My view continues to be that, as on many previous occasions, the jute interests succumb too easily to an alarmist attitude. I may add here that the market reasoning is that the Narayanganj fire—which might have reduced jute supplies by the magnificent figure of 1500 bales!—will reduce automatically the quantity of raw jute that Indian might be able to import from Pakistan. Surely, the present situation is in no whit changed from recent assessments: the balance between supply and demand will be close, but supply will not far so short as to justify any considerable impetus being given to raw jute prices.

It is unfortunate that raw jute firmness is being sympathetically reflected in the goods section. These are not light factors: a rise in stocks in India, despite lower production; a near absence of business done with overseas customers; and a reduced level of US consumption. The outlook may well be that, between now and, say, end of August—the period that is the slack season for jute

goods—there will be an element of over-production. So, prices in the goods section should, be such as to attract purchase orders; whereas the reverse is true of the market today.

What is more, the impact of current firm raw jute prices—and this is in the nature of a silver lining—on the next jute crop will be such as to bring about a sharp reduction in values around by the end of July. For, sowings will be heavy; Pakistan has lifted restrictions on acreage; and, unless the weather proves viciously inimical, the outlook is for the next raw jute crop to be bumper and bountiful.

Raw jute prices will noticeably decline, at the stage; and jute goods will "move" in "sympathy."

But the trouble is, and the trouble will last for another four months, there is a precarious balance between supply and demand in raw jute; and such a

state of affairs is just what the doctor ordered for speculative elements in the raw jute and jute goods markets.

Meantime, however, I hope that a rising trend in jute goods stocks will exert a downward pressure on prices; though, February being a short working month, it may well happen, at the end of the month, that stocks will somewhat have been eaten into. *

Prices of Jute Goods remained generally steady due to renewed speculative activity in the futures market, being mainly influenced by higher advices from the raw jute section. The confirmation of the news with regard to the purchases of Heavy Cees (Green) by Japan for March delivery was also a contributory factor. Even the news of the substantial drop of 9 million yards in US burlap consumption in January had little effect on sentiment as it was felt

that, with falling stocks, the US interest would develop soon. Taking advantage of the situation, mills were reported to have sold sparingly at higher levels.

Following were the price trends during the week:

WORLD OF TEA

Earlier End to Indian Tea Sales in London?

ACCORDING to trade sources, shipments of teas for sale through the London auctions, up to November last, totalled 127½ million pounds, which was nearly 2 million pounds less than the figure for the same period of last year. Shipments being generally ahead of the previous year, there was very little tea left in Calcutta for direct export to the United Kingdom.

In view of this, direct exports this year are not likely to exceed those of last year. The final sales of Indian teas in London will end at least a month ahead, provided offerings continue as hitherto.

Taking into account the balance of teas still left with the brokers in Calcutta, it is considered certain that Leaf tea sales will be completed by the end of March, while Dust sales are expected to end before the close of May, ensuing that there will be no overlap with dusts into the new season as had been the case in recent years.

Discussing the end-season prospects at the Calcutta sales, trade sources have stated that, during the final sales of the season, exportable teas form always a smaller proportion. This being so, offerings at the present scale, in the face of limited export demand, may perhaps be more than what local buyers can readily absorb. Should, however, overseas buyers, particularly those from the UK, be attracted again in the coming weeks to this market on grounds of the prevailing price differential and possible shortage of tea, in London during the later months, the final sales of Leaf teas here can meet with very strong demand.

In this connection, a well-known tea brokers' firm, Carriff Morans, says "that, in view of considerable direct sales from gardens, particularly in Cachar, to upcountry destinations, it seems unlikely that the total quantity of tea to be offered for export on the Calcutta market will exceed appreciably, if at all, the 1958-59 total. On this assumption and taking into account the balance of teas remaining in brokers' hands in Calcutta, it appears certain that sales of Leaf teas in Calcutta will be completed by the end of March 1960. If demand does not slacken

further, it seems likely that Sale No. 36, which will probably be held during the week of March 14, may be the last main sale of the season with a clearing-up for two weeks. Sales of Dust teas are also likely to be completed before the end of May."

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 74,284 packages. There was a good but less general demand and prices were a little irregular and again in buyers' favour. Plain black teas were sold well and selected lines of Fannings were keenly sought after. Medium Assam BOPs and OFs of ordinary quality tended easier. The brighter liquoring sorts, particularly OFs, were sold readily at sometimes dearer rates.

There was a good enquiry for CTC teas. Low Medium and Medium sorts were often dearer; but the best were sometimes 5 nP to 10 nP easier. The more ordinary non-wither legg-cut teas were 2 nP to 4 nP easier; but any with bright autumnal liquors came in for keen competition. There was slightly less demand for Whole Leaf grades. While clean well-made teas showed little change, the more stalky kinds tended easier. There was a selective enquiry for Darjeeling teas. Following were the rates (per pound):—Clean Black Pekoe Rs

2.18 to Rs 2.22 Plain BP Rs 1.94 to Rs 1.98; Plain Fannings Rs 1.98 to Rs 2.08; Medium BP Rs 1.90 to Rs 1.96; Medium Fannings Rs 2.04 to Rs 2.16; Best Assam CTC BP Rs 2.40 to Rs 2.60 and Best Assam CTC Fannings Rs 2.45 to Rs 2.60.

In the Internal Sale, offerings consisted of 22,094 packages of Dusts. There was less demand for the grainy exportable types which were sold at from 4 nP to 8 nP per pound easier. Mixed powdery grades were also up to 6 nP easier and sometimes more. Legg-cut Dooars teas followed this trend. Darjeeling dusts were irregular and sometimes dearer. The few of the very best, in this category, were generally sold at about last rates. Following rates were quoted: Medium Dooars Dust Rs 2.22 to Rs 2.42; Medium Assam Dust Rs 2.16 to Rs 2.36; Medium Assam CTC Dust Rs 2.26 to Rs 2.36 and Best Assam CTC Dust Rs 2.55 to Rs 2.85. Also 1,056 packages of Leaf grades were offered for internal consumption and these were sold at irregular rates.

In the Colombo market, offerings were 7,477,646 pounds. Demand was strong and general with buyers closely following quality. Best liquoring BOPs were dearer, while better liquoring high-grown and brighter mediums were irregularly dearer. Other Broken were fully firm. Low-grown teas and Com-

mons also met with strong demand at slightly dearer rates.

It is understood that tea exports from Pakistan, for the next four months of the season, may totally be banned and price control may be imposed as a sequel to a sharp rise in internal prices following lifting of price control in November 7 last year. Earlier, the Pakistan Government had decided to curtail tea export quota of 20 million pounds in order to release an additional 2½ million pounds for internal consumption.

The general pattern of demand for the 66,026 packages of tea, catalogued for sale in Mincing Lane, recorded no significant change. Some of the better quality invoices tended to be dearer. The plainer sorts were inclined easier. Even so, the overall range of prices was unchanged at from 3sh 10d to 5sh 6d per pound. The top end of the range underlines the essential lack of quality teas.

Tea stocks in London, as on the 5th February, totalled 152.56 million pounds as against 146.03 million pounds in the previous week. Total afloat was 22.25 million pounds including from Calcutta 12.97 million pounds; from Chittagong 1.32 million pounds; from Ceylon 1.09 million pounds; from Ceylon 5.00 million pounds and from other Ports 1.86 million pounds.

Quality has its price, but it is economical in the long run.

You can be sure of quality and a smart turnout when you select your clothing material from among the wide range of long-lasting, sanforized cotton fabrics, manufactured by Shri Ambica Mills Ltd.

Sentiment Remains Bullish

THE cotton market in Bombay was highlighted by new peak levels in the nearby March contract following heavy short covering as the bulls, who were called upon to pay increased margins once the price pierced the Rs 770 mark, sat tight on their contracts. This maturing contract recorded a rise of more than Rs 20 during the week, and the price was taken up to Rs 683. Instead of starting business in the next term hedge contract, namely May delivery, the Board of the EICA decided to commence trading in August contract, to which the Forward Markets Commission gave their permission. Business in this contract started at a discount of Rs 23 at Rs 743 from the March contract, and this widened to as much as Rs 44 as some of the prominent bears were reported to be transferring their sales to the distant position. After rising to Rs 790 from Rs 762, March finished at Rs 787, while August moved between Rs 743 and Rs 748 before terminating at Rs 746. The general feeling is that, with considerably higher prices prevailing in the spot section, the market in futures for the March contract might reach the ceiling by the time the contract expires. Sentiment remains generally bullish in view of the dearth of good quality cotton, and, despite the efforts of the Government to liberalise their import policy, the textile industry is still faced with the difficulty of procuring the raw material at fair prices.

In the Ahmedabad market also, cotton prices have showed a steep rise during the past few days and, as such, the market was closed on Tuesday, February 16. The Forward Markets Commission increased with immediate effect the special margin payable by longs from Rs 25 per bale to Rs 75 per bale when the price of the April 1960 contract rules above Rs 800.50 per candy. The special margin payable by longs during the delivery period used to be Rs 200 per bale. The revised margins came into force when the market reopened on Wednesday.

The cotton supply position remains tight and, for the next eight to ten months, the situation is bound to create anxiety. It is to be seen whether the monsoon helps in augmenting production. The Cotton Advisory Board is due to meet on February 26 to review the cotton situation as it exists and, if

necessary, to devise further measures to bring the situation under proper control.

Spot Market:

The spot cotton market at Sewri has continued to manifest a firm tendency with mills showing interest in Laxmi, Western Farm, CO 2, Kalyan and Wagad. New crop Wagad, Kalyan and Kalagin are being sought after at upcountry centre and, as a result, the prices of these growths have advanced further. Good inquiry for Vijay and Digvijay was also reported, and business for March/April delivery was done at Rs 1025 and Rs 1065 respectively. Prices of Laxmi and Western Farm have gone up by more than Rs 20. Laxmi March/April came to business at Rs 1090 and Adoni Farm at Rs 935.

Among foreign growths, prices of Egyptian cotton have come down slightly, while those of Sudan are ruling higher. There was not much change in the prices of American and African varieties.

Helpful Measures:

Measures announced at the meeting of the Export Promotion Advisory Council on Sunday, February 14, to the effect that textile mills will be allowed to import cotton of any staple against their retention quotas and that the existing export incentive scheme for textiles would be extended with certain modifications have been welcomed by the textile industry. This will provide more choice in the purchase of foreign cotton by the spinners. As it is, the present export incentive scheme for cotton piecegoods was due to expire at the end of September 1960, and its extension would certainly prove helpful to boost exports.

Fresh Import Quota:

Following the deliberations of the Import Advisory Council at its meeting last week, the Government of India have announced a fresh import quota of 50,000 bales of not below 1 1/16" staple length from any country for meeting the requirements for spinning over 60s by the textile mills. The mills which have been issued allotment letters for the import of cotton stapling 1 3/16" and above might, however, import cotton stapling 1/16" if desired.

Excluding the above new quota, the import allocations issued so far during the present season aggregate 10.20 lakh bales. The quantity of foreign cotton licensed for import into India in the first five months of the current season amounts to 330,885 bales while the actual arrivals during the same period total 188,218 bales.

The variety-wise break-up of the quantity licensed and actual arrivals during the five month period (from 1-9-59 to 30-1-60)

are as follows:

Variety	(In Bales)	
	Quantity Licensed	Actual Arrivals*
Egyptian	124,996	75,200
Sudan	44,338	50,677
East Africans	57,351	28,775
USA	49,153	23,288
Others	53,047	12,258
Total	330,885	188,218

*This includes quantity licensed in the previous season.

Cloth Market:

After the recent dull phase, the cotton piecegoods market seems to have returned to steady conditions. The up-country demand is still far from satisfactory, but it seems that inquiries might broaden in the near future. The export position is little disquieting after the brisk business which passed some months back. With the high raw material prices, the competitive position of Indian textile goods has gone down, and it is wondered whether the export performance this year will be as encouraging as

in the past year. With the enhancement of 5 per cent on freight as from April 1, 1960, cloth prices are expected to move up.

New York Cotton:

The New York cotton market has continued to rule steady. The members of the Exchange have adopted a new contract for the future delivery of cotton. Trading in this new contract has started from February 10, and is initially for delivery in October and December 1961. The general feeling is that this new contract will offer a more equitable hedging instrument in the trade. The new contract increases the premium for the larger staples which tends to bring it more into line with spot values. Contracts made under the current terms will continue to be traded in for delivery through September 1961. After expiration of trading in that month, all contracts with future delivery of cotton on the New York cotton exchange will provide for the changes adopted.

MARKETS

Firmer Tendency
in Shellac Prices

SHELLAC prices have been displaying a firmer tendency, both in London and Calcutta markets, during the past many weeks. Prices in London have been rising steadily since last November and look like continuing to do so. This has taken dealers in London by surprise, especially as the two winter crops in India were considerably larger than usual and Thailand is back as a major producer.

For the past two years, Thailand has produced hardly any shellac at all; but this season's crop is back to the old levels and may be as much as 25 per cent of the total world production.

One reason given for the rise in shellac prices is that more consumers are tending to buy direct from India instead of through the London market. The processed shellac, now sold by the two large factories in Calcutta, consumers say, is of uniform quality and can be safely bought in lots without the help of a London broker. This has meant, brokers claim, that the pressure on producers to accept lower prices has diminished. The consumers appear to be happy about the position.

It cannot be denied that the steps taken by the Lac Exporters' Asso-

ciation and the fixing of a minimum export price has resulted in a stability in export prices, thereby helping India to earn substantial foreign exchange. In this connection, the President of the Indian Lac Cess Committee has expressed the view that measures should now be evolved to stabilise the internal prices of sticklac and seedlac in conformity with the minimum export prices and distribute the benefits among the various links of the industry. He adds that parity between internal and minimum export prices is essential.

Meanwhile, in the Calcutta market, the rate for Pure TN quality shellac is quoted around Rs 76 per maund. Shipments during the current month till the 8th were 7,561 packages comprising 5,553 packages of shellac (4,102); 1,234 packages of seedlac (5,013); 171 packages of buttonlac (309) and 603 packages of other varieties (535). Figures shown within brackets were for the corresponding period of last month.

Sugar

Sugar markets have been ruling very steady. In the Hapur market, prices have recorded modest gains. Although, officially, there is no allocation for Uttar Pradesh for free sale, enough quantity of crystal is reaching the market from unrevealed sources.

Production of crystal sugar is reported to be higher than in the corresponding period of last year; but supplies of cane to factories in some centres is declining. Fears are, therefore, expressed that the sugar season will end earlier, as no steps have yet been taken to stop diversion of cane to the khandsari units. In the open market, the rate for the sweet commodity is quoted around

Rs 124 per bag. In the Muzaffarnagar market, rates are moving between Rs 116 and Rs 126 per bag, according to quality.

Although the aggregate world production of sugar, during the year 1959-60, is estimated to be lower at 49.59 million tons as compared with 50.94 million tons last year, the supply position has become comfortable at 61.82 million tons—a rise of nearly 780,000 tons as compared with the supply of 61.04 million tons available in the previous season. The improvement in supply is largely due to the huge carryover stocks of 12.23 million tons from the last season.

As against this situation in the world sugar market, the position in India has been one of shortage. As a result, the authorities have been obliged to resort to distribution control in addition to price control. That this should be so when the Government have recently released 1.75 lakh tons for distribution throughout the country is somewhat perplexing.

Khandsari

Khandsari prices have registered a slight fall from the previous week's level due to withdrawal of demand. Rail loading restrictions have hampered despatches to the needy areas of Gujarat and Saurashtra. Producers are now in a position to buy cane even at higher prices than paid by the factories. Superior quality is quoted at Rs 44 to Rs 48 per maund.

In the Muzaffarnagar area, production is going on smoothly and the arrivals are being lifted readily.

Gur

Although ready Gur prices are fully steady due to continued brisk outside buying enquiry, prices have eased fractionally in the Hapur market due to restricted loading. Daily arrivals amount to 4,000 maunds. Panseera quality is quoted at Rs 17.25 and Balti at Rs 17.75 to Rs 18.12.

In the Muzaffarnagar market, the demand for the commodity is good from the Punjab, Gujarat, Rajasthan and Madhya Pradesh. Besides, South Indian traders are keen buyers. Chakku has eased by 50 nP to 62 nP per maund due to non-acceptance of bills by the different banks.

Foodgrains

Steady to firm conditions have prevailed in the Hapur Foodgrains market, as "rabi" crop prospects are not rated bright owing to inadequate winter rains. Stocks with the traders are also reported to be meagre.

While Wheat prices have advanced by Re 1 a maund, Coarse grains have sought higher levels. Pulses, however, remain depressed in the absence of demand. The market for Gram remains steady on firmer advice from the Punjab where the standing crop is reported to have been adversely affected due to lack of rains. Maize and Bajra prices are ruling higher due to good consumer support in the face of depleted stock position.

Rubber

According to the figures released by India Rubber Board, production of Rubber has shown a decline to 2,946 metric tonnes in December from 3,037 metric tonnes in November, 1959, while consumption has risen to 4,121 metric tonnes from 3,434 metric tonnes. Stocks with the estates and dealers are higher at 5,212 metric tonnes against 5,004 metric tonnes and those with the manufacturers at 5,581 metric tonnes against 5,483 metric tonnes.

The recent price weakness in natural rubber on the London market has caused a little anxiety. Experienced observers believe that a fall in prices at this time is in the best long-term interests of the commodity. During January, market prices in London average over 35d a pound—more than 10d above the figure for January 1959 and some 5jd higher than the average for the whole of 1959.

London traders say that this further gain of nearly 18 per cent in rubber prices during January, coming on top of a rise of some 28 per cent last year, is threatening to raise to the point at which a substantial switch of consumption toward synthetic rubber will become inevitable.

Coffee

The weather has been unkind to Coffee throughout the 1959-60 season. Delayed blossom showers adversely affected the crop at the very start of the season. It was subsequently exposed to excessive rains in July-September and to unseasonal rains in the usual dry months of November and December. The Coffee Board does not, therefore, expect a crop of more than 47,000 tons this season as against 46,000 tons in the previous season. The crop is being harvested now.

Leading planters feel confident that India will not be left with unsaleable stocks, provided a rational marketing system is followed and preference given to the export of Plantation coffees. The Coffee Board has provisionally recommended the earmarking of 16,500 tons of coffee for export out of the current crop. This will comprise 8,500 tons of Plantation; 6,000 tons of Arabica Cherry and 2,000 tons of Robusta.

Meanwhile, the Coffee Board has released a quantity of 669,000 kilograms of coffee for export out of the 1959-60 crop, consisting of 471,000 kilograms of Plantation "A"; 105,000 kilograms of Plantation "B" and 93,000 kilograms of Plantation Triage. Tenders are due on the 26th February, 1960.

Bullion

Despite the stringent margin, a fairly steady tendency was discernible on the Bullion Exchange in Bombay during the week under review. At higher levels, however, some profit-taking was in evidence, and ideas were that the rise in gold prices had been overdone for the time being. Seasonal offtake was satisfactory, but, on rumours of some unauthorised arrivals in the yellow metal, some of the bull traders preferred to lighten their commitments. Gold Faigun delivery, after an early

rise to Rs 132.19, came down to Rs 131.08 before recovering to Rs 132, but relapsed to Rs 131 at the close. Silver Faigun delivery firmed up to Rs 214.62 from the opening level of Rs 213.37 and finished at Rs 214.25. Floating stocks of silver and gold in the Bombay market are estimated at 1,200 bars and 27,000 tolas, respectively.

Yarn

The yarn market has continued to remain subdued during the past week, with the result that prices have moved narrowly with an irregular tendency. Offtake from several consuming centres has contracted, but it appears that, with the Railway freights going up by 5 nP from April 1, there should be more demand from consuming centres in the next fortnight or so. Art silk yarn prices ruled quietly steady, but staple fibre yarn was a shade easier. With firm advices from the spot cotton market, cotton yarn prices have turned steady to firm.

Oils & Oilseeds

A firm tendency, which was noted in the Bombay Oilseeds market during the first part of the week, gave way to a subdued tone on account of realising pressure. Following the move initiated in the Bombay market, ceiling prices have been fixed for groundnut oil in all trading centres of Saurashtra, and this brought forth some offerings at the rise.

Castor seeds touched a new high of Rs 189.12 as against Rs 185, but later on came back to Rs 185 on reports that the US was not interested in buying castor oil from India at higher levels. Groundnuts February, after starting at Rs 217, reacted to Rs 215; then rebounded to Rs 218.50 before receding to Rs 214. The May delivery moved between Rs 209.50 and Rs 212.50, and then was marked down at Rs 210. After being done at Rs 35.77, Linseed dropped sharply to Rs 34.31 on discouraging overseas advices. Groundnut oil April-May changed hands at Rs 22.75 to Rs 22.44, and finished at Rs 22.50. Castor seeds February were firm at Rs 157 and May at Rs 150.

Exports of oilseeds, oils and oilseeds from Bombay during January 1960 were as follows:

	In tons
HPS groundnut kernels	2,832
Kardiseed	25
Castor oil	4,585
Groundnut oil	1,893
Linseed oil	1,830
Sesameseed oil	6
Groundnut cake Expeller	11,525
Groundnut cake Extraction	15,470
Linseed oil cake	5,337
Nigerseed oil cake	150

Business was at a low ebb in the Madras oils and seeds market. There is the usual pre-budget caution, with the spot goods purchasers completely hesitant to commit themselves even to the nominal rates. Prices were also easier, and transactions very limited.

Arrivals in the City and other places were negligible.

While United Kingdom rate for groundnut oil per ton was £124, no

quotations could be had for Burma shipment. In other seeds also, activities were dormant.

Only April deliveries are quoted in Groundnut oil at Rs 391 (nominal) per candy. This rate touched Rs 400 a few days ago.

Heavy excise duties are feared possible by oil interests in the next Budget. There is no ground available yet to justify this apprehension, but generally there is the opinion widely prevalent that the Central Budget would undoubtedly hold fairly heavy imposts including excise duties on oils.

Today's closing rates in the Exchange were: Groundnut oil per candy of 500 lbs expeller ready 3 per cent F.F.A. Rs 390 (nominal):

April delivery Rs 391 (nominal). No March transaction. Kernels per candy of 531 lbs: Coromandel: Rs 205 (nominal). Castor oil per candy of 500 lbs: Rs 340. Coconut oil per tin: Rs 41 to Rs 41.50. Gingelly oil per maund Rs 21.50. Gingelly Seed per bag Rs 73/74. Groundnut oil Cake: Expeller variety: Rs 28.50 to Rs 28.75 per bag.

It was a subdued tone after last week end that one witnessed in the groundnut oil markets. There was no aggressive buying. It was as if should be. It is well known the season started off with very high prices of, groundnut and oil. No export is possible to overseas destinations.

The big and small vanaspathi interests decided to work on a hand-to-mouth basis. All these certainly were responsible for poor buying interest. The marking of small declines in Bombay groundnut and castor futures influenced the local trend toward a sliding price range. The ready rate, too, had its own severe margin, and operators were too timid to transact large scale business even at Rs 390. If speculative interests also kept quiet in the market, contributing to its colorless day, all these factors made them lie low for the present.

Local arrivals of groundnuts were not large. Nor do reports from up-country points show a contrary fact. About 40/50 tons only in coromandel varieties are available daily in Madras. Last week-end, support was coming at the pucca parity price of Rs 206/205 per candy mostly from crushers using chekku or power-driven rotaries. Bigger buyers kept severely aloof.

Calcutta interests took some quantities in groundnut oil. Yesterday, the price dwindled to Rs 391 Ready, and April position to Rs 397. Ready got still further down today to Rs 390 and April to Rs 391.

As indicated by INDIAN FINANCE last week, April future trading in Groundnut oil commenced 10th February. Daily turnover, however, has proved small since then. The heavy margin payable by Longs above the price level of Rs 385 per candy acted as a check on any kind of hectic or even heavy transactions by speculative interests. The opening day business realised Rs 394/396 but went up to Rs 400. It soon came down to Rs 397 last week end and today it was still lower at Rs 391 nominal.

Hides and Skins

Prices of tanned cowhides were firm due to small arrivals. This has been ascribed to decreased tanning activities in Ranipet tanneries. Last week's rates continued in the export section. UK bought fifts in the 5/5½ lb and 8/8½ lb average.

Inferior fifts had good sale in the internal market. But the local price did not find favour with the exporters.

UK wanted more cow calf. Therefore, the 2/3d increase in price for premium marks did not matter and deals were concluded at that rate for UK. Even ordinary market quality was up in price between 30/35 nP this week. Similar was the case in tanned buffalo calf. But preference by UK was for top grades at a higher price by 1 or 2d per lb. Lower

grade qualities were also sold in good quantities at a firmer price.

Tanned goat skins sold were 7,000 pieces and tanned sheep skins sold numbered about 26,000, less turnover than last week. Left over pieces in the market were 5,000 goat and 40,000 sheep skins. Market quality tanned skins remained at the same prices as given below. Sheep skins were higher, however, by 12 nP.

The following prices ruled in tanning materials:

Avaram Bark Rs 90/110, Konnam Rs 67½/72½; Myrabolams Salem Rs 145/150; Bombay Rs 95/97; Pungam Oil Rs 505/510.

Raw skin price were slightly easier: Bangalore raw goatskins Rs 660/700. White Wool sheep Rs 585/590; Black wool sheep Rs 480/535; Bezwada goat skins Rs 635/640; He sheep Rs 605; She Sheep Rs 505.

Taxes—Certain: Reliefs: Perhaps?

Investment Gossip:

TIME for marking time is with us again, with the central Budget just 10 days away. I find it rather interesting that, quite fatalistically, the market has come to accept as inevitable another bout of fresh taxation. An array of Excise duties is expected; and movements in particular sections indicate where the operators think the Finance Minister's attention will be aroused. Rayon? Yes. Paper? Yes. A range of light engineering goods? Again, yes. It is from such duties, Lyons Range hopes rather than thinks, that the Finance Minister will find the bulk of the resources necessary for the three-fold task of (a) meeting the increased costs of defence; (b) implementing the Pay Commission's recommendations; and (c) putting through the heavy disbursements relating to the last year of the Second Plan.

It is such hopes which have also led to the expectation of some manner of reliefs in the offing. Will the taxation of bonus issues be reduced as to rate? The answer is a hopeful affirmative, and the reasoning is that, at the present rate of bonus tax, Government do not benefit, because no bonus issues are being made. So: if the rate is reduced, it will be a concession—and so improve the investment climate—while, at the same time, it may bring in some revenue to Government.

Then, "adjustments" are expected in the rate of corporate tax. I personally believe that the Finance Minister is committed to reducing the rate to, say, 42½ per cent (as against the 45 per cent effective for the advance payment of tax). But, then, there have been complications in the picture since then, and it wouldn't surprise me unduly if the Finance Minister blandly announced: "No Change."

Thus, another 10 days to wait; and wait we shall.

ERs

Investment Special:

Simpson & Company

Simpson & Company Limited, Madras, consists of eight subsidiary companies and their year ending is 31st May, 1959. Altogether, the profits for the year were Rs 48.84 lakhs as against Rs 26.59 lakhs in the previous year. A sum of Rs 19 lakhs is provided for Taxation. Along with the sum brought forward from the previous year, there is an avail-

able balance of Rs 48.71 lakhs out of which a sum of Rs 22.50 lakhs is provided for General Reserve. Among the dividends declared, one portion relates to one under Section 23-A, absorbing Rs 7.06 lakhs. A further amount of Rs 16.88 lakhs had to be paid out of the year's profit once again to meet with the provisions of Section 23-A. Two interim dividends have been declared out of this amount. A final dividend is also recommended and the total distribution for the year amounts to 31.92 per cent.

Simpsons have licence for expanding the Perkins Engines capacity to 7,000. A second expansion scheme to increase the capacity to 12,000 has been submitted to the Government. The Coach Building and the Light Engineering Departments have a praiseworthy record of work.

ERs

Rallis India

According to a telegraphic message, Rallis India Limited has made a net profit, before providing for Depreciation and Taxation, of Rs 29.55 lakhs for the year ended 31st August, 1959. Profits realised on sale of fixed assets were Rs 23.41 lakhs including previous Property Reserve of Rs 10.75 lakhs, and this has been set off against the previous debit balance account. Appropriations were Rs 3.25 lakhs for Depreciation; Rs 4.43 lakhs for Taxation and Rs 1.25 lakhs for other provisions. The directors have recommended the arrears of dividends on the Preference shares for two years. The Ordinary dividend is passed over. The carry forward to next year is Rs 2.55 lakhs. Transfer Books will be closed from the 28th March, 1960.

New Issue Notes

It is understood that the equity shares of the Hindustan Aluminium Corporation have been oversubscribed well before the closing date, February 18.

The Radio and Electricals Manufacturing Company, Madras, has announced the issue of 1,25,000 equity shares of Rs 10 each, at par, in the ratio of one for every two shares held. The amount payable on application is Rs 5 per share and the balance of Rs 5 on allotment. The new shares will rank pari passu in all respects with the existing shares from April 1, 1960.

Attikhan (Billigiri) Limited, Madras, is to enter the market for capital of Rs 6 lakhs — 2 lakh equity shares of Rs 2 each and 20,000-9 per cent Redeemable Preference shares of Rs 10 each. Of this, 1 lakh equity shares and 10,000 Preference shares have been agreed to be subscribed for by the signatories to the Memorandum of Association, the directors and their friends. The balance of 1 lakh equity shares and 10,000 Preference shares are now offered to the public for subscription. Applications for less than 100 equity shares and 50 Preference shares will not be considered. The list for subscription will be opened on the 19th February. The primary object of the company is to acquire the freehold rights of Atti-

Indian Finance

khan Estate in the Billigiri Rangan Hills, Mysore State, belonging to Mr. A. E. C. Morris jointly with the Trustees of the Settlement and to operate it as a going concern as from the 1st April, 1959. The purchase consideration for the estate, including the value of the current season's crop, is Rs 8 lakhs and this will be covered to the extent of Rs 5 lakhs by the proceeds of the issue, while the vendor has agreed to leave a loan of Rs 3 lakhs, repayable in a period of three years, at a rate of 8 per cent interest.

Premier Tyres Allotment

Lots for the public issue of equity shares of Premier Tyres Limited have been drawn. The equity issue was 44,100 shares of the total value of Rs 44.1 lakhs. The number of

Group of shares	Number of Applications Received	Number of shares applied for	Successful applications in draw of lots	Number of shares allotted in each group
5 to 20	25928	186,233	4451	5
25 to 40	1699	47,600	566	10
50 to 75	902	46,310	356	15
80 to 200	617	66,730	412	20
over 210	37	24,785	37	10 p.c.

Emerald Valley

Emerald Valley Estates Limited has proposed to issue 30,000 equity shares of Rs 5 each, at par, to holders as on the 8th March 1960, in the ratio of one share for every two shares held. The new shares do not rank for dividend for the year ended 31st December, 1959.

The Ravalgaon Sugar Farm Limited has decided to raise the authorised capital from Rs 50 lakhs to Rs 1.04 crores by the creation of 48,000 Ordinary shares of Rs 50 each and 30,000 Preference shares of Rs 100 each. It is intended to issue 20,000 Ordinary shares, which will be offered to the Ordinary and Deferred shareholders. The funds will be utilised for financing the expansion programme of the company. In this connection, a general meeting of the company will be held on the 18th March, 1960.

Investment Notes:

The Elgin Mills Company Limited has proposed to purchase from the British India Corporation Limited its Cawnpore Cotton Mills branch with all its leasehold land, buildings, machinery, stocks and stores, at a price of Rs 35 lakhs on certain terms. The terms are that Rs 5 lakhs will be paid at the time of the execution of the sale deed; that the balance of Rs 30 lakhs will be paid in five equal yearly instalments (which if not paid at the due date will carry interest at 6 per cent per annum) and that the company will not sell, mortgage or transfer the block of the Cawnpore Cotton Mills branch to any party without prior approval of the BIC as long as the purchase price is not paid in full.

The shares of Dharamsi Chemicals have been a firm feature around Rs 155. The company is reported to be doing very well and has already undertaken to double its production capacity of superphosphate and sulphuric acid. The company is putting up a new factory for the manufac-

ture of superphosphate and sulphuric acid at Kumbhari in Madhya Pradesh. The estimated cost of this project is Rs 40 lakhs.

The Cottanad Plantations Limited has reported a crop of 6,214 pounds of rubber and 8,042 pounds of tea for December 1959, making a total of 35,392 pounds of rubber and 118,889 pounds of tea for the period April to December, 1959. These compare with 41,176 pounds of rubber and 131,480 pounds of tea for the corresponding period of the previous year.

The Nilambur Rubber Company Limited has reported a crop of 14,060 pounds of Rubber for December, making a total of 147,818 pounds for 1959 as against 234,738 pounds in the previous year.

The Travancore Rubber & Tea Company has reported a crop of 84,075 lbs of rubber and 57,268 lbs of tea for January as against 93,714 lbs and 68,360 lbs respectively in January last year.

The Eastern Cachar Tea Company, in the managing agency of Octavius Steel & Company Limited, has called a meeting of the shareholders to obtain the sanction for the proposed sale of the garden at Binnakandy, Cachar. The present move is a sequel to the difficulty faced by the directors in obtaining finance.

ERs

Balance-Sheet Briefs:

Godavari Sugar Mills Limited has reported a net profit of Rs 37.64 lakhs for the year ended 31st May, 1959 as against Rs 31.75 lakhs for the previous year. A dividend of Rs 20 per share, subject to tax, is recommended by the directors. This works out to a net dividend of Rs 14 per share and compares with a net dividend of Rs 12.50 paid for the previous year.

The working of the Loyal Textile Mills Limited has resulted in a loss of Rs 1.29 lakhs for the year ended 30th June, 1959 as against Rs 4 lakhs in the previous year. The dividend is passed over.

COMPANY REPORTS

Competition in Export Markets Reflected in Orissa Minerals' Accounts

Balance-Sheet Reviews:

THE Orissa Minerals Development Company Limited has reported a decrease in earnings for the year ended 30th June 1959, reflecting the highly competitive conditions that prevailed in the export market for manganese ore. The company was able to sell its ore to the traditional buyers only at prices lower than were obtainable in the previous year. This was mainly due to the fact that increasing quantities were offered by other exporting countries, such as Brazil, Ghana, Morocco, Russia and South Africa, which enjoyed a considerable freight advantage over India.

Output of Manganese Ore increased by 10,617 tons to 60,027 tons; and so also sales from 56,801 tons to 60,787 tons. Raisings and despatches of Iron Ore also increased from 502,970 tons and 495,061 tons to 587,803 tons and 566,122 tons respectively. But for the increased earnings in the exports of iron ore, the decline in the net earnings would have been more pronounced.

Total sales are lower at Rs 1.17 crores against Rs 1.28 crores, while the net profit, before providing for Depreciation and Taxation, amounts to Rs 28,68,726 against Rs 38,16,628 in the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 2.92 lakhs from Rs 2.17 lakhs, while the Taxation provision is reduced to Rs 11.50 lakhs from Rs 18.30 lakhs, General Reserve to Rs 2.00 lakhs from Rs 2.51 lakhs; Building Reserve to Rs 1.00 lakh from Rs 2.00 lakhs; Statutory Development Rebate Reserve to Rs 60,800 from Rs 92,500 and Mechanisation Reserve to Rs 4,00 lakhs from Rs 5.50 lakhs. No provision is made for Stores and Stock Reserve against Rs 1.50 lakhs previously.

The directors have recommended a final dividend of 23½ per cent, a total of 36 per cent against 25 per cent in the previous year. This increased dividend is declared after taking into consideration the effect of the Finance Act 1959, whereby the company has to deduct tax at the prescribed rates before payment of dividend.

The balance-sheet, as at 30th June 1959, shows a paid-up capital of Rs 20 lakhs against which reserves and surplus are shown higher at Rs 56.29 lakhs. The gross block at Rs 64.43 lakhs is depreciated by Rs 32.00 lakhs to show a net block value of Rs 32.43 lakhs.

According to the directors' report, Bolani Ores (Private) Limited, in which the company has a substantial holding, has made considerable head-way. The extension of railway siding from Barabil to Bolani is now almost complete and the Bolani Ores (Private) Limited will be commencing despatches of iron to the Durgapur Steel Project in the very near future.

The activities of the Eastern Shipping Syndicate ceased on the 31st August 1957. The realisation of the assets and the payment of the liabilities is in progress.

The progress of the company, during the past three years, is indicated in the following comparative table:

Year ended June	1959	1958	1957
	Rs.	Rs.	Rs.

Dena Bank's Balance Sheet

THE first of the banking balance-sheets for 1959 to be released is that of Deykaran Nanjee Banking Company Limited, and this is in consonance with Dena Bank's ability also to be the first to release the preliminary results. As already noted in this journal, the working results showed that, apparently in line with the general experience of the banking system, Dena Bank had reported a decline in its net profit. The detailed accounts now published reveal why the profit in fact is higher: it is shown net of taxation.

According to the balance-sheet, Deposits and other accounts have risen by Rs 5.26 crores to Rs 35.38 crores; and all but Rs 1.63 crores of this rise has occurred in respect of the higher-costing Deposits, Fixed and Savings Bank. Meantime, it is true, Advances expanded by a slightly better margin, in rising by Rs 5.41 crores to Rs 19.46 crores. Also, Dena Bank prudently enlarged its investment portfolio, holdings of gilt-edged rising from Rs 13.48 crores to Rs 15.32 crores.

Thus, in the profit and loss account, interest and discount are found to have fetched Rs 19 lakhs more at Rs 1.27 crores, while commission, exchange and brokerage have yielded Rs 22.01 lakhs against Rs 17.71 lakhs. However, interest paid is sharply higher by Rs 12.58 lakhs at Rs 79.44 lakhs, and salaries and allowances have absorbed Rs 7.80 lakhs more at Rs 41.32 lakhs. With such increase in operating costs, the balance of profit has come down to Rs 13.05 lakhs from Rs 14.22 lakhs; with this reservation, that, in 1958, Rs 5 lakhs had to be provided for tax, whereas, in 1959, the balance of profit is net of any tax liability.

The Directors' Report provides figures that are at first sight baffling; the profit for the year is here said to be Rs 15.30 lakhs while, in the profit and loss account, the relevant figure is clearly stated to be Rs 13.05 lakhs. A little deduction is necessary to find out that the discrepancy relates to bonus to staff; this has been added back in the Directors' Report, while, presumably, salaries and allowances, in the profit and loss account, includes this element of Rs 2.25 lakhs. In any case the transfer to Reserve is maintained at Rs 6 lakhs, and the Reserve Fund, now at Rs 52 lakhs, exceeds the capital of Rs 50 lakhs. The bonus to staff, it may be noted, is Rs 45,000 higher than it was in 1958. The dividend has been generously increased: the tax free dividend in 1958 was at 6 per cent and absorbed Rs 3 lakhs. Already, for 1959, an ad interim dividend has been paid in a total amount of Rs 1.86 lakhs; and the final dividend proposed will need another Rs 2.50 lakhs, making the total distribution—subject to deduction of tax though it is—significantly higher at Rs 4.36 lakhs; and the 1959 dividend works out to a "net" dividend of 6.132 per cent.

Such, then, a good start for the 1959 bank balance-sheet season.

STOCK

EXCHANGES

Markets Flat Again

Watch-Dog Writes:

BARRING some enquiry in a few selected scrip, stock markets are flat again and price movements are confined to a narrow range. With only a week to go for the Union Budget, operators have referred to keep their books light. Moreover, the news of the increase in freight rates in the Railway Budget has also caused some disappointment.

The Calcutta Stock Exchange witnessed a featureless session and price movements were narrowly irregular in a reduced turnover.

Trading on the Bombay Stock Exchange was a very tame affair due to lack of incentives.

Although activity was small, prices on the Madras Stock Exchange continued to remain steady with scattered gains.

It was a week of nerves on the London Stock Exchange where operators were eagerly awaiting the outcome of the rail discussions.

Wall Street closed barely steady.

*

Calcutta

Friday Evening.

ONCE again, equities on the local Stock Exchange moved narrowly irregular during the past week due to lack of fresh support as well as realising pressure. The pre-Budget caution made operators hesitant in extending their commitments beyond what they considered to be the safe level, not to speak of the disappointment over the increase in railway freights which, it was felt, would add directly to the costs of most industries in the country.

There was unanimous opinion that the Finance Minister had to raise increased revenues for the implementation of the Pay Commission's award and meeting the rising defence expenditure. Optimism was, however, entertained by some circles that the Finance Minister might not do anything to undermine the confidence of investors when the country is about to embark on a gigantic Third Plan. Had it not been for this factor, the easier tendency in prices would not have been interrupted by the emergence of support at the lower levels.

The Gilt-edged section was dull with business at a reduced level. Interest was limited to a few loans and the tendency was for prices to sag slowly owing to lack of support. State Loans were also on offer with buyers reserved. 3 per cent 1966

Conversion Loan opened at Rs 74.25 and, after touching a low of Rs 74 and a high of Rs 74.50, finished the week at Rs 74.30.

Bank shares showed little change. Punjab National moved between Rs 20.87 and Rs 21.25 with United Commercial nominally quoted at Rs 69.50.

Jute shares ruled fairly steady on reports that mill profits for the current year would be satisfactory. Those mills, which had bought raw jute in time and at cheaper prices, were expected to benefit in particular. Even the news of the decline in US burlap consumption by about 9 million yards last month had no effect on sentiment. The decline in burlap stocks from 259 to 251 million yards led to the belief that the USA had to enter the market shortly to replenish its depleting stocks. Howrah received support up to Rs 24 from Rs 23.87; Birlas up to Rs 25.94 from Rs 25.87; Anglo-India up to Rs 216 from Rs 212; India up to Rs 16.50 from Rs 16.37 and Nuddea up to Rs 58.50 from Rs 56.75. New Central moved rather irregularly between Rs 22.87 and Rs 23.25, to close finally at Rs 23.19. National were, however, on offer at Rs 30.75.

Coal shares came in for only limited enquiry in the absence of any incentive. East Indian changed hands at Rs 26.12 to Rs 26.62; New Beerbhoom at Rs 22.81 to Rs 22.87; Central India at Rs 8.81 to Rs 8.94 and Bengal at Rs 297.50 to Rs 299. Burrakur moved irregularly between Rs 18.25 and Rs 18.75 on alternate bouts of buying and selling, to finish the week at Rs 18.37. Equitable were quiet at Rs 30 against Rs 30.50.

Tea shares were generally neglected and dealings were few and far between. The fall in the general level of prices obtained at the auctions, both in Calcutta and London, and the absence of any enquiry from foreign buyers induced fears that the domestic market might not be able to absorb all available supplies. Some operators had the belief that the remaining North Indian output would meet with a strong market and this belief seemed to be based on the statistical position. But for this factor, prices would have developed a downward trend. Dauracherra met with business at Rs 8.44 to Rs 10.12; East India at Rs 24.50 to Rs 24.62; Hasimara at Rs 21.69 to Rs 21.94; Jayshree at Rs 16.97 to Rs 17.19; Patrakola at Rs 192 to Rs 201 and Tellapara at Rs 139 to Rs 143. Eastern Cachar were, however, offered at as low as Rs 1.31 against Rs 1.75 following a decision to sell the garden.

Sugar shares were generally quiet in lack of fresh support at recent high levels. The only two steady features were Raza/Buland and SKG having support up to Rs 12.87 and Rs 14.25 respectively. Balaramore were done at Rs 4.00 against Rs 4.09 and Carew at Rs 12.25 against Rs 12.37.

Textile scrip were also quiet with Kesoram changing hands at Rs 22.62 to Rs 22.75. New Victoria at Rs 1.31 to Rs 1.40 and Jayshree at Rs 12.50 to Rs 12.66. Bowreah were quoted lower at Rs 145 against Rs 152 and Dunbar at Rs 185 against Rs 200.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. After opening steady at Rs 22.10, Indian Irons improved at one time to Rs 22.20, at which level profit-taking brought down the scrip at the close to Rs 22.18. Jessop were at one time taken up to Rs 23.56 from Rs 23.37; Britannia up to Rs 13.50 from Rs 13.25; Kumardhubu up to Rs 7.12 from Rs 6.94, to ease off at the close to Rs 23.31; Rs 13.37 and Rs 6.94 respectively. Braithwaite were, however, a firm feature at Rs 28.75. TEXMACO, after touching a high of Rs 25.55 from Rs 25.40 receded at the close to Rs 25.30. G. K. Williams were rather quiet at Rs 46.06 against Rs 46.31.

Paper shares attracted good attention, as some of the mills were reported to have plans for big expansion during the Third Plan period. Higher levels could not, however, be maintained till the close due to profit-taking. Following were the price trends of a few selected scrip:

	Week's High	Week's Low	Week's Closing
Orient Paper	38.50	38.10	38.35
Shree Gopal	22.44	22.31	22.37
Sirpur	13.69	13.56	13.62

Bombay

DULL conditions have prevailed on the Bombay Stock Exchange during the week under review. Turnover shrank considerably, and the forthcoming Budget cast its shadows ahead, with the result that price movements generally were on a narrow scale. Conditions, in short, were listless. The market was in a vacillating mood as neither buyers nor sellers were anxious to undertake fresh commitments, since it was taken for granted that, with the further supplementary increase of 5 per cent in Railway freights, an increase in taxation was inevitable due to several factors, of which the border dispute with China is accounted as a vital one, necessitating an increase in defence expenditure. Though the general view is that the bulk of the new resources would be met from indirect taxation, Dalal Street is unable to make up its mind about how some adjustments in corporate taxation will be brought about, as the dividend return will be moulded by this factor. There are also rumours that the incidence of bonus taxation, which is 30 per cent at present, might be reduced to 15 to 20 per cent. Anyway, the

Railway Budget has provided a damper, and the week has wound up with around modest declines in values.

Bank shares were quiet, with Baroda attracting support. All the bank shares are quoting cum dividend, but, in view of the cut in net returns, the investors here have lost their interest in this group, as also in electrics, which are in the doldrums.

Dyes and Chemical shares presented steady conditions. Tata Chemicals were well maintained around Rs 15.52. Indian Dyestuff old provided a steady feature at Rs 461 on hopes that a small maiden dividend might be paid this year on old shares. Dharamsi Chemicals were firm, rising to Rs 160 following the phosphate project which is being set up in Madhya Pradesh.

Cement shares were featureless. ACC, after being listed exdividend, failed to pick up at Rs 142.50. But Digvijay were a steady feature at Rs 146. Engineering shares were mostly steady with narrow movements. Premier Construction, however, remained quiet on rumours that this company might cut the net dividend. There are reports that Premier Construction Co Ltd will release about 15,000 shares of its subsidiary, viz, Indian Hume Pipe Co Ltd, at a premium of Rs 50, i.e., at Rs 150. Larsen and Toubro were better at Rs 28.60, while Mahindra and Mahindra were well maintained at Rs 25. Tata Steel ordinary moved within narrow bounds between Rs 149.50 and Rs 148.25. Tata Locomotive were unaffected by the arbitrator's award fixing the price at Rs 3.80 lakhs per locomotive for 200 units. Premier Automobile declined to Rs 137.50 from Rs 142. Shivrajpur Syndicate shares were hard hit on pessimistic reckoning of the results and dropped down to Rs 76 from Rs 86.50.

Among the 'sugar' shares, Belapur were a shade better while Walchandnagar came down to Rs 286 from Rs 303 on expectations of a reduction in the net dividend, as its sister concern, Ravalgaon drastically cut the dividend to Rs 8.50 gross against Rs 12 net in the previous year. As a result, Ravalgaon dropped to Rs 115 from Rs 140.

Despite better outlook for tea, Bombay Burmah failed to evoke much interest. BB Petrol suffered further. Hindustan Lever ruled firm in view of the forthcoming dividend. Tata oil, after remaining firm, reacted on profit-taking. West Coast Paper receded to some extent at Rs 154, while Wimco also lost Rs 5 to Rs 237.50. Radio Lamp was sold down to Rs 109 from Rs 114. Ceat Tyres continued to provide a firm spot at Rs 174.

Cotton mill shares made a mixed show. Standard Mills rose to Rs 780 from Rs 746 to finish at Rs 773. Kohinoor and Century moved narrowly. India United and Svadeshi Mills were steady. Shreenivas Mills improved to Rs 258, then reacted to Rs 253. National Rayon, after early steadiness, were marked down once again to Rs 372 on rumours of an increase in excise duty on rayon goods.

The week's movements in prices of few representative scrips are as follows:

	High	Low	Close
B Dyeing	68.40	66.10	67.70
Century	441.00	437.00	437.50
I. U. Ord.	12.84	12.52	12.76

Madras

Madras, Thursday, February 11.

IN the Madras Stock Exchange today, activity was centred round industrials. In the plantings, absorption was good at lower levels. Sugars proved to be well enquired after. Textiles were steady though large business was not reported. Other counters remained the same.

Government Securities: Previous closings continued in this section with no change. 4% 1968 Orissa Loan was offered at Rs 100.25. 4% 1979 Government of India Loan was transacted at Rs 100.20. 4% 1967 Madras Loan was marked at Rs 100.25 and 4% 1963 Madras Loan was at Rs 100.35. 4% 1971 Madras Loan remained at Rs 100.10. 4% taxable Mysore 1963 loan was sold at Rs 100.35. 4% taxable 1969 was available at Rs 102.00. There was no change in the Kerala State Loans. The 4% 1970 was available at Rs 100.97 and 4% 1971 at Rs 99.90.

Banks: The "big" and "small" Andhra Bank shares remained at Rs 103.00 and Rs 85.00 respectively. The Indian Bank Rs 100 paid share was unchanged at Rs 187 and the Rs 80 paid share at Rs 152.00. Pandyan Bank did not change from the previous closing of Rs 37.50. Punjab National Bank was the same at Rs 21.10 and the Travancore Forward Bank continued to be at Rs 6.20 and the smaller share at Rs 2.00.

Electric: No change occurred in this section today. Cochin and Ellore were unaltered at Rs 10.25 and Rs 10.35 respectively. Karaikal was below par at Rs 9.95. Kumbakonam was the same at Rs 10.70. Negapatnam was on par at Rs 10.00. Salem-Erode maintained itself at Rs 12.50, while South Madras was slightly better at Rs 10.05. Tinnevely-Tuticorin was quoted at Rs 12.25. Vellore and West-Coast were listed at Rs 13.00 and Rs 12.37 respectively.

Sugars & Breweries: Doctan was sold unaltered at Rs 12.82. EID, went up to Rs 45.50 today, better than its last closing which was at Rs 45.00. India Sugars were far-cied at Rs 12.20, higher by ten nP than the last closing. Travancore shares were done at Rs 10.60.

United Breweries were quiet at Rs 51.00. Others remained unaltered.

Plantings: Amalgamated did not show any change at Rs 13.75, but Anapara went up to Rs 5.35. Arthala at Rs 4.00 was below par. Bababudin was priced at Rs 9.65 and Badra at Rs 3.67. Be Be was the same at Rs 3.50. Blue Mountain was lower at Rs 3.35. Chembra was available at Rs 4.42. Cochin Malabar did not report transactions at Rs 7.14 as also Coffee Lands at Rs 23.10. Consolidated Coffee shares were negotiated at Rs 22.30, ten nP lower. Coonoor and Coorg tea shares were unaltered at Rs 26.75 and Rs 5.50 respectively. Devashola with 10% interim taxable-cum-dividend was quoted at Rs 33.00. Halleyburia was not thought of today at Rs 16.00. Kallasa improved a bit to Rs 5.30. Kalasa at Rs 4.10 was nominal. Kalpetta was the same at Rs 11.73. Kil Kotagiri was absorbed at Rs 5.90 with 35% ftd. Lingapur was transacted at Rs 6.80. Lucky Valley was quoted at Rs 13.00. Malabar Agricultural was quoted at Rs 7.50. Malabar Industrial at Rs 12.85 was lower today by 15 nP. Business was done in Marcara at Rs 9.85. Mysore Amalgamated. Business was done in Neelimalal (7½% ftd) at Rs 4.92. Also, transactions took place in Neillampathy at Rs 2.90 with taxable 10% dividend. Nilgiri Tea had buyers at Rs 7.43. Ouchterlony Valley had enquiries at Rs 5.86. Parkside was quoted higher at Rs 25.00. Peermade was better at Rs 21.25. Perlakaramalal was listed at Rs 3.80. Pullangode was fractionally higher at Rs 1.91. Puthuthottam at Rs 2.77 was an improvement on the previous closing. Some business went through in Rajendra at Rs 17.50. Talayar went up to Rs 1.75. Travancore Rubber was at Rs 15.62 and Travancore Rubber & Tea shares were bargained at Rs 8.25. Twyford improved to Rs 12.90. United Nilgiri 6% cd was lower at Rs 22.25. Vellimalal was higher at Rs 6.50. Wartyhully also looked better at Rs 3.66. Woodland remained the same at Rs 8.00.

Textiles: Anglo-French was better at Rs 99.50. Asher was the same at Rs 212.80. Bangalore Woollen and Buckingham were unaltered at Rs 197.00 and Rs 199.50 respectively. While the Rs 40 paid Balasubramania was at Rs 52, the Rs 70 paid 'B' shares improved to Rs 96.00. Cannanore was available for Rs 161.00. Cauvery Spinning at Rs 14.00 was unchanged. Coimbatore Cotton gained one rupee more at Rs 166.00. Coimbatore Pioneer Rs 100 paid share was priced at Rs 360.00 while the Coimbatore Spinning Mills share was unaltered at Rs 55.50. Hemalatha xd was at Rs 7.74. Janardana was quoted at Rs 64.00. Kasthuri was lower at Rs 24.75. Lakshmi Mills did not change at Rs 148.00. There was some business in Madura at the unaltered price of Rs 32.00. Mettur remained unaltered at Rs 424.00. Premier was available at Rs 215.00 and Radhakrishna was sold at Rs 29.00. Rajalakshmi was unchanged at Rs 69.00. Ranga Vilas was quoted at Rs 47.00. Tirumurti at Rs 95.00 and Tirupati at Rs 9.30

were unaltered. Travancore Rayon continued at Rs 25.85. Venkatesa was quoted at Rs 133.00. Bijayalakshmi at Rs 139.00 was an improvement on the previous closing.

Miscellaneous: Enquiries were made of Aluminium Industries at the lower level of Rs 22.65. Business was done in Ashoka Leyland at Rs 6.90. Andhra Cement was also lower at Rs 9.20. Binny Engineering was priced at Rs 167.00. Central Scientific improved to Rs 7.00. Dalmia cement was at Rs 11.05. Enfield could be had at Rs 14.30. FACTs at Rs 9.87 was unchanged. Hindustan Lever was available at Rs 36.25. India Cements did business at Rs 6.05. Kirloskar Electrics improved to Rs 13.00. Madras Vanaspathi at Rs 15.00 was unchanged. Marikar was better today than last week at Rs 48.00. Mettur Chemical was quoted at Rs 12.30. McDowell was quoted at Rs 27.15. Mysore Chem Mfgs was available at Rs 24.50. Mysore Lamp at Rs 20.52. Mysore Paper at Rs 23.85 and Mysore Tobacco at Rs 13.30 were the same as before. Ogale Glass was lower at Rs 3.00. Orissa Cement shares changed hands at Rs 12.90. Panyam Cement was at Rs 90.00. Parrys Confectionery were sold at Rs 4.33. Radio & Electricals went down to Rs 4.27. Rallis was the same at Rs 84.50. Spencer was quoted higher at Rs 20.12. Textool was also quoted higher at Rs 160.00. Travancore Cements was at Rs 9.60. Tube Investments bigger share at Rs 235 and the smaller ones at Rs 205.00 were unchanged. Western India Plywoods improved to Rs 265.00 with business done at that rate.

*

London

ALTHOUGH it was a week of nerves with operators eagerly awaiting the outcome of the rail discussions, the general undertone of the London Stock Exchange was good in response to a certain amount of selective buying. Sentiment was, to some extent, helped by the encouraging survey by the Federation of British Industries.

In the Industrial section, there were a number of good features and Steel shares were particularly firm. Tobacco shares improved in response to British American Tobacco's good results. Gilt-edged securities encountered good investment demand and showed widespread gains.

*

New York

STEADIER conditions were noticed on Wall Street. Some Wall Street sources said that prices might hold fairly steady over the near-term in an attempt to form a base which would be counted on to support a spring advance. But, specific inducements were apparently lacking to tempt buyers from the sidelines. Sentiment was helped somewhat by the decline in short-term borrowing costs, the rise in tyre and farm equipment prices and a continued flow of good 1959 reports and prospects.

Investment Briefs:

The Industrial Credit & Investment Corporation of India Limited has recommended a dividend of 5 per cent, subject to tax, on the Ordinary shares for the year ended 31st December, 1959.

The Ravalgaon Sugar Farm Limited has proposed a taxable dividend of Rs 8.50 on the Ordinary shares for 1958-59. The net dividend, which amounts to Rs 5.95 per share, compares very unfavourably with the previous year's dividend of Rs 12. The cut in dividend is due to poor results for the year under review.

The Bombay Dyeing & Manufacturing Company, Limited has announced the closure of its share Transfer Books from the 7th to the 31st March 1960, both days inclusive.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

NOTICE TO MEMBERS

The Twentythird Ordinary General Meeting of the Members will be held on Wednesday the 16th March 1960 at 2-30 P.M. at the registered Office, 34 Chowringhee, Calcutta 16.

Notice of the Meeting has already been posted to the Shareholders direct.

The Ordinary Share Registers of the Company will remain closed from the 27th February to the 16th March 1960, both the days inclusive.

By Order of the Board
Imperial Chemical Industries
(India) Private Ltd.
Secretaries.

Calcutta
10th February 1960.

MARTIN BURN LIMITED.

NOTICE.

The Board of Directors of Martin Burn Limited has to-day recommended payment of dividend at the rate of Rupees Two and Seventy-five nP. per share on the Ordinary Share Capital of the Company ranking for dividend for the year ended 30th September, 1959. This dividend awaits the sanction of the Shareholders at the ANNUAL GENERAL MEETING, to be held on Wednesday, the 30th March, 1960, at 12 noon. The dividend if declared will be paid under deduction of tax at the prescribed rates on or after the 18th April, 1960, to the Ordinary Shareholders whose names are on the Company's Register of Members on the 30th March, 1960, or to their mandates.

The Ordinary SHARE REGISTER of the Company will be closed from the 15th to 30th March, 1960, both days inclusive.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. Gidley
Secretary.

12, Mission Row,

WHY WE ADVERTISE...4

taking
more goods
to
more people
in
more places

Mr. G.V.K. Murthy, Chairman,
Brooke Bond India Private Ltd.

WE ALL KNOW how widely news-
papers and periodicals are read
today. As a result, millions of
people, in many widely-dispersed
areas, learn of the amenities, the
advantages, the services available
through new inventions and im-
proved products...of which, with-
out Advertising, they might never
have become aware.

And the people who read of
these products, want them. Prod-
ucts must be more widely-distri-
buted to meet the increasing
demand. The Tea Industry, for
example, wanted its product
delivered as fresh as possible in
order to hold the new customers

its Advertising had created. And
because of these new customers,
stocks had to be frequently replen-
ished. Rapid re-stocking meant the
rapid movement of supplies from
factory to shop. The customer
must get his tea fresh.

And what is true of tea, is true
of other products. Customers in
every part of India are receiving
new goods, improved products—in
better condition than ever before.
Advertising acts as a potent and
insistent stimulus in our country
of great distances and widespread
markets, pushing sales and distri-
bution networks to higher levels
of efficiency and public service.

Good advertising serves you

WORLD OF FINANCE

Advances, up by Rs 17 Crores, are at New Peak

RESPIRE from busy season pressure was available during the week ended February 19, according to the returns for that week of the Reserve Bank and of the State Bank. However, one slack week does not mean the slack season, and it is to be anticipated that relentless busy season pressure will be felt until, certainly, the end of March, at which time the year-end disbursements of the Central Government may be counted upon to alleviate monetary stringency. Indeed, the expansion in Advances, in the latest return of the Scheduled Banks, is of such proportions to compel the feeling that the rise in bank credit during the current busy season will be unprecedented.

There has been contraction in Active Note circulation during the week ended February 19, with the relevant figure declining by Rs 5.38 crores to Rs 1806.55 crores. Moreover, Rupee Coin has returned from circulation for Rs 0.26 crores. As a result of both these, the Reserve Bank's cash in the till is marked up by Rs 5.62 crores at Rs 18.06 crores.

Inter-governmental transactions are indicated in the return of the Reserve Bank for the Banking Department. The Centre's balances are shown to have dropped more than somewhat by Rs 16.21 crores to Rs 50.75 crores. This, of course, relates in part to the gain in State Government balances amounting to Rs 5.62 crores. Also, however, it is to be noted that the Reserve Bank's holding of Investments is higher by Rs 9.81 crores, despite probable purchase of Rs 5 crores through the tap by the State Bank. Hence, deficit financing is suggested. Such recourse to created money would have been warranted by the fact of the considerable maturing—Rs 15.90 crores—of Treasury Bills purchased and discounted by the Reserve Bank.

The Reserve Balances of member banks have moved down by Rs 5.61 crores to Rs 75.59 crores. But this is wholly on account of the State Bank, and for the reason that it drew on its balances with the Reserve Bank for liquidating debt. So, the overall impression to be obtained is that even the Scheduled Banks may not have experienced so severe a dose of busy season stringency. The Other Loans and Advances of the Reserve Bank have contracted by Rs 9.02 crores to Rs 121.23 crores, but this, again, is wholly ascribable to the State Bank. In other words, other Scheduled Banks have not reduced their debt. Finally, Balances Held Abroad are down sharply by Rs 4.50 crores at Rs 39.84 crores.

Special Deposits from a fresh tranche of Public Law 480 counterpart funds possibly account for the sudden rise of Rs 11.97 crores to Rs 600.20 crores in the State Bank's Deposits as at February 19—this being the first time that the Rs 600 crore mark has been pierced. (With this rise, the return of Scheduled Banks for the relevant week should disclose that gross Deposits of Scheduled Banks have crossed the Rs 1900 crore mark). Such indeed is the insinuation of the rise of Rs 5.82 crores to Rs 375.10 crores

in gilt-edged holdings of the State Bank, signifying as it does tap purchases in the midst of the busy season. In any case, this was a windfall that the State Bank has reason to be grateful for. For, with Advances more or less static at Rs 189.73 crores, the State Bank could, by running down cash balances by Rs 7.38 crores to Rs 31.63 crores, reduce its indebtedness to the Reserve Bank by Rs 9.45 crores to Rs 1.61 crores. If, in fact, a new tranche of counterpart funds is in process of being built up—and, as we had recently pointed out, fresh accretions are to be expected—then, the State Bank's Deposits could well improve by Rs 100 crores by the end of June this year; and this will mean that, correspondingly, the State Bank will purchase Rs 100 crores of securities through the Reserve Bank tap. This last observation, as to purchase of gilt-edged, is based on the State Bank's policy of contra-investing against its receipts of special Deposits. If this were to happen, then the State Bank, in order to meet busy season financing needs during the rest of the busy season, may still be paradoxically compelled to approach the Reserve Bank for loans.

Advances of Scheduled Banks have, in the week ended February 12, shot up by Rs 16.85 crores to a new peak of Rs 1049.01 crores. Since, meantime, Deposits had showed a small fall of Rs 1.62 crores to Rs 1886.10 crores, it became necessary to borrow heavily from the Reserve Bank. Borrowings from this source are nearly Rs 10 crores higher at Rs 49.33 crores against Rs 39.44 crores; and Rs 4.76 crores of this is due to the State Bank. Furthermore, borrowings from the State Bank have also increased by nearly Rs 1 crore. Disinvestment in gilt-edged is in the considerable amount of Rs 24 crores—but all of it on account of the State Bank. Similarly, though cash balances appear to have improved by Rs 9.21 crores to Rs 159.79 crores, it has to be noted that the State Bank, in disinvesting in gilt-edged, improved its cash balances by Rs 14.60 crores. So, other Scheduled Banks must have experienced a fall of around Rs 5 crores in their cash balances.

Bank of India's Accounts for 1959

IN its balance-sheet as at the end of December 1959, the Bank of India Ltd has been able to show its Deposits crossing the Rs 100 crore mark. In the latest year, the rise in Deposits and other accounts is to the tune of Rs 12.42 crores, and Deposits are now placed at Rs 100.69 crores. While Savings Bank Deposits are higher by a little over Rs 2 crores at Rs 13.89 crores, the other two heads show larger gains; Fixed Deposits have moved up by nearly Rs 6 crores from Rs 39.58 crores to Rs 45.50 crores, and Current Accounts, etc., are higher by Rs 4.47 crores at Rs 41.30 crores. Such rise in Deposits has easily enabled Bank of India to expand its Advances portfolio from Rs 58.99 crores to Rs 67.94 crores. Meantime, also, the bank's investments in gilt-edged have moved up by Rs 4.31 crores to Rs 26.22 crores. Cash balances, too, have improved, cash in hand rising from Rs 8.65 crores to Rs 10.09 crores. However, it is to be presumed that the demand for Advances was sudden and at the year end, since borrowings are shown at Rs 3 crores against nil in the previous balance-sheet.

According to the profit and loss account, income by way of interest and discount has gone up but slightly from Rs 3.88 crores to Rs 3.91 crores. But, since the provision for tax (as we shall presently see) has been reduced, we may infer that the higher deduction of tax on

interest receivable on gilt-edged investments is responsible for a smaller rise in the income under this head being shown than is actually the case. Commission, exchange and brokerage have fetched slightly more at Rs 56.96 lakhs against Rs 52.34 lakhs. It is heartening to note that the bank has kept a very tight rein on expenses. Interest paid shows a small rise of Rs 4.74 lakhs to just a shade under Rs 2 crores; and the rise in salaries and allowances is one of Rs 9.77 lakhs to Rs 1.31 crores. In the result, however, the balance of profit, subject to tax, is marked lower by Rs 3.09 lakhs at Rs 82.68 lakhs.

The provision for tax has been reduced by Rs 7 lakhs to Rs 18 lakhs. The provision for bonus to staff has been stepped up by Rs 1 lakh to Rs 17 lakhs. The rate of dividend, including the interim payment, has been maintained at 16 per cent. But the return to the shareholder is less, in that the latest dividend is subject to deduction of tax, whereas the distribution for 1958 was free of income tax. The carry forward, at Rs 12.48 lakhs, shows little change from the amount brought in of Rs 12.79 lakhs.

Bank of Rajasthan's Profit for 1959

The Bank of Rajasthan Ltd reports that Deposits have risen by Rs 38 lakhs to Rs 4.92 crores. The profit for 1959 works out to Rs 2.60 lakhs. The transfer to the Reserve Fund is Rs 0.53 lakhs, and the Reserve, at Rs 5.45 lakhs, works out to 58.98 per cent of the paid-up capital. Income tax absorbs Rs 0.96 lakhs, and Rs 37,000 has been provided for bonus to staff. The dividend recommended is one of 8 per cent subject to deduction of income tax, and this compares with last year's 6 per cent free of tax. The amount carried forward is at Rs 1,570 as against Rs 1,019 brought in.

Government of India Treasury Bills

TENDERS for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 23rd February 1960. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.310 and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.750 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 29th February 1960. Successful tenders should make payment on Friday, the 4th March 1960. Other conditions are as usual.

During the week ended the 19th February 1960 Government of India Treasury Bills for Rs 55,60,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 24th to 27th February 1960 at Rs 99.331 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 17th to 20th February 1960.

Government by Statistics

By Paul Einzig

IT is the dream of statisticians, and the nightmare of most of the rest of us, that one day—perhaps in the not too distant future—our countries will be governed by decisions taken entirely on the strength of index figures and other statistics. Such system, in its most extreme form, would obviate the need for thinking and for taking responsible decisions. Electronic brains could replace Ministers. The statistical material collected by Government Departments would be fed into the computers and these would automatically produce the decision about the administrative action to be taken.

We have not yet arrived at that stage, or anywhere near it, but we are undoubtedly making progress towards it. Statisticians are not yet our rulers, but they wield considerable influence behind the scenes. Which is as it should be—within reason. Governments must know what is going on, and good up to date statistics are indispensable to that end. Considering the statistical material they have at their disposal today, we are at times inclined to wonder how the world was run until recently in the almost complete absence of statistics. Possibly, the world is now run much better, thanks to the remarkable improvement of statistical services, and it will be run a great deal better if only we could improve further these services. We are all green with envy when we think of the highly up to date statistics in the United States, for instance.

But there can be such thing as excessive reliance on figures instead of relying on our judgment based on facts and on common sense. There are, for instance, dangers inherent in the system under which wages are adjusted automatically to the cost of living index. In some countries, that system is based on legislation. It is the major preoccupation of the Governments in such countries to devise means to mitigate the effect of such government by statistics. They move heaven and earth to prevent the rise in the index—not in the hard way of preventing a rise in prices but by manipulating certain prices in order to influence the average.

The case of the French wine trade has provided a striking instance of the results of government by statistics. Wine plays a very important part in the French economy. A considerable section of the population depends on it for its prosperity. For this reason, the Government adopted an elaborate system by which to prevent a fall in wine prices that was threatened as a result of the exceptionally large harvest in 1959. There was too much

wine, so some of it had to be kept off the market. Facilities for storage have been developed, and finance has been provided to enable growers to store the surplus instead of throwing it on the market. Furthermore, distilling facilities have been expanded, and steps have been taken to increase consumer demand at home and abroad.

So far so good. The trouble is that all these measures have succeeded too well. Instead of the disastrous slump in wine prices which threatened to ruin whole districts in France, the official action has resulted in a sharp rise in wine prices. Producers are happy and prosperous. But the situation is giving the Government a major headache. Fir, wine in France is important not only to producers but also to consumers. It figures prominently among the goods that determine the cost of living index. A sharp rise in wine prices might easily bring the index to a figure at which its rise automatically entails an all-round substantial increase of wages and salaries. This means that the unexpected success of the French Government's intervention to safeguard the wine producers' interests is liable to initiate a major turn in the inflationary wage price-spiral.

There was nothing for it but to take steps to check the rise in the price of wine. It was, of course, easier to induce wine producers to store their surplus than to throw their surplus on the market when this would suit the Government. To revert to price control would have been most unpopular. The alternative method which would not interfere with the free movement of prices was to increase wine imports. France is taking this opportunity for giving some real meaning to the system of European Economic Community which has just been established. Arrangements are being made to increase the import of wines from other member countries of that community, especially Germany and Italy.

This episode teaches us two lessons. The one is that measures taken on the basis of output statistics to neutralise a surplus need not necessarily achieve their desired end even if the statistical service is prompt and dependable. The other is that the rigid application of the system of automatic wage increases on the basis of the cost of living index is liable to land the Government into difficulties. In the present instance, it appears to be possible to solve those difficulties. In other instances, quite absurd measures had to be adopted to manipulate the cost of living index. There is a strong temptation for Governments which have adopted that system to subsidise directly or indirectly the articles which play an important part in the calculation of the index and to tax the articles which play no part or only a subordinate part in that calculation. The result is unnatural interference with production and consumption. Copyright.

Budget: Hopes Rather than Fears

REFLECTIONS on the probable shape of the coming year's Budget have understandably tended to be cheerless. But Mr Morarji Desai's reasons for asking for more are better and more sympathetically understood than were Oliver Twist's by Bumble. Indeed, these reasons have been rehearsed with a certain gloomy masochism. Increased defence needs are expected not only to restore last year's slash of Rs 25 crores, but to swallow up an additional Rs 30 crores, thus bringing the defence expenditure to nearly Rs 300 crores. The Pay Commission's recommendations, accepted by the Government, are expected to increase the administrative bill. Estimate of such increase seems to vary from time to time, each new estimate putting the commitment at a higher figure. The demands of the final year of the Second Plan is another, and perhaps most readily acquired in, justification for further sacrifices. One estimate of the Planning Commission puts the total outlay on the plan up to the end of 1959-60 at Rs 3,660 crores. This would leave a sum of nearly Rs 1100 crores to be found by the Centre (against this year's Rs 1093 crores) in order to fulfil the plan's expectation of a total outlay of Rs 4800 crores. Deficit financing having reached massive proportions already—one estimate puts it at Rs 1115 crores for the first four years of the Second Plan against the outside limit of Rs 1200 crores for the plan as a whole—it is hardly possible for the Finance Minister to take recourse to this mode of finding funds for the plan, particularly in view of the continued pressure on prices.

While all this is true enough, certain hopeful features of the situation have been obscured by this persistent auto-suggestion of the inevitability of further taxation. It is to such Budget hopes rather than fears that we would draw attention on the eve of the Budget day. First among these is the buoyant trend in current revenues from taxes. These promise to outstrip Budget estimates in an impressive fashion. Table I makes the position clear.

TABLE I

	Budget Estimates for 1959-60.	Actuals for 9 months up to December, 1959.	Estimates for full year based on actuals for 9 months.
	(In Rs crores)		
Customs ..	132.77	115.19	153.92
Excise ..	325.08	259.73	346.31
Corporation Tax ..	58.75	55.04	73.39
Income Tax (Net) ..	87.63	81.14	108.19
Total ..	604.23	511.10	681.81

It is evident from Table I that, judged by the actual performance in the first nine months of the year, nearly Rs 78 crores more than anticipated will be realised from these four items. In terms of percentage, the increase is nearly 13 per cent over the Budget estimate. If it is remembered that tax collection in the last quarter of the financial year is significantly higher than the quarterly average, the

actuals for the year 1959-60 will be much higher than the figures estimated in Table I.

What are the conclusions to be drawn from this? First, the increased tempo of production is making a significant contribution to tax revenues. Second, this increased production being largely the result of gradual maturing of Second Plan schemes, the coming year is sure to see further accentuation of the trend. As more and more schemes overcome their initial handicaps and get into their stride, the pace of production will be quicker and there will be a steady increase in their earning capacity. Therefore, the gathering momentum of the Plan is sure to make the coming year reach the peak not only of increased production, but, consequently of tax receipts. Therefore, fatalism about increase in taxes is not justified. While new commitments are certainly an unwelcome burden, it should be realised that a developing economy is capable of taking them in its stride. After all, present sacrifices for the sake of developing an economy can be justified only if the dynamism generated progressively reduces the privations involved in such sacrifice.

This, of course, is not an argument in favour of blanket reduction in taxes. But it is certainly a plea for adjustments in the tax structure and for the removal of features that have proved irksome and iniquitous, have little fiscal justification and, above all, have tended to curb the very dynamism that brings in more revenue. Particular instances can easily be given. The tax on bonus shares is one which authority is persisting in, when even such justification as it once had has disappeared. With the tax on excess dividend abolished, a tax on the issue of bonus shares is an open invitation to improvident distribution of dividends and consequent reduction in retained profits. From every point of view, therefore, the tax cries aloud to be abolished.

The second adjustment that the Finance Minister can attempt is in the matter of corporate taxation. Here, there is an additional obligation flowing from the implicit assurance given by the Finance Minister that every one will be exactly where he was before the new system was introduced. Studies have shown that, if the Finance Minister's intention is to be realised, the rate of taxation will have to be significantly lower than the 45 per cent at which advance taxes were collected during 1959-60. The most recent of such studies is that published by the Association of Indian Trade and Industry, which has worked out the impact of the new system over a wide range of hypothetical cases. It is now fairly clear that the net impact of the new system will leave companies and share-holders taken together worse off than before in a majority of cases, unless the actual rate is less than the 45 per cent foreshadowed last year. This being the position, there is a strong case for the reduction of this rate, especially since the "bounce" imparted by such a gesture will quicken the economy in many tangible and intangible ways.

There is another reason why fatalism about further taxes is unjustified. The buoyancy of the economy has been testified to not only by

the increase in tax receipts, but also by the impressive success of the borrowing programmes of the Centre and the States during the current year. We have been consistently urging that the borrowing programme of the Government has been unduly faint-hearted.

Thus, it is evident that increased receipts from taxes at current rates with suitable adjustments may bring in anything between Rs 100 crores and Rs 150 crores. Market borrowings and small savings can be significantly stepped up. Even if deficit financing is to be restricted to less than a hundred crores, (against the current year's estimate of Rs 222 crores), the increased receipts may take care of a good portion of the increased commitments. There may, of course, be still some extra money to be found. But the coming Budget need not necessarily fulfil all the gloomy prognostications made about it. Mr Desai can, without being unfaithful to his stern duties, yet confound the gloomier prophets by being less demanding than they fear. It will be a unique kind of revenge, in that it will be as sweet to the avenger as to the avenged.

Andhra Budget

ABSENCE of fresh taxation proposals, and the provision of relief amounting to Rs 45.7 lakhs to particular industrial and agricultural sectors high-light the Budget presented by Mr K. Brahmamanda Reddy, Finance Minister of Andhra Pradesh, to the State legislature early this week. The Budget estimate of revenue for 1960-61 is Rs 82.13 crores while the estimate for expenditure is Rs 81.98 crores. The resulting revenue surplus amounting to Rs 20.01 lakhs has, in view of the concessions sought to be provided, been converted into a deficit of Rs 25.6 lakhs. Taking into account capital outlay at Rs 32.44 crores, net disbursements on account of loans and advances and repayment of loans at Rs 0.21 crores and ways and means at Rs 37.72 crores, the overall position reveals a deficit to the tune of Rs 3.73 crores. Thus, the Andhra Pradesh Budget falls into the pattern disclosed by State Budgets already published and which should be further reflected in the States Budgets to come. Subject to the pressure of mounting expenditure arising from Second Plan development schemes, an overall surplus is something that has become well nigh unattainable.

The picture of the financial situation reflected in the Budget provides a bright contrast to the initial difficulties which the State faced when Andhra Pradesh was formed. Running continuous overdrafts on the Reserve Bank of India and the Government of India, it was a careful piece of husbanding business that the early Finance Ministers were called upon to do. It is a measure of the improvement that has since been achieved that total revenue receipts have gone up from Rs 47.25 crores in 1956 to Rs 82.13 crores for 1960-61.

Financial improvement has been paralleled by success in implementation of Plan schemes. Out of a total provision of Rs 175 crores for the Second Plan, an outlay of Rs 92 crores has been incurred in the first three years. The

Indian Finance

Established 1928

February 27, 1960

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

Budget outlay for the fourth year at Rs 42.03 crores is expected to be exceeded by more than Rs 2 crores, which would leave a balance of barely Rs 40 crores to be covered in the last and final year of the Plan. That the total targeted outlay should be exceeded should be evident from the fact that, for 1960-61, the plan provision amounts to Rs 44.04 crores. The allocation of outlay reveals a bias toward agriculture and irrigation which, between them, take up more than Rs 26 crores.

Industrial development, which has been lagging, has received more attention in the Budget for 1960-61. In the course of his Budget speech, Mr Reddy announced the Government's decision to constitute an Industrial Development Corporation which could give a fillip to industrial development in the State. The Corporation would plan, promote and set up industries either by itself or in association with private enterprise. The Budget has made a provision of Rs 1 crore by way of capital for the Corporation.

Another notable development in the industrial sphere is the near materialisation of the project for the fertiliser factory which has been hanging in the air for a fairly long time. Referring to this, Mr Reddy observed that the Government have decided to accept the recommendation of the Technical Committee set up by the Government of India to locate the factory at Kothagudum with a capacity of 80,000 tons of nitrogen per annum.

It is, by all standards, a commendable record in financial management and plan implementation that the State has witnessed in the course of the last few years. Judged from the standpoint of the massive development, envisaged under the Third Plan, the present resources position could, however, by no means be considered completely satisfactory. The Third Plan of the State envisages an outlay of Rs 475 crores, which works out to nearly three times the outlay that would be incurred under the Second Plan. The mounting burden of public debt and the adverse ways and means position should give legitimate grounds for worry about the prospects for sustaining the Third Plan programmes. The public debt liability, which stood at Rs 168.85 crores at the end of March 1959, is, consequent on the loan programmes implemented in the course of the fourth year of the Plan, expected to rise to Rs 185.90 crores by the end of March 1960 and to Rs 209.87 crores by the end of March 1961. The liability in terms of servicing and repayment that has to be met in the course of 1960-61 works out to Rs 11.25 crores, against which the total public borrowings envisaged for the Budget year amount to only Rs 13.00 crores. The financial situation as reflected in the ways and means position is hardly more encouraging, as should be evident from the accelerated drain on the cash balance which, in view of the over all deficit revealed in the Budget, is expected to rise from minus Rs 4.89 crores at the end of 1959-60 fiscal year to Rs 8.62 crores at the end of the next fiscal year.

Orissa Budget

DESPITE an anticipated increase of over Rs 6½ crores in revenue over the revised estimates for 1959-60, Orissa's Budget for 1960-61 shows a deficit of Rs 3.50 crores. The revenue deficit is converted into a surplus of Rs 15 lakhs as a result of the net transactions both on revenue and capital accounts, as the latter shows a surplus of Rs 3.65 crores. The Budget estimates revenue at Rs 36.87 crores and expenditure at Rs 40.17 crores. The anticipated rise in revenue will be largely as a result of the new irrigation rates, the unification of cess rates, the tax on goods carried

by road and inland waterways, and the purchase tax on rice and paddy, sales tax on cereals, pulses and edible oils, and the tax on diesel oil and kendu leaves.

If, even after the fresh tax efforts, the State has had to show a deficit on revenue account, it is mainly due to the fact that it has to pay more than Rs 3 crores by way of interest to the Centre on the loans received for the Hirakud project. Hirakud is due to come under the direct control of the State Government with effect from April 1 next and the Budget has taken into account the increased contribution to the State's revenue in the next year from this source. Even so, the revenue from Hirakud will fall far short of the interest charges and Mr R. N. Singh Deo, the Finance Minister, has pointed out that, in view of the expectation that it will take some time for receipts from Hirakud to grow to a satisfactory level, continuing deficit in the Budget may have to be reckoned with. However, there is some hope in the fact that the State's financial position is to be reviewed five years after the completion of the Hirakud project. The Central Government have also agreed to refer the question to the next Finance Commission and it is hoped that the Centre may consider sympathetically the request that a portion of the Hirakud loan be treated as a Central grant for flood relief. But these reliefs are not in sight yet and it is only prudent to go by what obtains at the moment. In this view, the State's financial position, as Mr Singh Deo himself has admitted, is not quite satisfactory. What with a public debt to the tune of Rs 147 crores and an accumulated revenue deficit of Rs 20 crores, the State cannot afford to leave the task of bridging the gap between revenue and expenditure unattended for long.

There is every reason, however, to hope that the State can address itself to this all important work with success in the coming years as the development projects under the five year plans are already beginning to bear fruit. Significant progress has been made in food production and the last harvest has been bigger than the previous year's, and what is perhaps much more important is that the average yield per acre has gone up considerably. As a result of the revised estimate of the average yield, last year's harvest is expected to be 3.6 million tons. Iron ore exports are looking up and the State Government expect to export a large quantity of ore to Japan during the next financial year under agreement with the State Trading Corporation.

Kashmir Budget

BY a small increase of 5 nP per gallon in the tax on the sale of diesel oil; by stepping up the tax on the sale of automobiles from 3 per cent to 5 per cent; and by the imposition of a 5 per cent sales tax on a number of articles hitherto free from this tax, Mr Bakshi Ghulam Mohammed, Kashmir's Prime Minister-cum Finance Minister, has been able to show a substantial surplus in the State's Budget for 1960-61. Most of the articles which are now to bear either enhanced tax or a tax for the first time may be termed as "luxury" items, though essential articles, too, find a place in the list. The expansion of the sphere of sales tax is in conformity with the decision arrived at at the conference of State Finance Ministers, and it is also evident that Mr Bakshi Ghulam Mohammed has rightly come to the conclusion that the increased prosperity of the people of the State as a consequence of the implementation of development projects under the five year plans also justifies the new levies. The revenue receipts for 1960-61 are estimated at Rs

1569.95 lakhs and revenue expenditure at Rs 1283.40 lakhs, leaving a revenue surplus of Rs 286.55 lakhs. Apart from the increased revenue from sales tax, higher yield is also expected next year from Excise Duties and under Civil Works.

As is to be expected, the Budget year, by virtue of its being the final year of the Second Plan, is to witness accelerated activity, and it is gratifying to note that rural electrification is to continue to get high priority. The Kashmir Premier has expressed satisfaction at the progress of the plan projects. Already, the effect of these is visible in important sections of the economy. During the first four years of the current plan period, as many as 11,000 jobs in Government departments and quite a considerable number in other sectors have been created.

The Dalai Lama's Bullion

THE weight of the bullion sold in Calcutta during this week on account of the Dalai Lama has not provoked much comment and local prices have not yielded to the sudden supply. There is an implicit admission that the Dalai Lama's cause is lost, and there is no chance of a restoration so long as the Chinese forces straddle the Himalaya. The disposal of the treasure brought from Sikkim may lead to queries about import licences, the duty to be levied, and sales tax due. It may also lead to queries about the Reserve Bank not entering promptly a pre-emptive claim to purchase treasure, because India has no bullion brokers related to the central banking institution like the quartet in London led by N. M. Rothschild and Sons.

The local prices of gold and silver may not be affected in view of the official reply about the depreciation of the Indian rupee. But the fact or possibility that proceeds will be applied for relief of Tibetan refugees may make many here feel that gold is the only real store of value, and the modern faith in managed money may be shaken. Sir Oliver Franks' recent lectures notwithstanding. The sale of the treasure to the market through a banker may lead to questions about wealth tax due from the discreet buyers.

It is, however, gratifying that no protest has been entered by the Chinese Government, which takes philosophically the sudden flight via Sikkim of Tibet's little stock of capital. But Sikkim has earned a title to India's gratitude and the protected State qualifies for help, like that afforded to Bhutan for construction of roads. Official approval of the sale is implied in the promise of Army vehicles and escorts, as also the presence of a Union Government official at the airport.

The entry of Tibetan silver may not frighten the bulls in the Bombay bullion market, since they know that future replenishment of supplies is unlikely, and the silver bars may go at once into vaults. The Dalai Lama's sale of treasure may raise him above Indian capitalists, but it may be wiser for him to invest in the Buddhist hill kingdoms and put new life into their plans for rapid development. The Prime Minister's reply to questions in Parliament suggest that the Dalai Lama's premonitions in 1950 about the safety of his capital were known to Delhi, and Sikkim was approved as the repository because, like Switzerland, it is neutral ground. It is just possible that some Indian capitalists may try to secure safety for some of the possessions in Sikkim, which also offers great possibilities for those willing to make scotch whisky outside Scotland.

NATIONAL NOTES

Kerala: "Love Me, Love My League"

The two-party coalition Government in Kerala has been hailed with relief throughout the country, and not least for the fact that it has been possible for the Congress to participate in the Government of the United Front without sacrifice of its basic principles. Until the very end of the long-drawn negotiations which preceded the agreement, this remained doubtful, with the PSP playing the game of "Love Me, Love My League". The Muslim League in Kerala is entitled to congratulations for resisting the temptation to blackmail the United Front, as it must have been sorely tempted to do by the open encouragement it received from its old patrons who have come out in spots.

The result of the election could have been justly regarded as a mandate for a tri-partite coalition if the three parties had contested it on the basis of a common programme. When that was not the case, there was no obligation to continue the electoral arrangement. It would have been far better if the Congress in Kerala had not entered into this arrangement. But the fact that they had committed one mistake does not mean that they should go on committing others.

HOWRAH

At this time of day, it is amazing that any one should have the hardihood to suggest that the inclusion of the Muslim League in the Coalition would have made for the emotional integration of the Muslim community with the rest of the nation. But the fact is that the one great obstacle to the emotional integration is the continued existence of the Muslim League. And if, as is argued, the League in Kerala is really different, and its members are nationalists in fancy dress, they should be advised by their friends to cast off the disguise for the better health of the nation.

★

Begar in Burkha?

The Planning Commission's memorandum on community assets in rural areas looks, on the surface, like a constructive approach to the problem of utilisation of idle resources; but, at the same time, it raises doubts, not easily cast aside, whether it is not an attempt to introduce forced labour, which has been outlawed by the Constitution, in a disguised form. These apprehensions are reinforced by the fact that the memorandum has been drawn up in connection with the remarkable proposal, first announced by Mr Shriman Narayan, of requiring every citizen to contribute 100 hours of voluntary labour in the service of the nation.

"Voluntary labour", which every citizen "should" contribute is itself a prime example of Oxymoron over which old teachers of English Grammar, if the tribe is not extinct, will gloat for hours. It may be explained that the element of voluntariness comes in, because those who have the means can purchase their freedom by settling for a cash payment. They can also choose the type of work which they will do. Those who have the taste and the inclination may choose to purvey the pure milk of human kindness on visits to jails, hospitals and lunatic asylums. Others may take up the more heroic task of teaching the three R's to the local street urchins. But, in any case, it will be their choice. But no such easy means of escape is open to those who lack the cash; and they constitute the vast majority. And it is to them that the Planning Commission's proposals for harnessing manpower resources in the rural areas have relevance. For the rural unemployed and under-employed, the voluntary labour stunt is in no way different from begar in a burkha.

Forced labour, and the proposal amounts to no less, is the first step on the road to the regimentation which marks out a totalitarian polity. In a democracy, it is the duty of the political parties and the representatives of the people to be ever on the alert to check such dangerous deviations. The indifference displayed by the democratic parties to this pernicious proposal is as puzzling as it is disheartening to those who set store by the rights and liberties of

the individual. The Swatantra party, which has nailed the flag of liberty to its mast, would do well to turn its fire from Cooperative Farming, which like the Cheshire Cat has all but disappeared until only its grin is visible, to this more tangible menace on the horizon.

Perhaps we are unjust to the Planning Commission. Perhaps they expect that the workers will be paid their hire. If so, they should also have explained how the programme is to be financed, assessed the inflationary impact of a nationwide programme for creation of capital assets and pointed out how this could be held under control by increasing supplies of common consumer goods. There are other answers to inflation than the starvation of the workers. The Planning Commission should also have refrained from emphasising the aspect of the obligatory work, which even now villagers perform in certain States in connection with the construction and maintenance of irrigation works.

There is no denying that unemployed labour in rural areas represents a substantial productive potential which remains unutilised. The effective utilisation of this labour in productive work can take India much earlier to the stage of "take-off," if the programme is properly drawn up and the execution is phased so as to maintain the level of employment. But creation of community assets with unpaid labour, as appears to be the intention, will not lead the country to a self-generating economy. It is more likely to depress the purchasing power and the level of living in the country-side and take the country back to the feudal past rather than forward to the brave new world of the Prime Minister's dreams.

★

Never Enough Sugar

What hits the eye in the Third Plan target for sugar, suggested by the Development Council for the Industry, is its utter inadequacy. The target of thirty lakh tons will make available for consumption 13.87 lbs of sugar per year per head in the last year of the Third Plan, which is equivalent to 6.3 kilograms. This compares with 54.8 kg in Australia, 51.5 kg in the UK, 46.3 kg in the Netherlands, 42.6 kg in the USA and 54.1 kg in Denmark. Even at the end of the Third Plan, India's consumption of refined sugar will remain one of the lowest in the world.

In this context, it will be useful to examine the soundness of the assumptions on which the Third Plan estimate of sugar consumption has been drawn up. It has been estimated that 25.06 lakh tons of sugar would be required for a population of 480 million at the existing rate of consumption. To this has been added 2.14 lakh tons to cover increases due to changes

in dietary habits and another 2.51 lakh tons to meet rising demand following increase in the purchasing power of the people.

Experience of the last decade, during which sugar consumption has doubled, raises doubts whether the nature and magnitude of the impact of new incomes on the demand for sugar have been correctly sized up. The tentative approach to the Third Plan envisages an annual rate of increase of national income of the order of five per cent. From this, it will not be justifiable to draw the conclusion that sugar consumption will also rise at the same, sedate rate. During the last ten years, sugar consumption has been doubled, though the increase in national income during the period is less than twenty per cent. Moreover, it should be noted that the rise in demand is not continuous, but proceeds by fits and jerks. As and when new groups enter the consumption picture, there will be sharp increases in demand. The plan for sugar should make allowance for these factors.

The target of thirty lakh tons will not enable the country to get off the recurrent cycle of shortages, profiteering, ineffective controls and all-round frustration. It may not be possible, with our present resources, to ensure a level of consumption comparable with western countries. But it is no one's case that the scope for increasing production has been fully investigated, and that a target of more than thirty lakh tons will not be practicable. Land is the ultimate limiting factor. But the low per acre yield of sugar cane in India, which is only 1.4 tons as against more than six tons in Hawaii and Java, indicates the large scope that exists for increas-

ing the output of cane without diverting land from other crops to sugar cane cultivation. But it will require the adoption of a programme of incentives which will increase the per acre yield of sugar cane. One measure which can be suggested is to fix the price of cane in terms of its sucrose content.

Call to Sacrifice

The memory of the harrowing experience of last year, when the State passed through a series of calamities, natural and man made, has imparted an austere note to the address of the Governor of West Bengal to the State legislature. The keynote of the address was the call for patience and sacrifice for the success of the Third Plan. The call to sacrifice is not new to the people of Bengal, and they will not hesitate to respond if the cause is inspiring. But the cold statistics of planned projects are not the stuff to inspire poets to rapture; and enthusiasm is at a low ebb when the leaders have apparently lost the capacity to transmit it to their following. Preoccupation with the current difficulties should not, however, be allowed to obscure the view of the projects in different fields which make up an encouraging pattern of many-sided progress. Three new universities are coming up in the educational field which, one hopes, would help to ease the problems of numbers in existing universities. In the field of industry, the Durgapur project has been making steady progress—the thermal station would be in commission next month, while, elsewhere, the Kalyani Spinning Mills is expected to start operations next June. The National Sugar Mills, in which the State has an interest, has already gone into production, and the availability of local supplies should strengthen the hands of the Government in ensuring sugar at reasonable prices. For many years, the food problem has been a persistent source of anxiety. The food gap is yet to be firmly estimated, but the Governor was in a position to give the assurance that, whatever the deficit, it would be met by the Centre.

Words in Haste

When drawn into a discussion over the progress of investments in the private and public sectors during the Second Five Year Plan—Mr Bhupesh Gupta did the provoking in the Rajya Sabha last week—Mr S. N. Mishra, Deputy Minister of Planning, seemed to have been apologetic about the performance of the public sector in the matter of investment. The fact that led the Communist member to draw the inference that the private sector is moving faster than the public sector is that the investments made during the first three years of the Second Plan in organised manufacturing industries in the public sector amount-

ed to Rs 426 crores as against Rs 563 crores in the private sector. Mr Gupta's contention is that the trend disclosed by the figures is in marked contrast to the general belief derivable from the stated objectives of planning in our country, that the public sector would overtake the private sector ultimately and occupy a dominant position. Quite unnecessarily, it would seem, Mr Mishra has explained that, although the private sector is expected to exceed the targets in regard to the financial investments, it does not mean that it is going to fulfill the physical targets laid down for it. In replying to Mr Gupta's accusation, he has further unquestioningly accepted the construction put on official policies by the Communist member. For, he has observed that an examination of the figures will show that the process (domination of the private sector by the public sector) has already started.

It was time Government spokesmen learned to avoid scrupulously the controversy over the respective roles of the two sectors. A look at the details of development of the so-called public sector and private sector industries during the first three years of the Second period given by Mr Mishra in his statement, laid on the table of the House, would at once show the utter futility of this distinction. Among the private sector industries that have increased investments are aluminium, ferro manganese, general and electrical engineering, heavy chemicals and fertilizers, dyestuffs, drugs, plastics and chemical industries, rubber manufactures, paper and paper board, cement and refractories, petroleum refining, textiles, sugar and other manufacturing industries. Can any one validly argue that the progress of these industries means nothing to the development of the country as a whole, or that, without the progress of these industries, the Indian economy as a whole can prosper? How is one to reconcile the Deputy Planning Minister's explicit assumption that the private sector is to be ultimately dominated by the public sector with the recent categorical statement of Prime Minister Nehru that private sector industries will continue to have their rightful place in the economy? Unthinking people and interested parties like the Communists may continue to speak of the two sectors as though they are two mutually exclusive sectors of activity, but one has a right to expect Ministers to show a more balanced judgement.

Tourist and the Law

Many lessons can be drawn from the unfortunate incident in which Mr Frederic March and his companions were involved on the last day of their stay in India. This is a matter of regret even for the most fanatical prohibitionists in the country. For instance, a cogent case can be made out that we cannot have both prohibition

and tourist dollars, and if we want the one we must be prepared to give up the other. But we are afraid that this suggestion will only sharpen the glint in the eye of our austere Finance Minister. It can be argued that tourists should be advised to drop Madras from their itinerary, unless they happen to be teetotallers. Or it can even be suggested that tourist department officials should be more active and alert, keep tag of the visitors' drink permits and see to their renewal in time, till the moment of their departure. All these would be legitimate conclusions, though none of them is likely to be acted upon. But it would be extremely unfortunate if the row kicked up over the incident creates the impression that the police were wrong in taking action against the tourists and should be disciplined. There are tourists and tourists. Some develop an inexplicable fascination for sensitive spots on the border. Incidentally, the road from Thekkadi Game Reserve to Madurai, along which Mr March and his party were driving, is said to be a regular smugglers' run.

The reports that have appeared do not suggest that the visitors were subjected to any harassment, though the experience must have been extremely annoying. In all, they were delayed by four hours, by which time the party had been taken to the nearest police station, case registered, an ailing magistrate rooted out of his sick-bed, and bail granted on their personal undertakings. The visitors were also permitted to appear by proxy at the subsequent trial. From what we know of the speed at which Government machinery moves, the constables concerned appear to have acted with unusual celerity so as to minimise the inconvenience to the visitors. If the law had allowed them the discretion, in the matter, they would not have taken any notice of the four ounces of whisky in the doctor's handbag which led to all the trouble.

An enquiry has been ordered by the Inspector General of Police, Madras, which should show whether the constables were at fault in any particular, or deserve commendation for a remarkable sense of duty. But the mere fact that an enquiry had been ordered in this case may lead the rank and file of the police to play for safety and act as if the tourist can do no wrong. Tourism, of course, is important, but the rule of law is of even greater importance. For, it is only on the assumption that the rule of law is well established that we can invite tourists to visit our country with a good conscience.

Polish Credit for India

Inspired by the spirit of co-operation, Poland has offered a long term credit for Rs 15 crores to help India in the successful implementation of the Third Five Year Plan. Dr Juliusz Katz-suchy, the Polish Ambassador to India,

informed pressmen last week the new agreement was expected to be signed in Delhi by the representatives of the two Governments within a couple of months. The exact terms and conditions, as well as the details of the agreement, would be finalised only in the course of the negotiations that are to be held at Delhi before the signing of the agreement.

From the preliminary talks held, it is understood that the credit offered would be utilised for the purchase of Polish machinery like industrial plants, machinery for the manufacture of aluminium and processing of zinc ore, machine tool factories, and coal washing plants. The repayment of this credit would be in terms of Indian raw materials and industrial goods. Another advantage of the Polish credit is that the interest to be charged will not exceed 3 per cent.

It may be recalled that the new agreement would be in addition to the three-year agreement reached by the two Governments in January this year. Besides, India is the first country to receive such a long term credit from Poland. The new form of economic co-operation between Poland and India will strengthen the existing cordial relations. The Polish Ambassador has also extended an invitation to an Indian delegation to visit the Poznan International Fair to be held in June.

Beaten Track

Mr M. L. Shah has covered familiar ground in his address to the Third Quarterly Meeting of the Indian Chamber. He has elaborated the theme familiar with reiteration, of the strangling effect of controls and administrative delays on productive enterprise at a time when production claims the highest priority. But this paradox is inherent in any programme of planning. If economic and industrial progress could be ensured by abolishing all controls, there would have been no need for planning at all. So far, even Mr Masani has not taken up this position. His objection to the Planning Commission, which he wants to abolish, is based on political considerations rather than on the requirements of national economic progress. As a matter of historical fact, controls preceded the inauguration of planning in India by at least one decade. When all sorts of things are in short supply, controls are inescapable.

While that continues to be the position, a general omnibus attack of the system of controls and the administration that has grown with it, serves no purpose except letting off steam. On the other hand, it may defeat its very objective by diverting attention from particular controls which have become out of date and cause needless vexation. Mr Shah would have been more effective if he had left the beaten track and penetrated more deeply into the jungle of control.

FOREIGN NOTES

More Exports—but Larger Deficit

Attention has been drawn to the general improvement in trading conditions during 1959 in the discussions of the Ecafe Committee on Trade which reviewed principal developments in trade and trade policies in the region, at an eight day session in Bangkok last month. Almost all the member countries have reported larger export earnings; but balance of payments difficulties persist, on account of the larger imports needed for implementation of development plans, restricting the scope for liberalisation of imports or simplification of exchange control procedures. India's experience is typical. The first nine months of 1959 have registered a noticeable expansion in foreign trade both in value and in volume. But the trade deficit has widened simultaneously with the increase in exports. And, over the region as a whole, exports have not recovered the ground lost in the recession of 1957-58, while the terms of trade continued to be unfavourable to primary producing countries.

The uncertainties of the outlook for prices of primary commodities constitute one of the major worries of the countries in this region. The problem has been complicated by the trends toward regional integration, though no clear conclusions could be discerned in the discussions of the effects on the Ecafe region of a Europe at "Sixes" and "Sevens." The patterns of trade inherited from the colonial era persist, obscuring the view of a new and rational pattern of intra-regional trade. The membership of Western countries and the USSR in the Ecafe is also a relic of the past, which is perhaps justified at present by the underdeveloped status of the region and its need for external assistance both financial and technical. But one result of the global membership of a regional limb of the United Nations happens to be that multilateral trade expansion continues to hold the stage, while the countries in the regions have not yet started to think about the possibility of expanding trade within the region on lines that have been adopted elsewhere.

The countries in the Ecafe region, which have started on the road to industrial expansion, will have to seek a stable basis for future development in a programme of integration. The problem is certainly not a simple one. It bristles with the difficulties arising out of the legacy of the past as well as from

the varied levels of development at present. But the problem will have to be tackled sooner or later. India and Pakistan, which have made a happy beginning toward restoration of trade, can take the initiative in evolving a new pattern of trade policies, just as France and West Germany have done for Western Europe.

DLF's Landmark

Recent news about the two new international lending agencies—the International Development Association (IDA) and the Inter-American Development Bank (IADB)—has tended to push into the background another similar organization, the Development Loan Fund (DLF). Just as IDA and IADB, DLF specializes in loans to developing lands on easier terms than can normally be obtained from most private or public sources.

There, much of the resemblance ends, however. For DIF is not a United Nations Institution like IDA, nor is it a regional body like IADB, to which many nations have contributed or will contribute capital. It is strictly an agency of the United States Government which channels American dollars into worthy projects abroad.

What may be DLF's most important distinction at this time is that it is a working body. Unlike IDA and IADB, which will not be making their first loans for some time, DLF is in actual operation and has been for the past two years.

So active has DLF been, that it stands today near a significant landmark. Only a week ago, DLF let it be known that it has committed a grand total of \$948 million in loan money—and this after two short years. Thus, its commitments soon will be reaching the \$1,000 million mark—the total capitalization projected for each of its two international "colleagues" in the development loan field.

In all, since it started operating in 1958, DLF has made well over 100 loans and two credit guarantees for loans. And the distribution of its funds clearly is in accord with its award purpose: to make financing available for investment in less developed countries, thereby helping them to develop their economic resources and increase their productive capabilities.

Here, according to a recent though not entirely up-to-date report, is a region-by-region breakdown of DLF loan commitments:

Latin America: 21 loans totalling \$77,590,000 to borrowers in 13 countries;

South Asia: 25 loans totalling \$332,000,000 to borrowers in three countries;

Far East: 27 loans and one guarantee totalling \$168,876,000 to borrowers in seven countries;

Near East: 19 loans totalling \$195,900,000 to borrowers in seven countries;

Africa: 10 loans and one guarantee totalling \$53,390,000 to borrowers in eight countries;

Europe: 8 loans totalling \$8,000,000 to borrowers in three countries.

The principal borrowing countries, according to the report, have been India, with eight loans totalling \$195,080,000 and Pakistan with 14 loans totalling \$133,555,000.

There is a high degree of flexibility in DLF's operations. Loans may be made to individuals, private business, governments, financial institutions, and even international organizations. Of great interest to developing lands is the fact that DLF can lend badly needed dollars and yet, where necessary, accept repayment in other currencies.

DLF's resources come from capital funds appropriated from time to time by the US Congress. Since it was set up in 1957, DLF has received a total of \$1,400 million in Congressional appropriations. Moreover, as loans are repaid and interest and fees earned, DLF will now be able to use these receipts former-lending to other borrowers, thereby further stimulating economic growth in developing lands.

Thus, IDA and IADB have an operating prototype, so to speak, in the US Development Loan Fund. But the two new agencies, while receiving much of their financial support from the United States, will have the added advantage of being truly multinational, with capital contributions coming from many countries of the free world.

Maldives and the UK

Not Ceylon, but the United Kingdom, will hereafter have a big voice in the affairs of the Maldives. The hardy islanders who dropped their Sultan and swung to a republic in recent years had

trouble with Ceylon, which claimed a vague protectorate on account of the islands being in the Arabian Sea. The leaders of the Moslem fisherfolk had to explain that the offer of a staging-post for the RAF was no unfriendly act directed against Ceylon, and it was open for Britain which had given up its bases in Ceylon at the request of the late Mr Bandaranaike, to secure an alternative halt on the long en route from Aden to Australia. Britain has agreed to defend the islands, give a subsidy and to maintain an RAF base for 50 years. Bargaining was distinctly less difficult than with the new free Cyprus, because local labour was used for a long while (after protests over immigrants) and the islanders could see the real advantage of military protection, though the Arab States have no idea of taking over rainy islands in the Indian Ocean. Mr Alport's mission to the East has concluded with a treaty that only restores the status obtaining before Ceylonese independence. Of course there is no resemblance between Gan and Malta, because Gan is just an atoll and has no hope of getting into the UK to attain full security. Patience in dealing with the islanders, who can offer only coconuts and fish for sale, has paid off, and the Maldives go back to the former position of assured dependence. This may be due to the recent troubles in Ceylon, but it may also be traced to the fact that British supremacy in the Indian Ocean goes back to 1812 A.D. and the new free nations have not the ships and planes to acquire or recover a dominant position. Political prophecies in the war period about India holding the line from Aden to Singapore are now seen to be very wide of the mark.

STATES NOTES

"With Malice Toward None"

As the world celebrated the 151st birth anniversary of Abraham Lincoln last week, what surely should have evoked homage to his memory is the historical role Lincoln played in shaping democracy in America. Faced with the onslaught of ideological Communism, it is natural that defenders of democracy should seek faith and inspiration in Lincoln who, in his life and speeches, represented the best that is in that system of Government. "From log cabin to the White House" is an expression that, signifying Lincoln's rise to

the highest position of presidency, illustrates a basic democratic idea, namely, the wide diffusion of talent among mankind. In his speeches and policy as President, Lincoln gave new amplitude to democratic philosophy; and, by waging an unbending war for abolition of slavery, won for the negroes the right of equality before law. Great as he is for all these, he is greater for what he represented in his personality and character and by way of principles of universal application. In an admirable estimate of Lincoln's personality, at the Lincoln Society, New Delhi. Mr Ellsworth Bunker, American Ambassador in India, points out how Lincoln exemplified moderation, patience, devotion to democratic principles, indignation at moral wrongs, a deeply religious faith and humility. Of Lincoln's humanity, Bunker quotes Lincoln's own statement from his second inaugural address—"With malice toward none; with charity for all; with firmness in the right as God gives us to see the right, let us strive on to finish the work we

are in to bind up the nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations". As Mr Bunker points out, these are words to which all peoples and nations should harken today. For, lasting peace among nations remains yet to be attained and could be attained only if nations could show more charity and less malice in their mutual relations.

★

Neglected Andhra

Andhra State has complained against what it described as inadequate allocation for industrial development of the State in the next five year Plan. Speaking to newsmen at Hyderabad, Mr P. Ranga Reddi, Andhra's Minister for Planning, observed that out of the total provision of Rs 890 crores for industries in the Second Five Year Plan, Andhra's allocation was only Rs 14.26 crores. This works out to 7.8 per cent of the total outlay.

Andhra Pradesh being rich in mineral resources like coal, mica, iron, limestone and other essential raw materials needed for heavy industries, the Minister strongly felt that the allocation was inadequate. Two of the extremely valuable and potentially resourceful rivers flow through the State. Exploitation of these rivers would also need more resources. In India, Andhra ranks 4th in major mineral production like coal, iron ore, and manganese. It is third in mica production. Andhra's share of major industries, based on iron ore, manganese and mica, is, however, nil except for a ferro-manganese unit in Garividi.

To prove the State's industrial backwardness, the Minister listed the following statistics: (1) per capita investment in industry in Andhra is Rs 10.68 against Rs 46.1 in Bombay, Rs 65.30 in West Bengal and Rs 26.80 in Bihar; (2) Andhra's per capita income from industries is Rs 8 against Rs 20 for all India; (3) the State's income from contribution of factories and industries is only 2.8 per cent against the all-India figure of 7.8 per cent; and (4) production of capital investments in Andhra is only 4 per cent of the all India total as against the State's population at 9 per cent of the all India total.

While, therefore, the potential resources would warrant larger allocation for industrial development, immediate possibilities exist, according to Mr Reddi, for the setting up of a newsprint factory, a marine diesel engine factory, a synthetic drug project, a surgical instrument factory, a new machine tool factory and a DDT factory.

★

Indo-Japanese Effort

A unique opportunity for witnessing an array of industrial machinery manufactured in Japan

will be provided by the Japan Machinery Centre which is going to conduct an exhibition at the Haigh Memorial Hall in Bangalore between March 8 and 20. Japan is the only Asian country which produces and supplies machinery to the Far Eastern area. Japanese machine tools are noted for their high quality and precision work. Textile machinery, heavy electrical machinery and transport equipment form major items of Japanese exports to India. Recently, Japan has been evincing considerable interest in helping India to accelerate the pace of industrialisation. It may be recalled, in this connection, that a prototype machine tool factory has already been established in Dasnagar in West Bengal with Japanese assistance. The first watch factory in India, which will be installed in Bangalore as a subsidiary of the Hindustan Machine Tools Factory, is another project to be carried out in collaboration with the Japanese Government. The Kalyani Co-operative Toy Society Ltd started at Kalyani, in West Bengal, is yet another instance of joint endeavour. The exhibition will form an important link in the chain of the ever expanding Indo-Japanese economic co-operation.

★

Electricity Per Capita

Addressing the 21st annual general meeting of the Eastern Regional Electrical Contractors' Association in Calcutta, Mr Bhaumik, Electrical Advisor to the Government, referred to the programme of increasing the per capita consumption of West Bengal, briefly reiteration of electricity in the State by the end of the Third Five Year Plan. A provision of Rs 45 crores is suggested for the completion of the proposed programme. The sum set apart for the scheme also includes the expenditure for installing a super-thermal plant at Bandel with a capacity of 250 kw at the cost of about Rs 24 crores.

Mr P. Bose, the President of the Association, complained that the electrical installation works were deteriorating due to unsatisfactory labour and lack of supervision and adequate equipment. It is indeed disheartening to point out that, in spite of the efforts of the Indian Standards Institution, the quality of the materials was not showing signs of improvement.

During the Third Plan period, there was bound to be considerable power development in Calcutta and other industrial areas of the State. Considering the huge demand for electricity in the State, it is feared that the amount allotted is inadequate to meet the requirements.

★

Expanding Steel

An expansion programme for attaining complete steel self-sufficiency for India by the end of the Third Five Year Plan is assuming

final shape. Deliberations have already started for increasing the production capacity of the three steel plants in Bhilai, Rourkela and Durgapur as also for the establishment of another plant in Bokaro in Bihar. The annual production capacity of Bhilai steel plant would be raised from 1 million to 2.5 million tons and that of Rourkela and Durgapur from 1 million to 2 million tons each. The designing and construction of the plant at Bokaro will be carried out entirely by Indian engineers without any assistance from foreign experts. The major portion of the heavy machinery equipment required for the new plant will be produced at the Heavy Engineering Works at Ranchi. The actual construction work of the plant will be finalised by the Planning Commission within a month or two. These facts were revealed by Mr G. Pande, Chairman of Hindustan Steel, in a press conference held at Raipur. Any further expansion of the steel plants after doubling their present capacity during the Third Plan and the question of constructing more steel plants will depend on the demand for steel in the market.

★

Dalmia Cement Expands

The further expansion of capacity at the plant of Dalmia Cement in Trichy District was approved by the Chief Minister of Madras, who asked the local workers not to hold up schemes of industrial expansion or improvement. It is estimated that three cement factories in Madras will produce 1.5 million tons of cement by the end of 1960. A new company is also in the field while India Cement has a programme of early plant extension for which a loan has been already taken from the IFC. But the lack of coal has been a limiting factor and cement production and sales have not kept step. The indifferent form of the industry in recent years accounts for the poor support given to cement shares by investors in Madras, and it is noteworthy that the opening of the third cement plant had no effect on the market quotation for Dalmia Cement, while delay in declaration of the interim dividends lowered the quotation for India Cement's 5 rupee shares now on the forward list. The disparity as between cement shares quoted in Bombay and Madras need not be discussed, but it is well to remember that the central excise restrains consumption of cement and increased use of cement may not automatically follow an increase in the supply of steel, since no cut in steel prices is contemplated and expansion of output, not of consumption, is the major aim of the new state owned plants. Dalmia Cement's immediate prospects in any case are not bound up with cement alone. Refractories, Sanitary ware, etc., represent a valuable side-line and if compensation for assets held in Pakistan is obtained, the outlook for 1960 may improve very quickly.

Andhra Chooses Roads

Andhra State will soon raise a Rs 1 crore public loan toward improvement of the State's road services. This will be done by the autonomous Andhra Pradesh Road Transport Corporation.

The Corporation would ultimately raise Rs 8 crores at the rate of Rs 1 crore a year. This will be to complete the nationalisation programme over an eight-year period.

The Corporation expects to raise its assets to Rs 20 crores when the

nationalisation scheme is fully completed.

By the end of the Third Plan period, the Corporation is expected to own and operate 2,700 buses employing 20,000 workers.

The object of the complete nationalisation scheme is to link all the villages of the State, and the Corporation hopes to leave not even a single village unconnected.

It is a fact that Andhra is not so well served by the Railways as are either Madras or Kerala. In the Third Plan, no railway improvement is proposed except

connection of the Rourkela Steel works with the Vizagapatam Port.

The realisation that Andhra State is not so well served by the Railways is there, and possibly it may goad the authorities to correct the inadequacy of Rail transport.

That there is need for greater railway communication in the State has never been gainsaid. As compared with the improvement of the Railways, which would take time and need more steel, road transport development seems to be the quicker way for effective result for the population.

WORLD OF BUSINESS

The 1,000,000th TI Cycle

AT a time when dedication to God is a rapidly vanishing idea among our industrial promoters, it was a pleasant surprise to see a function especially devoted for the purpose—the millionth cycle produced in a Madras Bicycle factory was dedicated to Lord Venkateswara, whose "envy" was present especially for the purpose to accept that humble "offering".

The Madras T. I. Cycles Limited, the well known bicycle factory in

Asla, which has so far manufactured a million bicycles ever since the inauguration of this important industry in collaboration with a British entrepreneur, arranged for a neat little function at its Ambattur factory lines where this dedication was made by the State Industries Minister Mr R. Venkataraman, before a very distinguished gathering of the Cycle World.

Mr C. Anna Rao, Commissioner, Tirumalai-Tirupathi Devasthanam, received the millionth flower bedecked cycle on behalf of Lord Venkateswara.

Mr A. M. M. Murugappa Chettiar, Managing Director of TI Cycles, welcomed the gathering which included the UK Deputy High Commissioner, Mr M. E. Allen. The decade-old history of TI Cycles started with collaboration with Tube Investments of Britain, manufacturers of the well-known Hercules cycles. The Ambattur factory undoubtedly has become a

landmark in the Madras industrial topography. Mr Murugappa stated that they had plans even then for the progressive manufacture, over a period of years, of 75 per cent of the components. They have progressed further, he stated, due to what he called the "far sighted policy" of Mr T. T. Krishnamachari, who was the Industries Minister, Government of India. Last year, the Company also began manufacture of Philips bicycles in addition to the famous Hercules cycles.

Sir A. Ramaswami Mudaliar, one of the promoters of this venture ten years ago, before requesting the Minister of Industries to hand over the millionth machine to Lord Venkateswara's representative, referred to the then existing apathy toward foreign collaboration of any kind by Indian industrialists. He ascribed this antipathy to lack of clear policy in the Government's industrial expansion programme in the post-independent era. It was indeed a great task to persuade the British entrepreneurs to venture out into India and help the progressive industrialists on a scheme whose fruits they were now reaping.

Sir A. Ramaswami Mudaliar took the opportunity to hit hard at the lack of speculative enterprise in the South. He recalled how dormant the South Indian businessmen were despite his repeated assurances to them during war time while he was Industries Minister in the Government of India. Thanks to the enlightened spirit now pervading, the South was not the benighted State now as it used to be. The South Indian worker was equal to the best anywhere in the world and Sir A. Ramaswami Mudaliar proudly recalled how they were able to do a kind of work pertaining to the aeroplane industry at Bangalore during the war period in a far shorter period than could the workers in the highly industrialised America.

Nor did Sir A. Ramaswami Mudaliar forget to mention the fact of the dangerous power shortage in Madras. He also referred in passing to the necessity for providing competitive power supplies by the recently formed State Electricity Boards, which should not be intent upon making money alone, but see that industries grew as well and as rapidly as possible. He warned against any halting power supply to growing industry, since it would cripple the industries and it would take very long to catch up others which are always on the move.

This power paucity problem certainly faces the Government of Madras, which has exploited all its resources of power in the State.

Mr R. Venkataraman, the State's Industries Minister, before performing the dedication function, said that foreign industrialists were happy to collaborate with ventures in Madras State, where they found an accommodative spi-

rit besides a skill in engineering and technology of the highest order.

As for the provision of adequate power supply for the growing industry in the State, the Minister believed, that a plant capable of producing 500,000 kw would be needed for Madras. He readily agreed with Sir A. Ramaswami Mudaliar's suggestion on the matter and said that neither the proposed Neiveli Thermal Station nor the Kundah scheme nor even the Perambikulam project would satisfy the State's requirements. The Madras Government were urging the Government of India on the need, most imperative and urgent need, to instal an atomic power station in the South. If at all there should be a power shortage, he hoped it would be only temporary.

T. I. Cycles are now manufacturing at the rate of 300,000 cycles as from the year end. It has 1,600 workers in its Ambattur factory.

"Best-selling" Enfields

By the year end, Enfields India Madras, will be able to export to outside markets. This was disclosed here last week by Major F. W. Smith, Chairman and Managing Director, Enfield Cycle Company Limited, United Kingdom, the technical collaborators with Enfield India Limited, Madras. Major Smith accompanied by Mrs Smith and Major V. T. Montford, a director of the Company, are on a brief business visit to India.

Major Montford paid tributes to the "splendid" work in the Madras factory and said that the schedule of the phased programme had been accelerated. The finished products of Madras Enfields compared very favourably with the UK produced units. They could be "best sellers" in any part of the world, according to Major Montford.

Reduction of the price of the Enfield motor cycle depended upon several factors, including the volume of production. Quality and satisfaction of the consuming public should not be sacrificed for the sake of a price reduction. If the plants were fully utilised, Major Montford thought there could be 15 to 20 per cent reduction in prices. If continuous inflow of raw material was assured, Madras Enfields would be achieving the same production as their UK counterpart.

Mr S. Sankaran, Managing Director, Enfield India Ltd., said that, if the present production was doubled by 1961, they could effect a reduction in price by 33-1/3 per cent that is today's Rs 2,000 priced vehicle could be sold at Rs 1,500.

The Indian Enfield, he said, were making 60 per cent of the parts in the local factory itself. He said the factory would become hundred per cent locally made during the course of this year, as per the phased programme.

Mr Sankaran disclosed their decision to propose an industrial Estate on the Guindy Estate model to the Government, sponsoring 30-40 small scale units, the technical know-how being provided by the Company itself. Raw materials for making the Enfield components would be supplied by them. By the end of the year, all the components would be made in this country, according to Mr Sankaran.

Oil India News

One of the world's most modern form of power generation—the gas turbine—will be employed for the first time in India to generate power and light at Nahorkatiya, Upper Assam.

The generators that produce the electricity will be driven by gas turbines burning natural gas from Nahorkatiya oilfields. The turbines are of the latest design in world use.

Two turbo-alternator sets, designed to produce 1,790 kilowatts each at maximum rating, will be used in the power station now being built at Zaloni, the industrial area of Oil India Private Limited at Nahorkatiya.

The first of these turbo-alternator sets was recently given a test run at the English Electric Company's works at Rugby, England.

Natural gas is an ideal fuel for industrial gas turbines because it offers few problems from the combustion viewpoint and does not give rise to harmful ash products. Among the many advantages of turbines are their mechanical simplicity, compactness, relatively light weight, freedom from vibration and absence of cooling water.

Gas turbines of the natural-gas-burning type have been installed by oil companies in power stations in north and south America and in the Middle East.

All the three wells completed at Nahorkatiya in 1960 so far have proved to be successful. This makes a total of 66 wells drilled by the Assam Oil Company drillers at Nahorkatiya and Moran, the Oil India areas in Upper Assam.

Wells Nos. 55 and 56 are progressing satisfactorily. Preparations for drilling of Well No. 57 are also afoot.

Business Briefs

The Government of India have decided to install a factory for the manufacture of English and Hindi teleprinters in the country during 1961-62. This was revealed by Dr P. Subbarayan, Minister of Transport and Communications, in the Lok Sabha early this week. The negotiations with the firms who are interested in the new enterprise had been finalised. The question of selecting the consultants for the construction of the project is being considered by the authorities.

An agreement to establish a project at Ootacamund in Madras State for the production of photographic films, cinema films and various types of photographic

papers, has been reached between the Government of India and Messrs. Bauchet of Paris last Saturday at New Delhi. The estimated cost of the project will be approximately Rs 5 crores. The foreign exchange component of the cost—nearly Rs 3 crores—would be met by the French export credit. The National Industrial Development Corporation, under whose supervision the factory will be constructed, is also conducting negotiations for the manufacture of several basic raw materials for the new project.

The Government of India have issued licences to eight entrepreneurs for establishing small pig iron plants in the private sector. Out of the eight projects, three will be located in Bombay, three in Madras, one each in West Bengal and Orissa. They are expected to go into production within a year or two.

Mr B. G. Jatti, the Chief Minister of Mysore, at a press conference held at Bangalore, announced that a motor cycle factory will be set up in the private sector in the State this year. The proposal of a Bombay businessman for the establishment of the factory has been accepted by the Licensing Committee of the Government of India. The details of the project are yet to be made available.

Aviation Notes

KLM Jet Engine Test House

No less than 119 thirty-foot concrete piles, 250,000 bricks, 600 cubic yards of concrete and 30 tons of rock wool—the latter for sound-proofing—have been used in the construction of KLM's new jet engine test house which is to be put into service next April at Schiphol Airport, Amsterdam. In the design of this building measuring 65 by 125 feet, special allowance had to be made for the intense noise and vibration produced during the testing of these powerful jet engines. KLM has, therefore, maintained close contact with the Applied Scientific Research Institute of the Netherlands in regard to the system of noise suppression to be employed.

The building is divided into a workshop, a control room and the actual test chamber. A 52-ton silencer is installed in the outlet tunnel of the test chamber. This tunnel is 65 feet long and at some points its concrete walls are 25 inches thick. Moreover, absorbing panels (perforated steel sheets in wooden frames) are fixed at the entrance of the outlet tunnel. The air supply to the test chamber is provided by a compressor holding 850 cubic feet, while fuel is drawn from an underground tank with a capacity of 7,500 gallons.

The control room is built such a way that it is wholly separate from the test chamber; this is necessary to ensure that it will be sound-proof and free from vibration, which is of course extremely important because the measuring instruments are so sensitive. The window of the control room offers an unobstructed view of the engine while it is being

tested; it consists of three layers of glass and it is 9 inches thick.

This new jet engine test house stands besides the Engine Workshop which KLM put into use at Schiphol Airport early last year.

1959 Review for TWA

For Trans World Airlines, 1959 was a Year of realization, both operationally and financially. It was a year when the airline gained world-wide recognition for the introduction and successful operation of the Boeing 707 jet on both US and international routes. It was a year when the outstanding performance of both jet and piston aircraft, combined with an intensive programme of management realignment and expense control, will enable TWA to realize a substantial profit.

The record-breaking performance of the airline's jet fleet began with the first TWA 707 scheduled flight from San Francisco to New York on March 20. Since that date, jet service has been expanded to cover 11 cities in the United States and four overseas points—London, Frankfurt, Paris and Rome. By the end of the year, TWA had flown 610,000 jet passengers, a total of 1,172,000,000 revenue passenger jet miles. And this represents nearly one-quarter of the total mileage flown by TWA.

As these figures show, public acceptance of the jets was instantaneous and far beyond expectations. Load factors on the 707s to date have averaged 85 per cent. These heavy jet passenger loads have helped TWA to set some outstanding records, both operationally and financially.

With all equipment, during the first ten months of 1959, TWA flew 4,863,109,000 revenue passenger miles.

As of January 1, TWA's timetables show 28 jet flights in the United States and, in 1960, TWA plans to augment its domestic jet fleet with the Convair 440.

For its trans-Atlantic jet operation, TWA introduced in November the larger, longer-range version of the Boeing 707—the Intercontinental jet. This fast service, non-stop to and from Europe, providing both deluxe and low-fare economy class accommodations on the same luxury jetliner, also won immediate public acceptance.

As of January 10, the three times a week service to Paris and Rome was stepped up to daily schedules, and since January 17 service to London and Frankfurt has also been offered daily.

While the jet operation naturally received top acclaim during 1959 because of its newness and glamour, TWA still had 130 piston-powered aircraft flying the line with exceptionally good load factors. With a fine performance by the combined jet and piston fleet, TWA flew a record-breaking 5,660,000,000 passenger miles. This mileage represented a 75% load factor and an increase of 23% over the mileage in 1958.

TWA noted significant advances in air cargo transportation in 1959, too. During the year, TWA greatly expanded its cargo capacity with a fleet of Super-H Constellation all-cargo Sky Freighters, offering a combined domestic and international all-cargo airlift potential of 6,157,000 available ton miles a month.

For the first nine months of 1959, TWA announced earnings, before taxes, of \$18,353,000 resulting in a net profit after taxes of \$9,068,000 or \$1.36 a share, both all-time highs. This compares with a loss for the first nine months of 1958 of \$1,824,000 or 17 cents a share.

Seven years ago, the Dome of the GENERAL POST OFFICE, Calcutta, was Shalimar Tar waterproofed and is, today, still waterproof.

Proof enough that bituminous proofing is the best.

Throughout India, crores of rupees worth of Government property, industrial establishments and private homes are protected from dampness of ceilings, walls and floors, from acid and alkali action by Shalimar Tar bituminous based protective materials.

Burmah-Shell Service!

IT was a splendid idea of the trustees of the Sir Dorab Tata Trust to have asked Sir Oliver Franks to deliver the first series of the Sir Dorab memorial lectures. It is difficult to think of another person so admirably suited for the purpose, for, such men, as Sir Homi Mody said at the conclusion of the series, "do not grow on the hedges." Sir Oliver's first visit to India has fortuitously coincided with a rather piquant moment in his life. He has been nominated to the post of Chancellor of Oxford University. This is —pace Oxonians—no earth-shaking event in itself, but what has made it impinge on public consciousness is the fact that Mr Harold Macmillan has also been nominated, and the vicarious thrills of a general election are being sedulously purveyed by "publicists." In consequence, people who had hardly been aware of a life rich in political and monetary usefulness suddenly began wondering about Sir Oliver. But those who had known of his services to his country as Ambassador at Washington, as Chairman of Lloyds Bank and as a member of the Radcliffe Committee knew that the lectures would be rewarding; since the subject was the Radcliffe Report itself, public interest was keen.

There was another reason for public interest in this country in Sir Oliver. He is one of the three members of the "Bankers Commission" who will tour India and Pakistan, and then report to the World Bank about the needs of their developmental finance. In fact, the Mission is now "officially" in Delhi. It was natural that we should like to know what Sir Oliver thought of our own monetary policies. In the event, however, Sir Oliver explicitly refused to draw any morals for India. Instead, he asked his audience to do so if they felt like it. This is what I propose to do. I know there are some dangers in so doing, but, though special remedies have got to be devised for particular diseases, the compulsions on monetary and fiscal policies are broadly the same—up to a point—everywhere.

In the first of his three lectures, Sir Oliver dealt with the profound changes that had come over the objectives of monetary policy in the years between the Macmillan Committee's Report in 1930 and the Radcliffe Committee's Report in 1959. In his second lecture, he spoke about the effectiveness—or ineffectiveness—of monetary instruments in dealing with monetary behaviour and general economic trends. In his last lecture,

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

he dealt with the international aspect of monetary policy. I shall try and formulate how far the generalisations that Sir Oliver applies to the UK are relevant to Indian experience.

Objects of monetary policies have changed in the last thirty years, not only in the UK but all over the world. In India, as in the rest of the world, there has, in the words of Sir Oliver, been "a large shift in the relation of the Government to the general economic life of the country." Sir Oliver mentions, among the responsibilities now taken on by governments, those for "full employment and balance of payments and the economy growth." In India, the responsibility for the first is avowed, but it is to be ruefully admitted that the time when Government will be able to discharge it satisfactorily is still very far off. Such a discrepancy is probably not possible in the UK today. Though we often hear of wistful references to "optimum unemployment", no Government, Conservative or Labour, can politically survive any such admission.

Incidentally, one of our political problems is this avowal of—or impossibility of renouncing—economic responsibilities that we are admittedly in no position to discharge immediately. (This creates a certain amount of confusion, but it cannot be helped). The problem has often been posed by Mr Nehru as one flowing from the reversal in our case of the historical sequence of political emancipation preceding—or being far ahead of—economic emancipation. In many ways, this is the core of many of our other economic dilemmas also, and constitutes an additional reason for departure from monetary orthodoxy.

The responsibility, for the second—namely, balance of payments—is something that no modern state can disown. And the responsibility for economic growth is something no Government, however obstinately wedded to "free enterprise", can, under modern conditions, totally avoid. Some countries assume more, and others less. Great Britain takes on more than, say the United States; and India more than, say, Pakistan. But the important point is, as Sir Oliver

put it, "it does not make any difference from this point of view whether a Conservative or a Labour Government is in power. They are equally committed to these broad economic ends." In the case of India, I will go a step further, and say that such commitment is not merely expedient but inescapable. These compulsions are not only political but also economic. In a developed economy, there is room for argument whether or not the Government can remain an onlooker or, at worst, an umpire, though, even there, the umpire rushes into the game often enough. But, in an under-developed economy, there is no room for any such arguments.

These new responsibilities of the State have inevitably affected monetary policies all over the world. Of course, the fundamental task of monetary policy is the maintenance of monetary stability and only secondarily to subserve the other economic objectives, such as increasing the economic resources of the community and securing welfare on the widest commonality spread. Often enough, there arise situations in which there is an apparent conflict in the pursuit of these simultaneously. Such conflict is not merely between the fundamental and second-

ary aims, but also between the different secondary aims. Drawing on British experience, Sir Oliver referred to the conflict between full employment and price stability and balance of payments. In India, too, we are familiar with similar conflicts. The precise limits of deficit finance as legitimate stimulant of development is an example.

The third change that Sir Oliver noted in the British economic scene since the war is the change in the character of annual Budgets. It is no longer merely the "nation's yearly housekeeping." This being so, monetary policy and monetary instruments are no longer the sole or even prime regulators of the economy. There are, then, administrative acts like controls and rationing, which again regulate the economy as much as monetary and fiscal measures. Thus, not only the ends but the means of economic tasks of the nations have undergone a radical change with consequent modification of the role of monetary authorities. Many would try to simplify the change as consisting merely of the central bank taking its orders from the Treasury—a view that ignores the complex compulsions behind the close cooperation between the two custodians of the nation's economic health. Sir Oliver rightly regards the development of this "partnership" as one of the most significant happenings of the post-war years.

Another development that Sir Oliver regards as having had a

profound effect on monetary policy in England is equally relevant to Indian experience. It is the steady growth of the public sector. As in England, in India, too, the size of the annual Budget in relation to the national income is increasing. Government spending is so powerful a factor in regulating general demand that many in India blame such spending for many of our ills. These certainly have affected monetary policy, though not in the same way as in England.

In his second lecture, Sir Oliver discussed the extent to which purely monetary instruments are capable of affecting trends. The conclusions he draws are in their detail mainly relevant to British experience, but it is clear that the range of effectiveness of purely monetary devices like change in interest rates is narrow and not immediate, though it can be very real. But, in times of stress on balance of payments, more drastic action was necessary.

For instance, administrative decisions like curtailment of expenditure in the public sector will have a significant impact. Even among monetary or quasi-monetary measures, direct "credit squeeze" is more immediately effective. Restriction of hire-purchase transactions, by making conditions of such borrowing more onerous—heavier initial payments and a smaller number of instalments and a shorter period of credit—can, for example, have quick effect. As far

Indian Finance

as India is concerned, with its large unmonetised sector, bank rates have even less impact on the volume of credit. I shall not rashly rush into fields that Sir Oliver said the Radcliffe Committee deliberately avoided—the "question of inflation." But, it seems to me that, in India, purely monetary solutions to the problem, like raising of bank rate or devaluation of the rupee, will not only not solve anything but create innumerable new headaches.

*

The last lecture of Sir Oliver concerns itself with the international aspect of British monetary policy. Sir Oliver feels that reserves at the disposal of the British monetary authorities are insufficient both from the point of view of probable demands of international payments and from the viewpoint of the sterling area's requirement vis-a-vis the other areas. Impressive as the figure of reserves looks—£1,000 million—they are not large in relation to the total volume of transactions, which is around £10,000 million. From the standpoint of the sterling area as a whole, too, there is need for strengthening the position, though the present situation is comfortable relative to the one some years ago. As a long-term idea, the Radcliffe Committee commended the suggestion of an international central bank, a sort of central bankers' bank, free to accept deposits and to extend overdrafts in various currencies. The attraction of the idea is obvious.

*

And now, a word about the Bankers' Mission itself. It seems to me that, essentially, the task of the three bankers will be to make an assessment of the credit worthiness of this country and thereafter to report back to the World Bank. The current Mission may be said to be the logical offshoot of the special meeting of India's creditors called by the World Bank in August 1958. At that time, the creditor nations were supposed to consider how they could "bail out" India. And at the present moment, it may well be that, unofficially, an appraisal is being made of this country's ability to utilise foreign assistance as also to discover if and when India will be able to make repayment of loans now taken. That is to say, will foreign assistance to India be just so much money down the drain? Or will it enable India soon to meet the servicing charges, etc.? Lastly, when will India be able to earn enough foreign exchange so that loan repayment could be commenced without further aggravating the balance of payments? These are, I suppose, just some of the questions that the Bankers' Mission will address itself to.

EAVESDROPPER.

SECOND PHASE

On October 1, 1958, Metric weights were introduced in selected areas and regulated markets in all States and Union Territories with a two-year time-limit for complete change-over.

THIS TWO-YEAR PERIOD WILL END ON SEPTEMBER 30, 1960, AFTER WHICH USE OF METRIC WEIGHTS WILL BE COMPULSORY IN THESE AREAS.

Plans are under way to launch the second phase of the reform and extend the use of Metric weights to the remaining areas in the country. Already Metric weights have been introduced in the whole of Kerala. Other States will follow suit soon.

The Vanaspati Controversy

LATTERLY, the vanaspati industry has received a good deal of unsolicited publicity. Following some remarks made by a Union Minister in Parliament about vanaspati, the controversy about the relation between the consumption of fatty foods and the incidence of heart disease in human beings has been taken up by the general Press, thereby making the confusion worse confounded. It is contended by some that, since hydrogenated oil or vanaspati is deficient in essential fatty acids, consumption of vanaspati may lead to the development of coronary heart disease. Proponents of this theory further aver that the increase in heart disease in Western countries is attributable to the type of fat consumed.

It is rather strange that, in a matter which is closely connected with the dietary of the people, our Government should have allowed ambiguous statements to be made on their behalf. Besides the damage such half truths would do the industry concerned, the man in the street is left in grave doubt. It would appear that nothing has been done by Government, except perhaps referring the matter to the Indian Council of Medical Research, which body is now conducting experiments to determine whether diets and dietary fats play a major role in the development of heart disease. One would expect authority, having sowed the seeds of doubts as to the harmlessness of vanaspati and being in no position to give an unambiguous verdict, to have made available to the public all available views on the subject. It must be remembered that there are quite a number of people in every country who will refrain from using a particular commodity if there is the slightest sus-

picion about its merits, especially if that commodity happens to form part of their diet. Some others there are who will decide to cut down their consumption of the commodity to the barest minimum. It is quite possible that some such developments have taken place in our country with regard to the consumption of vanaspati in recent months. But it would appear that a large majority of vanaspati consumers have not taken much notice of the present controversy. On the contrary, they seem to have increased their consumption. For, production of vanaspati has increased in 1959 by about 20,000 tons as compared with the previous year. But one would be wrong if one assumes that the industry, like so many an industry, has been making rapid progress during the current five year plan. As a matter of fact, the industry is yet to be stabilised. The Planning Commission had calculated that, with its installed capacity of 445,000 tons at the beginning of the Second Plan, the vanaspati industry would be able to cope up with the increase in demand that was likely to be encountered during the current plan period. As the consumption of vanaspati during the First Plan increased at an average of about 20,000 tons per annum, the Commission assumed that the rate of increase would rise to about 25,000 tons per annum during the Second Plan. Thus, internal consumption of vanaspati was estimated at about 380,000 tons in 1960-61. An export of 20,000 to 25,000 tons per annum was envisaged and, therefore, a target of about 400,000 tons was considered quite adequate. As against this target, production in 1959 amounted to only 315,500 tons. The slow progress of the industry is said to be due to the difficulties that have come to be encountered in recent years on the export front, largely because of the high domestic price of edible oils.

Pending the findings of the Indian Council of Medical Research, the public should be grateful to Mr S. H. Turner, Chairman of the Vanaspati Manufacturers Association for his guidance. He has devoted his speech at the annual meeting of the Association last week in Bombay, exclusively to an examination of the present controversy about vanaspati. Referring to the fact that much publicity has been given to the theory that a "high serum cholesterol level" in the blood is the cause of heart disease and that this level is raised by excessive consumption of fatty foods, he has pointed out that, in fact, there is no proved connection between high blood cholesterol and heart disease. Not all sufferers from coronary heart disease have a high serum cholesterol level, nor is a reduced serum cholesterol level a guarantee of freedom from this disease. It is also wrong to think that cholesterol is bad, for, it is a normal component of the body. It is yet to

be determined what a "normal" cholesterol level is. This is also borne out by the fact that the average serum cholesterol values for Americans and Western Europeans are considered higher than those for Afro-Asians. Again, experiments have shown that serum cholesterol is raised by the highest level with coconut oil and butter fat (ghee), less with hydrogenated vegetable oils (vanaspati) and least with liquid oils. It is also to be noted that many other factors such as mental strain and physical activity may affect this level. Similarly, recent research has disproved that consumption of hydrogenated oils causes heart disease. It has also been observed that death from coronary heart disease is comparatively low in Norway where the consumption of hydrogenated oil is 29 lb per capita as against 10 lb in the US and 8 lb in the UK. The per capita consumption of hydrogenated vegetable oil or vanaspati in India is only 1.8 lb.

Authoritative clarification of the position of food fats does not seem to have found conclusive evidence to connect dietary fats with heart disease. The US Food and Nutrition Board's Committee on Fat in Human Nutrition has this to say on the question: "A large amount of information has been made available in recent years relating fats to the causation of atherosclerosis, coronary artery disease and other similar diseases. However, the data are so incomplete and conflicting that it is impossible to draw conclusions which are universally acceptable to nutritionists and medical authorities". It is also significant that the "Food and Drug Administration of the US Department of Health Education and Welfare made it a punishable offence for manufacturers of salad oils and other food products containing high proportions of unsaturated oils to claim that the consumption of these products was remedial to people suffering from heart or circulatory diseases".

The Latest on Joint Farming

THE latest report on co-operative farming, that of the Working Group headed by Mr S. Nijalingappa of Mysore, will not be the last, for, as far as one can look ahead, at least two more reports will have to be awaited before the public can decide whether the attempt to reorganise farming on co-operative lines will peter out or gather momentum. The first of these prospective reports may be available in the course of the current year after the official delegation to Israel and Yugoslavia has completed its studies of co-operative farming in those countries. And the second—possibly in the nature of an evaluation report on the working of the first batch of 400 "pilot" co-operative farming societies recommended by the Nijalingappa Committee—may be expected to be available early in 1962. Since the possible organisation of 2,000 co-operative farming societies in 1962-63 will depend, it may be rightly expected, on the results of the working of the first batch of "pilot" societies to be organised in 1960-61, there will be enough time for both the protagonists and the opponents of the co-operative farming idea to come to dispassionate and objective conclusions in the light of experience.

As it is, the experience of co-operative joint and collective farming in about 1,100 societies actually working in different parts of the country as on 30th June, 1958, are not conclusive on the most crucial point of productivity about which the Nijalingappa Committee itself has admitted that "figures for comparing the yield of co-operative farms with that of individuals working in similar conditions were not available". In the circumstances, neither the intentions—good or bad—of Congress leaders nor the ideological heat and pre-conceived notions imported into the controversy over co-operative farming seem to be quite relevant. After all, the Nijalingappa Committee

has recommended a staggered programme which is manifestly modest and cautious although the co-operative farming idea has been actively (though rather ineffectively) canvassed, both at the official and the non-official levels, since 1944, when the Bombay Plan publicised by eight leading industrialists gave the lead in the following arguments:

"Increase in agricultural production, however, presupposes certain fundamental reforms. The most important question to be solved is that of the size of agricultural holdings. The average holding at present is not more than 3 acres scattered over the village in tiny fragments. Although there may be definite limits to the advantages arising out of consolidation of holdings and increase in their size, it is one of the main reforms which would be necessary for the adoption of intensive farming. To bring it about, co-operative farming appears to present less difficulties than any other method that may be suggested. It increases the size of the holding for purposes of cultivation without depriving the cultivators of their right to the ownership of their existing holdings. In order that co-operative farming should come into vogue as early as possible, some measure of consolidation appears desirable". (Italics ours).

".....With the development of co-operative farming, the enforcement of minimum agricultural wages, which otherwise might present formidable obstacles, would become less difficult".

".....it (the ryotwari system) has the great advantage of bringing the actual cultivator directly in contact with the state. This gives to the cultivator a better status and awakens the state to its responsibilities (italics ours) in the matter of co-operative farming, irrigation, prevention of soil erosion, etc., without which even under a ryotwari system no agricultural improvement would be possible".

Those were the arguments of industrialists among whom were such illustrious leaders to opinion as J. R. D. Tata, G. D. Birla and A. D. Shroff, since then an impressive array of arguments has established a

prima facie case for co-operative farming. But this case is still largely theoretical as far as this country is concerned. Whether or not it will work will be known only when the programme recommended by the Nijalingappa Committee is implemented and evaluated.

It thus becomes necessary to highlight here the suggested programme. Since the Committee has found that a number of co-operative farming societies visited by it have succeeded in "improving the economic and social conditions, particularly of small and middle cultivators" and since "the growth of co-operative farming societies has not so far taken place on systematic and proper lines", it has recommended that 320 carefully planned pilot projects be carried out in the next four years in those N.E.S. blocks where the co-operation programme has advanced so that there may be one project per district. Each pilot project should cover 10 societies which are to be "so organised and managed that they will serve as catalytic agents for further expansion". The phasing of the proposed pilot projects (societies) will be as under:

Year.	No. of projects.	No. of societies.
1960-61	40	400
1961-62	60	600
1962-63	90	900
1963-64	130	1,300
Total	320	3,200

It is the Committee's belief that "the pilot projects will enable the agriculturists to see the benefits that accrue from co-operative farming and their misgivings, if any, would be dispelled". And it is also expected that as a result of the working of the pilot projects, the programme of education and training and the widening of co-operative effort in general, the idea of co-operative farming would gain ground and that 20,000 new societies would come into existence by the end of the Third Five-Year Plan. Although the Committee has made no "firm" recommendation regarding such expansion, the growth of new societies is "envisaged" as under:

Year.	No. of societies.
III Year (1962-63)	2,000
IV " (1963-64)	3,000
V " (1964-65)	5,000
VI " (1965-66)	10,000
Total	20,000

Pitting the two sets of figures together—one set pertaining to the proposed pilot societies and the other covering the additional societies envisaged—it will be found that 23,200 societies in all will be functioning at the beginning of the Fourth Plan in the best of circumstances visualised by the Committee. In terms of villages, they will probably cover no more than 12,000 out of the 600,000 villages in the country. In other words, the expansion visualised will

cover just 2 per cent of the cultivated area of the country, assuming that the pilot projects will demonstrably succeed to the point of ensuring such expansion. At this rate, no widespread "revolution" on the agrarian front need be expected even after six or seven years. After all Indian agriculture which will continue to be overwhelmingly individualist in character can well afford to have a few co-operative farms, a few state farms, a few large-scale capitalistic farms and a few plantations in its fold. And that will be so much variety in farming even as there is variety in every other sector of Indian economy and polity.

That apart, progress in the direction of cooperative farming is bound to be exceedingly slow even otherwise. The most important inhibiting factor here will be finance. The Committee has estimated that the total financial requirement of the programme covering 23,200 societies will be of the order of Rs 35.3 crores for loans, subsidies and share capital contribution, education and training of co-operative farming personnel and expenditure on technical staff, advisory boards and their complementary staff. If this rate of outlay is assumed for introducing co-operative farming throughout the country, it will come to a total of about Rs 1,750 crores! The education and training part of this outlay alone will account for Rs 210 crores. Even if all this money (Rs 210 crores) is allocated, during the Third Plan period, to training and education of personnel, there will still be severe physical limits to the required facilities for training.

It would thus appear that the concluding hope of the Nijalingappa Committee that "co-operative farming will emerge as a pattern of agriculture in the country" may not be fulfilled in the life-time of the present leaders—Congress and Swatantra. He would be no cynic who doubts if even 20,000 new societies (besides the pilots) will come to be organised by the end of the Third Plan, for, there is no knowing, as of today, whether unit-area yields in the pilot co-operative farms will be significantly greater than in the adjacent individual farms. Whatever other benefits it may or may not bring to its members, the co-operative farming society will have really failed if it does not bring about greater per-acre productivity. If it fails, there, it will have been deprived of a supreme economic justification from the national point of view. The national interest is that absolute production has to be increased greatly through an increase in per-acre productivity for the simple reason that there are no virgin lands of any consequence remaining to be brought under cultivation on any tangible scale. If a city has not much land space for expansion, it has to build skyscrapers. Even so, if there are not enough virgin lands, more production will have to be obtained from the lands already under cultivation. If co-operative farming works that way, it is bound to be encouraged. Otherwise it will be quietly allowed to peter out. No prophetic powers are required to say this.

THE PENINSULA

Mr Reddy's reliefs in Andhra Budget

AMID deeply concerned speculations over impending new central taxation proposals, it is a relief to be told by the Andhra State Finance Minister, Mr K. Brahmananda Reddy, that he had proposed relief for the State's industrialists and agriculturists by presenting a surplus Budget which, however, has been turned into a deficit because of the provision of relief.

The Andhra State Budget for 1960-61 shows a surplus of Rs 20.01 lakhs. This has been converted into a deficit of Rs 25.6 lakhs as a consequence of new concessions amounting to Rs 45.7 lakhs.

BUDGET AT A GLANCE

(In lakhs of rupees)

Accounts	Revised Estimate 1959-60	Budget Estimate 1960-61
Revenue	6752.23	7809.19
Expenditure	6341.97	7813.21
Surplus	410.26	194.98

The Minister said that improvement in revenue in the next year was expected mainly from land revenue (Rs 50 lakhs), excise duties (Rs 42 lakhs), sales (Rs 52 lakhs), other duties and taxes (Rs 29 lakhs), industries and supplies (Rs 27 lakhs), Central taxes and grants, (Rs 164 lakhs) and miscellaneous (Rs 46 lakhs).

On the public debt position, the Minister stated that funds required to meet the liability toward instalments of loans for repayment next year will be of the order of Rs 11.25 crores. Public borrowing was of the order of Rs 13 crores. There will, therefore, be hardly any amount left for supplementing the resources available for financing the Plan schemes.

The Minister observed that this was causing some anxiety in the context of the State's needs for financing the Third Plan. He hoped, however, that the next Finance Commission would take this factor into consideration in assessing the State's requirements.

The 1959-60 revised estimates disclose revenue at Rs 78.08 crores while revenue expenditure has been placed at Rs 76.13 crores. There is thus a revenue surplus of Rs 1.95 crores. The coming year's Budget estimates record a further improvement by showing the revenue receipts at Rs 82.18 crores, leaving a surplus of Rs 20 lakhs over the estimated expenditure; capital expenditure during the next year has been estimated at Rs 32.44 crores against Rs 30.10 crores in the current year.

The public debt liability at the end of March 1960 is expected to stand at Rs 186 crores. The year

The concessions announced are: (1) suspension of the special assessment on groundnut and cotton for three years; (2) exemption from tax of the sales of cotton yarn consumed by the State's handloom industry; (3) exemption from tax on the purchase of oilseeds by ghanis-owners if they are eligible for exemption on the sales of the produce of ghanies and (4) reduction in the rate of tax on the sales of oil cake from 3 per cent to 2 per cent.

No fresh taxation proposals have been made in the budget.

The State's revenue was placed at Rs 82.18 crores and expenditure at Rs 81.98 crores.

Capital outlay in the expenditure will be Rs 32.4 crores.

The Budget estimates include a sum of Rs 44.04 crores for Plan schemes.

Announcing that there was no proposal for fresh taxation, the Finance Minister said the question would be examined separately, and if necessary.

ernments had to take steps to conserve stocks and regulate food-grains prices. Mr. Brahmanand Reddy, by the way, also referred to the Central Government's refusal to separate Andhra as a separate food zone.

Regarding the wholesale prices of most commodities, the Minister stated that while there was a downward trend early in 1959, they firmed up by May 1959 and that trend was still continuing.

Industrial production was comparatively better in 1959. The monthly average production indicated a rise in cotton, yarn, liquor, fertilizers, glass, cement, coal, paper and cigarettes, but declines in the case of cotton piecegoods, jute, asbestos and sugar from 1958 levels.

Reviewing the financial position of the State since the formation of the Andhra State in 1956, the Minister gave the following details on the growth of expenditure in the period 1956-57 to 1960-61:

Heads	Estimated Expenditure in 1956-57	Estimated Expenditure in 1960-61
(In lakhs of Rs)		
Agriculture	128	343
Veterinary	51	143
Co-operation	55	195
Education	926	1525
Medical and Pub.		
Health	328	728
Industries	120	195
Civil Works	301	529
Community Development	409	450

The year 1958-59 opened with a cash balance of Rs 3.00 crores. Revenue Receipts and Revenue Expenditure during the year amounted to Rs 67.52 crores and Rs 63.42 crores respectively which resulted in a surplus of Rs 4.10 crores. The expenditure on capital account was Rs 24.71 crores while public debt rose by Rs 18.56 crores. Deposits and advances and other debt head transactions revealed a net income of Rs 5.00 crores. The year closed with a balance of Rs 5.95 crores.

The revised estimates for 1959-60 provide for a total revenue of Rs 72.04 crores.

Here are some of the important items of fresh expenditure for which provision has been made in the 1960-61 estimates:

1. A sum of Rs 9 lakhs (Rs 4 lakhs as grant and Rs 5 lakhs as loan for improvement of Visakhapatnam Beach;
2. For replacement of overaged and uneconomical vehicles in the police department, a sum of Rs 9 lakhs has been set apart for the Budget year; the proposal is to provide Rs 45 lakhs, spread over a period of five years, for complete replacement of such vehicles.
3. Rs 10 lakhs for jeeps for the Telangana Revenue Department.
4. Rs 4.71 lakhs for opening fire stations at Karimnagar, Mahabubnagar, Tadepalle, Tadipatri, Narasaraopet and Madanapalli.

5. Rs 8 lakhs for Panchayat improvement and village communalities.

6. Rs 4.48 lakhs for strengthening the Local Fund Audit Department.

7. Restoration of total compensation to Municipalities—Rs 5 lakhs.

8. Enhanced share of entertainment to Municipalities from 80 to 90 per cent for which a provision of Rs 7.60 lakhs been made.

9. Housing schemes for Harijans an increase to Rs 20 lakhs.

10. Rs 10 lakhs for starting cottage and small scale industries in the cities of Secunderabad and Hyderabad.

11. For purchase of equipment and medicines, particularly in Telangana, Rs 24.00 lakhs.

12. Rs 35.00 lakhs for maintenance of highways and district board roads.

As regards capital outlay involving Rs 32.44 crores, power, including capital expenditure to be incurred through the Electricity Board, is put at Rs 291.82 lakhs; Irrigation at Rs 1,677.8 lakhs; Civil works at Rs 577.12 lakhs; Public Health schemes at Rs 108.67 lakhs; investment in industrial concerns and undertakings at Rs 339.64 lakhs; commutation of pension at Rs 119.12 lakhs; and compensation to zamindars at Rs 129.86 lakhs.

Among the principal items of capital outlay are: Nagarjunasagar Project Rs 900 lakhs; Tungabhadra High level Canal Rs 133.69 lakhs; Pochambadi project Rs 60 lakhs; Kadam project Rs 50 lakhs; Tungabhadra Hydro-Thermal scheme Rs 67 lakhs; Upper Sileru Electric scheme Rs 92.45 lakhs; Rural electrification Rs 116.91 lakhs; Fertilizer factory Rs 150 lakhs.

The Finance Minister announced that a fertilizer factory with a capacity to produce 80,000 tons of nitrogen annually will be set up near Kothagudem based on the coal gasification from the Singareni collieries. This recommendation made by the Government of India Technical Committee has been accepted. The production of the factory will consist partly of urea and partly of a complex fertilizer, nitrophosphate. The India Government, the Minister added, had assured Andhra of their full support. Necessary foreign exchange would be made available by long term credits.

Tender specifications are under preparation and contracts would be awarded in a few months time. The fertilizer factory would be commissioned in 1963. The ownership and management would be transferred to a limited company, expected to be registered shortly. The Andhra Government will own 51 per cent of the shares with substantial room for participation of private capital.

In conclusion, the Finance Minister observed that the Budget for next year discloses an anticipated closing balance of minus Rs 8.62 crores which could have been avoided by pruning the expenditure programme.

It's the oldest of all the Scheduled Banks founded in the State of Mysore!

WORLD OF JUTE

Supplies Drying up in the Up-country?

Interest in the jute markets continued to be mainly confined to the raw jute section. Last week, I explained at some length the significance of the present firmness of raw jute. It is perhaps inevitable, having regard to the large part played by Dame Weather in determining the size of the jute crop from season to season, that the conditions in the jute industry and trade are determined by the raw jute supply position. Of course, efforts are in train to minimise the effects of some uncertain elements, but it is to be admitted that, since jute is a crop which requires different climatic conditions and different levels of water supply at the various stages of its growth, Dame Weather will continue to have a big say in the World of Jute.

It was generally believed, till a few days ago, that, after the near

panic condition created in the jute markets in December last by those who asserted that, in the current season, jute supply to the Indian industry would be inadequate, wiser counsel has come to prevail; and both traders and mills appeared to have realised that there would not be any shortage of raw jute this season. And there are ample reasons to support this view. Even according to the official jute and mesta estimates—the trade estimate is invariably higher—supply of raw jute during the current season should be more than sufficient to meet domestic requirements, especially since there is a sizable carryover from last season. Furthermore, there is the Government assurance that domestic supply of raw jute will be augmented by increased exports, if need be. These have been considered to provide conclusive evidence to the supply of raw jute during the current season: being sufficient to meet mills' requirements and leave a modest quantity to be carried over to the next season.

But, since a fortnight or so ago, doubts seem to have revived. Evidently, the fresh apprehensions have stemmed from the fact that imports in uncountry centres have begun to fall off perceptibly in recent weeks. With still nearly six months to go for the new crop to become available, it is too early in the current season to expect a drying up of supplies. On the contrary, it is to be expected that supplies will be large up to the end of the season, because crop

movement this season has been interrupted in the early months due to the floods. One explanation that is offered for this phenomenon is that holders are keeping back supplies in anticipation of higher prices later on. But, from the increased interest that is being evinced by mills during the past few days despite the high price levels, it would appear that the continued paucity of supplies at up-country markets is beginning to break the reserve of mills. This inference is strengthened by the fact that raw jute prices have continued to move up during the past week, even though the trend in the jute goods section is downward. It is undeniable that mills may not be able to make much of a profit on the sales of their manufactures at the present juncture, as they have to pay high prices for their raw material. But if the alternative to purchasing raw jute at high prices is curtailment of working due to shortage of the raw material, then the present behaviour of mills become intelligible. This is a situation which is sustained by calculations based on factors which do not lend themselves for verification. It will be incumbent on Authority, therefore, to take such measures as will bring about a reasonable price level in the raw jute market if the present trend persists.

Conditions in the jute goods market were quiet most of the time during the past week ended Wednesday. Although there has been some interest noticeable in particular varieties, heavy cees are reported to be in keen

request from the Far East, and some covering business has been in evidence in hessian, the market, as a whole has had little in the nature of fresh foreign enquiries. Toward the close of the week, there have been reports of a Burmese tender, and this, perhaps, explains the slight improvement in sentiment noticeable on Wednesday. The firmness in the raw jute section has also contributed to the steadiness in the goods section.

Tea Target for Third Plan

ACCORDING to a draft prepared by the Working Group of the Union Ministry of Commerce and Industry, India's Tea production target is expected to be 850 million pounds for the Third Plan, representing an increase of about 150 million pounds over the production in 1959. In the Second Plan, no specific production target was laid down for tea. It was, however, expected that, through the normal process of development, production would increase to 700 million pounds by the end of the 'Plan' period. The production in 1959 is officially estimated at 696 million pounds.

Laying stress on internal consumption, the draft says that, in times of fluctuation in export, a stable internal demand gives the industry an outlet for part of its production. Internal consumption is stated to have risen from 173 million pounds in 1953-54 to 233 million pounds in 1957-58. With rising standards of living, increase in per capita income and scarcity of milk, it will not be unrealistic to expect an increase in internal consumption by 10 million pounds annually on an additional production of at least 250 million pounds, if not 300 million pounds by the end of the Third Plan period.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 68,035 packages. There was a fair but not very general demand at rates which showed a further general decline of 2 nP to 6 nP per pound. Clean well-made Broken were often unchanged and selected lines of Fannings were strong; but the poorer stalky residue types were often difficult of sale at 8 nP to 10 nP below last rates. Medium BOPs, except the few bright liquoring ones, were again weak; but there was a good enquiry for Orange Fannings.

CTC Assams were the strongest feature of the sale and sold readily at generally firm to dearer rates, there being a little more interest shown in broken than in fannings grades. The plainer liquoring, non-wither leg-cut teas were 2 nP to 6 nP per pound easier; but any with bright autumnal liquors were keenly sought after and were often dearer.

Whole Leaf grades tended easier and there was a very limited and selective demand for Darjeeling teas. Following rates (per pound) were quoted:—Clean Black Pekoe Rs 2.16 to Rs 2.20; Plain

BP Rs 1.90 to Rs 1.96; Plain Fannings Rs 1.96 to Rs 2.06; Medium BP Rs 1.90 to Rs 1.96; Medium Fannings Rs 2.04 to Rs 2.16; Best CTC Assam BP Rs 2.45 to Rs 2.60 and best CTC Assam Fannings Rs 2.45 to Rs 2.60.

In the Internal Sale, offerings consisted of 22,431 packages of Dusts and 2,017 packages of Leaf grades. There was a good general demand for dusts, although grainy exportable descriptions were sold at a drop of 6 nP per pound.

The Chairman of the Cochin Tea Trade Association has stated that the increase in sales tax and its legal implications are interfering with the export possibilities of Indian tea rather than the rising internal consumption in the country as portended by the Government of India. This, he says, is a matter of considerable concern to the trade.

Strong representations had been made to the Government for the abolition of sales-tax particularly on teas sold through Cochin auctions. This concession, the Chairman points out, is being enjoyed

by their counterparts in Calcutta and there is, therefore, no justification for discrimination. The Chairman has also called for further reliefs in taxes and duties in order to make Indian teas competitive with those of other centres so as to increase the country's earnings in foreign exchange.

In the Colombo market, offerings totalled 7,420,835 pounds. There was an active demand for best quality Dimbula Broken and Broken Orange Pekoe Fannings at considerably dearer rates. Improved liquoring high-grown were also irregularly dearer; but the plainer and medium descriptions were generally 2 to 5 cents per pound dearer. Low-grown met with a good demand, but were generally slightly lower.

In the Chittagong market, offerings were 17,336 chests of Leaf grades and 4,395 chests of Dusts. The demand for Dusts was very irregular and prices, on average, showed a decline of around eight annas per pound. Plain Sylhet Dust was quoted at Rs 4.40.

Strong representations had been made to the Government for the abolition of sales-tax particularly on teas sold through Cochin auctions. This concession, the Chairman points out, is being enjoyed

FIFTY YEARS AGO, Sardar Pratap Singh Bhumra, now 87, was assembling cranes and electrical equipment as India's first steel works was taking shape in the wilderness of Chhotanagpur.

His son, Jwala Singh, joined the steel works his father helped to build. Drawing upon his mature technical skill, he suggested an improvement to soaking pit cranes which won him a reward from Management and appreciation from the American manufacturers.

Hari Singh, Jwala Singh's son, imbibed the family tradition early in life. A young electrician in Tata Steel's Skelp Mill, he was recently sent to Japan to study advanced crane maintenance.

Thus, a tradition of skill is being laid at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

Well done,
dockers—
now you need
a cup of tea!

The market for Leaf grades opened rather shakily; but lately settled down at around 10 to 12 annas below previous rates. Toward the close, however, the demand slackened down when many lots were sold between As 14 and Re 1 under valuations.

Following the last minute settlement of the threatened rail strike, the Mincing Lane tea auction opened as usual with around 67,600 packages. The better quality invoices were in better request with prices moving in sellers' favour. Plainier sorts, however, tended to ease. With the result, the spread between the top and bottom qualities widened at from 3sh 9d to 5sh 7d per pound as compared with 3sh 10d to 5sh 6d in the previous week. Although the price range for plain teas has declined by 2d per pound recently now stands at from 3sh 9d to 4sh 3d, it still stands at about 1sh above the levels of a year ago.

Tea stocks in London, as on the 12th February, totalled 152.85 million pounds as against 152.56 million pounds in the previous week. Total quantity to be landed, on the same date, was 16.87 million pounds. Total afloat was 19.14 million pounds including from Calcutta 11.73 million pounds; from Chittagong 245,260 pounds; from Cochin 498,000 pounds; from Ceylon 5.79 million pounds and from other Ports 873,500 pounds.

The production in Africa continues to increase. According to some reports, an output of probably more than 90 million pounds is estimated for 1959. This compares very favourably with Indonesian production.

Cotton Supply Position

THE inevitable has at last happened. As indicated last week in these columns, the March Contract scored strident rises and pierced the ceiling level of Rs 790 during the non-delivery period and touched Rs 815 unofficially. When tender period starts as from 1st March 1960, the effective ceiling rate would be Rs 820. The ceiling rate has almost been touched much earlier than expected, as the bull operators were able to dictate terms and forced the bears to cover their sales in the advancing market rather in a nervous mood. The distant August contract improved moderately in sympathy to Rs 761 from Rs 748 to finish around Rs 755. Thus, the backwardation charges rose to Rs 56. The fixa-

tion of tendering differences for the maturing March contract had very little effect. Though the outlook for the futures section remains promising, there might materialise moderate setback for the August delivery but no material decline is anticipated as spot prices are ruling considerably higher. However, at the time of the maturing of this contract in August, sentiment would be guided by the progress of the monsoon though, for issue of cotton on docket, there will not be any quality cotton left. If business had been started in May instead of the August contract, the situation would have been different.

Spot Market:

Turnover on the spot Sewri market in Bombay expanded during the week as mills evinced interest for almost all varieties of cotton. Khandesh, Moglai, G2, 0384, Berar, 197/3 were in request. A few Ahmedabad mills were reported to be eager buyers of Luxmi-Joydhar, Western Farm, Vijay and Digvijay. Offerings in Vijay and Digvijay have dried up while prices of Luxmy and Western Farm have advanced. Some spinners have purchased Kalyan Wegad and Kalagin. Khandesh Co2 came to business at Rs 940, Pachora Co2 at Rs 935, Morbi March/April at Rs 900, Porbunder Co2 at Rs 1210 for March, Malegaon Rs 935, Adoni Luxmi at Rs 1065 to Rs 1070 for March, Ganganagar Rs 880, Kitkapura Rs 800, Akda Rs 925, Mogha Rs 785, Karanpur Rs 880, Digvijay March/April Rs 1061, Burhanpur G2 Rs 1075 and Jalna Rs 945. There was nothing particular to note in the foreign section. Some interest was shown in American 1" and Syrian cotton. American cotton of 1" staple changed hands at Rs 1080 to Rs 1104. Among African cottons, Busoga was done at Rs 1385, Bukhadi at Rs 1310 and BP 42 at Rs 1410 while Syrian cotton was put through at Rs 1115 on sample.

Supply and Carryover:

According to the latest indigenous crop estimate of 42.25 lakh bales and possible imports of foreign cotton at 6.50 lakh bales and the carryover of 20 lakh bales as on 1st September 1959, the total supply of cotton during the current season is estimated at 68.75 lakh bales. Total consumption by mills during the season 1960-61 is estimated at 51.50 lakh bales including foreign consumption of 6 lakh bales. With estimated exports of 2 lakh bales and village consumption of 65,000 bales and mill consumption of 51.50 lakh bales, the total distribution for the season will amount to 54.15 lakh bales, leaving a carryover of 14.60 lakh bales consisting of 12.50 lakh bales of Indian cotton and 2.10 lakh bales of foreign cotton as on 31st August 1960. It might be noted here that, out of the carryover of 20.00 lakh bales as on 1st Septem-

ber 1959, Indian cotton accounted for 18.40 lakh bales against 1.60 lakh bales of foreign cotton. Thus, there will be an overall reduction

of 7.50 lakh bales in the carry-over, which is bound to create a critical phase in the initial stages of the 1960-61 season.

PAY COMMISSION'S RECOMMENDATIONS

In reply to a question by Mr Vajpayee and four others in the Lok Sabha, the Deputy Minister of Finance, Mr B. R. Bhagat, stated that Government had taken further decision on the Pay Commission's recommendations.

He placed the following statement on the table of the house:

Government's Decision

Accepted with the following modifications:

1. Introduction of the provision of "added years" for pension subject to the following conditions:

(1) The concession should be limited to appointments for which post-Graduate research or special-ist qualifications in scientific, technological or professional fields, or considerable experience in those fields, or in a profession, for example medicine or law are essential.

(2) Only those appointed to Government service after completing the age of 28 years should be eligible.

(3) The power to grant the concession should be exercised in consultation with the Union Public Service Commission.

(4) The concession should be allowed only if the age of superannuation is attained.

(5) The addition to the qualifying service should be at the rate of one-fourth of the actual length of service, subject to a maximum limit of five years in all.

2. Highly qualified scientists and technologists who are recruited at the age of 35 and above may be given the option to join the Contributory Provident Fund scheme in preference to the pensions scheme.

3. The service rendered by scientific employees in semi-government institutions which are financed, from cess or Government grant should count in full for pension on their subsequent appointment to permanent pensionable service provided the previous employers are willing to bear the proportionate pensionary charges.

4. To facilitate freer inter-change of scientists and technologists between the Government and the universities, the pensionary contribution which the latter have to pay when they borrow the service of a Government servant should be restricted to the rate at which the University contributes to the Provident Fund of its other employees.

5. The permanent requirements of all categories of staff should be speedily determined and thereafter the margin of temporary posts should be the same for all class.

The statement added that action had been taken to give effect to the above decisions, while the remaining recommendations of the Pay Com-

(1) The concession should be allowed in respect of future recruitment of persons recruited above the age of 25 years.

(2) The decision to grant the concession should be taken by the administrative Ministry, at the time of making recruitment, in consultation with the Ministry of Finance and the Union Public Service Commission.

(3) The period of qualifying service should not be less than ten years at the time of superannuation.

(4) The addition to the qualifying service will be:

(a) Excess over the age of 25 years at the time of recruitment; or

(b) One-fourth of the actual length of service or

(c) Five years, whichever of the three is the least.

Accepted.

Accepted. Where an officer was on a Contributory Provident Fund scheme in a semi-Government institution, the contribution paid by the Institution to his Contributory Provident Fund should be made over to Government and the entire service counted for pension.

Accepted.

In all permanent departments other than those in workshops and industrial units temporary posts in all grades and classes which have been in existence for not less than three years as on 1-3-59 should be converted into permanent posts upto a limit of 80 per cent. If Ministries concerned are satisfied that such posts are required permanently.

mission were under active consideration and Government hoped to take decision on them shortly.

Pepper Futures in US

IT is learnt that a move is afoot in America to start futures trading black pepper. The New York Produce Exchange, which has already formulated the necessary bye-laws, is expected to decide soon upon a date for the commencement of futures trading. According to current indications, the basis of the contract will be garbled black pepper with the unit of transaction being 10 tons. The first contract will be probably July, 1960.

The current move is stated to have been inspired by the fact that the US imports annually 15,000 to 16,000 tons of black pepper from various sources. The share of the US purchases has, in fact, increased sharply this year with the shipments during November 1959 to January 1960—the first three months of the season—amounting to about 5,000 tons out of a total of 8,150 tons. During the current month, shipments to the USA are likely to amount to about 1,500 tons. During the whole of the last season, it bought only 3,300 tons from India. Meanwhile, black pepper values in New York are ruling higher, reflecting steadier origin markets and slightly improved buying interest locally. Malabar-Lampong spot, awaiting release, afloats and February delivery are all quoted at 54 cents per pound.

In the context of the US move, dealers of pepper feel that the absence of facilities for futures trading in black pepper in Bombay, which handles a large volume of exports, assumes an added significance. The total Indian production usually amounts to about 25,000 tons and it is expected to increase by 2,000 to 3,000 tons this year. But futures trading has been permitted only to two centres in South India. Exporters are, however, watching the US move with considerable interest, as that country is one of the principal buyers of Indian pepper.

Exports of black pepper from India, during the month of December 1959, were considerably higher at 52,655 cwts as against 33,669 cwts in the previous month. Out of the total exports, Bombay accounted for 4,229 cwts; Alleppey 18,485 cwts and Cochin 29,791 cwts. Total exports, for the two months of November and December 1959, came to 86,316 cwts as against 54,111 cwts for the corresponding period of the previous

year, thus showing an increase of 32,205 cwts.

Rubber

According to official sources, the gap between the consumption and production of natural Rubber in India has widened to 15,512 tons in 1959 from 13,681 tons in the previous year. While consumption of natural rubber rose from 38,008 tons in 1958 to 39,284 tons last year, production declined from 24,327 tons to 23,772 tons. This is considered very disquieting in view of the world shortage of natural rubber and rising trend in prices.

The world output of natural rubber is estimated at 2.01 million tons in 1959 as against 1.96 million tons in the previous year. This year also, natural rubber is expected to maintain its upward movement in world-wide production and consumption. Rubber growers expect that production will touch 2.05 million tons and consumption 2.09 million tons. Release from stockpiles of major consuming countries will continue to be a factor in the world rubber supply. Exactly how much stockpile rubber will be put on the market during the current year is not known. Whatever the amount, it is expected to add just as much to the available total to help balance the supply-demand position.

Malaya—one of the world's largest producer of rubber—has been implementing an ambitious replanting and new planting programme for the last few years. The average annual yield of rubber in Malaya today is 490 pounds an acre. The new stock now being planted will produce from 1,500 to 2,000 pounds an acre. It is estimated that, by the end of last year, well over a third of Malaya's approximately 3,500,000 rubber acres might have been planted with the high-yielding rubber.

Sugar

Sugar markets are slightly depressed. Apart from the better supply position, there are rumours about imminent enhancement of the excise duty on the commodity in the forthcoming budget announcement. Although there has been no fresh release for open sale by the Government, the commodity is reaching the market in heavy quantities, presumably from stocks meant for distribution through ration shops. In the Hapur market, the rate is quoted at Rs 122.50 per bag.

Although till the first week of February, the cane supply position was normal, the same had abruptly dwindled since the crushing season was expected to be shorter by about a month than it was expected to be previously. This is presumably due to the fact that gur and khandasari prices have gone very high and the manufacturers are buying cane around Rs 2 a maund.

The consensus of opinion is that the increases in cane price is not an effective remedy. Any increase in cane price by the factories will meet a respective increase by gur and khandasari manufacturers. In case, the Government decided to import sugar, this will have the salutary effect of bringing down gur and khandasari prices to a reasonable limit. Liberal releases of sugar will also help bring down the prices to a greater extent.

The output of sugar, in the current season, up to the end of January, amounted to 11.44 lakh tons against 9.19 lakh tons during the corresponding period in the 1958-59 season. There has thus been an increase in the output so far by 2.25 lakh tons. It can, therefore, be expected that, in the absence of any untoward developments, total production in the current season will be above 21 lakh tons. Any increase in output above 21 lakh tons will be helpful to bring down prices, especially when the annual consumption is presently around 21 lakh tons.

Meanwhile, the Development Council for Sugar Industry has recommended a consumption target of 30 lakh tons of sugar for the Third Five-Year Plan. This will make available per capita consumption of 13.87 lbs of sugar in 1965-66 as against 11.70 lbs at the end of the Second Plan. The Third Plan estimate of sugar consumption is based on the assumption that 25.06 lakh tons of sugar will be required at the existing rate of consumption; 2.14 lakh tons required to cover increase due to changes in dietary habits and 2.51 lakh tons required to meet the demand due to increase in the purchasing power of the people.

On the New York market, the rate for the sweet commodity is quoted higher by 3 cents to 3.10 cents a pound. Russia has agreed to buy five million tons of sugar from Cuba over the next five years. The deal should help to establish a better balance in the world sugar market, which has been in a state of oversupply for some months.

Dealers are, however, doubtful about prospects. Two points in particular are causing concern. Cuba's sugar production, this year, has not yet been fixed and it is possible that, in view of the Russian contract, it will be increased. Moreover, export quotas, as fixed by the World Sugar Council, are only 85 per cent of normal. Thus, on the surface, the chances of the sugar market recovering much seem small.

Gur

After a slight fall early in the week, Gur prices have firmed up again in the Hapur market, thanks to the revival of demand from the South. Loading is, however, restricted and the daily arrivals are at an average of 4,000 maunds. In the Muzaffarnagar market, Gur Laddu is quoted around Rs 19 a maund.

Khandasari

The market for Khandasari is ruling quietly steady. Demand for the commodity is brisk from Saurashtra; but the loading restrictions have hampered despatches. Rumours suggest likely increase in the excise duty on khandasari in the coming budget.

Production is in full swing and is expected to touch a new high this year. Producers are purchasing cane at a higher price than fixed by the Government for deliveries at the mill gates. Dry quality is quoted at Rs 41 to Rs 48 a maund.

Meanwhile, the Government of India have announced a scheme of compounded excise levy for khandasari as a measure of assistance to the industry. The scheme will come into operation from 1st March. In order to help the manufacturers of khandasari sugar working without the aid of sulphitation plants, the Government have introduced the above scheme by virtue of which the manufacturers will be required to pay a composition-fee on the rated capacity of the equipment employed and will thereafter be absolved from the day-to-day checking or verification of the production by the Central excise staff.

Bullion

Silver prices have once again edged forward in the Bombay market during the past week, while gold rallied moderately to meet with corrective profit-taking. Silver was mainly influenced by somewhat better off-take reports and it appears that, for the next two months during the remaining off-take season, the bull operators will try to sway sentiment. As for gold, the general feeling, as stated last week, is that the market has seen the peak level for the time-being.

Gold Faigun delivery after earlier recovery to Rs 131.87 from Rs 131.12 came down to Rs 130.94 to rally to Rs 131.50 to be placed at Rs 131.37. Silver Faigun rose to Rs 215.44 from Rs 214.25 to recede to Rs 214.81, to be placed finally at Rs 215.25.

The issue as to whether trading in Chaitra delivery should be permitted with the introduction of special margin is to be decided at the Board's meeting on Friday.

Metals

The non-ferrous metal market ruled fairly steady, barring zinc which dropped down sharply to Rs 131 from Rs 141 per cwt in the Bombay market following enhancement of import quota. It might be recollected that, early in January this year, the price of this metal had touched a high of Rs 160. Following the slump, business has almost come to a standstill in this metal. Lead prices, on the other hand, have improved to Rs 76.50 per cwt while tin has continued to hover around Rs 139 per quarter. Copper prices have ruled almost steady. The Metal Exchange (Bombay) has represented to the Union Government to adopt

a somewhat liberal import policy if OGL is not possible as in the opinion of the trade, the present policy has not helped the genuine consumers in any way. Hence a change in the import policy for the next licensing period has been suggested.

Yarn

Cotton yarn prices, as indicated last week, have continued to rule steadier following the renewed strength of the raw material. Staple fibre yarn prices have rebounded sharply with February delivery up to Rs 756 from the recent low of Rs 728 and April up to Rs 736 from Rs 715. Art silk yarn prices have also been ruling steadier on likelihood of enhancement of excise duty in the Budget. Bemberg Cupressa April delivery was done at Rs 1,845 to Rs 1,832 to finish at Rs 1,833 while the maturing February delivery was quoted at a discount of Rs 40 per case.

Oils & Oilseeds

With irregular movements, prices of oilseeds and oils in the Bombay market have suffered a sharp drop

during the week due to absence of any fresh export business materialising as Indian prices are considered to be out of parity with buyers' ideas in overseas markets. The announcement of a fresh export quota of 10,000 tons of groundnut oil for shipment till 30th September, 1960, failed to have any stabilising influence on the market as business at current levels is not considered possible. This quota is available only for those shippers who shipped groundnut oil during 1959 under the incentive scheme offered by the Government equivalent to 25 per cent of the shipment made by each shipper. For every ton of oil shipped within 30th September, 1960, a quota of 3½ tons of groundnut oil cake expeller variety will be allowed and these can be shipped up to 30th November, 1960. Moreover, the shipment period of the existing groundnut oil cake (expeller variety) quota has been extended from 29th February to 30th June, 1960.

Groundnut February delivery dropped to Rs 208 from Rs 213 and May delivery to Rs 205.50 from Rs 210 before terminating slightly

higher. Groundnut oil April-May delivery was sold down to Rs 21.84 from Rs 22.50 per quarter. As the US is in no mood to buy Indian castor oil at higher levels, castor prices suffered a sharp drop to Rs 177.25 from Rs 185 for May delivery. Castor oil commercial quality dropped to Rs 18.37 from Rs 18.81 per quarter. Linseed prices came down sharply following increased arrivals of the new crop and the absence of fresh support. The rate for the May contract declined to Rs 32.69 from Rs 34.37 per cwt, while linseed oil was marked down to Rs 15.75 from Rs 16.50 per quarter. Cotton-seed prices were relatively steady with February at Rs 155.50 and May at Rs 148 per candy. Following discouraging overseas advices, oil cake prices have gone down.

The Government of India's announcement allowing shipment of groundnut oil up to September next year and that of groundnut cake up to November has had no effect on the market here. The shipment time has been so timed, it is stated here in the Exchange, as to concur with the season for the groundnut harvest

and cake production that little encouragement could be derived from the announcement.

Locally, there has been very little business due to pre-Budget fears of possibly more excise duties. Arrivals, too, have been small in both oil and nuts. As for overseas enquiries, there is a fear the present rate of £122/10 to £123 would not be profitable; unless the rate is £126 or £127 per ton and that the cake is £32 or £33 per ton, there would be no margin. The UK rate today quoted for shipment is £122/10 to £123 per ton.

Today's rates in the exchange are: Groundnut oil per candy of 500 lbs ex-Madras godown expeller ready 3 per cent ready Rs 380/381.

April Rs 383/8.

Groundnut kernels per candy of 531 lbs. Coromandel Rs 200/201.

Castor oil per candy of 500 lbs Rs 335 nominal.

Gingelly oil per maund Rs 21/8. Gingelly seeds per bag Rs 74.

Coconut oil per tin Rs 41-4.

Groundnut cake per bag Rs 26/8.

A sober outlook now prevails in the groundnut and oil markets.

The Scindia Steam Navigation Company, Limited

Speech delivered by the Chairman, Shri Dharamsey M. Khatau, at the 40th Annual General Meeting of the Company held on Wednesday, the 24th February, 1960, at 4-00 p.m. at Scindia House, Ballard Estate, Bombay.

After welcoming the shareholders, Shri Dharamsey explained the reasons for the net profit being lower, although the gross earnings were higher.

Speaking on Overseas trades, Shri Dharamsey referred to the difficult time for the shipping industry as freights continued at low levels and cargo movements were not quite satisfactory. The world tonnage presently surplus is being continuously augmented and all this has resulted in a scramble for cargo to avoid space going unutilised. The Indian Lines have therefore a trying time for not only have they to compete with long established Lines but also have to withstand competition from ships of other countries which either have little trade with India or where our ships are not allowed to call and from ships which call at Indian ports en route and carry away what they could get to other ports.

The Indian Lines, he observed, were determined to stand firmly together and face the difficult future to establish for themselves a proper place in the countries' overseas trades. In this approach the Government is sympathetic, as the Govt. of India wants to see not only Indian shipping to grow but also that the voice of Indian shipping is heard in various Conferences which govern the trade routes to the advantage of Indian

Difficult Time for Shipping Industry

Assessment of Prospects by the Chairman, Mr Dharamsey M. Khatau

trade with the world. A further vital factor was the saving of valuable foreign exchange on cargo carried by Indian ships. He also observed:—

"The Indian Lines, on their part, have

- (1) rationalised their services to various ports of the world by giving a regular service to the shippers;
- (2) are continuously replacing their old vessels by faster vessels; and
- (3) are opening up new trade routes.

I have said all this to show the difficulties which the Indian Lines have to face and the steps they are required to take to face it. We may have to go through a severe trial of strength and patience, but I am sure that in the end wiser counsels will prevail and by negotiation and in a spirit of goodwill we will be able to adjust matters with the other competing Lines for the good of all."

Dealing with the Coastal and adjacent trades, Shri Dharamsey reiterated the factors that were responsible for the drop in available Coastal cargoes, thereby affecting freight earnings. He emphasised the national need for maintaining and expanding Coastal shipping without which the country's transport economy would vitally suffer, and added:

"Frankly, Coastal shipping is facing almost a crisis of existence. Unless the recommendations of the Rail-Sea Co-ordination Committee for diversion of bulk cargo to the sea route are implemented, it would seem that its future is gloomy. It is unfortunate that we are at present witnessing a reverse process, in which cargoes traditionally moving by the sea route are going out to the rail route. It is not in the interests of the economy of the country to allow Coastal shipping to suffer—if not to fade out—and I would appeal especially to the Transport Minister of Shipping and to the National Shipping Board to ensure that it is enabled to maintain its proper position in the transport economy by adequate diversion of bulk cargoes, from the rail route, so that it may also retain its foothold as a second line of defence. Unless early and adequate steps are taken, I am afraid our Company, as owners of sizable Coastal fleet, will incur a substantial loss in this trade.

I would also request the Ministries of Transport and of Food to take all the economic considerations into account in fixing the rate of freight on Burma rice instead of considering mainly the fluctuating conditions governing tramp tonnage."

Speaking about the tonnage programme, he observed that the

Company's acquired fleet for a period of 5½ years ending June 1960 would be 24 vessels costing approximately Rs. 25 crores and most of these are engaged in the Companies' overseas services. He stressed that out of Rs. 25 crores involved, only Rs. 11 crores were borrowed from Government as loan.

Regarding the prospects for the current year, he expressed the view that the current year would be worse than the year 1958-59, although he hoped that restoration of economic rates in the international trade would in due course assist the Company in improving its position.

He welcomed the target of 1.60 million G.R.T. for the Third Five-Year Plan and expressed satisfaction on the formation of the National Shipping Board.

He suggested that transfer to Reserves out of the Development Rebate be spread over a period of years especially in the shipping industry with a continuous programme of expansion and replacement. He also stressed the urgent need of the Govt. of India evolving a War Risk Insurance scheme, without which ships on the Indian Register would stand exposed to very big risks in the event of outbreak of hostilities anywhere in the world.

Dealing with the Subsidiary Companies, especially the Bombay Steam Navigation Co. (1953) Pvt. Ltd., he hoped that the ad hoc Committee appointed to examine and report on immediate and long term problems of Konkani services would give such decision as would enable the services to be maintained uninterrupted in future.

February 27, 1960

Buyers in both the counters are, for the past fortnight, keeping a reserved outlook. There are the Budget uncertainties to account for the cautiousness. Risk is avoided lest any kind of new excise impost should hit hard the speculative interests and also actual buyers. Only the very bare necessities asked to. Activity has naturally declined, with price declines as well. Even the allowance to export unutilised licenses had no effect. Groundnut oil lost ground to the extent of Rs 18/20 per ton.

Arrivals have not been much in groundnut kernels. Coromandel variety could be measured between 40 and 50 tons daily and they were taken up by local crushers. The bigger interests did not bother themselves. Due to urgent demand, a few deals early in the week could be had around only at Rs 205 or Rs 206 per candy; but, later on, the price went down to Rs 200. It went up again last week-end to Rs 201. Yesterday, it closed at the same rate. Today, it was around Rs 200/201.

One or two Calcutta buyers evinced interest in groundnut oil. Spot goods commanded sales at Rs 391 or even Rs 392 per candy by the last-week end. But the price rapidly went down to Rs 388 two days later, and yesterday's closing at Rs 381 indicated the high reservedness which pervades the mentality of buying. Today, it was quoted at the same rate, and the price seems destined to go down still further.

There was not very much enthusiasm in forward April position. While April was quoted at Rs 396 early this week, it declined to Rs 391 later on. Yesterday, it closed at Rs 386.50 and today it closed at Rs 383.50.

Groundnut oil cake was easier. There were steady arrivals from North India, between 4 and 5 wagons daily. The nominal indication today is Rs 26.50 per 160 lbs bag with gunny ex-mill.

Upcountry Markets: In most of the regulated market-yards of South and North Arcot districts, arrivals of groundnut have been poor, as they have been during the past fortnight. It is estimated that, already, about 50 per cent of the total crop has been marketed. The balance is reportedly in the hands of middlemen, who would resort to restricted business. Vridhacalam centre had reported 50 tons arrivals daily. This is bigger than the quantity reported in other points, which got only between 15 and 25 tons daily. This commodity was available at Rs 204 or Rs 205 per candy early on, and when arrivals took to scarcity level, the price did not spurt but went down still lower to Rs 201 or Rs 200 on pucca basis. Vanaspathi interests locally absorbed oil at Rs 392/395 to get on with their production. When prices declined later on, even this interest dwindled.

Other Seeds and Oils: Gingelly seed was firm. Castorseed, which ruled around Rs 40 per bag, has gone up suddenly to Rs 48/49 per bag. This price ruled in the producing Salem and other areas. Castor oil, too, was at Rs 340 last week but today it has come down to Rs 335 per candy.

The coconut oil quotation was steady. The Madras price was Rs

41/4 per tin. Alleppey Rate was Rs 650 ready, March Rs 641 and May Rs 635, all sellers all per candy of 600 lbs.

Gingelly seed: Kusumba variety Rs 74 per bag; Anantapur quality Rs 71/72.

Gingelly oil: On wholesale basis Rs 21/8 per maund, on retail basis Rs 21/12 to Rs 22.

Foreign Markets: Groundnut oil prices are maintaining a steady level. The groundnut cake market continues to be subdued. Overseas buyers are trying to secure goods at the lowest level. The latest ruling rates in the foreign markets of oils and seeds are:

Groundnuts: April/May £77 to £77/10 per ton; Castorseed February/March £63½ per ton; Niger seed nominal March £53½/54 per ton; Groundnut oil spot £122/10 to £123 per ton; Groundnut oil February/March Nil; Castor oil BSS Bulk Feb./March £134 per ton; Castor oil commercial Feb./March £127/128 per ton; Tobaccosseed oil Nominal Feb./March £118/118/10 per ton; Coconut oil Straits Feb./March £130 per ton; Coconut oil Ceylon Feb./March £137/137½ per ton; Groundnut oil cake expeller Feb. £31/10/32 per ton; Groundnut oil deoiled Feb. £31/10 per ton; Groundnut oil deoiled Feb. £30/10 to £31 per ton.

The following are the prices which prevailed today in the upcountry markets of groundnut oil and groundnut kernels.

	Kernels per candy of 531 lbs.	Oil per candy of 500 lbs.
Guntur/Bezwada	210	392.50
Uridhachalam	200	387
Nandyal	200	385
Villipuram	200	388
Cuddappah/Yerraguntla	200	385.50
Pollachi superior nominal	202	387.50
Tanjore	200	390
Tiruvannamalai	198	387
Salem	205	390

Hides and Skins

This week also, prices of tanned cowhides did not change. Arrivals were not large. UK negotiated some business at last week's rates. An advance of half a penny was noticed in fifts in both 5/5½ lbs and 8/8½ lbs. Absorption of inferior fifts continued to be the same, leaving nothing for export.

In tanned buffalo hides, there was good overseas demand. Coupled as this was with equally strong local demand, prices firmed up.

Cow calf tanned skins on foreign demand went up by a couple of pence in price. Tanned buffalo calf, too, was in much demand with quotation at 2d higher than last week. Both premium and semi-premium qualities remained firm. Sheep skins tanned sold were 2,000 pieces and goat skins tanned disposed of numbered 60,000 pieces. Still available in the market are 5,000 and 40,000 tanned goat and sheep skins respectively.

This week, quotations for foreign enquiries were lower, but even at such quotations, business was not confirmed by foreign buying.

The raw skin market remained as follows; Bangalore Raw goatskins Rs 615/660; White Wool Sheep Rs 550/610; Black Wool sheep Rs 500/525; Bezwada raw goatskins Rs 590/600; He sheep skins Rs 590/595; She sheep skins Rs 490/495.

The following shipments outside India were reported from Madras Port for February first fortnight:

UK: Tanned hides (1,000 bales, cow calf skins 82 bales, buffalo hides 10 bales, buffalo calf skins 245 bales, goatskins 313 bales, sheep skins 313 bales and dry salted skins one bale.

Continental Ports: Tanned cow calf skins 75 bales, buffalo calf skins 19 bales, goatskins 168 bales and 118 bales sheepskins.

NEW CENTRAL JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of New Central Jute Mills Co. Ltd., will be held on Friday, the 24th March, 1960, at 11.30 a.m. at the Registered Office of the Company at 11, Clive Row, Calcutta, West Bengal, for the purpose of considering and if thought fit, passing with or without modification the following Resolutions:—

(1) (To be proposed as an Ordinary Resolution):—

"Resolved that subject to the approval of the Central Government being obtained under the provisions of the Companies Act, 1956, the Company hereby re-appoints Messrs. Sahu Jain Ltd., as the Managing Agents of the Company for a period of 10 years with effect from 15th August, 1960, on the remuneration and upon the terms, provisions and conditions contained in the draft agreement (with such modifications, if any, as may be agreed to at this meeting) proposed to be entered into between the Company of the one part and the said Sahu Jain Ltd., of the other part and the said draft Agreement is placed before this Meeting and for the purpose of identification subscribed by the Chairman thereof with power to the Directors of the Company, subject to the provisions of the Companies Act, 1956, to vary or alter such of the terms, provisions and conditions of the said draft Agreement before execution, as may be required by the Central Government and Agreed to by the Managing Agents and the Directors on behalf of the Company."

(2) (To be proposed as a Special Resolution):—

"Resolved that Articles of Association of the Company be altered in the manner following:—

Clauses 132 to 134 of the Articles of Association of the Company be deleted and be substituted by the following clause:—

"Subject to the consent of the Central Government and subject to the provisions of the Act Messrs. Sahu Jain Ltd., shall be and remain Managing Agents of the Company for the period and upon the terms, provisions and conditions set out in the Agreement entered into between the Company and the Managing Agents, provided that before the expiry of the terms agreed upon the Managing Agents shall be re-appointed for a further period in accordance with the Agreement, subject, however, to any notification issued by the Central Government or any provisions contained in the Companies Act.

By Order of the Board
For NEW CENTRAL JUTE MILLS COMPANY LTD.,
For SAHU JAIN LIMITED
A. K. JAIN
Managing Director
Managing Agents
Calcutta, 24th February, 1960.

N.B.:—A member entitled to attend and vote is entitled to appoint a proxy to attend & Vote instead of himself. Such proxy need not be a member of the Company.

EXPLANATORY NOTES:

(i) Messrs. Sahu Jain Limited were appointed the Managing Agents of the Company under an Agreement dated 11-4-51 for a period of 20 years. The Managing Agency Agreement between the Company and the Managing Agents was duly approved by the Shareholders of the Company. Under the provisions of Section 330 of the Company's Act term of Office of the Managing Agents will expire on 15th August, 1960, unless before that date the Managing Agents are re-appointed for a fresh term in accordance with the provisions contained in the Companies Act. A copy of the draft Agreement is kept at the Registered Office of the Company and can be inspected by the Shareholders on any working day during business hours and the same will be placed before the shareholders at the above Meeting. An abstract of the Agreement as required under Section 302(3) of the Companies Act, 1956, is enclosed.

Shri A. K. Jain, Chairman Director of the Company is Managing Director Shareholder of the Managing Agents Company.

(ii) The provisions of the existing Articles are required in order to conform to the re-appointment of the Managing Agents and in accordance with the Companies Act.

THE BANK OF INDIA LIMITED

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-Fourth Annual General Meeting to be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 10th day of March, 1960, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1959

The Directors submit to the Shareholders the BALANCE-SHEET AND PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1959. The Auditors' Report is also annexed.

The transactions for the past year have resulted in a profit of Rs. 82,68,266.65. To this has been added the balance of Rs. 12,79,476.54 brought forward from the previous year, making a total sum of ... Rs. 95,47,743 19

An interim dividend was paid for the half-year ended 30th June, 1959, at the rate of 6 per cent, subject to deduction of tax at the prescribed rates, on the Paid-up Capital of Rs. 3,00,00,000, which absorbed ... Rs. 18,00,000 00

Provision made for Income-tax and Super-tax for the year ... 18,00,000 00

Bonus to Staff ... 17,00,000 00

The Directors now propose:—

To pay a final dividend for the half-year ended 31st December, 1959, at the rate of 10 per cent, subject to deduction of tax at the prescribed rates, making 16 per cent for the year, on the Paid-up Capital of Rs. 3,00,00,000, which will absorb ... 30,00,000 00

To carry forward to the next account ... 12,47,743 19

Total ... Rs. 95,47,743 19

The Company's business continued to function satisfactorily.

The Bank Rate remained stationary at 4%.

Branches were opened during the year at Santa Cruz in Bombay, at Maninagar in Ahmedabad, at Sowcarpet in Madras and at Cochin.

The Directors report with deep regret the death on 23rd January, 1959, of their esteemed colleague, Sir Vithal N. Chandavarkar, who was a Director of the Company

from 1956; they desire to place on record their high appreciation of the valuable services rendered by him to the Company.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election:—

Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E.,
Mr. Madanmohan Mangaldas,
Mr. N. K. Petigara.

During the year Mr. Jaisinh Vithaldas and Mr. Girdharilal Mehta, at the invitation of the Board of Directors, accepted seats on the Board. Under the provisions of Section 260 of the Companies Act, 1956, and of Article 85 of the Company's Articles of Association, they will hold office up to the date of the Annual General Meeting, namely, up to 10th March, 1960. They stand for election in the manner provided by the Act and the Articles of Association.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR,

Chairman.

A. D. SHROFF,

Vice-Chairman.

AMBALAL SARABHAI,

RAMNATH RAMNARAYN,

BHAGVANDAS C. MEHTA,

K. M. D. THACKERSEY,

MADANMOHAN MANGALDAS,

N. K. PETIGARA,

JUGMOHAN PRASAD GOENKA,

JAISINH VITHALDAS,

GIRDHARILAL MEHTA,

Directors.

K. R. KEDARI,

Acting Chief Accountant.

T. R. LALWANI,

General Manager.

Bombay, 4th February, 1960.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance-Sheet of The Bank of India Limited as at 31st December, 1959, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by other Auditors.

In accordance with the provisions of Section 23 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

- we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1959, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Total Rupees	4,55,09,053	09

Statement Pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Limited for the year ended 31st December, 1959, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Limited, (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Limited. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U.K.) Nominees Limited, a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Limited shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Limited is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

Directors' Report for the year ended 31st December, 1959

The Directors submit the Balance-Sheet for the year ended 31st December, 1959. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Limited, of which the Company is a wholly-owned subsidiary.

S. C. KOTHARI, Directors.
S. H. BRADFORD, Directors.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

Balance-Sheet as at 31st December, 1959

Capital Authorised and Fully Paid-up:	Cash at Bankers	£100
100 Ordinary Shares of £1 each		£100
		£100

Signed on behalf of the Board,
S. C. KOTHARI, Directors.
S. H. BRADFORD, Directors.

REPORT OF THE AUDITORS.

We have obtained all the information and explanations which we have required, and which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1959, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

London, 1st January, 1960.

IN PARLIAMENT

Indo-Pakistan Financial Issues

A statement on the recent talks between the officials of India and Pakistan on the financial issues outstanding between the two countries was made in the Lok Sabha last week by the Finance Minister, Mr Morarji Desai. He said:

In the statement made by me on the 18th December last, I had indicated that a further meeting would be held towards the close of the month to clear up a few items relating mainly to the balance sheet of the Central Government. The officials of the two Governments accordingly met

for four days at Delhi and concluded their discussions on the 3rd January, 1960. This completed the rounds of official level talks for the evaluation of the assets and liabilities of the undivided Central Government and divided Provinces and their allocation between the two Governments on the lines settled at the time of partition. It was possible to arrive at an agreement on the data relating to most of the items. However, a few items which needed further consideration were left over for discussion at the time of the meeting between the two Ministers. The programme for this meeting will be settled in consultation with the Finance Minister of Pakistan. As I stressed in my earlier statement, these discussions between the officials of the two countries are mainly of a fact-finding nature. The Hon'ble Members will, therefore, appreciate that it will not be appropriate for me at this stage to indicate the details of these talks until the Ministers have had an opportunity of considering the matter and the whole

position is thereafter reviewed by the respective Governments. It is my earnest hope that with good-will on both sides, it would be possible to arrive at a satisfactory settlement on these issues in the near future.

A similar statement was laid on the Table of the Rajya Sabha.

Monazite Sand in Orissa

The Prime Minister stated in the Lok Sabha that monazite sand had been found in the coastal districts of Orissa. It was premature at present to assess the quantity available as investigations were still in progress.

Replying to a question by Mr P. K. Deo, the Prime Minister said that the monazite would be utilised for a traction of rare-earths, thorium and uranium.

United Kingdom Aid for Specified Projects

The Deputy Minister of Finance, Mr B. R. Bhagat, replied in the negative to a question by Mr N. C. Sekhar in the Rajya Sabha whether the Gov-

ernment of the United Kingdom had indicated that aid given in future by the United Kingdom would be "tied" to specific projects.

Production at Bhilai Steel

The Bhilai Steelworks produced 21,262 tons of steel ingots during January 1960, compared to 15,306 tons in December 1959.

The steel production since first open hearth furnace went into commission on October 12, 1959, now totals more than 50,000 tons. About 5,500 tons of rolled steel in the form of slabs and billets had been despatched from Bhilai to consumers in India upto the end of January.

The pig iron production in Bhilai during January, 1960, totalled 28,388 tons compared to 24,975 tons in December 1959. The total pig iron production since first blast furnace went into production on February 4, 1959, amounts to about 330,000 tons.

Production of pig iron upto the end of January, 1960 totalled nearly three lakh tons.

FOR THE INVESTOR

Suddenly, a Cheerful Mood

Investment Gossip:

STOCK markets have been in a more confident mood this week than for some time past and sentiment has been quite buoyant on Friday with the more speculative counters recording sizable gains. Even Indian Iron, which has been sluggish for quite a long time now, has begun to show signs of active life. Considering the fact that the Central Budget is just round the corner, this week's cheerfulness is indeed remarkable.

Evidently, the latest reports from the Capital (that only marketmen presumably have access to) should have been particularly good. Good news for the markets in the present context of the close proximity of the Budget can only mean that Mr Morarji Desai is not expected to administer any jitters.

Nobody in the market-place now believes that the Union Finance Minister can afford to be satisfied with the present level of revenue. Provision has to be made in the coming Budget for increased outlay on defence, and there is the additional expenditure on account of the acceptance of the Central Pay Commissions' recommendations. Furthermore, the next financial year also happens to be the final year of the current five year plan, and it is natural to expect Mr Desai to try to mobilise increased resources in order to enable Government to implement the remaining Plan projects.

It is not as though market men are unaware of the enormity of the problem facing the Union Finance Minister. But they are confident that Mr Desai can get all he wants from indirect taxation. Those who go somewhat deeper into the problem of resources than marketmen are wont to, however, are wondering how the Finance Minister can manage without some direct taxation, also.

ERs

New Issue Notes

The recent offer of shares for Rs 25 lakhs by the Asian Cables Corporation Limited is believed to have been oversubscribed. It is expected that allotment letters will be issued before the end of March. Production is expected to start in early 1961.

It is learnt that the equity issue of the Automobile Products of India Limited has been oversubscribed by four or five times the offer. As the response from up-

country centres is yet to be received, a further assessment can only be had after some time.

The Laxmi Starch Factory Limited has proposed to increase its authorised capital from Rs 35 lakhs to Rs 50 lakhs by cancelling all the unissued and unsubscribed Preference shares and by creating 22,500 Ordinary shares of Rs 100 each and 10,000 unclassified shares of Rs 100 each.

Andhra Sugars Limited has decided to issue 30,000-6½ per cent Cumulative Preference shares of Rs 100 each, pro rata, to holders as on the 12th March, 1960.

ERs

Investment Notes:

Jaipur Udyog have been a firm feature around Rs 11.75 during the past few weeks. It is learnt that the company has made substantial headway in production and despatches of cement, resulting in a larger working surplus. The company is assured of a stable demand in its own area with larger quantities being required for the Rajasthan Canal.

Estrela Batteries Limited seems to have turned the corner as is evident from the recent recovery in shares to around the par level (Rs 50 paid) from as low as Rs 23 some time ago. This is largely attributed to an increase in turnover during the current year. The company has now taken to the manufacture of radio batteries. It has also plans for doubling the production of cells by stages during the next five years.

According to a report from Madras, one more unit for the manufacture of paper out of bagasse and bamboo is likely to be set up at Erode. The capacity of the proposed plant is estimated at 60 to 70 tons a day. The entire project is estimated to cost around Rs 6 crores. The sponsors of the project propose to obtain a rupee loan of about Rs 2 crores from the US Export-Import Bank. The balance of Rs 4 crores will be raised internally, partly through institutional investors and partly from public subscription. The public issue will be to the tune of Rs 1.5 crores.

The Pullangode Rubber & Produce Company Limited has reported a crop of 46,000 pounds for 1959-60, making a total of 503,500 pounds to date as against 576,000 pounds in the same period last year.

The Peermade Tea Company Limited has reported a crop of 110,613 pounds for January 1960 as against 156,302 pounds in the corresponding month of 1959.

Investment Brief:

Burrakur Coal Company Limited has declared a final dividend of 8 per cent, making a total of 13 per cent (taxable) for the year ended 30th June, 1959. This compares with 8½ per cent, free of tax, for the previous year. The National & Grindlays Bank Limited has proposed a second

interim dividend of 6½ per cent, less income-tax, for 1959.

Martin-Burn Limited has announced a taxable dividend of Rs 2.75 per share for the year ended 30th September 1959. The net dividend works out to Rs 1.925 per share as against Rs 2.12 in the previous year.

Dhanalakshmi Mills Limited, Coimbatore, has recommended a taxable dividend of 17½ per cent for the year 1959 as against 10 per cent paid for the previous year.

In Bombay, W. H. Brady & Company Limited has recommended a dividend of Rs 35, subject to deduction of tax, for 1959. This works out to a net dividend of Rs 24.50 per share as against Rs 25 paid for 1958.

The Central India Spinning, Weaving & Manufacturing Company Limited has again passed over the dividends both on the Ordinary and Preference shares for the year ended 30th June, 1959.

In Madras, Kumargode Estates have recommended a dividend of 20 per cent (taxable) for the year ended 31st October 1959, same as in the previous year.

Coimbatore Cotton has proposed a dividend of 6 per cent, taxable for the year ended 31st December 1959. The dividend paid for the previous year was 6 per cent, free of tax.

Mercara Rubber has announced a taxable dividend of 20 per cent for the year ended 30th June 1959, same as in the previous year.

Balance-Sheet Briefs:

The net profit of the Hindustan Lever Limited is substantially higher at Rs 208 lakhs for 1959 as against Rs 128 lakhs in the previous year. The directors have recommended a taxable dividend of Rs 2.40, which works out to a net dividend of Rs 1.68 per share as against Rs 1.50 paid for 1958.

The Kesar Sugar Works Limited has shown a profit of Rs 4.47 lakhs for the year ended 31st July 1959 as against Rs 2.05 lakhs in the previous year. The directors have recommended a dividend of 6 per cent, subject to deduction of tax. This works out to a net dividend of Rs 4.20 against Rs 4.00 paid for the previous year.

The Empire Dyeing & Manufacturing Company Limited has earned a profit of Rs 2.67 lakhs for 1959 as against Rs 76,900 for 1958.

The New City of Bombay Manufacturing Company Limited has incurred a loss of Rs 11.98 lakhs for 1959 as against Rs 3.04 lakhs in the preceding year.

In Madras, the Nelliampathy Tea & Produce Company Limited has reported a net profit, before providing for Depreciation, of only Rs 2.15 lakhs for the year ended 30th June, 1959 as against Rs 4.92 lakhs in the previous year. A dividend of 10 per cent, taxable, is recommended against 15 per cent previously.

Trick or Treat

Watch-Dog Writes:

CONDITIONS in stock markets have taken a sudden turn for the better during the week under review. Several modest gains in prices have been recorded in selected scrip, thanks to short-covering coupled with speculative support, presumably induced by favourable expectations of the Budget. It, however, remains to be seen whether the markets will get the Finance Minister's "birth-day" trick or treat.

Equities on the local Stock Exchange displayed a firmer tendency under the speculative issues.

MARTIN BURN LIMITED.

NOTICE

The Annual General Meeting (being the Fourteenth Ordinary General Meeting) of the Shareholders of Martin Burn Limited will be held on Wednesday, 30th March, 1960, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

- To receive and adopt the Audited Accounts for the year ended 30th September, 1959, and the Directors' and Auditors' Reports thereon.
- To declare a Dividend.
- To appoint a Director in place of the retiring Director.
- To appoint Auditors and to fix their remuneration.

The Ordinary Share Register of the Company will be closed from 15th to 30th March, 1960, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
A. G. GIDLEY,
Secretary.

Calcutta,
25th February, 1960.

NOTE—The Dividend, if sanctioned, will be paid on or after 18th April, 1960, to those Shareholders so entitled whose names appear in the Company's Register of Members for Ordinary Shares on the 30th March, 1960, or to their mandatories. No application for dividend warrants will be necessary.

Trading on the Bombay Stock Exchange sparked into life again following good business reported in selected scrip on favourable corporate rumours.

A definitely steadier feeling was noticed on the Madras Stock Exchange, as operators were inclined to the view that the Budget proposals might not affect them significantly.

Nervous and unsettled conditions prevailed on the London Stock Exchange.

Wall Street closed barely steady.

Calcutta

Friday Evening.

THE local Stock Exchange presented a steady appearance and, with the speculative scrip encountering good support, prices improved in most sections during the week under review. Although operators were mentally prepared for an increase in taxation, the view that there was little scope for any rise in direct taxes and that the Budget proposals might be mostly in the form of indirect taxation, was increasingly entertained by bulls. It was also felt that the cut in the net dividends of most of the companies would induce the Finance Minister to reconsider the position. However, with only a day left for the Budget, there was a general disposition to remain cautious before increasing commitments.

Continued tightness in the money market was reflected in the gilt-edged section, which was devoid of support. Institutional investors preferred to keep out of the market, while enquiry from other sources was negligible. With the result, 3 per cent 1986 Conversion Loan closed lower at Rs 74.10 after improving at one time to Rs 74.50 from Rs 73.95.

Bank shares remained quiet due to adverse repercussions on bank companies' profits by the new system of taxation introduced in the last year's Budget. Punjab National were quoted lower at Rs 20.50 as against Rs 21 in the previous week.

Selected Jute shares received a little more attention than last week. Hopes were held that a few mills might make satisfactory profits for the current year, having already bought raw jute in time and at cheaper prices. Howrah had buyers at Rs 23.87 to Rs 24.12; National at Rs 30.50 to Rs 31; New Central at Rs 22.87 to Rs 23.37; Belvedere at Rs 148.50 to Rs 150.50 and Ganges at Rs 9.56 to Rs 9.75.

Coal shares responded well to selective enquiries on reports of rising consumption and the possibility of an increase in exports to neighbouring countries. East Indian were taken up to Rs 28.81 from Rs 26.62 and Central India up to Rs 8.90 from Rs 8.69. Burrakur fluctuated rather irregularly between Rs 18.19 and Rs 18.56, to finish the week at Rs 18.50. Amalgamated were a steady feature at Rs 22.12.

The Tea section recorded scrippy business following creation of doubts regarding marketing prospects for the new season. Foreign enquiry also appeared to have decreased considerably. Dealings were, therefore, few and far between. The only relieving feature of trading was the

demand for the shares of gardens situated in Pakistan, particularly for Patrakola, Telipara and Dauracherra. Banarhat changed hands at Rs 331 to Rs 333; Brooke Bond at Rs 17.75 to Rs 17.81; Grob at Rs 13.62 to Rs 13.69; Jayshree at Rs 17.25 to Rs 17.31 and Tezpur at Rs 17.69 to Rs 18.

Sugar shares maintained generally a firmer tendency on prospects of an increase in production during the current season. Raza/Buland were in enquiry up to Rs 13.06 from Rs 12.87; Belsund up to Rs 13.69 from Rs 13.50 and Ramnugger up to Rs 21.19 from Rs 20.81. Carew were, however, quiet at Rs 11.87 against Rs 12.25 on lack of fresh support.

Textile scrip were rather quiet in the absence of fresh enquiry. The only three steady features were Elgins, Kesoram and New Victoria having support up to Rs 18.19, Rs 22.75 and Rs 1.50 respectively. Jayshree were on offer at Rs 12 against Rs 12.50 with Bowreah quoted around Rs 147.

In the Engineering section, price movements were mainly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments till Wednesday. After opening lower at Rs 22.09, Indian Irons recovered steadily to touch at one time Rs 22.77 on higher Bombay advices, to finish the week at Rs 22.75. Jessop at one time touched a high of Rs 23.56 from Rs 23.37; Braithwaite Rs 28.87 from Rs 28.75 and TEXMACO Rs 25.60 to close finally at Rs 23.56. Rs 28.81 and Rs 25.55 respectively. G. K. Williams forged ahead to Rs 47.94 from Rs 46.31 on sustained investment demand and so also Britannia to Rs 13.62 from Rs 13.50. Kumardhubi were nearly maintained at Rs 7.

Bombay

EXCEPT for a small spurt in activity and modest rise in prices on Wednesday, trading in Dalal Street has come to a virtual standstill, pending the announcement of the Budget proposals, which will be released on the afternoon of Monday, February 29. Price movements were confined to a narrow range during the week under review, as operators preferred to have minimum commitments in view of past bitter experience. Reports about purchases of Tata Steel Ordinary and ACC by the Life Insurance Corporation failed to inspire confidence on account of apprehensions of increased

load of taxation. However, during the week-end, an all-round modest appreciation took place.

Among Engineerings, Premier Construction were quiet around Rs 329. It is now reliably gathered that Premier Construction Company Limited will release 25,000 equity shares of Indian Hume Pipe Company at Rs 150, i.e. at Rs 50 premium. Tractors (India) advanced to Rs 34.50, while Voltas were fully steady around Rs 206. Tata Steel Ordinary, after early improvement to Rs 150.25, reacted to Rs 148.75, to recover to Rs 149.75. Tata Loca were subdued at Rs 201.50. Premier Auto were quiet at Rs 138.50. Shivrajpur met with short-covering, to recover to Rs 81 from Rs 76.

Bombay Burmah tried to edge forward. But, in view of the subdued tendency in other pivotal counters, not much progress could be made. Hindustan Lever shot up to Rs 40.25 on higher gross dividend of Rs 2.40 (net Rs 1.68) for 1959 against Rs 1.50, to react to Rs 39.50. Tata Oil ruled steady around Rs 65. WIMCO turned quiet at Rs 238.

Cotton Mill shares kept quiet. Standard Mills strengthened to Rs 885, to come back to Rs 873 on expectations of a net dividend of Rs 21; but later on spurted to Rs 899. Bombay Dyeing met with pressure on rumours of a lower dividend. Century hovered around Rs 438, to come up to Rs 446.

Madras

THE Madras Stock Exchange was closed today (Thursday 25th) on account of "Mahasivaratri".

(The following report is based on the closing quotations of Wednesday):

A slightly better tone prevailed on the Madras Stock Exchange with a tendency from the investment sector to ignore the possibilities or otherwise in the coming central Budget. Textiles were in general demand. Plantations reported better business, and enquiries after Industrials did not slacken.

Plantings: Amalgamated did not change at Rs 13.75 and Anapara at Rs 5.25. Athimattam was below par at Rs 1.25. Balmadies was quoted at Rs 2.80. Be Be was higher by 10 nP at Rs 3.70 and Blue Mountain gained a single nP in value at Rs 3.37. Cochin Malabar was higher at Rs 7.23. Both Coffee Lands and Consolidated Coffee improved on buying inquiries to Rs 23.20 and Rs 22.70 respectively. Coorg was fractionally lower at Rs 5.53.

Some of Britain's most famous engineering and electrical firms are grouped together in the Consortium known as ISCON for the purpose of building the Steelworks at Durgapur. Each of these firms is a leader in its own field and the integrated Steelworks when completed will compare favourably with the largest and most modern in any part of the world.

WHY WE ADVERTISE... 6

towards
a better
standard
of living

Mr. A. C. Khanna, Chairman,
Britannia Biscuit Co., Ltd.

ADVERTISING is sometimes criticised as leading to discontent, pointless striving and unhappiness. All this is supposedly caused by people wanting things they cannot afford—yet long for—because advertising makes them appear so desirable.

It is correct to say that advertising can stimulate interest and desire, but when this desire is for a better product, a better standard of living surely it is to be commended rather than condemned?

Take the biscuit industry, for instance. It can safely be said that people who read biscuit advertisements can afford a packet of biscuits. In this case advertising strives to convince the readers that biscuits are good for them and their children... that they are tasty, nutritious and hygienically

made and packaged. It tries to make people realise the good sense of consuming this type of wholesome nourishment rather than contaminated foods and sweets, from open stalls and unhygienic bazaars.

And so it is with many other products and services which are advertised. If there is discontent, then it is discontent with the cheap and the shoddy. If there is striving, it is a welcome effort towards better living, and towards obtaining the means of better living. Unhappiness just does not enter into the picture at all.

Advertising does more. Not only does it tell people how they can live better. It also tells them how they can buy things they want more easily, more quickly and at less cost.

Good advertising serves you

Market Borrowings in Budget Year

So, finally, the prize bonds have come to stay; this was the surprise in Mr Morarji Desai's Budget for 1960-61. There is as yet no mention of gold bearer bonds; and, surely, there was greater urgency for such a scheme. The borrowing effort during the Budget year is all that we could have wished for, with the target for the new loan set at Rs 250 crores; but, then, this should be extremely easy of accomplishment. There are three maturing loans—or loans where Government apparently intend to redeem. There are (a) the 4 per cent 1960-70 loan for Rs 60 crores; (b) the 2½ per cent loan 1960 for Rs 44 crores; and (c) the Hyderabad 2½ per cent Development Loan 1955-60 for Rs 4 crores. Thus, new cash that is being sought is in the environs of Rs 140 crores. If regard is had for the fact that the State Bank is likely to get an addition to its Deposits of the order of Rs 90 crores in the near future, it will be seen that the raising of the target figure of Rs 250 crores gross will present no problem at all. There is, besides, the consideration that the tax-free bounty on the Prize Bonds may, in these days of high taxation, very well attract large subscriptions, and not merely from the get-rich-quick investing public. In this light, provided Deposits of the banking system fulfil the promise they now make of considerable additions being likely during the year, and provided also that, whether by fiat of the Reserve Bank or by natural causes, the 1960 slack season witnesses a contraction in Advances to the tune of Rs 100 crores, there is no reason why the borrowing effort should not realise Rs 250 crores net instead of Rs 250 crores gross.

In the Budget, it is heartening to find, secondly, that reliance on deficit financing during the current year is likely to be lower than as originally expected. For our part, we believe that, when the year is closed, it will be found that created money during 1959-60 may fall short of the revised estimate of Rs 190 crores by another Rs 15 crores. Furthermore, we believe there is reason to hope that deficit financing in the last year of the Second Plan can, with some luck, be kept down to Rs 50 crores.

These and other aspects of the "money market" Budget will be studied at greater length in the Supplement to be brought out by Indian Finance next week.

Spectacular Rise in Bank Deposits

APPARENT slackening in busy season pressure, the completion of a second tranche of special transactions connected with the International Monetary Fund and the crossing of the Rs 1900 crore mark in the Deposits of Scheduled Banks highlight the latest banking returns.

Active note circulation has, according to the returns of the Reserve Bank for February 26,

contracted by Rs 7.38 crores to Rs 1798.93 crores. Rupee Coin has also returned from circulation for Rs 0.31 crores. With both Foreign Securities and Rupee Securities unchanged, the Reserve Bank's cash in the till has resolutely improved by Rs 7.89 crores to Rs 25.95 crores. Does this mean a slackening in busy season pressure?

In the Banking Department, similar evidence of the busy season seemingly tapering off is available: the Reserve Balances of member banks have been marked up by Rs 4.37 crores at Rs 79.96 crores, and the Other Loans and Advances of the Reserve Bank are seen to have declined, although nominally, by Rs 0.26 crores to Rs 121.07 crores. Besides, Investments in the Banking Department are higher only by Rs 1.91 crores, and this would on the face of it rule out deficit financing, implying therefore that the Central Government, too, did not feel any strain owing to busy season influences. Indeed, with State Government balances marked up by Rs 3.75 crores at Rs 30.22 crores—it is true, their ways and means borrowings from the Reserve Bank have also mounted by Rs 1.32 crores to Rs 25.99 crores—the suggestion is that the Central Government, despite inter-governmental payments and despite also the special transaction with the IMF, have had a comfortable time of it.

But let us now trace this special transaction. As we had surmised a few weeks ago, what time Other Deposits had shown a drop, the Central Government are in process of repurchasing rupees from the International Monetary Fund; and this relates to purchase of currencies in 1957. The Finance Minister, in the course of his Budget speech, confirmed that Government had already repurchased \$50 million worth of rupees.

The first instalment of such repurchase was concluded in the week ended February 12, when a drop of Rs 10 crores in Other Deposits was accompanied by, strangely enough, little or no change in Foreign Balances. This meant that, in the relevant week, foreign exchange accretions, whether by way of export surplus or by way of assistance, were so good, that the expending of Rs 10 crores' worth for repurchase of rupees from the IMF failed to be reflected in the level of foreign exchange reserves. The second instalment of the repurchase, in an amount of Rs 15 crores, has been completed in the latest week, and is seen reflected in (a) a drop of Rs 14.62 crores in Other Deposits and (b) a decline of Rs 4.04 crores in Balances Held Abroad. Here, too, it is heartening to find that the impact of the utilisation of Rs 15 crores of our exchange reserves for the purpose has been reflected only as to a drop of Rs 4 crores in foreign balances.

We wish to suggest that these transactions, involving a net loss of foreign exchange, would have had a contractionist influence upon active note circulation. Hence, it would not be correct to conclude from the decline that has occurred in the latest week that the busy season is showing signs of drawing to its end. Similarly, the rise in Reserve Balances of member banks is due entirely to the State Bank; and, with the State Bank figuring as a purchaser of gilt-edged for Rs 6 crores during the week, there is also the suggestion of deficit financing for Rs 10 crores.

Government, it may be noted, would also have had a liability in respect of maturing Treasury Bills purchased and discounted by the Reserve Bank. The relevant portfolio shows a drop of over Rs 13 crores in the latest week.

In any case, busy season signs are not lacking in the latest returns of the State Bank and of the Scheduled Banks, as we shall presently see.

The State Bank's return for February 26 shows that part at least of recent additions to Deposits may be presumed to have stemmed from public Law 480 counterpart funds. For, the busy season notwithstanding, the State Bank has increased its gilt-edged portfolio by Rs 6.25 crores to Rs 381.35 crores; and that the purchase had apparently been decided upon in the earlier week is suggested by the decline of Rs 6.76 crores in Other Assets. The busy season is seen reflected in a further rise of Rs 0.77 crores to Rs 190.49 crores in Advances. Meantime, however, Deposits have notched another increase of Rs 4.26 crores to Rs 604.82 crores. As such, after slightly reducing borrowings by Rs 0.32 crores to Rs 1.29 crores, cash balances stand improved by Rs 4½ crores at Rs 36.18 crores. It is to be anticipated that the return for the first week in March will again bear strident testimony to the demand for funds occasioned by month-early disbursements and the needs of the busy season. Also, it is possible that counterpart funds will continue to make their impress felt week by week in the period till June, by which time, as the Finance Minister has indicated in his Budget speech, Public Law 480 assistance in an amount of Rs 90 crores should be coming.

Our anticipation that the Scheduled Bank return for February 19 will mark the crossing of the Rs 1900 crores level in gross Deposits has materialised, with a rise recorded during the week of a steep Rs 20.31 crores to Rs 1906.41 crores. The total of Advances has continued to expand, though the week's rise is smaller at Rs 3.65 crores to Rs 1052.65 crores. The more comfortable position resulting from the rise in Deposits has enabled reduction in indebtedness. Borrowings from the State Bank are lower by Rs 1½ crores, and borrowings from the Reserve Bank, wholly on account of the State Bank, have declined by Rs 9.33 crores to Rs 40.00 crores. The investment portfolio is higher by Rs 2.22 crores at Rs 761.66 crores; but, with the State Bank reporting an increase in that week of Rs 5.82 crores, it is clear that other Scheduled Banks have disinvested in gilt-edged. Finally, Cash Balances are lower by Rs 2.43 crores at Rs 157.36 crores—the State Bank's cash had gone down by Rs 7.38 crores.

Government of India Treasury Bills

TENDERS for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 1st March 1960. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.310 and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.750 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 7th March 1960. Successful tenderers should make payment at Kanpur on Thursday, the 10th March 1960 and at other centres on Friday, the 11th March 1960. Other conditions are as usual.

During the week ended 26th February Rs 24,89,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 2nd to 5th March 1960 at Rs 99.331 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from the 24th to 27th February 1960 amounted to Rs 7,00,000.

The "Old Lady" Forswears Gilt

Ry Paul Einzig

THE announcement made on February 24 that the Bank of England would no longer support the gilt-edged market came entirely unexpected. It had been known for some time that the Governor of the Bank, Mr. Cobbold, was not happy about the pace at which bank advances had been expanding. On repeated occasions, he uttered warnings, and on January 21 the Bank rate was raised. But there was no sign of any response, either on the Stock Exchange or in the economy of the country. The effect of the Bank rate increase was shaken off in a very short time. The only influence that was able to check and even reverse the Stock Exchange boom in February was the weak tone of Wall Street. All indices pointed toward an expansion of business. Various important firms declared greatly expanded profits and higher dividends, and excessive wage demands were once more cheerfully granted. In the circumstances, it was not surprising that the authorities should decide to follow up the increase of the Bank rate by further action. What was surprising that it should assume the form it did.

It is certainly something of an innovation to prevent banks from pursuing their policy of credit expansion to an unwanted degree by making it too costly for them to realise their investments. Yet, when one comes to think of it, the surprising thing is not that the Bank of England called a halt to that process but that it had allowed it to proceed so far. Had it not been for the Bank of England's willingness to take over the Government loans that banks wanted to unload and to pay current market prices, the banks would have had to sell in the open market which would have brought down prices quite considerably. A stage would long have been reached at which the game would have ceased to be worth the candle. Rather than cut too heavy losses, the banks would have felt impelled to put a brake on their credit expansion.

From a political point of view, too, it is remarkable that this practice of bolstering up the gilt-edged market should have been pursued so long under a Conservative Government. It flavoured very much like Dr. Dalton's policy during the early post-war period. It is true, the yield on Government Loans today is more than twice as high as it was in the days of the "doctor." It is something quite different to try to keep down that yield to a shade above 5 per cent from what it was to try to reduce it to 2 per cent. Even so, the whole practice is contrary to everything a Conservative Government stands for. Possibly

this was one of the reasons, if not the main reason, why it was decided to bring it to an end instead of restricting credit expansion by some other means.

From the point of view of the effect on long-term borrowing by industry, the local authorities, etc., there is not much difference between the direct way of putting up interest rates and this indirect way. After all, the yield on gilt-edged will set the pace for the yield on every kind of fixed interest bearing securities. It tends to discourage industrial issues fully as effectively as a further increase of the Bank rate. On the other hand, industry is spared another increase in the cost of its short-term borrowing. As it is, bank loans and overdrafts are expensive and it is only the certainty of good demand by consumers that prevents a contraction of bank credit as a result of an unwillingness of the borrowers to pay the high rates. But, amidst the prevailing optimistic atmosphere about business prospects, most short-term borrowers cheerfully pay the extra interest on the assumption that the 5 per cent Bank rate must be purely temporary, so that interest on short credits would soon be lowered. The payment of high interest rates on medium and long-term loans is, however, a different story.

The question is, do the authorities consider the removal of support on the gilt-edged market as a temporary expedient, or will they restore their support at a lower level? If, after a decline of gilt-edged prices, the market should still need support, it would only show that the level to which it declined is still not low enough. To take over from the banks hundreds of millions of pounds in Government loans even at lower prices is almost as inflationary as to take them over at higher prices. The way to avoid inflation is to let sellers of Government loans find private counterparts so that the increase in the liquid resources of the selling bank is bound to mean a corresponding decline in the liquid resources of the bank that has bought the amount sold, or whose customer has bought it. If Government buy the gilt-edged, it means that somebody's liquid resources increase without any corresponding decline in somebody else's liquid resources.

Considering the extent to which these operations had been going on throughout last year, it is indeed surprising that the price level has remained steady. But the authorities have at long last realised that they could not continue the inflationary process much longer with impunity. There is much to be said for doing away with the artificial situation created by official buying of Government Loans. It was of no use for the authorities of the Bank to warn against undue optimism so long as they continued to pursue a policy that justified optimism.

A "Balanced" Budget

TECHNICAL second thoughts may unfold some snags that are not immediately apparent, but, taken as a whole, Mr. Morarji Desai's second Budget appears as an excellent exercise in the difficult art of "balancing". Particular disappointments, some of which we shall discuss presently, should not obscure the fact that the Finance Minister has made an honest and largely successful effort at meeting varied and often contradictory importunities. In being able to do this, he has had his measure of luck: as we pointed out last week, the expectations from revenue for the current year have turned out to be far below the actuals, owing largely to an upsurge in production. This buoyancy may well prove the estimate of deficit for the coming year unduly pessimistic. As the Economic Survey for 1959-60 records, and as the Finance Minister himself pointed out, production trends in agriculture and industry have been heartening, and the coming year may see the full impact of the various projects completed during the Second Plan period. Industrial production has shown an increase of 7.4 per cent as against the 1.7 per cent and 3.5 per cent of 1957 and 1958 respectively. If the foreign exchange situation had been easier and import of essential raw materials and machinery has been freer, the results would have been even more impressive. Exports have shown some improvement both in their earnings and in the diversification of their contents. And, except for the price situation, other indices of economic health give a fairly clean bill. Therefore, save for unforeseen developments on the security front, the outlook for the coming year is definitely hopeful, provided the price situation is kept strictly under control.

Mr. Morarji Desai's expectations of revenue for the coming year are Rs 866.45 crores at existing levels of taxation as against the revised estimate for the current year of Rs 838.66 crores, which itself is about Rs 58 crores more than the original expectations. The expenditure on revenue account is put down by him at Rs 980.35 crores as against the revised estimate for the current year of Rs 854.05 crores (which was about Rs 15 crores more than the original estimate). The deficit anticipated (taking into account receipts from new taxation) is of the order of Rs 60 crores, which is roughly the same amount as the original deficit estimate for the current year. It is quite likely that the current year's experience, in which the revised estimate of deficit is put down at Rs 15.39 crores, may be repeated in the coming year.

On the revenue side, the expectations for the coming year are higher under almost every head. Wealth tax receipts are put at a lower figure, presumably because of the loss from this source by the abolition of wealth tax on companies. The increase in corporation tax and the fall in the head "income tax other than corporation tax" is probably due to the new system of taxation under which, among other things, certain sums which were shown as deductions from dividends will not have to be paid directly as advance tax under Section 18A by the companies. (Advance taxes are treated as current receipts under government accounting). It is difficult to say without fur-

ther analysis whether the increase in corporate tax receipts (Rs 57 crores) and the decrease in other income tax receipts (about Rs 20 crores) anticipated for the coming year would by themselves justify the inference that the new system leaves the tax payers worse off than before. It may be that the increase envisaged in the receipts of corporation tax is no more than the rise due to higher earnings anticipated. It may be that there is an element of adjustment which is not quite apparent at first sight. In any event, the proposition that the new scheme of taxation is fiscally more onerous has other data to support it, though the Finance Minister has chosen to take the view that it is far too early for him to make up his mind. He has, however, met partially influential representations on the question by making some concessions to small companies and by giving some relief on dividends paid out of profits of earlier years under the old system. Certain other procedural changes (like abolition of differential rates of deduction of tax from dividends) have also been made, though the net amount of tax receipts are ensured to be the same as before.

On the expenditure side, the biggest increases are under civil administration, "social services" and defence. The administrative cost increase is due to the implementation of the Pay Commission's recommendations, which is expected to cost annually Rs 55 crores. This figure apparently includes the railways' share also, for, the actual increase estimated is slightly over Rs 34 crores. And even this increase somewhat exaggerates the Government's "extravagance", for, this includes the provision for more than one year's expenditure, since no provision was made in the current year's Budget for the increased payments due from July 1959. The Finance Minister gave the usual assurance about efforts at economy but it is doubtful whether any significant reduction will take place.

As regards defence, the increase envisaged was far below the expectations of the most sanguine, and therefore came as a distinctly agreeable surprise. It is only about Rs 31 crores more than the current year's revised estimate, which itself is only about a crore of rupees more than the original estimate. In terms of the percentage of total expenditure, there has even been a slight reduction. As Mr. Desai rightly anticipated, no one will grudge this particular extra burden in view of what is at stake. We have also no doubt that the estimates framed will have taken fully into account the needs of the situation. Since the estimates were framed, before the latest note for Mr. Chou en-Lai, there would have been no complacent underestimate of the threats to our security. While it would be too much to hope that the coming meeting of the two Prime Ministers would miraculously resolve the border disputes, it may well turn out that Mr. Desai's fear that he may have to come again before Parliament for fresh authorisations for defence expenditure may prove unfounded.

Mr. Desai's new taxation proposals have understandably leaned heavily on indirect taxes. That the Finance Minister has not

increased direct taxes, has been noted with satisfaction and even glee, and this is evident from the reaction of the Stock markets to his proposals. And, even among the indirect taxes, Mr. Desai has spread items that can be considered articles essential to the common man. Cotton textiles, rayon yarn, vanaspathi, sugar and tobacco (confounding, incidentally, as regards the last, the local hoarders) have all got off scot-free. That his levies fall heavily on light engineering industry and road transport is unfortunately true. But a Finance Minister who is to find fresh revenue and, at the same time, avoid increase in direct taxes (because of its adverse effect on capital formation); eschew increase in indirect taxes on essentials (because of their adverse effect on the cost of living); reduce to the minimum the Budgetary deficit (because of its inflationary characteristic), cannot but lay his hands on sources like the one Mr. Desai has in fact done. There is no doubt a case for reconsidering the extent of such levies, especially those connected with road transport and the automobile industry, but that would really be a case of marginal adjustment. The case for rationalisation of the taxation of road transport is, however, strong, and one on which some kind of inquiry (and, what is more important, effective action) is urgent.

In the understandable preoccupation with new taxes, some of the real concessions that the Finance Minister has announced have not received the notice they deserve. For instance, owners of real property (constructed before 1950) will have a reduction in respect of the entire tax levied by any local authority, as against only half of such levy as at present. Secondly, concern for promotion of scientific research is practically demonstrated by the liberalisation of conditions of allowance made therefor in computation of business income. Development rebate is still there without any further "strings" (as was widely feared) and Section 15C of the Income Tax Act has been given a fresh lease of life so that new undertakings may be encouraged.

The overall budgetary position for the next year shows a deficit on revenue account (without taking into account from new taxes) of Rs 84 crores. Capital outlay will amount to Rs 371 crores, loans to States and others to Rs 531 crores and debt repayment to Rs 140 crores. The total disbursement of Rs 1126 crores will be met by market borrowing to the extent of Rs 250 crores; Rs 90 crores from small savings; Rs 362 crores (or nearly a crore a day) from foreign assistance; Rs 239 crores from loan recoveries and other miscellaneous receipts, leaving a deficit of Rs 177 crores to be met by expansion of treasury bills. The overall deficit financing for the entire Plan period is expected to be slightly over the estimated Rs 1200 crores. The estimate of Plan outlay was put by the Finance Minister at Rs 4600 crores.

The Finance Minister put the coming year's Budget in the perspective of the Third Plan. He was right in saying that we have reached a stage of growth when we can hardly afford to halt. The Third Plan will have to gather the painfully induced momentum of the first

two Plans and make the big leap forward. The rate of investment and the rate of production (both agricultural and industrial) will have to be at a steadily accelerated pace, if we are to overcome the accumulated inertia of centuries of stagnation and the pressure of increasing population. This means a high degree of not only fiscal and monetary discipline, as the Finance Minister put it, but also of individual and communal discipline.

Candid Counsel

THE rapid evolution of the economic scene, the result of the continuous inter-action of changes in supply, demand and prices, is the perpetual bug bear of the administrator of controls. Nothing stays put where he wants it to remain. And while he is still panting to catch up with the problems of yesterday, the problems of tomorrow are already knocking at the door. The apostles of Swatantra may exult in his discomfiture and proclaim that this is part of the price to be paid for the presumption of planning. But there is no easy way of escape for the Ministries charged with the administration of controls of trade and industry or its hardworked officials. While the difficulties are felt in every sphere, they are most severe when the controller has to deal with the export industries. More exports are necessary to feed the insatiable appetite of the Plan for foreign exchange; but the impact of planned development on domestic demand and on the cost of production threatens to price traditional Indian exports out of foreign markets. Nothing better illustrates the point than the problems of jute or tea, which are admirably dealt with in the Presidential address of Mr J. D. K. Brown at the last meeting of the Bengal Chamber of Commerce.

Even a few months ago, the problem was to ensure remunerative prices for the jute cultivator. Special measures had to be taken to keep up the prices. Mills were asked to lay in stocks and, for the first time in ten years, India resumed the export of raw jute in the first week of April. But, within the space of a few months, the situation has undergone a total transformation. Though the industry had a good year in 1959, it is now apprehensive that the recent rise in raw material prices will place it at a serious disadvantage in meeting the greatly intensified competition from Pakistan. While the developing trends in the national economy indicate that the domestic demand for jute products will eventually be able to absorb if necessary the entire output of the Indian jute industry, that stage is not yet. And at present the country cannot afford to forego the foreign exchange brought in by jute exports.

There may be other ways of meeting the industry's needs than the more liberal import policy advocated by the President of the Bengal Chamber. But the essential requirement is to keep the raw material prices down. Government of course, cannot ignore the interests of the growers. But the proper way to help the cultivator, consistent with overall national interest, is to help him increase his income through increased yield per acre. In jute, as well as in sugar, the main problem is to make available supplies of raw material at prices which are not uneconomic for the manufacturer.

Mr Brown has also warned the Government against complacency regarding the future for tea. The shortfall in the world tea crop last year, which is responsible for the buoyancy of the tea market, is likely to be followed by a glut in the next, if climatic factors are even

ordinarily satisfactory. And Mr Brown feels that the "Indian tea industry today is ill equipped to face the consequences." The industry's status as the foremost earner of foreign exchange gives the Government an interest in maintaining its viability as a producer in quantity of the teas for which there is demand in foreign countries; and, therefore, should make them receptive to suggestions for securing the industry's future.

Apart from throwing much needed light on the problems of the industries of vital importance to the prosperity of Eastern India, Mr Brown has also offered candid counsel on the various drags on development and, particularly, the chaotic state of communications round about Calcutta which has already handicapped the industrial progress of this part of the country. In regard to traffic problems, as with water supplies and drainage, the authorities have long been aware of the problem and have also taken initial steps. The problem now is one of speeding up the implementation. Mr Brown has referred in particular to the early implementation of the plans that exist for improvement of road communications between Calcutta and the industrial areas in other parts of the State and in Bihar. In addition to the construction of an Express Highway linking Calcutta with Durgapur where a vast new industrial complex is taking shape, there are also plans for an Express Highway to Burdwan and another from Calcutta to Dum Dum. Early implementation of these projects will to a great extent eliminate the difficulties to which Mr Brown has referred. The task has been entrusted to the West Bengal Development Corporation, which has been given a splendid chance to justify its name.

West Bengal Budget

THE most striking feature of the Budgets of the West Bengal Government in recent years has been the unexpected resilience displayed by receipts on the revenue side. It is true, expenditures have also registered simultaneous increases. But there is also a progressive narrowing of the gap between the two sides of the ledger, even leading, as in the revised estimates for the current year, to a bonanza in the shape of a Rs 4.95 crores surplus in place of a deficit of Rs 3.63 crores in the Budget. Over the last three years, revenue receipts have increased by more than Rs 23 crores. And, in each of the last two years, they have exceeded anticipations by over Rs 12 crores. The Budget for 1958-59 estimated revenue at Rs 68.86 crores, almost the same level as the actual receipts during 1957-58. But actual receipts during 1958-59 have turned out to be as high as Rs 80.39 crores. Similarly, the budgeted figure of Rs 79.01 crores under revenue receipts for the current year (1959-60) has been scaled up to Rs 91.49 crores in the revised estimates. There is good reason to expect that revenues, estimated at Rs 88.17 crores, will amount to about Rs 100 crores when accounts are closed for the year 1960-61. For part of the increased receipts, no doubt, the State Government have to thank the Santhanam Commission. But the basis of allocation of the State's share of income tax has itself been a sore point with West Bengal, which remains unreconciled to the low weightage assigned to the place of collection as compared with population. And even the ad hoc grants that the Finance Commission had recommended have to be wheedled out of a reluctant Planning Commission, which so far have not accepted these recommendations as binding on them. Out of Rs 25 crores recommended by the Santhanam Commission

Indian Finance

as grants during the entire Second Plan period, the State has so far received during the first four years only Rs 14.7 crores. Out of the remainder of Rs 10.3 crores, the State Government, grown wise on earlier disappointments, have taken credit for only Rs 6.15 crores in the Budget for 1960-61.

Revenues have also been buoyed up the price inflation which has apparently contributed a substantial share to the strident increase in Sales tax revenue. But when all allowance is made for these extraneous factors, the successful tax effort made by the State to increase revenue cannot be denied. This point has to be emphasised, for, it has become fashionable in some quarters to castigate the State Governments for their alleged remissness in raising new taxes required for fulfilment of the Plan targets. It is not possible to track down the canard to its source, but it has the knack of turning up in the most unexpected quarters. As far as West Bengal is concerned, it can be asserted with confidence that there is no basis for such criticism. As against Rs 14 crores which the State Government were expected to raise by way of additional taxation during the Second Plan Period, they have been able to raise a total of Rs 65 crores, of which Rs 43 crores accrue from new taxes and the balance of Rs 22 crores from better collection of existing taxes.

The increased tax revenues have also enabled the State Government to maintain the Plan outlays, in spite of the fact that the Central contribution has been nowhere near the level originally indicated when the Plan was drawn up; and even the amount of annual contribution, settled after prolonged discussions with the Planning Commission before the yearly plans are drawn up, is not forthcoming in time. The total Plan outlay during the first three years amounted to Rs 74.85 crores. Including the allocation of Rs 38.51 crores in the revised estimates for the current year and Rs 44.03 crores in the Budget for 1960-61, there will be no shortfall in the implementation of a Plan of Rs 157.4 crores, including Rs 4 crores on account of areas transferred from Bihar allowing the reorganisation of States. But, out of this outlay, the State Government will be contributing Rs 80.7 crores against the original assessment of Rs 64.4 crores, while the Central contribution has been scaled down from Rs 89.3 crores to Rs 76.7 crores. Dr B. C. Roy can now look back with satisfaction on the record of his stewardship of the State's finances over the last twelve years. In the last year of the Second Five Year Plan, when programmes have to be drawn up for the Third, the State finances are in better fettle than in any year after 1947.

The small overall surplus of Rs 48 lakhs estimated for the current year has been revised to over Rs 7.12 crores. While revenues are better at Rs 91.50 crores in the revised estimates as compared with Rs 79.05 in the Budget, expenditure has also increased from the budgeted figure of Rs 82.67 crores to Rs 86.54 crores. The increase in expenditure is mainly accounted for by relief operations in flood affected areas. On the other hand, loans from the Central Government are lower at Rs 26.76 crores against the Budget estimate of Rs 32.29 crores, while capital expenditure has been maintained at the same level of Rs 26 crores both in the Budget and revised estimates.

The Budget for 1960-61 estimates revenue at Rs 88.17 crores against expenditure of Rs 89.22 crores. Changes in the pattern of company taxation introduced in the last Central Budget have affected the State's share of income-tax, and this has been responsible for a reduction of Rs 3.33 crores in the revenue

March 5, 1960

estimate. The loss, however, will be fully made up by Grants-in-Aid by the Union Government under Article 232 of the Constitution. The disappearance from the Budget for the coming year of an item, (arrears of central assistance for relief and for displaced persons) which has been included in the revised estimates, accounts for a decrease of Rs 7.42 crores in revenue receipts. These changes, together with smaller fluctuations under other heads, lead to an overall decrease in the estimate of revenue as compared with the Budget estimates. The increase of Rs 2.68 crores in expenditure is mainly on account of plan schemes. The budgeted figure does not include any provision for implementing the recommendations of the Pay Committee which has been set up by the State Government to examine the pay structure of Government servants and to make recommendations for changes, keeping in view, among other things, the impact of the recommendations of the Central Pay Commission. There is an excess of Expenditure over Revenue of Rs 1.06 crores. Together with the deficit of Rs 1.59 crores outside the Revenue Account, the Budget shows an overall deficit of Rs 2.65 crores which has been left uncovered. But, considering the steady uptrend in tax realisations, the uncovered deficit need not occasion any feeling of uneasiness. The provision for capital expenditure in the Budget year at Rs 33.96 crores is Rs 7.89 crores higher than the revised estimates. The increased outlay will be financed by a loan of Rs 7 crores which the State Government propose to float in the coming year.

The most interesting part of Dr Roy's Budget speech is where he has indicated the contours of the State's Third Plan. The total outlay will be of the order of Rs 200 to Rs 250 crores; and, in view of the urgencies of the problems of urban unemployment and chronic food shortage, will have to be balanced between industry, mainly small industry, and agricultural improvement. The establishment of a fertiliser plant in the State, for which provision of Rs 75 lakhs has been made in the Budget, was long overdue.

The Peninsula: India's Major Economic Problem?

ONLY last week did the Union Government take formal cognisance of the problems of industrial location, the claims of undeveloped regions, and the needs for dispersal of industries. The Grady mission in 1942, when engaged in assessing India's potential, examined the conditions of growth and for development, and the Viceroy's Expanded Council came to learn from a brief report that organised industry in India had developed over 40 years without much regard to the main requirements of defence and employment policy. Those old reports take on a new relevance at present in view of Mr Lal Bahadur Shastri's reply to a Communist MP's statement of the case for economic justice in the matter of allocation of new industries. With the public sector assuming greater prominence, and State-owned plants in operation already, it seems as if pleas from Assam, Madras and Kerala for preventing disparity in development are going to be heard. Jealousy among States set up for linguistic reasons may be a minor consideration as compared with the need to prevent further congestion in both Calcutta and Bombay, where engineering enterprises are concentrated.

The existence of consuming markets and access to potential export outlets may justify

or dilute the present distribution of large scale enterprises. But, with more steel in sight, and plenty of cement available, the planners have to examine other points, besides the tradition of managing agents who prefer to be well placed for administration. But it may be noted that, if Bihar has received most attention from managing Agents in Bengal, the venture of Burn & Co into Salem in the far South for getting magnesite for making refractories and the keen interest shown in Orissa's manganese by Tatas represent a welcome departure from past policy.

The Barlow Commission's work in Britain may hold lessons for India like those available in the Liberal Yellow Book of 1928. And, of course, the development of Ulster after the war contains some valuable hints for our planners, since the entry of foreign capital into the UK has been helped directly by Ulster's policy. The blurring of party lines in the parliamentary discussion last week is derived from the general sense that the Peninsula, owing to the dearth of capital, has not received as much attention as desired. And, if figures relating to licences issued are not quite adequate as a foundation for the argument regarding neglect, there is the fact that, so far in the South, the chemical industry has not made much headway and it is the entrepreneur from the north that has given new sources of soda ash as well as cement. While the Communist MP made much of congested Kerala's economic potential and manpower, the real case may be said to rest on earlier development of power, helping the decentralisation of industry and creating incidentally a large market for electric equipment at home.

There is little need here to recall Franklin Delano Roosevelt's remark about the South being the major US economic problem. That remark was connected with the US depression and was made to justify departures in planning for the Tennessee Valley. The pressure on the land in the coastal areas is, of course, the reason for the claim entered in July last by the zonal conference of businessmen held in Madras about port development, the pressing need for heavy industry, and the further possibilities of Neyveli. The means to encourage new enterprise (found easily in Mysore in the past) may be lacking today and the Centre alone can stimulate, advise, and assist actually. Something has been done already to shift new plants from Bombay to Saurashtra and Gujarat, for instance, in the rayon industry. But conscious planning, such as is now available to small scale industries, is what is wanted, and if Mr Shastri emphasised the difference existing between South Bihar and North, he did not pay due attention to the damage done by the Kosi over years, the earlier earthquake and the varying fortunes of the sugar industry in Bihar, which in point of minerals is far ahead of all States, now as before.

The assurance that expert aid had been previously taken as regards location may well be reflected in the impending rise of new fertiliser plants in the South or in the opening of rayon plants mainly to help the cotton mills in need of raw materials. But, by and large, the industrial development to date and the economic situation have been dominated by the lack of fuel, and the difference between the Hyderabad region and the Circars is to be traced to the presence of coal in Telengana.

The reference to vital industries made by the Industries Minister may have definite implications in the light of acute and growing Defence needs, and the second shipyard to be established at Cochin will have its own bearing on the future defence of India. Mr Shastri mentioned also the problems in connection with the stagnation of over-populated regions, but it may be asked if changes in management

had no connection with the decline recorded over a decade. He perhaps ignored the advent of the Rihand aluminium plant to offset the rise of an Indo-Canadian venture at Hirakud. And he certainly forgot that electricity charges after the nationalisation had a definite consequence for the industrial concerns based on Kanpur.

Vague comforting assurances about total outlay and enterprises may signify little to the foreign businessman who is keen on knowing what seaports are near, how goods trains operate, and the distance to the best markets. The sponsors of secondary or manufacturing industries are not guided by sentiment or prejudice, and the association of foreign capital with indigenous enterprise is always based on material, not moral, factors.

There is one other consideration to which Mr Shastri failed to refer. The labour movement, or rather its militancy, is an operative factor, and the quality of local trade union leadership may help to explain why the light engineering industry is growing apace in Madras city in spite of its known handicaps. The strength of trade unions, even more than the adaptability of local labour, is always weighed by foreign capital seeking to enter a fresh field, and there are valuable lessons from the past to which the authorities may give weight in dealing with regional disparities or local pressures. But there are some really inspiring examples from the South, where Harveys expanded from Madras up to Tuticorin and Punalur. And Stanes' success beyond the planting industry is due perhaps to the facilities available in a prosperous district like Coimbatore. In view of recent happenings at the new State-owned steel plants, the labour situation, present or future, is as material a factor as wage-levels, and the growing preference for the South in future, already visiting in the case of automobile manufacture, may be guided as much by the differences in the cost of living as by the success of local apprenticeship schemes. In the debate last week, no comprehensive review was attempted; but, then, India has no depressed or black areas to warrant special treatment, and the Communist concern for Kerala may be due largely to the recent electoral reverse. The effective transformation of agricultural regions by the planting industry is another point to which few care to pay attention. It may even be said that the opening up of the Shevroys has brought new life to Salem, and the economic significance of the Nilgiris is based on high-grown tea—not on the decaying hill-stations or the defunct brewery. Something may yet be gained by Indian authorities from adaptation of what was said at the pre-war meetings of the British Association, as, also from wartime experience which made Avadi a base for future industrial growth—not only for a Socialist platform to woo the voters. What is being done by the Industrial Estates may not be of direct or great consequence, but it is clear that concern for traditional skills may help to create new centres for non-ferrous metal industries, which tend to cling to the main cities.

The problem in India is really not like that of Canada, where the Maritime Provinces languish, while British Columbia is booming. It is really one of breaking the old mould which made slums and bred unrest in big cities. To achieve this, electric traction may be soon required and the growth of industrial suburbs may cause no alarm if it is appreciated that deconcentration is the rule in the gigantic steel and chemical industries in the USA. It is not without some significance that Wilmington, Delaware, which few now can spot even on a large map, is the base of operations for the famous du Pont Nemours enterprise that has made science and industry truly synonymous.

NATIONAL NOTES

After Twelve Years

A resolution asking for the end of the Commonwealth link met with its appointed fate in the Lok Sabha on Friday last. The airing of views was useful because the majority see the fine points of the Commonwealth and India's own gains from its free association. Electoral approval was claimed for the 1948 decision to accept the reigning monarch as the Head of the Commonwealth, though no reference was made to Mr Macmillan's visit to Delhi or to Prince Philip's triumphant tour of India last year. The Commonwealth as a group parallel to NATO and the Warsaw alliance may have influence, but no power, at present. But the Commonwealth has changed since Mr Lionel Curtis analysed its implications. Much was said last week about the common ideals of the UK and India, and about India's independent foreign policy, though no mention was made of the moral support extended in the current controversy with China or the map secured from London to help in stating the case for the maintenance of the McMahon Line. The lectures of Dr Arnold Toynbee perhaps had no bearing on the views put forward, while Professor Mukerjee was content to harp on continued exploitation by foreign capital. And some assumed that failure to secure Goa implied that the Commonwealth

connexion offered no material advantage to India. Mrs Lakshmi N. Menon emphasised the value of informal ties, the continuous contacts and the emergence of new African members in the Commonwealth. The freedom to differ under the Commonwealth arrangements is still the most valuable part of the arrangements created by statesmen like Mr Mackenzie King and Gen Smuts as well as Mr Attlee, and Lord Balfour much earlier. Appreciation of India's problems and policies has been made possible and it has been found that the new Tory party is as responsive as the old Labour party. The Colombo Plan's continuance is a consequence of the free association, kept up as much out of self-interest as the general desire to help weaker Asian nations. If the parliamentary discussion proved that old prejudices die hard, the party in power at least recognises that, as a free republic, India has lost nothing by the connection preserved for sound economic reasons, though little was said about Indo-British trade or the cultural contacts that are promoted by the Asiatic Society—a local enterprise launched in the past by Britain's aware of India's legacy.

Academic Lament

The University Grants Commission and their report have had a distinctly good press. It was inevitable owing to Sir C. D. Deshmukh's part in the proceedings and plans of the Commission. At the same time that he tried to explain the merits of the examination system, a retired professor summed up the decay of the universities in an article in *The Hindu* dealing with clouds over the colleges. This valuable academic intervention is certainly a warning to politicians, who find it easy to prescribe change, and a plea for conservatism. It is singular that India's new conservative party has not set out its views on the ills of the universities, including a double dose of communalism, and has made no mention of what comes from trying to push out study by extra-curricular activity that had an unhappy climax in the last youth festival at Bangalore. However, it is Professor Sarma's general outline of the consequences that supports the case for university autonomy. The restoration of discipline is contingent on the restoration of the teacher's status and the free flow of talent into a now neglected and depressed profession.

The sombre lessons drawn from the current fall in standards should convince the authorities that Gresham's Law is operating in the field of higher education. The melancholy reflections on present discontents are certainly sharpened by the reference to the corruption of examiners and the known sale of seats in colleges. There is now a reasoned depreciation of extra-curricular activity as well

as a plea for keeping English—not in its place—but above all languages, because English is not a divisive factor like Hindi. This acute analysis needs no specific endorsement in these columns but it demands a wider circle of readers here and now.

Better Villages

AS much to check the drift to towns, which are getting bigger but not better, the Planning Commission have lately asked the States to secure minimum amenities. It is surprising that, after loud talk of dynamism in the villages and the Community Development programme's effects, there should be a plaintive plea for a rural minimum in the backward areas. The novelty of the plea lies in the argument for creation of communal (in the original, not the local sense) assets. The partial restoration of the Indian village community, as it existed or worked in the past, is a large task that was not envisaged in former schemes of reconstruction. The assignment of waste land to panchayats for tree-planting, pastures and like purposes will make them property-owners, able to supplement income from taxes and grants. But the question is whether the assets will be carefully conserved and the communes (in the West European sense) will be able to devote income for increasing both work and wealth in the villages.

The village offices can scarcely do much. New development work must devolve on the distinctive, agency offered by the new councils already set up in Madras and Andhra Pradesh. But the leadership that is given by elected persons must be both skilled and sincere. Achievements to date in water supply, rural housing and sanitation are inconsiderable, and it is essential that Harijan welfare funds must go to development in the villages if rural slums are soon to disappear. The outlay by the States must match the Union Government grants, but the Budgets to date seems to have avoided the task of making the villages habitable. Co-operatives cannot do more than act as Government agents—the elected Councils must soon raise resources locally and accept new responsibilities like the repair of channels and ponds. The abolition of poverty by social change has forced the planners to look afresh at country planning. In this connection, it may be necessary to think of a betterment levy from the well-to-do cultivators, a step justified by both the rise in land values and the ill-distributed rise in rural incomes over a decade.

Show Boat

This week, an argosy laden with Indian goods sails from Bombay to the Persian Gulf and East Africa. The All-India Manufacturer's Organisation is behind this chartered expedition which may be called a case of trade following the flag shown by the Indian Navy

over many years in its cruises in distant waters. The engineering trade missions have assessed prospects already and reports presented to the Export Promotion Councils inspire the further effort to advertise the fact that India Can Make It. Even if the Japanese had done the same job to tell India earlier that Japan is back in business, the imitation on India's part is well worth while. The showrooms and exhibitions so far arranged may require a reinforcement by display of goods for sale.

The Persian Gulf area is still within India's economic sphere of influence and the midjet kingdoms may provide good opportunities for Indian merchants who may have found that, in Afghanistan, the Soviet Union has a stronger hold after the war.

The East African markets, too, may offer more opportunities because the Bazar trade is in Indian hands, and if prices are competitive, there should be good demand for cycles, lanterns and other necessities that the Africans require for raising their standard of living. The Jyoti will differ from the Showboat of general conception, but it may be a good idea to mix popular entertainment with the transaction of business and Indian films or records may prove a useful sideline to exports of handloom goods and domestic hardware. The floating fair will take Karachi on the way, and help to restore normal trade with West Pakistan. The Fair is based on the idea that Arabia stretches from Aden to Zanzibar, as Sir Harold Ingrams pointed out, and the provision of banking facilities has preceded this happy departure in export promotion to which Mr Nehru has given his hearty approval.

STATES NOTES

Calcutta Port Finances

Despite a decline in the volume of traffic passing through it, Calcutta Port's finances, as far as the revenue side is concerned, show a satisfactory position. The income for the year 1960-61 has been estimated at Rs 13.77 crores and the expenditure at Rs 13.67 crores, showing a surplus of about Rs 10 lakhs. The total traffic estimated to pass through the port during 1960-61 is 9,280,000 tons as against the estimated total traffic likely to be handled in the current year of 9,525,000 tons. It was originally estimated that, during the current year, a total traffic of 9,960,000 tons would be handled.

Referring to the lower traffic estimated for the next year, Mr K. Mitra, Chairman of the Calcutta Port Commissioners, has pointed out that "the Budget estimates have been prepared on a somewhat conservative basis keeping in view the completion of the execution of the various steel plants in the regions served by the Port and the consequential fall in the imports of heavy machinery. Apart from this aspect, allotments of foreign exchange on which alone the flow and the volume of imports from foreign countries depend is still being screened by Government and subjected to considerable restriction. In these circumstances it will not be proper to Budget for a larger surplus expecting the volume of import traffic to reach the previous year's level." But, as Mr Mitra has himself indicated the actual results of next year's working may well turn out to be better than anticipated in the Budget, as it is not improbable that the influences that are expected to work toward a reduction of traffic in the Calcutta port may either not fully come into play during the next year or be more than offset by opposite influences.

The estimated increase in revenue is expected to accrue mainly from the recent enhancement of port charges which came into effect on 21st January 1960. The income from this source is expected to yield in a full year an additional revenue of Rs 135.5 lakhs. Storage charges and the income from the operation of the Haldia Anchorage are two other important heads contributing to improved revenue.

The revised estimates for the current year show a surplus of about Rs 20.26 lakhs in the revenue account as against a deficit of about Rs 17.35 lakhs envisaged in the original estimates. This striking improvement has been brought about by a sizable increase in

income under a number of heads but largely from storage charges, enhanced port charges for about two months and additional income from operating the Haldia Anchorage. Expenditure, too, has risen by over Rs 61 lakhs mainly due to the need for making additional provision for implementing the recommendations of the Chaudhuri Committee and the Pay Commission. However, the Chairman has further revealed that a move has already been made in this direction.

The capital Budget for 1960-61 puts total expenditure at 12.61 crores comprising Rs 11.09 crores outlay on works in progress and on firm contractual commitments and an outlay of about Rs 92 lakhs on works yet to be sanctioned and composed mainly of Second Five Year Plan projects. As the year will open with a credit balance of Rs 1.61 crores, it will be necessary to borrow Rs 4.5 crores from Government and Rs 6 crores from the International Bank. After taking into account the contribution of Rs 2 lakhs from the Revenue account, the year is expected to close with a credit balance of Rs 17.64 lakhs. In revised estimates for the current year, which opened with a credit balance of Rs 2.41 crores, expenditure is estimated at Rs 3.47 crores and it is proposed to borrow Rs 1.5 crores from Government and Rs 1 crore from the International Bank. The contribution from revenue surplus is placed at Rs 12 lakhs.

Power Plan for Madras

A welcome development in recent years has been the increased attention paid to the extension of electric power to the different parts of the country. The manifold uses to which this power can be profitably directed need hardly be emphasised. The success of the programme for the rapid industrialisation of the country, the stepping up of agricultural output and complete electrification of the villages, to a great extent depends on the availability of electric power. Keeping this well in view, the Madras State Electricity Board has chalked out a bold and ambitious plan at the cost of about Rs 136 crores for the development of power during the Third Five Year Plan.

The new programme does not envisage the launching of new projects but will confine itself to the expansion of the existing ones. This, according to the calculations of the authorities, will yield total additional power of the order of 475,000 kw. The Mettur Scheme, the Parambikulam Scheme, the third stage extension of the Kundah Hydro-electric Scheme and the fourth unit of the Periyar scheme are the main schemes on which expanding activities will be focussed. The details of the schemes have been forwarded to the Planning Commission and the Central Water and Power Commission for approval. The setting up of new thermal stations in different

parts of the State on the lines of the Neyveli Thermal plant is also suggested to eradicate the glaring defect of the Madras grid—its extreme dependence on irrigation reservoirs which remain closed during the dry months. It can be reasonably anticipated that, apart from providing power to the various industries that will be started in the State, the bid of the Board to extend power to all the 19,900 villages by the end of the Third Plan will also materialise.

Making do with 30 per cent Power in Punjab

East Punjab is presently going through a phase of electricity shortage which, in its severity, has not been preceded in past experience. Though power scarcity is a seasonal winter phenomenon, a 30 per cent ceiling on consumption was one for which consumers would not have been prepared and which they would have found hard put to accept. Attributed to absence of rain in winter, early symptoms of shortage began to manifest themselves as early as the last week of December when free flow of discharge in the Sutlej began to decrease successively and fell below 4,000 cusecs. This fell far short of the 5,500 cusecs required at the Nangal hydel canal for keeping the power houses at Kotla and Ganguwal in full generating capacity. Relief anticipated from Bhakra storage failed to materialise in view of the depletion of the reservoir for repair of hoist chamber and choking the mouth of the right diversion tunnel. Failure of rain being total, power generation at the Joginder Nagar power house also suffered substantial reduction. The flow of water at Uhl, which generally averages 250 cusecs, is reported to have gone down to 160 cusecs.

The cut in power supplies that the Government have imposed to the extent of nearly 30 per cent was a step which they could not have helped, in the circumstances that led to the shortage. Present conditions in respect to flow of water in the Sutlej and Uhl are such as to rule out hopes of any immediate lifting of the cut in supplies. Mr Birendra Singh, the Minister for Irrigation and Power, has forecast continuance of present cuts till March.

The power shortage that overtook the state has, in the causes that preceded it, some lessons to offer for future policy in regard to power generation. Power shortage being, in the case of Punjab, a predictable winter phenomenon depending upon the supplies of water for the power houses, it could certainly be averted by ensuring adequate supply for the power houses. While the shortage in supplies arising from the damage suffered by the Bhakra was inevitable, shortage in supplies for Joginder Nagar station could have been avoided if storage facilities had been created. The station is at present solely dependent

on the flow of Uhl which does not maintain an even flow throughout the year. Secondly, development activity relating to new line connection will have to be adjusted to the likely increase that could be achieved in generation of power.

Developing Andhra

Replying to the address presented by the Chandragiri Panchayat Samiti, Mr A. C. Subba Reddi, the Andhra Minister for Industries, dwelt at length on the industrial backwardness of the State in spite of the abundant supply of raw materials that can cater to the needs of industries. He exhorted industrialists in general to come forward and start new industries in the state and assured them of all possible assistance irrespective of their nationality. Mr Reddi explained the scheme of decentralisation of power introduced by the Government and felt that the success of the scheme would largely depend on the ability of those who control administration of the samitis. The setting up of the Industrial Development Corporation, which is under the consideration of the Government, will expedite the industrial activities of the State.

The Minister assured the gathering that a licence would be issued at an early date to install a sugar factory in that locality. Besides, the programme of establishing industrial estates in all the districts will also be carried out in right earnest. Mr Reddi also complained that the attitude of the Union Government toward the State has hitherto been not quite favourable for its industrialisation and earnestly desired a more considerate treatment.

The urgent need for the rapid industrialisation of the State can hardly be exaggerated. The abundant supply of minerals in the State is well-known. Andhra occupies the fourth place in the production of major minerals like manganese, iron ore and coal. All these factors warrant the establishment of more industrial projects so that the raw materials can be profitably converted into useful products in the State itself.

FOREIGN NOTES

Adventure in Understanding

Mr Eisenhower's visit to Latin America may prove an essay in understanding and help to promote integration evident already in the association of ABC group (Argentina, Brazil and Chile) with neighbours for the reduction of tariffs and the promotion of intra-regional trade. If the USA has invested a lot in Latin America, the evolution of its relations with Mexico in this century should convince its neighbours that the organisation of American States is not merely a prop of the Monroe Doctrine. Mr Eisenhower's visit led to an eruption of pro-Peron feeling, but it has also given the Frondizi Government a good talking point for defending its policy of sacrifices after the bread and circuses of a decade. The absence of a colour problem marks off South America from South Africa and the continent has experienced only revolutions, not wars, in this century. The prolonged trouble in Cuba is one reason for the President's trip; the other is the advice given earlier by Dr Milton S. Eisenhower about mending fences in time; and the decline of dictators added force to the plea. There has been no forceful push by the Soviet Union, but Arbenz of Guatemala stirred the American memory about the dangers in the Caribbean. The control of the Panama Canal is dependant on the goodwill of the ten Republics even more than that of Panama, and Congressional resolutions in Washington may not help so much as an exposition of American aims in the right places. The President's accent was again on peace and work for prosperity and he deprecated emulation of the United States. That is distinctly helpful to countries that wish to develop in their own way and maintain old relations with Paris and Madrid. Mr Eisenhower's quick, quiet tour presents somewhat of a contrast to the tour made some time ago by Mr Nixon to South America, where student demonstrations marred the official receptions and created the impression that suspicion of Yankee Imperialism remained a potent force in Chile and other republics.

Foreign Aid? Or Mutual Assistance?

What is, generally, called foreign aid, but perhaps should be known more properly as mutual assistance, is very much in the news these days.

Just within the past week, President Eisenhower presented Congress with two formal messages: his recommendations for the U. S. Mutual Assistance Programme for the 1961 fiscal year beginning this coming July 1, and his request for approval of US participation in the new multinational International Development Association (IDA). In addition, Paul H. Hoffman, speaking as a private citizen rather than as managing director of the United Nations Special Fund (his present post) or as former administrator of the celebrated Marshall Plan, outlined for newsmen his suggestions for an increase in the worldwide development effort.

Implicit in all these proposals is the recognition that development assistance is an important element of international economic programmes in the USA and elsewhere. Fiscal 1961 will mark the fourteenth consecutive post-war year of large scale US economic aid to other lands, and the recommendations offered by Mr Eisenhower indicate no lessening of the American determination to help other peoples help themselves.

The \$4,175 million the President is requesting for mutual assistance in fiscal 1961 is about \$200 million more than he requested last year, and nearly \$1,000 million more than Congress actually appropriated. And well over half of his 1961 request is for various types of economic, as against military, assistance.

Included are \$700 million for the easy-term Development Loan Fund, to keep its lending programme operating at current levels; \$206 million for technical assistance; \$286 million for "special assistance," largely for certain countries in Asia and Africa; \$276 million for emergency funds to meet unforeseen aid requirements; and \$724 million for defence support—another name for economic aid to a number of developing countries whose resources are strained by the need to maintain their defences.

In his mutual assistance message, the President laid great stress on the increased ability and willingness of other industrial countries—in Western Europe and Japan and Canada, for instance—to assume more responsibility for aiding the developing nations. As the President put it, "free world co-operation is becoming the watchword" of this effort to boost living standards throughout the world.

As one concrete example of this co-operation, Mr Eisenhower pointed to the success of the United Nations World Bank in lining up financial assistance commitments from British Commonwealth countries, the Federal Republic of Germany and the United States to help with the India-Pakistan Indus River basin development project.

Development co-operation is most obvious, perhaps, in the case of IDA, the projected \$1,000 million affiliate of the World Bank. Of its total capital, the US would put up some \$320 million, and other industrial nations nearly \$443 million. The remaining \$237 million would come from the developing nations themselves.

This emphasis on co-operation—fast becoming known as the "partnership" concept—also appears in Mr Hoffman's proposals, which are spelled out in a new booklet bearing the somewhat imposing title of "One Hundred Countries—One And One Quarter Billion People: How To Speed Their Economic Growth—and Ours—in the 1960's." The booklet is published by the Albert D. and Mary Lasker Foundation, a private, non-profit American agency interested in medical research and in improving the health and well-being of people generally.

It is Mr Hoffman's thesis that the economic aid programmes of the 1950's, while reasonably successful, have not laid the foundation for the crucial work of the 1960's. To achieve desired and feasible rates of world economic growth, it is his contention that an additional \$30,000 million should be made available for development purposes in the decade ahead. And this capital would come from all sources—from commercial loans and private investment as well as from special "risk assistance" by industrial nations and international organizations.

Nor does Mr Hoffman overlook the part developing nations should themselves play in contributing capital, labour and materials, and in providing a healthy atmosphere for the constructive investment and utilisation of foreign capital.

Given the appropriate action by all concerned, it is his view that at least 15 to 20 developing lands in all parts of the free world are now in a position to move "from relative stagnation to self-sustaining economies" within ten years. While not particularizing, he cited India and Mexico as two examples.

Underlying the Hoffman approach is the conviction that development assistance should be viewed not as charity or paternalism, nor as a political tool, but rather as a realistic, joint endeavour to which all nations, whatever their stages of development, can contribute and from which all can benefit. This, he notes, was the moving spirit behind the Marshall Plan, which he headed, and, one may add, it has been an important factor in all US mutual assistance efforts since.

Amending Insurance in Pakistan

Two amendments promulgated by the Pakistan President are to rescue insurance business from the risk it spelled to policy holders under the original Act of 1938. The detriment to policy holders' interests in the original act arose from the latitude given to insurance companies in respect of statutory assets they were required to hold and the absence of protection in the case of mismanagement. Under the original Act, the only action that could be taken in

the case of unsound working was to cancel the registration of the insurance company or to apply to a court of law for winding up its business. This was a course from which the policy holders stood nothing to gain. One of the amendments now promulgated seeks to plug this loophole by providing for the appointment by the Central Government of an Administrator to take over the management of an insurance company which is not running on sound lines or whose activities may be detrimental to the interest of the policy holders. The Administrator will be required to handle the affairs of the company till such time as it is able to run on sound lines. Further, liability to prosecution in case of misappropriation, incorporated in the amendment, should ensure clean management.

Another amendment lays down that the assets invested by general insurance companies should always exceed their liabilities by an amount of Rs 5 lakhs. Under the original Act, the only provision in respect of statutory assets was that companies should maintain compulsory deposits varying from Rs 1,50,000 and to Rs 3,50,000. Lack of adequate cover against liabilities was a condition in which companies were tempted to pursue ruinous policies of business expansion. The significance of the new amendment, which seeks to enforce a proper balance between assets and liabilities, is obvious and should regulate insurance business in Pakistan along lines which would protect and safeguard the interests of policy holders.

Rise in UK Output of Chemicals and Vehicles

With large increases in chemicals and vehicles, industrial production in 1959 in the UK is estimated to have exceeded production in 1958 in a substantial measure. In the third quarter of 1959, the chemicals and allied industries were turning out 13 per cent more than a year earlier, while in vehicles manufacture the increase worked out to over 10 per cent, passenger cars registering the outstanding gain with 45 per cent. Expansion being broadbased, increased activity was witnessed in the engineering and electrical industries in which production went up by 9 per cent. Resulting from the rise in production in the engineering and vehicles industries, the iron and steel industry also experienced a revival and, by November 1959, the steel industry was working at full capacity.

Judging from the employment figures, the increased activity in the industrial sphere seems to have been continued well into February 1960. The total number of unemployed persons, estimated at 450,000 on February 15, 1960, was 2 per cent of the estimated number of employees against 2.8

March 5, 1960

per cent a year ago. Mr Reginald Maudling, President of the United Kingdom Board of Trade, has forecast further increase of prosperity in 1960. The present trend in production and employment would seem to give ground for such optimism.

German Assistance

Growing friendship built around participation in Indian economic development has marked the relations between India and the Federal Republic of West Germany. It was this friendly feeling subsisting between the two countries that was symbolised by the visit of Dr Heinrich Von Brentano to India's capital last week. In the speeches he made at the capital, Mr Brentano gave the most categorical expression to the understanding and sympathy with which his countrymen look upon the problems of Indian development as also to the desire of West Germany to help India out of its difficulties. German assistance, already received in substantial measure, would, Mr Brentano hoped, be further continued for the implementation of the Third Plan. Mr Bretano said, "We consider it a first priority task and obligation to participate in the economic development of India to the best of our means."

Reassuring as this is, it is to be regretted that full utilisation of assistance already sanctioned is being held up by restrictive conditions imposed by the West German Government. Under these conditions, the credit extended by the West German Government could be made use of only for payments against orders insured with the Hermes organisation, which is the West German credit insurance body. Since no West German exporter is under obligation to insure his export credit and also considering that the bulk of West German supplies had been contracted without the mediation of the Hermes organisation, the extent of assistance availed of by India has fallen far short of the amount sanctioned by West Germany. Thus, against a total of 100 million dollars offered by West Germany in three instalments of 40 million dollars for 1958-59 and 30 million dollars for each of the fiscal years 1959-60 and 1960-61, the amount drawn by India has been less than 40 million dollars. Full utilisation of the West German credit is thus contingent on the waiving of the restriction regarding insuring of orders with the Hermes Organisation. Mr Brentano disclosed that he has invited Mr Morarji Desai, India's Finance Minister, and Sardar Swaran Singh, Union Minister for Steel, to visit Germany. It is to be hoped that the visit would be utilised to solve the difficulties that seem to take away from the full value of West German assistance sanctioned for the Second Plan.

Indian Shipping at Low Ebb

As a key sector with a vital role in industrial development, the shipping industry has few parallels. Though increased allocations under the Second Plan have enabled development to be stepped up as compared with the First Plan, shipping has a long way to go before it could be in a position to meet the country's needs arising from expanding coastal and overseas trade. The development involves increase in tonnage simultaneously with expansion of trade carried by Indian vessels. While increase in tonnage would resolve itself into a matter of the size of the outlay, expansion in the proportion of trade is necessarily more complicated in view of the external factors that condition movement of overseas trade. With low freight levels and scramble for cargo arising from excess surplus in world shipping tonnage and predominance of railways in coastal trade, the prospects for developing Indian shipping appear far from bright. Apart from the disadvantages of having to compete with long established lines, India also faces discrimination arising from this inexperience. Mr Dhanramsey M. Khatau, Chairman of Seindia Steam Navigation Company Ltd, pictured the situation correctly when he pointed out that Indian ships have to go through a severe trial of strength and patience. However, it is heartening to hear from Mr Khatau that Indian lines would pull together and unitedly face the competition. The task would be rendered easier if Indian ships could go on the basis of rationalisation of service with accent on regularity and fastness.

Improvement of coastal shipping calls for diversion of bulk cargo, which as a matter of deliberate Governmental policy is now being moved on the rail route. The continuing predominance of railways as the carrier of coastal trade has an element of incongruity considering that the Rail-sea Coordination Committee has recommended the diversion of such trade to the sea route. As pointed out by Mr Khatau, it would not be in the national interest to allow coastal shipping to suffer in this manner.

Port Monopoly

A proposal adopted in December to secure for the Madras Port Trust a monopoly of handling export cargo with the exception of

mineral ores, oils and other bulk cargo was kept in abeyance owing to a writ petition filed by a clearing agent. The dock workers promptly approved the idea of the Port Trust taking over the business held by private interests. The High Court has ruled that the statutory body can prescribe what agency should be used by shippers for loading vessels and that previous practice has no special sanctity. Greater efficiency may be attained through a monopoly, and it has been held by the Madras Court that, within the harbour premises, the Port Trust alone has authority to clear goods. The exclusion of private interests by a public authority is within the rights of a body that includes representatives of local trade and industry. The due clarification of the legal position may not lead to displacement of labour in the port, but will certainly hit those who acted as shipping agents. The Port Trust scale of charges may perhaps be higher, but shippers and shipping lines stand to gain from an arrangement that is to be viewed only as a tempered or partial monopoly now imposed in the public interest.

B.O.A.C. Enters Credit Travel Market

A BOAC spokesman recently announced the airline's entry into the Credit Travel market in India with their Travel Instalment Plan—TIP for short.

Statement about ownership and other particulars of Indian Finance

1. Place of Publication .. 116 Lower Circular Road, Calcutta
2. Periodicity of Publication Weekly on Saturdays

5. Editor's Name .. C. Swaminatha Rangaswami Jr.
Nationality .. Indian
Address .. 116 Lower Circular Road, Calcutta
6. Names and addresses of individuals who own the newspapers and partners or shareholders holding more than one per cent of the total capital. Late Mr C. S. Rangaswami, 116 Lower Circular Rd, Calcutta; Mrs Sadhu Rangaswami, 116 Lower Circular Rd, Calcutta; Mrs Vatsala Govindaraj, 116 Lower Circular Rd, Calcutta; Mr C. Swaminatha Rangaswami Jr, 116 Lower Circular Rd, Calcutta; Mrs Vijaya Subramanian, 116, Lower Circular Road, Calcutta; Mr P. R. Srinivas, 15, Prithvi Avenue, Teynampet, Madras-18; R. G. Das & Co, 7 Council House St, Calcutta; Mr B. K. Basu, 50 Turf Rd, Calcutta; Mr K. B. Ghose, 6 Old Post Office St, Calcutta; Tata Sons Ltd, Bruce St, Bombay; Mr Mathradas Vasanji, 9 Wallace St, Bombay; Mr Manu Subedar, Kodak House, Bombay; Sir Biren Mookerjee, Martin Burn Ltd, Calcutta; Mr A. D. Shroff, Dalal St, Bombay; Sir R. M. Alagappa Chettiar, Vepery, Madras; Mr A. W. Adamjee, 5 Dalhousie Square, Calcutta; Bengal Central Building Society Ltd, 41, Free School Street, Calcutta.

I, C. Swaminatha Rangaswami Jr., hereby declare that the particulars given above are true to the best of my knowledge and belief.

Sd./- C. Swaminatha Rangaswami Jr.
February 29, 1960.

is in association or partnership with Quantas, Air India as of next month, Middle East Airlines and East African Airways.

Application forms are now available in the four BOAC Offices in India—Bombay, Calcutta, Delhi and Madras. In addition they are available from any of the 60 IATA-approved, BOAC-appointed Travel Agents, and from any of the 84 Main and Branch Offices of the three Banks concerned.

A Simple Straightforward System:

The Travel Instalment Plan is very simple. Once the application form is completed, it is sent through a recognised Travel Agent or BOAC Office to the nearest branch of the Bank for determination of credit facilities.

Once approved, the applicant is asked to sign a letter of Agreement plus a Note of Indemnity and to make a down payment of 20 per cent, or more if he wishes, of the cost of the ticket.

The Bank pays the balance of the fare to BOAC and the applicant is issued with his ticket and can proceed on his journey.

Thereafter he repays to the Bank the balance of the loan, plus interest, over a period of 3, 6, 9, 12 or 15 months, as it suits him.

A Well Tested Facility:

From their wealth of experience of similar Travel Instalment Plans which they have introduced in past years in the United Kingdom, USA, Canada, Malaya, South America and other parts of the world, BOAC are confident that this facility will be welcomed in India.

Through the Plan many who have not been able, in the past, to find the capital to purchase a ticket, will now be able to do so.

Students, in particular, will find the Plan a great boon. So too will Parents whose children are at school abroad and whose return to the family during the holidays has been too infrequent.

Wives can now accompany their husbands on business trips. And even the Businessman can use his capital to greater advantage.

All-in-all this "Never-Never" system will stimulate many to travel to the "Never-Never-Lands" of their dreams.

INDEX NUMBER OF WHOLESALE PRICES IN INDIA

Review for the week ended February 13, 1960 (Magha 24, 1881).

The official wholesale price index (with the year ended March, 1953 as 100) advanced by 0.4 per cent to 119.9 during the week ended February 13, 1960, as compared with 119.4 for the earlier week. The index was higher by 0.3 and 5.3 per cent respectively when compared with the corresponding weeks of the previous month and of a year ago.

Higher prices of oranges (+32%), milk (+9%) cummin (+6%), rice at Jayanagar, wheat at Hapur and jowar at Hubli (+5% each), cashew-nuts and tea (+3% each), mung,

mustard oil and black pepper (+2% each) and gur, coffee, cardamoms and betelnuts (+1% each) raised the index for 'Food Articles' by 1.1 per cent to 119.6. The prices of jowar at Hyderabad (-8%), at Akola (-7%) and at Mohal (-5%), onions (-8%), Wheat at Rewa (-7%), maize at Dohad (-6%), gram at Delhi and fish (-5% each), potatoes and chillies (-4% each), coconut oil, eggs and turmeric (-2% each) and Arhar, bananas, groundnut oil and bajra (-1% each), however, showed decline.

The index for 'Tobacco' fell by 0.6 per cent to 94.0 due to a decline in the prices of raw tobacco (-1%).

Despite an increase in the prices of castor oil (+1%), the index for the 'Fuel, Power light and Lubricants' group remained unchanged at its earlier week's revised level of 117.4.

The prices of raw jute (-4%) and linseed and copra (-1% each) moved down while those of gingellyseed, tanning materials and raw hides (+1% each) showed advances and in consequence the index for 'Industrial Raw Materials' declined by 0.7 per cent to 131.5 as against 132.4 (revised) for the previous week.

The index for 'Intermediate products' receded by 0.3 per cent to 120.4 as compared with 120.8 (revised) for the earlier week due to a decline in the prices of zinc (-2%), and cotton yarn and lead (-1% each), although the prices of tin (+2%) and linseed oil (+1%) showed advances.

The index for 'Finished Products' remained stationary at the previous week's revised level of 115.5. The prices of cycles (+2%), however, showed a rise during the week.

Index Number of Wholesale Prices by Group and Sub-group of Commodities.

Bessemer Converter and new Blast Furnaces at the Burnpur works of The Indian Iron & Steel Company Limited

This is the heart of a giant industry. Here converges an endless stream of raw materials—coke, limestone and iron ore to feed the roaring blast furnaces. Here blows the Bessemer converter with its charge of molten metal, engines drawing ladles come and go, cranes clank and swing, men toil and sweat, here begins the ordeal by fire—the first step in the making and shaping of Steel.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

MR MORARJI DESAI has not seen fit to make the readjustment in the corporate tax structure that he had promised last year, when he fixed the rate for advance payment of tax at 45 per cent; and his plea is that there is not enough experience to go on to justify any tinkering with that rate. This surely is weak and not very convincing reason for his decision apparently to defer a reconsideration of what the proper rate of tax should be, so that the effective revenues to the Central Government are unchanged. Having made this reservation, I might suggest that the Finance Minister can justly be said to have done the impossible—although he has received not a little help from the fact that revenues are beginning, for the first time since the planning era started, to reflect the impact of a dynamic economy in action. For, it was widely apprehended that the three factors on the basis of which the Finance Minister would necessarily be required to draw up his Budget would entail substantial new tax proposal. But the revised estimates for the current year show how Mr Desai's task in this regard was minimised. On the one hand, the rise in defence expenditure has been negligible; few could have hoped that the Budget figure would be exceeded by a mere crore of rupees. On the other hand, the improvement on the receipts side of the Revenue Budget amounts to the considerable figure of Rs 58 crores. It is now expected that customs revenue will fetch more than Rs 17 crores over the Budget figure; that excise duties will show an improvement of Rs 26 crores; and that realisations from Corporation Tax will be better than the Budgeted figure by Rs 11 crores. So, for the current year, the revenue deficit stands reduced by Rs 44 crores at Rs 15 crores. (It may be noted that the revised expects a decline of Rs 14 crores in the taxes on income; my own view is that such decline may not materialise in full, and that with further improvement in the actuals, 1959-60 may not prove to have a revenue deficit at all).

I suggest that the kind of expansion that is being registered in excise duty revenues is indicative of the beginning of dynamism in governmental receipts. (A special study in this behalf will be published in the Supplement to be brought out by Indian Finance next week). What is more, one estimate that I have seen insinuates firmly that income and corporation tax revenues will be showing a similarly expansive trend. But,

for reasons that should be obvious, Mr Desai has been extremely conservative in his revised estimates; and his "fate" in this regard may be the same that overtook Sir Chintaman Deshmukh, I think it was in the year following the Korean War Boom, when there was an unprecedented revenue surplus of nearly Rs 130 crores. Now, it may not happen that so large an excess of income over expenditure will be the Finance Minister's lot; but, certainly, the budgeted revenue deficit of Rs 59 crores, already reduced in the revised estimate to Rs 15 crores, has every chance of being converted into a small surplus. I presume that there has been such deliberate under-statement of revenues, because the Finance Minister, possibly for political rather than any other sort of reason, could find no way of convincing his colleagues in the Cabinet that a reduction in the corporate tax rate was not only desirable but even mandatory. Fortunately, this is not so great a pity as it might have been. The expansionary economy implies that companies, too will be able to take in their stride one year of unfairly high taxation. But it will be incumbent on the Finance Minister, in the Budget for 1961-62, to "rectify" the corporate tax rate. It cannot at that time be claimed that there is an insufficiency of data; and the clincher to the argument will be the necessity to enable companies to find internally the resources for the expansion and development that they will have to take on hand for the Third Plan. But, for a year, I am afraid, and in respect of advance tax for a year besides, companies will be liable to bear the higher rate of taxation.

I wonder who slipped up about the taxation of bonus shares. For, if there was one concession that the Finance Minister could have given, with profit and not loss to the central exchequer, it was a reduction in the rate of tax on bonus shares; no useful purpose is served by the impost as it exists today. So long as the excess dividends was on the statute books, companies might have considered four or five years "purchase" of the dividends tax, by opting for the bonus tax in the intention that, thereby the liability as to dividends

tax would be minimised. But, today, no company would be anxious to incur the tax burden implied by a capitalisation of reserves; and the shareholder for his part is likely to be satisfied with such increase in dividend as comes his way. On the other hand, had the rate of bonus taxation been reduced, some companies there are which, anxious to restore balance between capital and assets, would have been prepared to undertake a small liability; and their reasoning would also have been that on the ex-rights basis, the share prices would have readjusted downward, thereby enabling new small investors to be attracted. The bonus tax, I am afraid, does nobody any good. And it is still not too late to reduce the rate.

It is good, however, that the Finance Minister has resisted the temptation to secure larger immediate revenues from readjusting the requirements in respect of Development Rebate. While, from the point of view of the companies, a "spread" would have "equalised" surpluses available for distribution, Government perhaps are not anxious that current revenues should be buoyant; for, in that event, tax reliefs would be in

order. Nevertheless, I think that the "spread" idea is still a good one, because, with the requirement of tax deduction at source on dividends, and the "grossing" element on reserves built up in the past all too meagre, the effective return to the shareholder in a dynamic, progressive company is likely to be affected. This, again, is a notion worth considering in the next Budget.

The borrowing effort is commendable; this is one aspect of the Budget in which Mr Desai has been helped by circumstances, but also one where the Finance Minister has taken full advantage of such favourable situation. There is, firstly, the innovation of the Prize Bonds; not quite an innovation, because it was tried, though without much success, during the wartime. However, Mr Desai can hope for a greater attractiveness in the present context of high rates of personal taxation. For, a tax-free windfall is bound to be attractive, and the disadvantage of there being no interest offered on the Bonds will be quite offset by the fact that no loss (except for depreciation of currency over the five year period) can accrue, while the gain can be considerable. Secondly, the target for market borrowings has been fixed reasonably at Rs 250 crores. While I personally believe that much more can be secured, we have to take cognisance of the complaint that a large governmental borrowing programme allegedly "drains" the market of funds for the private

Calcutta Madras New Delhi

sector. I disagree violently with this view. Money meant for ordinary shares will never find refuge in gilt-edged. On the other hand, quite a bit of money ordained for gilt-edged quite often finds sanctuary in ordinary shares nowadays. But much will depend on how the banking situation develops over the 1960 slack season. In the current fiscal year, the budgeted figure has been more than attained; but, because conversion subscriptions were so considerable, net borrowings were less than in the previous year. Today, there is a much greater expansion of demand from industrial users of money. To such extent, it may happen that the surplus with banks available for investment in gilt-edged will be affected. Again, however, evidence there is already of a record rise in the Deposit liabilities of Scheduled Banks. To such extent, the capa-

city of the banking system to absorb gilt-edged will improve. My hunch is that, the Prize Bonds apart, the target for market borrowings will be easily achieved; and what the Prize Bonds will attract will be pure "profit".

Not that the Budget is devoid of concessions, I might point out at this stage. The most important of these is the credit given for the full, instead of half of, the amount of local taxes payable on property built before 1950. This may conceivably set off a boom in old houses. For, capital gains is always there, land and buildings still constitute one of the best hedges against inflation—and where else is taxation so just? Then, there is the extension of concessions for new industrial undertakings. Small but significant reliefs have been announced in the sphere of ex-

penditure tax. Companies with small profits will attract a lower rate of tax than the 45 per cent for the generality of the corporate sector. Some relief is also given to investment companies attracting Section 23A of the Income-tax Act. Even the excise duties have been so devised as to touch the "luxury" articles rather than consumer goods. (However, in this last respect, it seems to me that road transport has again been penalised, and this might, though indirectly, affect consumer goods prices. I am not against the levy of the tax on passenger cars, though I suppose I will have to cough up a bit more if I should buy a car! but road transport of goods has to be encouraged and fostered, and Government seem bent on doing just the opposite. I think a rationalisation of the whole complex of motor vehicles taxation, in every

one of its aspects, is urgently called for).

We can, I suppose, also hope for inflationary tendencies to be kept better in check during the Budget year. If production is the answer to inflation, both agricultural and industrial output are satisfactory enough. If deficit financing imperils the economy, the threat will be minimised by the lesser reliance on created money in the Budget year. (Indeed, it may happen that deficit financing in 1960-61 will amount to no more than a nominal Rs 50 crores). To sum it up, Mr Morarji Desai's Budget for 1960-61 is a better and less exacting Budget than anybody could have hoped for.

Mr G. L. Mehta is all praise for 1959. His statement relating to the accounts for last year of the Industrial Credit and Investment Corporation of India Limited has been circulated with the Directors' Report, and he makes the neat point that "last year was a good one for India and hence for your Corporation." Surely, this is true of industry generally as well. The 1957 dip in cotton textile consumption can easily be traced back to the relative failure of agricultural crops in that year. In the case of ICIC, I presume the link is even more direct and easily discernible. A prosperous year witnesses a resurgence of investment confidence and also of new capital flotations. And here, ICIC has been rising admirably to the demands being made on it. Mr Mehta has reported that the resources of the Corporation doubled during 1959, or practically so. For foreign exchange loans, ICIC has successfully negotiated a second \$10 million line of credit from the World Bank; for internal resources, a second loan of Rs 10 crores has been obtained from Government. And this doubling of resources was necessary precisely because the lending, investing and underwriting operations of ICIC have increased so much. New proposals approved almost trebled in a single year to Rs 8.40 crores. In the five years of its existence, underwriting operations have amounted to Rs 8.30 crores, and nearly half of this relating to ordinary shares. But by far the best news that Mr Mehta has is that the investment market is such today, and the underwriting efforts of the Corporation so well chosen, that ICIC has now begun to place on the market, at a profit, such shares as were left with the Corporation as a result of underwriting obligations. The profit realised—call it capital gains, which is what they really are; but the tax authorities insist on their pound of flesh at the profit rate, to which Mr Mehta quite rightly strenuously objects—was Rs 24 lakhs in 1959, and this has been set apart to Reserve. The real gain, however, is that, in the process resources are being freed to enable ICIC to undertake further responsibility in underwriting ventures. Mr Mehta's statement is clearly a testament of the good work being done by ICIC for private sector financing.

GATEWAY GOSSIP

"Static" Affects Electricity Undertakings

ALTHOUGH Mr Jaisukhlal Hathi, Union Deputy Minister for Power and Irrigation, has avoided a direct indication of his reaction to the proposals now before Government, intended to introduce additional incentive factors so as to enable the electricity supply industry to continue to function efficiently, his speech at the annual general meeting of the Federation of Electricity Undertakings of India last week in Bombay has left Government's attitude to the industry in no doubt. This in brief is that the legitimate rights of the power supply undertakings in the licensed sector will be safeguarded and they can depend on Government to extend to them "such reasonable assistance as would be necessary for proper discharge of their responsibilities." If the electricity supply companies have come to be governed by a set of regulations that are different from those applied to industrial undertakings in general, it is because the electricity supply industry is an essential industry and as

such owes certain responsibilities and obligation to the public, like a high standard of service, making available plentiful supply of power and stability of rates. But the difference is not only with regard to regulation but is also in other important aspects of its working. If the industry is asked to accept certain financial restrictions, it is to be noted that it also "inherently enjoys an element of monopoly and is statutorily assured of a reasonable return on its investment."

The industry, too, has accepted the principles governing its regulation, but it is its contention that the control measures have failed to ensure that, in the process of their working, the growth of the industry is not stifled. Two of the principal complaints pertain to the return to the shareholder in electricity undertakings and the facilities available to the Companies to raise capital for their projects. It is argued that, because dividends are not attractive, investors take little interest in electricity supply company shares. While this main source of funds is thus made almost unavailable, borrowing is equally difficult as the industry is not free to procure funds at its own discretion.

It would, however, appear that Government's assessment of the financial condition of the industry is somewhat different. For, Mr Hathi has said, "As far as I have been given to understand, most of the electricity supply companies have been able to maintain a reasonable level of dividends and have also raised necessary additional capital for financing their projects." The abiding interest of Government in the industry is evidenced in the inclusion of the Undertakings' representatives in the Central Electricity Board and the Zonal Technical Committees. Government have also advanced funds to a few deserving licensees or given security for repayment of the loans raised by them. Perhaps, Mr Hathi has by implication meant that the very fact that the industry has made commendable progress in recent years is proof positive that, by and large, the regulatory central gear is not having any retarding effect on the industry. The investments in the undertakings operated by the licensees will be soon reaching the Rs 300 crore mark—an impressive record, indeed. The Undertakings, Mr Hathi has pointed out, today operate about 37 per cent of the generating plant in the country and serve about 38 per cent of the total number of consumers.

It is evident that the reasonable level of dividend means one thing to Government and another to the investors. For, any one who has some knowledge of the stock markets in our country will readily be able to say that, compared to other equities, shares of electricity companies are a neglected counter. What time most shares in the list

have been taken to giddy heights, electricity shares have been languishing. As against the growth prospects offered by most equities and consequently of higher dividend possibilities, the shares of electricity companies offer no such prospects; on the contrary, after the Finance Act 1959, shareholders' return has been eaten into by the tax that they have now to pay on their dividends. Mr A. N. Haksar, Chairman of the Federation of Electricity Undertakings of India, has understandably devoted a major portion of his speech to what he terms the "contradictions" which have arisen between the changing pattern of the tax laws and the financial code governing licensees undertakings. In his opinion, the legislative intention of making the rate of return fixed to the shareholder in an electricity supply company free from all forms of taxation is not being fulfilled. Although it seems to have been assumed by Government that new assets of electricity supply companies, once they come into productive use, should be able to yield earnings enough to give the prescribed return to the shareholder and to build up a reserve to meet deferred tax liability, in actual working this is yet to be proved. The Finance Act 1959 has made the position still worse in that it requires the shareholder to pay tax on the none too attractive return he gets from his electricity supply company equities. According to Mr Haksar, a lasting remedy will be the automatic diversion of tax burdens to the consumers in whatever form they may come. As against the information of Mr Hathi regarding the finances of the Undertakings, we have the follow-

ing observations of the FEU Chairman:

"There is little doubt that the present level of the return which has been, and is being, exposed to tax complications is far from being able to sustain this end (to raise funds in the market necessary for the proper continuity of his public duties). A further justification for rethinking on this problem is that during the brief period the Electricity (Supply) Act has been in operation experience has shown that the financial code affecting Licensees has tended to be less and less incentive, either by the law having been amended as to deny to the Licensees even some of the fringe benefits or by the regulatory authorities tending towards rigid interpretation."

Some of the contradictions between the two sets of laws governing the industry may be soon resolved. Mr Hathi has himself admitted that, since the Electricity Supply Act is a complicated piece of legislation, it is quite likely that some fresh problems have sprung up, and has said that these difficulties will receive Government's best attention, when they are brought to their notice. The Federation has been representing through its memoranda to the appropriate authorities that, caught between the two sets of laws, the industry is in a sad predicament. Whatever may be their opinion on other points, Government cannot possibly dispute the claim of the Licensees to retain the tax concessions visualised by the Finance Act 1959 like other industries and deflect them to the shareholders.

I know what it takes...

Cement Wage Board's Award

THE Government of India have just accepted the recommendations of the Central Wage Board for the Cement Industry. In accepting the recommendations, the Government have also stated that a study of workloads in the industry would be desirable and that the recommendations regarding wage increase in the second phase, wherever applicable, may be implemented after this study is completed. Otherwise, they expect the recommendations to be implemented straightway, that is, with effect from January, 1960. They have also admitted that the cement industry does not have the capacity to pay the recommended wages on the existing retention prices. It is, therefore, proposed to increase the ex-works price payable to the producers with effect from the date when the Wage Board's recommendations are implemented. Such an increase in the ex-works price is, however, proposed to be accommodated within the existing F.O.R. destination price so as not to involve any increase in the price to the consumer.

The Wage Board's recommendations apply to workers employed at the cement factories, the limestone quarries owned by the cement producers and the places where calcareous sand or shells are collected and clay is excavated and to workers employed by cement companies in the transport of limestone, sand, shells and clay from the quarries to the factory. The recommendations do not apply to contract labour, if any, employed on construction work or on purely temporary jobs not connected with manufacturing processes and to employees engaged in other industries owned by the cement companies.

The total minimum wage recommended for an unskilled worker whose family is deemed to consist

of three consumption units is Rs 94 per month in Gujarat and Saurashtra and Rs 101 in the rest of the country. The split-up of these need-based minimum wages is as follows:—

Components	For centres in Gujarat and Saurashtra (in Rs)	For centres in the rest of the country (in Rs)
Basic minimum wage	52.0	52.0
Dearness allowance	31.5	38.5
House rent allowances	7.5	7.5
Cash value of amenities provided by employers	3.0	3.0
Total	94.0	101.0

Incidentally, these minimum wages for unskilled workers in the cement industry may be compared with the minimum wages, recently recommended by the Central Pay Commission, for unskilled workers in Central Government employment. The split-up of the latter minimum wages is as follows:—

Basic minimum wage	Rs 70
Dearness allowance	10
House rent allowance on the class of cities	5 to 10
Total Rs	85 to 90

If the cash value of amenities (which are greater in the case of Government employment) are included, it will be found that the minimum wages recommended for unskilled workers in the cement industry and in Government employment are about the same. The Government, therefore, cannot be accused of adopting two different standards of minimum wage fixation—one favourable to themselves and the other unfavourable to private employers.

As a matter of fact, the wage scales fixed for unskilled, semi-skilled and skilled workers in the cement industry are by no means higher than those recommended for those categories of employees in Central Government employment. The comparative position emerging from the relevant recommendations of the Wage Board

for the Cement Industry and the Central Pay Commission is worked out and presented in a nutshell in the following table:—

Nature of workers	Basic wage	Minimum	Maximum
1	2	3	4
Cement Industry:			
Unskilled	52.0	62.4	
Semi-skilled	57.2	73.8	
Skilled, lower	62.4	93.6	
Skilled, upper	73.2	124.8	
Skilled, highly	110.5	169.0	
Central Govt.:			
Unskilled	70.0	85.0	
Semi-skilled	75 to 95	95 to 110	
Skilled, lower	85 to 110	110 to 180	
Skilled, upper	125 to 150	155 to 180	
Skilled, highly	130 to 205	205 to 240	

(In Rs per month)	5	6	7
Dearness Allowance	31.5 to 38.5	34.4 to 41.4	37.7 to 44.7
House Rent Allowance	7.5	7.5	7.5
Total of (2), (4) and (5)	91.0 to 98.0	99.1 to 106.1	107.8 to 114.6
Total of (2), (4) and (5)	107.8 to 114.6	130.5 to 137.5	160.8 to 167.6
Total of (2), (4) and (5)	85 to 90.0	92.5 to 120.0	102.5 to 140.0
Total of (2), (4) and (5)	142.5 to 180.0	147.5 to 245.5	

It will be seen from the above table that the semi-skilled, skilled and highly skilled workers in Central Government employment have received a distinctly fairer deal than the identical categories of workers in the cement industry. That the Central Government are a "model employer" is thus beyond dispute. But they are hardly in a position to compel any private industry to pay identical wages without carefully appraising the capacity of that industry to pay. A wage board for each major industry, consisting of two representatives of employers, two of employees, two independent members and an independent chairman seems to be a suitable instrument for balancing conflicting interests and pronouncing an award which would be fair to both the parties. In the particular case of the cement industry, the Wage Board itself has fully recognised that the industry will not be in a position to meet the incidence of increased wages recommended by it if the retention prices paid to producers are not revised.

A salutary feature of the Cement Wage Board's Award is that, where the lowest total minimum wage recommended by the Board will result in a very big increase (to the tune of Rs 25) over the present wage, the increased wage should not be given in "one jump" but should be so fixed that the full incidence comes into effect one year after the initial increase is given. Another salutary feature is that new cement factories whether owned by the existing cement companies or otherwise should be exempted for a period of 18 months from the month the factory goes into production from paying in full the wages and salaries recommended by the Board for the various categories of employees. During this exemption period, the new units should pay the basic wages, dearness allowance and house rent allowance at 75 per cent of each component. Any fac-

tories already paying more than 75 per cent of the wages recommended should, however, continue to pay the higher wages, dearness allowance, etc.

The recommended exemption in the case of new cement factories and the Government's decision to increase the ex-works price of cement suitably are calculated to ensure the expansion of this basic industry on sound lines. There are now (as of 1959) 35 cement factories with an estimated annual capacity of 9.04 million tons and an estimated production of 8.14 million tons. As on April 1, 1959, there were 32 factories with a total annual capacity of 7.74 million tons. Since that date some new units have gone into production and some are yet to go into production. Details of both categories are given below:—

Name of firms	Capacity approved (per ton annum)
1. A. C. C. Bombay (Location: Yerraguntla)	165,000
2. Andhra Cement Co., Madras (Location: Vizianagaram)	102,000
3. India Cements Ltd., Madras (Location: Vizianagaram)	200,000
4. Ravasacema Development Corporation Madras (Location: Kamalapuram)	126,000
5. Aasam Cements Ltd., Shillong (Location: Umty-Nagar)	60,000
6. Bihar Limestone and Mineral Co. Ltd., Calcutta (Location: Dumai)	100,000
7. Sawashtia Cement and Chemicals Industries Ltd., Porbandar (Location: Porbandar)	200,000
8. A. C. C. Bombay (Location: Veraval)	165,000
9. A. C. C. Bombay (Location: Drug)	165,000
10. Shri Sanwalram More, Bombay (Location: Nee-much)	150,000
11. Shri Rammohan Rao, Nidadavol (Location: Drug)	200,000
12. V. Ramakrishna & Sons, Madras (Location: Thiruvottiyur)	16,500
13. Madras Cements Ltd., Rajapalayam (Location: Ram-nathapuram)	198,000
14. Mysore Cements Ltd., Bangalore (Location: Ob-la-pura)	200,000
15. K. C. P. Ltd., Madras (Location: Pondichery)	200,000
16. A. C. C. Bombay (Location: Abu Road)	165,000
17. J. K. Commercial Corporation, Kanpur (Location: Nim-ki-Thana)	156,000
18. Birla Bros., Ltd., Calcutta (Location: Durgapur)	330,000
19. Durgapur Cement Ltd., Calcutta (Location: Durgapur)	240,000
20. Rajur Cement Works, Bombay (Location: Rajur)	240,000
Veraval Oilcake Co., Veraval (Location: Veraval)	49,500
Total	3,530,000

Since no further capacity has been licensed since April 1959, it is to be hoped that if all the licensed new units go into production soon, there will be 53 cement factories working before the close of 1961.

THE PENINSULA

Human Element in Industrial Relations

THE Indian Institute of personal management meeting, for its tenth annual conference in a two-day session at Bangalore, discussed the various aspects of the problem presented by industrial disputes. A subject of exasperating anxiety and concern to the Government, labour-management hostility has rankled industrial relations for so long and so much that it has become a problem of the first magnitude and priority, on the solution of which much by way of industrial progress depends.

The speakers at the conference, who represented a cross section of the interests, while underlining the importance of seeking all possible ways to avoid disputes, were not inclined to be facile in their estimate of the difficulties involved in finding a solution to the problem. On the contrary, they revealed an understandable awareness of the confused tangle which the state of industrial relations presently reflects. Mr B. D. Jatti, the Mysore Chief Minister, whose address was read at the conference, traced the complexity, to the human element which constituted the most important of all the factors which affected the rate and volume of production. "We must always remember," Mr Jatti observed, "that

when we talk of 'manpower' and 'labour force' we talk of men and women with individual rights, interests and preferences to be taken into account and not as mere units in the mechanism of production."

It was against the background of the conflicting interests and complicating elements involved in the problem of minimising disputes that the role of personnel officers was stressed at the conference. Mr Jagdish Prasad, Managing Director of the Indian Telephone Industries, speaking on the role of personnel officers, pointed out how they could enthuse labour, make workers cultivate a feeling of belonging to the industry and cause every one to derive greater personal satisfaction from doing his allotted work. Mr D. P. Mukherjee, President of the Conference, went further and said that industrial peace will be a far cry until personnel officers also have a share in the direction of affairs. Mr Venkataraman, the Madras Minister for Industries and Labour, also pointed out how personnel officers could contribute to industrial peace by promoting mutual relations at the plant level. The true index of good industrial relations was the spirit of cooperation that existed between labour and management and in every such activity of theirs resulting in higher productivity and contentment.

An equally important consideration that arises in connection with the subject of industrial disputes is that relating to the proper method of settlement. Mr Venkataraman commended the method of collective bargaining. For collective bargaining to succeed, it is imperative that a sense of responsibility should be developed in trade

unions and managements. This calls for an element of sacrifice on the part of workers and managements alike to honour agreements and abide by them.

But, as pointed out by Mr Venkataraman, such settlement of disputes through collective bargaining and direct negotiation is far from popular and far from being widely resorted to settle disputes. On the contrary, increasing recourse is being had to such methods as compulsory arbitration and appointment of wage boards and pay commission. While this does not reflect the best climate in industrial relations, current conditions regarding social security invest them with some inevitability and justification. However, Mr Venkataraman pointed out, the number of occasions on which recourse to that system was had should be as few as possible and also it should not become the normal channel for settlement of disputes.

A factor that has bedevilled industrial peace in the country is the intrusion of political ideology in the field of industrial relations. The resulting polarisation of the trade union movement has considerably enfeebled the efficacy of collective bargaining as a method for settling industrial disputes. Such a state of multiplicity of trade unions also lends itself to exploitation at the hands of employers.

Mr N. S. Bhat suggested that there should be one national employers' organisation and that all local or regional employers' and workers' organisations should be affiliated to the respective national organisations. This clearly evades the complication arising from the

existence of multiplicity of unions modelled on political and ideological lines. The real problem that is faced in respect of industrial relations is to rid the trade union movement of the influence of politics. How far could this be done? Mr Bhat has suggested that steps should be taken for workers to progressively take over the leadership of unions. Dr K. P. Ramaswami, a director of Messrs Parry and Company, Madras, made a similar suggestion when he said that steps should be taken to make trade unions in-built. These are steps which, even though they could not completely eliminate the sway of ideological or political forces in the trade union movement, could at least reduce their rigour and impact.

One thing that is basic to the maintenance of sound industrial relations is the strengthening of trade unions. A progressive outlook on the part of employers involving recognition of the legitimate rights and privileges of workers for decent salaries and wages consistent with the general working conditions of the industry concerned, would reduce scope for friction between labour and management. Mr Bhat's suggestion for introducing the system of shop stewards on the lines prevalent in the advanced countries of the West which, according to him, enable differences to be settled on a voluntary basis without governmental intervention, should also tend to reduce causes for industrial unrest. His suggestion that collective bargaining on all matters which are bound to have wide repercussions should be conducted industry-wise also deserves consideration.

54 years strong

The Canara Banking Corporation Limited

is today working with a fine network of 53 branches spread over the States of Mysore, Madras, Andhra Pradesh, Kerala, Bombay and West Bengal and agency arrangements throughout the Country.

Careful and cautious in following its advances policy and guaranteeing cent per cent safety and security for the hard-earned money of all its depositors, it is well suited to all your Banking requirements.

Its branch in Calcutta City:

3 1/2 (First Floor) ARMENIAN STREET

(Phone No. 22-6253)

It's the oldest of all the Scheduled Banks founded in the State of Mysore!

Prices Still Maintained

THE jute markets have ruled rather subdued during the past few days, but there is as yet no indication that prices are due for a setback. The higher price levels in the goods section are mainly sustained by the continued steadiness of the raw jute section. It is true, Assam Bottoms have recorded a decline of 75 nP or so per maund over the past week and mills have been less anxious than last week to enter into fresh commitments. But sellers are still reserved and, at the lower levels, offerings are not large. As I have noted in this column last week, there are two main factors governing the present steadiness of raw jute market. Firstly, there are quite a sizable number of people in the Indian World of Jute who believe that supplies of raw jute will not be adequate as the season draws to a close. Secondly, the stock positions of the mills are not identical throughout the industry. The fact that stocks of raw jute with IJMA mills at the end of January 1960 have improved further as compared with the position as at the end of December 1959 need not necessarily mean that all mills are equally comfortably placed as regards their stock of the raw material. Moreover, the significance of the facts that total arrivals up to January this year are more than 6 lakhs bales lower than in the corresponding period of last season and that jute consumption this season is running at a higher level than last season is not likely to be lost on the sellers in the raw jute market.

With raw jute keeping to a high level, it is inevitable that goods prices are also rigged up correspondingly. The satisfactory statistical position of jute goods is a contributory factor in the present situation which is, however, conspicuous for the absence of any big foreign orders. There has no doubt been some small business in recent weeks, especially in heavy goods, from a number of foreign countries, and it is believed that the recent decision of the Australian Government to abolish import licences will result in a larger offtake of sackings by that country. The outlook for hessian in the immediate future seems to depend very much on our price levels.

It would appear that the need for price stability in our jute goods has never been greater. For one thing, Pakistan is making a deter-

mined bid to step up its export of jute goods. Overseas consumers have thus another important source to look to for their requirements; and be it noted that, provided prices are competitive, the generality of consumers will prefer Pakistani goods to Indian goods for the superior quality of the former. It is also to be borne in mind that overseas consumers are no longer at the mercy of jute goods manufacturers as substitute packaging materials' manufacturers are putting forth concerted efforts to meet their changing needs by innovations and improvements in their products. But thanks to its superior qualities as a packaging material and its versatility as a material which can be put to new uses, there is immense scope for jute manufactures in world markets. The Indian jute goods industry is well poised to take advantage of the big potential world demand. The attainment of raw jute self-sufficiency and the continuing efforts to grow more and better jute in India can still gain for our industry a preminent place in world markets. Modernisation, which is progressing apace, enables it further to compete almost on equal terms with other jute goods manufacturers. But it is still lacking in one essential prerequisite to prosperity—price stability. The fact that all interests in the Indian World of Jute are fully aware of the damage that is being done to the cause of our jute goods exports by unbridled speculation, which continues to plague our jute markets, and are apparently helpless in rooting out this evil, shows that more efficacious steps than have been taken hitherto have to be devised.

The jute goods market opened on a steady note mainly in sympathy with the raw jute market, where, following a fair amount of mill business, prices were well maintained. Covering business in ready and near positions also helped sentiment and B Twills Feb was done at Rs 113.90 by close on last Saturday. Hessian 40"x10oz Feb was firm at Rs 42.25. Sentiment was rather quiet on Monday presumably again in sympathy with the raw jute section. The news of a Government tender for 10,000 bales of B Twills March-April delivery failed to induce much enthusiasm. It would appear that prospects of a fall in raw jute prices were mainly responsible for the quiet trend. With reports of rain in jute growing areas, the raw jute market ruled easier on Tuesday and prices in the jute section also were marked down. Hessian 40"x10 oz Feb reacted to Rs 41.60 while B Twills Feb was finally placed at Rs 112.50. Conditions remained almost unchanged on Wednesday though the undertone was steadier than on the previous day. In the goods section, only scattered covering business was reported done. Thursday's session was a dull affair with little activity and narrow price

movements. Hessian, 40"x10oz Feb was placed at the close of the day at Rs 41.55 with B Twills Feb done at Rs 112.60.

In the raw jute section, prices were somewhat lower on balance with Assam Bottoms at Rs 31 per maund. News of rainfall in the growing areas seemed to be mainly responsible for the reactionary tendency, but it would appear that sellers were not unduly disturbed by the news as they seemed to be confident that scarcity conditions would develop sooner or later.

General Demand Maintained

THE general demand noticed in the Export Sale last week has been well maintained during the week under review. The main inspiration is derived from talks of expansion of the tea industry in the Third Plan. Trade circles think that the North-East Indian crop of the current season will be sold earlier in spite of the softer trend in prices, especially of Common grades.

In the Export Sale, offerings were 72,034 packages. There was a more general demand than in the previous sale; but prices for orthodox descriptions declined by a further 4 nP to 6 nP per pound, while the poorest sorts were often 8 nP to 10 nP easier and sometimes more. Any clean black-leaved teas with sweet liquors were, however, about steady, while the brighter liquoring Assam BOPs and OFs were sold well.

There was again a strong demand for CTC Assams. Although the poorest sorts sometimes failed to realise valuations, the

medium and better kinds were firm to dearer. Non-wither leg-cut teas with bright liquors were sold readily at firm rates; but the plainer sorts were about 4 nP easier. There was fair enquiry for Whole Leaf grades which were, however, a little irregular. The demand for Darjeeling teas was very limited. Following rates were quoted:—Clean Black Pekoe Rs 2.16 to Rs 2.20; Plain BP Rs 1.86 to Rs 1.92; Plain Fannings Rs 1.90 to Rs 2.08; Best Assam CTC EP Rs 2.45 to Rs 2.65 and Best Assam CTC Fannings Rs 2.45 to Rs 2.65.

In the Internal Sale, offerings consisted of 23,168 packages of Dusts and 1,71 packages of Leaf grades. The market for Dusts opened to a more restricted demand which slackened as the sale progressed. Exportable kinds met with limited enquiry, registering a drop of 12 nP per pound. Toward the close, withdrawals were heavy. Legg-cut Doora teas were sold at rates which were 6 nP to 12 nP below last levels.

Medium CTC kinds came to an irregularly easier market, while the best were a weak feature and lower by 15 nP to 20 nP. Following rates were quoted:—Medium Doora Dust Rs 2.14 to Rs 2.24; Medium Assam Dust Rs 2.08 to Rs 2.18; Medium Assam CTC Dust Rs 2.20 to Rs 2.30 and Best CTC Assam Dust Rs 2.45 to Rs 2.75. There was a fair demand for Leaf grades and prices were generally firm except for stalky residual teas which were sold at irregularly easier rates. Green teas were well supported, selling at dearer rates.

In the Cochin market, offerings were 800,000 pounds. The demand for every sort except low medium and medium Fannings, which were irregularly 5 nP easier, was generally strong. Medium, good medium and best liquoring teas were, however, dear following quality.

Ceylon's Tea Replanting Scheme has been launched. According to the Plan framed for a 10-year period 1959-68, a 32 per cent increase in crop over the 1957 crop level is aimed at. It means a rise of 127 million pounds by 1968 as against India's increase in output of about 137 million pounds by 1968.

To encourage the Ceylon producer to implement the scheme, the Government of Ceylon have offered a tax-free subsidy of Rs 2,500 per acre as against the estimated cost of Rs 4,000. The present scheme is for replanting 30,000 acres in six years at 5,000 acres per annum and the cost of subsidy to the Government is nearly Rs 2 crores per annum. Internal consumption is estimated to rise by 50 per cent from 24 million pounds to 36 million pounds.

Ceylon appears to be in danger of losing its Rs 182 million tea market in the Middle East consequent on the opening of Israel's diplomatic mission in Ceylon. In

protest against Ceylon's diplomatic ties with Israel, the Middle Eastern Arab countries are learnt to have decided on economic sanctions against Ceylon.

Sign of such joint action by Arab countries came to be known when a number of local tea exporters had received cables from their Syrian importers not to ship tea to Syria, as the Syrian Government had placed a ban on the import of goods from Ceylon. A spokesman of the Ceylon Chamber of Commerce has stated that he is in contact with the Syrian sources to obtain confirmation of the above report and future action will depend on the results to his enquiries.

In Mincing Lane, London, offerings were 67,400 packages. A good demand prevailed in the auction. Improved quality invoices were wanted and prices for these were dearer, especially where the Ceylon types concerned. Medium and Plain sorts were also a good market and were sometimes slightly dearer. Thin liquoring descriptions were, however, an indifferent section. Nevertheless, the price range was unchanged from last week at from 3sh 9d to 5sh 7d per pound.

UK imports of tea from all sources, during January, totalled 65.19 million pounds as compared with 69.35 million pounds in December 1959. Re-exports amounted to 2.16 million pounds as against 3.23 million pounds.

"No Decontrol" Decision

THE cotton futures market has continued to manifest a firm tendency, though movements were rather irregular and narrow so far as the distant August contract was concerned. The rate for this distant hedge contract fluctuated between Rs 754 and Rs 760 to be placed at Rs 763. The March contract reached the effective ceiling rate of Rs 820 as soon as the delivery period started as from 1st March. It looks almost certain that this contract will expire at the ceiling level of Rs 820. On the first day of the notice period, tenders of only 150 bales of Laxmi "A" description were issued as it looks as if very little of cotton will be delivered to the market as prices in the spot section for almost all varieties are quoting substantially higher. The general feeling in trade circles is that the August contract will attract buyers on any moderate setback.

The Indian Central Cotton Committee and its various sub-committees which are doing very valu-

able work on cotton research and other allied vital problems such as increasing the yield, improving the strains and developing new varieties, held their annual meetings in Bombay last week. After a lengthy discussion, a resolution was moved by Mr R. G. Saraiya for the decontrol of cotton; but the Committee at its annual meeting on February 27 concluded that decontrol was unwise and that the floor and ceiling prices should be raised commensurate with the overall rise to cover the costs of the cultivator. The Committee, however, felt that the floor and ceiling prices at the present levels did meet the expenditure incurred by the cultivators. It was also mentioned that the study of the economics of cotton growing should be undertaken before the cotton price policy was considered. A build up of a buffer stock of cotton out of the indigenous cotton production was recommended with a view to making it available in periods of high prices and dull supplies.

In a search for areas where cotton production, could be maintained steadily without the disturbing factor of rain, it was observed that such areas were more or less concentrated in Rajasthan where the rainfall is scanty. It was considered that the Rajasthan Canal would irrigate as much as 35 lakh acres and that about 10 lakh bales of additional good cotton could be produced which can offset any decrease in other regions. Another approach for augmenting cotton production was to grow cotton in the rice fallow areas in the delta regions of the Cauvery, Godavari and Krishna and other irrigation project areas. A high power committee has, therefore, been appointed to assess the potentialities of cotton cultivation in the different rice fallow areas.

The Committee has accepted, the recommendations of the Sea Island Cotton Development Sub-Committee that the target for extension of Sea Island "Andrews" cotton in Kerala and Mysore for 1960-61 should be 20,000 and 10,000 acres respectively. It is also recommended that Madras and Andhra Pradesh should be encouraged to grow this cotton on 1000 and 500 acres respectively.

The Textile Commissioner has directed that, in view of the estimated short crop of Kalgoan, Wagad and Kalagin cottons during the current cotton season, mills should not purchase these varieties of cotton with aggregate in excess of 55 per cent of their total consumption of these cottons during the cotton season 1958-59 within the overall quota of Indian cotton. In case any mill has made forward purchases of these cottons in excess of the quantity specified above, it should settle the contract for the excess immediately under advice of the Textile Commissioner's Office.

The Textile Commissioner in another circular has stated that it is incumbent on the mill to take immediate steps to import what-

ever margin cotton has been allotted to them and that, in case any mill does not apply for an import licence by 31st March in respect of the quantity allotted for licensing, he should be compelled to withhold further quota of Indian cotton. This measure seems to have been provoked by the fact that some mills have not taken expeditious steps to import foreign cotton allotted to them. Earlier, it was emphasised that it was not enough if mills obtained quotas but that it would be necessary for them to ensure that the entire quantities of cotton were brought into the country in sufficient time to enable consumption by August 31, 1960.

Activity in the spot market at Sewri was somewhat restricted though the price basis remained firm. There have been indications that the Government of India are proposing to negotiate shortly with the US Government for further allocation of three lakhs bales of cotton stapling 1" and below. Amraoti Co2 came to business at Rs 1270, Gadag Laxmi at Rs 1125 and Adoni Co2 at Rs 1100. Hubli changed hands at Rs 1060 and 1065 and Athani Co2 at Rs 1175. Portbunder Co2 new was done at Rs 1200 and Devangere at Rs 1265. Among imported varieties, American good Middling 1" was reported at Rs 1242, Sudan 445 at Rs 1870, Sudan P2L at Rs 1825, Busoga at Rs 1340 and Pakistan at Rs 1225 for March April delivery.

OPTICAL GLASS PLANT

The Minister of Industry, Mr Manubhai Shah, stated in the Lok Sabha last week that the Soviet authorities had been requested to revise the scope of the optical and ophthalmic glass project by dropping the production relating to optical glass and including in its place other types of glasses. The details regarding the scope of the revised project were

being awaited from the Soviet experts. Mr Shah, who was replying to a question by Mr Ram Krishan Gupta and Mr D. C. Sharma, added that the revision of the project was undertaken on the basis of information received from the Central Glass and Ceramic Research Institute that they had successfully evolved the technical 'know-how' for producing certain types of 'optical glass and would be in a position to undertake production of other main types by 1962.

The Minister of Industry added that the detailed project report for the optical and ophthalmic Glass project prepared in accordance with the contract entered into with M/s Techno-export of Moscow had been received by the Government of India.

DECLINE IN THE VALUE OF INDIAN RUPEE

The Deputy Minister of Finance, Mr B. R. Bhagat, informed the Lok Sabha last week that quotations for the Indian rupee had fallen in several free markets.

He said the fall in the rate in the foreign open markets was due to the measures taken by Government to prevent the leakage of foreign exchange caused by smuggling out of Indian currency notes to enable the smuggling in of gold or other imports.

The Deputy Minister said the extent of decline varied from market to market. In Singapore the decline since May 1959 had been about 28 per cent; the Hongkong quotations in January 1960 were about 32 per cent lower than in May 1959; in New York, the rate fell only nominally. In Ceylon and Burma the decline came to around 17 per cent and 13 per cent respectively, although in both these countries the rate was still well above the par value of the Indian rupee. The open market rate in Nepal had improved by 2.8 per cent.

MARKETS

Higher Output of Sugar

THE production of Sugar is higher by about 2.5 lakh tons so far this season as compared with last season. The increase is attributed to higher cane production, higher recovery of sugar and the various incentives offered by the Government to raise production. Production, during the current season up to the 22nd February 1960, is estimated at 14.99 lakh tons as against 12.48 lakhs in the corresponding period of the previous season.

It is understood that Uttar Pradesh and Punjab Governments are taking certain administrative measures to ensure adequate supply of cane to the sugar mills throughout the season and also to encourage power crushers and khandisari units to operate increasingly away from factory areas.

The all-India first estimate of sugar, to be produced directly from cane in vacuum-pan factories in 1959-60, is estimated at 22.15 lakh tons. This shows an increase of nearly 3 lakh tons over the production during the previous season.

Out of 19.19 lakh tons produced in the last season, the cooperative sectors' contribution was 1.79 lakh tons. Seventeen more factories are expected to be set up by the end of the Second Plan. Bombay, with sixteen factories, tops the list followed by Andhra and the Punjab with five each. Uttar Pradesh, Mysore and Madras are expected to have three factories each, and Orissa and Assam two and one respectively by 1960-61.

Normally, this encouraging production should have been reflected in the price trends in the market. Unfortunately, this is not so and prices have continued to rule at a high level. In the Hapur market, the rates are quoted at Rs 117 to Rs 119 per bag.

In this connection, the Indian Sugar Mills Association points out that the industry is in no way responsible for the high consumer prices since it is, under law, obliged to sell the commodity at fixed prices. The Association states that, once the sugar leaves the factories under Government release orders, there is no effective control on its prices thereafter and the higher levels ruling at the consuming centres bear no relation to the ex-factory prices.

Against the control price of Rs 37.85 nP per maund which the factories in Uttar Pradesh and

North Bihar get, the wholesale price in Bengal, which receives almost its entire supplies from these two States, is ruling at about Rs 55 per maund. In the interior in Saurashtra and elsewhere, the rates are even higher and are quoted at Rs 75 to Rs 100 per maund.

According to the Association, the present impasse of shortages and high prices can be removed only by abolishing the present stifling controls, which are responsible for creating a psychology of scarcity in spite of increased production. Free from the stifling controls, the industry can also take steps to maximise its production in competition with khandisari and gur and to bring down the current high prices.

Meanwhile, the world sugar market has not continued the recovery started early last week by the news that Russia is to buy 5 million tons of sugar from Cuba over the next five years. After rising to 3.10 cents a pound, the market has fallen slightly. It is not yet clear what its next move will be. Consumers are still not sufficiently confident of the outlook to buy on any scale. The general feeling in the London market is that, while the Russian purchases should give the market stability, a rising trend is nevertheless unlikely with world production at its present level.

Gur

After an early fall, Gur prices have improved in the Hapur market, thanks to the revival of demand from the consuming areas of the South. Loading facilities are by allotment. Stocks are reported to have swelled to 34,000 maunds. Total arrivals, so far in the current season, are estimated at 5.35 lakh maunds as against 5.01 lakh maunds last year. Pan-sara quality is quoted at Rs 16.50 and the Balti variety at Rs 16.75 a maund.

Khandisari

In the Hapur market, Khandisari prices have eased by about Rs 2 a maund due to lack of buying interest and better supply position. Production is still on a large scale; but the offtake is quoted at Rs 40 to Rs 44 a maund.

THE UNITED COMMERCIAL BANK LIMITED

NOTICE

Notice is hereby given that the Register of Members and Transfer Books of The United Commercial Bank Limited will be closed from Monday, the 21st day of March to Wednesday, the 6th day of April 1960 both days inclusive.

By Order of the Board
S. T. Sadasivan
General Manager.

Calcutta
February 22, 1960

Foodgrains

The better supply position and the anxiety on the part of stockists to liquidate their holdings are reflected in the Foodgrains market where prices have developed an easier tendency. In the Hapur

market, Wheat prices have declined to 18.50 a maund for the average quality and to Rs 19.37 for the farm variety. The condition of the standing crop is reported to be fair except in areas where there are no irrigation facilities and

THE UNITED COMMERCIAL BANK, LIMITED

2, India Exchange Place,
CALCUTTA-1.

NOTICE

NOTICE IS HEREBY GIVEN that the SEVENTEENTH ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 6th day of April, 1960, at 4 P.M. to transact the following business:

1. To receive and adopt the Report of the Directors and the Audited Balance-sheet as on 31st December, 1959 and Profit & Loss Account for the year ended 31st December, 1959;

2. To declare a dividend;

3. To appoint two Directors in place of Mr. M. R. Ruia and Mr. G. D. Kothari who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;

4. To appoint a Director in place of Mr. G. D. Birla who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

"Resolved that Mr. G. D. Birla, who has attained the age of 65 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him".

5. To appoint a Director in place of Mr. M. L. Shah who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

"Resolved that Mr. M. L. Shah, who has attained the age of 65 years, be and is hereby re-appointed a Director of the Bank

and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him".

6. To appoint a Director in place of Mr. G. L. Bangur who, by virtue of Section 280(2) of the Companies Act, 1956, vacates his office at the conclusion of this Annual General Meeting and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

"Resolved that Mr. G. L. Bangur, who has attained the age of 65 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him".

7. To appoint auditors for the current year and to fix their remuneration.

Note: 1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

2. (a) The transfer books of the Bank will be closed from Monday, the 21st day of March, 1960 to Wednesday, the 6th April, 1960, both days inclusive.

(b) The dividend, if sanctioned, will be payable on and after the 7th April, 1960, to those Shareholders whose names appear in the Register of Members on Wednesday, the 6th April, 1960.

(c) Dividend Warrants will be posted to Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

By Order of the Board,
S. T. SADASIVAN,
General Manager.
Calcutta,
29th February, 1960.

March 5, 1960

lack of winter rains have adversely affected the crops.

The market for Rice is ruling quiet in view of the satisfactory supply position. The Commonwealth Economic Committee, in its February Rice Supplement, states that world production for 1959 and 1960 will probably be around the same high levels of the previous season. Large crops have been reported in Japan, Formosa, Thailand and Burma, while an increase

in acreage is indicated in India and Pakistan.

Gram prices have eased by about Re 1 a maund on lower Punjab advices and heavy local stocks. In the Pulses section, prices of Peas and Arhar have fallen by 37 nP and 50 nP a maund due to slack demand and comfortable stock position.

Coffee

A great change, which has come over the Coffee industry, is the progressive methods of cultivation and management adopted by the smaller growers. This process may be accelerated during the next five years. Planters in the South are, therefore, looking forward to a bumper 60,000-ton crop in the coming season, provided the blossom showers are satisfactory.

The expansion of coffee output, during the Third Plan period, is under consideration. Arabica production, in the next five years, is expected to go up to 50,000 tons and Robusta to 30,000 tons, making a total of about 80,000 tons.

According to the Coffee Board, coffee cultivation on a commercial scale will also be introduced shortly in areas other than the traditional coffee zones of Mysore, Madras and Kerala. Assam and West Bengal have already planted coffee on an experimental scale as part of their scheme for the rehabilitation of tribal people. The Coffee Board points out in this connection that these regions are endowed with plentiful virgin forest land and favourable climatic conditions. An addition of 10,000 to 15,000 tons to India's coffee output is, therefore, expected in the next ten years.

The harvesting and delivery of coffee to the Pool, during the current season, has been delayed due to late blossom showers last year. Receipts into the Pool, up to January-end this year, totalled 12,909 tonnes as against 16,786 tonnes in the corresponding period of last year. Export sales from the 1958-59 crop totalled 16,379 tonnes out of a total allocation of 17,000 tonnes. The remaining 621 tonnes have also been offered for sale.

Pepper

The Pepper markets, both in London and New York, have remained suspiciously quiet this week. But, signs that another period of intense activity may not be far way, have begun to appear and prices have picked up slightly after recent steady decline. This can mean that dealers feel that the market has fallen far enough or that consumers have had to start buying again. In the New York market, Malabar/Lampong spot rate is quoted around 57 cents per pound.

Consumer interest over the past few weeks has been negligible. Their stocks may now be low. In such

a case it may not be long before the pressure on supplies becomes as severe as it was in early January. But world consumption of pepper is still outrunning production and most of the available supplies, as far as is known, is in the hands of the Chinese Syndicate. Unless consumers can hold out until the new Sarawak crop is available in a few months' time, prices seem bound to go up again and possibly shortly.

Bullion

Movements on the bullion exchange in Bombay remained two-sided. Seasonal offtake was satisfactory and the move for changes in the margin system favouring the bulls for commencement of business in Chaitra delivery helped the market in its rallying tendency. However, reports that the Bombay Government were not agreeable to the new margin scheme induced some selling pressure. As pointed out last

week, gold faced offerings at early bulge and reported release of Dalai Lama's treasure. Silver prices, however, ruled relatively steadier. The rate for Falgun delivery, after earlier setback to Rs 214.81, rose to Rs 215.87 to be placed at Rs 215.75. Gold Falgun dropped to Rs 130 from Rs 137.37 to recover to Rs 131.19 but relapsed to Rs 130 to be placed at Rs 131.25. Sovereign was placed at Rs 84.75. Business in Chaitra delivery has commenced from this Wednesday.

Metals

The non-ferrous metal market ruled steady during the past week with narrow movements. The levy of duty on aluminium sheets and ingots, however, will result in higher prices of utensils, wires and other finished goods. Brass sheets prices have been increased. At the close, copper scrap stood at Rs 210, brass scrap at Rs 180 and lead at Rs 77 per cwt. Aluminium scrap was reported at Rs 1.44 per lb while tin was quoting at Rs 138. Business in zinc patchy.

THE INDIAN STEEL & WIRE PRODUCTS LTD.

NOTICE

NOTICE IS HEREBY GIVEN that the Twenty-fourth Annual General Meeting of the Shareholders of THE INDIAN STEEL & WIRE PRODUCTS LIMITED, will be held at its Registered Office, No. 7, Wellesley Place, Calcutta-1, on Monday the 28th March, 1960 at 11 A.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Manufacturing and Profit & Loss Account of the Company for the year ended 31st March, 1959.

2. To declare Dividend and Cash Bonus on Ordinary shares of the Company.

3. To appoint a Director in place of Mr. P. C. Mustafa, who retires by rotation and is eligible for re-election. In this connection to consider and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company stating therein that he will attain the age of 69 years on the 18th March, 1960 and is hereby given to the members.

"RESOLVED that pursuant to Sec. 281 of the Companies Act, 1956, Mr. P. C. Mustafa, who has attained the age of 69 years be re-appointed a director of the Company and it be and is hereby specifically declared that the age limit for directors prescribed in Sec. 280 of the said Act shall not apply to him."

4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 15th March, 1960 to the 28th March, 1960 both days inclusive.

By Order of the Board of Directors
INDRA SINGH & SONS
PRIVATE LTD.
A. Singh
DIRECTOR
MANAGING AGENTS

7, Wellesley Place,
Calcutta-1.
The 26th February, 1960.

Note: (1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and upon a poll to vote instead of himself and that a proxy need not be a member.

(2) If dividend and cash bonus on shares, as recommended by the Directors, are passed at the Annual General Meeting, the payments will be made on or after the 30th March, 1960, to those shareholders whose names are on the Company's Registers on the 28th March, 1960.

(3) The Explanatory Notes of the above resolution under item No. 3 of the Notice have been sent to the shareholders along with the Notice of the Meeting. It can be inspected at the Registered Office of the Company, No. 7, Wellesley Place, Calcutta-1, during usual Office Hours on any working day.

Yarn

Yarn prices have remained steadier. The imposition of excise duty to the tune of 6 nP per square yard on staple fibre fabrics has been viewed with some misgivings by the industry. More than 4220 powerlooms using staple yarn have remained idle in Surat as from 1st March following the protest against the levy. Art silk and cotton yarn prices were steadier and firm. Staple fibre yarn for February delivery improved to Rs 760 before expiring at Rs 748. February position was reported at Rs 725 to Rs 758 to expire at Rs 748 while April delivery stood at a discount of Rs 25.

*

Oils & Oilseeds

After a short termed rally, the oilseeds market in Bombay developed renewed weakness on absence of export demand from overseas markets while the growing arrivals of the new crop in castor and linseed had their impact on the market. Speculative holders were obliged to liquidate their holdings in the declining market to save themselves from further losses. No business was reported in groundnut oil or cake. Rumours about the issue of fresh export quota in H.P.S groundnuts have failed to materialise. The Budget as such had little effect on the market.

THE SAMNUGGUR JUTE FACTORY COMPANY LIMITED

The Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 7% making, with the interim dividend, 10% for the year ended 31st December 1959; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1959.

These dividends will be paid on 25th March 1960, less Income Tax at 7/9 per £, and the Transfer Books will be closed from 11th March to 25th March, 1960, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1959.

Preliminary figures for the year ended 31st December 1959 show Trading Profit £264,647 (£109,999), Income from Investments £23,125 (£20,994), Depreciation written off £40,000 (£10,000), Net Profit after Taxation £129,170 (£87,883), Transferred to Modernisation of Machinery Reserve £30,000 (Nil), net interim dividends already paid £13,781, net dividends now declared £28,481 and estimated carry forward £98,898 (£41,990).

P. WILLIAMS,
Secretary.
Dundee,
3rd March, 1960.

Groundnuts February delivery expired at Rs 212. The May delivery, after early setback to Rs 203.50, recovered to Rs 208.25 to decline to Rs 204. Groundnut oil May delivery came down to Rs 21.56 per quarter from the earlier improved level of Rs 22.06. Castor May dropped to Rs 204 from Rs 208 while castor oil commercial quality came down to Rs 17.81 from Rs 18.37. Linseed was weak, declining to Rs 32 from Rs 32.69. Linseed oil was sold down to Rs 15.50. Cotton seeds May delivery were done between Rs 145.50 and Rs 148.50 to be placed finally at Rs 146.75. Oil cake prices were quietly steady.

Exports of castor oil from Bombay from 1st January 1960 to 18th February totalled 6510 tons, groundnut oil 1893 tons and linseed 1846 tons. Exports of H.P.S groundnuts came to 5000 tons while, among oilcakes, groundnut oilcake extraction accounted for 26,875 tons, groundnut expeller cake 14,188 tons, linseed oilcake 7186 tons and nigerseed oilcake 2135 tons.

The Madras Groundnut oil and kernel market was easier today. All speculation about budget levies on oils and seeds having been laid to rest, the tone improved and with good buying support as a forerunner for the coming weeks' trade in the commodity.

Today's quotations are: Groundnut oil per candy of 500 lbs ex-Madras Godown expeller ready 3% F.F.A. Ready Rs 381.

April Rs 384 per candy.

Kernels per candy of 531 lbs Coromandel: Rs 202.

Castor oil per candy of 500 lbs Rs 335.

Coconut oil per tin Rs 41.

Gingelly oil per maund Rs 21/12: Gingelly seed per bag Rs 74.

Groundnut cake per bag Rs 26.

The United Kingdom price for groundnut oil per ton was at £123.

The Government of India announcement extending the validity of unutilised groundnut oil cake of the expeller variety quota up to June next enlivened the market. Groundnuts too were in demand, probably on the feeling that groundnut cake may be in continuous demand even after the end of this month. Already, the February time limit has expired. Oil was not supported by other quarters, including Calcutta interests. Sellers were few and far between even at lower levels and the quota allowed to established shippers, to the tune of 10,000 tons had no effect either. Therefore, oil lost Rs 27/28 per ton this week. Even late support from Calcutta vanaspathi interests did not come to the rescue of the colourless oil market.

Groundnut arrivals locally were in the neighbourhood of 30 tons daily. This was mostly consumed by crushers at Rs 201 per candy.

Only, reselling and local agents of groundnut oil were in the picture of oil buying. The Rs 380 per candy level lost ground to Rs 378/379, but during the week-end it rallied again around Rs 380/381 at which rate it continues since Tuesday.

April position did not command much trading. The week-end quotation of Rs 387 continued, alternating between fractionally lower and higher margins. But today's opening confirmed the sliding tendency and the market closed at Rs 382 per candy.

In groundnut oil cake, there was also a sizeable fall in prices. This was ascribed to lack of shippers' interest. The market rate ruled dull at Rs 26 per bag of 160 lbs ex-mill with gunny.

In upcountry centres, activity reported was small. Groundnut kernels arrivals were also not much. These little quantities were taken up by small crushers. The price quoted and accepted was around Rs 201/202 per candy.

Other Seeds & Oils: The gingelly seed market maintained a firmer outlook. Only some wagons of kusumba variety were received from northern markets of Itarsi, Bhopal and other places. The latest ruling rates are:

Gingelly seed: Itarsi/Bhopal variety Rs 75 per bag; Rajasthan quality Rs 70/71 per bag; Anantapur quality Rs 71/72 per bag.

Gingelly oil: On wholesale basis Rs 21/12 per maund; On retail basis Rs 22/- per maund.

Coconut oil: Madras quotation per tin Rs 41; Cochin: Ready Rs 633; March Rs 643; April Rs 639. (All per candy).

The following were the latest foreign market quotations for some of the important seeds and oils:

Groundnut oil Spot £125 per ton; Groundnuts April/May £77/77½ per ton; Castorseed Feb./March £63 per ton; Nigerseed nominal Feb./March £53½ per ton; Castor oil Commercial Feb./March Bulk £125 per ton; Coconut oil Straits February £130½ per ton; Coconut oil Colombo February £138 per ton; Groundnut oil cake (Expeller) Feb. £31/10 to £31/15 per ton; Groundnut oil cake (deolled) £30½ per ton.

*

Hides and Skins

Though there has been good local demand for tanned hides and improvement is reported in arrivals, there was but slight change in their prices. Due to continued resistance to Madras prices, not many deals were reported with United Kingdom importers. Madras offers were reduced between half to one penny, at which some business deals were reported. For further business improvement, it looks as if the UK customers would wait for reductions to enable them to place heavier orders.

Tanned buffalo skin has been in strong demand internally. Also, there is similar demand for cow calf tanned skins. Prices of these, therefore, remained firm.

Premium marks were firm, too. UK tanned cow calf demand has not been much. The same also was the case with tanned buffalo calf export demand.

About 57,000 pieces of tanned sheepskins have been marketed. There is besides a good stock left behind to the tune of about 50,000 pieces of goat skins. Goat skins left were at 36,000 numbers.

The following prices of tanning materials were quoted today: Avaram/Bark Rs 90 to Rs 112.50; Konam Bark Rs 67.50 Rs 70; Myrobolams Salem 1st Quality Rs 150 and Salem 2nd Quality Rs 100; Bombay quality Rs 87.50 to Rs 90. Wattle Extract Rs 1010.

The following are the quotations for raw skins with last week's prices given in brackets:

Bangalore goatskins Rs 600/630 (Rs 615/660): White wool sheep Rs 550/625 (Rs 550/610): Black wool sheep Rs 400/500 (Rs 500/525): Bozwaada goatskins Rs 570 (Rs 590/600): He sheep Rs 585 (Rs 590/595): She sheep Rs 485 (Rs 490/495).

The quotations for tanned hides and skins per lb: Cow Prime 5/5½ lb Rs 3 to Rs 3/6: 6/6½ lb Rs 2.13 to Rs 3.00 8/8½ lb Rs 2/5 to Rs 2/8: 10/12 lb Rs 1/15 to Rs 2/1. Buffalo 12/13 lb 1/8 to Rs 1/12: Cow calf 13/2 lb Rs 4; 4 to Rs 5/4: Buffalo calf 1½/2 lb Rs 3/2 to Rs 3/8: Goat Prime 8/9 lb Rs 9/4 to Rs 9/6: 5½/6 lb Rs 10/8 to Rs 10/12: Sheep ordy. 6/7 lb Rs 8/6 to Rs 8/12: Sheep Prime 6/7 lb Rs 10/12 to Rs 10/14.

THE VICTORIA JUTE COMPANY LIMITED

The Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 7% making, with the interim dividend, 10% for the year ended 31st December 1959; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1959.

These dividends will be paid on 25th March 1960, less Income Tax at 7/9 per £, and the Transfer Books will be closed from 11th March to 25th March 1960, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1959.

Preliminary figures for the year ended 31st December 1959 show Trading Profit £171,631 (£58,717), Income from Investments £17,824 (£15,765), Depreciation written off £50,000 (£10,000), Net Profit after Taxation £106,077 (£38,452), Transferred to Modernisation of Machinery Reserve £30,000 (Nil), net interim dividends already paid £10,106, net dividends now declared £19,906 and estimated carry forward £81,170 (£35,105).

P. WILLIAMS,
Secretary.
Dundee,
3rd March, 1960.

The Industrial Credit & Investment Corporation of India Ltd.

Most Important Underwriting Institution in India

1959 a Good Year of Activity

Resources Almost Doubled

The Chairman, Mr G. L. Mehta, on Foreign Private Investment

The Annual General Meeting of the Shareholders of the Corporation will be held at the Registered Office of the Corporation, Union Bank Building, Apollo Street, Fort, Bombay 1, on April 7, 1960, at 4 P.M. The following is the Statement by the Chairman, Mr. G. L. Mehta, circulated to the Shareholders with the Directors' Report and Accounts for the year ended December 31, 1959.

I have the honour to place before the shareholders the Report of the Board of Directors of The Industrial Credit and Investment Corporation of India Limited for the year ending December 31, 1959—the fifth of the Corporation's life. I take particular pleasure in doing so because last year was a good one for India and hence for your Corporation.

By comparison with the year that preceded it, 1959 was a good year for India. All the important sectors of the nation's economy registered substantial increases in output. Favourable weather helped the country to achieve what appears to have been a record production of both foodstuffs and non-food items. Since agriculture accounts for so large a proportion of the nation's output, this fact alone was sufficient to lift national income by an appreciable percentage. Similarly, industrial production increased almost all along the line despite persistent difficulty in some industries. Both exports and imports rose, the latter much more than the former. While the rapid increase in imports permitted an expansion of both industrial construction and production, too large a proportion of it, unfortunately, was due to wheat imports made necessary by the poor harvest of the preceding year.

GROWING OPTIMISM

The upswing in physical production induced, and was accompanied by a revival in business confidence, evidence of which already existed towards the end of the depressed year 1958. A good harvest, some improvement in the country's foreign exchange reserves, a more flexible policy of Government towards expansion of the private sector and mounting evidence that friendly countries were willing to assist us to the maximum of their capacity—all this contributed to a growing optimism with respect to our economic future. In addition

to this, the cold wind that blew down on India from the Himalayas has been making us more conscious of the need for national security and has brought an air of realism which has not always been evident in national planning.

Against a background of expanding production and rising expectations in the country, it is but natural that the year 1959 was an unusually good one for your Corporation, too.

RESOURCES

On the resources side, in 1959, your Corporation almost doubled the funds it had available for investment in Indian industry. A year ago, I reported that the loan made by the World Bank in 1955 had been nearly committed and that we proposed to apply to the Bank for a new foreign exchange loan as well as to the Government of India for a new loan in rupees. In July, 1959, your Corporation negotiated a second \$10 million line of credit from the World Bank; and in October, for a second loan of Rs. 10 crores from the Government of India from funds accumulated out of the sale of surplus United States agricultural commodities in India. The Rs. 17.3 crores we had available for investment in 1955 has thus increased to more than Rs. 32 crores. I am sure you will agree with me that we have reasons to be gratified by these developments not merely because they augment our financial resources but also because they reflect the continued confidence of the Government of India and the World Bank as also the United States authorities in the management, operations and prospects of your Corporation. I should like to take this opportunity of conveying our sense of gratitude to all of them for their co-operation. I might add that during the year under review, we had also the benefit of the association of Mr. William Diamond whose services were generously made available to us by the World Bank and whose assistance was invaluable to this institution.

ACTIVITY

On the other side of our activity, namely lending and investing, 1959 has been a good year. We received more applications, approved more of them, and sanctioned more loans and investments than in any preceding year. Your Board of Direc-

tors approved Rs. 840 lacs of new proposals, nearly three times the level of 1958, bringing the total, over our 5-year life, to about Rs. 25 crores. Not all of these have resulted in contractual commitments. More than Rs. 4 crores have fallen by the wayside, mostly in the earlier years, because the applicants subsequently withdrew their requests or reduced the amount sanctioned. And a similar amount is in respect of projects which still await government consents. Nevertheless, contractual commitments in 1959 were higher than before, and so were the actual disbursements.

SATISFACTORY RESULTS

I hope you will not consider the financial results of 1959 as unsatisfactory. Income and net profits were about the same as in 1958. However, the Corporation, in accordance with its avowed objectives has begun to place some of its investments on the market. Capital gains from these sales amounted to Rs. 24 lacs, nearly half as much as the profits from current income. In accordance with our present practice, these gains from the sale of securities have been placed in Reserve and are not available for distribution as dividends. What is particularly gratifying in this development is the evidence that your Corporation's investments are proving sound ones, although I should add that we have also benefited by the upward trend in the stock market. This source of income will, I trust, gradually become an important factor in building up our reserves.

It is particularly gratifying to note the expansion in the Corporation's activity since it reflects the improved climate for private investment which prevailed in 1959. What is more, it is also the result of the efforts we are making to attract more business rather than simply wait for it to come. Our teething troubles such as every new institution faces and particularly a new one of this kind, are, I believe, over. We have made much progress in training our staff and have begun in 1959 to expand it both on engineering and financial side to meet the increasing demands upon us. The experience we have gained in the past has become a valuable foundation for the future. We have learned more about how to appraise a proposal

which comes to us, and our clients have become increasingly familiar with the rigorous financial discipline appropriate to modern industry, to which we try to accustom them. This experience coupled with the spirit of optimism prevailing in the industrial community may well give hope in the continued growth of your Corporation and in its ability to make the contribution to development of Indian industry which its promoters and shareholders expect of it.

I would not like to give you the impression, however, that your Corporation does not face some difficult problems. It does do so, and I should like to review them here despite the fact that none is new and all have been referred to frequently in the past. For instance, I have already referred to the fact that there is a substantial backlog of approved proposals which still require a variety of government consents and approvals. The need for these consents and approvals is the principal reason for the long delay, usually of several months, between the time we agree to assist a client and the time we can actually do so. Our relations with Government are close and cordial but we have not yet been able to make much headway in overcoming various impediments involved in departmental routines.

LOW LEVEL OF RESERVES

Another matter of concern is the low level of your Corporation's reserves. In five years, we have been able to set aside only Rs. 24 lacs from net profits. This sum is woefully inadequate for a Corporation which is expected and is, indeed, presumed to take substantial risks in financing and establishment of new enterprises and has been set up not only to make secured loans but to provide risk capital. The situation will be even more difficult from 1960 onwards because we are required, beginning with this year, to set aside 25% of net profits to reserves. The problem of inadequate reserves is common to other similar institutions such as the Industrial Finance Corporation and the State Finance Corporations and deserves the earnest consideration of the authorities.

PROFITS

The shareholders will have noticed that while our profits this year are nearly the same as last

year and while we have provided a larger amount for dividend to shareholders, the net dividend in the hands of the shareholders will be less than what they received last year. As a result of the coming into operation of the new scheme of company taxation, the shareholders who received a dividend of 4% tax-free last year will receive this year a taxable dividend of 5%, which is well below the last year's net dividend. This is unsatisfactory to the shareholders but, I regret to say, we can do little in the matter. We on our part do realise how essential it is to pay a modest dividend to our shareholders and at the same time to build up reserves.

Yet another problem closely related with the question of reserves concerns capital gains which from 1959 onwards may loom large in the annual accounts of your Corporation. These gains are being directly allocated to reserves. The tax authorities, however, are not treating these as capital gains and are taxing the Corporation at full rates. This imposes an unduly heavy burden on the Corporation and is a matter of serious concern. Necessary representations have been made to appropriate authorities in this connection and no effort is being spared to obtain proper redress.

TAX POLICY

I trust Government will see their way to revise the tax policy relating to development banks generally with a view to enable them, by building up adequate reserves, to be increasingly self-reliant. This is essential to enable such institutions to fulfil the purpose of industrial risk-taking for which they have been set up. An objective analysis would show that taxation of development finance corporations which operate on a very narrow margin of profits while assuming large risks should not be on the same level as full corporate taxation applicable to industrial and trading concerns. When new industries are sought to be promoted by means of substantial tax relief, there is surely a case for special consideration of the problems of financing institutions with a view to fostering their rapid and healthy development. Mobilization of resources is a key to the success of all our plans and such mobilization would be possible by encouraging various forms of financing agencies which function in a modern economy. One may turn to the Radcliff Committee's Report to see the important role such agencies play in resource mobilization in the United Kingdom.

SIGNIFICANT CONTRIBUTION

I am fully aware of the fact that, quantitatively speaking, ICICI has as yet made a small impact on industrial finance in the country. The same might, indeed, be said of other specialized industrial finance institutions. At the same time, however, the importance of

these institutions, and their contribution, should not be measured in quantitative terms alone. What is more important is the nature of their operations and whether they fill a need not met by the conventional sources of finance. I should like in this context to call your attention to the underwriting done by your Corporation. In a mere five years of life, ICICI has emerged as the most important underwriting institution in India, and in fact, almost the only underwriter of ordinary shares. Its underwriting operations amount to about Rs. 830 lacs of which nearly half have been in ordinary shares. It will be appreciated that in this sphere, your Corporation has already made a significant contribution.

In this field as also in lending transactions, the policy of this Corporation is to work in co-operation with other institutions. I am glad to state that we have been steadily building up close contacts with the Industrial Finance Corporation of India, Commercial Banks, State Bank of India, Life Insurance Corporation, Refinance Corporation as well as the State Finance Corporations. We discuss with them schemes of common interest, we exchange information, we seek their participation in loans and underwritings and are thereby able to assist our borrowers in raising the required capital as well as in distributing a given risk as widely as possible. In addition, we also endeavour to broaden the capital market encouraging stockbrokers to underwrite or sub-underwrite. We are also building up contacts abroad. We are in continuous touch with the International Finance Corporation in Washington and have been developing closer relations with the Commonwealth Development Finance Company in London, as also with some leading investment concerns and banks in the United States, United Kingdom and West Germany. We hope to expand and consolidate these activities in future.

THIRD PLAN

Our Government is at the moment in the process of formulating a Third Plan. Although the shape of the Plan is not yet clear, there is little doubt that subject to considerations of national security and within the framework of sound finance, the Plan will be a large one. And it will be large for private as well as for public enterprise. The opportunities for private industrial expansion, stimulated by the growing domestic market and facilitated by governmental activity in essential services and basic industries, will be large. And the demands on the specialized financial institutions will be correspondingly great.

During the last year, discussions have been going on between Government, officials of the Technical Cooperation Mission of the U.S.A., ourselves and some specialists

about the establishment of an institution to promote foreign private investment. Several countries have set up such Centres and some of them have been remarkably successful in attracting private capital especially from the United States. These discussions have advanced to a stage where concrete proposals for an Investment Centre have been formulated. This scheme is now under the consideration of the Government. If the responsibility for running such a Centre is entrusted to your Corporation, we would be agreeable to undertake it. It would be a matter of public service which this Corporation would be prepared to render in accordance with the basic objective set forth in its Memorandum of Association: to encourage and promote participation of private capital, both internal and external, in the creation, expansion and modernization of industrial enterprises in the private sector.

I should like to express my sense of appreciation for the Staff for their efficient services. During the last one year of my association with the Corporation, I found that they are discharging their duties with competence and sustained interest.

THE TITAGHUR JUTE FACTORY COMPANY LIMITED

The Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 8% making, with the interim dividend, 10% for the year ended 31st December 1959; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1959.

These dividends will be paid on 25th March 1960, less Income Tax at 7½ per cent, and the Transfer Books will be closed from 11th March to 25th March 1960, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1959.

Preliminary figures for the year ended 31st December 1959 show Trading Profit £181,801 (£34,376), Income from Investments £35,287 (£30,998), Depreciation written off £30,000 (£10,000) Net Profit after Taxation £151,401 (£27,204), Transferred to General Reserve £60,000 (Nil), Transferred to Modernisation of Machinery Reserve £30,000 (Nil), net interim dividends already paid £10,106, net dividends now declared £32,156 and estimated carry forward £48,387 (£29,248).

P. WILLIAMS,
Secretary.

Dundee,
3rd March, 1960.

BRAITHWAITE & CO (INDIA) LIMITED

NOTICE

NOTICE is hereby given that the Thirtieth Annual General Meeting of Braithwaite & Co (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta—1, on Monday, the fourth day of April, 1960, at 11.30 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1959.
2. To declare a Dividend.
3. To elect Directors in place of those retiring and in this connection to consider and, if thought fit, to pass the following Resolution of which special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

That pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Asoka Kumar Roy, who has attained the age of 73 years and who retires from the Board by rotation, be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed by Section 280 of the Companies Act, 1956, shall not apply to him.

4. To re-appoint Auditors and fix their remuneration.
- The Transfer Books of the Company will be closed from the 21st March, 1960 to the 4th April, 1960, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such Dividend as may be declared will be made to those members whose names are on the Company's Register on the 4th April, 1960.

By Order of the Board,
Y. S. TAYAL,
Secretary.

Calcutta,
24th February, 1960

Explanatory Statement under Section 173 of the Companies Act, 1956.

Sir Asoka K. Roy who joined the Board of Directors of the Company in 1950 retires by rotation and is eligible for re-appointment subject to compliance with the provisions of Section 281 of the Companies Act, 1956. The Company has received special Notice from a member of his intention to move the Resolution as set out above. The Directors consider it is most desirable that the Board shall continue to benefit from the experience and counsel of Sir Asoka K. Roy and recommend that the proposed Resolution be adopted.

If Bank Rate Rise, So What?

Investment Gossip:

THE bullishness that is characterising trading on the Indian Stock Exchanges this week is not unexpected, because it had been generally anticipated that, if Mr Morarji Desai did not impose any direct tax, buyers would throw the markets in their numbers.

And the Union Finance Minister has more than fulfilled expectations in regard to new levies, direct and indirect. Not only is there no further addition to direct tax, but indirect taxes have proved to be much smaller than marketmen had been prepared for. Most people thought that indirect taxes would amount to something like Rs 70 or 80 crores, but they actually amount to no more than Rs 23 crores odd. There is, of course, an uncovered deficit of Rs 60 crores odd, but marketmen are not unduly concerned about it for the simple reason that there is a firm belief that the revenue from excise duties is underestimated by the Finance Minister. It is interesting to note in this regard that the Federation of Indian Chambers of Commerce and Industry have averred that, in view of the buoyancy of Government revenue, Mr Desai should have given some relief to the corporate sector.

It is true, with the hefty dose of deficit financing promised by the Budget, inflationary tendencies in the economy might become more pronounced. Bull operators naturally think that this should give added impetus to the onward march of equities.

During the past two days, however, the market is showing an irregular pattern. Part of this hesitancy must have sprung from the genuine apprehension that prices have been taken up too far. There is also the lurking fear that Authority cannot be unmindful of the stock market boom. And this is reflected in the persistent rumour that the Indian Bank Rate is due for a rise.

It would appear that even this restraining factor has lost much of its influence, and the present attitude of the bulls would seem to be: "Bank Rate rise, what if it comes?" This shows the current mood of the market.

It is true that there is cause for enthusiasm, but one should not forget that Mr Morarji Desai has stuck to his 45 per cent tax on Companies. And one buys equities largely to get an equitable return on them. Capital appre-

ciation is also another important consideration and, at the present juncture, this will receive special attention. But yield considerations should by and large govern the price levels. By this criterion, it must be admitted that a fairly large portion of the lists is already overpriced. There is no gainsaying that equities are a good buy now; but at what price is a question that needs to be decided by investors. And, in this regard, they should not take the present hectic activity as their only guide.

Investment Special:

Controlling Capital Issues

Capital issues control in India extended by statute is being amplified. According to a report to the Federation of Indian Chambers of Commerce and Industry by its representatives on the Advisory Committee, the Controllers of Capital Issues are in favour of a ceiling on debenture interest and preference dividends. This is presumably meant to favour the holders of ordinary capital. It is mentioned that 7 per cent tax-free (i.e., 10 per cent taxable) is held to be the maximum rate for preference dividend, and debentures should not offer more than 7 per cent taxable. Recent increases in rates offered on debentures whose term of redemption is extended may be held to be a reason for the official view recommended by the Advisory Committee.

The question of the gearing of the capital structure has apparently been ignored, and the Committee has ignored the current argument over the status of preference shares after the Finance Act of 1959. The Committee examined the position of investments outside the reserves by companies which have very large assets in relation to limited original capital. The extraneous investments, according to the present official view, are those which are treated as extraneous under the EPT Act of 1940. The sale of investments and refund of capital—like that undertaken by BB Petrol Co and Premier Construction Co—may be justified by the view now taken as to excluded investments. A lot of Malayan mining and rubber companies in London are liquidating partly and giving away capital as income, because much of it represents profits withheld from distributors in the past.

There is now an official doctrine as regards commission payable on new issues. The payment of 3½ per cent for underwriting and brokerage is taken to be high, though English text books mention 5 per cent as the permissible maximum, and the Companies Act, 1956 accepted 5 per cent. It is the promoters who must make or take the terms as to private placing or public issues and middlemen have a case for higher charges, since their own margins are eroded by the inescapable fact of inflation. At the concomitant of economic planning, the control of capital issues is now borne without complaints and Sir Alan Lloyd's spade-work has helped the average investor as well

as the Government, whose own mistakes in regard to the floatations were rectified by rationalisation, though the sequel is an extended investigation into the management methods of management in the case of a well-known group.

There is yet no digest comparable to that provided by the Midland Bank in regard to accretions of capital to new companies or old, and the Reserve Bank Bulletin may help to close the gap in current financial knowledge by acting in concert with the Controller of Capital Issues, whose pet formula disclaiming responsibility is now of no interest as compared with the growth of private capital vis-a-vis the Government investment in the public sector—about which the Cabinet Secretariat supplies data, but not up-to-date.

New Issue Notes

It is understood that the public portion of the issue by Associated Battery Makers (Eastern) Limited has been oversubscribed by about fifteen times. More than 60,000 applications were received for Rs 9 crores. Of the shares offered to the public, 65 per cent has been allocated to the applicants who had asked for 50 to 200 shares and 15 per cent to those for 250 to 500 shares. Lots were drawn and about 22,000 shareholders were allotted ten shares each in respect of their applications for 50 to 100 shares. About 2,000 shareholders will get 20 shares in the application category 150 to 200 shares. Those who applied for 250 shares and up to 500 shares will get 30 shares each. The maximum allotment is for 100 shares on an application and the total number of shareholders will be approximately 28,000.

The Premier Construction Company Limited has offered, for sale, 25,000 Ordinary shares of the Indian Hume Pipe Company Limited at Rs 150, i.e., at a premium of Rs 50. This offer is open for three days from 8th March to 10th March. Applications have to be made with the remittance of Rs 150 per share to the managing broker, Shri Karamchand Chunnial, Share and Stock Broker, Stock Exchange New Building, Ground Floor, Fort, Bombay. The cheques are to be drawn in favour of the Premier Construction Company Limited. This issue is likely to be oversubscribed in view of the bright prospects for the company, which declared a taxable dividend of Rs 13 for the year ended 30th June 1959.

The Vellore Electric Supply Company has decided to issue 40,000

equity shares of Rs 10 each, at par, to the holders as on the 15th March 1960, in the ratio of one share for every share held. Letters of application and renunciation will be received up to the 15th April, 1960.

COMPANY REPORTS

Burrakur Coal Produces Excellent Results, Pays More

Balance-Sheet Reviews:

THE Burrakur Coal Company Limited has produced excellent working results for the year ended 30th June 1959, thanks to the rise in raisings, despatches and sales. Raisings have risen to 1.17 million tons from 1.04 million tons; despatches to 1.17 million tons from 1.02 million tons and sales to Rs 2.95 crores from Rs 2.56 crores.

The net profit for the year, before providing for Depreciation and Taxation, is higher at Rs 45.07 lakhs as against Rs 40.30 lakhs in the previous year. Except for Taxation provision, which is reduced to Rs 14.50 lakhs from Rs 15.26 lakhs, all other allocations have been increased:—Depreciation to Rs 11.00 from Rs 10.52 lakhs; Development Rebate Reserve to Rs 75,000 from Rs 44,400; Statutory Development Rebate Reserve to Rs 3.50 lakhs from Rs 1.32 lakhs and General Reserve to Rs 1.50 lakhs from Rs 1.00 lakh.

The directors have recommended a final dividend of 8 per cent on the Ordinary shares, making a total of 13 per cent for the year. This works out to a net dividend of 9.1 as against 8.75 per cent free of tax in the previous year.

The balance-sheet, as at 30th June 1959, shows a paid-up capital of Rs 1,18,42,280, divided into 9,09,248 Ordinary shares of Rs 10 each; 22,998-7 per cent Cumulative Preference shares of Rs 100 each and 45,000-6 per cent Second Cumulative Preference shares of Rs 100 each. Against this, Reserves and surplus are substantially higher at Rs 1.79 crores. 4½ per cent Mortgage Debentures are shown at Rs 20 lakhs.

The gross block at Rs 4.59 crores is depreciated by Rs 2.18 crores to show a net block value of Rs 2.41 crores.

The production of metallurgical coke during the year was 1.29 lakh tons against 1.11 lakh tons in the previous year.

Lower Net Dividend by Martin Burn

The decline in earnings by way of Managing Agency commission from Rs 57.04 lakhs to Rs 50.87 lakhs and in Income from Investments from Rs 13.96 lakhs to Rs 12.94 lakhs, is reflected in the working results of Martin Burn Limited for the year ended 30th September, 1959. Also, sales are lower at Rs 7.67 crores against Rs 9.04 crores.

With the result, the net profit for the year before providing for Depreciation and Taxation, stands reduced to Rs 86.30 lakh against Rs 93.65 lakhs in the previous year. The Depreciation amount is raised to Rs 1.81 lakhs from Rs 1.36 lakhs, while Taxation provision is reduced substantially to Rs 35 lakhs from Rs 53 lakhs and General Reserve to Rs 5 lakhs from Rs 28.50 lakhs. In this connection, it may be added that the larger provisions for the last two items were possible in the previous year by the transfer of Rs 10 lakhs from Contingencies Reserve and Rs 13.16 lakhs from Taxation provision.

The directors have recommended an Ordinary dividend of Rs 2.75 per share, which works out to a net dividend of Rs 1.925 against Rs 2.12 paid for the previous year.

Against a paid-up capital of Rs 2,05,82,750, Reserves and surplus are shown at Rs 1.13 crores. The gross block at Rs 69.07 lakhs is depreciated by Rs 16.26 lakhs to show a net block value of Rs 52.81 lakhs.

During the year, holders of Rs 55,000 in Convertible Notes exercised their option to convert their holdings into Ordinary shares, resulting in an increase in the Ordinary share capital of the company by 2,750 shares and a reduction of Rs 55,000 in Convertible Notes outstanding. The total Reserve arising from surplus on conversion is Rs 15.83 lakhs.

Dividend Passed over by Carew & Company

Although the working results of Carew & Company Limited for the year ended 30th June 1959 are satisfactory, the directors are not in a position to recommend the payment of a dividend as against 0.25 nP per share paid for the previous year. In this connection, they state that a large part of the profit has risen in Pakistan and the question of the remittance of profits is under negotiation with the State Bank of Pakistan.

Sales are lower at Rs 2.39 crores against Rs 3.25 crores, while the net profit, before providing for Depreciation, amounts to Rs 16.99 lakhs as against Rs 17.44 lakhs in the previous year. The directors have set apart a sum of Rs 3.61 lakhs (Rs 3.57 lakhs for Depreciation; Rs 11.28 lakhs (Rs 19.26 lakhs) for Taxation; Rs 3.00 lakhs (nil) for Debenture Redemption Fund; Rs 3.10 lakhs (nil) for General Reserve and Rs 58,000 (nil) for Development Rebate Reserve. In the previous year, larger allocations were possible by a transfer of Rs 6.50 lakhs from General Reserve.

The balance-sheet shows a paid-up capital of Rs 40 lakhs; First Mortgage Debentures, carrying interest at 6 per cent, at Rs 17.50 lakhs and Second Mortgage Debentures, carrying interest at 5½ per cent, at Rs 4.00 lakhs. Reserve and surplus stand at Rs 30.77 lakhs.

The gross block at Rs 1.52 crores is depreciated by Rs 1.05 crores to show a net block value of Rs 47 lakhs.

According to the directors' report, the profits of the company's two distilleries are slightly higher than in the previous year. While the demand for commercial spirit is satisfactory, the sales of foreign liquor is facing severe competition.

The Darsana factory, in Pakistan, has enjoyed a successful season. The prospects for the current year are not, however, favourable.

Eastern Investments Pay More

Thanks to a rise in "Dividends and Interest" received, Eastern Investments Limited has reported a net profit, after providing for Taxation, of Rs 9.19 lakhs for the year ended 31st December 1959 as against Rs 6.29 lakhs in the previous year.

In respect of allocations, the Taxation provision is raised to Rs 7.53 lakhs from Rs 7.34 lakhs, while General Reserve is reduced to Rs 50,000 from Rs 1.87 lakhs. The directors have recommended a dividend of 14 per cent (taxable) as against 9 per cent. This increased dividend is recommended after taking into consideration the effect of the Indian Finance Act 1959 according to which the company has to deduct tax at the prescribed rates from the dividends before payment thereof to the shareholders.

Against a paid up capital of 76.26 lakhs, Reserves and surplus are shown at Rs 57.17 lakhs. The total of the market value of the investments for which rates are available together with unquoted investments, as valued by the directors, exceeds the book value by Rs 80.84 lakhs on the 31st December, 1959.

STOCK EXCHANGES

Favourable Reaction to Budget

Watch-Dog Writes:

STOCK markets in general reacted favourably to the announcement of the Central Budget proposals as was disclosed by the pattern of trading during the week under review. The "status quo" in individual and corporate taxation with indirect levies to cover only a fourth of the deficit led to a strong buying wave, resulting in prices being substantially marked up. Rumours about the possibility of an increase in the Bank Rate, however, erased some of the extreme gains at the close.

With operators welcoming the Budget proposals, the Calcutta Stock Exchange exhibited cheerful conditions with prices rallying smartly on a wide front.

Hectic activity was witnessed on the Bombay Stock Exchange where equities recorded a spectacular rise in prices although higher levels attracted some profit-taking toward the close.

The Madras Stock Exchange provided several bright spots due to a buying spree. The market finished the week with minor losses on balance.

Share prices on the London Stock Exchange were widely marked down following a sudden break in the prices of gilt-edged securities.

Wall Street closed barely steady.

Calcutta

Friday Evening.

IT should be said that the Central Budget gave new life to the local Stock Exchange. Even the little hesitation that marked the special Budget session on Monday appeared to have completely subsided.

Though the market had been anticipating some relief in corporate taxation, the absence of any change in the structure and rates of taxation did not fail to enthuse sentiment, especially when second thoughts about the Budget appeared to have placed more reliance on growth prospects.

When it was found that there was some relief in respect of taxation on incomes from inter-corporate investments and dividends paid out of taxed reserves, there was nervous covering and fresh buying, resulting in new high levels being established. The rise in prices would have been more pronounced, but for the rumours about the possibility of an increase in the Bank Rate, which induced some profit-taking toward the close.

Rumours of an increase in the Bank Rate caused some nervous selling of gilt-edged securities by institutional investors. Longdated issues, in particular, were the worst sufferers.

Bank shares were generally quiet.

Although Jute shares were generally dull due to the absence of foreign enquiry for jute goods, prices of a few selected scrip participated in the general trend of the market, not to speak of the belief that such mills might be making satisfactory profits, having already bought raw jute at cheaper prices.

Coal shares responded to selective enquiries on reports of rising consumption and the possibility of an increase in exports to the neighbouring countries.

The fact that this week's auction results were not particularly encouraging and the general feeling that India was gradually losing its

--------------------	-------	-------	-------	-------

It is learnt that, in view of the steady and sharp rise in the prices of Rohtas, Orient Paper and Indian Irons after the Budget, the Stock Exchange Committee has fixed up interim clearing rates today instead of on Wednesday next—the settlement day. The clearing rate for Rohtas is fixed up at Rs 31.50 (Rs 26.75); Orient Paper at 41.40 (Rs 38.25) and Indian Irons at Rs 23.94 (Rs 22.30). Figures shown within brackets were the last clearing rates.

position in the foreign markets, induced a quieter tendency in the Tea section. But, a few selected scrip came in for some enquiry at improved levels on support lent from special quarters.

Sugar shares maintained generally a firmer tendency on prospects of an increase in production during the current season.

Thanks to the reports of a rise in cloth prices and the absence of any duty on textiles, Cotton Mill shares came in for good demand at enhanced levels.

Following encouraging corporate news, the announcement of higher dividends by a few companies and the emergence of investment support for blue chips due to growth prospects, the Miscellaneous section provided several bright features.

The following table shows the price trends of a few selected scrip during the pre-Budget and post-Budget sessions:—

	As on 27th Feb.	Pre-Budget Closing Rs	Post-Budget High Rs	As on 4th March Rs

Bombay

VERTICAL boom conditions have prevailed on the stock market in Bombay following the release of the Budget proposals. Though during the Budget session itself, some profit-taking emanated on account of rumours of increase in Bank rate, the market subsequently rebounded with vengeance. Shorts were caught unaware while some operators who had been in the know of things about a favourable budget and having

already made long commitments, particularly in National Rayon before the release of the Budget accumulated further holdings. Relief of 10 per cent tax on distribution of dividend paid out of the post-taxed profits gave impetus to the bulls in their operations and a spectacular rise was recorded around under the lead of National Rayon. Almost all the groups barring electricity, banks and Insurance participated in the rise. As no relief was forthcoming for electricity as well as banks in the new tax pattern, both these groups failed to attract attention.

The adoption of uniform system of deduction of 30 per cent tax on the amounts of dividends for both individuals and companies will again add to the simplicity in the procedure though the companies have been asked to pay 15 per cent as advance payment of the dividends received. The 45 per cent tax remains unchanged and the Finance Minister has made it plain that he was not going to reduce it. The market was not deterred over this fact and equities scored further sharp rise on hectic buying and covering movement despite occasional bouts of profit-taking. The main drive for the market appears to have been provided by inflationary psychology.

Interest in bank shares remained at a low ebb and prices moved narrowly. Baroda Bank has announced right issue one share for every five shares. Electricity shares were a shade easier. New India Insurance was steadier.

Shipping shares were in doldrums with Scindia Steam having been listed ex-dividend. Following the unanimous re-election of Smt. Sumati S. Morarjee as a director of the company the shares met some buying support to improve to Rs 15-96 but closed at Rs 15.68. Automobile shares were in good shape despite levy of excise duty. Premier shot up to Rs 161 to react to Rs 154. Engineering shares manifested a firm tendency with around sharp rise. Premier Construction despite lack of any relief in bonus tax advanced by Rs 30. Voltas shot up by Rs 40 to Rs 245 while Larsen Toubro gained Rs 5 to Rs 33. Mahindra and Mahindra moved ahead. Cement shares were slightly better. Steel shares rose smartly with Tata Steel and India Iron scoring good rise. Shivrajpur advanced but lacked follow up support. Shares of dyes and chemicals concerns were in active demand. Colour Chem rose upto Rs 355 from Rs 325 while Indian Dyestuffs old rose to Rs 530 and then to Rs 549. Poly-Chems gained Rs 15 to Rs 192. Tata Chemical improved by Rs 16 to Rs 92. National Rayon shot to Rs 464 from Rs 380 to close at Rs 453. Baroda Rayon advanced by Rs 10 to Rs 70. Gwalior Rayon climbed to a new peak of Rs 31. Walchandnagar Industries dropped to Rs 285 after rallying to Rs 311 to finish at Rs 298 on announcement of lower dividend.

Bombay Burmah shot up to Rs 582 from Rs 537. Wimco came up to Rs 255 on active demand. BB Petrol was quietly steady following the 3 per cent interim dividend for the year ended 31st March 1960. Ceat Tyres were firm at Rs 184. Tata Oil

March 5, 1960

moved up to Rs 74 from Rs 65. Hindustan Lever better at Rs 41.25.

Cotton Mill shares were in good shape on feverish buying. Standard Mills shot up by Rs 100 to react to Rs 835 on profit-taking, while Muffat-lal Fine was taken up to Rs 880. Bombay Dyeing forged ahead to Rs 71 from Rs 69 while Century was boosted upto Rs 492 from Rs 446. Khatau gained Rs 35 while Kohinoor made headway to Rs 335. Shreeniwas was better off at Rs 270 and Svadeshi gained Rs 20 to Rs 278. Tata Mills gained Rs 4 at Rs 52.

The week's movements in prices of a few representative scrips were as follows:—

	High Rs	Low Rs	Close Rs
B. Dyeing	71.50	68.00	70.50
Century	492.00	446.00	482.50
Indu Ord.	13.08	12.64	12.60

Madras

THAT post-Central Budget stock exchange transactions had been least affected was proved by today's buoyant tone in all counters of the local Exchange. Sugars were very good. Textiles vastly improved. There was a sizeable volume of business in plantation shares. Industrials as usual were very well fancied.

Government Securities: Madras Government 4% 1963 loan were traded at Rs 100.35. The same Government's 1960 3% Development Loan stood at Rs 99.40. The Mysore Government's 4% 1963 Taxable loan was quoted at Rs 100.35. The same period and denomination loan of the Kerala State remained at Rs 100.35.

Banks: This counter remained unaffected. Business was reported in Rs 80 paid Indian Bank shares at Rs 152.00. The Rs 100 paid share of the same Bank was quoted at Rs 187.50. The Rs 50 paid Indo-Commercial "C" share was quoted lower today at Rs 14.00. Punjab National Bank at Rs 21.00 and Pandyan Bank at Rs 40.00 were also unchanged.

Electrics: South Madras was quoted two nP higher at Rs 10.12. Cochlin and Karaikkal remained at Rs 10.65 and Rs 9.95 respectively. Kumbakonam was unaffected at Rs 10.70 and Salem-Erode at Rs 12.50.

Sugars & Breweries: Cauvery was at the market rate of Rs 130.00 but Deccan was in demand at Rs 14.05. EID commanded inquiries at Rs 48.50. Transactions were made in India Sugars at the lower rate of Rs 12.80. Jeypore was quoted at Rs 15.50 and KCP remained at Rs 19.50. Kirlampudi at Rs 69.00 and Mysore at Rs 56.75 were unchanged. Travancore improved to Rs 11.35 and United Breweries were available at Rs 65.00.

Plantings: Anandam declined to Rs 15.30. Bababuddin was quoted at Rs 9.65. Balanoor was available at Rs 17.65. Be Be was available at Rs 3.75. Blue Mountain improved slightly to Rs 3.50. Chembras changed hands at Rs 7.45. Coffee Lands and Consolidated Coffee were firm at Rs 23.75 and Rs 23.50 respectively. Devashola appreciated with 10% interim taxable dividend to Rs 33.25. Kil Kotagiri with 35% dividend was transacted at Rs 6.10. Mercara with taxable dividend of 20% was marked at Rs 9.85. Neelamalai again appreciated to Rs 4.75. Ouchterlony Valley was in good demand at Rs 6.09 at which business was done. Savamalai was bought at Rs 4.25. Talayar also was in demand at Rs 1.83. Thamarapally went up to Rs 28.00, appreciating by Rs 1.58 on its overnights closing of 26.62.

Textiles: Textiles showed vast improvement in dealings at higher levels. Anglo-French shares touched Rs 101.00. Balasubramania remained at Rs 52.00, for its Rs 40 rupee share and the Rs 70 rupee share was quoted at Rs 98.00. Bangalore Woollen shot up to Rs 201, five rupees above the overnight closing of Rs 196, and Buckingham Mill shares registered a gain of Rs 12 at Rs 212. Cauvery Spinning registered a spurt to Rs 14.50. Dhanalakshmi with 174% taxable dividend went up to Rs 235, having gained as much as Rs 8 from the previous closing. Janardhana was higher at Rs 69, the previous closing being Rs 66. Lakshmi shares were fancied at Rs 161, two rupees better than their previous rate. Mettur rose to Rs 435 from Rs 430. Rupee 50 paid share of Palani Andavar "A" with 30% dividend was as high as Rs 220, having gained Rs 60 from its last closing of Rs 160. Travancore Rayon was the fancy as usual at an appreciated level of Rs 29.70.

Miscellaneous: Aluminium Industries were fancied and bought at Rs 24.40. Dalmia Cement was another counter which had business reported at Rs 11.50. Hindustan Lever (24% tcd) at Rs 41. India Cements shares were sold at Rs 6.18.

London

PRICES on the London Stock Exchange were widely marked down following a sudden break in the prices of Government securities. Chief sufferers appeared to be the shares of Hire Purchase Finance houses, although falls were also evident in Bank and Industrial shares.

Shares of the United Kingdom Trust—a big Hire Purchase House—tumbled 10sh to 190sh. Other leading hire purchase shares recorded falls of about one shilling, while Bank shares showed losses of nine pence or one shilling. In the Industrial section, prices fell by 3d to 6d on the average.

Government securities opened "nervously" and prices were marked down by about one-eighth after the overnight slump. An additional factor causing unsettlement was a further fall on Wall Street, which led to a renewed slide in Gold shares.

New York

PRICES on Wall Street ruled generally steady. The market suffered initial losses reflecting profit-taking which was centred in Industrials, particularly Steels, Chemicals, Oils and Motors. Even the continued favourable news background including, further good 1959 earnings re-

ports and prospects for the current year, had no effect on sentiment.

Pressure, however, diminished toward the close and the market showed signs of rallying ability except for a few individual issues. Anaconda Copper was quoted at \$57 1/8; General Motors at \$46 and US Steel at \$85 1/2.

ROHTAS INDUSTRIES LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of Rohtas Industries Ltd., will be held on Saturday, the 26th March, 1960, at 11 a.m. at the Registered Office of the Company at Dalmianagar, Dist. Shahabad, Bihar, for the purpose of considering and if thought fit, passing with or without modification the following Resolutions:—

(1) (To be proposed as an Ordinary Resolution):—

"Resolved that subject to the approval of the Central Government being obtained under the provisions of the Companies Act, 1956, the Company hereby re-appoints Messrs. Sahu Jain Ltd., as the Managing Agents of the Company for a period of 10 years with effect from 15th August, 1960, on the remuneration and upon the terms, provisions and conditions contained in the draft Agreement (with such modifications, if any, as may be agreed to at this Meeting) proposed to be entered into between the Company of the one part and the said Sahu Jain Ltd., of the other part and the said draft Agreement is placed before this Meeting and for the purposes of identification subscribed by the Chairman thereof with power to the Directors of the Company, subject to the provisions of the Companies Act, 1956, to vary or alter such of the terms, provisions and conditions of the said draft Agreement before execution, as may be required by the Central Government and agreed to by the Managing Agents and the Directors on behalf of the Company."

(2) (To be proposed as a Special Resolution):—

"Resolved that Articles of Association of the Company be altered in the manner following:—

Clause 131 of the Articles of Association of the Company be deleted and be substituted by the following clause:—

"Subject to the consent of the Central Government and subject to the provisions of the Act Messrs. Sahu Jain Ltd., shall be and remain Managing Agents of the Company for the period and upon the terms, provisions and conditions set out in the Agreement entered into between the Company and the Managing Agents, provided that before the expiry of the terms agreed upon the Managing Agents shall be re-appointed for a further period in accordance with the Agreement subject, however, to any notification issued by the Central Government or any provisions contained in the Companies Act."

By Order of the Board for ROHTAS INDUSTRIES LIMITED, A. K. Jain, Managing Director, Managing Agents.

EXPLANATORY NOTES:

(i) Messrs. Sahu Jain Limited were appointed the Managing Agents of the Company under an Agreement dated 6-4-1951 for a period of 20 years. The Managing Agency Agreement between the Company and the Managing Agents was duly approved by the Shareholders of the Company. Under the provisions of Section 330 of the Company's Act term of Office of the Managing Agents will expire on 15th August, 1960, unless before that date the Managing Agents are re-appointed for a fresh term in accordance with the provisions contained in the Companies Act. A copy of the draft Agreement is kept at the Registered Office of the Company and can be inspected by the Shareholders on any working day during business hours and the same will be placed before the shareholders at the above Meeting. An abstract of the Agreement as required under Section 302(3) of the Companies Act, 1956, is enclosed

BUDGET:

A Study

Contents will include an assessment of excise duties in Union Budgets since the beginning of the planning era, an analysis of the direct tax proposals, comments by Eavesdropper and Watch-dog, a money market approach to the Budget and the Leading Article.

The Supplement will besides contain the full texts of the speeches of the Finance and Railway Ministers and of the Finance Bill 1960.

TO BE ISSUED FREE TO SUBSCRIBERS

Extra Copies at Rs. 2 each.

INVESTOR'S SUPPLEMENT

FOR the first time since the beginning of the year, substantial gains in prices were recorded in most of the counters on the Calcutta Stock Exchange, especially toward the end of February. Turnover, too, was fairly heavy. In this connection, it should be said that the Central Budget gave a new life to the market and even the little hesitation, that marked the close of the special Budget session on the last day of the month, appeared to have completely subsided.

Although the market started the month shakily and many operators applied pressure indicating the usual pre-budgetary nervousness, the encouraging trend of results for non-Communists in Kerala elections and the reports of the decision made by the USA to raise her aid to India by 50 per cent had a salutary effect, resulting in a steady recovery in prices from the beginning of the month.

During the second and third week of the month, conditions remained rather dull, as the pre-Budget caution made operators hesitant to extend their commitments beyond what they considered to be the safe level. It was, however, noteworthy that there was no aggressive selling in any of the counters. This appeared to be due to hopes that the Finance Minister might not do anything to undermine the confidence of investors, especially when the country is about to embark on a gigantic Third Plan.

In the above respect, some operators believed that, if the Railway Budget was taken as any indication, the Union Budget might also be undisturbing. Again, they felt that, while the State Budgets had been harmless, no radical tax measures would be proposed, especially when there was the prospect of a substantial rise in revenues due to increased income-tax collections from companies following the changes in the last budget.

It was believed that, additional resources were to be raised, they would have to come from indirect taxes. Optimism was even entertained that there might be some concessions here and there in the structure of direct taxation which, it was felt, had already reached its limits. Hopes were also held that any increase in indirect taxation might be imposed only on producers' goods and not on those commodities entering into the daily consumption of the masses.

As a matter of fact, when the Budget proposals were announced on the last day of the month, there was a fair-up in values due to sustained bull support coupled with nervous short-covering. Of course, there was genuine disappointment over the absence of the

Handsome Gains in Prices Recorded in February

much-needed relief in respect of corporate taxes and the reduction in the levy on bonus issues. But, it was felt that, with the extension of tax exemption to the new industrial undertakings for a period with market expectations. With the result, operators came out as aggressive buyers and the craze for buying infected almost all the sections of the market toward the end of the month.

of five years, there would be a boom in new capital issues. Again, the proposal in regard to payment of dividends out of taxed reserves and the levy of excise duties on various commodities were in line

Irrespective of the levy on pig iron and electric motors, Engineering shares met with good support at enhanced levels under the lead of Indian Irons on the belief that the increase in costs would ulti-

mately be passed on to the consumer.

In the Jute section, scrips of selected mills maintained their best levels on the hope that these mills might make satisfactory profits for the current year, having already bought jute in time and at cheaper prices.

Although Coal shares reacted slightly to the announcement of the increase in railway freight on the commodity, they responded well to selective enquiries on reports of rising consumption. Hopes were also entertained that the Government would soon realise the need for encouraging the private sector of the industry and give encouragement to raise production.

The Tea section recorded only a scrumpy business as the auction results for all the weeks of the month were disappointing in view of the poor enquiry from overseas buyers. A few selected scrips, however, showed a marked recovery toward the close of the month following the encouragement derived from the Centre's decision to increase the excise duty as a prelude to the rationalisation of the burden on tea. It was thought that the West Bengal and Assam States would be compensated by a share in the excise duty in case if these States would agree to abolish the Octroi and Carriage Taxes.

Sugar shares came in for selective support in anticipation of increased production during the current season. The absence of any new levy on the sweet commodity had also a favourable effect.

Although Textile scrips participated in the general rise in prices in the absence of any fresh levy, the reports, that the Government of India had accepted the recommendations of the Central Wage Board, induced small liquidation at the close of the month.

Thanks to good corporate news, the announcement of satisfactory dividends by a few companies and the emergence of investment support for the blue chips to growth prospects, the Miscellaneous section provided several bright features.

Paper shares were buoyant throughout the month in the absence of any fresh levy.

Even the heavy excise duty on cars was ignored on the belief that the producers would increase the price without difficulty.

The possibility of raising cement retention prices in order to cover the increased wage bill induced renewed firmness in Cement shares.

Other shares in the section naturally participated in the general recovery in prices, although profit-taking erased some of the extreme gains at the close of the month.

We are rather proud
of ourselves

TODAY, banking is almost a public utility. Its success
depends on its ability to give friendly and helpful
service.

We modestly believe that our progress shows
that our clients, whether they are industrialists,
exporters or just men who want to deposit Rs. 10/-
in a Savings Bank account, realise that in IOB
they have an institution that has made friendly
service the basis for all their activities.

Rise in Note Circulation, Bank Advances

IN view of the State Bank strike, the latest
banking returns are necessarily incomplete,
and analysis has therefore to wait until the
statements of the institution are to hand.
Nevertheless, there is evidence enough of the
continued busy season pressure, in the figures
both of the Reserve Bank and of the Scheduled
Banks.

During the week ended March 4, Active
Note circulation has expanded sharply by Rs
21.93 crores to Rs 1820.91 crores. Rupee Coin
has flowed out into circulation in the conside-
rable amount of Rs 2.41 crores. Governmental
disbursements presumably accounting for a
moiety of the demand for funds, deficit finan-
cing has been resorted to, probably for Rs 25
crores, and expansion of currency has taken
place for Rs 20 crores against Rupee Securities.
In the result, the Reserve Bank's cash in the
till has been drained by Rs 4.53 crores to Rs
21.42 crores.

In the Banking Department, it is to be
noticed that the Centre's payments have been
heavy. Notwithstanding created money for
perhaps Rs 25 crores, its balances have been
marked down by Rs 1.40 crores at Rs 50.37
crores. State Governments may have received
some payments from the Centre, since their
balances have improved by Rs 4.05 crores to
Rs 34.27 crores; but, then, their indebtedness
to the Reserve Bank in respect of ways and
means borrowings has also risen by Rs 1.78
crores to Rs 27.77 crores.

Busy season pressure, combined, of course,
with the demand occasioned by month-early
disbursements, is also suggested by figures re-
lating to Scheduled Banks in the Reserve
Bank returns. The Reserve Balances of
member banks are, it is true, higher by Rs 1.96
crores at Rs 81.92 crores. But the Other
Loans and Advances of the Reserve Bank, re-
presenting presumably increased accommoda-
tion to Scheduled Banks in the main, have
risen further by Rs 5.46 crores to Rs 126.52
crores.

Balances Held Abroad are again lower, by
Rs 2.07 crores at Rs 33.73 crores.

According to the return of Scheduled Banks
for February 26, Advances continue to advance,
the latest week indicating a rise of Rs 3.34
crores to Rs 1061.00 crores. In the next week,
with busy season pressure aided, abetted, ag-
gravated by beginning of the month disburse-
ments, the expansion may be of severe propor-
tions. However, the pressure on banks was
partly alleviated by the fact that Deposits rose
further by Rs 4.37 crores to Rs 1910.78 crores,
though the whole of this is accounted for by
the State Bank; on the other hand, almost the
full quantum of the rise in Advances being
ascribable to the other Scheduled Banks.
Borrowings from the Reserve Bank (the State
Bank again not figuring significantly) are
higher by around Rs 1½ crores at Rs 41.49
crores. Cash balances show some slight im-
provement in rising from Rs 159.36 crores to
Rs 160.59 crores, but, then, the State Bank in
the relevant week reported a rise in the por-
folio of Rs 4.49 crores. Lastly, the gilt-edged

holdings of Scheduled Banks are seen to have
gone up by Rs 2.49 crores to Rs 764.14 crores;
in that week, the State Bank added to its
gilt-edged by Rs 6.25 crores, and the inference
is that other Scheduled Banks disinvested in an
amount of around Rs 4 crores.

Allahabad Bank's Fine Results

IN a year in which banking results, particu-
larly of the bigger banks, have been mak-
ing poor showing, the accounts of Allahabad
Bank Limited offer a heartening contrast. A
study of the figures shows that such a perfor-
mance is the result of optimum use of funds.
For example, during a year in which almost
every bank has reported an increase in its
gilt-edged portfolio, Allahabad Bank reveals a
decline, fractional though it is; and this is
because the bank was able to expand its Ad-
vances by an amount almost equalling its in-
crease in Deposits.

Deposits and other accounts are marked
higher by Rs 4.71 crores at Rs 50.13 crores.
Current accounts are a shade lower, and the
rise has occurred mainly under the head of
Fixed Deposits, which have increased by Rs
4.23 crores to Rs 33.29 crores. But, then, the
bias in Allahabad Bank Deposits has always
been in favour of Fixed Deposits and Savings
Bank Deposits, which have also gone up by Rs
0.62 crores to Rs 6.04 crores. What though
Advances rose, borrowings in the latest
balance-sheet are lower as compared with the
previous year by Rs 1.07 crores at Rs 1.28
crores. The balance-sheet total marks a rise
from Rs 53.46 crores to Rs 59.20 crores.

Advances, including Bills Discounted and
Purchased, have expanded by Rs 3.31 crores to
Rs 28.36 crores. The other direction in which
assets show a rise is in respect of cash in hand
and with Reserve Bank and State Bank, which
has gone up from Rs 3.81 crores to Rs 4.26
crores. As already noted, gilt-edged invest-
ments are down a bit, by Rs 29 lakhs at Rs
14.33 crores.

Improved earnings are fully reflected in the
profit and loss account. The income by in-
terest and discount is higher by Rs 22 lakhs
at Rs 2.39 crores, while commission, exchange
and brokerage have fetched a shade over Rs 3
lakhs more at Rs 35.34 lakhs. Gross income
is marked up by almost exactly 10 per cent at
Rs 2.76 crores against Rs 2.50 crores.

A tight rein has clearly been kept on ex-
penses. Interest paid is higher only by Rs 12
lakhs at Rs 1.35 crores, while the rise in Sala-
ries and Allowances is one of Rs 4 lakhs odd
to Rs 87.62 lakhs. In the result, the balance
of profit is sharply improved from Rs 13.71
lakhs to Rs 16.27 lakhs. We may note here
that, but for an undue rise of over Rs 5½ lakhs
in rent, taxes, insurance, lighting, etc., the net
profit earned (which, in the case of Allahabad
Bank, is after provision made for taxation and
depreciation) would have showed an even
more significant increase.

The Directors' Report indicates that the rate
of dividends is to be maintained both on the
ordinary and preference shares, though, in
view of the new requirement of deduction of
tax at source on dividend payments, the return
to the shareholder will be reduced. Allaha-
bad Bank has seen to it that the staff benefits
from the improved performance; the provi-
sion for bonus has been raised from Rs 7.28
lakhs to Rs 7.60 lakhs; and, furthermore, a
transfer of Rs 2 lakhs is to be made to the
Trustees, Staff Pension Fund, against nil in
the previous year.

Bank Announcements

Subject to audit, the net profit of the Indian
Bank Limited, Madras, for the year 1959, after
providing for contingencies and meeting all
expenses, together with the sum carried from the
previous year's account, amounts to
Rs 37,45,143.18 nP. An ad-interim dividend at
the rate of 5 per cent and bonus of 2½ per cent
(subject to tax) has been paid. The Directors
now propose to recommend to the General
Meeting payment of a final dividend of 5 per
cent and a bonus of 2½ per cent for the year
1959, thereby making the dividend and bonus
for the year amount to 15 per cent.

The Manager, The Chartered Bank, Calcutta,
has received the following cabled information
from his Head Office in London:—

"At the Annual General Meeting of Stock-
holders 30th March Directors will recom-
mend final dividend 7½ per cent actual sub-
ject income tax. In the consolidated ac-
counts of the Chartered Bank and its wholly
owned subsidiaries the following appropria-
tions have been made:—

£ 2,50,000 written off Bank Premises
£ 125,000 Pension Fund
£ 20,000 Widows and Orphans Fund
£ 1,50,000 Contingencies leaving
£ 4,91,994 to be carried forward
Net Profits £ 1,014,696 compared with
£ 993,590 in 1958."

The profit of United Bank of India Ltd for
the year 1959 was Rs 14.29 lakhs after provid-
ing for the taxes, as against Rs 14.15 lakhs in
the previous year. The Directors of the Bank
have recommended a gross dividend at 4.50
per cent which, after deduction of tax, will
work out at the same net rate of tax-free
dividend as in the last year, i.e., 3 per cent.
Payment of dividend will take up Rs 11.39
lakhs and allocation to Reserves Rs 2.90 lakhs.
There will remain Rs 1.81 lakhs to be carried
over which is same as in last year.

The Hongkong and Shanghai Banking Corpo-
ration has received an advice from its Head
Office in Hongkong of an increase in its paid
up capital and in its reserve fund.

The new figures are:
Capital Authorised Hong Kong \$100,000,000
Capital Issued and Fully Paid Hong Kong
\$78,974,750; Reserve Fund Sterling £10,949,165.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Gov-
ernment of India Treasury Bills were opened
on Tuesday, the 8th March 1960. Total amount
offered was Rs 2,00,00,000. Tenders at
Rs 99.310 and above were accepted in full.
Total amount accepted was Rs 2,00,00,000, the
average rate of accepted tenders being Rs 2.755
per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Gov-
ernment of India Treasury Bills will be re-
ceived at all centres (Bangalore, Bombay, Cai-
cutta, Kanpur, Madras, Nagpur and New
Delhi) upto the close of business on Monday,
the 14th March 1960. Successful tenderers
should make payment on Friday, the 18th
March 1960. Other conditions are as usual.

During the week ended the 4th March 1960
Government of India Treasury Bills for
Rs 49,24,75,000 were sold in favour of Reserve
Bank of India.

91 days' Intermediate Treasury Bills will be
sold from the 9th to 12th March 1960 at
Rs 99.326 per cent. Sales can be stopped at
any time without notice if Government think
it necessary.

There were no sales of 91 days' Intermediate
Treasury Bills during the period 2nd to 5th
March 1960.

The Trade Split in Europe

By Paul Einzig

As a result of the decision of the European Economic Community Commission in Brussels to accelerate the pace of tariff integration and unification, and the recent settlement of practically all outstanding differences in respect of the unification of external tariffs, a clash between the six countries of the EEC and the seven countries of the European Free Trade Association has become almost inevitable. Although hopes are entertained that some solution might be reached at the forthcoming meeting of the Governments of all Western European countries plus the United States and Canada on March 29th, at the time of writing the prospects look none too favourable. It is therefore necessary to envisage the possibility of a trade war between the two camps as from July 1, 1960, when the proposed tariff changes by the EEC will become operative.

From the point of view of underdeveloped countries the prospects of Western Europe splitting into two hostile camps are anything but cheerful. Apart altogether from the effect of a discrimination against their products by the EEC countries, it seems probable that such a development will greatly affect the extent to which Europe and even North America would be able to assist in the industrialisation of the backward countries. This is because a considerable proportion of their resources available for investment abroad will be invested in the countries of the rival camps.

Already a large number of British, American, Scandinavian and Swiss industrial firms have made arrangements to establish branches or affiliates within the EEC countries, so as to ensure that their manufactures are not excluded from the benefits of the expanding market to be created through the economic integration of the six countries. This movement is likely to assume considerable dimensions once it becomes certain that no agreement is possible between the EEC and the EFTA.

To the extent to which the movement means the establishment of new factories or the extension of existing factories within the EEC by firms outside it, it means that these countries will have so much less financial and technical resources to assist in the industrialisation of underdeveloped countries. A large proportion of their balance of payment surpluses will be invested in countries which are in no need of an influx of foreign capital. Resources in management and skilled labour, too, will be diverted to countries where they are not really needed. Even to the extent to which this

penetration assumes the form of acquiring financial interests in firms established in EEC countries it would reduce the financial surplus available for investment in underdeveloped countries.

Nobody would stand to benefit by such development. The firms which want to establish themselves in EEC countries merely seek to safeguard their existing markets there in face of the threat of discrimination against them. The EEC countries, with the possible exception of Italy, are already fully employed, and any additional demand for labour would merely accentuate their inflationary wages spiral. If firms in the EEC countries should in turn seek to establish themselves or expand in EFTA countries this futile process would be done on a reciprocal basis. The net result will be a great deal of capital expenditure where it is not needed. Indeed it is no exaggeration to say that if all the financial and technical resources which are likely to be expended in the process were to be made available to underdeveloped countries it would make quite a difference to the latter's progress towards much-needed industrialisation.

The United States, too, embarked on the establishment of branch factories in Western Europe, in anticipation of discrimination against American imports. In view of the outflow of gold from the United States during the last two years or so, even American financial resources are no longer considered to be virtually unlimited. To the extent to which this process affects the American balance of payments it will reduce the ability of the United States to help in the industrialisation of underdeveloped countries.

This aspect of the problem has received little or no attention so far. It is indeed high time for the Governments and public opinion in underdeveloped countries to realise what is at stake. What is happening is that the industrialised Western countries are engaged in reducing their capacity to help, partly by cutting working hours in their industries, and partly by unnecessarily investing in each other's territories instead of reserving their capacity for the countries that need it the most.

It is for the Governments and the Press of the underdeveloped countries to raise a voice of protest against such frittering away of surplus resources. Whenever a leading European or American statesman speaks about help to underdeveloped countries he should be reminded that unless something is done quickly the extent of any possible help is bound to be greatly curtailed. The underdeveloped countries, by showing themselves aware of this situation, and by putting the blame where it belongs, could to some extent exert their influence in the right direction.

A Good Year Ends Badly for Jute Goods

WITH the attainment of raw jute self-sufficiency in the jute year 1958-59, and with the commendable progress made by mills in the modernisation of their machinery, it was generally anticipated that 1959 would herald the end of uneconomic working for the Indian jute goods industry. The expectation has largely been fulfilled. In reviewing the working of the industry last year, Mr Kenneth E. Tosh, Chairman of the Indian Jute Mills Association, has stated at last week's annual general meeting that 1959 has witnessed gains in a number of directions. Exports have been the highest for the last 10 years and the industry has been able to effect an increase in production. Sacking stocks, which were a drag on the market, have been reduced to a remarkably low level. The industry's earnings, too, improved, and hopes have been entertained that, with a continuance of the favourable trading conditions, jute mills would before long be in a sound financial position. But, even before the year was out, these hopes proved to be dupes. And we are now told by Mr Tosh that the factor that put the clock back with the industry is excessive speculation in the jute futures market.

It all started toward the lag end of last year, that is, some time in November. The basic fact was that, mainly because of unfavourable weather conditions at sowing time, the 1959-60 jute crop would not be as large as its predecessor. All sorts of rumours were built around this fact; and, by November, operators in the jute market were freely discussing the possibility of a shortage of raw jute developing toward the end of the current season. This provided ideal material for speculation; and, before many could realise what was happening, raw jute prices were several rupees higher than previous markings. And soon, all in the Indian World of Jute were caught in the vicious circle of raw jute prices chasing goods prices and vice versa. The upshot of all this was that the stability of jute markets was jeopardised and foreign buyers promptly withdrew from the Calcutta market.

What were Government doing mean time? They did take steps to curb speculation; but, by the time they came to grips with the problem, the mischief had already been done. It was toward the end of December that Government, at a hurriedly called press conference, declared that 'uneconomic raw jute prices would damage the position of jute goods overseas. It was officially pointed out that, with the large carryover from the previous season, raw jute supply in the current season would be sufficient to meet all domestic requirements in full. Furthermore, it was announced that licences were to be issued immediately for the import of 2 lakh bales of jute from Pakistan. This clarification and such sanction for import of jute from Pakistan had no doubt a sobering effect; but it also became evident that stability, once disrupted, took a long time to return.

Unless Mr Tosh has made a serious mistake in his assessment of the conditions in the jute goods trade since last November, the inference is inescapable that Authority, whose main responsibility it is to ensure that nothing untoward happens to the interests of this vital

industry, has committed a costly blunder. Mr Tosh puts it rather mildly when he says that mistakes in timing of the remedial measures are chiefly responsible for the present high level of raw jute prices. It may be argued that Government through the Forward Markets Commission, which is directly responsible for the proper working of the futures market in jute, had taken steps to curb speculation. It is true, the East India Jute and Hessian Exchange imposed margins in quick succession two or three times within the space of a fortnight. All the same, it is a sad commentary on Government's ability to cope with the situation. The fact that the special margin proved as fuel to the raging fire of speculation shows that the motive force in the jute market was an apprehension of a shortage—an apprehension which had gained wide acceptance by the middle of November. Evidently, Government were pitifully slow in finding out the root cause of the speculation.

The effect of this lapse on the part of Government has been disastrous to the industry. Of course, abiding interest is evinced by Authority in the jute industry. None can deny that, but for the concerted efforts taken by Government, raw jute production in India would not have recorded such resounding progress in the span of about 10 years. In other directions also, particularly in the matter of modernisation, Government help is being made available in sizable measure. But all this does not absolve Government of their patent failure last year in stemming the tide of unbridled speculation which so grievously has hurt the industry. To say that a handful of people in the jute market have been responsible for the serious dislocation caused to so vital an industry as the jute goods industry is to admit that there is something woefully inadequate with Government's jute policy.

Even with the most favourable trading conditions, the jute industry has to labour hard to market its production. As a predominantly export industry, it is governed by, besides domestic developments, developments in the principal consuming countries overseas. Mr Tosh has drawn pointed attention to the continued difficulty in marketing sacking goods abroad in view of the growing competition from other jute goods manufacturing countries, especially from Pakistan. Although the Pakistani industry is still in its infancy, it is growing fast. Moreover, Pakistan has the added advantage of having good quality jute and its mills can get jute at a much lower cost than the Indian mills because of the higher acreage yield obtained in that country.

Hessian has fared well, and there is every indication that it will continue to be popular in the US, its principal market. Thanks to the unremitting publicity conducted by the IJMA, hessian has very much improved its position with American consumers. The finding of new uses for hessian also promises to bring good custom from this country. But, even here, the gains will be nullified if price stability is not ensured. It would appear that, if there is one factor that can surely put hessian in the good books of the American consumer—or, for that matter, in any other country—it is price stability.

"The Wise Man in his attitude towards the World has neither Prejudices nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

A lasting remedy, of course, lies in having an adequate supply of raw jute at equitable prices for the mills. It is equally important to ensure that the cultivator gets an equitable return for his labour. Allowance has naturally to be made for the uncertainty of weather. But the main aim of jute production should be to increase the yield per acre. This will greatly simplify the task of finding a price level for jute which is at once equitable to the industry and the cultivator. In the meantime, it is incumbent on Government to keep in close touch with the jute situation in the country from day to day and take appropriate measures to allay all fears about a shortage of raw jute. Mr Tosh has laid down the wholesome principle of extending price support when there is a bumper crop and liberalising imports when a shortage is apprehended. Government's task is very much simplified, now that the Committee of the IJMA have agreed in principle to endeavour to operate a regular support scheme for raw jute prices, should they fall to levels which may discourage future sowings. If unbridled speculation is not to sully the good name of Indian jute goods in overseas markets, it is up to Government to ensure that stability of the jute markets is not disrupted by factors which are well within their control.

Growth Trends in Union Finances—1

NOW that the Central Budget for the last year of the Second Plan has been presented to Parliament, it would be opportune to bring into focus certain long-term trends which have been in operation in the structure of Union finances. In this the first instalment of the study are presented the trends in respect of tax revenue and non-tax revenue, expenditure on defence and civil administration in relation to total revenue, tax revenue in relation to national income and per capita incidence of taxation. Since the analysis, done here through a series of statistical tables specially constructed for the purpose, covers such long periods as 1948-50 in some cases and 1948-61 in some others, the trends disclosed may be validly assumed to be present, in more or less the same form, during the period of the Third Plan. It is hardly likely that long-term growth trends in respect of tax revenue, for example, will be significantly reversed or modified during a short period of five years.

The most important or, what may be called, the basic trend disclosed is that an increasing proportion of the increasing national income since 1948-49 has been appropriated by way of taxation by the centre. It will be seen from the following table (No. 1) that the increase is about a third in either case. But, while this has meant a near-doubling of tax revenue over the decade, it is not worthy that only about 10 per cent of the additional income generated in 1957-58 as compared to 1948-49 has been appropriated by way of additional tax revenue. The chances of this 10 per cent being reduced in the next five or six years are slender; if anything, the growing compulsions

of defence and development expenditure may well justify its being increased. But, even at the present rate, tax revenue may be expected to reach a level of about Rs 1,000 crores by the end of the Third Plan.

TABLE 1

Year	National Tax Revenue Income at (including cost current of collection) (3) as prices (Rs crores) (Rs crores) per cent of (2)	1	2	3	4
1948-49	8,650	317.3	3.7		
1949-50	9,010	309.3	3.4		
1950-51	9,530	353.6	3.7		
1951-52	9,970	456.6	4.6		
1952-53	9,820	365.0	3.7		
1953-54	10,480	343.1	3.3		
1954-55	9,610	379.8	4.0		
1955-56	9,980	407.0	4.1		
1956-57	11,310	489.8	4.3		
1957-58	11,360	571.6	5.0		
1958-59	11,570	549.8	...		
(at constant prices)					

Another noteworthy trend is the increasing importance of non-tax revenue in the structure of union finances. It will be seen from Table 2 hereunder that the proportion of non-tax revenue in total revenue has maintained a steady upward trend especially since the close of the First Plan. In view of the increasing activities of State enterprises, it may not be surprising if non-tax revenue comes to represent as much as 25 per cent of total revenue by the end of the Third Plan. In which case, total revenue may be expected to reach a level of about Rs 1,300 crores in 1965-66.

TABLE 2

Year	Total revenue (Rs crores)	Non-tax part (3) as per of total revenue nue (Rs crores) (2)	1	2	3	4
1948-49	366.3	49.0	13.4			
1949-50	344.7	35.4	10.3			
1950-51	403.7	50.1	12.4			
1951-52	507.4	50.8	10.0			
1952-53	408.5	48.5	10.6			
1953-54	390.6	47.5	12.2			
1954-55	431.6	51.8	12.0			
1955-56	478.4	71.4	14.9			
1956-57	581.4	71.6	12.8			
1957-58	672.6	101.0	15.0			
1958-59	670.2	120.4	18.0			
1959-60	740.7	138.8	18.7			
(Revised)						
1960-61	802.7	153.3	19.1			
(Budget)						

So much on the revenue side. On the expenditure side, the most conspicuous trend is that an increasing proportion of the increasing revenue has been accounted for by defence and civil administration. It will be seen from Table 3 hereunder that while these heads together accounted for about half of total revenue in 1948-49, they have come to account for about two-thirds in recent years. A fair approach to this question of increase in expenditure would be that security has an indirect developmental import and that civil administration in a planned economy is virtually synonymous with administration of developmental and social services. Where defence industries are, also directly related to development and the civil administration is called upon to perform a whole range of additional developmental functions besides the usual ones, it would be difficult to draw a line and separate the expenditure on defence and civil administration into two distinct categories—namely, "development" and "non-development". It is too late in the day to expect a

reversal of this trend of expenditure on defence and civil administration even if it is assumed that such expenditure comes wholly under the "non-development" category. And it is also difficult to believe that this expenditure will range between half and two-thirds of total revenue instead of between two-thirds and three-fourths during the Third Plan period.

TABLE 3

Year	Total Revenue (Rs crores)	Defence expenditure and civil administration* (Rs crores)	(3) as per cent of (2)
1948-49	366.3	190.3	52.0
1949-50	344.7	197.5	57.3
1950-51	403.7	228.4	56.6
1951-52	507.4	242.6	47.8
1952-53	408.5	249.6	61.1
1953-54	390.6	271.1	69.2
1954-55	431.6	282.0	65.3
1955-56	478.4	285.4	59.7
1956-57	581.4	335.2	57.7
1957-58	672.6	450.4	67.0
1958-59	670.2	470.6	70.2
1959-60	740.7	505.3	68.2
(Revised)			
1960-61	802.7	569.1	70.9
(Budget)			

*Civil administration includes superannuation allowance, stationery and printing and civil works as these are directly related to it.

Thus far the long-term trends in respect of national income, tax revenue, non-tax revenue and expenditure on defence and civil administration have been presented without any reference to growth rates as such. To complete this part of the study it is necessary to work out, on the basis of the index numbers constructed in Table 4 hereunder, the average annual rates of growth, over the last decade, of national income, tax revenue, non-tax revenue, etc. Calculations based on these index numbers show that national income has registered an average annual rate of growth of 2.7 per cent in the period 1948-57 and that tax revenue, non-tax revenue and expenditure on defence and civil administration have registered rates of growth of 7.2 per cent, 13.6 per cent and 13.6 per cent per annum respectively during the period 1948-50.

TABLE 4

Year	Index Number of National Income at Current Prices	Index Number of Tax Revenue	Index Number of Non-tax Revenue	Index Number of Expenditure on Defence and Civil Administration
1948-49	100.0	100.0	100.0	100.0
1949-50	104.2	97.5	72.2	103.4
1950-51	110.2	114.6	102.2	120.0
1951-52	115.3	143.9	103.7	127.5
1952-53	113.5	115.0	88.8	131.2
1953-54	121.2	108.1	96.9	142.5
1954-55	111.1	119.7	105.7	148.2
1955-56	115.4	128.3	145.7	150.0
1956-57	130.8	154.4	146.1	176.1
1957-58	131.3	180.1	206.1	236.7
1958-59	...	173.3	245.7	247.3

Here, the growth rate in respect of national income would have to be interpreted with some caution because the figures refer to national income at current prices which are subject to fluctuations from year to year. Since figures of tax revenue, non-tax revenue, etc., have necessarily to be related to figures of national income at current prices, the growth rate of the latter has been worked out accordingly. Actually, as far as national income is concerned, its growth at constant prices is a more reliable index of the progress of the

economy. It may be recalled here that the average annual rate of growth of real national income in the period 1948-59 has been worked out as 3.4 per cent. (Vide: Leading Article entitled "Decade Growth of National Income" in the issue of "Indian Finance" of October 24, 1959.)

Broadly speaking, over the long-term, the growth of tax revenue is nearly twice as fast as the growth of national income. On the face of it, this may seem to be a disquieting trend from the point of view of the taxpayer. Actually the trend is not so very disquieting if the money burden of taxation is considered in per capita terms. It will be seen from Table 5 hereunder that while per capita money income (as of 1958-59) has increased by about 20 per cent since 1948-49, per capita money burden of Union taxation has not doubled itself but increased only by about 50 per cent. If the money burden of taxation increases with the per capita money income, that is as it should be.

TABLE 5

Year	Per capita income at current prices (Rs)	Per capita money burden of taxation (Rs)	(3) as per cent of (2)
1948-49	246.9	9.1	3.7
1949-50	253.9	8.7	3.4
1950-51	265.2	9.8	3.7
1951-52	274.0	12.5	4.6
1952-53	266.4	9.9	3.7
1953-54	280.7	9.2	3.3
1954-55	254.2	10.0	4.0
1955-56	280.6	10.6	4.1
1956-57	291.5	12.6	4.3

1958-59	297.0	13.8	4.7
(guestimate)			

India's Debt is Growing

By a Special correspondent

NOT the size or the composition of India's public debt but the expansionary trend will excite comment. Critics may find the trend disturbing, but little can be done to arrest it. There is no statutory ceiling (as in the USA) to the debt contracted by the Union and, in this case, it may be said the sky is the limit. The Budget papers issued last week analyse the debt in the bare, official style. The debt is expected to rise from Rs 4,842.78 crores at the end of 1959-60 to Rs 5,263 crores at the end of 1960-61. India's sterling debt is insignificant, but the loans taken from the USA are still rising. As on March 31, 1961 the debt to the USA will stand at Rs 342.74 crores. The loans from the World Bank and the Export-Import Bank will increase, as also from Japan. There will be an addition of Rs 115 crores to the net obligations, raising the external debt from Rs 519.74 crores to Rs 810.47 crores.

Before the Swatantra Party started operations, some of its leading lights were concerned over the growth of external debt, the consequent strain on the balance of payments, and the new "drain" arising from the new dollar debt. All that may be mere financial history, but the fact remains that, while external assets are down, the liabilities certainly are going up. The Budget memorandum in its cold recital states that the pre war total of Rs 949.77 crores has been left a long way behind and the growth of public debt is now barely matched by the rise in rupee securities held as reserve for the paper currency. As is known widely, the external reserve in gold or sterling stocks is small and the country is reconciled to the currency resting largely on the Government's credit. New borrowing at home will be matched by the rise in other obliga-

tions, including the depreciation funds and the deposits received by the Government. These extra-budgetary funds are useful for supporting the gilt-edged market, which is now subdued owing chiefly to rumours of a rise soon in the Bank Rate. But the present vast figures relating to debt outstanding suggest that the Government have given many hostages to fortune and will be averse to raising the cost of fresh borrowing. The States are in a way in good company and their creations—the Electricity Boards, Financial Corporations, and Mortgage Banks—have an eye on the capital market. The competing claims of the borrowing parties certainly will lead to staggering in the so-called slack season. But, to the average citizen of India, it is plain that Ike's visit means more borrowing in dollars and Mr K's recent visit also means an addition to debt—of course, for approved purposes. A lot of money has been borrowed for creating assets and publicly owned property means something like security for the holders of Government loans. The railways, like the investments in the public sector, are a commercial asset but the Government still list the Rs 300 crores due from the Pakistan government as an item among the assets. But the Government are also frank enough to admit that the unproductive debt will have risen to a total of Rs 991 crores as against the pre war figure of Rs 183 crores. Much of this increase is attributable to grants made to the States which are always in need. But new offices for the revenue establishment or the defence department contribute in a way to the power and earning capacity of the Republic.

Enough has been said already by critics about Mr Desai's proposal to raise money by the issue of Treasury Bills. The inflationary

aspect upsets the worrying kind among our MPs. And the trend of interest rates abroad makes it difficult to assume that new loans contracted abroad for Rs 115 crores can be raised on the same modest terms as before and India, in order to settle the canal waters dispute, must raise money; it cannot get gifts even for the purpose of a pact blessed by the World Bank—the big lender who lays out borrowed money, in dollars, sterling, guilders, or Swiss francs—frankly to promote peace by economics. Borrowing from the UK is on the way. But how is it to be put through when there is already a loan from a British syndicate of banks? And there is also Mr Heathcoat-Amory's policy of tighter credit at home to keep down inflation. That is a point to remember, when it is presumed that India's credit rating is good, as the visiting mission of international bankers is told to bear in mind.

The figures available indicate also, that capital invested in commercial concerns owned by the Government will go up from Rs 460.14 crores to Rs 533.78 crores. This may be sign that the non-tax revenue in future will really go up, but too much should not be read into this prospective addition to income, when it is noted that the surplus of liabilities over assets will rise to Rs 1114.82 crores. This may mean that interest charges will absorb about Rs 45 crores per annum and the taxpayer will have to pay for regular annual debt service alone, a sum that is growing like an oak tree. This is equal to a year's net income from the Railways. Though Government intend to pay off debts in order to raise new loans, taken for the Plans at a lower rate in the past, the interest represents a real burden. The Union Government must feel they are lucky in having

taken over the Hyderabad loans and bless Sir Archibald Rowlands for conversion of 3½ per cent Paper into a 3 per cent loan repayable only after September 1, 1986.

There is obviously no moral to the story of mounting debt and growing interest burdens. It is not a sequel to the war, since India had managed to pay back vast sums due to the UK in 1942-45 and it is a fair comment that post-war strains have imposed additional liabilities. The cost of annual service is up from Rs 60.14 crores to Rs 69.59 crores in the latest Budget estimates. Suggestions for economy will certainly sound hollow in the face of this rising liability, and the public should realise that Rs 5 crores provided in the Budget framed every year for reduction or avoidance of debt is a trifle compared with the recurring addition to debt, and consequently to interest charges. Of course, if a lot of people are holding government loans, the social fabric is strong, but the denunciation of the rentier class will also get stronger. There is yet no condemnation since the big creditors of the Government are the big banks and the LIC, whose main concern is to pay out less than they receive and to lend the surplus to the Government for the sake of interest. The debt outstanding may not be very big in comparison with a year's revenue, but the succession of deficits makes the steady increase in debt ominous. Some MP may well raise the issue of an ever-increasing debt, though it is easy to say that, by borrowing, the burden is passed on to posterity whose claims are negated by the simple fact that it has no vote. And all that can be said about vigilance in borrowing and arranging for the best terms may sound thin to an administration facing grave new tasks in relation to national security.

In 1959, the first year of its First Five-Year Plan

the Life Insurance Corporation of India has completed new business of over

Rs. 428,00,00,000

Hand in hand with the increasing prosperity of the nation, the Life Insurance Corporation has made rapid strides in fulfilling its firm determination to provide financial security and all-out life insurance service to more people in a larger number of places.

By utilising life insurance to provide essential funds for marriage, education and start in life of their children, for a continuous income for the family if the unexpected happens and for a comfortable old age for themselves, people have realised that...

there's no substitute for Life Insurance

Life Insurance
Corporation of India

NATIONAL NOTES

Prices and the Plan

The problem of prices dominated the general discussion on the budget, and rightly too. For the movement of prices over the last year has been such as to cause grave concern regarding the cost of planning. Over the first four years of the Plan, the index number of wholesale prices had increased by 25.4 points or 27.5 per cent, from 92.5 in 1955-56 to 117.9 in December 1959. The index had further increased by two more points to 119.9 by the second week of past month. A comparison of the figures would indicate that prices have overtaken the growth of national income and masked the gains in national output. During 1955-56 to 1958-59, per capita income, at 1948-49 prices, had only increased from 110.8 to 117.7 or slightly more than six per cent against increase of over 20 per cent in wholesale prices over the same period. The fall in real income and the consequent hardships press with exceptional severity on the fixed income groups of the middle class. These lead in turn to inflation of the pay bill, which has already pushed up the cost of planning. The claim that the total outlay on the Plan will be only Rs 200 crores below the original target will have to be viewed against this background. The Pay Commission's recommendations have already pushed up the cost of Civil Administration by about Rs 50 crores without satisfying the Government employees.

And now the Government have to deal with what the Finance Minister described as the "fantastic demands" of the State Bank employees.

It was perhaps inevitable in the circumstances that critics of Government in Parliament should fasten on the scale of deficit financing as the obvious cause of the price increase. But the position in a developing economy is more complicated, and the Finance Minister could easily show that there is no necessary connexion between fluctuation of prices and expansion of Treasury Bills. Changes in the level of population, production, investment and imports are all relevant to the problem of prices as the Finance Minister had explained earlier to Parliament's Consultative Committee on Finance. An objective assessment would have to take all these factors into consideration. The country, however, will expect of the Government and the Finance Minister something more than an objective assessment. The crux of the problem, as the Governor of the Reserve Bank pointed out last month, during the Golden Jubilee of the Economics Department of the Calcutta University, is how to balance the development of the economy at an appropriately rapid rate with the maintenance of the stability of the currency.

The fact which the Finance Minister has emphasised, that the rise in prices in India had been less than in many other countries, cannot be regarded as a source of comfort. A comparison of the impact of prices in India and other countries, should take prices along with figures of national income or, to be more exact, the changes in the net personal incomes after taxation. For example in the United Kingdom, prices have increased by 66 per cent in the last decade against 13 per cent in India. But still, Mr Macmillan was able to win a hotly contested election on the strength of the slogan: "We never had it so good". Even the brashest politician would hesitate to put forward a similar slogan in India.

Allocation for Agriculture

The need for giving top priority to schemes for increasing agricultural output in the Third Plan has been rammed home by the experience of the Second. There is now general awareness of the inter-relation between the levels of agricultural output, prices and investment. But the scale of outlay, necessary to secure the agricultural front, remains a matter for tough bargaining between the Ministry of Agriculture and the Planning Commission.

The Ministry which has the assignment of boosting agricultural production to 110 million tons by 1967, that is by 35 million tons during the five years of the Third Plan, has calculated the requirements on the basis of outlays and achievements during the Second Plan. An outlay of 294 crores on development of agriculture during the Second Plan is expected to increase output by ten million tons. On this basis it is estimated that the minimum provision for agri-

culture during the Third Plan should be Rs 1000 crores, apart from the provision of Rs 92 crores for the package deal. But agriculture is a field in which it is not possible to establish close correspondence between input and output. The vagaries of the weather and of biology can play funny tricks with arithmetical calculations. So there is scope left for argument on the size of the allotment which will have to be fitted within the total resources in sight.

The details of the allocation and the methods employed to increase production are at least as relevant as the size of the total allocation. The total provision is intended to cover a variety of programmes, including fertilisers, minor irrigation, soil conservation, land development and research, seed farms, storage, plant protection, agricultural implements and so on. While there may be room for avoiding wastage under these individual programmes and for choice of comparatively less costly methods, the Ford Foundation Team's report has repeatedly stressed the need for a comprehensive approach to the problem of agricultural planning. And that is the rationale of the package programme. Still it should be possible to economise on the total outlay, by integrating the agricultural programme with Community Development and the programme for the development of community assets by utilising unemployed resources of rural manpower.

Public Enterprise Accounting

There are at present 45 Government companies, 14 Statutory Corporations, eight Committees, seven Boards, three Councils, three Akademis and the Khadi and Village Industries Commission which come under the category of public undertakings, and more are likely to be added to the number. These have been set up with the money provided out of public funds, for undertaking, commercial, financial or promotional activities on behalf of the Government. A rough estimate places the total investment on these undertakings at over Rs 765 crores. Are the existing methods of furnishing information to Parliament on their programmes and working results adequate and satisfactory? The question is answered emphatically in the negative by the Estimates Committee.

The Committee in its 73rd report points out that, under the existing arrangement, Parliament does not get a comprehensive picture of the undertakings. Consolidated information is not available, either regarding total investment made by the Government in the public undertakings, or about the working of the undertakings and its results. Except in the case of four public undertakings, others have no legal obligation to present their budgets to Parliament. Statutory bodies like the Port Trusts, the Reserve Bank and the State Bank are not required to submit their accounts to Parliament. The reports of companies in-

which Government has a substantial stake, even though they do not come under the category of Government companies, (that is companies in which Government holds not less than 51 per cent of Share Capital) are also not required to be laid before Parliament. The reports when they are required to be submitted are often delayed and the information furnished is inadequate.

Under the Companies Act, undertakings in the private sector are obliged to hold annual meetings within nine months of the close of their financial year, and their shareholders get the annual reports and statement of Accounts at least three weeks before that date. In the case of the State undertakings, the time taken in laying the reports on the Table of the House ranges from four months to two years eleven months. In the majority of the cases the reports are delayed by over one year. In the USA public enterprises are obliged to present their reports to Congress within the time limit of six and a half months after the conclusion of the fiscal year. While there is no specific time limit in the U.K., the reports are usually available to Parliament within six months.

The Estimates Committee has recommended that the reports and accounts for the previous year of all public undertakings may be laid before Parliament before the general budget for the following year is presented. They have also reiterated a suggestion made earlier that, along with the report for the previous year, a performance and programme statement should also be submitted, as in the usual practice in United States. The obligation to present reports to Parliament will be one of the most effective means of toning up the administrative efficiency of public undertakings.

FOREIGN NOTES

Supplies for Nepal

A new trade pact with Nepal to replace that of 1950 is overdue. Negotiations in Delhi followed the visit of Mr Koirala who is now off to Peking. The transit trade of Nepal must have suffered. The pact of 1950 provided for a Nepali tariff at the Indian level. But import control in India plus high duties and surcharges must operate to the disadvantage of Nepal which can be served only by the port of Calcutta. Nepal's new-found political stability must be sustained by economic growth for which a large supply of consumer and capital goods is indispensable. New Delhi has perhaps recognised the just and pressing claims of Nepal and the duty to maintain special bonded warehouses for goods imported by Nepal via Calcutta, Indian export trade to Nepal is bound to benefit and there is a case for large exports of salt, sugar, tea and tobacco, exempt from excise.

The depreciation of the Nepal rupee has been arrested and Nepal may be able to buy more rice from Burma and piecegoods from Hong Kong or Japan by payment in Indian rupees by exporting more jute or timber to India. The future intake of capital goods or light engineering products may also improve, if the pact takes account of the general needs of Nepal and India's present foreign policy may demand special terms for permitting a landlocked State to get supplies from the nearest source or to get over the prohibitions enjoined by import control in India. The special circumstances of Nepal will entail relaxation of restrictions applied in India and the authorities will have to distinguish between supplies given on credit or as aid by the USA or Russia to Nepal and the purchases made in India. The STC may find new opportunities and adapt Russian trade practices to the trade across the land frontiers. The only point that requires some emphasis at present is that ordinary rules cannot apply and Nepal therefore should be enabled to obtain imports via Calcutta or Bombay, be it paper, sugar or liquor and woollens without undue concern for Indian import policy. A closed economy is a luxury that Nepal cannot afford at present.

Ceylon's Import Rules

Ceylon's import policy distinguishes between the dollar area and the sterling group. While imports from the rouble bloc require an individual import licence, there

seems to be a restriction on imports from the ECM area also since December 1959. The OGL applies to grains, bran and pollards, cattle-feed as well as meat and drink. The Island lets in coffee as well as coriander and fruits and fish without any excessive concern for either exchange stability or home production. The free entry of infant foods calls for mention in view of the quota restrictions still obtaining in India. The absence of Prohibition explains the inclusion of wines and spirits in the schedule of permitted items. Far more important for India is the inclusion of tobacco, both manufactured and unmanufactured. According to official figures (for the first half 1959-60) Ceylon buys bidi tobacco as well as a small quantity of chewing tobacco from India. But it is not apparently buying cigarettes or cigars. The explanation may be in the rise of local factories.

The licensing policy in Ceylon is not governed by any special concern for the indigenous angle as in India; on the other hand, discretion is vested in the controllers to issue licenses to imports, though in the case of coir or furniture no permission can be had and, in the case of soap, textiles and footwear, licences are reserved for registered Ceylonese traders only. In this respect, Ceylon may be said to follow Burma. But India still exports more than it buys from Ceylon and licensing cannot be criticised harshly. There is a total ban on crackers as also rubber toys but, in the case of stationery, some lines, not manufactured locally, are permitted imports. Ceylon does not seem to prohibit bullion imports, since the Controller is allowed discretion in authorising imports of gold or gold coin, perhaps for specified or proved needs. In regard to textiles, the policy of curbing the import of lungis is continued but piecegoods, except hosiery of Indian origin can enter while there is an absolute ban on the import of goods from the dollar area. And in regard to chillies and dry fish, Ceylon is not only the leading importer of these items from India, but India has made it clear that export policy is governed by other considerations than the needs of the domestic consumer at present.

St. Lawrence Seaw

With the opening of the ice-bound St. Lawrence Seaway little more than a month off, both ocean-going and inland ship lines are looking forward to a banner year—a year which should mean notable gains over the record results of last year, the first of the Seaway's operation.

Final reports show that in 1959 more than 20 million tons moved through the new waterway between opening date, April 25, and its closing on December 3. While this was about five million tons less than had been expected, it was still a full 71 per cent higher than the volume achieved in 1958, when the Seaway

was limited to shallow-draft vessels. Failure to meet estimated tonnage totals is attributed mainly to a sailing season which, because of the weather, was one month shorter than anticipated.

As perhaps was to be expected with the widening and deepening of the Seaway channels, the most dramatic gain last year was made in direct overseas commerce with inland U.S. and Canadian ports on the Great Lakes. According to official reports, total direct overseas traffic last year amounted to nearly 4.6 million tons, compared with less than 900,000 tons in 1958. Based on preliminary data, the traffic for 14 U.S. Great Lakes ports engaged in direct foreign commerce was 3.6 million tons in 1959 as against 600,000 tons the year before.

Looking ahead, shipping men predict that last year's 20 million-ton total of domestic and foreign traffic should be exceeded by at least five million tons or more this year. They agree that the biggest gains in the coming eight-month season will be in bulk cargoes, chiefly grain and ore.

American shippers are particularly optimistic, since last year's lengthy steel stoppage in the United States idled most of the U.S. ore fleet for nearly four months. This left to Canadian carriers the bulk of the iron ore movement from Canadian mines to American steel mills on the Great Lakes.

Another reason for optimism is the possibility of an early opening of the St. Lawrence Seaway this year—earlier than last year at any rate.

Canadian officials usually open the channels around April 15, and it is significant that icebreakers already have smashed through to Montreal Harbour, the eastern entrance to the Seaway.

It also should be remembered that last year, the first of the Seaway's operation, saw the inevitable delays in transit and in the handling of cargo that can be expected to accompany the opening of a new and crowded waterway. Now, with last year's experience behind them, shippers and port officials should be in position to overcome many of the earlier difficulties.

Operators of foreign lines, who profited most from the Seaway last year, are reported planning to place additional ships in the Great Lakes-overseas service this season, and some may be replacing their smaller ships with larger and faster carriers. One American line also is considering using larger and faster ships on its Great Lakes-overseas runs. In all, 1960 is expected to see the greatest number of ocean-going ships on the Great Lakes in the shipping history of North America.

Lending an important boost to the Seaway traffic, of course, has been the remarkable expansion of world commerce generally and of U.S. demand for foreign goods in particular. Last year, U.S. merchandise imports reached a spectacular \$15,300 million, the largest annual total by far, and they are expected to increase further this year. U.S. exports also are expected to gain in 1960, in line with the general economic growth around the world.

STATES NOTES

AP's Industrial Growth

An official note on industrial development in Andhra Pradesh deals with the chances of making the most of the minerals and power supply. Under the Second Plan loans to large industries took Rs 283.72 crores in order to help raise output of paper and sugar. It is hoped to raise output of the paper mill at Rajahmundry to 50 tons a day by getting new machinery from Japan on credit. The installation of a fertilizer plant to meet the present demand for 200,000 tons of ammonium sulphate a year is taken to be urgent. And it may be noted that the private sector, too, is keen and the interest of EID & SF in the production of fertiliser perhaps at Vijayawada may be the reflection of the Government's interest in producing more manure to raise output of sugarcane and tobacco. The Singareni collieries is raising funds for expanding output to 30 lakh tons and the Union Government are obtaining a share in the control of the State-owned company. The present bonus issue to shareholders is a prelude to the virtual take-over of the Company. The Government's ambition to start coir and sericulture industries may excite criticism but all will approve the scheme for manufacture of stoneware pipes through the purchase of the East Coast Ceramics at Rajahmundry or the making of splints for the four small match factories set up in Andhra Pradesh also. The additions and extensions made to sugar factories have enabled Andhra to export sugar to adjacent states and the two new co-operative mills are drawing machinery from the KCP, which has improved its large workshop in Madras City.

Wage Board's Impact on Madras Textiles

Implementation of the recommendations of the Textile Wage Board would result in the closure of a majority of units of textile mills in South India and would be the starting point of acute and acrimonious industrial disputes in the surviving units.

This is the view very strongly held by the Southern India Millowners' Association, Coimbatore. The Association (spokesman, Mr R. K. Kandaswamy, who is also the Chamber's vice-chairman, in a press statement contended that the wage Board's recommendations were very controversial, vague, and

particularly "discriminatory to Madras State."

Mr Kandaswamy's statement is said to have been issued on behalf of the Association of which he is the Vice-Chairman. He pointed out that the Wage Board had not taken into consideration the fact that, in Madras State, for every thousand spindles, the mills employed fourteen workers as against 11 in Bombay and Ahmedabad up to spindle point. In addition, seven reelers were employed, he said, for every 1,000 spindles. This was very peculiar to the spinning industry, he stated, on account of the nature of the consumer requirements of the handloom industry. In Bombay and Ahmedabad, which have composite mills, there was no necessity for such additional labour.

It was necessary to rationalise, but he asserted the Wage Board "has failed to make the increase in wages conditional upon the extent to which rationalisation is accepted and implemented by the employees." He avers that the Madras State textile industry would be hard hit and could not withstand and survive the impact of the implementation of the recommendations of the Textile Wage Board.

Furthermore, Mr Kandaswamy's statement emphasised that the Board's report has failed to take into account the very large number of workers employed in the South as compared to Bombay or Ahmedabad. In Madras State, industry is predominantly spinning industry catering to handlooms and providing special kind of packing required.

A third of the total labour force was reelers. He contends that, to equate wages paid in Madras State with those paid in Bombay or Ahmedabad, would be inequitable to the Madras area in view of the large number of workers in Madras State.

Nor had the handloom industry been considered by the Wage Board, Mr Kandaswamy charges, and asks whether the Board had ever taken into account the factor of the handloom industry itself taking on the increase in yarn prices. It was a fact well known that the handloom industry had proved itself incapable of meeting any increase in the price of yarn resulting even from market fluctuations. Therefore, any substantial increase in yarn prices consequent to the liberal wage increase recommended by the Board could not be borne by the handloom industry.

Possibly, this oversight was due to the absence of any handloom representative in the Board. The Southern India textile industry looked forward to the Government of India taking a realistic view of the situation, but Mr Kandaswamy records with regret the serious repercussions likely to be caused by the industry's acceptance of the recommendations.

The Southern India Millowners' Association has a membership of 100 mills with 28.81 lakh spindles and 8,826 looms. This Association is organising an urgent meeting of representatives of all mills in Madras and neighbouring States to discuss the situation arising from the acceptance of the report by the Government.

Cumbersome Labour Laws

Comments on India's labour laws from foreign experts have always been unwelcome to the authorities, but the outspoken view that labour legislation in India was being enacted too fast and that it was cumbersome, by Professor Charles Orr of the International Labour Organisation, should have been quite embarrassing to the authors of the nation's labour codes.

Prof. Orr expressed some frank views at the meeting of the Managing Committee of the Federation of Andhra Pradesh Chamber of Commerce and Industry at Hyderabad last week. He said that, in India, there was so much legislation in labour that neither the employers nor the employees, nor the labour officers themselves clearly understood and knew them. He told the meeting of the complaints from labour leaders themselves that the State employer units were worse than the private sector. At the same time, he also spoke of mediaeval conception of the dignity of labour entertained by some employers supposedly representing advanced types.

It was not far wrong to think, he believed, that the Government leaders themselves were as much in need of education as the workers. Workers were human and needed to be treated as such, and he had to state this because many Government leaders did not trust workers to make up their mind.

What was the type of workers' education? He answered this question by saying that it should be toward minimising the strikes. India was a country beginning to get industrialised with frequent strikes by workers. Worker-teachers from among the workers trainees should be able to inform their coworkers as to the interests of consumers (as also the social and national interests).

It was Prof. Orr's considered view that workers' participation in industrial management could not progress fast in this country. It might be, of course, desirable, but it appeared to him that workers were not prepared for that task yet. Rationalisation and standardisation should grow apace without detriment to labour progress. No unemployment should result through standardisation. Industrial relations were well organised and honest in Europe, as to make the Workers understand the need for both rationalisation and standardisation for high quality production.

Contrasting labour in India and America, Prof. Orr said that in America workers were so well paid that they did not bother themselves about politics. Not did the American Government interfere with labour affairs. Practically no labour legislation was there in America. The task of the United States Government was only to ward controlling quality and not quantity.

Fast industrialisation would generate a new kind of industrial workers who would pose a problem to the State. He advised more fertilizer factories for India for a balanced economy rather than steel plants. It was his view that India could export its iron ore to Japan and import steel at rates cheaper than the Indian manufactured steel. The investment on fertilizer factories, would get far higher returns than from steel factories as fertilizer was far more important to India at present than steel plants.

Shipping appears a depressed industry and shipping shares are out of favour at present. But over half the Indian tonnage is composed of fairly new vessels less than ten years old, and only 15 per cent can be described as middle aged. Additions to tonnage are still being made and the total registered may go up to 845,000 tons as against 744,000 tons at the end of 1959. It is known that these vessels are on the run to the Gulf and one small refrigerated vessel will operate shortly as a banana-carrier. This will be welcomed by the oil companies, too. A fairly high proportion of the present fleet is engaged in foreign trade, but the complaint made by ship-owners is against the present level of rates and the absence of any reservation of Government cargo for Indian bottoms, according to the current practice in Brazil. Cheap loans for buying ships are in vogue in Belgium which makes new capital available at 1 per cent for buying coastal vessels. Lower building costs and careful buying of used ships may help to raise India's present low tonnage, but it is the diversion of railway traffic that will really help coastal vessels (307,000 tons total) to earn more soon. In spite of safeguards devised by the Government, the operating results of shipping companies have been below expectations and the Government, as a big creditor, should be in a position to restore capacity to repay. The improvements to ports may not help much when import trade is substantially lower at present. The shipping interests are agreed at present that policy should be shaped by the persistence of keen competition and the rise in working costs in this industry.

Depressed Industry

Shipping appears a depressed industry and shipping shares are out of favour at present. But over half the Indian tonnage is composed of fairly new vessels less than ten years old, and only 15 per cent can be described as middle aged. Additions to tonnage are still being made and the total registered may go up to 845,000 tons as against 744,000 tons at the end of 1959. It is known that these vessels are on the run to the Gulf and one small refrigerated vessel will operate shortly as a banana-carrier. This will be welcomed by the oil companies, too. A fairly high proportion of the present fleet is engaged in foreign trade, but the complaint made by ship-owners is against the present level of rates and the absence of any reservation of Government cargo for Indian bottoms, according to the current practice in Brazil. Cheap loans for buying ships are in vogue in Belgium which makes new capital available at 1 per cent for buying coastal vessels. Lower building costs and careful buying of used ships may help to raise India's present low tonnage, but it is the diversion of railway traffic that will really help coastal vessels (307,000 tons total) to earn more soon. In spite of safeguards devised by the Government, the operating results of shipping companies have been below expectations and the Government, as a big creditor, should be in a position to restore capacity to repay. The improvements to ports may not help much when import trade is substantially lower at present. Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

dred per cent. There was, therefore, some justification for Mr Desai's description of the demands as "fantastic." Presumably, the employees themselves have framed their demands, not on the basis that they were minimal, and a rather liberal allowance of bargaining elbow room has been made. Subsequently, there were talks between the federation and the management, and according to Mr Desai, the employees were told that their demands were completely unrealistic, and that they should frame an order of priority in their demands so that the matter may be further examined. Mr Desai also avers that this was not done, but negotiations were still going on. Some time in November last year, the federation felt that there was no further room for negotiation, and passed a resolution asking the management to agree to voluntary arbitration; they also asked for interim relief that would have involved an expenditure of Rs 2½ crores. On the question of arbitration, the management, according to Mr Desai, said that the question should be considered, not in isolation but as part of a general question of the entire banking system. Employees of other banks had also served similar charters in their employers, and therefore Government were thinking of devising a machinery for dealing with the entire question. Meantime, the strike notice was served and, during further discussion between the management and the federation, it would appear that the management said that, since it was the employees' own view that negotiations had failed, it could not resume them without consulting the Government. On consultation, Government said that negotiation should continue, but that a reasonable basis for negotiation should be determined. No such basis was afforded by a demand that involved a further annual outlay of Rs 4½ crores. On this, apparently, the strike was precipitated. It was said by Mr Khadilkar that the strike was provoked by the management taking the stand that there could be no negotiation unless the demands were withdrawn. Mr Desai repudiated this, and said, "We can never say 'no' (to negotiations) however unreasonable the demands may be." But he also added that he would not accept unreasonable demands. He further made it clear that there could be no negotiation until the strike was

called off. Subsequently, the employees offered to call off the strike "if they get a written undertaking to resume negotiation and arrive at an amicable settlement within seven days failing which the matter should be referred to arbitration." As I write, reports in the press say that Government are to announce shortly their decision on the question of suitable machinery for dealing with the demands of all bank employees.

I have set out in some detail the background of the dispute the more easily to draw the morals. First among these is the tortuous equivocation and quibbling that emanate from both sides on such occasions. The Finance Minister is ready to negotiate, even on unreasonable demands, but he says in advance that he will not concede unreasonable demands. There is, I suppose, a distinction of a subtle sort embedded here, but practical people may not see it. Likewise, the employees are willing to meet management halfway by not insisting on the charter, provided they get an assurance of a "sincere" desire to settle the dispute within seven days, failing which there should be arbitration. How they expect this offer to be accepted in this form is difficult to see, for, arbitration has already been ruled out by the Finance Minister except in the context of the entire bank-

ing business. Of course, all this is the familiar cut and thrust of the strike game. In fact, the reported desire to devise an arbitration machinery for all bank employees' demands is probably authority's riposte for the employees' offer. In that they have tacitly given up the charter of demands as a basis of negotiation, but they insist on safeguarding the rear by eventual arbitration, should negotiations on the new basis fail. Of course, Government's offer of a general machinery for arbitration meets their wishes only halfway. Indeed, from the State Bank employees' point of view, it may even be a snare: first, there is the inevitable delay involved in the machinery starting to function. Second, and more important, in the context of the entire banking business, the State Bank employees' grievances would appear relatively exaggerated, for, among banking employees, they are probably the best off. Thus, the involutions of the offer and counter offer hide innumerable mental reservations on both sides.

Indeed, on the question of arbitration, authority's equivocation has been unwittingly exposed by different reasons being advanced for its reluctance to submit to the employees' demand for it. Mr Desai was more adroit than the "spokesman" of the State Bank. Mr Desai's short answer to the demand for arbitration was that such a machinery would have to be devised for the entire banking business. This seems so reasonable that none—not even the State Bank employees, who may have thus been hoisted with their own petard—can demur on principle.

William Jacks & Co. Ltd.

(Incorporated in England. Liability of Members Limited)
CALCUTTA BOMBAY MADRAS NEW DELHI

But the State Bank's own explanation as reported in the press was more specious. It was explained that "it was not possible for the bank as a public-owned institution to agree to voluntary arbitration as this would take away the rights of Parliament, Supreme Court and the Government to review the arbitrator's award—a right which they had retained even in matters which were adjudicated by a Tribunal under the Industrial Disputes Act." Mr Desai himself does not mention this reason, and, in his re-

ported readiness to think of machinery for considering the charters of all bank employees, this particular argument seems to have been abandoned by implication. And yet, the fact that it should have been advanced shows a crucial ambiguity in authority's attitude to such questions. Strictly speaking, there is no reason why a public-owned bank should, in labour-management relations, have special considerations. In the past, special "awards" have been devised for other bank employees, and the bankers in the "private

sector" can legitimately ask why the State Bank should be immune. Indeed, theoretically and in other contexts, Government (in the person of the Labour Minister) have said there should be no distinction between workers in public and private undertakings. And yet, when it comes to the sticking point a (not often openly avowed) different criterion is invoked. What is perhaps even more glaring is that, in situations in which a member of the private sector is embarrassed by precisely such situations, authority has been all

too ostentatiously keeping aloof. Ability to shoulder the burden, inelasticity in earning capacity and the legitimate interests of the other partner in the enterprise—the shareholder—are considerations that loom large enough, but do not seem somehow to make any impression at such times.

This, of course, is nothing so crude as an anti-labour jibe. Government's responsibility in securing the legitimate rights of labour is denied only by morons. Nor am I insensible of the fact that, on the whole, Government as an employer have been striving to set an example and succeeding in a large measure. The cheerful acceptance of an additional burden of Rs 55 crores per annum is impressive enough evidence of that. It is also quite true that Mr Desai's description of the demands of the State Bank employees as "fantastic" is not far off the mark. But the principle that increase in wages must have some relation to rise in productivity can be abjured only by the fiscally irresponsible. And this is an argument that has validity in all contexts. Much has been said recently of the dangers of inflation, and it is true that one of the factors that aggravates it is wage increases unrelated to increased productivity. In the coming years, Government's responsibility as an industrial employer will rise enormously. Many of the enterprises to be taken on by them are crucial to the national economy. Strikes in these undertakings would have incalculable effect on the economic health of the nation. It is time that Government took thought to avoid situations like the one created by the State Bank strike.

West German collaboration in India's industrial development has come to cover an expanding field. A vital link in this is represented by the activities of Demag, the 140 year old German company headquartered in West Germany's smoke city of Duisburg. Notable among its achievements was the building of steel plants in Egypt, Korea, the Philippines, Burma, Brazil and Argentina. In India itself, it is with the erection of steel plant that the Demag is associated. Considerable importance thus attaches to the visit of Dr Erich Kemna, the 56-year old Vice President of Demag, to the country. The visit has coincided with the fructification of a joint venture between Demag and Indian enterprise represented by Mr Tulsidas Kilchand, a name well known in the country. Dr Kemna has evinced keen interest in the study of the developments in heavy engineering and its ancillary industries as also of port development. The visit should, therefore, foreshadow further developments in the direction of increased collaboration on the part of Demag in Indian industrial development.

Textile Wage Board

IN accepting the unanimous recommendation of the Central Wage Board for Textiles, Government have urged employees, workers and State Governments to take immediate steps to implement the recommendations. The Board's recommendations relating to wages may be summarised as follows:

1. An increase at the average rate of Rs 8 per month for worker shall be given to all workers in mills in category I from 1st January 1960 and a further flat increase of Rs 2 per month for worker shall be given to them from 1st January 1962.

2. An increase in the average rate of Rs 6 per month per worker shall be given to all workers in mills of category II from 1st Jan. 60 and a further flat rate of Rs 2 per month shall be given from 1st January 1962.

For the purposes of wages, the industry should be divided into two categories, mills in Bombay city and Island (including Kurla), Ahmedabad, Baroda, Billimora, Navsari, Nadiad, Surat Phagwara, Hissar, Delhi, Modinagar, Calcutta City, the whole of Madras State and Bangalore, coming in the 1st Category, and mills in other centres in category II.

The increases in the basic wage are subject to the conditions that the said sum of Rs 8 and Rs 6 shall ensure not less than Rs 7 and Rs 5 respectively, to the lowest paid, and that the increase of Rs 2 from 1st January 1962 shall be flat for all. As regards dearness allowances, it has been recommended that it should be linked to the cost of living index in all centres and further that it should be consolidated with the basic wage at an index which will yield an amount equal to three-fourths of the average dearness allowance of the first 6 months of 1959. The remaining 25 per cent dearness allowance shall continue as dearness allowance and shall have a flexible character.

In making its recommendations, the Board expressed regret that ever after a century's existence the industry is unable to pay a need-based wage. Government's resolution on the recommendations also expresses the hope that having regard to the need for building up a healthy industry and the necessity to maintain industrial peace which will assist in rehabilitation and modernisation of the industry, the industry and employees will take necessary steps to implement the recommendations.

Speaking in Bombay last week Mr Gulzarilal Nanda, Union Minister for Planning and Labour em-

phasised the need for accepting the recommendations of Wage Boards in a spirit of goodwill. In his opinion the lead should come from employers so that employees may follow suit. While admitting that an ideal way to settle employer-labour differences is yet to be devised, Wage Boards, whenever they have been applied with vision, have yielded good results.

Prospects for ready acceptance of the Central Wage Board for the textile industry do not, however, appear to be encouraging. For, the Committee of the Indian Cotton Mills Federation views with grave concern what it terms as the enormous burden which will fall on the industry as a result of the recommendation for a flat increase without linking it with productivity. It has been estimated that the increased wages will impose an additional expenditure of Rs 9 crores per annum and Rs 11.25 crores per annum two years hence. In addition to this, mills in certain areas may have to pay increased dearness allowance as a result of this

allowance being linked with the cost of living index. In a press note, the Committee of the Federation has pointed out that already about 40 units have gone out of production and more mills will find it difficult to continue because of the new financial burden imposed by the Wage Board recommendations.

Government naturally expect that both employers and employees will show a spirit of accommodation in interpreting the recommendations of the Board since the recommendations represent agreed conclusions between their representatives. They have also expressed the hope that difficulties, if any, will be solved by direct discussion between the parties concerned and, if necessary, with the assistance of the State Government concerned. The tripartite Wage Board for Textile industry was constituted in March 1957 with Mr F. Jeejeebhoy as Chairman. Employers were represented by Mr Arvind N. Mafatal and Mr Bharat Ram, and workers by

Mr G. Ramanujam and Mr S. R. Vasavada. The independent members on the Board were Mr Asoka Mehta and Prof. M. V. Mathur.

It is, however, gratifying to note that the Board have emphasised the importance of speedy rationalisation. In their resolution Government have also said that it is very necessary that work loads and working conditions in the industry should be rationalised as early as possible. But as the Board has stipulated that as a result of rationalisation there should be no retrenchment or loss of earnings of the existing employees, difficulties may be encountered. The machinery at Regional and National levels recommended by the Board to deal with disputes arising out of rationalisation may not be able to solve all the problems that may come up. But if the importance of a speedy rationalisation of the industry is fully realised by all sections of the industry, the achievement of the desired result may prove to be surprisingly easy.

Finance
Ministry's Report

THE Union Finance Ministry's Report contains a succinct review of developments in 1959-60. Some of these are highlighted in this despatch. At the outset, it is mentioned in the report that 11,31,533 income-tax assessments were completed during the year 1958-59 against 10,03,134 completed during the year 1957-58. It is not known whether the larger number of completed assessments in 1958-59 reflects greater speed in the work of assessment or it is due to an increase in the number of assessees. It is probably the latter because the number of pending assessments as on 1st October, 1959 is 10,82,103 as against 9,60,315 on 1st October, 1958.

While dealing with the Wealth Tax, the report says that "though the experience of this new measure is still limited, no serious difficulties in the working of the Act were experienced during the year". If there have been "no serious difficulties" in the working of the Wealth Tax Act, it is rather surprising that only 9,490 cases had been disposed of between 1st April and 31st October 1959 out of 45,250 cases for disposal during the year 1959-60, including the cases brought forward from the previous year. This slow pace of disposal probably accounts for the fact that the revenue from Wealth Tax has not substantially gone up even in its third year. Perhaps the work of disposal of Wealth Tax cases will get speeded up in the wake of a recent development, namely, that the constitutional objection raised against the levy of wealth tax on Hindu Undivided Families has been decided by the Bombay High Court in favour of the Department. As for the Expenditure Tax, the total number of cases for disposal in 1958-59 was 7,774, out of which 5,768 cases were disposed of during the year. In spite of such speedy disposal total collections against

the Revised estimate of Rs 1 crore for 1958-59 amounted to only Rs 65 lakhs. It would appear that if this tax, even after two years, has not turned out to be a fruitful source of revenue, it is not due to any slackness in assessment and disposal as in the case of the Wealth Tax.

The Finance Ministry's Report has also dealt with the position regarding the Estate Duty. The Estate Duty (Amendment) Act, 1958, has not yet been brought into force, as Government have not received resolutions under Article 252 of the Constitution from all the States. The Legislatures of ten States have passed resolutions asking Parliament to apply the provisions of the Amendment Act to the levy of estate duty on agricultural lands. The Legislature of Orissa has passed a resolution to the effect that the parent Act should not apply to agricultural lands in the State from 1st April, 1959. In the States of West Bengal and Jammu and Kashmir the original Act does not apply to agricultural lands. In the remaining State of Bihar, the resolution has been passed by the Legislative Council and remains to be passed by the Legislative Assembly. It is proposed to bring before Parliament a Bill to give effect to the resolutions passed by the various State Legislatures after the Bihar Assembly passes the resolution under Article 252 of Constitution.

As for the Gift Tax, 4,778 assessments were made during the year 1958-59 and the collection came to Rs 1 crore. The Finance Ministry's report has referred to the Writ petitions before the Andhra High Court challenging the competence of the Central Government to levy a tax on gifts of agricultural lands. It is noteworthy that this question too has been decided in favour of the Government.

Among the other highlights of the Finance Ministry's Report are the sections dealing with the Economy Division of the Department of Expenditure, the Small Savings movement, capital issues control, and the Economic and Insurance Divisions of the Department of Economic Affairs. Firstly, in the section dealing with the Economy Division it is stated that the Special Reorganisation Unit has carried out, since the reorientation of its methods towards the end 1956, work-studies in 25 organisations, besides a number of ad hoc studies. Besides economies resulting from work simplification and improvement of standards of performance, the direct economies resulting from implementation of the staffing assessments made so far will alone be of the order of Rs 50-55 lakhs per annum. At this rate, it would be idle to expect any substantial economies in the expenditure on civil administration. The scope for such economies seems to be limited in the work-studies of the Special Reorganisation Unit are assumed to be thoroughly impartial and reliable. If they are, there is no reason why they should not be made

available to the public if they have not been published so far.

Secondly, the Finance Ministry's Report has recorded with satisfaction that as a result of the various measures taken to intensify the collections under the small Savings movement, the actual net realisations during the year 1958-59 reached the record figure of Rs 78.5 crores. But at least two of the new measures do not appear to have produced substantial results. For example, under the new Pay Roll Scheme, permitting deductions to be made from the wages, with the consent of the employees in large establishments, factories, etc., for investment in Small Savings, collections have amounted to just Rs 16 lakhs from about 69,000 employees upto 31st December, 1959. Again, under the new Cumulative Time Deposit Scheme, which was introduced with effect from 2nd January, 1959 to encourage regular savings from persons with regular incomes, the total amount collected till the end of December, 1959, has been just Rs 51 lakhs. It may be noted here that the deposits under this scheme are to be repaid with income tax free return of 3.3 per cent per annum on a 5-year account and 3.85 per cent on a 10-year account.

Thirdly, on the subject of capital issues control, the Report says that 468 applications were received during the calendar year 1959. Out of these, 286 were disposed of during the year for a total issue of capital amounting to Rs 206.5 crores. Out of these 286 consents, 196 for a total amount of Rs 174.3 crores related to industrial companies. Of the applications disposed of, 98 involved participation, amounting to Rs 32.8 crores, by non-residents in companies registered or to be registered in India. It may be recalled here that the exemption limit for the issue of capital in a period of 12 months without Government's permission has been increased from Rs 5 lakhs to Rs 10 lakhs with effect from 29th August, 1959.

Fourthly, the Economic Division, which keeps under review the emerging trends in the economy and advises the Finance Ministry on questions of economic policy as they arise from time to time, has expanded its activities. During the year 1959-60 a Tax Research unit has been set up in the Division to assemble and compile systematically the data on taxation both at the Centre and in the States and to study problems such as incidence of taxation, economic effects of taxes and the like. The Public Finance and Planning Section of the Division has undertaken, during the year, special studies in the field of incidence of direct and indirect taxes, on measurement of price and income elasticities of some important consumer goods, on resources for the Plan, on shifts in income, distribution, additional taxation, etc. The sections in Monetary Economics and International Economics have done, during the year, a number of studies

of monetary, banking and foreign exchange trends including assessment of policy in the fields. It is good that the Finance Ministry has referred to the growing volume of research under way. But it is a matter for regret that a Government Department treats the results of its research as "confidential". Surely, there is a world of difference between market research carried out by competing industrial concerns and economic research done in Government Departments. That the results of the latter research with its bearing on public revenue and public expenditure should be available to the public is a reasonable expectation. That will also serve as a damper on biased, distorted or imperfect non-official research which cannot hope to have all the data which the Finance Ministry has.

Lastly, the Finance Ministry's Report has recorded that the final figures of Life Insurance business written by the Corporation during the calendar year 1958 stood at Rs 343 crores as against Rs 282 crores during 1957. During the year 1959, the Corporation has completed new business to the extent of Rs 384 crores, including Rs 8 crores for foreign business. But the business under the Janata policy from 1st January, 1959, to 30th November, 1959, has been just Rs 1.2 crores only.

Iron Ore Export:

The latest agreement between the Government of India and the Japanese Steel Mission for the supply of four million tons of iron ore every year, for a period of 15 years beginning from 1966, from the Bailadila iron ore project, in Madhya Pradesh is a heartening development. It is noteworthy that the Bailadila project, which involves the development of the iron ore mine, a railway line connecting the mine to the Visakhapatnam port and the improvement of facilities at the port, is to be undertaken with the collaboration of the Japanese who are to purchase the ore. The entire project will cost about Rs 82 crores, of which the railway construction part alone will account for Rs 65 crores. Japanese assistance is expected to be of the order of Rs 10 crores. The latest agreement is in addition to another agreement concluded with the Japanese steel mills, under which India is to sell two million tons of iron ore per annum from 1964 onwards for a period of ten years.

A Correction

In the "Olympus" despatch entitled "Cement Wage Board's Award" in last week's issue, it was mentioned by mistake that the minimum wage for cement factories in Gujarat and Saurashtra was Rs 94 and that for the cement factories in the rest of the country was Rs 101. Actually, it is Rs 101 for the Gujarat and Saurashtra factories and Rs 94 for factories in the rest of the country. The mistake is regretted.

THE
PENINSULA

Road Transport

THAT road transport is being given a treatment that bears no relation to its importance and potentialities is a complaint that is now and then voiced by people concerned with the development of the industry. A general reckoning of the results of the transport policy pursued by the Government would also reveal that road transport is lagging in pace of development behind the railways, and is attributed by spokesmen of road transport to the overlooking of the claims of road transport by the Government in comparison with railways. The argument is not that railways have overridden road transport in respect of equal development. Such an argument would be open to the objection of being unrealistic about the special needs arising in the wake of massive industrialisation. Planning postulates a system of priorities which is no less applicable to transport development than to any other sector of activity. That, having regard to this consideration of special needs, railways have to have the larger allocation cannot be questioned. But when the charge is made of transport policy being deliberately fashioned to develop railway transport at the expense of road transport, it is not the superiority or inferiority of either mode of transport that is involved but the claim of road transport for uninhibited development on the basis of a beneficial policy from the Government. This, according to spokesmen of road transport, is far being the case under the present Government policy.

Mr T. S. Santhanam, Managing Director of Messrs T. V. Sundaram Motors of Madras, who was speaking on this theme, had a wealth of facts to point to the one-sided transport policy of the Government. Why should there be a simultaneous duty on diesel oil and motors every time a cess is levied on railway freight? The argument that it is a matter of simple coincidence does not sound convincing when such coincidence tends to reveal an unaccountable regularity. Mr Santhanam feels that the disorganised nature of the industry lends itself to being taxed at almost every point. That the motor transport industry bears the burden of excessive taxation should be evident from the fact that the total amount accruing to the Central as well as State Governments from this source is of the order of Rs 100 crores. What the industry has reaped for such contribution to general revenue is the prospect of uneconomic competition with railways. Such a result would do flagrant violence even to the principle of rail-road co-

ordination now accepted by the Government.

The question of a facilitating motor transport policy assumes importance in the context of the growth in the volume of traffic arising from future plans. In this connection, Mr Santhanam referred to the report of the Chief Engineers on Road Transport Development for 1960-61 in which it has been estimated that, by 1981, the long distance traffic will reach a volume of 800 million tons, to be met by railway capacity at 525 million tons and road transport capacity at 245 million tons. Railway capacity is presently of the order of 161 million tons and is estimated to go up to 220 million tons by the end of the Third Plan. A more than doubling in capacity after the completion of the Third Plan is involved in achieving the target for railway capacity at the end of 1981. Railway expansion has obvious limitations in view of the increase in locomotives, wagons and speed of trains called for. The average speed of goods train has already decreased from 10.7 miles to 9.28 miles on the broad gauge and from 9.6 miles to 8.23 miles in meter gauge over the period 1949-58. Moreover, the non-revenue traffic of railways is at a high figure of 22 per cent against not more than 7 per cent in other countries. Considering all these, the importance of fostering motor road transport should be obvious.

The description of the road transport industry as "capital equipment on wheels" by Mr Santhanam involved no exaggeration of either its present position or the industry's role in the economic development of the country. The total investment on these vehicles, which number more than 215,000 buses and trucks, is, inclusive of fixed assets and ancillaries, estimated at over Rs 400 crores. Taking into consideration other subsidiary and ancillary industries such as petroleum industry supplying gasoline, tyre industry, the automobile industry, and its ancillary wings such as automobile workshops, garages, service stations, road making and maintenance, the total investment traceable to the motor transport industry would reach a high figure.

A more rapid growth of the motor transport industry is desirable on grounds of the special benefits which its development holds out, particularly with reference to employment generation and potentialities. With an average number of persons employed per truck at 6 and indirect employment offered at more than 10, the road transport industry is more labour intensive than railways which offer less employment potential. An additional advantage of the road transport industry as compared with railways is that the employment potential has spread and consequently its development tends to bring about a wide dispersal of employment. In the case of railways, on the contrary, employment tends to con-

centrate on terminals. The springing up of automobile workshops in the taluk towns serving as ancillary to the village craftsmen is a development that owes to the expansion in road transport witnessed in recent years. It is also worth mentioning that, at 1,290,000, the total employment in the road transport industry is more than the total employment offered by either railways or the cotton textile industry.

Another characteristic of the industry advanced by Mr Santhanam as entitling it to encouragement for development is the fact of its middle-class ownership. In this connection, Mr Santhanam pointed out that not only was the industry

owned by the middle class but also that it was operated and controlled by the same class. The industry therefore deserves the treatment that is due to a middle-class enterprise.

Mr Santhanam considers the present tax policy of the Government with reference to the motor transport industry as inconsistent with the principle of greater expansion accepted by them. He focussed attention on the invidious discrimination being made by the Government so that the public would get interested in the development of the industry and espouse its cause for a more sympathetic understanding of its needs at the hands of the Government.

WORLD OF JUTE

Bane of Speculation

SPEAKING at the annual general meeting of the Indian Jute Mills Association last week Mr Kenneth E. Tosh, the IJMA Chairman, said that the year 1959, which seemed full of promise, ended on a less optimistic note. The encouraging developments were (1) exports of jute goods were the highest for more than 10 years; (2) Excessive stocks of sacking were eliminated; (3) production was higher than in the previous year; and (4) financially, too, the industry fared better, thanks to increased supply of raw jute and a more realistic relationship between jute and gunny prices. But, as the year was nearing its close, the favourable conditions came to an abrupt end and since November last, trading has tended to be difficult.

The IJMA Chairman attributes the reversal of the trend to excessive speculation that characterised trading last November. Considering the fact that a large number of people, and in a manner of speaking, the entire nation—because of the considerable amount of foreign exchange that jute goods earn for the country have a vital stake in the jute industry, it is surprising that a handful of speculators should have been allowed to hurt it grievously. Mr Tosh has, however, pointed out that timely action by Government would have averted the present predicament of the industry. Too little and too late have been the import of raw jute. "Had a more liberal import policy been announced six weeks earlier," says the IJMA Chairman, "this speculative activity would have probably been nipped in the bud, and we should not now find ourselves saddled with jute prices that are still far too high and with goods prices which, although they have not risen in proportion, are nevertheless at levels which cannot help our exports trade."

One of the main problems that continue to cause considerable worry to the industry is the persistently disappointing offtake of sacking. The comparatively better performance of sacking in 1959 is largely due to the unexpectedly large Chinese order of about 50,000 tons. But for this large offtake, sacking stocks would have recorded a rise instead of a decline of 20,000 tons that has been the case. The slow movement of sacking in overseas markets is a

clear indication of the increasing competition in the sacking markets and, if India is to maintain its sacking exports at a satisfactory level, it is imperative that it has to achieve "still greater efficiency in its manufacturing processes." Hessian, however, has fared very well indeed, as exports of this category of goods have improved by nearly 50,000 tons, thanks largely to the sizably increased buying from the USA.

The past year has again demonstrated that, unless extreme vigilance is exercised by Government, even a vague apprehension of a shortage of raw jute is capable of violently upsetting the balance of the Indian world of jute. It is undeniable that the problem of computing a price level for raw jute which is at once fair to the industry and the cultivator is not an easy one. But this does not relieve Government of their responsibility in the matter. A lasting remedy is a sizable increase in the yield per acre—there is considerable room for improvement in India, because the average yield per acre in India is only 2.85 bales while it is about 4 bales in nearby Pakistan. The IJMA Chairman has pointed out that, in order to achieve this, Government should step up the distribution of improved seeds and fertilizers to the cultivators. In the meantime, much damage can be avoided by taking timely remedies. Liberal imports of raw jute when a shortage is apprehended and price support for raw jute when there are definite indications of a bumper crop, between them will be largely able to bring about the desired result. It is gratifying to note that the IJMA has agreed in principle to operate a regular support scheme for raw jute prices should they fall to levels which may discourage future sowings.

Steady conditions were noticeable in the jute goods market during the past two days especially in the hessian section. It would appear that the renewed interest in the hessian section has primarily stemmed from the fact that the mill stock figures for February have shown a small decline of 200 tons in the case of this category of goods. Total stocks at the end of last month as compared with those at the end of January show a small rise of 1500 tons—sackings have increased by 100 tons, other varieties by 1600 tons while Hessians have declined by 200 tons. The announcement of the February-end stock figures was greeted by the jute goods market with buying support for both the categories of goods presumably because the market had anticipated that the rise in stocks would be rather heavy in view of the reportedly small shipping orders received during the month. Other contributory factors for the steadiness of hessian are the rumours of an enquiry from Russia and covering business in regard to

some recent foreign orders. The market opened last Friday on a quiet note due to selling pressure in the futures market. The reactionary tendency was particularly evident in the heavy goods section where B Twills March receded rather sharply to Rs 111.40. Hessian was also subdued in sympathy with Hessian 40"x10 oz March done at Rs 41.30. There was no marked change in sentiment although the lower levels attracted some buying interest. With the announcement of the February-end stocks however, renewed support was noticeable, especially in the hessian section, and on Tuesday the closing prices were as follows: B Twills March Rs 111.65 and Hessian 40"x10 oz March Rs 41.60. Rumours of a Russian order sent hessian prices up on Wednesday and B Twills also improved in sympathy. Prices closed the day as follows: B Twills March Rs 112.15 and Hessian 40"x10 oz March Rs 41.95. In the raw jute market also, prices have advanced moderately during the week with Assam Bottoms quoting at close of Wednesday at Rs 31.50 per maund as against its quotation last Friday of Rs 31. The improvement in sentiment in the raw jute section appears to be partly due to increased mill interest at the rising price levels and partly due to the steadiness of the goods section.

WORLD OF TEA

A Rs 2-Crore Scheme

THE Government of India have approved a Rs 2-crore scheme to give financial assistance to the Tea industry in the country. The Scheme, to be operated immediately by the Tea Board, provides for a total expenditure of Rs 2 crores with a limit of Rs 2 lakhs on the supply of equipment and machinery to individual concerns.

In this connection, it would be recalled that a section of the tea industry had been finding it difficult on account of financial stringency to introduce, renovate or replace much-needed equipment and machinery at the tea estates or in the factories. The Board has, therefore, prepared the above scheme after considering ways and means of affording relief to this section of the industry which will enable them to buy the required equipment and machinery on suitable hire-purchase terms.

The Government have also declared the export allotment of tea for the year 1959-60 at 507.5 million pounds. This represents 67 per cent of the crop basis for the year, which is estimated at 757.5 million pounds. The Tea Board have already allotted export quota at 65 per cent of the crop basis to all tea estates. Arrangements are being made to allot balance quota at the rate of 20 per cent of crop basis as early as possible. The allotment does not include the quantity of Dust teas, which are exported under licence without cover of export quota.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 69,265 packages. The market opened with a fair demand, but eased as the sale progressed. Prices declined by 6 nP to 10 nP per pound for plain and orthodox medium teas, Fannings grades often selling at 10 nP to 12 nP below last rates and sometimes more. The few bright liquoring teas with autumnal character were, however, sold well and any clear black-leaved grade showed only a slight decline in value.

The demand for CTC teas was not as strong as in recent weeks and prices were irregular often registering a fall of 10 nP to 15 nP per pound although the very best were generally sold well. Bright liquoring leg-cut teas came to a ready market at 4 nP to 6 nP below last rates; but the plainer liquoring fibrous sorts were considerably easier.

Whole Leaf grades were a little irregular with an easier tendency

and Darjeelings again encountered a very limited enquiry. Following rates were quoted:—Clean Black Pekoe Rs 2.12 to Rs 2.16 (nominal); Plain BP Rs 1.80 to Rs 1.86 (nominal); Plain Fannings Rs 1.84 to Rs 1.96 (nominal); Medium BP Rs 1.80 to Rs 1.84; Medium Fannings Rs 1.90 to Rs 2.00; Best Assam CTC BP Rs 2.45 to Rs 2.65 and Best Assam CTC Fannings Rs 2.45 to Rs 2.85.

According to official sources, direct exports of North-east Indian tea to the UK during the nine months ended December 1959 were lower at 153.81 million pounds as against 156.32 million pounds in the corresponding period of the previous year. While shipments for London auctions fell from 147.65 million pounds in April-December 1958 to 143.98 million pounds during the period under review, those against private sales and forward contracts increased from 8.68 million pounds to 9.89 million pounds.

Production of tea in British East Africa, including Nyasaland, during December 1959, increased to 7.1 million pounds from 6.8 million pounds in the corresponding month of last year. This places the total British East African tea output last year higher at 69.1 million pounds as against 63.1 million pounds in 1958 and 54.3 million pounds in 1957.

In the Internal Sale, offerings consisted of 23,562 packages of Dusts and 3,056 packages of grades. Demand for Dusts was fair, but prices were considerably lower. Grainy orthodox kinds met with restricted enquiry and were easier by 14 nP to 16 nP per pound, while leg-cut Doosars teas registered a decline of 8 nP to 12 nP and sometimes more. Medium CTC descriptions were well supported at rates which were around 20 nP below last levels. The best were irregular and easier except for the few with quality, which were sold well. Following rates were quoted:—Medium Doosars Dust Rs 2.02 to Rs 2.10; Medium Assam Dust Rs 1.96 to Rs 2.04; Medium Assam CTC Dust Rs 2.06 to Rs 2.18 and Best Assam CTC Dust Rs 2.40 to Rs 2.75 (nominal). There was only a fair demand for Leaf grades and prices generally followed an easier tendency.

In the Cochin market, a total of 1,060,000 pounds was offered. Against a strong general demand, prices were fully firm to dearer for every sort, particularly improved quality high-grown broken and Fannings grades.

In the Colombo market, offerings were 7,017,627 pounds. The quality from the Western districts generally showed an irregular improvement. The few best liquoring Dimbula/Dikoya Broken met with a strong demand at firm to dearer rates; but the market for below the best types was irregularly lower. There was also less demand for medium broken orange pekoes, which declined by 5 to 10 cents per pound. Low-grown

Subdued Tone in Raw Cotton

THE Raw cotton market was again in the limelight and after a further smart rise reacted partially on lack of follow-up support as well as the implications of the Government's decision to accept the Wage Board's decision for increase in the wages of labour in the cotton textile industry. The general view was that prices had reached the peak levels for the time being as anti-inflationary measures such as by way of credit squeeze or increase in the bank rate were expected to be taken by the monetary authorities as a result of the previous weeks conference in New Delhi between the Central Board of Directors of the Reserve Bank and the Finance Ministry. It is difficult to say as to whether such measures will be announced immediately in the light of the defence of the Budget proposals by the Finance Minister in the Rajya Sabha. Anyway, markets were left conjecturing on the nature of such steps being taken.

ICC August contract which had climbed upto Rs 777 on March 4 from Rs 763 receded to Rs 766 to recover to Rs 773. The maturing March contract hovered between Rs 818 to Rs 820 to be placed almost at the ceiling level of Rs 820. So far tenders of about 12000 bales have been issued against the March Contract.

CONSUMPTION:

In view of the dearth of supplies of indigenous cotton and the teas were also lower; but the commonest descriptions ruled fully firm.

In Indonesia, production rose to 9.8 million pounds in November 1959 from 9.00 million pounds in the corresponding month of 1958. Despite this increase, total Indonesian production, in the first eleven months of last year, was lower at 87.1 million pounds as compared with 92.6 million pounds in the similar 1958 period.

In London auction, offerings were 26,605 packages including 23,481 packages from North India. Demand was less active and prices were very irregular. Best quality met with fair competition, but at slightly lower levels. Bright liquoring and coloury mediums were in demand and prices ruled about steady. Plain thin stalky teas were again a weak feature.

various restrictions such as introduction of quality survey and curbs on buying by mills, consumption of Indian cotton has showed a declining trend. Consumption of indigenous cotton during the month of January is placed at Rs 388,852 bales which is lower by 14,285 bales as compared to the preceding month and less by as much as 24,329 bales as compared to January 1959. In view of the restrictions as well as difficulties of getting adequately the requirements, the general feeling is that the overall consumption of Indian cotton during the current season might range between 44 to 45 lakh bales as against 46.16 lakh bales in the last season.

On the other hand, consumption of foreign cotton shows some improvement and it is expected that this tendency might be accelerated in the next few months when actual quantum of imports will increase. During the month of January, foreign cotton consumption by mills in India increased to 42,823 bales as against 40,848 bales in December 1959 and 34,370 bales in January 1959.

Since the beginning of this season, the consumption figures for both Indian as well as foreign cotton were as follows:

	(In bales of 392 lbs)	
	Indian	Foreign
September '59	396,354	42,154
October '59	395,050	39,728
November '59	383,961	37,028
December '59	408,137	40,848
January '60	388,852	42,828

SPOT:

Business in the Sewri market continued to be restricted though mills were reported to be taking interest in cottons spinning 14s to 24s counts. The price basis was, however, reported firm. The Vijay and Digvijay cottons have started coming in the terminal markets of Gujarat and the quality of the crop is stated to be somewhat satisfactory in relation to earlier ideas.

Business in Digvijay was reported between Rs 1050 to Rs 1080. Dabhoi was placed at Rs 1030 and Palej at Rs 1035. Spot and Sadabi Digvijay at Rs 1115 subject to survey. Kalyan Wagad and Kalagivi cottons were being avidly sought after in the producing centres. Khandwa Co2 was done at Rs 1015 to Rs 1020. Kalyan spot was reported between Rs 895 to Rs 940. Khangaon changed hands at Rs 981. Sailu at Rs 930 to Rs 970, Surat Rs 1095 and Rajpipla Rs 1065. Subject to survey results, Akot was done at Rs 935, Akola Rs 960. Chalisgaon Rs 970 and Yedind 0934 old Rs 1010. Among foreign growths, mills are evincing interest in practically all varieties in American which appears to be relatively cheaper to other growths. Renewed interest thus displayed by mills has been attributed to the directive issued by the Textile

Commissioner to mills to apply for import licences before the end of March. American on sample was put through at Rs 1080 to Rs 1120, Bushoga Rs 1310 to Rs 1315, California 1 5/32" Rs 1205 to Rs 1220, Sudan G22 Rs 1801, Sudan XG35 at Rs 2065 and Elpaso Rs 1345 to Rs 1380. Syrian cotton was reported at Rs 1295 and BP52 at Rs 1360.

IMPORTS:

Imports of foreign cotton in Bombay from 1st September 1959 to 3rd March 1960 amounted to 169,604 bales as against 116,560 bales in the previous year. Particulars of imports are as follows:—

	(In bales)	
	1959-60	1958-59
American	24,127	5,352
East African	31,604	62,100
Egyptian	61,588	23,669
Pakistan	2,595	..
Sudan	47,057	24,439
Other sorts	2,653	1,000
Total	169,624	116,560

CLOTH MARKET:

Conditions on the cotton piece-goods market were slightly better during the past week but inquiries on behalf of upcountry centres were restricted due to Holi festival. Conditions in the export trade continue sluggish and as a result of the rise in prices, it is wondered as to whether the export performance this year will be as encouraging as in 1959. The outlook on the export front at the moment is somewhat gloomy. The increase in the wages of the workers as well as higher costs of raw materials has jeopardised the competitive position of the industry.

NEW YORK COTTON:

The New York Cotton market has remained dull with narrow movements. The July position stood at 32.56 cents as against 32.50 cents a week ago. The carryover of US Cotton as on 1st April 1960 is estimated 8.34 million bales as against 8.61 bales on 1st April 1959. Production during the current cotton season is placed at 14.56 million bales and with imports of about 60,000 bales, the total supply will be 23.24 million bales. Domestic consumption will be to the tune of 8.9 million bales and exports are estimated at 6 million bales, thus leaving a carry-forward of 8.3 million bales as on 1st April 1960. Speculation in New York cotton futures market has dwindled considerably for some months past due to Government agencies' intervention in the trade at various stages.

Hedge Trading in Gur Baisakh

THE Forward Markets Commission has granted permission to the Rajdhani Grains & Jaggery Exchange Limited, Delhi, to start trading in Gur Baisakh from March 2. The Commission has fixed the following margin slabs:

A special margin shall be payable on the next working day when the closing price on any day of the Baisakh 2017 delivery in gur hedge contract is or exceeds Rs 15.10 per maund (hereinafter referred to as the "margin line") at Rs 110 per unit by members holding net long position from 1 to 10 units; at Rs 140 per unit by members holding net long position from 11 to 1,000 units and at Rs 250 per unit by members holding net long position from 1,001 to 2,000 units.

When the closing price on any day of the Baisakh 2017 delivery is or exceeds Rs 16.60 per maund, a margin at Rs 110 per unit shall be payable by members holding net long position from 1 to 10 units and at Rs 750 by members holding net long position from 11 to 2,000 units and, when the closing price on any day of the contract is or exceeds Rs 18.10 per maund, at Rs 110 per unit by members holding net long position from 1 to 10 units and at Rs 825 per unit by members holding net long position from 11 to 2,000 units.

Provided that during delivery period, whenever the closing price on any day is at any level at or above the marginal line, special margin at a flat rate of Rs 1,000 per unit shall be payable on the next working day by all members having net long position irrespective of the quantity held. The Commission has further directed, that no member having long open position in Baisakh 2017 delivery shall increase the same during its currency, provided that any persons having a long open position less than 63 units and any other person having any short open position may acquire long open position upto 63 units.

While sanctioning the opening of trading in Baisakh delivery, the Commission has directed the Hapur Chamber of Commerce that no member shall have, at any time, a long open position of more than 31 units. A special margin shall be payable on the next working day when the closing price on any day of Baisakh delivery is or exceeds Rs 14.75 per maund, at Rs 225 per unit by members holding

net long position from 1 to 5 units; at Rs 280 per unit by members holding net long position from 6 to 500 units; at Rs 500 per unit by members holding net long position from 501 to 1000 units.

When the closing price on any day is or exceeds Rs 16.25 per maund, a special margin at Rs 225 per unit shall be payable by members holding net long position from 1 to 5 units and at Rs 1,500 per unit by members holding net long position from 6 to 1000 units and, when the closing price is or exceeds Rs 17.75 per maund, at Rs 225 per unit by members holding net long position from 1 to 5 units and at Rs 1,600 per unit by members holding net long position from 6 to 1000 units.

Meanwhile, Gur prices have eased sharply by over Re 1 a maund in the Hapur market due to slack outside demand. The Balti quality is not in request from the South as a part of despatches were damaged in transit. Daily arrivals are modest, at an average rate of 2,500 maunds. Total arrivals, since the beginning of the current season, are put at 5.5 lakh maunds, showing an increase of about 30,000 maunds over the corresponding figure of last year. Many of the crushers are reported to have stopped manufacturing gur due to an increase in cane prices in the face of a declining trend in gur. Pansera quality is quoted at Rs 15.50 and Balti at Rs 15.62 a maund.

Khandsari

The Khandsari market remains generally depressed, as demand is slack and loading facilities are restricted. Moreover production is maintained at a large scale and producers are buying cane upto Rs 1.12 maund. Stocks are reported to be mounting. Superior quality is quoted at Rs 40 to Rs 43 a maund.

Sugar

Quiet conditions have been prevailing in the Sugar market. Following a sharp fall in ready gur prices and increase in the cane purchasing price by two annas to Rs 1.75 a maund by some of the sugar mills, the cane supply position is reported to have improved. In the Hapur market, the rate for the sweet commodity is quoted around Rs 118 per bag.

In the Muzaffarnagar market, the supply position is better and the demand for the same is lacking. The rates are moving between Rs 112 to Rs 116 a maund, according to quality.

The Government of India has decided to release 1.75 lakh tons of sugar. There will be no release for free sale from the factories in Uttar Pradesh, North Bihar and the Punjab except a small quantity which will be released to each factory for sale to its employees. The controlled ex-factory price for Uttar Pradesh and North Bihar factories is Rs 37.85 per maund

and for factories in the Punjab Rs 38.35 per maund for ISS D-29 grade with the prescribed price differentials for other grades. The fixed f.o.r. destination prices in respect of allotments made to Kanpur and Calcutta will be Rs 38.60 and Rs 29.85 per maund respectively for Sugar ISS D-29 grade.

Pepper

Prices in the Pepper market have been developing a slightly easier tendency during the past two weeks, as consumer buying has remained small. In the Cochin market, the rate is quoted at Rs 285 per cwt.

In the New York market, Malabar/Lampong spot is quoted around 61 cents per pound. Stocks in the USA or afloat appear to be about 5,000 tons, and over 4,000 tons are available in London. These are comfortable, though not high figures.

In spite of the lack of consumer interest, it looks as if the market can become firmer within the next few months. Consumption of pepper, last year, was greater than production, while stocks in Singapore and the consuming countries were run down to make up the difference. The position will probably be much the same this year. Further, speculative activity by the Chinese Syndicate in Singapore must also be reckoned with.

Non-Ferrous Metals

Conditions in the Bombay Non-Ferrous Metal market remained generally quiet. Copper Scrap was quoted at Rs 210 per cwt. For the past two months or so, the demand for utensils has been very slack and in spite of the fact that the major sheet producers have continued to raise their prices, the market for copper shows no change.

The Lead market remained steady with price movements confined to a narrow range. The rate was quoted around Rs 76 per cwt. Demand is rather poor, while certified industries are reported to be coming out as sellers.

Weaker Singapore advices have had a demoralising effect on the already weak Tin market. In the absence of any appreciable demand, the metal continues to be depressed with the rate quoted around Rs 136 per quarter. Doubts are being expressed whether the import policy will be on the same basis in the coming period in view of the glut of the material prevailing in the market as reflected in the easy tone which leaves the importers with a margin well under 4 per cent.

Bullion

Silver prices during the past week recorded an all time high level on speculative buying and covering but later on reacted moderately. The Gold market once again developed a reactionary

tendency on increased arrivals as well as somewhat restricted off-take. The Holi festival has no doubt affected the demand for the actual and it is expected that the demand might once again broaden. As pointed out last week, the Bombay Government did not agree with the suggestion of the Bullion Board for relaxing margins in favour of the bull. The same terms of margin were applied in Chaitra delivery as have been enforced in the case of Falgun delivery.

Chaitra delivery in silver which started on 2nd March at Rs 215.56 spurted to Rs 217.69 to react to Rs 216.75. Falgun which was quoted at a discount of annas 6 was placed at 3 annas discount. Gold Chaitra delivery after commencing at Rs 130.87 firmed up to Rs 132.12 receded sharply to Rs 130.50 to be placed at Rs 130.56. Sovereign was quoted at Rs 88.25. Floating stocks of silver and gold in Bombay market are estimated around 1000 bars and 35,000 tolas respectively.

Yarn

The yarn market has generally ruled easier with restricted demand from consuming centres which have still not reconciled with the levy of 2 annas on staple fibre cloth. Staple fibre yarn was hit and sellers outnumbered buyers in view of the general feeling that the off-take of staple fibre cloth issued contract in view of higher prices. The April delivery for Staple fibre yarn after dropping to Rs 690 recovered to Rs 702. Art silk yarn prices ruled easier with Bombay April delivery dropping to Rs 1804 from the week's high level of Rs 1820. Cotton yarn prices were relatively steady.

Oils & Oilseeds

The Oilseeds Market in Bombay staged a smart rebound on reports of reduction freight for overseas and especially US but higher levels in castor lacked follow-up due to paucity of export business with US. Groundnuts, however, depicted a firm tone due to strong statistical position and smaller arrivals in the terminal markets. However, no fresh export business either in groundnut oil or cakes expeller variety in terms of the new quota was reported. The freight reduction for HPS groundnuts kernels is applicable only to US Atlantic ports and not to Canada which is the main buyer. The Karmahan Conference has made a reduction of sh 10 per ton in freight rates on all oils, oilcakes and extractions and has also amended the freight rebate system to be applicable quarterly instead of half yearly Trade quarters, however, do not look with equanimity the rebate system as it gives rise to monopolistic tendencies.

US did not evince fresh interest in purchases of Indian castor oil and as spot prices are quoted at a fair discount in relation to futures

position, sentiment turned apathetic at higher levels. It is estimated that since the beginning of 1960, export sales of about 10,000 tons of castor oil have been undertaken but in view of the crop movement it is generally felt that the supply position will bear the impact. Castor May have fluctuated erratically. The rate which was marked down to Rs 172.50 on March 2 recovered to Rs 178.50 to relapse to Rs 174.75 to improve to Rs 177.25 but after falling once again to Rs 173.50 stood at Rs 174. Castor oil commercial quality has come down to Rs 17.69 from Rs 18 while this year the highest rate touched was Rs 19.37 last month.

Groundnuts May delivery rebounded to Rs 211.50 from Rs 240.50 to react to Rs 208 to quote at Rs 209.50. In February delivery total tenders amounted to 6100 candies. Groundnut oil April-May delivery improved to Rs 22.12 from Rs 21.81. Linseed May after being done as low as Rs 32 in the previous week was taken upto Rs 33 to recede to Rs 32.44. Linseed-oil was done at Rs 15.75 to 15.62. Castorseeds were steadier around Rs 150.

In the month of February exports of HPS groundnuts from Bombay amounted to 2771 tons and castor oil 4054 tons. There was no shipment of groundnut oil, but exports of groundnut-oil cake expeller variety came to 2663 tons and meal 1802 tons. Linseed oilcake accounted for 2322 tons and niger oil cake 2085 tons.

Though conditions in the Madras seeds and oil market here were steady, there was however not much activity. Arrivals of groundnut kernels bordering on 35 to 40 tons daily did not help briskness in trade. Calcutta interests too did not display any inclination to buy in large quantities. Today's quotations were:

Groundnut oil per candy of 500 lbs ex-Madras godown expeller ready 3% F.F.A. Rs 390.

April Rs 392/8; May Rs 396. Kernels per candy of 500 lbs Rs 208/209.

Castor oil too did not show activity. Per candy of 500 lbs the price quoted today was Rs 325 sellers: Rs 322 buyers.

Gingelly oil per maund Rs 21/12. Coconut oil per tin Rs 40 to Rs 40/4.

Groundnut cake was dull at Rs 25/4 to Rs 25/8 per bag.

United Kingdom spot groundnut oil export quotation was £124 per ton.

The Price for Burma consignment was Rs 1,800 per ton. (Nominal).

The firmer outlook throughout last week in the groundnut and oil markets steadied from Monday when activities turned up to be a bit dull. Budget uncertainties are not there. Therefore operators entered with a boldness to pick up quantities. But they probably were not in hurry when they thought there might be subsequent recession in prices in as much no duties had been levied on oils or seeds. Therefore there the dullness is now prevalent. Now it was also believed that medium and small sized power-driven crushers would go in for good quantities of

kernels. This was also encouraged by the modification in the collection of excise duty by the Central Board of Revenue. According to the revised method of collection, the quantum of levy these crushers would have to pay would be significantly less than under the old method. Also these people would be free from the too many cumbersome and routine statements.

Naturally this concession is also expected to be extended to those bigger groups or factories owing more than two expellers. It should be remembered that nearly 99.5% of the oil-crushing factories in this State fall within the definition of small scale industry. There is also a feeling among this circle that the old rates of excise duty fixed were not in consonance with the capacity of the machinery

installed in each unit. Because under "baby expellers and other expellers" the different types of plants vary in their daily crushing capacity.

Coming to the trade trend, the brisk bull support from Bombay last weekend helped price gains both in groundnut and in groundnut oil. No fresh business was put through in spite of the export quota allocation of 10,000 tons of oil and corresponding incentive quota for expeller variety of groundnut cake. Thus the kernels gained Rs 34/35 per ton and oil Rs 44/45 per ton.

Hides and Skins

Prices in the tanned cow hides market remained unaltered. London did a little business this week

due again probably to the prices being high. Only in the fifties there seemed to be demand from United Kingdom. But then the latter were disinclined to deal at the prices which continued at least two pence higher per lb. Tanned Buffalo hides was in good demand. Even cow calf tanned hides were limited in supply. Export sales with either United States or United Kingdom were meagre since the importers apparently wanted to bring prices further down.

Tanned goatskins of market quality sold here were 2,000 in number and sheepskins in larger demand sold numbered 88,000. Still the leftover was 7,000 goatskins and 47,000 tanned sheepskins. These tanned skins did not change in prices. Raw skins prices receded further this week.

In addition to the credit of Rs. 24,75,000 pertaining to the final dividend for 1958, a sum of Rs. 30,93,750 was credited to this Fund on account of the interim dividend declared in July 1959. A sum of Rs. 35,31,909 was appropriated from this Fund during the year under the authority of the Reserve Bank of India. In respect of the losses for the years 1957 and 1958 of the new branches established under Section 16(5) of the State Bank of India Act, 1955, vide item 7 of the Profit & Loss Account.

Includes State Welfare Fund and State Co-operative Housing Fund, ownership whereof vests in the Bank.

*Of which Rs. 30,83,760 is to be credited to the Integration and Development Fund, (item 2A above) bringing the amount in the said Fund to Rs. 1,99,80,561.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA.

We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1959.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branches and by the Secretaries and Treasurers of the Local Head Offices at the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any record or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (iv) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (v) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vi) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray & Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray & Ray.

*Consequent upon the new procedure of deduction of tax at source introduced by the Finance Act, 1939, credit has been taken in the accounts for the year 1939 for anticipated tax refunds; previous year's figures are therefore not strictly comparable.

Speech of the Chairman, Shri P. C. Bhattacharyya at the Fifth Annual General Meeting of the Shareholders held in Bombay, on the 4th March, 1960

The Profit and Loss Account shows that the balance of profit available for distribution for 1959 is Rs. 187 lakhs as compared to Rs. 190 lakhs for 1958. I had mentioned last year that the increased earnings of the Bank for the year 1958 were some what fortuitous. This continued to be the position in 1959 also. A sizable portion of the Bank's deposits continued to consist of the United States P. L. 480 Funds which remained with us and were invested in Government securities. The balance of profit available for distribution this year reflects the result of the Bank's normal operations, so as to give a realistic picture to the shareholders and the public. This explains why the net profit shown in the Profit and Loss Account for the year ended 31st December 1959 is somewhat lower than that shown in the accounts for the year ended 31st December 1958, even though the tax payable by the Bank on its profits before declaration of dividend was provided at a somewhat lower rate in 1959 than that in 1958. The profit of Rs. 187 lakhs for 1959 should be appropriately compared to the figure of Rs. 156 lakhs which was the profit for the year 1956, when the Bank did not have any United States P. L. 480 Funds deposited with it.

There has been a continuous rise in the expenditure of the Bank since 1956. The total expenditure of the Bank which amounted to Rs. 7.11 crores in 1956 more than doubled itself to Rs. 16.66 crores in 1959. Up to the end of 1959, we opened 359 new branches out of which only 44 branches have reached a profit earning stage. As many as 315 of these branches are still running at a loss. Compared to 1956, the increase in the expenditure on Salaries, Allowances and Provident Fund of employees alone has been of the order of Rs. 260 lakhs. This represents an increase of roughly 60 per cent. In spite of this, we have been fortunate enough that the increase in expenditure over the last three years has been covered by the increase in the income of the Bank. We cannot however be complacent. Even though the original branch expansion programme is nearing completion, this is one of our activities which has to be carried on in the future also, if we are to continue to serve the wider national interest as we have been doing. This, together with the expansion of the other developmental activities undertaken by the Bank, will lead to a further increase in establishment expenses. Over and above this, the year-to-year increase in the expenditure of the Bank will have to be provided for. If we are to meet such

increases in expenditure without impairing the strength of the institution, it is absolutely imperative that the traditional business of the Bank must expand.

I had drawn your attention last year to the fact that the traditional business of the Bank had not been showing any marked progress since June 1958 and that in January and February 1959 the average advances and bills of the Bank had been actually lower than those in the corresponding months of 1958. This trend generally continued throughout 1959. As you are aware, our advances to industry constitute almost 70 per cent of our total advances. In 1959, there was a marked decline in the Bank advances to the cotton textile and sugar industries. With the revival in the external demand and an increase in the internal demand for its products, the Indian cotton textile industry was able to turn the corner in the year and with the decline in the stocks required to be held, the industry was able to reduce its dependence on the Bank's funds. The decline in the Bank's advances against sugar was mainly due to lower sugar production in 1959 consequent on short supply of sugar cane. Recently, with the accretion of large funds to the banking system, banking business in this country has also become highly competitive. Special facilities, some of which we are not in a position to extend, are being given by some banks to new concerns in order to attract business. In a rapidly expanding institution like ours with obligation to undertake numerous activities in the public interest, it is essential that the Bank should record progress in all spheres of its activities, traditional as well as developmental. This matter is constantly engaging the attention of your Directors. I do hope that the present position is just a passing phase. I hope that our new branches will justify their existence in the near future and will enable us to show better working results. I also hope that we shall continue to enjoy the support of all—both in the public and the private sectors—in our endeavour to play our recognised role in the monetary and banking system of the country.

Your Directors regret that this year, the net dividend to the shareholder after payment of taxes has had to be slightly reduced. The Bank has declared a dividend of Rs. 20/- per share for 1959 compared to Rs. 18/- per share paid for 1958. I wish it were possible for us to declare a dividend which would have given the shareholder the same net amount as in the past even after deduction of tax at source as required under the

new procedure introduced by the Finance Act of 1959. But, having taken into consideration the incidence of the new system of taxation, the probable increase in the Bank's expenditure in the near future and the necessity for an institution like ours to be in a position to maintain a particular rate of dividend over a reasonably long period, the Board of Directors were compelled to reduce the net dividend to some extent. I feel confident that it will be possible for the Bank to maintain for some years to come, the rate of dividend that has now been fixed.

It will not be out of place here to refer to a particular matter, viz., the 'Charter of Demands' that we had received some time ago from the Federation of our Staff Associations. This charter demands a radical revision of the pay scales, a point-to-point adjustment in the revised scales, abolition of areawise classification and increased Provident Fund and Pension facilities for all the subordinate and clerical staff with effect from 1st January 1959. A rough computation shows that if the demands are met, the present cost per employee would increase by a hundred per cent. I can understand the desire of our employees to secure an increase in their emoluments but that must obviously be related to the capacity of the Bank to bear the additional cost. Further, the wage structure demanded must be in line with that prevailing in other comparable employments and one which

can be justified in the context of the prevailing economic conditions in the country. I regret to say that the demands put forward by the Federation cannot be said to satisfy any of these tests. We have always endeavoured to maintain cordial relations with the staff and the Federation and have always agreed to discuss across the table any issues raised by them. The Federation should consider whether this does not cast on them an obligation to take account of all the considerations, enumerated by me, before framing their demands. I explained earlier the extent to which the developmental activities of the Bank claim our attention and resources. I take it that the employees of the Bank, as citizens of the country, are equally interested in seeing that neither the developmental programme of the Bank nor its financial position is adversely affected. I would earnestly request those who are conducting the affairs of the Federation to adopt a more realistic approach to the question of the improvement of their prospects and in the interest of the maintenance of cordial relations in the Bank desist from putting forward demands which it is impossible to meet. On my part, I can give them the assurance that the management will not be found wanting in willingness to respond to reasonable demands.

I shall now give you some more particulars of the branch expansion.

sion programme and other developmental activities of the Bank referred to in the Annual Report. Out of the 359 new branches opened upto December 31, 1959, 66 branches have been opened at towns with a population below 10,000; 182 branches at places with a population of 10,000—25,000 and 86 branches at places with a population of 25,000—50,000. Thus the vast majority of the new branches opened by the Bank operate at comparative small places and has been increasing banking facilities in the rural and semi-urban areas. Actually at 55 places where we have opened branches, no other scheduled, non-scheduled or co-operative bank had a branch or office; and 29 of our branches have been opened at places where no banking facility was available within a distance of 20 miles. The deposits received and advances granted at the 359 new branches stood at Rs. 28.29 crores and Rs. 11.96 crores respectively on December 31, 1959. This is an indication of the contribution made by the Bank to the mobilisation of the national resources and to the provision of cheaper banking facilities in the rural and semi-urban areas of the country. I may also mention here that during 1959 the Bank opened several temporary pay offices to meet the special requirements of the Assemblies, conferences and fairs held at various places, so as to serve both Indian nationals as well as visiting foreigners. These facilities, I need hardly add, were well appreciated.

As I mentioned in my speech at the last Annual General Meeting, the Bank emerged out of the pilot stage of its scheme for financing small scale industries. From 1st January 1959, the Bank has been financing small scale industries at all of its branches. Financing of small scale industries has now become a part of the normal business of the Bank. The total credit limits sanctioned to small scale industries have increased from about Rs. 237 lakhs in 1958 to about Rs. 462 lakhs at the end of 1959, the number of accounts going up from 696 to 1496 during the year. You must have observed from the Report that the Bank has been making special efforts at some of its branches which have been styled as "intensive centres". The main object of operating these centres is to secure best possible results from the co-ordination of the Bank's activities in this respect with the activities of other agencies interested in the promotion of small scale industries. The progress achieved at these centres, I may tell you, has been quite encouraging. Apart from the fact that both the credit limits as well as the number of accounts at these centres have been steadily increasing, as many as 85 per cent of the borrowers have been granted limits of less than Rs. 50,000 each. The bulk of finance provided by the Bank is thus made available to relatively small units.

The finance made available by the Bank to various co-operative institutions also steadily increased during the year. The co-operative central financing agencies as well as co-operative marketing and processing societies have been drawing more on the Bank's resources and the efforts made by the Bank in several directions to fill the gap in the institutional framework for finance to co-operatives as also to impart strength and support to co-operative central financing agencies are well appreciated. Most of the doubts, misgivings and fears which were entertained in this regard initially have proved to be unreal and a workable arrangement has been arrived at in which the Reserve Bank of India, the State Bank of India, and the co-operative financing agencies have been operating in a co-ordinated and harmonious manner. I do hope this relationship will grow stronger in future so as to benefit both the State Bank of India and the co-operatives, which must in turn benefit the entire community.

Another important development of the year, to which I would like to refer is the formation of the State-associated banks as subsidiaries of the State Bank of India. One of these State-associated banks was taken over on 1st October 1959 and the four others were taken over on 1st January 1960. One more has become our subsidiary on 1st March 1960. Arrangements are being made to take over the remaining two of these banks shortly, so that all the eight State-associated banks will have then been taken over. I would like to assure you and the general public that each of these subsidiary banks, being autonomous, will continue to maintain its individuality and independence in its day-to-day operations. The State Bank of India will have just the general powers of control, supervision and direction. The object of taking these banks over is, as you know, to impart to them additional strength and stability, so that they, as well as the State Bank of India, can play a more useful role in the country's economy.

I may also tell you that arrangements are being made by the State Bank of India as well as the State-associated banks with a view to enabling the latter to fall in line with the policies adopted by the State Bank of India in respect of the various developmental activities. The branch expansion programme of these banks is being co-ordinated with that of the State Bank of India. Each of these banks will ordinarily limit its branch expansion to the area in which it has been functioning. Some of the centres selected by the State Bank of India for opening its branches have been handed over to the respective State-associated banks and each of these banks will also be opening a few more branches in its own area. I do hope this integrated banking

structure will before long provide banking and remittance facilities within easy reach from all places of importance and be sufficiently responsive to national policies adopted for a rapid development of the country's economy.

**NEW CENTRAL JUTE MILLS
COMPANY LIMITED**

NOTICE is hereby given that an Extraordinary General Meeting of the shareholders of the Company will be held on Thursday, the 31st March 1960 at 11-30 A.M. at the Registered Office of the Company at 11, Clive Row, Calcutta to consider and if thought fit to pass with or without modification the following resolution:—

"RESOLVED THAT A FURTHER DIVIDEND IN RESPECT OF
The year ended 31st March 1959 be and is hereby declared out of General Reserve 'No. 1 at the rate of Rs. 1.50 nP per share i.e. 15% (without deduction of income tax) on Ordinary shares payable to the shareholders whose names stand registered in the books of the Company on 31st March 1960".

The Share Transfer Books of the Company will remain closed from 28th March 1960 to 31st March 1960 both days inclusive.

By Order of the Board.
for NEW CENTRAL JUTE MILLS
CO. LTD.,
for SAHU JAIN LIMITED
A. K. Jain
Managing Director,
Managing Agents

Calcutta,
7th March 1960.

N.B. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Explanatory Note:

The profits of the Company on the working of the jute mill during the current year ending 31st March 1960 are substantial; higher than those for the preceding year. As against same, Development Rebate in respect of the Chemical Fertiliser Plant switched into operation during the current year to be provided out of the current year's profits as per provision of the Finance Act 1958 would be substantial. The Directors, therefore, do not propose to recommend payment of any dividend on ordinary shares in respect of the current year ending 31st March 1960. The Directors recommend further dividend as mentioned in the proposed resolution aforesaid.

THE MEMBERS OF
DEVKARAN NANJEE BANKING CO., LTD.

1. Your Directors beg to submit herewith the audited Balance Sheet as on 31st December, 1959, and the Profit and Loss Account for the year ended 31st December, 1959. The Auditors' Report is also annexed.

2. The Bank has, during the year, made good progress generally. The Bank's deposits, at the end of the year, were about Rs. 35 crores, the total working funds about Rs. 45½ crores, and the number of accounts over 1,75,000. Eight branches were opened during the year—at Malabar Hill, Tardeo and Kharek Bazar in Bombay, Bhowanipore in Calcutta, Dharmaj in Gujarat, Bangalore and Mangalore in Mysore State, and Cochin in Kerala—bringing the total number of the Bank's offices to 83 at the end of 1959. Five Safe Deposit Vaults were opened—at Malabar Hill and Vile Parle (East) in Greater Bombay, Poona Camp, Delhi Chakla in Ahmedabad, and Bhowanipore in Calcutta—bringing the total number of Safe Deposit Vaults to 21. Attention was also concentrated on the existing units with a view to expand them. The Reserve Funds of the Bank at Rs. 52 lakhs have now exceeded the paid-up Capital of Rs. 50 lakhs.

3. The Bank has made a net profit of Rs. 15,30,286.70, which, together with the sum of Rs. 3,02,014.77 brought forward from last year's account, amounts to Rs. 18,32,301.47. Out of this, your Directors have made the following appropriations:

	Rs.	nP.
To Add-Interim Dividend for the half-year ended 30th June, 1959, at the rate of Rs. 1.86 per share	1,86,000.00	
To Amount Provided for Bonus to Staff	2,25,000.00	

	Rs.	nP.
To Reserve Fund under Section 17 of the Banking Companies Act	6,00,000.00	
and propose to appropriate the balance as under:		
To Pay a Final Dividend for the half-year ended 31st December, 1959, at the rate of Rs. 2.52 per share (making in all 8.76 per cent. per annum, subject to deduction of tax)	2,52,000.00	
and to Carry Forward	5,69,301.47	
Total Rs.	18,32,301.47	

4. Shri Jayantilal R. Trivedi was appointed on 27th January, 1960, as a Director in the casual vacancy in the Board of Directors and he ceases to hold office as a Director at the Annual General Meeting. In accordance with Article 100 of the Articles of Association, Shri Laxmikant S. Dabholkar, Shri Harshadrai B. Parekh and Shri M. A. Master retire from the Board of Directors by rotation but being eligible offer themselves for re-appointment.

5. You are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Yours faithfully,
For the Board of Directors,
LALITCHANDRA C. D. NANJEE,
Chairman.

BOMBAY, 4th February, 1960.

DEVKARAN NANJEE BANKING COMPANY, LIMITED—(Continued.)

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the DEVKARAN NANJEE BANKING CO., LTD., as at 31st December, 1959, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the unaudited returns from all the Branches in India not visited by us for the purposes of this Report.

In accordance with the provision of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956, they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that—

- we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1959, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

BENGAL JUTE MILL COMPANY LIMITED

8, Dalhousie Square East,
Calcutta.

2nd March, 1960.

NOTICE

NOTICE is hereby given that the 29th Annual General Meeting of the Company will be held at the Registered Office of the Company at No. 8, Dalhousie Square East, Calcutta on Thursday the 31st March 1960 at 3 P.M. for the purpose of receiving the Directors' Report, passing the Audited Accounts, declaring the Dividend recommended by the Directors for the year ended 30th June, 1959, appointing Auditors and—

1. To appoint and/or approve the appointment of Sri M. L. Jalan who retires by rotation and is eligible for reappointment and to consider and if thought fit to pass the following resolution, as a Special Resolution of which a Special Notice as required by Section 190 & 261 of the Companies Act 1956 has been received by the Company.

"Resolved that pursuant to the provisions of Section 261 and other

applicable provisions (if any) of the Companies Act, 1956 the appointment of Sri M. L. Jalan a Director of the Company, who is also a Partner of Messrs. Soorajmull Nagarmull the Managing Agents of the Company, be and is hereby made and/or approved as required by the provisions of the said Section".

2. To appoint and/or approve the appointment of Sri B. L. Jalan who retires by rotation and is eligible for reappointment and to consider and if thought fit to pass the following resolution as a Special Resolution of which a Special Notice as required by Sections 190 & 261 of the Companies Act 1956 has been received by the Company.

"Resolved that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Sri B. L. Jalan a Director of the Company, who is also a Partner of Messrs. Soorajmull Nagarmull the Managing Agents of the Company, be and is hereby made and/or approved as required by the provisions of the said Section".

3. To appoint a Director in place of Sri M. L. Shah who retires by rotation and is eligible for reappointment subject to compliance with the provisions of Section 281 of the Companies Act 1956 and to consider and if thought fit to pass the following resolution as an ordinary resolution of which a Special notice as required by Section 281 of the Companies Act 1956 has been received by the Company.

As an ordinary Resolution:

"Resolved that pursuant to the provisions of Section 281 of the Companies Act 1956 Sri M. L. Shah who has attained the age of 65 years and who retires by rotation be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him".

4. Any other business that may be brought forward.

EXPLANATORY NOTE

Item No. 1 of the Notice, Section 261 (1) (f) of the Companies Act 1956 read with sub-Section (4) of the same Section of Companies Act 1956 requires the re-appointment of any Director retiring by rotation who is an associate of the Managing Agents to be made by a Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advice of Mr. M. L. Jalan at present a Director of the Company who is an associate of the Managing Agents by retaining him as a member of the Board of Directors of your Company it will be desirable that the above proposed Special Resolution, Special Notice of which has been received by the Company, be passed.

In respect of Item No. 2 of the Notice Section 261 (1) (f) read with sub-Section (4) of the same Section of the Companies Act 1956 requires the appointment of any Director who is an Associate of the Managing Agents to be made by Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advice of Mr. B. L. Jalan at present a Director of the Company who is an associate of the Managing Agents by retaining him as a member of the Board of Directors of your Company it will be desirable that the above proposed Special Resolution, Special Notice of which has been received by the Company, be passed.

In respect of Item No. 3 of the Notice Sri M. L. Shah who is proposed to be appointed a Director of the Company has attained the age of 65 years and under Section 280 (2) of the Companies Act, 1956, retires at the conclusion of this Meeting which is the 29th Annual General Meeting since the commencement of the Companies Act, 1956. The resolution includes a declaration that the age limit of 65 years prescribed by Section 280

of the Act shall not apply to him as provided in Section 281 of the Act.

During his long association with the Company Sri M. L. Shah has rendered very valuable services and his guidance and advice have been of considerable benefit to the Company. As it is in the interest of the members that the Company should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be re-appointed a Director.

The Share Transfer Register of the Company will remain closed from the 24th March 1960 to 31st March 1960 both days inclusive.

By order of the Board,
For and on behalf of

The Chartered Bank

Continued Expansion of Business

Accounts Reveal High Degree of Liquidity

Larger Profits Despite Increasing Costs

Importance of Raising Asian Living Standards

Mr V. A. Grantham's Statement

The One Hundred and Sixth Annual General Meeting of The Chartered Bank will be held on March 30 at 38, Bishopsgate, London, E.C.2.

The following is an extract from the statement by the Chairman, Mr. V. A. Grantham, which has been circulated with the report and accounts for the year 1959:—

THE BANK'S BALANCE SHEET

The accounts indicate the continued expansion of the Bank's business and reveal a high degree of liquidity. The total of our own balance sheet at £270,390,101 is the highest we have ever recorded being £27,271,915 up on last year's figure which was itself a record.

Our Consolidated Balance Sheet shows a total of £317,021,709, which is £31,591,207 up on that of last year.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

The net profits for the year at £1,014,696 are higher by £21,106 than last year, in spite of continually increasing working costs in all parts of the world, and may be considered very satisfactory.

We paid an interim dividend in September last of 7½% less income tax, absorbing £229,688 and it is now proposed that out of the balance available a final dividend of 7½% less income tax be paid, costing £229,687. We have repeated the allocations made last year of £250,000 to Bank Premises and Furniture and £125,000 and £20,000 respectively to the Pension Fund and Widows' and Orphans' Fund. £150,000 has been transferred to Reserves for Contingencies and the increased balance carried forward is £491,994.

THE IRANO BRITISH BANK

Our joint venture in Iran has now completed its first working year and I am pleased to report that good and steady progress has been made, and this is reflected in the figures of the first balance sheet. These good results have been achieved mainly through the industry and application of the staff, both European and Persian, and it is particularly gratifying to find a feeling of loyalty amongst

the bank's national employees and the promise that many of them will, with more training, be able to fill key positions in the expanding organisation.

This expansion so far has led, in addition to the head office in Tehran and the original branch in Khorramshahr, to the opening of a bazaar branch in Tehran and a branch at Abadan. A further branch is shortly to be opened at Ahwaz. All this has been achieved in the face of a general shortage of local funds, increasing competition from new banks and perhaps a less helpful officialdom than we were led to expect.

Outwardly at least the country gives an impression of stability although the Bank Melli is having to take steps to conserve foreign exchange. Without being critical of the present arrangements, I believe that it would facilitate trade and be in the country's interests were the Bank Melli to deal freely in foreign exchange, both ready and forward, with the commercial banks at special rates in a manner similar to the operations of central banks in other countries.

The great need is, of course, for exports in addition to oil.

OVERSEA SURVEY.

As a bank primarily engaged in financing overseas trade we were vitally interested in the findings of the Radcliffe Committee, for in 1957 when it was appointed, there was widespread anxiety that internal inflation might jeopardise the hard won progress which had been made in rehabilitating and modernising British industry and there was considerable doubt, both at home and abroad, whether it would prove possible to maintain sufficient confidence in sterling to assure its status as a major international medium of exchange.

In the light of the steps taken by the government in the interim to deal effectively with both those problems it is interesting to note that the report, which was published in August, gives tacit approval to the working of the monetary system and I hope we shall hear no more from the politicians and economists who would restrict the use of sterling in international

trade. The Chartered, and all other British banks trading overseas, welcome the continuance of conditions which allow us to handle worldwide trade and to contribute thereby to the United Kingdom's invisible earnings.

Last year I mentioned the European Economic Community and the fears that existed in Asian countries that any addition to the six countries of E.E.C. might mean surrounding Europe with tariff barriers. There was in fact no such addition but in any case fears were, to some extent, allayed by figures produced at the recent meeting of G.A.T.T. in Tokyo showing increased trade between the E.E.C. area, and in particular the undeveloped countries. This helps to confirm my own views that an integrated free trade area for the whole of Europe must ultimately result in an expansion of the trade of the Asian countries in which this Bank has branches, and I trust that Her Majesty's ministers and officials will, in the not too distant future, see a successful outcome to the patient and difficult negotiations in which they have played such a prominent part.

CYPRUS

Cyprus commences its independent career with a very substantial trade deficit and, although the government finances have recently benefited from the cessation of the emergency and from the increased yield of import duties, it is clear that the new state will be in need of assistance from abroad for some years to come. The British government has already indicated that it will be giving financial support and this, with expenditure in respect of British forces based on the island, will continue to be a material factor in sustaining employment and trade.

LEBANON

By the end of 1959 the Lebanon seemed to have recovered almost completely from the disturbances of 1958. Present indications are that the country, given tranquillity, should have a good future.

IRAQ

There were signs during 1959 of a gradual return to more normal

business conditions. This was helped by a rise in oil exports, which totalled thirty-nine million tons. This was unfortunately offset to some extent by poor harvests and it was necessary for the government to prohibit the export of barley and to arrange for the import of fairly large quantities of wheat.

Import policy was liberalised in the second half of the year but the resultant improvement in business conditions was offset by the steep rise in overhead charges. The country is still in a state of transition and it is too early yet to say how the new pattern of trade relations will work out. It is clear however that, given peaceful conditions, the country will go forward with its development schemes and will for many years be a buyer of both capital and consumer goods.

PERSIAN GULF

New "Gulf rupee" currency notes were brought into circulation during the year by arrangement between the government of India and the Rulers. The great increase in the commercial importance of the area during the past twenty years has made the continued use of ordinary Indian rupee notes as customary tender an embarrassment to the Exchange Control authorities in India. The distinctive "Gulf" notes preserve the link with India but ensure that control can be maintained.

BAHRAIN

Bahrain is still dependent for its development on its oil revenue which shows little change. Business has continued satisfactorily but with three banks in competition and a fourth likely to open soon there is a temptation for merchants to over-trade and the bazaar to become over-stocked.

DOHA

Doha has had another uneventful year, with development continuing. Oil royalties are buoyant and off-shore drilling has been resumed.

SHARJAH

Business has shown some signs of improvement. Various deve-

development projects are in hand at the neighbouring port of Dubai.

BADHRAHAUT

Mukalla

Business shows a distinct improvement but is still on a very small scale. So far no oil has been found in the area though prospecting continues.

ADEN

Following the first elections under the new constitution last January a measure of self-government has been introduced into Aden Colony and it appears to be working effectively.

The fall in the year's trade figures from those for 1958 can be attributed to strikes in the oil bunkering establishments, which were particularly serious for a port dependent upon an entrepot trade. In the Western Protectorate the cotton producers had a poor year, but there is confidence that the crop for the coming season will be better and, meanwhile, irrigation facilities are being extended to expand substantially the area under cultivation. Politically, more stability was given to the Western Protectorate by the formation last February of a federation of six states.

INDIA

Thanks to generous assistance from abroad the shortage of foreign exchange which threatened to retard India's development last year was overcome, and it appears that most of the production targets will be reached in the second five-year plan which is approaching its final year. India is now at the stage when it should begin to reap the benefit of the vast expenditure which has been made under the two five-year plans although there has been criticism, much of it well founded, of the various priorities under the plans and also of the methods by which they have been financed. This criticism however should not be allowed to obscure or minimise the very real progress which has been made in many sectors of the national economy. The completion of the three new steel plants and the expansion of the two existing ones should assist in the further development of the many lighter industries in the private sector, which have been established during the last few years and are now going into full production. In order to finance this development on a national scale it has been necessary to resort to the potentially inflationary expedient of deficit financing, and it says much for the manner in which the Indian authorities handled the country's internal finances that there has been no major inflation. In fact, the price level has risen less in recent years than in many highly industrialised countries with stronger economies than India's.

In the banking field the expansion in deposits, to which I referred last year, has continued and the liquidity of the banking sys-

tem has increased. There would seem little point, therefore, in the prevalent practice of quoting high deposit rates in order to attract funds for which profitable employment is lacking. It was reassuring to have an official government statement in the Lok Sabha that the Planning Commission had come to the conclusion that the nationalisation of banks was not a desirable step.

PAKISTAN

A year ago it seemed that the situation in Pakistan was rather more hopeful than for some years past and in the event the country has made satisfactory progress during 1959. In recent years governmental instability and lack of leadership have cost Pakistan dear, and for this reason the population has responded well to the military regime which at present controls its affairs. Stern measures were required to eradicate the corruption and inefficiency which had previously been such a feature of the country's administration and it is to the credit of the present regime that, although it has dictatorial powers, it has used them with moderation and with justice. More settled conditions have been reflected in a noticeable improvement in Pakistan's trading and payments position, and the augmented foreign exchange holdings have permitted a more liberal import programme, which will be of benefit to the country's new manufacturing industries.

It is encouraging that the government has effected an improvement in the agricultural sector of the economy in the relatively short time since it assumed power and, once again, Pakistan's prospects for the coming year appear reasonably favourable, particularly if the improved relations with India lead to a settlement of some of the outstanding disputes between the two countries.

CEYLON

Politically the past year in Ceylon has been a difficult one. The assassination of the Prime Minister, Mr. S. W. R. D. Bandaranaike, brought to a head the instability which had been apparent for so long, and the difficulties experienced by his successor in holding the government together led to the dissolution of parliament in December. A general election is due to take place in March and, unless the country obtains a government with a working majority, sufficient to cope successfully with the many problems which have accumulated and require resolute action, the future outlook is poor indeed.

In the economic field a basic trouble has been the labour disputes, which have been allowed to develop and continue to the extent of jeopardising the country's production and trade and the living standards of the population. In the circumstances it is satisfactory to be able to note the extent to which the producing and mercantile communities, by adopting a "business

as usual" policy, have been able to maintain the trade of Ceylon despite the handicap of strikes and political unrest and to raise tea production once again to a record level.

BURMA

Under the able leadership of General Ne Win, the "caretaker government" which has been in office for just over a year has brought about a steady and appreciable improvement in conditions in Burma. The drive by the government against terrorists has been singularly successful and law and order in all but a few outlying and isolated areas has now been restored.

The attainment of greater internal stability has, notwithstanding the restrictive effects of excessive state interference in commerce, resulted in improved trading conditions. A direct outcome was that exports have increased in value although a secondary factor contributing to this was an example of a more liberal policy, that by which the State Agricultural Marketing Board helped to expand rice shipments to overseas markets. Quite rightly, the government regards it of the greatest importance to expand agricultural production but the emphasis has been on more intensive cultivation of the rice crop and improved facilities for milling and storage rather than on extending the acreage under tillage.

SINGAPORE

The first elections under Singapore's new constitution were held last May and the new government, which was voted into office by an overwhelming majority, has acted soundly and responsibly. Great care has been taken to avoid any official action which might have effects prejudicial to trade and industry, and in particular to the island state's traditional entrepot business. The government clearly recognises that the living standards of the expanding population can only be assured and improved if the national income grows at the same rate and conditions in Singapore remain attractive to capital and enterprise from abroad. By the imposition of strict economies the gap between revenue and expenditure has been bridged and the current financial position of the state appears sound.

Singapore's prosperity is likely to be based for a very long time to come on trade and it is, therefore, satisfactory that last year's trade turnover increased. This was largely because of the high prices of rubber and tin and the increased export quotas of the latter commodity.

FEDERATION OF MALAYA

Under the wise leadership of Tengku Abdul Rahman the Federation of Malaya has had an encouraging start as an independent state and, now that the Alliance Party has secured a decisive majority in the general elections held last August, the country should

again be assured of stable government for the next few years. One of the most satisfactory features of the period since independence has been the virtual ending of the emergency. Most of the country has now been declared "white", and the population can go about its business unhindered by security restrictions.

Last year was a favourable one for overseas trade and the improvement in business conditions in the United States was an important factor in stimulating demand for the Federation's staple commodities, rubber and tin. This led to a substantial increase in the total value of exports and, with imports remaining at much the same level as in 1958, a larger trade surplus is in prospect. An interesting development since the close of the year is that, as the result of a recent meeting of the Currency Board in Kuala Lumpur, it has been decided that the common currency, i.e. the Malayan dollar, is to continue in the Malayan and Borneo territories and remain linked to sterling at the 2/4d. parity. However, the Board is now to be permitted to invest up to about twenty-five per cent. of its assets in locally issued securities instead of wholly in sterling securities as at present.

NORTH BORNEO

Once again North Borneo's trade turnover last year reached record levels and the modest surplus achieved in 1958 was substantially exceeded. The country should undoubtedly have a great future provided its inhabitants of differing races live and work in harmony with one another and avoid the errors which have contributed to the misunderstandings that have arisen in nearby territories in South East Asia.

BRUNEI

Economically the territory still depends almost entirely on the oil-field although production has begun to fall off. It is estimated however that oil reserves will be adequate for at least twenty years and there is always a possibility that further fields will be discovered off-shore. In the circumstances it would seem worthwhile to encourage the development of a more broadly based economy. The sound financial position of Brunei State enabled the authorisation of a further loan of M\$100 million to the Federation of Malaya.

SARAWAK

While there were hopes a year ago that 1958 would prove a more prosperous period for Sarawak than the previous year, there was little expectation that it would turn out to be the best trading year since the Korean war boom. The high prices ruling in international markets for the territory's principal exports, namely rubber, pepper and timber, plus the record illipe nut crop exported early in the year, substantially raised the aggregate trade turnover. As a result, notwithstanding an increase

Indian Finance

March 12, 1960

In imports and disregarding the oil transit trade, Sarawak has for the first time for four years enjoyed a favourable balance of trade.

INDONESIA

Sympathy must be felt for Indonesia, where galloping inflation dominates everything including politics. The daily depreciation of the internal value of the rupiah is the outcome of progressive deficit budgeting, aggravated by heavy expenditure on the armed forces for security measures, and it seems that, without a drastic change of policy, little can be done to halt government expenditure and the consequent rise in the note circulation.

After the President's Cabinet was formed in July ministers made commendable attempts to economise in such things as the use of transport, the collection of monies owing to government and action to revitalise and prune government departments and embassies abroad. For one reason or another these efforts were nullified, but the biggest setback came when the drastic measures taken in August to reform the currency failed.

On the other hand, it is encouraging that although the monetary situation is deteriorating the external trading position shows improvement. This is due partly to severe restrictions of imports but also to exports having been substantially higher in value than in 1958. Potentially the richest country in South East Asia, there can be little doubt that economic recovery would be swift if effective steps were taken to curb inflation, especially now that the principal export commodities are fetching good prices in the world market.

THAILAND

Thailand continues to enjoy the benefits of a stable regime.

Again last year the country had an adverse balance of trade but, in spite of this, the exchange reserves have actually increased thanks to the extent of American aid. The authorities are naturally concerned at the trade deficit and it is to be hoped that their exhortations to curb the import of luxury goods will have the desired effect. The alternative would be to impose import restrictions and it would be particularly unfortunate if this were to prove necessary, for Thailand's return to a free economy a few years ago was not only almost unique in Asia, but also a particularly courageous experiment which has, so far, abundantly justified itself.

VIETNAM

The firm rule of the government of President Ngo Dinh Diem, despite sporadic incidents, continues to provide the country with the law and order necessary if the damage of the long years of war is to be repaired and the national economy rehabilitated. The economic task which confronts the country is indeed formidable, for Vietnam is still dependent on American aid for approximately seventy

per cent of its imports. The obvious remedy for this situation is to increase sales abroad of the country's staple exports; this has become more than ever necessary now that the United States, in view of its own balance of payment difficulties, has indicated that a reduction in aid is to be made during the coming year.

CAMBODIA

The latest figures available indicate that the trade deficit last year was substantially lower than in 1958, mainly by reason of a contraction in imports. Export figures rose as a result of increased rubber production and a higher level of prices for this commodity. Rice shipments on the other hand have been lower.

Cambodia, apart from the cost of maintaining its armed forces, which is financed by American aid, is in the happy position of being able to pay for its own imports. The government is well aware however of the need to stimulate the development of agriculture, which is and will remain the mainstay of the national economy. Efforts have also been made to encourage the establishment of light industries and in this field foreign investment can play a useful part.

THE PHILIPPINES

The stabilisation programme which, as I mentioned last year, has been approved by the Monetary Board on the initiative of Governor Cuaderno of the Central Bank, has been instrumental in effecting an improvement in the economic situation of the Philippines during the past year. The disinflationary measures introduced early in the year were later supplemented by the controversial foreign exchange margin tax, which came into effect in July and has brought about a significant contraction in imports. For the first time since the war the country has enjoyed a favourable balance of trade and there has been an increase in the international reserve. The overseas trade surplus owes much to the industrial recovery in the United States, which stimulated demand for Philippine primary products, and to the high prices in international markets obtainable for copra and coconut products.

HONG KONG

Very little complaint, if any, has been heard from any section of Hong Kong's industry about business conditions in 1959 and some of the major industries are at present enjoying boom conditions. During the year the value of total exports showed a ten per cent. rise, nearly all of which is accounted for by increased shipments to the United States, and it was particularly fortunate that the restriction of textile exports to the United Kingdom has been more than counterbalanced by expanding markets elsewhere. Despite this general picture of prosperity it cannot be said that 1960 opens too propitiously for the Colony, for the

increasing tendency for countries to apply trading restrictions against Hong Kong's products is disconcerting, especially as Hong Kong is now heavily dependent upon the marketing of its manufactured goods to sustain its economy and avoid large scale unemployment. Private building continued apace last year both in Hong Kong and Kowloon and there are still no signs of a slackening of activity in this direction. Even to the frequent visitor the rapidity with which the skyline changes is a thing to be wondered at, and perhaps nothing has done this more effectively than the completion of our own eighteen storeyed building, which is universally acclaimed as both imposing and attractive. Our next venture in this line is to be a new branch in Kowloon, which we expect to open towards the end of 1960.

CHINA

It is unfortunate that prospects for an increase of trade with the United Kingdom recently suffered a setback when the British government, in the process of administrative adjustments in its foreign trade policy, unfortunately conveyed the impression that it was increasing restrictions on Sino-British trade instead of relaxing them. It is to be hoped that the consequence will not be reduced sales of British goods to China, which would penalise those sections of British trade and industry whose enterprise in the last few years has gained a footing in the China market.

Our Shanghai office continues to do useful business, particularly in connection with the financing of China's export trade.

JAPAN

The steady recovery in the Japanese economy which had begun in 1958, and to which I referred in my last report, continued throughout the early months of the year and led to a new phase of industrial expansion. The results so far have been very satisfactory and exports have reached a record level, largely by increased shipments to the American market. As was to be expected with an expanding demand for industrial raw materials, imports have also risen, but the record rice crop which was harvested last year in spite of the damage done by disastrous typhoons holds out the possibility of Japan attaining self-sufficiency in this essential foodstuff within a few years, thus effecting a significant saving in foreign exchange.

With the trade deficit at its lowest since the war Japan's external reserves have increased steadily over the year, despite the fact that war reparations are being paid to four countries. It is evident that Japan is now reaping the benefit of the extensive modernisation and development of the country's industries which have been put in hand in recent years and as a result of which Japanese products embodying the latest advances in industrial technique, including automation and

electronics, are competing successfully in markets throughout the world.

NEW YORK

In the banking field the most noticeable feature during the latter part of the year has been the rise in short-term interest rates; a rise accentuated by congressional reluctance to raise the legal limit on interest rates relating to government borrowing for periods exceeding five years. On the initiative of the New York Clearing House Association efforts are being made to revise the state banking law to permit, with certain safeguards, foreign banks in New York state to accept local deposits. A draft bill to this effect is to be considered by the state legislature early in 1960. We appreciate having had an opportunity of putting forward, in common with the other British banks concerned, our views on the proposed legislation and we will continue to follow closely the progress of the bill.

HAMBURG

Thanks largely to a stable government 1959 was for Western Germany another prosperous year and the economic activities were such that the authorities finally felt constrained to raise interest rates to check over-expansion. Possibly the only danger to continued prosperity is the inflationary pressure arising from the growing strength of the trade union movement and its demands on industry.

Our Hamburg agency continues to function as an active link between our branches in the East and trade and industry in West Germany. In co-operation with The Eastern Bank and The Franco-British Bank our agency is gaining an increasing share of the financing of German trade with the Middle East.

WEST END, LONDON

Last autumn our branch in the West End of London was transferred to more modern and conveniently situated premises at 2, Regent Street. The design and decor of the new office have been commented in the technical press and a coloured illustration of a section of the public space appears in this report.

CONCLUSION

The importance of raising Asian living standards is now generally accepted and the highly industrialised nations have recognised that they have a responsibility for assisting in the process. This assistance will, for the most part, be in some form of aid, either direct from country to country or through one of the international funds. Those exporting the capital or making the grants, and the United Kingdom is one of the countries likely to be increasingly involved, will want to be sure that their contributions are genuinely devoted to the development of the receiving country and the benefit of its people. The tremendous national pride of the young coun-

tries will not allow them to accept aid with terms attached and yet, as some of these countries are run today, aid will not put them on their feet and give them viable economies.

The problem then is to find a formula which gives to these countries, with their consent, a control-free administration which would eliminate opportunities for bribery and corruption and a unit of currency having the same internal and external value, thus eliminating the rewards of smuggling and the other forms of currency evasion which run down the country's external assets—possibly in far greater sums than the aid received.

It is not uncommon these days for leaders of new nations to state that democracy does not work with them but what is not said is that their inexperienced politicians and civil servants often find it beyond their powers to run restricted and controlled economies. Cannot, therefore, those advisers of the World Bank and the International Monetary Fund, and those negotiating direct loans with these countries, advocate with more persuasiveness the freeing of rates of exchange, the concentration of trade in private hands, with the elimination of that increasing economic menace, state trading, and the ceasing of discrimination against the nationals and the trading of those highly-taxed countries whose peoples are bearing the cost of the aid?

Copies of the full text of the statement will be sent on application to the Secretary of the Bank at 38, Bishopsgate, London, E.C.2.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN that the Directors have decided to declare a second Interim Dividend on 30th March 1960 (additional to the Interim Dividend of 2½%, subject to tax, declared on 7th August 1959) in respect of the Company's financial year ending 31st March 1960, of 2½%, subject to tax, payable on or after 20th April 1960 to registered shareholders whose names appear in the Register on 30th March 1960 or to their mandatories.

Transfers received at the Company's Registered Office before close of business on 26th March 1960 will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board

J. R. Blaikie
Secretary.

Virginia House,
37, Chowringhee,
Calcutta.

11th March 1960.

N.B. Shareholders should inform the Registrar of any changes in their registered addresses.

End of Bull Phase?

Investment Gossip:

The stock market has continued its onward march upto the end of transactions on Friday without showing the least concern for the various rumours about imminent steps from the monetary authorities to hold the price line not excluding that in the stock markets. Throughout the week enthusiasm has known no bounds and fresh new levels have been recorded by many a scrip. The price advance was widespread. It was, however, evident that unlike the previous week, the market this week has largely been in the hands of speculators.

Friday night's Reserve Bank announcement regarding steps to check price rise and speculation may put an end to what may be described as unbridled speculation in equities. Immediately after the announcement korb rates have recorded a sharp decline for pivotal shares. An indication of the possible repercussions of the Reserve Bank directive on the share market can be had from the fact that the President of the Calcutta Stock Exchange Association has notified late last night that the Calcutta Stock Exchange will remain open on Saturday although it had earlier been announced that it will be closed today.

As has been generally expected the Reserve Bank has expressed concern at the trend of activity in the stock markets in the past few days and has now issued certain directives. The first directs banks to keep a minimum margin of 50 per cent in respect of all advances against equity shares above the amount of Rs 5,000. Banks are further prohibited from engaging themselves in direct financing of budia transactions. The directive has revealed that the credit control measures pertaining to the stock market operations have stemmed from the Bank's finding that the rise in share prices has been at least partly assisted by larger extension of bank credit. That more curb measures may be in the offing it need be indicated by the Bank's statement that Friday's measures have been taken for the present.

It is, however, to be noted that the Reserve Bank directive has made it clear that while taking the restrictive measures on speculative activity on the stock markets there is no intention to interfere with the progress of genuine investment.

So investors need not look upon the directive with undue alarm. The only people who should be worried and rightly so, are those who look upon the stock market as a gambling den.

New Issue Notes

SINGARENI Collieries have convened a general meeting on the 19th March to consider a scheme to increase the authorised capital of the company to Rs 4 crores, divided into 40 lakh equity shares of Rs 10 each. This is proposed to be done by deleting the provisions relating to preference shares of Rs 10 lakhs and increasing the issued and subscribed capital from Rs 63,21,450 to Rs 3 crores, divided into 30 lakh shares of Rs 10 each in the following manner:

By declaring bonus shares in the ratio of one for one and by effecting the balance of 17,35,710 equity shares to the existing shareholders in the proportion of their respective holdings in the first instance and to offer the shares, not taken up by the present shareholders, to the extent of 1.20 crore equity shares to the Central Government and to dispose of the balance in a manner the directors think fit.

The Balrampur Sugar Company Limited has decided to raise the paid-up capital by issuing 2.30 lakh Ordinary shares of Rs 2.50 each, at par, in the proportion of one share for every share held to those shareholders whose names stand on the register as on the 22nd March, 1960.

The Ryam Sugar Company Limited has proposed to increase the authorised capital from Rs 32 lakhs to Rs 38 lakhs by the creation of 40,000-8 per cent Redeemable Preference shares of Rs 10 each, to be redeemed at par, after 10 years from the date of their issue. The company has, however, the option to redeem them at any time after the expiry of 5 years by giving three months' notice. The new shares shall rank pari passu with the existing 6 per cent Cumulative Preference shares.

Western India Plywood Limited has proposed to issue 4,500 equity shares of Rs 100 each, at a premium of Rs 25 per share. Time for the submission of coupons has been extended from 29th February to 31st March, 1960.

INRS

Investment Notes:

New Central Jute has proposed to pay a further dividend of Rs 1.50 per Ordinary share, without deduction of tax, in respect of the year ended 31st March 1959. This will be paid out of General Reserve No. 1 and payable to those shareholders whose names are registered as on the 31st March, 1960. In this connection, the explanatory note, issued by the company, states that the working of the mill, during the current year ended 31st March 1960, are substantially higher than those for the preceding year. As against the same, Development Rebate in respect of the Chemical Fertilizer Plant, which is switched into operation, is to be provided out of current year's profits. The directors do not, therefore, propose to recommend payment of any dividend on the Ordinary shares in

respect of the year ended 31st March, 1960. Shares are presently quoted around Rs 29.00.

Indian Aluminium Company Limited has recommended a dividend of 12 per cent, subject to tax, for 1959. This works out to a net dividend of 8.4 per cent as against 7 per cent paid for the preceding year. As a result of the opening of the Hirakud smelter, production of primary ingot amounts to 14,600 tons, while that of semi-fabricated aluminium goods has also increased. Sales have risen from Rs 743 lakhs to Rs 970 lakhs. Net profit for the year is reported at Rs 68 lakhs (Rs 37 lakhs for 1958) after providing Rs 57 lakhs (Rs 28 lakhs) for depreciation and depletion; Rs 55 lakhs (Rs 60 lakhs) for Taxation and Rs 62 lakhs (Rs 11 lakhs) for Development Rebate Reserve. The shares are ruling very firm at Rs 25.87.

The following table shows the total production (in tons) of both the IISCO and the TISCO:—

	11 months ended 29.2.1960	11 months ended 28.2.1959
IISCO		

Pig Iron ..	964,072	864,871

Pig Iron ..	1,436,300	1,009,700
Steel Ingots ..	1,386,700	1,026,300
Saleable Steel ..	1,090,100	784,000

INRS

Investment Briefs:

Bengal Coal Company Limited has proposed a final dividend of Rs 15, subject to deduction of tax, making a total of Rs 25 per share for the year ended 31st October, 1959. This works out to a net dividend of Rs 17.50 per share, same as in the previous year.

Union Carbide of India Limited has recommended a final dividend of Rs 1.05 per share, subject to tax, making a total of Rs 1.80 per share for the year ended 25th December, 1959. The net dividend works out to 12.6 per cent against 14 per cent paid previously.

Walchandnagar Industries have decided to recommend a gross dividend of Rs 20 per share for the year ended 30th September, 1959. The net dividend comes to Rs 14 as against Rs 21 paid for the past several years.

The following textile mills have reported the net profits (in lakhs Rs) and the dividends (per share) for 1959 as compared to 1958:

Mills	1959 Rs	1958 Rs
Standard ..	33.34	15.89
Dividend+Bonus ..	25+4	20
New Shorrock ..	23.30	...
Dividend+Bonus ..	40+15	30+5

Ambika Mill ..	45.26	30.48
Dividend ..	45.00	30.00

COMPANY REPORTS

J. K. Steel Produces Excellent Results

Balance-Sheet Reviews:

J. K. STEEL has produced excellent working results for the year ended 30th June 1959. While sales have reached a new level of Rs 94.95 lakhs from Rs 56.21 lakhs, the net profit, before providing for Depreciation and Taxation, is substantially higher at Rs 16.88 lakhs as against Rs 7.09 lakhs in the previous year.

Apart from providing a sum of Rs 2.02 lakhs for General Reserve, the Depreciation amount is raised to Rs 5.12 lakhs from Rs 3.18 lakhs and Development Rebate Reserve to Rs 4.33 lakhs from Rs 3.50 lakhs.

The directors have recommended a dividend of 12½ per cent, subject to tax, on the increased ordinary capital as against 12½ per cent, free of tax, in the previous year. In this connection, it would be recalled that the Controller of Capital Issues gave his consent on the 26th July 1958 to the company to issue further share capital of Rs 25 lakhs comprising 10,000-7 per cent income-tax free Cumulative Redeemable Preference shares and 15,000 Ordinary shares, both of Rs 100 each. These shares were fully subscribed.

It may be further recalled that the Ordinary shares of the company, which were originally Rs 100 each, were sub-divided into shares of Rs 10 each, vide a special resolution passed by the share-holders on the 29th June, 1959.

Against a total paid-up capital of Rs 30 lakhs, General Reserve is shown at Rs 17.48 lakhs and Development Rebate Reserve at Rs 3.50 lakhs. The gross block at Rs 76.16 lakhs is depreciated by Rs 17.48 lakhs to show a net block value of Rs 58.68 lakhs.

According to the directors' report, the company has obtained licences for the manufacture of Electric Hoists and Chain Pulley Blocks. It has already entered into a technical collaboration with a leading Finish firm in this regard. It is hoped that the project will be completely shortly.

The company has also obtained Government's approval for the installation of Electric Furnace for the production of steel. The completion of this project will, to a large extent, make the company self-sufficient in its requirements of raw materials.

Kesar Sugar Works Reports Increased Profits

Although sales are lower at Rs 1.97 crores against Rs 2.35 crores, the Kesar Sugar Works Limited has earned a higher profit of Rs 11.23 lakhs for the year ended 31st July 1959 as against Rs 8.55 lakhs in the previous year, mainly due to the cut in manufacturing expenses from Rs 86.38 lakhs to Rs 79.28 lakhs. The directors have provided Rs 1.00 lakh for General Reserve and raised the Taxation provision from Rs 3.50 lakhs to Rs 4.50 lakhs. The Depreciation amount is, however, reduced to Rs 2.48 lakhs from Rs 2.49 lakhs and Development Rebate Reserve to Rs 40,000 from Rs 50,000. A taxable dividend of Rs 6.00 per share is recommended on the Ordinary shares against Rs 4.00 paid for the previous year.

The balance-sheet, as at 31st July 1959, shows a paid-up capital of Rs 33 lakhs divided into 45,000 Ordinary shares of Rs 50 each (Rs 40 paid-up) and 15,000 Redeemable 5½ per cent Cumulative Preference shares of Rs 100 each. The company has the right, after the 31st December 1951, to redeem from time to time all the Preference shares or such of them as the directors of the company may from time to time decide, at a premium of Rs 5 per share, after giving six months' notice. Against the paid-up capital, Reserves and surplus are shown at Rs 14.42 lakhs. The gross block amounts to Rs 85.26 lakhs and this is depreciated by Rs 54.42 lakhs to show a net block value of Rs 30.84 lakhs.

The quantity of cane crushed was 42.33 lakhs maunds as compared with 47.18 lakh maunds, while sugar manufactured amounted to only 4.04 lakh maunds against 4.67 lakh maunds, mainly due to the decline in the recovery percentage from 9.9 to 9.55.

The directors state that, looking to the present condition of the cane crop, larger crushing is expected than the previous season provided large-scale diversion of cane to manufacture of khandari does not take place. With further renovations of machinery which are being carried out, efficiency in production, is also expected to increase.

The production of distillery products is the highest on record, although offtake was poor. The working of doubling the capacity of the distillery is progressing well and most of the machineries ordered have been received and installed. The expansion is expected to be completed this year.

In this connection, it may be of interest to know that, under a project sanctioned by the Government, a factory to manufacture synthetic rubber is to be established near Bareilly and this will require a very large quantity of alcohol as basic raw material. It is, therefore, expected that the problem of finding a market for the surplus alcohol will be solved. The company's chemical factory has been able to increase its production and sales and the progress is being maintained this year also.

Chairman:—Mr. Tulsidas Kilachand.

Central India Again Passes Over Dividend

The continued disruption and dislocation of normal working caused by the large-scale renovation programme of Mills No. 1 and 2 (which is now nearly completed), the unsatisfactory trading conditions for a considerable part of the year and further increases in the cost of production, are fully reflected in the working results of the Central India Spinning, Weaving and Manufacturing Company Limited for the year ended 30th June 1959.

While sales are lower at Rs 2.25 crores against Rs 2.46 crores, the accounts for the year reveal a loss of Rs 52.89 lakhs against a loss of Rs 42.61 lakhs in the previous year. Naturally, the directors have not been able to recommend any dividend, either on the Ordinary or Preference shares. The debit balance carried forward to next year is as much as Rs 95.30 lakhs.

The balance-sheet, as at 30th June 1959, shows a paid-up capital of Rs 96,87,500 divided into 46,875 Ordinary shares of Rs 100 each and 10,000-5 per cent income-tax free Cumulative Preference shares of Rs 500 each. Reserve against assets taken over from Jannadhar Poddar and Company is shown at Rs 5.00 lakhs; Investment Reserve at Rs 5.00

lakhs and Dividend Equalisation Fund at Rs 87,822.

The gross block is shown at Rs 4.54 crores, which is depreciated by Rs 1.51 crores to show a net block value of Rs 3.03 crores. The value of new plant and equipment, installed during the year under report, amounted to Rs 84 lakhs and new construction work completed has cost Rs 17 lakhs. The present installed capacity of the mills is 1,15,188 spindles and 2,032 looms.

Nelliampathy Tea Reports Lower Profits

The Nelliampathy Tea and Produce Company Limited has reported a net profit of only Rs 2.14 lakhs for the year ended 30th June 1959 as against Rs 4.92 lakhs in the previous year, mainly due to the decline in sales from Rs 22.13 lakhs to Rs 19.02 lakhs. The Depreciation amount is reduced to Rs 36,572 from Rs 39,270 and Taxation provision to Rs 80,000 from Rs 2.40 lakhs. The directors have recommended a dividend of 10 per cent, subject to tax, as against 15 per cent paid for the previous year.

The company has reported a shortfall in tea production at 746,000 pounds as against an estimate of 900,000 pounds. The coffee crop harvested is, however, substantially higher at 729.63 cwts as against 222.78 cwts. The cardamom crop is shown at 24,162 pounds against 24,626 pounds.

Against a paid-up capital of Rs 16.50 lakhs, General Reserve stands at Rs 5.03 lakhs and Dividend Equalisation Fund at Rs 1.34 lakhs. The gross block at Rs 26.24 lakhs is depreciated by Rs 5.36 lakhs to show a net block value of Rs 20.88 lakhs.

According to the directors' report, conditions so far in the new season are favourable and better results than last season are expected.

Rayalseema Mills Maintain Dividend

Despite a higher profit, the Rayalseema Mills Limited has just maintained the dividend at 10 per cent for 1959. Yarn prices during the first half of the year were quite low and, at the end of June, the company made a loss. But, yarn prices improved beyond all expectations during the second half of the year and this has resulted in the company having made such satisfactory profits as has been disclosed in the accounts.

Sales have improved to Rs 70.54 lakhs from Rs 59.20 lakhs, while the net profit amounts to Rs 6.42 lakhs against Rs 6.22 lakhs in the previous year. The directors have set apart Rs 2.69 lakhs (Rs 2.72 lakhs) for Depreciation; Rs 1.54 lakhs (Rs 1.57 lakhs) for Taxation and Rs 1,038 (Rs 20,000) for Development Rebate Reserve.

Against a paid-up capital of Rs 22.33 lakhs, Reserves and other Funds amount to Rs 11.20 lakhs. The gross block is shown at Rs 56.79 lakhs; total depreciation at Rs 28.56 lakhs and the net block at Rs 28.23 lakhs.

A. V. Thomas & Co. Pays Only Preference Dividend Arrears

Although sales are lower at Rs 1.38 lakhs against Rs 4.05 lakhs, the working of A. V. Thomas and Company (India) Limited has resulted in a net profit of Rs 52,004 for the year ended 30th June 1959 as against Rs 19,611 in the previous year. Apart from setting aside a sum of Rs 22,500 for Taxation, the Depreciation amount is raised to Rs 2,739 from Rs 1,871. The directors have recommended the payment of 5 per cent dividend on the preference shares for 1958-59, subject to tax, and also arrears of 5 per cent dividend for 1948-49 and 1949-50, subject to deduction of income-tax.

The balance-sheet shows a paid-up capital of Rs 5.00 lakhs divided into 30,000 equity shares and 20,000-5 per cent Cumulative Preference shares, both of Rs 10 each.

Buying Spree Despite Profit-Taking

Watch-Dog Writes:

SINCE the publication of the Budget proposals, stock markets have been enjoying a veritable boom. With demand becoming more insistent, the rise in share values has gathered momentum, resulting in an impressive turnover, especially when fears of an increase in the Bank Rate appear to have receded. Profit-taking, however, has erased some of the extreme gains at the close of the week.

Despite profit-taking at higher levels, the Calcutta Stock Exchange witnessed cheerful conditions last week.

Trading on the Bombay Stock Exchange was featured by irregular price pattern.

On the Madras Stock Exchange, buying support gathered momentum in active trading in selected scrip. Quiet conditions were experienced on the London Stock Exchange.

Wall Street closed with an irregularly lower tendency.

Calcutta

Friday Evening.

CONDITIONS akin to a boom were witnessed on the local Stock Exchange during the week under review. Almost all the sections participated in the rise and fresh higher levels were recorded by selected shares, although profit-taking caused a slight setback toward the close of the week. One reason for the sustained buoyancy in the market is the fact that the bull operators have now fully understood the implications of the Central Budget and are now proceeding on the basis that the impact of large-scale development expenditure will be favourable to the stock markets. As a result, bouts of profit-taking have been easily absorbed without any material setback.

Some of the operators, however, appear to be somewhat concerned over the possibility of credit squeeze being attempted to check the inflationary pressures. Again, it is considered that, in the absence of genuine investment support, the present rise in prices is overdone due to speculative activity. There are even unconfirmed rumours with regard to the possibility of a few operators being unable to meet their commitments in the current settlement. It is even wondered whether the present steady rise in prices will be maintained without

leading to a vulnerable position in the market. The developments in the coming weeks will, therefore, be worth watching.

The Gilt-edged market took a slight turn for the better, thanks to the fears of an impending increase in the Bank Rate having receded. Long-dated issues were, however, still quiet in the absence of institutional support. 3 per cent 1986 Conversion Loan, after touching a new of Rs 73.40 from Rs 74.05, improved toward the close to Rs 73.73.

In sympathy, Bank shares showed a slight improvement over last levels with Punjab National changing hands at Rs 21.50 to Rs 21.75 and United Commercial at Rs 72 to Rs 72.25.

Higher advices from the gunny market had a favourable effect on the Jute section where selected scrip met with good business at enhanced levels on the feeling that the mills might be making satisfactory profits at the present level of raw jute prices. New Central were a special feature and the scrip, after hitting a new high on the recommendation of a further dividend for last year, displayed a slightly reactionary tendency toward the close on the company's decision not to recommend any dividend for the current year ended 31st March, 1960.

Coal shares continued to respond well to selective enquiries on the hope that the Government would soon realise the need for encouraging the private sector of the industry and give encouragement to raise production.

In the Tea section, a few selected shares showed a smart recovery from the recent low levels following the encouragement derived from the Centre's decision to increase the excise duty as a prelude to the rationalisation of the burden on tea.

Sugar shares were rather quiet in the absence of fresh support, although one or two scrip maintained their best levels.

Textile scrip moved within a narrow range, as operators were inclined to await how far the recommendations of the Central Wage Board would affect the working results of the various cotton mills. It was even feared that, on top of costlier raw material supplies, an unexpected increase in wage costs would cut seriously into the profit margins of the mills.

Engineering shares buoyed up under the lead of Indian Irons on the feeling that the levy on pig iron and the consequent increase in costs would ultimately be passed on to the consumer.

Miscellaneous scrip showed a considerable rise over last levels due to the reserved attitude of sellers in view of growth prospects. Paper shares remained buoyant in the absence of any fresh levy. Hind Motor rallied on consistent buying, generated by strong rumours about a right issue.

The following table shows the extent of the rise in the prices of

a few selected scrip from the last week-end levels:

Week-end Review:				
		As on March 5	Week's High	As on March 11
		Rs	Rs	Rs
Engineering:				
Indian Iron	...	23.98	24.49	24.34

recover to Rs 611 to terminate at Rs 603. Wmco met with investment demand. Hindustan Lever were steady at Rs 40.75 following the publication of the detailed accounts. Shivrampur were steadier around Rs 81.50 while Cent Tyres were done upto Rs 186. B.B. Petrol was slightly better.

Cotton mill shares after early improvement reacted sizably on prompt taking to recover but again succumbed to the close. Standard Mills and Mafatlal lines reacted sizably on poor yield considerations following the announcement of dividends. India United Mills faced heavy selling but later on steadied up. Khataf were well maintained around Rs 292. Bombay Dyeing after reacting to Rs 69.60 from Rs 70.60 rebounded to Rs 71.50 to react to Rs 70.50 but shot upto Rs 72.70 to drop down to Rs 70.70 on announcement of April dividend of Rs 2.50 subject to tax. Century moved upto Rs 431 after mid-week set back to Rs 472 to terminate at Rs 484. Swadeshi Mills were steadier around Rs 283 finally rose to Rs 340 to react at Rs 333.

Madras

SUGAR shares were keenly bought today in the Madras Stock Exchange which witnessed one of the most active days during the season. There was good support of a speculative nature to plantation shares. In anticipation of increased price of rubber, rubber shares boomed. Coffee and tea in sympathy with this also firmed up. Textiles were buoyant. Industrials were quite steady and closed firm.

Government Securities: The 4% Government of India 1979 loan was bought at Rs 100.20. Government of Madras 1963 Madras Loan was quoted at Rs 100.35. That of Mysore Loan of the same period and denomination was bought at Rs 100.35. Other State loans of the various denominations and periods remained at the market prices without any change whatsoever.

Banks: Banks counter did not evince any interest. They were the same in their prices. The Indian Bank Rs 100 paid share was quoted at Rs 189.00 and the Rs 80 paid share was available at Rs 150.00. The Pandyan Bank was unchanged

at Rs 40.00. The Punjab National Bank stood at Rs 21.60.

Electricity: No change was observed in this section too. Cochin remained at Rs 10.65, Ellore at Rs 10.35, Karaikkal at Rs 9.95, Kumbakonam at Rs 10.70, Negapatnam at Rs 10.00, Salem-Erode at Rs 12.50, South Madras at Rs 10.25, Vellore at Rs 13.00 and West Coast at Rs 12.50.

Sugars & Breweries: Andhra with taxable 20% dividend was marked at Rs 24.25. Cauvery was bought at Rs 152.00. Deccan was up at Rs 14.45 and E.I.D. was negotiated at Rs 49.00. India sugars was sold lower at Rs 13.10. Jeypore remained at Rs 15.50. K.C.P. jumped to Rs 20.00. Kirlampudi was sold at Rs 67.00, Mysore at Rs 57.50. Travancore at Rs 11.00. United Breweries increased its value by two rupees at Rs 67.00.

Plantings: Balanor was at Rs 17.65. Be Be at Rs 3.70 was the same. Blue Mountain gained points at Rs 3.68. Chembra was available at Rs 4.68. Cochin Malabar increased its value at Rs 8.20. Coffee Lands registered increase at Rs 25.75 and Cons. Coffee shares also at Rs

24.50. Coonoor was stable at Rs 27.25. Cowcoody was higher by 6 nP per share at Rs 6.10. Haileyburia was marketed at a higher level of Rs 48.50. Kallias too went up to Rs 3.80. Kiri Kotalagiri was bought higher at Rs 6.50. Kumargode remained unchanged at Rs 5.95. Lingapur was available at Rs 7.10. Malabar Agriculture was quoted at Rs 7.50, and Malabar Industrial was rated at Rs 12.85. Mercara increased its quotation to Rs 10.35. Midland too was available only at Rs 12.35. Mysore Coffee remained steady at Rs 5.10. Mysore Plantation with 6% dividend was sold at Rs 1.95. Nelliampathy was sold lower at Rs 2.95. Nenmeny at Rs 12.05 and Nilampur at Rs 17.50 did not show any increase. Nilgiri was available at Rs 7.50 and Nonsuch at Rs 26.75. Ouchterlony increased to Rs 6.55. Panchura at Rs 4.47 was another scrip that was seen steady. Peermade was better at Rs 25.00, while Peninsular was unaltered at Rs 22.75. Perikaramalai at Rs 4.05 was a favoured scrip today. Pullangode was also fancied at a fractionally lower rate of Rs 2.04. Puthuthottam registered a rise of 3 nP at Rs 2.85. Rajagiri went up to Rs 22.25. Savamalai also was fancied at Rs 4.53. Swinton's rate went up by 15 nP per share to Rs 2.75. Thamarapally gained Rs 1.50 at Rs 30.50. Thirumbadi was in demand at Rs 2.16 and Travancore Rubber at Rs 15.62. Travancore Rubber & Tea was also a fancied share at Rs 9.35. Vellimalai went up to Rs 6.80 and Waterfall to Rs 3.75.

Textiles: Anglo-French went up to Rs 107.00 making a bid at six rupees higher. Asher remained at Rs 212.80. Bangalore Woollen at Rs 200 was another share which though in demand did not change, but Buckingham went up to Rs 204.00. Cauvery Spinning at Rs 14.50, Colimbatore Cotton at Rs 152.50, Colimbatore Kamala (Rs 100 share) at Rs 102.00 and the Rs 50 paid share at Rs 50.00, Colimbatore Murugan at Rs 95.00 and Colimbatore Pioneer at Rs 360.00 were unchanged.

*

London

QUIET conditions were experienced on the London Stock Exchange. Buyers were still not disposed to extend their commitments too far ahead although a certain amount of selective support was evident. Any benefit that sentiment might have gained from the February gold reserve figures was offset to some extent, by the decline in prices on Wall Street.

Imperial Chemical were among the leaders to improve in advance of this month's final dividend statement. Oils were quiet and irregular. Tea shares were on the dull side, while Rubbers showed little change.

*

New York

AGAINST a mixed news background, prices on Wall Street continued their downward trend right from the beginning of the week under the leadership of Industrials and Ralls. Losses were at first confined to fractions; but penetration by the Dow Jones Rail Average of last November's low appeared to give the signal for increased selling. As a result, the decline in prices was accentuated.

Durgapur Steelworks

The Steel Melting Shop

Stage Two—work goes on

Yesterday we surveyed, planned and builttoday results are being obtained. India's newest steelworks at Durgapur, which is being built by ISCON, is now in production under Hindustan Steel Ltd.

No. 1 Blast Furnace is making iron while work goes on in the second stage, the completion of which will mark the beginning of making and shaping of steel at the steelworks.

the key to
better motoring

When you switch on the Ignition and start your engine it commences to use petrol and oil, both rather expensive items these days. So it's quite important that your car (and you) receive the kindest treatment. And, the wise motorists are those who always use Caltex petrol and oils —there's nothing as good as Caltex for better performance, and proved economy.

Care for your car—

In the steel-making furnaces at Jamshedpur, the temperature is around 3200°F. The brick-lined doors of the furnace required frequent repairs because the tremendous heat burnt out the lower part of the door lining and the frames.

It was left to Zahir Hussain, a 43-year old mason in the Brick Department, to devise a new method of lining which has increased the life of the furnace doors. Zahir Hussain's achievement won him acclaim and a cash reward of Rs. 5,000—one of the 435 suggestion awards made since 1945.

This is one of the many examples of initiative from the shop floor benefiting the whole enterprise—another industrial tradition being laid in Jamshedpur, where industry is not merely a source of livelihood but a way of life.

WORLD OF FINANCE

Credit Squeeze? No Control & Restraint? Yes

THE immediate reaction to the measures initiated by the Reserve Bank last week is that, at long last, the central banking authority has brought out the big guns in its armoury of anti-inflationary weapons and imposed a general credit squeeze. Second thoughts, on the basis of a more careful examination of the measures, should show that the last week's directives of the Reserve Bank in no way run counter to its reiterated desire to ensure that finance is not denied for productive purposes. What is it that has been barred or is affected? Advances, firstly, against ordinary shares; the margin thereon has been raised from 40 per cent to 50 per cent. Now, there cannot be any vestige of doubt that prices have been overdone on the Stock Exchanges; the extent of price rise has in many instances been dizzy; and the Reserve Bank has adduced figures to show that bank finance has played a part, however small, in enabling purchase of shares—and part of this, we may conjecture, has undoubtedly been of a speculative nature. A corrective to share prices was necessary, and if a crash in the future was to be avoided, the Reserve Bank's action in this behalf—already producing the desired effect—is undoubtedly in the interests of the investor.

Secondly, there is an injunction on the proportion of Advances that Scheduled Banks may extend as "clean". This, of course, is in furtherance of the first objective in view; it has happened in the past that directives in respect of specific commodities have had their effectiveness curtailed by the obtaining instead of "clean" Advances. In any case, too high a proportion of clean Advances is not desirable in a bank balance-sheet, and both the investor and depositor in a bank must consider this action to be in their interests. However, some clarification is necessary in respect of Advances which are technically clean, but actually secured.

Thirdly, the financing of budla transactions has been prohibited. The Reserve Bank calls such activity on the part of banks undesirable. It certainly is so when speculative elements cut their frenzied caper. But, in the long run, "budla" financing must be reckoned part of the money market apparatus, and when the Reserve Bank is satisfied that speculators have withdrawn, budla should again be permitted—within prescribed, safe limits—and the new margin requirement of 50 per cent against Advances on equity shares may be relaxed to 45 per cent.

Lastly, there is the impounding of 25 per cent of all new Deposits accruing after March 11; and this is in addition to the existing statutory balances to be maintained with the Reserve Bank. This alone is a measure arising from a desire to secure a general, rather than particular, control over banking assets. Although the Reserve Bank has announced that such enforced deposits will carry an interest to be determined, the fact that it will

be lower than the yields on Government securities has led some circles to describe this particular measure as an attempt by Government at enforcing loans from the banking system at a cheaper rate of interest. But it should be remembered that such enforced deposits will be of little use to the Government; it is the Reserve Bank's cash in the till which will benefit; indeed, the effect of this requirement will be, on the contrary, to reduce the quantum of banking funds that will be available for investment in Government securities. We presume that, when the current busy season ends, and when bank Advances show signs of declining, the monetary authorities will withdraw this requirement—instead, however, raising the quantum of statutory balances to be maintained with the Reserve Bank. We suggest this is a monetary instrument which should be used with flexibility and elasticity.

In brief, the Reserve Bank's actions do not tantamount to a credit squeeze; rather are they an attempt at securing effective credit control and restraint. That is to say, the Reserve Bank will ensure, in the future as in the past, that industrial expansion and productive enterprises are not hampered by lack of banking finance.

Steep Fall in Reserve Balances of Member Banks

BANKING figures have yet to be distorted by the "credit squeeze"; but they no doubt already bear repercussions flowing from the virtual standstill of the operations of the State Bank. Meantime, the busy season continues with unabating relentlessness. It remains to be seen whether the set of measures instituted by the Reserve Bank, effective March 11, will serve to make the rest of the busy season less strenuous. For our part, we believe that the "relieving" of the stringency by the credit squeeze, in a manner of speaking, will be offset by the increased demand resulting from the State Bank strike. At the same time, the end of March approaches, and the hefty governmental end of fiscal year disbursements will undoubtedly be reflected in a considerable accretion to Scheduled Bank Deposits. Thus it is that money market stringency, might be relieved by the end of the month, though the demand for Advances may persist until the end of April.

The returns of the Reserve Bank for March 11 show that spillover of beginning of the month disbursements has, together with the continued busy season pressure, caused another steep rise of Rs 16.99 crores to Rs 1837.90 crores in Active Note Circulation. Rupee Coin has also moved out into circulation in the amount of Rs 0.73 crores. Currency has been expanded, symptomatic presumably of deficit financing, for Rs 5 crores against Rupee Securities; and cash in the till is down by Rs 12.75 crores at Rs 8.67 crores. Foreign Securities are unchanged.

The Central Government's balances are more or less static, being higher by Rs 0.27 crores at Rs 50.64 crores. But, then, there is the likelihood of deficit financing, as also the possibility that State Governments have made some repayment of loans during the relevant week. For, Deposits of the States are lower by Rs 4.50 crores at Rs 29.76 crores, and their borrowings have gone up by Rs 1.72 crores to Rs 29.49 crores. It is for these two reasons that, despite probable considerable disbursements on the part of the Centre, its balances have not declined.

Interestingly, Reserve Balances of member banks have been steeply drawn on, having gone down by Rs 22.86 crores to Rs 71.63 crores; and that Scheduled Bank borrowings have mounted, and substantially at that, is suggested by the rise of Rs 9.08 crores to Rs 135.61 crores in the Other Loans and Advances of the Reserve Bank. Partly, these two changes may be said to reflect the strain experienced by Scheduled Banks in meeting the busy season demand for funds. Partly, also, they may be said to be an offshoot of the State Bank strike, compelling perhaps greater accommodation being sought from the other Scheduled Banks. Lastly, Balances Held Abroad have moved down by Rs 1.46 crores to Rs 32.27 crores.

We surmise that Scheduled Banks must have experienced considerable gross accretions to Deposits during the week ended March 4. For, in that week, Advances are shown to have risen only by Rs 7.40 crores to Rs 1068.40 crores; and, meantime, gross Deposits, too, have gone up net by Rs 2.91 crores to Rs 1913.69 crores. Surely, the superimposition of beginning of the month demand for funds on the busy season would have caused a steeper rise in accommodation sought. So, it seems to us likely that "new" Deposits have immediately been offset by funds drawn by constituents to meet month early expenditure. It is not possible to isolate figures of other Scheduled Banks, since the return of the State Bank from that week onwards is not available. But, by and large it may be stated that the disinvestment in gilt-edged for Rs 6.66 crores is probably on account of the State Bank. As a result, cash balances have improved slightly by Rs 3.12 crores to Rs 163.71 crores. Meantime, however, borrowings from the Reserve Bank are higher by Rs 5.21 crores. In this context, we may mention that the State Bank is likely to have necessity both to disinvest and to borrow from the Reserve Bank. Fortunately, for the State Bank, or perhaps it called back its loans in this respect, Scheduled Bank borrowings from that institution are reduced by Rs 4.11 crores at Rs 10.83 crores.

The next return of Scheduled Banks may, conceivably be, highlighted by (a) a fall in Deposits; (b) a sharper fall in balances with Reserve Bank; (c) a sizeable rise in borrowings from the central banking institution; and (d) an expansion of fair dimensions in Advances. While the first three may be considerably on account of the State Bank, the last would be experienced by other Scheduled Banks as a result of the State Bank strike.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, the 15th March 1960. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.310 were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.760 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills will be received at Bangalore, Calcutta, Kanpur, Madras and New Delhi up to the close of business on Monday, the 21st March 1960 and at Bombay and Nagpur on Tuesday, the 22nd March 1960 up to 11 A.M. Successful tenderers should make payment on Friday, the 25th March 1960. Other conditions are as usual.

During the week ended the 11th March 1960 Government of India Treasury Bills for Rs 6,41,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 16th to 19th March 1960 at Rs 99.326 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 9th to 12th March 1960.

Inflation and Interest Rates

By Paul Einzig

ON the occasion of a recent debate in the House of Lords, the Earl of Dundee, speaking on behalf of the Government, attributed the fall in gilt-edged market to the rise in long-term interest rates. This remark is somewhat perplexing, since obviously a fall in the price of Government loans and the rise in the interest rates on them are merely two aspects of the same thing. The only possible interpretation of the remark is that it is meant to convey that the fall in Government loans was the result of the Government policies causing a rise in interest rates. If this interpretation is correct, then Lord Dundee was less than fair to his own Government. He accepted by implication the blame for losses suffered by holders of Government securities.

In reality, responsibility rests with those who have caused the domestic purchasing power of the pound to depreciate since the end of the War. The Governments in office since 1945 shared in that responsibility because of their reluctance to adopt policies preventing inflation. On the other hand, by far the larger part of the responsibility rests with the trade unions which, through their excessive wage demands, have caused sterling to lose much of its purchasing power. It means that, even if Government Loans were still quoted at the high level to which they were raised by Socialist's cheap money policy after the War, holders would only receive less than half of real value for their dividends. It is no wonder that many holders grew tired of holding fixed interest bearing securities unless their prices declined to a level at which their yield compensated them for the fall in the purchasing power of sterling. A 5 per cent yield today has less real value than a 2½ per cent yield had during the days of Dr Dalton.

One of the ways in which inflation can be resisted is by means of raising interest rates. This was done by the Conservative Government soon after they assumed office, though it was not done on a sufficient extent to be effective until the crisis of 1957. It is the tragedy of the unfortunate holders of fixed interest bearing securities that they stand to lose both on the swings and on the roundabouts. They stand to lose if the Government do not take any measures to resist inflation, but they

also stand to lose as a result of effective measures taken by the Government to resist inflation. In addition to the decline in the price of gilt-edged securities resulting from inflation, there has been a further decline resulting from the measures taken to resist inflation.

That being so, it is not strictly correct to attribute the fall in the gilt-edged market to high interest rates. Had interest rates been kept low, inflation would have proceeded at a much faster pace between the advent of the Conservative Government in 1951 and the crisis of 1957. As a result, the price of gilt-edged securities would have declined to an even larger degree owing to the depreciation of the goods value they represented. It is true, by raising interest rates, the Conservative Government made themselves directly responsible for a further fall in the gilt-edged market. In the absence of its dear money policy, however, Government securities would have fallen to an even higher degree.

It is true, thanks to the drastic measures taken in 1957, inflation has been halted for nearly two years; and, in spite of this, there has been a further depreciation of Government securities as a result of the policy of dear money which halted inflation. In this sense, it may be technically correct to argue that the fall in the gilt-edged market was caused by high interest rates during the last two years. Nobody is in a position to tell at what price the Government securities would be quoted today, if money rates had been kept, say, 2 per cent below their present level. The Government would have been in a position to keep short money rates low at the cost of allowing the goods value of the pound to decline further. It would not have been in a position, however, to prevent long term interest rates from rising as a result of a flight of investors from their depreciating fixed interest bearing securities.

A decline of interest rates through Bank rate reductions would bring relief to holders of Government securities, but only in so far as a policy of cheaper money could be adopted without causing a resumption of inflation. Otherwise, any benefit derived by the gilt-edged market from lower short-term interest rates would be offset, and more than offset, by a resumption of the flight of capital from gilt-edged investment.

On the basis of the above argument, it seems that the decline in the gilt-edged market was due not to the rise in interest rates, but to inflationary wage demands by the unions; the unwillingness of employers to resist such wage demands; the unwillingness of consumers to resist the resulting rise in the trend of prices; and the unwillingness of Governments to bring about such resistance by employers and consumers by means of a determined disinflationary policy.

IFC as Catalyst

SOME interesting points that have relevance to problems of industrial growth in this country, especially with foreign financial assistance, have been made by Mr Robert L. Garner, President of the International Financial Corporation, in a paper presented to the International Congress of Scientific Management which met recently in Australia. In this paper, the IFC President has undertaken a comprehensive review of the provision, accumulation and management of capital in a developing country. For the purpose of the discussion, developing countries have been defined as those in which industrialisation is relatively recent, regardless of variations of industrial activities. These countries are under compulsion to achieve a rate of growth which is high in relation to the rate of indigenous capital formation. The gap is sought to be filled by raising funds abroad, mostly from Governmental institutions, though of late there is growing awareness, among forward-looking business leaders of the advanced countries, of the opportunities of the new economic frontier represented by the less developed areas. This awareness is heightened by the recognition of the strategic significance of the developing areas in an era of competitive co-existence. The aim the IFC has set before itself is to act as a catalyst to mobilise private investment funds and to set the pattern to stimulate the flow of such investment into growing private sectors of the developing countries.

Public funds, from both local and external sources, now play a significant role in financing industrial enterprise. While conceding the useful role of public funds in providing the basic facilities and services, Mr Garner has noted that many of the countries have diverted funds from such needs into activities traditionally performed by private enterprise and private capital. The availability of public funds at subsidised rates of interest has also acted as a barrier to the flow of private capital.

As the amount of public funds available is necessarily limited, cheap Government funds, in the long run "may well hinder rather than promote" industrial growth. During the first year of its operations in India, the IFC concluded two substantial loan agreements. It will be useful to know how far the availability of low-cost Government funds has limited the scope of its activities in this country.

The suggestions made by Mr Garner regarding the capital structure of growing industries and the appropriate dividend policy they might follow, merit the careful consideration of sponsors of new ventures as well as of the public authorities who sanction them. As regards borrowed funds, the IFC generally takes the line that equity should exceed, or at least equal, debt. Mr Garner has also drawn attention to the risks of excessive short-term debt and the disadvantages of reliance on supplier credit to finance construction or purchase of equipment. A fresh appraisal is indicated regarding Government's policy of allowing imports of equipment only against deferred payments agreements. As regards dividends, Mr Garner has suggested that, for successful and

growing companies, payment of dividends in shares may be a sound practice, which will reconcile the claims of shareholders for liberal dividends and the needs of the business to retain a substantial part of the earnings for expansion. This suggestion will meet with enthusiastic approval in business circles, but the Finance Minister may not be inclined to take a more kindly view of the taxation of bonus shares.

Growing Painfully

THE Jha Committee's findings, related to the current prices for motor cars, have been accompanied by a plea for relaxation of import policy for the benefit of the local and still growing automobile industry. It looks as if the Committee is in agreement with Lord Tedder on the issue of the optimum price for a locally made small car. It also looks as if the foreign associates of Indian manufacturers will have to offer new terms for collaboration, especially, if the cheapening of commercial vehicles by removal of present price control takes place. The tacit permission given for keener competition may well affect the fortunes of manufacturers emerging from a long depression and it is also clear that much more capital will have to be raised in India, not only to qualify for approved expansion programme but to enlist the help of the foreign associate—be it GMC or BMC. The increase of indigenous content in motor vehicles made in India was presumably the main aim of the inquiry and the lack of uniform progress to date is no reason for withholding help in relation to essential imports or giving immediate and substantial aid to local makers of ancillary parts. The handicaps of the industry, past and present, have been listed in detail, and the conclusions drawn must only suggest that Tata-Mercedes-Benz have so far done much better than others in the field. But it is transport policy and road construction that are still operative considerations and there is no blinking the fact that the Government's main concern is always over railway revenues in the face of rising costs of operation and competition for road transport.

The justification for tariff protection offered in the report was certainly expected. An official committee could not criticise fiscal policy, though Parliament can comment in such cases. But the industry, like the consumer, has paid the price for economic nationalism, and it is always well to remember that restricted home demand, export difficulties and rising wages are not problems peculiar to India today. The experience of Britain whose motor industry has run into difficulties (not at all expected in 1948 when the PEP assessed the growth and prospects of a new, staple industry) must be kept in view by optimists who hold that the Indian motor manufacturer has a great future. Progressive consolidation after the war has helped, but operation below capacity is due to the handicaps of exporters though exports rose by 19 per cent in 1958 and 1959. The profits saved during the war certainly helped expan-

sion of output, and foreign capital in the UK industry made prompt and full use of its opportunities. But a point to remember now and here is that the manufacture of components and accessories claims more than half the labour force in the UK motor industry. The UK had the advantage of a large share of the Commonwealth market, though local assembly of cars gradually reduced the proportion of exports to manufacture. In comparison with the USA, Canada and Germany, the UK was not well placed and rigid wage costs have long hampered the industry which, during the war, was diverted to other products.

Such an experience is unknown to India, but the current structural changes in the British motor industry may well compel India to ask whether integration or even new location is not possible. The UK industry is looking well away from the Midlands to the Mersey side, Scotland and Wales, and massive investment by the big firms is the cardinal feature of the revolution concerned as much with enlarging local employment, as with restoring advantages to the export trade. The estimate that Britain will be able soon to produce over two million vehicles per annum is offset by the assumption that costs will not be lower, because of the inexperience of new workers in new plants. But one other point demands notice here. The big firms are planning for bigger output. The BMC intends to produce a million vehicles by putting in £50 million for development under special sanction and Vauxhall (a subsidiary of General Motors) means to expand on its own former lines from its own ample reserves. The changed fortunes of the industry in the export field may lie behind the plan to develop further in order to compete with France, Italy and Germany which are rivals in the US market also.

The new pattern of concentration by stronger units, arising from mergers like that of Standard with Triumph, is not without its lessons for India, which will have steel to spare for the industry but must wait for the rapid growth of the engineering industry and, above all, for home demand to increase as expected. The current US preference for smaller cars may influence the trend of UK production, but it will be agreed that the growth potential of the industry is very limited in comparison with that of the UK industry because new motorways may have a bearing on replacement demand, along with the increase in car-buyers in the lower-income brackets. But the latest inquest on the Indian motor industry may dictate a new attitude to the manufacture of ancillary equipment including batteries and tyres in India. It will also suggest the need to copy Japan in the manufacture of vehicles according to foreign blueprints, so that a share in adjacent markets, too, may be acquired before long. There remains the need for rational, uniform taxation by means of a tax on petrol on fuel consumption alone and the State Governments must be induced to make other vehicles bear a part of the cost of road construction and maintenance. While the case for a cheap light car is by no means fully established at present, the Jha

Committee has indicated that the performance of the car industry has not been quite up to previous anticipation. And its growth in future must be assisted rather than requested on a priori considerations.

Growth Trends in Union Finances—II

[The first instalment of this article appeared in the issue of "Indian Finance" of March 12, 1960—Ed.]

FROM Table 5 at the end of the first instalment of this article, the reader might have seen that, while the per capita income has increased from Rs 265 in 1950-51 to Rs 297 in 1958-59, that is, by Rs 32, the per capita money burden of Union taxation has increased from Rs 9.8 in the former year to Rs 13.8 in the latter, that is, by Rs 4. What he could not have known from that table is that about 60

per cent of that increase of Rs 4 in the per capita tax burden has been accounted for by increases in the excise duties on eight commodities of general or universal consumption. These eight commodities are cotton mill cloth, sugar, matches, kerosene, tea, vanaspati, paper and soap. In a special table (No. 6) hereunder is presented the per capita incidence of excise on account of the respective quantities consumed of these eight commodities in the two years—1950-51 and 1958-59. It will be seen from this table that the per capita incidence of excise has increased from Re 1 in the former year to Rs 3½ in the latter, that is, by Rs 2½. Since the commodities concerned are widely consumed, the increase in the incidence of excise means that, by and large, the "masses" of the population have made their "fair" additional contribution to the Exchequer in the period of planning. That they will be making, in the years to come, an increasingly greater contribution to the State's revenues with the increase in their consumption levels may be postulated with a degree of certainty.

TABLE 6.

But it is difficult to make out, on the basis of yield trends of Income-tax, whether the "classes" have made, and will be making, a relatively greater or lesser contribution to the Exchequer. If all those who pay Income-tax are described as the "classes" with reference to their income levels, the ones belonging to the income brackets of "up to Rs 5,000", "Rs 5,001-10,000", "Rs 10,001-25,000" and "Rs 25,001-50,000" do not seem to have made any significant additional contribution to the Exchequer except, perhaps, through indirect taxes on articles of luxury consumption. That the average disposable incomes (after tax) of these groups have maintained, more or less, a constant level since 1954-55 may be seen from Table-7 hereunder. The figures presented in this table are averages worked out from the All-India Income-tax Revenue Statistics pertaining to "Individuals".

It will be seen from the above table that the average total assessed incomes in the relevant brackets have also not increased; this is somewhat intriguing even after allowance is made for the fact that the inflationary impact of deficit financing during the period has been partly contained. It is difficult to believe that inflation has not augmented the average incomes in these brackets, howsoever mild it may have been. If this has not taken place, it may have been partly due to the fact that the number of assesses in the second, third and fourth brackets together has itself increased from 298,930 in 1954-55 to 399,645 in 1957-58, that is, by about a third, and partly due to the fact of tax evasion or avoidance or both. As regards the first fact, the shift in income—the total assessed income of the relevant number of assesses in 1954-55 has increased from Rs 342 crores to Rs 446 crores on account of the relevant number of assesses in 1957-58, that is, by just under a third—has been obscured by the one-third addition to the number of assesses. Whether or not inflation, howsoever mild it may have been, has made the already rich richer, there is prima facie warrant for the inference that it has created more rich men.

It is a matter for consideration whether all those who have benefited by development are making a "fair" additional contribution to the Exchequer. But, at the same time, there is the risk that, if the incidence of income-tax is made heavier in their case, such savings as they effect out of their disposable incomes and employ in productive investments will be correspondingly reduced. Here therefore, is a fiscal dilemma which may be expected to continue into the future. It is, therefore, doubtful if the growth of income in the wake of development and a certain consequential shift in income in favour of the relevant groups will be reflected in a proportionate increase in tax yield.

In the case of the income groups of "Rs 50,001-1,00,000," "Rs 1,00,001-2,00,000" and "Rs 2,00,001 and above", however, the average disposable incomes (after tax) have fallen substantially. Although the total number of assesses in these three brackets together has increased from 6,341 in 1954-55 to 9,276 in 1957-58, that is, by just under half and their total assessed income from Rs 78 crores to Rs 93 crores, that is, by about a fifth, their disposal incomes have fallen pretty steeply. Which suggests that the incidence of income-tax has been far heavier in their case and that such shift in income—relatively modest as it is—as has taken place in their favour has been rendered partly infertile by the operation of tax rates at the higher slabs. By way of comparison, it may be noted here that, while the shift in income to the tune of Rs 104 crores in favour of the

groups, namely, "Rs 5,001-10,000", Rs "10,001-25,000" and "Rs 25,001-50,000", has brought in an additional revenue of only Rs 9 crores to the Exchequer, the shift in income to the tune of Rs 15 crores in favour of the three uppermost groups has yielded an additional revenue of Rs 8 crores.

It is conceivable that, if the tax rates at the higher slabs are reduced, the capacity of the three uppermost groups to save and to invest productively will be increased. But the dilemma facing the Government here seems to be political. When excise duties and the like on commodities consumed by the poorer classes are being increased, it will be extremely difficult to secure Parliament's acceptance for a steep reduction in the maximum rates of income-tax; this is a political difficulty. At the same time, the vicarious satisfaction derived by the poorer classes at the sight of the "rich being soaked" is shrewdly seen as a political asset; this is by no means an expendable asset for any party in power,

considering that subtle exploitation of human jealousy has become a permanent feature of the body-politic.

Thus far, the incidence of income-tax on individuals has been dealt with at some length because they account for most of the revenue from personal income-tax, such revenue being Rs 90 crores as of 1957-58 as against Rs 73 crores in 1954-55. But Hindu Undivided Families and unregistered firms are not unimportant, although their respective contributions to income-tax revenue as of 1957-58 are only Rs 12 crores and Rs 7 crores. That almost similar trends as have been noticed in the case of "individuals" have been in operation in their case, too, may be seen from Tables-3 and 9 hereunder. What has been said about "individuals" is applicable, mutatis mutandis, to these two classes of assesses also. As for company income-tax, no attempt is made here to deal with the trends disclosed by Table-10 because the entire structure of corporate taxation is now undergoing modification.

Example or Precept?

By M. SUR

THAT good conduct can be better taught by example than by precept is an accepted maxim. Government, being the largest employer of labour in the country, should surely by now have realised the truth of this maxim; yet, in management-labour relations, we are continually finding evidence that Government do not practice what their Labour Minister preaches to the private employer.

A glance at recent reports in the newspapers illustrate the point quite clearly. Take the Bhilai Project, for example. Discontent among the 30,000 construction workers employed by the project authorities had been growing, it was reported, for the last two years, and finally culminated in disturbances which "bewildered" the officials in charge. But why should there be such bewilderment? The newspaper report goes on to say that there are no Standing Orders for these workmen. Yet, every industrial establishment employing more than 100 workmen must by law have its standing orders, and the public sector has not been excepted. "According to union sources, and largely corroborated by State Government circles", the plant authorities have never fully implemented certain promises relating to wages and promotions. It is said that the authorities had agreed to promote 40 per cent of the men drawing Rs 48 to the next higher grade; but so far only 10 per cent had been so promoted. Yet, how often have private employers been castigated for non-implementation of agreements or awards? In fact, Government have set up machinery in all the States in the form of Evaluation Committees to check on the non-implementation of agreements and awards.

Government have persistently egged on the private sector to provide housing for its workers; and, at the last Conference of Housing Ministers, it was suggested that, if employers did not take advantage of the housing loan scheme, legislation to compel them should be considered. At Bhilai, the camps for construction workers employed by the project are "in sharp contrast to the beautiful quarters built for contractors' men." Living conditions in one camp are reported to be just tolerable, but the others are mere hovels. Water supply is scanty; only one camp has electricity; and sanitary arrangements are non-existent. Yet, in plantations, for instance, standards of workers' housing have been prescribed by Government.

The immediate cause of the disturbance at Bhilai and of the hunger strike of the union leader was the fear of retrenchment. Obviously, the project cannot continue to employ all the construction workers once the construction phase is over, but what the workers were demanding was that preference in recruitment for permanent operatives should be given to suitably qualified construction workers. The General Manager had on 2nd February passed orders that recruitment of new workers should be stopped and arrangements made to absorb surplus construction workers in other branches as workers or artisan trainees on the basis of seniority and merit. Knowledge of this decision might have prevented the disturbance, but when the trouble started a fortnight later the workers had not learnt of the orders. What is the good of preaching sound industrial relations, settlement of disputes by negotiation, better communication between management and workers in private industry, if these things are not practised in the public sector?

Another appalling instance of neglect of basic principles of personnel management was

brought to public notice last week in a press report on the Institute at Sitarampur for training in mining. It was the first institute of its kind, started over half a century ago as a Government school under the State Industry Department. It has trained over 4,000 students, some of whom are now in top positions; but the institute has never been made a permanent school, and its teachers are still given temporary appointments from year to year and are not entitled to pension or gratuity even on retirement after 30 years' service! Yet, in private industry, employees under standing orders must be put on the permanent list after 3 or 6 months' service, and employment even in temporary jobs is as good as permanent after 240 days' continuous service, for, the employee can be retrenched thereafter only according to the provisions of the law.

Sitarampur is an extreme example, but it is well known that Government employees remain on the temporary list for years. Fortunately some action is now being taken as a result of the recent Pay Commissions recommendations, and it was recently announced in the Lok Sabha that, in all permanent departments other than workshops and industrial units, temporary posts in all grades and classes which had been in existence for not less than three years on 1st March, 1959, should be converted into permanent posts up to a limit of 80 per cent if the Ministries concerned were satisfied that such posts were required permanently. This means that 80 per cent of temporary office staff with 4 years' Government service may now be placed on the permanent list. Would any industrial court accept such a position in the private sector? And what about all those in workshops and industrial units in the public sector? The decision is a step in the right direction, but it can hardly be considered equal treatment for the public and private sectors.

A Union Minister recently stated in the Lok Sabha that Government were not bound by a decision taken at the tripartite Indian Labour Conference. They are not legally bound, it is true, for, the decisions of the Conference are in the nature of tripartite agreements on principles. But how can Government say they are not morally bound by such agreements, when they are continually pressing for settlement of dispute by mutual agreement? The General Secretary of the INTUC has complained that Government do not accept the principle of voluntary arbitration so far as their own employees are concerned, though they have been preaching the principle to private industry. The National Federation of Indian Railwaymen has also been pressing Government to accept machinery for voluntary arbitration. The Code for Discipline in Industry agreed at the 15th session of the Indian Labour Conference, and it was subsequently ratified by the national bodies representing employers and workers, on a clause binding management and unions to "settle all future differences, disputes, and grievances by mutual negotiation, conciliation and voluntary arbitration."

The State of Bombay recently lost its appeal in the Supreme Court against the judgement of the High Court holding that hospitals were an industry under the Industrial Disputes Act. The decision was almost a foregone conclusion, since all kinds of institutions have been held to be industries under the Act. The Ministry of Labour deplores the practice of appeals to the Supreme Court. Could not the Government of Bombay have resolved the question by addressing the Law Ministry instead of taking an appeal to the highest court in the land? Could they not have accep-

ted 'voluntarily that, since hospitals are large employers, they should be treated as other employers when it comes to terms of service for their employees?

The National Productivity Council, an autonomous body, but sponsored by Government, and with a Council consisting of representatives of Government, employers and workers, was set up to stimulate productivity consciousness in the country. The editorial of the second issue of its journal, "Productivity", states:—

"A better treated worker, a better educated worker, a more comfortably placed worker who does not pass his time in anxiety about his security and the security of his family, his home and his food is a more productive worker than one who has not had these advantages, and the higher productivity of the worker pays for the advantages that lead to higher productivity. A productive economic system thus is a self-sustaining system. The whole concept of productivity needs to be viewed against this philosophical and social background."

Is not private industry justified in asking that Government should set an example in these matters as the largest employers in the country?

Madras Budget

A STRIKING feature of the finances of the Madras State in recent years is their inherent soundness. From a level of Rs 69.95 crores in the actuals for 1958-59, revenue receipts are estimated in the Budget for 1960-61 at Rs 80.87 crores. It is, however, to be noted that expenditure is tending to outstrip revenue. The final accounts for 1958-59 show expenditure some Rs 160 lakhs lower at Rs 68.35 crores; but in 1960-61, it is estimated to be higher than revenue by Rs 34 lakhs at Rs 81.21 crores. The State Finance Minister, Mr C. Subramaniam, has indicated in his Budget speech that, in view of the additional expenditure that may have to be incurred on the recommendations of the State Pay Commission, who are to submit their report shortly, the deficit may be larger than anticipated in the Budget.

Mr Subramaniam has not only left the small deficit uncovered but has also proposed to afford small reliefs in respect of the liability from sales tax. It may be recalled that, last year, there was a State-wide protest against the imposition of sales tax on perishables. In deciding to exempt perishables, including eggs, meat and fish, and commodities like oil from country chekku and green leaf tea, from sales tax, Government ostensibly appear to have fulfilled their promise that they would review, after one year of working of the amended Sales Tax Act which came into effect from 1st April 1960, the various problems arising from its implementation. But the reliefs now given cannot be deemed to be entirely voluntary on the part of Government.

The Rs 257 lakh higher revenue at Rs 80.87 crores expected in 1960-61, as compared with the revised estimates for the current year, are mainly expected to be accounted for by increases under share of Central taxes, General Sales Tax, Motor Vehicles Tax and interest. Estimated expenditure next year at Rs 81.21 crores will be Rs 349 lakhs more than the expenditure in the revised estimates for the current year. The rise in expenditure is mainly due to increase in debt charges and larger allocation for education, industries and community development. Capital expenditure

for 1960-61 is fixed at Rs 10.85 crores, and in the current year it is now expected to be of the order of Rs 12.77 crores.

Mr Subramaniam has quite appropriately utilised his Budget speech for a detailed review of the State's progress during the first four years of the Second Five Year Plan. Apart from the Budget speech being a proper medium for appraising the legislature of the work that is being done in diverse spheres, Mr Subramaniam has other justifiable reasons for dilating upon the Plan's progress in the State. Moreover, the coming year marks the last year of the Second Plan and, as such, important matters regarding the shape and content of the Third Plan will come up for decision. As far as the current Plan is concerned, the Madras Finance Minister is in a position to tell the legislature that the targets have not only been reached in many instances but have been exceeded in certain cases. Unlike most States, Madras is in the enviable position of having considerably over reached the Plan outlay fixed for it. The State's Second Plan as originally framed visualised an outlay of Rs 152 crores. With the estimated outlay for 1960-61, the total expenditure for the whole of the Second Plan may come to Rs 171.5 crores. Adding to this the cost of Canadian equipment for Kundah project adjusted in 1959-60, the total outlay comes to Rs 180.8 crores. It would appear that the increased outlay has been made possible largely by the substantial stepping up of loans and grants by the Central Government. It had been originally estimated that the Centre's assistance for Plan projects would be to the tune of Rs 73 crores. Such assistance is now expected to amount to Rs 90 crores. Expenditure on plan projects in the first four years is placed at Rs 133.1 crores.

The State has made alround progress during the past four years and in certain important sectors its record is indeed impressive. In the industrial sphere, the Rs 86 crore Neyveli lignite project is fast taking shape and the fertiliser and briquette plants are expected to be commissioned early in the Third Plan period as scheduled. By the end of the next Plan, production of lignite has been planned to be stepped up to 6 million tons from the present target of 3.5 million tons. A steel plant based on ore from Salem and using the Neyveli lignite has been visualised and the matter is now under investigation by a specially constituted technical committee. Exploration of the Cauvery Basin for oil is to be intensified. According to informed opinion, a fairly extensive area in the State may be usefully explored for oil. Notwithstanding the handicaps caused by paucity of coal and inadequate hydro-electric potential, Madras has taken rapid strides in industrialisation. The proposed raw film factory in the Nilgiris district is scheduled to be completed by 1962. A surgical instruments factory with Soviet aid is to be set up at Guindy and three cooperative sugar factories are expected to go into production in the next financial year. Their number will be increased to seven in the near future as arrangements are in train for four more. Private enterprise has also not lagged behind. A caustic soda plant, a rayon factory, a cement factory, a plant to manufacture refractory bricks and a railway wagon building factory either have been completed or are in varying stages of completion. Besides these, arrangements are in progress for the establishment of an aluminium plant, a heavy machinery plant, a paper factory, a factory for making wheels and rims and two fertiliser factories. Mr Subramaniam, however, does not think these developments will suffice. He wants more and more industries, and rightly so.

With the full commissioning of the Neyveli project and the coming into existence of the proposed steel plant, fresh vistas will open up for the enterprising entrepreneurs in the State.

In one important sector—it is really the most important sector food production—the State's record is not satisfactory. It is now expected that, as against the target of additional food production of 1.28 million tons at the end of the Second Plan, the actual achievement will not be more than 900,000 tons. But the State Government are not to blame for this. They have done their part well, but one essential requisite on which the Second Plan food production programme has been based, supply of an adequate quantity of chemical fertilisers, has not been fulfilled by the Centre. That the State is putting forth concerted efforts in the sphere of agriculture is borne out by the crop yield achieved. The average yield of rice in Madras State stands at 1300 lbs as against the all-India average of 816 lbs. It is expected that, in the current year, the average yield will be further higher at 1344 lbs. But the State is not to be satisfied with this no doubt commendable achievement. For, Mr Subramaniam compares the Madras record with those in Japan (2650 lbs), USA (2150 lbs) and China (1610 lbs) and has rightly concluded that the "agriculturists of our State can also do equally well if only they are provided with the necessary facilities."

In narrating the achievements of the State, Mr Subramaniam has not omitted to draw pointed attention to one very disquieting aspect of the economy. The continuous upward trend in prices and the consequent irresistible demands for higher wages and salaries are increasing the cost of both production and administration. The result of this price-wage situation is already evident in a reduction of saving available for investment in the private sector and the diversion of funds to establishments by Governments—funds which otherwise could have been put to productive use. Mr Subramaniam has done well to reiterate the need for devising "special measures to stabilise the price level, especially that of the prime necessities of life". Effective action now in this regard will ensure one essential prerequisite to the success of the Third Plan.

Mysore Budget

THE task of Mr T. Mariappa, Finance Minister of Mysore, in preparing the Budget for 1960-61, has been rendered considerably easy by the buoyancy of the State's finances. With an estimated revenue of Rs 63.71 crores for the next year and an expenditure of Rs 62.63 crores, the revenue Budget shows a surplus of Rs 1.08 crores. This surplus is, however, expected to be converted into a deficit of Rs 42 lakhs in view of the grant of interim relief to the low paid Government employees. The budget estimates have not taken this additional expenditure into account. Mr Mariappa is justified in claiming that the financial position of the State is sound as revenue receipts are expected to increase in the Budget year by Rs 3.72 crores from the revised estimate for the current year.

But it is only in recent years that the State's finances have come to be in good shape. The fact that the State has had to face initial difficulties after its reorganisation five years ago has received due recognition at the hands of the Central Government and consequently larger Central aid has been forthcoming. On its part, the State has taken active measures to mobilise internal resources along with steps to effect economies wherever possible. The cumulative effect of all this is its present

satisfactory financial position. It is gratifying to note that the State Government are fully aware of the need for mobilising further resources. Fortunately, there is still some scope for augmenting income. Survey and resettlements aimed at increasing income from land revenue are yet to yield the expected dividend, but it is to be assumed that the desired results will accrue in a few years' time. Collections of water rate and betterment levy may also improve with the passage of the amendment to the Betterment Levy Act.

For a State which was preoccupied with problems of reorganisation for nearly two years during the current plan period, its record of achievement as regards implementation of Plan projects is praiseworthy. In the last three years of the Plan, the outlay on development schemes has been progressively stepped up. From only Rs 25.6 crores in 1958-59, the estimated outlay in 1960-61 stands at Rs 40.77 crores. The State's Second Plan programme envisaged an estimated total expenditure of Rs 145 crores. Although progress has not been evenly distributed over all sectors, the overall picture of the State's performance during the Second Plan period so far must be said to be satisfactory. The efforts toward implementing Plan projects in the next year are to be greatly intensified as will be evident from the increased allotments made under different heads.

The sound financial position that the State is now enjoying, however, should not lead to complacency as expenditure is even now tending to outstrip income. Mr Mariappa has noted that, with the various ameliorative measures already taken and contemplated and the implementation of certain other measures to which the Government are committed, the financial position may not long remain as comfortable as it is now. In this regard, it may be noted that the problem of determining an equitable pay scale for the State Government employees has only been postponed by the grant of an interim relief of Rs 5 per month in the shape of an increase in the dearness allowance to all the employees drawing Rs 300 and below with effect from January 1960. The State Finance Minister has said that it is proposed to set up a small Committee to review the existing pay structure and other service conditions in the light of the recommendations of the Central Pay Commission and the report of the Madras State Pay Commission, which is expected shortly. On top of all this, there is the Third Plan already looming large on the horizon. As at present conceived, the State's Third Plan will involve an outlay of Rs 279 crores and Mr Mariappa has put the additional resources to be found by way of taxation at Rs 20 crores. With such responsibility ahead of them, the State Government have done well to constitute a Committee to suggest ways and means of finding new resources as well as of effecting the utmost economies.

Punjab Budget

ALTHOUGH the task of most State Finance Ministers this year has been much simplified, thanks to buoyant revenues, it has been the special privilege of Dr Gopichand Bhargava, Punjab's Finance Minister, to announce some tax concessions in his Budget for 1960-61. He has been enabled to do this because revenue expenditure in the next financial year is estimated to be lower than revenue receipts by Rs 1.69 crores. The Budget estimates for 1960-61 place revenue receipts at Rs 59.42 crores and revenue expenditure at Rs 57.73 crores. The capital Budget, however, shows a deficit of Rs 5.16 crores but it is

proposed to be more than covered by the sale of treasury bills to the value of Rs 5.50 crores.

The not too unsatisfactory financial position of the State has mainly stemmed from increased revenue receipts. As in most States, in Punjab also, the rate of increase of revenue receipts is progressively higher in the past one or two years. This is directly attributable to the fruition of part of the plan efforts. The Budget estimates for the current year anticipated only a small surplus of Rs 40 lakhs, but the revised estimates show that there is a surplus of Rs 5.72 crores. This sizable improvement has largely been brought about by a substantial increase in revenue receipts to Rs 56.89 crores. Dr Bhargava has rightly anticipated that revenue receipts would be further higher in the Budget year.

The cue to the buoyancy of revenue in the State can be found in the huge productive investments that have taken place during the past few years. The net debt liability of the State at the end of the Second Five Year Plan period is placed at Rs 234.84 crores. But the explanatory memorandum pertinently points out that "almost the entire liability is in respect of productive schemes, Bhakra Nangal project alone accounting for Rs 172 crores." Already, the investment on productive enterprise is being reflected in the steady rise in revenue, and it is quite on the cards that this trend will be further strengthened in coming years when the full effect of the Second Plan projects come to be felt. As Dr Bhargava has warned, there can be no slackening of efforts, especially at mobilising internal resources, because the State's Third Plan is bound to be much bigger than its predecessors.

There are certain things which have to be done, whether the Budget is surplus or deficit. In many a State, the claim for relief for the low-paid Government servants has received sympathetic attention at the hands of the Finance Ministers. In Punjab also, a specific grievance of Class IV employees has been redressed. Hereafter, Class IV Government employees will get increased daily allowance when on tour and thus will be brought on par with Central Government employees of a similar category. There is also a promise of relief in purchase tax for dealers in respect of some commodities bought by them. Although the total loss to the State Exchequer is expected to be only about Rs 6 lakhs, the concession in the shape of the abolition of electricity duty on industrial concerns which generate power for their own use is significant in that it shows that the difficulties of private enterprise too are getting due attention.

Madhya Pradesh Budget

Madhya Pradesh's Budget for 1960-61 shows a revenue deficit of Rs 62.95 lakhs as estimated revenue receipts are lower at Rs 6467.69 lakhs as against the estimated revenue expenditure of Rs 6530.44 lakhs. Mr Mishrilal Gangwal, the State Finance Minister, has not proposed any new taxation to cover the deficit. If Madhya Pradesh's revenue has not grown as fast as in some other States, the explanation is perhaps to be found in the comparative backwardness of the State, which has necessitated the emphasis in spending to be placed on social welfare. It is true that, during the whole of the Second Plan period, almost all States have been obliged to make heavy outlays on social welfare and allied work. Such expenditure is not productive in the sense of bringing in increased revenue. And, in States like Madhya Pradesh, which have a sizable tribal population to be taken care of, the incidence of unproductive expenditure is

particularly heavy and hence it is idle to expect the revenue of these States to be buoyant till Plan efforts can be fully diverted to productive expenditure. Mr Gangwal, however, is hopeful that some of the plan schemes will begin to bear fruit by the beginning of the Third Plan. Investment on productive work is also to be sizably increased during the final year of the current plan period, and Mr Gangwal has disclosed that 65 per cent of the Rs 37 crore annual plan outlay for 1960-61 has been allocated for the productive sectors.

State Bank & Branch Expansion

A Correspondent Writes:

IT will be noted that, at the State Bank of India's annual meeting last week, no reference was made to the complaint, heard more than once in 1959, that one bank gets all the funds due under PL 480 loans to the USA and that the State Bank is able consequently to make bigger profits and to raise dividends. However, the shareholders are in a defenceless minority against the President of India, to whom the Board reports its results, and the 100 rupee shares are not listed in all markets, because of the take over that has made the State Bank a bigger unit in the banking system. Claims made regarding banking expansion in recent years support the hope cherished after the Gorwala Committee's report on rural credit. But the figures now available suggest that the new branches do not contribute much to the profits of the year, for, Advances and Deposits at the 359 brand-new branches are not at all impressive. Aid to the co-operative banks under Government directions may represent a departure in banking policy, but the maintenance of tradition of dependence is not at all a source of satisfaction. The future of banks taken over this year can be glimpsed from the reference to their qualified autonomy. Branch extension will be guided, and the object is to make the banks regional. The results for the Bank staff may not be wholly welcome, for, the chances in Kerala or Mysore may be limited for able and ambitious men who expected that the take-over would lead to a new pool arrangement enlarging opportunities. But it is clear that regional banking under State Bank auspices will not be a real threat to old-established or new country banks which have set the pace in branch expansion, as proved by the record of the Pandyan Bank, based on Madura, but able to move far afield. The amalgamation of small banks in Kerala canvassed eagerly in 1958, will gain real momentum if the State Bank's regional unit becomes a real rival. They may shed their parochial or communal character, and continue to defend their interests against the monolithic banking directed latterly toward small industries also, promoted by Government for set reasons.

NATIONAL NOTES

Modified "Universal" Education

Any appraisal of the cost and adequacy of the Union Education Ministry's draft plan cannot evade the uncomfortable fact that the date-line for completion of the requirements under Article 45 of the Constitution has to be postponed to the end of Fifth Plan, if not later. While that realisation should restrain the critics who think that the total outlay envisaged of Rs 980.06 crores is on the high side, it should also induce the educational administrators to re-examine the basis of their estimates, to make sure that these represent the irreducible minimum. The Union Education Ministry's estimate amounts to over ten per cent of the total plan outlay that is, considered practicable at present. This compares with the allocation of the order of seven per cent in the First and Second Plans. It may also be noted in this context that, while seven per cent was provided in the original Second Plan estimates, this was subsequently reduced when the Plan had to be rephased in its second year.

The increased allotment according to the Education Ministry's programme will just enable introduction of universal compulsory primary education for the 6-11

age group. Primary education, naturally, accounts for the largest share of the proposed outlay. In respect of secondary and university education, the emphasis rightly is on consolidation of the progress already achieved and raising of standards rather than on expansion, except to provide for the normal increase in the numbers of students seeking admission to schools and universities.

In the context of the programmes of development that are envisaged, introduction of universal primary education cannot be regarded as a luxury which can be put off for the time being. Literacy is the pre-condition for the success of measures to increase productivity in agriculture as well as in industry. But the relevant question is whether the limited objective that is now being considered cannot be reached at lesser cost. The Second Plan had recognised the need for utmost economy for securing rapid increase in facilities at the primary level. Economies, it was suggested, could be sought by cutting down cost on buildings, organising schools on the shift system and increase in the number of co-educational schools for the age group 6-11 years. Has the Ministry fully explored the scope for achieving economies by the adoption of these methods?

Base or Basic?

Cost of education, for the State as for the parents of the students, will be less if the authorities are able to control the itch for effecting changes. Sweeping attacks on the system of education, of the sort levelled by Acharya Kripalani, are not particularly helpful in this context. Changes so far have worked greater havoc in the fields of secondary and university education. As far as primary schools are concerned, the main change is orientation to the basic pattern. While craft-based education can be very good indeed in the hands of gifted teachers, these do not grow on every other bush. Even if the national minimum of Rs 50 for primary school teachers, suggested by the Ministry, is increased many-fold, the supply is not likely to respond to the demand. And, of some basic schools, it is said that they are institutions that deserve the attention of the Society for the Prevention of Cruelty to Children.

A realistic appraisal of possibilities, in terms of men and material, will show that expansion of primary education will have to proceed mainly with the help of persons who, for one reason or another, have missed the bus for better prospects. The revolutionary changes in social values have made it practically impossible to recruit persons of requisite calibre at the maximum level of remuneration the country is able to offer to its primary teachers. Particular care should, therefore, be taken that the burden that is imposed on them is not heavier than

they can carry. In such conditions, orientation of primary education to the basic pattern, which seems to have become an obsession with planners in New Delhi, will make education not basic, but really base.

Fertiliser Target Short by 500,000 Tons

The fertiliser target of one million tons of nitrogen, which the Planning Commission are reported to have fixed for the Third Plan, is very much short of the minimum requirements. The Union Food Ministry had programmed to make 1,500,000 tons in terms of nitrogen available at the end of the Third Plan Period. The Ford Foundation team, which examined the targets for fertilisers, considered that they were "conservative in relation to need" and the very minima for meeting food production targets. There will be a shortfall of half a million tons of nitrogen unless the Planning Commission propose to fill the deficit with help of imports. In that case, it will be necessary to examine whether it would not be really more economic to set up additional capacity than to pay for imports of this order. World fertiliser prices are currently ruling low. But they may not continue at that level when imports are required on a really substantial scale.

The slow progress of foodgrains production is still attributed to the conservatism of the peasants who are supposed to be reluctant to use "scientific methods" even though it has not been possible to meet the minimum requirements of the different States for fertiliser. The result of the overall shortage is the growth of a black market in fertiliser and complaints that fertilisers are being adulterated with materials that destroy the fertility of the soil. The branch manager of a cooperative marketing society in Madras state was recently convicted of black marketing and prosecutions have been filed against several merchants in the State for adulteration of the fertiliser sold by them. The Union Food Minister has promised larger supplies during the current year as compared to previous years, but, even so, it will only meet 62 per cent of the States' requirements. In this situation, more attention naturally is being paid to green manure and compost, and rightly too, for, all sources of increasing production should be exploited to the maximum possible extent. But, in drawing up the plan for fertilisers, the planners should not overlook the fact that, while green manure and compost are essential to supplement chemical fertiliser, they cannot replace the latter, especially when substantial increase in production has to be achieved in a short period.

The press report does not make it clear whether the plan for fertilisers has made adequate provision for manufacture of what are

called high analysis fertilisers, such as calcium metaphosphate, ammonium metaphosphate, double superphosphate, urea, etc., which contain a higher proportion of plant nutrient than the conventional low analysis fertilisers in use like ammonium sulphate and superphosphate. Emphasising the need to develop the use of these high analysis fertilisers, the Ford Foundation team had drawn attention to the substantial reduction in cost that could be effected, through lower packing, transport and handling charges. The cost of manufacture may not be substantially different, but what matters is not cost at the factory but cost on the field. And the report points out that it takes three times the bags, three times the freight, three times the storage and three times the handling for a 16 per cent material as it does for a 48 per cent material of the same quantity of plant nutrient. This indicates the scope for reduction of cost by a switch-over from low analysis to high analysis fertilisers, for which the production programme should make adequate provision.

It is good, however, that Government have indicated that the private sector may participate in the setting up of additional capacity for the manufacture of fertilisers. Indeed, already, a number of projects under the aegis of private enterprise are reported to be in hand. Against such a background, although, in the perspective of current thoughts on the part of the Food Ministry, a shortfall of fertilisers seems inescapable, there is the offchance that vigorous enterprise in the private sector will make this good. It is to be hoped that the private sector entrepreneurs will rise equal to the occasion.

Swatantra's Suspect Purposes

The long statement of purposes put out by the Swatantra party carries the country not very far, because praise for the Army today is offset by criticism of India's foreign policy. Suggestions made by the party leaders for a defence agreement with Pakistan to ward off the new threat from China will make little impression, because the party overlooks the stubborn fact of Pakistan's insistence on the inclusion of Kashmir in its territory. The party manifesto barely mentions the subject of denationalisation of life insurance, to which a reference was made at the conference in Bangalore held not long ago. The preservation of peasant farming is naturally in the forefront of the Patna programme, and there is a harking back to the old liberal slogan of peace, retrenchment and reform, in this manifesto, one drawn up by ex-Congress leaders who are, however, aware that socialism is very much in the air and it is impossible to look for the restoration of free enterprise. In a sense, the party has shaken loose from the Forum of Free Enterprise, but its objections to high taxation, import restrictions, and economic controls are derived from the arguments of the older organisation.

There is a plea for decentralisation of industry, and its sympathy with the claims of trade unions is made known through the approval given to collective bargaining. All the same, the claim that the Swatantra party is a party with a difference will not be universally accepted, nor will the public take it for granted that the Swatantra party alone stands for ordered progress. A point to bear in mind is that criticism of the Planning Commission, which is regarded as a super-Cabinet, comes very late and the accusation of a totalitarian approach by the Congress ignores the fact that, in Madras, the help of the opposition parties has been enlisted by the Congress Ministry for framing its new plan. There is little doubt that the party's criticism of the preference accorded to heavy industry so far is a hang-over from what was said against the plan frame drawn up four years ago. The manifesto ignores the risk that freedom of expression given to every member of the Party will militate against the discipline which is essential if the Swatantra party is to make any headway. Of course, it has taken the field early in regard to the general elections of 1952, but its eagerness to draw allies even from Communist groups merely to hold Congress in check savours of opportunism, and it is noteworthy that its promises to remove controls and encourage property are based on opinions frequently aired at meetings of Chambers of Commerce. The suspicion that the Swatantra party is the political wing of big business will not be

dispelled by the very elaborate statement of the party's principles and purposes.

Local Preference?

The employment of more Bengalis in private firms is a laudable aim but the issue of directives by the State Government to private employers is hardly the correct procedure. Both employees and employers are not eager to take directions from the Government which must be aware that domicile and language rules are inconsistent with the Constitution. There is a risk that other States would also insist on local preference in filling jobs, and if employers prefer to give jobs to relatives of those serving, the cry of nepotism and jobbery cannot be raised. And if agreements are violated, the prospective employees can be sore, though unemployment is an issue that taxes the Government's energies.

The argument over the employment of non-Bengalis in private firms need not be mixed up with talk about fair employment practices at present. But the freedom of private employers cannot be abridged, though Government can undertake reservation by insisting on a knowledge of the local language for filling public posts. The muted debate on the enlargement of opportunities is a result of the pre-dominance of outside capital in trade and industry. The remedy is the advent of more Bengali capital and enterprise, but that appears distant. And it cannot be forgotten that Bengalis in other States like Bihar and Assam enjoy opportunities, due to historical reasons chiefly, and it would also be dangerous to press employers to fix percentages without due regard to efficiency or output. The judgement of employers cannot be fettered by official directions to personnel officers or managers and the incidents last year in Rourkela arising from the entry of many non-Oriyas for work are a grim reminder that prejudice can work havoc. The freedom of both internal migration and trade must be maintained and the non-Bengali employees may be tempted to ask for guarantees owing to the Government's efforts to raise the intake of local people, including presumably refugees. An issue regarding treatment of linguistic minorities may even be raised by employers and the West-Bengal Government may be reminded that the employers set store by traditional aptitudes and skills, the strength of family ties and the conventions prevailing among Sardars who provide replacements in case of leave or retirement. Reservation for Harijans in public or Railway service may be defended, but surely there is nothing to be said for compelling non-Bengali employers to take Government's advice in filling vacancies by local people, because employers have to meet many claims, and the Government

cannot impose the very modest standards of efficiency in Government offices on employers who risk their capital and insist on a fair day's work for wages given.

Return to Curzon

The Defence Ministry's report dealing with the adjustments on the Northern frontier in the light of Chinese incursions has received more notice than the arrangements proposed to make Ladakh a fully administered territory. It may be due to Kashmir's insistence, that the step is now taken to prevent Chinese claims to more territory. As a prelude to frontier demarcation, it may be unexceptionable and the rapid extension of frontier administration to the mountainous desert will have the support of Kashmir, because that State is relieved of heavy and undefined liability. The Defence bill is bound to rise, if Ladakh is policed as Waziristan was in the past, and there is no prospect of the old caravan trade via Leh reviving in the near future. The step taken will be viewed by Peking as a spring manoeuvre of the usual kind, and its reactions to the close border policy will have to be watched in the light of the integration proposed.

The policy of Lord Curzon is being followed as many will now admit, and India's frontiers are now viewed in a different light. How Pakistan will take it is another question, because of the recent objection taken to Indian maps. There is here no question of raising aboriginals to the accepted standards or of copying Burma's policy in the twenties by suppressing slavery and curbing opium cultivation in the triangle beyond the Shan states. This is clearly a move directed against the large and vague claims of China, in order to supplement the advance made by the Dogra princes in the past century and to emphasise also the integration of Kashmir with India effected by consent already. The reinstatement of non-Regulation or Excluded areas after India achieved independence will not excite much surprise. The administration to suit the needs of the region over which direct control is assumed by the Central Government must necessarily be on the lines devised for the North West Frontier province by Lord Curzon who marked off the five settled districts from the Pathan Tribal area, going up to the Durand Line in order to remind Afghanistan that the Punjab was divided in 1904 in order only to emphasise the differences in population and economic conditions. Had India followed Curzon's forward policy in regard to Tibet, there would be few frontier problems or regrets and it is perhaps the result of India's masterly inactivity in the fifties that Pakistan is now pressing for the definitive acceptance of the Durand Line by the Afghan autho-

rities to force a withdrawal of any demand, even for a Pathan State neutralised by agreement.

Jute for Tobacco

The arrival in Delhi of a mission from Pakistan to examine not only trade possibilities but the restoration of old ties may lead to firm guesses about exchange and payments. The trade by sea in coal and other items is certainly more important than trade across the land border with East Pakistan, and there is little chance of tariffs being adjusted to the requirements of Pakistan which can, however, negotiate a rupee payments agreement to pay for tea or textiles taken from India. But the outstanding debt and other issues must be settled soon, and the regular remittance of profits earned in Pakistan by Indian Companies must be ensured to make any trade agreement satisfactory. The purchase of jute on a fairly generous scale must follow the abrogation of crop control in East Pakistan, but here again it is India that must give a bold lead, as much for political considerations, as for the current needs of the jute mill industry. The removal of quotas to enable East Pakistan to buy more vegetable oil or sugar in India may be called logical and Pakistan must be enabled to ship raw hides and skins for the tanning industry. A substantial reversal of the policy pursued since 1951 is demanded of both countries, but there is an example in Belgium which maintains close ties with Holland in spite of the political and other differences. Indian commercial organisations can hardly tender much advice in the present context, more so as Pakistan buys oil for the State railways and Japanese textiles to avoid large purchases from India.

Relaxation of import control in both countries is a condition precedent to normal trade as also permission to remit funds or repatriate assets. If India suggests removal of quotas, it may be even possible to buy newsprint from Chalna to supplement Indian output and the chances of India selling more tobacco to the new factories in Pakistan must be given due weight. The scope and rate of industrial growth in India is perhaps as weighty a consideration for Pakistan, whose external assets have gone down so that payment in sterling for imports raises fresh problems. However, India can, and perhaps must, buy more cotton to secure a market for manufactured goods, and it is clear that export promotion hereafter must take account of what opportunities Pakistan offers, be it for chillies or for beads. The change of regime may help Pakistan to think of supplies from India rather than the USA, though in regard to foodgrains, India cannot spare any quantity for Pakistan, now or hereafter.

STATES NOTES

Industrial Housing and Private Profit

The rise in the cost of living has raised industrial wages since 1956, as Mr M. J. Edwards pointed out at the last meeting of the Employers' Federation of South India. In depreciating inflation (and the increase in railway rates by 5 per cent) he certainly joined many MPs and his special reference to the consumer hit by rising prices was by no means superfluous. The latest inflationary budget may be counteracted by new curbs on speculation in markets but the shortages due to restricted imports will have their own effect as usual. The criticism of the industrial housing scheme, subsidised it is true, makes plain the fact that scales for loan subsidy etc., fixed in the past bear no relation to present cost of construction of dwellings for workers. The claims of the tax-gatherer and, of course, the shareholders cannot be ignored, but it may also be asked if some schemes have not been put into effect by some employers in order to inflate costs and to get the benefit of loans, etc. The fact that some schemes have been implemented by the less scrupulous employer in order to produce a private profit must, however, appear of less weight at present than the plea that subsidised housing entails a recurring liability since rent charged is not enough to cover cost of repair, depreciation, rates and taxes. The average employer's view was put convincingly by Mr Edwards, who urged that new machinery would yield a fair better return on the capital invested for the benefit of the shareholders who would certainly favour plant expansion, in spite of the rules about development rebate reserves. The restrictions on choice of investment of reserves and the tax on bonus issue may be said to favour housing projects at present, but not all employers can afford to create brand new towns near the place of work. Loans to approved workers by the employer may present new possibilities, if regular deductions from wages are allowed and Provident Fund contributions are made a security for advances given to houses which need not at all be up to official standard for their own regions where the climate allows both the erection of cheap mud and thatch dwellings and the avoidance of congestion in tenements. One may add that the State as an employer has no shining record in the matter of housing its employees.

Food Plan for West Bengal

West Bengal's food problem, which has been of a chronic character gaining yearly in intensity and which has been the focal point of political demonstrations in the State, is at last to have a permanent solution. A six-man committee appointed by the Cabinet Sub-Committee on food production has charted a six-year plan of action for achieving self-sufficiency in foodgrain production. On the basis of population at 66 million, and per capita consumption at 17 ounces, the total foodgrain requirement by 1966 has been estimated at about 6.3 million tons. Current production being estimated at about 4.1 million tons, additional production required for attaining self-sufficiency by 1966 is of the order of 2.2 million tons.

The plan, which is of a comprehensive character costing more than Rs 125 crores, lays particular stress on irrigation for which an outlay of Rs 110 crores has been allocated. The target for irrigation is 30 lakh acres and will be implemented through construction of deep tubewells, for which there are immense possibilities in the State, and lift irrigation. The recommendations of the Committee for increasing foodgrain output include also stepping up of fertilisers and manures, multiplication of seed farms, and introduction of improved methods of cultivation. The allocations for these three are respectively Rs 7 crores, Rs 1.16 crores and Rs 2.82 crores. Reclamation of waste land is another line of development for which the allocation is Rs 3.4 crores.

The achievement of foodgrain self-sufficiency for West Bengal is a matter that has importance not only for West Bengal but also for the whole of India. The total deficit in the country's foodgrain production is, to no small extent, derived from the deficit in West Bengal's production.

Foreign Interest in the South

The Bombay-based Hungarian Trade Commissioner for the Hungarian People's Republic told reporters in Madras last week that Hungary would collaborate with a private firm in Madras to manufacture fluorescent tube. Negotiations were only in the initial stages, he said; and, if finalised, Hungary would supply the industrialist the technical know-how and machinery.

Mr Laszlo met the Madras Industries Director, the Electricity Board and the Madras Port Trust. Presently, there is a plant for motor winding wires installed at the Guindy Industrial Estate through Hungarian help. Mr Laszlo visited the Estate. He told newsmen that there were many items of industrial venture in which Hungary could advantageously collaborate with India. A glass wool factory

is being erected at Bombay with Hungarian assistance. Hungary could supply technical know-how and machinery for big and small industries. He stated that a pharmaceutical industry would be set up at Hyderabad next year with Hungarian collaboration. Manufacture of Ganz household electric metres would be begun in Delhi soon.

According to the trade agreement Hungary had signed with India, it was buying, from the South, pepper, groundnut kernels, vegetable oils, etc. New items which Hungary could buy from the Southern region were skins and hides, coir products and cashew from Kerala. The quantum of trade between Hungary and India was about Rs 3.5 crores each way, and he hoped it would go up to Rs 5 crores next year.

Ex-King Leopold of Belgium told an Indian Finance reporter, while he was in Madras last week, that Belgium, which has become a great industrialised country in Europe, would help India in erection of industries with both technical know-how and machinery supplies, big or small. He referred, particularly, to raw film manufacture and stated that Belgium would be very happy to assist India in founding a raw film industry in which it has specialised knowledge. The ex-King added that Belgium would be happy to receive young Indians in its engineering institutions and train them.

The ex-King made these offers in the course of a talk with an Indian Finance correspondent at Polambakkam in Chingleput District early this month, when he was there in connection with the inspection of the Belgian Leprosy Centre.

This Polambakkam Leprosy Centre, founded at Brussels with ex-King Leopold and his wife, Mrs Lilliane, as President and patron, is to be handed over to the Government of India next June in accordance with the original intention of handing it over to the Government after five years' working.

In a period of fifty-four months after its foundation at Polambakkam, the Centre had instituted 45 "clinics" treating as many as 650 patients every month covering an area of about 80 square miles and a population of 50,000. Polambakkam centre is considered the most endemic in leprosy in India and holds the world's highest leprosy incidence of 6 per cent while, in the Belgian Congo, the leprosy incidence has been only between 2 per cent and 2.5 per cent.

The Belgian Medical staff at Polambakkam Centre has been doing magnificent work in checking the incidence through mass treatment of the stricken. They don't have brick mortar buildings as clinics, and the shades of village banyan trees provide them the best clinic under which the team has been working. Ex-King Leopold and his wife, watched the treatment of about 650 patients at

Marudadu village, 15 miles south of Polambakkam, when they inspected the Centre early this month. The stayed at the "clinic" for over two hours.

Upper Sileru Stage—I

The Upper Sileru Stage I Hydro-electric project, costing Rs 10 crores and producing 1.20 lakhs kilowatts of power, is being taken up by the Andhra State Government after an agreement with the Orissa Government last week. This was disclosed in the Hyderabad State Assembly by the Finance Minister, Mr K. Brahmananda Reddi. The agreement was arrived at and signed in the middle of this month between the two Governments in the presence of Mr C. M. Trivedi, Planning Commission Member.

Work on the project has begun. Sileru is a branch of Sabari, a tributary of the Godavari and situated on the Andhra-Orissa border.

The Andhra Government had agreed not to interfere with the Orissa construction of Balimela dam. For storing the yield of the river either at Guntewada or Balimela, the alternative dams would be examined and the cheaper of the two would be undertaken. The storage thus created would be shared between the two states equally.

The Upper Sileru scheme Stage II would be considered by the Andhra State so that they could prepare the scheme before the Third Plan. On the construction of the selected dam for the Upper Sileru Scheme Stage II, each state would make an appropriate provision in the Plan.

Company Law in Madras

Twenty-three Companies were registered in Madras in January 1960. All of them were private and limited by shares. Of these, 14 companies would be managed by Managing Directors, eight by Boards of Directors and one by Managing Agents. Among the new incorporations, 17 were transport companies.

The total authorised capital involved in the new registrations was Rs 93.79 lakhs, out of which one company accounted for Rs 50 lakhs.

Twenty-two companies ceased working during the month of which 17 were struck off as defunct and the remaining went into liquidation.

The total paid up capital of the companies increased by Rs 732.75 lakhs during the month, made up of Rs 34.98 lakhs for public companies, and Rs 697.77 lakhs for private companies.

During the same period, seventeen cases were launched for the infringement of the provisions of the Company Law while four cases were disposed of by the court imposing a total fine of Rs 600 on the company and the defaulting officers.

FOREIGN NOTES

Africa Awakening

The new Ghana (formerly the Gold Coast) has come in for praise as a sign of the African awakening and the constitution has been taken as proof of the wisdom and moderation of Dr Nkrumah. But it will be noted that both tribalism and regionalism are disposed of effectively in a construction that seems to be derived from the Paris of General de Gaulle, though it is argued that the US model has been adapted to the circumstances of Ghana. The tradition of the Golden Stool of Kumasi accounts for the honorific position accorded to African chiefs, but Ghana does not think of restoring indirect rule on the British pattern and is thinking of federation with colonies nearby. Whether the constitution will encourage foreign capital and keep the cocoa trade expanding are issues that have not been examined. But it is a fair guess that Ghana, perhaps in the Commonwealth like India, will try to get the best terms from British mining interests and open direct connections with US importers of cocoa.

The rise of Ghana as a republic, different in many ways from Liberia, under US influence for long will certainly not be lost on South Africa, preparing now to cut the painter and to restore the Boer ascendancy in spite of cautions given by Britain. The rapid transition from agitation to supreme power in the case of Dr Nkrumah may encourage African leaders in Tanganyika, Uganda and Kenya to press for great and immediate political changes without due regard for the achievements of British settlers and Asian traders in East Africa. But it may be added that existing differences of religion and language in Ghana have not deflected the leaders from achieving independence on their own terms, and the last war made West Africans aware of what they could aim at, while the famous Achimota college had provided a nursery for leaders prepared to take over the controls when the time came.

Plus Five Per Cent

Before the elections of 1960, the Government of Burma had provided a framework for investment, and the resemblance between the Union of Burma Investment Act (No 41 of 1959) and the post independence Indian legislation covering industrial development will not be overlooked. The creation of an investment committee to examine new proposals, issue permits for new enterprises, afford facilities, and to recommend tax exemption in approved cases, in addition to duty-free imports of machinery, are cardinal features of the Act, which also contains a guarantee against nationalisation for

renewal of such guarantee, when justified. The foreign investor is assured of facilities for remittance of profits or the proceeds of sale of assets by a foreign concern. All this may be inspired by a desire to secure more foreign capital and to reassure the British mining concerns which may not stand in need of technical aid but would require guarantees as to compensation payable in foreign currency, if required. The Committee is invested with power to hear complaints from promoters of new enterprises and to recommend measures for stimulating domestic or foreign investment. The arrangement, which treats reinvested profits on a par with new capital, will certainly be welcomed and it is to be hoped that, after the steps taken in India to encourage or reassure foreign capital, the authorities will not miss the point of legislation even in a country like Burma that is as anxious for social justice and welfare as India today. The provision for employment and training of Burmese nationals and the offer to permit tax paid on behalf of foreign employees as business expenses for computing income-tax on the side of generosity, like the offer to exempt from income-tax accrued profits which are reinvested within a year from allocation to reserve. These principles have a distinct value for all underdeveloped countries, willing to accept foreign capital on terms equitable to the recipients and to the lenders who may think in terms of philanthropy plus five per cent.

Adenauer for Tokyo

The proposed visit of the West German Chancellor to Japan may be regarded as the starting point of a policy of keeping the American alliance with both Germany and Japan in good repair. Since Herr Brentano, too, is going, it is clear that Bonn means to assure Tokyo that the comment on missile bases in Spain is disregarded like the Soviet comment on the US-Japanese treaty for mutual aid. The drawing together of Japan and Germany may not be due wholly to the Sino-Soviet combination, but to the circumstance that defeated nations have a common purpose in developing former trade rather than empire in the usual sense. The Chancellor's position may be defined as one of telling Asia indirectly that its interest lies beyond the undeveloped regions seeking capital in Japan whose Meiji Meiji era was inspired by the achievements of Bismarck's long rule. With Germany divided, it is pointless to compare Adenauer with Bismarck, the civil servant with the Jinkier who believed in brief, successful campaigns. But Adenauer, too, may believe that he can play the honest broker, and open up contacts with Asia through Japan, which can yet enter the Middle Eastern oil preserves of the Anglo-American companies or secure raw materials for new consortiums based on German technical aid.

The spring cruise will perhaps enable Adenauer to examine the consequences of the revolt in Tibet and to ascertain also what Japan can

do by way of exporting some capital to needy countries on terms that must seem onerous to intending borrowers but will appear fair to the lenders who have no rooted preference for cheap money. Some will hold that Adenauer's visit is symbolic in the sense that the German contingent went to Peking during the Boxer rising, but it may be added that the opposition of both to Communism is a stronger tie today than the memory of adventures which must include Japan's capture of Tsingtao and the conquest of Shantung. The rise of Communism in the Far East is the cardinal fact of modern times and the smooth Mr Kishi may be able to convince that, as an island empire, it is Japan that must support the West, including the USA, whose Atlantic alliance does not reduce the value of the political connection with Japan that goes back to the forcing of the door by Commodore Perry.

Eagerness to Give

The present open rivalry to lend money and to increase trade unobtrusively with the weaker nations is in contrast to the economic aspects of Western Imperialism that forced loans on the Manchu empire and led to a mortgage of China's revenues. What is important is not the emergence of Soviet Russia as a lender on the capitalist model with overseas investments but the export of technicians to further projects, from Egypt to Uruguay. The consequences may not be the rise of client kingdoms or dependent republics, since minor States born yesterday are as conscious of their new political status and economic viability as Luxembourg. The fall in US exports and the rise in imports leading to an outflow of gold and weakness of the US dollar

may explain the trend which began with the UN effort to clear the Suez Canal after the miss of 1956-57. The gratitude for the ten year Marshall Plan, appreciation of efforts to shore up Korea, Vietnam, Laos and other areas may underlie the eagerness to receive as well as to give, while US consciousness of the growth of charity at home as a major industry may have a bearing on current efforts to draw in other countries with cash to spare for aid to needy nations. There is also the continuance of the Colombo Plan as a co-operative effort to patch up populous Asian nations that feel economic security is not less important than political emancipation.

The end of empire on the 19th century pattern has compelled Britain to think more of influence and less of power and the new Toryism feels that its task is to reduce the gulf between rich and poor—the two nations to whom Disraeli referred in Sybil. The further development of Africa is viewed as a challenge and the goal is uplift—not the monopoly to which Rhodes bent his efforts. The fact that, in a review of British economic policy after the war by Andrew Shonfield, little is said about new overseas investment and much about the urgent need to catch up with European rivals in costs of production may be due to preoccupation with trade union claims and the revival of Japan. It is, of course, true that the Kariba and Owen Falls schemes were drawn up to help raise UK income from abroad but there was also the idea that extractive industry was not enough and Britain (with a model in the Gezira cotton scheme that made the Sudanese peasant a proprietor, fully able to use new export opportunities) was ready to move forward and to preach scientific farming and co-

operative marketing under State auspices, even to the colonies. The thrust of US capital into the Dominions, and Guiana too, perhaps compelled Britain to think of less favoured fields of investment and the competition to move on was added by the end of the sterling crisis. It is difficult to estimate the actual gains from Britain now taking a direct share in developing India's steel industry, but it will be seen that partnership in a new venture like Durgapur offers more than material advantages to Britain. But the rivalry in giving assistance is in

part due to India's own small efforts to help Nepal, lend to Burma in need, and to supplement resources by new taxation.

Ardour in the Windy City

Together with most of the United States, Chicago—aptly known as the windy city—was buffeted last week by the kind of icy blasts that are more appropriate to midwinter than to the days just before the onset of spring.

Yet, even the unseasonal weather did not cool the ardour of hundreds of businessmen who gather to attend the twenty-third Annual Chicago World Trade Conference—a conference which has been assuming increasing importance with the growing interest of the American heartland in economic affairs around the world.

Behind that ardour seemed to lie the widely accepted view that what may well be under way today is a new era in international commerce. Involved also was the evident conviction of American businessmen—

bankers, industrialists and traders—that they, along with businessmen everywhere, have an important role to play in contributing to the world-wide economic progress.

It seemed entirely fitting, under the circumstances, that the theme of the two-day (March 9-10) conference should have been "International enterprise—builder of a better world."

An especially compelling exposition of this theme came from Mr Earl A. Denton, President of the International Trade Club of Chicago.

His organization and the Chicago Association of Commerce and Industry, both aggressive private agencies active in midwestern trade, were co-sponsors of last week's world trade conference.

As Mr Denton sees it, "an international enterprise explosion" is under way. "All over the world," he said, "enterprise is building new factories, putting new firms into business, constructing new roads, putting up new buildings—more merchandise is being manufactured, more minerals are being taken from the mines, more food is being harvested from the farms to such an extent that the increased tempo of enterprise is becoming evident everywhere."

What is causing all this activity? First, there is the "tremendously increasing population throughout the world." This, he says, is making for a substantial increase in demands for goods and services, even if it is just to take care of the larger number of human beings at the prevailing levels of living.

But the prevailing levels are hardly considered adequate as objectives. And this leads to the second reason for the increased tempo of enterprise: Vast numbers of people throughout the world are striving for and moving up to higher standards of living.

Put these two factors together, Mr Denton says, and you have a need for goods and services such as has never been known before. "The enterprise of intelligent and qualified people everywhere," he notes, "is coming into play to fulfil the requirements of this enormously increased demand."

He points out that businessmen from virtually all nations are not only expanding their operations at home, but to an increasing degree are moving across national boundaries to establish and develop enterprises of a useful and productive nature in other countries. Involved are such activities as setting up new plants or branch plants, merging with foreign firms, and licensing of production processes. The net result is an important boost of the world's gross product—its total output of goods and services.

In the process, "great scientific advances in the fields of agriculture, mining, hydroelectric power, transportation, communication and improved business techniques" are coming into widespread use, particularly as the more developed nations direct their attention, their wealth and know-how to the advancement of the less-developed. This, by its very nature, leads to vast benefits for developing lands.

Indian Finance

March 19, 1960

Vital Metal

The Finance Minister of Madras made special reference to the rise of new industries in the State during 1959. But there was no reference in the economic survey to the advent of small but essential enterprises located in the Southern suburbs at present. It was only in January that the public learnt that the Eyre Smelting Works was in operation in a small factory, and Madras was able to draw supplies of type metal, soldering metal, white metal for bearings and lead plate required for batteries from a local source set up to supplement the production of the bigger works located in Kidderpore. The Eyre Smelting Works is a subsidiary of Fry's Metal Foundries in the UK (the latter is connected with Goodlass Wall, Lead Industries Ltd) and is able to command technical assistance available from the British companies. Fortunately the company is not handicapped by import restrictions and continuous successful operation is made possible by the fairly large stocks of metals imported. The Company is able to secure licences for both lead and tin imported from Malaya and China at present, though under official directions, the works is called upon to obtain through the State Trading Corporation some tin sold by Russia. The Eyre Smelting Works, licensed to produce 1,000 tons per annum, is not operating at full capacity at present, but it is able to meet the requirements of all type foundries and newspapers and is supplying stereo metal. In addition, it is able to provide what the oil companies and can-makers require for soldering tins and the free service to customers, requiring technical guidance, has been appreciated. Imported supplies are supplemented by recovery from dross and the metal reclaimed is put to good use in the foundries which can deal with 15 tons a day. Careful planning of output for weeks ahead and a good knowledge of the market served has enabled the company to look beyond local demand and the new small Madras Factory, employing about 30 workers only, is able to supply Bombay customers by using lorry transport which is regarded as more speedy and efficient than rail transport. Of course, the larger establishment in Calcutta, which has its own laboratory with 7 chemists to examine the properties and behaviour of metals, is able to make a better showing because the Calcutta market produces fluxes in addition to type metal, etc., and is able to maintain the leadership of Fry consistent with quality maintained. While selling arrangements through Heatley & Gresham ensure regular delivery, it is production locally that has given India an assured source of a special type of

non-ferrous metals whose importance must always grow with the spread of education and the increased production of paper. It is good to remember that a foreign enterprise operating in India has carefully considered indigenous needs and it may be added that the Eyre Smelting Works, located on leasehold land, presents a model of neatness and efficiency, though it is quite near the still-expanding industrial estate at Guindy.

Yawning Gap in Paper

The inauguration of the third unit of Titagur Paper Mills Ltd. in Orissa signifies a landmark in the industrialisation of the State. Constructed at a cost of about Rs 3 crores, the project is designed to utilise the forest wealth of the State for manufacturing paper. Mr R. N. Singh Deo, the Minister of Finance and Industry, in his inaugural speech pointed out that the per capita paper consumption in the country is the lowest in the world, at 2 lbs, in contrast to the 412 lbs in the United States and 183 lbs in the UK. He made a strong plea to the mill authorities to conduct an enquiry into the possibility of utilising soft wood and paddy straw as raw materials so that the impending shortage of bamboo will not disrupt the progress of the industry in the long run.

The need for increasing the production of paper in the country has been urgently felt in recent years, especially when the massive campaign for eradicating illiteracy is in full swing. Recent estimates reveal that the gap between demand and supply of paper will be around 50,000

tons and it is feared that this will be pushed further to 143,000 tons by the end of 1963. Sir Walter Michelmore, the Chairman of the Titagur Paper Mills, in his welcome speech, appealed to the Government for the restoration of the recent price cut in paper prices to "strike a balance and allow the industry to earn enough to plough back for further expansion from their own resources". Considering the urgency of the matter, the adoption of a more considerate policy by the Government assisting the industry is eminently desirable.

Muddled Oil

The Government of India's policy on distribution of and exploration for oil came up for discussion in the Rajya Sabha last week. A Communist member alleged that the Government were yielding to the pressure of foreign interests in regard to the programme of exploration and distribution of oil. Another complaint levelled against Government was that nothing substantial was done by the company set up for this purpose. Denying these charges Mr K. D. Malaviya, the Minister for Mines and Oil, revealed that the company had already finalised the programme to be implemented, and that they are intending to import sizeable quantities of petroleum products to meet the growing demand, and the entire quantity will be distributed through machinery in the public sector. It cannot be denied that the programme has been delayed to some extent because of financial difficulties. However, the Minister has stated that, as soon as the

arrangements for storage and distribution were completed, the import programme would be carried out.

The demand for petroleum products in the country is increasing at a rapid rate, and it is estimated that, if the present trend continues, the demand will be around 14 million tons in 1965. But the total supply available in India can meet only a fringe of the demand. This naturally calls for the exploration of new deposits so that the need for importing the products can be eliminated to a great extent and the country will be a gainer, especially when it is facing a severe foreign exchange shortage.

Importers Dwindling

From a class which had a big say in the direction of industrial and commercial activities, import traders have now become a category whose ranks are thinning and whose business is dwindling. This is a phenomenon that is connected with the changes in trade policy effected by the Government in recent times. What exactly wrought the debacle in the conditions of import traders was the restrictions that came to be imposed on imports following the emergence of foreign exchange shortage, and the implementation of the policy regarding issue of import licences to actual users. While prospects of uneasy foreign exchange conditions ahead require importers to shed their nostalgia for the old days, whether they should be left to suffer on account of the policy of issuing actual users' licences is a question that continues to agitate

25% MORE ECONOMY

Ride in style in the BIG Ambassador

The Overhead Valve Engine has given remarkable power to the Ambassador—nearly 25% more. For leaping ahead on level roads or for climbing effortlessly on gradients, few cars can come near the new Ambassador.

Not only that, the Overhead Valve Engine has brought about far more economy in fuel consumption: nearly 25% more miles to each gallon.

These new advantages and the generous seating capacity plus its streamlined, modern appearance and superior workmanship, make the Ambassador the best buy of the day.

them. Mr J. K. Foreman, Chairman of the Calcutta Import Traders Association, in the course of his address to the Association's Annual General Meeting, points out that Government's policy in this regard has mistimed. The ostensible object of the policy was to ensure delivery of spare parts to the consumers direct, bypassing the link provided by importers. What on the contrary has followed is a serious imbalance of spares in the country, involving considerable tie-up of capital in unproductive pools. This was a result which was inevitable in a policy which provided temptations for users for indenting for imports in amounts considerably in excess of their requirements. Mr Foreman attributes such imbalance to the amateurish basis on which requirements are assessed by industries. He is of the opinion that such a development could have been forestalled if imports were left to be handled by sole agents who according to him being professionals could gauge the country's requirements correctly.

Mr Foreman also drew attention to the other problems faced by importers. These relate to the present method of valuation by customs of articles imported, the claims of sole agents for discounts, port congestion at Calcutta and classification of articles for assessment of duty. The present method of valuation by Customs, according to him, merely increases the price of the item to the consumer and contributes to inflation. The condition that the agent must import 90 per cent of all the materials for eligibility to discount also works harshly on them. For alleviating congestion at the port, Mr Foreman suggests simultaneous clearance of cargo and elimination of delays in processing documents through Customs.

Government Policy Affects Coal Output

The process of attaining the target of 60 million tons of coal fixed for the Second Plan appears, from current position in respect of production to be in danger of being extended beyond the Second Plan. Mr B. P. Sinha, a member of the Coal Transport Advisory Committee representing the INTUC-sponsored Indian National Mine Workers' Federation, has disclosed in the course of a press statement that it is certain that there would be a shortfall to the tune of some eight million tons in production of coal by the end of the Second Plan. For such a result, which is contrary to the reassurances being held out by Government spokesmen about the possibility of reaching the coal target, Mr Sinha pins the blame on the coal policy pursued by the Government. This policy, which was uncertain and vacillating in the extreme, erred particularly in including elements which militated against increase in production. How, for example, could production of coking coal have been increased, when Governments persisted in controlling output by enforcement of pegging? The refusal of the Government to permit the collieries to sink new pits or extend their workings to the contiguous areas within or outside their

leaseholds on grounds of the sanctity of the revised Industrial Policy Resolution of 1956 was of a piece with the contradiction that characterised Government's coal policy.

Leaving aside the repercussions on industrial production, which should be widespread and particularly severe on steel production in view of what is anticipated to be a shortfall in coking coal to the tune of nearly 1 million tons, what is even more important is the issue that arises in connection with the prospects for implementing the Third Plan for coal. With demand for coking coal at 22.55 million tons, and consumption by railways, electricity, cement and BRK expected to go up to 26 million tons, 13 million tons 6 million tons and 7.50 million tons respectively total requirements add up to a target of 110 million tons of coal for the Third Plan. It is a doubling in production that is involved in meeting the demand at 110 million tons at the end of the Third Plan. Government have a pattern of production envisaging colliery-wise targets that, according to Mr Sinha, would work out only on paper. Moreover, Government policy, which should ensure the implementation of the Plan, suffers because of lack of co-ordination among different departments, overlapping of jurisdiction, duplication of functions, multiplicity of committees and commissions, boards and councils and diversity in approaches. Mr Sinha is right when he warns that "where the Government does not know its own mind it is futile to make elaborate plans and it is idle to expect their accurate and timely implementation."

Anticipatory Sale of Land

The Madras High Court has ruled that there is nothing illegal or opposed to public policy in the sale by a landlord of surplus extent of land in anticipation of land ceiling reforms.

Last week, an appeal was dealt with by the Madras High Court against the judgment of a Coimbatore case in which a minor-guardian wanted to sell away surplus land in excess of 30 acres, at which the ceiling was reportedly to be placed by the Government under the Land Ceiling Reform, in the market at Rs 3,000 to Rs 5,000 per acre. The compensation payable by the Government was reportedly not over Rs 1,000 per acre.

This judgment should be far reaching in character in as much as several instances of anticipatory sales of excess of land at market value may be brought to the judicial notice.

Mr Justice M. Ananthanarayanan, who heard the appeal, noted: "To anticipate a law (in this instance the Land Reform Act placing the ownership of individual at 30 acres of land) and to take certain measures dictated by prudence, which are legally permitted, is not at all in contravention of public policy."

The appellant, a minor-guardian, wanted to dispose of 55 standard acres of lands and sought permission to do so under the Guardians and Wards Act. This petition for permission was filed because of the impending legislation fixing ceiling upon land possession in the State

and the appellant also thought that compensation would be payable only at the rate of Rs 1,000 per acre, but the lands of the minor could be sold between Rs 3,000 and Rs 5,000 per acre. If this sale at this rate was not done it was contended, the minor would suffer great loss.

The Coimbatore District Judge, refusing permission to sell the excess land, observed that nothing definite was known about the talked of land ceiling legislation, and secondly the Court could not countenance the object of the appellant who wanted to get over that legislation.

Dealing with the appeal, the Madras High Court characterised the Coimbatore Judge's argument as "fallacious". The talked of land ceiling, the High Court held, was impending or imminent and its broad outlines had been publicly declared by the Government at the highest level. It was not also disputed, His Lordship held, that the ceiling was likely to be fixed at about 30 acres per individual as far as the existing declarations of policy permitted them to make a forecast at all. The argument that, in any event, the State would pay compensation, His Lordship further noted, could not stand scrutiny, because His Lordship observed, according to the authoritative statements of the principles upon which compensation might be paid, it might either be specified amounts related to different classes of land, or in terms of multiples of land revenue, or in some other manner. It might not necessarily approximate to the market value at all and might be nowhere near the market value of Rs 3,000 to Rs 5,000 which was the alleged rate. There was material of an objective and authoritative nature justifying the Court in considering that the proposed land reform fixing a ceiling and the probable trend of compensation was reasonably certain. All these facts clearly showed, His Lordship observed, that it was greatly to the benefit of the estate of the minor that surplus land should now be sold and the income realised invested in other forms. His Lordship further observed that sales by private owners of land of surplus above the probable ceiling were themselves effective instrumentation of the reform. His Lordship, therefore, held that to anticipate a law and to take certain measures dictated by prudence legally permitted was not at all any contravention of public policy. In the end, His Lordship directed the Coimbatore District Judge to dispose of the permission sought in the light of the High Court findings made on the appeal.

Industrial Furnaces

Promoted by the OFU, Germany, and the Lynx Machinery Company of Calcutta, a new company has been established for the production of Industrial Furnaces. The Chairman of the Company is Dr Rolf Dubois of OFU, while Mr Anandilal Poddar is the Vice-Chairman and K. K. Jajodia is the Managing Director. The distribution of the shares of the new company between the OFU and Indian shareholders is in the ratio of 49:51. The technical control has

been vested in the hands of the OFU. This is to be appreciated in view of the fact that the OFU are one of the largest designers and builders of industrial reheating furnaces in Europe and maintain excellent research facilities in their establishment at Dusseldorf.

The significance of the new venture should be apparent, considering the pivotal importance of furnace production for industrial progress. Being basic requirements of the metallurgical, chemical and ceramic industries, furnaces come into use at almost every stage of production. Uptil now, with the exception of a portion of the erection cost, the total amount required for furnaces was being paid in foreign currency since the industry in India was not in a position to supply the required materials. There should, therefore, result a considerable saving in foreign exchange when the new unit goes into production. The initial turnover is placed at Rs 1 crore. Subsequent expansion to achieve a turnover of Rs 4 to Rs 5 crores is also envisaged. The provision of facilities for the production of component parts of furnaces should create employment opportunities to a greater extent than would have been the case were operations to be confined to the erection of furnaces.

Sugar, Fertilisers

A sugar factory, at an estimated cost of Rs 15,000,000 has been scheduled to be set up in Karaikal on a co-operative basis. This decision was arrived at by an influential committee of Karaikal businessmen attended by Mr M. Ismail Maricar, Government Councillor for Co-operation. The share capital would be collected by the committee.

Increasing attention is now being given by Karaikal business community toward investing their surplus funds in starting of industries in the former French possessions. Karaikal in the Coromandel coast is endowed with good soil for sugarcane cultivation with plentiful water supply. It is near about the Nelveli, the artisan spring well region of South Arcot with underground water supply easily available. Therefore, sugarcane availability is no problem and the installation of a sugarcane factory should no doubt materialise without much difficulty.

A fertiliser factory was the talk of the local business community in Karaikal. It will be feasible, if they come together and pool their resources to start not only a fertiliser factory, but other small ancillary industries on the basis of assurance of power supply from Nelveli.

With reference to a news item we published last week in the columns of Clive Street Gossip, relating to the joint venture between the Demag of West Germany and Indian enterprise a correction is in order. The new company is known as Indmag and is jointly promoted by Demag representing West German interests and Mr R. N. Kilachand representing Indian enterprise. Mr. Tulsidas Kilachand, whose name appeared as representing Indian enterprise in the last week's issue, has nothing to do with the new company.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

CERTAINLY once a year—but, unfortunately, more frequently since the Second Plan began—we have been having pointed attention being drawn to the extremely difficult circumstances under which the private sector in coal is working. The once a year occasion is, of course, the annual general meetings of the Indian Mining Association. No Chairman in recent years that I know of has not had grave misgivings to express; and it seems to me that the situation facing the industry is seen steadily to deteriorate from year to year. "I will probably not be contradicted," said Mr Wright, IMA's chairman, "when I say that coal has never before in the history of this country assumed such great importance." Certainly, I'm not going to contradict him. It is a sorry commentary on the governmental attitude to coal, that problems enumerated by earlier Chairmen of the IMA still remain unresolved; it is a sad thing that Mr Wright should have to say, "I was rather disheartened when reading through the speeches of some of my worthy predecessors in this chair to note for how long and on how many occasions the same views have been expressed and warnings given which, at best, have received only limited attention." So far, however, by a great species of good luck, a crisis in coal has been avoided, though, for the first time, in the last year a real shortage was experienced. This may be partly because, in 1958, the tempo of industrialisation bogged down slightly. But, the last year's shortage, the commissioning of the three public sector steel plants, the completion of the expansion schemes of the two private sector steel units, the envisaging of a rather more ambitious railway plan, the certainty of an accelerated tempo of industrialisation during the Third Plan period are all reasons why, finally, we have reached the stage when delayed decisions by Government will cost the country dear—the decisions, of course, pertaining to the World of Coal.

I think this is the most important thing for Government to convince themselves about, that, for the raising of additional coal, the private sector must necessarily have some responsibility. Government can't "go it alone." Once they do make up their mind that the public sector by itself will not be able to produce all the additional coal that the country will need, the next step should not be hard for the authorities. Unless such conviction is born, I am afraid Government as heretofore may be lethargic as to firm decisions taken. After all, the reasoning might be, the while that the private sector has been mouthing complaints of every kind, and has been maintaining that it would not be able to achieve Second Plan targets, it has also happened that development and new output by the private sector has been vigorous; production in December 1959, at an annual

rate of 43.7 million tons, approximates the target set for the private sector under the Second Plan. So, what need, Government might say, of being more solicitous at the present time? The answer is to be found in the performance of the public sector. It is now incontrovertible that, if the Second Plan output target for coal is not going to be attained, it will be because of a considerable shortfall in production by the state sector. Past experience would therefore suggest that, in the Third Plan as well, the public sector may not be able to measure up to targets. It would be more imperative than ever before that the private sector should be enabled to achieve planned output. What is it that stands in the way of the private sector in coal putting its best foot forward?

For answer to that question, I will again seek Mr Wright's extensive help. This is what he says: "In the industry today we have the demand for our coal, but since prices are pegged no advantage can be taken of the present conditions and many coal companies cannot cover rising production costs, let alone find the funds necessary for expansion. Some months ago Government's decision on the Coal Price Revision Committee's Report was made known and I am afraid that this report, although concise and to the point,

contained certain unfortunate anomalies and was based on a number of incorrect assessments. When asking for an opportunity to explain the inaccuracies, we have been told that the matter is closed. The industry feels that this is hardly a fair method of disposing of such an important matter, particularly when undisputed figures relating to 55 public limited companies which between them produce over one-third of the total output of coal in India show that the average return on capital employed is 2.4% only. Gentlemen, one must appreciate the occasional feeling of bitterness expressed by members of our industry. While I agree that the production costs of other industries and the country must be safeguarded, to expect these to be subsidised by the coal industry, on which so much depends, is to run a very grave risk, to say the least of it. Figures available with the Association show that the cost of coal and coke expressed as a percentage of the gross ex-factory value of products is 1.15% for cotton textiles, 0.7% for jute textiles and 11.25% for iron and steel. For the railways it is 16.5%. A reasonable increase in the price of coal would, I submit, not unduly affect these industries and would cause less financial embarrassment than an acute shortage of coal."

Government must rid themselves of the fear that approval of a higher price for coal will contribute to runaway inflation. As Mr Wright has pointed out, coal as an element in costs of the more important industries occupies but a minor place. Surely, the authori-

ties will be aware of this fact. Why then their great reluctance? Obviously, political rather than economic reasoning, in this matter at least, holds sway with Government. As it is, prices of many a necessity have gone up. Granted Government will not wish to "alienate" the electorate, how are we, in this view, to reconcile their facile increase in railway freights which, as Mr Wright says, "have automatically raised the price of coal to consumers"? No, in all matters relating to coal, the gov-

ernmental attitude can almost be called perverse. More: specious and short-sighted is their thinking. For, let us see what may happen if—God forbid—official policy is such that coal output does not appreciably rise. Industry no less than the home would be starved—the one of a vital raw material, the other of a prime necessity. In the one case, production could be hampered! In the other, the consumer will be at the mercy of the black-market. (It would be ironic if black diamonds were to

be available only in the black market). If industrial production is static (we need not here consider the possibility, though it exists, of a fall in output) that will be enough to generate inflationary tendencies. The pressure of demand, not only for coal, but for the various other articles in short supply because of an insufficiency of coal, would cause a general rise in prices. Is this what Government want? I hardly think so, but this is what Government (and, unfortunately, the country as well)

will get, if their policy in coal does not acquire some enlightenment.

Indian Finance

So it is that the need for encouragement being given to the private sector for raising coal production assumes paramount importance. The paradox is, if inflation is to be avoided, and inflation of the dangerous type, you must immediately set about raising the prices of coal, though that will result in some increase in the prices of industrial goods. But a small rise in the price level is a cheap price to pay, for guarding against the possibility of a steep increase later on.

And so, finally, to Mr Wright on the Third Plan, and what the private sector in coal is capable of: "I now turn to coal production under the Third Five-Year Plan. The industry has been giving this matter considerable thought for some time and it has had various discussions with the Ministry of Steel, Mines & Fuel and with members of the Planning Commission. Recent indications suggest that a target of 90 million tons of coal has been fixed for the Third Five-Year Plan, i.e. an increase of about 37 million tons over the estimated level of production at the end of the present Plan. The amount which the private sector can achieve out of this target will depend on the level of encouragement which the industry will receive from Government. Help in certain directions we must have because our hands are tied by controls. If the present conditions are to continue, and if production is to be confined to contiguous areas, it will not be possible for the private sector to produce more than an extra 7.20 million tons by 1965/66. If, however, coal companies are allowed to expand into new areas, for which they hold mining leases, and our basic requirements are met, it will be possible for us to produce an extra 21.60 million tons of coal—14.40 million tons of which will come from proximate leased areas. Certain units of the industry will require assistance in the form of loans to cover the considerable capital expenditure involved, but the production offered by us will still leave a vast target for the Public Sector—sufficient to strain their resources and cause them many a headache. We would therefore ask Government to take a realistic view and to accept our offer in the best interests of the country."

It is well we remember that the country will turn the corner only if coal does so. The country's prosperity depends upon a sufficient output of coal, and this can be achieved only if governmental policy becomes, in this regard, an enlightened one.

GATEWAY GOSSIP

Banker's View of Indian Economy

THE first quarter of the year usually offers a rich fare to the student of economics in the shape of a plethora of economic surveys from a number of eminent people closely associated with the economy in diverse ways. In recent years, these assessments are having a progressively expanding audience comprising a considerable number of members of the lay public. Matters of economic import are no longer the concern of a specialised section of the community but are becoming topics of lively discussion among the populace in general. This new awareness stems from the realisation that the country's salvation lies in a rapid development of its economy. And people are understandably keen to know the progress our economy is making from year to year.

As I have said at the outset, the first quarter of the year brings a crop of annual reviews. The one from the Union Finance Minister on the last day of February, when he presents the country's budget for the next financial year, is perhaps the most valuable as it provides much important data. The Bankers' surveys, which become available about this time of the year, are also very helpful in arriving at a comprehensive picture of the economy.

Speaking at the annual meeting of the shareholders of the Bank of India, Sir Cowasji Jehangir, the Chairman, has pointed out that the year 1959 has recorded good progress in many directions. In the sphere of industry, steel production has received a fillip during the year with the completion of the expansion of TISCO and the commissioning of the three Government plants. Expansion of manufacturing industries has made further headway, thanks to generous assistance from Government. Referring to the cotton industry, Sir Cowasji has said that, although the past year had brought encouraging trends, the industry's prospects are conditioned by the threats of higher cost of production consequent to the award of the Cotton Textile Wage Board and rising cost of raw material. The food situation has shown considerable improvement. The past year has also witnessed some easing in the foreign exchange situation, largely because of material external help and the continuance of import restrictions. The outlook for private industry has improved as will be seen from the spectacular success of a number of new issues. Money conditions have continued to be easy throughout the year due to a reduction in the demand for import finance and large disbursement of funds due to increased in-

dustrial activity. Public Law 480 Funds have also gone to augment the total Deposits with scheduled banks. The cumulative effect of all these factors has been a further easing of money conditions in the third quarter of the year; and, in order to cope with the new situation banks have had to reduce maximum rates for Deposits further with effect from September 1, 1959 by mutual agreement as in October 1958.

As is to be expected, with the better business conditions, the Bank of India has fared well during the year. Dividend has been maintained at 16 per cent. The net return to the shareholders, however, will be lower because they have now to pay tax on the dividend whereas previous dividends were tax-free.

Sir Cowasji has shown that, under the new dispensation, banking companies are not in a position to compensate the shareholders for the loss sustained by them through the abolition of grossing up of dividends. The Finance Act 1959 reduced the rate of company taxation from 51½ per cent to 45 per cent. In the Budget for 1960-61, the Union Finance Minister has fixed the rate at 45 per cent and has also announced the abolition of the excess dividend tax and the Wealth tax on companies. Under the new procedure, a shareholder of a company will not get credit for the tax paid by the company on the profits from which the dividend has been paid. It has been pointed out on behalf of the Government that, in actual practice, no loss will be sustained by the shareholder under the new procedure because, as their taxation has been reduced, companies will be able to raise suitably their dividend to allow for the tax to be paid by the shareholder. Mr Morarji Desai has said in his Budget speech this year that the scheme has not worked long enough to allow an assessment to be made of its actual impact on the corporate sector. But already a good deal of data is available, and there seems to be a strong case for a downward revision of the rate of company taxation if the objective of status quo as regards return to shareholders is to be achieved. Companies, especially those which distribute a large portion of their profits, have found that the saving resulting from the new procedure will be much less than what they will have to pay as extra dividend to compensate for the loss of tax credit to shareholders. In the case of the shareholders of banking companies, the changes are particularly disadvantageous. Sir Cowasji has pointed out that the saving from the new procedure will be much smaller in the case of banks because they had not to pay Wealth Tax even before the coming into operation of the new tax structure.

Referring to taxation in general, Sir Cowasji is of the view that high taxation does not contribute to business prosperity as it takes

away incentives to earn and save. With inadequate saving by the community, capital formation will be retarded. He has also drawn attention to the creeping inflation in the economy. Currency expansion in recent years has been rather heavy—notes in circulation have increased from Rs 1546 crores in March 1958 to Rs 1806 crores now. Even allowing for the considerable expansion that has taken place in the economy during this period, the currency expansion that has taken place is to be viewed with concern, if not alarm. Sir Cowasji has warned that the danger of creeping inflation is to be constantly kept in view by Government, whose aim should be that their policies do not aggravate the inflationary tendencies in the economy.

It is evident that inflation has begun to cause concern to Authority also. The Union Finance Minister has emphasised the need for holding the price level and a common theme of Budget speeches of State Finance Ministers this year has also been the importance of price stability. The effect of runaway prices is already seen in lower physical achievement, even though financial targets have been fulfilled. If the present situation of wages chasing prices and vice versa is allowed to continue, galloping inflation will be with us in no time. The fact that even the recommendations of the Central Pay Commission have not afforded a full satisfaction to Central Govern-

ment employees is an indication of the depth of the discontent in the country. Many States are faced with similar problems and even though they have taken steps to meet the demand of their employees, there is no certainty that further demands will not be made. It is to be noted that there is a standing demand that, in the matter of emoluments, State Government employees should be placed on a par with Central Government employees. We have now another wage demand from the employees of the State Bank of India. Government are to constitute a Tribunal for the entire banking industry to go into the question of wages. Employees of two industries, cement and cotton textiles, have been awarded wage increases as a result of the acceptance of the recommendations of the respective Wage Boards by Government.

The problem of containing inflation is not to be lightly treated. For, it is not as though outlays on development projects will come to an end with the conclusion of the Second Plan. There is now a consensus in the country that the next Plan period must witness greatly increased national effort as that period is a crucial one in the planned development of the country. For this reason also, it is imperative that price stability is achieved as early as possible so that, when the Third Plan commences, there is no diversion of precious funds to unproductive channels, which is a sure way to inflation.

NOW-METRIC CAPACITY MEASURES

The Metric capacity measure—LITRE—will come into use from April, 1960 when the PAINT and PETROLEUM industries change over to the Metric System. Paint will then be sold in litres and the entire distribution of petroleum will be in litres only.

CONVERSION TABLE

1 GALLON = 4 LITRES approx.

1 LITRE = 1,000 MILLILITRES

CHANGE TO METRIC SYSTEM FOR SIMPLICITY & UNIFORMITY

Issued by Government of India

DA 20/59

National and Grindlays Bank Ltd.

(Amalgamating National Bank of India Ltd., & Grindlays Bank Ltd.)
Registered in London under the Companies Act of 1947 on the 23rd March, 1960. The liability of members is limited.

Bankers to the Government in Aden, Kenya Colony, Zanzibar, Uganda and Somaliland Protectorate.

Authorised Capital £4,562,400
Subscribed and Paid-Up Capital £3,421,875
Reserve Funds £3,000,000

Head Office: 26 BISHOPSGATE, LONDON, E.C.2.

London Branches:

54 Parliament Street, S.W. 1; 13 St. James's Square, S.W. 1.

BRANCHES throughout India, Pakistan, Ceylon, Burma, Aden, Somaliland Protectorate, Zanzibar, Island, Kenya, Uganda, Tanganyika Territory and Northern and Southern Rhodesia.

The Bank conducts all classes of Banking and Exchange Business throughout the world. Trusteeships and Executorships are undertaken.

The Bank undertakes the recovery of Income Tax and the preparation of Income Tax returns on behalf of constituents.

Calcutta Branches:

19 Netaji Subhas Road, 31 Chowringhee Road
6 Church Lane, 17 Brabourne Road

OLYMPUS

Half Truths, Quarter Truths:

"The word Socialism implies social control of the economy by the Government Five-Year Plans carry the same connotation. It is easy, as a result, to imagine that the Indian economy is managed by the Government and that New Delhi has in its hands the necessary instruments for such control... Nothing could be farther from the fact... By almost any test, the economy of India is less responsive to public guidance and direction than that of the United States. Indeed, it is one of the world's least controlled or 'planned' economies.

"In the United States, the several levels of Government dispose of about 20 per cent of total production... In India, the corresponding figure is not over 10 per cent. By this test—the size of State activity in relation to all activity—more than twice as much of the American economy is managed or planned by Government as is the case in India... Military outlays, which are a sizable part of our figures, may not be a useful index of resources under social control, but even outside the field of direct public activity, our economy is subject to a far greater degree of public guidance and direction than that of India. Our agriculture is much more subject to control and is more extensively controlled by the State. Wages, hours and conditions of labour are much more extensively regulated in the United States and in one way or other we can do more about manpower supply. Taxation and fiscal policy are subject to the same manipulation in free enterprise Washington as in Socialist India, and in our case the tools in the hands of the Government are almost certainly more efficient..."

[What obtains in India is] "a small Socialised sector atop what, no doubt is the world's greatest example of functioning anarchy."

"The Indian Five-Year Plans have no kinship to the Soviet 'Gosplans' but are more akin to a Western capital budget that has been spread out to provide for industrial capital formation."

"It is becoming increasingly clear that Indian economic policy is at its best when it is most self-reliant. Adaptation of action to circumstances has on numerous occasions produced better results than the adoption of foreign models."

—Prof. J. K. Galbraith.

ANY unbiased observer who has no political axe to grind will agree that this is a truer, fairer and more perspicacious description of Indian economic reality than what is contained in the Swatantra Party's Statement of Policy. The image of Indian economic life that this Statement constructs is rather grotesque and, in some ways, untrue. At the outset, for example, it is asserted that the ruling party's "basic philosophy is a fundamentalist belief... that the State sector of the economy must constantly grow until, in the end, the free sector is reduced to inconsequential proportions" and "that the peasantry must somehow be persuaded to extinguish themselves in big 'co-operative' or 'collective farms'."

The first part of this statement is not confirmed by what has been and is being actually practised in relation to the private sector. For one thing, the Government are not wedded to a policy of nationalisation. For another, under both the Plans, they have encouraged and assisted the expansion of existing private industries and the establishment of a number of new industries in the private sector. More or less the same pattern of private investment has obtained during the Second Plan, is being visualised for the Third Plan period also. Above all, the Government's

policy relating to small industries is bringing about a pattern of wider private ownership of the means of production. That the "free sector" is all the time expanding—investing more, producing more and augmenting the ranks of medium and small businessmen—conclusively refutes the Swatantra "scare story" that the free sector will be reduced to "inconsequential proportions". What is more, when some basic and heavy industries involving heavy capital outlays are established in the public sector to serve the private sector, it will be found that, over the long-term, it is the latter that has registered a faster rate of growth. The Congress Party's "fundamentalist belief", if it really has any, is therefore hardly relevant in this context.

The second part relating to "co-operative" or collective farming is an even greater exaggeration. In highlighting the long-term implications of the co-operative farming programme suggested by the Nijalingappa Committee, this correspondent has drawn the conclusion that the proposed six-year programme will cover just 2 per cent of the cultivated area of the country and that, at this rate, no widespread "revolution" on the agrarian front need be expected even after six or seven years. (Vide: 'Olympus' despatch entitled

"The Latest on Joint Farming" in the issue of 'Indian Finance' of February 27, 1960). Whatever be the Congress resolutions on co-operative farming, what is being done or proposed to be done is the addition of a few cooperative farms and a few state farms, on both of which large-scale farming techniques can be adopted as on plantations and on integrated and well-managed farms, sugarcane farms attached to factories, etc., which are being exempted from the land ceilings legislation. Even here, the co-operative farming society of Government's conception will have no recognisable collectivist features as in Russia or in China.

Another dogmatic Swatantra assertion is that the Government have adopted the approach of totalitarian planning. This, again, is untrue. To quote Professor Galbraith:

"Nothing could be less in keeping with Indian temperament and the character of the ruling Congress Party than the vigour and, on occasion, the violence of Soviet governmental techniques. No one has suggested that Indian Socialism is revolutionary Socialism. On the contrary, it identifies itself wholly with the tradition of non-violence.

"Russians must negotiate the chasm between a country that is genuinely Socialistic (in the Soviet sense of the term) and a country that chooses to call itself Socialist but in fact is at the opposite pole in actual organization. The Soviet leaders cannot tell a friendly Socialist country that it is no such thing, nor can they make recommendations which accept the fact of a total absence of central control. Russians are more or less under the obligation to believe that the Indian economy is what it is not."

That, again, is a truer description of Indian style planning. To describe this as totalitarian planning can only be called a species of scare-mongering. Fortunately, the Swatantra Party itself has laid this ghost, in a strange contradiction, when it says in the same breath that "the Government has not adequate control over the allocation of resources" and that it "has, therefore, little control over savings."

The Swatantra stand on inflation is also characterised by exaggeration. That this phenomenon has been kept under partial check is well known. The latest foreign observer, to visit this country, Mr H. Borges da Fonseca, Economic Adviser to the President of Brazil, has also testified to the fact that, "among under-developed nations India has been the most successful in controlling inflation." According to him, "the rate of inflation in India in the last few years has been small when compared to other countries. The ideal for any nation is to have economic development absolutely without inflation but it is almost a dream." (Press

Conference at New Delhi on March 8, 1960.).

On the subject of industrial production, the Swatantra statement says that, "if, despite governmental interference and regulation, industrial output has somewhat risen, it is due to the vitality of the productive forces of the Indian people." After all, governmental regulation which, by and large, has been accepted by the private industrial sector as something in its own interest, does not seem to have had any crippling effect on industry even according to the Swatantra Party. [Then, why condemn regulation as such? Surely, has not the Industries Regulation Act operated to the benefit of a whole range of newer and younger industries?

Some of the Swatantra statements marked by exaggeration and distortion have been critically dealt with so far. There are other such statements, not covered here, which, together with the ones criticised, constitute a bundle of half-truths and quarter-truths, exaggerations, factual distortions and unfair generalisations. All this in a Statement wherein there is profuse reference to God and Gandhiji alike! If these "weapons" can take a party to power, the Communist Party would be ruling the country now, permanently denying to both the Congress and the Swatantra that opportunity. If diagnosis is half the cure, the Swatantra Party is in no position to effect even a partial cure for the simple reason that its diagnosis is not reliable. It is difficult to see what *raison d'être* the Swatantra has, except the one of imprisoning the reactionary right-wing elements within the constitution and thereby neutralising their subversive propensities.

Scientific Books in Indian Languages

To encourage the publication of high class scientific books, both popular and academic, in the various Indian languages, the Union Ministry of Scientific Research and Cultural Affairs have decided to institute an annual award of Rs 10,000 to be given to a publisher each year beginning from 1960.

Award will be given to a publisher for the best series of scientific books published in any Indian language in the course of a year. A series will be defined as consisting of at least five books published during one calendar year. Individual authors will not be eligible for the award.

The books should be of a fairly high standard and, in case they are text-books, they should be for use of students not below the graduate level.

Books published during the calendar year 1960 will be considered for the award.

The need for encouraging production of publication of more and better scientific books has been felt by the Government for some time past. The publication of scientific books, it is hoped, will encourage to create a climate of science in the country.

March 19, 1960

THE
PENINSULA

Madras Shows the Way

THE Madras Budget for 1960-61 discloses a small deficit of Rs 34 lakhs. It contains no fresh taxation. Mr C. Subramaniam, the Finance Minister, who introduced the Budget in the State Assembly on March 10, announced exemption from Sales Tax for perishable articles like fruits, flowers, vegetables, eggs and potatoes. Also, oils crushed by local chekkus and green leaf tea are free from Sales Tax levy. This relief is welcome in as much as agitation for this tax exemption has been going on for the last eighteen months.

Mr Subramaniam does not propose to cover the small deficit. He summarised the State's achievements during the past three years. As one went through the speech, the impression was fostered that Mr Subramaniam richly deserved the congratulation of the people for keeping the finances in good shape and for keeping plan implementation well ahead of the schedule. The total outlay is expected to amount to Rs 181 crores by the end of 1960-61 against the original estimate of Rs 152 crores. Canadian equipment for the Kundah hydel scheme cost Rs 9.3 crores. Even if this is left outside the purview of the Budget the estimated expenditure of Rs 171.5 crores is surely on the creditably high level.

The Finance Minister explained the reason for the high expenditure, as being due to the grant of increased dearness allowance of Rs 5 a month to low paid Government servants, teachers and local board employees. The deficit of Rs 34 lakhs would be higher if the Government of Madras have to implement their own Pay Commission's report. This report is expected to be out by the end of this month, and any commitments by the Government toward implementation of the possible pay rise that may be recommended would increase the deficit of the State.

That was why Mr Subramaniam rightly pointed out: "We must take heed of the inherent contradiction between planned development and uncontrolled prices." This was the same keynote which characterised his Bangalore Congress speech moving the Cooperative Farming resolution.

The revised estimate for 1958-59 was expected to show a revenue at Rs 69.49 crores and expenditure at Rs 66.84 crores, leaving a surplus of Rs 265 lakhs. But the final account shows that receipts stood at Rs 69.95 crores and expenditure at Rs 68.35 crores, leaving a surplus of Rs 160 lakhs. The increase of Rs 5 a month in dearness allow-

ance to Government servants, local board employees and teachers effective from December 1958 was the reason for the increased expenditure and it almost wiped off the surplus. Also, the Government had to spend Rs 35 lakhs on rebates on handloom cloth and Rs 72 lakhs more on buildings and roads. The cash balance at the end of the year was Rs 328 lakhs.

Current year's receipts were estimated at Rs 73.08 crores and expenditure at Rs 71.69 crores. The concession by way of increased dearness allowance cost the Government Rs 180 lakhs. The revised estimate for the current year showed receipts at Rs 78.30 crores and expenditure at Rs 77.72 crores, leaving a surplus of Rs 58 lakhs.

Mr Subramaniam stated that the State's share of Central taxes was expected to be Rs 75 lakhs more than the Budget estimates. Under the State taxes, a sum of Rs 41 lakhs more was expected under Motor Vehicles Tax, Rs 20 lakhs more under Central Sales Tax, Rs 15 lakhs more under Entertainment Tax and Rs 43 lakhs more under Stamps.

The Plan expenditure had been estimated for 1959-60 at Rs 10.59 crores. But it was expected that the expenditure would be Rs 12.77 crores. The main increases in expenditure are Rs 31 lakhs for Zamindari abolition, Rs 85 lakhs for Irrigation, mainly for the Parambikkulam-Aliyar Project, and Rs 120 lakhs for the Madras Government's investment in the share capital of the Madras State Cooperative and Central Banks.

The State Electricity Board had planned a Budget of Rs 11 crores, but the Government would be spending Rs 14 crores, excluding equipment valued at Rs 9.34 crores received from Canada. A sum of Rs 18.84 crores had been set apart for loans to the Electricity Board. The cash balance at the end of the year would be Rs 373 lakhs.

The Budget estimates for 1960-61 place receipts from Revenue account at Rs 80.87 crores. The expenditure on Revenue Account is placed at Rs 81.21 crores. "This has resulted in revenue deficit of Rs 34 lakhs. This small deficit is insignificant in a revenue Budget of the order of Rs 81 crores," the Minister declared.

Next year's receipts are expected to be Rs 257 lakhs more than the receipts anticipated in the Revised Estimates for the current year.

The following are main provisions made in the 1960-61 Budget toward development expenditure:

Education & scientific Departments Rs 15.53 crores; Medical Rs 4.80 crores; Public Health Rs 2.05 crores; Agriculture Rs 3.12 crores; Animal Husbandry Rs 1.11 crores; Cooperation Rs 1.88 crores; Industries & Supplies Rs 4.89 crores; Harijan Uplift Rs 2.95 crores; and Community Development & National Extension Service Rs 3.31 crores. As usual, Madras State has

allotted the biggest amount for Education which has been combined with scientific departments.

Capital expenditure for 1960-61 is fixed at Rs 10.85 crores. It is made up of Rs 370 lakhs on buildings and roads, Rs 171 lakhs on irrigation, Rs 169 lakhs on industrial development, Rs 53 lakhs on bus purchases, and the balance on miscellaneous development.

Mr Subramaniam stated that this year's Budget had special significance as this was the last year of the Second Five Year Plan. He said that only on the basis of the achievements of the Second Plan could the State shape the size and content of the next Plan.

Naturally, the Minister narrated the achievements of the State during the Second Plan period.

Giving figures, the Minister said that, during the last four years, the State had increased rice production by 464,000 tons, millets by 104,000 tons, or both combined together by 568,000 tons. Groundnut production had increased by 87,000 tons during the past four years, cotton by 94,000 bales, and sugarcane by 57,000 tons. The targeted foodgrain production was 1.28 million tons, but the Minister stated that an additional production of only 900,000 tons could be achieved, the shortfall being due to want of chemical fertilisers. This fertiliser shortage, the Minister hoped, would be covered when the Neivell fertiliser unit was expected to go into production of 150,000 tons of urea equivalent to 350,000 tons of ammonium sulphate.

In the matter of yield per acre, Madras State had a better record at 1,300 lbs of cleaned rice than

the all-India average of 816 lbs for 1958-59. The current year's estimate showed a further improvement to 1,344 lbs per acre. Though the figures proved encouraging, the Minister pointed to the higher yields obtained in Japan (2,650 lbs per acre) in the USA (2,150 lbs per acre) and China (1,610 lbs per acre.) Sugar production in the state was inadequate to the tune of 40,000 tons on the basis of present consumption. By the end of the Third Plan, this deficit might go up to 60,000 tons. Plans to produce additionally 600,000 tons of sugarcane in the Third Plan have been made.

As regards irrigation, the Minister observed that it was their aim to bring under cultivation 292,000 acres. In the first four years of the Plan, 252,000 acres would be brought under irrigation and an additional 40,000 acres in 1960-61, and thus the total target for the Second Plan would be reached.

The Minister pointed out that the Parambikkulam-Aliyar project, the largest Second Plan scheme, would take Rs 1 crore on preliminaries and that further work would be commenced in 1960-61.

Minor irrigation works had naturally been given high priority in view of their being economical and quick-yielding. They are also widely dispersed. The scheme includes tanks improvement, developing and increasing filter points and well-subsidies.

As for community development, the Minister noted that the State had been delimited into 360 development blocks each with a population of 66,000. The last year of the Second Plan would have

THE PUNJAB NATIONAL BANK LTD.

(ESTABLISHED 1895)
HEAD OFFICE: NEW DELHI

Government of India

Five-Year Interest-Free Prize Bonds, 1965 Issued at par and Repayable at par on or after The 1st April 1965

Available for sale in denominations of Rs. 5/- and Rs. 100/-
from 1st April 1960 until further notice.

ISSUES: The Prize Bonds (which will be in the form of bearer bonds) will be on sale at:

- (i) the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Bangalore and Nagpur,
- (ii) branches of the State Bank of India, State Bank of Hyderabad and State Bank of Mysore conducting Government Treasury business,
- (iii) Treasuries and Sub-treasuries in India other than those at any place referred to in item (i) or at any place where there is a branch of any of the banks referred to in item (ii), and
- (iv) all Head Post Offices and Departmental Sub-Post Offices.

Subscriptions will be received in the form of cash only and no written application will be necessary.

PRIZES: The Bonds will be in the denominations of Rs. 100/- and Rs. 5/- and will not bear interest but lots will be drawn quarterly for prizes on the 1st June, 1st September, 1st December and 1st March every year, the first draw being held on the 1st September 1960 and the last draw on the 1st March 1965. Lots will be drawn under the supervision of the Government of India, separately in respect of each series. The total number of prizes to be offered to the holders of winning Bonds each quarter will be 40 of the aggregate value of Rs. 92,000/- and 278 of the aggregate value of Rs. 46,000/- in respect of each series of Rs. 100 and Rs. 5 respectively. Each series of Rs. 100/- will be for Rs. 1 crore (i.e. 1 lakh Bonds of Rs. 100/- each) and each series of Rs. 5 Bonds will be for Rs. 50 lakhs (i.e. 10 lakhs Bonds of Rs. 5 each). Each Bond sold will be eligible for participation in all the draws held after the expiry of two calendar months from the month of its sale. All Bonds pertaining to a series from which any Bonds have been sold will participate in the draw but no prizes will be awarded for unsold Bonds or Bonds sold within two calendar months immediately preceding the month of the draw.

The number and amount of prizes in each series will be as follows:

EACH SERIES OF Rs. 100 BONDS

1 Prize of Rs. 25,000	...	Rs. 25,000
2 Prizes of Rs. 10,000	...	Rs. 20,000
3 Prizes of Rs. 5,000	...	Rs. 15,000
14 Prizes of Rs. 1,000	...	Rs. 14,000
20 Prizes of Rs. 500	...	Rs. 10,000

Total amount of prize money quarterly in each series of one lakh pieces. ... Rs. 92,000

EACH SERIES OF Rs. 5 BONDS

1 Prize of Rs. 7,500	...	Rs. 7,500
2 Prizes of Rs. 2,500	...	Rs. 5,000
10 Prizes of Rs. 1,000	...	Rs. 10,000
20 Prizes of Rs. 500	...	Rs. 10,000
25 Prizes of Rs. 100	...	Rs. 2,500
220 Prizes of Rs. 50	...	Rs. 11,000

Total amount of prize money quarterly in each series of ten lakhs pieces. ... Rs. 46,000

All prize-money will be paid in cash and will not be liable to tax under the Indian Income-Tax Act, 1922.

PAYMENT OF PRIZE: The holder of a prize-winning Bond may present his claim together with the Bond at any time after the date of the relative draw at any of the following offices:

- (i) the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Bangalore and Nagpur,
- (ii) branches of the State Bank of India, State Bank of Hyderabad and State Bank of Mysore conducting Government Treasury business,
- (iii) Treasuries and Sub-treasuries in India other than those at any place referred to in item (i) or at any place where there is a branch of any of the banks referred to in item (ii), and
- (iv) all Head Post Offices.

The prize money will be paid to him at the office at which he has presented the Bond after the claim has been admitted by the Reserve Bank of India.

PUBLICATION OF WINNING NUMBER: The particulars of the prize winning Bonds will be published in the Gazette of India and the press as soon as possible after the date of the relative draw.

REPAYMENT: Prize Bonds will be repaid at par on or after the 1st April 1965 on presentation.

Further particulars can be obtained at any of the offices authorised to receive subscriptions.

covered 10,500 villages in 211 blocks, out of a total number of 18,000 villages. Out of the amount of Rs. 13.92 crores set apart, the spent amount was Rs. 6.78 crores in 1958-59 and the total expenditure during 1959-60 and 1960-61 would be Rs. 12.74 crores.

With a provision of Rs. 19 crores for the current year, the Minister stated that 50 per cent of the rural population would be covered by 1960-61 in respect of cooperation. Credit provided under the scheme would be Rs. 22.5 crores. The modification of the scheme lies in that the Government, which did not advance loans before to ryots unable to give proper securities, far, had undertaken to guarantee losses to the cooperative organisations advancing such loans. A Guarantee Fund is being constituted for this purpose.

The record in respect of establishment of major industries in Madras has been very good. The Neiveli Lignite Project, Mr. Subramaniam noted with satisfaction, had been progressing very well. The Rs. 86 crore project, with an anticipated outlay of Rs. 46 crores during the Second Plan, had consumed Rs. 11 crores up to March end 1959. In the current year, Rs. 15.47 crores would be spent. As known already, the integrated mining project's yearly output of 3.5 million tons of lignite would be utilised as follows: 1.5 million tons to produce 25,000 k.w. of electric power with Russian assistance; 500,000 tons of lignite in an urea fertiliser plant with a capacity of 150,000 tons and the balance of 1.5 million tons would be briquetted. The fertiliser and the briquetting plants would go into production in the Third Plan period. During the Third Plan, it has been programmed to mine 6 million tons of lignite.

The Minister referred to the preliminary arrangements for steel plant erection utilising this lignite at Salem. The Central Government had already constituted a Technical Committee to go into this question.

The Minister announced that an agreement had been concluded with French firm (Messrs. Bauelet of Paris) to establish a raw film factory in the Nilgiris (Ootacamund). The factory is expected to go into production by 1962 end and the first stage of the project will cost Rs. 5 crores. Initially, it will employ 1,300 persons.

The Rs. 3 crore Surgical Instruments factory to be set up by the Central Government at Guindy with Soviet aid will make 2 million surgical instruments of different kinds yearly, providing employment for 2,000 persons.

By 1960-61, three cooperative sugar mills will be commissioned in Madurantakam, Udumalpet and Ambur, and more such ones would be established in due course.

Listing the major factories in the State under the private sector, Mr. Subramaniam pointed to the Tiru-

nelveli caustic soda factory, which had gone into production and carrying on smoothly. The Madras Government had put in Rs. 10 lakhs share capital in this out of its total outlay of Rs. 3.5 crores. About 1,500 persons are employed in this factory. By the current year the Rs. 1 crore Rajapalayam cement factory, with a targeted capacity of 66,000 tons years, initially would get into commission. This will provide employment for 700 persons. The ultimate capacity is expected to be raised to 132,000 tons yearly.

Messrs. Burn & Company's refractory bricks factory utilising Salem magnesite with a thousand tons monthly capacity has also been completed.

An Italian firm is collaborating in respect of an aluminium plant installation at Mettur.

A thousand unit per year railway wagons factory with a share capital of Rs. 1 crore—Madras Government contributing a token Rs. 2 lakhs—at Pattabhiram has been established. A paper factory at Mettur with daily capacity of 50-60 tons is being established by Messrs. Seshasayee Brothers, who are importing American machinery for this purpose. Messrs. T. V. Sundaram Iyengar & Sons Ltd are proposing a wheels and rim factory with 15,000 wheels and rims monthly at a capital cost of Rs. 1 crore.

With all this, the Minister stated there could be no doubt on the point that the State's development was still far from adequate. He hoped the National Council of Applied Economic Research would help in formulating the State's industrial programme for the Third Plan.

The Minister referred to the continued progress being made by the State in the Small Scale Industries aid programme. In the first three years of the Plan, he said that Rs. 63 lakhs had been disbursed to 7,700 persons. This plan was being continued on the same scale in the current and next year.

About power production in the State, the Minister said that the installed capacity of the Madras Grid was 258,000 k.w. at the end of the First Five Year Plan proposed to enhance the installed capacity to 571,000 k.w. The Madras Plant Extension scheme commissioned in 1958 had increased the capacity by 30,000 k.w. The Periyar Project had added another 105,000 k.w. The Kundah project under progress would add another 180,000 k.w.

Against the provision of Rs. 53.25 crores for Power development, Rs. 41.84 crores had been spent so far in the current Plan. In the current year, against an original estimate of Rs. 11 crores, it was expected that Rs. 14 crores would be spent. Next year's outlay was expected to be Rs. 12 crores. With the value of the Canadian equipment added, the State would be spending Rs. 77 crores as against Rs. 53 crores allotted originally in the Second Plan for Power Development.

WORLD OF JUTE

Continued Firmness in Raw Jute

IT has again been made clear during the past week that those who influence the raw jute market have little concern for what may be happening to our exports. What matters to them is the demand and supply position, or to be more precise, what they imagine is the demand and supply position. It is useless to complain that interested parties are circulating exaggerated reports about a paucity or a plethora of supplies to serve their selfish ends. For, such stories will not hold the field long if they are not sustained by a fairly widespread tendency to rely upon them.

We have noted in this column last week that the IJMA Chairman has made it clear that, without stability in our jute goods market, it will be extremely difficult for our jute goods to continue to be in the good books of overseas consumers. One of the arguments advanced in favour of substitute packaging materials is that, since their prices remain stable over fairly long periods, consumers are enabled to know in advance the cost of packaging to a high degree of correctness. The same cannot be said of jute manufactures. Knowledgeable circles now believe that, partly because of the fact that users have learnt to make do with substitute materials where once they were solely dependent on jute goods and partly due to the ceaseless efforts that are being made by jute's rivals in the packaging field, overseas consumers are apt to put price stability above everything else. These indications seem to have been entirely lost on our market men, as otherwise, it will be difficult to find a justifiable reason for the continued uptrend in prices. And, during the past few days, conditions have been such as to remind one of last December.

A significant feature of the trading during this week is the fairly keen interest evinced by some mills in the raw jute market, notwithstanding the daily rise in price levels. Evidently, these mills do not find themselves as comfortable as others as regards their stocks of raw jute. It is not known how Government view the prevailing conditions in the jute markets. There is no doubt that they will be quite concerned at the runaway prices. The sanction for the import of 200,000 bales of jute from Pakistan last December should have allayed all lingering doubts about shortage of supplies. The impact of this is to be seen in

the increased arrivals from Pakistan during the past two or three years.

Operators in the jute market, however, seem to think that, despite the higher imports, the supply position will be difficult toward the end of the current season. The continued low level of arrivals in the upcountry markets have further sharpened the speculative edge of the market. A few days ago, the fall of early rains in the growing areas encouraged the hope that, in the coming season, sowings will be heavy and that the new crop will be available quite early in the next jute year. Reports now indicate lack of interest among cultivators and consequently it is argued that it will be too optimistic to anticipate a big and early outturn of the new crop. With mills ready to pay the higher price, operators have had little difficulty in pushing up the market.

The jute goods market ruled steady during the past week ended Wednesday largely in sympathy with the raw jute section. After a quiet opening, values hardened following speculative activity in the futures section. Heavy goods were in keen demand and hessian also improved in sympathy. Toward the close, the undertone was slightly easy, especially in the hessian section. It would appear the weakness of hessian has stemmed from the US burlap consumption figures for February 1960. Burlap consumption last month in US has been higher at 75 million yards as compared with 71 million yards in the previous month and 70 million yards in the corresponding month of last year. This is no doubt encouraging, but operators have evidently not been satisfied with the news that stocks at the end of last month are slightly higher at 251.4 million yards as against 251 million yards at the end of the previous month.

Production of jute goods during February 1960 was lower at 86,000 tons as against 86,700 tons during the previous month. It is to be noted that, despite the higher (200.5) number of hours worked during last month—mills worked only 197.5 hours in January—production has declined. Output of hessian is 500 tons lower at 36,200 tons and that of sacking is 1,300 tons lower at 41,600 tons. Production of other varieties is, however, higher by 1,100 tons at 8,200 tons. Taking the two sets of figures—the production and stocks—for the month, it would be evident that despatches during February have been higher than in January, when despatches totalled only 73,100 tons. Total despatches during last month should have been in the environs of 84,000 tons.

WORLD OF TEA

Price Prospects

THE quicker rise in Common tea prices, a characteristic feature of the Tea market in the second half of last year, seems to have been arrested. Apart from the price factor, it is believed that, with larger supplies from Africa and elsewhere, the availability of plain teas will be more than sufficient to satisfy world demand.

The UK tea stock, which is an important factor in shaping the market sentiment, has improved in recent weeks and continues to rise. This has enabled the buyer in that country to sit back and watch the price trend. Visible supplies are not overabundant so as to weigh on the market there. Yet, there has been a slow weakening of the market in recent weeks. One reason may be the reluctance of the packers to hold large stocks in view of the large volume of financing required for the purpose.

Judging from the virtual end of direct exports to the UK, there is the possibility that London auctions of Indian teas for this season will end earlier than usual. If so happens, it is felt that it will lead to the opening of the new season's teas on a bright note. In Calcutta also, the last export sale will be held on the 28th March. As such, the impact of the accumulated demand is expected to be felt on the new season's sales.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 67,034 packages. The market opened with a rather better and more general demand; but an easier tendency became apparent as the sale progressed. Clean-leaved Brokenes were irregular, but showed little change on balance, while plain Fannings tended easier. The few bright liquoring orthodox Assams came in for keen competition, but the plainer stalky kinds were again lower.

The poorer CTC Assams tended easier, but the better sorts were sold well although, at the close, they were often 10 nP to 25 nP below last rates. Non-wither leg-

cut teas declined by 6 nP to 10 nP apart from a few selected lines. There was less competition for Whole Leaf grades, which were sold at lower rates and there was again a very limited enquiry. Following rates were quoted:—Clean Black Pekoe Rs. 2.00 to 1.2.03; Plain BP Rs. 1.80 to Rs. 1.86; Plain Fannings Rs. 1.80 to Rs. 1.90; Medium BP Rs. 1.78 to Rs. 1.88; Medium Fannings Rs. 1.88 to Rs. 2.00; Best Assam CTC BP Rs. 2.40 to Rs. 2.60 and Best Assam CTC Fannings Rs. 2.45 to Rs. 2.65. All rates are nominal.

In the Internal Sale, offerings consisted of 22,672 packages of Dusts and 1,598 packages of Leaf grades. The market opened to good demand, but prices again followed an easier tendency. Grainy orthodox kinds met with less support and were lower by 10 nP to 12 nP, while the smaller stronger-liquoring types declined to a lesser extent. Legg-cut Dooraos descriptions found buyers at a drop of 8 nP to 12 nP per pound. Darjeelings followed the lower trend.

Medium CTC teas were well supported, but sold at prices which were 6 nP to 12 nP below last levels, more activity being seen on the brighter and more powdery grades. The best CTC Dusts were irregular, but generally followed quality. Following rates were quoted:—Medium Dooraos Dust Rs. 1.96 to Rs. 2.00; Medium Assam Dust Rs. 1.90 to Rs. 1.94; Medium Assam CTC Dust Rs. 2.02 to Rs. 2.14 and Best CTC Assam Dust Rs. 2.40 to Rs. 2.75. Demand for Leaf grades was fair, but prices were irregular and generally lower. Green teas were sold well.

Arrivals of tea in Calcutta in the eleven months ended February 1960, were lower at 4,539,834 chests as compared to 4,624,294 chests in the corresponding period of 1958. While arrivals by rail increased to 1,253,016 chests in the period April 1959 to February 1960 from 1,183,668 chests in the eleven months ended February 1959, those by river and air declined to 3,206 chests and 68,493 chests from 3,334,565 chests and 106,062 chests respectively. Arrivals by road amounted to 12,042 chests as compared to nil in the corresponding period of last year.

In the Cochin market, offerings were 975,000 pounds of Leaf tea, Good medium and best liquoring sorts, which were dearer, attracted good demand. Medium and low medium teas were irregularly 5 nP easier. Low-priced teas were firm to dearer, while Whole Leaf teas, particularly Orange Pekoes, were fully firm to dearer.

In the Colombo market, offerings totalled 7,125,120 pounds. Quality was irregular. There was a good general demand for high-grown Broken at the opening when prices were generally fully firm to dearer. Later in the sale, however, prices were often easier, particularly where quality showed a good demand at slightly de-

rates, while low-grown teas were 2 to 5 cents per pound lower except for Persian Gulf types.

The final internal sale was held in Chittagong toward the end of last week. Offerings were 17,158 packages of Leaf grades and 5,750 packages of Dusts. As usual, the quality of the Leaf offerings was generally poor and the larger part of the catalogues consisted of undesirable stalky end-of-season varieties and offgrades. After a hesitant opening, a fair demand developed for clean teas with sweet liquors. For most of sale, they were selling at around 6 to 8 annas below previous rates. The best liquoring sorts were, however, generally taken at 2 to 4 annas below valuations. There was only limited demand for the poorer types, which were difficult to sell and were frequently discounted by from 12 annas to over a rupee per pound.

There was a fair demand for Dusts, but at lower rates with sweet liquoring teas selling at 8 to 10 annas per pound below previous levels. Best liquoring sorts and non-wither varieties were a strong feature and only declined by about 2 annas. Plain Sylhet Dust was quoted at Rs 3.10.0 to Rs 3.11.0 per pound.

In the London auction, offerings were 0,507 packages including 18,877 packages from Northern India. From the opening, all teas were markedly easier and, as the sale continued, more and more lots were withdrawn. Sold teas were generally a penny to three pence per pound lower and, with the exception of an odd invoice of quality, all grades lacked competition. Poor quality and thin liquoring types suffered. Plain tea was quoted at 3 sh 8d per pound.

Forward Business Dwindles

THE cotton futures market in Bombay, keeping steady, turned a shade easier following the credit squeeze measures which have been taken during the last week end. Though these steps are directed mainly against the unhealthy speculative activity in the stock markets fed on bank finance, the psychological effect was there. Prices declined moderately, but once again steadied up due to apprehensions of very tight supply position at the far end of the season. Following further downward revision of the crop estimate to only a million bales for 1959-60, the March contract was virtually pegged around the ceiling of Rs.

820 while the distant August contract, after declining to Rs 768.25 from Rs 773.50, recovered to Rs 770 to be placed at Rs 769.

Business in the forward section has dwindled considerably due to the very difficult supply position and it is generally felt that, after the maturity of the March contract, the bull operators might once again concentrate their energies to push up the August contract. It is difficult to visualise how things will shape at the time of the maturity of the August contract, but, more than anything else, the progress of the monsoon will mould the pattern. In the meanwhile a move is already afoot on behalf of the brokers and the jobbers to start trading in the new 1960-61 crop earlier than usual with certain amendments in the by-laws. Usually, business in the new crop for the next season starts every year in the month of June; but, whether official permission could be forthcoming for an early date, appears problematic.

SPOT:

The Serwi spot market was fairly active during the past week. Mill interest was centred on varieties like Co2, Moglai, 197/3 and 0394. A few mills were reported to be eagerly seeking these varieties. Vijay, Digvijay and Laxmi were in good demand and it was reported that some Ahmedabad mills in particular booked a sizable quantity of these varieties in the terminal markets. Fairly good interest was displayed in Kalyan and Wagad descriptions. Hence, the price basis for indigenous varieties continued to be firm. Baroda Paleg and Kapadwang Vijay changed hands at Rs 1065 for spot. Amod Digvijay for spot came to business at Rs 1090 for spot, Kaledia Digvijay spot Rs 1081, Wardha Umakhed and Yestmal Co2 was done at Rs 1045 to Rs 1060 and Adoni Co2 at Rs 1101. Ghatangi Co2 was put through at Rs 1060 subject to survey, Hubli Co2 was reported at Rs 1075, Gadag Laxmi Rs 1095, Hingali Rs 990 and Dharwa Rs 995.

Among foreign varieties, Sudan cotton has gone down to some extent while Egyptian prices, having staged a decline, are in close parity with Sudans. African varieties have gained some ground while American prices are ruling slightly easier. B.P 52 was done at Rs 1340 to Rs 1350 CIF for May-June shipment, BP (Unug) Rs 1390, Sudan G34 Rs 1905 for March, Busoga Rs 1295 for April-May, West Nile Rs 1232 and Syrian on sample at Rs 1101. American (California) 1 5/32" came to business at Rs 1200 per for April Shipment.

BENGAL DESHI:

The export quota of 150,000 bales of Bengal Deshi cotton has been almost exhausted. The position with regard to the quantity

licensed and passed for shipment was on March 5, 1960 out of the quota issued in the current season appears to be satisfactory. Out of the first quota of 75,000 bales, quantity licensed amounted to 72,452 bales while 70,933 bales were passed for shipment. Out of the second quota of 75,000 bales, quantity licensed came to 71,748 bales while only 14,285 bales were passed for shipment till 5th March.

Exports of all descriptions of cotton from Bombay from 1st September 1959 to 10th March 1960 came to 109,776 bales as against 190,513 bales. Out of this, Japan took 88,690 bales as against 124,322 bales.

YARN:

The yarn market was inclined to rule quiet. Stable fibre yarn declined to Rs 682 form Rs 702 for April delivery to rally to Rs 691 to be placed at Rs 686. Art Silk Bemberg Cupressa April delivery moved between Rs 1,794 and Rs 1,803 to quote at Rs 1,795. As some of the Staple fibre power-looms in the country have closed down due to the recent imposition of excise duty on fibre cloth, selling pressure is evident in staple fibre yarn. Cotton yarn prices have continued to rule steady. Exports of cotton yarn in February from Bombay have amounted to 367,212 lbs and cotton sewing threads 27862 lbs. Imports of artsilk yarn during the month into Bombay port accounted to 1,674,560 lbs and synthetic yarn 102,488 lbs.

IMPORT LICENCES:

The Indian Cotton Mills Federation is likely to make representation to allow imports of foreign cotton. The quantity licensed for import of foreign cotton into India in the first half of the current season (1959-60) i.e. till 27th February 1960 totals 469,094 bales, while the actual arrivals in the same period aggregate 226,790 bales. The varietywise breakdown of the licences issued and the actual arrivals from 1-9-59 to 27-2-60 are as follows:—

	(In bales of 400 lbs each)	Licensed Arrivals	Actual
USA	...	127,842	26,508
Egyptian	...	140,541	96,895
Sudan	...	50,104	53,354
East African	...	78,348	34,421
Others	...	72,259	15,612
Total	...	469,094	226,790

*This includes quantity licensed last season.

CLOTH MARKET:

Conditions in the cotton piece goods market were slightly better on expectation of increase in off-take; otherwise conditions were more or less normal, though with

low stocks with the mills, trade quarters feel that prices, which had reacted moderately modestly during the past six weeks or so, would stabilise. There is no effect on the trade's psychology in Bombay about the bifurcation of the State which is to materialise after six weeks or so, but monetary stringency is being experienced. In superfine goods, Dhories are, however, realising better prices due to restriction on fine production, while in medium varieties, long grey cloth, which had staged a sharp rise some months ago ruled steadier. Varietywise production of mill made cloth in 1959 as compared with the previous year was as follows:—

	(In yards)	1959	1958
Coarse	...	802,047,000	969,960,000
Medium	...	3,506,795,000	3,395,808,000
Fine	...	241,949,000	303,062,000
Superfine	...	291,025,000	258,135,000
Total	...	4,925,429,000	4,926,965,000

It is evident from the above table that, with the rising standard of living, tastes are also changing. Consumption of superfine cloth is increasing while coarse cloth demand is gradually shrinking.

NEW YORK COTTON:

Trading on the New York cotton futures market had remained colourless. The July position closed at 32.40 cents as against 32.50 cents a week ago. Shipments of Government owned cotton from May 1959 to March 11 1960 under the export subsidy scheme have aggregated 5,985,117 bales. The US Department of Agriculture has announced a new cotton sales plan intended to isolate several million bales of Government-owned cotton from the market. Persons seeking to buy surplus cotton from its stocks after 1st August will have to pay a premium for cotton produced in 1959 and prior years, though they will be able to get 1960 crop cotton at lower price. Currently, the Department sells all cotton at the same price regardless of age.

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LIMITED

ANNOUNCEMENT

The Preference Share Registers of the Company will be closed from the 28th March, 1960 to the 6th April, 1960 both days inclusive.

By Order of the Board
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LTD.
Secretaries

Calcutta
2nd March 1960.

Deficit Year for Pepper?

PEPPER prices have started looking up again. In the Cochin market, the rate, after moving up to Rs 295 per cwt six weeks ago, climbed down to Rs 265 last week, to be presently quoted around Rs 270. The main reason for these ups and downs in prices is the fact that distress selling and liquidation by weak holders having been finished there is a steady recovery in prices due to reports of a considerable fall in arrivals.

US buyers, who had provided the main support to the market and who practically withdrew some weeks ago, are again active and showing interest. Although New York brokers are inviting offers in quantity, Indian exporters are offering only small quantities as they are not sure of getting enough supply for replacement at a reasonable price, most of the growers being reserved sellers.

The spot rate in New York, after touching a low of 52 cents, has now recovered to 58 cents per pound. Conservatives among New York dealers, who were waiting for the bottom during the peak of the harvesting season, are now reported in the market for ready, afloat and forward. For, they feel that the present prices are a safe level for purchasing in view of the likely overall shortage of the commodity during the year.

The immediate future of the market appears to be uncertain at the moment, as foreign buying support is not consistent. It is, however, a question of time before prices advance sharply either for want of sufficient supplies in the primary markets or under pressure of foreign aggressive buying, which is likely to develop. This view is based on various factors.

First, chances of Russian and other East European countries buying are now brighter than before, as the prices have stabilised and in view of the larger rupee account facilities between them and India. Secondly, inland demand is improving. Any further development in inland demand together with revival of enquiries from foreign consuming countries is sure to push up prices more rapidly than before, as the technical position of the commodity is now reported to be very sound.

A section of the trade holds the view that the long-term outlook for Indian pepper is bright. The factors contributing to their optimism are the following. Almost

50 per cent of the Indian crop has already been sold. Internal offtake is bound to increase in view of the unreasonably high price for chillies—chief rival of pepper in the Indian market. World situation is also favourable. Sarawak is expected to have another lean crop in the season beginning in April. Preliminary reports with regard to the Indonesian crop are not encouraging. The world will thus be having another deficit year for pepper in 1960. Traders agree that this should work to the advantage of this country.

Rubber

The growing shortage of Rubber in the country has compelled the Government of India to expedite the production of reclaimed rubber. The Union Ministry of Commerce and Industry has, so far, sanctioned three schemes—one at Delhi for an annual production of 1,000 tons; another at Coimbatore for an equal quantity and the third at Bombay for 5,000 tons. Dunlop and Bata are already producing about 2,500 tons a year for their own consumption.

The factory at Delhi is expected to start in a couple of months. Negotiations are under way for foreign collaboration to start production in Bombay; but no progress is reported regarding the Coimbatore plant. There are indications that the Government of India may permit a fourth factory at Calcutta as the indigenous demand for reclaimed rubber is expected to go up from 6,000 tons in 1959 to 13,500 tons in 1965.

Sugar

Sugar markets are ruling generally quiet; thanks to the recent release of 1.75 lakh tons. Prices have fallen by about Rs 4 per bag to quote Rs 115 following the heavy arrivals in the open market.

In the Kanpur market, prices have suffered substantial losses in the absence of fresh demand from the consuming areas. Sentiment is visibly depressed due to selling pressure from khandsari manufacturers apart from the fact that the supply position is very comfortable. Current optimism about a rise in production this year is another factor that has weakened the market sentiment.

Gur

The Gur market has also shown an uneven trend during the past few days. Prices have come down by about Rs 3 per maund on reports of excellent production in Uttar Pradesh, the Punjab and Bombay, this year. Reports from Hapur indicate that stocks of new production of gur, with the trade have gone up by about 30 per cent during the past two months. Futures trading in the commodity in North India has also indicated an obscure outlook for the commodity. In the Hapur market, the rate for the Pansera quality is quoted

around Rs 1. and for Balti at Rs 16 to Rs 16.25 per maund.

Foodgrains

The market for Foodgrains continues to rule quiet due to slack demand and beginning of the new crop arrivals in east and south Uttar Pradesh and Madhya Pradesh. In the Hapur market, wheat prices have declined by about 50 nP a maund, as harvesting of the commodity has already begun. The Rice section also remains quiet due to easy supply position. Gram prices have eased fractionally, as stocks are reported to be heavy and harvesting has begun in certain areas. Among Pulses, Peas and Arhar have exhibited an easy trend due to heavy stock position. Harvesting of peas is in full swing. Urad and Moong prices have also eased in sympathy.

Despite reports of adverse weather conditions in the producing areas due to the recent rains, the foodgrains market in Delhi showed an easier tendency during the week under review. Wheat dara quality declined from Rs 16 to Rs 15 a maund in the wake of increased arrivals coupled with poor demand. Following lower advices from the producing areas, Rice prices declined sharply by Re 1 to Rs 3 a maund. Among coarse grains, Gram declined by about 25 nP as demand from the consuming centres was poor.

The all-India final estimate of Kharif Pulses (other than Tur) for 1959-60 puts the current year's area and production at 16,075,000 acres and 1,567,000 tons as against the partially-revised estimate of 15,597,000 acres and 1,559,000 tons for 1958-59. This shows an increase of 478,000 acres or 3.1 per cent in area and 8,000 tons or 0.5 per cent in production over last year. The overall increase in acreage during the current year is accounted for mainly by Rajasthan and, to a lesser extent, by Bihar, Madhya Pradesh, Andhra Pradesh and Madras and is attributed generally to favourable climatic conditions at the time of sowing. This increase has, however, been offset to some extent by decrease in area registered in the Punjab and Mysore States. The increase in production of other kharif pulses is mainly due to the increase in Bombay State, which is attributed generally to favourable seasonal conditions during the growing period of the crops.

Non-Ferrous Metals

Conditions in the non-ferrous markets were generally easier and prices lost further ground during the week. Hopes that the import quotas of scheduled industries might be raised for the six months, April to September, induced a quiet feeling. Demand was also low. Copper scrap continued to hover around Rs 208 per cwt while Brass scrap declined to Rs 176 from Rs 180. Lead has eased off to Rs 75 per cwt while tin

changed hands between Rs 136.50 and Rs 135.50. Zinc prices have suffered a further drop.

Bullion

Following the credit squeeze measures which have been primarily directed against the stock markets, the bullion market in Bombay has reacted further on apprehensions that the Reserve Bank might take similar measures against advances on precious metals. Gold prices suffered a sharp decline following some unloading by spot interests as well as liquidation on behalf of a prominent bull operator. Apprehensions were also held that a leading South Indian operator, who has absorbed large deliveries in spot, might try to reduce his spot commitments. This no doubt made the market somewhat uneasy. It has been repeatedly pointed out in these columns that gold prices had seen their peak levels.

Silver Chaitra delivery, after advancing to Rs 217.75 from Rs 216.82, came down to Rs 216.25 to be placed at Rs 216.37. Gold Chaitra delivery dropped down to Rs 219 from Rs 130.56 to rally to Rs 129.62 but relapsed to Rs 128.50. Spot Gold was quoted at a premium of 25 nP, while ready silver of .996 fineness was placed at a premium of 31 nP. Sovereign was better at Rs 86.50. Floating stocks of silver and gold in Bombay market are estimated at 800 bars and 35,000 tolas respectively.

Oils & Oilseeds

The oilseeds market in Bombay was a shade easier during the week under review with irregular price movements. Business was restricted on fears of credit squeeze. Rumours about HPS Groundnut export quota have not turned out to be true. Reports about the move on behalf of the Bombay Municipality for the imposition of an Octroi duty on vegetable oils and oilseeds have produced an uneasy feeling among trade circles as such an octroi duty would have unfavourable effect on the crushing industry in Bombay. On the export front, conditions have been far from favourable. There is wide disparity in prices of groundnut oil locally and overseas. The incentive scheme is also not effective at the moment as, due to unremunerative prices, exports of groundnut oil cake expeller variety are almost at a standstill. US buyers have evinced little interest in purchases of castor oil at the current levels while Indian prices are higher as compared to the rates prevailing in the UK. Hence, there is little possibility of business with UK at the moment. It is to be seen whether US will evince interest at somewhat lower levels. Linseed was steady. Cottonseeds were almost dormant, while oilcake prices were generally steady.

Castor May delivery, after improving to Rs 175.87, declined to

Rs 171.87 to recover to Rs 173 to be placed at Rs 172.37. Castor oil commercial quality declined to Rs 17.06 from Rs 17.69. Groundnuts May delivery moved between Rs 210.75 to Rs 209 to quote at Rs 209.25. Groundnut oil April-May was done at Rs 22.25 to Rs 22.00 to be placed at Rs 22.19. Linseed May was put through at Rs 33 to Rs 32.56 to quote at Rs 32.87. Linseed oil was steady at Rs 15.12 per quarter. Cottonseeds May delivery moved between Rs 151 and Rs 150.

World Linseed production is now known to have shown a decline of about 5 per cent last year from the 1958 level. Final estimates of output suggest that the world crop amounted to about 124 million bushels as against over 130 million in the previous season. On the other hand, the 1959 production was still 4 per cent above the average figure for the 1950-54 period.

The major part of the decline last year is attributable to a sharp drop in production in the United States and there was also some decrease in the size of the Canadian crop. Informed sources are inclined to believe that linseed production also fell away last year in the Soviet Union. As against these declines, there was an improvement in the Indian harvest while Argentina, which accounts for an important proportion of linseed entering into world trade, enjoyed its highest production since 1947.

The result of these divergent trends, combined with a fairly widespread improvement in de-

mand and consumption levels, was to bring about a substantial cut during the year in world carry-over of linseed and linseed oil. With the Argentine crop for 1959-60 expected to show a further substantial increase, which the latest official estimates put at about 25 per cent above last year's 620,000 tons, the prospects clearly suggest that linseed will be in plentiful supply.

In the Madras groundnut oil and seeds market on Wednesday the trend was steady. But there was weakness due to poor arrivals of kernels not only in the City but also in the producing markets of the South. Arrivals in the City were of the order of 50-60 tons of kernels while, in the Southern markets, arrival daily averaged only between 40 and 50 tons with no activity. Calcutta alone showed interest in local buying Burma's interest was next to nothing as its needs have been got from African markets. While the UK price of groundnut oil was at £123/10 to £124, the rate in Burma stood at Rs 1800 per ton nominally.

Today's prices in the seeds and oil Exchange were:

Groundnut oil per candy of 500 lbs exMadras godown expeller ready 3 per cent FFA: Ready Rs 387; April Rs 391; May Rs 395.

Groundnut kernels per candy of 531 lbs Coromandels Rs 207-208.

Castor oil per candy of 500 lbs Tirupattur Rs 320-322.

Coconut oil per tin Rs 40-12 to Rs 41.

Gingelly oil per maund Rs 21-12 to Rs 22.

Gingelly seed per bag Rs 73-76. Groundnut oil cake per bag Rs 25-4.

There was only a slightly better tone, but the turnover continued to be poor in the groundnut oil market this week. It was good that the price levels in both groundnut kernels and oil were steady. All local arrivals of groundnut were absorbed by local small crushers. These have come under the purview of the compounded levy system exempted by the Madras Government in their Budget for 1960-61. But oil buyers were few, and Calcutta buyers, who showed no interest last week, were found not altogether disinterested this week. Vanaspathi manufacturers wanted to stock only at lower price levels. They bought only small quantities toward the last week-end, but kept their fingers crossed this week in hope of lower prices.

Shippers continued to be prominent by their absence, due perhaps to the high prices still prevailing. The oil price went down to Rs 389 per candy Monday and continued at that rate the next day. On Wednesday however, it, closed at Rs 391, two rupees higher. This increase came probably because some north Indian buying interest appeared in the market.

With poor arrivals of groundnut kernels in the market, the price level did not decline below Rs 207 Wednesday. The rate per candy on Monday was Rs 208. Tuesday, it declined to Rs 207 but decline of another rupee was found only for a small period, and today it closed, at Rs 207 per candy.

The April position of groundnut oil remained at Rs 293 on Monday. It declined to Rs 391 Tuesday. There was little enthusiasm in either April or May positions by either bulls or bears; for, the implication of the compounded levy under excise duty has not yet been made clear, as to whether it is applicable to all expellers or only to baby expellers and others of this category. April rate closed today at Rs 391 per candy, the same as yesterday.

Groundnut oil May was quoted at Rs 395 on Monday and Tuesday, opening higher at Rs 396. Support came around at Rs 397 last week-end, but it declined to Rs 395 on Monday and continuing the same today also.

The Reserve Bank's new restrictions to Scheduled Banks on credits should also restrict speculative interest in these commodities to some extent. Prices of stocks and shares and also other speculative counters should go down definitely. Decline for the coming weeks in oils and seeds future positions may be inevitable, it is felt.

The groundnut oil cake market continued easier. Arrivals of stocks from North India were poor. Local quality cake was sold at Rs 25/4 per bag of 160 lbs exmill with gunny bag.

Upcountry Markets: At the clearing centres, arrivals were small,

being in the neighbourhood of 40/50 tons daily of groundnut kernels. Large scale summer crop of kernels could be expected only by May end. The standing groundnut crops are reportedly good, though one or two summer showers would make them yield better.

Other Seeds & Oils: Gingelly oil and seeds have gone up in prices due to shortness of stock:

Gingelly seed: Itarsi/Bhopal variety Rs 76/8 per bag. Rajasthan quality Rs 72 to Rs 72/8 per bag. Ananapur quality Rs 72/72/8 per bag. Local variety Rs 75 to 76 per bag.

Gingelly Oil: Wholesale Rs 22/- per maund. Retail Rs 22/4 per maund.

Foreign Markets: France is reported to have bought some quantities of groundnut oil other than Indian origin at a higher level of prices. Due to this, UK and Continental prices have firmed up slightly. Afloat stocks of groundnut cake have been sold out with small improvement in prices. Latest ruling levels in some oils and seeds in the foreign markets are:

Groundnuts April/May £75 per ton. Castorseed April/May £82 per ton. Nigerseed nominal £53½ per ton. Groundnut oil March/April £124 per ton. Castor oil BSS, Bulk March/April £125½ per ton. Castor oil Commercial £120 per ton. Tobacco seed oil nominal April/May in drums £124 per ton. Coconut oil Straits March £130 per ton. Coconut oil Ceylon £136 per ton. Groundnut oil cake (Expeller) March/April £32 to £32/5 per ton. Groundnut oil deoiled 50% O & A March/April £30/5 to £30/7/6 per ton. Groundnut oil: Burma Rs 1,800 nominal C.I.F. near shipments.

★

Hides and Skins

In the Madras Hides and Skins market, Tanned cow hides of 5-5½ lbs remained steady while prices for 8-8½ lbs went up by a couple of naye paise. Export deals were better in all grades though at a price one to two pennies lower per lb. There is no great demand for tanned buffalo hides. Cow calf of market quality was easier by 6 to 10 nP. UK importers are still hesitant to deal in this variety of leather.

In tanned goat skins, 6,000 pieces were transacted, leaving 5,000. Practically no activity was reported in CIF section. In tanned sheep skins, this week's clearance was comparatively less at 38,000 skins, leaving 40,000 in stock to be cleared. Prices, too, were lower by about 40 nP.

Raw skins prices were as follows per 100 skins. Last week's quotations in brackets; Bangalore raw goatskins Rs 575-625 (Rs 575-620); White wool sheep Rs 550-660 (Rs 550-600); Black Wool sheep Rs 440-500 (Rs 440-500); Bezwada raw goat skins Rs 530-540 (Rs 570); He sheep Rs 565-575 (Rs 565-580); she sheep Rs 465-475 (Rs 460-465).

The Indian Mining Association

Early Decision Required on Private Sector's offer of Increased Coal Production

Assessment and Analysis of the Coal Industry's Problems by Mr R. H. Wright, The Chairman

The following is the Speech by Mr. R. H. Wright, Chairman of The Indian Mining Association, at the Annual General Meeting of the Association held in Calcutta on 18th March, 1960 at the Bengal Chamber of Commerce and Industry.

GENTLEMEN,

It is my pleasant duty this morning to review briefly the progress of the mining industry during the last 12 months, to draw attention to some of the problems which have faced us and to give some indication of the future prospects of the industry. At a time when reference is being made frequently in Parliament to the shortage of coal being experienced by the Railways, with the apprehended cut in train services, and to the possibility of closure of a number of mills and factories throughout the country who are without coal, I will probably not be contradicted when I say that coal has never before in the history of this country assumed such great importance.

Although my remarks this morning will apply mainly to the private sector of the industry, I would at the outset like to make it clear that we in this Association consider this whole vast problem facing the mining industry to be a national matter. There should be no pointed distinction between the two sectors and no insinuation that this or that sector is responsible for the present crisis. A very large unit of the public sector is in fact a member of this Association, and we are indeed delighted to have with us this morning representatives of the National Coal Development Corporation, including their Managing Director, Mr. R. C. Dutt. The NCDC have faced a stupendous task in opening out during the Second Plan a number of new areas. They have had their share of good luck and of misfortune, all well known to those units which have been undertaking mining in this country for upwards of a century, and they are now better equipped to assess the contribution which they can make to the ever-increasing coal targets of the future. Let us then have the future production targets decided not on a basis of public sector versus private sector which signifies an attitude of encouragement to one at all costs whilst strangling the other, but on a basis of the coal which each can produce within its capacity of technical and managerial "know how",

without unnecessary expenditure of funds, and generally for the good of the country. Within the overall policy of our Government, the public sector can and will contribute a definite tonnage, and beyond this the private sector should be allowed to contribute its fair share, including new developments in areas where they already have their establishment, their stores, their central workshops and so forth. I will refer to this matter again.

Continuing on my approach that the solution to our present problems can only be found by concerted and constructive action by the many parties concerned with our industry, it is a pleasure to see with us this morning representatives of the Coal Board, the Mines Department, the Railways, the Coal Mines Welfare Organisation and the consumers. Nothing can be gained by any one party engaged in this gigantic effort blaming another party for its shortcomings. Let us appreciate the problems of others, and constructive discussions can achieve far more than destructive criticism. This view is, I know, fully shared by our Coal Controller, Mr. Zaman. During the past year we in the industry have received from him every possible assistance and guidance, many has been the approach turning down, but any reasonable proposal has received detailed study and has been followed up with all vigour. The major share of the credit for the improvement in the operations of the Coal Board must be his, and we are indeed most grateful for all that he has done.

All India coal production during 1959 amounted to something over 47 million tons, of which our share in the Private Sector was 40.4 million tons—an increase of some 6.6 million tons over our 1955 figure. We would be fooling ourselves if we were to state that our Private Sector production during December 1959 was at the level of 43.7 million tons per annum, or very nearly our Second Plan target. It was only during last year that the country for the first time experienced a shortage of coal, and it was perhaps a pity that detailed consideration of ways and means of overcoming this shortage was delayed until the crisis was actually upon us. In October last year, just when the whole problem was being tackled vigorously, production dropped very appreciably due to the cyclo-

nic conditions which prevailed in the coalfields during the later part of the monsoon. During the month of October, 1959 the output of the Private Sector collieries dropped to only 3.06 million tons, which was at a level much lower than that of the previous two years, and it is estimated that we lost at least 400,000 tons of coal production on account of these floods in the Bengal and Bihar coalfields until the leeway was made up in December.

Over such events nobody has any control, but on the other hand many of the obstacles which have retarded production could most certainly have been avoided. I know it is easy to be wise after the event but only by an impartial examination of the factors which have hampered production can similar pitfalls be avoided in the future. I was rather disheartened when reading through the speeches of some of my worthy predecessors in this chair to note for how long and on how many occasions the same views have been expressed and warnings given which, at best, have only received limited attention. Seven years ago from this chair Sir Walter Michelmore dwelt at considerable length on the need for giving immediate and detailed consideration to the necessity for increased sandstowing and washing; indeed it is a pity that more attention was not given at that time to his words "It has always been my view that a far greater measure of conservation could be achieved by sandstowing, washing and blending than by severe restriction (pegging of output)". Many of these views I shall now repeat, because they cover the basic requirements of the coal industry which must be met if we are to achieve our objective. First and foremost, there is the question of finance and I am sorry to have to introduce this matter so early in my speech. In fact I am sorry that I have to bring it up at all but it is a subject which is foremost in everybody's thoughts and it is a matter, whether we like it or not, which arises on so many occasions; almost everything is linked with finance.

In the industry today we have the demand for our coal, but since prices are pegged no advantage can be taken of the present conditions and many coal companies cannot cover rising production costs, let alone find the funds necessary for expansion. Some months ago Government's decision

on the Coal Price Revision Committee's Report was made known and I am afraid that this report, although concise and to the point, contained certain unfortunate anomalies and was based on a number of incorrect assessments. When asking for an opportunity to explain the inaccuracies, we have been told that the matter is closed. The industry feels that this is hardly a fair method of disposing of such an important matter, particularly when undisputed figures relating to 55 public limited companies which between them produce over one-third of the total output of coal in India show that the average return on capital employed is 2.4% only. Gentlemen, one must appreciate the occasional feeling of bitterness expressed by members of our industry. While I agree that the production costs of other industries and the country must be safeguarded, to expect these to be subsidised by the coal industry, on which so much depends, is to run a very grave risk, to say the least of it. Figures available with the Association show that the cost of coal and coke expressed as a percentage of the gross ex-factory value of products is 1.15% for cotton textiles, 0.7% for jute textiles and 11.25% for iron and steel. For the railways it is 18.5%. A reasonable increase in the price of coal would, I submit, not unduly affect these industries and would cause less financial embarrassment than an acute shortage of coal. Increases in railway freight arising out of the recent Railway Budget have automatically raised the price of coal to consumers and little heed seems to have been paid to inflationary pressure. Many consumers in Western and Southern India will now be paying Rs 1.50 per ton additional railway freight, but without protest from any quarter. The private sector of the coal industry has now reached a turning point, and whether it goes forward or retreats must depend very largely on Government's policy with regard to selling prices. It alone can decide whether the private sector must wither and decay or whether it will go from strength to strength, as indeed it can, if it is placed in a position to meet increasing costs and is permitted to retain the necessary finance to expand.

I now turn to coal production under the Third Five-Year Plan. The industry has been giving this matter considerable thought for

CALCUTTA TRAMS

Advertisement Managers:

The Publicity Society of India Ltd.
1. Waterloo Street, Calcutta - 1

some time and it has had various discussions with the Ministry of Steel, Mines & Fuel and with members of the Planning Commission. Recent indications suggest that a target of 90 million tons of coal has been fixed for the Third Five-Year Plan, i.e. an increase of about 37 million tons over the estimated level of production at the end of the present Plan. The amount which the private sector can achieve out of this target will depend on the level of encouragement which the industry will receive from Government. Help in certain directions we must have because our hands are tied by controls. If the present conditions are to continue, and if production is to be confined to contiguous areas, it will not be possible for the private sector to produce more than an extra 7.20 million tons by 1965/66. If, however, coal companies are allowed to expand into new areas, for which they hold mining leases, and our basic requirements are met, it will be possible for us to produce an extra 21.60 million tons of coal—14.40 million tons of which will come from proximate leased areas. Certain units of the industry will require assistance in the form of loans to cover the considerable capital expenditure involved, but the production offered by us will still leave a vast target for the Public Sector—sufficient to strain their resources and cause them many a headache. We would therefore ask Government to take a realistic view and to accept our offer in the best interests of the country.

It is hoped that the railways are also turning their attention to the amount of coal which must be moved during this Plan. Details cannot of course be worked out until they know details of the areas from which the extra coal will be raised, but on the assumption that the additional production materialises as is proposed, the railways will have to increase wagon supplies for coal movement by approximately 50% by the end of the Third Five Year Plan. The railways, I know, have many difficulties to face in trying to meet everybody's requirements but I am confident that, as in the past, they will in the future rise to the occasion. But for the immediate future a more steady supply of wagons, and more open wagons where they are required would go a long way to removing the existing anxieties of the industry in respect of rail transport. The industry finds it difficult to understand the need for limiting coal loadings to five hours when, on occasions delays of three or four days occur between the time the wagons are drawn from the colliery siding and they are booked from the despatching stations. This whole matter requires further attention and, whilst demurrage charges and other penalties levied by the Railways are aimed at ensuring that wagons are not held up in colliery sidings, it appears only equitable

that the present irregular times of working of the pilots and the unnecessary delays caused within the sidings while pilots are working should similarly be covered by penalties. Collieries having large sidings with mechanical screening and loading plants should, we feel, be compensated by the Railways when wagon deliveries are delayed and pilots take an inordinate time to draw the wagons.

The next point I would like to turn to is the question of safety and the enforcement of the Mines Regulations. I am afraid at the moment we have not reached a happy balance between safety on the one hand and production on the other. During the year the Mines (Amendment) Act 1959 came into being. The Bill in its original draft form had a number of objectionable features and it was necessary for the industry to make very strong representations to the Ministry of Labour before certain changes were made. Originally Government proposed compulsory imprisonment for a person who had been convicted twice for the same offence within two years. I cannot but express the strong disappointment of the industry at the suggestion of such a penalty, the brunt of which would have fallen on colliery managers. Many collieries today are vast undertakings, some of which employ many hundreds of workers not all of whom perhaps, through lack of education, appreciate fully their responsibilities to themselves and their co-workers. A manager or his assistant cannot watch everything, nobody can, and to treat him as a potential criminal is indeed unjust. We have today an efficient body of mining engineers on whose shoulders must fall the day to day implementation of our plans to increase coal production and such an attitude of mistrust can do nothing but harm. I would like to take this opportunity of expressing our appreciation of the very keen interest in affairs being taken—by no means always supporting the views of the associations of employers—by the two associations of Mine Managers.

With regard to the Department of Mines, all of us connected with the industry are fully aware of their difficult position in the discharge of their obligations, when they are being criticised from all sides. To provide opportunities for an exchange of views regarding our respective difficulties, this Association has recently had the first of a series of regular meetings with the Chief Inspector of Mines at which we on our side can explain the particular difficulties and restrictions being experienced by our collieries, whilst at the same time the Chief Inspector can draw our attention to instances where our members are not extending full co-operation with regard to compliance with regulations. I am sure that this arrangement will do much to improve safety in our mines without unnecessary res-

triction, and our thanks are due to the Chief Inspector for his broad field of vision in this respect. Safety is a joint enterprise between owners, managers, the Mines Department and the workers. Each section is equally responsible for ensuring safety. The law must be administered in a practical and realistic manner, and both employers and workers must be fully conscious of their obligations; safety must not suffer at the hands of production and conversely production must not suffer at the hands of safety.

During the past year we have made repeated representations for the speedy implementation of the Central schemes for stowing in both the Jharia and Jambad/Kajora coalfields. Considerable quantities of high grade coal are going to be lost to the country unless sand and other stowing materials are made available in the required areas and in adequate quantities. Again, on the question of establishment of Central Washeries inordinate delays have taken place with the result that the Steel Plants will, for some time to come have to consume a considerable proportion of the lower grades of coking coals in their raw state pending supplies of the required grades of quality coal from the washeries. These two matters deserve every attention.

Expansion as is now envisaged will require substantial imports of mining equipment and machinery. Until production plans of individual companies are settled exact details cannot be calculated but very substantial increases in foreign exchange will have to be made available to the mining industry. Whilst we are appreciative of the allocations which have been made on account of import licences for mining machinery, and applications have been attended to promptly, an alarming number of applications for the import of spare parts have recently been reduced to a considerable extent. We are all well aware of the difficult foreign exchange position, but if expansion is to follow a regulated pattern adequate releases of foreign exchange will be necessary. Whatever happens, licences for spare parts must be given every priority, since today there are numerous items of machinery lying idle at collieries owing to lack of spares; such idle machines represent a considerable capital investment on which no return is being received.

The judgement has recently been issued in respect of the first of several suits which we have with West Bengal Government in respect of interpretation of the West Bengal Estates Acquisition (Amendment) Act, and I hope that this will pave the way for settlement of these disputes.

The ban on coal exports to all foreign markets other than Pakistan came as a great disappointment to the coal exporters when it was announced some six weeks

ago. Whilst we are all agreed that the demands of industries within the country must be met before exports are permitted, it must be remembered that the tonnage of coal involved to maintain our traditional markets including Burma and Ceylon is not very large, and the earning of foreign exchange therefrom is equivalent to the total value of the annual allocation of foreign exchange permitted to the private sector of the coal industry to cover imported plant and machinery. All that one can hope at present is that these markets can in due course be recaptured without undue delay.

Labour relations have been generally satisfactory throughout the year although latterly there have been certain outbreaks of violence at collieries. The extension of the Majumdar Award upto May 1960 helped to improve the position and on the whole labour are satisfied with their remuneration and terms of service. The output per manshift has fluctuated between 0.41 and 0.43 but in these figures is reflected a considerable amount of additional mechanisation and of open-cast mining, which inevitably shows a high rate of output once the overburden has been removed. Employers are now redoubling their efforts to increase coal output and, while labour certainly have their difficulties, more could be done by them to increase output. We are all trying to increase the industrial wealth of the country, the main purpose of which is to increase the standard of living of the workers which is still so deplorably low. The length of time which this will take can be shortened considerably if workers themselves help to increase output. We all know that many piece-rated workers do not work a full shift; they cut their tub and that is the end of their day's work. In the context of today's events I do not think that we are asking too much in suggesting a full and honest day's work from everybody connected with the coal industry. From employers I would ask that more attention is paid to the provision of welfare measures under the auspices of the Coal Mines Welfare Commissioner's organisation. In particular, I would stress housing. We have now various schemes under the auspices of the Coal Mines Labour Housing Board and it is up to individual coal companies to take full advantage of these schemes, with the full knowledge that a properly housed and contented labour force can only be a great asset to employers.

In this context I would like to refer to the Gorakhpur Labour Organisation and the Coalfields Recruiting Organisation. Recently a Parliamentary Committee has toured the coalfields and has made a thorough examination of the conditions of the camps under the Coalfields Recruiting Organisation. There are persistent demands from certain quarters for the abolition

of this organisation which, I feel, have as their object neither the betterment of Gorakhpur labour nor the welfare of the industry. The Gorakhpur Labour Organisation has now been in existence for some considerable time and has been steadily built up step-by-step until a stage was reached last year when this labour force produced over 5 million tons of coal, in addition to a considerable tonnage of ores. It is easy to destroy but to build is much more difficult and the present is not the time to destroy a well run flourishing organisation which has done so much to help the industry. I do not say that some changes should not be made, perhaps some are necessary, but the present general over all arrangements and control must remain, otherwise coal production will suffer.

Having stressed at some length a number of the difficulties which have confronted us during the year and which have contributed towards the disappointing level of output, I must acknowledge that much has been achieved from the industry's point of view and we have a great deal to be thankful

for. Your Committee, in conjunction with the Indian Mining Federation and the Indian Colliery Owner's Association has been in constant touch with the Government of India and with the various departments dealing with our affairs. In fact no less than eleven visits were made to Delhi during the past year by representatives of the Association to discuss matters with the Government of India. We have received during the year a general appreciation of our difficulties, although speedier decisions on many of our problems is desirable. During the year we have succeeded in a matter which we have been pressing for many years and I am sure that you were all pleased to learn that the private sector is now for the first time represented on the Coal Board. We have also succeeded with our suggestion for the imposition of a cess to give assistance for deep, gassy and difficult mines. The cess has been levied as from 1st February and, whilst details of how the assistance will be paid are now being worked out, it is hoped that actual payment will commence in the near future. We have also managed to achieve increases

which make more realistic the assistance given towards stowing, and this will certainly encourage more collieries to undertake stowing both for safety and conservation. Lastly, but by no means least in importance, we have had the establishment of a Co-ordination Committee between the Ministries of Labour and Fuel, to devise means of ensuring the maintenance of all safety without unduly affecting production.

Turning now to the minerals others than coal, the past year has seen a welcome and rapid increase in the production of all minerals and the demand for these is growing speedily in line with the expansion plans and so forth. Rail facilities, however, still create an imbalance between demand and supply which has resulted in increased cost and dislocation of production.

Unfortunately, whereas the export of iron ore has registered a small increase, the market for manganese ore continues to be unsatisfactory and even now there does not appear to be any valid reason to believe that exports will be substantially increased in the near future. During the year, the

export duty on all manganese ore was removed, the railway freight for lower grades was allowed a rebate to encourage exports, and only last month, the royalty rates for manganese ore were brought down to 1954 levels. This is all to the good and may to some extent contribute towards an increase in the export of ore.

Looking to the future, the Third Plan targets which are still to be announced suggest considerable demand for both ferrous and non-ferrous ores as well as for the extractive raw materials for the refractory industry. Unfortunately, however, the future of most of the mineral companies is uncertain by reason of the fact that Government have still not announced their acceptance of offers to exploit certain scheduled minerals. These mineral companies have for many years had teams of qualified geologists searching for areas likely to yield the minerals needed for industry, and I would most strongly urge Government to reconsider their policy and to permit these companies to obtain new leases and to utilise their considerable experience in the interests of the country.

The Bank of India Limited

Trading on Sound and Beneficial Lines

1959, A Year of Progress

Review of Money Market by Sir Cowasjee Jehangir, Baronet, GBE, KCIE

Extracts from the speech of the Chairman, Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E., at the Fifty-fourth Annual General Meeting of the Shareholders of The Bank of India Limited at Bombay on Thursday, 10th March, 1960.

Ladies and Gentlemen,

With your permission the balance-sheet may be taken as read.

At the time of our Annual General Meeting in 1959 the currency in circulation was Rs. 1,659 crores. At the corresponding date in 1958 it was Rs. 1,546 crores. This year it is Rs. 1,806 crores. The increase on last year's figure is Rs. 147 crores. In the present circumstances, this increase is by no means modest. Our expanding economy would appear to qualify the significance of the figures of currency in circulation but the danger of creeping inflation is ever-present and calls for constant watchfulness on the part of our Government. It is hoped that Government will see to it that their policies do not add to this inflation.

THE YEAR 1959

In many respects 1959 was a year of progress with a better re-

cord than 1958. Pessimism as to the future of private enterprise diminished a little and there is, I think, more confidence in the outlook for private industry than when I addressed you a year ago. Many new issues of shares by companies were made in 1959. A number were appreciably over-subscribed, some spectacularly so. Issues of loans by the Central and State Governments during the year were a success. The rise in industrial share prices of 1958 continued in 1959. There is, I think, a tendency towards an increase in the number of investors in equity share capital. The transactions in shares of The Bank of India Limited are comparatively few and the shares are generally held for long periods, but the number of our shareholders has passed the 10,000 mark.

Industrial development and production proceeded apace in 1959 to a marked degree. The three steel plants built under Government auspices, Rourkela, Bhilai and Durgapur, started production during the year. To this should be added the expansion of the Jamshedpur steel works being undertaken on a considerable scale. Steel production has received great attention. The year saw arrangements made

for appreciable new industrial plant and machinery to replace old. There was further development in the establishment of factories for the manufacture in India of goods which had previously to be imported. This development is the subject of material assistance by way of foreign collaboration as to capital and technical help. The position regarding textiles improved during the year as the off-take in 1959 increased and the heavy stocks of 1958 were materially reduced. To-day, however, the increase in labour charges as recommended by the Wage Board, the higher prices of cotton and the diminishing demand for cloth are factors operating against the maintenance of the improvement.

I told you last year that the outlook for the food situation was not entirely dark, that agricultural production had shown improvement and that the position regarding food was expected to get better. This has come about and 1959 has seen increased crops and some easing of the food situation, which is bound up with problems stemming from the continuous and appreciable increase in population.

Generally, world affairs in 1959 tended somewhat towards greater tranquility. The well-being of

peoples would be greatly enhanced if even a part of the enormous expenditure on defence were diverted to productive purposes. If the prospects for long-term world peace were reasonably certain nations could turn their energies and resources to international trade with zeal and confidence. I fear, however, that the position with our neighbour nation on our northern frontiers is not, at present, such as to allow us relief from defence expenditure. The 1960 Budget, presented the other day, proposes an increase of about Rs 30 crores in defence expenditure for the forthcoming year.

FOREIGN EXCHANGE

With the material assistance of external help, there was, in 1959, a marked easing of the drain on foreign exchange reserves. The import restrictions, albeit somewhat relaxed, continued to have their effect and foreign securities and balances held abroad maintained over-all their position in the year. These reserves are small enough, in all conscience, but it is a little reassuring that progressive reduction has been arrested. The picture of our foreign exchange position has still been causing anxiety. The adverse balance of

trade persists, notwithstanding an increase in exports in 1959. The year showed an increase in imports but much is at Government level and some on a footing where immediate foreign exchange payments are not required due to foreign aid or deferment. Plant and machinery for the growing industries form a considerable part of total imports. As I said a year ago, foreign aid and import restrictions are negative measures. It is export earnings which can, ultimately, close the foreign exchange gap.

The United States of America is beginning to feel the effect of an adverse balance of payments which has developed in her economy. Opinion is growing that other industrially developed countries should take upon their shoulders a greater share than at present of the burden of aid to those countries whose development is still young.

Trade agreements between India and other countries have continued in operation. Many of these agreements are now expressed in Indian rupees. Clauses in the agreements providing for ultimate settlement in sterling are, in some cases, being taken out when agreements are renewed.

TAXATION

Business prosperity in this country is not aided by the heavy taxation imposts. High taxation is a handicap to the efforts of private enterprise to accumulate capital for the proper equipment of its industries. It takes away from individuals some of the incentive to earn and save. The Finance Act of 1959 made radical changes in the income-tax law applicable to companies and shareholders. Before this enactment, a holder of shares in a company was given credit in his income-tax assessment for the income-tax paid by the company on profits attributable to his dividend. Tax was not deducted from the dividend. Now, the shareholder does not get credit for any tax paid by the company. Tax at prescribed rates is deducted at source from the dividend and the credit to the shareholder is restricted to the amount of such deduction. The Finance Act of 1959 reduced the rate of company taxation from 51½ per cent. to 45 per cent. for advance payments of tax. The 1960 Budget proposes this reduced rate of 45 per cent. for regular company assessments. Wealth-tax is proposed to be taken off companies, but this removal would not benefit banks as they were never liable to the tax. The excess dividends tax is also proposed to be removed. This was applicable to banks.

The saving resulting from the reduction in the rate of company taxation and from the abolition of the excess dividends tax would not, it seems, equal the loss of tax credit shareholders enjoyed prior to the change made by the Finance Act of 1959, particularly where companies distribute as dividend an appreciable portion of their pro-

fits. The change has made a great difference to the dividends paid to the shareholders of banks. This is due to Government action and not to any fault of the management of banks. To the extent that the new system does away with the need to "gross-up" net dividends in tax assessments there is much simplification and elimination of a good deal of work by the taxing department. The deduction of tax at source under the new system had a cumbersome feature as it prescribed different total rates of deduction for four categories, namely, residents, non-residents, Indian companies and foreign companies. I welcome the proposal in the 1960 Budget to reduce from four to three the different total rates of deduction by prescribing the same total rate of deduction for residents and Indian companies.

THE MONEY POSITION

The Reserve Bank of India Rate, raised from 3½ per cent. to 4 per cent. on 16th May, 1957, continued at 4 per cent. throughout 1959. The easy money conditions beginning in the middle of 1958 prevailed during 1959 and deposits with scheduled banks, particularly time deposits, increased as in 1958. Restrictions on imports continued to reduce the demand for import finance. Disbursements on account of increased activity on industrial projects tended towards easy money. Funds received under the United States of America Public Law 480 and lodged with specified banks would also augment the total of scheduled banks' deposits. The all-India Inter-bank agreement for maximum rates of interest on deposits operated from 1st October, 1958. It reduced undesirable competition amongst the larger banks for deposits. As 1959 wore on, money became still easier and a reduction in the maximum rates for deposits was effected by agreement from 1st September, 1959.

THE BANK IN 1959

The effect of the better business conditions of 1959 on the Bank's profits was modified by easy money and the increasingly high operating costs. At some periods in 1959 the Bank was exercised over the lack of demand for money which was aggravated by the busy season starting late.

The 1959 profit of something over Rs. 82½ lakhs is less by about Rs. 3 lakhs than the 1958 figure of Rs. 85½ lakhs. The two figures cannot be precisely compared. For part of 1959 a higher rate of tax has been deducted at source from our investment income than in 1958, but this does not affect our final tax liability. Before the profit figure has been struck, usual prudent provisions have been made.

Tax provision absorbs Rs. 18 lakhs against Rs. 25 lakhs for the previous year.

A final dividend of 10 per cent. subject to deduction of tax is proposed, absorbing Rs. 30 lakhs.

With the interim dividend of 6 per cent., or Rs. 18 lakhs, subject to deduction of tax, paid last August, this makes 16½ per annum, or Rs. 48 lakhs for the year, subject to deduction of tax at prescribed rates. The proposed carry forward at about Rs. 12½ lakhs is slightly smaller than in the previous year.

I appreciate that shareholders will be disappointed that we are proposing what amounts to a lower net dividend for 1959 than for 1958. The Bank's dividend for the four years ended 1958 was 16 per cent. per annum free of income-tax. In spite of an increase in taxation suffered by the Bank during the four years, the same dividend was paid to shareholders. I do not think that the Board could, in existing conditions, prudently propose any increase in the dividend for 1959 to off-set in some degree the reduction in the net payment caused by the deduction of tax.

I must not, however, be construed as saying that the Bank's business in 1959 receded. That is by no means the case. Progress was made and trading was conducted on sound and beneficial lines, but the reduction in the net dividend paid to shareholders is due to Government action.

BRANCHES

During 1959, we opened four new branches—Santa Cruz (Bombay), Maninagar (Ahmedabad), Sowcarpet (Madras) and Cochin. We are giving increased service by establishing additional safe deposit vaults. New vaults have been opened at Santa Cruz and Churchgate branches in Bombay, at Navrangpura and Maninagar branches in Ahmedabad and at Kanpur branch. Further branches and safe deposit vaults are being opened in India. A branch at Hong Kong is being rapidly prepared for opening and will, I think, be a useful link in our chain of foreign branches.

STAFF RELATIONS

During 1959, staff relations were on a fairly even keel. Problems and difficulties occur and require patient, tactful handling.

DIRECTORS

During 1959, at our invitation, Mr. Jaisinh Vithaldas and Mr. Giridharilal Mehta joined the Board. Under the law and the Bank's Articles of Association they hold office only up to today and their election is on the agenda of this meeting.

Mr. Jaisinh Vithaldas is a partner in the old Bombay firm of Messrs. Vissanji Sons & Company and is on the board of cotton manufacturing and other companies. He belongs to a family with long connections with industry in Bombay and we consider he would be an asset in the deliberations of the Board.

Mr. Giridharilal Mehta is a Calcutta industrialist of much experience. He is managing director of Jardine Henderson Limited and is on the board of other companies,

mainly registered in Calcutta. We believe his assistance would be of much value to the Bank, particularly in relation to business emanating from Calcutta.

LOCAL COMMITTEES AND STAFF

I would voice our appreciation of the help given by our Local Committees at branches. In 1959 we have extended the number of Local Committees in India and abroad. We think this will assist us greatly in the consideration of proposals for advances.

I express our thanks to Mr. T. R. Lalwani for his competent management of our affairs in 1959—also to the staff who have assisted Mr. Lalwani in dealing with the Bank's business during the year.

Note:—This does not purport to be a Report of the proceedings of the Annual General Meeting.

Andhra Plans

The Andhra State Government have decided to establish a newsprint and a synthetic drugs manufacture with Russian aid. In giving this information, while replying to the four-day debate on the Andhra Budget, Mr. Brahmananda Reddi, Finance Minister, stated that a machine tools unit would be started in the State, as a subsidiary to the Hindusthan Machine Tools Factory. Mr. Brahmananda Reddi reiterated the fact of the State's backwardness in industrial development, and added that an industrial bias had to be given to the State's Third Plan. The State would be having its fertilizer factory with the aid of the Central Government of India in regard to foreign exchange. German collaboration has been enlisted for this factory.

Union Carbide in India

Another foreign industrial luminary to visit the country in recent weeks was Mr. Kenneth Rush, Vice-President and Director of Union Carbide Corporation, USA, the international organisation which has extensive activities, which include operations in the field of alloys, ores and minerals, batteries, electrodes, calcium carbide, industrial gases, chemicals and plastics. Associated with the Union Carbide Corporation since 1936, Mr. Rush has directed the operations of the international division of the Union Carbide Corporation since 1954, when the corporation embarked upon a phase of expansion of overseas business which has not yet ended.

An interview with pressmen at Calcutta provided the occasion for Mr. Rush to detail with the activities of the corporation in India and to indicate future developments. It has four manufacturing plants in India producing dry cells, radio batteries, torches and zinc sheets and strips. With a fifth plant now under construction for the manufacture of organic chemicals and polyethylene, the Corporation is in the thick of an expansion programme in India. Costing Rs. 4.5 crores, this major project is expected to go "on steam" this year.

CHAIRMAN'S SPEECH

The Alkali & Chemical Corporation of India Limited

Sales 31% Higher than Previous Year

Mr. J. M. Lal on future plans

Speech delivered by the Chairman, Mr. J. M. Lal, at the Twenty-third Ordinary General Meeting at Calcutta, on Wednesday, the 16th March, 1960.

Gentlemen,

The Audited Accounts and Directors' Report have been in your hands for some time and, with your permission, I shall take them as read.

On the whole, your Company has had a good year. Sales were 31% higher than in the previous year. The Polythene Plant commenced production in May 1959 and polythene sales were mainly responsible for the increase in turnover. There was also an appreciable increase in the turnover of Paints. As regards Chlorine and Caustic Soda, although the sales were satisfactory during the year under review, the Government have since fixed ceiling prices which will restrict the profit of this section of the factory in future years. Representations have been made to the Government by the Industry and it is hoped that some relief will be given, otherwise this Industry in North Eastern India cannot progress and production is unlikely to keep pace with the increased demand.

Our export sales have grown and, in support of the Government's export policy, means of increasing exports are being examined.

PROFITS, DIVIDENDS & TAXATION

Turnover and trading profits showed satisfactory increases of over 30%. Interest paid on borrowings this year as against interest received last year brought the net profit increase down to 6%. Through the operation of the Development Rebate Scheme there was no liability to income tax this year. I may perhaps say a word or two about this scheme. The requirement to appropriate 75% of the development rebate claimed out of current profits is indeed an onerous one but, fortunately, in a Company like ours which follows a policy of sound conservative finance and has built up fairly large revenue reserves, the implications are not serious. Most of the money we have placed to the credit of development rebate reserve we released from other reserves. Our total reserves of 91.5 lakhs (excluding a small balance on profit and loss account)

depict a very healthy state of affairs.

The formulation of the recommendation for payment of a dividend on Ordinary Shares this year was a major exercise which required extremely careful consideration by the Board. The Shareholders' interests are always uppermost in your Directors' minds who are conscious of the fact that although the dividend of 9.5% that they have recommended is higher than the previous year's rate, the net amount in the hands of the Shareholders will be less.

We were told by the Finance Minister himself last year that the new proposals for a dividend tax of 30% and reduction of Company Tax to 45% would not increase the tax burden on Companies and Shareholders collectively. May I tell you that in recommending the present dividend your Directors have allocated the same amount of profit before tax to this dividend as they did last year. Any saving in Company Tax has been passed on to you and any additional dividend tax that you may have to pay is to be borne by you. Whether or not the result of the new taxation system has increased the tax burden on you, you can see for yourselves from the net amount you receive. The Finance Minister, when introducing these tax proposals promised to review the position if it were shown to him that in fact Government would recover substantially higher taxes. From the Reports of many well established companies it is quite evident that the burden of taxation under the new system is substantially higher. Although representations have been made to Government on behalf of Industry & Commerce, I regret to note that the recent Finance Bill offers no relief to your Company in this regard.

In formulating their dividend policy, the Board have also had to bear in mind the substantial development programme they have on hand and also the Company's indebtedness to Banks.

In conformity with the terms of issue the dividend on Preference Shares has been paid free of Income Tax. In other words, a dividend of 7.14% the gross equivalent of 5%, has been paid.

Another major defect in the tax system concerns payment of dividend from past reserves which have already been taxed at higher rates. Dividends declared from

those reserves are also subject to deduction of tax at source at the prescribed rates which virtually amount to confiscation of tax credit on the taxed reserves of companies. The current Finance Bill appears to make a small concession to companies in this regard but the wording of this provision in the Bill is far from clear. I consider therefore that it would be unwise for me to make any further observation on this matter at this stage.

PRODUCTION

Production in all Units of the factory was maintained at a satisfactory level. "Alkathene" brand of polythene granules and "Alfloc" Water Treatment Powders were added during the year to the range of products manufactured at Rishra. The designed output of the polythene plant was achieved with little trouble. This success has been due in no small measure to our Technical Advisers, Imperial Chemical Industries Limited, London; to the wholehearted co-operation of contractors engaged on the work and, not least, to the efforts of the staff at Rishra factory and in Head Office.

The extensions to the Caustic/Chlorine Plant were substantially completed during the latter part of the year and the Plant is working at an increased capacity from September 1959.

EXPANSION PROGRAMME

A phased programme has been worked out to extend the Paints Plant at Rishra and it is expected that during the current year increased production will be achieved. We are still faced with a shortage of raw materials due to restriction in Import Licences. Increasing use is being made of indigenous raw materials.

FUTURE PLANS

An announcement has already been made that a Plant for the manufacture of various chemicals used in the Rubber Industry will be constructed at Rishra at a cost of rupees two crores. Plans have now been finalised and construction work will begin shortly. This Unit will be erected under an agreement with our Technical Advisers, Imperial Chemical Industries Limited, London, who will provide the know-how and the sterling loan finance required to cover the cost of machinery which must be imported. When the Plant is in production a considerable saving in

Foreign Exchange is expected. We have other plans on the drawing board about which I hope to say something later in the year. Here I may perhaps digress a little and say a few words about the country's plans.

It has become common practice for a number of industrialists and Company Chairmen to find fault with Government in their public speeches and the Third Five-Year Plan being in a formative stage at the present time has come in for a great deal of criticism from the usual quarters. I for one must differ from these experts.

It is very easy to criticise a country's plans and theoretical economists everywhere are always ready to criticise that which does not fit into their own pattern of thinking. They called the Second Plan "over-ambitious" and, despite the measure of success which that Plan has met, they repeat the same criticism against the Third Plan. The fiscal objective of the Second Plan was to increase the per capita income from Rs. 281 per head to Rs. 331 per head by 1961. When I tell you that the comparable figure in Britain was Rs. 3990 per head, you will realise the enormity of the task that lies ahead.

If we wish to make progress we must approach the problems with boldness. By that I do not mean that we should be reckless in our planning but we must not be timid. The world around us is moving fast and we who have to make up so much leeway must not fall further behind. The one thing that we have to avoid is becoming inflexible in our plans. I am happy to say that by their resilience in tackling the Second Five-Year Plan, our planners have shown their ability to re-think and adjust their sights. I have no reason to believe that they would not do so in the years to come if such a step were warranted. But it is my view that in the world of the 1960s when it seems inevitable that the less developed countries will receive more assistance from our more fortunate friends abroad, a Five-Year Plan of Rs. 10,000 crores for 400 million people of a democracy is unlikely to be allowed to run into financial difficulties which would necessitate major adjustments.

LABOUR RELATIONS

Last year I emphasised the need for labour and management alike to recognise their common objec-

tives; the prosperity of the one being closely linked with the prosperity of the other. We have, to a large extent, through Works Committees and direct negotiations with the Union reached agreement on a number of outstanding questions in a cordial atmosphere. Relations with employees in all sectors of your Company have been satisfactory.

Work reward and other incentive schemes are under consideration with a view to increasing productivity and enabling the participants to earn greater reward for greater output. I must emphasise that with the present wage structure and amenities provided for the staff it is essential that productivity must increase if industry is to progress at a satisfactory rate.

Ours is already a high cost economy and unless steps are taken to keep the unit cost of production in check further inflation will be unavoidable.

Large scale Governmental spending inevitably results in some inflationary stress and if the unit cost of production in secondary industries is also rising simultaneously and no checks are applied then the economy can be in real danger.

In pursuance of the Company's policy of providing opportunities to staff to fill positions of responsibility, members of the Technical staff are regularly sent abroad for training. We are grateful to our Technical Advisers, Imperial Chemical Industries, London, and our Associates in Australia for providing facilities for their training.

Much was done during the year to provide more staff and workers with housing. Three blocks of ten quarters each, and four blocks of six rooms each were constructed at Konnagar near Rishra. Orders have also been placed for the construction of further three blocks of sixteen quarters each.

Your selling agents, Imperial Chemical Industries (India) Private

Limited, have rendered the Company excellent service, both commercial and technical, and it gives me great pleasure to place on record this expression of our thanks. I would also express on behalf of your Board our appreciation of the services rendered by the staff and workers at the factory and Head Office throughout a particularly arduous year to which the extensions on the scale undertaken by the Company have thrown a very great additional burden and responsibility on all staff.

DIRECTORS

The Directors retiring by rotation are: Sir Biren Mookerjee, Sir B. P. Singh Roy and Mr. C. A. Pitts, and I have pleasure in recommending their re-election.

Once again we have to pass a resolution that the age limit applicable to Directors should not apply to Sir Bijoy. I have pleasure in commending this resolution to you.

I have also to announce that more recently Mr. John Dick was appointed an Alternate Director for Mr. Basil Robertson Goodfellow.

Messrs. Lovelock and Lewes, the Auditors, seek re-election and have asked a fee of Rs. 10,000 plus out-of-pocket expenses, which is the same as the previous year. Again I recommend their re-appointment on these terms.

There is also an item of special business which refers to the appointment of Imperial Chemical Industries (India) Private Limited as sole selling agents for a further period of 5 years. Full particulars are given in an explanatory statement. A further item of special business requires your approval to I.C.I. (India) holding a place or office of profit namely as sole selling agents of the Company. I commend these resolutions to you.

(Note: This is not a report of the proceedings at the above Annual General Meeting.)

KYANG TEA SEED COMPANY, LIMITED

NOTICE is hereby given that the Thirty-second Annual General Meeting of the Members will be held at the Registered Office of the Company No. 4, Bankshall Street, Calcutta on Monday the 11th April 1960 at 11.45 A.M. for the following purposes.

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1959.
- (2) To elect a Director.
- (3) To appoint Auditors and to fix their remuneration.
- (4) To consider and if thought fit, to pass with or without modification the following Resolution as a Special Resolution:—

"That the Company do hereby approve of the Contract, a draft of which is set out below and which shall be deemed to be incorporated in and form a part of this resolution, being entered into between the Company of the one part and Shaw Wallace & Co. Ltd., the Managing Agents of the Company, of the other part:—

An agreement dated the day of one thousand nine hundred and sixty BETWEEN KYANG TEA SEED COMPANY LIMITED, a Company registered under the Indian Companies Act and having its registered Office at No. 4, Bankshall Street, Calcutta (hereinafter called "the Buyers") of the one part and SHAW WALLACE & COMPANY LIMITED, a Company registered under the Indian Companies Act and having its Office at No. 4, Bankshall Street, Calcutta (hereinafter called "the Sellers") of the other part.

THE SCHEDULE above referred to Particulars of Goods

Description	Quantity	Price
FERTILISERS	Upto maximum of 10 tons	Market Price prevailing at dates of orders or dates of delivery.

Fungicides, insecticides and other chemical preparations	Upto a value of Rs. 5,000
Sprayers & Spare Parts	Upto a value of Rs. 5,000
Agricultural Implements	Upto a value of Rs. 5,000

The Transfer Register will be closed from 1st April 1960 to 11th April 1960 both days inclusive.

N.B.:—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.
7th March, 1960.

Explanatory Note:

Section 360 of the Companies Act 1956 prescribes, inter alia, that a Company may, by a special resolution approve any contract being entered into with its Managing

Whereas the Sellers in the course of their business sell goods of the description set out in the Schedule hereto. AND WHEREAS the Buyers are dealing in such goods from time to time.

NOW IT IS HEREBY AGREED AND DECLARED as follows:—

1) During the period of this Agreement the Sellers will sell and the Buyers will purchase goods (hereinafter called "the Goods") of the description quality and the quantities to be supplied each year as set forth in the Schedule hereto at the price mentioned therein. Delivery of the Goods shall be made in accordance with Buyers requirements. Buyers delivery requirements shall be notified by an Advice Note.

2) Annual quantities shall be delivered before the 31st December in every year.

3) Unless otherwise mutually agreed the terms and conditions commonly used in the trade shall be applicable to all sales made hereunder in so far as they relate to the particular goods purchased.

4) The price of the goods shall be paid to the Sellers within one month from the date of the actual delivery of the goods to the buyers.

5) All disputes or difference between us and relating to the terms of the Agreement shall be settled by Arbitration in accordance with the Arbitration Act 1940.

6) This Agreement shall commence on the 1st day of January one thousand nine hundred and sixty and shall continue for a period of five years.

Agents or any associate of the Managing Agent for the sale, supply or purchase of any property or for the supply or rendering of any services other than that of Managing Agents.

It is considered desirable and in the interest of the Company to purchase the items enumerated in the Schedule to the proposed Agreement from the Managing Agents Messrs. Shaw Wallace & Co. Ltd. as and when required and the proposed special resolution has been included in the annexed convening notice to approve of the contracts that are in existence and/or may be entered into with the Managing Agents in respect of the items mentioned in the Schedule to the draft Agreement.

FOR THE INVESTOR

Curb on Speculation

Investment Gossip:

ALTHOUGH the stock market is still reeling under the heavy blow struck by the Reserve Bank directive of last Friday, there are discernible in the past day or two, signs of a revival of buying interest at the lower levels.

There is no denying the crushing effect of the RBI action. But none can find fault with the stated intention behind the curb move. It is to put a stop to unbridled speculation on the stock markets. As it has been found that bank credit has been aiding speculation, banks have been asked not to indulge in budia transactions. The fifty per cent margin on equity share transactions over Rs 5000 is also aimed at putting an end to undue speculation.

To say that the RBI curb is justified is, however, not to suggest that what has been done cannot be cavilled at. The measures can be supported only if they reduce speculation. Here, one has to make a difference between activity emanating from the gambling propensity and genuine expectation of improvement in prospects based on growth considerations. Again, as the RBI directive has itself admitted, needs of genuine investment activity should not be jeopardised. There is now a genuine fear that some at least of the RBI measures will militate against normal functioning of investment activity. The right thing to do for the RBI (as it has already done in respect of one of the provisions in the directive) is to remove any disability or misunderstanding that its directives might have created for regular business on the stock markets.

It is true, it is rather difficult to counter the argument that, in the present stage of our economy, when expansion is the keynote of industrial activity, it will be folly to dub as speculation all substantial price increases in equities. Even so, it cannot be denied that the post-budget bullishness has richly qualified for such a description.

The continued uncertainty as regards dividends of preference shares has further added to present confusion in the stock markets. As was to be expected, preference shares are completely neglected.

The coming meeting at Calcutta of the Investment Committee of the LIC is eagerly awaited, as it is

believed that it will give some useful pointers. The expectation seems to be that the Corporation may decide to enter the market as a buyer of equities in view of the present attractive price levels.

As I have indicated last week, the outlook for equities and, therefore, for the Investor, is good. Mr Morarji Desai's second Budget has no doubt improved prospects for the private sector. Steady stock markets are indicated, provided the Stock Exchange does not invite Authority's intervention again by unbridled speculation.

Preference not Preferred

Investment Special:

Preference shares, except for a select few, are now under a cloud. The argument that started in September last with the conversion of some preference dividends into taxable dividends (reduced automatically by 30 per cent deducted at source) has ended with Mr Morarji Desai's hint that companies which choose to do so, unless expressly forbidden, can limit payments to shareholders in future. This has not been lost on the Jeypore Sugar Co., which has raised its ordinary dividend for the year to June 1959 to 10 per cent, but has cut the preference dividend to 6 per cent taxable. The company's report says that the dividend is subject to tax, according to the Finance Act of 1959 and 1960.

But it adds the excess will be paid, if found payable, on clarification and sufficient provision has been made for the same. The action may be related to the withdrawal of Rs 2.77 lakhs from Reserves for paying dividends, since the profit of Rs 6.14 lakhs is reduced by the allocation of Rs 4.55 lakhs, to the development rebate reserve. The closure of the Nagaram factory for this season is mentioned, as also the success of the ferro-manganese plant using both local and Madhya Pradesh ore. The output is sold mostly to Hindustan Steel at Rs 850 per ton f.o.r. Rayaghada. The output from the second furnace is earmarked for export by the company to the USA. But the Jeypore Sugar Co's policy has been anticipated by the A. V. Thomas Group of planting companies, which have made preference dividends taxable. These shares have, therefore, fallen while some preference shares listed in Madras have moved up consistently in the last few months. The proposal of EID & SF to make preference dividend taxfree on the lines proposed by Walchandnagar has met with some opposition from holders of ordinary shares on the ground of undue generosity, but the Preference Capital is £200,000 in cumulative shares and conversion into tax-free is now called unfair. Meetings called for the purpose have been adjourned, but it may be added that ordinary shareholders got bonus shares twice and got also Parry's Confectionary shares by way of a special dividend. They also stand to gain from the rights issue expected in view of plans drawn up to start a fertiliser factory under the

auspices of the EID & SF group to make the most of new opportunities.

ERs New Issue Notes

The Hindustan Aluminium Corporation Limited has announced the following procedure for the allotment of equity shares. Applicants up to 250 shares will receive full allotment. Applicants for more than 250 and up to 300 shares will receive 250 shares. Applicants for between 350 and 1,000 shares will get 70 per cent, but only in multiples of 50. Applicants for between 1,000 and 5,000 shares will get 65 per cent allotment, also in multiples of 50. Applicants for over 5,000 shares will receive only 60 per cent allotment. The number of shares to be allotted to the public is 21,56,000 as against which the total applications were nearly 29 lakhs.

It is understood that Larsen and Toubro Limited has applied to the Controller of Capital Issues for raising fresh capital of about Rs 20 lakhs. The proposed issue is expected to be made to the existing shareholders in the ratio of one for two shares held.

Radio and Electricals Limited, Madras, has proposed to issue 1,25,000 equity shares of Rs 10 each, at par, in the ratio of 1:2. The Government sanction has been obtained. The last date for receipt of letters of application and renunciation is 31st March, 1960.

Ashok Leylands Limited has convened a general meeting on the 16th April to consider an increase in the authorised capital of the company from Rs 3.25 crores to Rs 10 crores.

The directors of the Asian Cable Corporation have decided on the basis of allotments to the various categories of applicants and this has been approved by the authorities of the Bombay Stock Exchange. Inquiries indicate that there were more than 5,540 applicants for a total of 76,190 shares for the public issue of 25,000 shares of which Rs 25 was payable on application. With regard to applicants for 15 shares to 500 shares, the allotment varied from 40 to 25 per cent. A definite percentage could not be allotted in each group, as the shares had to be allotted in lots of five only. The highest application for 1,000 shares had been allotted 200 shares only. The company will be shortly returning the cheques to those applicants who have not been allotted any shares.

ERs Investment Notes:

It is understood that the East India Distilleries Limited has completed arrangements for erecting a new factory at Ennore, near Madras, for the manufacture of compound fertilisers at a cost of £3 million. The finance required for this purpose may be obtained partly through loans and partly by the issue of additional capital in equity shares to the existing shareholders. The company has declared a second interim dividend of 14-2/7 per cent, and a

special dividend of 7-1/7 per cent which, along with the first interim, makes a total of 28-4/7 per cent gross for the year ended 30th September, 1959.

ERs Investment Briefs:

Dhanalakshmi Mills Limited, Coimbatore, has reported a net profit of Rs 25.81 lakhs for 1959 as against Rs 14.61 lakhs in the previous year. A gross dividend of 17½ per cent is recommended against a tax-free dividend of 10 per cent for 1958.

Kumergode Estates Limited has earned a net profit of Rs 2.20 lakhs for the year ended 31st October, 1959 as against Rs 2.52 lakhs for the previous year. The dividend is maintained at 20 per cent, though the latest distribution is subject to deduction of tax.

The Coimbatore Cotton Mills Limited has shown a net profit of Rs 10.03 lakhs for 1959 as against Rs 6.33 lakhs in 1958.

ERs Balance-Sheet Brief:

The Union Carbide India Limited has recommended a final dividend of 10½ per cent, subject to deduction of income-tax, be paid out of earnings for the year ended 25th December, 1959. This, plus the interim dividend of 7½ per cent paid to shareholders in November, will bring dividends in respect of the 1959 working of the Company to 18 per cent subject to deduction of income-tax and will absorb Rs 36,00,000 as compared to 14 per cent free of tax and Rs 28,00,000 respectively for 1958. 1959 earnings, before tax and after Development Rebate, amount to Rs 1,35,50,812 on gross sales of Rs 7,69,92,592 as compared to 1958 earnings of Rs 82,85,063 on gross sales of Rs 6,05,06,971. Development Rebate in 1959 amounts to Rs 2,30,000 as compared to Rs 4,50,000 in 1958. Tax provision for the year absorbs Rs 64,61,432 as against Rs 45,37,014 for the preceding year. Rs 25,00,000 has been transferred to General Reserve and the balance carried forward in surplus account is Rs 43,63,429. The principal reasons for the improved results were reduced manufacturing costs and increased sales. A higher volume of production contributed to the reduction in costs and enabled management to reduce selling prices to customers for several of the Company's products. Increased sales of flashlights were possible because of the larger output available from the Lucknow factory of The Eveready Flashlight Company in its first complete year of operation.

The Union Carbide India Limited has announced that the rights, offering of 8,00,000 new shares of Rs 10 each at premium of Rs 2.50 nP per share in the proportion of two for five held, is expected to be made on or about 1st June, 1960. The new shares will rank in all respects pari passu with the existing shares except that they will not entitle the holders thereof to any dividend declared at or prior to the annual general meeting to be held in the year 1960.

COMPANY REPORTS

Indian Steel & Wire Products
Produce Satisfactory Results

Balance-Sheet Reviews:

It would be recalled that, according to a resolution passed on the 30th March 1959, the share capital of the Indian Steel & Wire Products Limited had been increased by issuing two bonus shares for every fully-paid Ordinary share and in proportion thereto as regards partly-paid shares.

The working of the company, during the year ended 31st March 1959, has resulted in a higher net profit, before providing for Depreciation and Taxation, of Rs 87.11 lakhs as against Rs 69.88 lakhs for the previous year, although sales are slightly lower at Rs 4.15 crores against Rs 4.27 crores.

In respect of allocations to Funds, a sum of Rs 3.00 lakhs is provided for General Reserve apart from raising the Taxation provision from Rs 33.00 lakhs to Rs 60.50 lakhs, including Rs 16.05 lakhs provided for taxation under Section 23A for the assessment years 1955-56 and 1956-57 and additional taxation for 1957-58. The Depreciation amount is, however, reduced to Rs 8.47 lakhs from Rs 14.14 lakhs and Development Rebate Reserve to Rs 1.40 lakhs from Rs 4.33 lakhs. The directors have recommended a dividend of Rs 1.00 and a bonus of 62½ p, making a total of Rs 1.62½ p per share on the increased ordinary capital as against Rs 4.00 previously.

Against a paid-up capital of Rs 96,79,740, Reserves and surplus are shown at as much as Rs 2.64 crores. The gross block at Rs 2.19 crores is depreciated by Rs 1.46 crores to show a net block value of Rs 73.25 lakhs.

The company has obtained a licence to import modern Wire Rod Mill machinery on deferred payment arrangements. All the financial arrangements have been made with the Bank of America and the manufacturers. The machinery is expected to arrive during the financial year 1960-61. It is estimated that the total cost of the new mill will be about Rs 2.50 crores.

Rallis India Pays Part of
Preference Arrears

Rallis India Limited has reported a reduction of about Rs 2 crores in turnover in the year ended 31st August 1959. The main reason for this is the reduced quantity of steel imported. The net profit has, however, shown a rise to Rs 28.55 lakhs from Rs 18.73 lakhs, the most important contributors to the rise in profits being Cotton, Fertilizers and Machinery.

The directors have provided Rs 3.25 lakhs (Rs 5.18 lakhs) for Depreciation; Rs 4.43 lakhs (Rs 1.75 lakhs) for Taxation and Rs 25,500 (Rs 15,000) for Development Rebate Reserve. After making these provisions and adjusting the loss brought forward from the last account, there is a disposal balance of Rs 11.55 lakhs. Out of this, the directors have been able to recommend the arrears of dividends on the Preference shares for two years ended 31st August, 1954, leaving a balance of Rs 2.55 lakhs to be carried forward.

The balance-sheet, as at 31st August 1959, shows a paid-up capital of Rs 3 crores divided into 2.25 lakh Ordinary shares and 75,000-6 per cent taxable Cumulative Preference shares, both of Rs 100 each. Gross block is shown at Rs 66.75 lakhs and this is depreciated by Rs 30.90 lakhs to show a net block value of Rs 35.86 lakhs.

ICIC Raises Gross Dividend
Despite Lower Profits

The Industrial Credit & Investment Corporation of India Limited has presented the fifth report for the year ended 31st December 1959. During the year under review, the Corporation received 65 definite applications for financial assistance and several more enquiries. The directors approved assistance, both in rupees and in foreign currencies, to 27 companies for a total of Rs 841 lakhs. Rupee assistance in the form of loans, underwriting of and direct subscriptions to Ordinary and Preference shares amounted to Rs 432 lakhs to 12 companies and foreign currency loans for the equivalent of Rs 409 lakhs to 16 companies.

Meanwhile, the amount received by way of interest and dividends is shown at Rs 57.95 lakhs against Rs 57.22 lakhs in the previous year. The net profit for the year, before providing for Taxation, works out to Rs 50.76 lakhs against Rs 51.85 lakhs. The directors have provided Rs 8,977 (Rs 19,621) for Depreciation; Rs 22.43 lakhs (Rs 26.43 lakhs) for Taxation and Rs 4.00 lakhs (Rs 5.00 lakhs) for General Reserve. The dividend recommended is 5 per cent against 4 per cent.

Against a paid-up capital of Rs 5 crores, General Reserve is shown at Rs 24 lakhs and Capital Reserve at Rs 14.93 lakhs.

Anapara Estates Report Record
Coffee Crop

Thanks to the record coffee crop of 10,520 cwts, the Anapara Estates Limited has reported a higher net profit of Rs 6.20 lakhs for the year ended 30th June 1959 as against Rs 4.81 lakhs in the previous year. A sum of Rs 36,770 is provided for Depreciation against Rs 28,178 and Rs 2.16 lakhs for Taxation against Rs 1.45 lakhs.

The directors have recommended a final dividend of 10 per cent, making a total of 25 per cent on the increased capital as against 35 per cent paid on the original capital for the previous year. In this connection, it may be added that the paid-up capital of the company was raised to Rs 12,07,838 from Rs 9,05,878 by the issue of Rs 3,01,960 worth of bonus shares. The present dividend of 35 per cent works out to a net dividend of 22 per cent, which is about the same as paid in the previous year. The revised estimate of the coffee crop of the company is placed at 9,950 cwts for the season 1959-60.

Mercara Rubber Repeats
Dividend

The Mercara Rubbers Limited has earned a net profit of Rs 1.28 lakhs for the year ended 30th June 1959 as against Rs 1.16 lakhs in the previous year. The Depreciation amount is raised to Rs 10,588 from Rs 6,911 and Taxation to Rs 1.28 lakhs from Rs 1.16 lakhs. The directors have recommended a taxable dividend of 20 per cent as against 20 per cent, free of tax, for the previous year.

Against a paid-up capital of Rs 5.75 lakhs, General Reserve is shown at Rs 2.50 lakhs. The gross block at Rs 7.62 lakhs is depreciated by Rs 10,588, to show a net block value of Rs 7.51 lakhs.

A record crop of 270,020 pounds of rubber was produced against the estimated crop of 250,000 pounds. The cost of production per pound has gone down to 86.86 cents from 89 cents in 1958.

STOCK EXCHANGES

Partial Recovery After a Severe Jolt

Watch-Dog Writes:

AFTER a veritable landslide in equity values following the announcement of credit squeeze by the Reserve Bank of India, stock markets have been showing signs of stability around the depressed levels. To what extent the credit squeeze will affect the volume of business over a period remains to be seen. There is also an anxiety to await the outcome of the LIC Investment Committee meeting, to be held in Calcutta, on the 25th March.

Sentiment on the Calcutta Stock Exchange remained unsettled and price movements were narrowly irregular in the absence of follow-up support.

After showing hectic price changes for the past two days, trading on the Bombay Stock Exchange showed signs of returning to normalcy.

On the Madras Stock Exchange, there was moderate activity. A relieving feature of trading was the steadier trend in cleared shares.

The London Stock Exchange finished the week on a very quiet note.

Wall Street closed very steady.

Calcutta

Friday, Evening.

THE sudden announcement of measures enforcing a credit squeeze by the Reserve Bank of India provided a rude jolt to the local Stock Exchange, which had been enjoying a veritable boom since the presentation of the Central Budget. Prices crumbled in almost one day at the end of last week. Even the Stock Exchange authorities were compelled to fix up interim clearing rates to enable the operators to avoid further losses despite the fact that the last settlement was held only on Wednesday last week.

The downward trend in prices was carried due to sustained liquidation by nervous holders even after the market was reopened after the Holi festival, mainly due to the bank strike spreading and the possible dislocation of trade activities. Some bear-covering, however, developed at the lower levels from Wednesday due to a general feeling that it would be still possible for the average investor to obtain bank finance for genuine purposes, that the floating stocks might not be large and that the industrial outlook continued to be bright. It was also felt that, as the over-bought position in some shares had been corrected, there

would be more sober trading in the coming weeks. As conditions were so much demoralised, it looked as if the market would take some more time to stabilise. This was evident from the cautious attitude adopted by the operators who were inclined to book profits at bulges.

Firmer advices from the gunny market following the release of the stock figures had a favourable effect on the Jute section. But prices suffered a setback due to general liquidation, although a slight recovery was noticed toward the close of the week.

Coal shares continued to respond well to selective enquiries and prices, after recording fresh higher levels on the hope that the Government would soon realise the need for encouraging the private sector of the industry, developed a slightly easier tendency due to profit-taking at the close.

Tea shares were generally neglected in the absence of incentive. Dealings were, therefore, few and far between.

Sugar shares came in for selective support in anticipation of an increase in production during the current season.

In the Textile section, price movements were rather halting in view of the reluctance on the part of operators to extend commitments. It was feared that, on top of costlier raw material supplies, an unexpected increase in wage costs would cut seriously into the profit-margins of various mills.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons.

Miscellaneous issues, after suffering a sharp setback early in the week, recovered moderately toward the close, thanks to the emergence of buying support at the lower levels.

The following table gives an idea of the extent of the decline in prices due to the announcement of the credit control measures and the subsequent recovery made at the end of the week:

	As on March 11	Low March 11	As on March 18

Bombay

DALAL STREET is once again in jitters. The good effects of the Budget have been done away with so swiftly and with such impact that the market seems to be in the midst of a debacle so far as the pivotal speculative counters are concerned. Though some sort of credit squeeze was effected and a hint to this effect was given in these columns last week, nobody had the least idea that the Reserve Bank would entirely prohibit the banks directly from financing budla transactions in shares, i.e., purchasing in the current settlement while effecting sales in the next one. Even normally the raising of the Bank Rate would not have led to such a disastrous effect. But this sizable measure of loan on budla by banks has led to a demoralising effect on the trading psychology. Other measures such as raising up of the margin to 50 per cent on advances against shares, the virtual freezing of the 25 per cent of the additional deposits which might accrue to the banks and the 50 per cent margin on drafts no doubt contributed in aggravating the nervous tendency. However, it is reliably gathered that the original arrangement on drafts will be restored.

The active speculative counters have declined by about 10 per cent from the last week's peak levels and even after such a heavy decline, the process of adjustment is still taking place. It is generally felt that it might take time for the market to adjust to the new factors. Even in the cash section, buyers have been somewhat scared away due to the debacle in the clearing listed shares though the drop in values in this section was very much restricted. Anyway stock market sentiment has received a rude jerk and it will take a pretty long time for the markets to stage any appreciable rebound. It might, however, be noted that there is no change in the fundamental outlook and hence a moderate rally is looked for.

Electricity developed fresh weakness with prices touching new low levels. Buyers were, so to say, absent Bank shares were also a shade easier. Shipping shares were in the doldrums with Scindia dropping to a new level of Rs 14.48 after a lapse of several years. Among Automobiles Premier dropped down by more than Rs 15. In the Engineering section Voltas came down by Rs 35 to Rs 217 cd as no immediate issue of fresh capital is expected.

THE Madras Stock Exchange remained closed today in protest against some of the local banks' interpretation of the Reserve Bank's order that only 50% of the Bills presented be paid to share-brokers, the balance being payable after clearance.

After representations late in the afternoon, the order seems to have been rescinded, restoring the status quo.

Premier Construction slumped by Rs 60 to recover to some extent following the dividend announcement of Rs 18 subject to tax i.e. net Rs 12.60 as against Rs 12. Tata Locomotive has lost Rs 15. Jyoti Ltd, however, ruled steady at Rs 191. Larsen & Toubro lost Rs 2. Tata Steel Ordinary crashed by Rs 15 from the early high level to recover to Rs 148.

Chemical and Dyes shares have also received a set back. Colour Chem has come down to Rs 310 from Rs 335 while Tata Chemical which had gone up to Rs 18.12 came down to Rs 17.32. National Rayon which was boosted up to Rs 475 suffered a landslide to Rs 429 to finish at Rs 438. Sugar shares also fell further. Belapur was sold down to Rs 334 from Rs 352 to finish at Rs 336. Walchandnagar declined by Rs 7 to Rs 295.

Bombay Burma which was taken up to Rs 615 slumped to Rs 547 to recover to Rs 568 but again reacted to Rs 556 to terminate firm at Rs 569 to meet buyers at Rs 575 after the close of the session on Thursday. Cement shares turned easier with ACC declining to Rs 140 from Rs 145. WIMCO lost Rs 10 from the recent high level while Tata Oil came down to Rs 68 from Rs 73. Hindustan Lever was marked down to Rs 40.

Cotton mill shares suffered around recession. Bombay Dyeing which was taken up to Rs 72.70 in the previous week was sold down to Rs 65.80 to finish at Rs 66.60. It is reported that the working of the concern in 1959 might reveal a modest drop in profit. Century dropped down to Rs 438 from Rs 485 to rally to Rs 449 to finish at Rs 447. Kohinoor was marked down to Rs 320 from Rs 340 to quote at Rs 325. Svadeshi came down to Rs 258 from Rs 283 while Standard Mills dropped down to Rs 805 from Rs 890 to recover to Rs 878 to finish at Rs 840. Khatau declined to Rs 280 from Rs 295.

The week's movements in prices of a few representative scrip are as follows:—

	High Rs	Low Rs	Close Rs
B. Dying	71.10	65.70	66.50
Century	487.00	438.00	447.00
India Ord.	42.40	11.28	11.40

Tata Steel	159.00	145.00	147.50
Voltas	248.00	215.00	217.50

Madras

THE Madras Stock Exchange remained closed today in protest against some of the local banks' interpretation of the Reserve Bank's order that only 50% of the Bills presented be paid to share-brokers, the balance being payable after clearance.

After representations late in the afternoon, the order seems to have been rescinded, restoring the status quo.

Originally, the Madras Stock Exchange adopted a resolution for a two-day closure, Thursday and Friday. Since, however, there is to be no such holding back of 50 per cent of the Bills' value by banks, the Exchange will function as usual on Friday. The following is the text of the communique issued by the Madras Stock Exchange:—

In pursuance of the directive of the Reserve Bank of India, Banks in the City today called upon Members to deposit 50% of the value of the documentary bills sent to them for discounting, as it is considered that the purchase of such bills will constitute an advance against securities. The Council of Management of the Madras Stock Exchange felt that this would impose considerable strain on its Members who are thus asked to lay out large sums during the pendency of the bills. It was further felt that under such conditions it would not be possible to transact business and secure their settlement without causing unbearable hardship and decided to close the market for business and deliveries for today and tomorrow. A telegraphic representation followed by a detailed letter has been made to the Governor of the Reserve Bank of India appealing for early action to exclude documentary bills presented by brokers to the Banks from the purview of advances requiring the aforesaid margin.

There has been no need for brokers to make representations about the margin payable on bills relating to shares bought from outside, since the Reserve Bank has modified its new rules, and banks have withdrawn a circular asking brokers to pay a margin. But the Madras Stock Exchange, which suddenly closed on March 17 in order to review the position caused by the credit curbs, has decided to apply new rules to forward business. Margin at 2 per cent has to be paid on outstanding transactions and brokers have to furnish details of transactions in cleared securities. The settlement of March 23 will not be liable to the new margin requirements, but the effect on business next month will be considerable.

A definite shrinkage is expected, and the Madras Shareholders Association is meeting on March 19 to examine the consequences of the recent slump attributed to credit curbs. It is pointed out that bank overdrafts are taken, not for speculation, but for financing other business, and new rules will affect bonafide business carried on by many investors, who usually look upon their invested capital as a source of supplementary funds. The rules about forward business may raise contango rates and will limit further business, but the Shareholders' Association is perhaps not concerned with that, but with the demand for additional margin made by some banks. The aftermath of the credit squeeze may be a drying up of new capital for new issues and the shareholders, facing reduced income under the new system of taxation, must accept sudden depreciation as part of the fortune of war, or rather, peace.

London

CONDITIONS on the London Stock Exchange remained quiet as buyers were still reluctant to enter into fresh commitments. There was, however, some recovery in places and steel shares, for instance, closed with net gains, while several leading stocks were finally above the lowest. Oil shares were easier, while Teas drifted lower. Rubber shares were selectively better with Malayan Plantations sharply higher at 36sh following the increased interim dividend.

The Giltedged section had a quiet week; but prices were fractionally better where changed in spite of a rise in the week's Treasury Bill Rate.

New York

PRICES on Wall street, after showing slight easiness early in the week, developed a steadier tendency toward the close. The initial easiness was mainly due to rumours that the New York Federal Reserve Bank was moving toward an easier credit policy. By the end of the week, the list became firmer to show an irregularly higher tendency, mostly one point or more.

Leaders in advance were assorted Aircraft, Missiles, Televisions, Electronics, Cameras, Gold Minings, Rubbers, Papers and Steels. There appeared to be no news to account for the sudden popularity of the goldmining group, which was led by US Smelting.

Does High Taxation Retard Capital Formation?

By A Special Correspondent
ONE of the main criticisms levelled against the Central Budget for 1960-61 is that it does not provide incentives for capital formation. As this view has been expressed by some prominent business organisations, it will be worthwhile to examine it in some detail.

The Budget, of course, does provide some concessions. For example, it has extended the period of exemption for new industries under Section 15C by another five years. Reliefs are given in respect of donations to charitable, scientific and educational institutions. Marginal fiscal adjustments have also been made in certain directions. But the fact remains that the overall burden of taxation on individuals and companies has been allowed to stand practically at the same level as before. It is pointed out that, at this level of taxation, it is impossible for the economy to generate savings on a sufficiently large scale and thus speed up the pace of development.

It is true, the level of direct taxation in India is excessive, considering the underdeveloped nature

of our economy. Personal income tax rates in India are higher than in the United States, West Germany, France and Japan for certain income groups. In the sphere of corporate taxation also, the rate of 45 per cent is considered to be too burdensome. Businessmen all over the country are practically unanimous in their view that the existing rates of taxation do hamper incentives and capital formation.

Unfortunately, however, it is difficult to prove statistically that the present tax structure is standing in the way of economic expansion. Available data show that our economy, despite the high tax rates, continues to evince signs of vigorous activity. Industrial production in 1959 rose at a faster rate than in the previous two years. For the first ten months of 1959, the average index of production (1951=100) was 149.4, that is, an increase of 7.4 per cent over the corresponding period of 1958. In 1957, the index had increased by 3.5 per cent and in 1958 by only 1.7 per cent. In 1959, there was a substantial increase in the output of intermediate goods and capital goods. Consumer goods industries as a group also registered an increase.

It is also significant that the data on consents given for capital issues indicate, according to official sources, "a higher level of investment intentions in the private sector in 1959." This will be clear from the following table:

TREND IN CAPITAL ISSUES

	**	*	Total
	(Rs crores)	(Rs crores)	(Rs crores)
1956	59.4	170.8	230.2

*Non-Government Companies

The licences granted under the Industries (Development and Regulation) Act for new units and for substantial expansions were also on a larger scale than in 1958.

These data would seem to show that, even with the tax rates at the existing level, production continued to record a sharp increase and that there was a keen anxiety on the part of entrepreneurs to expand capacity and set up new units. Moreover, the absence of fiscal reliefs in

the Budget for 1960-61 did not produce any adverse impact on the share markets. On the other hand, the sentiment in the markets was quite cheerful and prices maintained an upward trend. So much so, the Reserve Bank was compelled to take action calling for a credit squeeze.

It will, however, be wrong to conclude that all is well with the fiscal system and that the economy will continue to be buoyant even with the existing level of taxes. The fact is that we are not expanding as rapidly as we should. The price level continues to cause anxiety. The way to combat the menace of inflation is by increased production, and this will be possible only when industries are able to function efficiently. Lack of funds is a handicap with many major industries and there is no doubt that a small reduction in corporate taxation would have been greatly helpful.

Also significant is the fact that the progress in regard to small savings has not been quite satisfactory. An official survey says as follows:

"Small savings collections have shown considerable improvement in the last two years; in 1958-59, they totalled Rs 78.5 crores as compared to Rs 69.6 crores in the previous year. The collections up to January this year were about Rs 47 crores, that is, about the same as in the corresponding period last year. The five-year target in this respect was Rs 500 crores.

Moreover, the employment situation does not show any improvement. At the end of 1959, the number of applicants registered with the employment exchange was 1.42 million as compared to 1.18 million at the end of 1958. All these show beyond doubt that we have to march forward at a much faster rate than hitherto. The Government should not argue that, because the disincentive effects of the taxation system cannot be proved statistically, there is no need to lower the tax burden. On the other hand, the abolition of certain levies which have no significance from the revenue point of view, such as the expenditure tax, wealth tax or the tax on bonus shares, would have gone a long way to tone up the economy and expand it on a more vigorous scale. The Finance Minister should carefully watch the trends in the economy in next few months and suitably adjust the fiscal policy so as to encourage the people to work harder and save more for the benefit of the country.

MEETINGS AND DIVIDENDS PROPOSED

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office:

PALAI, KERALA STATE.

Branches at: Madras, Cochin, Quilon,
Trivandrum, Alleppey, Mangalore, Ban-
galore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

Feel Safer— Be Safer For Longer

Firestone

New DeLuxe Champion Tyres

You get more than good value for your money when you fit Firestone New DeLuxe Champion tyres to your car. You feel SAFER whether in dense traffic or at high speed, or when taking dangerous corners on treacherous ghats BECAUSE all Firestone tyres are built with the same engineering skill that World Motor Racing Champions depend on for their lives! You get that extra safety FREE with every Firestone New DeLuxe Champion tyre.

Whether you drive on good roads or on bad, your Firestone tyres will stay safer LONGER because of their unsurpassed, skid-resistant tread, an exclusive product of FIRESTONE RESEARCH.

WORLD OF FINANCE

Impact of Additional Deposit Requirements

IN the penultimate week of the fiscal year, the Central Government have, it is clear from the returns of the Reserve Bank for 18 March, made heavy disbursements, especially to State Governments. Recourse to deficit financing is considerable, as a result.

The busy season continues, and the latest week has registered a rise of Rs 4.04 crores in Active Note Circulation to Rs 1841.93 crores. However, Rupee Coin has returned from circulation for Rs 0.08 crores. Currency has been expanded against Rupee Securities for Rs 10 crores; clearly, deficit financing.

In the Banking Department, Investments are found to be Rs 27 crores higher; and the magnitude of created money during the week may thus be of the order of Rs 40 crores. Not all of this, however, is likely to have been utilised in payment to State Governments, though the balances of the latter are sharply higher by Rs 30.69 crores at Rs 60.45 crores, on top of a reduction of Rs 8.85 crores to Rs 20.64 crores in their ways and means borrowings from the Reserve Bank. It would appear to us that the rise of Rs 20 crores in the Reserve Bank's holdings of Government Treasury Bills Purchased and Discounted might relate largely to sales thereof by State Governments. As such, only half of the quantum of deficit financing might have gone in payment to the States. As for the other half, we suggest that the rise of over Rs 12 crores in Bills Payable is in this regard significant. That is to say, drafts have been issued in behalf of Government, possibly to entities other than Governments, but these have yet to be presented for encashment. After all these transactions, the Centre's balances are better by Rs 1.99 crores at Rs 52.62 crores.

There is a sharp and substantial rise of Rs 14.21 crores to Rs 85.84 crores in the Reserve Balances of member banks. This, we may be sure, is a reflection of the additional deposit requirements, whereunder, Scheduled Banks are obligated to keep with the Reserve Bank an amount equivalent to 25 per cent of Deposits accruing as from 11 March. It follows, consequently, that Scheduled Banks have apparently experienced a considerable accretion to their Deposit resources in the relevant week, though confirmation in this regard will be had only a week later. It is interesting to find that, meantime, the Other Loans and Advances of the Reserve Bank are sizably higher by Rs 19.51 crores at Rs 155.12 crores. This rise in central banking credit to Scheduled Banks was undoubtedly found necessary because, on the one hand, of busy season pressure on the banking system and, on the other hand, of the State Bank strike imposing a fresh strain on the remnant of the banking system. It is ironical that what the Reserve Bank "extorts" with one hand, in the form of additional deposits, it "gives away" with the other, in the form of increased loans and advances.

Lastly, Balances Held Abroad are again down, by Rs 0.31 crores at Rs 31.98 crores.

The return of Scheduled Banks for 11 March does not, of course, show the impact of the new deposit requirements as also of the policy of credit restraint and control. However, it

does reflect the strain experienced by the banking system as a consequence of the State Bank strike. Thus, the rise of over Rs 15 crores to Rs 1083.44 crores in the total of Advances is only partly due to busy season demand, since it is to be presumed that there was pressure on the banking system for "normal" requirements that could not be had from the State Bank. Fortunately, Deposits have risen by Rs 8.74 crores to Rs 1922.43 crores, and hence the rise in borrowings from the Reserve Bank has been restricted to Rs 9.64 crores. There is a small rise of Rs 2.51 crores to Rs 760.00 crores in gilt-edged investments, as also an increase of Rs 2.42 crores to Rs 166.13 crores in cash balances.

The next return of Scheduled Banks will without doubt bear the following characteristics: (a) a considerable rise in Deposits; (b) a steep increase in borrowings from the Reserve Bank; (c) a continued expansion in the total of Advances, with the Rs 1100 crore mark possibly being pierced; and (d) a fair augmentation of balances with the Reserve Bank.

Central Bank's Accounts for 1959

Deposits of the Central Bank of India Limited have shown a smart increase during 1959, in rising by Rs 18.28 crores to Rs 180.26 crores. All three categories of Deposits have been marked higher. Fixed Deposits and Cash Certificates have risen by Rs 13.42 crores to Rs 88.75 crores; Savings Bank Deposits by Rs 2.28 crores to Rs 32.43 crores; and Current Accounts, etc., by Rs 2.57 crores to Rs 59.07 crores. Utilisation of these resources has been mainly in the form of an expansion in Advances; this portfolio showing a rise of Rs 20.04 crores to Rs 119.92 crores. Also, however, there is a small rise of Rs 1.18 crores to Rs 45.68 crores in gilt-edged holdings, though this is largely offset by the fact that, whereas the bank had Rs 1 crore worth of Treasury Bills last year, Treasury Bills do not figure in the latest balance-sheet. Though cash in hand and with Reserve Bank and State Bank is higher by Rs 1.22 crores at Rs 15.59 crores, balances with other banks have declined from Rs 1.51 crores to Rs 1.36 crores and money at call and short notice from Rs 7.66 crores to Rs 5.35 crores. As a result, borrowings have gone up somewhat from Rs 1.43 crores to Rs 2.81 crores.

A higher level of Advances has naturally contributed to an improvement in revenue. Income by interest and discount has been marked up by Rs 37 lakhs to Rs 7.43 crores, and commission, exchange and brokerage have fetched Rs 8 lakhs more at Rs 1.38 crores. On the income side of the profit and loss account, it is also to be noted that net profit on sale of investments, etc., has contributed Rs 9.75 lakhs against Rs 6 lakhs last year.

Interest paid continues to be the most important item of expenditure, absorbing Rs 18 lakhs more at Rs 3.86 crores. But salaries and allowances are a close second, and the increase under this head is even higher at Rs 28 lakhs to Rs 3.34 crores. At this rate, it may well happen, in 1960 or 1961, by the latest, that establishment costs will be the most important constituent of the expenditure of a bank.

The balance of profit is shown, in the profit and loss account, to be Rs 2 lakhs lower at Rs 99.43 lakhs. But it is important to note in this regard that the 1959 profit is net of taxation, while the earnings for 1958 were subject to taxation to the tune of Rs 16.50 lakhs. It would thus follow that the profit of Central Bank, after providing for tax, has risen by some Rs 141 lakhs during 1959. The Staff

Gratuity Fund gets the same amount, as last year at Rs 10 lakhs. Bonus, to Staff, absorbs Rs 1.75 lakhs more at Rs 33.75 lakhs. The disposable balance is such as to permit a net dividend at 12.04 per cent (that is, after deduction of tax) as against a distribution of 14 per cent tax free in 1958.

Good Rise in Profits of Indian Overseas Bank

Splendid results have been announced by the Indian Overseas Bank Limited, in respect of its operation in 1959. This would serve to confirm that the generally difficult banking conditions during the last year did not, however, affect the medium or the small sized banks.

According to the Balance Sheet of Indian Overseas as at the end of 31 December 1959, Deposits have registered a small increase of Rs 2.55 crores to Rs 30.49 crores. It is intriguing to note that the bank experienced a switch-over from current accounts to fixed and time Deposits. Current accounts show a fall of over Rs 3 crores to Rs 9.28 crores, whereas Fixed, Time and Staff Security Deposits have risen by Rs 5.32 crores to Rs 17.20 crores. Savings bank accounts show a small rise of Rs 0.29 crores to a shade under Rs 4 crores.

The bank found such remunerative use for its money that its Advances portfolio has expanded by an amount that is larger than the increase in Deposits. The total of Advances has staged a rise of Rs 3.52 crores to Rs 19.04 crores. Cash balances have been somewhat drawn down, being lower by roughly Rs 1 crore. It is also not surprising, consequently, that the gilt-edged portfolio has risen, by a small amount of Rs 0.45 crores to Rs 9.55 crores. In the result, borrowings had to be increased from Rs 0.67 crores to Rs 1.86 crores.

The Profit and Loss Account shows, that income by interest and discount has moved up by Rs 0.30 crores to Rs 1.42 crores. Commission, Exchange and Brokerage have fetched more at Rs 58.67 lakhs against Rs 52.84 lakhs. A tight rein has been kept on expenses, with interest paid absorbing Rs 20 lakhs more at Rs 86.31 lakhs and salaries and allowances rising by Rs 7 lakhs to Rs 56.18 lakhs. In the result, the balance of profit has moved up satisfactorily by Rs 5.01 lakhs to Rs 33.61 lakhs.

The provision for bonus to staff has been marked up from Rs 4.50 lakhs to Rs 5 lakhs; the provision for tax is unchanged at Rs 12.56 lakhs; the transfer to Reserve Fund gets more at Rs 6.25 lakhs against Rs 6 lakhs; and there is a new transfer of Rs 75,000 to Development Rebate Reserve. Finally, the dividend recommended has been stepped up to 14 per cent subject to deduction of tax as against 10 per cent tax-free in 1958. This means that Indian Overseas Bank, by reason of able management and good working, is one of the few banking institutions which have been able not only to maintain but slightly to increase the effective return to the shareholders.

Giltedged Analysis

By A Special Correspondent

NOT enough attention has so far been given to an elaborate analysis of the holdings of giltedged securities in India in the past decade. The stimulating study made by the Reserve Bank (in the Bulletin for February) throws light on the growth of institutional investment, the essential stabilisation of interest rates and the general change in reserves.

The USA, through the Federal Reserve system, has its grip on the investment market, and bond yields usually follow the Treasury borrowing rates. If the Funds in London have been shaken more than once by the adjustment of the Bank Rate, it is known that distaste for gilt-edged preceded the war and a corresponding preference for equities, as a hedge against inflation, developed in the course of an unsettled decade. Even the Established Church has turned away from Government stocks and gone into ordinary shares, as offering distinct attractions including steady appreciation.

Whether the growth of public debt or the poor return affected market sentiment against gilt-edged may be debated for long. But the fact remains that India, in contrast to Britain, has shown unmistakable confidence, and the capital market has absorbed, year after year, larger issues of new Government loans. The Plans have been supported by borrowing on a much larger scale than during the war. The Reserve Bank's sterling holdings have largely been replaced by rupee debt and the paper currency reserve is mainly non-metallic at present. But the increase in public debt has been followed by greater absorption, and even if Budgets have been unbalanced, the borrowing has been continuously successful to put gloom to flight. The essential principles of management in the public interest have been successful. Conversion on a small scale coincided with the rise in debt, and even if the institutional investor has shown a definite liking for short-term loans, the fall in banks' Advances, like the rise in their Deposits, has contributed to the expansion of borrowing operations and the ever-growing extra-Budgetary funds (as in the UK over three decades) have begun to absorb a part of the much larger outstanding debt. The replacement of money by short-term securities easily saleable always is a trend not peculiar to India, but it may be noted that Treasury bills are not so much to the fore as short-term loans in the portfolios of institutions, able and willing to invest on a large scale regularly.

It has been stated in the last Budget speech that Rs 298 crores was secured in 1959-60. This is a sign of confidence born of independence perhaps, as also the circumstance that there is no "hot" money and India's external debt, mainly contracted for the Plans, does not cause strain similar to that caused by the sterling balances on the UK which, as the banker of the sterling area, has to meet sudden or heavy drafts. It has been inferred, on the basis of figures for five years, that Rs 289.9 crores represent the net absorption of public debt in India and in the subsequent years, too, net absorption has shown appreciable improvement. This is a flattering conclusion, especially when the money market is said to be ill-developed, and may be said to reflect great credit on the Reserve Bank, which manages the debt and holds stock for sale, after making large mutual subscriptions to new loans. Nevertheless, heavy, continuous borrowing by the States means a rise in annual interest and the repayment of loans is also made difficult despite sinking funds maintained. The growth of debt may be viewed as a sign of the Plans going through. But it is also the result of relatively cheap money and there is something to be said for keeping the Bank rate unchanged and trying to counter inflation by selective credit restrictions, similar to those now applied in respect of the stock exchange.

Whether Government, too, are a successful rival for the private sector, looking for additional capital, is scarcely an issue to be examined, for, it may be noted that private issues fared very well from 1958 to 1960 and the

response to many new issues was impressive, by any reckoning.

There are no Pension Funds or Building Societies, but the institutions, including general insurance companies and provident funds, hold a sizeable part. The proportion of debt held by the LIC is not very large and non-residents held only a very small part of the debt as on 31 December 1958. It is not likely that variations in percentages have taken place since, but it may be noted that banks and insurance companies, including the LIC, hold over 42 per cent of the total. Private trusts, local authorities, and others held a fairly large part, because of statutory restrictions on trustee investment, and joint-stock companies also retained their past profits in the form of Government securities. The pattern of distribution may contribute to the liquidity required in the case of banks and provident funds which have to meet recurring calls on their resources. The analysis reveals, incidentally, that banks have no specific preference for Central loans, and insurance companies actually prefer State loans for the slightly better yield available. Another point to note here is that investment by banks has risen steadily since 1957 and provident funds are disposed to invest in both State and Central Loans and even prefer to invest in loans maturing after 15 years, while the financial corporations seem to prefer short-dated loans only, like the co-operative banks. The latter do not hold much stock compared with the Reserve Bank or the Scheduled Banks. This is a rewarding study, and one hopes that bankers in future in reviewing investments will devote some attention to the composition and size of the debt they hold as well as the Advances made by banks. Joint stock banks, too, have a definite interest in conversion, maturity and other incidents of the public debt, and it is hoped that they will shed more light in their speeches—not on employees' current claims but on the behaviour of the gilt-edged market or even the alternatives to present investment and indicate to the country how far the banking system has sustained the Plans in which the public at large has a larger stake, merely through the increase in public debt during the past decade. One may add that the rentier (i.e., the holder of debt) is today more often an institution than an individual.

Premium Bonds

[The Scheme for Prize Bonds has strangely attracted very little financial comment. What its implications may be can be inferred from the following gleanings from an article by Mr A. J. Forrest in The Birmingham Post, which describes the history of Premium Bonds in the UK.]

NOT in the least astonishing instrument of aid wielded by Britain's contemporary Welfare State is the Premium Bond scheme. Now running into its fourth year, the scheme though not the bedrock of the National Savings movement, may justly be defined as a powerful buttress of it. Moreover, as a monthly agent of excitement, bringing rewards to some, disappointment and resignation to others, it exercises a psychological impact upon a community of approximately 12,000,000 bond holders, a total equivalent to almost a quarter of the population.

To some people, this innovation was, to put it mildly, deplorable. Critics denounced it, mostly on moral grounds, as signifying the Government's descent into a gambling institution and its desire to compete, as one gambling agency against another, with the football pools' industry. Looking back to-day, however, one

can say that the scheme has brought harm to none, benefits to many and hope to millions. And the great benefactor, the one undisputed winner is, of course, the State itself to which, since the scheme was launched, over £276,000,000 have been subscribed.

The odds against winning a prize are slowly, indeed almost imperceptibly lengthening. At the present time, they are 11,179 to one. This contrasts with odds of 10,554 to one in December, 1958, and 10,001 to one in December, 1957. When the first draw was held, six months after the scheme's inauguration, in June, 1957, the odds were then the most favoured ever, a mere 2,095 to one. This ratio whetted everyone's appetite for a prize. But the following month such a disproportionate ratio vanished for good and the new odds of 8,394 to one declared the shape of hazards or chances to come.

In January, 1959, the odds were 10,527 to one; in August 10,544 to one; since when they have risen steadily to the present figure. But these odds have not proved sufficiently high to deter buyers. As Mr Anthony Barber, Economic Secretary to the Treasury, said in the House recently, the worst that could happen was that the odds could extend to 12,700 to one. That calculation is based on the assumption that not another bond is bought. As one about to buy presents for nephews and god-children, I myself can confound that forecast.

Allowing for encashments, the net value of bonds in the scheme to-day is approximately £246 millions. At a rough estimate, the National Savings Committee puts the average holding per person at 22 bonds. Patience is therefore counselled by the scheme's administrators, in particular by Lord Mackintosh of Halifax, as chairman of the National Savings Movement. For, with a holding of 22 bonds, a single prize of £25, won at the end of five years, represents a return of 16 per cent per annum. Few investments can offer so good a yield. With a slice of extra luck, of course, one can do even better.

By and large, the disappointment experienced each month by unlucky holders is of extremely fleeting duration—a momentary pang, if that. The scheme gains a great advantage through its unique quality of preserving the investor's money while entertaining him, month by month, with the gambler's hope of securing the maximum reward for his stake, in this case a £1,000 prize for a £1 bond. But, despite this "can't lose" policy for investors, it is the six months' qualifying period which is an incontestably strong factor in the scheme's success, consolidating its value to the National Savings Movement.

The Treasury view is that if the qualifying period for prizes were reduced, people would be readier to cash their holdings of premium bonds. Such a trend would mean investments on a short term basis, so curtailing the scheme's value as an inducement to genuine small savings.

The quantity of prizes remains an inducement. For, people do not think as a rule of the odds stacked against them. They think of their personal holdings in relation to the number of prizes available. At the draw in December, prizes totalled 19,028, made up of 79 at £1,000, 158 at £500, 316 at £250, 790 at £100, 1,580 at £50 and 16,105 at £25. The enormous disproportion of prizes at the lowest winning level to bigger rewards will be noted. These £25 prizes serve as the scheme's carrots. Some investors must wish, no doubt, that luck when it comes their way is not invariably accompanied by £25. But that's being greedy.

None the less, since the prize lists opened, over £17,000,000 has been distributed in prize money. That sum, however viewed, cannot be dismissed as a mean or insignificant reward.

"IMITATION—the sincerest form of flattery!"

... surely, Bhai Sahib, imitation is the sincerest form of flattery!

True—but where people's health is concerned, it's more a dangerous form of flattery, my friend. Unscrupulous people who take so much trouble in imitating packets with the Brooke Bond name and design, invariably fill these packets with poor grade tea, adulterated with numerous mixtures. It's the innocent consumer who suffers.

Isn't anything being done to stop all this?

Oh, quite a lot. There's the Government Trade-Marks Department which keeps a complete record of all the trade-marks used by well-known manufacturers in the country. Drastic punishment is meted out to those who infringe these trade-marks.

Can't Brooke Bond do something for their own protection?

Yes, they can and do—for their own protection as well as to safeguard the interests of their customers. Every one of their 2000 Salesmen keeps a vigilant lookout in the market for packets that resemble any of the Company's Trade-Marks and immediate steps are taken to stop the sale of such packets in order to safeguard the public's interests.

What can the customer do to make sure he gets genuine Brooke Bond Tea?

For one thing, buy his tea from a shop he knows and can trust. Always examine the packet very carefully before purchase. If you are dissatisfied, make a complaint to the shopkeeper immediately.

I agree... it's for all of us to guard and work against this terrible anti-social practice of making and selling spurious goods.

Brooke Bond India Private Limited

Investors and Monetary Policy

By Paul Einzig

BEYOND doubt, investors are in a position to influence by their attitude the monetary situation in their country and even in other countries. Their decisions whether to buy or sell equities or Government Loans or whether to keep their funds in a liquid form, are apt to influence interest rates to such an extent as to affect at times the monetary and economic trend. The latest instance of this influence has been provided by the behaviour of American investors during the last month or two. They have succeeded in checking and even reversing the upward trend of money rates not only in New York but to some degree even in London.

What is happening is that, owing to the uncertainty of the outlook on Wall Street, a large number of American investors, having realised their holdings of equities, are keeping their funds liquid. Indeed, nowadays the fashionable advice to investors is to play for safety by realising about one-third of their investments. By such means, they do not forfeit their investment income altogether, and at the same time they stand a chance of reinvesting part of their capital at more favourable prices. This advice has certainly not the merit of being logical. If an investor is convinced that prices in Wall Street will continue to decline, he should have the courage of his conviction by selling out his entire holding and living on his capital for a few months, in the hope that the fall in prices that would take place in the meantime would amply compensate him. However, the formula of realising part of the holdings does appeal to many people.

A very large proportion of the proceeds of investments thus realised has come to be employed in US Treasury Bills. This again is a fairly new fashion as far as the rank and file of the investing public is concerned. Until comparatively recently in the United States, as in Britain, holdings of Treasury Bills were largely confined to institutional investors and to very large individual investors. But now medium-sized funds are also being invested temporarily in Treasury bills. The result of this change was an unexpected fall in bill rates in New York at the end of January, at a time when it was widely expected that the rise in the British Bank rate would be followed by corresponding change in the United States.

For many weeks, experts were at a loss to explain this strange behaviour of bill rates in New York, and it was only quite recently that they stumbled on the correct explanation. By that time, it had become also necessary to explain an unexpected demand for British

Treasury bills at the weekly tenders. That demand, too, was attributable to American investors who have acquired the habit of employing in British Treasury bills the proceeds of their realised British equity holdings.

Both in Britain and in the United States, the authorities are confronted with a declining trend in short-term interest rates that is not their doing, and which to a large extent conflicts with the immediate object of their monetary policy. Both in Britain and in the United States, the authorities aim at discouraging somewhat the over-buoyant economic activity. But if money rates decline, it will tend to produce exactly the opposite effect. So, it seems that the change in the habit of American investors is to some degree interfering with official monetary policy both in Britain and in the United States.

There is, of course, nothing new in this phenomenon. The Wall Street boom of 1929 provided a striking example showing the power of investors (and, of course, of speculators) in the sphere of monetary policy. The United States authorities wanted to keep money tight in order to discourage speculation. But interest rates on loans to Wall Street rose to such a high level that they would have attracted money even from the moon if such a thing had been possible. They certainly did attract very large amounts from London, much to the dismay of the American as well as the British monetary authorities. The latter were very anxious to keep money reasonably cheap and plentiful in order to assist trade suffering from chronic depression. But investors and speculators in Wall Street forced them to raise the Bank rate and to tighten money.

The present instance of the investors' influence over monetary policy is, of course, not nearly as striking and dramatic as the instance of 1929 had been. Both in Britain and in the United States, the authorities are in a position to counteract the unwanted effect produced by the demand for Treasury bills by American investors. It is easy to envisage, however, the situation when the authorities would find neutralising action inconvenient and perhaps even impracticable. So, they would have to suffer the interference of investors with their monetary policies.

The Radcliffe Report, which is supposed to be the last word on the subject of monetary technique in Britain, contains no reference to the role played by the American investor in influencing British Treasury bill rates. The Committee of experts can hardly be blamed for it, for they concluded their evidence and drafted their report long before the new fashion became sufficiently important to attract notice. But experience shows that it is not sufficient to examine the monetary technique once in many years. It has to be kept under constant close supervision.

Pakistan's Jute Policy

THERE have been indications in recent months of the possibility of far-reaching changes being effected in Pakistan's jute policy. At long last, this country, whose economy is dependent on jute's fortunes to a considerable extent, seems to have realised that attempts to dictate terms to buyers on the strength of its position as the main supplier of jute to overseas markets, are only jeopardising its interests in the long run. The recent announcement that the limitation on jute acreage has been lifted is an attempt to regain the confidence of consumers abroad. Since then, those charged with the responsibility for looking after the interests of the jute grower, as well as those of the industry, have been frequently emphasising the need for demonstrating to the foreign buyer that Pakistani jute will be made available to them in sufficient quantity and at an equitable price.

There is no denying the difficult position in which Pakistan has placed itself in regard to the export of both raw jute and jute goods. A decade of short-sighted jute policy has lost it valuable custom in the continent and elsewhere, too. The high prices that the jute goods industries in Europe have been made to pay for their raw jute requirements have virtually eliminated them from the international market. Even in their domestic markets, they are facing difficulties as they are finding it almost impossible to compete against low-priced Asian goods. This development did not worry Pakistan' overmuch, as it probably thought that, in the context of the fast growth of its own manufacturing industry, the decline in the offtake of raw jute by foreign consumers would be more than offset by the increase in offtake by the domestic industry.

Pakistan's jute goods industry has no doubt made big strides in the past few years. But it would appear that, of late, it is finding the going rather hard. A rapid expansion cannot be achieved overnight. In its anxiety to capture overseas markets for its jute goods, Pakistan has been following extraordinary measures. Recently, it was admitted by a Pakistani spokesman that undercutting of price in overseas markets of its jute goods had resulted in sizable hardship both to the industry and to the cultivators. Even so, a determined effort is being made to accelerate the growth of the domestic industry. A short cut to a rapid expansion seems to have been thought of. This is revealed by the report that a suggestion has been made to the Dundee industry that it may consider, with mutual benefit the possibility of transplanting some of its mills in Pakistan. Against this background, the indication sounds plausible that Pakistan is inclined to ask India that the jute policies of both the neighbour countries are framed in such a way as to take note of their common interests. A lasting understanding between India and Pakistan in regard to jute will go a long way toward helping both the countries in the international markets.

It needs also to be realised that, if the demand for jute goods has not been rising at a pace commensurate with the expansion in world

industrial production, it is because price behaviour in the jute and jute goods market has been extremely erratic. This has provoked many an erstwhile consumer of jute goods to go in for substitutes. If jute goods are to share in the general world prosperity, there will be inescapable need on the part of the two major raw jute producing countries, India and Pakistan, to ensure that violent fluctuations in the prices of the manufactured articles are not touched off by a famine in the raw material. It is wise to remember that the policy of restriction, in the matter of raw jute output, has already cost Pakistan calamitously dear.

Wage Boards

By M. SUR

THE Union Government's acceptance of the recommendations of the Textile Wage Board for the 800,000 workers in the textile industry, coming fast on a similar acceptance of the report of the Central Wage Board for the Cement Industry, has given prominence to this new machinery for fixation of wages. But, actually, the idea of wage boards is not so new. It was originally introduced in the Minimum Wages Act, which drew to a large extent on British Wage Board legislation. The Act applied to scheduled industries where labour organisation was weak and lacked the strength to bargain for reasonable wages. Under the Act, State Governments were required to fix minimum wages in these industries, either directly or by appointing a representative board or committee to advise them on the particular industry.

More recently, the idea of a Wage Board set up voluntarily within an industry, and representing both employers and workers, has been gaining ground, and has the approval of the Labour Minister. Wage Boards have been set up in national industries such as sugar, cement and textiles: the jute industry will shortly have one and there are to be two for plantations covering the northern and the southern zones. Increasingly, trade unions are demanding fixation of wages by wage boards rather than by adjudication; even the bank employees asked for a wage board. It is, perhaps, the novelty that appeals primarily, because every one is weary of the processes of the industrial courts.

The composition of the cement and textile wage boards was similar: a well-known public figure as chairman; two independent members (one an MP and one academic); two representatives of the employers' associations and two of the trade unions. The terms of reference were identical, except that the subject of bonus figured in the cement wage board terms and not in the textile. The wage boards were to determine the categories of employees (manual, clerical, supervisory, etc) who should be brought within the scope of the wage fixation, and work out a wage structure based on the principles of fair wages as set forth in the Report of the Committee on Fair Wages. In so doing, they were to take into account the needs

of the industry in a developing economy, the requirements of social justice and the need for adjusting wage differentials in such a manner as to provide incentives to workers for advancing their skill. They were to bear in mind the desirability of extending the system of payment by results, keeping in view the need for fixing a minimum or fall-back wage and also to safeguard against overwork and undue speed.

The constitution of a wage board, representing both sides of industry, should make its recommendations acceptable both to the workers and to the industry as a whole in a way that a tribunal award can never be, and Government, in their acceptance of the Textile Wage Board's Report, have stressed this point:

"Since the recommendations represent agreed conclusions between the representatives of employers and workers, the Government expects that the parties concerned will show a spirit of accommodation in interpreting the recommendations, and difficulties, if any, will be solved by direct discussions between them, and if necessary, with the assistance of the State Governments concerned."

In fact, however, considerable opposition has already been expressed by textile employers, both in West Bengal and in the South, to the report of the Textile Wage Board. The Bengal Millowners' Association has stated that a large number of the State's 17 composite and 9 spinning mills would close if the recommendations were implemented. It is worth while, therefore, to consider the basis of their objections. The industry in West Bengal consists mostly of small units, whereas both the employers' representatives on the Board, they point out, came from very large companies and had no practical experience of the difficulties of smaller mills. It is calculated that the increased annual burden of implementing the recommendations of the Board on dearness allowance alone would be Rs 1.04 crores in West Bengal textile industry, which employs about 43,000 workers, compared with an annual burden of Rs 1.70 in the Madras textile industry which employs 101,000. According to a statement prepared by the Indian Cotton Mills Federation, the percentage increase in emoluments of workers per 100 looms in West Bengal will be 36 per cent as against 5.7 per cent in Bombay and 5.3 per cent in Ahmedabad. Productivity of workers in West Bengal textile mills is lower than in other centres, and the number of workers is proportionately higher. The reason for this may be inefficiency and old machinery, but while the Wage Board has emphasised the need for rationalisation and modernisation, it has stipulated as the first condition "no retrenchment and no loss of earnings of existing employees", so labour costs would not be reduced by modernisation, except perhaps in the long run.

The other point that disturbs the West Bengal millowners is that an omnibus tribunal as recently as 1958 had awarded an increase of Rs 10.50 per textile worker, after taking

"The Wise Man in his attitude towards the World has neither Prejudices nor Prejudices. He is on the side of what is Right"—The Analects of Confucius

into account the industry's capacity to pay. While the Wage Board recommended that recently negotiated increases should be taken as part of the increase recommended, it excepted increases awarded by industrial tribunals. The Bengal Millowners' Association estimates that the increase already given by the 1958 tribunal represented about 21 per cent of the workers' previous emoluments.

Hitherto, under the system of adjudication, we have had settlement of wages on a region-cum-industry basis, which has naturally taken account of regional variation. If we are now to fix wages through national wage boards, it seems important that regional variations should be given due consideration. If a whole region feels that its special problems have not been given sufficient weight, it will not be easy to implement the recommendations of the wage board and the idea of wage boards will become discredited. The question of enforcement of wage board recommendations has already been under consideration by the Government, and was discussed at the last Indian Labour Conference. Since a wage board is a voluntarily constituted body (even if sponsored by Government), its conclusions have no legal sanction. For this reason, the Indian Labour Conference proposed that wage boards should be put on a statutory footing, but the Standing Labour Committee pointed out that this would not be in keeping with the general approach of encouraging voluntary settlement, and that unanimous decisions of wage boards should be implemented by the parties themselves. Government, however, have not ruled out the possibility of giving wage board recommendations statutory force, so the textile industry may prove a test case.

Coming to a study of the recommendations for textiles and cement, it is noteworthy that the two boards approached their problems from different angles. The Cement Wage Board took as its basis the resolution of the 15th Indian Labour Conference that the minimum wage should be "need-based", whereas the Textile Wage Board viewed the introduction of a need-based wage as a "leap forward of a character that the industry would not be able to support", and so contented itself with flat wage increases.

The Cement Wage Board arrived at a total minimum wage of Rs 94 for all unskilled workers in the industry, except in the Gujarat and Saurashtra regions of Bombay State, where it calculated that a higher cost of living would give a minimum requirement of Rs 101. Of this minimum, Rs 3 is to be deducted as the value of amenities provided by the employer, leaving a minimum cash wage of Rs 91 and Rs 98 respectively. This is composed of a basic wage of Rs 52, a house rent allowance of Rs 7.50, and the rest as dearness allowance, which is to be linked to the All India Consumer Price General Index, rising or falling Rs 1.47 for every two points in the index (Rs 1.59 for Gujarat and Saurashtra). These recommendations will result, it seems, in an increase of at least Rs 25 per month for each unskilled worker in the lowest grade, and so the Board has suggested a phased implementation, the second stage being conditional on a study of workloads. (One wonders why this was not broadened into a study of productivity?) Existing piece-rates are to be adjusted so as to enable the operatives to earn not less than the wage recommended for unskilled operatives, and where new piece rates are introduced, provision is made for the joint nomination of an arbitrator if a settlement cannot be reached by negotiation.

On bonus, the Cement Wage Board preferred not to interfere with the "Bombay Formula" of the Full Bench. As the increases recommended in basic wages would conside-

rably increase the burden of gratuity payments, the Board has suggested splitting the period of service for purposes of gratuity calculation into two parts. For the first period up to the date of coming into operation of the recommendations, gratuity should be calculated in terms of the average basic wage earned in the last month or year of the first period; for the second period, gratuity should be calculated in terms of the average basic wage earned in the month or year of service.

To meet the cost of these increases, the Board recommended that Government should examine and revise the retention prices of cement paid to the producers. This, Government have promised to do, without affecting the existing FOR destination price and the price to the consumer.

The Textile Wage Board divided the industry into two categories, the first to cover Bombay City, Ahmedabad, Nadiad, Surat, Phagwara, Hissar, Delhi, Modinagar, Calcutta City, Madras State and Bangalore; the second embracing all other areas. The recommendations of the Wage Board are for a flat increase at the average rate of Rs 8 per month for all workers in the first category from 1 January 1960, and a further flat increase of Rs 2 per month from 1 January 1962; whereas, in the second category, the increases are to be Rs 6 and Rs 2 respectively.

Three-quarters of the dearness allowance of textile workers is to be consolidated in their pay on the basis of 75 per cent of the average DA received during the first six months of 1959. The remaining 25 per cent will remain as DA and be linked with the cost of living index in all centres where such figures are kept, and where there is no such index with the index of the nearest centre which has one. In Madras State, DA is to be increased to give full neutralisation for the rise in the local cost of living index since 1936-39 on minimum wages. This revised system of dearness allowance is rather complicated, involving detailed calculations which may give rise to differences of opinion, and so Government intend to appoint a national tribunal to sort out such difficulties if they cannot be solved by negotiation. Gratuity will be calculated in terms of basic wage up to 31 December 1959, and in terms of basic wage plus the increase now awarded, but excluding the consolidated DA, after 1 January 1960.

Some criticism has been voiced in the press about the different approach of the two boards. Why, say the critics, should Government accept such different principles for the fixation of wages; does it not indicate indecision as to national policy? The recommendations of the Cement Wage Board will lead to standardisation in the industry except for the two areas in Bombay State, but the Textile Wage Board report will only perpetuate the variations in that industry. How, say the critics, can a national wage policy emerge in such circumstances? It certainly looks as if the Government are not thoroughly convinced of the "need-based" wage suggested by the Indian Labour Conference. On the other hand, it must be remembered that every attempt made so far to draw up a national minimum wage policy has foundered on the differences between industries and the great variations in the cost of living in different parts of the country.

But there is a further consideration. Wage boards are not necessarily part of a design which will produce a national wage policy. They are part of the machinery of industrial relations, and their primary object is the peaceful settlement of wage disputes. Is it not a healthy sign that, at the national level, both sides of industry are now prepared for wages to be settled in a fact-finding spirit by their representatives sitting together, rather than in

the heated atmosphere of the industrial courts, with all the delays of legal proceedings? It is certainly carrying out the principle of settlement by negotiation rather than by adjudication. Such settlement cannot be expected to run along similar lines in all industries. What suits one may not suit another. It is surely better for the parties to work out a solution acceptable to them in the present circumstances than to try and force them all to an imposed pattern. One wage board will doubtless be influenced by the findings of another. We have at present two patterns set, and it will be interesting to see whether the jute industry and the plantations will follow either of these or evolve yet another. If eventually a national pattern should emerge, it will be all to the good. If it does not, at least settlement by agreement should bring about a more stable relationship within the industry. It is noteworthy that the Textile Wage Board places as its first joint recommendation that there should be no further claims for revision of minimum wages within next five years. This is surely an achievement, and it would be a pity if the experiment in the voluntary settlement of wages were marred by individual employers showing themselves unwilling to accept the decisions of their industry's representatives. It is all the more important, therefore, that industry's representatives on these boards should be fully informed on regional variations and difficulties, and on the degree of acceptance that any recommendation can command. It should not be necessary to consider placing wage boards on a statutory footing, for, if they are set up voluntarily in an industry, it should follow as a natural corollary that both parties should bind themselves in advance to accept the joint recommendations of their representatives.

Indus Waters

THE negotiations for the conclusion of a Water Treaty between India and Pakistan in settlement of the Indus Waters question are continuing in Washington under the auspices of the World Bank. It is hoped that final agreement on all the outstanding points to be included in the Treaty will be reached within the next two months.

The Treaty would be based on a division of the Indus Waters on the lines of the Proposal made by the Bank to the two Governments in February 1954. Under this Proposal the three Eastern Rivers of the Indus system (Sutlej, Beas and Ravi) would be for the use of India, and the three Western Rivers (Indus, Jhelum and Chenab) would be for the use of Pakistan.

This division of the waters necessitates the construction of works to transfer, from the three Western Rivers, supplies to meet the irrigation uses in those areas of Pakistan which have hitherto depended on supplies from the three Eastern Rivers. The effect of this transfer would be to release the whole flow of the three Eastern Rivers for irrigation development in India, and, as part of the Treaty, India would agree to contribute towards the costs of these works. The system of works to be constructed would, however, provide further substantial additional irrigation development both in India and Pakistan and, as well as irrigation, would develop important hydro-electric potential in both countries. It would also make an important contribution to soil reclamation and drainage in Pakistan, and provide a measure of flood protection in both countries.

It is estimated that the total cost of the system of works to achieve these results would be of the order of the equivalent of \$1,000 million, partly in foreign exchange and partly in local currencies.

The Bank has evolved a plan to finance the required expenditure and has had assurances from certain friendly governments of their readiness to participate in the cost of the Plan, over and above the amounts to be contributed by India and Pakistan and by the Bank itself. The implementation of the financial plan, and the participation of the governments concerned would, of course, be contingent on the ratification of the Water Treaty now under negotiation and would be subject to such parliamentary and congressional action as may in each case be necessary. The participation of each of the friendly governments concerned would be as follows:

A. In Foreign Exchange		
Australia	£A	6,964,286 in grants
Canada	Can \$	22,100,000 in grants
Germany	DM	126,000,000 in grants
New Zealand	£NZ	1,000,000 in grants
United Kingdom	£	20,880,000 in grants
United States	US	\$177,000,000 in grants, and US \$103,000,000 in loans

B. In Local Currency
United States The equivalent of US \$235,000,000

The President of the World Bank is prepared to recommend to the Bank's Directors that the Bank should participate with loans to India and Pakistan of the order of \$103 million.

The Bank's financial plan envisages that all construction contracts would be open to competitive bidding, and that the foreign exchange

contributions would be freely useable for purchases anywhere in accordance with procedures similar to those followed by the Bank in its normal operations.

The costs of the construction programme would be spread over a period of approximately ten years, and the general supervision of the programme would be undertaken by the Bank.

Kerala Budget

UNLIKE the Finance Ministers of most States, Mr R. Sankar, Kerala's Deputy Chief Minister, who is also in charge of the Finance portfolio, has an arduous task in managing the finances of his State. The revenue Budget for 1960-61 shows a deficit of Rs 1.99 crores as receipts and expenditure are placed at Rs 42.95 crores and Rs 44.94 crores respectively. The deficit has been left uncovered. The revised estimates for 1959-60 put receipts at Rs 39.53 crores and expenditure at Rs 40.56 crores, thereby showing a deficit of Rs 1.03 crores. The Budget for 1959-60 anticipated a deficit of only Rs 0.72 crores. The Capital Budget for 1960-61 places the estimated expenditure at Rs 9.06 crores as against Rs 8.77 crores in the revised estimate for 1959-60. An open market loan of Rs 4.40 crores is to be floated next year.

While it is to be admitted that the anticipated deficit next year is not of such a magnitude as to be made much of, it is at the same time not of such small proportion as can be

taken complacently. There is nothing extraordinary in the uptrend in expenditure. This is a common phenomenon in other States also. But, in Kerala, revenue receipts are not displaying the buoyancy that characterises those in most other States. Referring to the inelasticity of the State's revenue while expenditure is maintaining its uptrend, Mr Sankar has pointed to the limited scope of tax revenue. There does not appear to be any source still left untapped in this regard—on the contrary there appears to be a case for reduction of taxes—as many new taxation measures have been introduced in recent years. According to him, there are only one or two among the tax sources which may still be expected to fetch increased receipts. In view of the fall in the price of tea and on account of the land policy, an increase in revenue from Agricultural income tax is unlikely. This leaves only sales tax which continues to be a major source of income for the State. Excise is another source that is still netting a satisfactory income.

Mr Sankar has, however, spoken hopefully about the future. Industrialisation may be expected to be speeded up as the new Government propose to give encouragement to private enterprise. It is hoped that the State will secure due recognition of its needs in the matter of outlay under the Third Plan. Food production should continue to receive Government's close attention as there is a sizable gap to fill between requirement and indigenous output. As against a requirement of 1.6 million tons of rice, production at present is barely 900,000 tons. Mr Sankar is, however, confident that self-sufficiency in rice can be attained by the end of the Third Plan without even the need to increase to any appreciable extent the area under paddy. This will, of course, require the expansion of irrigation facilities and the supply of manure in large quantities. Coconut production is also to receive increased attention.

Mr Sankar's Budget speech necessarily gives only the broad outlines of Government policy because there has been too little time between the assumption of office by the new coalition Ministry and the presentation of the Budget. The programme of expenditure now proposed is only of a preliminary nature and the "final picture" will be presented to the Legislature at its next session. The short review of the State's economic situation given by the Finance Minister contains an indication of the manner in which the various problems are proposed to be tackled. There is, first, the need for augmenting revenue, and Mr Sankar has rightly concluded that the scope for taxation is limited and therefore more attention should be paid to non-tax revenue. The prospects are good in this regard because there is a big leeway to be made up in industrialisation which has not been attended to seriously so far for one reason or another. Now that the Government to which Mr Sankar belongs promise to make a realistic approach to the needs of the private sector, entrepreneurs may be more enthusiastic than they have been for some time past. It is also a happy augury that the State Government are earnestly considering steps to expand rubber production as well as other plantation crops. It is to be hoped that, when Mr Sankar presents his full picture of the State's economy, the realistic approach to the problems of the State, of which there are indications in the Budget speech, will be better revealed.

Rajasthan Budget

A SIMULTANEOUS attempt to cut down expenditure and augment revenue is the significant feature of the Budget for 1960-61 presented to the State Legislature by Mr Hari-

bhau Upadhyaya, Finance Minister of Rajasthan. With revenue receipts and expenditure estimated for the Budget year at Rs 45.15 crores and Rs 45.89 crores respectively, there is a deficit of Rs 74 lakhs. Mr Upadhyaya, however, expects that the deficit will be converted into a surplus of about Rs 16 lakhs as a result of fresh taxation measures announced and some other adjustments. Capital expenditure is estimated at Rs 27.22 crores. The State Government have proposed to raise Rs 5 crores from public loans during the next year.

New taxation is expected to net a total of Rs 90 lakhs. With the bringing into the purview of sales tax of 47 items which will bear tax at rates ranging from half a per cent to 7 per cent (all other commodities bear sales tax at the rate of 4 per cent) an additional sum of Rs 35 lakhs is anticipated from sales tax. Surcharge on revenue will yield Rs 10 lakhs. An additional excise income of Rs 7 lakhs is expected as a result of the slight changes in the State excise duty rates. There will be an increase of Rs 4 lakhs under duty on motor spirits purely on account of the adoption of the metric system. Purchase tax and stamp and court fees will yield Rs 6 lakhs and Rs 3 lakhs respectively. The proposed economy in administration is estimated to yield Rs 25 lakhs. Mr Upadhyaya has endeavoured to put into practice what is still largely a pious wish elsewhere in the country. Everybody in the country, not excluding the ministers themselves, are declaring loudly that the cost of administration should be kept down. Rajasthan's Finance Minister has shown how it can be done. What he has proposed involves no retrenchment, but applies to fresh appointments. Government have decided to enforce an ad hoc cut of 5 per cent in the ministerial and 10 per cent in Class IV services.

Mr Upadhyaya has warned against both complacency and undue perturbation about the finances of the State. True, the Second Plan has proceeded satisfactorily to justify the hope of reaching the targets set. But this does not mean that the people of the State can relax their efforts because even bigger tasks lie ahead during the Third Plan period. The fact that the State's loan liability to the Centre is of the order of Rs 87.31 crores need cause no alarm because assets far in excess of the liability have already been created. According to Mr Upadhyaya, as a result of the additional irrigation facilities created in the course of the past few years, there will be considerable additions to revenue resources. A large portion of the capital expenditure is also expected to be covered by the sale of land and betterment levy in the areas where major irrigation projects have been completed.

Bombay Budget

THE Budget presented by Dr Jivraj Mehta to the Bombay Legislature last Friday is the last Budget of the Bilingual Bombay State. A full fledged detailed Budget is not possible for the simple reason that the bilingual Bombay State itself will cease to exist in about a month's time. From 1 May, the two unilingual States, Maharashtra and Gujarat, will come into being and consequently there will have to be two sets of accounts.

The Budget shows that revenue is estimated at Rs 150.06 crores and expenditure at Rs 149.09 crores, leaving a small surplus of Rs 7 lakhs. A "Vote on Account" for a sum of Rs 92.11 crores is sought by the Finance Minister to cover the estimated expenditure of the bilingual Bombay State up to 1 May, and thereafter of the residuary Bombay State for the next four

months. The expenditure of the Gujarat State during the period will be authorised by the Governor.

Of the revenue receipts of Rs 150.06 crores, the biggest single contribution is from Sales Tax (Rs 36.5 crores) with the contribution from the Centre in respect of the State's share of Excise and Estate duties and taxes on railway fares coming a close second (Rs 31.09 crores). Of the estimated expenditure of Rs 149.59 crores, Education gets the pride of place with Rs 26.58 crores with Medical and Public Health getting Rs 11.65 crores. Capital expenditure is estimated at Rs 47.75 crores of which nearly half goes to Irrigation.

How strong the bilingual State has been financially, is revealed in the rapid growth of its revenues in the course of the past few years. In the first full year of the enlarged State, that is 1957-58, receipts were placed at Rs 128.35 crores and expenditure at Rs 115.08 crores. In 1960-61 receipts and expenditure are placed at Rs 150.06 crores and Rs 149.59 crores respectively. Dr Mehta ascribes this remarkable improvement to the full cooperation of the people of the State for all the measures aimed at increasing the State's revenue. This readiness to shoulder the increasing tax burden also shows that the planned development under the Second Plan has had its impact on the economic condition of the population.

The bilingual State has done well during the Second Plan period in the matter of implementation of Plan projects. It is now estimated that about 70 per cent of the total outlay of Rs 350 crores will have been spent by the end of the current year. Dr Mehta expects that the full Plan outlay will be covered by the end of the Plan period next year. The annual Plan outlay in 1960-61 for Maharashtra and Gujarat are Rs 66.77 crores and Rs 34.09 crores respectively.

SPECIAL SECTION

[In the course of the last two weeks, Central Government Ministries have published their Reports for 1959-60. This Special Section summarises such reports as have been received.]

Commerce & Industry

AMONG the heartening trends in the industrial sector which have been in operation in 1959-60 and which are highlighted in the very valuable and informative report of the Commerce and Industry Ministry for the year are the ones relating to the rise in the level of industrial production, better utilisation of capacities in a number of industries, greater encouragement and assistance to the private sector and the increasing complementarity between the two sectors—public and private. In the first place, the rise in the index of industrial production for the first ten months of 1959 by 10.4 points over the previous year's figure, as compared with an increase of less than 2 points in 1958 over 1957, is all the more remarkable, considering the tight foreign exchange position which has continued to prevail during the year. "Actually the increase in industrial production has been even larger than the index would suggest." In emphasising this fact, the report has rightly pinpointed three defects in the present index, namely, that the base year for it is 1951, that new items, the production of which has started after that date, do not enter into it and that the weightage in favour of traditional industries like cotton textiles, jute textiles and sugar is very heavy in the index as composed at present. If the index, with such defects, does not adequately reflect the progress of industrial production, it is high time a more reliable index with a more appropriate base year was constructed and maintained. The Commerce and Industry Ministry may well note that critics, especially the more uncharitable ones, have neither the time nor the patience "to consider generally the progress made by our newer industries."

Apart from the need for a new index of industrial production, there is the need for a more systematic presentation of year-to-year trends in the matter of utilisation of installed capacities. As it is, the only information available regarding better utilisation, if any, of capacity is contained in the 10th column of the Statistical Appendix on "Industrial capacity and

Production in Major Industries" to the Commerce and Industry Ministry's report. Even here, it is not always clear whether the rise, if any, in production has been really due to better utilisation of idle capacity in some units or due to any increase in the total installed capacity as such. For example, the increase in actual production of agricultural implements from 14,000 tons in 1958 to an estimated 15,886 tons in 1959 is stated to be due to better utilisation of capacity. But, actually in this case, the installed capacity itself has increased from 19,696 tons in 1958 to 23,788 tons in 1959. It is, of course, possible that new capacity may have been installed too late in the year to be of any consequence in terms of actual production. And it is also possible that the production plan itself of a unit has provided only for a staggered utilisation of capacity. In view of these considerations, it may be necessary to go by the word of the Commerce and Industry Ministry according to which the industries recording increases in production in 1959 (as compared to 1958) through better utilisation of capacities are as under:

Agricultural implements; bolts, nuts and rivets; chains; conduit pipes; razor blades; sewing machines; shafting; steel pipes and tubes; steel structural; typewriters; welding electrodes; wire ropes and stranded wire; wood screws; zip fasteners; diamond drill bits; H.T. insulators; sanitarywares; sheet glass; viscose staple fibre; vegetable tanning of hides; and glue.

The fact that there are substantial unutilised capacities in a number of other industries does not, however, detract from the trend of better utilisation of capacity in the above relatively minor industries.

As regards encouragement and assistance to the private sector, it is noteworthy that there has been an increased licensing of capital goods to the private sector during 1959 "to sustain the momentum of development in the vital sectors of the economy." The facts in this connection refer to approvals for capital goods imports for the following industries:

	(Rs crores)
Paper	29.4
Basic chemicals	13.2
Automobile industry	6.3
Non-ferrous metals	5.4
Cotton textiles	13.5
Engineering industries	4.9
Re-rolling and secondary fabrication of iron and steel	5.8
Refractories	2.5
Rubber	2.2
Total	83.2

Actually, the total value of approvals for capital goods imports is as much as Rs 97 crores if approvals against inflow of fresh foreign private capital on deferred payments and on cash basis are also included.

Another trend of greater encouragement to the private sector has been in evidence in the sphere of licensing of new industrial schemes under the Industries (Development and Regulation) Act. Noteworthy here are certain decisions to speed up licensing work. In particular, for industrial machinery and a number of other items, it has been decided that individual applications need not be placed before the Licensing Committee. The firms concerned may apply straight away for import licences for capital goods; once these are granted, they will be able to proceed with the project and get the Industries Act license as a matter of course. It has also been decided to accord speedy approvals, subject to certain condition, to applications from undertakings for diversification of production. Even applications for additional capacity in regard to certain items where there is sufficient capacity in the country already are to be rejected only for a specified period. Thanks to such liberalisation in licensing, the number of new industrial schemes approved in the period October, 1958—September 1959 under the Industries Act has reached the record level of 1963—composed of 412 licences for establishing new industrial undertakings, 351 for substantial expansion of existing units and 200 for the manufacture of new articles. This may be compared with the trend of licensing in 1958, for which the figures are given in the table below:

State	Schemes approved	Licences issued
Andhra Pradesh	16	15
Assam	6	6
Bombay	330	271
Bihar	17	15
Kerala	14	16
Madhya Pradesh	8	5
Madras	59	73
Mysore	11	14
Orissa	6	9
Punjab	32	39
Rajasthan	13	6
Uttar Pradesh	48	45
West Bengal	140	123
Andamans	—	1
Delhi	31	11
Himachal Pradesh	2	—
Total	733	649

Since an unknown number of approved applications in the 1958 total of 733 approvals must have been for regularising the activities of industrial undertakings which were already in existence but had not obtained the necessary licences, the total of 963 approvals in the latest period probably represents a 50 per cent increase. In a way, this is an index of the increasingly favourable climate for private enterprise in the country.

This climate will be even more favourable in the years to come when the factor of complementarity between the public sector and the private sector begins to operate fully as it must in the wake of establishment of basic industrial projects in the public sector. To quote from the report of the Commerce and Industry Ministry:

"The projects in the public sector will provide a basis for the further expansion of production and capacity in the private sector. The increased production of steel in public sector plants will encourage the expansion of engineering industries in the private sector. The availability of basic chemicals and intermediates from indigenous sources will make the production of drugs, dyestuffs and plastics less dependent on the availability of foreign exchange for the import of raw materials. The increase in machine building capacity will enable industries in India to expand their capacity without having to depend upon imports and the consequent expenditure of foreign currencies. Development in the public sector will be complementary to and augment the capacity which is being set up in the private sector."

There is absolutely no exaggeration in this official statement. If anything, it is an under-statement so very characteristic of some Government reports. Be that as it may, can there be a more fitting reply to the Swatantra scare-mongers?

[The Report of the Finance Ministry was dealt with in Olympus, page 470, issue of 12 March 1960.]

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

54 years strong

The Canara Banking Corporation Limited

is today working with a fine network of 53 branches spread over the States of Mysore, Madras, Andhra Pradesh, Kerala, Bombay and West Bengal and agency arrangements throughout the Country.

Careful and cautious in following its advances policy and guaranteeing cent per cent safety and security for the hard-earned money of all its depositors, it is well suited to all your Banking requirements.

Its Branch in Calcutta City:
3 1/2 (First floor) ARMENIAN STREET
(Phone No. 22-6263)

It's the oldest of all the Scheduled Banks founded in the State of Mysore!

Food

The report of the Department of Food in the Ministry of Food and Agriculture for 1959-60 discloses that the general food position showed considerable improvement during 1959 consequent on the increased output of 73.5 million tons of foodgrains. But, because the increase in the flow of supplies to the market was not commensurate with the rise in output, the improvement in the price situation fell below expectations. This inevitably entailed the continuation of the regulatory measures such as selective control on bank credit against foodgrains, ban on forward trading in foodgrains, zonal arrangements, licensing of foodgrain dealers and millers and ban on open market purchases of wheat by roller flour mills in most States.

The production of foodgrains at 73.5 million tons during 1958-59 compares with 62.5 million tons during 1957-58. The production of rice increased from 24.9 million tons in 1957-58 to 29.7 million tons in 1958-59, while output of wheat rose from 7.7 million tons to 9.7 million tons in the corresponding period. Production of cereals at 61.3 million tons was higher by more than 8 million tons than production in 1957-58, which stood at 53.0 million tons. Production of pulses increased from 9.5 million tons in 1957-58 to 12.2 million tons in 1958-59.

Under the impact of the increased production, prices started a downward course and, by May 1959, the index for cereals as a whole had declined to 99 from 115 in September 1958. With the onset of the off-season, this trend was reversed and prices began to move up again, though, on the whole, they remained considerably lower than those in the corresponding period of 1958 in most parts of the country.

During 1959, there was considerable extension of state trading activities with respect to purchase and distribution of foodgrains. Total purchases of rice and paddy both by the Central and State Governments amounted to 1.39 million tons as compared with 461,000 tons in the preceding season. However, the experience in respect of state trading is disclosed to have been not quite happy in the deficit or marginally-placed States, where the flow of market arrivals was adversely affected. Four State Governments—West Bengal, Bihar, Madras and Mysore—had to discontinue purchases.

The sugar situation in 1959 is reported to have remained tight, and is traced to lower production at 1.92 million tons in 1958-59 against 1.98 million tons in the previous year and to the increased offtake from factories at 2.08 million tons against 2.04 million tons in 1957-58. The steps which the Government took to keep the situation under check included discontinuation of exports, continuation of the control over ex-factory price of sugar produced by factories in UP, North Bihar and Punjab, licensing of wholesale dealers, delegation of powers to district officers to fix sale prices of sugar, taking over of the entire production of sugar factories in UP,

North Bihar and Punjab for controlled distribution, allotment of specific quotas to various states and suitable restrictions on the movement of sugar.

Agriculture

Thanks to favourable weather conditions and the various developmental measures, including the rabi production campaign carried out by the Union Ministry of Food and Agriculture, agricultural production touched a record level in 1958-59. The annual report of the Department of Agriculture in the Union Ministry of Food and Agriculture states that the overall index of agricultural production (with 1949-50 as base) rose to 131.0, showing an increase of 14.3 per cent over the previous record of 123.6 for 1956-57. The production of foodgrains was at the high level of 73.5 million tons, jute about 5.2 million bales, oilseeds 6.9 million tons and sugarcane (in terms of gur) 7.2 million tons; only the production of cotton remained at the same level as in the previous year.

For the most part, the increase in production reflects the acceleration in the implementation of development programmes in the direction of intensive cultivation. In this connection, the report states that minor irrigation works which yield quick results were given special emphasis. The total outlay sanctioned to the States and Union Territories for this programme during the year amounted to Rs 20 crores. On the basis of present progress, the target of extending irrigation facilities to an additional area of 9 million acres through minor irrigation during the Second Plan period is expected to be achieved.

Central assistance to the tune of Rs 4.7 crores for the setting up of seed farms enabled acceleration of activities in this field. The number of seed farms already established is placed at 2,700. Of this, over 2,400 farms are reported to have started producing improved seeds. In respect of chemical fertilisers, there was a shortfall in supplies to the extent of about 700,000 tons. Against demand estimated at 1.88 million tons, internal availability amounted to only 1.19 million tons, but foreign exchange shortage precluded large imports.

In respect of cash crops such as sugarcane, cotton, jute and oilseeds, the report reveals increased tempo in development work. In the field of sugarcane, the extension of intensive manuring to attain a target of 2.9 million acres was the highlight of activities. Under the cotton extension schemes, loans amounting to Rs 40 lakhs were sanctioned for purchase of fertilizers and Rs 35 lakhs for the purchase of improved seeds. For the development of jute, the area under improved seeds went up to 80,000 acres in 1958-59, as compared with 57,000 acres in the previous year.

Steady progress is also disclosed in the sphere of animal husbandry, dairying, fisheries and forestry. Setting up artificial insemination centres, key villages extension centres and development of feed and

fodder resources went apace. In the sphere of soil conservation, the programme undertaken included 180 schemes designed to benefit an area of 946,000 acres involving central assistance amounting to Rs 3.8 crores.

Community Development

The report of the Department of Community Development claims that more than 179 million, or about 61 per cent of the total rural population of the country, had come within the orbit of Community Development programme by October 2, 1959, when the programme had been extended to 2,708 (in addition to 403 pre-extension) Blocks. Peoples' contribution, since the inception of the programme in 1952, is valued at Rs 79.75 crores as against total Government expenditure of Rs 153.97 crores. The most significant development during the year was the implementation of the scheme of Panchayat Raj, and devolution of responsibility for planning and execution of the CD programme on the people themselves.

The activities under the programme cover improvement of agricultural practices, minor irrigation, animal husbandry and fisheries, handicrafts and small industries, public health, housing, social education, tribal welfare and special programmes for women and children. During the year, the Department brought out 71 publications in English and Indian languages, and distributed 22 films produced by the Ministry of Information and Broadcasting for the Ministry of Community Development and Cooperation. More than 400 distinguished visitors, including President Eisenhower, President Voroshilov and the Prime Ministers of Sweden, Afghanistan and Nepal visited Community Development areas and saw the programme in action.

Cooperation

In view of the current controversy over cooperative farming, considerable interest attaches to the report of the Department of Cooperation, which has been transferred to the Ministry of Community Development and Co-operation by a Presidential Order dated December 30, 1958. The Department expects that 67,000 service co-operatives will be functioning within the next twelve months. So far, 15,000 service co-operatives have been set up as at November, 1959, and the target of 39,000 societies for 1959-60 is expected to be achieved by June, 1960. Reorganisation of rural credit societies, of which there were nearly 168,000 by the end of June 1958, into service co-operatives, where necessary, is expected to complete the target by the end of the Second Plan.

The volume of short and medium credit extended by co-operatives is estimated at Rs 125 crores during 1958. This is expected to increase to Rs 190 crores by the end of the Second Plan, only Rs 10 crores below the target. An expert committee has been set up to examine the question of expansion of cooperative credit to farmers.

Considerable progress has been made in the establishment of market-

ing societies, of which 1,063 were organised during the first three years of the Plan. More than 800 are to be established in the remaining period of the Plan, which had set the target of 1,900 marketing societies. Cooperative factories accounted for 10 per cent of the country's total sugar production in the 1958-59 crushing season. Up to end of March 1959, Government had contributed Rs 334 lakhs to the share capital of these factories, and during 1959-60 another Rs 100 lakhs would have been contributed.

Irrigation and Power

The review of activities of the Ministry of Irrigation and Power for the year 1959-60, reveals a marked improvement in the utilisation of irrigation potential created by medium and major projects during the first three years of the Second Plan period. The utilisation at the end of 1958-59 was 82 per cent of the potential created by the First and Second Plan schemes at the beginning of the year. In terms of million acres, the potential created and utilised in 1956-57 were 5.3 and 3.4 in 1957-58, 6.2 and 4.9 and in 1958-59 7.2 and 5.9.

A significant achievement in the year was the completion by the National Projects Construction Corporation of the Wazirabad Barrage on the Yamuna in the Union Territory of Delhi in the space of one working season.

Referring to the progress made by major projects, the report points out that the first stage of the Hirakud Project has almost been completed and that it has been decided to hand over the project to the State Government on 1st April, 1960. In the DVC, the Panchet Hill Dam was completed and the hydro-electric power station, with a generating capacity of 40,000 KW, put into commercial operation. A significant feature of the implementation of these projects was that most of them generally adhered to the schedule of work drawn up for the year.

In regard to development of power, the report says that the Second Five Year Plan provides for an increase of 3.5 million KW in the installed generating capacity of power plants in the country. During the first three years of the Plan, the installed capacity increased by 0.9 million KW. During the year under review a total of 557,000 KW is likely to be added. However, in view of the foreign exchange difficulties, the possibility of achieving the target for power is not considered likely.

Referring to the work of the Power Wing of CW & PC, the report states that the State Governments and project authorities were afforded assistance in connection with the examination of tenders for generating plant and equipment required for various schemes under execution.

Communications & Civil Aviation

Further strides have been made in civil aviation during the past year. The annual report of the Department of Communications and

Civil Aviation for the year 1959-60, which gives detailed information about the progress of civil aviation, also covers the activities of the Departments of Meteorology, Overseas Communications, Wireless, Planning and Co-ordination, the administration of railway inspection and the working of the Indian Telephone Industries.

The two air corporations, Air India International and the Indian Airlines Corporation, have continued to make steady progress during the year under review. A notable development in Air India International is its active preparation for the inauguration of the jet flights. Two of the three Boeing 707 jet aircraft on order at a total cost of Rs 11.50 crores were received in February and in early March 1960. The third Boeing is due to be delivered before the end of the current financial year. An order has been placed for the fourth, which is expected to be delivered in April 1961. The jet operations are expected to commence from April this year. The operations of the Corporations were disrupted for a week in January due to the pilots' strike which, however, was amicably settled.

The Indian Airlines Corporation's fleet strength was reduced to 75 aircraft from the previous year's strength of 80, but there is a progressive improvement in the capacity ton miles operated. The question of selection of suitable aircraft to replace the Dakotas (the Corporation has 57 Dakotas) is still under consideration, but, in the meanwhile, five Fokker Friendship aircraft at a cost of Rs 234.21 lakhs on the basis of a barter deal are to be acquired. From 64.075 million in 1958-59, it is estimated that the capacity ton miles operated in 1959-60 would be of the order of 66,380 million. Under agreements with the Punjab and Rajasthan Governments, the Corporation has started new services, and its winter schedule included provision of additional services. The Civil Aviation Department controls 85 aerodromes and steady progress was maintained in the provision of ground facilities for the operation of air services.

There has been an all round increase in production at the Indian Telephone Industries, Bangalore, during the past year compared to earlier years. It may be noted that the annual targets for the Second Plan period had already been exceeded as early as in 1958-59. It is expected that the Second Plan target of 3,20,000 telephones and 2,15,000 lines will be far exceeded by March 1961. The emphasis in the operation of ITI is now on diversification of production with increased attention devoted to the fuller exploitation of indigenous sources of supply. A new telephone has been developed, which is new in appearance, size and performance. The large scale production of this new telephone is expected to be taken in hand shortly. ITI has also taken up for development and manufacture a number of items of equipment required for the Railway Electrification project. As these items are not made in India, their production by ITI will help conserve foreign exchange.

The total value of sales in ITI during 1959-60 is estimated at Rs 359 lakhs as compared to Rs 344.5 lakhs during the previous year.

Transport

The annual report of the Department of Transport, Ministry of Transport and Communications, for 1959-60, contains much information that will be carefully noted by a wide section of the community. The special importance of this Department's report may be said to stem from the fact that it deals with some of the sectors of economic activity which are still largely in the hands of private enterprise. The recommendations of the Road Transport Reorganisation Committee are now under examination by the Central Government in consultation with the State Governments. Another Committee has been set up under the Chairmanship of Mr K. C. Neogy to examine the questions relating to co-ordination between modes of transportation, particularly rail and road transport, and their future development and to draw up the broad outlines of a national transportation policy. The target laid down in the Nagpur Plan in respect of mileage of roads has been fully achieved and good progress is being made in respect of National highways and roads other than National highways.

The merchant marine has recorded satisfactory progress during the year. The total Indian owned tonnage as on 31st December, 1959, stood approximately at 739,000 gross tons as compared to about 638,000 gross tons at the end of 1958. Some of the significant developments affecting Indian shipping during the year are the constitution of a Statutory Shipping Development Fund with a sum of Rs 1 crore to start with, and the setting up of the National Shipping Board on 17th March, 1959 as a permanent Statutory Body under the Merchant Shipping Act, to advise Government on all policy matters relating to Shipping. The report notes that the two Government shipping concerns, the Eastern Shipping Corporation and the Western Shipping Corporation, made net profits of Rs 15.32 lakhs and Rs 2.60 lakhs respectively and that their total tonnage at the end of the year were 69,602 GRT and 31,400 GRT respectively.

As regards the Second Shipyard, the report says that the Government of India have decided that, subject to the results of further investigations into the soil conditions being satisfactory, the second Shipyard should be located at Cochin at the site recommended by the UK Shipyard Mission. The Inland Water Transport Committee submitted its report in June 1959, and its important recommendations are the setting up of country boat co-operatives, training establishments, and technical organisation of the Centre and in the States. The first meeting of the Sub-Committee of the Road and Inland Water Transport Advisory Committee recommended that one or more pilot co-operative societies should be organised in the States where country boats were strong enough for towing and traffic justified it. Development of tourism has received further fillip during the year

under review and plans in this regard have been formulated by the Central and State Governments. The number of foreign tourists visiting India has progressively been increasing in the past few years. The number has quadrupled since 1951. The number of foreign tourists (excluding Pakistanis) during the year 1958 was 92,202 and 75,512 during the first nine months of 1959. The earnings from tourism have also shown a sizable increase in recent years.

Posts & Telegraphs

That the Posts and Telegraphs Department continues to maintain steady progress in all the spheres of its activities is attested to in the report of the Ministry of Transport and Communications (Posts and Telegraphs) for 1959-60. The staff employed by the Department was 336,000 on 31 March 1959 and is estimated to exceed 350,000 on 31 March 1960. The reconstitution of the P & T Board with effect from 14-12-59 with enhanced administrative and financial powers was a step of far-reaching significance.

Considerable progress is reported in the opening of new post offices. The total number of post offices in existence on 31 March 1959 was 64,993. During the period from 1 April to 31 December 1959, 2,716 new post offices were opened and another 2,082 post offices are proposed to be opened by 31 March 1960. The introduction of air parcel service to the People's Republic of China and Soviet Russia, and the introduction of insured Airmail Letter Services to Aden, British East Africa, Burma, Japan, and Pakistan were notable achievements.

Progress in the extension of telegraph facilities to the rural and undeveloped areas was also steady. At the end of December 1959, only three District Towns out of 329 in the whole country, five out of 500 sub-divisional towns and 125 out of 1,356 headquarters of tehsils and corresponding units remained without telegraph facility. The total telegraph offices increased from 5,895 to 5,939. At the same time, the main telegraph network was expanded by 3,500 channel miles between 1 April and 31 December 1959.

The liberalised policy for providing telephone facilities permitting the opening of exchanges at the district headquarters and PCOs at sub-divisional headquarters towns continued to be operative. The number of sub-divisional towns without telephone facility by the end of December 1959 was 58. 26,336 new exchange lines added during the period from 1 April 1959 to 31 December 1959 numbered 26,336, taking the total of direct exchange lines to nearly 296,000. New telephone exchanges were opened during the period 1 April 1959 to 31 January 1960. During the period under review, 81 exchanges were expanded or rehabilitated.

Mines & Fuel

1959-60 is particularly notable year for the Department of Mines and Fuel in the Ministry of Steel,

Mines and Fuel, in that it has seen the incorporation of the Indian Oil Company Limited, a new Government entity under the Indian Companies Act. The Company will be responsible mainly for taking over the product of the two refineries in the public sector—one at Nummati in Assam and the other at Barauni in Bihar—to be set up by the Indian Refineries Ltd. The Nummati Refinery is to be built with the assistance of the Rumanian Peoples' Republic. The work relating to the erection of the refinery is expected to be completed by about March 1961. The other refinery, Barauni, is to be built in collaboration with the USSR. This refinery is expected to be in full scale production by 1963. Mineral oil prices received the special attention of the Ministry during 1959-60, and though oil companies have agreed to a total reduction of Rs 9 crores per annum, the annual report of the Ministry notes that the ceiling prices for consumers have remained unchanged because of additional duties payable by the companies. The Oil and Natural Gas Commission are intensifying their work as more and more areas likely to yield oil are being brought under the drill.

Work in connection with the integrated Neyveli Lignite Project has made satisfactory progress during the year under review. The lignite mine is expected to commence production early in 1961 and attain full production by the middle of 1963. The first unit of the power station is expected to be commissioned by the middle of 1961 and the entire power station by the middle of 1962. The scheme for the setting up of a fertilizer plant at Neyveli for the production of 152,000 tons of urea per annum has been sanctioned. It is now estimated that the total cost of the lignite project will amount to Rs 86 crores as against the original estimate of Rs 68.90 crores.

The section of the annual report dealing with Coal vouchsafes the information that the working of the National Coal Development Corporation during the past year has been satisfactory and that indications are that the Corporation will be able to attain the target set for it under the Second Five-Year Plan. Improvements have been noticed both in production and despatches of coal in the country as a whole during the year. The total raisings in India during the year 1959 amounted to about 47 million tons and despatches to 41.3 million tons. The corresponding figures for 1958 were 45.3 million tons and 40.34 tons. Exports of coal, however, were lower in 1959 at 1.43 million tons as against 1.67 million tons in 1958. Private sector collieries accounted for about 40.3 million tons in 1959. Voluntary amalgamation of collieries with the assistance of the Committee set up by Government in the previous year has made only moderate progress, and the Committee is taking the necessary steps to accelerate the progress of voluntary amalgamation. An important development during the year was the submission of the long awaited report of the Coal Prices Revision Committee which had been appointed in May 1957. The original and supplementary recommendations of the

Committee have been accepted by Government and the Committee's recommendations in regard to hard coke are under examination by the Government. The Coal Council is of the view that the coal production target for the Third Plan should be nearer 110 than 100 million tons.

Defence

The latest statement of the activities of the Ministry of Defence tabled in Parliament last week reveals the remarkable progress made by the Services. It is reported that necessary adjustments in the civil and military forces have been adopted in the border areas to meet the situation precipitated by the Chinese incursions. The Army took full operational control of the border posts as well as the civil forces deployed in the borders.

The morale and proficiency of the army was maintained through vigorous training programmes in the various Training Institutions. To impart special training to officers of the rank of Colonel and above, it has been decided to establish a National Defence College in India at the Imperial Defence College of London. Apart from this, a college on the lines of Kitchner College will be established in Nowgong for training promising "Other Ranks" for entry into the commissioned ranks.

The year 1959 witnessed a gradual expansion in all spheres of activities in the Indian Navy. The naval construction programme gathered momentum with the commissioning of ships both in the UK and in India. The Fleet has been augmented by the addition of Anti-Submarine Frigates, INS Kirpan and INS Kuthar, and more ships are expected to arrive from the UK during this year. It is quite encouraging to note that a beginning has already been made in building small ships for the Navy in the country.

The starting of a number of specialist courses provided the highlights of Naval training. The high standard of training imparted to the Navy was well evidenced by the successful performance of ships, aircrafts and personnel during the manifold exercises conducted by the Fleet. It is quite heartening to record that practically the entire training of officers and men, except some highly specialised courses, is undertaken in the country.

The Indian Air Force also made considerable headway. Two Auxiliary Air Force Squadrons have been formed, one at Bhubaneswar and the other at Chandigarh. Jet training has been introduced in the Delhi, Madras and Bengal Auxiliary Force Squadrons.

The Defence Production Organisation was responsible for the overall defence effort for meeting the requirements of the Services by maximum utilisation of the existing production capacity and creating new capacity both in Ordnance Factories and in the civil sector. The value of overall output of the Ordnance Factories was to the tune of Rs 20 crores during 1958-59. The most remarkable feature of the production in the Ordnance Factories

has been that the increase in output has been achieved without addition to the labour strength. Thanks to the introduction of improved methods and techniques of production, there has been a progressive reduction in the cost of production of many items. Besides, the enhanced and new indigenous production of armament, ammunition and other stores for the Services and production of goods for civil trade, the Ordnance Factories have helped to accelerate the pace of the country's industrialisation and helped in conservation of foreign exchange to the tune of Rs 16 crores during the period 1957 to 1959.

To provide military training to students on a substantially larger scale than hitherto, it has been decided to raise a NCC Rifles. The strength of the NCC will be raised to 250,000 by the 31 March 1961.

Education

The progress achieved by the various schemes of the Union Education Ministry as well as the programmes drawn up for the Third Plan are set out in the annual report of the Ministry for 1959-60. A programme of universal free and compulsory education, including a scheme for training an adequate number of teachers for the purpose, has been formulated. To advise on the special problems of women's education, a National Council of Women's Education has been set up. Grants amounting to Rs 30 lakhs were given to 119 institutions to provide special condensed courses of two years' duration to meet the special needs of adult women by the Social Welfare Board. During the year, model legislation for compulsory education was prepared and sent to State Governments for their guidance. Measures taken to improve secondary education include organisation of science clubs, establishment of 54 Extension service departments to provide "in-service training" to secondary teachers, provision of audio-visual facilities, guidance services, organisation of workshops and libraries, etc. A Central Examination Unit has been set up for the promotion of examination reform. There are now 313 School Science clubs in the country. Under a scheme formulated in 1956, 40 teachers were sent abroad for training in Science teaching. Next year's programme of the Ministry for fostering science includes organisation of science fairs and search for science talent. For promoting research in Secondary Education, grants amounting to Rs 1,03,399 were sanctioned during the year for 24 research projects in Teacher Training Colleges and University Departments of Education. Under the Scheme of National Awards to Teachers, 71 primary and secondary school teachers received awards for outstanding service.

The report states that almost all universities have accepted the Three Year Degree Course, and 22 universities have actually introduced it. Six universities have been selected for grant of assistance to conduct seminars, to undertake preparation of reading materials and to obtain equipment under a scheme drawn up to give further impetus to General Education. The Ford Foundation in

India has agreed to make a grant of \$50,000 for the purpose.

In addition to those mentioned above, the activities of the Ministry cover social education, and social welfare, scholarships, physical education and recreation, and spread of Hindi. During the year, the Central Social Welfare Board made grants totalling Rs 47.35 lakhs to 2,130 voluntary organisations. The Board also established 169 Welfare Extension Projects of the coordinated type, bringing the total number to 673.

Home

Reorientation of the administrative services, to the needs of a Welfare State in the making, is the principal problem of planned development. It is not enough to ensure professional skill and efficiency of Government servants; they should also have "wider outlook, greater adaptability and a deeper realisation of the ethics and obligations of public service." The Ministry of Home Affairs, which exercises overall control over the recruitment, training and promotion of public servants, as well as over disciplinary action when the regrettable necessity arises, has the primary responsibility for maintaining these essential attributes of public service. The report of the Home Ministry for 1959-60 sets out how it is dealing with this two-fold problem and the success attending its efforts.

The organisational matters of the Ministry was revised toward the end of 1958 to achieve expeditious disposal of work. As a result, the disposal of receipts has gone up from 96 per cent in 1957 to 97.5 per cent in 1959. While the number of receipts had gone up from 196,930 to 225,417 over the two years, disposals have increased from 189,116 to 219,859, while pending receipts had gone down from 7,814 to 4,390. The training of Government recruits of the All India and Central Services has received special attention, and the courses at the National Academy of Administration and the Central Police Training College at Mount Abu have been revised and their scope widened.

The Ministry's efforts to stamp out corruption are of topical interest. During the year under report, prosecution was launched in 284 cases, and 232 cases were decided by courts, resulting in conviction in 190 cases, this including 10 gazetted officers. In addition, 363 cases were decided departmentally, out of which 325 ended in punishment. Vigilance officers have been appointed in all the Ministries. There are also separate Directorates of Inspection to look after vigilance work in the Income-tax and Customs Departments, and also in the Railways. There are, then, special units dealing with vigilance work requiring technical knowledge. A Fraud Squad for investigation of offences like fraud, cheating and embezzlement by persons in charge of joint stock companies was set up in July 1959 in consultation with the Company Law Administration.

A sum of Rs 4,10,000 has been sanctioned during the year for staff welfare activities, and the nine new welfare centres set up during the year bring the total to 17.

Indian Finance

Under the Hindi Training Scheme, over 60,000 Central Government employees have so far received training while 200 lower division clerks have started their training in Hindi typing.

The Manpower Directorate of the Ministry has carried out a survey of the requirements of educational personnel below the University stage during the Third and Fourth Plans, as well as a detailed survey of requirements of engineering personnel and an All India Survey of pattern and personnel and training requirements of key industries.

Disbursements for the welfare of Backward Classes during the year amounted to over Rs 12 crores.

Law

A comprehensive study of the working of the Law Ministry of the Government of India is provided in its report for 1959-60. The whole machinery is controlled by two departments, namely, the Department of Legal Affairs and the Legislative Department. The Ministry is responsible for all the legislative and other actions pertaining to subjects allotted to it, including elections to Parliament, Legislatures of States and the offices of the President and the Vice-President, and matters relating to the Election Commission, the Law Commission and the Income-tax Appellate Tribunal.

The Advice Section of the Ministry advises all other Ministries and Departments on all legal matters, including the interpretation of provisions of statutes and statutory rules, regulations, orders, bye-laws, notifications and contracts entered into by the Union Government.

The Litigation Section acts as a liaison office between the Government Counsel at Delhi and the various departments of the Central Government and briefs the Counsel after collection and scrutiny of relevant materials.

The Judicial section deals with the work relating to the engagement of various law officers of the Government, the arrangements to be made with the State Governments for enlisting the services of the State Law Officers on behalf of the Union Government, the making of reciprocal arrangements with foreign Governments for the execution of civil decrees, enforcement of maintenance orders, service of summonses and other processes in civil matters, and the examination of witnesses in foreign countries on commissions.

The setting up of the Central Agency Section has secured greater co-ordination between the Central Government and the State Governments on various matters brought before the Supreme Court.

The Election Section is in charge of all matters pertaining to election law and election expenditure, the administration of the Representation of the People Acts and all administrative matters concerning the Election Commission and the delimitation of constituencies.

The Legislative Section, which is in charge of the drafting of all bills, Ordinances and Regulations that are enacted or promulgated from the Centre, did a considerable amount of

March 26, 1960

drafting work during the period under review.

Narcotics

The annual report on the working of the Narcotic Department of the Government of India for the year ending September 1959 records all-round improvement. The operations of the two Government opium factories situated in Ghazipur and Neemuch were quite encouraging, so much so that the net profits of the two reached a new record of Rs 81 lakhs, indicating a clear increase of Rs 12 lakhs over the previous year.

The increase in exports by 77 tons valued at Rs 50 lakhs compared to the corresponding period in the previous year is no mean achievement. The total production of opium during the year under review also reached a record level of 20,422 maunds while the area brought under the cultivation of poppy shot up to 74,205 acres. The average yield per bigha, which continued to remain steady at 6.87 seers, is another national record. The total sale of alkaloids increased to 3,775 pounds from 3,637 pounds in the previous year. The purchase price of opium was fixed on a sliding scale ranging from Rs 33 to Rs 37 per seer and the payments made to the cultivators amounted to Rs 2.7 crores.

Information & Broadcasting

Significant progress has been recorded by the Ministry of Information and Broadcasting during the year 1959-60. There is evidence of the increasing popularity of All-India Radio, one of the main spheres of activity of the Ministry. The number of licences of all types on August 1959 was 1,684,378 which is an increase of approximately 275,000 over the corresponding figure of the previous year. The Ministry comprises, it may be noted, the All-India Radio, the Press Information Bureau, the Films Division, the Directorate of Advertising and Visual Publicity, the Publications Division, the Directorate of Field Publicity and the Song and Drama Division. In addition to these units, the offices of the Registrar of Newspapers and the Central Board of Film Censors also form part of this Ministry.

The highlights of last year's work of the Ministry are the intensification and diversification of the "Help the Plan—Help Yourself" campaign, the inauguration of experimental television and of Radio Rural Forms on a countrywide basis, the issue of documentaries and newsreels in nearly all the languages of the Union, the release of an education cartoon film, the introduction of road and rail mobile miniature exhibitions, the issue of books in the Builders of Modern India series and completion of the arrangements for the constitution of the Central Information Service.

The background and feature service is a significant development in the Press Information Bureau's work and Industrial Highlights has been added last year to the previous year's four feature series. This section of the Ministry has earned

praise from the American Press last year for its efficient arrangements for the large number of American journalists, cameramen and radiomen who were in India to cover the five-day historic visit of President Eisenhower. Within the short time of its existence, the office of the Press Registrar has been able to collect and collate useful information about the press in India. According to the Registrar's third annual report, which was presented to the Government on 24th August, 1959, there were 6,918 newspapers and periodicals in existence in the country on 31st December, 1958. The Ministry's annual report says that an improvement has been noticed in the response from the publishers of newspapers in the submission of annual statements and delivery of copies of their publications. More than 4,000 annual statements were received for 1958 as against 3,000 for 1957.

Parliamentary Affairs

According to the report of the Parliamentary Affairs Department, apart from the thirteen bills carried

forward from 1958, sixty-six new bills were introduced—fifty-seven in the Lok Sabha and nine in the Rajya Sabha—during the 1959-60 sessions. The Government of India have accepted the Bill moved by Mrs Subhadra Joshi to amend section 198 of the Code of Criminal Procedure with a view to facilitating the institution of prosecution for offences of bigamy.

Among the non-legislative business transacted by the Parliament, the most conspicuous are the debates on foreign affairs, food situation in the country, the President's proclamation regarding Kerala and the damage caused to the hoist-chamber in Bhakra Dam.

Eight Informal Committees were constituted for various Railway zones and a Consultative Committee was set up for the Department of Atomic Energy. To consider questions relating to the formulation of the Third Five Year Plan, a Special Consultative Committee was formed. Apart from these, four sub-committees of the Informal Consultative Committee for the Ministry of Community Development and Co-opera-

tion were appointed to conduct closer study on the Panchayats, democratic decentralisation, training and education, co-operation and community development. The Informal Consultative Committees now occupy the place of the former Standing Committees attached to different Ministries and Departments of the Government, though their functions and mode of operations are entirely different from those of their predecessors. The working of these Committees, it is anticipated, will serve the useful purpose of furnishing adequate opportunities to the Members of Parliament to gain specialisation in subjects of different Ministries.

Twenty-four recommendations contained in the various reports of the Committees on Subordinate Legislation were accepted while three were dropped. One hundred and six members of the Lok Sabha and ninety nine members of the Rajya Sabha were appointed, with the approval of the Ministers for Parliamentary Affairs, on different committees, councils, Boards etc., set up by the Government.

METRIC SYSTEM

in

RAILWAYS

From April 1, 1960, the Commercial Branches of the Indian Railways will adopt the Metric System of Weights and Measures.

- Distances will be in kilometres.
(1 KILOMETRE = 5 FURLONGS)
- Goods and luggage will be booked in Metric units only.
(1 KILOGRAM = 16 TOLAS;
1 MOUNTAL = 2 MAUNDS = 37 SEERS;
1 METRIC TONNE = 9.99 TON)

Help Railways by showing metric weights in forwarding notes

METRIC SYSTEM

FOR SIMPLICITY & UNIFORMITY

Issued by Government of India

DA-50/599

Development Rather than Regulation

The procedure relating to licensing and development of industries has lately been clarified and promoters of new enterprises have in assurance that sanction is a mere formality in respect of many industries. The expansion of capacity can be undertaken by many industries because of approval readily available, and even if the list of industries is subject to revision by the licensing committee, the sponsors of new undertaking are assured, in the light of a communication released last month by the Federation of Indian Chambers of Commerce and Industry that industrial expansion can take place without prior sanction in many fields and promoters can submit applications for approval for a licence, along with request for sanction for import of capital goods or arrangements made with foreign firms for technical aid or capital participation. From the list of industries which are exempt from detailed previous scrutiny, it may be inferred that the Union Government are now fully aware of the existing gaps in the industrial structure and are also interested in promoting the rapid growth of the engineering industry. Industries which are eligible for free approval include: the manufacture

of boilers and industrial machinery as well as machine tools. The manufacture of earth-moving machinery, industrial instruments and castings is also covered by the scheme for free approval. In order to encourage local manufacture of small tools, electrical switchgear and steel forgings, licensing procedure is relaxed. Though nothing is said about the manufacture of machinery designed for the paper, cement and other industries, it may be inferred that prior sanction will facilitate schemes already in operation. What is important is that the Industries Development and Regulation Act will devote more attention to development, and this appears probable from the list of industries that can be expanded without any previous reference to the licensing committee. The list includes the manufacture of sulphuric acid, V and Fan belts, finished leather, plate glass, electric insulators and fine chemicals. The processing of textiles, including sizing, can be undertaken without a special licence and this may help prosperous mills to go in for additional plant like mercerising equipment. The arrangement devised will perhaps help old-established industries rather than brand-new enterprises, but the scheme is derived from the existence of idle capacity, particularly in the engineering industry, and it is also based on due appreciation of the scarcity of imports, particularly of capital goods.

Grants and Guarantees

The Central Government's Budget memorandum lists and describes the Government's guarantees and grants. The Heavy Electricals project at Bhopal has led to a guarantee to the State Bank in respect of a loan taken at one per cent above the Bank of England's rate in respect of £2.72 millions. The Industrial Finance Corporation's loan to the Metal Corporation of India for developing lead and zinc supplies is also guaranteed but the interest is 5½ per cent less a rebate of ¼ per cent for punctual payment. Guarantees given in respect of the Small Industries Corporation are of less significance than the guarantee given in respect of the IFC loan to FACTS for an interest free loan of Rs 306 lakhs or the 5½ per cent loans taken by the Dhrangadhra Chemicals from the IFC in 1957. It may be noted that the loan of Rs 1.5 crores made by IFC under a mortgage by the West Coast Paper Mills carries a higher rate of interest, whereas the loan for Rs 205.89 lakhs made to Jessop under a mortgage does not seem to carry interest. The loans made to new Co-operative sugar mills are also covered by Government guarantee, but rates of interest charged are not uniform. There are also State Co-operative Banks in Manipur, etc., which have taken loans from the Reserve Bank under guarantee at 2 per cent be-

low the Bank rate. The State-owned enterprises like Hindustan Aircraft have taken loans. Both the ICIC and IFC have received guarantees in respect of bonds issued and dividends payable and the World Bank Loans to the Tata Hydro Electric Group have been guaranteed.

The old guarantees given in respect of several light railway companies are now in force, though the managing agents' remuneration is fixed by agreement. The guaranteed loans given to the steel companies carry a higher rate of interest than the loan made to the National Coal Development Corporation and Bhilai Steel which has, however, got the funds from the Russian Credit. The loan made to Bolani Ores for Rs 50 lakhs carries 6½ per cent while that contracted for the Neyveli Lignite undertaking (owned by the Government) is getting Russian aid by way of loans under the inter-governmental agreement. The loans taken by the Port Trusts are guaranteed, like that taken by Air India International for new jet aircraft, and it is fairly clear that there is income to repay the foreign loans guaranteed.

As for grants, the memorandum is fairly explicit and it can be said that many scientific bodies are supported by the Central Government. The grant to UNESCO is substantial, but the Royal Asiatic Society qualifies for a meagre yearly grant of Rs 3,000 only, as poor as the Rs 1,000 given to the School of Tropical Medicine. The subscription to the UN is put at Rs 74,28,600 and the provision made for the UN emergency fund is substantial at Rs 84,22,950. Grants are made for the Palestine refugees through the UN agency and India's grants to FAO and WHO are not only maintained but even increased. The gross contributions to international agencies is estimated at Rs 374.56 lakhs for 1960-61.

Fruitful Dependence

Being directly responsible for several territories, the Union Government mean to spend more on developing the tribal areas in 1960-61. The Budget memorandum points to increased outlay on medical relief and public health compared with previous years. Expenditure on Pondicherry will be stepped up for development schemes together with Social Welfare. The outlay on handloom industry development, the setting up of a medical college, and the construction of a new pier suggest that de facto transfer to India is producing good results for the new regime in Pondicherry. Expenditure on the Delhi administration is also going up, but far more important is the indication that spending on the Andamans will increase. Grants for colonisation may be small but

agriculture and animal husbandry should gain from the larger provision made also for education. Like the expenditure on Himachal Pradesh, the outlay may not show immediate results but there is no doubt that the absence of autonomy involves no burdens since the Andamans obtain bus services and public health schemes without payment. More money is to be spent for developing the forests of Machur and the territorial Council qualifies for a bigger grant while more money for road transport is promised. Benefits to Tripura by the larger grants provided for industry and supply will suggest that the poor relations get more out of Central revenues than the States exhorted to become self-reliant. More money is allotted for the Laccadives also and the separation from Malabar is made distinctly advantageous for the islanders for whom road and transport schemes are devised as also the provision of buoys for intricate navigation. The administrative expenditure may not be up, but gross expenditure is certainly rising, to go by the enhanced provision made for irrigation and other items in areas whose contribution to Central revenues may be smaller though land revenue, etc., may be obtained from Himachal, Tripura and Manipur as also from electricity schemes in operation. The dependence of the Union territories may be described as an advantage at present in view of the larger provision made for their welfare in the Union Budget this year.

Company Registrations

Statistics of company registrations for the three years since the

new Companies Act came into force disclose a steady upward trend. The number of new companies registered increased from 909 in 1957 to 1,052 in 1958 and further to 1,399 in 1959, an increase of nearly 54 per cent over the three-year period. This may be held to support the claim that the impact of Government's fiscal policy on private investment has not been as disastrous as made out by critics. Individual entrepreneurs apparently do not share the dim view of business prospects to which their "authorised" spokesmen give clamant expression on formal occasions. This is certainly encouraging, for, the Third Plan, according to the tentative outline, is said to envisage an outlay of Rs 4000 crores in the private sector out of the total investment outlay of Rs 9,950 crores on the plan as a whole. If the trend indicated by new Company Registrations continues, there is no good reason why it should not—the record of private industry under the Second Plan, when it bettered the investment target set for it, should be improved upon during the Third.

The statistics indicate that the provisions of the Companies Act have strengthened the preference for private companies, a trend which was forecast by this journal in a special study of the Act published in 1956. Out of 1,399 companies registered last year, 1,324 were private companies, continuing the trend of the previous years when the number of private companies registered increased from 845 out of a total of 909 in 1957 to 992 out of 1,052 in 1958. Registrations of public companies, on the other hand, decreased from 64 in 1957 to 60 in 1958, but increased to 75 last year.

The States of West Bengal, Madras, Bombay and Delhi together account for over 80 per cent of the total registrations all over the country. One remarkable feature during last year was the spurt in the number of new registrations which increased from 88 in 1958 to 309 last year. But the number of companies is not same thing as scale of activities, as is made clear by the fact that the total capital of these 309 companies is only Rs 12 crores against 290 companies with total authorised capital of Rs 55.3 crores registered during the same year in Bombay. Companies registered in Bombay account for the largest share of the total authorised capital of Rs 168.4 crores for all companies registered in the country last year.

Confused Ideas on US Aid

What Mr G. L. Mehta told the Indo-American Society in Calcutta on the aims of American aid may not make any difference to the jaundiced outlook of the Communist party. It may be recalled that,

only a few days ago, a Communist member of Parliament asked for an investigation of American economic assistance, a suggestion which was very properly rejected by the Finance Minister. But, nevertheless, it was worth saying, for, misunderstanding about American aid is not confined to the ranks of Communists and their fellow-travellers. The founder of the Swatantra Party made no secret of his dislike of India taking American aid, during the Atom Bomb phase of his public activities, though, after forming his own

party, he has apparently been persuaded by his chief lieutenants to keep his counsel. It is not merely those who oppose acceptance of American Aid who are liable to take a wrong view of the implications. While the Communists fear that US aid will tie India to the Western bloc, there are also a substantial number of people who fervently hope that it will. Mr Mehta made the point very clear that substantial differences over foreign policy have not deterred the United States from extending generous aid to India's First and

Second Five Year Plans. Per contra, there is no reason to think that continuance of aid for the Third Plan need by itself bring about a change in the points on which Indian and US policies have differed, unless the change is indubitably in India's national interest. The Indo-American Society will be doing the greatest service toward establishing friendly relations between the peoples of the two great democracies on an enduring basis, by clearing up the confused ideas on this point that persist in both countries.

FOREIGN NODES

Guided Socialism for Ceylon

The electoral pendulum in Ceylon had begun to swing before the elections this month, and Municipal election results showed that the United National Party had regained ground lost earlier. The UNP has not obtained a majority, but its leaders fared far better than the many Ministers who had survived in office after Mr. Bandaranaike's assassination. The Finance Minister who introduced fiscal experiments, the Food Minister who advocated nationalisation of foreign-owned estates, and the last Premier who was identified with religious or linguistic excess, have departed; and a moderate, anti-Leftist party has come to power again. In view of the Communist rout, it may even be said that the Ceylonese voters have followed Burma to the point that Socialism will be guided carefully and minority rights accorded respect. The outcome of a quiet, orderly election means much to India, since the new Premier sets store by the agreement reached with India about registration and citizenship for Indians domiciled in the Island. If the recent vote is largely one against the inflation engendered by planning, it may be assumed that Ceylon will try to import more food and essential articles in the near future and the agreement with other parties like the Federal Party may well compel Mr. Senanayake to set a course for closer trade ties with India. There will be less careless talk of danger from Tamil designs and more of fruitful co-operation for development with the help of estate labour. The trade unions will perhaps be less obtrusive in public life and foreign capital less apprehensive about its own standing and prospects.

The election result is more than a symptom of a retreat from feverish activity—it is an indication that an underdeveloped country cannot force the pace of economic change at present. The apparatus of planning and the controls in force will remain, but freedom of enterprise will become more than a phrase because of the reverse sustained by the Sama Samaj and the Communist parties. But the presence of a strong opposition in the legislature may help the party to adopt a course of action attuned to the present circumstances of development which postulates investment on a large scale in secondary industry mainly from the earnings of export trade. The extension of peasant farming in the dry empty areas will not contribute

much to resources, and the new Ceylon Ministry will realise that the plantations must remain the foundation of the island's economy for a long time. Keener competition for Indian tea exports may be expected, but Ceylon will probably limit its commercial contacts with the Communist Bloc and might expect much more by way of aid from the USA as well as the UK, now that the distorting effects of socialist planning in a hurry have gone with the end of the MEP Coalition—both ill-assorted and ill-conditioned.

Winning Vein

The by-elections in Brighouse and Harrow West have helped the Conservative Party to add to its majority in the Commons and it is clear that six months after the general election the Macmillan Government is still in winning vein. Whether the Labour Party's differences about the goal or pace of nationalisation have affected the party's fortunes may be doubted, though it is clear that, in Yorkshire, the whole attitude of electors to nationalisation may be conditioned by the course of British economic recovery. It is evident that the rise in Bank rate and the credit restrictions or official direction of investment count for little when it comes to voting, and the floating vote still turns in the direction of the party in power which, after three elections, may claim that Socialism has lost its appeal to a new generation of voters who may not think of empire but are keen on the continuance of prosperity. The Government may not provide tax relief or cut Defence charges, but they can go to the summit with the confidence that the voters are, by and large, behind the foreign policy of Mr. Macmillan and are content to leave well alone. The by-election results, despite a light poll, prove that the "pinch of prosperity" is against any swing of the electoral pendulum, and also that Mr. Macmillan's handling of the changing Commonwealth, especially after the Suez Muddle, has made for popular confidence in a statesman who keeps the common touch through his descent from Lowland Scottish farmers. The Tory Government, despite awkward squabbles over Cyprus and Kenya, have made it clear that they put *libertas* before *imperium* in Africa and have decided to ignore South African perversity and are decidedly keen on bringing Western Europe and the USA together. For Moscow, too, the election results hold a lesson; Britain also can negotiate from the strength born of a new sense of a mission, to meet challenge with a response based on a new attitude resting on influence rather than power, and not at all on current competition with the USSR or the USA in missiles.

Egyptian Market Changes

Trade with Egypt is regarded as promising, and India's exports are

rising. But, there are major rivals at present in both Germany and the USA. While Britain's share in Egyptian import trade has fallen considerably, Italy has gained ground of late. Industrial growth in Egypt has influenced the pattern of trade in recent years and the major change is the advent of Russia as a major supplier. Foreign aid has made a difference to trade and Egypt has begun to make wagons, batteries, loco accessories, sewing machines, cycles and auto components already. Tight import control is also a feature of foreign trade at present, and the BOT Journal predicts that importing firms have changed and State Control is increasing so that wheat, tea and flour, like fertilisers, are got through Government channels. Oil is a major import as also machinery. The equipment needed for growing industries looms large and the iron and steel works at Helwan is already drawing a good deal of machinery. Germany has become a major supplier. Bridgework power-station equipment and diesel locomotives figure among imports and German buses are being ordered by the Cairo municipality. But capital goods from the UK also find a place and textile machinery is not a monopoly of Italy.

Planning in Egypt means a surplus of imports, providing another opportunity for manufacturers abroad. The Suez Canal authority is a big buyer of small craft, cranes, etc. Plans to make sugar, dyestuffs and tractors make the Egyptian market valuable to the UK, which hopes that mineral development will bring orders for mining equipment. Navigation on the Nile is to be improved for carriage of iron ore, fertilisers, etc., and barges are expected to be ordered in quantity. The fall in sterling assets naturally makes it difficult to expect a vast increase, but the canal dues supplement exchange earned from cotton exports. In many respects, the import policy of Egypt resembles that of India, and yet the rate of development makes the exporter of machinery both keen and optimistic. The survey made after the resumption of diplomatic ties with the UK makes it clear that there are many new rivals to the UK, which still hopes to benefit from the past reputation of British goods. This certainly means that Indian goods offered to Egypt must be both sound and reasonably priced.

Expanding US Export Trade

A long talked-about programme to expand US export trade became a reality last week, when President Eisenhower announced a vigorous and coordinated Government effort to help spur sales of US goods abroad.

In a special message to the US Congress outlining principal elements in the programme, the President noted that no new legislation would be required, other than fill-

ing of "supplementary" appropriations requests to be made at a later date. Even these additional costs are not expected to be large, running only to about \$5 million or so this year, and up to \$10 or \$12 million annually in the next few years.

Nevertheless, the export expansion effort will be a relatively ambitious undertaking. The United States heretofore has not had a programme of this scope. It could help increase US exports by as much as 10 or 20 per cent, according to some informed estimates, over the current annual rate of close to \$18,000 million.

Here are the programme's main features:

1. The Commerce Department will increase its export promotion staff at home and abroad, will make available more information about export opportunities, and in general will try to foster more interest in exports among American businessmen.

2. The State Department will more than double its present staff of 112 commercial attaches abroad. One of the main jobs of these officials is to help develop more export business for American companies.

3. The Export-Import Bank will undertake a new programme of guaranteeing short-term credits (up to 180 days) against losses from "political"—that is, not commercial—risks, such as war or currency devaluation by foreign governments. The Bank also will make it easier for exporters to get direct credits for medium term (one to five years) export financing. (See below for text of Export-Import Bank announcement).

The Export-Import Bank's new short-term programme could help stimulate sales of consumer goods to foreign buyers. Up to now, the Bank has generally limited its financing and guarantees to medium and long-term credit, used principally for the export of "productive"—that is, capital—equipment.

In addition, the Government will establish new overseas trade centres, will make fuller use of trade fairs and special trade missions to bring American products to the attention of buyers abroad and will promote tourist travel to the United States.

All this, of course, is designed to build up US receipts on its international transactions and thus help overcome the large adverse balance of payments, which came to \$3,700 million last year and to \$3,400 million the year before.

Rising exports can play a key role in this effort. One of the principal problems has been that US exports and other forms of revenue-producing international transactions have not generated enough income to pay for the cost of US imports which have soared to a

record high and such other forms of capital outgo as US Government aid to other countries, private American investment and American tourist expenditures abroad.

US exports, of course, are greater than US imports, but the trade surplus last year came to only \$1,000 million, far short of the historic postwar figures. Even though exports have been on the upgrade for nearly a year, and the balance of payments deficit does not threaten to be nearly as large this year as last, a continued substantial outflow of US gold and dollars cannot be countenanced indefinitely. The fact that liberal US trade, aid and investment policies have helped other exporting nations build up their economies and their competitive positions in world markets does not answer the present need of the United States to reestablish a more "normal" export-import balance.

From an international point of view, a strong US export rise would have benefits going far beyond the merely national interest of the United States. In the final analysis, it would enable the United States to continue financing on a sizeable scale not only in increasing import total but also all those other balance of payments items which contribute importantly to the economic progress and the security of other nations.

Thus, the new programme emphasises once again the determination of the US Government to continue their traditionally liberal foreign economic policies—in this case, by spurring merchandise exports rather than cutting back on imports, on aid, or on other income-producing opportunities open to other countries in their dealings with the United States.

Implementation of this export expansion programme will be largely in the hands of American private enterprise. While the Government will help create conditions under which American companies can expand their sales abroad, it will be up to the companies themselves to do the selling—to pursue the leads and opportunities that may be opened to them by the new programme.

In this connection, US Government officials note that relatively few of the five million business enterprises in the United States now play a part in the nation's export trade. They note, too, that the United States, the world's largest exporter in volume, still sells abroad only four per cent of its total output of goods and services (its Gross National Product) compared with as much as 20 or 25 per cent for many other major exporting countries, nearly all of whom have long had aggressive export promotion programmes of their own.

This, plus the fact that world trade and economic advancement have been on the rise, is believed to hold out the promise of growing foreign markets for American

goods if American companies seek out those markets diligently and intelligently.

These markets can be found, it is believed, in all parts of the world, in both industrial and developing lands. In the case of industrial countries, the rise of discretionary consumer purchasing power along with the growing prosperity of recent years offers markets for a wide variety of items from the United States. In the case of the developing lands, their continued economic progress means a growing need for the many kinds of capital goods and equipment which the United States is able to supply in both quantity and quality.

Export-Import Bank Announcement

Following is the text of an announcement issued on 17 March by the US Export-Import Bank describing measures designed to increase US exports:

The Export-Import Bank of Washington announced that it will provide a new system of export guarantees covering political risks in short term transactions where credits are not in excess of 180 days. Bank President Samuel C. Waugh also described a further effort to stimulate US export trade by an expanded programme of Export-Import Bank participation with commercial banks in medium term (one to five years) credits. Mr. Waugh restated existing Export-Import Bank facilities available to exporters interested in medium term credits.

Both the short term and the medium term innovations can be made without change in Export-Import Bank's existing statutory authority.

Guarantees on short term transactions will be limited to political risks in order to encourage private capital to provide the necessary financing and the guarantees of insurance with respect to the normal commercial credit risks.

In general, it is expected that the political risk guaranty contract will cover to the extent of 50 per cent the risk of non-transferability to nonconvertibility of foreign currencies; losses directly resulting from war, civil commotion and expropriation; and those resulting from the imposition of import restrictions or the cancellation of import permits. As in all other countries offering this service, the exporter who obtains a guaranty agreement on short term transactions would be required to declare any pay fees on all his eligible export shipments as they are made.

Details for the issuance and administration of the short term political risk guarantees are presently being completed and will be announced at a later date. It is anticipated that the plan will be put into operation within the next two months through the agency of the foreign department of com-

mercial banks. The guarantees will also be made available through the facilities of any insurance companies that are prepared to offer insurance or guarantees of the commercial risks involved in short term export transactions.

On the subject of additions to present facilities in the field of medium term credits, Mr. Waugh said Export-Import Bank will embark upon a new plan for co-operation and participation with commercial banks.

Export-Import Bank will participate in the financing of medium term transactions in sole reliance upon the credit judgment of a US commercial bank in the following circumstances:

1) Whenever a commercial bank is prepared to finance, for its own account and without recourse on the exporter, the first three or four semi-annual instalments of a three to five year credit, Export-Import Bank will finance the remaining instalments.

2) If the exporter and a commercial bank will participate in each of the instalments, the exporter to the extent of fifteen per cent of the invoice value and the commercial bank to the extent of ten per cent of the invoice value for its own account and without recourse on the exporter, Export-Import Bank will finance fifty-five per cent of the invoice value of the export.

In each of the foregoing situations the foreign buyer must have paid at least twenty per cent of the invoice value by the time of delivery. If the buyers' payment is increased, proportionate reductions will be made in the amounts carried by the participants.

Transactions should be in markets mutually acceptable to the commercial bank and Export-Import Bank and should meet the usual requirements of Export-Import Bank with respect to terms. This proposal is in accordance with Export-Import Bank's desire to accelerate the processing of credit and to increase the participation by private banks in financing foreign trade.

Export-Import Bank also has under study procedures to accelerate the processing of applications for assistance of the types presently available on medium term transactions. These four types extended by Export-Import Bank to US exporters were described by Mr. Waugh as follows:

1) Exporter credit. Where direct financing by Export-Import Bank is required, Export-Import Bank participates with the exporter on a case-by-case basis by purchasing from him for cash, and without recourse on the exporter, obligations of the buyer representing up to 85 per cent of the financed portion of the transaction. In each such case it is necessary that at least 20 per cent of the invoice value shall have been paid by the buyer by the time of delivery of the goods.

2. Comprehensive guarantee. In cases in which the exporter or his commercial bank is prepared to provide the financing, Export-Import Bank issues a guarantee covering both credit and political risks of the exporter or his bank to the extent of 85 per cent of the financed portion of the transaction.

3. Political risk guarantee. In cases in which the exporter or a commercial bank is prepared to provide the financing and assume the commercial credit risks, Export-Import Bank guarantees the political risks involved to the extent of 90 per cent of the financed portion of the transaction.

4. Repetitive sales. Once an exporter has established the credit standing of a foreign dealer or other customer to whom a number of sales are anticipated, Export-Import Bank agrees upon a credit ceiling against which the exporter may carry out a series of transactions without reference to Export-Import Bank in each instance.

Mr. Waugh stated that, in addition to its programme of assistance to individual exporters, Export-Import Bank will continue to be active in the field of long term loans to finance US products and services required for large projects and development abroad.

STATES NOTES

The Many and the Few

The visit of Mr. D. L. Mazumdar to Madras helped commercial organisations to appreciate what company law administration means for them and their members. Apart from pleading that business administration today requires qualified personnel and urging jointstock companies to make fuller use of qualified auditors, Mr Mazumdar made it clear that the supervisory and regulatory aspect of administration is based on the status which is meant both to protect investors and to encourage investment. At the Andhra Chamber, he indicated that India is not alone in enforcing

measures relating to economic development and the use of funds gathered from the many by the few. Legitimate activities are not affected by the existence of company law and the whole object is to carry out a moral revolution and material transformation for the benefit of joint stock enterprise. The continuance of the managing agency system for a period is still envisaged and the reappointment of those who had applied for renewal of contracts would be approved if applications were filed. Though some industries would not be allowed to have managing agents under the law, when prior approval is given by shareholders applications for renewal would be considered according to the rules. A notification regarding extension of time for applications is promised. The very large scope for effective business administration under the present law was certainly explained during a helpful visit, and it is possible that, in the amending Bill changes would be effected in the light of pleas

made regarding definition of terms like "interest of a director", and "relative of a director or managing agent". During his visit, a point regarding the exemption of Nidhis and funds from The Companies Act was made by the Tamil Chamber, and it is now realised that mutual funds are not profit-making organisations and should not come within the legislative framework. Chambers of Commerce also, as registered bodies will fall outside the scope of Company Law hereafter, being non-trading companies. It may be added that Nidhis and Funds are no longer to be regarded as banking institutions because they cannot issue cheque-books though they may receive deposits and repay deposits. In the last annual report of the Union Ministry of Finance, it has been made clear that the power to issue cheque-books is vested only in banking institutions and the legal distinction between bill and cheque is now absolute.

*

Southern Enterprise

Another chemical enterprise of more than local importance is coming up near Tirunelveli in South India. A private company incorporated some years ago has set up a plant to produce calcium carbide, and commercial production is expected to follow the success of the pilot plant (with a capacity of 50 tons) operated near Talayuthu and using the excellent limestone already available for cement manufacture. Norwegian assistance has been secured for the design and erection of the plant and the cost of production is known to be far lower than that of other producers who have benefited by tariff protection. The capital of Rs 30 lakhs (secured with the aid of some Bombay interests) has enabled Industrial Chemicals to get on with the job quickly, and it is known that a contract for the supply of 3,900 tons has been given by a leading industrial firm to the new entrant in the Chemical field. The inception of more than one chemical firm may help in the early development of Tuticorin port, but what is important is that the success of India Cements has promoted the formation of new concerns to use locally available materials. The advance of the Chemical industry in the South may not be as impressive as in Bombay, but there is salt in plenty and minerals like gypsum and limestone to support growing local enterprises.

*

Grim Picture of Upper India Mills

A balanced survey of the economic situation in the country made in the presidential address of Mr J. K. Shrivastava, to the 72nd Annual General Meeting of the Upper India Chamber of Commerce concludes with a detailed examination of the recommendations of the

Textile Wage Board and its impact on the textile industry. The address has drawn attention to the decline in the profitability of the textile industry since 1951, which is particularly marked in the case of upcountry mills which manufacture coarse and medium cloth. Most of these are also in urgent need of new equipment and machinery. Increase in the wage bill at this juncture will make it practically impossible for them to find resources for carrying out the suggestions of the Textile Inquiry Committee regarding modernisation and production of new varieties of cloth to suit changes in consumer preferences. The Ahmedabad Mills, it is true, have accepted the Wage Board Award, but they are differently situated. These Mills are mainly engaged in the production of fine and superfine counts which have a good market, and the industry in Ahmedabad has been able to double its block by ploughing back profits. Mr Shrivastava has drawn a grim picture of the outlook for the cotton mills in Upper India. Many of them, he fears, may be forced to close down, leading to widespread unemployment. Already, 5,000 cotton mill operatives are unemployed in Kanpur. The purpose of the Wage Board award, which is to improve the conditions of labour, will be frustrated if its implementation results in mill closures and unemployment. Mr Shrivastava feels that wage scales should be linked to the volume of employment, that is, the number of men per 1,000 spindles and 100 looms. Mr Shrivastava has also made the point that wage increases in particular industries will have an unsettling effect on labour relations over the entire field of industry. And, in this connexion, he has repeated the suggestion he made last year for the appointment of a Wage Commission to frame a comprehensive wage policy for all major industries.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

So, finally, with the last week's meeting of the National Development Council, a rising tempo is to be discerned in the preoccupation with the Third Plan. I think we may with profit list at the outset what are enumerated by the Council as the essential conditions for putting through a large Plan. These are:

- A rapid increase in agricultural production and fuller use of the country's manpower resources;
- Public enterprises being carried out with economy and efficiency and yielding the maximum returns feasible;
- Laying down and carrying out an integrated price policy;
- Construction programmes and costs being kept to the minimum;
- High levels of administrative efficiency and determined efforts to raise standards in administration; and
- Realising the maximum employment potential inherent in the plans of the public and the private sector.

Where do we go from here? The foregoing, it seems to me, is nothing more than a tedious repetition of generalities that we have heard over and over again. You surely do not require to be told these things; the conditions, in the climate of planning that we live today, may be taken for granted. It is the specific rather than should interest us; and, here, I am more concerned with the resources than the outlays, though, of course, limitations of administrative capacity can restrict and will restrict the extent to which even a disbursement plan can be taken up. Unfortunately, as far as I can gather, thoughts in this respect still tend to be vague. True, allocations for what is called "preliminary planning" have been given; true, also the Prime Minister has emphasised that at the moment we are still in the preliminary stage of working out the sort of Third Plan we are going to have.

Table I represents outlays in the public sector. The private sector is expected moreover to muster Rs 1,000 crores for industry and minerals; Rs 250 crores for transport, communications and power; Rs 275 crores for village and small industries; Rs 1,075 crores for urban and rural housing and construction; and Rs 600 crores for inventories. The first point to which I may draw attention is the undoubted inadequacy of the provision for the development of transport. By something of a fluke, thankfully, a transport crisis

has been avoided during the Second Plan. But, when the Third Plan begins, all three steel plants in the public sector will be in production, and the transport capacity that will be required to move the raw materials will be quite considerable. On top of this will be the transport effort required to handle the substantial increase in agricultural production, which, it may be emphasised, is a fundamental condition of the success of the Third Plan. I would be interested to know how much the Railway Ministry asked for, and how much this vital sector of development has been allocated by the NDC.

TABLE I

	Anticipated outlay in Second Plan.	Allocations for preliminary planning in Third Plan.
	(In Crores of Rs)	
Agriculture and Community Development	630	1,000
Irrigation	400	650
Power	410	900
Village and Small Industries	180	250
Industry and Minerals	820	1,300
Transport and communications	1,330	1,450
Social Services and allied heads	680	1,250
Inventories	200	200
Total	4,550	7,000

*

I suppose, on the other hand, that the expenditure targets for agriculture will prove sufficient; though I fear that the indicated objective of sugarcane will result in considerable shortage being experienced. But, having regard to the much cheaper prices of sugar in world markets, I feel that the planners should make provision for imports of sugar to meet the shortfall. Over the long term, of course, a certain balancing between indigenous supply and demand would be desirable. But it is too costly a process to seek a higher level of sugar output by means of extension of acreage under sugarcane. Attention needs rather to be paid to improving firstly, the per acre yield of sugarcane and, secondly, the percentage of recovery.

In a general way, I suppose the preliminary figures of outlays in other directions are acceptable. It is especially good to find that the target of new investment in the private sector has been placed at

Rs 4,000 crores; and also that, under the main heads, the allocations as between the public and private sectors are almost the same. Current indications are that new production in steel is to come wholly from the Government steel plants; and such being the case, it is clear that a considerable responsibility is imposed on the private sector for setting up the ancillary industry, since otherwise the allocation under industry and minerals for the private sector would not have been as large as Rs 1,000 crores. If anything, therefore, the scope for expansion as also for branching out into new lines of production will vastly widen in the Third Plan for the private sector. In all this, however, we are bidden to remember, as the Prime Minister has stressed, that the magnitudes suggested by the Planning Commission are tentative, and will need to be further examined in the next few weeks, before allocations are finalised.

*

We may now see how resources for putting through the Third Plan in the public sector are expected to be gathered:

	Third Plan (Rs crores)
I Resources on revenue accounts:	
(a) Balance from current revenues	200
(b) Additional Taxation	1400
Total	1600

II Contributions of public enterprises:	
(a) Railways	400
(b) Others	470
Total	870
III Resources on capital accounts:	
(a) Loans from the public (net)	850
(b) Small Savings	550
(c) Provident Funds, betterment levies, Steel Equalisation Fund & miscellaneous capital receipts	380
Total	1780
IV Total domestic budgetary resources	4250
V Budgetary receipts corresponding to foreign assistance	2200
VI Deficit Financing	1550
VII Total Resources for Public Sector Plan	7000

*

The first thing that strikes the eye of the long-suffering taxpayer is the "threat" that a further Rs 1400 crores of new impositions are to be expected during the Third Plan period. Coincidentally, and not without an element of wry humour, is the fact that the target of additional taxation exceeds the expectation under this head in the Second Plan by exactly Rs 420 crores. I do not frankly see how so considerable an amount by way of new taxes can be raised. Surely, by the time the Third Plan is finally drafted, the planners will have more detailed figures about the behaviour of revenue receipts in 1959-60; and this should make it clear that the buoyant, expansionary trend is such that the so-called "balance from current revenues" will be substantially higher than the Rs 200 crores indicated in the preliminary figures of resources.

It surprises me that the planners expect only from Rs 850 crores net from market borrowings. For, this is only an increase of Rs 50 crores over the "revised estimates" for the Second Plan. And it is only during the later years of the Second Plan that realisations from Government borrowings have been heavy. Nor is it valid reason to explain the unambitious target by pointing out that maturing liabilities during the Third Plan, at Rs 832 crores, exceed the relative figure for the Second Plan by roughly Rs 400 crores. Conversion, after all, can be taken for granted. (In 1959-60, when the new loan programme consisted of two issues neither of which could be said to be particularly attractive to the banking system, the option to convert was exercised in a surprisingly large measure). Moreover, the planners have not yet, I think, got fully aware of the fact that there is a direct link between governmental disbursements and the capacity for absorption of gilt-edged. If, during the Third Plan, outlays by Governments are to be heavier still than were the annual average of disbursements during the Second Plan, it should follow naturally that there will be a greater demand for gilt-edged. There can be no doubt, in my view,

of the chicken hearted approach to borrowings for the Third Plan period.

Similarly, it appears to me that the planners have erred in the exactly other direction in respect of deficit financing. Can created money really be contained within a figure of Rs 550 crores? I am frankly unbeliever in this respect. Furthermore, the time has not yet come when we are likely to burn our fingers, if we continue to depend upon deficit financing. There is as yet no proof whatever that created money during the Second Plan has in any significant measure contributed to inflationary pressures. Let us be realistic: let us hope that we can keep created money down to a figure of, say, just under or around Rs 1000 crores, and we shall have done very well indeed.

The dependence on foreign assistance is to be exactly double what it was during the Second Plan; and this does not include provision for maturing obligations which we will have to meet. As far as I can see, the planners are none too hopeful of any sizable improvement in earnings of foreign exchange from exports. On the contrary, may be they are pitching their expectations too high as to

the magnitude of friendly foreign aid which we can get. It is true, the size of the Third Plan will in the final analysis be determined by the quantum of external resources that we will be able to lay our hands on; for reasons I shall set out in future weeks, the difficulty in respect of internal resources is a rather less fearful one. But, surely, some element of austerity in consumption must also be aimed at, so that Indian manufactures will become "freed" for export. Always, if external assistance materialises in an extent equal to our needs, such Indian output can be "written back" for indigenous consumption. Planning should be on the basis that, even if foreign aid is lower than we expect it to be, no serious cut-back in achievement targets should become necessary. I would again reiterate here the need for a foreign exchange budget annually to be drawn up. And we must be prepared, if the needs of foreign exchange so dictate, for earmarking a definite proportion of Indian production for export. Here, too, is the place whereat I should draw attention to the sustained demand being experienced lately for iron ore. There should be no difficulty in drawing up an ambitious plan for sale to our friends overseas of

considerable quantities of iron ore. Even America, I'm sure, will be greatly interested in an assured supply of quality iron ore. Lastly in this context, I should mention that the idea of gold bearer bonds has seemingly been dropped. No doubt, some time in the Third Plan, when maturing liabilities are heavy and foreign exchange reserves are low, we shall again consider the scheme.

The contribution of public sector enterprises alone has perhaps been correctly gauged. But, on the whole, I can't say I'm happy about the estimates of resources. The fundamental approach is wrong: in directions where much more can and should be planned for, the planners have grossly under-estimated receipts; and, in other directions, where it is wrong to hope for too much, optimistic estimates have been made. In the course of the next few weeks, I propose, on the basis of past experience, to draw up a resources table for the Third Plan. I trust that the Third Plan as finally drawn up presents a more reassuring and cheerful picture. Otherwise...

As The Spectator, in its column Portrait of the Week, points out, "An attempted take-over by Pisons, who make fertilisers, for BDH Ltd., who make contraceptives, has proved abortive." EAVESDROPPER.

GATEWAY TO GOSSIP

Toward Better Labour Relations

PROBLEMS of employer-employee relations form the theme of Mr. Naval H. Tata's presidential address to the annual general meeting of the Employers' Federation of India held last week in Bombay. The speech is an indication of the extent of the preoccupation of managements with labour problems. Ideas about labour relations have undergone radical changes during the past decade and it is now rarely, if at all, disputed that labour and management are partners in a common enterprise. The concept of an equitable return for the worker has come to stay and the justifiability of a need-based wage is fairly well recognised by employers too.

Government, who are wedded to a socialistic pattern of society, cannot but be obliged to take steps to help labour improve its lot. The process is continuing and it cannot be denied that the spate of labour legislation that has been placed on the statute books both of the Centre and the States has largely been responsible for the favoured position in which at least organised labour finds itself today. This is a point that will not be conceded by labour, which will claim that its achievements are the fruits of its own vigilance. Be that as it may, the fact remains that the factory worker in the country today is much better off than he was, say, a decade ago.

It is perhaps an inherent defect of the philosophy that seems to activate labour that "satisfaction should remain forever" an elusive entity for it. It seems to be suffering from a permanent hallucination that an employer should necessarily be extremely reluctant to share his profits even with those who have been mainly instrumental in making the profits possible. An identical attitude is displayed

toward the public sector employer, too. One is, therefore, led to wonder whether labour is not trying to transform itself into a new privileged class which accepts only one criterion, self-advancement, to the exclusion of other wholesome principles that should characterise the life of labour as much as of the people at large. The obvious benefits accruing from organisation and the consequent bargaining power have not been lost on other sections of the community, with results that may not be said to be conducive to the smooth functioning of the economy. This is not, however, to say that employers are blameless or that the welfare of workers is one of the main concerns of all employers. Government, who have come to occupy a peculiar position as an employer-cum-arbitrator (in labour relations), cannot also be said to be discharging their responsibilities without giving room for misgivings among both managements and labour.

To attempt to find an easy solution to the various problems of labour-management relations as obtaining in the country today will be to belittle their magnitude. These are extremely complicated matters which have to be tackled, with, among other things, a vigilant eye on the needs of our growing economy, consideration for the managements who have to shoulder great responsibilities and sympathy for the workers whose wish to better their lot is legitimate. A labour policy which satisfies these broad criteria is yet to be evolved. There are people who maintain that Government's handling of labour problems smacks of a lack of a clear-cut policy. It would appear that a sizable section of labour has the fixed idea that Government's labour policy favours, or can favour, only the employers. Likewise, a considerable section of employers believes that Government will always throw their weight on the side of labour. Again, Government face a great deal of criticism from both the camps for their handling of their own labour problems as employers in the public sector. One thing, however, should be evident to all concerned, not excluding Government. This is, that labour policy as it obtains today in the country is not such as can secure full and around co-operation.

In the context of the rapid industrial development planned for the coming years, it is imperative that labour relations are much more satisfactory than at present. It is of course true that improvement in this regard is primarily dependent on abiding goodwill and understanding between labour and managements. But Government's labour policy will have a large say in the matter. The immediate objective of this policy should be to ensure that the Third Five Year Plan period will have a far better record of labour-management co-operation than has been the case during the current Plan period.

Mr. Tata's review of labour relations during the past year and the suggestions for their betterment has to give deserve to be studied carefully by those who are in charge of shaping Government's labour policy. The relations between continuous wage increase and inflation is now clearly visible. Containing inflation can no longer be confined to academic discussions; it is an urgent task that faces the country. One of the main remedies is to be sought in holding the price line. Mr. Tata makes a valid point in the following passage:

"While the Union Labour Ministry is understandably anxious to see that a fair deal is not denied to the working class, it is extremely important that there should be active and effective coordination between the Labour Ministry on the one hand, and Food, Finance, Commerce and Industry and the employing Ministries on the other. If stability of real wages is the ultimate goal of the Labour Ministry, the impact of food and fiscal policies on the wage structure of the country should never be lost sight of."

In deciding the wage structure in private sector industries, consideration is rarely given to the capacity to pay. But Government seem to be quite careful about this factor when they have to foot the wage bill. Mr. Tata points to the Government's decision on the Central Pay Commission's recommendations and says that it clearly shows that capacity to pay is taken as the governing principle. It is only proper that Government apply the same principle to the private sector also. It is Mr. Tata's sugges-

tion that Government should give a clear directive to Industrial Tribunals that the ability of an industry or establishment to pay should be given the most important consideration.

Mr. Tata has touched on a number of points affecting labour relations and it would appear that, given some necessary modifications and a determined effort from all concerned, most of the recent measures can be made quite useful. For instance, the Code of Discipline cannot be dubbed useless as yet and Mr. Tata says that there is need for a longer period of trial before any definite verdict can be pronounced. The scheme of participation of Labour in Management is likewise yet only on an experimental stage as both sides have not begun to evince keen interest in it for various reasons. Lack of clear understanding of the scheme seems to be mainly responsible for the present state of affairs. Mr. Tata has done well to emphasise the need for doing away with processions and demonstrations with a view to getting labour's demands conceded. There are ample means available for labour to advance its claims. Processions and demonstrations especially in big cities often interfere with normal life and cause untold hardship to a large number of people. If labour is really serious about gaining the sympathy of the people for its cause, it should remember that frequent processions and demonstrations will only have the opposite effect. It is to be hoped that Mr. Tata's eminent suggestion that national labour leaders through a high powered committee of their own should bring about a self-imposed ban on such demonstrations will find acceptance.

May we help you to export your goods?

TODAY, the word "Export" is very much in the air. But you need full details of your market before you can take any risk. Perhaps, our branches in Bangkok, Colombo, Hong Kong, Ipoh, Klang, Kuala Lumpur, Malacca, Rangoon and Singapore may be in a position to assist you.

Coffee Crop Outlook

EYES in the planting districts are once again, turned sky-wards searching for signs of rain-bearing clouds. Spared from untimely showers through the past two months, the prospects for the Coffee industry are considered to be bright for a 50,000 to 55,000 ton crop, provided the coffee receives a rainfall of one or two inches during the next two or three weeks. Hopes are presently high in every estate for a record-breaking crop in 1960/61.

The Coffee Marketing Committee has placed the revised estimates of the 1959/59 crop at 44,069 tonnes, comprising 30,785 tonnes Arabica and 13,275 tonnes Robusta. Pool receipts of Plantation variety are estimated to be 22,000 tonnes and those of Arabica Cherry 8,785 tonnes, bringing the total Arabica to 30,785 tonnes.

The receipts of 1959/60 crop into the Pool, up to 29 February 1960, amounted to 25,759 tonnes consisting of 21,011 tonnes Plantation; 2,814 tonnes Arabica Cherry and 1,934 tonnes Robusta. The corresponding receipts of the 1958/59 crop up to the end of February last year were 26,621 tonnes, consisting of 17,006 tonnes Plantation; 4,536 tonnes Arabica Cherry and 5,059 tonnes Robusta. The West Coast alone has received 10,699 tonnes, covering nearly 50 per cent of the total receipts. While nearly 50 per cent of the coffee under Plantation variety has already been cured, the curing of Arabica Cherry and Robusta has just started.

The total internal releases, till the end of February 1960, amounted to 5,083 tonnes comprising 1,832 tonnes Plantation; 1,054 tonnes Arabica Cherry and 2,197 tonnes Robusta. The total releases, till the end of February last year, were 4,953 tonnes.

The total quantity of coffee sold for export out of the 1958/59 crop amounted to 16,400 tonnes with the export sale on March 2. There is still a balance of 60 tonnes of Robusta, to be sold for export out of the 1958/59 allocation.

The Coffee Board has released 1,494,000 kilograms of coffee for export out of the 1959/60 crop consisting of 882,000 kilograms of Plantation A, 294,000 kilograms of Plantation B, 174,000 kilograms of Plantation Triage and 144,000 kilograms of Arabica Cherry Flats. The last date for the tender is 7th April.

Meanwhile, the world coffee market displays a surprising

undertone of strength and optimism despite the larger production trends in a world over-fed, with coffee. As against a production average of 19 million bags by Brazil during 1951/55, the crop forecast for 1960/61 is 36 million bags. As for world production, the rise during the period was from 41 million to 63.7 million bags.

Much of the recent stability in the world coffee market is attributed to the American coffee agreement. In fact, during the first whole year of the retention scheme, Brazil increased its exports from 12.9 million bags in 1958 to 17.5 million bags in 1959, while Colombia increased its shipments from 5.4 to 6.4 million bags. Total world import of coffee was also high at 40 million bags, of which the USA took 22 million bags.

Rubber

According to the Rubber Board, consumption of rubber in India amounted to 3,205 tonnes in January, 1960, whereas production totalled only 2,438 tonnes. The corresponding figures for January last year were 2,866 tonnes and 2,324 tonnes respectively.

Imports in January this year declined to 468 tonnes from 671 tonnes in the corresponding month of last year. Stocks, at the end of January 1960, were lower at 10,496 tonnes compared to 11,716 tonnes at the close of January last year. While stocks with the estates and dealers fell to 5,770 tonnes from 5,950 tonnes, those with the manufacturers were also lower at 4,726 tonnes as compared with 5,766 tonnes in January last year.

To judge by world production and consumption figures, it appears that the steady trend will continue for some time. Production increased by 163,000 tons to 2,065,000 tons last year. Consumption increased by 215,000 tons to 2,105,000 tons. The latter figure included estimated imports into the USSR of 232,500 tons and into China of 134,750 tons.

Output of synthetic rubber increased from 1,242,500 tons to 1,627,500 tons. Consumption rose from 1,247,500 tons to 1,557,500 tons.

Pepper

In the absence of any new development and encouraging advices from New York or Singapore, Pepper markets are ruling quiet. As such, turnover remains limited. In the Alleppey and Cochin markets, the rate for ready garbled variety is quoted around Rs 250 per cwt. In the New York market, the rate for ready and "awaiting release" positions is quoted at 57 cents per pound.

Despite the sound statistical position, the future of the market is uncertain in view of the absence of new developments. Merchants in India are following Singapore and any weak advice therefrom is affecting the sentiment, which is rather paradoxical, since India is

to remain the main supplier of black pepper till the advent of the new crop of Lampong, some time in August.

Earnings from the export of black pepper in 1959 amounted to Rs 4.27 crores as compared with only Rs 2.98 crores in the previous year. The USA was the biggest buyer of Indian pepper last year, offtake being valued at Rs 1.58 crores as against Rs 82 lakhs in 1958. Offtake of the USSR, which was the leading buyer of Indian pepper in 1958, declined in value from Rs 96 lakhs in 1958 to Rs 84 lakhs last year. Other important importers of Indian black pepper last year were Italy, Canada, Poland and Czechoslovakia.

Sugar

According to the Indian Sugar Mills Association, Sugar production was higher at 473,000 tons in February as against 410,000 tons in the corresponding month of last year. This brings the total production for the season 1959/60 up to the end of February, to 1.61 million tons as against 1.33 million tons in the corresponding period of last season. Latest reports indicate that the production has gone up to 1.825 million tons as on 15 March, thus suggesting that the aggregate production this season will exceed 2.1 million tons—about 300,000 tons more than in 1958/59.

The offtake of sugar from the factories, till the end of last month, has been estimated at 628,000 tons as against 691,000 tons in the corresponding period of last season. The closing stock with the factories, as on 29th February 1960, was estimated at 1.125 million tons as against 972,000 tons on the corresponding date of the last season.

The increase in production as well as stocks with the factories has naturally made the supply position easier, resulting in open market prices showing a downward trend at all places. The declining trend in gur and khandasari has also contributed to the easy tone in the sugar markets.

Rumours are now current that the Food Ministry will consider the question of decontrol at an early date as a sequel to excellent production in the country.

Khandasari

Prices in Khandasari market have been developing an easier tendency, in the face of increasing stocks. Production is being continued in some centres, while most of the crushers are reported to have closed their season.

Reports from Uttar Pradesh indicate that many khandasari units have already stopped crushing for the season. With the result, the sugar mills are getting adequate cane supplies at the enhanced rate of Rs 1.75 a maund. Production of Khandasari this year is estimated at 500,000 tons which, together with a carryover of 150,000 tons and sugar production of 2.3 million

Indian Finance

March 26, 1960

tons, will add up to a total of 2.95 million tons available in the country as against an estimated consumption of around 2.6 million tons.

Foodgrains

Conditions in the Foodgrains market continued to remain quiet with prices displaying an easier tendency due to slack demand coupled with the beginning of new "rabi" crop arrivals. Wheat is quoted at Rs 17.50 a maund for the average quality and Rs 18.75 for the farm variety. Harvesting of the crop, which has started in east Uttar Pradesh, will begin by the end of the month in west Uttar Pradesh.

The Rice market is ruling quiet in the absence of new urges. Moreover, the supply position is reported to be satisfactory. Gram prices have registered fractional falls, as old stocks with the trade are heavy following recent rains. Harvesting of cereals is in full swing. The prices of Maize and Bajra have shown an easier tendency due to withdrawal of seasonal support.

Thanks to better demand in the face of poor stock position, Jowar and Guar prices are ruling steady. Among Pulses, arhar has lost 75 nP a maund due to dormant demand and bright crop prospects. The markets for other pulses are mostly quiet.

Shellac

Thanks to the successful operation of the price support scheme of the Indian Lac Exporters' Association, the Shellac market in Calcutta continues to rule steady with the Pure TV quality quoting Rs 76 a maund. It has now been decided to fix new minimum and maximum export prices, which will be operative from April to September 1960.

The new minima have been increased by 5 per cent to 9 per cent in line with current prices. Except for some special grades, the maximum prices have generally not been changed. They are fixed at nearly 16 per cent to 18 per cent above the minima. The idea of increasing the minima probably arises from the anxiety to hold prices as soon as increased supplies become available from the raw Bysakhi crop. The Katki crop this season has also been bigger.

The Katki crop in 1959 is finally estimated at 345,000 maunds as compared with 265,000 maunds in the previous year and 233,000 maunds in 1957. Substantial increases took place in Bihar, Madhya Pradesh and West Bengal, which produced 134,000 maunds; 130,000 maunds and 23,000 maunds respectively of Katki crop in 1959.

Bullion

The Bullion market in Bombay, after early weakness, steadied up under the leadership of gold which met with renewed demand from the bull operators followed by short-covering. Rumours that credit squeeze measures might be implemented in the case of bullion

had, earlier in the week, led to a bearish feeling and some short sales were indulged. But, as the leading South Indian operator is carrying substantial long interest besides considerable stake in spot gold, shorts were forced to cover their sales in the advancing market, as the bull operators once again tried to dominate the position following the expanded offtake. Silver also firmed up in sympathy with gold. Floating stocks of silver in Bombay are estimated around 700 bars and gold 25,000 tolas.

Gold Chattr declined to Rs 128.12, to rebound to Rs 130.12, to be placed at Rs 129.81. Silver came up to Rs 217.81 from Rs 216.37, to stand at Rs 217.37. The premium on spot gold increased to Rs 1.12, while spot silver commanded a premium of 25 nP.

Oils & Oilseeds

The Oilseeds market in Bombay, after opening on a steady note, declined to steady up once again under the leadership of groundnuts, which met with renewed support at lower levels due to strong statistical position. No export business in groundnut oil has been reported due to disparity in prices, while the long-awaited export quota of HPS groundnuts has failed to materialise. In Castor Oil also, very little export business has materialised; but the prospects are considered somewhat satisfactory. The unanimous decision at the meeting of the National Development Council, however, to hold the price line had a subdued effect on the market sentiment, as fears were entertained in certain circles that, in view of the tight monetary conditions prevailing, any credit curbs would have an exaggerated effect.

Groundnut May delivery declined to Rs 205.75 from Rs 209.25, to recover to Rs 208.25, to be placed at Rs 207. Groundnut Oil April/May delivery came to business at Rs 21.94 to Rs 21.69, to recover to Rs 22. Castor seeds were marked down to Rs 169 from Rs 173.50, to rally to Rs 170.62, to be placed finally at Rs 168.50. Linseed declined to Rs 32.16 from Rs 32.87, to quote at Rs 32.25. Cottonseeds were listless and hovered around Rs 149. Linseed Oil moved between Rs 15.50 and Rs 15.62, while Castor Oil, commercial quality, came down to Rs 17.50 from Rs 17.75.

For the first two and a half months of this year, exports of groundnut oil have amounted to 1,893 tons; castor oil 9,561 tons and linseed oil 1,891 tons. HPS groundnuts have accounted for 7,030 tons; groundnut oilcake expeller variety 14,188 tons; extraction oilcake 38,078 tons; linseed oilcake 8,197 tons and niger cake 2,335 tons.

Yarn

The Yarn market was in a listless state, having been overha-

dowed by the financial difficulties of one party which, in turn, has led to an apathetic tendency. Business was comparatively small and hence the resulting price movements were confined to a narrow range. The powerlooms in the various centres are not working at full strength in view of the discontent which has been brewing following the imposition of excise duty on staple-fibre cloth.

Staple-fibre yarn April delivery moved between Rs 680 and 688, to finish at Rs 685. Among Art Silk yarns, Bemberg Express was done at Rs 1776 to Rs 1794, to finish at Rs 1786. The June delivery commanded a premium of Rs 29.

Metals

The Bombay Non-Ferrous Metal market ruled quiet with narrow movements. New import policy, which will be out after a week, is being awaited. The Indian Copper Corporation has received industrial licence to set up an electrolytic copper plant with an an-

nual capacity of 8,000 tons. Copper Scrap was quoted at Rs 2.78 per cwt; Brass Scrap at Rs 176 and Lead at Rs 75. Tin was quoted around Rs 135.50 per quarter.

Hides and Skins

Tanned cow hides had a good turn over in the market this week. While leathers of light weight did not change, other tanned hides of 88½ lbs were available at a price lower by between 2 nP and 4 nP per lb.

Export business was static. UK buyers were hesitating, anticipating still lower prices. A small volume of exports was reported half a penny lower. UK bought some inferior fifties. A high volume of trade with United Kingdom is possible at still lower prices. Madras sellers are not willing to trade lower down. Tanned buffalo hides, prices, too, did not change. Cow tanned skins were lower today by 10 nP to 12 nP per lb. UK won't enter into fresh business in this commodity.

You can bank on
The Bank of Baroda
for really
first class service!

We offer complete banking service:

Current Accounts • Savings Bank and Recurring Deposit Accounts • Fixed Deposits • Loan, Overdraft and Cash Credit Accounts • Discount of Bills and Hundis • Safe Custody • Foreign Bills and Letters of Credit • Travellers Cheques and Cash Certificates • Demand Drafts • Telegraphic Transfers • Executor and Trusteeship • Safe Deposit Lockers

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1959 and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 65 branches audited by us, 14 branches audited by other auditors and the unaudited returns from 116 other branches and 121 Pay Offices not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with proviso to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- The transactions of the Bank which have come to our notice have been within the powers of the Bank;
- In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- The Bank's Balance Sheet and Profit and Loss Account drawn up by this report are in agreement with the books of account and the returns;
- In our opinion, and to the best of our information and belief, according to the explanations given to us, the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1959, and the Profit and Loss Account gives a true and fair view of the Profit, for the year ended upon that date.

Indian Sugar Mills Association

Decontrol of Sugar Necessary for Increasing Production and Bringing Down Sugar Prices

President Sri Sahu Jagdish Prasad's Address

In his Presidential address at the 27th Annual General Meeting of the Indian Sugar Mills Association, held at New Delhi on the 24th March, 1960, Sahu Jagdish Prasad, President of the Association said:—

DECLINE IN PRODUCTION.

To us in the sugar industry, the last year has again been a year of declining production, shortages and high consumer prices. Against the peak figure of 20.29 lakh tons in 1956-57, production in 1958-59 was only 18.18 lakh tons. This drop of 1.11 lakh tons over the last two years may by itself not appear to be serious; but it has to be considered in the context of an addition of 3 lakh tons to the installed capacity of the industry during the same period. In effect, therefore, the actual drop was much larger.

STEADY RISE IN CONSUMPTION.

Against this decline in production, consumption of sugar in the country has been rising steadily. From 19.88 lakh tons in 1956-57, consumption last year rose to 20.66 lakh tons. It would have been still higher at 21 lakh tons or so but for Government's restricting the releases from mills following short-fall in production. This year too consumption has been kept within limits through Government's deliberate policy of regulated releases at the rate of 1.75 lakh tons per month. Even at this rate, this year's consumption will be 21 lakh tons.

PRICE CONTROL

While deterioration in crop conditions contributed towards the fall in production, the main reason was the imposition of control on ex-factory prices of sugar and that too at uneconomic levels, particularly when there was no control on the other two competitors for cane i.e. gur and khandasari. As was pointed out by my predecessor last year, the controlled price levied in July, 1958, was much below the price that was agreed to in the discussions between the representatives of the industry and the Government in July, 1958. Far from giving an incentive to the industry to produce more, the controlled price did not even cover the cost of production fully. Last year, when the sugar recovery came down from 9.93 to 9.80 in U.P. and from 9.81 to 9.78 in Bihar due to inferior quality of cane and the production costs increased further, the industry approached the

Government for appropriate upward revision in prices to compensate the factories for this loss. But the Government did not find its way to revise the prices and the factories had to suffer further. It is true that the matter of fair price was referred by the Government to the Tariff Commission whose report is presently under Government's consideration; but meanwhile two seasons have passed and the third is on, without redress of the industry's grievance regarding uneconomic prices.

While therefore the sugar industry was faced with an unremunerative price, the gur and khandasari interests being free from any such stifling controls, took advantage of the position by attracting cane away from the factories.

ADVERSE EFFECT OF KHANDSARI GROWTH.

Sugar production is to a great extent affected by the production and prices of gur and khandasari. If, because of better gur and khandasari prices, the cane grower gets higher returns by converting his cane to gur or selling it to khandasari, increasing supplies of cane normally meant for sugar factories are diverted to gur and khandasari and sugar production to that extent suffers. This is what has precisely happened during the last two years.

The net realisation of a sugar factory in Northern India after paying a tax element of Rs. 13.16 per Md. from the ceiling price of Rs. 37.85 is only Rs. 24.69 per Md. Against this, there being no control on khandasari prices, the khandasari manufacturer's net realisation is about Rs. 38/- to Rs. 40/-, after paying a tax of only Rs. 3.24/- Rs. 4.16 per Md. Thus, khandasari producer gets easily 50% more for his product than the crystal sugar manufacturer even though khandasari is comparatively a much inferior product. Similarly, the gur producer, who is free from any tax burden, realises Rs. 16/- to Rs. 18/- per maund even though the sucrose content of gur is only about half that of sugar. The excess realisation of the gur producer as compared to a crystal sugar manufacturer, on the basis of the sugar content, thus becomes obvious.

The excess realisation enabled the khandasari manufacturer to increase his production at the cost of crystal sugar. The sugar facto-

ries in West U.P., Central U.P. and the Punjab have been the main sufferers of the competition from power crushers and khandasari, and the drop in their production at 34%, from 1956-57 peak level has been quite severe in spite of the substantial expansions effected by them. In certain individual cases, the decline has been as high as 50 percent. The nominal excise duty levied on khandasari from March last year, has hardly made a difference to the relative advantages of khandasari. The result is that last year's khandasari production is estimated to have increased from under 1 lakh tons before 1956-57 to about 3.50 lakh tons. On every maund of sugarcane diverted from the sugar factory towards khandasari manufacture, the country has lost approximately 1.5 seers of sugar, due to the inefficiency and low recovery of the latter as compared with the former. Thus, the diversion of cane to khandasari made possible by control on sugar prices has not only reduced production of sugar factories, but it has also resulted in the actual loss of about 1.5 lakh tons of sugar in the process. This is an avoidable waste at least partially of the limited food resources available to the country.

It might be of interest to note here that it is only in the controlled area that sugar production declined, while in other regions there was actually some improvement.

RISE IN PRICES.

With a widening gap between production and consumption, reserve stocks in the country declined from 4,28,000 tons at the close of 1956-57 to 3,30,000 tons in 1957-58 and to 1,53,000 tons at the close of the last season, that is, 1958-59. But for restricted releases from the mills, reserve stocks would have declined further. This apparently, created a bullish psychology in the markets and prices. Government, instead of going to the root of the problem and appreciating the need for maximising production and devising ways and means accordingly, tightened controls further. The proportion of direct allotments to Government nominees was gradually increased. In June last, the quota of U.P. and North Bihar mills was cut down to 30 per cent, while that of Punjab suspended altogether. In July, there was complete suspension of releases to mills and the entire quantity was taken over by the

Government for sale by their allottees. Government also fixed the basis of prices to be charged by the wholesalers. In some places, rationing was also introduced. But, all these measures did not improve the situation.

CRITICS OF THE INDUSTRY NOT JUSTIFIED.

Understandably, there was strong resentment against rising prices in the Parliament and elsewhere. But, unfortunately for the industry, the debates and discussion in Parliament and elsewhere instead of helping a proper assessment of the position, only led to much uninformed and unjustified criticism of the industry. It was evident from the then Food Minister's statement in the Lok Sabha in August last that the prices continued to be at a reasonable level until the beginning of May and the controlled rate fixed for U.P., North Bihar and the Punjab were generally effective. In July, the Government took over the entire stocks with the mills in the controlled area. Profitsteering by the mills, if any, could therefore have taken place only during the months of May and June. During these two months, the total quantity of sugar released by the Government was 3.75 lakh tons. Out of this quantity 1.31 lakh tons was allotted directly by the Government to their nominees, 1.24 lakh tons was given for sale to factories situated in non-controlled areas and the balance 1.20 lakh tons was released to mills in the controlled area. The allegation about profiteering thus could relate only to 1.20 lakh tons which was sold by mills in the controlled area. This quota of 1.20 lakh tons forms only 32% of the total release. It is hardly convincing, and even against the established concepts of economics, to suggest that the factories which contributed only 32% of the supply could manipulate the prices or exploit the situation to push up the prices.

The actual position was that while fall in production created fears of shortage, the manner and timing of control and the faulty distribution arrangements made thereafter turned this into a scare of scarcity which resulted in the rise in prices. It is significant that even though Government control over distribution has been complete for about 9 months now, the position has hardly improved and prices continue to be high. It is,

therefore, unfortunate that even though the industry is in no way responsible for supplies and prices in the market now, criticism against it still persists from some quarters. Our critics do not sufficiently appreciate that a sugar factory is under law obliged to deliver whatever it produces to Government nominees at Government fixed prices. And if after the goods leave the factory, and are allotted to different markets as per Government arrangements, the prices in the wholesale or the retail market rule high, the industry can hardly be blamed. It only shows that the distributive arrangements and machinery evolved by Government have been faulty and have not been able to replace, with any amount of success, the normal distribution channels. The result is that the psychology of scarcity which resulted from a short-fall in production in the previous two years persists this year also in spite of the increase in production.

The fact is that the method of approach to such problems adopted by the Government is fundamentally different from the approach advocated by the industry. Whenever the country experiences shortage of some commodity, the usual action taken by the Government is to control its distribution. But so long as the supply remains insufficient to meet the demand, no amount of regimentation can prevent the continuance of scarcity conditions, and the consequent rise in prices. Controls can never provide an escape from the normal law of supply and demand. It is exactly with this in view that the industry always advocates tackling the production angle in such cases. If production is sufficient to meet the demand, prices will inevitably find their normal level.

SHIFT IN EMPHASIS FROM DISTRIBUTION TO PRODUCTION.

I am glad to find greater appreciation at the hands of the Government of the view point advocated by the industry, as a consequence of which, there has been a shift from emphasis on distributive measures only to increased production. The new sugar policy initiated by the Food Minister this year, is a great step forward in this direction, as it provides incentives for increased production both to the growers and to the industry.

The incentives have had wholesome effect on production. By 7th of March this year, we had produced 2.98 lakh tons more than last year, the actual production by that date being 17.26 lakh tons against only 14.28 lakh tons for the corresponding period last year. There have, however, been disquieting reports of increasing pressure on cane supplies from khandasari since last month. This, I am afraid, might affect the position to some extent, which otherwise would have been still more promising.

MAXIMISATION OF PRODUCTION.

As stated by me earlier, and as duly appreciated now by Government also, it is only by increasing the present production appreciably to a level where the fear of scarcity will no longer exist and a satisfactory stock position will be built, that the sugar price position will get stabilized. This year there is sufficient cane available. Sugar factories have also the requisite production capacity. Production could, therefore, be raised still further if factories were in a position to attract requisite supplies of cane for their crushing. This could be possible only if, in competition with Khandasari and gur, sugar factories could draw their supplies of cane to crush to their maximum capacity. It is in this context that the industry has been urging removal of control on sugar prices. The abolition of controls would on the one side, remove the scare of scarcity and on the other would enable factories to draw sufficient cane supplies by paying competitive cane prices.

There has been criticism that such a policy might raise the consumer prices still further. There is, however, no ground for such an apprehension. It is true that for paying competitive cane prices the ex-factory prices will have to be raised from the present controlled rate of Rs. 37.85 nP per maund. But this by itself will not mean higher prices for the consumer. Even this higher price will be lower than the overall price he has to pay now, not only for crystal sugar but also for its alternative, khandasari sugar and gur.

RIGID COST STRUCTURE.

We often hear criticism that the Sugar Industry in this country has, inspite of the protection at the cost of the consumer, not tried to make sugar available to the consumer at cheaper prices. This has the natural implication that the industry here is either not working as efficiently as its counterparts in other countries or it is making undue profits at the cost of the consumer. But in making such allegations, the fact of the rigid and regulated conditions under which the industry works here is conveniently overlooked. These are too well and commonly known, to require a detailed mention by me here. In fact, as Government spokesmen themselves have often admitted, sugar is the most regulated industry in the country. A look at the industry's cost structure will show how rigid it is. Against the ex-factory price of Rs. 37.85 nP per maund fixed by the Government, the price of cane accounts for Rs. 16.55 nP, taxes for Rs. 13.16 nP, manufacturing charges including salaries and wages for Rs. 6.93, leaving only Rs. 2.19 nP to meet overhead expenses, to allow for profits subject to taxation, and also to provide for reserves out of which to replace machinery when worn out, at today's enhance costs,

which is more than seven times the original installed value.

HIGHER TAX BURDEN.

It should be realised that one of the main reasons for the relatively higher prices that the consumer has to pay is the heavy burden of taxes. The way in which the burden has increased over the last few years shows that the Central and State Governments treat the sugar industry as an inexhaustible source of ever-increasing revenue. State Governments collect about Rs. 10 crores annually as cane cess and spend a very meagre portion of it on sugarcane development which is the primary object of the imposition of this cess. The Central Government raises about Rs. 58 crores a year through excise duty. Sugar factories also pay annually Rs. 1 crore as Co-operative Societies' commission. The tax burden of the industry has increased by about 4.5 times since 1946-47.

CANE DEVELOPMENT.

Besides, the high incidence of cost of cane also accounts for comparatively higher cost of production of our factories. Adequate quantity and quality of sugarcane is of basic importance to a healthy and growing sugar industry. And here, much remains to be done. Although sugarcane development schemes were started in 1948-49, not much improvement has been effected so far. Although in the matter of total cane production we are nearing the target set for the Second Plan, in the matter of yield per acre and the sugar contents in cane per acre, we have made hardly any progress. Our position when compared to other cane producing countries is also very backward.

The target of 100 million tons of cane fixed by the Indian Central Sugarcane Committee for the 3rd Plan will necessitate raising the yield per acre to 20 tons or about 50% more than the present average. The effort required to effect such an increase will be tremendous. But, unless something really substantial is done and concerted and co-ordinated steps are taken, the position cannot improve.

POOR FINANCIAL POSITION.

The imposition of control brought to the fore the uneconomic nature of the industry's working and its poor financial position. I may here refer to the results of the study conducted by the Association of Indian Industry and Trade for the seasons 1954-55 to 1957-58. It covered the factories producing 88 percent to 92 percent of the country's output of sugar and should, therefore, be considered as fully representative of the industry. The study has shown an alarmingly poor financial position of the industry. Many units are actually incurring losses and returns on capital and also reserves are declining. The industry in the North, particularly, is faced with near-crisis conditions.

NEED FOR ADEQUATE ALLOWANCE FOR REHABILITATION

While on this subject, I would like to refer to the urgency of rehabilitation and modernisation in the industry. Most of the existing plants were put up over 25 years ago, and are due for large scale replacement and modernisation for which large funds are required. As will be appreciated, the prices of sugar machinery between 1931 to 1937 and now have increased by six to seven times. For example, the cost of a Co-operative sugar factory that has gone into production recently, namely, Bazpur in Nainital District, is Rs. 1,40,00,000/-. If compared to the cost of a factory of identical capacity erected between 1930 and 1936, it shows a rise of more than 650 per cent. It is quite clear, therefore, that the normal depreciation will be wholly inadequate to cover even a fraction of the rehabilitation charges.

Moreover, all the funds available with the industry including equity capital, depreciation and reserves of all kinds have been employed for expanding the capacity of the factories and are represented by the current block. As a matter of fact, over a period of 10 years or so, the borrowing of the industry as a whole against the block, apart from current borrowings from stocks etc. has increased very substantially. The consumer has been directly benefited by the increase in capacity because this has led to a lower cost of production, being taken into account when the reasonable price of sugar for him is determined. I would, therefore, urge upon the Government to formulate a realistic price policy, which, besides meeting the cost of production fully, would also provide for the rehabilitation requirements which is necessary to ensure the industry's growth and development.

THE DUNLOP RUBBER CO. (INDIA) LTD.

Notice is hereby given that the Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 11th April, 1960 to 1st May, 1960, both days inclusive. The Annual General Meeting is convened to be held on 19th April, 1960. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 11th April, 1960.

By Order

OLYMPUS

Progress in Some Plan Sectors

TWENTY-THOUSAND new post offices, 1,400 new telegraph offices and 180,000 new telephones were the targets originally laid down in the Second Plan for the Posts and Telegraphs Department. It would appear from the progress actually made during the period 1 April 1956-31 December 1959 that these targets are likely to be reached. Firstly as regards post offices, 12,742 of them have been opened during the period; 2,082 are being opened in the first three months of 1960. With nearly 4,800 post offices opened in the fourth year alone, it may be expected that 5,200 will be opened in the last year to bring the total number to 75,000 at the end of the Second Plan as against 55,000 at the end of the First Plan. Secondly, as regards telegraph offices, 1,014 of them have been opened during the period 1 April 1956-31 December 1959. At this rate, it may be expected that the target thereof will be reached and that 6,300 telegraph offices will be working at the end of the Second Plan as against 4,900 at the end of the First. Thirdly, as regards telephones, 132,400 of them have been installed during the same period. Here also, the target is likely to be reached, bringing the total number of telephones at the end of the Second Plan to 450,000 as against 270,000 at the end of the First. Actually, it has been estimated that the total number of telephone connections as on 31 March 1960, will be 427,000.

It is not surprising that all this progress has been reflected in a steady and substantial increase in traffic. The more notable traffic figures in 1959-60 (Estimated) and 1958-59 (Actual) are given below:

	1958-59	1959-60
Total number of postal articles handled (including service and registered articles) (million)	3,596	3,856
Number of money orders issued (million)	73.0	78.1
Value of money orders issued (Rs. crores)	296	317
Number of savings bank transactions (million)	22.2	24.0
Number of telegrams (million)	34.5	35.4
Number of Trunk Calls (million)	26.4	30.0
Number of telephone connections ('000)	378.5	427.0

This increase in traffic, in turn, has led to an increase in gross revenue from Rs. 66.3 crores in 1958-59 to Rs. 70.0 crores in 1959-60 (Revised). The only sub-head of revenue which has remained static is "Radios," with Rs. 8.2 lakhs in 1958-59 and Rs. 8.1 lakhs in 1959-60. Does this mean that the market for radios is not expanding?

Community Development:
As on 2 October 1959, the Community Development Programme

covers 2,708 blocks (excluding 403 pre-extension blocks) with 360,000 villages and a population of 179 million. It may be expected that, with the blocks to be allotted on 2 October 1960, the population that will come to be covered by the Programme will reach a total of about 200 million in the final year of the Second Plan. That will mean a coverage representing 62 per cent of the Plan's target of 325 million people originally laid down.

Although agriculture is said to have received the highest priority under the Programme, the average achievements per block per year in that field have not been very impressive. For example, the quantity of improved seeds distributed per average block in a year is 2,680 maunds—just sufficient, perhaps, for 5 per cent of the cultivated area and all the major crops in an average block will not be covered by improved seeds in the 5-year post-intensive phase of development. Secondly, the quantity of chemical fertilisers distributed per average block in a year is 6,350 maunds—just sufficient, perhaps, for a fourth of the irrigated area which, itself, may be only a fifth of the cultivated area of that block.

Thirdly, the number of improved implements distributed per average block in a year is only 164 which, even if assumed to consist entirely of improved ploughs, could cover only one per cent of all the household operational holdings in that block. At this rate, it is clear that all the farmers in an average block will not come to have improved ploughs—so very necessary for better tillage—in the 5-year post-intensive phase of development. And, lastly, the number of compost pits dug per average block in a year is 890—that is, 6 or 7 pits in each village in that block. Since one pit cannot produce enough compost manure for 100 acres of land, it is obvious that a much larger number of pits will have to be dug and properly maintained if, in the post-intensive phase of development, all the lands in an average village are to have their quota of organic manure, which may have to be as much as 25 tons per acre.

It would appear from this picture of achievements that the physical inputs into agriculture are not commensurate with the needs of development. The Community Development Programme has thus touched only the fringe of the problem. Since greater physical inputs will involve, necessarily, heavier financial outlays, it is to be hoped that, in the Third Plan period, the pace of progress will be quickened. Otherwise, that Plan's target of 105 million tons of foodgrains is not likely to be achieved.

Co-operation:

The Second Plan, it may be recalled, originally laid down the target of membership of primary credit cooperatives at 15 million by the end of 1960-61. This target

was subsequently raised to 20 million. As against this target, the actual membership in 1958-59 is believed to have reached a level of about 12 million. No substantial increase in membership is likely to have taken place in 1959-60. At this rate, therefore, the Plan's original target may not be even fully reached. The slow pace of progress in this sphere is attributed to the fact that the question of membership is inextricably linked with providing adequate production credit and other services. The position in regard to credit is that co-operatives supplied short and medium term credit to the extent of Rs. 125 crores in 1958-59 and Rs. 150 crores in 1959-60. It is stated that, at the present rate of growth, the credit that may be made available in 1960-61 is unlikely to exceed Rs. 190 crores. Even the relatively modest target of Rs. 200 crores to be achieved in 1960-61 is, therefore, not likely to be reached. That the average loan per member has increased from Rs. 64 in 1955-56 to just Rs. 94 in 1957-58 is an index of the inadequacy of cooperative credit.

If the purely credit societies are not progressing according to plan, there is now the compensating circumstance that more multipurpose societies, otherwise known as "service cooperatives," are coming up. In pursuance of the new policy directive issued in May 1959, as many as 39,000 service cooperatives (composed of 16,000 new and 23,000 by reorganisation of existing village societies) will have been organised by the end of June 1960. It is also expected that 29,000 service cooperatives (10,000 new and 19,000 by reorganisation) will be organised in 1960-61. It is a heartening trend that the organisation of these service cooperatives is proceeding on sound lines. This is inferred from the fact that many of the States have laid down tests of minimum membership—generally 40 to 50 members—and minimum paid-up share capital—generally Rs. 400 to Rs. 500—which must be fulfilled before new societies are organised. At the same time, to enable the service cooperatives to employ a part-time manager, a subsidy to the extent of Rs. 900 is also being given to each society spread over a period of five years.

The physical achievements of some other parts of the Cooperative Programme would also need to be mentioned. These achievements during the period 1956-61 as against the Plan targets will be as under:

	Plan target	Achievement
Organisation of large-sized societies	10,400	7,312
Construction of rural godowns	4,000	4,109
Organisation of primary marketing societies	1,283	1,669
Construction of godowns by marketing societies	1,543	1,679
Co-operative sugar factories going into production	20	20
New processing societies other than sugar factories	166	379
New training schools for subordinate personnel	38	38

Organisation of primary land mortgage banks	96	96
Organisation of credit unions	301	301

In regard to large-sized societies, it may be noted that they are not being organised now in view of the shift in policy in favour of service cooperatives. As for co-operative sugar factories, 21 of them which were actually working in the 1958-59 season produced a total quantity of 4.87 million maunds (nearly 180,000 tons) of sugar.

The Road Plan:

It is gratifying to know that the mileage targets of the Road Plan have already been achieved. The position is as under:

	Nagpur Plan target	Mileage of roads at the end of 1957-58
Surfaced roads	123,000	133,810
Unsurfaced roads	208,000	223,566
Total	331,000	357,376

The Coal Plan:

It may be recalled that, out of the additional production target of 22 million tons of coal under the Second Plan, 12 million tons were allotted to the public sector—10.5 million tons to the National Coal Development Corporation and 1.5 million tons to the Singareni Collieries—and 10 million tons to the private sector. Of the 10.5 million tons allotted to the NCDC, 0.5 million tons were to be raised from the existing 11 State Collieries.

The progress toward these targets appears to be satisfactory. Firstly, the 11 old State collieries have increased their production from 2.9 million tons in 1955-56 to 3.5 million tons in 1958-59; they have thus achieved already their target of 0.5 million tons by way of additional coal production. Secondly, production from the new mines under the NCDC during 1959 was 1.3 million tons. It is estimated, on the basis of the production level attained during December 1959, that the annual level of production reached by the NCDC is already over 5 million tons. But it is rather doubtful if the target of 10 million tons set for the new mines under the NCDC will be reached by the end of the Second Plan.

Thirdly, the Singareni collieries in Andhra Pradesh, which are scheduled to reach a production level of 3 million tons in 1961 to achieve the target of additional production set for them, have produced 2.23 million tons in 1959. It is confidently expected, on the basis of the trend of production so far, that the target fixed for these collieries would be reached by the end of the current Plan period. Lastly, in the private sector, production in 1959 was about 40.3 million tons as against 33.9 million tons in 1955. At this rate, it may be reasonably expected that the private sector will achieve its target of additional production by the end of the current Plan.

THE PENINSULA

Kerala Budget

STATE legislatures should now be resounding with budget discussions, the ritual of Budget presentation having been gone through almost everywhere. The presentation of the Kerala Budget has, however, come as a late effort. The delay is to be attributed to the pressure of business on the new coalition Government which had only a month's time for Budget preparation after they assumed power. The lack of time has naturally told on the nature of the Budget which, as the State Finance Minister, Mr R. Sankar, observed in the course of his Budget speech, could be deemed only as a preliminary programme. Amidst the administrative interruptions the State suffered consequent on the dismissal of the Communist Ministry and the interregnum preceding the assumption of office by the United Democratic Front after a new general election, it was an impossible task for the Finance Minister to garner all the financial facts and integrate them with an economic policy which itself requires careful deliberation and thought in the light of the departures envisaged from the previous

policies of the Communist Government. Mr Sankar could not have but postponed presentation of a thorough picture of the State's finances for the next year.

The Budget for 1960-61 discloses a deficit of the order of Rs 1.99 crores. Revenue receipts are estimated at Rs 42.95 crores and expenditure on revenue account at Rs 44.94 crores. The Finance Minister has preferred to leave the gap uncovered. While the dismissal of the Communist Ministry would itself have banished fears of thunderbolts in the form of fresh taxation, particularly on plantations, which have been the particular target of the Communist Government, the decision not to impose new taxes also rested on an awareness of the lack of scope for fresh taxation. Mr Sankar was clear on this point, and observed that, excepting for the agricultural income tax and sales tax, the other sources of revenue were inelastic. He has wisely refrained from further additions to the agricultural income tax since the trend in respect of plantation costs and size of land holdings, is such as precludes increase in revenue in the event of new levies. In the context of the inelasticity of tax revenue, Mr Sankar has sounded the need for exploring avenues for increasing non-tax revenues.

Capital expenditure outside the revenue account is placed at Rs

9.06 crores, and includes Rs 4.3 crores under loans and advances. The Budget takes credit for Rs 4.40 crores to be obtained through open market loans to be floated in 1960-61 and also incorporates an amount of Rs 1.50 crores anticipated to be the State's share of the National Savings collections.

The allocations of expenditure under the Budget are noteworthy for what they reveal to be the most pressing problems confronting the State. Rice deficit, which at present runs to the tune of nearly 700,000 tons, has been Kerala's economic riddle. The Budget makes an allocation of Rs 107.56 lakhs for its supply through fair price shops on the basis of a subsidy amounting to 50 nP per measure. The rice deficit defines the problem of the State in indubitable terms. It was, therefore, but proper that Mr Sankar should lay the maximum stress on increasing rice production through intensive cultivation.

The Budget does not seem to be sufficiently ambitious in respect of industrial development. While there is a verbal assurance from the State Finance Minister that no efforts would be spared in industrialising the State, he made no secret of his view that concentration on agricultural production rather than on industrialisation would pay better dividends in terms of more employment opportunities. The relative affluence of agriculturists in Kerala as com-

pared with the non-agricultural population, and the scope for intensive cultivation in rice and coconut production together with lack of resources for setting up major industries, would point to concentration on agriculture as the best means of raising living standards in Kerala. The Budget makes a large provision for ensuring organic and chemical manures for popularising intensive cultivation of rice and coconuts.

Education figures as one of the most important items of outlay. Nursery schools would get larger provisions in the State. To have made education free up to the eighth standard is also a remarkable achievement. Though Kerala is noted for the high percentage of literacy, this is true only of the region represented by the old Travancore and Cochin States. Free education up to the eighth standard should step up literacy in the Malabar area, which has been backward in education. The Budget also envisages the establishment of a Hindi Teachers' training college. Apparently, Kerala does not seem to nourish any quarrel on the question of the National language, which has agitated a large section of opinion in the Madras and West Bengal States. Mr Sankar revealed the State Government's attitude on this question when he observed that Kerala has recognised the growing importance of Hindi in the national sphere.

THE ACID TEST

Production of Sulphuric Acid is an unfailing index of a country's industrial growth and economic independence.

There has been a threefold rise in the production of this key chemical in India in the last seven years, and with this rise is associated the name of Simon-Carves.

The total capacity of Simon-Carves acid plants already commissioned is more than half the entire acid production of India in 1958.

The world-wide experience of Simon-Carves in designing, engineering and constructing Sulphuric Acid plants, is at the service of India.

WORLD OF JUTE

Shipments of Gunny Cloth in 1959

WITH the Indo-Pakistani trade talks promising to be fruitful, to an extent that perhaps we could not have hoped for, there is reason to think that all will now be well in the World of Jute. The unbridled speculation that has been witnessed in Calcutta markets, particularly in raw jute, may now thankfully come to an end. No longer can the speculative fraternity count upon inadequacy of the raw material as a pretext for "bulling" the market; no longer, I trust, will jute goods prices be subject to the violent fluctuations that do nobody any good except the market gambler. Calmness and a sense of proportion will, I believe now be restored.

The future course of prices should therefore be downward. With raw jute prices at soaring levels at sowing time, with the Pakistani removal of restrictions on the acreage under raw jute, with the promise of more abundant supplies of the raw material from our neighbour country, it is clear that, unless the weather turns especially vicious and malignant, raw jute availability in the jute year 1960-61 should be more than adequate. With plentiful raw jute at fair and reasonable prices, output of jute goods should improve; and the manufactures can probably be marketed at prices distinctly lower than what they are today. In such case, we may, I feel, take for granted an expansion in the demand for jute goods. In such wise is it that circumstances are fortunately conspiring to make of the year beginning 1 July 1960 one of the best in recent times. Who knows, even the market for jute goods might expand.

Meantime, the detailed figures of gunny cloth shipments in 1959 make for heartening reading. Gunny cloth clearances from Calcutta in the last calendar year improved substantially by 156 million yards over the respective figure for 1958. Contributing importantly to such improved offtake by India's customers is, it is intriguing to find, the United States of America. So, the steel strike notwithstanding, the USA improved its absorption of gunny cloth by fully 94 million yards.

The second customer of importance, in respect of this category of jute goods, is South America; rather, Argentina. Here, the export-licence is slightly unhappy, in that

offtake, for the region, is lower by 15 million yards. I suppose we must find what consolation we can in the fact that the Argentine has always been a temperamental customer; in the one year, all previous records are broken; in the next it has happened that the country has practically no use for jute goods. On the other hand, every other important customer for gunny cloth, with the exception of New Zealand, took distinctly more of this species of jute manufactures during 1959. Truly impressive is the increase in respect of Turkey and the Continent; and the rise of 10 million yards in clearances to Indian Ports has, I should say, its own significance. There is an attendant mystery in respect of the increase of 25 million yards in shipments to all other ports. China, perhaps?

The table giving details of clearances of gunny in the last three years is given below.

Clearances of Gunny Cloth

	(In Millions of yards)		
	1959	1958	1957
USA ..	781.4	688.0	674.4
S. America ..	213.3	228.0	252.4
Canada ..	158.4	152.1	131.0
UK ..	122.4	119.3	68.9
Indian Ports ..	56.2	46.5	46.5
Continent ..	62.3	38.3	21.1
Australia ..	45.9	44.8	46.1
USSR ..	27.8	25.7	10.3
UAR ..	17.9	14.5	16.1
Turkey ..	16.8	7.5	16.5
Middle East ..	10.8	6.0	21.4
New Zealand ..	8.6	9.7	11.2
Other Ports ..	54.9	30.1	28.0
Total	1566.7	1410.5	1343.8

(Note: Gunny cloth relates mainly to hessian; for example, in 1959, of total clearances of gunny cloth at 1567 million yards, hessian cloth accounted for 1541 million yards and sacking cloth for 26 million yards)

Wide fluctuations in price have characterised trading in the jute goods market during the past week ended Thursday. The market opened last Friday with the undertone steady. During the day, activity was, however, at a low ebb and prices moved within a narrow range. At the close, Hessian 40"x10 oz was done at Rs 41.65 while B Twills March was placed at Rs 113.25. Conditions were almost unchanged on Saturday with activity limited to covering in near positions. The undertone turned easy on Monday, especially in the sacking section, following selling pressure in the futures market. Sentiment seemed to have been adversely affected by reports of poor shipping instructions during the current month. B Twills reacted to Rs 112.35 and Hessian was also lower in sympathy at Rs 41.50. Prices were further easier on Wednesday largely because of a decline in raw jute prices.

Buying support, however, was forthcoming on Thursday following reports of revival of Chinese enquiries. Reports had it that an

order for Heavy Cees from this country was in the offing. The news bolstered sentiment and prices moved up quickly. But the peak levels touched during the earlier part of the day could not be maintained till the close due to profit taking at the higher levels. Hessian March closed at Rs 41.40 while B Twills were finally placed at Rs 112.40.

WORLD OF TEA

Production and Exports

ACCORDING to the latest figures, production of Tea in India, during last year, declined to 706.2 million pounds from 711.3 million pounds in the previous year. The decline took place mainly toward the end of last year when production, in the last quarter, was placed at 199.7 million pounds against 209.9 million pounds in the fourth quarter of 1958.

Most districts in South India have had early rains and some estates are reporting heavy flush. If the Third Plan target is 850 million pounds, the South Indian share will be about 185 million pounds and, with the present trend in production, it may be easily reached ahead of time. Production for the whole of last year fell to 148.2 million pounds from 157.7 million pounds in 1958.

Production of tea in Ceylon, during January 1960, rose to 35.1 million pounds from 33.8 million pounds in the corresponding month of last year, thanks to favourable weather.

According to East African reports, Kenya's tea expansion is going apace and it is said that about 700,000 acres of suitable tea-land is available in the colony.

Although the Indian tea industry has welcomed the announcement regarding a Rs 2-crore assistance scheme, there is an undercurrent of scepticism among producers who feel that almost all good schemes on paper get wholly complicated in practice and in the end cause waste of time and effort.

As far as North-East Indian tea is concerned, exports, during last month, amounted to 33.9 million pounds against 17.7 million pounds in the corresponding month of the previous year, showing a rise of more than 16 million pounds.

Shipments from South India, however, declined to 83.41 million pounds last year from 96.02 million pounds in the previous year. Even allowing for the fall in shipments to Indian Ports from 10.75 million pounds in 1958 to 9.19 million pounds last year, total South Indian tea shipments to foreign countries disclosed a fall of more than 11 million pounds.

Exports from Ceylon also declined to 383.49 million pounds from 410.77 million pounds in 1958. Except to

the USA and Egypt, Ceylonese exports to all destinations recorded a decline. Offtake by the UK alone fell by nearly 26 million pounds from 164.55 million pounds in 1958 to 138.7 million pounds last year. Shipments to the Continent also fell from 18.54 million pounds to 15.84 million pounds as did those to Canada from 17.66 million pounds to 16.65 million pounds.

Meanwhile, the gradual decline in plain tea prices at the Calcutta auction continues to persist. No export auction is being held this week and the clearing sale for the current season will be held next week.

In the Internal Sale, offerings consisted of 24,648 packages of Dusts. There was good active demand. Orthodox grainy descriptions met with support at a drop of up to 10 nP per pound, while the more powdery kinds and brighter Assams were again in better demand. Leg-cut Doars Dusts were lower by 4 nP to 8 nP a pound. Medium CTC types were better supported, the smaller and brighter liquoring dusts often selling at steady rates. The best CTC types were often lower, but followed quality. Following rates were quoted:—Medium Doars Dust Rs 1.88 to Rs 1.94; Medium Assam Dust Rs 1.84 to Rs 1.90; Medium Assam CTC Dust Rs 2.00 to Rs 2.14 and Best CTC Assam Dust Rs 2.40 to Rs 2.75 (nominal).

In the London auction, buyers of Ceylon tea showed discrimination where quality was concerned and overall demand was only fair. A few of the best invoices were sold well. Otherwise, prices showed sharp falls, especially for Broken Orange Pekoes, and there were many withdrawals. Offerings totalled 13,095 packages.

Except for the few bright liquoring invoices, prices for the South Indian growths on offer declined by about 2d per pound and withdrawals were substantial. Offerings of South Indian tea amounted to 6,825 packages.

In the London auction, prices for Plain teas have developed an easier tendency and the rate has been marked down to 3sh 7d from 4sh 2d a pound. The amount of plain tea available in London remains large and this may well be one reason for the current weakness of the market.

Another possible explanation is that blenders in London are satisfied with their current level of stocks and reckon that they can get through the summer without buying very much more. Normally, blenders have to build up their stocks at this time of the year, because tea imports, during the summer months, are small; but there has been little evidence of that happening recently.

According to figures released by the Food and Agricultural Organisation of the United Nations, Britain's imports of tea dropped by nearly 38,000 tons last year. Estimated world production also fell slightly and the tea producing countries themselves drank more. Tea consumption in Western Europe, the Organisation considers, is likely to grow only with the growth of population. But, in the producing countries, demand should grow hand in hand with increasing prosperity.

Cloth Stocks Go Down in February

THE Cotton futures market is once again in the doldrums and prices have lost some ground on a somewhat bearish psychology following the slump in the stock markets and rumours of curbs on advances on commodities and cloth by the Reserve Bank. Moreover, reports of financial difficulties of a few business firms in outside markets also threw a damper on the market. Somewhat easier advices from the spot section and talks of additional imports also acted as a

deterrent to the general feeling which turned hesitant. ICC August dropped down to Rs 756 from Rs 767 to be placed around Rs 757. The maturing March delivery dropped from the ceiling level of Rs 820 to Rs 810 to rally to Rs 811. As the statistical position of indigenous cotton continues inherently strong, the market is likely to attract support in the event of a further fall to around Rs 750, but much will depend on business sentiment.

SPOT:

Modest business passed in the spot market at Sewri. Mills were somewhat reserved in their purchases due to the move for additional imports as well as the necessity to take out import licences against their allocations. Though Vijay and Digvijay met with somewhat better enquiries, prices of these growths have declined by about Rs 20 to Rs 25. There was fairly good demand for lower varieties. In the import section, the tendency was a shade

easier in respect of practically all varieties of foreign cotton. Sudan cotton prices have dropped while some good enquiry was reported in African cotton by Southern mills. Egyptian and American prices were also placed somewhat lower.

MOORE IMPORTS:

There are indications that Government of India might arrange for more imports of cotton from USA. According to the present arrangements, the Government of India have pledged to allow import to the extent of 1.25 million bales till the end of the season. Import allocations so far issued total 1.02 million bales. Some quarters are inclined to revise downward the crop estimate to 3.8 million bales as against 4 million bales a few days ago. In view of this, mill quarters feel the need for the import quota to be raised. Government, however, are considering how best the needs of the industry could be met without frittering away foreign exchange. There are

indications from New Delhi that a further import quota of about 40,000 bales of cotton from Pakistan is likely to be announced following the new trade agreement which is being negotiated between the two countries. It might be recollected that, already, imports of about 20,000 bales had been arranged under limited payment agreement. There are unofficial reports that Washington has issued two purchase authorities to India, one involving 100,000 bales of cotton Stapling 1" and below, the other consisting of a like quantity of cotton stapling 1 1/16" and above. Following the directive issued by the Textile Commissioner the previous week, mills are rushing in to apply for import licences and hence the quantity licenced from the beginning of the season till 5 March has increased to 545,139 bales as against 469,094 bales till 27 February.

CLOTH MARKET:

The Cloth market is in somewhat better shape than expected and domestic demand has expanded with a slight improvement in the rates. Export performance was also encouraging. Business to the extent of two million yards of grey and bleached long cloth with Burma and a million yards of bleached long cloth with Indonesia was reported to have been concluded recently.

Exports of cotton piecegoods in the month of February are provisionally estimated at 57 million yards. Although this is 16 million yards below the January figure of 73 million yards and 34.3 million yards below the December record of 91.53 million yards, it compares favourably with the figures for the first two months of 1959. These were 51.07 million yards and 53.76 million yards respectively. Exports in 1959 at 793 million yards showed an impressive rise of 205 million yards from 578.22 million yards in 1958. It is to be seen whether export performance during the current year will continue to be as encouraging as in the previous year in view of the rise in cloth prices.

Cloth production, during the month of February, has been placed at 402 million yards and yarn at 138 million pounds. This compares with the production of 418 million yards and 144 million pounds in January and 392 million yards and 137 million pounds in February 1959.

Stocks with the mills, at the end of February 1960, have decreased to 259,800 bales from 268,900 bales at the end of January and 494,900 bales a year ago. Out of the stocks of 259,800 bales, unsold stocks increased to 140,200 bales as against 117,700 bales a month ago, while cloth stocks sold but delivery not taken have gone down to 119,600 bales from 151,200 bales. Yarn stocks have increased during the month by 6,100 bales to 28,900 bales.

Suspended Animation

Investment Gossip:

THE stock market still seems to be in a state of suspended animation. The RBI directive of 11 March is squarely blamed for what is now described as the loss of confidence.

All are, however, agreed that there is nothing wrong in Authority trying to make the stock markets safe for investors, that is, unsafe for the pure speculator. But it is pointed out that the medicine, while eradicating the disease, threatens to kill the patient also. For, that is what is forecast if the RBI does not effect necessary modifications in its directives so as to make it possible once more for investors to regain their confidence in the stock market. The basis of this claim is the belief that, in the past fortnight, investors together with a section of marketmen have also lost heavily. This is a point on which there can be more than one opinion. What the genuine investor has lost is perhaps what he thought he had gained in the hectic period.

But, as I have pointed out last week, the RBI directive may have imposed certain disabilities which have not been intended. The sooner they are removed the better for the investor. A curb on unbridled speculation is necessary at all times. And it is my view that RBI intervention was quite timely. But I repeat that it must be ensured that the remedial measures do not result in shaking the investors' confidence in equities.

A reader has written to me about what I had said a few weeks ago about the vital position of the LIC. I had said therein that over-enthusiastic marketmen should not fail to remember that there was big brother LIC in the background always capable of swaying the market both ways. This reader further argues that the desired result would have been obtained by the LIC coming out as a seller. But there is no point in talking about the would-have-beens. We have now to reckon with what has been done. It is to be hoped that Authority will see to it that the needs of genuine investment are ensured even as it has chosen to curb unbridled speculation.

The meeting of the investment committee of the LIC on Friday in Calcutta has aroused a good deal of interest. But it is idle to expect the LIC to give any specific indication of its intentions, immediately after the meeting. The present levels should be very attractive for a big investor like the LIC which has plenty of money that must be profitably employed. Some sizable LIC

buying may be in the offing, if not immediately, some days later.

In the meantime, due to lower-than-expected badla charges in Calcutta, sentiment is slowly getting to be more constructive than it has been during the past fortnight. A steadier trend may prevail in the coming weeks if Authority also lends its helping hand in strengthening the returning confidence.

Stanes Impressive Investment Special:

Truly impressive results have been turned in by T. Stanes & Co. for year ended September 1959. The year's dividend has been raised to 27½ per cent taxable (against 20 per cent tax-free for the two previous years) but far more important is the rise in the profit of both Stanes and its subsidiaries to Rs 13,82,177 from Rs 8,64,683 following the rise in operating profits based on larger turnover. The Directors, after making provision for depreciation, commission, bonus, etc., have allocated Rs 2,35,000 for taxation and Rs 63,533 to General Reserve.

In the consolidated balance sheet, the ordinary capital of Rs 11,56,300 is supported by a capital reserve of Rs 6,90,596 and the revenue reserves exceed Rs 35.24 lakhs. These figures, like the dividend record, explain the current premium on the ordinary shares which are always hard to get for investors who know that Stanes & Co. has, in addition to plantation interests, sound investments in coffee curing works, road transport and fertilisers.

The investments exceed the paid-up capital, while fixed assets have been supplemented by improvements to buildings and machinery in the subsidiaries. The evaluation of the breakup value is useless, but the earning power remains high, and the dividend on the preference and ordinary shares takes only Rs 3,28,483 out of the year's profit of Rs 13,77,448, out of which Rs 6,57,960 goes for taxation. The transfer to Reserves is more substantial, amounting to Rs 5,15,082 and Rs 52,802 is carried forward to the accounts for the current year.

The Company holds 8,304 shares in United Nilgiri Tea (book cost only Rs 46,448) and 13,225 shares in Stanes Amalgamated at par. It also holds 40,000 ordinary shares of Rs 15 each in United Coffee Supply (now a fully-owned subsidiary) and the value of its holding, in Stanes Motors is shown at Rs 4,61,924 only though that branch is booming and made a net profit of Rs 1.6 lakhs and paid a dividend of 20 per cent tax free. Incidentally, Stanes, as a public company from 1918, will soon celebrate its jubilee for which provision is already made. But Stanes & Co. is older, since Sir Robert Stanes started business in Coimbatore in 1861.

New Issue Notes

Asian Cables Corporation Limited has announced the procedure for the allotment of shares in respect of the recent issue of 25,000 Ordinary

shares (Rs 25 paid-up). There are more than 5,540 applications for a total of 76,190 shares. In the case of applications for 5 to 10 shares, lots have been drawn. In the case of applications for 15 to 500 shares, allotment ranges from 40 to 25 per cent. Shares have been allotted in lots of five only. The highest application for 1,000 shares gets 20 per cent allotment.

Sen & Pundit Industries Limited has set up a factory at Kalyani (West Bengal) for the manufacture of cycle components. To meet the cost, estimated at over Rs 78 lakhs, the company, it is understood, has proposed to raise the paid-up capital to Rs 50 lakhs and raise loans to cover the balance. It is also learnt that the company has entered into reciprocal arrangements with Sen Raleigh Industries under which the two concerns have agreed not to manufacture competing items.

The shareholders of the Ravalgaon Sugar Farm Limited have given their approval to raise the authorised capital of the company from Rs 50 lakhs to Rs 104 lakhs. It is proposed to issue 20,000 Ordinary shares of Rs 50 each and offer them to the existing shareholders of Ordinary and Deferred shares in the proportion of two new Ordinary shares for every five Ordinary or five Deferred shares.

The National Electrical Industries Limited has proposed to issue new 7 per cent tax-free Preference shares, at par, in the proportion of one share for every Preference share held.

Investment Notes:

Walchandnagar Industries Limited has received the sanction from the Government of India for the issue of 6 per cent taxable Debentures for Rs 75 lakhs. The Debentures will be offered, at par, to the equity shareholders of the company. The funds are to be utilised for financing the expansion plans of the company.

Star Paper Mills Limited has asked for a final call of Rs 25 on the 7 per cent tax-free Convertible Third Preference shares.

It is learnt that a resident individual Preference shareholder of the Cauvery Sugars & Chemicals Limited will receive a net amount of Rs 14.88 per share in respect of dividends on the Preference shares for

the three years ended 30 June 1957, 1958 and 1959.

Investment Briefs:

Killick Industries Limited has recommended a final dividend of Rs 5.50 per share, making a total of 9 per cent, subject to tax, for the year ended 30 November 1959 as against Rs 13, paid free of tax, for the 17 months ended 30 November 1958.

Ouchterlony Valley has recommended a taxable dividend of 15 per cent for the year ended 31 October 1959 against 10 per cent for the previous year.

Indian Bank Limited has announced a final dividend of 7½ per cent, making a total of 15 per cent (taxable) against 13 per cent for 1958.

Buckingham & Carnatic Company has recommended a final dividend of 6 per cent, making a total of 10 per cent (taxable) for 1959 against the same in the previous year.

WIMCO has stepped up the net dividend (including bonus) from Rs 11 to Rs 11.20 per share for 1959.

Travancore Rayon has proposed a taxable dividend of Rs 2 for 1959. The net dividend works out to Rs 1.40 against Rs 1.25 per share for 1958.

Deccan Sugar & Abkari Company has announced a taxable interim dividend of 7½ per cent for last year.

Vasanta Mills Limited has declared a final dividend of 3½ per cent, making a total of 6½ per cent for 1959 against 12 per cent for the previous year.

Balance-Sheet Briefs:

Walchandnagar Industries Limited has earned a net profit of Rs 19.01 lakhs for the year ended 30 September 1959 against Rs 27.98 lakhs in the previous year. A taxable dividend of Rs 20 per share is recommended.

Ruby Rubber Works Limited has reported a net profit of Rs 2.65 lakhs for the year ended 30 June 1959 against Rs 2.30 lakhs for the previous year. The directors have recommended a taxable dividend of 6 per cent.

Shree Niwas Cotton Mills Limited has shown a gross profit of Rs 36.45 lakhs for 1959 against Rs 17.64 lakhs for 1958. The net dividend is raised from Rs 10 to Rs 10.50 per share.

Dunlop Rubber's Superb Performance in 1959

Balance-Sheet Reviews:

WITH a strident rise of 16 per cent in sales during 1959, the Dunlop Rubber Company (India) Limited has been enabled to present a fine set of accounts for that year. Sales have gone up from Rs 22.28 crores to Rs 25.87 crores. But the increase in expenditure has by no means been a corresponding one. Thus it is that the profit for the year, before taxation and depreciation, has moved up sharply from Rs 2.02 crores to Rs 2.44 crores. This, it may be noted, is after excise duty had absorbed Rs 1.02 crores more at Rs 3.55 crores. Another item that shows an increase is salaries, wages and bonus, higher by Rs 27 lakhs at Rs 2.57 crores. By virtue of additions to block during the year, the provision for depreciation has had to be raised from Rs 31.47 lakhs to Rs 50.99 lakhs. On the other hand, for the same reason, as also because of the tax concession available on Development Rebate, taxation absorbs rather less at Rs 74.76 lakhs against Rs 88.13 lakhs. In the result, the disposable profit has risen smartly by Rs 35.62 lakhs to Rs 1.18 crores.

The transfer to Development Rebate Reserve is lower by Rs 13 lakhs at Rs 17 lakhs. On the other hand, there is a transfer of Rs 30 lakhs to General Reserve against nil in 1958. The rate of ordinary dividend has been stepped up to 21.5 per cent, though this is subject to deduction of tax. This means that the return to the ordinary shareholder in Dunlops has been lowered slightly. The carry forward, at Rs 24.03 lakhs, is Rs 1.57 lakhs higher than the amount brought in.

According to the Dunlop balance-sheet as at 31 December 1959, the issued capital is shown at Rs 3.70 crores, of which Rs 3 crores is represented by equity capital. Against this, the Reserves and Surplus total Rs 5.36 crores. Additions to block during 1959 total Rs 88.47 lakhs, and the gross block of Rs 9.62 crores has a book value of Rs 6.17 crores.

Hindustan Lever's Excellent Results

HINDUSTAN LEVER LIMITED has produced excellent working results for 1959. Although further progress in the sales of soaps and detergents is at a lower rate than in previous year, the company achieved particularly encouraging results in the smaller towns and rural areas from its intensive sales promotion work. Turnover has, as a result, risen to Rs 41.75 crores from Rs 36.73 crores.

The net profit for the year, before providing for Depreciation and Taxation, is substantially higher at Rs 4.68 crores against Rs 3.50 lakhs in the previous year. All allocations have been raised:—Depreciation from Rs 34.97 lakhs to Rs 42 lakhs; Taxation provision from Rs 1.72 crores to Rs 2.08 crores and Development Rebate Reserve from Rs 8.72 lakhs to Rs 9.00 lakhs. The directors have recommended a dividend of Rs 2.40 per share, subject to deduction of tax.

The balance-sheet, as at 31st December 1959, shows a paid-up capital of Rs 5.57 crores against which Capital Reserve is shown at Rs 62.62 lakhs; General Reserve at Rs 41.32 lakhs and other Reserves at Rs 25.55 lakhs. The gross block at Rs 5.77 crores is depreciated by Rs 2.04 crores to show a net block value of Rs 3.73 crores.

According to the director's report, there was a pronounced increase in the turnover of toilet preparations. Exports of vanaspati rose marginally from 1,602 tons to 1,694 tons.

During the year, steps were taken to form a research unit with a view to developing new and improved products, specially suited to the tastes and requirements of the Indian consumer. Premises for the unit were completed at the Bombay factory.

The major capital projects completed during the year were the erection of the sulphonation plant at Bombay and the plant for the semi-large scale processing of peas at Ghazalabad.

Braithwaite Maintains Dividend Despite Lower Profits

The country-wide recession in the heavy engineering industry on account of the shortage of raw materials is fully reflected in the working results of Braithwaite & Company (India) Limited for the year ended 31 December 1959. The item "Contracts Invoiced" is shown lower at Rs 3.42 crores against Rs 3.35 crores, while the net profit is shown at Rs 38.29 lakhs against Rs 42.23 lakhs.

In respect of allocations, the directors have provided a sum of Rs 3.50 lakhs (Rs 2.63 lakhs) for Depreciation; Rs 15.50 lakhs (Rs 23.25 lakhs) for Taxation; Rs 4.60 lakhs (Rs 7.96 lakhs) for General Reserve and Rs 2.04 lakhs (Rs 1.19 lakhs) for Development Rebate Reserve. The dividend now recommended by the directors at Rs 2.25 per share is the same as the total of the dividend paid in respect of 1958 and the additional dividends paid during 1958 in respect of the years 1954 and 1955.

Against a paid-up capital of Rs 58.60 lakhs, Capital Reserve is shown at Rs 30.70 lakhs; General Reserve at Rs 33 lakhs and Development Reserve at Rs 7.25 lakhs. The gross block is shown at Rs 77.34 lakhs; Depreciation at Rs 12.79 lakhs and the net block at Rs 64.54 lakhs.

The directors state that, although production was affected by shortage of raw materials, particularly in the Structural Shop, it will be maintained throughout the current year. The Wagon Shop was successfully turned over to the building of eight-wheeled bogie vehicles in place of four-wheelers. The company is well-booked with Structural and Wagon orders and the prospects are considered to be good.

An encouraging start has been made with the export of some of the company's products. Again, the company has recently taken over the control of the Angus Engineering Works, Hooghly District, and it is proposed to enter into a 99-year lease of this property with the Angus Company Limited, the owners thereof. It is the intention immediately to develop the output of the foundry, forge and machine shop at these Works as a diversification of the company's present interests. Further substantial developments at this site are in the planning stage.

March 26, 1960

Secretary: Mr. Y. S. Tagal.

Jay Shree Textiles Propose to Diversify its Activities

Despite the inadequacy of the import licences for certain essential raw materials, Jay Shree Textiles Limited has reported satisfactory profits for the year ended 31st December 1959, reflecting the increased demand for the company's products. Sales have gone up to Rs 1.03 crores from Rs 88.80 lakhs, while the net profit, before providing for Depreciation and Taxation, amounts to Rs 17.92 lakhs against Rs 18.85 lakhs in the previous year.

All allocations have been raised:—Depreciation from Rs 8.35 lakhs to Rs 13.34 lakhs; Taxation provision from Rs 31,000 to Rs 75,000 and Development Rebate Reserve from Rs 28,860 to Rs 87,605. The directors have recommended a dividend of 80 NP per share, subject to deduction of tax, against 65 NP previously.

According to the directors' report, the plant to manufacture Rubber-lined Fire Fighting Hoses has now been erected and it is expected that the products of this plant will be put in the market in the near future.

The directors are now examining some new schemes which will further enlarge and diversify the activities of the company. As a result of these efforts, the company has obtained permission from the Government for setting up a High Tension Electric Insulator factory. The directors are now taking active steps to implement this scheme.

Against a paid-up capital of Rs 50,06,500, Reserves and surplus are shown at Rs 8,36,505.

The gross block at Rs 88.01 lakhs is depreciated by Rs 43.01 lakhs to show a net block value of Rs 45.00 lakhs.

Kumergode Estates Repeats

Kumergode Estates Limited has recommended a gross dividend of 20 per cent for the year ended 31 October 1959 as against 20 per cent, free of tax, paid for the previous year. The net profit for the year is slightly lower at Rs 2.20 lakhs against Rs 2.52 lakhs. The provision for Depreciation is raised to Rs 40,973 from Rs 29,587, while taxation amount is reduced to Rs 51,100 from Rs 63,500. General Reserve is maintained at Rs 80,000.

The company has made a crop of 172,481 kilos of coffee against 190,665 kilos in 1957-58. The crop for 1959-60 is estimated at 173 tonnes, to be harvested at a cost of Rs 206.62 per kilo or Rs 585.35 per acre.

Kil Kotagiri Pays a Higher Dividend

Despite lower profits, the Kil Kotagiri Tea & Coffee Estates Company Limited has recommended a higher dividend of 35 per cent, subject to tax, for the year ended 31 October 1959. This works out to a net dividend of 24.5 per cent for the year against 15 per cent paid for 1957-58.

The net profit amounts to Rs 8.97 lakhs against Rs 9.48 lakhs. The directors have provided Rs 67,495 (Rs 62,779) for Depreciation; Rs 3.75 lakhs (Rs 3.55 lakhs) for Taxation; Rs 1.00 lakhs (Rs 2.00 lakhs) for General Reserve; Rs 1.00 lakh (Rs 1.00 lakh) for Dividend Equalisation Reserve and Rs 13,638 (Rs 7,604) for Development Rebate Reserve.

The paid-up capital is shown at Rs 11,08,538 divided into 4,29,269 Ordinary shares of Rs 2 each and 25,000 Preference shares of Rs 10 each. The Share Premium Account is shown at Rs 2,48,462; General Reserve at Rs 14.25 lakhs; Dividend Equalisation Reserve at Rs 2.00 lakhs and Development Rebate Reserve at Rs 21,242.

A total tea crop of 890,357 pounds was manufactured during the year against 875,450 pounds in the previous year. The average price realised per pound is higher at Rs 2.74 against Rs 2.54. A crop of 46,017 tonnes of coffee was harvested and delivered to the Coffee Board and this compares with 88,235 tonnes harvested in 1957-58.

Recovery From Recent Shock

Watch-Dog Writes:

ALTHOUGH the stock markets have not fully recovered from the shock they received after the Reserve Bank's credit curb announcement, there are now indications of growing resistance to selling pressure around the lower levels.

Sentiment has brightened up, mainly under the influence of the belief that the Investment Committee of the LIC may, at today's (Fridays) meeting, decide to buy some shares. This is the only hope that is sustaining the market.

After the recent sharp recession, the past week's session witnessed an all-round recovery on the Calcutta Stock Exchange.

Price movements on the Bombay Stock Exchange were rather irregular on alternate buying and selling.

On the Madras Stock Exchange, price trends were indecisive; but selective buying was noticed in a few shares.

Conditions on the London Stock Exchange remained dull and quiet. Consolidation forces took hold of Wall Street.

Calcutta

THE easier trend in equity prices, that was noticed on the local Stock Exchange at the last week-end, was more pronounced during the week under review and fresh lower levels were touched due to renewed offerings till Wednesday. Thanks to the hope that the Investment Committee of the LIC might decide to buy some shares and the lower-than-expected badla charges for Indian Irons and Hindustan Motor, the market took a turn for the better on Thursday when prices displayed a smart recovery on short-covering. Fresh buying support was, however, lacking, as operators preferred to await further developments.

With money conditions becoming tight and a veritable scramble for accommodation, business in the gilt-edged section continued to be restricted. There was, however, some interest in certain directions. While short-dated issues found a measure of support, the long-dated loans were neglected. State Loans were also dull. 3 per cent 1986 Conversion Loan, after dropping down to Rs 72.90 from the week-end level of Rs 73.80, closed better at Rs 73.15.

The prospects of bank profits coming down as a result of the latest credit restraint induced some selling in Bank shares. Punjab National were at one time depressed to Rs 20.50 from Rs 21.50 and United Commercial to Rs 70.25 from Rs 71, to improve toward the close to Rs 21 and Rs 71 respectively.

Jute shares presented a quiet trend, partly in sympathy with the general trend of the market and partly due to the uncertain outlook for the industry. Fears were expressed that the profit margins of the mills might be squeezed in view of the disproportionate rise in fibre prices. Anglo-India were marked down, early in the week, to Rs 207 from Rs 225 (Rs 210) Belvedere to Rs 146 from Rs 172 (Rs 153); Howrah to Rs 22 from Rs 22.50 (Rs 22.50); National to Rs 30.50 from Rs 31 (Rs 30.81) and New Central to Rs 25 from Rs 25.44 (Rs 25.25). Figures shown within bracket were the week's closing rates.

Coal shares, after ruling quiet early in the week, displayed a slightly steadier tendency. It was thought that the fixation of a high target in the Third Plan would be followed by incentives on the lines demanded by the industry. Bengal changed hands at Rs 320 to Rs 325; Central India from Rs 9.44 to Rs 9.87; Western Bengal at Rs 7.31 to Rs 7.81 and Equitable at Rs 29.62 to Rs 29.75. Burrakur moved erratically between Rs 18.12 and Rs 18.87, to finish the week at Rs 18.81.

Tea shares were quiet in restricted dealings. Lower prices obtained at the recent auctions and the obscure outlook for Common grades induced some caution in the minds of the operators. Baghmari were on offer at Rs 24 against Rs 24.06; Bishnauth at Rs 19.84 against Rs 20.19; Grob at Rs 13.94 against Rs 14.06; Hantapara at Rs 155 against Rs 169; Jayshree at Rs 15.50 against Rs 15.87 and Tezpur at Rs 17.75 against Rs 18.50. Hasimara were the only bright spot, having support up to Rs 24 from Rs 23.25.

Sugar shares ruled comparatively steady and appeared to be unaffected much by the credit squeeze move. This was mainly due to hopes of an increase in production during the current season. Carew met with business at Rs 11.19 to Rs 11.37; SKG at Rs 13.12 to Rs 13.62; Raza/Buland at Rs 13.06 to Rs 13.25 and Champaran at Rs 19.75 to Rs 20.

Textile scrip, after remaining quiet during most part of the week, developed a hardening tendency toward the close on encouraging advices from the cloth front. Jay Shree moved up to Rs 13.12 from a low of Rs 12.25; Elgins up to Rs 19.25 from Rs 18.12; Cawnpore to Rs 7.19 from Rs 6.75 and Kesoram up to Rs 23.06 from Rs 22.66.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Iron which, in turn, were subjec-

ted to settlement adjustments till Wednesday. Against the week-end closing of Rs 21.98, Indian Irons opened better at Rs 22.13 and, after touching at one time a low of Rs 21.84, steadily recovered to Rs 22.42, to finish the week at Rs 22.32. Similarly, TEXMACO moved up to Rs 25.50 from a low of Rs 25, to close finally at Rs 25.35. Jessop met with good demand up to Rs 24.12 from Rs 23.62, while Kumardhubi and Marshalls moved narrowly around Rs 7.06 and Rs 6.19 respectively. Britannia remained very firm at Rs 13.56 against Rs 13.44.

Miscellaneous issues wiped out a good portion of the earlier losses, thanks to the emergence of investment support at the recent low levels. The recovery in Dunlop Rubber from Rs 36 to Rs 38.62 was more marked due to the publication of excellent results for last year and prospects of an increase in capital. Orient Paper showed a recovery at one time to Rs 41 from Rs 40-15 (Rs 40.80); Indian Cable to Rs 30 from Rs 29.12 (Rs 29.75); Indian Aluminium to Rs 25.69 from Rs 24.81 (Rs 25.56); Hindustan Motor to Rs 17.75 from Rs 16.56 (Rs 17.50); Shree Gopal to Rs 23 from Rs 22.75 (Rs 23); Indian Copper to Rs 4.44 from Rs 4.18 (Rs 4.39); Rohtas to Rs 31 from Rs 29.69 (Rs 30.56); India Steamship to Rs 11.12 from Rs 10.97 (Rs 11); and BIC to Rs 7.25 from Rs 6.87 (Rs 7.19). Figures shown within brackets were the week's closing rates.

Bombay

THE Tendency in Dalal Street was highly unsettled during the week under review and, with sellers dominating at every small rally, prices touched new low levels since 1 March. In several cases, values reached considerably lower levels than the pre-Budget ones. The market seemed to be worried as to how the budla position would develop on 1 April at the time of the next settlement period in view of the prohibition of direct budla business by the banks. These charges are expected to increase in view of the monetary stringency, but the fact that the budla charges in Calcutta market this Wednesday were only slightly higher gave some solace to the market, which was, however, mainly oppressed over its impact. It is still too early to say whether some men of means and the financial institutions who hitherto refrained from such type of business would start taking interest in the financing of the floating stock in the market.

More than anything else, the credit squeeze had an exaggerated effect on the psychology of the market. There are, however, reports that, in view of the disquieting developments which might affect the credit structure, the Reserve Bank authorities are likely to amend the credit curb measures to a certain extent. It is considered likely that individuals might be allowed to adjust their overdraft position to 50 per cent margin on shares in the markets instead of one month's time given.

Durgapur Steelworks

The Steel Melting Shop

Stage Two—work goes on

Yesterday we surveyed, planned and built today results are being obtained. India's newest steelworks at Durgapur, which is being built by ISCON, is now in production under Hindustan Steel Ltd.

No. 1 Blast Furnace, is making iron while work goes on in the second stage, the completion of which will mark the beginning of making and shaping of steel at the steelworks.

STAR PERFORMER THE WORLD OVER!

BEDFORD

PETROL AND DIESEL

A great year, 1959, for the British Motor Industry. And right out in front, leading the leaders, is Bedford.... more firmly established than ever before as No. 1 British truck the world over.

Bedford's success is based on leadership in design, leadership in value-for-money, and leadership in service-after-sales.

- ★ 50,000 Bedford trucks built in 1959. A truck production record never achieved before by any British manufacturer.
- ★ Highest-ever truck sales in 1959. Latest figures for 1959 show that, while British truck production increased overall by 31%, Bedford production increased by 63%!
- ★ 4 in 10 new British trucks are Bedfords. Latest figures for 1959 show that 39.9% of all new trucks built in Britain were Bedfords.
- ★ 30,000 Bedford DIESEL trucks built in 1959. Diesel-engined models accounted for 60% of Bedford's 1959 production record.

WORLD OF FINANCE

Bank Advances Cross Rs 1100 Crore Mark

WITH the calling off of the State Bank strike, figures relating to this institution are once more available, and hence an interpretation of the monetary statistics should normally have been reckoned a much easier task. However, on the basis of the statutory statement of the State Bank for 25 March, it is not possible, because of a number of complicated transactions yet to be completed, to draw inferences with any certitude. Furthermore, there is also the fact that there is no way of placing the broad changes in the State Bank returns in any of the four weeks for which no statements were issued. Thus, at best, we can try this week to indicate broadly the probable significance of various changes; more conclusive assertions in this regard must wait for another week.

The returns of the Reserve Bank for 25 March are important for the impression they bear of the end of fiscal year transactions of the Central Government. Such transactions on the part of the Centre have necessitated, on the face of it, deficit financing on a small scale—indeed, in an incredibly small amount. But, here again, we must have regard for the possibility of distortion owing to the transactions of the State Bank. But, going directly by the Reserve Bank figures, indications are that created money in the latest week has been in an amount of Rs 10 crores.

Busy season influences are seen in a small rise of Rs 2.97 crores to Rs 1844.90 crores in Active Note Circulation. However, there has been an inflow of Rupee Coin for Rs 0.40 crores. Currency has been expanded against Rupee Securities for Rs 10 crores and, in the result, the Reserve Bank's cash in the till has improved by Rs 7.34 crores to Rs 21.94 crores.

Obviously State Governments have made large repayment to the Central Government in the week under review. For, their Deposits are sharply lower by Rs 17.49 crores at Rs 42.97 crores, on top of an increase in their ways and means borrowings from the Reserve Bank by Rs 1.70 crores to Rs 22.34 crores. Hence, end of fiscal year payments notwithstanding, the Central Government's balances are seen to have improved by Rs 10.53 crores to Rs 63.15 crores. However, drafts issued in respect of payments made by the Central Government have, to a considerable extent, not yet been presented for encashment. This is to be inferred from the fact that Bills Payable are unusually higher by Rs 14.05 crores at Rs 53.62 crores. In any case, we presume that the returns of the Reserve Bank for 1 April will, in even more strident fashion, reflect the year-end transactions of the Central Government, though the figures in this respect may again be subject to distortion as a result of beginning of the month disbursements.

It is intriguing to find that the Reserve balances of member banks have, for the second week in succession, shown a rise, in being marked up by Rs 7.06 crores at Rs 92.90 crores. Indubitably, this increase represents the additional deposits required of Scheduled Banks consequent on the higher statutory deposit requirements in respect of all new resources

accruing with Scheduled Banks as from 11 March. At the same time, that Scheduled Banks have been compelled to seek the assistance of the Reserve Bank is suggested by the rise of Rs 1.42 crores to Rs 156.54 crores in the latter's Other Loans and Advances. Lastly as concerns the Reserve Bank returns, Balances Held Abroad, for the second week in succession, have registered an improvement in rising by Rs 2.15 crores to Rs 34.11 crores.

The returns of the State Bank for 25 March can be compared only with the statutory statement of the institution for 26 February. This shows that, over the period, Deposits have improved by Rs 22.62 crores to Rs 627.44 crores. What part of this increase in Deposits took place consequent to 11 March, it is not possible with any certainty to assert. All that can be done is, when the return of Scheduled Banks for 25 March is available, to distinguish between the rise in the Deposits of the State Bank, on the one hand, and other Scheduled Banks, on the other. Over the same period, the Advances of the State Bank have risen rather sharply by Rs 22.73 crores to Rs 213.22 crores. We may take it that the magnitude of rise in Advances is indicative of not only the busy season demand for funds but also the extra accommodation given by the State Bank to its constituents during the strike period. In this context, it is intriguing to note that Other Assets are very sharply higher by Rs 32.49 crores at Rs 41.51 crores. This should in large part relate to inter-office adjustments. However, as a consequence, the State Bank has had to disinvest in gilt-edged for Rs 33.96 crores (the return of Scheduled Banks for 18 March indicates a drop of Rs 30.62 crores in gilt-edged, and we may surmise that sales of gilt-edged effected by the State Bank were largely in that week). On account of the strike, as also due to the considerable expansion in the Advances portfolio, the State Bank's borrowings from the Reserve Bank have gone up by Rs 6.78 crores to Rs 8.07 crores. We may also infer from the fact that cash in hand and with Reserve Bank has moved by Rs 6.96 crores to Rs 37.37 crores that part, at least, of the rise in Deposits occurred after 11 March. In this context, an extremely interesting issue arises.

Constituents may not have been able to deposit cheques with the State Bank during the currency of the strike. Hence, all cheques that, for purposes of deposit, had been kept in abeyance pending the end of the strike, would have been sent in only after the appointed day of 11 March. It would follow that, by implication, the State Bank would have been compelled to comply with the additional deposit requirements on all the increase in Deposits resources as from the last statement issued, viz., that for 26 February; however, the qualification is in respect of Deposits credited subsequent to the statement for 26 February and up to the time of the beginning of the strike. As such, we suggest that at least Rs 5 crores of the increase in cash in hand and with Reserve Bank would relate to additional deposits maintained by the State Bank with the Reserve Bank. This would also imply that Scheduled Banks other than the State Bank have also experienced an increase in Deposits during the week ended 25 March, since the Reserve Balances of member banks in the relevant week moved up by a little over Rs 7 crores. We surmise, therefore, that the return of the Scheduled Banks for 25 March will indicate a rise in deposits of the magnitude of over Rs 25 crores.

The return of Scheduled Banks for 18 March confirms to some extent the views that, in this respect, we had advanced last week. However, in an important respect, our expectation has been belied. This is in regard to the Deposit resources of Scheduled Banks. We had anticipated that a rise of considerable dimensions

would be reported; but, in fact, gross Deposits show a drop of Rs 2.62 crores to Rs 1919.91 crores, though net deposits are higher by Rs 0.90 crores. Why, then, has it happened that balances with the Reserve Bank, as we had expected, have risen sharply by Rs 11.40 crores to Rs 79.78 crores? Our suggestion in this behalf is that, owing to the strike, the State Bank's Deposits were drawn upon and, off-setting this decline, Deposits of other Scheduled Banks improved substantially. It is only in such case that there would have been the necessity for member banks so to have augmented their deposits with the Reserve Bank. As expected, the total of Advances has risen steeply by Rs 23.72 crores to cross the 1100 Crore mark in being placed at Rs 1107.16 crores. There has been disinvestment in gilt-edged for Rs 30.37 crores; but, as we have already pointed out, this is likely to be on account of the State Bank. Such a sharp expansion in Advances, coupled with the necessity for making additional deposit, has compelled Scheduled Banks to increase borrowings from the Reserve Bank by a sharp Rs 20.55 crores to Rs 76.88 crores.

The return of Scheduled Banks for 25 March should, we suggest, bear the following characteristics:—(a) A considerable rise in deposits; (b) a further expansion of fair dimensions in Advances and (c) a further augmentation of balances with the Reserve Bank.

The next returns of the Reserve Bank are likely to prove even more interesting. For example, will the Central Government exercise their option to tender Rupee Coin for Rs 5 crores to the Reserve Bank and receive credit therefor, or will they defer this transaction to the second week of April? How large will be the remnant disbursements of the Centre in the last week of the fiscal year? What will be the extent of their resort to deficit financing for this purpose? And, in the week thereafter, what will be the impact on Deposits of Scheduled Banks? Will the receipt of new resources by member banks against governmental disbursements serve suddenly to relieve the current busy season pressure? Or, in the circumstances of the additional deposit requirements, will the status quo be maintained in the strain felt by Scheduled Banks? It is questions such as these for which answers will be found in the course of the next two weeks.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Wednesday, the 30th March 1960. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.305 and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.770 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 4th April 1960. Successful tenderers should make payment on Friday, the 8th April 1960. Other conditions are as usual.

During the week ended the 25th March 1960 Government of India Treasury Bills for Rs 21,15,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 31st March 1960 to the 2nd April 1960 at Rs 99.326 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 23rd to 26th March 1960.

current crisis in the banking industry every few years?

There are a number of contradictions evident in the present dispute which it is worth while to consider briefly before taking up the demands of the State Bank Staff Federation. First of all, while the Ministry of Labour is laying all possible emphasis on peaceful settlement of disputes by negotiation or voluntary arbitration, and the Standing Labour Committee has asked for a modification in the approach to industrial relations in the Third Five Year Plan, in order to encourage greater recourse to voluntary arbitration, we find the Finance Minister refusing further negotiation with the State Bank employees on the ground that their charter of demands is unreasonable, and refusing voluntary arbitration on the ground that it would not be profitable for the State Bank to go to arbitration when other banks have been served with similar demands. Now, any one connected with trade union negotiation in the private sector is aware that union demands are purposely pitched high (it is after all only human to ask for more than you expect to get), and that collective bargaining in the initial stages has some of the elements of bazaar bargaining. But it is not the experience of private industry that the Ministry of Labour Conciliation Officers would consider this a reason for not negotiating. They say, and quite reasonably, that the parties should meet and find to what extent they can modify their standpoints, and what are the demands in which the employees are most interested. When it comes to the public sector, it seems that conciliation does not come into the picture. The conciliation service was not called upon in the State Bank dispute. The Finance Minister, it is true, consulted the Labour Minister, but this top level consultation is not conciliation. If the dispute had originated in one of the private banks, then it would have gone through the normal processes of conciliation, and one can assume that the charter of demands would have been sifted and an attempt made to reconcile the differing viewpoints, and the dispute might have been narrowed down even if it had not been settled.

What actually happened is that negotiation of a sort was going on for nearly a year between the Board of the State Bank and the Federation, although the Finance Minister said later that there could be no negotiation on the basis of the charter of demands. Discussions, however, seem to have been rather half-hearted. The Bank Board suggested delaying until the Pay Commission Report came out, but it did not help their case because one of the main planks of the Federation platform is the demand for uniform scales of basic pay throughout India, as for Central Government employees. Then, there was talk on behalf of all the banks of asking for a special all Banks Commission, for, by now, other banks were also receiving demands from their staff. Negotiations broke down altogether in November last, and because nothing further was happening, the Federation in January gave notice of strike. Further negotiation was then promised by the Chairman of the State Bank, but later refused by the Finance Minister.

The demand of the Federation all along has been for voluntary arbitration failing a negotiated settlement. It should be considered as a step in the right direction that unions are now asking for settlement by other means than adjudication, although in all probability this change of outlook has been brought about more by disgust with the delays of industrial courts than by a conviction on the value of peaceful settlement. The diffidence of other Ministries in accepting the principle of voluntary arbitration so ardently pressed by the Ministry of Labour would seem to point to lack of conviction of Government also. Has

the Ministry of Labour thought out in detail how voluntary arbitration is to work, where it is likely to be successful and whether it can be applied to Government as an employer? If Government are not convinced that voluntary arbitration is applicable in their own employ, then they should make their position clear and explain why what is advocated in the private sector cannot be accepted in the public sector, for, already there is a persistent demand from trade unions that voluntary arbitration should be applied in the public sector.

At present, we have two statements, that of the State Bank Chairman that it is not possible for the Bank as a public-owned institution to agree to voluntary arbitration, and that of the Finance Minister that it would not be profitable (an odd word to use) for the State Bank alone to go in for voluntary arbitration when other banks were also involved. We are surely entitled to a clearer explanation of Government policy on this important point.

Admittedly, there are difficulties in dealing with banking disputes which involve three tiers: the Reserve Bank, which is almost a Government Department; the State Bank which is a nationalised bank with its own board of directors; and the private banking companies which represent many gradations when it comes to capacity, size of business and working capital. Voluntary arbitration is not necessarily an ideal method of settling all disputes. Indeed, the only really ideal method is mutual agreement. In other countries, voluntary arbitration has been found useful for settling differences over questions of interpretation of existing agreements. In the USA, an arbitration clause is usually embodied in labour contracts for this purpose. Similarly, arbitration may be suitable for settling a specific question of principle, such as whether basic pay should be uniform throughout the country, or should vary regionwise. Whether it is suitable for settling a large scale dispute based on a lengthy charter of demands is not so clear. Then comes the problem of enforcement of the arbitrator's award. If Government are having difficulty in getting Wage Board recommendations accepted, although such Boards are set up with the approval of both sides of industry, would they have any better success in getting an arbitrator's award accepted? It is obviously useless to go to voluntary arbitration without prior agreement by all parties to accept without demur the arbitrator's award. It is doubtful whether such agreement could be found in the banking industry.

Turning to the workers' side, it is surely anomalous that the Federation should call for a strike in order to force "voluntary" negotiation. Posters displayed at various private banks show similar muddled thinking—"We demand increases by negotiation." If one is genuinely convinced of the value of a negotiated settlement, then surely one would not call a strike, particularly in an essential public service? One is led to the conclusion that it is not so much conviction as search for a new slogan, now that adjudication has become discredited with the rank and file of the workers, which has influenced the Federation. However, whatever the influence working in favour of mutual settlement, it is a pity not to take advantage of it. Settlement, of course, has not officially been ruled out, because it was on the condition that reference to adjudication did not preclude further discussion and settlement that the strike was eventually called off, but one is left wondering where fresh discussion can begin when the Finance Minister is not prepared to discuss the present charter of demands.

What are the demands? The issues referred to the tribunal include categorization of banks and areas for adjudication; scales of pay and

the method of their adjustment; dearness allowance, house-rent and other allowances; provident fund, pension and gratuity; leave rules; hours of work and overtime; medical aid; cash deposits and other securities to be furnished by the staff; question of seniority; age of retirement; subsistence allowance during suspension; anomalies in the existing award. Every one of these issues except the last was adjudicated upon by the Sastry award in 1953. Has the situation changed so radically that they can all be re-agitated?

Demands for increased emoluments, according to the State Bank, would involve a recurring expenditure of about 4 crores of rupees. The demands are based on the principles of the Fair Wages Committee, but every one knows that these principles represent an ideal rather than the practical. Presumably, it would not have been so difficult to negotiate a flat increase in pay, but the demand is for a complete revision of the whole basis of payment. The Federation is demanding the abolition of the area-wise categories of basic pay, arguing that, as the employees belong to a nationalized bank, they should be paid in the same manner as Central Government employees, with common basic scales for the whole country, and regional variations in the cost of living should be met by regional allowances. Now, from the Sen award onwards, there has been a dual classification of banks, both area-wise and according to their working capital. All the authorities referred to have agreed that the "existing pattern of the banking structure in the country does not permit of the fixation of a single scale of pay for employees of all banks". It is also well established in tribunal rulings in other industries that questions of pay should be settled on an industry-cum-region basis. Therefore, any national tribunal will hesitate to break away from this principle.

The State Bank employees have, however, some logic in their argument, namely that they are employees of the State and the principles of the Pay Commission should be applied to them. There are two opposing principles here, which it seems impossible to reconcile in an industry covering both the public and the private sectors. A break-away from the area-wise classification would have serious effects on the private banks and would act to the detriment of extension of banking to rural areas, which has been one of the aims of the Planning Commission. If the bank employees are also going to demand abolition of the classification by working capital, then obviously the smaller banks would go out of business.

As to demands for general increases, has the situation changed so materially since the last award as to justify them? Already, bank employees receive dearness allowance which is revised every three months on the basis of the cost of living figures. They cannot, therefore, argue from increased cost of living. And where is the argument for interim relief?

As to the question of bonus—a demand which may be separately referred to the tribunal—the State Bank employees have been receiving a customary bonus of 2 months' basic pay. They declare that the profits of the bank have gone up and they want not only more bonus, but bonus linked with profits. There is already a case on bonus before the Supreme Court, referred by one of the private banks. That decision will affect the whole position, and it seems reasonable to wait for it, which is presumably the reason for separating the bonus issue.

As to the capacity of the banks to pay higher emoluments, this was the issue referred to the Commission under Mr Gajendragadkar. He found that the representation made by the bankers to the Government, which led them to make certain modifications in the appellate

award, were based on the figures for 1953 and an assumption that the subsequent years would show no improvement. Actually, the decline in banking had been arrested in 1954 and Mr Gajendragadkar held that subsequent years might even show an upward trend. He therefore based his findings on the 1954 figures. What has been the trend in recent years? The Chairman of the Indian Banks' Association has said that the increased quantum of Deposits has been offset by the reduced tempo of bank credit expansion, the ratio of Advances to Deposits being reduced from 69.9 per cent in 1957 to 59.6 per cent in 1958.

But of even greater importance than the question of the banks' capacity to pay is the question whether, in a major industry, the whole basis of wages can be re-agitated at frequent intervals. When some of the finest legal brains in the country have already been applied to the problem of wage structure and have reached similar conclusions, should the question at all be open for review by yet another High Court judge?

Rise in Income Tax Revenue for 1958-59

THE income-tax statistics for 1958-59 released by the Central Board of Revenue reveal interesting information regarding the financial aspects of different sections of the Indian economy. The total income assessed and the tax thereon worked out to Rs 1,174.0 crores and Rs 254.1 crores respectively during 1958-59 as compared to Rs 1,010.5 crores and Rs 222.2 crores respectively in the preceding year. The trend in the past two years is shown below:

	No. of assesses	1957-58 Income assessed (Rs. crores)	Tax (Rs. crores)
Individuals	570,172	605.0	90.3
Hindu Undivided Families	54,608	77.1	12.3
Unregistered Firms & Associations of persons	28,279	34.5	6.8
Registered Firms	9,330	74.2	2.3
Companies	10,989	219.7	110.5
Total	673,378	1010.5	222.2
	No. of assesses	1958-59 Income assessed (Rs. crores)	Tax (Rs. crores)
Individuals	717,340	693.7	94.6
Hindu Undivided Families	67,426	86.3	12.0
Unregistered Firms & Associations of persons	33,221	37.9	7.4
Registered Firms	11,372	90.2	2.7
Companies	10,778	265.9	137.4
Total	840,137	1174.0	254.1

The figures show that there was a sharp increase in the number of assesses, income assessed and the tax yield in 1958-59 as compared to the preceding year. Individuals account for the bulk of the increase, the number of assesses going up from 570,172 to 717,340, the income assessed from Rs 605 crores to Rs 693.7 crores and the tax from Rs 90.3 crores to Rs 94.6 crores.

"Business and Professions" account for the most important source of income. The total assessed income of this category in 1958-59 is Rs 680 crores, the tax amounting to Rs 168 crores as compared to Rs 581 crores and Rs 168 crores in the preceding year. Within this category, the assesses coming under "Commerce, Transport and Communications" account for the largest income and tax, the figures being Rs 336 crores and Rs 53 crores (including super tax) respectively. The tax yield in the group is the largest from "wholesale trade in

commodities other than foodstuffs" amounting to Rs 14 crores by way of income tax and about Rs 15 crores by way of super-tax.

The next main group is "Processing and manufacture of metals and chemicals and products thereof". The tax from this source in 1958-59 is about Rs 41 crores—Rs 16 crores from income tax and the rest from super tax. Within this group, "Iron and Steel" tops the list with Rs 6 crores from income tax and about Rs 10 crores from super tax.

"Finance" is the next main group consisting of banks, insurance companies, money-lenders, share brokers, managing agents, etc. The number of assesses in this group was 43,825. Their income amounted to nearly Rs 70 crores, the tax including super-tax being about Rs 24 crores.

An analysis of the "Professions" reveals interesting details. Of the 34,839 assesses under this heading, as many as 16,971 belonged to medical and health services; their income amounted to nearly Rs 11 crores; the income tax and super tax realised amounted to Rs 63 lakhs and Rs 21 lakhs respectively. Of particular interest are the figures relating to film production and allied services. There were 1,463 assesses in this class. Their total income was over Rs 4 crores. Their income tax amounted to Rs 66 lakhs and super tax to Rs 72 lakhs. Fuller details are given in the accompanying tables.

TRADE CLASSIFICATION OF BUSINESS AND PROFESSIONAL INCOME ASSESSED TO INCOME-TAX AND SUPER-TAX DURING 1958-59.

CLASSIFICATION.	No. of assesses in each category	Income Rs. (000)	Income-tax Rs. (000)	Super-tax (Rs. (000))
1. Forestry, Mining and Quarrying.				
1. Forestry and woodcutting	2,448	3,37,96	25,68	15,01
2. Coal mining	757	6,52,33	1,58,08	2,28,70
3. Iron-ore mining	71	64,31	14,34	21,91
4. Metal mining except iron-ore	86	1,35,17	34,19	58,79
5. Crude petroleum and natural gas	6	20,28,92	5,56,31	6,47,45
6. Stone quarrying, clay and sand pits	234	75,84	14,70	21,42
7. Mica	234	97,67	17,74	21,81
8. Salt, sulphate and saline substances	164	77,13	10,12	10,93
9. Other non-metallic mining and quarrying	91	45,07	9,60	10,20
Total	4,091	35,14,40	3,40,76	12,36,12
2. Primary industries and processing and manufacture of foodstuffs (including beverage and narcotics).				
1. Tea Plantation	594	12,17,76	3,33,10	5,23,68
2. Coffee Plantation	45	18,79	3,38	3,71
3. Other plantations (including rubber)	27	35,33	9,46	5,83
4. Fishing	186	23,72	1,78	79
5. Grains and pulses (milling, grinding, etc.)	5,164	7,65,35	78,65	79,71
6. Vegetable oils and dairy products	2,291	4,10,75	39,56	30,62
7. Sugar industries	685	9,79,02	2,46,65	3,43,74
8. Tobacco (including cigarette and bidi) manufactures	2,556	8,55,10	1,71,44	2,54,78
9. Processing and manufacture of other foodstuffs	1,597	3,17,37	57,59	80,35
Total	13,145	46,23,19	9,41,61	13,23,21
3. Processing and manufacture—textiles and leather and products thereof.				
1. Cotton textiles	3,385	18,47,39	4,29,96	6,19,16
2. Wool and woollen manufactures	133	89,12	20,81	33,53
3. Silk manufactures	517	90,10	10,11	9,54
4. Manufacture of rayon or artificial silk	570	1,81,88	29,78	37,75
5. Wearing apparel and made-up textile goods	4,257	3,47,82	18,12	7,43
6. Jute manufactures	228	2,88,16	69,67	91,86
7. Hemp and flax manufactures	39	8,75	1,38	1,12
8. Other textile industries	275	60,81	9,86	12,06
9. Leather, leather products and footwear	2,377	3,43,52	51,86	71,66
Total	11,781	32,57,63	6,41,55	8,84,11
4. Processing and manufacture—metals and chemicals and products thereof.				
1. Iron and steel (basic manufacture)	37	23,15,41	6,30,86	9,95,26
2. Non-ferrous metals (basic manufacture)	21	20,41	5,69	9,77
3. Transport equipment (repair, assembly, manufacture, etc.)	1,895	6,70,68	1,58,21	2,46,27
4. Electrical machinery (apparatus, appliances, etc.)	797	5,78,69	1,39,07	1,97,58
5. Other machinery (including engineering workshops)	2,210	8,48,91	1,85,59	2,74,30
6. Manufacture of other metal products	5,253	11,30,28	1,85,13	2,56,26
7. Basic industrial chemicals, fertiliser and power alcohol	183	1,90,92	44,24	61,92
8. Medical and pharmaceutical preparations	931	4,65,60	1,09,96	1,62,97
9. Manufacture of other chemical products	1,633	7,91,17	1,88,34	2,96,96
Total	12,960	70,10,27	16,47,09	24,96,96
5. Processing and manufacture—cement, rubber paper and other mineral products.				
1. Products of petroleum and coal	21	76,07	20,36	30,69
2. Bricks articles and other structural clay products	1,772	2,38,70	23,36	18,01
3. Cement and cement products	60	4,10,30	1,17,65	1,85,67
4. Non-metallic mineral products (earthenware, glass, etc.)	1,010	1,80,05	28,04	31,51
5. Rubber and products thereof	188	3,72,58	1,04,96	1,75,87
6. Wood products (including furniture and fixtures)	2,562	3,46,23	42,40	44,90
7. Paper and paper manufactures	350	3,37,26	76,07	95,60
8. Printing and allied industries	3,892	4,79,92	64,37	75,32
9. Other processing and manufacturing industries	5,572	6,22,91	68,75	76,40
Total	15,427	30,64,00	5,43,96	7,33,96
6. Commerce, Transport and Communications.				
1. Retail trade in foodstuffs (including beverages and narcotics)	57,802	42,08,21	1,88,70	43,01
2. Retail trade in commodities other than foodstuffs	1,90,939	1,47,42,08	7,86,53	2,22,14
3. Wholesale trade in foodstuffs (including beverages and narcotics)	20,768	27,67,65	2,16,21	1,18,87
4. Wholesale trade in commodities other than foodstuffs	31,633	97,74,58	14,31,02	14,71,41
5. Transport by road	12,063	11,77,35	1,20,84	1,09,08
6. Transport by water	1,026	7,25,76	2,00,18	3,04,95
7. Transport by air	9	6,86	1,80	2,19
8. Railway transport	22	32,70	9,85	17,03
9. Other transport and communications and incidental services	517	1,38,26	23,62	32,17
Total	3,14,779	3,35,73,55	29,78,35	23,20,85

Sustained Expansion and Export Records in UK

By MARTIN GOTZ

THE United Kingdom economy continues to present an encouraging picture of sustained expansion. In January, industrial production and exports reached new records and in February the reserves began to rise again. Sterling continues to be strong in the international exchange markets. Prices have remained stable for nearly two years. Investment in manufacturing industry shows signs of a welcome revival.

On the other hand, there are indications of an incipient labour shortage in some areas, especially in London and the Midlands, although in others, notably in Scotland, Wales and around Liverpool, unemployment is markedly above the average for the country. Government expenditure, both for social investment (including roads, hospitals and schools) and for defence, will be rising in the coming financial year. Following the interim railway settlement (providing for a 5 per cent wage rise), and with the implementation of the Guillebaud report (which will about double this rise) now under discussion, there is a risk of a general upward movement in wages which might threaten the stability of prices. It cannot be entirely ruled out that the resources of the country may again be overstrained later on if action is not taken in good time to moderate the pace of expansion.

But the situation is very different from what it was in 1955 when strong disinflationary measures had to be taken. Thanks to the industrial investment carried out in recent years, there is still enough spare capacity, especially in the capital goods industries, to permit a substantial rise in production. Thus, the rise of Bank Rate to 5 per cent toward the end of January and the withdrawal of official support for the gilt-edged market a month later were certainly not intended to put an end to expansion, but they could be regarded as a signal to the banks for caution in the further increase of their advances, which have grown steadily since the end of the "credit squeeze" in July, 1958.

Full balance-of-payments data will not be available before the end of March, but the rise of the reserves in February by £13,000,000 to £972,000,000 shows that the external position continues to be satisfactory. This is also con-

firmed by the latest trade returns. In January exports reached the record total of £316,000,000. In the three months November to January, exports were 11 per cent higher than in the corresponding period a year earlier and 7 per cent more than the average for 1959.

Towards the end of the year, there was a sharp recovery of exports to the sterling area and an acceleration of the increase in exports to Western Europe. Exports to North America were 18 per cent higher than a year earlier—quite a noteworthy achievement, even if not so spectacular as the 23 per cent increase achieved in the first ten months of last year. Total imports rose also by 11 per cent in the period November to January over a year earlier and reached £367,000,000 in January. Imports from the sterling area rose by 10 per cent. This growth of imports is natural at a time of expanding industrial production and helps the UK's suppliers to increase their own purchases abroad. So long as they remain fully competitive, as they are at present, UK exports are likely to go on rising.

The maintenance of a healthy balance of payments is now even more necessary than in former years in view of the increased commitments which the UK has undertaken abroad. Government assistance, mainly to the less developed countries in the Commonwealth, has doubled over the last two years and there is a large and growing flow of private investment to overseas countries, mainly in the Commonwealth.

This outflow of capital can be maintained only if the UK has a surplus to spare. That is why a sufficient volume of savings is important, not only to provide for investment at home, but also for investment overseas. It is, therefore, encouraging, that in the present financial year (with only five weeks left) new "national savings" (largely the savings of the small man) have reached £356,000,000 compared with £290,000,000 in the corresponding period of the previous financial year.

Home demand has increased particularly for consumer goods, and this was shown in expanding retail sales, which, after a record Christmas trade, kept up well in January. Last year was notable for a boom in durable consumer goods, sold largely on hire-purchase. The total debt outstanding on hire-purchase contracts rose from £576,000,000 at the end of January 1959 to £873,000,000 at the end of January 1960. As the debts incurred have to be paid back now, it is to be expected that the rise in the outstanding debt will slow down

and this will help to slow down the growth of domestic demand (provided, of course, that there are not excessive wage increases which would allow the repayment of old debts and the incurring of new obligations at the same time).

Industrial production in January was 10 per cent higher than a year earlier. Steel production rose to 471,000 tons a week, an all-time "high". Production of motor cars was at an annual rate of 1,500,000. Over the past year, expansion of industrial production extended to all branches with the exception of shipbuilding and coal-mining. Towards the end of the year, output of consumer durables, with the exception of cars, showed signs of slackening, but output of other consumer goods and of capital goods continued to rise.

Unemployment in February was 2 per cent, compared with 2.1 per cent in January and 2.3 per cent in February 1959. The new Local Unemployment Bill, which is expected to become law in April, provides the Government with increased facilities to support the movement of industries into districts with high local unemployment. Such a movement should help to lessen the danger of expansion being checked by labour shortages. Plans for the establishment by the motor industry of new factories in Scotland and on Merseyside have already been announced by the leading manufacturers.

Thus the outlook for the UK economy remains promising, provided the revival of inflationary strains can be avoided. UK Ministers have made clear the great importance they attach to this. The implications for the Budget, to be submitted on April 4, are being much discussed by financial commentators, most of whom seem to expect that the Chancellor's proposals will this year be relatively limited in scope.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

A SYMBOL OF SERVICE

United Bank of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA

“It is not often realised that the development expenditure needed to bring an oilfield into commercial production, though less hazardous, is generally several times as great as the original exploration effort.”

Extract from a Burmah-Shell publication

An oil derrick in Assam

NATIONAL NOTES

New Bogey

The stress on industrial potential laid by Mr Nehru at the FICCI session and the reference to socialistic thinking, derived from the passion for equality, may find favour generally. But his reference to free enterprise aiming at monopoly will lead to disapproval and dissent. The view that private enterprise today consciously seeks monopoly to maximise profits is unfounded. Elaborate enquiries into industries are undertaken and profit-margins invariably are fixed in relation to fair prices. The revision of prices in relation to costs is delayed, and many an industry faces burdens that are apt to threaten its existence. The objection to monopoly may be justified. But is there any industry that has reached the point of eliminating competition and exploiting the consumer? The answer will be in the negative, and the FICCI will do well to produce a brochure on trade rings and monopolies, anticipate a commission of inquiry and make known the persistence of competition even under a regime of restricted imports.

The Government's opium monopoly maintained by licensing of cultivation in Malwa may be termed an exception, retained for both fiscal purposes and moral ends. But there is no other instance that can be mentioned offhand. The classic

case dealing with conspiracy in restraint of trade may be the Mogul line case, but the shipping industry, despite concessions and subsidies, is not one liable to monopoly. The manufacture of electric lamps, cables, etc., in India does not seem to have the benefit of previous agreement about sharing of markets or discounts allowed, and the Government are already preparing to enter the oil industry to prevent the emergence of any monopoly.

The fact that Britain has curbed monopolies and investigated restrictive practices may not be without weight, and the Indian Government today their own licensing policy, ensure that competition does not remain imperfect. The major industries of India are still marked by keen competition, and it is the lack of combination that hampers an export drive. And the Government, as a buyer of coal, cement, etc., try consistently to promote competition to the advantage of the Exchequer, and the prospects of monopoly are blighted. The Constitution is meant to discourage monopoly, but the legal safeguards have been anticipated and free enterprise in every industry from bicycles to buttons has to win its share of the market on merits. The State as a producer of cheap power may have a monopoly and can gain on transport facilities. But privately owned industry has no such advantages and it lacks also the capacity to prevent competition by the public sector, as evidenced by the rapid rise of the State Trading Corporation. The fear of monopoly bred by rampant capitalism, is due to an ingrained suspicion of private enterprise, though the circumstances of industry contradict the assumption that monopoly is probable. The power of organised labour offsets the power of capital combined into big trusts, and the State Bank strike may have yielded a lesson about Galbraith's doctrine of countervailing capitalism.

Curtain-Raiser?

The boundary agreement made at Peking by Mr Koirala is a reminder that Nepal's foreign policy is its own concern. Concessions made by China to the small kingdom bordering Tibet are a sign of the detente necessary for the forthcoming talks in Delhi. The promise of Chinese aid for Nepal may irk India to some extent, but it cannot hope for a monopoly in order to make Nepal a client-State. The independence of Nepal is underlined by the opening of new diplomatic missions, marking also the end of an unsettled decade following the Royal restoration. Mr Koirala has spoken of Nepal's poverty as a reason for taking aid and trying to reach an accord on frontiers. It is clear that Nepal has no objections to the new Chinese conquest of Tibet and is not inclined to support the Lamas against the Communists in power or to press for the reopening of

trade, since its needs will perhaps be met by India.

Whether the agreement with Nepal is a curtain-raiser to the restoration of normal relations with China may not be the only question facing Delhi at present. The appointment of a joint commission to fix the boundary would mean an abatement of India's claims. The insistence on the McMahon line and the steps taken to exercise control in Ladakh run counter to the Chinese plea that the traditional frontier is in doubt. That a part of Ladakh is occupied by Pakistan, and China has only copied the former has not been explicitly urged, but there is no doubt that India as the backer of Kashmiri authority over Ladakh has got not so strong a case as presumed.

The Prime Minister's plea for more industries to support defence arrangements is a clue to India's reserved attitude, even after the frontier adjustment reached between China and Burma as much in order to prevent the succession of the Shan States as to afford relief to a country that has grappled with Karen revolt, KMT intrusion and Communist outrages. The Indian attitude in respect of Britain and Sikkim has been defined already, but Peking may accept the continuation of the protectorate, only in return for some concessions on the part of India. The point will claim notice only when ethnic differences are put forward by China as a talking point. The careful modulation of Chinese foreign policy of late in relation to Burma (for, nothing has been said about rights of navigation on the Irrawaddy) will only suggest that it is preparing to state a case based on its control of Turkestan and Tibet and the need to keep up communications through Ladakh. The chances of a harder bargain than expected must not be lost sight of, because the Himalayan Kingdoms were never like the Indian Princely States, and the loose control exercised in the past over the maintain Kingdoms helps China to hark back to the Han empire's claims. The satisfaction of Mr Koirala with the results of his trip to China may not engender equal optimism in India about the early achievement of truly peaceful co-existence.

Failure, But not Total

The failure of the talks held at Rawalpindi can cause no surprise, if it is taken for granted that India's Finance Minister asked about the debt due to India after partition. The agreement on minor items will not temper the disappointment felt in India, especially as the trade talks ended well up to a point. The difficulties of Pakistan are likely to end with outside aid for the new canal scheme. But the attitude may be due to the lack of any settlement

as regards Kashmir. That certainly makes a solution urgent and if the Commonwealth Premier's meeting helps toward the inevitable partition, few will be perturbed because the idea of a plebiscite in the valley is dropped. The payment due for India's operation to hold Kashmir can be waived if it is made clear that Kashmir's accession is definitive. While such a solution can be reached only gradually, it is necessary to remember that the present regime in Pakistan has done nothing to spoil relations with India and friendly contacts have been restored by Pakistani leaders.

The expectations of more foreign aid after Mr Eisenhower's visit are based on the likelihood of normal relations, and the visit of Mr Desai cannot be termed wholly barren, if Pakistan is made to realise how much has been spent on refugee relief in India. The inference that both countries are making conditions is legitimate, for, any aid from India to the canal waters settlement is contingent on Pakistan settling outstanding claims in advance. There are no private creditors to press Pakistan, and it is able to dawdle or delay partly because India's foreign policy is undergoing a change under the impact of new developments. The end of the border trouble may nourish a belief that Pakistan will give no trouble and India's defence problem lies only in the north-east today. But that belief may induce Pakistan to play a waiting game and ask for a scaling down of claims in view of the steady fall in its external assets and the assurance of abundant foreign aid for preserving the status quo in regard to irrigation from the Indus system.

STATES NOTES

The 10 Percenters

The pattern of import trade, which took a revolutionary turn in 1956, culminated in putting the established importers, who accounted for almost three-fourths of the total requirements of the country, in an embarrassing situation. The volume of their share in the import trade, which was at one time as high as nearly 70 per cent, declined sharply to a low level of 10 to 12 per cent. The shrinkage in the volume of trade compelled both the large and the small import houses either to close down or retrench their staff to an irreducible minimum. This unfavourable position could have been avoided, to a considerable extent, if the industrialists of the country had followed the normal channels for the distribution of their goods. Disclosing these facts, Mr Shantilal M. Shah, the President of the All India Importers' Association, in his address to its Annual General Meeting held at Bombay, highlighted the importance of utilising the immense knowledge and experience, specialised services and available facilities of the established channels for the distribution of indigenous products, failing which, he feared, a number of middle-class persons will be thrown out of employment, to swell the already shocking ranks of the unemployed, since most of the small importers and their assistants belong to this category.

Mr Shah made a strong plea to the Government of India for the relaxation and liberalisation of the rules governing the import of capital goods, so that projects involving foreign exchange components to the tune of Rs 10 lakhs could be covered by the ordinary rules of payment other than the Ex-im Bank or similar arrangements. Thanks to the efforts of the members of the All India Importers' Association, import of a substantial portion of requirements on rupee currency was made possible.

10 million acre Plan for Bihar

Bihar has every reason to continue to lay emphasis on agriculture in planning. Firstly, even after ten years of planned development, this State is still a long way from self-sufficiency in food. Secondly, nearly 86 per cent of the State's population is dependent on agriculture for its livelihood. There is another vital point that the

State Government have to take note of, and that is its population is rapidly increasing. It is estimated that, by 1976, Bihar will be requiring something like 10 million tons of food-grains to feed its growing population. The only satisfactory solution seems to be a concerted effort on the part of the State to become self-sufficient in foodgrains.

It is gratifying to note, therefore, that the State Government are thinking in terms of a long-term plan for achieving food self-sufficiency. Experience during the two five year plans has shown that creation of additional irrigation facilities is a long-drawn out process. To bring about an additional irrigation potential of nearly 1.1 million acres, it has taken nearly 10 years; and, for food self-sufficiency, irrigation facilities have to be brought to an additional area of something like 10 million acres. This stupendous task does not seem to deter the State's Irrigation Department, which has drawn up a scheme to achieve the desired result in 15 to 20 years. The cost of the programme is estimated at about Rs 184 crores. The Department's plan divide the State into three natural parts, indicating the outlay for each part separately. North Bihar gets the maximum attention, presumably for its great irrigation potential on account of its snowfed rivers in which it abounds. The plateau regions of Chota Nagpur and Santhal Parganas and South Bihar Plains are the other two divisions which are expected to yield 1.06 million lakh acres and 2.9 million acres respectively of additional land for cultivation under the proposed scheme.

Mr Reddy on Taxes

Mr B. Gopala Reddy seems to have effectively dealt with criticism against some of the new tax proposals in the Central Budget in the course of his reply to a memorandum presented by the Mysore Chamber of Commerce. The tax on diesel oil, he explained, was a temporary expedient and in the nature of a corrective measure. Diesel oil is in short supply in the country and the rising demand for this is to be met from imports. The additional tax on Diesel oil is aimed at arresting the dieselisation of vehicles. As there is an unexportable surplus of petrol, interests of road transport will not be jeopardised but more diesel oil will be available for agriculture for which this oil is essential. Mr Reddy has explained away the tax on exposed cinema films even more simply. He seems to think that much ado is being made about a small levy that is sought to be imposed on the film industry. What the Government want is only Rs 75 lakhs from it. Government have no objection to withdrawing the levy if the industry is able to give this amount in some other way agreeable to it. Similarly,

Mr Reddy has advanced convincing arguments to justify the tax on cycles, the duty on silk and staple fabrics and the proposed amendment of Section 54 of the Income tax Act in order to make known income-tax assessments to the public. One cannot but agree with Mr Reddy when he points out that the cycle industry has grown rapidly (production of cycles is near the 1 million mark now) and that the tax will mean that one has to pay only Rs 10 in the whole lifetime of one's cycle.

Planning for MP Deliberately

Dr Katju, the Chief Minister of Madhya Pradesh, in his inaugural speech at the first meeting of the State Board of Industries and Natural Resources, highlighted the importance of the implementation of a "deliberate and thoughtful plan" for the fuller exploitation of the State's vast natural resources and thereby accelerate the pace of its industrialisation. It may be recalled that the Board was specially constituted by the Government for this purpose by bringing together the various factors for development like Government agencies, private enterprise and public opinion. The main stumbling blocks that retard the progress of industrial activities in the State were the lack of adequate transport facilities and sufficient water and power supply. The advantages of developing these facilities in a State need hardly be emphasised, especially for the uplift of the backward areas. Apart from these, other inducements should also be offered to industries to spread out to the undeveloped and underdeveloped areas, like factory accommodation on reasonable terms and water and power supply at moderate rates.

It may be pointed out that the spark of industrialisation in the State has already been kindled with the installation of Bhilai Steel plant, Heavy Electricals and Security Paper Mill in the public sector. In the private sector also, paper mills, fertiliser plants and new units like cement factories, sulphuric plants are likely to be set up shortly. Nevertheless, the abundant availability of resources in the State provide ample scope for further industrial activities. As pointed out by the Chief Minister, the iron-ore deposits in Raughat and the Ballidiala areas and bauxite deposits in the Amarkantak regions can be profitably exploited if new industries were set up in those regions. Apart from lifting those regions from their industrial backwardness, the new industries will also provide additional employment to the people. And it is left to the Board to evolve a realistic plan for the rapid development of the State and recommend effective steps for its speedy realisation.

Bar Trouble

Steps taken to produce a unified Bar for India by improving Bar Councils will be welcomed as derived from the integration of the medical profession. The recent Bombay case in which the High Court asked the State Government to explain why its warrant was not executed certainly caused alarm in the profession, and the Western India Bar Association entered a separate plea to maintain the authority of the Court. The Advocate-General argued that the discretionary power of the Governor ruled out the execution of the sentence passed by the Court. None has so far asked whether, as the Leader of the Bar, the Advocate-General was justified in opposing the Bench and Bar alike, merely on the score of his nomination to office by the Governor. The niceties of etiquette may have to be explained by a reference to the Benchers in London. It cannot be argued that the client's claims override those of the profession, ranged in this case against executive power deployed only to obstruct justice.

Though nothing can be done now to remedy a situation, caused by indiscretion rather than malice, it is patent that a written Constitution does not vest overriding powers in the judiciary and the US Court's action in asking the federal government to hand over steel plants to private owners as explained in the Youngstown Sheet and Tube case remains for India an unattainable precedent. The Advocate-General's reliance on the power to pardon ignored the procedure adopted in California this year or the exercise of the Crown's prerogative in the UK where the advice of judges is always taken by the Home Secretary to recommend reprieve.

The intrusion of the Centre is in a way understandable, but the State Cabinet as a whole had no chance to consider the issue and the rejection of the petition for leave to appeal made the Governor's action appear arbitrary. However, the point to consider is whether the Attorney-General or the Advocate-General is a Cabinet Minister (like the US Attorney-General) or a practitioner whose first duty is always to the Court rather than to the State as client. Opinions may vary, but an independent appraisal of the conduct of the recent proceedings in the Bombay High Court will help to prevent a fall in the standards of legal department. The Advocate-General did not appear earlier in the case and was instructed to plead for the Governor, even while denying the jurisdiction of the Court. An impossible situation was certainly created, but it could have been avoided by the Advocate-General making it clear that he did not consider himself as apart from, or above, the Bar, which has insisted that a case of contempt of Court had arisen by refusal to follow the Court's order.

FOREIGN NOTES

US GNP Up

IN its latest monthly review of economic conditions in the US, the US Department of Commerce noted last week that business activity continued at a high level in February and will post a substantial gain during the first quarter of 1960 over the last quarter of 1959.

While the Department obviously is not yet ready to specify just how large the gain will turn out to be, officials have little hesitancy in saying that the Gross National Product (GNP)—the nation's total output of goods and services—will approximate an annual rate of \$500,000 million. This would represent an increase of better than \$16,000 million over the previous quarter's rate—the largest quarter-to-quarter advance in a decade. What is more, this current gain is being registered without the benefit of price rises to inflate the dollar value of the goods produced and the services rendered.

What makes this performance all the more notable is the fact that it comes at a time of so-called "business uneasiness"—reported apprehensions over faltering automobile sales, steel cutbacks, inventory build-ups, lagging retail sales, etc.

There is no doubt that some of the first quarter gain represents the lingering after-math of last year's lengthy steel shutdown. But now, as the Commerce Department observes, the strike-induced disruptions and shortages have been largely overcome, and, in the early weeks of March, there was little evidence of any "forced momentum" stemming from this source. From now on, economic movements will be shaped primarily by the usual and basic supply and demand factors.

An important key to these movements, of course, will be consumer behaviour. The continued rise in the disposable—after-tax—income of Americans is likely to play a major role in sustaining consumer expenditures and economic activity in general.

One of the nation's foremost economists—A. W. Zelomek, President of the International Statistical Bureau—has some interesting observations to make on this score. He expects total disposable income to expand at an annual rate of close to \$18,000 million in the first six months of this year, or better than five per cent above the comparable 1959 levels. And he foresees consumer spending for this period exceeding the pace for the similar 1959 period in about the same proportion. His views are based on several factors.

1. Sales of new automobiles will rise, and will show larger gains than have been evident in the first few months of the year. It is interesting to note, in this connection, that retail sales of new cars picked up noticeably in mid-March from the earlier weeks of the month.

2. With food prices steady, consumers will have more money on hand to put into the purchase of other types of merchandise.

3. With their incomes going up, consumers will be in a position to step up their instalment, or time, buying. This is likely to have its greatest impact on automobile sales, but it also will affect a broad range of products, including appliances and house-hold furnishing.

4. Retailers will be building up their inventories above present levels. In the main, however, they are expected to adhere to the kind of conservative inventory policy which has become evident in the past few months. Since inventory-sales ratios are relatively low today, this implies that self-stocking will remain close to actual needs, and inventory liquidation should not be a problem.

Mr Zelomek also sees the calendar playing an important part in consumer activity this spring. As a number of analysts have pointed out, the Easter holiday is coming

a few weeks later this year than last (April 17 as against March 29), with the result that the major impact of the usual pre-Easter buying upturn has yet to materialise.

Nor are analysts overlooking the effects of the weather. Spring has been late in coming this year, and March has been an unseasonably cold and snowy month throughout America—hardly the circumstances calculated to bring out spring shoppers in large numbers. Now, however, with the worst of the wintery blasts apparently over, retail store sales are beginning to perk up. This, and the past week's upturn in automobile sales, are being cited as early signs of a vigorous consumer market in the months ahead.

UK Jottings

Britain's exports and imports reached the record figures of £316,300,000 and £367,300,000 respectively in January 1960. Revealing these figures the Board of Trade in London admitted that January is normally a favourable month for exports and the high level of imports was attributed to the increased domestic economic activity. According to the report of the Board of Trade, exports in the period November to January were 4 per cent more than in the preceding three months and 7 per cent higher than the average for 1959, while the imports were 8 per cent more in November-January and 10 per cent higher than the average for the previous year. The full trade returns indicate that the recovery in exports, which has been a welcome feature of the latter part of previous year, was more widely spread than had been the case earlier in the year. Thanks to the recent buoyancy of exports, the excess of imports over exports was kept within reasonable dimensions.

Industrial output in the United Kingdom registered a strongly upward trend in January. The latest index of industrial production issued by the British Treasury stated that the output of steel, cars and man-made fibres reached a new record and added that the boom is gradually spreading out steadily from steel, motor and the appliance industries into general engineering, too. The production of both steel and pig iron reached an all time record. Steel production continued at an average weekly rate of 484,200 tons and pig iron output ruled steady at an average weekly rate of 301,500 tons.

According to the statistics issued by the Ministry of Labour, unemployment in Great Britain is now at one of its lowest levels for many years and the unemployment figures fell by 11,000 between 11 January and 15 February.

The Sterling area gold and convertible currency reserves stood at £972,000,000 at the end of February. However, the outlook for the reserves in the rest of the year does not appear, to be bright, but

the economic situation at the commencement of this year is comparatively stronger.

As a result of the marked expansion in commodity-producing capacity throughout the Commonwealth, the exports of raw materials from these countries shot up from £342 million in 1958 to £2,380 million in 1957. The Commonwealth provided nearly all the free world's output of colr and corundum, more than nine-tenths of jute platinum metals, asbestos and rutile, and half of gold, mica and diamonds (by value) nickel, wool, ilmenite as well as substantial share of many other raw materials. Along with this remarkable development in Commonwealth production, consumption in the Commonwealth countries also showed a sizeable increase.

French Facts & Figures

The French economy in 1959 experienced an uptrend in industrial production which has remained uninterrupted in the first month of 1960. The overall index of French industrial output (not including building) at 183 in December 1959 was higher than the previous record of 181 in November and 15 per cent higher than the index of 159 registered in December 1958. Production of cement totalled 14,000,000 tons compared with 13,415,000 tons in 1958, which works out to an increase of 4.4 per cent. Aluminium production was higher at 215,700 tons in 1959 against 209,744 in 1958. Iron ore output registered an increase of 2.46 per cent, being estimated at 60,898,000 tons in 1959 against 59,437,817 tons in 1958.

Automotive industry and artificial textile constituted two major exceptions to the general trend in industrial activity. Production of heavy transport vehicles declined by 10 per cent as compared with 1958. Rayon output was lower at 52,780 tons against 57,289 tons in 1958, and production of staple fibre receded to 57,012 tons in 1959 from 69,823 tons in 1958. French coal production at 59,775,000 tons in 1959 was 264,000 tons less than output in 1958. There was, however, an offsetting increase in the production of electricity, which stood at 64.55 billion kwh as compared with 61.8 billion kwh in 1958.

A sharp swing in the foreign trade balance was another notable feature of the French economy during 1959. Statistics of trade published indicate that the country's foreign trade balance for 1959 will show a surplus of 260.1 billion old francs compared with a deficit of 202.1 billion francs for 1958 and a deficit of 376.2 billion francs in 1957. Exports totalled 2,775.2 billion francs in 1959 compared with 2,153.1 billion francs for 1958, while imports were valued at 2,515.1 billion francs in 1959 against 2,355.2 billion francs in 1958.

April 2, 1960

WORLD OF BUSINESS

Refractories: Progress, But not Enough

The speech delivered by Mr A. Banerjee, the Chairman of the Indian Refractory Association, at its Second Annual General Meeting held in Calcutta, provides a general picture of the progress made by the industry and the manifold problems it has to confront. As claimed by the Chairman, the industry recorded remarkable progress, but the total output of the industry was sufficient to meet only a fringe of the growing demands for refractories from the steel factories. Sardar Swaran Singh, the union Minister for Steel, Mines and Fuel, was merely voicing the general sentiment of the steel manufacturers when he complained at the meeting of the Engineering Association that the refractory industry had failed to step up production proportionate to the requirements of the Steel industry. But, as revealed by Mr Banerjee, the demands for these goods were exceedingly large and were concentrated within two or three years; hence the wide gap between supply and demand. It was also indicated that the industry's task would be simplified if uniform specifications and dimensions were agreed upon. Besides, the draft specifications drawn up by the Indian Standards Institution did not appear to be adequate for the needs of the new plants.

From the policy of the Government, it is quite evident that the steel industry will have to rely entirely on the indigenous refractory industry over the next two years. And the steel industry will have to accept, in the beginning, bricks which will not be of the same quality as imported bricks. But the fact that the industry can produce only refractories of particular specification when reasonable demand has been established cannot be overlooked. It was only recently that it had been made clear that a sufficient demand existed for certain types of refractory materials and the necessary changeover to the manufacture of refractories of the required type is bound to take some time.

The Association also expressed its difficulty in accepting the Indian Standards Institution Certification Marks scheme, for, it involved innumerable tests for both the raw materials required and for the refractories produced even for the lowest grades and the cost in implementing the scheme would be extremely high in relation to the cost of the refractories.

Another serious problem which has telling effect on the quality of refractories produced is the shortage of high volatile coal. The industry requires good coal in order to maintain the high temperature necessary in the furnaces and kilns, and if low grades of coal are used these high temperatures cannot be maintained. This will result in deterioration in the quality of the products.

Confectionery

THE confectionery industry occupies a unique position in that it has already built up an installed capacity sufficient to meet the needs of the country during another two or three Plan periods also. The installed capacity of the 44 units registered with the Development Wing of the Ministry of Commerce and Industry is estimated at 51,000 tons. The Planning Commission's production target for the Second Plan period is 10,000 tons, which is expected to be exceeded by about 50 per cent. In the course of his presidential address to the recent annual general meeting of the Indian Confectionery Manufacturers Association, Mr P. Mohanlal, estimates the confectionery requirements during the Third Plan at 25,000 tons. However, there is no worry about building an installed capacity sufficient to meet the anticipated increase in demand. But it is wrong to imagine that the industry has no problem at all. Mr Mohanlal has listed quite a few that trouble it. Sugar is the main raw material for the industry, and with this commodity not in plentiful supply, the confectionery industry has had to bear its part of the general difficulty in procuring adequate supplies. The various restrictions and regulations that go by the name of sugar policy have made the position of even those confectionery units who have got their own sugar factories no better than that of the ordinary consumer. Mr Mohanlal's plea that Government should devise a scheme for ensuring regular and adequate supplies to all the units registered with the Development Wing should appeal to Authority if it is keen on avoiding the present confusion in the supply of sugar to the industry.

Two other points touched upon by Mr Mohanlal deserve special mention. Printed waxed paper is an essential item for the industry, but, after representation, Government have agreed to allow the industry to import half its requirements. But what about the other half? This is to be got from indigenous sources, and Mr Mohanlal says the domestic product is not of the required high standard. The confectionery units are perfectly right in refusing to use printed waxed paper which is not of a high standard, because the sweets that will be wrapped in this paper is an article for human consumption. So long as there is no adequate indi-

genous supply of waxed paper of the desired quality, there is no alternative to allowing imports. But the question why our indigenous manufacturers of printed waxed paper should not be made to improve the quality of the paper has to be considered by Government. With its large installed capacity, coupled with the fact that the quality of its products has been found to be quite acceptable to overseas countries, the confectionery industry gains importance for its export potential. But it is handicapped by the inadequate supply of sugar and its high price. If Indian confectionery is to compete in overseas markets, its price must be comparable to that of other manufacturers. Mr Mohanlal has rightly pointed out that a policy similar to that followed in respect of some other export products like cotton textiles is indicated in the case of confectionery also.

From Hand to Mill

Mr G. E. Howitt, Chairman of the Calcutta Flour Mills Association, has dealt with the many problems faced by the flour mill industry in his recent report to the Annual General Meeting of the Association. The main preoccupation of the flour mills represented by this Association seems to be wheat supply and the difficulties created by the rather unimaginative policy governing its distribution. Quotas allotted enable the mills to work only 66 per cent of their capacity. With the rise in rice price, demand for wheat products has increased, and it is urged that the daily allotment be increased to 1,100 tons from the present rate of 800 tons. It would appear that often wheat which has lost its essential characteristics is forced on the mills in the form of reconditioned wheat. There has been at least one instance where a mill has to face prosecution for using the reconditioned wheat supplied by Government. The inspecting authority has found the wheat unfit for human consumption. It cannot be the intention of authority to pass on damaged wheat to the mill industry, thereby endangering the health of the population.

There appears to be some sort of a dictatorship in operation in regard to distribution of wheat to the flour mills. Mr Howitt has referred to two clauses relating to quality and quantity in the new application form to be used by mills for the purchase of wheat from Government. These are in the nature of 'compelling mills to accept such quality as is offered and under conditions which appear to be positively inimical to the interests of the mills. It is stipulated that no claim for short weight or short receipt would be accepted by Government at any time, in whatever circumstances. Considering the frequent shortage of wheat products that occurs in Calcutta, the plea that sufficient

wheat should be allotted to mills to enable them to build up a reserve is reasonable. As it is, they are living from hand to mill.

Mr Howitt's reference to the move on the part of Assam to become self sufficient in the production of wheat touches on an important aspect of Government policy. The flour mills in Calcutta usually supply Assam's requirements of wheat products. This market will be lost to them hereafter, and consequently their idle capacity may probably be further increased, although, already, the mills have one-third of their production capacity lying idle. It is rather strange that new units have been allowed to set up in Assam when, in a nearby State, flour mills are having considerable idle capacity.

Madras Fertilisers

Sanction has been granted for the installation of a fertiliser factory in Madras. The new factory, called "Madras Fertilisers Ltd", will be located in Cuddalore with an authorised capital of Rs 100 lakhs. The plant will engage in the production of sulphuric acid and superphosphate. The necessary industrial licence has already been given and the Capital Goods Committee is considering the issue of adequate import licences. The issue of such licences is all the more important by which the authorities can procure adequate supply of raw materials from abroad. The new plant is destined to play an important role in helping the country to increase agricultural output. Mr M. Ct. Muthia, the Chairman of the Indian Overseas Bank Ltd, will be the Chairman of the new company and Messrs M. Ct. Pethachi, A. R. Ramanathan and S. P. Virmani will function, as directors.

Machine Tools' Output

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 13 leading member-firms during the month of January, 1960, was—

Description of Machine Tools	Quantity	Value
Manufactured	Nos.	Rs
Lathes	198	28,66,679
Milling machines	25	10,17,500
Radial drills	15	2,00,000
Shaping machines	47	3,80,545
Drilling machines	37	1,23,000
Hacksaw machines	10	24,329
Miscellaneous	10	9,700
Lathe chucks	229	46,330
Drill chucks	172	7,981
Total	743	46,76,064

SPECIAL SECTION

[In the course of the last two weeks, Central Government Ministries have published their Reports for 1959-60. This Special Section summarises some more reports which have been received.]

External Affairs

The work of the Ministry of External Affairs is not solely confined to India's relations with foreign countries or the UN. In the domestic sphere, apart from the administration of a number of Acts relating to Emigration, pilgrims etc, the Ministry is also responsible for the administration of tribal areas on the North East Frontier. Expenditure under this head accounts for over a quarter of the total estimates for the Ministry, and amounts to Rs 126.77 lakhs out of a total of Rs 484.92 lakhs in the revised estimates for 1959-60. The allocation for the 109 Missions and Posts abroad amounts to Rs 224.46 lakhs, while the allocation for the Headquarters amounts to Rs 73.12 lakhs. The performance of the External Publicity division has frequently come under fire in Parliament and outside. The total budgetary provision for the Division in 1959-60 amounted to Rs 93.5 lakhs, of which Rs 71 lakhs represented expenditure on Information Posts abroad, and the balance the expenditure at headquarters. The annual report of the Ministry points out that this expenditure includes the salaries of officers and staff (India-based and local) costs of passages, foreign allowance, rents and taxes for premises, the cost of furniture and other equipment postage telegrams, telephone charges etc, which leave "only a small proportion of the total financial outlay for purely Information and Publicity work". The External Publicity Division runs 48 separate Information Units and provides information services to about 94 Indian Posts abroad.

Part two of the report, which summarises India's relations with the different countries during the year, forms a compact and up-to-date guide to India's relations with the rest of the world. The report notes the improvement in relations with Pakistan which are treated at some length, as well as the unfortunate set back in relations with China.

Iron & Steel

The year 1959 marked the turning point in India's steel economy. Production of steel increased from 1.39 million tons in 1958 to 1.77 million tons in 1959, the two producers in the private sector contri-

buted most of the increase. The blast furnaces in the public sector plants started producing pig iron during the year—in Rourkela and Bhilai at its beginning and in Durgapur toward its end. Rourkela and Bhilai made substantial contribution to the sharp increase in the output of pig iron from 441,000 tons to 752,403 tons. The public sector plants also started producing steel during 1959. During the year Tatas and Indian Iron had almost completed the expansion programmes they had undertaken.

As a result of increased production the supply position of pig iron was comparatively easy. Larger supplies of billets were also available to the re-rolling industry which stepped up production from about 445,000 tons in 1958 to 566,000 tons in 1959. During the year India exported pig iron for the first time since 1953, and finalised exports of about 258,900 tons of which 168,900 tons were sold for cash and the rest in exchange for steel.

The report of the Department of Iron & Steel (Ministry of Mines and Fuel) points out that in spite of increased production achieved during the year, total availability was less than in previous years. Supplies continued to be restricted on account of shortage of foreign exchange. Only about 750,000 tons of steel were imported in 1959 against 1.17 million tons in 1958 and 1.72 million tons in 1957. Except for increase of Rs 12.5 per ton in price of wire, statutory steel prices remained unchanged during the year.

The Ministry has been following a policy of liberal export of melting scrap of types which could not be utilised in the country. The total availability, now estimated at 400,000 tons, is expected to go up to about 600,000 tons by 1960-61. In order to utilise that larger quantities of scrap that would become available, 19 new electric furnaces were sanctioned in 1959. Two small blast furnaces each with a capacity of 15,000 tons per annum (one in Madras and the other in Orissa) have gone into operation. Seven more have been sanctioned—two in Madras State, three in Bombay State, one in West Bengal and one on a small scale in Madhya Pradesh.

Rehabilitation

The report of the Ministry of Rehabilitation of 1959 begins on the confident note that the formidable task assigned to the Ministry twelve years ago is, now within sight of completion. About 28.57 lakhs of persons are estimated to have migrated from Pakistan up to December 1959. Of these 47.40 lakhs came from West Pakistan and 41.17 lakhs from East Pakistan. The expenditure on displaced persons up to the end of 1959-60 is estimated at Rs 352.52 crores, of which the expenditure on displaced persons from East Pakistan amounts to Rs 165.71 crores. In the Western

Zone the rehabilitation of about 48 lakhs of displaced persons has been almost completed. Substantial progress has also been made in the payment of compensation. About 4.49 lakhs, out of 4.85 cases, have been disposed of. With the completion of the residuary work in connexion with the rehabilitation of the displaced persons from West Pakistan, it is hoped that the Western Wing of the Ministry will be wound up within 1960-61.

As regards displaced persons from East Pakistan, the report says the year 1959 marks the beginning of the final phase of rehabilitation. During the year 48 camps were closed, and at the end of the year there was a total population of 1.33 lakh persons in 91 camps in West Bengal and Bihar. Total number of families given rehabilitation assistance so far is 6.02 lakhs, including 26,000 families which were given assistance during the year under report. While the progress of the Dandakaranya Scheme has not been up to expectations, the report points out that the work of reclamation has been started in right earnest, and that, hereafter, there will be a steady flow of camp population to Dandakaranya.

Scientific Research & Cultural Affairs

The brochure published by the Ministry of Scientific Research and Cultural Affairs of the Government of India has highlighted some of the important activities of the Ministry during 1959-60. The Summer School on Theoretical Physics held at Mussoorie in June last was attended by 53 delegates and the report of the School was published in two volumes. Sixty-two new inventions by the National Laboratories and other institutions were reported for development. Decision was taken to improve the pay scale of teachers in Science and Technical subjects at University institutions, Technical Institutions and other affiliated colleges. Special committees were appointed by the CSIR to consider the question of scientific instruments and the establishment of a Central Institute of Scientific and Technical Information.

The Survey of India conducted extensive surveys for Gauhati Oil Refineries Site and Township and for Kiriburu iron ore mines. Surveys of the desert regions for the Rajasthan Canal Project are being carried out by three separate field units. The National Atlas Organisation completed the drawings of 15 originals for the main English Edition of the map of India.

The recommendations of the Central Board of Geophysics for the procurement of geophysical data from private agencies engaged in the exploration of oil and also for the setting up of a committee for Exploration Geophysics were accepted by the Government.

The Zoological Survey of India conducted faunistic and ecological surveys of the Sambhar Lake

(Rajasthan), and faunistic surveys of Andaman and Nicobar Islands and of UP.

Remarkable progress was made in the field of Technical Education during the period. It witnessed the setting up of the Indian Institute of Technology in Madras. A scheme of merit-cum-means scholarships was formulated and implemented to extend state aid to meritorious but poor students to continue their technical studies. Schemes for the establishment of 40 polytechnics and nine engineering colleges were finalised.

The Scheme for the development of Museums and Modern Indian languages made substantial progress. A scheme of inter-state exchange of cultural troupes was formulated with a view to promoting cultural and emotional integration and solidarity among the common people all over India.

Cultural agreements were signed with the USSR and the Republic of Czechoslovakia. Indian delegates participated in various International congresses and conferences held abroad. Scholarships pertaining to scientific and cultural subjects continued to be awarded by the Government of India both to Indian and foreign students. Information is also being compiled on facilities for study in technical courses available in India and on educational facilities at post-graduate level in other Commonwealth countries.

NIDC LOANS

The National Industrial Development Corporation has formulated a new scheme for granting loans up to Rs 10 lakhs to cotton textile and jute mills for speedy modernisation and rehabilitation.

The scheme will be in operation in addition to the two other NIDC schemes for long and short-term financing of the programme of modernisation and rehabilitation of machinery in selected industries.

Loans granted under the new scheme, like Bank Advances, will be secured by a simple promissory note executed by the mill company with an equitable mortgage or guarantees as collateral security. Repayment of the loan will be in five equal instalments, but the first instalment will fall due only two years after the drawal of the loan amount.

Under the long-term financing scheme, the NIDC has so far sanctioned loans totalling about Rs 124 crores for facilitating rehabilitation and modernisation of machinery in 27 cotton textile and 24 jute mills. A sum of Rs 5 crores has actually been drawn so far, and further disbursements will be made as and when the machinery is delivered and has to be paid for.

Besides loans to the cotton textile and jute industries, the NIDC has also sanctioned two loans totalling Rs 35 lakhs for assisting in the expansion plans of the machine tool industry.

LANDMARK

Kundah Project

IN his inaugural speech at Kundah throwing open the first station of the Kundah Hydro-electric scheme, the biggest in Madras State and the nation's third biggest, Mr Nehru appropriately described it as a symbol of "national and international cooperation" for the welfare of the people. This Rs 34 crore scheme will add 55 per cent to the capacity to the Madras Electricity Grid. Mr C. A. Ronning, Canadian High Commissioner, and Mrs Ronning travelled with the Prime Minister all the way down to Kundah from New Delhi to be present at this significant function. He described this as the greatest project with which the Canadians were associated and he hoped to bring a Canadian Minister when the next power house of the Project was to be commissioned.

Mr V. P. Appadurai, Chief Engineer for the State Electricity Board, who should indeed have been the happiest man on the occasion, hoped there won't be occasions in the future when the State would suffer from power cuts during summer months. The per capita consumption of power in Madras State is 42 units with the average for all-India at 30 units. Kundah's first power station has now added another 20 units, increasing the per capita consumption 62 units in Madras.

Probably to inject a sense of democracy into the official inauguration of the function, to which a very distinguished group of visitors had been invited, including a number of Canadian engineers associated with the scheme, 52-year old Sardar Khan, who joined as foreman at the very inception of the scheme and was with it ever since the first pod of earth was turned up at the Kundah village, pressed a key to synchronise with the power generation through water jets spinning the turbine wheel at which two Canadian engineers were present to offer their comments through a loudspeaker heard by the big audience.

The top of the Kundah hills grew dusky and cold as the evening wore out and the Prime Minister was a bit delayed due to the breakdown of his car enroute to the village. The villagers round about the far flung mountainous hamlets had trekked down from early in the forenoon along with their womenfolk. It was a good crowd for the place to greet not only the Prime Minister but others who had gone there to witness one of the most eventful functions in the industrial history of the State. The function was not only colourful but looked quite dramatic. The Prime Minister's speech was pointedly brief. He said his presence at the inauguration had made him "happier just to see the project is built with the joint cooperation of the Canadian Government and their engineers and our engineers." Those who had helped in building the Kundah scheme, Mr Nehru pointed out, had helped to some extent to build a new India that was shaping out. In his own words, the people of the Kundah had not only "built the Kundah project, which will produce electric power, but partly a new India."

In his further reference to the importance of making the workers conscious of their big participation in the emergence of a great nation to the take-off time on to a new economic and industrial era, Mr Nehru stressed the necessity for educating the workers with the knowledge that they were participating in a scheme which would bring happiness to large numbers of people and that they were engaged in the building of a new India. "It is only then," Mr Nehru thought, "that the engineers' work becomes fruitful and full of meaning; the engineers, the mechanics and others engaged in the work must see the picture, not only of the completed scheme, not only of dams and power houses and electric wires taking power to distant parts of the country, but they should see and explain to every humble worker the significance of these, because it has something to do with the lives of millions of people. It is something which will bring happiness and work to a large number of people and will raise the standards of living of all of you."

Mr Nehru expressed gratitude for the Canadian help on behalf of the Government of India and said, "This Kundah project is the symbol of national cooperation and international cooperation. Therefore, it represents something that is very good because it is through a nation working together and cooperating with other nations that we shall progress, and the world will progress." The Prime Minister congratulated all of them who had been associated with the work whether they came from Canada or India and whether they were "humble people of villages, who worked because you have had a share in the building of this great work."

Mr V. Ramiah, Minister for Electricity, thanked all who attended, for responding to the invitation and making the inaugural function epochal. The first power house will immediately add 40,000 k.w. of power and the second power house, which will be bigger, would probably be commissioned in the next few months. This second house would enrich the grid with another 140,000 k.w. Thus, this project

would add 180,000 k.w. of power in an early stage, giving a great impetus to the State's industrial progress. Then, Madras would top Indian States in hydro-electric power production.

What perhaps should have impressed most of the Canadian engineers associated with the project was the labour force of some 10,000 persons, constructing that vast undertaking. The minimum amount of mechanisation has been the key note of the project work, and Mr Pratt, the Capital Projects Chief, Canada, felt that this scheme was "worthy of study by any western engineers or constructors interested in development work in your country."

Mr D. Stairs, Vice-President, Montreal Engineering Company, who are the chief constructors of the Dam, truly said the credit "for the cooperation and design of the project and for forcing it through to completion (in a record time of 34 years, be it remembered) in all its far flung complexity goes to Mr V. P. Appadurai and his staff." The great masonry barricades rose across the valleys, stone on stone, tier on tier, with infinite toil and care. The Mountain streams are filling the new lake and running through the tunnels carved out of the rock and down through the steel pipes to the powerhouses far below and driving the generators, and sending the power out all over the State of Madras. Such were the highly inspiring words of Mr Stairs.

Engineer after Canadian engineer, associated with the Indian labour force while the project was on the road to rapid progress, had nothing but high praise for the "well preserved symbols of your ancient civilisation. It underlined how young our own country is and how few and far apart are our historic monuments."

In the words of Mr C. Ritchie, General Manager, Montreal Engineering Company, who were responsible for the design and construction of the dam with the co-operation of the Madras Electricity Board headed by the energetic and untiring Mr Appadurai, the Kundah Project "is of major proportions by any standards and represents the most modern engineering practice in hydraulic design to be found today—it is a work of outstanding significance."

"This Project will also symbolise the cooperative nature of the Colombo Plan," Mr John Diefenbaker, the Prime Minister of Canada, said in his message to the inaugural function. "It is a matter of gratification to all Canadians that engineers, technicians and experts from our two countries have worked closely together in friendship and understanding, and have brought this impressive Project to its final stages. I am confident that these final bonds of mutual understanding will make a lasting contribution to the deep and close association which is continuing to grow

between our two countries," Mr Diefenbaker said.

Mr C. A. Ronning, Canada's High Commissioner in India, said the Canadians who had visited the Kundah project in the process of formation were all impressed not only by the spirit of cordial co-operation, but also by the craftsmanship of the Indian worker and by the high standards of Indian Engineering which had been demonstrated at the project. "It is thus a matter of pride for my country to be associated with an undertaking which can do so much to help the farmer, the manufacturer and the worker in the State of Madras."

Mr Ronning said that Canadians were prepared to continue "with this fruitful cooperation." He disclosed that, during the present fiscal year, Canada had increased its commitments under the Colombo Plan, despite the Canadian Government's desire to reduce its financial deficit, and this had been done with the encouragement of all parties in Canada's Parliament and by the people as a whole.

He also disclosed, "During the next twelve months studies will be carried out in India to see what might be most usefully undertaken in some cooperative way."

Mr Ronning's words in concluding his speech at the inaugural function proved very encouraging: "As more lights go on in the villages of Madras State, and as the sound of water is heard from the electric pumps, perhaps we may all be inclined to think again of our mutual experiences in the Commonwealth to which both India and Canada belong. I suggest that this mutual experience has been enriched and broadened by our joint participation in the Colombo Plan of the type so clearly exemplified by this Kundah Project."

The Chief Minister of Madras was typically his self while describing the Kundah scheme. Not accustomed to waste words, he described the Kundah as "one more dream come true." He said, "This work will brighten many homes and lighten the load of many men. Our first tribute therefore is to those who completed this project in good time. The story of Kundah should not stop here; the power from Kundah should be made to turn the wheels of industry in every village and town to create perpetual work and wages for countless more people. I am sure Kundah will be our proudest achievement since Independence."

The Finance Minister, Mr C. Subramaniam, should have been a happy individual, though State Assembly Session did not allow him to participate in the function. Firstly, because he is the child of a district whose industrial potential and progress so far has not yet been properly assessed and now it stands to benefit immensely; secondly because he has been tirelessly telling Separatist political

groups in this State that Madras was not lagging behind in its march toward industrial progress. Coimbatore's progress in small-scale industries is something that is phenomenal. With organised coordination and collaboration among the small industrialists, it could easily emerge as the best in India even better than the Punjab, which is credited with craftsmanship confidently depending upon the little machines which are abundantly manufactured there.

Coimbatore district should prove ultimately the industrial pivot of the South. It abounds in little enterprises run by little captains of industry with courage and confidence. In some factories, particularly in textile machinery manufacturing, a certain factory has been producing amazingly much with amazingly little capital investment. In the north, similar organisation would have invested several times the same amount. There is a call definitely from Coimbatore. If only the industrialists open their eyes wide open, arrange for good publicity and broadcast their achievements, which will astonish any western industrialist, an unprecedented boom is knocking at their door steps. To this extent, the Kundah project would have helped this most advanced district, but which is still unconscious of its own achievements and potentialities. It should now wake up.

The Facts

THE history of the Kundah Scheme, the biggest hydel project in Madras State and the third biggest in India, dates back to 1921. Tatas were given a concession to develop power from Kundah then, but when no attempts were made to make use of the concession, it was withdrawn. Investigation of the scheme was made during the First Five Year Plan itself. The final report was submitted to both the Central Government and the Central Water and Power Commission in January 1952. The scheme came back to the Madras Government two years later, in 1954, after some amendments.

It was in September 1955 that the scheme was finally approved. The estimated cost of the scheme was Rs 35.44 crores, which also included the cost of drawing the transmission lines.

Sir Chintaman Deshmukh, who was Finance Minister, Government of India, inaugurated the scheme on 29 June 1956.

The Kundah basin is situated to the South-east of the Pykara basin in the picturesque Nilgiris. There are two streams, the Avalanche and the Emerald. The names of these two streams are undoubtedly English in origin and probably these were so named by English men who alone ventured into these places long ago when they ruled India. These turbulent streams rise amidst the high peaks of Devabetta, Karaikada, Kolinbetta and Porthimund. They rise at an

altitude of over 8,000 feet and the streams falling down the valley form the Kundah river. Joined by some more streams, the Kundah river takes a southeasterly direction near Mandanai at an altitude of about 6,000 feet. The river has got a fall of about 200 feet here. For about 2,000 feet, it cascades through. It reaches the Kundah village where, again, it is joined by the Kanarahalla and Koulmuli-halla streams. The swollen cascades and, at 2,100 feet above sea level, another stream, Peghumbahalla, merges with it. Beyond this confluence, it runs in rapids for about a mile and half and later, in an easy gradient, down to its junction with the river Bhavani at an altitude of 1,340 feet.

The development of the Kundah basin has been taken up in two phases. Each phase will have four stations and an auxiliary power station.

The Second Five Year Plan period envisaged the construction of a storage by building two dams across Avalanche and Emerald streams of 5,500 million cubic ft with an interconnecting tunnel; a reservoir at Upper Bhavani of storage of 3,573 million cubic ft capacity and a tunnel 9,740 ft long to connect this to Avalanche reservoir; a pressure tunnel about 15,000 ft long from Avalanche reservoir to surge tank one from where penstocks lead to Power House I, which was commissioned to work last week.

Particulars are: Power House I, on the right bank of the Kundah river (opened last week), near Kundah Pallem village with a gross head of 1,177 ft and an installed capacity of 40 Mega Watts; forebay dam for Power House II (to be commissioned in a few months) across the Kundah river to collect the tail race water of Power House I and the run off from its free catchment of 44 sq miles; pressure tunnel about 12,000 ft long from the forebay to a surge tank and penstocks there from to Power House II, located on the left bank of Pegumbhalla stream, and finally Power House II utilising a gross head of 2,470 ft with an installed capacity of 140 Mega Watts.

Mr H. G. Nil Cavel, Canadian Administrator of the Colombo Plan, visited India in February 1955, Kundah scheme was suggested as a scheme that could be undertaken and the Canadian representative took keen interest, and Canada deputed its Engineering Consultants, (Montreal Engineering Company, Canada) Messrs D. Stairs and J. K. Sexton to the project site. The scheme was reported technically sound by them.

On 29 December 1956, an agreement was concluded at New Delhi by which Canada was to give aid to the tune of \$20 million, in Indian currency about Rs 10 crores. Up to now, Canada has given \$25 million to the Kundah Scheme.

A brief history of power development in Madras State would

not be out of place here. Though power generation dated back to 1908, actual progress could be said to have commenced only when Sir C. P. Ramaswami Aiyer created, in 1927, the Government Electricity department for developing the Pykara Hydro-electric scheme in 1932 and the Mettur Hydro-electric scheme in 1937. In 1944, the Papanasam Hydro-electric scheme was completed. The Madurai Thermal station was commissioned in 1951. In the next year, the fourth hydro-electric power station of Moyar came into operation. The Basin Bridge station, generating 15,000 kw, was installed in 1953. The Madurai Thermal Station was augmented with an additional turbo set in 1954. Also, the Pykara scheme got added capacity of two units capable of generating 13,600 kw. each in June 1954. Another 15,000 kw. was added to the grid in January 1955. In April 1958, the grid was helped with another 30,000 kw. In the Periyar Power House, the first 35,000 kw generating set was put into commission and, in February 1959, the second and third units were installed.

The Madras Power Grid now comprises five hydro-electric power stations, 2 thermal (steam) stations; 13,900 miles of high tension transmission lines and 19,000 miles of low tension distribution lines. The Grid covers all the thirteen districts of the State.

The installed capacity of the power stations totalling 391,700

kw are: Pykara 70,000 kw; Mettur, 20,000 kw; Papanasam 28,000 kw; Moyar 36,000 kw; Periyar 105,000 kw; Madras 98,500 kw; and Madurai 14,000 kw.

Madras today ranks third in its electricity production. Bombay and West Bengal being first and second respectively. But Madras is first in respect of power utilization for agricultural purposes. In the matter of hydro-electric output, Madras is second only to Bombay. But today it leads India with the inauguration of the first power House of the Kundah scheme. Unlike in Bombay and West Bengal, where power is consumed in big industries and urban loads, Madras has extended its grid to almost every district and rural area, leading in village electrification in India. Madras State has 9,174 towns, villages and hamlets lit with electricity as at February 1959.

It may not be premature to mention in this connection that the necessity to instal a nuclear power station in Madras State has been conceded by the Government of India. This nuclear station may, in all likelihood, be set up during the Third Plan period. There is also constant vigilance of the Madras Government in pointedly drawing the Government of India's attention to the imperative need of the South for the location of such a station. Government circles are hopeful that this will become an accomplished fact.

FIVE-YEAR PLANS IN MADRAS STATE				
Particulars	At the beginning of 1st plan.	At the end of 1st plan.	At the end of 2nd plan.	
Generation:				
Installed generating capacity in MW	156	256	571	
Aggregate demand in MW	130	208	560	
Units Generated in millions	630	1,053	2,500	
Transmission:				
H.T. Lines in miles	4,355	7,343	15,500	
L.T. Lines in miles	3,580	8,128	20,000	
Distribution:				
Consumers in Lakhs	2.50	4.26	8.00	
Substations including distribution transformers	1,647	3,862	10,150	
Rural Electrification:				
Villages electrified	1,613	3,320	10,000	
Agricultural pump sets connected	14,373	32,440	100,000	
Finance:				
Capital Outlay in lakhs of Rupees	30.96	54.01	125.34	
Gross Revenue in lakhs of Rupees	3.37	7.03	18.42	

POWER PROJECTS IN THE FIVE-YEAR PLAN.			
No.	Name of Project.	Estimated cost in Lakhs of Rs.	Remarks.
A. Continuing Schemes:			
1.	Periyar Hydro Electric Scheme (1st stage)	2.32	
2.	Kundah Hydro-Electric Scheme (1st and 2nd stage)	2.48	
3.	Sandynallah Reservoir Scheme	28	
B. New Schemes:			
4.	Mettur Tunnel Scheme (1st stage)	5.99	100 MW installed capacity.
5.	Kundah Hydro-Electric (II stage)	22.81	240 MW installed capacity.
6.	Periyar Hydro-Electric (III stage)	95	35 MW installed capacity.
7.	Periyar Pumping Scheme	62	44 million units annually.
8.	Anamalai Hydro-Electric Scheme (Parambikulam Project)	5.59	95 MW installed capacity.
9.	New Thermal Station (at Neiveli)	22.50	200 MW installed capacity.
10.	Transmission and Distribution Project	57.31	5,600 miles of HT Lines.
11.	Improvements to existing power houses transmission lines and substations	7.00	8,600 villages to be electrified.
12.	Investigation of new schemes	22	
13.	Housing scheme for the employees of the Electricity Board	1.00	
14.	Acquisition of electrical undertakings	4.25	
Total Rs.		133.32

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

day for the doubtful prospect of prosperity generations hence. Last of all, by means of foreign assistance, let us not mortgage the future.

Hardly a comforting state of affairs. But, as the reader will surely (I hope) have guessed, my own views in this behalf are totally different. This is because all argument that I have adduced at the beginning is made up of the half-truths represented by oversimplifications. Much more important, there is the fact that a most significant development is, in such argument, completely lost sight of. I refer here to an economy in the throes of industrialisation, in the process of acquiring for itself all the attributes of dynamism and expansion that growth implies. Proof, mind you, is not lacking of the manner in which, already, the Indian economy bears evidence of having acquired dynamism, or the way in which revenues, under whatever head you care to mention, have turned buoyant. Those that do not want a plan, I am afraid, cannot see past their noses in two crucial respects: they fail to see what could happen to India if planning were given up, and they fail to note that resources can be found without undue strain.

The forswearing of planning will not be, as is made out to be in some circles, the saviour of democracy but the wreck of it. Certain urges and impulses, needs, and wants have come to the notice of the general populace. And there is impatience for satisfaction being vouchsafed in all these respects, as soon as is possible. A Government that does not even try to secure these wants will not endure; it will topple, and the grim alternative to which the country will be forced is chaos and Communism. But, with the Indian a highly individualistic creature, the democratic path will be preferred, even if in comparison with China progress in this country is slow, so long as he is convinced that Government are making an honest attempt at planning for his better future. Indeed, you might say that the First and Second Plans have already made inevitable a future era of planning. So, plans are here to stay, and it is best that we found how best we can manage our affairs so that whatever regimentation that might be innate in planning will

So, whatever Government do they will be doing wrong. This is the stage in the argument when you can quietly sink away, convinced that planning is something that this country can do or rather should do, without. Why talk of a coat, with which to clothe the new India, if there is not a square meter of cloth available for the purpose? After all, the proverb tells us—or is it the adage?—that we should cut the coat according to the cloth. The resources are just not there; or they can be found only at the cost of greatly wounding the economy. So, forget about planning. Let nature take its course. Trust in Karma. Tomorrow can take care of itself. Don't mortgage today. There is no need of privations to-

last for the least possible time. Clearly, with such an objective, Professor Rostow's phrase of an economy achieving the "take-off" stage acquires, in Indian conditions, an immediacy and urgency. Once you can have self-sustaining growth, you can relax in your efforts to "push" the economy along. You can rest awhile, now and then, while the momentum you have gained takes you further along toward your pre-determined goal. But, naturally, the greatest strain for the economy occurs when you are reviving up your engines to get the power wherewith you can be air-borne. All the power and resources of a plane are pressed into service in that moment of truth for the pilot, the take-off. There is room for very little slack. Even in an economy, there has to be a concentrated effort for securing that momentum.

The crew members—corresponding to Ministers of Government—are of course in a high pitch of concentration. But the passengers have a task as well. I wonder whether the reader recalls having flown in a Viking. Passengers were judiciously arranged all over the plane; but what was curious was that luggage was also strategically placed within the cabin. It was only after such ordering of passengers and cargo that the pilot would decide on preparing to take off. Substitute the people for the

passengers and industries for the luggage. You need, I suggest, a similar careful placement, with the pilot deciding on certain balances as between the people and industries, for the economy to be able to take off. After all, it is not as if the Indian economy is so modern as to be a Viscount or a Boeing 707. Hence, again, planning; and priorities are inherent in planning.

Let us now have done with talk of take-off. The all-important question is, can we get the resources; rather, can we afford to get them? In the sense that, as I have said at the beginning, valid objections can be raised against each of the four main heads? Here, too, you need balancing. We need to have a little of each; some additional taxation; a small increase in foreign aid expectations; a more ambitious borrowing programme; and inevitably some element of dependence on deficit financing. Where we have to be careful is to ensure that the adverse impact of finding resources in such manner is at every stage minimised. For example, in taxation, it has got to be capacity to pay; direct taxes have reached, if they have not already passed, the saturation point; but with new products being manufactured every day, and industrial production itself rising most respectably, the scope for indirect taxes is immense. The imposition of indirect taxes surely will raise costs of production all along the line; but the new revenues, let it be realised, are a result of additional production. So, it is not as if additional burdens are being imposed on the same set of taxpayers—except in the sense that the consumer has to pay more,

CALCUTTA BOMBAY MADRAS NEW DELHI

Resources for the public sector Third Plan are, as I indicated last week, to be found as follows:

V	Budgetary receipts corresponding to foreign assistance ..	2200
VI	Deficit Financing ..	550
VII	Total Resources for Public Sector Plan ..	7000

*

Enough, for the present at least, about the Third Plan. India continues to be the Mecca for visiting dignitaries, and Mr Nasser is with us again. There is now less of a threat of war in the Middle East—the target of such Arab designs being, of course, Israel—and Mr Nasser, on his travels and in his second visit to India, is welcomed not only as the architect of a bigger republic but as an exponent of neu-

Mr Nasser comes at a point when India has a frontier problem on its hands, one that must be handled independently, with an ambitious and powerful neighbour oppressed by memories of many unequal treaties. He can offer little guidance, for, he too has been unable to reinstate the unity of the Nile Valley and is reconciled to the sharing of the waters with the Sudan. The engineers from India (Willcocks and the rest) have created a moral barrage that he cannot surmount, so that the Sudan will retain what it has by way of irrigation facilities. This probably holds a lesson for Pakistan in regard to the Indus waters. The second visit to this region follows after great changes in Pakistan, no longer estranged from India and blindly backing the sponsors of anti-Communist alliances. This, too, may help to see the succession State in a new light in relation to a Russia that has expanded in Asia by design as well as accident. The common faith in social democracy may link Egypt and India for long, and it is generally assumed that India's accord with the UK may influence Egyptian policy in spite of the inflammatory memoirs of Sir Anthony Eden. No striking results can, however, be discerned, though it is possible that more cotton may be bought by India, exposed now to a serious shortage, for rupees. And a useful line of exports in sacking, for Syria mostly, may be established if Egypt is ready also to buy piecegoods from India. Arrangements between the Central Banks may support such bilateral trade far more than conventional pacts, and Egypt can hope to get some experts and equipment from India for its industrial schemes. But the future can be glimpsed only vaguely, for, high policy (aid, no trade, in fact) will be the theme of discussions at Delhi this week, and the leaders will lament over carnage in the Cape Province rather than the experience of Community projects that General Neguib started to overcome the pathetic contentment of the fellah.

Plans for People, Not Vice Versa

Speaking from the chair last Wednesday at the annual general meeting of the Central Bank of India, he has entered a plea for economic realism. He points out that our planners would do well to remember that planning is for the good of the people and that plans are not all important in themselves. How much he is opposed to present official thinking on planning is well borne out by his labelling phrases like "take-off stage" and "self generating economy" as meaningless.

It is against this way of thinking that Sir Homi Mody raises his voice of protest. From the manner in which Government are going about drawing up the programmes for the Third Plan, it would appear that the Second Plan has had no lessons for them. And yet, they are so patently clear. Sir Homi describes the method in which the truncated Second Plan, called the hard core, is being accomplished, in three phrases—large foreign credits, heavy deficit financing, and bouts of fresh taxation. The Third Plan is also apparently to lean heavily on foreign aid. Indications are that the required foreign aid will be available. But says Sir Homi, this is not something one should feel happy about. Already, in the Two Five Year Plans, our external indebtedness is heavy enough. It is his plea that people

Sir Homi's apprehensions about inflation will, however, be widely shared in the country. The continuously rising price level should occasion serious concern to Authority. But what is being done to check the price level? Sir Homi quotes the Governor of the Reserve Bank to indicate what requires to be done—integration of fiscal (including a policy with regard to deficit financing) with monetary policy. He has also two suggestions to make toward containing inflation. The first refers to a reappraisal by Government of the programmes they have been pursuing in the past few years. This can be done through the medium of an independent body of experts entrusted with the task of making a survey of the monetary system. The second suggestion pertains to the advisability of associating Scheduled Banks in the tackling of the inflationary tendency on a pattern similar to the one that has been designed in Norway. In that country, a credit agreement has been entered into between the Ministry of Finance and the Bank of Norway on the one hand and the Joint Consultative Council representing the country's banks and insurance companies, on the other. Sir Homi makes this suggestion while discussing whether the Reserve Bank of India by itself through the mechanism of selective credit controls can cope with the inflationary situation. Strangely enough, the Reserve Bank authorities who have themselves contended that selective credit controls have a marginal effect have not hesitated to assign them a task which is beyond their capacity.

The 'sizable increase' in the money supply also 'bears testimony to the creeping inflation.' During the last

FOREIGN COLLABORATION IN
INDUSTRY

The Union Ministry of Commerce and Industry has formulated broad principles to govern the sanctioning of new industrial undertakings in the country.

The sanction which industrial projects require from the Commerce & Industry fall broadly under three heads:

(i) Approval to the terms of foreign collaboration in the project, if any;

(ii) Approval in regard to capacity, location, etc., after consideration by the Licensing Committee; and

(iii) Approval of the foreign exchange expenditure for the import of plant and machinery.

Regarding agreements with overseas firms for technical collaboration or financial participation, the need to consider each case on its

The broad principle, however, is that technical collaboration agreements should have a limited number

period of life, and, as a rule, not exceed ten years. Another point to which the Government attach importance is that the

importance is that the agreement should not lay down any restrictions on exports from India. Even if it is not possible to get freedom

to export to all countries, permission for exports to some countries should be necessarily there.

A point which often creates difficulties in the way of Government approving collaboration agreements is the stipulation that certain products will be imported only from the foreign firm colla-

Another undesirable feature in some agreements, which creates difficulties and delays in approval, is the provision for payment of a minimum royalty. When payments are to be related to turnover, it is reasonable to expect that these would vary with the turn-over and no payment would be guaranteed regardless of turnover.

A number of measures have been taken to speed up the disposal of applications seeking Government's approval for capacity location, etc. of new units.

Another major step taken, late, in this regard is the Government's decision that industries employing less than 100 workers and having fixed assets of less than Rs 10 lakhs need not obtain any licence whatsoever under the Industries (Development and Regulation) Act.

As a result of these measures the Licensing Committee will now mainly deal with cases relating to major projects or development in industries where regional considerations, availability of raw materials, port problems and similar factors play an important part.

In view of the country's limited foreign exchange resources, the possibilities of obtaining import licences for capital goods are limited to cases where either (i) the applicant himself can make satisfactory arrangements for raising external finance or (ii) Government have facilities in the shape of credits or payment arrangements with particular countries to finance such imports.

As regards the first, the form of financing acceptable to Government are investment in equity capital of the company or long term loans.

As regards the import of machinery out of the credits or payment arrangements by the Government, it is hoped that facilities will, as hitherto, be available with most countries which have been important suppliers of machinery to India.

The size of these credits, however, is smaller than the demand for them. In view of this, applicants for import licences for capital goods should clearly specify the countries from which imports are to be made, instead of merely indicating the currency area in vague terms. Alternative sources of supply in the order of preference should also be indicated.

It is also essential that applicants should clearly indicate whether, in the event of their being given a licence to import, they would be prepared to import licence against the credit facilities available to Government; if not, they would be in a position to find the necessary rupee resources and take advantage of the licence granted.

OLYMPUS

FICCI Annual Session

IT was a powerful and disarmingly frank speech that Prime Minister Nehru made while inaugurating the 33rd Annual Session of the Federation of Indian Chambers of Commerce and Industry here on Sunday last. In the opinion of this correspondent, the Prime Minister's speech was also implicitly conciliatory in tone, calculated to assuage the agitated feelings of a section of the business community on the score of the 'ever-growing' public sector. Most of the industrial sector, he said, would continue to be in private hands; the real controversy was only over a select few basic and heavy industries although, even here, the private sector did have a considerable part to play. The businessmen's approach to economic problems and his own approach, Mr Nehru continued, might be somewhat different, but in actual practice there might not be much of an area of disagreement between them. The approach of Socialism did not involve an anti-capitalist bias. It was a positive approach which helped one to understand economic problems; for the rest, it was a question of pragmatism in its actual application.

Mr Nehru was always saying this, and if he laid renewed emphasis on this pragmatic approach, it was wholly necessary in the context of the propaganda of the Forum of Free Enterprise which he described as the Form of 'Unfree' or 'Monopoly' Enterprise. The implication here was that the Forum aimed at the concentration of economic power in a few hands through monopoly control of some big strategic industries. Those who raised the slogan of 'free enterprise' loudly in the name of democracy were at heart Fascist authoritarians, and Mr Nehru disliked Fascist authoritarianism as much as he

disliked Communist authoritarianism. The assembled businessmen could not have hoped for a more eloquent and sincere reaffirmation by Mr Nehru of his liberal faith. If some of them had thought that he was unduly harsh where he condemned the 'vulgarity of the rich' and the degrading character of 'making money' without caring for spiritual values, it would have been unfortunate. And it would have been unwarranted, too, for, Nehruvian Socialism represented, in essence, a humane approach to the problem of poverty.

On the subject of planning, which was being condemned by the Swatantra Party, what Mr Nehru said was no less pragmatic. That his was a flexible approach to this question could be easily seen from the following words:

"Having kept our objective in view, we should try to the best of our ability, and in consultation with as many people as we can, to come to some decisions. We should have a perspective for the next 10 or 20 years, not a rigid perspective, but a flexible perspective, and at the same time a more precise plan for the next few years. There is no virtue about five years. There is no rigidity even about those five years, but one has to have a certain plan in order to proceed methodically and not just leave things to chance."

If Indian planning is so flexible as, indeed, it has always been, it is not only far removed from totalitarian rigidity but is falling short of the standards of "effective development planning" which Mr Paul G. Hoffman, for example, wants the under-developed countries to adopt in his latest book, "One Hundred Countries—One and One Quarter Billion People". If the Swatantra Party is so very allergic to Mr Nehru, the best reply to it would be to quote Mr Hoffman who is no Socialist:

"Some of the greatest capital improvements in the early days of the US came from abroad.... Many other great improvements in this country were financed by the governments, Federal and State..... This is the traditional free enterprise (emphasis mine) way by which a new or under-developed country gets its start and grows up into the cycle of higher incomes, higher production, and increasing savings, and investment."

"The flow of development funds and technology to the low-income countries has depended on annual discussions and appropriations in the advanced countries, with no certainty that they would be continued, or if continued, with no certainty as to the amount. This has discouraged the low-income countries from effective development planning which, by definition, must look ahead for a period of years." (emphasis mine)

"Human effort responds to the statement of a goal and to

the establishment of goals to meet a goal."

Fortunately enlightened business opinion, which is shared by a majority of the business community, has taken kindly to planning. At the very outset, before Mr Nehru spoke, Mr Madanmohan R. Ruia, the outgoing President of the Federation, said in his address:

"In our Outline of the Third Plan, we have perhaps shown a bias in regard to the area and scope to be left to the private industrial sector. Naturally, this has to be viewed against the back-ground of the economic credo of the Federation. However, the central point which requires to be underlined is that the common denominators and inter-connected objectives of the authorities and the Federation are as many as they are substantial. It may well be said that there can hardly be a fundamental cleavage in the approach of responsible opinion to the problems of our economic development. If different degrees of emphasis come to be placed on specific aspects, it should not be taken as irreconcilable opinion. Even here the area of agreement is really larger than is commonly supposed."

At this point Mr Ruia referred to "the often discussed matter of taxation" and admitted frankly that it would be "idle to speak of the burden of taxation regardless of the benefit of the corresponding public expenditure". But there was bound to be difference of opinion in regard to specific measures of taxation, he continued. It could be inferred that what businessmen, by and large, wanted were some rational or marginal readjustments in the present structure of direct taxes. If the resolutions of the Federation, containing, like the resolutions of the Congress, an element of hyperbole, had always given a contrary impression, it was good that Mr Ruia dispelled it in a way although he repeated the Federation's stand that it would be worthwhile, even from the point of increased revenues to the Exchequer, to reduce "the heavy burden of taxation". The idea here was that what was lost on the swings could be made good on the roundabouts (of a brisker growth of enterprise). As usual, the Prime Minister was non-committal in his speech on this question of tax relief; in fact he did not even refer to it. He could not have done otherwise because the Planning Commission's draft memorandum on the Third Plan, visualising an additional taxation of Rs 1,650 crores by the Centre and the States, was very much in the background.

If, in spite of these considerations, the Federation has just passed a resolution to the effect that "the fiscal policy of the Government should be reorientated to ensure that the savings of the individuals fructify in their hands, for it is individual savings that

can stimulate broad-based development even of the corporate sector", one wonders if the choice of the word 'reorientation' is not unfortunate. But, then, a Federation resolution, like a Congress resolution, is not to be taken too seriously. In the same way, the Federation's demand, in the context of the recent credit restraint measures, that "the credit policy of the Reserve Bank and the commercial banks should be actively geared to our development requirements" seems to be unrealistic at the present time when deficit financing plus bank credit appears to have exceeded the safe limits of monetary stability. Less taxation, more bank credit and continued deficit financing would seem to be an unholy combination of expectations not very much in the interests of private enterprise itself. But all these expectations are reflected in the approach of the Federation to fiscal and monetary policies. If the cost of industrial construction and the wage and raw material cost of production alike resulting from unrestrained credit and currency expansion, it would be idle to talk of export promotion or industrial expansion on sound lines.

But in regard to at least one matter the Federation has a clear and cogent case. This case is presented in the resolution "strongly urging on Government as well as industries the imperative need for fully utilising the services of the traditional trade channels." Although the word 'fully' would appear to rule out even cooperatives—which, incidentally, have a useful role to play in restraining the undesirable practices, if any, of private trade although they will not come to cover anything more than a small part of internal trade—the Federation's resolution is probably meant to get the activities of the State Trading Corporation restricted rather than have the cooperatives discouraged. The point that "the extension of the activities of the State Trading Corporation has far exceeded the role for which it was originally set up and has created difficulties for the normal trade channels" compels fair consideration. The Federation's demand that the operations of the Corporation should be confined to entering into trade agreements or such wider promotional activities with foreign countries as would encourage expansion of exports and that the actual trading operations resulting from such agreements be left for being handled and carried on by the private trading interests seems to be reasonable. But the contemptuous reference to "the so-called co-operatives" in the resolution, as originally worded, and the demand that "the entire field of internal trade should be open to the normal trade channels" are unfair and unreasonable. Perhaps, this demand is a bargaining counter for getting the operations of the STC restricted.

WORLD OF JUTE

Pakistani Competition

THE past year has been marked by a considerable expansion in the world economy and jute goods have had their share of it in the shape of an increase in demand. But the trend of jute goods exports last year does not show that India has derived much benefit from the expansion of world demand. Who, then, has supplied the additional requirements? According to Mr D. Duncan-Smith, Chairman of the Calcutta Jute Fabrics Shippers' Association, Pakistan is the lucky country which has "taken care of the increased demand for jute goods". Pakistan has emerged as a serious competitor to India and indications are that this country's bid to capture overseas markets will further intensify in the coming years. The Pakistani Jute Goods industry has drawn up plans for further expansion of manufacturing capacity. Already, during the past year, production and exports have recorded a sharp increase. As last week's leading article in Indian Finance has noted, the success of Pakistan in world markets has not come without tears, for, it has been able to score over Indian goods mainly through underquoting. Even so, India cannot afford to ignore the fast-growing Pakistani competition. Mr Duncan-Smith is right in saying that the present situation in the world of Indian and Pakistani jute is detrimental to the interests of both the countries. Those who are charged with moulding the jute policies in Pakistan and India may do well to ponder over Mr Duncan-Smith's observation that, "in respect of the jute industry as a whole, the economies of India and Pakistan were, and still are, complementary, and any undue stress

on economic self-sufficiency in this field can only have serious effects on the well-being of both".

After a steady start, the jute goods market is ending the week on a firm note with prices showing a gain of over two points all along the list. The main incentive has come from the revival of Chinese buying. It is learnt that the Chinese order was to the tune of between 15,000 and 16,000 bales. Later in the week, there have been various reports about fresh orders including one, from the Government of India. On Wednesday, the market was thick with reports of new business and Egypt was frequently mentioned. The bullish fervour was well pronounced on Thursday, when, in earlier dealings, prices, especially in the heavy goods section, were taken to new peaks. Though profit taking pared off part of the gains, the closing was fully steady. B Twills March was done at Rs 113 last Friday but during the next day had gained 50 nP. By close of transactions on Monday, another small gain was made to take the quotation to Rs 113.70. The uptrend continued unabated and when the market opened on Wednesday there was no mistaking the speculative influence behind the proceedings. The day's gain amounted to Rs 1.20 with the final rate at Rs 114.80. It would appear that the incentive for the aggressive buying support was derived from reports about fresh business from this country or that. In sympathy with the futures section, prices moved up briskly on Thursday and B Twills March was finally placed at Rs 115.20. Hessian, too, was fully steady throughout the week; but, even here, the impetus seems to have been derived from expectations rather than from actual enquiries. However, scattered business has been reported done in both categories of goods throughout the week. Hessian 40"x10 oz March, which was quoting at Rs 41.50 last Friday, closed on Thursday at Rs 42.45.

In the raw jute market also, conditions have been fully steady and Assam Bottoms has recorded a gain over the week of Rs 1.50 to Rs 34 per maund. Mills have not been showing much interest, though, toward close, small buying at the prevailing prices has been reported done. Sellers are in no mood to discount rates as advices from the upcountry centres are firm. Whatever chance, there was of an easing of the rates was lost when the goods section began to develop a firm trend. Raw jute prices have, therefore, followed the goods market, despite the fact that business passing has been meagre. Even otherwise, there has been little chance of inducing the sellers to discount rates. For, it is now fairly clear that, though the mill industry as a whole may be having a comfortable raw jute stock position, there are some units who have no other alternative but to buy raw jute at the current high prices in order to maintain their production. The final all-India estimate of

mesta released this week seems also to have contributed to the present firm trend in raw jute.

ALL INDIA FINAL ESTIMATE OF MESTA, 1959-60

The All-India Final Estimate of Mesta, 1959-60 puts the current year's area and production at 708,000 acres and 1,098,000 bales respectively according to the Directorate of Economics and Statistics, Ministry of Food and Agriculture. As compared with the Partially Revised Estimates of 825,000 acres and 1,488,000 bales for 1958-59, the estimates for 1959-60 show a decrease of 119,000 acres or 14.4% in area and 390,000 bales or 26.2% in production.

The decrease in area during the current year has occurred mainly in the most important mesta growing State of West Bengal and is attributed to low market price of mesta fibre during the previous year. Bombay State has also recorded some decrease in acreage. The decrease has, however, been offset to some extent by the increase in area in Bihar due to favourable weather conditions at the time of sowing.

The substantial decrease in production of mesta this year is also accounted for mainly by West Bengal and to a small extent by Tripura and is attributed partly to the shrinkage in acreage and partly to unfavourable weather conditions during the growing period of the crop. Bihar, Orissa and Andhra Pradesh have, however, recorded increase in production due mainly to the increase in acreage.

		Area (Thousand acres)			Production (Thousand bales of 400 lbs. each)		
State	1959-60 (a)	1958-59 (b)	Variation (c)	1959-60 (a)	1958-59 (b)	Variation (d)	
1	2	3	4	5	6	7

Africa has been cleared. The amount of tea available in London over the next few weeks will continue to be high; and it remains to be seen whether prices go on sagging or whether blenders begin to buy more heavily.

But a report, issued by the Food and Agriculture Organisation of the United Nations, states that production and demand for tea will rise this year and consumption and supply are in "close balance". Available figures suggest that consumption of tea in the main importing nations is either roughly stable or tending to decline slightly, while consumption in the producing nations is rising. In many tea producing nations, tea is still regarded as something of a luxury, and consumption appears to be linked with rising standards of living in these areas.

Meanwhile, in the final export sale held in Calcutta this week, offerings amounted to 47,437 packages. There was a strong demand for all sorts, mainly from internal buyers. Prices were very irregular. Fannings were the weakest feature of the sale; but the better liquoring teas and those of clean leaf appearance were often dearer. Whole Leaf grades came in for keen competition at dearer rates. Owing to the small quantity of suitable tea on offer, no rates were given.

Considering that the carryover to the new season is likely to be a small one, the new season's first export sale, which is expected to be held in the second week of May with despatches from the Darjeeling gardens, should fare well. Trade circles feel that the new season will start with good enquiries from Russia and Turkey, which are interested in high-grown teas.

In the Internal Sale, offerings were 22,000 packages of Dusts. Demand was strong, and fairly general. Orthodox grainy kind were generally lower by up to 8 nP, although a considerable strengthening was seen toward the close. Legg-cut Doars were sold readily at slightly easier rates except for the brighter liquoring descriptions.

Medium CTC kinds found ready buyers at irregular, but often lower rates except for the brighter and smaller types which sometimes registered advances. More enquiry was seen as the sale progressed. The best CTC types were sold well. Medium Doars was quoted at Rs 1.84 to Rs 1.90; Medium Assam Dust Rs 1.80 to Rs 1.90; Medium Assam CTC Dust Rs 1.96 to Rs 2.14 and Best Assam CTC Dust Rs 2.40 to Rs 2.75 (nominal).

In the Cochin market, a total of 800,000 pounds of Leaf tea was offered. There was less demand for every sort except the best liquoring high-grown Broken and Whole Leaf grades, which were tending dearer. All other grades were irregular and easier by 10 nP to 15 nP per pound. Fannings

grades were the weakest feature of the sale.
