENTATION-PATEL, Durgapur's civil engineers, were first to get to work at Durgapur. In three years, they have moved mountains of earth and concrete to a strict schedule—three years that crown the CEMENTATION COMPANY'S 30 years of service in India.

rent ways in which nuclear energy could be utilised for improving agricultural production. By far the most important exhibit in the American section is the TRIGA, a reactor conceived and developed by General Dynamics Corporation's General Atomic Division. It shows how nuclear energy could be harnessed for the improvement of crop strains and for controlling pests and plant and animal diseases. For this, a variety of radio-isotopes, including potassium and

sodium, are being produced daily in the TRIGA.

Aviation Notes

Following negotiations with the Egyptian Authorities, permission has now been obtained for BOAC to again to operate services through Egypt. This permission will allow service to return to Cairo after a lapse of three and a half years. It is planned initially, to operate a total of four return services a week by Comet 4 aircraft through Cairo

from London to points in India and the Far East. The first services will transit Cairo on 10th April next. BOAC will, as a result, be able to offer to the travelling public of the Arab countries in the Middle East the most comprehensive network of First Class and Tourist services of any international carrier operating through that important area.

Air France by using Caravelles became the first European Company

to use jet aircraft for transportation. From Sunday 31st January, 1960, it brought into service the four reactor Jet Boeing 707 on its long distance routes. Its order for such aircraft totals seventeen.

Everyday commencing from Sunday, the Boeing of Air France flies non-stop Paris/New York at approximately 600 miles an hour transporting 189 passengers in conditions of comfort never before matched.

This aircraft weighing 140 tons is destined to serve all the large Capitals of the world across Continents and oceans. With its greater range and tremendous power, these aircraft inaugurate a new age of reaction for millions of passengers, and on this first route they fly Paris/New York in 8 hours and New York/Paris in 6 hours 45 minutes.

TWA now offers twice daily service from Europe to New York with daily jet flights departing through both the Paris and London gateways.

TWA's jet flights originate in Rome and Frankfurt. The service will be extended to other cities and frequencies will be increased as more of the new Boeing intercontinental jets join the Company's fleet, according to Robert E. Montgomery, International Sales Vice-President.

Operating experience with the long range Boeing has exceeded expectations according to Mr Montgomery. "Every TWA flight, both eastbound and westbound has crossed the Atlantic non-stop with one exception when a flight elected to stop enroute to wait for more favourable weather in New York", Mr Montgomery said.

On January 11, a TWA jet became the first airliner to fly from Paris to New York in less than seven hours. The non-stop flight from Orly Field to Idlewild Airport took 6 hours and 46 minutes. TWA's best time eastbound between the two cities the direction favoured by prevailing winds was 5 hours 53 minutes.

According to Trans World Airline statisticians, TWA's present transatlantic passenger carrying capacity in jet aircraft alone is greater than the combined capacity of the ocean liners Queen Mary and United States.

TWA had daily jet service to New York from both the London and Paris Gateways. The big Boeings fly non-stop in both directions with a capacity of 142 passengers. The combined capacity of the ocean liners Queen Mary and United States is 3,875 passengers per crossing, and one round trip takes the ships 14 days. In 14 days TWA's winter jet schedules provide 3,976 seats in each direction across the Atlantic.

TWA will increase its jet lift to three times this figure before the summer travel rush. Total TWA lift across the Atlantic at the season's peak will be 22,000 seats in each direction per month, an increase of 58 per cent over last year's offering.

Indian Finance

February 13, 1960

I HAVE had occasion previously to remark on Mr H. V. R. Iengar's happy knack of being able to put his finger on the economic question that, at the moment, might be agitating students of economics. Some six weeks ago or so, it was agriculture that was considered by the Governor of the Reserve Bank as being necessary and deserving of his special attention; and the other day, in Calcutta, it was the price situation which succeeded in provoking him to comment. In both cases, Mr Iengar's thinking is crystal clear; and, perhaps, what he said may serve as the basis for the undoubtedly more detailed treatment that these two topics will receive at the hands of the Finance Minister on the last day of this month. But this, I am afraid, may prove to be no more than wishful thinking. For, Mr Iengar also possesses the knack, if I may say so, of thinking slightly ahead of his time. As such, he provides a lead to discussion, a lead that need not necessarily be followed immediately or even in the near future. I shall presently have something to say, after I summarise the substance of Mr Iengar's remarks, on the attitude that the Reserve Bank Governor brings to bear on these two burning topics. First, however, I should like, if I may, to think aloud.

As far as agriculture is concerned, it seems to me that Mr Patil is being blessed with the same kind of good fortune that made of Rafi Ahmed Kidwai a memorable Indian Food Minister. This is partly because Mr Patil's sense of timing is so right. For him to have advanced earlier any scheme for the building of buffer stocks in India, out of surplus US food-grains, would have been futile; indeed, the time perhaps is only ripe at the present juncture. Circumstances, like favourable weather in the late Mr Kidwai's time, can be seen to be conspiring to make a success of Mr Patil's stewardship of the Food portfolio. But this should not be allowed to detract from the capability, as it were, of Mr Patil. He saw the opportunity, and he seized it; and for this alone, we need properly to be thankful to him. But, then, the creation of a buffer stock is not "going to solve India's food problem. Production, and more production, is the only solution to India's perennial food quandaries."

It was at the nineteenth Conference of the Indian Society of Agricultural Economics that Mr Iengar, in his inaugural address, focussed attention on the really important sector of agriculture. So

taken was he with his subject, that he began with gently-worded personal reminiscences about the time, thirty years earlier, when he first was brought to face with problems of rural economics. But, in those days, it was no part of the duty of the revenue officer "to examine the manner in which the cotton cultivator financed his production, the fairness of the price he obtained from his financiers when the crop was ready, or the effect on his economic status of the whole set up for the ginning and marketing of cotton." Not that this was callousness, indifference; only that the administration of the time was not preoccupied with such matters, and did not consider that it had to do any more than cause the least possible disturbance. Today, says Mr Iengar, "a basic change is evident".

He then goes on conscientiously to record the history of agricultural administration, and the extent of his study is revealed by his references to the Pringle survey of the districts in 1827. Mr Iengar's point is that the British Government set themselves a limited administrative task, that of ensuring that, whether in respect of law and order or of taxation, policy would swiftly be communicated to the remotest village; but this itself was no mean task, and Mr Iengar adds, the British "succeeded in building up what, from their limited point of view, was a magnificent administrative machine." In current-day India, indeed, the objective is really no different; it is a question of ensuring that policy is again transmitted expeditiously to the furthest-flung villages. The question before us is "whether we can achieve an equal degree of success in the task of fashioning a machine that will respond to the new impulses of a national Government dedicated to the task of improving the lot of the common man." It is in such terms and in this wise that Mr Iengar hints at the agricultural problem being mainly an administrative task. But first, he says, the facts have to be ascertained.

The trouble is, according to the United Nations Technical Assistance Administration, which sent out a mission to this country, that there exists "a widespread confusion in India between what is intended and what in fact exists." The remarks made by the Mission

on administration are worth quoting in full:

"As regards the lines of communication between the top level and the village level, they exist administratively, in the ordered hierarchy of official responsibility for action, worked out in detail—in far too great detail—at every level. There may, however, be some lack of understanding among the top level officials about how to transmit their new thinking about community development to all the officials below them, or the very size of the official community development machine may make this particular kind of communication difficult; at any rate, the existing lines of communication seem to be blocked. Officials regard their function as being mainly to instruct and to 'organize', and seldom to sit patiently and listen until the slowly-formulated realistic thoughts of the villagers come to the surface. This patience and capacity for listening to villagers is brilliantly demonstrated by some of the very top level officials.

But while they sit quietly and wait for the villagers to speak, a flock of minor officials buzz around, waiting to demonstrate their activities, to push plans and figures under the eyes of the high official and prove that they have been 'on the job'."

So, the first requisite is that these "lines of communication" be opened up. This is both to ensure that the policy laid down at the top is conveyed to and implemented in the villages and to make possible the flow-back of information about the realistic problems that may be faced by the farmer. Viewed in this light, the real task in the agricultural sector would boil down to the sort of picture painted by Mr Iengar.

As distinct from the programme of community development, in which the kind of work to be done might be complex, the immediate task of increasing foodgrains production should normally be a simple one, especially since, in Mr Iengar's words, "one would imagine that the need for additional food supplies is so manifest that not only would there be no resistance but active cooperation on the part of the farmers". Unfortunately, here, too, the prime

requirement is in the sphere of administration, and here, too, lapses are evident. All that needs to be done to raise foodgrains production can be simply stated; better seeds, and more of them; fertilisers being made available, and this in timely fashion; wells and tanks being put into working order; and better agricultural implements being provided and used. These are concrete steps that can be taken, and it has repeatedly been proved that they can yield

a spectacular improvement in production. But the pity is that all too often the administrative pipeline has got blocked. A recent follow-up survey conducted by the Reserve Bank showed that only two out of eight villages "derived any benefit at all from the seed distribution scheme". Even in these two villages, "only nine out of twenty cultivators in one village and one out of twenty in another got improved seed". Then, in regard to fertilisers, 115 out of

143 villagers interviewed did not even know of the scheme for its distribution; and another ten tried but failed to get any for their use. The follow-up survey, according to Mr Iengar, described the trouble to be:

"The major factors responsible for this unsatisfactory progress are reported in this particular sample, to be administrative inefficiency, including corruption at some points, inadequate propaganda and demonstration and insufficient parti-

cipation on the part of the agriculturists."

In another area selected for study, the fly in the ointment was not either of character or of competence but merely of "faulty administrative arrangements." Against this background, the situation in the agricultural cooperative sector is even more intriguing—the right word might perhaps be distressing. For, at a time when it is the stated objective of Government to spread the cooperative sector, the existing societies are by no means competent enough. I may use figures given by Mr Iengar in this regard. The financing of cooperative societies by the Reserve Bank, through State Cooperative Banks, has risen from but lakhs of rupees in 1946-47 to nearly Rs 70 crores in 1958-59. But... many of the State Cooperative Banks have not drawn in full on their limits... the monthly unutilized credit limits rose from Rs 12 crores in 1957-58 to Rs 16 crores... one State Cooperative Bank has drawn nothing from the Reserve Bank... out of 418 Central Banks, 67 have failed to touch the one lakh figure in Deposits, while another 9 have no Deposits at all... of the primary cooperative credit societies, only 16 per cent were held to be well run in 1956-57, another 16 per cent were hopeless and on the verge of liquidation, the balance being "mediocre" societies. Mr Iengar has remarked that "there is little doubt that the situation in India has been aggravated by failure, at both official and non-official levels, to pay adequate attention to the need for administrative competence and quality."

So: we come back to this question of administration. It is in quite a different context that Mr G. D. Birla saw signs of it cracking up. And the picture painted by Mr Iengar is one to show us that, in the agricultural sector, the first and foremost problem that we have to address ourselves to is administration. Is it really at the present time that we should be preoccupying ourselves with such matters as land ceilings and extension of cooperation? It seems to me we should rather concentrate on the consolidation and strengthening of the administrative machinery for agriculture. The rest can follow, later: our immediate task is to increase foodgrains production, and the requirements for achieving that are, as I have stated, simple enough. But the thing basically to be done, and I will end this piece on agriculture by quoting Mr Iengar, is "to see that the administrative machine is really capable of doing its job, in letter and in spirit."

I shall leave over for the next week Mr Iengar's remarks on the price situation, which were made at the function that marked the Golden Jubilee of the Calcutta University Department of Economics.

US Foreign Policy

PERHAPS the most significant development in world affairs in the decade just past is the widespread realisation that war can no longer be the means of settlement of disputes between nations. It is true, this idea has yet to percolate into the minds of all world leaders, but it is a fairly safe presumption that, given freedom of speech, an overwhelming majority of the people in the world will unhesitatingly vote for the banning of war. It may not be correct, however, to say that man has, all of a sudden, shed all prejudices against man. A more correct interpretation would be that the knowledge that World War III may well see the beginning of the end of all mankind is the main operative factor in the new world opinion.

The situation, that is the situation created by world politicians, that obtains today in the world is still far from secure for peace. Notwithstanding the knowledge that nuclear warfare can be embarked upon only by a people who have gone stark mad, the race for nuclear supremacy has been going on apace and more are joining the race even when prospects of the total ban of nuclear weapons are becoming brighter than ever before in the past ten years or so. It is still too early to say whether sanity will prevail in the world. There have, no doubt, been considerable achievements during the last year toward agreement on the urgent need to make the atom subserve man and to avert for ever the possibility of the atom becoming the master of man. But mutual suspicion among the big nuclear powers of today constitutes a big obstacle in the road to lasting world peace. The first year of the sixties may well go down in the history of mankind as a period when man has come into his own again, if the long awaited summit meeting, which is scheduled to take place next May, produces the result devoutly wished for.

According to Mr Ellsworth Bunker, American Ambassador to India, the great challenge of the present decade is whether humanity will be sensible enough to remove the causes of world tension. In an address to the luncheon meeting of the Bombay Rotary Club early this month Mr Bunker, after briefly outlining the achievements and failures of the last decade, has arrived at the conclusion that prospects of mutual understanding among the nations of the world in the present decade are indeed bright. He has incidentally referred to the foreign policies of both the US and India with the plea that there is a fuller understanding of each country's standpoint by the other.

The US foreign policy, avers Mr Bunker, has the same aims as that of India or, for that matter, that of any other country's. But if it differs from those of some countries, it is to be recognised that it is according to the light of the people of US. In this view, there can be no room for misunderstanding because, so long as the ultimate aim is the same, it is only proper to concede that each country has a right to its own way of conducting its foreign affairs. Moreover, the present US foreign policy is the outcome of the realisation brought about by the Korean War and confirmed later by armed conflicts elsewhere in the world. For some considerable time after the end of World War II, the tendency in the US was toward reduction of its military force and this was based on the assumption that the world was returning to the ways of peace after its harrowing experience. It was to learn soon enough that the expectation was unlikely to be fulfilled and that there was need for the continued maintenance of a powerful military force. As a consequence of the activity of aggressive forces, collective security agreements have been entered into by the US with nearly 40 nations all over the world. At the same time, US foreign policy has not ignored the possibility of securing world peace by negotiation and the need for extending its helping hand to the underdeveloped nations in their task of economic development. This will be evident from the fact that some 20 of the uncommitted countries are receiving economic aid. We, in India, know that our foreign policy of non-alignment has not stood in the way of the US coming to our assistance. The sizable aid received so far by India bears eloquent testimony to the American people's broad-minded approach to world problems.

The United States' readiness to examine all concrete proposals aimed at reducing world tension is clearly brought out in President Eisenhower's recent State of the Union Message. In this message, he said: "Over the past year the Soviet Union has expressed an interest in measures to reduce the common peril of War. While neither we nor any other free world nation can permit ourselves to be misled by pleasant promises until they are tested by performance, yet we approach this apparently new opportunity with the utmost seriousness. We must strive to break the calamitous cycle of frustrations and crises which, if unchecked, could spiral into nuclear disaster; the ultimate insanity."

Apart from the natural desire to go to the aid of underdeveloped countries, US interest in India also springs from the manner in which we have been conducting ourselves since the winning of independence. By any reckoning, our record is impressive; and, what is much more important, we have demonstrated without any shadow

of doubt both by word and deed that we have abiding faith in democratic principles. Faced with the need for quickly raising the standard of the people, we have adopted a socialistic pattern of society as our aim. Planned progress with the emphasis on the expansion of the public sector has been the order of the day. But all this has not militated against the basic principles of democracy. In the sphere of foreign policy, we have firmly adhered to non-alignment. We are still stoically holding on to this wholesome principle, even after having been attacked by our powerful neighbour, China. Yet there is no ambiguity about our attitude to this unprovoked aggression. We are for ever ready to settle disputes, if any, on an equitable basis, but the aggressor can be in no doubt about our reaction to any of his further incursions.

Our foreign policy in the context of the Chinese aggression has met with considerable criticism within our own country. A prominent political leader of our country has recently pointed out that the fear, that use of force by India against China would lead to world conflagration, is unfounded, for, the number of armed conflicts in various parts of the world that had been witnessed in the post war period had not led to any widespread disturbance. Some other prominent men in our public life advocate the view that

arrangements for joint defence of our northern borders will be quite in order. There is also support for the view that we have to take arms aid from foreign countries to meet the Chinese threat. But the vast majority of the people in the country are for the continuance of the principle of non-alignment and, at the same time, they stand for the strengthening of our defence. Accordingly, we are now planning for increased outlay on defence.

World opinion on our singular lack of emotion in the face of the Chinese aggression has at first reacted in diverse ways and there was general scepticism about our continued faith in settlement by negotiation. There is, however, now a deeper appreciation of our determination to give the aggressor a chance to realise his folly and retrace his steps. As President Rajendra Prasad said the other day in his address to the joint session of Parliament, the weight of world opinion is beginning to tell on Peking. I prefer to think that, by our attitude to the Chinese aggression, we have in a large measure aided the forces that are now working with some success toward reducing world tension. An armed conflict on the Asian subcontinent between two big countries like India and China, even if it does not lead to a world conflagration, will have dealt a serious blow to the cause of world peace.

you have just opened A METAL BOX CONTAINER!

The container in which your favourite vanaspati comes to you is specially designed to protect the contents from spoilage. The container is precision manufactured on specialised machines and the accurately fitting lid and diaphragm ensure that the contents remain free from contamination over long periods. For added protection, vanaspati containers are made pilfer-proof with the now-familiar aluminium foil diaphragm. An unbroken diaphragm is your guarantee that the vanaspati you are buying is genuine.

Manufacturing scientifically designed packages is the business of Metal Box, leaders in the packaging field. A result of years of research abroad and in India, the vanaspati container is another example of a Metal Box package that delivers the best in consumer goods to you.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.

Japanese Advice on Small Industries

IT is heartening to know from the summary of the report of a Japanese Team of Experts that "the Government of India's policy in regard to the development of small scale industries has been worked out with thoroughness and that the steps taken by them compared favourably with those taken by the Japanese Government." More valuable than this finding is the advice that the Government should "guide and encourage" rather than "protect and foster" small scale industries. Coming as it does from a team of experts belonging to a country with its massive experience and pre-eminence in modern small scale industries, this advice would need to be seriously pondered. That "protection and fostering" of small industries provoke forces of resistance on the side of big industries and that the complementarity between them is all too forgotten in the resulting climate of "competition" are probably implied in the advice. Surely, "guidance and encouragement" can be given to small industries in the same way as they are given to big industries or to any other sector for that matter. That should put the thing in a new light.

THE INDIAN BANK LIMITED

(H. O. First Line Beach, Madras-1.)

offers every banking facility including foreign exchange

at its

23 local offices and 115 branches

spread over India, Ceylon and Malaya

London Agents : WESTMINSTER BANK LIMITED

New York Agents : FIRST NATIONAL CITY BANK OF NEW YORK

T. RAMAKRISHNA RAO,
Ag. Secretary.

Apart from this general, though pregnant advice, there are to be found in the Japanese Team's report a number of specific suggestions for encouraging the development of small scale industries. The most important of these suggestions are calculated to bring about a bolder and more liberal policy of financial assistance. These particular suggestions are:

- (1) Adoption of a Credit Guarantee System whereby a Credit Guarantee Fund under each State Financial Corporation should be created for guaranteeing the obligations of small scale units to financing institutions.
- (2) Creation of a Credit Insurance System whereby a Credit Insurance Fund, mainly contributed by the Central Government, should be established in the Reserve Bank of India; under this scheme, the sole insurer of the Credit Insurance Scheme would be the Credit Guarantee Fund and the scheme would become applicable only when the Credit Guarantee Fund, after repaying the money on behalf of the borrower, cannot collect it from him.
- (3) The establishment of a State Cooperative Bank or Apex Cooperative Bank in each State for providing finance to small scale industrial co-operatives.
- (4) Routing of Government loans through State Financial Corporations.
- (5) Utilisation of the branch offices of the State Bank of

India as agencies of the State Financial Corporations. (This suggestion, it may be recalled here, has been under Government's serious consideration.)

In commending the Industrial Estates scheme, the Japanese experts have suggested that the proposed new estates be organised, if possible, on cooperative lines; the mixing up of industrial units of various trades in one Estate be avoided; and the rents charged from the tenants in Industrial Estates be progressively increased and the sheds be sold on an easy instalment basis. The Team has also suggested that industrial co-operatives be strengthened and that new co-operatives consisting of proprietors of small firms be organised. These co-operatives, it is further suggested, should take up joint activities like common purchase of raw materials, common sale, storage and transportation and quality test of finished products. Besides co-operatives, Trade Associations for each industry in a State should be organised. These associations are to have among its functions matters of common interest like research on products, collection and dissemination of technical information, guidance in business administration, public relations activities and liaison with Government.

As regards the National Small Industries Corporation and its activities, the Japanese experts have recommended the following measures:—Establishment of a "State Small Industries Corporation" in each State for dealing with the hire-purchase of indigenous machinery; the simplification and liberalisation of the hire-purchase procedure, the running of raw material depots for the benefit of small scale units; purchase of stores by Government Departments in the States; and increase in the number of items now purchased by some Departments of Government exclusively from small scale units and their extension to Departments like Railways, Defence, Printing, etc.

Incidentally, it is interesting to know from the latest Annual Report of the National Small Industries Corporation that, under the hire-purchase scheme introduced early in 1956, orders have been placed for 3,596 machines valued at Rs 3.24 crores and deliveries effected in the case of 2,234 machines valued at Rs 1.84 crores up to 31st March, 1959, to various small scale units dispersed all over the country. It is further seen from the report that the hire-purchase scheme has been greatly liberalised so as to charge earnest money at the uniform rate of 20 per cent (as against the previous rates of 20 per cent of the value of general purpose machines and 33-1/3 per cent of the value of special purpose machines) for all machines irrespective of whether these are for special or general

purposes. Similarly, in respect of the period of repayment, which used to vary from three to eight years depending upon the type of machine, a fixed period of seven years has been decided upon for graded indigenous machines and imported machines. At the same time, it has been decided to collect the first instalment only after one year (as against the previous six months) from the date of execution of a hire-purchase agreement.

Again, in the matter of stores purchase on behalf of Government Departments, it is seen from the Corporation's Report that the small scale units, through the assistance of the Corporation, were able to secure orders worth Rs 2.6 crores in 1958-59 as against Rs 0.6 crore in 1957-58. With this increase in the value of contracts obtained by small scale units with the assistance of the Corporation, the value of total purchases made by the Directorate-General of Supplies & Disposals from the small scale sector has risen from Rs 1.97 crores in 1957-58 to Rs 4.13 crores in 1958-59. Following the success of this stores purchase scheme, the State Governments have also started thinking in terms of introducing a similar procedure as has been accepted by the Central Government for purchase of stores from the small scale sector. The Railway Board has also recently agreed to introduce a more or less similar scheme for the purchase of stores from the small scale sector. Further, the search for additional items which could be entirely reserved for procurement from the small scale sector has continued, with 11 new items having been added in 1958-59. This list now contains 27 items of stores which are as under:

Brass padlocks; G. I. padlocks; brass dampers; boxes made of metal; sign board, painted; buttons, metals; postal seals, all badges, cloth embroidered and metal (not for Defence); belt leather (apparel); cash bags; dust shield leather; chappals and sandals; leather boxes (not army type); laces, leather; leather bags; boots and shoes of types required by civil indents only; glass ampoules; handles, wooden and bamboo, soap, washing or laundry soap (against civilian indents only); metal wotish; scissors, cutting (ordinary scissors); coir fibre and coir yarn; postal weighing scales; cotton hosiery (against civil indents only); woollen hosiery (against civil indents only); keys, wooden; and stone curry and stone curry roller.

The National Small Industries Corporation is continuing the search for additional items of stores for exclusive purchase from the small scale sector. The Japanese Experts have gone a further step by suggesting that new public sector units should be required to purchase their requirements of parts and accessories from small scale units.

PENINSULA

The Oilseeds Situation

THE 13th annual meeting of the Indian Central Oilseeds Committee was held at Hyderabad last week, at which the problems faced by the industry came for examination. The most striking thing about the oilseeds situation over recent years has been the decline in importance which vegetable oil has suffered as a foreign exchange earner. From Rs 37.12 crores in 1955-56, the foreign exchange earnings attributable to exports of groundnut oil, linseed oil and castor oil fell to Rs 10.90 crores in 1957. Though a slight improvement was registered to the tune of Rs 3 crores in the following year, as compared to the 1955 level, the margin is still great. Exports have to be more than trebled to recapture lost ground. When foreign exchange needed for accelerating development schemes is running scarce, stepping up of oilseeds and vegetable oil exports should suggest itself as the best available means for adding to the country's foreign exchange earnings. As the Government spokesman interested in availing of all the possible means of increasing foreign exchange reserves, it was on this aspect of the problem that Mr S. K. Patil, Union Minister for Food and Agriculture, laid emphasis in his inaugural speech at the meeting.

Export promotion in respect of vegetable oil is presently conditioned by the growing demand for vegetable oil within the country arising from growth of population and improved standards of living. In fact, in the decline that had occurred in foreign exchange earnings from oilseeds, the rise in internal demand was an important factor. A sizable increase in production of oilseeds and oil has to be achieved to meet growing internal demand and to step up exports. The rise in internal demand should have been of a pronounced order, considering that, side by side with the fall in exports, production within the country has also been on the upgrade. For, while, in 1955-56, the total area under oilseeds was at 29.85 million acres, this had gone up to 31 million acres in 1958-59. In terms of actual production, there was an increase from 64 lakh tons to 69.19 lakh tons.

In the circumstances, the decision of the Indian Central Oilseeds Committee to draw up well coordinated and country-wide schemes for the improvement of the oilseeds crops such as groundnut, linseed, sesamum, mustard

and castor has to be welcomed as timely and appropriate. Extensive implementation of such schemes is the most important measure required for lifting agriculture to higher levels of productivity. The scope for such schemes in improving oilseeds production is evident from continuing low per acre yields. Mr Patil highlighted this fact by pointing out that, while India accounted for 41 per cent of the total world groundnut acreage and 35 per cent of total production, it occupied a backplace in per acre yield.

However, it is to the manner in which schemes are put through that attention will have to be directed. That this aspect of planning has not received the consideration it deserves is clear from the existing gap between target and actual production. The Second Five Year Plan target for oilseeds production was 75.5 lakh tons against which production in 1958-59 was only of the order of 69.19 lakh tons, which gives a figure of 6.3 lakh tons as arrears to be wiped out in the course of the next two years. As Mr Patil pointed out, this demands intense effort on the part of the State Departments of Agriculture. To ensure timely implementation of schemes, it is important that, as suggested by the Central Committee, there should be regular and adequate review of the working of the schemes already in operation. This would also avoid wastage of resources.

The Committee has put forward several suggestions for improving oilseed crops. These include setting up of regional and sub-regional stations for tackling different problems of oilseeds production, popularisation of improved methods through pictorial posters, distribution of better seeds, etc. That the Committee has recommended different methods for the different States is to be appreciated in view of the different problems affecting oilseeds production in the States. For Madras, the Committee has recommended intensive breeding of groundnut; for Mysore, multiplication and distribution of improved groundnut; and, for Andhra Pradesh, evolving of suitable varieties for rice follows.

The Committee's recommendations reveal a bias toward the problems involved in increasing groundnut production. This is understandable in the light of groundnut's pre-eminence among oilseeds produced in the country. Of the 31 million acres under oilseeds, nearly half the area is accounted for by groundnuts. A major part of the foreign exchange earnings from vegetable oil also comes from groundnuts. In 1955-56, export of groundnut oil alone fetched about Rs 22 crores in foreign exchange against a total of Rs 37.12 crores which covered contributions from other items also. For earning more foreign exchange through exports of vegetable oil also, it is on groundnuts that the country has to rely.

For increasing groundnut production, Mr Patil has suggested supply of improved seed to cultivators. The importance which the Government attach to this as the most effective means for stepping up output is evident from the subsidy that is now being paid to the cultivators for purchase of improved seeds. The work done in this respect should be reflected in increasing use made of such subsidy. So far, only Orissa, Punjab, Andhra Pradesh and Madhya Pradesh have sought the assistance available under the scheme.

Side by side with internal production, export promotion has also to be intensified. Though increase in production should be the main basis for such export promotion schemes, there is also need to check the element of waste in present utilisation

of edible vegetable oils in the country. In this connection, Mr Patil pointed to the utilisation of edible oils for non-edible purposes. This could be done by exploiting the potential resources for non-edible oils.

The waste involved in utilising the major portion of the 17 lakh tons of cotton seed as food for cattle should also be avoided by diverting the entire production for extraction of oil which, as pointed out by Mr Patil, could be used as a good medium for cooking either in the liquid form or after hydrogenation as Vanaspathi. At present only about 6 per cent of the total cotton seed production is crushed. A special committee constituted by the Ministry of Commerce had recommended that the production of cotton seed should be stepped up to yield 60,000 tons of oil by the end of the Second Plan period.

WORLD OF JUTE

Stocks Rise: Production Down

When figures pertaining to stocks of jute goods as at the end of January were released by the IJMA early this week, marketmen were cheerful, although stocks were higher than at the end of the previous month. This was because it was generally expected that there would be very heavy accumulation of stocks in January in view of the poor foreign enquiry received during the month. There has actually been an increase of only 12,900 tons, bringing the total stocks to 71,800 tons against 58,700 tons as at the end of December 1959. The

January total is made up of 27,200 tons hessian, 31,900 tons sacking and 12,700 tons other varieties. Apart from the fact that the rise in stocks has been lower than expected, January stocks cannot be deemed to be very heavy. The position this time last year was that mills were carrying total stocks of 113,800 tons.

But the earlier cheerfulness yielded place to depression on Wednesday with the publication of the production figures. Mills' output during last month has totalled 86,700 tons as against 93,600 tons in the previous month. Of this total, hessian amounts to 36,700 tons and sacking to 42,900 tons. Production of other varieties of goods has, however, increased to 7,100 tons from the December output of 6,900 tons. Of the December production, hessian comprised 38,800 tons and sacking 47,900 tons. During the corresponding month of last year, total production amounted to 92,100 tons comprising 40,000 tons of hessian, 45,200 tons of sacking and 6,900 tons in other varieties.

The decline in output last month is due to the fact that mills have

worked in January only 197.5 hours as against 217.5 hours in December 1959 and 206 hours in January 1959. It is evident that, apart from the intervention of holidays, there has been some loss of working time due to other factors.

The stock figures, if taken with the figures of production, will show that the rise in January stocks would have been much higher had it not been for the lower production during the month. If January output has been at a low level, it is because mills have had an unusually short month.

One need not take any special effort to find out the reasons for the disappointing performance of the industry and trade during last month. It is now clear that despatches during January have been much below the level reached in December. The question why overseas buying has been at a low ebb is easily answered. In the first place, the first quarter of the year is usually a lean period for exports, especially to countries like the U.S. This year, it was, however, expected that offtake would continue to be satisfactory during this

usually lean period in view of the fact that the normal pattern of U.S. burlap offtake had been disturbed last year by the steel strike. If, in spite of the favourable indications like the sizable rise in burlap consumption in US in 1959, offtake last month has been low, it is largely because our marketmen have in the past one or two months done their utmost to make price levels as unstable as possible. It is not surprising if foreign buyers have rightly decided to stop purchasing their requirements till prices come to reasonable levels.

It is time that those who are at the helm of affairs in the Indian World of Jute realised that our jute goods industry cannot afford to keep its overseas customers in a state of uncertainty and suspense. For, competition from Pakistan is increasing every day. Latterly, there is discernible in Pakistan a new determination to win new and fresh markets overseas both for its raw jute and manufactured goods. It will be readily accepted that, provided prices are equal, it is very likely that buyers will prefer Pakistani goods to our goods. This is because jute goods in Pakistan are manufactured in modern factories with superior quality raw material. Pakistan has now removed the ban on jute acreage and concerted attempts are to be made to make Pakistani jute both popular and cheap in world markets. An ambitious programme for the development of the jute goods industry under the country's Second Plan has been drawn up. In the meantime, some mills have already started working three shifts in order to meet the growing demand for Pakistani jute goods. In our country, too, both Government and the industry are one in wanting to increase exports of jute goods. This has not remained a pious wish, and concerted action has been taken. In a remarkably short time, we have attained self-sufficiency in raw jute and, today, our jute production is on a par with Pakistan, though only in quantity. Problems of modernisation and rationalisation of the industry have also been receiving the earnest attention of both Government and the industry with commendable results. In short, almost all the necessary conditions for efficient and economic working of the industry have been created. And yet, the essential prerequisite for gaining the goodwill of our overseas customers has not been created.

WORLD OF TEA

Reversal in Price Trends

THE possibility of the price gap between plain and quality tea widening once more is being discussed in trade circles. Should this happen, it will mean that the price trend, which has been prevailing since the spring of 1959, will be reversed. The fact that, in the UK auctions, during the past fortnight, the plainest sorts of tea on offer tended to be cheaper, while some of the better teas have shown more price stability, appears to have supported this belief.

It is thought that the drop in plain tea rates may be due, firstly, to the unwillingness of buyers to take extra quantities on to their books immediately and, secondly, to the possibility of a surplus of supply over demand during the 1959-60 season if consumption within the producing countries falls below that of the previous season. It is argued that, since low plain tea prices in 1958-59, were the main force for the rise in consumption during that season, the higher prices so far in the current season might well be responsible for a fall in consumption this season.

As a matter of fact, buyers in Mincing Lane are unwilling to pay recent levels for the plainer sorts. With the result, the price range over the week is slightly wider at 3sh 10d to 5sh 6d per pound as compared with 3sh 11d to 5sh 6d. It appears, as some quarters feel, that buyers have covered most of their requirements of these grades for the time being. Moreover, the recent higher level of the plainer teas has reportedly reduced the profit margin for the lower-priced retail packet.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 75,987 packages. There was a fair demand and the enquiry was a little more general than in the last week's sale; but the plainer liquoring Broken and some Fannings showed a further decline of 2 nP to 6 nP a pound. Selected Fannings grades were, however, very strong and sometimes dearer. Medium BOPs were irregular and easier and there were some withdrawals. The brighter liquoring types were sold readily, particularly any with autumnal character.

There was a good enquiry for CTC teas, which were a little irregular and prices for the best tended slightly easier as the sale progressed. The lower-priced sorts were sold readily and were often dearer. Non-wither legg-cut teas

came to a ready market at prices which were generally 4 nP below last rates. There was a useful enquiry for Whole Leaf grades, which were about steady.

The demand for Darjeeling teas was again limited and selective. Following rates were quoted (per pound):—Clean Black Pekoe Rs 2.18 to Rs 2.22; Plain BP Rs 1.96 to Rs 2.00; Plain Fannings Rs 2.00 to Rs 2.10; Medium BP Rs 1.92 to Rs 1.98; Medium Fannings Rs 2.06 to Rs 2.16; Best Assam, CTC BP Rs 2.40 to Rs 2.60 and Best Assam CTC Fannings Rs 2.45 to Rs 2.65.

In the Internal Sale, offerings consisted of 23,045 packages of Dusts and 1,778 packages of Leaf grades. There was a strong and active demand for Dusts, which increased as the sale progressed. Grainy orthodox descriptions, suitable for export, were a feature of the sale. These opened at about 10 nP per pound dearer, but later sold at 15 nP to 20 nP and sometimes more. Legg-cut Dooars teas

were well supported at irregularly dearer rates.

CTC teas were irregular and generally up to 6 nP easier at the start, but also strengthened as the sale progressed. Toward the close, these were firm and sometimes dearer. The very best, in this category, generally followed this trend. Following were the rates (per pound): Medium Dooars Dust Rs 2.26 to Rs 2.46; Medium Assam Dust Rs 2.20 to Rs 2.40; Medium Assam CTC Dust Rs 2.26 to Rs 2.34 and Best Assam CTC Dust Rs 2.35 to Rs 2.85. There was a good demand for Leaf grades at generally dearer rates. The few chests of Green Teas, on offer, were well supported at considerably dearer rates.

An Agreement between the Tea Association of India, Calcutta, and the Indian National Trade Union Congress (Assam Branch), has been signed in Dibrugarh on the 6th February, 1960, for payment of Bonus for the years 1957 and 1958 to workers of the tea gardens in

Assam Valley in the membership of the Tea Association of India.

According to the Agreement, 'Basic Bonus' shall be deemed to mean the following for each of the Zones specified:—

	(1)	(2)
Assam Zone I	Rs 90	Rs 45
Assam Zone II	Rs 85	Rs 42 1/2
Assam Zone III	Rs 80	Rs 40
(1) Gardens of 300 acres and above		
(2) Gardens below 300 acres		

The Bonus will be paid on the basis of the following formula, i.e., the profit of the company for the bonus year divided by the average profit of the company for the years 1954, 1955 and 1956, and then multiplied by Basic Bonus.

A minimum of Rs 10 is to be paid per adult worker even by the gardens which have made no profit during the bonus year, the amount to be adjusted against bonus entitlement of the worker in subsequent year or years. The Bonus for the year 1957 is to be paid by March, 1960, and for the year 1958, by March, 1961.

TELEGRAMS

delivered quicker

by TELEPHONE

BANNERJEE
•TF 31670
NEW DELHI

Send your telegrams addressed to the TELEPHONE NUMBER* of the addressee. The message will be telephoned to him as soon as it reaches the telegraph office. It will save all the delay involved in manual delivery.

It may also be cheaper—the telephone number, including the prefix 'TF' is charged for as only one word.

This facility is available wherever there is a local phone service.

A copy of the message will be sent the same day by the first postal delivery.

RECEIVE YOUR TELEGRAM BY 'PHONE

In some cities you can get telegrams by phone even if the sender has not given your phone number. Register your phone number with the telegraph office. Thereafter all telegrams for you will be delivered by phone followed by a copy. This service is available at Agra, Ahmedabad, Allahabad, Amritsar, Bangalore, Bombay, Calcutta, Coimbatore, Delhi, Indore, Kanpur, Madras, Nagpur, New Delhi, Salem and Secunderabad.

Strong Statistical Supply Position

THE Cotton market, after early setback, once again firmed up on reports of fresh allocation of indigenous raw cotton to mills. More than anything else, the strong statistical supply position as well as the renewed firmness in oilseeds bolstered up sentiment. The sharp upswing was also attributed to reports that trading in May contract might not be permitted by the Forward Markets Commission. However, certain trade circles do feel that there might be delay in the grant of permission. But reports go to indicate that the

EICA has not formally asked for permission till the 10th February. Renewed buying in the spot section, however, imparted a distinctly bullish slant. It might be here noted that ICC March, which had gone up to Rs 780 early in January, touched as low as Rs 740 on the 30th January—the lowest since 23rd November 1959—but recovered during the week up to Rs 767.50 before settling down at Rs 762.

SPOT MARKET:

In the Sewri market for spot, mills were in a mood to renew their buying, specially for such varieties as Laxmi old and new, 197/3, 0394, Rajpalayam, Western Farm and Moglal varieties. Prices consequently are ruling firm. According to a section of the trade, quality control seems to have only partially succeeded in its objective. Similarly, the issuance of large import quotas has not brought about any special change in the price structure of usually popular varieties of Indian cotton though it should be stated that, but for the import quota, the

price rise in indigenous varieties would have been still steeper.

Among foreign cottons, mill demand for Sudan has broadened lately in preference to Egyptian, in which prices have advanced further. The firmness in Egyptian cotton has been wholly attributed to excellent demand from world spinners and the consequential tightness of its statistical position. The mill demand for Sudan and Egyptian is presumably due to the fact that mills spinning over 60s have now obtained pretty large shares out of the recent import allocation of cotton stapling 1 3/16" and above. As a matter of fact, some mills seem to have received more allocations than they need. Heavy arrivals of foreign cotton are expected in the next three or four months. Some quarters feel that these might cause severe strain in the finances of particularly weak mills.

CLOTH MARKET:

The Cotton Piecegoods market appears to be still in a subdued mood and the speculative bullish fervour,

which had been in evidence a month ago, appears to have subsided. At the meeting of the Cotton Textile Consultative Board held last week, the representatives of the industry have assured the Government that there would be no cloth shortage while ensuring fair prices. However, it is felt that active steps should be taken to raise the cloth production if apprehensions of any shortage developing are to be set at rest.

Exports of cotton piecegoods from India during 1959 have been provisionally placed at 782 million yards and have thus recorded a rise of nearly 200 million yards over those in the previous year. There has generally been a sharp rise in the exports of practically all categories of piecegoods and more especially in the medium category.

The table below shows the variety-wise exports of cotton piecegoods from India in 1959 together with the comparison figures for the last five years:

Year	(In Million Yards)			
	Coarse	Medium	Fine	Total
1954	185	634	78	921
1955	187	631	36	854
1956	203	545	23	771
1957	234	591	12	837
1958	196	366	7	569
1959	283	476	9	768

NEW YORK COTTON MARKET:

The New York cotton futures market remains in a listless state with narrow movements. The Egyptian cotton crop is estimated at 1,385,245 bales (of 730 lbs), according to the second crop report. With the carry-over of 286,798 bales, the supply position, for the current season, is estimated at 1,671,993 bales. Export sales to January 15 1960 amount to 773,250 bales, which constitute an all-time record. During the corresponding period of the last season, sales amounted to 505,694 bales. Actual exports, up to 27th January 1960, are placed at 414,500 bales and local consumption at 125,205 bales.

The raised estimate of the Sudan cotton crop for 1959-60 is placed at 759,000 bales. However, shipments of raw cotton from Sudan to various countries, in the calendar year 1959, are placed at 947,303 bales, against which UK accounted for 298,057 bales; India for 139,948 bales; West Germany for 106,902 bales; France for 98,678 bales; Italy for 91,184 bales and the USSR for 33,230 bales.

According to the reports now available, there is a growing belief that a crop of 325,000 bales of Uganda cotton, during the current season, is almost a certainty. This will consist of about 310,000 bales of AR and 15,000 bales of BR varieties. Out of this, about 2 lakh bales have already been sold. No further sales will take place till this month-end; the future programme will depend on the crop progress. It appears that India is unlikely to purchase more than 150,000 bales during the present season, though the chairman of the Uganda Lint Marketing Board indicated that India would buy 2 lakh bales.

Competition in Sugar Industry

BIHAR is expected to produce 90 lakh maunds of Sugar this year against 84.32 lakh maunds produced in 1958-59. Although the quantity of cane crushed has shown an upward trend during the past few years, the total sugar output has remained the same, because of lower sugar recovery than before. The industry, which has survived the threats of imported sugar, is now faced with equally serious competition from the other States of India, viz., Bombay, Madras and Mysore, where the sugar industry is developing fast.

Bihar, which used to be the second largest sugar producing State in the country until recently, has now gone down to the third place, being displaced by Bombay which produced 3.21 lakh tons of sugar last season against Bihar's production of 3.10 lakh tons. The Bihar State Government have, therefore, given serious thought to this problem and have suggested measures for increasing both the acre-yield and sugar recovery in the State.

Meanwhile, the Government have decided to release 1.75 lakh tons of sugar. There will be no release for free sale from the factories of Uttar Pradesh, North Bihar and the Punjab except a small quantity which will be released to each factory for sale to its employees. Allotments of sugar to Madhya Pradesh, Rajasthan, Uttar Pradesh, Bihar, West Bengal, Orissa, Madras, Kerala, Bombay State, Himachal Pradesh, Assam, Manipur and Tripura, from factories in the controlled region, will be made only to the nominees of the State Governments.

Allotment will be made at prices fixed by the Government. The controlled ex-factory price for Uttar Pradesh and North Bihar factories is Rs 37.85 per maund and for factories in the Punjab Rs 38.35 for ISS D-29 grade with the prescribed price differentials for other grades. The fixed f.o.r. allotments made to Kanpur and Calcutta will be Rs 38.60 and Rs 39.85 per maund respectively for sugar ISS D-29 grade.

Despite this release, sugar prices have developed a hardening tendency. In the Muzaffarnagar market, the rate is quoted at Rs 120 to Rs 132 per bag in response to good demand for purposes of conversion to "Boora".

Gur

In the Hapur market, ready Gur prices have registered sharp gains of Rs 1.25 a maund on continued brisk demand from the South. Daily arrivals average 4,000 maunds and the total, from the beginning of the current season, is put at 4.55 lakh maunds as against 4.27 lakh maunds in the corresponding period of last year. Local stocks are estimated around 20,000 maunds. Pansera quality is quoted at Rs 18.62 a maund as against Rs 17.25 in the previous year.

Trading in gur futures, which remained suspended under orders from the Forward Markets Commission, was resumed at Rs 16.40 on Saturday last. The Commission, have approved the ceiling price for Gur Fagun at Rs 16.50, fixed by the Hapur Chamber of Commerce. The market thereafter moved narrowly and some transactions were reported at a premium of Rs 20 per transaction paid by the sellers to square up their deals.

In this connection, it may be added that the smart rise of about 10 per cent in the prices of jaggery all over the country during the past few weeks has compelled the FMC to take a cautious view of the situation. Reports from Delhi suggest that futures trading in gur Baisakh contract will not be permitted. The recent spurt in prices has, according to the authorities, no justification in view of the fact that production is expected to be higher this year. While bulls are trying to corner the available stocks, the firmer trend has been aided by reports that sugar will not be decontrolled in the near future.

Khandsari

Prices in the Hapur Khandsari market have remained steady, thanks to sustained demand from the consuming areas of the South. Although loading facilities are restricted by rail, goods are freely despatched by road. Rates are moving between Rs 46 and Rs 49 a maund, according to quality.

The khandsari units are reported to be working to their capacity due to unrestricted supply of sugarcane and higher prices realised in the market.

Foodgrains

Conditions in the Hapur Foodgrains market have continued to remain firm on reports of "rabi" crop being affected due to inadequate winter rains and heavy frost. Also, reports that strong westerly winds have also damaged the crop to some extent have aided the bullish sentiment.

Wheat and Gram prices have registered a rise of Re 1 a maund, while other coarse grains sought higher levels. The Rice section has registered fractional gains in sympathy. The supply position of this commodity is reported to be satisfactory. The Uttar Pradesh

Government are still purchasing rice for reserve.

According to the latest monthly Rice Bulletin issued in London by the Commonwealth Economic Committee, the 1959-60 rice harvest appears favourable almost everywhere with increased crops in the principal exporting countries, although no estimate of the Indian crop is given. Export prospects for 1960 are promising in the principal countries of Asia and the United States.

In a review of production, the bulletin states that the first estimate in Burma puts the crop at 6,600,000 tons—slightly higher than last year, but with a lower yield per acre. Dealing with exports, the bulletin adds that India took less than previously; but exports to Pakistan and Ceylon rose by nearly one-half and one-third respectively.

Gram prices have risen sharply by Re 1 a maund on firmer advices from the Punjab. Barley and Bejher prices have improved fractionally, while Maize and Bajra have continued to attract good consumer support and prices, too, have sought higher levels. In the Pulses section, Peas and Arhar prices have scored sharp gains on reported damage to the standing crops due to heavy frost.

Cashew

The short-term outlook for Cashewnut exports has suffered a change for the worse during the past few days. Earlier expectations of larger shipments to India's main overseas markets have not materialised. The USSR and the USA have, for the present, withdrawn from the Indian market. These two countries feel that the current prices are too high.

While shippers are demanding 51 cents a pound, Russia seems to be interested to buy at only 49 cents and the USA at 50 cents. The new trend in prices is understandable in view of the prospects of improved supplies in the coming months. At the same time, arrivals of the African crop are also regular. It is stated that African exporters are eager sellers of their produce even at lower levels, because of the consumer resistance at higher rates. They seem to be willing to liquidate their stocks at Rs 800 per ton as against Rs 850 a fortnight ago.

Meanwhile, trade circles place the overall shipments, in January, around one lakh cases of 50 pounds each. While this is considered normal, they fear that exports are not likely to pick up in the current month unless the prices come down in line with buyers' ideas.

Bullion

THE gold section on the Bullion Exchange in Bombay was once again in the lime-light due to the manipulative tactics of a few professional bull operators who were not slow to exploit the somewhat restricted supply position. A professional operator

from Madras, who not only has large stocks of the yellow metal in ready but also large forward holdings, continued to dominate the scene, and so, from the recent low level, gold prices recovered by more than Rs 3 in a matter of one week. In the maturing delivery, which expires by the week-end, he was successful not only in exacting higher back-wardation charges but also in liquidating at the bulge, part of his holdings. The enhanced margin in Phalgun delivery has not deterred the bulls much in their operations, except for the fact that the smaller fry among the trading public is being eliminated by the stringent margin requirements. The Silver section did not have much strength of its own, except for sympathetic movements.

The maturing delivery in gold advanced to Rs 133.31 before reacting to Rs 132, and Phalgun, which rose to Rs 132.50, came back to Rs 131.50. Spot gold commanded a premium of 56nP. The maturing silver contract moved between Rs 212.50 and Rs 213.50 to finish at Rs 212.67, while Phalgun was quoted at a premium of 75 nP.

The rise in bullion prices is no doubt adding to inflationary pressures. The Reserve Bank Governor recently emphasised at Calcutta the need for imperative and concerted action to bring down prices. This no doubt applies with greater force to bullion, which more or less forms a barometer with regard to the evaluation of agricultural commodities. Forward trading no doubt helps in boosting prices, and in the present context of the country's economy and shortage position, there is no utility in forward trading as such. In case this is not feasible, the monetary authorities can at least ease the position by resorting to sales of confiscated unauthorised gold receipts over the last two years.

Yarn

The yarn market has continued to rule easier, with buyers being reserved while restricted off-take from up-country centres has continued to affect all types of yarn. Art silk yarns have suffered a moderate setback, while staple fibre yarn continues to rule weak with February delivery coming down to Rs 234 and April to Rs 223. Nylon yarns made a mixed showing. Cotton yarn was also a shade easier.

Oils & Oilseeds

Boom conditions prevailed on the oils and oilseeds market in Bombay during the past week following the fixation of ceiling levels for groundnuts and oil by the Board of the Exchange. The ceiling rate fixed for February and May delivery for groundnut kernels per candy is Rs 225 and a penalty of Rs 5 for non-delivery. Likewise, the ceiling rate for oil was fixed at Rs 24 per quarter. As the decision was ratified by the Forward Markets Commission, this move gave fresh impetus to the bulls, who were inclined to think that the FMC would not interfere with the normal working of the market till the ceiling was reached. It is to be seen whether similar measures are

PRECISION IS THE KEY-NOTE

and included in our wide range of production are Tea and Jute Machinery, Steel Structural, Railway Signalling and Interlocking Equipments, Screw Couplings, Carriage and Wagon Forge Fittings, etc.

Yet, another item included in this list is the manufacture of Printing Machinery on a phased schedule in collaboration with a U.K. firm.

THE BRITANNIA ENGINEERING CO., LTD.

Titagur, West Bengal.

Managing Agents: McLEOD & CO. LTD.

likely to be adopted in all oils and oilseeds markets of the country, as these exchanges would otherwise be vulnerable to Bombay bull manipulators. Groundnuts February delivery, after rising to Rs 218, reacted to Rs 214, while the May delivery, after being marked up to Rs 214, receded to Rs 208.50 before quoting around Rs 211. The sharp decline in prices of groundnut oil cake on rumours of a move for imports of soya beans no doubt substantially arrested the upward trend. Groundnut oil ex-mill was quoting at Rs 22.87 and April-May delivery at Rs 22.56. As ready prices are commanding a fair premium of about Rs 7 above the February contract, no tenders have so far been issued.

Castor seeds prices were also taken to new peak levels for the season at Rs 180 for May delivery on prospects of export business and in sympathy with groundnuts. Later on, it reacted to Rs 184 before steadying up at Rs 185. Cottonseeds were firm with February at Rs 157.50 and May at Rs 151.50. Linseed was steady at Rs 35.19, May.

The firm tone in the Madras seeds and oils markets continued. The forward position transactions still remain suspended. A significant decline resulted on account of the forward transactions closure. Nonetheless, the result even then did not warrant higher volume of transac-

BIRDS INVESTMENTS LIMITED.

NOTICE is hereby given that the Twenty-third Annual General Meeting of the Shareholders of the Company will be held at the Registered Office, 4, Lyons Range, Calcutta, at 12 noon on Thursday, the 3rd day of March, 1960, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th September, 1959, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the dividends recommended by the Directors.
3. To elect Directors in place of Mr. K. F. L. Harris and Mr. N. D. Bangur who retire at this Meeting.
4. To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member of the Company.

The Share Transfer Registers of the Company will be closed from 18th February, 1960 to 3rd March, 1960, both days inclusive.

By Order of the Directors,
LOVELOCK & LEWES,
Secretaries.

Calcutta,
5th February, 1960.

Note: Dividends, if declared, will be paid to Registered Shareholders or their mandatees only.

tion usually taking place before the price increases. Today's position, too, remained nominal in groundnut and groundnut oil prices. Other oils and seeds also, in sympathy, displayed higher levels. Arrivals of groundnut locally were around fifty tons and this was mostly absorbed by small rotary chekku interests.

Today's prices were:
Groundnut oil per candy of 500 lbs ex-Madras Godown expeller ready 3 per cent F.F.A. Ready Rs 395 (nominal).

No Forward Transactions.
Groundnut kernels per candy of 331 lbs coromandel Rs 206/207.

Castor oil per candy of 500 lbs Tirupattur Rs 340.
Coconut oil per tin Rs 41/55.

Gingelly oil per maund Rs 21/75.
Gingelly seeds per bag Rs 73/74.
Groundnut oil cake per bag Rs 28.

UK price for groundnut oil was quoted at £124/125, while Burma price was unquoted today.

Operators perforce have to remain cautious in view of higher Bombay prices. Even then, the upward trend in the oil and seed market was not controllable. This was because, in all centres, the price trend seemed to look up. Buyers were therefore scarce in the local market or in up-country markets. On account of Calcutta interest, some transactions were reported at very high prices. The usual big buying groups kept aloof. The higher ceiling fixation for groundnuts for all positions and groundnut oil by the Bombay authorities acted as a sort of check on holders to sit tight over their stocks. This in turn had its own reaction in deterring the regularity of flow into the markets from production sources. The result was the gain made by groundnuts per ton was about Rs 35 and oil per ton gained Rs 50 over last closing levels.

It was, however, fortunate that the local crushers, both big and small, were able to absorb the 50 tons of kernels arriving daily here at the parity price of Rs 202/203 per candy; but at the beginning of this week the price spurted to Rs 208 and even to Rs 210, at which offers were made and accepted. Good quality coromandel was quoted better at Rs 211/212 per candy. At this rate, the purchasers were only small crushers.

Nearby deliveries were demanded by only one operator, but a very limited number of others took small quantities now and then. At one stage last week, the offerings were around Rs 382, but only a few individuals were reported to have transacted dealings at this rate. Later on, toward the weekend, the rates were better at Rs 390/393 and even went up to Rs 395. A few candies were even booked at Rs 400. The market closed at Rs 395.

As reported earlier, the forward positions remained closed. The Oil Exchange did a wise thing to close such operations, avoiding a serious crisis. This also avoided too many defaults which would have been the result if the Exchange did not act betimes to close such forward transactions. With the restoration of confidence, operators, many of whom would have got themselves drowned on account of inability to fulfill contracts, today heaved a sigh relief.

The forward transactions may commence in the course of the next few days.

Groundnut oil cake was in poor supply. The price therefore remained tight at Rs 28 per bag.

As has been stated in the beginning, the high prices acted as a sort of deterrent at outside sources also. In upcountry markets, the arrivals were reported small due to the price factor and also to the Bombay fixation of higher ceilings for both seed and oil. The South Arcot market registered only 200 tons daily. The daily average arrival of 200 tons is really very poor this season, when normally it would be thrice and even four times such a figure, as was the case last year. On pucca basis, the seed price remained at Rs 202, while oil ruled at Rs 392/394 in these centres. Vanaspathi interests, due to compelling reasons, had to pay Rs 395/400 in these places.

There is appreciable increase in the price of gingelly seeds. Madhya Pradesh and Hyderabad reported new crop arrivals. But prices have not gone down. The bullish outlook here is only a reflection of the groundnut and oil rates. The ruling rates today were:

Gingelly Seed:
Chanda-Warora quality Rs 74/75
Mysore quality Rs 70/71
Rajasthan quality Rs 71/72
Local varieties Rs 73/74

Gingelly Oil:
On wholesale basis per maund Rs 21/73
On retail basis per maund Rs 28/25

Castor Oil: Naturally, this can't remain without improvement in its quotation. Sellers quoted Rs 340.

Coconut Oil: At Cochin: Ready Rs 660 per candy of 656 lbs. February Rs 652 per candy and March Rs 649 per candy. At Madras sellers' idea is around Rs 41/55.

The following are the foreign market rates of improvement seeds and oils:

Groundnuts April-May, £77/77½ per ton; Castorseed February-March, £62½/62½ per ton; Nigerseed (nominal), £63½ per ton; Groundnut oil February-March, £124/125 per ton; Groundnut Chinese oil spot, £124/124½ per ton; Castor oil BSS February, £127/10 per ton; Castor oil Commercial February, £121 per ton; Groundnut oil cake expeller, 54 per cent O & A February, £34½ per ton; Groundnut oil Solvent February, £33/5 to £33/10 per ton.

The following prices prevailed in the other markets of groundnut oil and seeds.

Kernels per 531 lbs.	G. Nut oil candy of 500 lbs.	Rs.	Rs.
Guntur/Bezawada	216	397/8	
Vridhachalam	204	395	
Nandyal	205	390	
Villupuram	204	394	
Cuddappah/Yerraguntla	200	390	
Pollachi superior nominal	205	392	
Tanjore	202	390	
Tiruvannamalai	202	390	
Salem	205	395	

Hides and Skins

There were good sales in cow hides with fair arrivals today. But prices were unaltered. Inferior fifts were in good demand. Even export prices did not change. Buffalo tanned hides had good demand internally.

The UK bought decent quantities of tanned cow calf. Arrivals were small. Prices remained firm. Raw skins prices were also higher this week.

Sales of market quality tanned goat skins numbered over 5,000 pieces and tanned sheepskins about 58,000. Bazar Stock left over was 4,000 tanned goat and about 30,000 sheepskins. Madras prices continued to be high for sheepskins and, naturally, the UK was reluctant to buy at the level quoted.

Raw skins prices were: Bangalore Raw goatskins Rs 720/750; White wool sheep Rs 600/685; Black Rs 490/550; Bezawada Raw Goatskins Rs 680/690; He sheep Rs 615 and She sheep Rs 515.

January shipments from Madras were higher:

United Kingdom imported: 2,692 bales tanned cow hides, 255 bales of calf skins, 33 bales buffalo hides, 479 bales calf skins, 747 bales goatskins and 734 bales sheepskins.

Continental ports imported: 27 bales cowhides, 80 bales of calfskins, 3 bales of buffalo skins, 66 bales of calf skins, 732 bales of goat skins and 438 bales of sheepskins.

United States of America: One bale of cowhide, 105 bales of buffalo hides, 2 bales of calf skins and 87 bales of goatskins.

Japan imported 3 bales of goatskins and 93 bales of sheepskins. Eastern Europe bought 184 bales of cowhides and 21 bales of goatskins. Aden imported 11 bales of cowhides.

★

Non-Ferrous Metals

Copper prices have been displaying a firmer tendency during the past two weeks on higher advices from the London Metal Exchange where the price is now quoted at £274 per ton as against £268 in the previous week.

There are, however, prospects of a decline in price, as the supply is expected to improve with the end of the Kennecott strike in the USA. But for the prolonged strikes in the American mines, supplies would have improved by this time. The evidence indicates that there are enough supplies in the pipeline. If the strike-bound American mines begin production in the near future, there will be supply adequate to meet requirements.

The Zinc market has also presented a firm front with the rate quoted around Rs 142 per cwt in the Bombay market. This rise is attributed to an inordinate delay in the distribution of 10,000 tons which the Government of India promised last month. Some manufacturers have approached the Government with the plea that they should be allowed to convert their import quotas for copper, tin and lead for bringing zinc which is in short supply. But the outlook for the metal is considered to be fair.

Budget Fears Are Less than Normal

Investment Gossip:

THE present mood of stock markets may be described as one of confident expectation. The reasons for the optimism almost on the eve of the Central Budget—a Budget which is to tackle the resource problem for the final year of the current five year plan, and which is to show how we are to bear the unexpected burden of the additional defence outlay—are not difficult to find. A majority of the market people believe that, the Chinese threat notwithstanding, the powers-that-be in the country are determined to see that the pace of economic progress is accelerated as planned. As Prime Minister Nehru has said, one way of becoming enduringly strong is to build up heavy and other industries as quickly as possible. If industrialisation is to progress apace, it is to be conceded that the private sector cannot be taxed further—at least directly, because, as things stand today and as they will be for a considerable time to come, there can be no industrial progress in our country without an efficiently working private enterprise.

This line of reasoning has led to the assumption that the Finance Minister has perforce to look elsewhere for casting his net. The coming Budget has to make provision for higher defence outlay and the additional expenditure that will have to be met by Government as a consequence of the acceptance of the recommendations of the Pay Commission, to mention only two main items. It is now said that the additional expenditure in regard to the last mentioned item will be about Rs 31 crores.

So, the stock market this year seems to have realised, quite sympathetically too, the magnitude of the problem that is facing Mr. Morarji Desai. On the assumption that the Finance Minister also appreciates the contention that the corporate sector will not be able to bear any additional direct taxation, market intelligence has arrived at the comforting conclusion that Mr. Desai can get his requirements from indirect taxation. It is no doubt true that the scope for indirect taxation in our country is still large (an article published elsewhere in this issue discusses this matter in some detail) but, in view of the low standard of living in our country, this kind of levy is better avoided by all political

parties who want to continue in power. In the present context of the Chinese threat, this consideration cannot however hold good.

A possible contributory reason for the absence of any undue anxiety regarding this year's Budget is the expectation that Mr. Eisenhower and Mr. Khrushchev, between them, will more than offset the setback to our constructive effort caused by Mr. Chou En-lai and his ill-advised Government by assuming an aggressive attitude toward our country. The US President has assured us that sizable help will be available for our planned development now and in the years to come. In New Delhi this week, the USSR Premier, Mr. Khrushchev, has declared that Indo-Soviet cooperation has come to stay and this will be particularly increasingly evident in the economic sphere. Bhilai is already there to show what this cooperation can achieve. With the relationship between the two countries becoming closer and closer—it is expected that the agreement in regard to the rouble loan for the Third Plan will be signed in New Delhi before the Soviet Prime Minister concludes his present five day visit to India—even the Chinese threat may cease to require the urgent attention that it demands now.

Popular belief is that Mr. Khrushchev's visit may also achieve the limited objective of resolving the current Sino-Indian tension. That the very fact that operators are of the view that there will not be any direct taxation is an indication of their confidence in Government's industrial policy. This shows that private enterprise feels that its interest is also that of Government's and hence, by putting the private sector to difficulties and strain, Government's objective will also be thwarted.

★★

Rs. 5 Lakh New Issue

New Issue Notes

India Safe Deposit Vault Company, Limited has proposed to issue 5,000 equity shares of Rs 100 each. Of this, 200 equity shares have been subscribed by the signatories of memorandum and 2,500 shares have been agreed to be subscribed by the directors, promoters and their friends and associates. The remaining 2,300 equity shares will be offered for public subscription and the amount is payable at Rs 25 per share on application; Rs 25 on allotment and the balance of Rs 50 in such calls, each call not exceeding one-fourth of nominal value, as may be determined by the directors. The Safe Deposit Vault will be erected at premises No. 2, Brabourne Road, Calcutta. The subscription list will open on the 15th February and close on the 18th February or earlier, but not before the 17th February, 1960.

The new capital issue of Associated Battery Makers (Eastern) Limited is reported to have been over-subscribed. The response to the Hindustan Aluminium Corporation's public offer

of Rs 4.30 crores is reported to be good.

A new company known as the Indian Organic Chemicals Limited is to be formed shortly to undertake the manufacture of acetic acid—a basic chemical. Chika Private Limited, the sponsors of the project, has received the necessary permission and the factory will be located at Khopoli, near Bombay. The authorised capital of the company will be Rs 1 crore and the issued capital will be only Rs 10 lakhs initially and this is proposed to be raised to Rs 40 lakhs later on. The Industrial Credit and Investment Corporation of India Limited, the Investment Corporation of India Limited and a leading West German firm, engaged in the manufacture of acetic acid, are expected to participate in the share capital of the company. The company's plant is expected to go into production after 18 or 20 months. It is reported that the ICIC will grant a foreign exchange loan amounting to about Rs 25 lakhs.

The Vellore Electric Corporation Limited has proposed to raise the authorised capital from Rs 6 lakhs to Rs 10 lakhs and issue 40,000 equity shares at one new equity share for one equity share held. Transfer Books will be closed from the 20th to the 24th February, 1960.

The Victoria Mills Limited, Bombay, has proposed to raise its capital from Rs 24 lakhs to Rs 40 lakhs, by the issue of 16,000 Ordinary shares of Rs 100 each. The directors are of the opinion that the capital of the company should be brought into line with the value of its fixed assets, which stood at Rs 38 lakhs at the end of 1958.

★★

Kalyani Spinning Set Up

Investment Notes:

The Kalyani Spinning Mills Limited, sponsored by the West Bengal Government, has been formally registered as a private limited company under the Indian Companies Act. The company will have an initial capital of Rs 1.40 crores provided by the State Government. More capital may be raised from semi-Government institutions.

It is proposed to place the Upper Ganges Valley Electricity Company in voluntary liquidation. The UP State Electricity Board took over the company on May 15, 1959 by paying Rs 15 lakhs.

Carew & Company has proposed to postpone the date of redemption of the Debenture Issue outstanding to February 28, 1970, and increase the rate of interest payable from 5½ to 6½ per cent, less income-tax.

The Amalgamated Coffee Estates Limited has reported a crop of 2,123 cwt of coffee and 4,115 lbs of cardamom for January 1960, making a total of 6,436 cwt of coffee and 42,891 lbs of cardamom as against 2,482 cwt of coffee and 43,998 lbs of cardamom respectively in the corresponding period of the previous year.

Share Transfer Books of Hindustan Lever Limited will be closed from

31st March to 6th April, 1960 in connection with the payment of dividend.

The date of redemption of Debentures of Rs 1 lakh has been postponed from 31st March, 1960 to 31st March, 1966.

Machine Tools Production in December 1959

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 15 leading member-firms during the month of December, 1959, was:—

Description	Quantity Nos	Value Rs
Lathe	188	21,06,730
Milling machines	32	11,50,150
Shaping machines	37	2,90,635
Drilling machines	67	2,11,284
Lathe chucks	521	1,10,340
Planing machines	4	60,400
Radial drills	1	25,000
Drill chucks	336	14,988
Hacksaw machines	8	11,039
Grinding machines	4	1,946
Bandsaw machines	2	2,050
Miscellaneous	7	4,685
Total	1,207	39,89,247

Empire Dyeing Dividend

Investment Briefs:

Empire Dyeing & Manufacturing Company, Limited has recommended a dividend of Rs 4, subject to tax, for 1959. This works out at a net dividend of Rs 2.80 against Rs 3.00 per share paid in the previous year.

The New City of Bombay Manufacturing Company, Limited has decided to skip the dividend for 1959, for the second year in succession.

Brady Engineering Company has proposed a dividend of Rs 4 per share, subject to tax, as against Rs 3.00 for the previous year.

★★

The West Coast Paper

Balance-Sheet Briefs:

It is learnt that the working of the West Coast Paper Mills Limited has resulted in a profit of Rs 4.70 lakhs for the year ended 30th June, 1959 without providing for depreciation and development rebate. The paper factory went into regular production in July last. The directors have decided to pay the arrears of dividend on the Preference shares for the period ended 30th June, 1957. The arrears are for a period of two years and will absorb about Rs 4 lakhs.

The accounts of Madhusudan Limited reveal a profit of Rs 3.06 lakhs for the year ended 30th June, 1959, after providing Rs 20,000 for Doubtful Debts and Rs 2.90 lakhs for Taxation. The directors have recommended a dividend of Rs 9 per share on "A" Ordinary shares and Rs 1.80 per share on "B" Ordinary shares.

COMPANY REPORTS

SKG Sugar Reports Increased Earnings

Balance-Sheet Reviews

SHREE KRISHNA GYANODAY SUGAR LIMITED has presented excellent working results for the year ended 31st July, 1959. Except for Guraru sugar factory under lease with the company, production in other units has registered an increase, the cane crushed in Hathwa and Lauriya units being the highest on record during the past 19 years. Following are the relevant figures:

Year	Hathwa (mds)	Lauriya (mds)	Guraru (mds)
1957-58	3,366,886	3,827,787	519,446
1958-59	3,818,425	4,263,098	470,434

Sales are lower at Rs 3.00 crores against Rs 3.34 crores. This is mainly due to the fact that the distribution and price of sugar in respect of all factories was controlled by the Government of India.

The net profit, however, before providing for Depreciation and Taxation, is substantially higher at Rs 22.98 lakhs as against Rs 14.74 lakhs in the previous year. In respect of allocations, the Depreciation amount is raised to Rs 4.54 lakhs from Rs 4.45 lakhs; Taxation provision to Rs 8.60 lakhs from Rs 5.78 lakhs and Development Rebate Reserve to Rs 5,672 from Rs 1,284. A sum of Rs 2.50 lakhs is set apart for General Reserve.

The directors have recommended a dividend of Rs 1.50 per share on the Ordinary shares, subject to deduction of tax. This works out to a net dividend of Rs 1.05 per share as against a net dividend of Rs 1.00 paid for the previous year.

The balance-sheet, as at 31st July 1959, shows a paid-up capital of Rs 61,67,560 against which reserves and surplus stand at Rs 24.36 lakhs. The gross block at Rs 1.37 crores is depreciated by Rs 80.62 lakhs to show a net block value of Rs 56.22 lakhs.

The progress of the company, during the past three years, is indicated in the following comparative table:

Year ended July	1959	1958	1957
Sales	29,981,520	33,437,856	28,540,342

According to the directors' report, a new mill is being installed at Hathwa factory in replacement of the existing 5th mill. The same will be in operation in the 1960-61 season. This should improve milling efficiency as also the daily crush. The directors are considering further schemes for gradual

modernisation and rehabilitation of the Lauriya and Hathwa factories.

In respect of distillery production, the directors have added that the price of molasses in Bihar has been reduced to the price prevailing in Uttar Pradesh. The company's representation for increasing the price of Power Alcohol, due to the increase in the price of coal and stores, is still under the consideration of the Government. The directors, however, expect that the working results, in the current year, will show improvement due to reduction in the cost of molasses.

With a view to giving incentive to increase in production of sugar, the Government of India have already announced concessions in cane price for early starting and rebate in excise duty on sugar production during the 1959-60 season in excess of the average of the past two years. The production in all the three factories of the company should, therefore, be higher in the current year and, consequently, the working results will be better than for the year under review.

Bank Profits

Pandyan Bank's performance, among the smaller of the Indian Scheduled Banks, stands out. The results for 1959 are remarkable in every way. The balance of profit has risen sharply from Rs 4.19 lakhs to Rs 7.15 lakhs. The transfer to the General Reserve is six times the 1958 appropriation, being placed at Rs 1.50 lakhs. Contingency, however, gets a smaller provision of Rs 50,000 against Rs 75,000. Tax receives nearly a lakh more at Rs 3.22 lakhs against Rs 2.22 lakhs. The rate of dividend has been raised to 14 2/7 from 10 per cent, and it is being paid on a capital enlarged by Rs 5 lakhs. The balance sheet shows that Deposits have risen from Rs 3.89 crores to 5.64 crores. On the other side of the ledger, the Investment portfolio is marked up by 30 lakhs at Rs 1.25 crores; and there has been a sharp expansion in Advances from Rs 1.94 crores to Rs 3.46 crores.

A "medium" bank that has also done very well for itself is the Indian Overseas Bank, whose balance of profit has risen by just a shade over Rs 5 lakhs to Rs 33.61 lakhs. The provision for tax is unchanged at Rs 12.50 lakhs. The Reserve Fund gets Rs 1 lakh more at Rs 7 lakhs. Bonus to staff absorbs Rs 5 lakhs against Rs 4.50 lakhs. The rate of dividend has been increased to 14 per cent subject to tax, against 10 per cent free of tax; and it is being paid on a capital increased by virtue of calls made during the year.

The Canara Banking Corporation has secured a 50 per cent increase in its balance of profit from Rs 4.02 lakhs to Rs 6.07 lakhs. The Statutory Reserve gets Rs 1.35 lakhs against Rs 0.82 lakhs. The Contingent Fund is credited with Rs 45,000 against Rs 11,000. The provision for tax is raised from Rs 1.75 lakhs to Rs 2.10 lakhs. The dividend on ordinary shares is 15 per cent subject to tax against 10 per cent free of tax.

The Punjab National Bank has reported a decline of over Rs 10 lakhs in its balance of profit from Rs 106.22 lakhs to Rs 96.14 lakhs. Provision for tax is nearly halved to Rs 17.50 lakhs from Rs 33.50 lakhs. Bonus to Staff and Staff Funds get Rs 4.63 lakhs less at Rs 36.99 lakhs. Reserves and Contingencies get the unchanged amount of Rs 17 lakhs. The rate of dividend is also unchanged, the amount absorbed being Rs 25 lakhs.

The Directors of The Hongkong and Shanghai Banking Corporation announce that the profit of the Bank, including dividends received from subsidiaries, for the year ended 31st December, after providing for Taxation, etc., amounts to HK \$28,134,959. It is proposed to write HK \$4,000,000 off Bank premises and to pay a final dividend of £1-17-6 per share leaving a balance to be carried forward of HK \$2,116,714. These figures are subject to audit. The group accounts will be published at a later date.

STOCK EXCHANGES

A Halt to Downward trend?

Watch-Dog Writes:

FOR the first time in the past five weeks, equity values have shown signs of moving up. With the expectations of larger foreign assistance, bull operators are disposed to adopt a more optimistic outlook.

Even the fear of additional taxation in the coming Budget seems to have been subordinated to the prospect of a mightier inflation that may follow a greater outlay on defence and large-scale public expenditure.

It is, however, too early to say whether the market has cried halt to the downward trend that started with the turn of the year and whether it is well set for an upward move. For, there is no disposition on the part of bulls to be aggressive.

The week's session on the Calcutta Stock Exchange witnessed a revival of interest and, under the lead of speculative scrip, several firm features developed in most of the counters.

Prices on the Bombay Stock Exchange finished with generally modest declines for the week.

On the Madras Stock Exchange, business was mostly confined to the Planting section.

Conditions on the London Stock Exchange were generally unsettled. Price movements on Wall Street were rather irregular.

Calcutta

Friday Evening.

THE steadier trend on the local Stock Exchange, noticed over the previous week-end, continued during the week under review with prices responding to selective support. This was mainly due to an optimistic feeling still entertained by a section of the operators that the Finance Minister might offer some relief in direct taxation. It was also believed that the tax on bonus shares might be altogether removed or very much reduced.

Investors, on their part, felt that the exit of the Communists should improve the prospects of larger foreign aid flowing in to India. The market's performance would have been still better, but for the pre-Budget caution, which induced operators to be cautious in their commitments beyond what they considered the safe level.

The Glitged market was devoid of support. With monetary conditions stringent, institutional investors showed little interest. The long and medium-dated issues were on offer at the quoted rates, while a little enquiry was noticed in the short-dated loans. Consequently, the

volume of business was reduced even below the recent attenuated levels. 3 per cent 1986 Conversion Loan changed hands at Rs 74.15 to Rs 74.25.

Bank shares were featureless with little of business passing. Punjab National were quoted at Rs 21.50 and United Commercial at Rs 69.50 to Rs 70.

There was little doing in the Jute section. Even the slight improvement in prices, recorded early in the week following higher advices from the gunny market, could not be retained till the close in view of the poor demand for jute goods from overseas buyers, serving as a reminder of the beginning of the slack season in the export market. Howrah were at one time taken up to Rs 24.37 from Rs 24.12 and New Central up to Rs 23.62 from Rs 23.37, to recede toward the close to Rs 24.00 and Rs 23.12 respectively. National, however, remained very firm at Rs 30.75, thanks to sustained speculative activity in the scrip. Among higher-priced scrip, Dalhousie met with some business at Rs 132.50 to Rs 133.50; Delta at Rs 137 to Rs 139; Kamarhatti at Rs 170 to Rs 172 and Kelvin at Rs 144 to Rs 146.

Coal shares were marked higher on selective support on the assumption that, due to rising production, the mines concerned would be able to close the accounts in respect of the past working year with a small increase in profits. New Beerboom were wanted up to Rs 22.81 from Rs 22.62; South Karanpura up to Rs 12.75 from Rs 12.56; Central India up to Rs 9 from Rs 8.81 and Western Bengal up to Rs 6.75 from Rs 6.62. Bengal were nearly maintained at Rs 298.50 with Burrakur fluctuating between Rs 18.25 and Rs 18.56 to finish the week at Rs 18.56.

Tea shares continued to rule quiet in view of uncertain marketing outlook for Common grades following the decline in values at the recent auctions and lower advices from Mincing Lane. The only redeeming feature of trading in this section was the sustained demand for Jayshree, which changed hands up to Rs 17.37 from Rs 16.94 following the announcement of right ordinary shares in the ratio of 1:5. Brooke Bond met with business at Rs 17.31 to Rs 17.62; Grob at Rs 13.87 to Rs 14.25 and Methoni at Rs 23.56 to Rs 23.62.

Sugar shares were selectively supported. Raza/Buland were done at Rs 12.87 to Rs 13.06; Carew at Rs 12.25 to Rs 12.37; Balrampore at Rs 4.00 to Rs 4.12 and Dyer Meakin Brewries at Rs 22 to Rs 23.50. SKG were enquired up to Rs 14.44 from Rs 14 following the publication of excellent results for last year and the slight increase in the net dividend from Rs 1.00 to Rs 1.05 per share.

Textile scrip remained generally steady with price movements confined to a narrow range. An outstanding feature in this section was a sharp spurt in Kesoram to Rs 23.25 from Rs 22.31, thanks to sustained support from influential quarters. Cawnpore changed hands at Rs 6 to Rs 6.25; Elgins at Rs 17.19 to Rs 17.69 and Jayshree at Rs 12.19 to Rs

12.50. New Victoria were better at Rs 1.35 against Rs 1.25.

The lead to the general recovery in prices was mainly led by the speculative issues under the lead of Indian Irons. After opening at Rs 22.20, Indian Irons receded at one time to Rs 22.10 due to selling pressure on lower Bombay advices. Some bear-covering coupled with replacement buying, however, caused a smart recovery to Rs 22.32, to close finally at Rs 22.20. TEXMACO touched at one time a high of Rs 25.75 from Rs 25.30; G. K. Williams Rs 46.25 from Rs 44.62; Braithwaite Rs 28.87 from Rs 28.62 and Jessop Rs 23.62 from Rs 23.50, to finish the week at Rs 25.40; Rs 46.25; Rs 28.62 and Rs 23.12 respectively on profit-taking. Kumardhubi were better at Rs 7 against Rs 6.75 with Indian Standard Wagon maintained at Rs 93 and Britannia at Rs 12.19.

The Miscellaneous section provided several firm features, although profit-taking erased some of the extreme gains at the close. Following were the price trends of a few selected scrip:—

	Week's High	Week's Low	Week's Closing
Rs.	Rs.	Rs.	Rs.
Orient Paper	38.75	37.90	38.50
Shree Gopal	22.82	22.44	22.44
Sipur	13.62	13.50	13.62
A. Chemical	24.50	23.69	24.25
Hindustan Motor	16.85	16.25	16.31
Rohas	27.44	27.12	27.25
Dunlop	36.62	36.19	36.62
I. Cable	29.69	29.37	29.37
I. Aluminium	24.87	24.69	24.69
I. Steamship	11.75	11.65	11.75
I. Copper	4.04	3.83	4.03
BIC	6.04	5.87	6.78
BDP	2.24	1.90	2.15

Bombay

THE Bombay Stock Exchange recorded two-sided movements. During the first part of the week, an all round improvement in values was recorded on active bull support coupled with short-covering following reports that the Life Insurance Corporation carried out purchases in Tata Steel Ordinary, Bombay Dyeing and ACC. Later on, however, the recovery was partially wiped off on profit-taking. Uncertainties regarding the Railway Budget as well as general Budget induced a cautious feeling as buyers preferred to keep on the side-lines. Uninspiring advices from Calcutta and the end of the account period acted as a damper at the close.

Bank shares were, so to say, listless, with small movements either way. New India Insurance kept quiet around Rs 58.50 while New Great Insurance was done at Rs 23.25 at the close. Electric shares quietly steady, with LIC continuing to make purchases of Ahmedabad Electricity in small parcels at Rs 91.

Shares of dyes and chemical companies met with selective buying. Amar Dye improved to Rs 265 to finish at Rs 260. Indian Dyestuff old spurted to Rs 480 before reacting to Rs 463.75. Polychem were a steady feature at Rs 176, but Dharamsi Chemical gained Rs 25 to Rs 155 on influential buying.

Cement shares were featureless. Orissa Cement, after rising to Rs 13.04, came down to Rs 12.88, and ACO to Rs 148.75 from the improved

level of Rs 150. In the engineering group, Voltas rose to Rs 204.50 on reports of increase in profit by about Rs 30 lakhs, and then receded to Rs 199.50. Larsen & Toubro were firmly maintained at Rs 28. Among Steels, Tata Ordinary rose to Rs 150.50 from Rs 147 to react to Rs 147.25 to finish around Rs 148.75. Tata Loco were relatively steady. Premier Automobiles moved up to Rs 147 to finish lower at Rs 142.

In Sugar shares, Walchandnagar was marked up to Rs 311.25 to recede to Rs 303.75, with the dividend announcement awaited. Phaltan were easier at Rs 163.75. Godavari Sugar Mills have announced a taxable dividend of Rs 20, i.e., Rs 14 net against Rs 12.50.

Bomway Burmah, after rising to Rs 539, dropped to Rs 529 on lack of firm support. BB Petrol was boosted to Rs 2.24 from Rs 1.88 on expectations of an interim dividend, but later on finished lower at Rs 2.12. Ceat Tyres turned firm at Rs 177 on expectation of an early start of production. National Rayon rose to Rs 379.50 to react to Rs 371.50. Raymond Woolen were easy at Rs 95.50. Tata Oil turned firm at Rs 67 on encouraging corporate news. Standard Batteries were well maintained at Rs 150. West Coast Paper ruled steady at Rs 157 as this company has cleared off the arrears of dividend on Preference shares for the two years ended 30th June 1957. Wimco rose to Rs 247 to come back to Rs 242.50.

In the textile section, Standard Mills were in the limelight with daily sharp swings. The shares, after rising to Rs 888 from Rs 792 declined to Rs 828, then rallied to Rs 875 to finish at Rs 840 on profit-taking. Bombay Dyeing moved up to Rs 67.90, but later on came down to Rs 66.60 as the bulls will be called upon to pay higher carryover charges in view of the closure of transfer books. Century dropped down to Rs 439 from the week's high of Rs 450. Kohinoor was sold down to Rs 309 from Rs 317. Svadeshi were quiet. Shreenivas Mills, after a smart rally to Rs 255, finished at Rs 251. Gwalior Rayon receded to Rs 26 from Rs 27.25.

The week's movements in prices of a few representative scrips are as follows:

	High	Low	Close
Rs.	Rs.	Rs.	Rs.
B. Dyeing	67.90	66.30	66.70

Madras

Madras, Thursday, February 11. PRE-BUDGET hesitancy was more than reflected by the very dull and

colourless tone in the Madras Stock Exchange today. No transactions worth recording were made and investors are very reluctant to take any risk till they come to know of the Budget details.

Government Securities: India Government 3 per cent 1986 Conversion Loan was at a lower level of Rs 73.95. Government of Madras 4½ per cent 1970 loan remained unchanged at Rs 101.90, and the same dated Mysore Loan was quoted at Rs 102.00, Kerala's same denomination, was, however, marked lower at Rs 100.97. The 4 per cent 1971 Madras Loan was quoted at Rs 102.20, that of Mysore at Rs 100.10 and Kerala at Rs 99.90. Andhra's was better at Rs 100.10.

Banks: Andhra Bank Rs 80 paid share had some enquiries at Rs 85.00. The Canara Banking Corporation

with 15 per cent t.c.d was available at Rs 75 and the Rs 50 paid share of Canara Bank also 15 per cent t.c.d was available for Rs 80. Indian Bank Rs 100 paid share was one rupee above last closing at Rs 182.00. Pandyan with 14-2/7 per cent taxable cum-dividend was available at Rs 36.00 and Punjab National was lower at Rs 21.00.

Electric: No change was reported in this section with prices remaining unaltered at the same previous closing. Cochin was quoted at Rs 10.35, Karaikkal was marked at Rs 9.95, Kumbakonam was unaltered at Rs 10.70, Negapatnam was also the same at Rs 10.00, Salem Erode was priced at Rs 12.50, and Vellore at Rs 13.00.

Sugars and Breweries: Not much business was done today. Cauvery was unaltered at Rs 124.00, Deccan at Rs 12.87, EID had inquiries lower at Rs 43.50 and India at Rs 12.00.

KCP was available at Rs 17.50, Mysore at Rs 56.75, Kirlampudi at Rs 69.00. Travancore alone proved better at Rs 10.45.

Plantings: This counter proved quiet today without any worthwhile transactions. Anandam was at Rs 15.50, Athimattam at Rs 1.25, Bababudin at Rs 9.55, Balanoor at Rs 17.65 and Bebeq at Rs 2.90. Blue Mountain was unchanged at Rs 3.38, Chandramalai xtd at Rs 2.83 had no enquiries. Chembra was available at Rs 4.30, Cochin Malabar at Rs 7.13. Both Coffee Lands and Cons. Coffee were unaltered at Rs 23.10 and Rs 22.20 respectively. Coonoor teas were the same at Rs 26.50. Cottanad xr was priced at Rs 14.67. Cowooddy xtd was rated at Rs 6.10. Highland was at Rs 16.05, and Kailas better than last closing at Rs 5.25. Kalpetta with 12½ per cent taxable cd was quoted at Rs 12.60. Kil Kotagiri was at Rs 5.20.

Mysore Amalgamated was quoted at Rs 6.00 and Mysore Coffee was the same at Rs 5.10. With 7½ per cent t.c.d Neelamalai was available at Rs 4.85. Nellithanam at Rs 12.05, Nilambur at Rs 17.75 and Nilgiri at Rs 7.35 and Osoor at Rs 3.72 were all unchanged. Oucherlony was stationary at Rs 5.70. Panchura with 40 per cent t.c.d was quoted at Rs 4.50. Periakaramalai was also unchanged at Rs 3.80. Puthutotam was available at Rs 2.77 while Rajagiri was at Rs 20.00. Rajendra improved to Rs 17.10. Savamalai was quoted at Rs 4.15. Stanes Amalgamated was priced at Rs 15.25 and Swinton at Rs 2.60. Tirumbadi was available at Rs 1.98. TR & T was fractionally higher at Rs 8.27. United Nilgiri at Rs 22.25 cd was neglected.

Textiles: In contrast to the previous weeks, textiles were dormant. While prices in most shares remained unaltered, a few shed some points. Anglo-French did not change at Rs 98.50, Bangalore Woollen and Buckingham also were the same at Rs 197.00 and Rs 199.50 respectively. Coimbatore Cotton at Rs 166.00, Coimbatore Kamala bigger and smaller at Rs 102.00 and Rs 50.00 respectively and Coimbatore Spinning at Rs 54.50 were unchanged. Coimbatore Pioneer at Rs 360.00 was not fancied. Dhanalakshmi shed Rs 3.00 to Rs 230 from the previous closing of Rs 233.00. Hemalatha xtd was available at Rs 7.74. Janardhana was available at Rs 64.00 and Kadri at Rs 120.00 was unchanged. With t.c.d of 12½ per cent Madura was quoted at Rs 31.75, Lakshmi was the same at Rs 148.00. Mettur Mills was marked at Rs 422.00. Radhakrishna at Rs 29.25 and Rajalakshmi at Rs 69.50 were unaltered. Tirupathi at Rs 9.30 was unimproved. Travancore Rayon was five nP better today at Rs 25.80. Vijayakumar was quoted at Rs 131.00.

Miscellaneous: Ashok Leyland was quoted higher at Rs 7.00 while Aluminium Industries was better by 10 nP at Rs 23.40. Brunton was at Rs 4.10, and Binny Engineering at Rs 166.00. Dalmia Cement was quoted at Rs 11.20. FACTS was priced at Rs 9.67. Hindustan Lever was higher today at Rs 36.25. India Cements with 5½ per cent interim taxable cum-dividend was available at Rs 12.20 was not higher than before. Kirloskar Electric 10 per cent t.c.d was available at Rs 12.85. Marikar has been remaining at the same level of Rs 47.50. Mysore Chemical Mfrs. was quoted at Rs 24.50. Mysore Tobacco was marked at Rs 13.45 and Orissa Cement improved to Rs 13.00. Parrys Confectionery was unaltered at Rs 4.35. Sen-Ralcigh was quoted at Rs 21.50. Spencers at Rs 20.15 was unchanged. Standard Motors was quoted at Rs 14.25. Textool at Rs 152.00 was two rupees better than the last closing. Travancore Cements was 30 nP lower today at Rs 9.40. Western India Plywoods also was better by Rs 3 at Rs 260.00.

SHREE KRISHNA GYANODAY SUGAR LIMITED

NOTICE

The 25th Annual General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Friday, the 4th March, 1960 at 11 A.M. to transact the following business:—

- To receive and adopt the Directors' Report and the Audited Accounts of the Company for the year ended 31st July, 1959.
- To declare dividends for the year ended 31st July, 1959.
- To elect a Director in place of Shri M. R. Sonthalia, who retires by rotation under Article 106 of the Articles of Association of the Company but, being eligible, offers himself for re-election.
- To appoint Auditors for the current year and to fix their remuneration. M/s. Singhi & Co., Chartered Accountants, the retiring Auditors, being eligible, offer themselves for re-appointment.

As special business:

- (To be proposed as an Ordinary Resolution):
"Resolved that subject to the approval of the Central Government being obtained under the provisions of the Companies Act, 1956, the Company hereby re-appoints Messrs. Sahu Jain Ltd., as the Managing Agents of the Company for a period of ten years with effect from 15th August, 1960 on the remuneration and upon the terms, provisions and conditions contained in the draft agreement (with such modifications, if any, as may be agreed to at this meeting) proposed to be entered into between the Company of the One Part and the said Sahu Jain Ltd. of the Other Part and the said draft

agreement is placed before this meeting and for the purposes of identification subscribed by the Chairman thereof with power to the Directors of the Company, subject to the provisions of the Companies Act, 1956 to vary or alter such of the terms, provisions and conditions of the said draft agreement before execution as may be required by the Central Government and agreed to by the Managing Agents and the Directors on behalf of the Company."

- (To be proposed as a Special Resolution):

"Resolved that Articles of Association of the Company be altered in the manner following:—

- Article 127 of the Articles of Association of the Company be deleted.
- Article 128 of the Articles of Association of the Company be deleted and be substituted by the following Article:—

"Subject to the consent of the Central Government and subject to the provisions of the Act, Messrs. Sahu Jain Ltd. shall be and remain Managing Agents of the Company for the period and upon the terms, provisions and conditions set out in the agreement entered into between the Company and the Managing Agents, provided that before the expiry of the terms agreed upon the Managing Agents shall be reappointed for a further period in accordance with the agreement subject however to any notification issued by the Central Government or any provision contained in the Companies Act."

The Share Transfer Books of the Company will remain closed from 23rd February, 1960 to 4th March, 1960, both days inclusive.

By Order of the Board,
S. K. JAIN
Secretary

Dalmianagar,
3rd February, 1960.

N.B. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Explanatory Note to:
Item No. 5: Messrs. Sahu Jain Ltd. were appointed the Managing Agents of the Company under an Agreement dated 6th April, 1951 for a period of 20 years. The Managing Agency Agreement between the Company and the Managing Agents were duly approved by the shareholders of the Company. Under the provisions of Section 330 of the Companies Act, 1956, the term of office of the Managing Agents will expire on 15th August, 1960 unless before that date the Managing Agents are reappointed for a fresh term in accordance with the provisions contained in the said Act. The terms relating to remuneration are in accordance with the notification issued by the Government of India. A copy of the draft agreement is kept at the Registered Office of the Company and is open to inspection of the shareholders on any working day during business hours, and the same will be placed before the shareholders at the aforesaid meeting. An abstract of the agreement as required by Section 302(3) of the Companies Act, 1956 is separately sent to the individual shareholders.

Shri A. K. Jain, Director and Chairman of the Company, is Director and shareholder of the Managing Agents Company.

Item No. 6: The provisions of the existing Articles are required to be altered in order to confirm to the reappointment of the Managing Agents and in accordance with the Companies Act.

BRITISH COMPANIES WORKING FOR INDIA

A familiar sight in the Durgapur of today is this instance of Indo-British collaboration — of Indian and British technicians discussing problems and working together to help build the giant 1 million ton steel plant in the newest steel city of India.

The entire construction work of the Durgapur project has been entrusted to ISCON, a consortium of leading British engineering and electrical firms, and from the very start they are working in partnership, hand in hand, with Indian technicians, Indian workers, skilled and unskilled.

MORE PIPES

to meet the nation's needs

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

WORLD OF FINANCE

Sustained Demand for Banking Accommodation

BANKING figures for the first week in February confirm our view that the 1959-60 busy season is going to prove to be one of the severest experienced so far. In the last two weeks alone, Advances have expanded by Rs 26 crores. At this rate, it is certain that the total expansion that will have been witnessed by the last Friday in April will exceed Rs 200 crores. And this means that the record expansion of the last busy season will have been bettered. However, in one important circumstance, the current busy season will differ from the last one, and will instead have as a parallel the 1956-57 busy season. We believe that, for reasons that need not be gone into here, the banking system will be compelled to have recourse to central banking credit on a scale approaching the very high level of borrowings resorted to in 1956-57. This is because banks are still somewhat reluctant to sell gilt-edged, and, in view of the current high ratio of investments in Government Securities to Deposits, resources to finance the busy season needs will have to be found elsewhere than from disinvestments. So, to the extent that Deposits do not rise by an appreciable or sufficient amount, there will be no alternative to increased accommodation taken from the Reserve Bank.

However, this will not affect banks' earnings in the current year. On the other hand, banks will presumably have their best year since 1957. For, as we have remarked on previous occasions, there are reasons to believe that demand for funds may be more sustained during 1960. But it should not be forgotten that, meantime, though not necessarily as a result of the increase in money supply, the trend in prices is pronouncedly upward. Consequently, the Reserve Bank can be counted upon to issue perhaps a regular series of directives, calling upon the banking system to show restraint in granting accommodation. Thus, Advances, which may merrily cross the Rs 1100 crore mark well before the end of the present busy season, will thereafter be expected, in the course of the 1960 slack season, to show a gradual and orderly decline to around Rs 1000 crores. Also, meantime, we expect that Deposits will continue to accrue with the banking system on a considerable scale. It should not be surprising if, by the end of June this year, Deposits should pierce the Rs 2000 crore level. At that stage, banks may conceivably be again embarrassed by a plethora of resources which they will not be permitted to utilise in the higher-earning assets—Advances.

This underlines the need for a downward revision of the maxima of interest payable on Deposits as soon as the 1960 slack season starts. Otherwise, it is possible that the very satisfactory results during the first four months of 1960 will be offset by reduced earnings in the rest of the year.

But prudent banking will always show a profit. The results of Dena Bank, which are

analysed on page 327, bear testimony to this fact.

Again, Busy Season Currency Expansion

THE strident march of the 1959-60 busy season continues to be fully and deeply reflected in the latest banking statements. In the Reserve Bank returns for February 12, there has been a further sharp increase of Rs 15.14 crores to Rs 1811.93 crores in Active Note circulation, although the beginning of the month disbursements would have been completed during the first week of February; and so this expansion in currency circulation is almost certainly due to busy season influences. So also, the outflow of Rupee Coin for Rs 0.91 crores, coming on top of the Rs 2.79 crores that moved into circulation in the previous week, must be ascribed to the increasing tempo of the seasonal demand for funds. Currency has been expanded for Rs 10 crores against Rupee Securities by transfer from Investments in the Banking Department; and, in the result, the Reserve Bank's cash in the till stands reduced by Rs 6.07 crores at Rs 12.44 crores.

In the Banking Department, there is a particular transaction whose exact significance we are unable to fathom. This relates to the drop of Rs 10.85 crores to Rs 108.51 crores in Other Deposits. It is, we may recall, under this head that rupees have been lodged in respect of the purchase of foreign currencies from the International Monetary Fund two years ago. Does this decline mean that the Indian Government have commenced repurchase of currency? We can no more than pose the question, except perhaps to suggest that it is unlikely that such a momentous step would have been taken without due publicity.

There is a considerable improvement of Rs 17.71 crores to Rs 66.96 crores in the balances of the Central Government. The decline in the Deposits of State Governments would suggest some element of repayment to the Centre; and since the State Bank has figured as a steep seller of gilt-edged in the relevant week, recourse to deficit financing is not to be ruled out. However, in this connection, it needs to be remarked that the Reserve Bank's portfolio of Treasury Bills purchased and discounted shows an unusual rise of Rs 24.33 crores to Rs 37.18 crores; and so the sales of gilt-edged by the State Bank might relate to discount by the State Bank of Treasury Bills with the Reserve Bank. Again, it is possible that State Governments, who are also known to possess parcels of ad hoc Treasury Bills, might have sought to replenish their balances in such wise. But, to account for the magnitude of the rise in the Central Government's Deposits, it would appear that deficit financing must have occurred; and we must wait for the next week to know the extent of created money.

The Scheduled Banks, as far as can be seen in the Reserve Bank returns, have not felt the impress of the busy season; this is because Reserve Balances of member banks have risen by Rs 14.90 crores to Rs 81.20 crores; but, then, this is owing to State Bank sales of gilt-edged. And the true reflection of the busy season, as far as concerns the Scheduled Banks, is to be inferred from the further rise of Rs 9.21 crores to Rs 130.25 crores in the Other Loans and Advances of the Reserve Bank, of which only something less than Rs 5 crores is traceable to the State Bank.

Investments, by dint of the transfer to the Issue Department, are lower by Rs 10 crores.

Balances of State Governments show a drop of Rs 4.89 crores to Rs 20.85 crores, on top of an increase of Rs 1.75 crores to Rs 23.50 crores in their ways and means borrowings from the Reserve Bank. And Balances Held Abroad are fractionally better at Rs 44.34 crores.

According to the return of the State Bank for February 12, the considerable busy season pressure has caused another expansion of Rs 7.91 crores to Rs 189.39 crores in Advances. Deposits are lower by Rs 0.40 crores at Rs 588.23 crores. There has been disinvestment in gilt-edged, presumably in order to meet the busy season demand for funds, in an amount of around Rs 24 crores. Nevertheless, borrowings have been marked by Rs 4.76 crores at Rs 11.06 crores. In the event, the State Bank's cash balances, which had tended to be rather low, have improved by Rs 14.60 crores to Rs 39.07 crores.

Busy season pressure and beginning of the month disbursements have combined to produce a sharp impact in the return of Scheduled Banks for February 5. The total of Advances has gone up steeply by another Rs 13.24 crores to Rs 1032.16 crores. Deposits have been drawn down by Rs 10.35 crores to Rs 1887.72 crores. There is a small decline of just under Rs 1 crore in investments. But borrowings both from the Reserve Bank and from the State Bank have risen, from the former by Rs 12.42 crores to Rs 39.44 crores and from the latter by Rs 1.22 crores to Rs 14.76 crores. In the result, cash balances are lower by nearly Rs 9 crores at Rs 150.58 crores against Rs 159.51 crores.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 16th February 1960. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.330 and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.665 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 22nd February 1960. Successful tenderers should make payment on Friday, the 26th February 1960. Other conditions are as usual.

During the week ended the 12th February 1960 Government of India Treasury Bills for Rs 72,70,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 17th to 20th February 1960 at Rs 99.351%. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from the 10th to 13th February 1960 amounted to Rs 5,00,000.

Changes in the City

By
Paul Einzig

THE amalgamation of two merchant banking firms, Lazard Brothers & Co and Edward de Stein & Co, coming as it does close on the amalgamation arranged last year between Philip Hill, Higginson & Co and Erlangers, indicates an interesting trend in London banking. It seems that British merchant bankers

want to form larger and stronger units, in order to avoid being swamped by the superior strength of clearing banks. Ever since the amalgamation of clearing banks after the first World War, the balance of power has changed considerably in favour of these banks. Moreover, during the 'thirties, the majority of merchant banks came under some degree of cloud as a result of their large frozen commitments in Germany and Central Europe. It is not generally known that, after the last War, all but an insignificant fraction of the German standstill credits was duly repaid, so that merchant banks—most of which had written off these credits as bad debts—have emerged with increased strength.

Having learnt their lessons about the risks attached to one-sided interests in international banking activities, the merchant banks have taken an increased interest in domestic banking activities during the last fifteen years. In doing so, they have filled a most important gap in London's financial organisation. Until the 'thirties, it was said to have been much easier for foreign borrowers to raise capital in London than for British firms, because clearing banks were only concerned with short-term credits while merchant banks were only interested in foreign issues. Today, merchant banks are very active in financing new domestic issues. They played an important part in financing recent take-over bids. Indeed, such offers are usually made by some banking firm on behalf of the industrial interests concerned.

Nevertheless, the financial resources of banking firms have not increased to an extent comparable to the expansion of clearing bank deposits. The bulk of London's financial resources is controlled more than ever by the "Big Five". Moreover, the clearing banks have become more enterprising than they had been before the war; they have established control over a large proportion of "industrial banks" engaged in financing hire-purchase.

Merchant bankers suffered an important reverse as a result of the recommendation of the Radcliffe Report that curtailed their influence in the Bank of England and of the implementation of that recommendation by the Government. This measure is looked upon as the personal triumph of Sir Oliver Franks who as Chairman of Lloyds Bank, was the spokesman of clearing bank interests on the Radcliffe Committee. The measure caused considerable resentment among merchant bankers who now have ceased to have any say in Bank Rate changes. Even before, ever since the crisis of the 'thirties, the influence of part-time directors of the Bank of England was confined to being consulted by the Governor before a Bank rate decision was reached. The decision rested for all practical purposes with the Chancellor of the Exchequer of the day during the last twenty years or so. The bankers representing merchant banks on the Court of the Bank

were not even informed in advance, except those who were members of the Bank's Treasury Committee. Now, they will not even be consulted.

Considering that the judicial inquiry held in 1957 over allegations of a Bank rate leak found that there was no Bank rate leak, it is regarded as less than fair that the merchant bankers, having been found "not guilty", should be treated as if they had been found "guilty". It is true, the maintenance of the outward form of their influence over Bank rate changes long after they have ceased to have the real power, was something of an anachronism. Even so, to make the change so soon after they had been cleared of the charge of having made improper use of their position on the Bank was clearly ill-timed.

Having regard to the above circumstances, merchant bankers feel very strongly that the Government should make amends by appointing a merchant banker to succeed Mr Cobbold as Governor of the Bank of England when he chooses to retire. There has been a suggestion that it is the Government's intention to appoint a clearing banker as the next Governor but the chances are that a compromise will be reached by appointing a former senior official of the Bank.

It seems probable that the movement aiming at strengthening the merchant banks through amalgamations will make appreciable progress during the next few years. If, as a result, a relatively small number of very strong firms should emerge, it would go some way toward readjusting the balance of power in their favour. For size and resources, none of them could, of course, hope to compete even with the smallest of clearing banks. But their increased strength after amalgamations is bound to inspire additional confidence and will attract additional business both at home and abroad. They will be in a position to continue to play an important part in domestic financing and at the same time to revive their pre-war role in international financing.

With the return of convertibility and with the improvement of international political relations, international lending is likely to revive, especially as the low yields on domestic investment will make it tempting for many investors to venture further afield. Provided that the Governments of underdeveloped countries, instead of relying on financial assistance by Government-sponsored international agencies, decide to reverse their present attitude tending to discourage private investment, it is certain that such investment would assume incomparably larger proportions than any officially-sponsored aid could possibly achieve. The London merchant banks, reinforced by amalgamations, would then play a very important part in the movement of capital toward underdeveloped countries.

The Railway Budget

THE Railway Budget for the last year of the Second Plan does not show any striking departure from the pattern set by the earlier ones. Gross receipts from traffic are expected to maintain their steady increase (1955-56: Actuals Rs 316 crores; Revised Estimates for 1959-60: Rs 422 crores; Budget Estimates for 1960-61: Rs 464.5 crores). Working expenses have also shown a similar trend (1955-56: Actuals Rs 213 crores; Revised Estimates for 1959-60: Rs 292 crores; Budget Estimates for 1960-61: Rs 327 crores). The rather steep rise in the working expenses in the estimates for 1960-61 is due to increased commitments consequent on the acceptance of the Pay Commission's recommendations. Such commitments would normally have involved an annual expenditure of Rs 13 crores; but, for the coming year, the Railway Minister has had to provide for the back pay increase from July 1959, an estimated expenditure of Rs 7 crores which should have normally gone to the debt of this year. The slight increase in the operational ratio (from 79.8 per cent to 80.1 per cent) is illusory, in view of the adjustments required to be made for the current and the next year.

Coming to the details, it will be seen that the performance in 1959-60 has revealed a better record than anticipated in passenger earnings and a worse one in goods earnings. As against Rs 118 crores originally estimated, passenger traffic is now expected to yield Rs 124 crores. Goods earnings, on the other hand, are not expected to reach the budgeted figure of Rs 275.5 crores, and the shortfall is estimated to be of the order of Rs 8 crores. With some increase in sundry other items, the Railway Minister hopes to achieve the gross total earnings originally anticipated. Despite this, the net surplus is to be only Rs 14.75 crores as against the budgeted surplus of Rs 21.19 crores. This has been due to unanticipated expenditure on repairs to tracks and bridges necessitated by abnormal floods and to the general increase in the cost of coal and other supplies.

The Budget estimates for 1960-61 take receipts at Rs 464.50 crores. This includes an estimated increase in freight earnings by the levy of a surcharge of 5 NP per rupee on goods and coal traffic freight, excluding export ores, military and postal and the railways' own traffic. This surcharge is anticipated to yield a sum of Rs 14 crores. The estimated receipts from goods, including this increase, is put at Rs 305 crores as against the current year's revised estimate of Rs 264 crores. Obviously, Mr Jagjivan Ram expects that the steadily increasing tempo of industrial and agricultural production is sure to give a fillip to freight earnings, despite competition from road transport. Professed anxiety about this latter development has assumed a concrete shape in the willingness, for the first time, to accept the responsibility as common carriers (for which the Budget has provided Rs 1 crore). The railways' evasion of this partially accounted for the attractions of road transport. Mr Jagjivan Ram claims that the Railways have been able to meet the increased demands of industry in the matter of quicker transport

and turnover of wagons. Though, undoubtedly, there has been vast improvement in this matter, on the related question of new line constructions for subserving the needs of raw materials—for steel, for example—there has been delay and consequent dislocation.

There is bound to be some argument about the propriety of increase in the freight rates proposed by Mr Jagjivan Ram. The Minister's own justification is that the Railway Freight Structure Inquiry Committee had recommended an overall increase of 13 per cent, whereas, inclusive of the proposed surcharge, he would still be short of the recommended rate by about 4 per cent. As against this, it may be argued that, since the fall in freight earnings are stated by the Minister himself to be a temporary phase and since he anticipates that the general economic improvement will give a boost to freight earnings, there was no justification for this additional levy with its inevitable repercussions on the price structure. If the operational efficiency will improve, industry may be willing more readily to bear this additional burden.

The progress of the railways under the Second Plan has been reviewed by the Railway Ministry in a brochure sent along with the Budget papers. This is an informative and useful publication, in which an attempt has been made to correlate the Railways' own fortunes with the general economic trends in the country. The index of gross traffic receipts (with 1950-51 as the base) was 148.4 for 1958-59 while the index of national income for that year, with the same base, is 130.7. The index of gross traffic receipts, as per the revised estimates for 1959-60, is put at 160.5. Movements in relation to production of certain commodities shows that the Railways' performance has shown steady improvement.

In terms of outlay, total expenditure under the plan up to March 31, 1960 would be of the order of Rs 872 crores, against the plan target of Rs 1121.50 crores. The Railway Minister hopes that the last year of the plan will see a quickening of tempo and that the entire sum will be spent. In terms of physical targets, the first four years of the plan have seen the doubling of 700 miles of track and

the opening of about another 600 miles of new lines; meantime, another 600 miles are in various stages of execution. Surveys for 900 miles are in progress, and the electrification programme has also gone on apace. According to Mr Jagjivan Ram, traffic expectations are also likely to be fulfilled; he anticipates an increase of 17 million tons in the coming year, thus bearing out the plan's estimate of 162 million tons. Passenger traffic is expected to exceed the plan's expectation of a fifteen per cent increase.

The performance in 1959-60 on works of a capital nature has not been according to expectations. It was expected that Rs 196.10 crores would be spent during the current year, whereas there is likely to be a shortfall of Rs 39 crores. This has been explained as being due to comparatively poor progress in rolling stock and electrification, and this in turn being owing to non-availability of steel, and delay in delivery of electrical locomotives as also in the procurement of over-head equipment. Budget estimates for the coming year under this head have been put at Rs 221 crores. If the projects so covered go according to schedule, the railways would have fulfilled in large measure the plan's hopes.

The Railway Minister has looked ahead at the prospects for the Third Plan, but there was little to purpose that he could state. The railways will continue to have at all times a crucial responsibility in development. But, in a plan deliberately oriented toward industrialisation (supported as an inescapable corollary by increased agricultural productivity), its centrality cannot be exaggerated. But detailed discussion will have to await the finalisation of expectations under other heads.

The Railway Minister is soberly hopeful about the railways' self-sufficiency, and even about the ability to export. It was cheering to be told that, in 1958-59, only 10 per cent of the total purchases (excluding raw materials and basic steel) had to be imported. As regards locomotives, not only are the bad days of the immediate post-war years over, but, thanks to Chittaranjan, we may even enter the export market for steam locomotives. Our manufacture is of a high standard,

RAILWAY BUDGET AT A GLANCE

*Including about Rs 20 crores on account of the effect of Pay Commission's recommendations from July 1, 1959 to March 31, 1961.

and the price competitive. There can be no more convincing evidence of our having arrived as an industrial nation than export of locomotives. In coaches and wagons, too, we have achieved self-sufficiency in capacity, and can look forward, steel being available, to building an export market.

Railways in 3rd Year of Second Plan

THE strategic role of railways in the economic development of the country has been recognised by according to it high priority in allocation of Plan resources. The Second Plan allotment was Rs 1,125 crores and represented nearly one-fourth of the total public sector outlay, while, in comparison with the First Plan outlay, it was three times larger. The rationale for outlay of this size lay in the need to meet the anticipated growth in traffic arising in the context of rapid industrialisation envisaged in the Plan. Considering that this traffic comprises movement of both raw materials and finished goods, the additional traffic arising from development of industries as envisaged in the Second Plan should be substantial. What tremendous work railways face in ensuring 'requisite' capacity should be evident from the fact that the setting up of the three steel plants in the public sector itself entailed laying up of new lines in terrain that was extremely difficult to tackle. Further, the volume of traffic arising from increase in agricultural production was also of an order calling for substantial expansion of railway capacity. In the circumstances, railway development was a matter that could brook no stinting of resources.

How the railways have been facing up to their task in the third year of the Second Plan is revealed in the report of the Ministry of Railways that has been released this week. For purposes of comparative study, the report could be divided into four sections dealing respectively with traffic carried, financial position, development work, and welfare activities.

In respect of traffic carried, the report points to sustained improvement in almost all aspects relating to goods traffic. The railways carried 136 million tons of goods during 1958-59 as compared to 134 million tons during the previous year, marking an increase of 1.8 per cent. Goods train miles totalled 92.04 million representing an increase of 1.13 per cent over the preceding year. Speed of goods trains is revealed to have shown an improvement over the broad gauge from 9.32 in 1957-58 to 9.42 in 1958-59. The index of net ton miles per goods locomotives day in use on a line recorded increases of 0.74 and 0.15 per cent respectively on the broad gauge.

Number of wagons loaded on revenue account showed an increase, the average per day on the broad gauge being 12,850 in 1958-59 against 12,682 in the previous year. In the metre gauge, there was a decline from 8,331 in 1957-58 to 8,050 in 1958-59.

In respect of passenger traffic, the report discloses a rise in the number of originating passengers and passenger train miles. The number of passengers increased from 1,430 million during 1957-58 to 1,441 million during the following year, while the passenger train miles increased, by 1.43 per cent to 123.18 million. However, consequent on the drop in the average distance travelled by each passenger, passenger miles registered a decline. While the average distance travelled came down from 29.6 miles in 1957-58 to 28.7 miles in 1958-59, passenger miles recorded a decrease of 1.82 per cent as compared with 1957-58.

The overall improvement in train mileage is reflected in the increase in ton miles to 46,752 from 45,644 in the previous year. However, in respect of the basic test of operating efficiency, the report reveals a drop which is reflected in the lower index of net ton miles per wagon day at

The railways' performance during the Second Plan has been heartening, and has won the acclaim of knowledgeable men from everywhere. With greater streamlining and coordination, there can be little doubt that the Third Plan will offer more ambitious opportunities for the Indian Railways.

573 and 216 respectively on broad and metre gauge against 598 and 225 for the previous year. This was inevitable in view of the failure of the anticipated volume of traffic, for which assets had been built up, to materialise.

The financial balance sheet discloses the impact on expenditure arising from the cost of additional staff, net effect of annual increments, interim relief to staff drawing a monthly salary up to Rs 300 in the shape of increase in the rate of dearness allowance for the entire year as compared to nine months of 1957-58, increased expenditure on repairs and maintenance, increase in the statutory price of coal, increase in the cost of materials and stores, sales-tax on coal, higher contribution to the staff benefit fund, and other staff welfare activities. Ordinary working expenses, including suspense, for the year have, as a result, gone up to Rs 276.33 crores from Rs 264.18 crores in 1957-58, which works out to an increase of Rs 12.15 crores. Against this, gross traffic receipts stood at Rs 390.21 crores made up of Rs 116.74 crores under passenger traffic and Rs 240.82 crores under goods traffic, the balance being contributed by such items as parcels, luggage, etc. Earnings from passenger traffic registered a drop of about Rs 2.36 crores, which, however, was more than offset by an increase of Rs 11.14 crores from passenger traffic. The net revenue after meeting all charges was Rs 59.32 crores which, after deducting an amount of Rs 50.39 crores as dividend payable to the general revenues, disclose a surplus of Rs 8.93 crores. Against this, the surplus in 1957-58 amounted to Rs 13.38 crores. The decline in 1958-59 is traceable to the increase in the dividend paid to general revenues—a rise of Rs 5.99 crores—and increased expenses incurred to the tune of Rs 3 crores for meeting the extra dearness allowance and the increase in the price of coal. The Ministry has, however, held out hopes that special measures will be instituted for exercising closer check and control over expenditure with a view to bringing it down.

As regards development work, the report reveals evidence of activity at high tempo. New lines aggregating 191 miles, including 17 miles on the Dehri-Rohas Light Railway, were opened to traffic. Other aspects of development work in which progress is recorded relate to electrification of lines, remodelling of a number of yards, doubling of line, renewal of rails and sleepers, etc. A total of 1,264 miles of rails and 1,261 miles of sleepers are claimed to have been renewed in 1958-59. Electrification of the Howrah-Burdwan main line was completed while lines totalling 144 miles are reported to be under construction. Construction of bridges, including strengthening,

constituted an important line of development activity.

The upturn in the production of rolling-stock constituted another highlight in the progress of railway development work in 1958-59. The Chittaranjan Locomotive Works is reported to have turned out 164 WG locomotives and also the first WT locomotive during 1958-59, while TELCO increased its production from 85 in 1957-58 to 103 in 1958-59. A marked improvement in the production of shells should follow the initiation of second shift work at the integral coach factory. The attention paid by the Ministry to increase the domestic production of a variety of railway equipment such as thermic syphons, steam pressures and vacuum gauges, screw and hydraulic jacks, lenses for single signals, and axle boxes for integral type coaches is also to be commended. The fact that, out of 16,701 wagons on line in 1958-59, 12,963 were of indigenous manufacture reveals praiseworthy work done by the Ministry in one of the key points of railway development.

The report also deals at considerable length with the steps the railways have taken to improve servicing for passengers. Passenger amenities have been increased and these, which included provision of separate accommodation for third class passengers by distance zones, provision of camping coaches, introduction of more sleeping coaches, etc., are shown to have involved the Ministry in an expenditure totalling Rs 2.72 crores. The Ministry has also been appreciative of the needs of the poorer sections of passengers for whom special amenities, such as cheap hygienic food packets, milk bars, etc., are being provided.

The railways as the biggest public enterprise have also set themselves up as a model employer. That the Indian railways are ahead of others in this matter is to be gathered from the welfare activities mentioned in the report. Such activities embrace a wide field including education, health, recreation, etc.

In the work so far done, there is room for satisfaction. The railways have, in the first three years of the Second Plan, incurred an expenditure of Rs 676 crores which leaves a balance of Rs 449 crores to be met in the next two years. That the railways should be able to cover this balance of expenditure should be a matter for safe presumption. However, even after incurring an outlay of Rs 1,125 crores, the railways would have gone only a small way toward ensuring a self-sufficient system of rail transport. With development work having tended to slacken consequent on foreign exchange shortage, there is already a backlog of unsatisfied demand for traffic capacity, which will further mount up in the next two years. In assessing the scope and prospect of development, the impact of future growth in demand has also to be reckoned with. This demand will be of a staggering order, considering that agricultural production alone is expected to go up to 150 million tons by 1980. With Governmental policy tending toward increased industrialisation, the demand arising from this source will be even greater. It is quite clear, therefore, that railway development should continue to have high priority for a long period to come.

Bank Rate Rise not a Defensive Step

By W. T. C. KING

THE rise in Britain's Bank Rate long anticipated in banking circles in London duly took place on January 21, but the primary reason for this move was not, it seems, the one that had given rise to the City's expectations.

Fears of a stiffening of London rates had arisen as far back as last summer when the rate for United States Government Treasury Bills in New York had first risen to, and then gone well beyond, the rate for United Kingdom Government Treasury Bills in London. At

that time it was widely assumed that such a disparity could not persist for long without putting an excessive strain on sterling, and thus would drive the London authorities to take defensive steps. It soon became clear, however, that if that were the only argument for raising interest rates in London, the British authorities would be reluctant to make any such move.

Authorities' Nerve Was Stronger

So long as there was no reason to suspect that any pressure experienced by sterling was

attributable to any more deep-seated cause than an outflow of short-term international funds in response to higher interest rates or monetary stringency in overseas markets, it appeared right to let the outflow continue without taking counter action.

This same view, indeed, evidently continued even after the outflow reached the point at which it showed itself in some net loss of gold from the Sterling Area's central reserves, as it did in November and December. In each of these months the reserves showed a net "true" decline—excluding special transactions—of just under £20,000,000, and there seems little doubt that the efflux was continuing at approximately the same rate through the three weeks that immediately preceded the rise in Bank Rate.

In this phase, however, the nerve of the market seems to have been less strong than that of the authorities, since apprehensions of a rise in Bank Rate had exerted a markedly restraining influence upon the Gilt-Edged market and had been reflected in a sharp rise in the Treasury Bill rate, from around 3½ per cent at end-November to appreciably over 3½ per cent by mid-January.

No Inflationary Crisis

When, however, the rise in Bank Rate occurred—it went from 4 to 5 per cent—it was authoritatively intimated that the move had been directed primarily to the condition of the domestic economy, notably on the ground that some signs of overstrain had become visible during the preceding few weeks. This does not mean that Britain's economy is now regarded as in imminent danger of running into a new inflationary crisis, or that it is felt to be already experiencing pressures comparable with those that assailed it when Bank Rate was last increased as a means of combating excessive strains at home. (The last such occasion, it may be recalled, was that of 1955 and 1956; Bank Rate was raised, in two steps, from 3 to 4½ per cent early in 1955, and then to 5½ per cent early in 1956. The penal rise from 5 to 7 per cent in September 1957 was directed rather to the crisis in the exchange market and the associated loss of confidence in the stability of Sterling's purchasing power at home.)

Employment—A marked Improvement

Five years ago there was no doubt that virtually the whole economy was beset by an overloading of demand. In mid-1954 the rate of unemployment had dropped to a mere 1.0 per cent, and even by the winter's peak in January it was no more than 1.4 per cent—from which it declined to still lower points, and touched the unprecedented figure of 0.9 per cent in the following summer. In this past year, by contrast, the level of unemployment has been moving from the trough reached during the shallow business recession of 1958. Hence, the rate at this winter's peak, 2.1 per cent recorded on January 12 last, though showing a marked improvement on the 2.8 per cent recorded at the worst point in the winter of 1958-59, indicates a much more substantial margin than was available five years ago. Moreover, over this period the ultimate reserves of labour supply have been extended in another way, by the departure from the labour force of considerable numbers of women workers and older people who had been attracted into employment or induced to remain longer in it by high rewards offered at the peak of the boom. On both these counts it would seem that the British labour market must be under perceptibly less strain now than it was facing in 1954-55. There is, however, one other notable difference between

the two situations which is much less reassuring. The aggregate of unemployment is now much less evenly spread through the economy than it formerly was.

In some regions, in the North of England and in Scotland, the proportion of the insured labour force that is unemployed ranges, even now, up to and even beyond 4 per cent, whereas in the English Midlands it is down to (or in some localities even below) 1.0 per cent; in London and the South-eastern area in general it is 1.2 per cent. These differences are indicative of the patchiness of the process of industrial re-expansion that has taken place in this past year or so.

Striking Response

As is well known, the most striking response to the reflationary stimuli has been in the motor car industries and their ancillaries and the industries producing consumers durable goods. Most of these have, for some time now, been working at or near the limits of capacity, whereas others, notably the basic heavy industries producing capital goods, have been expanded only slowly and still, therefore, have substantial reserves of unused capacity.

In such circumstances, the problem of deciding whether, and, if so, when, to swing over from a policy of deliberate deflation to one of restraint was a particularly difficult one. However clear it might seem that there was overstrain at particular points, it would be more than usually difficult to estimate what damage such strain might do to the economy as a whole. On the other hand, steps taken with the object of reducing the pressure at these points might be liable simply to intensify the unemployment at other points—and might, moreover, check the incipient revival in industrial investment before it had got reasonably under way.

Firm Correctives—In Good Time

Considerations such as these must have argued strongly for deferring any swing-over to a policy of restraint; yet the lessons from recent experience must have argued strongly in the opposite direction—for the clearest of all the conclusions that emerges from a study of the inflationary strains of 1954-55 is that, if the authorities are to have a reasonable chance of keeping the economy free from inflationary excesses, they must be sure of applying correctives firmly and in good time.

In the event, the case for sounding a warning note forthwith was evidently strengthened by indications that the much-to-be-desired revival of industrial investment seemed about to acquire a bigger momentum than had previously been expected, thus presaging an increase in the total load of demand on the economy and also suggesting that this particular source of the expansion was not, after all, likely to be cut back by a modest shift in the emphasis of economic policy. About mid-1959, forecasts made by companies participating in the Board of Trade's sample enquiry into investment intentions had suggested that the outlays by manufacturing industry on

fixed capital investment would be about 5 per cent smaller in 1960 than in 1959, and that those by other industries and services would show little change, thus halting the upward trend of recent years. Forecasts submitted towards the end of last year, however—that is, in the period following the General Election—indicated a pronounced shift in these intentions. Manufacturing industry was now expected to spend 14 per cent more in 1960 than in 1959, and other industries and services up to 20 per cent more. At the same time, a continuing expansion seems probable in most of the other broad sectors of demand on the economy.

Exceptional Expansion

At present there seems no reason to suppose that the total prospective demand would be more than could be borne without a new inflation; if once that prospect looms ahead, the authorities will need to tackle again the difficult task of actually cutting back demand. Up to date, however, the problem that presents itself is rather one of moderating the rate of expansion, and thus of ensuring that the ultimate danger point is never reached.

Industrial output will certainly not maintain in 1960 the exceptional rate of expansion attained in 1959—it was running at the year-end at roughly 10 per cent beyond its rate at end-1958—but it has recently been estimated by Britain's National Institute of Economic and Social Research that the still rising level of industrial capacity should "easily" permit a 4 per cent rise in the national product in the year 1960 as a whole—and that is also roughly the extent of the increase in total demand which the Institute expects if there is no further rise in Bank Rate and if no attempt is made to alter the level of demand by changes in Budgetary policy.

Preparing For "No-Change" Budget

The City, for its part, is already preparing itself for a "no-change" Budget; at least it is everywhere well understood that there is no possibility of a repetition, this year, of large tax reliefs such as those granted in 1959, when the aim of the Budget was reflationary. Banking circles are by no means sure, however, that they may not have to reckon with a still higher Bank Rate eventually, if the present level of business optimism is fairly measured by the behaviour of the stock markets. The 5 per cent rate, having been so long talked of in the City before-hand, proved to have been substantially discounted in security prices. The announcement did, it is true, provoke some weakening of the gilt-edged market, and a further fall in an equity market that was already in the midst of its first major profit-taking phase after the huge advance that had followed the General Election. At the moment of writing, however, that further drop in equities has been fully regained: the Ordinary share index of "The Financial Times" stands at just under 326, which, though well below the peak of 343 reached on January 4, is slightly higher than it was before the Bank Rate rise; its increase over the past twelve months still well exceeds 100 points; yet the tone of the market remains bullish.

UP Budget

LIKE his counterpart in the neighbouring State of Bihar, Mr Ali Zaheer, UP's Finance Minister, has also not imposed any new taxes and has chosen to leave uncovered, the revenue deficit of Rs 2.33 crores in his Budget for 1960-61. Revenue receipts are

estimated at Rs 130.90 crores with revenue expenditure at Rs 133.23 crores. The uncovered deficit need not cause undue concern if one looks at the State's performance in revenue collection during the previous two years. In the Budget for 1958-59, a deficit of Rs 4.54

crores had been anticipated, but the actuals for that year showed a reversal of the position with a revenue surplus of Rs 1.09 crores. Again, in the Budget estimates for 1959-60, revenue receipts and expenditure were put at Rs 119.61 crores and Rs 121.47 crores, respectively, indicating a deficit of Rs 1.86 crores. But, in the revised estimates, anticipated revenue and expenditure were Rs 122.23 crores and Rs 122.50 crores, respectively. Thus, the deficit is expected to be considerably reduced to stand at Rs 17 lakhs. This is proposed to be covered by transfer of an equivalent sum from the revenue reserve fund.

That the deficit is expected to be of the order of only Rs 2.43 crores is itself an encouraging sign, considering the size and potentialities of the State. Judging from the experience of the previous two years, it is not unlikely that the revised estimates for 1960-61 will disclose a much narrower gap between revenue receipts and expenditure. It is true, next year's Budget estimates are already based on the assumption that land revenue collections would be better than in the previous years; but, with more and more land benefiting from irrigation and other facilities as a result of the development works of the two five year plans, the hope is justified that the State's revenue will also progressively increase.

A feature of the 1960-61 Budget is the special attention it bestows on the developments flowing out of the Chinese aggression on our northern borders. A sizable section of the border falls within UP, which, as a consequence has come to have a common border with our aggressor. Although defence is a Central responsibility, the State Government have nevertheless correctly decided that they have a vital role to play in ensuring the security of the northern region. The State's realisation of its responsibility in this regard is to be seen in the Budget for next year, which makes a provision of nearly Rs 100 lakhs to take steps "within their own sphere of activity" to meet the aggressors challenge. The northern region of the State has seen considerable development during the past few years, but its communications are still unsatisfactory. A provision of Rs 61.64 lakhs is, therefore, made for communications, in addition to Rs 28.36 lakhs for general development. Steps are also to be taken in the coming financial year to make the people defence-conscious. Thanks to the foresight of the present Chief Minister when he was Minister for Education, a scheme known as the Provincial Educational Corps, which is similar to the present NCC Rifles, had been introduced in the State some 12 years ago. Over and above the NCC Rifles scheme, the State Government now propose to revitalise and strengthen the PEC. Further, it has been decided to establish a separate military school under the direct control of the State Government (for which a Budget provision of Rs 4.5 lakhs has been made) with a view to enabling the young men of the State to join the national army in larger numbers than at present.

As the next financial year also happens to be the final year of the Second Five Year Plan, activity in all directions has to be intensified. Thus, the highlights of the next year's Budget makes a long list. But the Second Plan schemes will pale into insignificance if the State Government are able to get the approval of the Planning Commission for their Rs 1800 crore Third Plan. In his budget speech, Mr Ali Zaheer has given an indication of the trend of thinking in the State in regard to its Third Plan. He has emphasised the need for a much bigger plan if the State is to reach quickly the stage of self-generating economy. It would appear that the justification for a big Third Plan, nearly one fifth the size of the National Third Plan, is sought to

be found, among other things, in the State's large population—about 17.5 per cent of the population of the country as a whole, and its comparative backwardness, economic and other. The need for a rapid development of the border regions of the State, in view of the Chinese threat, may perhaps figure as a powerful argument in the plea for meting out special treatment to the State in the next plan period.

IN the penultimate year of the Second Plan, and with the Third already on the anvil, State budgets will be scanned more for evidence of success in implementing plan programmes than for conventional items of revenue and expenditure; for, the record of the Second Plan period is bound to determine the prospects of the Third. Viewed in this light, the Budget for 1960-61 which was presented to the Bihar Legislature by Dr Sri Krishna Sinha, the Chief Minister, who like Dr B. C. Roy in West Bengal, also holds the portfolio of Finance, should be deemed adequate and encouraging.

During the first three years of the Second Plan period, States with few exceptions have lagged behind in reaching the plan targets. The difficulties experienced in the national sphere on account of the shortage of foreign exchange led to delay in the initiation of programmes of development, which had to be rephased and scaled down. Bihar has also shared the same experience. Total outlay during the first three years did not exceed Rs 80 crores against the original estimate of Rs 190.2 crores for the five year period. The actual expenditure during the first three years was even less than half the scaled down target of Rs 174 crores, so that there was room for apprehension whether it would at all be possible to carry out the plan programme in the two years that were left. Such doubts have been firmly set at rest by the experience of the current year. Against the budgeted figure of Rs 45.5 crores, for the current year, it has been possible to step up plan expenditure to Rs 49 crores, according to the revised estimates. The Budget for 1960-61, the last year of the plan, provides for the balance of Rs 45.6 crores to reach the revised target of total outlay.

The manner in which the plan expenditure has been financed is of as great interest as the figures of outlay and should afford even greater satisfaction as evidence of the progressive strengthening of the State's economy. According to the original programme, the State was expected to find Rs 79 crores out of the total outlay of Rs 190.2 crores, the balance to be met by Central loans and grants. But, actually, Bihar, in common with other States, had to bear a larger share of the burden and, over the five years, the State's contribution

Pull Devil, Pull Baker

THE fact that the 1914 Anglo-Tibetan-Chinese convention was not an open agreement openly arrived at does not detract from the value of the stand so far taken by India. The acceptance of the Line for four decades as the boundary between China and India makes it impossible to challenge it. The Chinese Government's appeal to history has been repelled with the artillery of arguments based on history. But this may be without much value in revolutionary times, and the Chinese Government may think on Communist lines that aggression does not matter, since Russia will not support the party affected.

Indian Finance

UP BUDGET AT A GLANCE.			
	1960-61 (Estimated)	1959-60 (Revised)	1958-59 (Actuals)

Expenditure	-2.33	-17	+1.09
Capital Expenditure	26.99	32.42	...

Bihar Budget

will be Rs 90 crores out of the actual outlay of Rs 173.6 crores. Though the reduction in the quantum of Central assistance has been disappointing to the State authorities, the fact that the State Government was able to make good the deficit out of its own resources is heartening evidence of the resilience of the economy which should be able to sustain a larger Third Plan. This conclusion is reinforced by the fact that it had not been possible to introduce new taxation during the first three years, and the additional taxes imposed in the current year's Budget are not yet reflected in the receipts.

The revised estimates for 1959-60 place revenue receipts at Rs 71.75 crores against the budget figure of Rs 71.87 crores, which shows very close budgeting. Revised estimates of revenue expenditure stand at Rs 69.34 crores against the budget figure of Rs 66.34 crores. The revised estimate of capital receipts is Rs 57.75 crores and expenditure Rs 64.92 crores against Budget figures of Rs 50.78 crores and Rs 58.35 crores. The Budget for 1960-61 estimates revenue receipts at Rs 79.35 crores and revenue expenditure at Rs 70.70 crores leaving a surplus on revenue account of Rs 8.65 crores. Capital expenditure is placed at Rs 59.24 crores against receipts of Rs 50.23 crores, so that the overall deficit will be Rs 36 lakhs, which is left uncovered.

The Budget includes a notable announcement regarding increase in the emoluments of Government servants, employees of local bodies, as well as of legislators. Government employees whose basic pay is less than Rs 250 numbering 143,000 will get a flat increase of Rs 10 in the cost of living allowance. Though the question of merging cost of living allowance in basic pay is still under consideration, it will be taken into account for purpose of calculating leave salary, gratuity and pension. This is a firm indication that a positive decision merging the allowance in basic pay will be taken in due course. The employees of local bodies of whom there are 83,000 have also been given increases in cost of living allowance of Rs 5 and the 41,000 chowkidars get an increase of Rs 2. Salaries of legislators have been increased from Rs 200 to Rs 250 a month, and halting allowances from Rs 10 to Rs 15 a day.

This calculation may be at the base of Peking's current thinking, though Mr Khrushchev's soundings in Asian capitals may force China to undertake a reappraisal soon. Beyond the tentative guess, one cannot draw inferences from Mr Nikita Khrushchev's visit to Delhi or its consequences. But it is fair to assume that the publication of the Indian reply to China's claims was made during the Russian Premier's visit in order to indicate that Delhi does not mean to retreat but to stand by the line since British experts like Sir Olaf Caroe have endorsed in principle the stand taken.

February 20, 1960

During Sir Henry McMahon's time, much was said about his correspondence with the princes of the Hejaz to induce them to rebel against Turkey. What was promised then in relation to the Jewish claim for Palestine as a national home for a scattered and oppressed people was hotly debated before the letters were published in 1938. But Sir Henry, after his term in Egypt and the Sudan, became a figure in the City of London—a fact not so far mentioned by any experts—or his long and fruitful career as a Company director with special interests in the East. But his posthumous fame seems to be more considerable, with Indians eagerly looking back on his achievement in the Seistan question or his career as a Political Officer in what was called the Indian borderland.

There has so far been no reference to what Lord Curzon said in his famous lecture on Frontiers, but the Foreign Office experts may be trusted to look that up as also Curzon's impressions of China before he came out to govern British India. The Indian reply, like that made earlier, rests largely on tacit acceptance of the Line, not the maps which were imperfect and throw no light on territorial claims or the facts of penetration or effective occupation under British Indian rule.

The problem now is to reconcile the conflicting claims, and the Chinese Government's implied acceptance of the McMahon line in relation to the Kachin and Shan States suggests previous arbitration by the League of Nations with reference to the Sino-Burman boundary was not disregarded by Gen. Ne Win, who was able to achieve a minor triumph at a time when Laos was menaced and Cambodia was exposed to subversion. There is no Anglo-French rivalry as in 1900, but Burma, like Thailand, has emerged as a neutral, able to stand up and speak itself.

That is a lesson whose present value is strengthened by the careful steps taken to keep the frontier dispute with China out of the international arena. A private argument about the McMahon line (different from the Curzon line, drawn to separate Poland from Russian territory) goes on, but the Line remains one like the Durand Line—a boundary which has survived the withdrawal of British power and has placed the Pathan tribesmen

under surveillance, incidentally helping Pakistan to reject claims for a separate homeland for the Pushtu-speaking tribes.

The McMahon line was drawn in different territory and British military forces had never made an approach to Tibet through Kashmir, whose prince was always afraid that the climate of Kashmir might tempt Europeans to settle permanently, and the principality, like Berar, would inevitably be submerged in British India. That point has scarcely been mentioned in discussions on the position of Leh, the explorations of Sir Aurel Stein, and the continuing revival of Chinese interest in Chinese Turkistan. There is no news from Tartary as yet, but if the routes from Tibet make the Chinese hold on Tibet complete, and Russia is elbowing out quietly from Sinkiang, the whole problem of Chinese intrusion into Ladakh may alter in both nature and dimensions. That cardinal fact is perhaps absent from the minds of those who forget that China has regained full control of both Outer and Inner Mongolia and has restored the balance of power obtaining in East Asia before the collapse of the Manchu empire.

It is evident that the force of history is on China's side, but India's friendliness as an uncommitted nation, its position in the modern world as a country that is serving as a bridge between Asia and the West and China's own need for good relations with Asian countries, alarmed by the power and ambition of the Red Mandarins, are in a way useful talking points. But they cannot be talked about, and the cynic will assume that diplomacy in its most recent phase has largely become a game of "Pull Devil, Pull Baker," and he who looks for direct, quick results from the exchange of protests and aids to memory is sadly mistaken.

The historian of the future, looking back on the sudden eruption of Sino-Indian differences, will perhaps dismiss it as something like the Corfu dispute or Russo-Finnish quarrels, because what follows may well be an adjustment of respective claims and counter-claims, and the commercial instincts of the Chinese may be expected to play their part, although one cannot forget that the protests of Peking have been given a sharper edge by references to the Opium wars and the recruitment of Sikh policemen to serve under English officers in Shanghai as well as Hongkong.

Financial Discipline in Pakistan

AFTER the present administration came into existence in 1958*, Pakistan has been a more disciplined nation than before; and nowhere has discipline yielded better dividends than in the sphere of finance. In the past, economic problems did not get the attention they deserved mainly because of chronic ministerial instability. As a result, the country was confronted with scarcity, high prices, black-marketing and other evils of excessive inflation. The present administration claims that, by enforcing financial discipline, it has effectively checked inflation and placed Pakistan firmly on the road to stability and prosperity. It will be worthwhile to consider the various measures that have been adopted for this purpose.

Broadly, the policy followed by Pakistan was to live within its means. This was applicable both to internal resources and external finance. Unproductive expenditure was curtailed or avoided and the maximum amount of the available resources was used for expenditure

on productive schemes. The taxation policy was so framed as to achieve the following objectives:

- (1) To increase the availability of goods in the country through maximum industrial and commercial activity so that goods are available to the consumer at reasonable prices, and there is sufficient encouragement for exporting them.
- (2) To create thorough incentives, exemptions and specific reliefs a fiscal climate in the country which should prove attractive to the foreign investor, as well as encourage the local industrialists and businessmen to invest and, what is equally important, to reinvest their savings and profits in existing and new enterprises.
- (3) To rationalize and simplify the taxation structure.

In pursuance of this policy, the Government decided to raise the bank rate from 3 per cent to 4 per cent with a view to restricting unproductive credit. Further, the deposit rates of savings bank current accounts have been raised by a half per cent. A new series of postal certificates have been issued carrying

*Field Marshal Ayub Khan was elected the first President under Pakistan's new constitution.

tax-free interest at 6 per cent per annum. Tax concessions have been offered to stimulate saving and re-investment of profits. Marginal income tax rates have been reduced to increase incentives for work and saving. A "tax holiday" has been given to new ventures if they primarily use indigenous raw materials and re-invest at least 60 per cent of their profits in the same enterprise during the period of "tax holiday". Considerable stress has also been laid on austerity in consumption at all levels.

At the same time, price control on various commodities was enforced strictly. Severe steps were taken for checking corruption, blackmarketing and hoarding. It is estimated that Rs 1,340 million of hidden wealth has been declared, yielding Rs 300 million of income tax to the Government. The actual collection of income tax arrears is placed at Rs 149.6 million in 1958-59 and Rs 54 million in 1959-60 (budget estimate).

The Government claim that these measures have had a perceptible impact on production and living costs. The index of industrial production rose (1950=100) from 119 in July-September 1958 to 169 in January-March 1959. Agricultural production also is reported to have recorded an improvement. The cost of living index of industrial workers at Karachi declined from 128 in September 1958 to 115 in March 1959 before rising to 121 in August 1959. Similarly, in Narayanganj, the cost of living index of industrial workers declined from 123 in September 1958 to 113 in December 1958 and again rose to 118 in June 1959.

These measures, it is stated, have helped to control the situation although, to quote an official document, "supplies are still very inadequate to meet the effective demand".

In the sphere of external finance also, a number of measures were adopted to improve the balance of payments position. Hoarders of foreign exchange were asked to surrender to the State Bank all the foreign assets illegally held by them. Import licences against which no firm commitments had been made were frozen. A cut of about 20 per cent was imposed on Government imports. Positive incentives were given to step up exports. In January last year, an Export Bonus Scheme was announced. Under this scheme, all exports other than raw jute, raw cotton, wool, hides and skins and tea were permitted to earn a bonus in the form of transferable import licences at 20 per cent or 40 per cent of the foreign exchange earnings. The bonus licences could be used to import goods out of a list of 219 items and could also be sold in the market at a premium. Further, procedures for export controls were simplified. It is claimed that, as a result of these measures, the country's balance of payment position showed a surplus of Rs 116 million during the six months period from October 1958 to March 1959, compared with a deficit of Rs 189 million in the corresponding period of the previous year. In April 1959, there was also a surplus of Rs 25.6 million. The gold, dollar and sterling reserves stood at Rs 930.2 million at the end of April 1959 and Rs 988 million at the end of May, as compared to the low level of Rs 72.62 million in September 1958.

The financial discipline enforced in Pakistan has a lesson for other countries which are anxious to develop their economy without creating inflation. However, it must be pointed out that the success of Pakistan is due largely to its administrative set up under military auspices. It is doubtful if other countries, too, could afford to maintain stern discipline without, at the same time, dispensing with the normal democratic apparatus such as free press, free elections, and a fearless opposition.

NATIONAL NOTES

Programme for Oil

The Advisory Committee on Petroleum products, which held its first meeting in New Delhi last week, has the two-fold problem of co-ordinating the activities of the different agencies engaged in prospecting, production and distribution of oil as well as balancing of the supply and demand of different products of the oil refineries, both existing and prospective. The imbalance between the supply and demand is the result of the fact that the quantities of gasoline, kerosene, the middle distillates and so on that can be obtained from a given quantity of crude oil can be varied only within very narrow limits. Currently in India, we have a surplus of motor spirit and shortage of kerosene and high speed diesel oil.

The imbalance is likely to be aggravated by changes in the consumption pattern, as for instance by the introduction of jet aircraft which burn kerosene in place of conventional planes using high octane aviation fuel. As the production pattern is more or less fixed, the remedy has to be sought in adjusting the pattern of consumption. The Committee will have to suggest measures to eliminate or reduce the surplus of particular products through measures designed to stimulate their consumption or exports. The committee, for instance, will have to suggest the most advantageous way of reducing the gap in the level of excise duties levied on motor

spirit and diesel oil. The development of petrochemical industries, which use gasoline as feedstock, can also help to absorb the surplus of gasoline, but only in course of time.

The problem has acquired added urgency with the start of work on the establishment of oil refineries in the public sector. Spokesmen of oil companies have drawn attention to the aggravation of the problem that is likely, unless steps are taken in time to deal with it. For instance, addressing the Calcutta Rotarians a few months ago, Mr O. R. Underhill, of Stanvac, expressed the fear that "Government's plan for a 45,000 Bbl/day Barauni refinery will render idle most of the 100,000 Bbl/day capacity of the existing coastal refineries." The fears entertained regarding the impact of the public sector refineries may be exaggerated. But they certainly point to the need for co-ordination of the activities of State and private agencies in the field, which was the principal theme of Mr K. D. Malaviya's inaugural address.

The prospects of co-operation between state-owned and private agencies in the field have very much improved in recent years with the realisation of the growing demand for oil products that is likely to materialise as planned development gets into stride. Total oil consumption has already increased from two million tons in 1947 to nearly six million tons at present and, on the basis of present trends, is likely to increase to 14 million tons of crude oil equivalent by 1966 and 25 million tons by 1971. As against this, indigenous production of crude oil is hardly 0.5 million tons at present, and may increase to four million tons by 1965.

The heavy cost of oil exploration is the principal justification for Government's decision announced a month ago to invite foreign explorers to join in the quest for oil. But old prejudices die hard. And a seasoned statesman like Sardar K. M. Panikkar has found it necessary to recall in the Rajya Sabha the story of oil interests creating oil empires in other parts of the world and controlling the politics of underdeveloped countries.

Aid for Growth

The importance of stepping up the rate of economic growth in India within the democratic political framework has been rightly stressed by Mr B. K. Nehru, the Indian Commissioner-General for Economic Affairs, in an address to an American organisation interested in international questions. While planned development has achieved the target of increased national output, the rate of growth has been too slow to make any perceptible impact on the standard of living of the common man; in certain sectors, real incomes have remained stationary or even declined. Unless the rate of increase could be speedily stepped up, there is reason for fear that growing popular discontent may burst the seams of our democratic constitution.

The inadequacy of the rate of progress is further highlighted by reports of the rates attained by

China. The totalitarian systems have an edge over democracies in that they are in a position to divert a larger proportion of current output toward investment. The extent to which a democratic government can force the pace of investment is strictly limited, especially with a mass electorate living on the margin of subsistence and impatient for tangible improvements in living conditions. The shortfall in investment has to be made good by foreign aid. This fact is now better understood in the Western countries, which have helped India in the past, than it is by some of our own countrymen, who are afraid that foreign assistance will prove to be indigestible; and their statements may cause confusion abroad, regarding India's attitude to offers of aid. All the more reason, therefore, to welcome the unambiguous statement of India's need by Mr B. K. Nehru.

Productivity

Doubts have often been expressed by critics of planning whether the country is getting value for the heavy investments both in public and private sectors in creating new productive facilities. The productivity movement, which has gathered remarkable momentum within the very short period of time since it was started, is evidence of widespread awareness of the need to ensure that plan expenditures do not all go down the drain.

When the general level of productivity is low, increase in capital investment only serves to add to the cost of the product. Productivity in India, whether in industry or agriculture, is admittedly low in comparison with other countries. And attention is immediately fastened on the productivity of labour. But it is as well to realise that no single agent of production is responsible for increased productivity. The joint responsibility of management, equipment and labour, for the present low levels of productivity, to which Mr Manubhai Shah drew attention at the annual meeting of the local Productivity Councils last week, spotlights the need for a co-operative effort of all the three factors, to make the productivity drive a success.

The growing number of productivity councils that have been set up, (thirty-four are now functioning, two more than the target) is evidence of the growing recognition of the importance of the movement. The productivity movement so far has confined itself to industrial operations. At the one-day conference of the Calcutta Productivity Council, the Chief Minister of West Bengal gave a timely lead when he stressed the need to extend the movement to agriculture.

This conference was the Calcutta Productivity Council's first major function and, to judge by the report of the discussions, it has given a powerful impetus to the productivity movement in this part of the country. The purpose of the conference was to consider the recommendations of the First NPC Productivity Team. In this context, the conference devoted special attention to work

study on the assumption, as explained by Mr H. K. S. Lindsay, who presided, "that the broader aspects of productivity which are within the control of management can initially at any rate safely be left to management associations to pursue." Another good reason for concentrating on work study was the participation of Mr R. M. Currie, a distinguished international figure in this field of productivity studies, whose review of modern work study methods provided the background to the later discussions. Mr Lindsay for his part was confident that the priority accorded to work study would be entirely justified. It will be, if there is readiness on the part of both management and workers to make and accept the changes indicated by an objective study of factors governing operational efficiency.

The first step toward the success of the movement is to dispel the suspicion, apparently widespread among workers, that the programme is just another device to increase the work load. There is need to evolve some system of positive incentives, like a productivity bonus, in order to enlist the co-operation of workers. While it is possible that the application of techniques of improved productivity may result in surplus labour in some establishments, only a general increase in productivity will create the basis for self sustaining growth of the national economy. Government's role should not be limited to making exhortations to management and workers to co-operate. The Minister of Industry might examine how the policies pursued by other ministries—the Ministry of Commerce, for instance, regarding restriction of imports of equipment or the Ministry of Labour as regards rationalisation—sometimes frustrate efforts made to improve productivity through installation of up to date equipment.

Japanese Trade with Communist Area

After the sharp decline in the immediate post-war period in the trade with Communist areas, Japan's trade with countries covered by this area has witnessed a gradual recovery, owing to the moderation of restrictions on exports. However, as compared with pre-war levels, present Japanese trade with these countries is extremely low. In the pre-war period, Japanese exports to countries now under Communist rule amounted to 163.0 million dollars on the 1934-36 average, accounting for 18.0 per cent of total exports. Against this, exports to these countries during 1956-58 averaged only 74.7 million dollars accounting for 2.7 per cent of the total exports. Similarly, imports which amounted to 111.2 million dollars in the pre-war period, representing 11.8 per cent of the Japanese total imports, fell off to 99.7 million dollars representing 2.8 per cent of the total during 1956-58.

The main cause for the sharp decline in trade with Communist countries was the severe disruption Japan suffered in its trade with Mainland China. In the pre-war period, Japan contributed 58.4 per cent of the free nations' exports to Mainland China. This has shrunk to 11.5 per cent in 1957. On the side of imports, Japan accounted for 38 per cent of the free nations' imports from Mainland China. This has fallen to 12.7 per cent in 1957.

According to a survey by the Japan-Mainland China Export and Import Association of the foreign trade of Mainland China by markets, the composition of markets witnessed an important increase of Communist countries after the Korean war, whilst free nations showed a marked shrinkage, the position of the two groups having been reversed. Since then, until around 1955, the ratio of Communist areas was almost 80 per cent, that of the free nations 20 per cent. It is, however, noteworthy that, while free nations have made a slight advance after 1956, the relative position of Japan remained stationary and even tended downward. The value of Japanese exports to mainland China, which was 67.3 million dollars in 1956, went down to 50.6 million dollars in 1958. Similarly, the value of Japanese imports from Mainland China, which stood at 83.6 million dollars in 1956, was reduced to 54.4 million dollars in 1958.

The suspension of trade with Mainland China from May 1958

marked a new stage in the trade relations between the two countries. This happened when Mainland China rejected the fourth agreement on private trade with Japan as a result of an unfortunate accident. The fourth agreement was concluded after the moderation of restrictions on exports to Mainland China, including the simplification of commodity classification, the mutual establishment of private trade representations, guarantee of long-term supply relations in important goods, the establishment of correspondence between Japanese and Chinese foreign exchange banks etc. As this agreement was inclusive, Japanese commercial circles were disappointed at the failure of its enforcement.

Contrary to this downward tendency of trade with Mainland China, trade with the Soviet Union has shown a recovery in recent years. The pre-war high was reached in 1930 with exports at 13.5 million dollars, and imports at 18.4 million dollars. Post-war Japanese trade with the Soviet Union may be divided into periods before and after the restoration of diplomatic relations in December 1956. Trade during the period from the termination of the war up to the restoration of diplomatic relations in 1956 was stagnant in general, though with considerable fluctuations.

Following the joint declaration of the restoration of diplomatic relations in December 1956, a commercial treaty and trade and payment agreement were concluded in December 1957 as a consequence of which Japanese trade with the Soviet Union entered a new stage. Trade showed a marked expansion in 1957 in expectation of the trade agreement, registering a 5 fold increase compared with 1956. Trade in 1957 again expanded to nearly twice the figure of 1957. Not only quantitatively, but also qualitatively, there was an improvement in export and import commodities. The composition of commodities developed toward heavy and chemical industries products. In this sense, trade with the Soviet Union can be said to have shown an important development.

The shrinkage in Japanese trade with communist countries in the post-war period has been attributed by some to the policy of autarky adopted in the socialistic countries. In the light of the actual development of trade between East and West, there does not seem to be much truth in this. For, the Soviet Union and Mainland China have officially admitted the importance of an expansion of foreign trade and the benefits of the international division of labour. Consequently, the lack of development of Japanese trade with Communist areas can be said to have been closely connected with post-war Japanese trade policies. This is clearly evidenced by the fact that the Japanese trade with Mainland China witnessed a marked

expansion after the moderation of restrictions on exports, and that Japanese trade with the Soviet Union registered a conspicuous expansion after the restoration of diplomatic relations in 1956, exceeding the pre-war level both quantitatively and qualitatively. Japanese foreign trade policies may be said to have been connected with political considerations, following the example of the United States, Formosa and other free nations, in respect of the Communist areas. However, it cannot be denied that the suspension of Japanese trade with Mainland China from May 1958 was due to unilateral political actions of Mainland China.

Japan is a country which is heavily dependent on foreign trade and for which, therefore, the cultivation of foreign markets is of supreme importance. This raises the question of the future prospects of trade with Communist countries. Considering that almost all the Communist countries are engaged in economic development in a big way, the scope for increase in Japanese exports to these countries appears great. However, it cannot be overlooked that the Communist countries try to maintain equilibrium of exports and imports by planned foreign trade. Therefore, an increase of foreign trade in the form of large excess exports cannot be hoped for. Consequently, the key to the expansion of Japanese trade with Communist countries is an increase of Japanese imports. It will, however, be a difficult problem to switch import sources from the United States and Southeast Asia to Communist areas.

Burma's Balance of Payments

Increased imports in the face of a slow-down exports cost Burma a drain in foreign exchange reserves to the tune of K 27 million in November 1959. Analysing the causes for this drain on foreign exchange reserves, the Union Bank of Burma review for the month of November traces it to the liberalised import licences issued by the Burma Government in October and November. Import licences in these two months are shown to have aggregated K 88 million. The decline in import payments, valued at K 19 million, which followed the fall in both Government and private imports in October has thus proved to be short-lived.

The contractionary influence of this decline in foreign exchange reserves on the money supply seems, however, to have been offset by expansion of commercial bank credit to the private sector and by increase in Government deposits. The increase in Government deposits was of the order of K 57 million and came as a result of a borrowing of K 37 million from the banking system and a receipt of K 32 million arising out of its transactions with the private domestic sector offset to the extent of K 12 million by net

deficit incurred in its transactions abroad. The total expansion in commercial bank credit in November is placed at K 25 million made up of K 14 million under advances and K 11 million under bills discounted. The effect of the increase of K 57 million in Government deposits on total money supply was offset to the extent of K 15 million by decline in private money. Total money supply, which rose by K 42 million, stood at K 1,980 million at the end of November.

Arising from increased tax collections, revenue receipts are reported to have gone up in October by 38 per cent over the previous month. Taken with the 71 per cent increase reported in respect of receipts under capital accounts, the increase in total receipts works out to 56 per cent. Increased revenue receipts were, however, matched by increase in current expenditures, which are reported to have gone up by K 19 million. Capital expenditure registered a marked decline from K 13 million to K 1 million.

Ayes for Ayub

Pakistan through the medium of chosen instruments has ratified Field-Marshal Ayub Khan's proceedings over sixteen months at home. His foreign policy may be said to have continuity. The eastern wing had no option to opt out, but the recent triumphal tour by train may have had its own effect on the people who have confirmed the soldiers in power and given him a dictator's mandate. Relations with India may improve after the poll—that is a prophecy which may be gratuitous but not erroneous. The new Capital at Rawalpindi may be in poor shape, but Pakistan may be in good heart after the poll, and get ready for a constitution modelled after the Fifth French republic. The further term of power given by the poll may induce the USA to step up economic aid, and Pakistan may be termed a better risk, for all the contradictions and contrasts that Pakistan must present.

The lesson for Delhi may not be very plain, but Ayub and Gen Shaikh now have a firm hand to deal with outstanding issues, other than financial. The big money for the new Canals will soon come, but it is Peking's psychic play that will shape the course on Kashmir. Anti-American feeling in Kandahar may compel Pakistan to try a fresh gambit in regard to Kashmir and India's latest protest to Peking may serve to reassure Ayub, (especially after the mid-term election in Kerala) that India is not too friendly with the Communists. The poll may even said to provide political insulation for the sub-continent and give extra edge to the pleas heard in India for summary treatment of corruption and intrigue a la Ayub. The idea of a no-war pact may have receded, but Pakistan's domestic policy will not be critically examined, after it is known that Ayub has got all the Ayes (98 per cent of the votes, in fact) he wanted to make his regime respectable.

Big Bang

The world is not coming to an end with a big bang in the Sahara, though Ghana registers angry disapproval. But that new nation has been capricious in dealing with mining companies, and foreign newspapers, too, and Paris may ignore it because the overseas empire has become in Gaullist parlance a new community. For NATO the implications may prove serious. The French advance to equality and the working out of the spirit of France-German agreements may render disengagement in Europe difficult. But it will also be widely appreciated that it is not pique but the claim to a compact culture and new mission that has made France undertake a test in the Sahara at a time when Geneva has been in coils, trying to reach a pact about a ban on future tests.

Whether the explosion will make the Sahara habitable is hardly a pressing query. But the Arab countries have been reminded that General de Gaulle has made up for the sorry business over Suez and has called the embattled Colons to order, shuffled the court cards in his political pack, and reminded the USA that the Atlantic alliance must be kept in good repair. Whether Moscow will take note of French claims and aspirations to modify its own policy of climbing slowly to the summit may depend on the success of Mr Khrushchev's mission to Indonesia. The French need not trouble too much about atomic weapons for West Germany or US missile bases in Italy, now that France, which produced the Curies has caught up with Britain. Too much should not be now read into the angry gesturings of Cairo, but more may be inferred about the prospects for Saharan oil in Europe. The US oil companies may see their market for Middle Eastern oil in Europe limited by the single fact of an explosion and Socony may try to put its foreign policy in shape before the State Department takes notice of what atomic tests can do to the desert terrain. The French Government have established, incidentally, their right to play host to the leaders meeting at the Summit in the spring, and the Big Three will have to prove themselves "Good Europeans" when the Western Europeans have got over the feeling of dependence on the US for economic aid.

Pakistan's 2nd Plan

A twenty per cent increase in food production, which should enable the country to reach self sufficiency, and an increase of the same order in gross national output are the main features of Pakistan's Second Five Year Plan whose aims were defined by Mr G. Ahmed, Chairman of the Planning Commission, in his address to the "All Mission" ICA Conference held in Karachi last week. The Plan itself, which envisages a total expenditure of Rs 1,900 crores, Rs 850 crores more than the First Plan target, was announced on December 30. Out of the total outlay, Rs 1,150 crores will be in the public sector and

Rs 750 crores in the private sector. The larger allocation to the public sector does not mean that Pakistan is committed to an expanding State enterprise. On the contrary, the Chairman of the Planning Commission explained that the allocations are not rigid and that any industrial activity initiated in the public sector could later be taken up by the private sector. He himself felt that Rs 750 crores for the private sector probably underestimated its potential. The aim of public sector investment was mainly to build up the infrastructure to sustain future industrial development. The Pakistan Industrial Development Corporation will also initiate development in areas where private capital is shy. One of its principal roles will be to equalise the levels of industrialisation in the two wings of Pakistan. East Pakistan lags behind in this respect and one of the aims of planning will be to redress the balance.

The foreign exchange requirements of the Second Plan are now estimated at about Rs 800 crores. Pakistan is already receiving aid of the order of Rs 100 crores a year, without taking into account the credits extended by the UK and by West Germany; so that, with the stepping up of the level of aid to underdeveloped areas envisaged in President Eisenhower's special message to the Congress asking for approval of the foreign aid programme for the coming year, foreign assistance is not likely to fall short of the plan estimates. The most hopeful development in Pakistan under the new regime is the earnest effort to set the country on the road to economic progress. And the Plan has laid down a proper order of priorities in placing agriculture in the forefront.

Economic Issues of US Election Year

THIS is a presidential election year in the United States, and as is to be expected, economic viewpoints on each side of the party fence are sharpened and vigorously debated by Republicans and Democrats. Such differences clearly appear in a report issued recently by the Joint Economic Committee of Congress. It is a report that caps a year-long study of US employment economic growth and prices, and it is a reflection of the partisan debate, with the Republican (minority) members of the committee dissenting on many points from the views of their Democratic (majority) colleagues.

Yet what is perhaps most notable about the report is the virtual unanimity of the committee's findings and recommendations on the matter of foreign economic policy—in contrast to the evident differences on a number of domestic questions. In essence, these recommendations call for the continuation of the forward-looking and liberal policies which traditionally have marked US foreign

aid, trade and investment programmes.

Among the specific recommendations, four stand out. They are:

1. To "continue to make the resources available" to help strengthen the economies of other free nations. Included is an endorsement, in principle at least, of mutual assistance and other US aid programmes.

2. To "encourage and co-ordinate the aid programmes of the free industrial countries", preferably through multilateral machinery. Mentioned as fitting instruments for this purpose are such institutions as the World Bank, the International Monetary Fund, and the Projected International Development Association.

3. To "reduce our own (US) tariffs in exchange for tariff concessions" from other countries, in an effort to strengthen the multilateral approach to world trade "without restrictions and discriminations". The committee notes, in this connection, that common markets and free trade associations should not become agents of trade discrimination.

4. To press upon "most of the continental countries of Western Europe", the need for prompt action to remove discriminations against dollar goods imports. Considerable progress along this line already has been made, of course, but the feeling seems to be that much more still can be done.

Significantly, these recommendations accord to a marked degree with positions taken by the Eisenhower administration. Further agreement with administration views is seen in the committee finding that the US balance of payments deficit, totalling some \$7,000 million in the past two years, "does not call for emergency measures"—although both Democrats and Republicans on the committee also agree that deficits of this magnitude obviously cannot be accepted indefinitely.

As is implied in the tenor of the committee's recommendations, both the Democratic and Republican members endorse the administration view that the best way to meet the balance of payments problem is through increasing US exports, not through reducing US imports. The committee, in effect, agrees with the views of many members of the Eisenhower administration. In discontinuing the oft-heard argument that US business has priced itself out of world markets.

The extent of the basic agreement within the committee on international economics is seen in this comment by the Republican members: "At a time when the clamor associated with the present outflow of gold has stampeded many observers into careless analysis and hasty suggestions, their (the Democratic committee members') sensible review of the issues and sound recommendations deserve praise."

It certainly would be premature, at this early date, to expect that foreign economic policy will not be discussed in the election campaign just getting underway. Nevertheless, the nature of this report by the Joint Economic Committee suggests a closer meeting

of the minds on this subject than is likely to be visible on economic matters of primarily domestic concern.

This underlying, bipartisan agreement on broad approaches to international aid, trade and investment at any rate seems to bode well for harmonious U.S. economic relations with other countries, regardless of the outcomes of the national balloting next November.

Australian Economy in 1959

After reviewing the tremendous expansion of Australia's economy, the leading newspapers of the country have predicted a continuance of the high level of investment and industry during 1960. Industrial production, as reported by the Australian Financial Review, accelerated tremendously in the September quarter of 1959. Factory production during the three months to August in 1959 recorded an increase of 8 per cent from that of the corresponding period in 1958. The average annual rate of growth over the past five years has been estimated to be over 6 per cent.

Mr Ian Porter, Chairman of Australian United Corporation, has stated that, with a continuance of the rise in the real income, the overall increment in national production was likely to be 50 per cent over the next ten years.

Australian commitments under the hire-purchase agreements, as revealed by the Chairman of the Australian Hire Purchase Conference, were about 7 per cent of national income in contrast to 12 to 13 per cent in the USA.

Referring to the more general aspects of investment, Mr Brian Barry, financial writer for the Melbourne Herald, has stated that the 1950s witnessed the development of public interest among Australians and added that interest would be intensified during the next decade.

The total receipts from the mineral products of the country was to the tune of Rs 200 crores. The value of exports of metals and minerals, excluding gold, was Rs 49 crores.

According to the estimation of the National Bank of Australia, 1960 should prove to be comparatively a good year for the retail trade in the country. A rise in consumer outlay is also expected, mainly due to the impact of recent wage margin adjustments and the improved employment situation. Vigorous competition will be witnessed in metropolitan areas due to the improved selling facilities.

The total output of cotton yarn, woollen and worsted yarn and woven cloth as well as of towels, blankets and drugs increased considerably during the period under review.

The total number of new motor vehicles registered in Australia reached an all time record of over 250,000. Consequently, the consumption of motor spirit in the country showed an increase of 9 per cent over the previous year.

Rs 1800 Crore Third Plan for UP?

The first reaction to the news that Uttar Pradesh has drawn up a Third Plan involving an outlay of Rs 1,800 crores will probably be that there has been a mistake somewhere. But a closer perusal of the State's proposals, will show that a big leap forward has really been planned, subject, of course, to the Planning Commission's approval. Evidently, the big size of the State's Third Plan has been the direct result of the indication that the Central Plan will be about Rs 10,000 crores. Perhaps, the surprise is in the fact that, while the Central Plan is only about double the size of the National Second Plan, UP's Third Plan is nearly five times the size of its Second Plan.

There are, no doubt, a number of valid reasons for aiming at greatly accelerated development in UP during the next plan period. Some of the important considerations, like the fact that it is a very big State with nearly one-fifth of the population of the country, will certainly weigh with the Planning Commission while deciding the question of Third Plan allocations to the States.

If a proposal for an expenditure of about Rs 2,000 crores during a five year period in a State of the dimensions of UP causes some scepticism, it is largely because of the none too bright prospects for the mobilisation of large resources, either internal or external, for the Third Plan. Had it not been for the need to pay heed to this serious limiting factor, an outlay twice as large as the one now proposed can easily pass muster. For, the work of building up the economy of the State by fully exploiting the available natural resources is still only in its initial stage, although the State has passed through nine years of planned development under the First and the Second Five Year Plans.

It is true, considerable headway has been made these nine years; but, considering the work that still lies ahead, the achievements so far pale into insignificance. Taking for instance the agricultural sector, on which depend nearly 75 per cent of the State's population, the development programmes of the first two plans will be able to cover only one-fifth of the area that can be put under the plough. So, it would appear that the emphasis in the State's Third Plan will also continue to be on agriculture. But other sectors of

activity cannot be neglected if around improvement is to be achieved, and this explains the big outlay proposed for the Third Plan.

Andhra's Third Plan Proposals

Although the various departments of the Andhra Pradesh State Government have drawn up ambitious schemes for implementation during the Third Plan involving a total outlay of Rs 700 crores, it is unlikely that the final proposals that will be put to the Planning Commission would exceed Rs 400 crores. This was disclosed by the State Minister for Planning and Development, Mr Pidathala Ranga Reddy, last week in Hyderabad.

While there is nothing unusual about the States wanting to develop their respective regions as quickly as possible, such enthusiasm should be tempered with a sense of realism based on the ability of the concerned regions to execute the tasks taken up and on the availability of the requisite resources. The Planning Commission seem to have arrived at a general rule that States' Third Plans should be not more than one and a half times their Second Plans. This may only be a rough yardstick and, in actual practice, the Commission would not be able to adhere strictly to this wholesome ruling. But this is not to say that there is no need for realism in fixing the plan outlays.

The Andhra Pradesh Planning Minister has noted that, apart from the Planning Commission's suggestion, there are a number of reasons why the State's Third Plan should not be too big. In the first place, experience during the current plan period has shown that the ability of the State to spend money, let alone mobilise resources, is still limited. Mr Reddy's estimate is that the spending capacity of the State during the next plan period will be at an annual average of Rs 60 crores. On this basis, the outlay should be only Rs 300 crores. This is also in accordance with the Planning Commission's suggestion. With constant and concerted attention the Plan projects, it may be possible to spend a maximum of Rs 350 crores.

In this view, the prospects for embarking on big projects during the Third Five Year Plan period are not very bright, because Mr Reddy has estimated that as much as about Rs 180 crores will be taken up by spill-over projects from the current Plan. In a Rs 350 crore Third Plan, therefore, a sum of only Rs 170 crores only will be left for new projects.

Modest Third Plan for Orissa?

Indications are that Orissa will elect to keep its Third Plan pro-

posals within the bounds of the Planning Commission's acceptance. For, it is learnt that even the working group set up by the State Government to draw up its Third Plan has set the target of expenditure around Rs 262 crores only, some two and a half times as big as the State's Second Plan. It would appear that even this proposed outlay may be drastically cut, if the view of the special committee, set up by the State Government to examine critically the various schemes with a close eye on the resources position, prevails. According to the Working Group's proposals, the emphasis in the Third Plan should be on Irrigation and Power with a view to creating the basic prerequisites for further development in other spheres. Agriculture, too, is important, even though the State has no big problem as regards the supply of food for its population. Great potentialities still exist in the State for stepping up agricultural production and, in view of the national importance of food production, agriculture should continue to receive a good deal of attention.

The scrutinising committee, which is composed of officials, can only be guided by the resources that can be mopped up within the State and the probable quantum of Central assistance. It is also gratifying to note that the committee has stressed the need for taking into account, while drawing up the State's Third Plan, the capacity of the State to execute the schemes finalised. The Committee is reported to have opined, presumably on the basis of these broad criteria, that a Third Plan of Rs 175 crores will be a practicable proposition. In this view, the committee is said to have suggested that alternate draft proposals should be prepared. This is evidently to obviate waste of time between the rejection of a particular proposal by the Planning Commission and the preparation of a new one. The example can be emulated by those States who have drawn up ambitious development schemes for the Third Plan.

Bombay's Annual Plan

Irrigation and Power Schemes share almost equally a total allotment of Rs 35 crores in the annual plan for Bombay that has been finalised recently after discussions in the Planning Commission with representatives of the State Government. The total outlay for the next year has been fixed at Rs 98.75 crores. The expenditure to be incurred in connection with the Koyna Project is a major item under Power development. Schemes under the State Electricity Board may be expected to get a fillip as a provision of Rs 2.75 crores has been made for this purpose in the annual plan. Multi-purpose projects get the major portion of the

allocation under Irrigation, which gets Rs 17.4 crores.

Next to Irrigation and Power, Agriculture and allied subjects including Cooperation and Panchayats receive a large allocation at Rs 22.6 crores. A little more than Rs 5 crores are to be expended on Minor Irrigation as evidently this type of increasing the land under cultivation has proved very efficacious. It is estimated that about 3.98 lakh acres would be irrigated through Minor Irrigation by the end of the current financial year. The target for the next financial year is 1.72 lakh acres. It is but meet that agriculture should continue to get concerted attention in the State, because it is still deficit in food-grains. The allocation for agricultural production is Rs 3.98 crores. The establishment of seed farms—an important factor in the efficiency of agricultural operations—is going on apace and it is expected that 323 seed farms would be functioning by the end of the current year. Soil Conservation Schemes are also to get much attention as the allocation for this purpose is quite large at Rs 2.95 crores.

As in other States, Social Services, including Health, Housing, Education, etc. are given a sizable share at Rs 21.9 crores, but a major portion of this expenditure is to be accounted for by Education, health and housing. Community Development and Transport get due importance and an allocation of Rs 8.4 crores for the latter reflects the State Government's special interest in it. The emphasis in the State Government's industrial activity is on the development of small scale industries which get Rs 1.93 crores out of the total allotment of Rs 2.19 crores.

Mr Birla on Technicians

Inaugurating the Sixth Management Conference in Ahmedabad, Mr G. D. Birla has forecast a bright future for technicians in India. But the technician will never attain the position that is his due unless he takes active interest in the business with which he is concerned. So long as he is content to remain secluded, doing his allotted job, he has no chance of improving his position. Mr Birla says that the Indian technicians should begin to emulate their counterparts in the US where a technician is also a businessman. This combination of two essential qualities in him makes the technician the natural choice for the top-ranking positions in industry.

It may not be possible for all to assert, as Mr Birla is able to do, that the US system is preferable to that of the UK. But there is no gainsaying the obvious advantages in having technicians with a sound knowledge of business

management at the helm of affairs in industry.

Mr Birla thinks conditions are conducive in India for the growth of what he calls people's capitalism by which is meant ownership of industries by a large section of the population. There are in our country a good many self-employed people and this is a happy augury for the setting up of a great number of corporations with a larger number of shareholders. People's capitalism will also be hastened by the high level of taxation in India, and Mr Birla opines that the era of personal business empires is quite near at hand.

Mr Birla, however, expects a good managing agency system to continue to do useful work to the community. Even after the disappearance of personal business, the managing agency system will have to stay in order to ensure that the impersonal corporations pass into good hands.

Mr S. P. Jain on Tax

It is a familiar complaint of private enterprise that, while loudly declaring that there is in reality only one sector, the national sector, in which the so-called private and public sectors are having complementary functions, Government spokesmen themselves are guilty of fostering separatist tendencies, both by word and deed. Government are accused that their preference for the public sector is too patent for them to try to hide it and, in the matter of enabling the private sector to find the requisite resources for its efficient functioning and steady growth. Authority is meting out a step-motherly treatment bestowing all attention on the needs of the public sector. The suspicion that, in coming years, the public sector will so grow as completely to overwhelm private enterprise revived following the trend of discussions at the Ooty Seminar of the All India Congress Committee. Although the Prime Minister allayed the fears in this regard in an interview specially sought with him by the President of the Federation of Indian Chambers of Commerce and Industry, one still

finds spokesmen of industry expressing concern at the ever present threat of nationalisation. It would appear that Mr Nehru has been doing his best to assure private enterprise that Government are not interested in nationalisation for the sake of nationalisation. For, has he not recently said that there is no question of nationalisation of units functioning under private management even in spheres which have been assigned to the public sector?

Yet another matter on which there is serious difference of opinion between authority and private enterprise is Government's taxation policy. It is contended that the present heavy taxation constitutes a serious disability for the private sector in the direction of its steady development. In this matter of taxation policy, it would appear that some self-appointed champions of private enterprise are more vociferous in their attack on Government than the industrialists.

Perhaps, Mr Shanti Prasad Jain's speech last week in Poona is the first categorical statement ever made by a businessman to the effect that neither the growth of the public sector nor Government's taxation policy is detrimental to the interests of private enterprise. Speaking at the Poona Jain Mitra Mandal, Mr Jain opined that there was no fear of a clash or serious competition between the public and private sectors. As for the taxation policy, he thinks that, as far as the corporate sector is concerned, there are adequate compensatory factors for the heavy taxation, like the handsome development rebate and the high percentage of depreciation allowance which enable the industries to recover a very high proportion of their investments for further deployment in the business. May be, individuals cannot amass wealth in the present set-up, but that is no reason why the corporate sector should not prosper. Arm-chair theorists can let in convincing arguments to prove that the taxation policy is suicidal and much else, but Mr Jain's views are evidently based on first hand knowledge of the impact of the taxation measures on the corporate sector, and as such deserve wide notice.

Mr K. in Alien Corn

Mr Khrushchev too has stood in the alien corn—in Rajasthan, be it added. He has commended to India the idea of mechanised State farming because Russian aid for the Suratgarh experiment has been attended with visible results. Success in estate farming by big cooperatives is not new—there was the Gosaba experiment launched by the vision and vigour of Sir Daniel Hamilton—whose association with Mackinnon, Mackenzie was capped by success in economic uplift and social service, long before the phrase Community

Development was ever known. The Suratgarh experiment may justify Mr Munshi's famous plea to hold back the creeping Rajasthani desert, but it is really modern irrigation that has helped to raise crops in formerly arid land. The big farm of 30,000 acres is far removed from the plots suited to the Japanese or Chinese style of cultivation, officially and often commended to cultivators, and if costs and profits are calculated, it may be found that success in Suratgarh means big spending by the Centre. If the Central Tractor Organisation gets relief or praise, the real point lies in the success shown with potatoes. The American vegetable that transformed European culture, in a way, has found a new home in India, which needs more food to supplement the cereals. The state farm may provide a centre of instruction for cultivators and great hopes are now placed promptly on the Soviet-inspired success because transformation has taken place just as in Bhilai. But the real meaning may lie in the possibility of internal migration from overcrowded Bihar and Rohilkhand to the fresh woods and pastures new that Rajasthan offers. The close settlement of Assam may justify a new approach to Rajasthan which has, of course, sent out Marwaris far and near to prove their business ability. That State may well be at the receiving end in future if oranges and lemons can be got along with mustard to yield oil that must be called essential, because a lot of people need it always.

Steel at Salem?

Thanks to the interest shown by the East German delegation which visited the city last week, the project for setting up a small steel plant in Madras State based on the iron ore resources of Salem District has come nearer to establishment of its technical feasibility. Though the Madras Government have for long been advancing the claim for setting up of small steel plants, the project has been delayed by technical difficulties involved in the use of lignite as fuel for treating the iron ore available at Salem. It is in this respect that the forthcoming visit of an East German technical team assumes importance. The team is expected to conduct on the spot investigations with regard to the quality of ore available at Salem and the suitability of Neyveli lignite as fuel.

The claim of Madras for a small steel plant in the context of the prospects opened out by the Neyveli lignite project in quite apparent, and is grounded on considerations of practicability and regional balance in industrial development. Though small steel plants are generally supposed to be technically inferior, their feasibility has been demonstrated by the success, though somewhat tarnished,

of the small plants in People's China and the perfection of the continuing casting method suitable for small and medium plants and based on the use of low grade coal in East Germany. Experiments conducted in our own country into the suitability of lignite for treating iron ore have yielded satisfactory results. This has also been confirmed by the opinion expressed by the delegation. On the basis of availability of lignite to the tune of 2 lakh tons per annum, it is considered possible to aim at an initial target of one lakh tons as production capacity for the prospective project.

Mr Bunker on the Great Challenge

Addressing the Rotary Club of Kanpur, Mr Ellsworth Bunker, US Ambassador in India, referred to the great challenge which mankind faces in eliminating the mistrust and misgiving which divide mankind and which keep world peace in an uneasy poise between hope and delusion. Even disarmament, with which, in people's minds, prospects for peace are bound up, is only an aspect, though an important one, of this wider issue; and the controls which Mr Bunker considers as necessary for giving real meaning to disarmament are being thwarted by suspicion and doubts about their adequacy and effectiveness. Hope, as Mr Bunker pointed out, lies in patience, intelligence and goodwill. Even between India and the USA, which have come closer to understanding each other's policies, it was the view of Mr Bunker that understanding was not complete. This was but inevitable since, as Mr Bunker himself said, the two countries followed policies which were not identical, being based on the different assessments of their mutual self-interest. For example, the argument that collective security agreements have produced a climate in the world in which all developing nations have been able to make economic and social progress will not be supported by exponents of our own foreign policy, who would rather see in such alliances the very element which aggravates the cold war between the power blocs.

Only tolerance and understanding could bring nations together and create a climate in which peace could be sought. This is exactly what is lacking in the present relations between nations belonging to rival blocs. In the circumstances, faith has to be placed in a radical change in people's attitudes and thinking. As Mr Bunker observed, Governments must forget the wrongs of the past and learn from mistakes and successes. He, however, warns that, to succeed in this, we must avoid both pessimism and an easy optimism: "Time tends to be a good solvent and an attempt at speed often aggravates rather than heals."

Much Ado in Belgaum

Last week's trouble in Belgaum was not merely due to the excess of Maharashtra no-tax campaigners. The border dispute forced the police to adopt vigorous methods, and the Congress Committee in Poona espoused the cause of the linguistic minority. Why an award of the Pataskar type cannot be secured, is one of the questions raised by the border trouble. It is evident that Belgaum is a doubtful case included in Mysore, and all the talk about mischief-mongers does not erase the impression that caste feeling is at the bottom of the trouble. The pending bifurcation of Bombay has made the Maharashtra case definitely stronger, and cutting a Taluk or two out of Mysore need not present grave difficulties if (and it is a big if) it is made clear that, if and when Goa is secured, it will go to Mysore by becoming part of North Kanara.

One point is made plain. Before Delhi can intervene with effect, the Governor of Mysore should be furnished an opportunity to deal with the issue raised by the unfortunate demonstrations and the grim sequel. There is a case for proper, princely action more useful than a Congress leader's formula, and it is a pity the Mysore Cabinet talks only of further firmness in dealing with local discontent, touched off by the official assumption that linguistic minorities have no specific grievances at present. The inclusion of Kasargod (on the strength of local feeling in South Kanara) may provide due compensation for early adjustments in Belgaum, but it is the new Kerala ministry that must read the signs of the local poll and enter into discussions with Mysore which can then be trusted to deal with present discontents in Belgaum district. The Zonal council can, and should, examine what has to be done and a Central inquiry will be in order before the Zonal council takes it up. The value of the Council will then be proved to the public, which may regard it now as a fifth wheel in the coach.

Mr Santhanam on Motor Vehicles Taxation

A plea for the avoidance of the multiplicity of taxes—described as the world's heaviest—on the motor vehicles was made at the 33rd Annual Conference of the Motor Vehicles and Allied Industries' Association by its chairman, Mr T. S. Santhanam, in Madras last week.

Government, both Central and State, considered road transport as a milch cow, Mr Santhanam stated; and, for the past three decades, more taxes, both direct and indirect, had been imposed with the result that the taxation of the road transport industry in India was the highest in the world.

There should be uniformity of taxes on a rational basis on motor vehicles

in all States. Because of such rivalry in taxation among States, Mr Santhanam thought that inter-state motor transport had not developed on healthy lines and there were violations of the Motor Vehicles Act and Rules and the Motor Vehicles Taxation Act. Mr Santhanam said he did not plead so much for tax reduction as against the multiplicity of taxes some of which, like the octroi, were vexatious by nature.

There was also no uniformity in the gross vehicle weight among the States, though it was true that all roads in India could not admit of uniform weight; but he wanted, at least in the case of National and State highways, that they should have uniformity in this regard. Confusion prevailed over laden weight and axle weight, he pointed out, adding that it was the axle weight which was more relevant with regard to the impact of load, particularly on culverts and bridges with short spans. Therefore, Mr Santhanam wanted the State and Union Governments to raise the laden weight to twelve tons (on two axles) at least for the National and State Highways.

While arguing for more expenditure on the expansion of the Motor Vehicles administration staff at all levels Mr Santhanam pointed out that less than 4 per cent of motor taxation revenue was spent by the States. He drew attention to the fact that the motor vehicles administrations were ill-equipped and understaffed in all States, leading to charges of corruption. He also was for encouraging manufacture of more motor vehicles in the country.

Mr Santhanam, representing the TVS, the noted road-transport organisation in the South, is certainly an authority on internal tourism. And he said that there was an upsurge in the country's internal tourism. Foreign tourists, too, were visiting the country in increasing numbers. So, he wanted both the Centre and the States to foster this industry, by improvement of the road surface, provision of greater tourist amenities at places of tourist attraction and allow big cars to be imported to handle such developing tourist trade.

Stating that ancillary motor industries had been steadily growing in India, Mr Santhanam said that it would take some time to catch up with the increasing demands of the rapidly growing road transport industry. He was, for the present, for larger imports of spare parts to keep the road traffic in trim by keeping the vehicles always in good condition.

Industrial Licensing

Defending Government control over the starting of new industries in the State, Mr Subramaniam said that such control protected the private sector from what he described as cut-throat competition. Such State control, he said, was much more conducive to growth of private industries.

Inaugurating the fourth All-India Conference of Cost and Works Accountants, Mr Subramaniam said he felt that uncontrolled private enterprise meant not only the control of

the Government being taken away, but also the indiscriminate starting of new ventures. He argued that uncontrolled private production would result in overproduction in particular lines. Therefore, Government planning helped avoid this wasteful competition because the private sector projects would be allowed by State Plan with a view to the needs of the country and the capacity of the industry to produce. This kind of planning helped private enterprise in getting an assured market.

India, underdeveloped as it was, could not afford wastage by competition. Even capital could not be wasted by this kind of overlapping. Licenses were given only after taking into account the demand for the articles the industries produced and the non-existence of competition in the same line by others. Mr Subramaniam wanted the critics of this system to consider the history of countries where "cut throat competition" existed, like America and England. Protection under State control would be much more effective and conducive to the growth of private industries.

The part played by Cost Accountants in new ventures was vital in that they examined whether the manpower, materials and machinery were utilised to the best advantage. Even in State monopolised industries, cost accountants had this important job to fulfil.

Debate at Bangalore

It was an interesting "debate" at Bangalore last week when, at the Rotary Business Conference, pro-Government and opposition views were expressed from one and the same platform. Mr K. M. Munshi, leader of the Swatantra Party, whose opposition to increasing State control of trade, business and industry is quite well known, was vehemently opposed by Mr B. D. Jatti, Mysore State's Chief Minister.

In a rather forthright proposition to the top-ranking businessmen assembled at the Bangalore Conference, Mr Munshi asked: "Are you going to be businessmen in a free country with rights and initiative or are you going to be regimented and ultimately wiped out? Whatever the slogan, phrase or philosophy, the fact remains that if planned economy steadily grows as it is now, independent businessmen are going to be wiped out."

But Mr Jatti frankly declared that planning implied Government control. If businessmen believed in planned economic development, they should also believe in Government regulating the country's economy. Mr Jatti held out that, even in United States, where there was greater freedom of enterprise than in any other country, the Government had been playing an increasingly dominant role. Mr Jatti admitted Government's trade and industrial policies differed from laissez faire, but he said, "I do protest that the restrictions imposed by Government are not quite as many and as constrictive as they were supposed to be."

Mr Jatti believed that, even within the limits of the supposed restrictions, there was enormous scope for individual enterprise and initiative.

Mr Munshi's address was an attack on the Government's industrial policy. They could not reconcile themselves to material advance at the cost of freedom. There were inherent fundamental fallacies in the policy pursued by the Government, Mr Munshi declared. He thought, therefore, whenever planning was intended to destroy or undermine such freedom, then it was planning that required to be adjusted, and not freedom.

Today, Government's attempts were, according to Mr Munshi, directed toward a regimented economy. And the Common Man became the casualty of today's planning, he said—something which he has been repeating ever since he joined the new political opposition party.

Industrial Unrest

The Government of Madras have expressed grave concern at the growing industrial unrest in the State. The general attitude of the Government toward this problem has been brought to light by Mr Venkataraman, Minister for Labour and Industries, in his address to the tenth meeting of the Madras Labour Advisory Board. The question of preparing and maintaining a permanent panel of arbitrators to settle the industrial disputes in the State is under the consideration of the Government. The principle of voluntary arbitration as a method of settlement of industrial disputes, which was provided under the Industrial Disputes Act, was also being commended to the parties in the State. Special instructions to the labour officers have also been given to this effect.

The existence of industrial peace is an essential prerequisite for the development of a nation, especially for a country like India. If the parties are reluctant to maintain peace, strict enforcement of the existing measures against violations will have to be resorted to. The harmonious co-operation of labour and management is thus eminently desirable.

WORLD OF BUSINESS

Belpahar Refractories

The inauguration of the Belpahar Refractories Plant Limited, a Tata-Dider enterprise, marks another milestone in the industrialisation of the State of Orissa. Constructed at a cost of Rs 3.88 crores, the factory at present possesses a capacity of 67,000 tons of refractory bricks and 10,000 tons of mortar. The planning and initial equipment of the project are specially designed for doubling the output at a comparatively low capital cost. The factory manufactures three varieties of bricks—firebricks from fire clay, silica bricks from quartzite and chrome and magnesite bricks from chrome ore.

The location of the factory at Belpahar has got its own peculiar advantage because of its proximity to the raw materials available abundantly in the neighbouring quarries. The only raw material which is brought from a distant place is magnesite, found in the quarries of Salem, about a thousand miles away from the factory.

Sir Jehangir J. Ghandy, the Chairman of the company, in his address to the gathering feared that there might be a paucity of fireclay, particularly of high-alumina clay, required for manufacturing bricks used by the steel industries, because of the absence of further scope for increasing production from the existing quarries. Naturally, the authorities will have to "seek fresh woods and pastures new", and this necessarily calls for the extension of transport to the new quarrying centres. It can be reasonably anticipated that the lack of adequate transport facilities in the region will be made good within a short time, for Mr. Harekrishna Mahtab, the Chief Minister of Orissa, has, in his inaugural address, assured all possible help to the industries located in the State to accelerate its economic growth.

At a period when India is striving to accelerate the pace of industrialisation and to raise the standard of living of the people, the use of refractories forms a basic necessity as practically almost all the industries in the country require them. The Belpahar Refractories factory, one of India's biggest and most modern, it may be noted, is the second major Indo-German enterprise in the country's industrialisation. The new township of Belpahar, presents a picturesque sight in the hill-girt valley sandwiched by trees. At present, the factory provides employment for about 700 people. But it will not be inappropriate to expect that the plant would prove, in due course, to be the stepping stone for the further development of the State, leading to its wider economic growth

and offering greater employment to its people.

Paint Exports

Paint as providing a protective surface is an industry whose development has to keep pace with the industrialisation process itself. In this, India has been fortunate, although not all the raw materials are at hand within the country, that with a series of co-operative enterprises, mostly with manufacturers in the UK, output has gone up from a monthly average of 2,791 tons in 1951 to 4,000 tons in 1958; and, in the first eight months of 1959, the monthly average had further risen to 4,500 tons. But, as in other sectors of industry, paint at the present time is also intended to fetch foreign exchange earnings. On this aspect, Mr R. S. T. Cooke, Chairman of the Paint Federation, shed some light early this month.

Mr Cooke was able to report that "export results for 1959 show a vast improvement, so far as our members are concerned, some of whom have broken all their export records handsomely." The Paint Panel in the relevant Export Promotion Council has, according to Mr Cooke, been providing assistance that was "both valuable and timely." Thus, for example, the system of import duty drawback has been simplified, and import licences are granted in recognition of exports made. Unfortunately, while the intentions are good, the implementation of these measures is far from satisfactory. Mr Cooke points out that "Federation members are having considerable difficulty in realising claims for drawback of duty and obtaining import licences against exports done." It is true, as Mr Cooke has himself charitably recognised, these schemes were put into operation quite recently. Nevertheless, having regard to the fact that the Indian paint industry already suffers from its prices being too high in foreign markets, steps should be taken to recompense as expeditiously as possible the sacrifice in profit at which alone exports are possible and duty drawback and "incentive" import licences are in this regard the recompense.

Another subject that Mr Cooke has touched upon relates to the proposal that 10 per cent of production should be placed at the disposal of the State Trading Corporation for export. This is "an immense tonnage of paint", and Mr. Cooke considers it would be prudent to start with a more modest effort. Indeed, he has suggested that where the manufacturers are themselves, through normal trade channels, exporting substantial quantities, they should not be required to "contribute" to STC exports.

Shaw Wallace: Pioneers in Madras

In the private sector in Madras, three super-phosphate fertilizer factories would shortly be set up at Ennore (near Madras), Cuddalore, and Coimbatore. This was disclosed by the State's Food Minister, Mr. M. Bhaktavatsalam, while he was de-

claring open the extension of the super-phosphate factory of Messrs Shaw Wallace & Co at Avadi. The Company has also set up a new sulphuric acid plant at Kaduvetti, midway between Avadi and Poona-malle.

During the Second Plan, Madras State would have a shortfall of three lakh of tons in foodgrains as against the targeted 56 lakh tons. Mr Bhaktavatsalam stated that he nevertheless, aimed at 70 lakh tons of foodgrains as the Third Plan target.

Thanks to the efforts of the State, farmers were now keen to adopt suggestions to improve production. The initial reluctance to use chemical fertilizers had disappeared from among the ryots. At the end of the First Plan, Madras State was producing only 38 lakh tons of foodgrains. The fertilizer minded ryots do not find their demands adequately met; and, in this context, the Minister welcomed the efforts of the pioneers in this industry, Messrs Shaw Wallace.

The Madras Director of the firm Mr G. L. Oliver, stated that the sulphuric plant had an output capacity of 50/55 tons daily. The total production of the company stood at 75 tons daily at present and this would be utilised to manufacture 75,000 tons of superphosphates yearly. With the new plant, production capacity had been trebled. Very great efforts would be needed to attain the target of 25 million tons of foodgrains additionally planned. Nitrogen was mainly produced in the public sector; and only recently was the private sector invited to participate in erection of nitrogen and complex fertilizer plants. Potash had been imported from East and West Germany. India used 1.0, 0.1 and 0.074 pounds respectively of nitrogen, phosphoric acid and potash per acre whereas Japan used 112.3, 59 and 68.5 pounds respectively.

However, Mr Oliver pointed out that the per capita consumption of fertilizers in Southern India was the highest in India. The Company had seven fertilizer mixing works in South India, and stored superphosphate and fertilizer mixtures at 13 strategic centres. In 1959, the Company sold 28,000 tons of superphosphate fertilizers to the farmers, and 50,000 tons additionally of fertilizer mixtures.

Standards

One of the latest economy projects concerning the steel industry in the country, evolved by the Indian Standards Institute, is supposed to cut the cost by 20 per cent to 25 per cent in the structural engineering sector. Dr Lal C. Verman, Director of the Institute, in his presidential address to the 38th Mechanical Engineers' Association (India), gave some details about this project at Hyderabad last week.

He stated that the use of cold-formed sections made from strip was also being standardised, which could save up to 40 per cent in steel. Standards for welding equipment and accessories design codes for steel structure evolved by the Institute would permit more economy in steel

use. If all these standards and codes were widely implemented, an overall economy of some 20 per cent to 25 per cent in steel might be expected.

Regarding the adoption of the metric system, Dr Verman said that it would add ten per cent to the additional skilled manpower of our country. It was so because it would enable skilled engineers, designers and others dealing with figures to save ten per cent of the time they spent on their work. He was however, disappointed at the result of their persistent efforts in the task of propagating the formation of company level standardisation cells in all production units and in stimulating standardisation activity at the association level.

An attempted survey of the economy effected by the adoption of standards in India met with miserable failure, according to Dr Verman, since basic data-collecting agencies were practically non-existent—the rare exceptions being the railways, Tatas and certain public sector units.

National standards literature in the world today was estimated to contain almost 100,000 published standards. India had contributed over 1,400 standards already. As far as India's actual needs were concerned, this number merely represented the beginning. The size of the country and the complexities of its economic structure demanded several thousands more of additional standards. He confessed that the pattern of the rate of demand on ISI for new standards was such that, even if the present rate of 220 standards were tripled yearly, the ISI would still not be able to catch up with the national demand by the end of the Third Five Year Plan.

Mr Viswanathan on Coffee

Mr Tenneti Viswanathan, Chairman, Coffee Board, hopes that Indian coffee production could be easily augmented by increasing production of quality coffee in Andhra, Orissa and Assam. The possibility of growing coffee in Assam's hill terrain was long ago planned and actual cultivation of coffee in Assam was thought of being put on an experimental basis forthwith.

Mr Viswanathan told newsmen in Madras last week that, in Assam, 15,000 acres in border areas have been put under coffee. The land was suitable for coffee. Favourable conditions as to climate and other aspects were also to be found. But the process could not be quick.

The Chairman of the Coffee Board would like this scheme to be taken up with a view to increasing export of coffee. He wanted that 66 per cent of the coffee grown should be of the plantation variety, which is in demand for export. In his view, if this scheme was taken up within the next 6-8 years, India would be having a steady source of earning foreign exchange.

Naturally, the Coffee Board would help the schemes with seedlings, selection of suitable sites for coffee plantation and other research.

Mr Viswanathan stated that the 1959-60 Coffee yield was 46,000 tons. Of this, 17,000 tons were Plantation

variety. Exports amounted to 8,100 tons. West Germany was the major Indian Coffee importer. There are 32 other countries taking up high quality Indian Coffee.

Steel Supply in 1960

Reports emanating from New Delhi anticipate a reduction in imports of steel during 1960. Against nearly 800,000 tons of steel imported in 1959, the quantity of imports for which the Government propose to make arrangements placed at 600,000 tons. Imports from Soviet Russia will be reduced from 204,000 tons in 1959 to 100,000 tons. Even this lower volume of imports from Russia is contingent on the readiness of that country to supply the categories needed by India.

Considering that import of steel had been a major source of drain of foreign exchange, the savings should be appreciable. In 1956 and 1957, foreign exchange spent on steel imports was of the order of Rs 126 crores and Rs 137 crores respectively. Expenditure of foreign exchange had been considerably brought down in 1959 by drastic cuts imposed on imports. But this entailed short supplies for industries. However, coming as a sequel to the beginning of steel production in the public sector, the reduction in imports during 1960 will not involve restriction of supply. On the basis of anticipated production at 2.5 million tons, total supplies during 1960 have been estimated at 3.1 million tons. Against this, total availability during 1959 was only 2.6 million. Allowing for the 0.2 million reduction in imports, the increase in output works out to 0.7 million tons.

Further reductions in steel imports should follow the phased programme for expansion of steel production in the country. By 1963-64, when the three units in the public sector would have been completed, imports would be required only to meet the demand for special types of alloy and tool steel for which production facilities are yet to be created in the country.

A new feature associated with the development of indigenous steel making industry is the expansion in the exports of pig iron. Exports, which amounted to 50,000 tons in the last year, are consequent on the anticipated rise in production of pig iron, expected to be of the order of 350,000 tons in 1960.

35 Projects Operational

According to a press release issued by the Government of India, the total number of projects that went into operation during the first half of 1959, both in the public and private sectors, is thirty-five. Important projects that started production in the public sector were the Rourkela and Bhilai steel projects.

Seventeen existing units undertook new lines of manufacturing activity during this period, while thirty one undertakings completed their expansion programmes. 447 licenses were issued under the Industries Development and Regulation Act. Of these, 88 licenses were issued for the installation of new units, 121 for the expansion of the already established ones and 86 for the manufacture of new articles.

Production in several projects in the public sector recorded an upward trend, while that of Sindri Fertilisers and Nahan Foundry registered a slight decline. Industrial production in some units in the private sector also showed an increase, especially in the case of coal, steel, cement, chemicals and the like. However, production in some industries like cotton textiles, machine screws, matches and power transformers slightly declined.

From the Directorate-General of Supplies and Disposals, the National Small Industries Corporation secured 460 contracts for small undertakings for supplying stores to the Union Government. The NSIC also disposed of 637 machines worth Rs 55 lakhs under the Hire-Purchase Scheme. In addition to these, the Corporation accepted applications for the supply of 1192 machines valued at Rs 1.29 crores during the period under review.

Company News from Southern Region

The review of the working of the Companies Act, 1956 in the Southern Region, comprising Andhra Pradesh, Kerala, Mysore and Madras, reveals that 137 companies with an authorised capital of Rs 1735.83 lakhs were registered in that region during the quarter ending December 31, 1959. Out of these, 126 are private companies, 9 public companies and two are associations working not for profit. Transport services continue to form the largest group among the new registrations, accounting for 74 companies. The Greater Mysore Rayon Grade Pulp and Paper Mills Limited, with an authorised capital of Rs 10 crores, was registered in the State of Mysore. Two giant companies, one in the public sector and the other in the private sector, for the manufacture of insulated cables and sheet glasses respectively have been registered in Madras State. Two foreign companies registered in the Southern Region, during the period referred to, were the Aloka Limited and Friends Union Transport Private Limited, the former in Mysore State and the latter in Madras State.

32 companies including, two banking companies with a paid up capital of Rs 17.52 lakhs went into liquidation during the period, while 88 companies were removed as defunct from the Register of Companies. Madras Chemical & Pharmaceuticals Limited shifted its registered office from Madras to Mysore, while Bombay Cycle &

Motor Agency of Secunderabad Limited transferred its registered office from Bombay to Andhra.

154 prosecutions were launched against certain companies along with their officers for not convening Annual General Meetings, for failure to file Annual Reports and Balance Sheets and other charges. Out of the 85 cases disposed, 80 accused were convicted and the rest were found not guilty.

UK Export Outlook

The GEC Export Guide for October 1959 gives a graphical representation of the import trends for various countries with particular reference to the outlook for British exports. 36 items, mainly manufactured articles, have been selected for determining the import trend.

So far as India is concerned, 15 items are shown to have registered a decline in imports, 13 items a rise in imports, while imports in respect of the balance of 8 items are shown to be stable. The 15 items which have shown a fall include drugs and medicines, perfumery and toiletries woollen and worsted fabrics, cotton yarn, clothing and footwear, synthetic fabrics, office machinery, iron and steel

bars and rods, implements and tools tractors, mechanical handling equipment, excavators transformers and switchgears, electric cables and wires, and cycles. The fall in respect of 13 of these items is shown to be but the continuation of the trend in the previous year.

The 13 items which are shown to have recorded an increase in imports include chemicals, chemical elements, cotton fabrics, synthetic yarns iron and steel tubes and sheets, iron and steel tubes and pipes, agricultural machinery, telegraph and telephone equipment, scientific and photographic goods, railway vehicles, cars, paints and pigments, and commercial vehicles. The rise in imports recorded by 12 out of these 13 items is shown to be new.

So far as imports from UK are concerned, 13 items have registered a fall, 12 items have shown a rise, while imports in respect of the balance of 11 items are stable. For the most part, these reflect previous trends, new losses and gains having occurred only in respect of 5 items. There is also no definite relation between those articles in respect of which Britain has gained. Out of the 13 articles which show a rise in imports, rise in British exports is recorded only

May we help you
to export your goods?

TODAY, the word "Export" is very much in the air. But you need full details of your market before you can take any risk. Perhaps, our branches in Bangkok, Colombo, Hong Kong, Ipoh, Klang, Kuala Lumpur, Malacca, Rangoon and Singapore may be in a position to assist you. Why not look us up?

for 5. The outlook for British exports to India is described as bad.

Typewriter Production

India should reckon it its fortune that, in the development of industries requiring specialised knowledge and skill, foreign private firms have shown a commendable readiness to help both with capital and technical know-how. Typewriter manufacture is one such industry in which the collaboration of Swedish AB Atvidabergs Industrier, (better known as the Facit Group) with the Rayala Corporation (Private) Limited has enabled the country to make rapid strides in production. Started in 1956, the Halda Typewriter factory at Guindy near Madras has advanced to the stage of manufacturing nearly 80 per cent of the component parts. By the end of this year, the figure for indigenous parts is expected to go up to 83 per cent. A simultaneous rise in the number of machines to more than 12,000 units from the present output of 3,500 units per annum is also planned. The factory is already in possession of most of the machinery, tools and jigs and the manufacturing programme is scheduled for completion in December 1960. The factory is producing typewriters with English, Tamil and Hindi keyboards.

The importance of stepping up typewriter production cannot be overemphasised in the context of what Mr Gunnar Ericsson, Managing Director of the collaborating Swedish firm, characterised as the "tremendous market for typewriters in India". A rapid rise in demand should follow further industrialisation and the expansion of the tertiary sector. Though present production is pitifully inadequate, that there should be no cause for concern was the view expressed by Mr Ericsson in the course of a press conference. He declared that his firm would go all out toward helping the factory in meeting the swiftly growing demand for typewriters in the country.

Longer Goods Trains

The decision of the Railway Board to introduce long goods trains possessing fifty per cent greater capacity than the ordinary ones to ease the mounting pressure of freight in the eastern region generally and on the lines feeding the steel plants particularly will be welcome news to all concerned. Preparations are already being made to meet the increasing demand for longer and heavier goods trains. Orders have been issued for 1,000 new design wagons with a capacity of 65 tons. A good number of them have been delivered and are utilised for transport of ore. For the transport of coal, a fifty-five ton capacity wagon has been designed and about 6,000 wagons of this type will be made by the end of the

current Plan. Electric traction is being introduced in a number of sections where heavy trains are being run. Where the electrification schemes are not yet completed, powerful diesel locomotives are being operated.

The advantages of introducing longer and heavier goods trains need hardly be emphasised when the increasing freight pressure has already caused a headache to the authorities and hardships to the public. The introduction of such goods trains to other parts of the country will be beneficial to all.

Alind

The Aluminium Industries Limited, started at Kundera, in Kerala State, with an initial capacity of 1,500 tons of aluminium conductors, is now the country's leading producer of electrical conductor—grade aluminium rods, (ACSR (aluminium conductors steel reinforced) and AAC (all aluminium conductors) and the full range of accessories and tools for electrical transmission and distribution lines. With the new plant in commission at Hirakud, the Alind's capacity will be 10,000 tons of aluminium rods and 13,000 tons of ACSR and AAC a year.

The Hirakud plant conceived, by Alind as a modest contribution to India's Second Five-Year Plan, is located within an ingots throw of Indian Aluminium Company, Limited. The rod mill of the new plant, possessing a capacity of 4,000 to 6,000 tons a year, by employing the continuous casting and rolling process eliminates the conventional process of billet casting and pre-heating.

The wire mill of the plant consists of a tandem wire drawing equipment capable of a drawing speed of over 4,000 feet a minute and several high-speed, tubular stranding capable of drawing up to 37 strand conductors. The machine also incorporate an electrically heated coating arrangement for grease-coating of the steel core for corrosion proofing.

The Alind has already produced 175,000 miles of aluminium conductor, which helped the country to save about Rs 5 crores in foreign exchange, and it can be reasonably anticipated that, with the inauguration of the new plant, the foreign exchange savings in this direction will be greater.

Blue Star Engineering

Blue Star Engineering Company, Limited, is now a leading supplier of the country's electronic and testing instruments. The association of the company with the Dia Elektrotechnik, expert manufacturers of electronic measuring and testing instruments in the German Democratic Republic, has enabled it to import these high quality instruments which are in great demand in our polytechnical and educational institutions. In exchange for these goods, East Germany will purchase from India goods specified in a special Trade Agreement between the two Governments. Considering that these instruments are obtained on the basis of a barter deal, the country stands to gain in two counts.

Indian Finance

First of all, it eliminates the problem of foreign exchange which could be considered as an important advantage in the present context of foreign exchange shortage. Secondly, it creates an outlet for Indian goods which could be taken advantage of to step up Indian exports to East Germany. It is also gratifying to point out, in this connection, that the company is considering the manufacture of some of these instruments in India in collaboration with German firms.

Business Briefs

PAPER

The first paper mill in the Madras State will be installed in the private sector at a cost of about Rs 5 crores within a short period. The plant, which is the direct result of the joint collaboration of a local company and a leading American paper manufacturing firm, will engage in the production of quality writing paper out of bagasse and bamboo. The daily output of the mill will be over 50 tons. The exact site of the mill and the details of the project and the company will be announced shortly. The State Government have also offered financial assistance to the local company to the extent of about a fifth of the total capital, while the American firm will purchase shares to the value of a seventh of the total. The possibilities of producing paper from wattle and blue gum are also being discussed by those concerned.

Arrangements have been finalised for the setting up of six paper mills in the State of Bihar, and the Government of India have already issued the necessary licenses. These mills will produce paper out of sugarcane bagasse which is available in plenty in the State. Out of the six mills, one big unit with a production capacity of 100 tons a day will likely be located in Darbhanga. The remaining five factories, all small units with a capacity of 10 tons a day, will be located in different cane-growing centres of the State.

METAL ROLLING

According to reliable information received, a metal rolling mill with a production capacity of about 30,000 tons of rolled goods per annum will be constructed in Agra during this year. The mill, as revealed by the Polish News Agency, will be delivered to India by the Polish Government. The delivery of the machinery will commence in the second quarter of the year and the assembling of the plant will be carried out under expert supervision of the Polish engineers.

PHYTO-CHEMICAL

The Government of India have decided to establish a phyto-chemical plant in the private sector in Kerala with Soviet aid. Under an Indo-Soviet technical aid and co-operation agreement, the USSR will provide the machinery and

technical know-how while the Government will meet the other expenses. The authorities have tentatively selected Neriamangalam as the ideal site for the location of the plant. The plant is designed to produce caffeine from tea waste and other drugs from medicinal herbs available abundantly in the forest regions in and around Neriamangalam. Apart from manufacturing medicines, the plant will provide employment for 1,200 persons.

DRUGS

A gigantic scheme at a cost of Rs 8.5 crores based on Indo-Soviet collaboration for manufacturing drugs, antibiotics, synthetic drugs and glandular preparations will be launched in the country by the end of 1963. The selection of favourable sites for the installation of the proposed plants will be made by the Soviet delegation of pharmaceutical experts who are now conducting an extensive tour all over the country. Mr Valashchek, a member of the delegation, has, at a press conference held at Madras, stated that Rishikesh had been tentatively selected for the location of the antibiotics plant, a place in Hyderabad for manufacturing synthetic drugs, a site in Kerala for producing medicinal drugs and a spot in Bombay for the glandular plant. The exact location of sites would be finalised by the delegation only after discussion with the Union Health Ministry. The plant and equipment required for the implementation of the scheme will be supplied by Russia. The details for constructing a surgical instrument plant in Guindy in the Madras State at a cost of Rs 3 crores are also being worked out by four Soviet experts.

CHEMICAL INTERMEDIARIES

A plant for the manufacture of chemical intermediaries like sulphuric acid, oleum, nitric acid, aluminium chloride and caustic soda will be located in India under the agreement reached by the Government of India and four German firms, namely BASF, UHDE, Bayer and Hoechst, on January 6th 1960. The estimated total outlay of the plant is Rs 12 crores. The plant when completed will produce intermediaries worth approximately Rs 9 crores per annum. The German firms will render technical aid in the erection and working of the plant.

SYNTHETIC RUBBER

The Government of India have announced their decision to install in Hyderabad a synthetic rubber plant for manufacturing synthetic rubber in collaboration with the Soviet Union. The Soviet delegates touring India have selected the proposed site for locating the rubber factory. The exact nature of Soviet assistance and the details of the plant are not available.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It

early lead. Ironically, India provided the capital for the quickening of these impulses that was to impoverish it.

But now, the process has been reversed. The economists of today will have to concern themselves, in a pragmatic spirit, with the process of development rather than decay. The technological backsliding is to be replaced by one mighty concentrated effort of a big leap forward. The circle is complete even to the comparatively minor point of capital being pumped into the country from abroad as a sort of belated and vicarious amends for our impoverishment in the last century. The basic political change of independence has made it possible, for the first time, to bring about a change in the quality of the lives of our people.

Actually, to do this is, as it were, easier said than done. It is more than an economic task. On the face of it, there is no parallel to the complexity and combination of adverse factors that make our efforts seem so forlorn. "Nowhere else is there the same crushing load of numbers, a crumbling agricultural economy, a juxtaposition of the most modern and the most primitive industrial techniques, vast unemployment and underemployment, and a functioning of democracy in its most sophisticated form and planning under a federal structure." The full implications of this admirably summed up (by Mr Iengar) predicament would make us even more discouraged. For instance, the coexistence of different levels of technical efficiencies creates contradictions which cannot be solved in favour of the more efficient mode for entirely valid human and even economic reasons. If we were blindly to follow experience elsewhere, we may do it, but it is here that our sophisticated democratic values would interfere. It was easy to abandon democratic values in the interests of economic development. This will not necessarily solve the economic problems, but failure would be much less embarrassing, since one is not answerable to any one. Paradoxically, it is this readiness to submit to democratic scrutiny and to respect popular wishes that will provide the surest guarantee of our ultimate success.

For, herein resides the idealism that will give a sense of direction to our efforts.

There is another condition for success. That is the forthcoming, in necessary measure, of the self-discipline and idealism—the qualities that stood us in good stead in our political struggle. Mr Iengar drew pointed attention to this aspect of the matter in an eloquent passage: "The problem now, in the second half of the century, is to eliminate the enemy of hunger and poverty. That problem requires an even deeper degree of idealism and sense of sacrifice...". At the moment, there is far too much evidence of personal and sectional interests overriding national interests. Mr Iengar called attention to the extensive tax evasion and the mulcting of the consumer in a general atmosphere of shortage, and all too familiar political and sectional orientations of labour leadership and to State Governments which live parasitically on the Centre. In the crucial stage of development in which we find ourselves now, these anti-

Is Capital Shy?

I may as well answer the question that I have set myself in the headline, before I proceed with this article. An emphatic no it is, for, the new issue market is booming in a manner that we have not, perhaps, witnessed since the years immediately following the end of the Second World War. Rights issues, or new issues, there seems to be an insatiable appetite on the part of the investor. Quite often, it is clear that the company thus floating new capital will be unable to yield a return to the shareholder in the near term future. But the investor's attitude is: "Not to worry." Clearly, the investing breed of the present day is not so much interested in dividends and yields and such other "mundane" matters. Of much more import for him is whether there is a reasonable chance of capital appreciation. He is quite prepared to wait for three years, or four years, or five years, or even more. Such de-emphasis on yield and this kind of stress on growth is easily explained. The tax system today is such that the investor, if he is having any sort of income at all, stands to pay a fair whacking cut on his dividend in the form of income and super-taxes. So, he attaches very little importance to his current or running yield.

On the other hand, in respect of capital appreciation, he is still mercifully lightly let off as to the tax burden. This, of course, is a gambit that is being practised in every country in which the high income earner is hard hit by the higher reaches of income-tax. In India, we have the queer manifestation of even the "average" investor—if there be such breed of animal—scoffing at running yield and having his eye on the main chance of capital growth.

No, the spate of new issues shows that capital is not shy. Nor, so far as the evidence of 1958 is concerned, are companies finding it difficult to put through their expansion programmes. Such a conclusion can be inferred from a note in the latest issue of the Reserve Bank of India Bulletin; a study has herein been made of capital formation in 775 public limited companies which closed their accounts during the twelve months ended June 1959. This roster of companies, may it be noted, represents 83 per cent of the sample of 1001 public limited companies whose accounts are periodically assessed by the Reserve Bank. And the categorical assertion can now be made that, at least in 1958, public limited companies found the money for new assets quite easily.

The balance-sheet total of these 775 companies has risen by almost exactly Rs 100 crores. As much

as a quarter of this has been in the form of paid-up capital; another Rs 14 crores are accounted by free reserves and surplus; borrowings mark a steep rise of Rs 37 crores; and an element of Rs 19 crores relates to increase in trade dues and other current liabilities; all these are on the liabilities side of the consolidated balance-sheet. As far as assets are concerned, the additions to gross fixed assets are in the considerable amount of Rs 125 crores; stocks and stores are placed Rs 4 crores higher; receivables mark a rise of Rs 9 crores; cash balances have improved by Rs 4 crores; and, significantly, advance of tax shows a reduction of Rs 3 crores.

The largest element in gross fixed assets formation is represented by plant and machinery, additions to which accounted for 54 per cent of the total of Rs 125 crores. This money was found as to Rs 18 crores by new capital sought and obtained from the market; as to Rs 37 crores by borrowings; as to Rs 21 crores from free reserves and surplus; and depreciation amounted to Rs 40 crores.

But, though capital raised from the public is not inconsiderable, ploughing back of profits constituted the most important avenue of resources. The Reserve Bank Bulletin says, in this context:

"Internal sources of these 775 companies at Rs 65 crores constituted 46 per cent of the total

funds as against 28 per cent and 37 per cent for 1001 companies during 1957 and 1958, respectively. Amongst the internal sources, depreciation reserves were by far the most important item, accounting for 29 per cent of total funds."

What was the situation in 1959? All I can do is to essay a guess. By all accounts, the implicitly higher tax rate on companies postulated by the 45 per cent fixed for advance payment of tax will have left a smaller surplus with companies for being ploughed back. But, then, there is no reason to believe that the most important constituent of internal resources, depreciation, will have shown any decline. On the other hand, the new issues market has, as any investor can tell you, been extraordinarily active. So, capital formation during 1959 should be some improvement on the figures for 1958.

So, it seems to me that the present healthy and invigorating climate in the investment market is due to the investor's greater interest in capital appreciation and consequently in his bidding keenly for the new issues which have prospects of growth. I am only hoping that the Finance Minister will not unsettle the kind of investment climate we have today, by thinking up a hike in the taxation of capital gains. For, if there is one thing that offsets the high rates of personal taxation, it is the

hope of much lower taxed capital gains.

Meantime, here in Bombay, the rumour is going the rounds that one concession that the Budget will undoubtedly prove to have is the reduction of the rate of taxation of bonus issues. The reasoning is that, at today's rates, no bonus issues are being made. And what use is a high rate, if, with no capitalisation of reserves, Government do not benefit by way of revenues? It remains to be seen whether the Budget prophets in this regard will be proved right in their predictions.

COMBINED BALANCE-SHEETS OF 775 SELECTED PUBLIC LIMITED COMPANIES—1957 AND 1958.

	(In Lakhs of Rs)	1957	1958

*Data relate to 776 companies of which two were merged in 1958. (Source: Reserve Bank of India Bulletin).

The other question of purely economic interest that Mr Lengua touched was the relationship between developmental effort and stability of currency. In this connection, he referred to the "almost continuous rise in the cost of living which had obscured the real gains that had simultaneously taken place in productive capacity and output during the Second Plan period." Mr Lengua said that a certain degree of inflationary pressure is unavoidable in a period of rapid development. Indeed, inflation can be an useful adjunct to productivity. But the price situation during the Second Plan period has certain peculiarities which make them unamenable to facile generalisations. Certainly, they make nonsense of blanket remedies like devaluation of the rupee and monetary techniques like increase in bank rate. The fact is that price increases have been local, and sectional, and have shown erratic trends throughout this period. Shortages have been followed, as in the case of cement, by periods of glut. Time was when people were talking starchy-eyed of export earnings from sugar; but, today, it has had to be rationed (and a pitifully small ration, at that) in Calcutta. Foodgrains prices present the paradoxical picture of increase in a year of record production.

Certain basic things need restating, since they seem to be missed even by people who ought to know better. The real answer to inflation

is more production; and in trying to inhibit investment by blanket monetary remedies, one would be merely hampering production. This remedy is worse than the disease. By all means, let us employ the technique of selective monetary control in sectors, areas and periods when such controls would frustrate speculative manipulations. But, for the rest, there is no other way of producing a greater volume of goods than greater work. The problem is really administrative and organisational. As I pointed out in these columns, in last week's Gossip, if there were greater coordination, less wasteful deployment of energy and a rigorous sense of priority in administrative and organisational tasks connected with agriculture, better utilisation of available resources, production (and productivity) would increase and bring the problem of prices to manageable proportions.

Of the other participants in the symposium, Professor Shenoy was quite unimpressed with the achievements of planning, and he was of the view that there was no midway between what he called the "communist way" and the "competitive way". He was dire in his predictions of the consequences of following the present policies. It is difficult to argue with such a catastrophic "either-or" attitude. With scarce resources, a "free market economy"—if such can exist today anywhere in the world—

would lead to a complete distortion of priorities of allocation. One can understand an argument about relative priorities, but, to say that an ordering of such priority should be left to competition, is to ignore realities. That agriculture must have priority is conceded by Professor Shenoy himself. Many will agree with him that Government are not setting about it the right way in dealing with agricultural production. There is room for argument also about the precise shape which industrial investment should take. But, to say (in effect) that heavy industry must wait its turn after, say, television sets (for which, surely, there will be enough of an immediate market to make it worth an entrepreneur's while) is to ignore, or be ignorant about, the real needs of the country.

A Correspondent in Madras has interesting news to give about waste paper. It seems a contrast to conditions in the paper trade (in which profiteering is the result of scarcity and only confusion has been produced by the official revision of ex-mill prices and profit margins) is now provided by the slump noted in the waste paper trade. The protection afforded to local waste paper by the ban on imports, and much earlier by a very stiff import duty, helped the producers of newspapers to build up a useful sideline through the sale of unsold copies, though the Press Commission hinted discreetly, in view of guaranteed imports at low prices,

that much newsprint was converted directly into brand-new waste in order to take advantage of the chronic scarcity of packing material in India. But there has been a great change since January and, in Madras, the buyers of waste paper have even notified that they cannot take more.

The enlarged supply may really be due to the rise in circulation of existing newspapers, while the use of heavier Nepa newsprint has conferred some advantages on the small seller. It may also be assumed that the bumper supplements of the dailies have augmented the local output of waste paper, and prices in this case have gone down sharply, to judge by the rates given for kirana and chemicals, though waste newspapers are neither spices nor chemicals. The sharp rise in stocks of old newspapers may also be due to the advent of more kraft paper displacing old newspapers steadily and the increasing preference for transparent paper to make parcels attractive. However, for domestic ignition, newspapers still have no rival. But newspaper readers confront a sharp fall in net income through the regular sale of newspapers and many will conclude that their dividends, too, are now taxable, and they cannot get back a good part of the prepaid subscription by the quick sale of a month's accumulated papers. But it may be added that there are no metric weights in the business yet, and the chain of intermediaries is still unbroken.

Import and Export Problems

THE import control policy for the licensing period, April-September 1960, is now in the process of evolution. One stage in that process has just ended with the Commerce & Industry Minister reviewing import trends and problems and the members of the Import Advisory Council advancing suggestions for consideration before the final announcement of policy is made. As usual, the Minister has emphasised the need for continued austerity in respect of consumer goods imports and for selective imports of machinery and industrial raw materials and the representatives of trade and industry have pleaded for the liberalisation of import of a whole range of items. Whether or not there will be a casual connection between the Advisory Council's "advice" and the import licensing policy to be announced, the meeting itself is more than a mere ritual because the Commerce Minister's speech provides the clue to the official policy in the making.

At the latest meeting, Mr Lal Bahadur Shastri has indicated that in the coming years there might be some increase in the total import bill mostly on account of industrial raw materials and, possibly, of machinery and that "various kinds of end products and consumer goods must be curtailed as far as possible." That the new import policy will be designed to facilitate the inflow of somewhat more industrial raw materials could be

inferred from the following passage in the Minister's speech:

"If we analyse the structure of our import trade during the calendar years 1958 and 1959 (on the basis of 10 months figures), we notice that the percentage of imports devoted to the importation of capital goods has gone down from 18.2 per cent in 1958 to 14.5 per cent during 1959. On the other hand, the percentage of industrial goods has risen from 55.1 per cent to 61.8 per cent. This is a trend which may in fact be regarded as the index of our industrial development. As industry develops, a higher and higher proportion of imports is bound to be devoted to the importation of the raw materials of industry."

In view of all this, the trend of deficit on trade account—now estimated at Rs 243 crores during the calendar year 1959—may be expected to continue at about the same level in 1960 also. This will be so because an increase in the total value of imports is expected. And it will be so in spite of a possible increase in the value of exports which have shown an upward trend during 1959, having been Rs 626 crores that year as against Rs 568 crores in 1958. In the circumstances, there is no likelihood of imports of raw materials like art silk yarn, wool tops and raw jute and of other industrial goods like spare parts, steel and non-ferrous metals being liberalised to the extent desired by industrial representatives. In particular, the suggestion put forward by the FICCI representative that the raw material requirements of industries should be fully met so as to avoid idle capacities is least likely to be accepted because the existence of idle capacities is

often due to such factors as the time-lag between installation of capacity and its staggered utilisation, the shortage if any, of working capital, the fall in demand for particular products, the reluctance of some industries to utilise substitute indigenous raw materials, etc. Perhaps, more industrial imports might be possible if the institution of "rupee account" were popularised to cover a part of the imports from West European countries, as suggested by one member of the Import-Advisory Council. This, incidentally, may give some fillip to the country's exports.

Mr Lal Bahadur Shastri himself has listed the items of goods which have been really in short supply. These are pig iron and steel, non-ferrous metals, art silk yarn and wool tops and paper. Although the Minister has admitted the shortages in these items, he has also described the present state of affairs. According to him, there is now no shortage of pig iron; the steel shortage will ease rapidly as the new steel plants go into production; as for non-ferrous metals, it might be necessary to increase the import of zinc only; as for art silk yarn and wool tops, the present difficulties are more on the score of sharing of raw materials by powerlooms and mills in the former case and by spinning mills and hosiery units in the latter; and, as for paper, there is definitely some need for importing a larger quantity. While thus the relative shortages in terms of supply are now expected to be eased in some lines, they are likely to persist in terms of prices in the case of items like paper, mercury and many other chemicals, non-ferrous metals, motor starters and motor vehicle parts. The importers have, therefore, been rightly warned that if they continue to put up prices, the Government will have to canalise imports of some of those items through the State Trading Corporation.

At the Export Promotion Advisory Council meeting, the Minister for Commerce and Industry has laid down a target of Rs 700 crores' worth of export trade for 1961. This represents an increase of Rs 75 crores over the value of exports in 1959. What is visualised for 1960 is an increase of only Rs 50 crores in export earnings. This is by no means an ambitious expectation. Here, there are some hopeful trends. One such factor is that credit agreements, seeking to integrate trade with aid by providing for repayments to be effected by way of increased sales of Indian products, have been recently concluded with the Soviet Union and Czechoslovakia. Another hopeful trend is in respect of some items of export.

Export of oil cakes in the first 11 months of 1959 has been valued at Rs 16.6 crores as against Rs 6.1 crores in the corresponding period of 1958.

The value of export of tanned leather during the whole of 1959 has been Rs 28.7 crores as

against Rs 18.2 crores in 1958. The value of cotton piece goods exports in 1959 has registered an increase of Rs 15.3 crores over the level of 1958.

There has been an increase of about Rs 16 crores in the value of exports of jute manufactures in 1959 as compared to 1958 and this is in spite of lower prices obtained for gunny bags.

Export of iron and steel scrap at Rs 4 crores in 1959 has recorded an increase of nearly Rs 3 crores.

Pig iron, which is a new item of export, has earned over a crore of rupees in 1959.

Cement, another comparatively new item of export, has earned Rs 1 crore during 1959.

In highlighting these particular export increases during the calendar year 1959, the Commerce and Industry Minister has also indicated that the prospects for increased exports of tea and jute goods are bright. In his view, it should be possible for the engineering industries to export as much as Rs 17 crores' worth of goods in 1960 and Rs 24 crores' worth in 1961 as against Rs 6 crores' worth in 1959. With the STC's hopeful performance in the field of iron ore exports, it is possible that earnings from this source also will go up in 1960 and 1961. All in all, an increase of Rs 50 crores in export earnings in 1960 as compared to 1959 seems to be a reasonable expectation.

The Export Advisory Council's meeting has also advanced some suggestions for promoting exports. Apart from the usual suggestion that wages should be linked to productivity, a new one is that an exporters' association be formed to press for a reduction in shipping freight from conference lines so as to promote exports. This latter suggestion has been strenuously opposed by the representatives of shipping companies. The Textile Wage Board's recommendations have been opposed on the ground that any increase in wage costs would adversely affect the fortunes of an export industry like the textile. On the same ground, the Wage Board to be set up for the jute industry is urged to keep the export market in mind and not to increase the wage costs in that industry.

These and other suggestions have been made on familiar lines. The wage question and the tax question do, of course, compel consideration in the context of export promotion. But they are issues with a larger policy import and, as such, will only be raised periodically without being really solved. Perhaps, it may not be quite so difficult to effect economies in industrial costs in other lines and in other ways without prejudice to the interests of labour or to those of Government. Since, however, such costs reductions may not also be easy, the modest character of the export target laid down by the Commerce Minister becomes understandable.

February 20, 1960

THE PENINSULA

Appalling Waste in Leather

Inaugurating a three-day symposium organised by the Central Leather Research Institute at Madras, Professor M. S. Thacker, Director-General, Council of Scientific and Industrial Research, lamented the waste arising in industry. Mr Thacker was provoked to comment on this matter by the huge amount of waste occurring in the leather industry. At Rs 35 crores, the value of waste in the leather industry was, he pointed out, as much as the leather industry itself was worth.

Such wastage, however, is not confined to the leather industry alone, but was part of a general pattern that was running through almost every industry. In the manufacture of gur and khandasri, for example, because of the hand-driven methods in use, there is a large amount of waste of both sucrose and molasses, the two most important elements in sugarcane. Similarly, in the utilisation of cotton seed as food for cattle, waste arises in as much as cotton seed provides a basic raw material for the vegetable oil industry. In agriculture, waste is even more colossal.

Mr R. Venkataraman, the Madras Minister for Industries and Labour, considered it a strange contradiction that there should be more waste in the poorer countries than in the advanced countries of the world. It should be obvious that rampant waste itself is a basic cause for backwardness, while it is of the very character of industrial progress that processing and manufacturing are perfected to a point where very little is left as waste. Mr Venkataraman sought to bring home the need for avoiding waste not only in terms of the additional national wealth which proper use of resources represents, but also in terms of the high cost of production which waste in industry involves. Elimination of waste is an essential concomitant of industrial progress and therefore should form part of the basic objective of industrial policy in underdeveloped countries.

For retrieving wealth that is wasted, science and technology have to be harnessed to production. Mr Thacker's appeal that the tanning industry should come "nearer to science and scientific research" should have relevance to almost every other industry. It cannot be denied that the use made of science and scientific methods in solving industrial problems is still small. For this, the meagreness of facilities for research is itself one reason. The lack of proper facilities is further accentuated by the delay in translating the methods found out by science. In the absence of prompt application, research itself tends to become wasteful. Professor Thacker was somewhat eager to defend the research and scientific institutions of

the country against the charge of barren work, and observed that there was no laboratory in the world which produced some results and which could immediately be translated in the industrial field. It had to undergo a lot of "teething troubles." The association of industry in scientific and technological research should be the best means of ensuring prompt application of scientific methods to industrial production. Indian industrialists have to be persuaded to shed their apathy and indifference to encouragement of scientific research.

The problem of eliminating waste has to be taken up simultaneously in both agriculture and industry. So far as agriculture is concerned, it was revealed by Mr Thacker that a committee constituted jointly by the Union Ministry of Food and Agriculture and the Council of Scientific and Industrial Research is considering the problem. The Committee is also disclosed to have submitted a report in this connection. It is to be hoped that useful work would be started on the basis of the findings of the Committee.

Eliminating industrial waste has on

the other hand, to be taken up industry-wide. Considering that most rampant waste occurs in the non-utilisation of by-products, the starting of industries to process industrial by-products should be the obvious means to waste elimination. Even in the manufacture of main product, waste is possible if production is based on techniques which could not be justified on scientific and technological grounds. Further, research has also to be intensified to explore new avenues to waste elimination. This can be done only on the basis of separate research institutes for each industry.

In the leather industry, the Central Leather Research Institute, though it has only a short past, has been doing excellent work in connection with improved methods of tanning and other aspects of leather manufacture. Mr Thacker indicated a measure of the progress which leather research has made when he pointed out that the whole carcass and every part of it could be utilised to manufacture something useful. In the circumstances, that there should be waste of the order of Rs 35 crores is appalling.

Appropriate measures have to be set on a foot to recover as much of this waste as possible. In the leather industry, the problem is aggravated by the fact that it operates on the basis of small-scale production scattered throughout the country. To carry the scientific techniques to every unit of production would involve formidable work. A promising beginning could be made on the basis of pilot projects in selected areas where there are concentrations of units of the leather industry. Agra, Kanpur, Madras, Calcutta and Bombay are the centres which would qualify on this consideration as areas for initiating the work of improvement. The initiative of the Madras Government in opening up training centres to impart education to tanners as to the best methods of flying, finishing and the manufacture of leather is to be commended to the attention of the other State Governments. Utilisation of tannery by-products has also to make considerable headway. Service centres to demonstrate successful utilisation of such by-products is essential.

The binding choli

She's busy from morn till dusk, every single day. And added to the seemingly endless daily chores is the constant nagging discomfort of her clothes. Her movements are restricted by a newly-made choli which has shrunk after washing!

If only her friendly neighbour would tell her to always look for the label 'Sanforized' on every yard of cotton cloth she buys.

Look for
SANFORIZED
on the label
and your clothes will never
shrink out of fit!

Owned by Chert, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietor of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements. For information: 'Sanforized' Service, 95, Marine Drive, Bombay-2.

"No debts No worry"

That's an unusual statement, Bhai Sahib — tell me what you mean.

Simply this, my friend, that Brooke Bond do not allow credit to any dealer. Shopkeepers pay cash for the tea when it is delivered to them.

That's all very well for Brooke Bond, but how do the shopkeepers react to it?

They like it! Don't you see? Since he has to pay cash the shopkeeper is very careful about the quantity of tea he buys at any time. He knows that stocking more tea than he can sell quickly will only tie up his money. And for the small trader cash payment means that he has no debts to worry about ... he is absolutely free to buy what he likes on every visit.

Yes, I can see the advantages of the system, but surely it makes life a little more difficult for Brooke Bond. I imagine each shopkeeper's stock has to be replenished frequently.

Yes, it does! And that is the secret of Brooke Bond's success. Getting supplies out to retailers at least once a week, and in many cases more often, means that the tea never goes stale on the dealer's shelves. That's why the customer always gets Brooke Bond Tea in factory-fresh condition. And because Brooke Bond are continually expanding their service of distribution more and more shopkeepers all over the country are demanding Brooke Bond Tea — fresh and good.

Brooke Bond India Private Limited

WORLD OF JUTE

Significance of Raw Jute Firmness

THE week's news is the firmness in raw jute prices, especially in the futures market, wherein operators have decided that the prospect is for perhaps an inadequate supply of the raw material over the rest of the current jute year. So it was that the report of a sizable decline in US burlap consumption, lower by some 9 million yards at 71 million yards, was not allowed to dampen enthusiasm unduly; but then, in this respect, it needs also to be noted that the fall in US consumption was simultaneously attended by a decline of almost corresponding dimensions in US stocks. Again, the conspicuous lack of overseas enquiry did not perceptibly depress jute goods prices, the main consideration being the steadiness in raw jute, which consequently lent strength to the manufactured section. Last of all, much was made of a reported fire in Narayanganj in which, the information goes, some Rs 2 lakhs of raw jute went up in smoke.

To what extent are these apprehensions of possible scarcity justifiable? How are such views affecting jute goods values, what will be the end result? Is there any significance to be attached to the present condition of the raw jute market?
