7 May 1960

Flair-up in Equities

Watch-Dog Writes:

STOCK markets have had a cheerful week and there has been a sizable spurt in selected shares. Although sentiment is at times affected by rumours of the increase in the Bank Rate, most operators firmly believe that it is unlikely in view of the large borrowing programme. Above all, there is a paucity of sellers.

Buoyant conditions were noticed on the Calcutta Stock Exchange where prices recorded a sharp rise due to sustained speculative buying.

On the Bombay Stock Exchange, selected shares soared briskly on a flurry of buying in face of paucity of sellers.

The Madras Stock Exchange exhibited cheerful conditions and there was a sizable spurt in selected shares in the cleared and cash sections.

Calcutta Friday Evening.

THE local Stock Exchange had a cheerful week and prices started up on revival of speculative buying and heavy short-covering. In the buying spree, some of the recent new issues, which cannot be expected to yield any immediate return, but which have good growth prospects, were lifted-up to unjustifiably high levels.

Although the general feeling remained bullish, higher levels attracted profit-taking as rumours were recurrent that the Reserve Bank might take further measures to curb the speculative activity in stock markets. There were also rumours that the bank rate might be raised. But, operators seemed to have failed to take note of these as they firmly believed that there would be no revision of the bank rate which would make the Government borrowing costly. Bulls were also encouraged by excellent corporate news and the imminent increase in steel retention prices. On the whole, the behaviour of the market indicated that it was in the grip of speculators as genuine investment was lacking.

Sentiment in the Gilt-edged section remained subdued. Whatever enquiry noted was for selected short-dated issues, while medium and long-dated scrips continued to be on offer. State Loans were wholly neglected. 3 per cent 1986 Conversion Loan opened at Rs 73.50 and, after improving at one time to Rs 73.87, receded toward the close to Rs 73.30 on selling pressure.

Bank shares were practically unchanged, as interest was at a low ebb.

Despite the firmer tendency of jute goods prices, little interest was shown in jute shares in view of a steady and sharp rise in the prices of the raw material. Operators felt that the outlook for the industry was not encouraging although the statistical position was considered quite sound. Howrah were the only bright spot, having support upto Rs 23.37 from Rs 23 due to speculative activity. National were, however, on offer at Rs 30 to Rs 30.25; Birlas at Rs 28.69 to Rs 29.19; Ganges at Rs 11 to Rs 11.31 and New Central at Rs 26.44 to Rs 26.75.

Coal shares enjoyed selective support on the thought that the private sector might be encouraged to raise coal production to meet the shortage of the commodity in the country. Bengal were taken upto Rs 335 from Rs 332 on publication of excellent results, while Central India spurred to Rs 15.50 from Rs 12.50 on rumours of the possibility of the scrip being included in the forward list. Western Bengal were enquired upto Rs 8.56 from Rs 8.00; East Indian upto Rs 31.62 from Rs 30.50 and New Beerboom upto Rs 23.75 from Rs 23.50. Burrakur fluctuated irregularly between Rs 19.50 and Rs 19.87 to finish at the last-quoted level.

Tea shares came in for selective buying, being influenced by the hope that the companies of those gardens in the Assam and Dooars areas might increase their dividends for last year and the outlook for the new season would be bright in view of the small carry-over. There was, however, some anxiety with regard to the present dry weather and the possibility of damage to the crop. Bishnauth changed hands at Rs 20.81 to Rs 21.12; Grob at Rs 13.12 to Rs 13.81; Hasimara at Rs 23.69 to Rs 23.87; Jayshree at Rs 17.56 to Rs 17.75 and Methoni at Rs 23.37 to Rs 23.62.

Sugar shares lacked fresh support, resulting in prices displaying a slightly easier tendency. Raza-Buland were on offer at Rs 13.31 to Rs 13.44; Balrampur at Rs 3.81 to Rs 4.06; Cawnpore at Rs 15.25 to Rs 15.50; Dyer Meakin at Rs 21 to Rs 21.50 and SKG at Rs 13.44 to Rs 13.75. Ramnugger Cane were, however, in enquiry upto Rs 25.12 from Rs 24 on reports of good working.

Textile scrips presented a firm front due to renewed support following the diversion of activities, especially by setting up rayon plants. Jaysree were taken upto Rs 14.44 from Rs 14.06; Elgins upto Rs 21.25 from Rs 20.94 and Kessoram upto Rs 28.50 from Rs 28.25, to finish the week at the highest levels. Cawnpore touched at one time a high of Rs 7.94 from Rs 7.69, to close finally at Rs 7.81 on profit-taking.

In the week's dealings, Indian Irons provided the lead to the market in registering a sharp rise in the prices of other shares. After opening better at Rs 24.12, Indian Irons were marked down at one time to Rs 23.92 on reports of a sharp fall in production last month as compared to March. Settlement considerations were another contributory factor. The rumours of an early announcement with regard to retention prices and the statement made by the directors that the fall in production was

mainly due to a blast furnace being off for relining, induced speculative buying and short-covering, resulting in the scrip making a sharp recovery to Rs 24.82, to close finally at Rs 24.75. Among other Engineering scrips, TEXMACO were taken upto Rs 27 from Rs 26.60; G. K. Williams upto Rs 44 from Rs 43.75; Jessop upto Rs 24.87 from Rs 24.62 and Indian Galvanizing upto Rs 22 from Rs 21.75. Marshalls moved narrowly between Rs 6.69 and Rs 6.81 and Kumardhubi between Rs 5.87 and Rs 6.00.

The Miscellaneous section, provided several bright spots on various considerations. The firmness in Paper shares was pronounced on reports of a rising trend in production. Hindustan Motors touched a new peak level on rumours of a capital issue, while Dunlops were keenly sought after at enhanced levels due to growth prospects. Orient Paper changed hands at Rs 43.60 to Rs 44.75 (Rs 44.30); Shree Gopal at Rs 26 to Rs 28.62 (Rs 28.62); Indian Cable at Rs 31.12 to Rs 32.56 (Rs 32.56); Indian Aluminium at Rs 27.94 to Rs 28.44 (Rs 28.12); Hindustan Motor at Rs 19.62 to Rs 20.56 (Rs 20.56); Indian Copper at Rs 4.60 to Rs 4.89 (Rs 4.86); Dunlop at Rs 42.25 to Rs 43.37 (Rs 43.25); Rohtas at Rs 33.25 to Rs 34.37 (Rs 34.25); BIC at Rs 7.50 to Rs 8.53 (Rs 8.37); Aluminium Corporation at Rs 18.19 to Rs 18.94 (Rs 18.56); Sirpur at Rs 16.87 to Rs 18.44 (Rs 18.44); Angelo Brothers at Rs 21.62 to Rs 22.37 (Rs 22.12) and Alkali Chemicals at Rs 26.19 to Rs 26.45 (Rs 26.25). Figures shown within brackets were the week's closing rates.

Bombay

THE stock market closed on Thursday on a firm note after moving irregularly high in earlier dealings. The start was rather hesitant as speculators were subdued on persistent talks of further credit curbs measures to come but Tuesday found the market in a cheerful mood. There was a change in the undertone again on Wednesday on renewed rumours about the credit squeeze. The Reserve Bank announcement that the additional reserve requirements of commercial banks have been raised to 50 per cent from 25 per cent came after the close of the transactions on Wednesday. Although sentiment in the 'kerb' was adversely affected, values quickly rallied on Thursday on bear covering following ideas that the latest credit curbs move would not have much adverse effect on stock market.

In the Steel section, Tata Steel which started on a quiet note following lower production in April, made an impressive rise on Thursday to quote at Rs 158.25 as against the week's low of Rs 155.75. Indian Iron also closed higher at Rs 24.52.

Selected Textile shares gained ground in later dealings while others ruled subdued. Standard moved up briskly to close at Rs 1.138 after being higher at Rs 1.160. Century finished at Rs 478 and Kohinoor at Rs 337.50.

In the miscellaneous section Premier construction was in the limelight improving to Rs 324.50.

5.50, Kalpetta at Rs 13.12, Karakode at Rs 9.50, Kurchemal at Rs 8.75, and Lingapur remained steady at Rs 7.00. Mercara was quoted down at Rs 9.90. Midland did not change at Rs 12.75 and Mamallay at Rs 42.00. Mysore Coffee was quoted at Rs 5.25, Neelamalai was bought slightly higher, at Rs 4.95. Nelliathanai appreciated to Rs 2.70 and Nemmeny was bought at Rs 18.65 with 15 per cent taxable dividend. Non-such was fancied at Rs 26.25. Ossoor was unaltered at Rs 370. Outcherlony valley did not change at Rs 5.54. Periakaramalai was quoted lower at Rs 3.84. Pullangode at Rs 1.96. Rajendra declined to Rs 16.40. Sangameshwar was transacted at Rs 2.55. Tirumbadi was lower at Rs 1.70, and Twyford was lower by 15 nP at Rs 13.35. Woodland did not change at Rs 7.15 while in Waterfalls transactions were made at Rs 3.65.

Textiles: This counter remained firm and unchanged. Anglo-French was quoted at the same Rs 109.00, Bangalore Woollen at Rs 195.00 and Buckingham at Rs 199.00 and Coimbatore Pioneer with 25 per cent taxable dividend at Rs 370.00. Kothari also with taxable 10 per cent dividend was marked down at Rs 12.45. Lakshmi was obtained one rupee lower at Rs 155.00, while Madura did not change at Rs 33.65. Mettur came down to Rs 436.00, but Radhakrishna appreciated slightly to Rs 28.50. Travancore Rayons remained at Rs 35.00.

Miscellaneous: Aluminium Industries went up to Rs 27.25 at which business was done. Ashok Leyland too was briskly trade upon at the appreciated value of Rs 7.65. Dalmia Cement depreciated a little to Rs 12.20. Enfield was quoted at Rs 16.37, FACTS went up to Rs 11.30 and Hindustan Lever remained at Rs 37.82. India Cement was quoted at Rs 6.38. McDowell was available at Rs 31.00, and Mettur Chemicals at Rs 12.65. Mysore Lamp was quoted at Rs 21.00, Mysore Paper at Rs 10.00, Mysore Tobacco at Rs 13.10. Ogale Glass remained at Rs 5.40. Parrys Confectionery was priced at Rs 4.40, Rallis was steady at Rs 116.00, Ruby Rubbers at Rs 8.83, Sen-Raleigh was quoted at Rs 21.75, and Spencer was available at Rs 20.50. Standard Motors went up to Rs 15.25. Textool remained at Rs 168.00, and Travancore Ogale with 6 per cent taxable dividend was quoted at Rs 8.00. Tube Investments was bought at increased value of Rs 272.00 for all its paid up shares. Western Indian Plywoods was quoted steady at Rs 274.00.

Balance-Sheet Briefs:

The New Commercial Mills Company, Limited of Ahmedabad has made a gross profit of Rs 31.34 lakhs for 1959 as against Rs 30.03 lakhs for 1958. The directors have recommended a dividend of Rs 36 per

share (net Rs 25.20) against a tax-free dividend of Rs 27. The Commercial Ahmedabad Mills Company, Limited has shown a gross profit of Rs 18.76 lakhs against Rs 12.02 lakhs. A taxable dividend of Rs 50 per share is recommended. This works out to a net dividend of Rs 35 against Rs 38 (including a bonus of Rs 8).

The Adoni Spinning & Weaving Company, Limited has earned a profit of Rs 9,026 against Rs 13,541. The dividend is passed over.

The net profit of the Travancore Rubbers Limited is slightly higher at Rs 1.60 lakhs for 1959 against Rs 1.38 lakhs. A dividend of 10 per cent, subject to tax, is recommended against a tax-free dividend of 10 per cent paid for the preceding year.

FRENCH FUEL CONSUMPTION IN FEBRUARY

In February 1960 French consumption of standard and high-test gasoline totalled 478,500 cubic meters compared with 425,300 cubic meters during the same month of last year. Considering that there were 29 days in February this year, there was only a slight increase in the rate of consumption.

Considering the same time factor the consumption of fuel-oil, including stocks, even shows a slight decrease; 144,700 cubic meters were used in the 29 days in February 1960 compared with 144,300 cubic meters in February 1959.

However, a marked increase in the consumption of oil products was noticed. In February 1960, 427,200 tons of domestic fuel were delivered compared with 364,000 tons during the same month of last year. Deliveries of lighter fuels totalled 315,600 tons compared with 286,500 tons in February 1959; and deliveries of heavy fuels totalled 609,200 tons in February 1960 compared with 590,000 tons during February a year ago.

HASSI-MESSAOUDEPOSIT

Exploitation and prospecting of the oil deposit at Hassi-Messaoud is proceeding at a normal rate. About 57 wells have been completed, of which 54 have proved to be productive. At the present time 13 drills are active, including 10 drills being used for drilling deep wells.

During January-February, a monthly average of 490,700 cubic meters of oil has been shipped from this deposit. Although the use of the Hassi-Messaoud-Bougie pipeline was slowed down because of certain technical difficulties, the use of the small pipeline and railway between the deposit and Philippeville has maintained the flow of crude oil, which by this means totalled 61,806 cubic meters during the two months.

It is planned that the evacuation of crude oil by means of the large pipeline will be increased in the

months to come. Beginning on 1 May, the present output of 780 cubic meters per hour will be increased to 1,400 cubic meters per hour by means of the opening of additional pumping stations. All of the planned pumping stations have not yet been completed.

Drilling at eight producing wells has been completed at the Hassi-R'Mel-gas deposit, and another extension well is being drilled ten kilometers north-northeast of the first well drilled at the deposit.

The well being drilled at Djebel-Onk, in the phosphate containing region of Tebessa, has provided some interesting indications which will be carefully studied as soon as the drilling has been terminated.

While the large Hassi-Messaoud-Bougie pipeline is being paralleled by the small Hassi-Messaoud-Tougourt pipeline and the railway, construction of the Hassi-R'Mel-Arzew gas pipeline is being actively continued.

A NEW INCREASE IN FRENCH AUTOMOBILE EXPORTS IN FEBRUARY

During February 1960, 69,146 vehicles were exported compared with 61,709 units in January 1960 and 36,412 units in February 1959. Exports of pleasure cars accounted for 62,244 units (of which 54,731 were shipped abroad and 7,513 went to overseas territories) compared with 55,703 units in January (49,169 abroad and 6,534 to overseas territories) and 33,265 units in February 1959 (27,877 abroad and 5,388 to overseas territories).

Exports of commercial vehicles and 3,273 to overseas territories, totalled 6,902 units (3,629 abroad compared with 6,006 units in January 1960 (3,675 abroad and 2,331 to overseas territories) and 2,147 units in February 1959 (1,481 abroad and 1,666 to overseas territories).

Between 1 January and 29 February 1960, French manufacturers exported 130,855 vehicles compared with 67,229 vehicles during the corresponding period of 1959. Of these totals, 117,947 were pleasure cars compared with 61,155 pleasure cars a year ago.

MOVEMENT OF COMMODITY PRICES

Review for March 1960 (Phalgun-Chaitra—1881—1882)

Wholesale Prices as measured by the official index (with the year ended March 1953 as 100) moved down by 0.6 per cent to 118.8 during the month of March 1960, as compared with 119.5 for February 1960. The index was, however, higher by 5.7 per cent when compared with 112.4 for March 1959.

During the month under review, the index for 'Food Articles' declined by 1.5 per cent to 117.0 and 'Tobacco'

& 'Fuel, Power, Light and Lubricants' by 0.1 per cent each to 94.1 and 117.3 respectively while 'Industrial Raw Materials' moved up by 0.2 per cent to 131.9 and 'Manufactures' by 0.3 per cent to 131.9 and 'Manufactures' by 0.3 per cent to 116.6.

Food Articles:

A decline in the prices of wheat, jowar, bajra, barley and maize brought down the index for 'Cereals' by 1.1 per cent to 103.2, although there was a rise in the prices of rice and ragi. The index for cereals was, however, higher by 1.5 per cent when compared with that of a year ago.

The sub-group index for 'Pulses' recorded a fall of 5.5 per cent to 89.9 as a result of a decline in the prices of all the pulses. Higher prices of potatoes, oranges, bananas and cashewnuts raised the index for 'Fruits and Vegetables' by 1.4 per cent to 126.0; the price of onions, however, exhibited a fall. A decrease of 0.7 per cent to 110.7 in the index for 'Milk and Ghee' was caused by a decline in the prices of milk. Lower prices of mustard oil and coconut oil brought down the sub-group index for 'Edible oils' by 0.9 per cent to 138.6 despite an increase in the prices of groundnut oil and gingelly oil. An advance in the prices of fish, eggs and most pushed up the index for 'Fish, Eggs, and Meat' by 3.6 per cent to 114.5. The sub-group index for 'Sugar and Gur' witnessed a fall of 3.1 per cent to 140.7 owing to a decline in the prices of gur. The index for 'Other Food Articles' receded by 5.8 per cent to 158.8 due to a fall in the prices of tea, coffee, black pepper, chillies, cloves, turmeric, cummin and cardamoms, although the prices of betelnuts and salt showed advances.

'Tobacco': Lower prices of raw tobacco brought down the index for 'Tobacco' by 0.1 per cent to 94.1 during the month under review. 'Fuel, Power, Light and Lubricants': A fall of 0.1 per cent to 117.3 in the index for 'Fuel, Power, Light and Lubricants' was caused by lower prices of castor oil.

'Industrial Raw Materials': Higher prices of raw jute raised the index for 'Fibres' by 1.5 per cent to 124.9, although prices of raw cotton showed a fall. Lower prices of linseed, castorseed, cottonseed and coara brought down the index for 'Oilseeds' by 0.2 per cent to 140.5 despite an advance in the prices of groundnuts, gingellyseed and rapeseed. The sub-group index for 'Minerals' went up by 1.4 per cent to 96.5 due to an increase in the prices of mica. A fall in the prices of raw skins, lac and bamboos caused a decline of 1.2 per cent to 116.6 in the index for 'Other Industrial Raw Materials'; although the prices of raw hides and tanning materials showed advances.

'Intermediate Products':

Higher prices of cotton yarn, rayon yarn, coal yarn, aluminium, brass and copper pushed up the index for 'Intermediate Products' by 0.7 per cent to 121.3, notwithstanding a decline in the prices of linseed oil, zinc, tin and lead.

Indian Finance

the most versatile natural fibre

Jute products enter our daily life in many forms. Conventionally a packaging material, today jute fibres also serve as backing for linoleum and floor-cloth. They make colourful drapes, carpets and furnishings for the modern home. Jute canvas is rendered fire-proof, rot-proof and water-proof to make tarpaulins for boat-hatch and wagon covers. Coloured webbings, fancy bindings and sash-cords, cushioning belts, surgical slivers

and hard-boards are all made from jute.

Strong, pliable, durable and tear-resistant, jute fabrics are the most widely used packaging material in industry, agriculture and trade. India produces 55% of the world's jute goods and earns from them on an average about Rs. 115 crores annually in foreign exchange.

Jute serves the nation in many ways, strengthens its economy.

WHY WE ADVERTISE—8

good
advertising...
a guide
to
better living

Mr. A. D. Shroff, Chairman, New India Assurance Co. Ltd., and Director of Tata Industries Private Ltd.

Here it is said that Advertising makes
people buy things they don't really need,
but what is it that people really need?

What has one to include or exclude?
And how can the mass selling and mass
production of these items, which Adver-
tising develops, benefit the public?

Most consumer products are bought
not because they are basically essential
commodities, but because we have come
to consider them as essential to a
certain standard of living. Advertising
has a tremendous effect on these com-
modities and their sale, but I should
like here to comment on a very unusual
consumer product—insurance, a subject

with which I am particularly familiar.

Modern insurance can be said to be
the bastion of security in industry, in
commerce and in family life. It draws
its immense strength and solidity from
numbers, on mass participation. The
more the people who insure, the more
is the risk divided, the greater is the
individual benefit both in lowered pre-
miums and in maximum indemnities.

Here is a field which we can safely
say would not offer these benefits on the
terms it now does, if Advertising had
not played its tremendous part in
building up mass participation—the
great guarantor of mass benefit.

Good advertising serves you

WORLD OF FINANCE

Inappropriateness of Bank Rate Weapon in Indian Conditions

THE last week's action of the Reserve Bank, in calling upon Scheduled Banks to maintain an additional 50 per cent deposit in respect of newly accruing resources, does not, it may be emphasised, preclude the possibility of an increase in the bank rate. Indeed, this measure was, if not the precursor, at least the warning, of such raising of the bank rate being in the offing. The extent or degree of the success of the new move in controlling the price trends will dictate whether or no the bank rate weapon is to be summoned. Unfortunately there are certain external circumstances operating at the present moment which militate against a steady trend in prices; and it is lest these circumstances should compel the Reserve Bank into hurried and unnecessary raising of the discount rate that we address these words.

What exactly will be the impact of a bank rate rise in India? Firstly, the prices of existing government securities will so depreciate that the yields available on them will conform to the new structure of interest rates inherent in the new bank rate. Secondly, by reason of such capital depreciation in the worth of existing gilt-edged issues, the response to the new loans of the Government, whether Central or State, will tend to become lukewarm. Thirdly, this means that the governmental recourse to created money will increase. Fourthly, automatically, the propensity for inflationary conditions to take hold of the economy will increase. Moreover, the cost of production will rise in consonance with the bank rate increase. Are these the repercussions that are or should be aimed at?

The two classical purposes of the utilisation of the instrument of raising the bank rate are: to attract short-term foreign funds and to discourage short-term inflationary capital expenditure. By these means, it is hoped to restore balance in the payments position (thereby enabling a better margin for imports as an anti-inflationary weapon) and balance in the economy (by reducing the quantum of short-term funds which does not immediately add to production). Neither of these purposes, it may be recognised here, could ever be the aim of monetary policy in India. For, an increase in bank rate will never succeed in enticing an additional dollar, pound sterling, yen or deutschmark to find sanctuary in India; and it is furthest from Indian objectives to take any steps which will hinder the growth of production in this country.

It may be argued that bank rate rise will affect only that marginal sector of the economy which most contributes to an aggravation of inflationary tendencies. In this sense and to that extent, it may be further argued that legitimate additional production will not be deterred by such fractional increase in cost as will be postulated by a raising of bank rate. Lastly, it may be suggested that money is cheap in India—especially in comparison with the cost of money in other countries which happen to be friends of ours.

it does the foregoing really constitute an answer to the problem of inflation? It is not marginally higher cost produced goods which dictates the cost and sale price of all. It is true that, all along the gamut of production, a rise in bank rate soon begins to be reflected, although nominally. And is it all relevant that money should be cheaper in India than elsewhere?

The protagonists of a higher bank rate also suggest that an increase in the borrowing rate of governments will maximise realisations; this is patently not true, and the experience of earlier years amply proves the fallacy of the argument that, the higher the interest coupon, the larger the sum of money that will be induced to support government borrowings.

All that is relevant and all that is important is whether the monetary policy being prosecuted fosters production or not in India. All available evidence shows that the heretofore policy of the Reserve Bank has admirably succeeded. As we pointed out last week, the causes of a rise in prices are to be found elsewhere; not in the cheap cost of money.

The impact of a higher bank rate could be disastrous: government borrowing will not succeed, banking soundness will deteriorate, cost of production will rise, the investment climate will be rendered the worse, inflationary conditions will gather momentum.

We have here tried to summarise the reasons why we believe the applicability of bank rate weapon to Indian conditions is wholly unjustified and unwarranted. Lest these horrendous repercussions should be lost sight of, we have felt it necessary to enumerate them in this article. We are convinced that cheap money is not bad merely because it is, comparatively speaking, inexpensive. We are in similar measure sure that selective monetary control, rather than the bank rate weapon, should be the main plank of monetary policy in this country.

Sharp Currency Expansion Due to Month-early Demand

It is not the continuation of the busy season, but the considerable demand occasioned by beginning of the month disbursements, which has influenced changes in the Reserve Bank returns for 6 May 1960. Also discernible in the latest returns is the impact of inter-governmental transactions.

Active Note Circulation has expanded sharply by Rs 20.90 crores to Rs 1904.49 crores, while Rupee Coin has gone out into circulation for Rs 1.68 crores. Currency has been expanded against Rupee Securities (by transfer from Investments in the Banking Department) for Rs 5 crores, and the Reserve Bank's cash has declined by Rs 17.62 crores to Rs 13.34 crores.

The State Governments appear to have made some repayment to the Centre, since their balances have been sharply marked down by Rs 26.38 crores to Rs 18.90 crores, on top of an increase of Rs 3.11 crores to Rs 51.33 crores in their ways and means borrowings from the Reserve Bank. The Central Government have benefited to the extent of a rise of Rs 9.72 crores to Rs 60.30 crores in their Deposits; and there is reason to believe that, moreover, reverse ad hocs have been instituted for Rs 5 crores or so. This is because Investments are shown to be lower by Rs 15 crores; of the decline, Rs 5 crores is accounted by transfer

to the Issue Department, another Rs 5 crores probably relates to sale of gilt-edged to the State Bank and the balance of Rs 5 crores almost certainly is in respect of cancellation of ad hocs in that amount.

The month-early pressure for funds has apparently been experienced by the Scheduled Banks as well. For, the Reserve Balances of member banks have moved down by Rs 9.42 crores to Rs 88.42 crores, the bulk of this being on account of the State Bank; and the Other Loans and Advances of the Reserve Bank have also mounted by Rs 2.99 crores to Rs 217.38 crores. It may be inferred that banks have not had an increase in Deposits in the latest week, since this would necessarily have been reflected (as to 50 per cent) in a rise in Reserve Balances with the central banking institution.

The return of the State Bank for 6 May shows that constituents have perhaps drawn down their balances rather than increase their borrowings in order to meet month-early disbursements. For, Deposits and Advances are both practically unchanged at Rs 628.82 crores and Rs 217.41 crores respectively. However, cash in hand and with Reserve Bank has been drawn on for Rs 7½ crores, partly to reduce borrowings (lower by Rs 1.07 crores) and partly to augment the gilt-edged portfolio (up by Rs 4½ crores).

As we had anticipated last week, the return of Scheduled Banks for 10 April shows the tail-end expansion in the demand for money. The total of Advances has risen by nearly Rs 5 crores from Rs 1124.90 crores to Rs 1129.30 crores, and roughly one-fourth of this rise was traceable to the State Bank. Deposits, however, have declined by Rs 5.37 crores, but, again, almost the whole of this is on account of the State Bank. Similarly, the fall of Rs 1.68 crores in cash balances and the rise of about Rs 5 crores in gilt-edged holdings are both in respect of changes in the State Bank's return for the relevant week. The one change for which the other Scheduled Banks can take all the credit, as it were, is the rise of Rs 11.50 crores to Rs 43.85 crores in borrowings from the Reserve Bank.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 10 May 1960. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.310 and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.745 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 16 May 1960. Successful tenderers should make payment on Friday, the 20 May 1960. Other conditions are as usual.

During the week ended the 6 May 1960 Government of India Treasury Bills for Rs 104,11,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 11 to 14 May 1960 at Rs 99.326 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 4 to 7 May 1960.

Britain is Gaining Gold

By Paul Einzig

FOR the second month running the Sterling Area gold reserve increased appreciably during April. Sterling has been steady to firm ever since the Budget statement, and more especially since the announcement of the arrangements concerning special deposits. Although the Stock Exchange has taken a dim view of these measures, they are appreciated in the foreign exchange market, and to some extent in the gilt-edged market. The reason for the firmness of sterling is the realisation that the Government is prepared to adopt disinflationary measures even before there are actual symptoms of inflation, and even before sterling and the gold reserve comes under the influence of inflation, whether actual or anticipated.

Until now the only situation in which any post-war Government adopted unpopular economic and financial measures was under an acute pressure on sterling that was threatening the gold reserve. Unless and until there was an outflow of gold on a large scale the Chancellors of the Exchequer in office since 1945 felt they could afford to ignore the rise in the cost of living. It was only if and when the gold reserve appeared to be imperilled that they resorted to disinflationary measures. On the present occasion, however, the Bank rate was raised, support from the gilt-edged market was withdrawn, special deposits were introduced, restrictions were imposed on hire-purchase terms, and additional taxation was imposed all during a period when the cost of living index has been absolutely steady and sterling has been steady to firm, with the gold reserve steadily increasing.

Evidently the Government adopted the view that "prevention is better than cure." Instead of awaiting the development of actual inflationary pressure, with its effect on the balance of payments and on confidence in sterling abroad, the authorities resorted to preventive measures in order to avoid a resumption of the inflationary spiral. They might have done so a few months earlier, so as to check the wave of wage demands that has developed since last autumn. From a purely economic point of view the ideal timing of the disinflationary measures would have been immediately after the Conservative victory at the general election.

It was only too obvious that the result of the election would give rise to a Stock Exchange boom and to an increase in the demand for consumer goods and capital goods. That

would have been the right moment for authorities to intervene in order to apply brake. But politically it was inconceivable that a Party which has just been reelected on the rising tide of prosperity should resort immediately to measures aiming at checking the tide of prosperity. That tide had to be allowed to proceed before it became politically feasible to interfere with it. Even as it is, the Government is subject to attacks on the part of the Opposition for having resorted to such measures so soon after the "We've never had it so good" election.

However this may be, the measures impressed the foreign exchange market favourably, not so much on account of their actual effect on the credit situation and on consumer demand as on account of the possibility of their reinforcement in case of need. As Mr. Amory pointed out the Government is quite ready to proceed further in the direction indicated by its recent measures.

Even so, it seems doubtful whether the disinflationary steps and the warning of further steps in case of need will be sufficient to damp down the growing demand. There are no indications that they have induced the trade unions to moderate their wage claims, or that they have induced employers to resist these claims more firmly. And this is really what matters. Possibly the amount of outstanding hire-purchase debt will rise more slowly, but it is certain to continue to rise, unless more drastic restrictions are adopted. Nor are industrial firms likely to modify their capital expenditure programme, based on the increased consumer demand of 1959.

The chances are that in themselves the present measures will not be able to check the inflationary pressure, even though they will moderate it. From the point of view of sterling the effect of the measures on confidence is all-important. Similarly moderate measures would utterly fail to impress the foreign exchange market if they were taken when inflation is in progress. But precisely because they were taken before inflation has actually developed they are likely to command more confidence.

This means that inflation, when it does appear actually, will be able to proceed further before it leads to an attack on sterling. Provided that the Government will resist inflation to an increasing degree it is not likely to lead to a flight from the pound this autumn. It will affect sterling in so far as it will affect the balance of payments as a result of rising costs of production and rising consumer demand for both home-produced and imported goods. But there is no reason to anticipate a repetition of the experience of 1957.

The Free Trade Zone

THE scheme to create a 'customs-free' zone in the environs of Kandla, circulated for eliciting public opinion, is basically sound. The purpose of the proposal would appear to be two-fold: first, to activate the somewhat somnolent port of Kandla from which so much was expected. The second and potentially of wider implications as an experiment, is to stimulate greater energy towards export earnings by doing away with the monetary and practical vexations of export and import duties. On the first, the scheme is a birth day present to the new state of Gujarat. The parliamentary announcement that preceded the detailed scheme now presented listed as one of its advantages the fact that it 'may prove helpful in giving the much needed impetus to economic and industrial activity at Kandla. From time to time, we read of unused and expensive facilities at Kandla, which was originally conceived as something of a substitute for Karachi. The new scheme is sure to make possible the realisation to some extent this ambition.

On the second aim, the details of the scheme appear to have been fairly well thought-out, though doubtless the actual execution will throw up many problems of practical sagacity and ingenuity. That the scheme is wholly geared to export promotion is evident from many of the details. Anyone who imagines that the scheme makes Kandla another Hongkong or Singapore will be wholly disappointed. In this sense, freedom of this free trade zone is somewhat limited. For instance, though there is nothing that you cannot export from here, there are, significantly, many things you cannot import into this area. Finished goods which are not for re-exports, and certain special articles like gold, watches, diamonds etc will be subjected to the same restrictions here as in the rest of the country. The etc presumably cover such notorious commodities like tape recorders transistor sets and a whole lot of luxury commodities that, along with watches and gold have made passengers from Hongkong objects of particular interest to customs authorities at Dum Dum and elsewhere. Secondly, the free zone area is to be provided with a Cordon sanitaire in consequence of which goods moving into the rest of the country from the free trade zone will have to submit to the usual restrictions. This doubtless will offer all the opportunities for the romantic thrills of smuggling, but considering the sort of things that are likely to be allowed to be imported into the free trade area, the game, romantically speaking, would hardly be worth the candle. One taste in romantic adventure must be peculiar, if one were wont to smuggle into the country, say, industrial raw materials or heavy machinery. This, however, is not to say, that the temptation to smuggle would not be there. Indeed, the major administrative problem in connection with this new idea is smuggling. Though its attractions are greatly reduced, smuggling will still have a great impetus in case of competition from producers for internal consumption this side of the barbed wire. The all too

familiar tricks in other contexts—like obtaining quota for export and selling it internally at a high profit will assume new shapes and will have to be tackled. In the absence of accurate costing and consumption accounting in manufacturing processes, mere accounting of the overall inflow and outflow—as is proposed under the scheme would hardly help stop smuggling. What is euphemistically known as manufacturing loss will cover a multitude of illegal transit beyond the fences. Of course, effective policing of the sources of exit—theoretically not difficult, since the free trade area is a bare quarter square mile—may yet pose familiar problems like petty corruption. But these are certainly matters of detail and inescapable in any endeavour which, rightly or wrongly, desire to interfere with man's 'free' nature. There can be no ready made solutions in advance for the situations likely to arise, but the customs authorities who have spent all their lives dealing with similar problems in other contexts will doubtless know the answers.

Another feature of this arrangement worth commenting upon is the fact that both industries and trade are to be allowed the use of the free zone. Consequently, not only raw materials and semi-manufacture are to be allowed free entry here, but also manufactured articles are to be allowed the same privilege. But there is an important reservation: these manufactured articles must be subsequently exported. This accords with the primary purpose of export promotion. But in practice, this will bring a host of problems. First, the temptation to trade rather than manufacture—will be all too easily yielded to. It may be urged that the scheme does not concern itself with the wider question of the pattern of the economy but only with the question of export promotion; that, at the moment, there is scope for export for commodities other than manufacture and indeed our export list is still largely of primary commodities; and that if there is money to be earned by re-export of manufactured articles by taking advantage of the time factor and favourable markets, we should not scorn it. All these are weighty arguments, but it is necessary to give a conscious orientation towards industrialisation, in every context. Moreover, manufactured articles, imported ostensibly for re-export would give further temptation to smuggling into the rest of the country. It may even become necessary, should the anticipated favourable turn of the export market fail to materialise, to allow the commodities to be sold in the country. Of course, the duty will then be realised, but valuable foreign exchange would have been spent for the imports for purposes not originally envisaged.

The administrative problems arising from the free trade zone are sure to be multitudinous and ticklish, but there need be no doubt that they will be solved. Transport to the free trade zone, for instance will increase enormously, if the hopes on which the scheme is

based are well founded. The area is not particularly well developed in this respect, but there is no doubt that Authority is conscious of the fact. (It is not without significance, that the scheme has been formulated by the Ministry of Transport and Communications.) Licensing problems will arise, especially when applications are made almost exclusively for a particular line or when the interests of existing units far away from the free trade zone area (who may either have to pay the duties or incur heavy transport charges to obtain the benefits of the free trade area) are adversely affected by such applications. This would suggest the necessity, after some experience is gained, of having more such free trade zone in other regions.

An important feature of the scheme is to make the imports self-financing without making too great an inroad into other foreign exchange earning. Another important aspect of this scheme is the inducement it offers to Indian businessmen abroad to start industries in this area. It is well known that Gujaratis of this area have a well established tradition of enterprise and have long standing business connections with Africa and other parts of the world. Here is an opportunity for them to strengthen their ties with the mother country by starting new establishments in the free trade area either by themselves or in partnership with persons in India. This is another inducement for repatriation of capital to India by overseas Indians. Since new industries in this area could qualify for the incentives provided in the Income-tax Act, the additional inducement of a duty free zone would be operative as a powerful factor in the industrialisation of this area.

The scheme also lists many other advantages likely to accrue from it and most of these advantages are real. But the creation of the pre-conditions of these advantages will take considerable time. For instance, it is said that the importer can make use of the free zone as a sort of half-way house and have his preliminary inspection done before finally making up his mind. It is also said to reduce the need for long-term import programme and reduce the time lag between need and availability. But all this involve elaborate storage facilities if the free trade zone is to be the cornucopia it is pictured to be. Moreover, if the domestic importer is to dip his hand in the stock held in the free trade zone for domestic needs, then there is bound to be some distortion of the original purpose of the scheme.

It is true that there is no reason why the original purposes of the scheme should not be enlarged as and when opportunities for them occur. Doubtless, a free port has other uses than export promotion. And in its broad purposes and in the generality of its actual mode of operation, the scheme is soundly conceived and is workable. Experience will tell the lines along which further modification will subserve its purposes better.

The State of Public Sector Industries

THE Central Statistical Organisation has recently assembled the data regarding the working results of principal public sector undertakings—industrial as well as non-industrial. These particulars are fairly up-to-date—the latest year for which they are available is generally 1958-59—and they are sufficiently comprehensive too. In this the first article only the industrial undertakings are considered, with the relevant data being presented in three tables. These undertakings are grouped under two heads, namely, those which are completed and in full operation and those which are incomplete and not in full operation.

To take the completed undertakings first. The more relevant data regarding these have been utilised in Tables 1 and 2 hereunder to give a broad picture of their capital structure, employment potential, wages bill, output value, and net profit before taxation. It will be seen from the figures regarding capital that out of the total employed capital of about Rs 136 crores on account of the 19 listed industrial concerns, as much as Rs 97 crores has been paid up predominantly by the Government of India. Out of this Rs 97 crores, what has been paid up by parties other than the Government of India comes to Rs 5 crores only.

The labour force (administrative, supervisory, skilled and unskilled employees) employed by all the concerns other than the National Coal Development Corporation comes to nearly 56,000. If the capital employed in the NCDC is omitted from the total employed capital of Rs 136 crores on account of all the listed concerns, the capital employed per worker in the public sector industries in general comes to about Rs 20,450. In a broad sense, this average coefficient of capital employed per worker does not seem to be on the high side, considering the current trends in the sector of large-scale industries. The individual variations in the coefficients of the different units may not be difficult to explain except in the case of the National Newsprint and Paper Mills in which the capital employed per worker is as much as Rs 55,000. In the case of this unit, the present high coefficient is explained by the fact that its second stage of development has not been completed as of 1958-59 and that, therefore, it has not begun to employ more labour. That even units of the heavy industry, type like the Chittaranjan Locomotive Works, the Hindustan Shipyard and the Hindustan Machine Tools have involved less than Rs 30,000 by way of capital employed per worker may also be noted in this connection.

The per capita annual earnings of the labour force employed in these public sector units seem to be generally more favourable than in the large-scale industries in the private sector. If the National Coal Development Corporation is omitted from consideration for lack of data regarding its labour force, the total annual wages bill for the 18 units comes to Rs 9.87 crores on account of 56,000 employees. That means Rs 1,763 by way of per capita annual earnings. Of course, there are some pronounced variations as between individual units. It is noteworthy that the Sindri Fertilisers and Chemicals, with its annual wages of Rs 2,531 per employee, leads all the rest.

The position regarding the coefficient of output per worker does not, however, lend itself to any definite interpretation. While the aggregate value of output in the year (generally 1958-59) has come to Rs 47.4 crores on account of the 18 units (with the NCDC excluded), giving a coefficient of about Rs 8,465 by way of annual output per worker, the capital out-

put ratio as such may be broadly taken as 24:1 which seems to be reasonable in the case of these public sector industries which are mostly of the large-scale variety. But the pronounced variations as between individual units are explained by the fact that although they are all completed and in full operation, all of them are not uniformly working to their full capacities. Some individual cases like the Hindustan Antibiotics, the Hindustan Insecti-

cides and the Indian Telephone Industries, where the coefficient of capital employed per worker and the coefficient of annual output per worker are nearly equal, are particularly striking.

As for the net profit before taxation (or, net profit after depreciation and interest charges) as per cent of capital employed, the position is positively disconcerting in most cases other than the Travancore Minerals, the Hin-

dustan Antibiotics and the Hindustan Insecticides. While the low rates of net profit in some units may be explained by the fact that they have not been working to their full capacities, no such explanation is possible in the case of other units which have been working to capacity. It is by no means clear whether these public sector units will be profitable to the point of yielding sizeable surpluses to the exchequer and of building up reserves for expansion. Perhaps, it is too early to judge their profit-making capacity; most of them, it must be noted, have only recently gone into full operation.

As for the second category of incomplete industrial undertakings, no statistical interpretation is possible for obvious reasons. But Table No. 3 is given merely to give an idea of the capital employed in them as of 1958-59.

Order on Official Language

THE President's Order on the report of the Joint Parliamentary Committee which considered the recommendations of the Official Language Commission is essentially a directive to the Union Ministry of Home Affairs to prepare and implement a plan for the progressive use of Hindi as official language of the Union as provided in clause (2) of Article 343 of the Constitution. In doing so an attempt has been made, within limits, to allay the apprehensions entertained by people of non-Hindi areas. The Order has endorsed the Parliamentary Committee's suggestion that no restrictions are to be imposed, for the present, on the use of the English language for any of the official purposes of the Union. This applies to the period till 1965, when Hindi will replace English as the official language on the expiry of the fifteen years' grace allowed to the latter under clause (2) of Article 343.

Attention has been drawn to the fact that no specific mention has been made in the Order to the continuance of English as an alternate or subsidiary official language after 1965. That is probably because the question of continued use of English as an official language of the Union, and the period and the purposes for which it may be used, are matters to be determined by Parliamentary legislation. The President's order has, however, recapitulated the recommendation of the Parliamentary Committee on this point and also made a reference to the Prime Minister's speech of September 4, 1959 in the course of discussions in Lok Sabha on the Language report, indicating "broadly the approach of the Government to the official language question."

The Committee's recommendation was to the effect that, "after 1965, when Hindi becomes the principal official language of the Union, English should continue as the subsidiary official language". To this the Prime Minister, in his speech of September 4, added the assurance that English would continue as an associate language till such time as the non-Hindi people desired. These may be taken as giving a firm indication of the shape of legislation on the subject, so long as there is no radical change in the present set up at the Centre or in the balance of political forces. But at the same time partisans of English cannot afford to relax the pressure for its retention, until these assurances are embodied in statute.

The President's Order also deals, among other things, with the question of the language of the Courts and of legislation, the medium of instruction in training establishments such as the National Defence Academy, recruitment to All India Services and to the local offices of the Central Government Departments. The

opinion of the Committee that Hindi should eventually become the language of the Supreme Court has been accepted in principle, but this will call for appropriate action only when the time comes for the change-over. As regards language of the High Courts, the Order endorses the recommendation of the Committee, which on this point had differed from the Kher Commission, to the effect that provision may be made for the use optionally of Hindi and official languages of States for the purposes of judgments, decrees and orders of High Courts. As regards legislation, the Ministry of Law has been directed to constitute a Standing Commission of legal experts for planning and implementation of the entire work relating to preparation of a standard legal terminology for use as far as possible in all Indian languages, and translation of Statutes in Hindi.

The President's Order agrees with the Committee's recommendation regarding use of Hindi for the internal working of the local offices of Central Government Departments but has modified it in favour of the non-Hindi areas by directing that, for the present, knowledge of Hindi shall not be insisted upon as a necessary qualification for entering into these services outside the Hindi areas.

The language of instruction in the training establishments will be English but steps may be taken to introduce Hindi also. While English will also continue to be the language of examination for entrance to these establishments, measures will be taken to introduce Hindi as an alternate medium. The Ministry of Defence has also been directed to set up a committee to examine the question of introduction of regional languages as media without introducing any quota system. If the committee's report is favourable, candidates from non-Hindi areas will not be at a disadvantage in respect of entrance examinations for admission to these establishments. But the position is different in respect of recruitment to All India Services.

When action has been taken in terms of the Order, English and Hindi will be the two media of examinations for these services. The Parliamentary Committee's recommendation for appointment of a committee to examine the feasibility of introducing regional languages as alternate media has been turned down, on the ground that the introduction of various regional languages also as alternative media is likely to lead to serious difficulties. The result, after some time, will be that candidates from non-Hindi areas sitting for these examinations will be at a disadvantage as compared with those from Hindi areas. While non-Hindi candidates will have to answer either in English or in Hindi, neither of which will be their mother tongue, candidates from Hindi areas will have the advantage of answering the papers in their own mother tongue. The disparity in conditions will act to the detriment of non-Hindi areas.

The trend, nowadays, as the Parliamentary Committee has pointed out, is toward replacement of English as medium of instruction and of official work in the States. Those who have been educated through the medium of the regional language will be effectively debarred from entry into All India Services. The State Governments which are apparently in a hurry to replace English as medium of instruction at the University stage will be imposing a double disability on their people by their hasty action.

India's Trade Rivals

IN an analysis of UK import trade, furnished in April 1960 attention is drawn to competitive sources. It is now clear that in the last three years, more East African tea has been sold in London though India provides about 60 per cent of tea supplied to the UK. The

table appearing in the supplement to the Journal of Industry and Trade makes it clear that India does not have a monopoly in any line and if she provides about 50 per cent of leather and leather manufacture, there are other suppliers, including Australia, which has rapidly developed ranching for meat but can now ship leather as a by-product. As may be expected, New Zealand, Austria and South Africa ship hides and skins and the Commonwealth area provided 22 per cent of British leather imports in 1959. In the case of oil-seeds and oils the position is quite satisfactory in respect of castor oil, but in regard to other oils, there are alternative sources like Nigeria and Ceylon. In the case of cotton textiles, the share of India is about the same as that of Commonwealth exporters like Pakistan and Hongkong and the imports from France and Belgium were maintained in 1959. It is only in jute fabrics that India retains a dominant position but in sacking it is evident that Pakistan has made headway last year, at the expense of India. Promotional work and efforts to meet Dundee's competition are compromised by the lift in prices of raw jute in India and the old advantages have shrunk suddenly and greatly.

In regard to the exports of tobacco, it is clear that the USA is the main supplier, providing about half the supply, and the steady increase in UK purchases of Rhodesian tobacco since 1957 is due to changes in consumer demand. The imports of Canadian tobacco are apt to fluctuate but the UK is taking only about 10 per cent of superior varieties from India and the export outlook is clouded at present, as many say. The shipments of feeding stuff for cattle have improved in recent years with India providing 18.3 per cent of British imports. This implies that larger export quotas of oilcake found a ready market but the Argentine, Canada and Burma are also important suppliers at present. The fall in shipments of cotton is apparent from the

The breath of industry

Oxygen—feeding the flame that knifes through steel, welding enormous broken castings and bubbling through molten metal to make pure steel—the flow of Oxygen in modern industry never ceases. From tiny workshops to the great steel plants and shipyards, wherever there is metal to be worked, Oxygen is on the job.

table. The USA and Sudan are the main sources of imports but the Lancashire cotton industry has declined in importance gradually.

Recent discussions on the mica trade confer extra interest on the supreme position held by India in the UK market. In the case of shellac also, India is the principal source providing about 80 per cent of the total imports. It is in regard to manganese that the position is disturbing. Both Ghana and Russia have emerged as strong rivals and it is necessary in view of the decline in exports last year to look for new markets for manganese ore. The authorities concerned with export promotion cannot look for a large-scale increase in shipments of wool or vegetables and spices as the UK market is open as usual to many exporting nations that can offer coffee or coir.

The rise of 2.3 per cent in UK's purchases from India in 1959 has been examined in relation to the growth of UK exports to India and it is seen that the import quotas for textiles may hit India to some extent. The high prices ruling for Indian raw materials including linseed oil, goatskins and coffee are an obstacle to the steady growth of exports to the UK and the entry of substitutes for jute manufactures or woollen carpets cannot be ignored. The analysis indicates that the USA is even now a more important customer, providing cotton and tobacco, as well as chemicals for industry. The Dominions provide food supplies and retain a firm hold on the UK market, whereas India is in no position to offer even copra or fruits for which the UK may be a regular buyer as in the case of pineapples and bananas from the West Indies.

The course of Indo-British trade, however, may be influenced by aid (not prices) and the consortiums for making machinery may play a greater part in setting the future pattern of trade so that India may hope to develop an export line in canned shrimps as well as cashewnuts to the UK because of an anticipated increase in Commonwealth trade and a decline in European trade. The chances of industrialisation leading to more trade are obvious, and if mineral oil imports fall away in future, the UK may be ready to sell ships and tankers to India, both new and used.

Are We Serious about Export Promotion?

(Contributed)

IT may seem rather odd to ask at this stage whether Government is really serious in regard to export promotion. Yet it is necessary to raise this question, considering the haphazard and uncoordinated manner in which this vital problem is being tackled. During the last ten years, dozens of delegations have gone abroad to study the prospects for increasing our exports. These delegations generally consisted of experienced businessmen and able officers and, on their return, they submitted detailed reports about the market conditions in the countries they visited. The reports also included various recommendations for stimulating exports. But it would appear that these reports are not carefully read by Government or the latter are unable or unwilling to implement the recommendations. This is the impression that one would gather after perusing the various reports submitted by trade delegations in the last few years.

Let us take a specific instance, namely, the export of tea. It is well known that tea is one of our biggest earners of foreign exchange and that we are facing increasing competition from various countries. One would have thought that at least in this case, Government would take vigorous and timely action to remove the hindrances that stand in the way of

increasing the exports. But this has not been done. The Indian Government Trade Delegation which recently visited West Europe under the leadership of Mr K. B. Lall, I.C.S., says in its report released a few days ago that it was "surprised to see that the position which India enjoys as a producer of high quality teas and as the major supplier to the world markets is not generally known in the countries visited". But really there should be nothing surprising in this discovery because almost every delegation has said exactly the same thing. Delegation after delegation has visited West Europe in the past after delegation has emphasized the need to intensify publicity for tea in foreign countries but it is clear from the Lall Delegation's report that adequate steps have not been taken in this direction.

The excessive fiscal burden on the tea industry is another handicap to export promotion. Spokesmen of tea trade and industry as well as the various trade delegations in the past have strongly stressed the need to reduce the burden of taxation. Yet, adequate action has not been taken. The Lall Delegation says as follows: "The high incidence of import duties and internal taxes on tea, combined with the high cost of packing and distribution make a cup of tea more expensive to the consumer than it need be. The incidence of cost of these two counts can be substantially reduced if both the trade and fiscal authorities have confidence in the future of this beverage and believe that a constructive solution of their worries lies in higher turn-over and not in crippling imports and margins."

It is, of course, refreshing to find the Lall Delegation emphasizing eloquently the need for fiscal relief but one wonders whether Government will take prompt action on this recommendation.

We shall take another instance, namely, Indian commercial representation in foreign countries. Obviously one of the first measures that should be taken by a Government keen on export promotion is to see that official trade representatives abroad are chosen properly, that they are provided with adequate staff and that they concentrate their efforts on trade promotion without wasting time on routine work. But what is the position in West Europe? This is what the report of the Lall Delegation says on this subject: "Indian commercial representation in West Europe, both at the official and the trade level, is inadequate for the task of strengthening commercial relations and of building up two-way trade for mutual benefit. The commercial sections of Indian embassies are inundated with routine work and the number and quality of staff are barely sufficient to keep pace with the rising number of enquiries—serious and frivolous—and at the same time to keep up the flow of general reports on broad trends of economic and commercial developments". Again, the report says: "Administrative procedures also require to be overhauled so that while time and effort are not wasted on useless enquiries, adequate support is made available to Indian parties seriously engaged in building up an expanding market for the products in which they are interested."

It cannot be argued that the Government of India was not aware earlier of the need to strengthen official commercial representation abroad. Almost every trade delegation in the past has laid great stress on this point. Why then was no action taken on this important matter?

Anyone who has been closely following official attempts at export promotion cannot but feel that there is a want of proper co-ordination and a sense of urgency on the part of those who are connected with this vital task. The reports submitted by Government's

trade representatives abroad are released through official journals several months after they are received in New Delhi. Consequently, much of the information which would have been very useful to trade and industry, if published promptly, becomes stale and out of date.

From what has been written above it will be clear that Government's efforts at export promotion have yet to be coordinated effectively. Mere exhortations to export more or the establishment of export promotion councils by themselves will not help to expand exports. For instance, certain sections of the tea trade have recently suggested the formation of an export promotion council for tea. Demand has also been made for export promotion councils for cement and paper. These demands are clearly unnecessary. So far as tea is concerned, every one knows what measures need to be adopted to strengthen its competitive position. The Tea Board is already there and what is essential is to make it more active and dynamic. As for cement and paper, the demand for export promotion councils is certainly premature. There should be no attempt at the indiscriminate multiplication of export promotion councils. On the other hand, Government should see to it that such councils as have already been set up function more efficiently. The various Government departments at the Centre and in the States should work in a spirit of closer co-operation and the entire problem should be tackled with seriousness and urgency. At the same time, every effort should be made to remove the genuine difficulties of trade and industry and enlist their enthusiastic co-operation. It is only then that it will be possible to obtain satisfactory results on the export front.

Foreign Trade...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

“India has more acreage under rice than any other country in the world. Yet production is not large enough to meet the demand. Considerable damage to crop is done by the paddy stem borer, the cost of which is estimated at over Rs. 30 crores a year. Shell endrin provides effective control of this deadly insect pest and can thus increase rice yields on affected fields by upto 50 per cent.”

Saving the rice crop

NATIONAL NOTES

National Disservice

The statement made by Dr Shrimali in Poona, regarding compulsory national service by students, has revived the apprehensions which were aroused when this ill-advised proposal was originally put forward by the National Service Committee appointed by the Union Ministry of Education. The Minister revealed that Government have evolved a scheme under which one year's national service will be made compulsory for students after the completion of their secondary school education. It is not clear whether educational or economic considerations weighed with the sponsors of this scheme which has more affinity with totalitarian than democratic politics.

Those students who intend to pursue their studies in the University or technical institutions are hardly likely to be helped by an year's break in the crucial period of their scholastic career when they should devote all their time to the acquisition of knowledge. For the others it will impose an insufferable burden as they will not be able to seek jobs for one year after they have completed their studies at school.

It has been claimed on behalf of the proposal that those entering life after one year of compulsory service would be more mature, more disciplined, and better pre-

pared for the responsibilities of their work, than those coming straight from schools. While this may be an indirect criticism of the existing system of secondary education, whose validity it is not here necessary to question, it cannot constitute a justification of the abridgement of the liberties of the future citizens of the country. As for discipline and team work, the habits should be instilled from the earliest years at school. It is difficult to believe that one year of camp life would achieve what ten years of school have failed to do. And to unloose a rabble of undisciplined youngsters on the country side in the name of national service, may give a leg-up to student politicians, but will be a positive disservice to the country.

Palm Gur Comes to Town

The All India Palm Gur Workers' Conference, inaugurated by President Rajendra Prasad in New Delhi on April 29, is convincing demonstration of the success achieved by palm gur enthusiasts in forwarding the claims of their pet project. The President, who recounted the benefits the country could derive by development of the palm gur industry, wondered why even now that we know the utility of palm trees, we are unable to utilise at least a sizable proportion of the crores of trees that we have in the country. There is good reason to suspect that the stumbling block to more effective utilisation of the palm trees is the problem of comparative costs.

The plain case for exploitation of the different varieties of palm found in our country as an alternative source of sugar is that it enables the utilisation of an existing capital resource which has taken years to grow to its present state, and possibly for the utilisation of marginal land which cannot be put to any other agricultural use. The President has estimated that the existing palm trees in Bihar, if tapped for sugar and gur, could equal the output of all the sugar mills in that State. But before the sugar could be produced, the juice has to be tapped and collected in a central place. And this is a particularly arduous job requiring specialised skill and endurance on the part of the workers.

The labour cost is too high to make the manufacture of palm sugar a remunerative proposition except where it is undertaken on a small scale to meet the requirements of small isolated areas where cane sugar is hard to get. That is the reason why palm gur or sugar sells at fifty to a hundred per cent above the price of corresponding products derived from sugar cane. As the industry is necessarily decentralised, increase in the total output is not likely to bring down the costs.

The industry was able to hold its own in former days when the scale

of wages and prices were held down by tradition. But with the extension of the money economy to all nooks and corners in the country, that is no longer possible and the industry is enabled to survive in isolated areas only with the help of Government subsidies. Before the advent of prohibition, manufacture of palm gur was a side line to the very profitable manufacture of liquor from which it derived a hidden subsidy. With the introduction of prohibition this source of support has disappeared.

The manufacture of palm gur was a thriving cottage industry in parts of Madras, where some decades back modern sugar mills were established to make refined sugar from palm juice and gur. But with the growing demand from the mills, the cost of the materials increased beyond economic levels, and the mills had to be closed down where they could not shift to sugar cane. This experience should serve as a warning against exaggerated hopes of drawing on palm trees to augment the country's supplies of sugar.

Manufacture of palm gur or sugar will not be an economic proposition unless methods could be devised for easy and economic tapping of the palm trees which would result in substantial increase in the productivity of the individual tapper. Until that happens, palm gur workers will find it more profitable to spend their time in the corridors of the secretariat in New Delhi than among the palm trees.

Technical Troubles

The major obstacle to the rapid expansion of technical education, to the level necessary to take India over the hump of development, is not so much shortage of funds though funds certainly are not plentiful, as shortage of efficient teachers. It has been estimated that during the Third Plan 4,654 teachers will be required for the Degree courses and another 4,802 for the Diploma courses. The All India Council of Technical Education, which at its last meeting has emphasised the need to maintain the tempo of expansion, has also drawn attention to the urgency of the problem.

Success in the implementation of the other proposals regarding establishment of new institutions, increasing the offtake of students and institutions of part time courses to turn out increasing numbers of technicians, depends on finding the required number of teachers of adequate calibre. Mere increase in the number of persons who have undergone an indifferent type of course will not help to improve the technical level of the country.

The proposals under consideration for the increase in the offtake of engineering colleges and polytechnics should not be allowed to lead to a dilution of standards. Along with shortage of teachers, many technical institutions are also woefully short of equipment. Until

it is found possible to overcome the shortages, these institutions will be hardly able to keep pace with the technological developments in industry, and will be obliged to report a high degree of wastage.

Minus Money

The Congress President only recently complained that there are no poor men in Parliament at present and politics is not now attracting men with merit, but without money. It is surprising that the Congress party which swears by equality complains openly of the domination of the rich—at least when asking for election tickets. The high cost of elections is one reason—the party organisation is weak and does not get at regular subscriptions from rank and file supporters. Reliance on donations from the rich drives the Congress into the arms of the rich candidate who can sedulously nurse a constituency. Further, membership of the Congress legislature party after election is an expense that poor M.P.s cannot afford. Adult suffrage is seen to have its limitations. Even the lawyers who get into parliament are rich men who forsake practice for prestige. It is discovered that only in a rich country like the USA can a journalist like Neuberger get into the Senate along with millionaires like Saltonstall or Kennedy. It is only in England that a miner's son can leave the pit for Westminster and a poor M. P. like James Maxton acquire the same prestige inside the Commons as Winston Churchill or John Buchan. The Universities seat in the Assemblies may help in a measure to redress the balance and let poor clerks in, but the Lok Sabha does not allow for postal election by graduates or teachers.

FOREIGN NOTES

Capital Investment of US Business

Capital investment plans of American businessmen just seem to keep on growing. According to the most recent report on this subject, the result of the thirteenth annual survey by the McGraw-Hill Company, American business spending for new plant and equipment will rise to \$37,900 million this year, a new record and a full 16 per cent above the 1959 level.

There is more to this report than the statistics, however, this is the third consecutive surge in a period of six months which has revealed more ambitious capital investment plans than were scheduled earlier.

Last fall, a preliminary McGraw-Hill survey indicated a 10 per cent increase in planned capital investment by business during 1960. Another survey, published in mid-March, this the official government version by the Commerce Department and the securities and exchange commission, forecast a 14 per cent gain.

Thus, this newest survey effectively refutes any suspicion that these earlier estimates were overstating 1960's probable capital spending total. On the contrary it shows that businessmen retain a good deal of confidence in the year's economic prospects, and are increasing their outlays, even though the economy's gains in the past few months have not been as pronounced as some experts had predicted when the year began. By the same token, capital expenditures of the magnitude contemplated would provide a very firm base for the maintenance of high levels of business throughout the year.

Another significant fact is that in this latest survey, McGraw-Hill—noted publisher of business journals and a pioneer in the field of capital investment analysis—has changed some of the bases not its findings. Its figures and industry classifications have now been made directly comparable with those of the official government survey, whereas in the past they differed in some respects. And this lends even greater meaning to the projected increase it has uncovered in investment plans.

It is interesting to note that the sharp rise in capital spending this year is designed largely to improve operating efficiency rather than to increase plant capacity. For business as a whole, the McGraw-Hill survey found 70 per cent of this year's programming going into ma-

chinery and equipment, and only 30 per cent into buildings.

Manufacturers as a group are planning to increase their 1960 expenditures for new plant and equipment by 26 per cent, which would bring their total to \$15,200 million. And of this indicated total, some 65 per cent—the highest percentage ever reported for this group—is scheduled for replacement and modernization, with the emphasis distinctly on equipment rather than plant expansion.

The desire to offset high labour costs, and to meet the keen competition from both domestic and imported products, helps explain much of this emphasis on modernization and efficiency.

This does not mean that there will be increases in productive capacity. As a matter of fact, manufacturers plan to expand their capacity by about five per cent this year, and are visualizing further expansion in the years ahead.

This is seen in the survey's findings that American business already has big capital spending programmes scheduled for the next few years. These obviously are preliminary and still incomplete, but their totals at this early date are significant: \$34,800 million for 1961; \$32,800 million for 1962; \$33,300 million for 1963.

And experience indicated that businessmen generally underestimate their capital outlays for periods longer than one year ahead.

In making their investment decisions, businessmen obviously are influenced by anticipated increase in sales volume. Manufacturing industries look for an eight per cent sales gain this year, ranging from four per cent for petroleum and coal products to 22 per cent for iron and steel. By 1963, manufacturers' sales are expected to be 17 per cent larger than this year—which would be a notable achievement, indeed, when one considers the very high levels from which they would be starting.

The upward trend in research spending by American business provides another guide for the future of the capital spending sector of the economy. This year, business is budgeting more than \$9,500 million for research and development, a rise of six per cent over last year. And even now, research outlays are projected at better than \$10,700 million for 1963—a figure which could well prove an underestimate. It should be noted that these figures do not include expenditures for research facilities, which would add another \$682 million to this year's total if it were included in research budgets.

One measure of the importance of research activities to industrial progress and to the American market is seen in the fact that manufacturers expect about 12 per cent of their 1963 sales to be of new products—products not made at all last year. Machinery makers, who turn out industry's tools, estimate that at least one quarter of their 1963 sales will be of new products.

Blockade into Boycott

The course of the argument between the Arab countries and the USA has only revealed their suspicion of US policy toward Israel. Mr David Ben Gurion got no guarantees after his trip but the Arabs smell a change in the US temper. The Cleopatra in New York has made history already because the US dockers got the Court's approval but were yet ready to drop the boycott. It is not open to a foreign country to insist that organised local labour should be made available to it, even for reasons of State. Far more important was the risk of US aid to Egypt being stopped suddenly. It is because Col. Nasser did not keep in mind the UN Secretary-General's hint about letting peaceful cargoes for Israel through the Suez Canal that the US Senate lately accepted an amendment to the scheme of foreign aid. If there is no free navigation for US vessels, foreign aid can be curtailed but Senator Fulbright did not endorse this view. And Egypt cannot afford that kind of argument about what she deserves or needs. But there was again a lot of brave words about keeping all US ships out of the Levant, even a ban from Morocco to the Persian Gulf. The Middle Eastern oil cannot be taken to the USA but the Arab States in the case of serious trouble will lose royalties. There is also a chance of Western Europe being hit much more than the USA by any action taken against US shipping or airlines serving the Middle East. The USA can, of course, use Alexandretta instead of Tripoli but the troubles in Turkey are a handicap. Whether the Arabs will be able to use the boycott as an excuse to jack up oil royalties need not be debated now but the surprising feature was that Saudi Arabia stood by Egypt and the latter forgot that US wheat is vital for saving Syria from famine. However, passion is not running high just now and the Suez Canal will not be made to lose either traffic or dues. If neutral vessels, in view of the current argument, get a share of the trade to the Middle East, Indian shipping will be naturally a beneficiary and can really do with a useful tonic just now.

The Egyptian blockade in peacetime is a paper blockade but the control of the Canal helps Nasser to put forward a claim to deny all supplies to Israel which cannot hope to make anything out of Port Elath if she is bound to rely on Haifa wholly. The Arabs can say unity has been retrieved by launching an economic campaign against both Israel and the Zionist backers in the USA but if the USA is touched, some will say that there is in Cairo no gratitude for US intervention in the Suez War on the Egyptian side. And the USA always can reconsider policy towards Nasser though the President speaks of a victorious boycott.

Reflections on the British monarchy and its lasting influence are no longer necessary but the royal wedding last week may well suggest that the morganatic marriage of

Princess Margaret with a Commoner is now a fait accompli that cancels out the Act of George III. The absence of foreign royalty did not cloud the popular rejoicing in London over a happy union but the promise of a peerage will deprive many of the satisfaction of following the Armstrong-Joneses. Probably the leader of the Opposition need not be consulted about the creation of a hereditary title for a former Court photographer. A self-imposed ban on political life will be a consequence of a grant from the Royal civil list for the Queen's sister. And if Mr. Armstrong-Jones like the sons-in-law of Queen Victoria takes an appointment abroad the Commonwealth will not be displeased though Dominion statesmen must approve any selection made in London for a post.

The rise of the Tudors to powers may indicate that the absence of a coronet is no handicap for one marrying into a royal house while the fall of most dynasties in Europe has limited the field of choice that was open to Queen Victoria a hundred years ago. Some will say that the influence of Prince Philip has been potent and even the starchy ruling house has come down to earth. Others will say that Altrincham's remarks on the stuffy Court bound by its code has made an impact and the entry of Armstrong-Jones into the Court Circle is a sign of the National Review having scored in what is called the century of the Common peer.

One may add that princely houses in India have already come down much farther and the entry of princes into business not only as directors of companies is a sign of the time. Former rulers are not only in politics but working up a City connection though the Directory of Directors in London (there is no counter part here) has not yet noted that blue-blooded financiers have emerged in India. And it is primarily money that has provided the base for the growth of some successful enterprises in the present as well as the past. The use of privy purses for purposes of development can only excite admiration and what was said about sugar factories making good easily in Rampur may be said also of concerns like Travancore Rayon which got going with State aid. Princely patronage of new enterprises in the past was limited to the taking up of debentures but most princes today will think of participating rights and the Darbars too may think of dividends first and last.

Britain's Textile Institute

Britain's Textile Institute, founded in 1910 to serve the needs of scientists and technologists working in the textile industry, is 50 years old. This period has seen the introduction of man-made fibres and new treatment of natural fibres to enhance their existing properties.

During the golden jubilee year, the institute is arranging two conferences that are likely to make yet further contributions to technological understanding.

The Assam Government have finalised the draft outline of the Third Plan which will be submitted to the Planning Commission after approval by the State Planning Sub-Committee. This completes the series of State Plans that started coming after the ground was laid by the inauguration of official deliberation on the Third Plan by the Centre.

The Third Plan frame drawn up by the Assam Government envisages a total expenditure of Rs 145 crores on State Sector, and has, as its pre-eminent aim, the raising of the per capita income of the people by 25 per cent. At present, the per capita income of the people of Assam is Rs 272 against the all-India average of Rs 290. Considering that the Third Plan envisages a 25 per cent increase in the per capita income of the whole country, the State's Third Plan would make no difference to its relative position *vis-a-vis* the country in respect of per capita income.

The draft outline envisages to afford compulsory primary education to all children between six and eleven years. This was a commitment which the State Government could not evade in view of the desire expressed by the Central Government to complete the programme on a nation wide basis in the course of the Third Plan. For this reason, education with Rs 21 crores outlay, gets the second largest allotment.

Allotments for industrial development and agriculture are, in comparison, modest. Agriculture as such gets an allotment of Rs 8.67 crores but if allotments for community development, co-operation and panchayats are included, the total will exceed expenditure for education.

With no new schemes being envisaged, the State Government seem evidently content with an allocation of Rs 8.3 crores for industrial development. However, the Barapani hydel project and the Naharkatiya gas projects set for completion during the Third Plan should open up opportunities for industrial development during the Fourth Plan.

With the laying of the foundation-stone of the Jamma Lal Bajaj Sagar Project near Banswara, a district headquarter in the Udaipur Division, by Mr Morarji Desai; Union Finance Minister, the Rajasthan Government have embarked on one of the largest projects ranking in importance and size next only to the Rajasthan Canal, Bhakra and the Chambal projects. The project will comprise a dam on the Mahi River in the Southernmost part of the State with a capacity of storing 60,000 mcf of water and will, on completion, irrigate an area of 67,000 acres and generate 40,000 Kws of power. The

estimated cost of the project is Rs 8
crores.

The areas which will be irrigated by the Project, are populated preponderantly by Adivasis and are consequently backward. Because of uncertainty and shortage of rains, agriculture which is the main occupation of the people, is unenterprising and low yielding. Cultivation is mainly done in Kharif, and Rabi is confined only to those areas where wells can be successfully dug. For these people, the project has opened up vision of a new era of plenty and prosperity. Apart from the new potentialities in agriculture, the region is also rich in mineral resources which should lend itself to exploitation on the basis of the power that would be available on completion of the project. Such development could be expedited if it is oriented in the direction of small scale and cottage industries. This would provide additional employment to the hitherto economically backward people. The existence of vast forest resources indicates another field in which the energies of the people could be beneficially employed.

The Gujarat State Road Transport Corporation, inaugurated on 1st May, faces a tremendous task in improving and modernising road transport in the newly constituted State. Out of a total of 12,362 miles of roads, nearly 61.12 per cent of the roads are "kutcha" while 17.94 per cent are good asphalt roads. Only 2 per cent of the roads are cement concrete roads. What the Road Transport Corporation has immediately and urgently to tackle is the suspension in traffic that follows in the wake of the monsoon. Out of a total of 976 'schedule routes' about 400 have at present to remain suspended during the monsoon because of the bad condition of the roads and the lack of culverts. Such suspension of services in the monsoon, it is feared will involve the Corporation in heavy losses of revenue. Mr Vadilal Mehta, Chairman of the Corporation has calculated the annual loss arising from this reason at Rs 52 lakhs. The priority aim in the endeavour of the Corporation should therefore be to stop this drain by reducing the number of routes suspended during the monsoon.

An anomalous factor making for uneconomic operation of the road transport services is the unfavourable load factor. While in peak periods, vehicular utilisation is about 74.4 per cent, in slack season, this drops to 44 per cent.

The first meeting of the Board of the Corporation which was held last week, has revealed that the Corporation is fully alive to its heavy responsibilities. The Corporation, it has been made clear, leans mainly on increase in operational efficiency for wiping out prospective losses. Mr Mehta, has talked in terms of a five-year industrial truce between the Corporation and its employees to forestall possible losses that might be incurred on account of labour troubles. Such an agreement, if it materialises, should provide the

needed impetus for road transport development in the new State.

The scarcity of electric power in Kerala, inspite of its abundant power potential, has assumed gigantic proportion so as to cause worry to the authorities and industrialists. The installed capacity of the completed projects totals only 117,500 k.w. The authorities have formulated a scheme for generating an additional capacity of 129,000 k.w. during the Second Five Year Plan. But the implementation of the scheme has been much delayed due to multifarious causes. The delay in securing technical clearance from the Planning Commission and difficulties for obtaining foreign exchange forced the authorities to postpone the work on the Sholayar and Panniar projects. Again the difficulty in getting import licence and foreign exchange for part of the equipments required for the Neriamangalma project almost made the commissioning of the project rather impossible.

But for these obstacles the power supply position in the State would have been much better, for the timely implementation of the various projects would have reached the 246,500 k.w. mark. In anticipation of this, the State Electricity Board entered into agreements with industrial undertakings like the FACT, the Premier Tyre Factory, and the Travancore Rayons. This will make the position still worse and it is estimated that the power deficit in the State by the end of the Second Plan will be to the tune of 45,000 k.w.

The State cannot depend on power producing agents like lignite and coal, for they are conspicuous in Kerala by their absence. Naturally the only recourse the State can have is the generation of power from the water supply. It is indeed gratifying to point out that the authorities have formulated a Master Plan for tapping the water resources. The priority the planners has accorded to hydro-electric schemes makes good sense for most of them are multipurposes providing irrigation and flood control along with electricity. The projects recommended by the Study Group and the Working Group to be included in the Third Five Year Plan are the Pamba Second Stage, Idikki project, Ooralkuzhi, Silent valley, Lakshmi, Poringalkuttu Right Bank and two thermal power stations. The Study Group alleges that the extraordinary delay in getting sanction for the State's power projects is the extreme pressure put by the Madras Government on the Planning Commission and the Union Government for diverting a portion of Kerala water to that State. It felt that the bogey of Madras claim claim to Kerala waters should cease to threaten and delay the approval and execution of the projects which are very vital for the State.

Mysore State Chief Minister suggested to the 8th annual meeting of the All-India Printers Conference at Bangalore last week that a common script for all Indian languages would greatly facilitate mechanisation of printing.

Mr K.C. Reddy, Minister for Works, Supply and Housing, Government of India, was at pains to convince the Conference printing specialists that the Government of India was ever treating that industry in a different manner than they did the printing in the public sector. Both the sectors, Mr Reddy said, faced the same difficulty in regard to foreign exchange availability. Though the Central Government had planned sometime ago to establish two Printing Presses on up-to-date style, one in Kerala and another in Coimbatore, Mr Reddy confessed, these could not be instituted due to foreign exchange difficulties.

In this connection Mr Reddy, as indeed other Ministers in the States and the Centre, welcomed ideas of manufacturing printing machinery in India itself assuring such of the pioneers with "good government assistance." He also referred to what he himself described the 'critical' paper supply position in the country and pointed out that the Union Government would effect a 20 per cent cut in their requirements and distribute this saving to other purposes. The Government had been trying to establish paper factories—15 to 20 units to begin with in medium and small units, but Mr Reddy was quite not sure that the plan would be of immediate help as it would take at least two years more to materialise.

Mr H. K. Dass, President of the All India Federation of Master Printers, in his presidential address referred to what he called the "staggering shortage of raw materials," paper, board, chemical plates and metal sheets. This obliged the printers in the country to run crippled and out-of-date units with lower productivity but with rising labour costs.

Mr Dass complained that the Government had completely ignored the requirements of the printing industry, and alleged that this industry did not enjoy its due share proportionate to its industrial strength and importance. While pleading for representation of the Printing Industry in the Import Advisory Council, he charged that costly foreign exchange allocated did not have the full utility and a considerable portion of it was being wasted. Auxiliary equipment was not allowed to be imported with the result the original imported machinery could not be utilised to its maximum capacity. He felt that since both the Central and State Governments already had expanded their activities considerably, their future requirements should be treated under a separate category altogether leaving the license in the trade to be utilised in full to the benefit of small printers.

FEEL SAFER — BE SAFER FOR LONGER

New DeLuxe Champion Tyres

You pay no premium for the EXTRA SAFETY that you get by fitting Firestone New DeLuxe Champion tyres to your car—that you get FREE whether you are more often driving in heavy traffic or all alone at high speed on the open road. You ARE SAFER on Firestone BECAUSE all Firestone tyres are built with the same engineering skill that World Motor Racing Champions depend on for *their lives!*

You get another BONUS too! Your Firestone tyres stay safer LONGER because of their unchallenged, skid-resistant tread—a UNIQUE FEATURE developed through Firestone Research.

Reasons for Paper Scarcity

Addressing a meeting of paper manufacturers, wholesale and retail dealers, printers and consumers at New Delhi, Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, warned the industry against continuance of mal-practices in the distribution of paper. Mr Shastri was evidently concerned with complaints voiced by consumers about shortage of paper. But Mr Shastri does not seem to be entirely correct in blaming the manufacturers, wholesalers and retailers for the scarcity the root cause for which lies in the rise in consumption that has followed the Government's attempts to step up education around. The fact is, the Second Plan for the paper industry did not envisage the elimination of paper imports into the country. The Plan targets for capacity and production were 4,50,000 tons and 3,50,000 tons respectively. The capacity already achieved including in this schemes under production and schemes covered by import licences exceed the target by a fair margin of 1 lakh tons. Production is near 3 lakh tons and has to be stepped up by 50,000 tons to fulfil Plan commitments. Consumption, however, has grown at a faster rate and has led to scarcity.

In such a situation, it will not be a wise move on the part of the Government to have the State Trading Corporation take up the distribution of paper as has been threatened by Mr Shastri. While mal-practices, if there are any, in the distribution of paper could be ended by the State Trading Corporation being asked to handle paper distribution, the scarcity will remain inspite of the STC as long as production is short of requirements. From the point of prices, the experience with the STC's handling of cement distribution should damp public enthusiasm in favour of a similar step in respect of paper.

Current scarcity should point to increase in production as the only solution. Third Plan envisages self-sufficiency in respect of almost all grades of paper and has fixed a target of nearly 7 lakh tons. This involves an uphill task for the industry which finds itself financially crippled to plan for expansion for lack of adequate returns allowed by the Government on invested capital. The 12 per cent recommended by the Tariff Commission has been accepted by the Government, but has failed to

satisfy the industrialists who are able to quote from the recommendations of the National Council of Applied Economic Research, a body set up by the Government, in favour of additional funds to rehabilitate plant. The assurance of reconsideration of prices after lapse of reasonable time held out by Mr Shastri is little comforting.

West German Aid

A second loan amounting to 30,000,000 dollars is reported to have been offered by West Germany to India to help finance her development schemes. This would take the total loan sanctioned by the West German Government to 70,000,000 dollars. While India's appeals for aid have always met with warm and friendly response from the West German Government, the India Government became justifiably concerned with the terms of the first loan which made it impossible for India to draw on the loan sanctioned by the West German Government. It was not anticipated that the condition that West German Exporters to India should have their names registered with 'Hermes', the West German credit insurance department, would slow down the process of utilisation of West German credit. Further the fact, that under the terms of the first loan, the West German Government had to raise market loans to raise funds for India operated similar effect. As market loans were subject to fluctuations, this method of assistance was not considered appropriate to the business of foreign exchange assistance.

Representations made by the Government of India about the restrictive effect of the terms of the first loan, seem now to have borne fruits and the restrictive conditions have been dropped in respect of the second loan granted by the West German Government. It will no longer be necessary for the West German exporters to India to register with Hermes and this removes the first obstacle against full utilisation of West German credit. India's complaint with respect to the second condition has also been satisfactorily met by the West German Government agreeing to use their own funds or the surplus funds available with the Banks to offer assistance to India.

More Fertiliser Factories

Two factories producing fertilisers in Kerala and Sindri can by no means be expected to meet the demand for fertilisers which has been growing fast with the availability of other facilities for progressive agriculture, and without more factories to produce fertilisers particularly in States chronically deficit in foodgrain production, there can be no solution to the problem of foodgrain shortage. In the State of West Bengal, foodgrain production is far short of requirements being accounted for

by among other things extreme insufficiency in the supply of fertilisers. There are nearly 11 million acres of land under paddy and at the rate of 30 lbs of nitrogen per acre, which is the minimum dose, the absolute minimum of requirement of fertilisers works out to 143,000 tons of nitrogen per annum equivalent to about 0.70 million tons of sulphate of ammonia. A fertiliser factory to meet local requirements was just a bare necessity. For this reason, the Planning Commission's approval of the scheme drawn up by the West Bengal Government for setting up a fertiliser plant at Durgapur should be a matter for gratification.

The project is estimated to cost Rs 24 crores in capital expenditure including housing and external supply of services to the plant. The total return on this basis, of capital investment and 333 days operation is likely to be Rs 3 crores per annum excluding taxation. The capital investment should, therefore, be recoverable in approximately 8 years. The project has also high employment potentials. While about 2000 people will have employment directly in the plant, another 10,000 people getting in direct employment. The reason behind the selection of Durgapur for the location of the plant lies in the availability of synthesis of ammonia in required quantities as well as availability of water in plentiful supplies.

Malayan Rubber Industry

The postwar prosperity of the Malayan rubber industry is due to the expanding demand for rubber and the virtual elimination of Indonesian competition. Consumption is still rising, and the plantation product is assured of a market in Russia too. Stability in rubber prices has forced many to revise their views on the place of synthetic. It is assumed that new synthetic plants cannot produce as cheaply as estates. This is calculated to strengthen faith in the future of Kerala estates. But for the South Indian producers the revision of prices by the Tariff Commission is more important since costs are up and controlled prices do not leave a margin for replanting and new cultivation.

After the official inquiry opened in March there has been an undercurrent of optimism, derived in part from the local stock position and the advent of new tyre companies which will need rubber. The continuance of imports at a higher price is also an argument for adjustment of the controlled price and the estates have been asked to step up yield. Malayan experts have been deputed to help in the development of rubber-growing and some companies have since 1958 been able to raise production. The persistence of small holdings is a handicap to which attention will be drawn. The co-operative method can be adopted to

the needs of estate cultivation and Malaya's example in regard to manuring and protection of trees may be cited again. The outlook for raw rubber is decidedly better than that for coffee, since rubber does not figure in exports and the domestic price is below that quoted in Singapore. The end of the emergency in Malaya may stimulate exports to the USA where the fears of a trade recession have disappeared. It is on this score that consumption is estimated to rise to over two million tons per annum and India too may be expected to develop a bigger demand since the cycle and automobile industries are dependent on a larger supply of rubber. The difference between tea and rubber is now obvious to local investors and recent company reports have certainly strengthened faith in rubber shares quoted in Madras, with Cochin Malabar well ahead on prospects of a larger crop for 1960-61. The 3 rupee shares have improved to 8.30 xd.

Polytechnics

The increased importance accorded to the advancement of technical education in India, especially after the attainment of political independence, is now gathering momentum toward the goal of economic independence. Even though we are rather far off the mark, our achievements in the field are by no means small. Yet the technical backwardness of the country can be easily gauged from the yawning gap between the demand and supply of technically qualified hands. Efforts at both the Governmental and private levels for bridging the gap are indeed numerous but they were able only to meet a fringe of the demand. As our Prime Minister has remarked India's need for technical personnel will, for a long time to come, be insatiable. Schemes for expansion in the field of technical education will have to be formulated by providing due weight to the size and diversity of demand. An integrated programme from the lowest to the highest levels, which would cater to our needs, seems to be the need of the hour.

The Government of India's decision to increase the number of polytechnical institutions in the country during the course of the Third Five Year Plan is really commendable. Outlining the Government's programme for the next Plan, Mr K. N. Sundaram, Assistant Educational Adviser to the Union Government, in the course of his address to the members of the Madurai-Ramnadu Chamber of Commerce, revealed that about 113 polytechnic institutes will be opened during the next Plan. According to an estimate of the Government of India, by the end of the Third Plan the schemes of technical education will produce about 40,000 engineering graduates and 82,000 diploma holders.

MORALS, more weighty than American clumsiness which, alas, is only too painfully evident—are to be drawn from the shooting down of the Lockheed U-2 that was on a spying mission over the Soviet territory. If, that is, morals are at all worth drawing. That they are not may well be the only one to be drawn. For an unpolitical person, it is a matter of gloomy wonderment how topsyturvy the world can get. On the face of it, it seems crazy that the very future of mankind should be so thoughtlessly jeopardised, ironically enough by an act of espionage to make it more secure. After all the boasting about the striking power of the Strategic Air Force, the Russians may well be forgiven for imagining that the intruding aircraft was carrying a nuclear bomb. That they did not and still shot it down—with a rocket too—only shows their own trigger-happiness, though excuses can be made with greater plausibility for them than for the Americans. If anyone were to tell me that the fact that the Russians did not start a war is evidence of the baseness of the fears for the future, I would consider him mad beyond ministration. This morning's paper informs me that Khrushchev has said that 'if there were any more spy flights over the Soviet territory, the Soviet Union will destroy the bases from which they come and that this means war'. This may well be bluff but you can call it only by taking a risk that you have no right to take. And when the provocative act is as disreputable as the present one, the last shred of respectability will be torn and the appalling moral nakedness underneath will be exposed to all the world to see.

And what right have the politicians to bring the world so near to annihilation by the very excess of their morbid fears? And what about the pretence of democratic rule being by consent, when a whole area of activity is hidden from public vision and is exposed only when something goes wrong? I know the usual answers that rest their case on the need for democracy to come to terms with the requirements of Power. But the moral basis for such mental reservations have always been shaky, and present day reality has only increased its wobble. Fifty years ago, when the world was comparatively stable and when the choice before mankind was not so catastrophically confined too, and when it was still possible to think of an unending series of wars without particular loss of sleep, such equivocations were accepted without too close an inquiry. But politicians who get our votes on platitudes about space, carry no

mandate from us to take us, knowingly or unwittingly to our extinction.

Even within the framework of accepted notions of power politics, the incident has much that gives cause for gloom. It is not only that the double-talk and double-dealing of politicians that stand exposed, but what is infinitely more tragic, it is the double-think that has been shown up. The essence of the double-think is that you are unconscious of the dichotomy in your mental processes. In earlier and more sophisticated ages like Renaissance Italy or our own Mauriyan period, you had people who understood the rules of the power game,—which were merely that there are no rules—and consciously employed them. The power game was recognised for what it was and there was no overlaying and when 'moral' and 'humanist' considerations entered at all, they did so to subserve power. This certainly was 'honest' after a fashion and in any event, unambiguous, and where ambiguous, it was the consequence of conscious equivocation. Not that Kautilya or Machiavelli were 'irreligious' in any conventional sense, though of course, they were deeply 'immoral'. Indeed, our own age, as Polany argued in a recent article suffers from excessive and even obsessive moral pre-occupation. And it is precisely from this that all our difficulties flow, including the embarrassment of double-think, which in many ways is more venial than double-talk, but more embarrassing when exposed. (That is why Mr Khrushchev has been able to go on as he has been doing simulating horror and moral indignation and the Americans are shame-faced and apologetic.) What has been happening for a long time now and especially since the end of the first world war is that politics has been overlaid with moral considerations of a fundamental sort. And yet the basic reality of politics has always been Power. The incongruity of these two has come up again and again in the last three or four generations in various forms. Ever since the Wilsonian era in international politics commenced, we had the spectacles of professors and Dons becoming politicians and doing fairly well until the ugly hand of naked power strangled their politics.

Latterly this incongruity has not been exposed in such grisly fashion, but it has been in ludicrous fashions. This absurdity is particularly heightened by the transformation of politics into a public relations job. Throughout the better part of the last eight years, President Eisenhower has been projected into public consciousness as a benign father figure. And so, indeed he is, in essence. (The secret of public relations is not lie, but subtle exaggeration.) But when he justifies as he did last Wednesday the spying mission on the ground that the Soviet Union is excessively secretive, and it was necessary for America's own security that the information must be obtained, the figure was badly out of focus and we saw a caricature. The argument itself is very specious, but the interesting thing is that it should be advanced at all. The same arguments have been advanced by other Americans with greater uncton and self-righteousness. On the rules of the power game, the argument is tenable, but then, Machiavelli would have scorned the self-righteousness. The same self-righteousness takes many forms even among intellectuals. When Mr Kennan mildly suggested that the differences between the American and the Russian society were not absolute but relative, it shocked his interlocutor. The simple test would be

to ask how Americans would have reacted to a hypothetical situation envisaged by James Reston: "Supposing Russians had bases in Mexico from which all kinds of planes flew daily along Texas border, what would the Americans do? "Our instruments are so close at the point that they can actually pick up interplane communications of the Red Air Force flying over Soviet territory and track down missile tests inside Soviet Union." Reston wrote this before the US admission that the plane that was shot down was actually on a spying mission. Now would Americans have made the kind of excuses for the Russians that they are making for themselves? Eisenhower's reference to Russian objection to open skies proposals was particularly inept since none has normally a right to forcibly enter my house if I, for whatever nefarious reason, don't ask him.

The truth is, there is confusion even over the formerly well defined conventions about espionage. A spy was a patriot after his fashion, but it was part of the bargain that he is an outcaste. He is essential, but expendable. Indeed, the first duty of a spy is not to get caught and if caught to die rather than betray his employer. Mr Powers seems to have been not a particularly good spy though a good photographer and flier. (In justice to him, it must be conceded that the versatility expected of a modern spy is of an impossibly high order. A spy has these days to be a nuclear physicist to be any real use, as Soviet Union, which foams at the mouth about the recent incident knows only too well.) Apart from the fact he got caught—which among spies, is the ulti-

mate indignity here again, the poor man had the odds heavily against him, since he had to reckon with rockets—he did not play the game. His baggage contained some odd items like a ring about which Khrushchev was very facetious,—but it also contained a poison needle and an equipment to blow the whole thing up. The fact that he did not use these and what is more important, the fact we do not find it in our hearts to blame him,

shows as nothing else can be the peculiar incongruity of our politics. Personally speaking I would rather have Powers alive, but then I would wish the need for espionage to disappear.

But the real clumsiness of the Americans arose in the early denial and half hearted attempt at trying to make it appear to be something else. It may be true that it would have been difficult to carry the

bluff through, but it seems to me in any earlier age—and I hope I am not wronging Russia in saying it—if Russia had been caught in the act, the attempt would have been made. It was characteristic that the US should have come out with the truth and what is more important with a justification for it. But more difficult is to justify the timing of this particular expedition. Eisenhower is admittedly not responsible for it, but it was

exceedingly stupid decision whose-soever it was and it illustrates the danger of leaving the initiative in such hands. And in the nature of things initiative has got to be left in such hands and that is another cause for gloom for the future. And if as Harold Stassen suspects the act was deliberate to wreck the prospects of the summit, then not even God can help us.

★

It is easy enough to rate the US for the incident as indeed it richly deserves to be. But let us restore a certain sense of proportion. I have a feeling that Mr Khrushchev is over playing his hand going about the way he does. Considering Russian record in espionage, it is plainly ridiculous for him to strike the postures he is doing. Considering that how a good deal of information on which Soviet parity in strength was raised was stolen and sold to them by spies a hundred times cleverer than Powers, Mr Khrushchev would find the throwing up his hands in horror for too long a time a little cramping. It is true that they have not yet been caught in acts like the one in which the Americans were, but there is no doubt that they are at it all the same. (In fact every one apparently is at it. The British Foreign Office refuses to comment on reports of Britain's own little excursions, but the silence is eloquent.) Russian planes have been known to stray into Pakistan and Alaska, but so far the most charitable interpretations have been put on it. But if such planes are shot down by a man a little quick on the trigger, we may find the occupants carrying, besides rings for Martian beauties, photographs of missile sites.

★

The incident has morals for Pakistan too, which, one hopes it will be quick to draw. Mr Khrushchev has not been slow to draw it for its benefit and though the US has given its assurances of standing by its friends, it is a little embarrassing to find that one's friend has been using one's flat without so much as one's leave for disreputable purposes.

★

The weather for the summit is perhaps not too favourable, but there is still reasonable ground for hope that the "mountaineers" will at least try to make the climb. The weather that is upsetting me is the brand that we have been having over the last two weeks (it surely appears to have been much longer than that) in this city of ours. The unrelenting heat and the relentless sun have sadly sapped energy and, except in the evening, one dreads going out. What, I wonder, happened to the thunder-showers that were so cheerfully forecast for the last day or two? Gone with the wind, I suppose.

GATEWAY GOSSIP

Role of Advertising

ALTHOUGH some of the papers read at the first Advertising convention held in Calcutta recently would seem to indicate that there is urgent need for telling our people the why of advertising, it must be admitted that there is greater awareness now than ever before that advertising is part and parcel of industry and commerce. There is no denying the big strides that advertising has made in India in recent years along with the significant development in many fields, particularly industry. But when compared to some of the economically advanced countries, it is still in its infancy in India. Astronomical sums are expended every year, for instance, by US business on advertising. The present rate of annual outlay in that country runs to about \$10,000 million a year and the expenditure in this regard in some other countries is also quite impressive. Such huge amounts will not be spent by those who have always an eye on profit had there been no commensurate return.

Advertising, however, is not merely a means to make profits. It performs a very valuable function in a country's economy. But for it the pace of economic progress of the advanced nations might perhaps have been slower. By creating an interest in new things, advertising makes people strive for the good things of life. Striving leads to more effort which in its turn results in increased production. This cycle may either be weak or totally absent if there had been no advertising to generate the urge.

Once the power of advertising is realised, the big search for the proper media to pass on its message to the people begins. One has only to make a brief look at country like the US to know the large variety of media used. Newspapers, radio and television play the major role while there are many other media available for the advertiser to transmit his message to the potential buyer. In India the advertiser has no such wide choice. One of the important means of communication, the radio, is not available to him while his counterpart in most countries is able to reach a large section of the public through this medium. Government are resisting attempts at commercialising radio presumably on the impression that radio's usefulness to the public will be curtailed.

But it cannot be said that although impressive has been its progress in recent years, advertising has made full use of even the media that are available to it.

Furthermore, advertising is yet to show the energy and resourcefulness with which it is associated in countries like the US. Its comparative sluggishness in India stems from the many handicaps it suffers here.

Some of the problems facing advertising in India have been referred to by Mr Chinubhai Kilachand, Chairman of the Indian Society of Advertising in his speech at the Eighth Anniversary Celebrations of the Society in Bombay early this week. Our mixed economy has made Government an industry and business besides their other activities. As is to be expected of any businessman, Government have also well recognised the role of advertising in national life. Government's confidence in advertising is borne out by the fact that they are the biggest single advertiser in the country today. Even with this rapid expansion coupled with the sizable increase in the quantum of Government spending advertising in India is yet to carry extensively the expert's touch. The practice of routing Government advertisements through an organisation of their own is perhaps partly responsible for the retarded growth. Mr Kilachand has rightly pointed out that for Government Advertising to be effective, it is necessary that it is based on proper understanding and appreciation of it as a means of communication. He further opines that even granting that the organisation handling Government advertising is efficient, the result of such unilateral approach is very likely to prove to be ineffective because of the danger of transmitting the advertiser's message in a stereotyped form. The scope for attracting the attention of a wide variety of people definitely will be better if a number of competent organisations are enabled to participate.

A high standard in advertising also depends on the calibre of its trained personnel. The fact that advertising in India is fast expanding does not seem to have been noticed by our Universities. There is practically no facility in our country for higher training in advertising. The Universities who alone can be of help in this regard are, for some unknown reason, yet to give this field its due recognition. It is time our universities emulated the example of some of the foreign universities. The London School of Economics, the New York University and the City College of New York award degrees and diplomas in advertising. In many of the European universities advertising forms part of course in Business Administration. It cannot be argued that there is no need for such courses in our universities because an adequate number of students may not be coming forward. For, advertising is sure to have a bright future in India and already there are clear indications that industrialists, businessmen and traders, not to speak of a large number of people not included in the

above categories, are evincing increased interest in advertising. When some of the still prevalent flaws are eliminated advertising will truly come into its own in India.

OLYMPUS

Centre's Non-Plan Expenditure

THE Estimates Committee of the Second Lok Sabha has recently drawn up a report on the growth of civil non-Plan expenditure. The principal 'finding' of the Committee is that out of a net revenue of Rs 3,372 crores accruing to the Government of India during the Second Plan period, the balance actually available for the Plan is Rs 440 crores as worked out below:

(In crores of Rs)

Revenue receipts accruing to the Centre	3,372
Non-Plan expenditure	2,932
Balance from revenue actually available for the Plan	440

On the assumption that Rs 252 crores were available for the Plan from the anticipated proceeds of revenue at the 1955-56 rates of taxation, the balance, namely, Rs 188 crores (Rs 440 crores minus Rs 252 crores) should be taken as accruing to the Plan from the additional measures of taxation during the five-year period. As the net additional receipts accruing to the Centre from such additional measures of taxation and from better collections from existing sources of revenue comes to Rs 792 crores, it would appear that the balance of Rs 604 crores (Rs 792 crores minus Rs 188 crores) of additional revenue raised has been absorbed by increases over the Plan estimates in the non-Plan expenditure.

The Finance Ministry's note to the Estimates Committee had, however, put forward a different argument as under:

"This inference—the inference that the proceeds of additional taxation levied by the Central Government since 1956-57 have been practically absorbed by the increases in non-Plan expenditure and not utilised for the Plan—is derived from the 'pairing' of the yield from additional taxation with the increases in non-Plan expenditure. A different conclusion would follow if one were to compare the yield from additional taxation with the expenditure on the Centre's Plan financed from revenue and revenue grants for the State Plans. Additional taxes levied by the Centre since 1956-57 are estimated to yield Rs 556 crores during 1956-60. Of this, the States' share is placed at about Rs 70 crores. Thus Rs 486 crores was

available for disbursement by the Central Government during the first four years of the Second Plan. Over the same period the expenditure on the Centre's revenue plan and revenue grants for the State Plans as estimated by the Planning Commission aggregated to Rs 422 crores. Thus one could argue with equal force that nearly the whole of the proceeds from additional taxation available for disbursement by the Centre was utilised for financing the plans of the Centre and the States.

"It will, thus, appear that the conclusion depends upon the choice about the 'pairing' of a part of revenues and a part of expenditures and no conclusive point can be made by such analysis. This is not to deny the increases in expenditures both under the Plan and outside".

The Estimates Committee, however, has rejected the above argument advanced by the Finance Ministry. The Committee has relied, in this connection, on a statement furnished by the Planning Commission. According to this statement, the total revenue expenditure (Plan and non-Plan) during the first four years of the Plan was Rs 2,744 crores against which the total revenue receipts during the period was only Rs 2,620 crores; there was thus a deficit of Rs 124 crores on revenue account. The balance available from the revenue after deducting non-Plan expenditure was only Rs 298 crores. In the circumstances, according to the Estimates Committee, though Plan expenditure to the extent of Rs 422 crores is shown to have been met from revenue, the actual amount of Plan expenditure that could be met from revenue would be only Rs 298 crores (Rs 422 crores minus Rs 124 crores). On the other hand, the Committee consider that in whatever manner the revenue may be paired with the expenditure it is obvious that while Rs 420 crores was expected to be available from the current sources of revenue and additional revenue was raised to the extent of Rs 1,644 crores during the full Plan period, the amount available to the Plan would be only Rs 439 crores.

All this seems to be a case of juggling with the figures, and the whole thing is rather confusing. It would, however, appear that there is some valid point in the Finance Ministry's argument, particularly on the score of revenue grants made by the Centre to the States, to 'others' and to local authorities. An aggregate of such revenue grants during the Second Plan period comes to Rs 865 crores; this figure is derived from the Economic Classifications of the Central Budgets. Of course, the larger part of these grants should have been in the category of "statutory grants" which are not related to the Plan. But it may be broadly estimated that such revenue grants as have been made for the Plan schemes plus the Centre's

revenue plan expenditures should have accounted for about Rs 600 crores during the five-year period. If to this is added an aggregate of Rs 154 crores by way of savings on revenue account available for the capital budget during the period, something like Rs 750 crores should have been available for the Plan. In which case, the additional non-Plan expenditure would appear to be substantially less than what the Estimates Committee has estimated it to be. If this inference is correct, it would mean that the additional non-Plan expenditure may not have been significantly higher than what would be justified by a normal rate of growth of such expenditure. It would be rather an exaggeration to say that there has been an abnormal growth in non-Plan expenditure in the absence of agreement on what should have been a normal growth in such expenditure.

The Estimates Committee has, no doubt, recognised that the bulk of the increase in non-Plan expenditure over the amount envisaged by the Planning Commission is accounted for by Defence, statutory grants to States, debt services, increases of an accounting nature, such as transfers of certain items of revenue to capital account and write-back to revenue of capital losses and capital expenditure incurred in the past, and that expenditure on these items may not be susceptible of very close control. But the Committee believes that close control on expenditure should be possible on (i) non-Plan developmental expenditure, (ii) tax-collection charges, (iii) civil administration, (iv) administrative expenditure under developmental heads, and (v) administrative expenditure under Civil Works and Miscellaneous.

As regards (i) above, that is, non-Plan developmental expenditure, the estimated actuals for the entire five-year period is Rs 443 crores as against the expenditure of Rs 350 crores assumed in the Plan. The Committee asks why there should have been an excess of Rs 93 crores in such expenditure. Here the Committee does not seem to have considered that although the increase in such expenditure is outside the Plan, it is still developmental expenditure and, as such, not undesirable; that the price factor may have partly accounted for the increase in money expenditure; and that there may have been some sudden need for developmental expenditure not originally visualised in the Plan. So long as such expenditure is for developmental purposes, there should be elbow room for meeting sudden and unexpected needs such as port development if congestion develops or if there is a sudden increase in overseas demand for iron or other ores. A strait-jacket approach to non-Plan developmental expenditure would, therefore, be hardly realistic, but this aspect has been ignored by the Estimates Committee.

As regards (ii), that is, tax collection charges, the Committee's view is that there should be scope for some reduction in them. It has been worked out that the cost of collection as a percentage of the collection varies from 2.03 per cent to 2.34 per cent in respect of income and allied taxes, from 1.91 per cent to 2.17 per cent in respect of customs and excise duties and from 2.38 per cent to 2.78 per cent in respect of total revenue. The Committee has further noted that the percentage cost of collection tends to rise though one would have expected naturally that it would go on decreasing with the increase of tax revenues. As against this, the Government's view is that with the emergence of an integrated scheme of taxation, widening the scope of the various tax measures, and also with the growing need for plugging loopholes and preventing evasion, the tax collection charges have inevitably to go up and that a part of the increase is also attributable to the normal increments, increase in emoluments of low-paid employees and the effect of Pay Commission's proposals common to other Departments.

As regards the other heads pertaining to administrative expenditure, the Estimates Committee has stated that the increases are of considerable magnitude. Here, again, it has not indicated what should have been the normal rate of growth of such expenditure. Especially when, in the context of planning, administrative expenditure has a developmental import, it would not be fair to assert that the increase in such expenditure has been wholly abnormal. So long as there is no separate record of the expenditure on administration included in the cost of developmental activities, no hasty judgement is possible. If the Committee's suggestion that the total administrative expenditure be classified under broad heads such as administrative services, tax collection, developmental and social services separately under Plan and non-Plan heads and included in the Explanatory Memorandum on the Central Budget can be implemented, it will be very good indeed.

Problems of Cotton Industry

THE cotton textile industry, has in the last few years, presented a picture of abject confusion in its affairs. No two years have been alike in the prospects they indicated for the industry. Harassed by overproduction at one time and insufficiency of raw cotton at another, the progress of the industry was uneven and halting. Industrialists had to incur unprecedented

loss caused by accumulation of stocks. Mills had closed being unable to face up to the prospect of unrewarding production. Consumers have felt the pinch of rise in price that became inevitable with increased production costs. 1959 did not bring in any mitigation of the uncertainty under which the industry has been struggling. Prospects ahead do not appear any the better. For it is one chorus of unmitigated concern that is voiced by the employer class in the industry. Mr E. J. M. Leigh, presiding at the Thirtieth Annual General Meeting of the Shareholders of the Buckingham & Carnatic Company Limited, has reviewed the fortunes of the industry during 1959 in the course of which he has also shed considerable light on the problems that plague the industry and which have to be solved to put the industry on sound and healthy lines.

1959 was according to Mr Leigh a year of mixed fortunes for the cotton textile industry, a dull first half being followed by hopeful trends in the second. Exports were at a low ebb in the early months of 1959 being explained by unfavourable market conditions and particularly the competition offered by Red China and Japan. While this released more quantities for internal consumption, increased internal offtake failed to materialise in view of the rise in cost of living brought about by high food prices. The industry according to Mr Leigh also experienced dislocations in operations caused by restrictions placed by the Government on import of cotton required for the production of finer varieties toward which there has been a decided shift in consumer preference. Broadening export demand combined with setback received by the Japanese textile industry and recession in Chinese exports, gave Indian textile industry the opportunity to push up its foreign sales, in the second half of 1959. Exports for the whole year totalled nearly 790 million yards. Mr Leigh has expressed the view that were it not for the inordinate delay of the Government in issuing import quotas even on the restricted basis, the country could have gained more foreign exchange through larger exports.

Looking to the immediate future, there is hardly anything that is encouraging. Hopes of exceeding the 1959 exports and reaching the 1000 million yard mark have been rudely shaken by the sharp fall in the estimated cotton crop for 1960. After two successive phases of revision, latest estimates have finally placed the cotton crop at nearly 37 lakh bales. According to Mr Leigh, shortage is concentrated on those types of Indian cottons on which the bulk of the country's cloth exports are based. The adverse effects on exports will be keenly felt since conditions in foreign markets offer opportunities for consolidating gains already made. It will be even more disastrous, if consequent on the rise that

has taken place in the price of cotton, export markets were to shrink further. For, one inevitable sequel to fall in cotton crop has been a sharp rise in the prices of cotton, which at one time even threatened to get out of hand. While speculative elements have been more or less weeded out, the impact of the actual fall in production continues to be reflected in current cotton prices and could be countered only by increase in physical availability of supplies. The Government's assurance in this behalf should be acted upon by arranging for bulk imports.

Over and above the rise in price of cotton, the industry is, by virtue of the recommendations of the Textile Wage Board, faced with a rise in the wages to be paid to workers in the industry. The Board has recommended a flat increase at the rate of Rs 8 per month for all workers of Bombay city, Ahmedabad, Nadiad, Surat, Phagwara, Hisar, Delhi, Modinagar, Calcutta, Madras State and Bangalore. For all other areas an increase at the rate of Rs 6 per month has been recommended. A further increase of Rs 2 on a uniform basis, has also been recommended from 1 January 1962. The recommendations of the Wage Board, it has been calculated, will impose a fresh financial burden on the industry to the tune of Rs 9 crores per annum from 1960 which will further rise to Rs 11.25 crores two years hence when the extra increase recommended by the Board will take effect. While no decision has yet been taken on the Board's recommendations, there have been signs of troubles in store for the industry from the side of labour, who would not brook anything that would delay implementation of the those proposals which relate to increase in wages payable to workers. The employers have genuine misgivings about the implications of accepting the recommendations of the Board. Mr Leigh himself is of the view that the findings of the Board are capable of different interpretations and therefore he wants an authenticated interpretation of the Wage Board's recommendations to be obtained by the Central Government.

In the light of these developments, namely the anticipated shortfall in cotton crop and the troubles brewing over the implementation of the Wage Board's recommendations, the prospects for the cotton industry during 1960 appear rather bleak. As Mr Leigh has observed, the most strenuous efforts will have to be made if even last year's figures of about 790 million yards in exports is to be achieved in 1960.

So far as the Buckingham & Carnatic Company Limited is concerned, it has remained away from the general trend in the textile industry. Mr Leigh has reported record sales at over Rs 10½ crores which reflects steady demand for the wide range of the company's products.

No Further Increase in Output

HECTIC conditions characterised trading in the jute markets during the past few days. The main reason for the sharp rise in prices continues to be the apprehensions about a shortage of jute not only in the current season but also in the next season. Even though it is as yet too early to assert that the next jute crop will be small, the fact dry weather conditions continue to prevail has encouraged the speculators who base their calculations on a shortage of raw jute. If there is no early improvement in weather in the growing areas, shortage will be too mild a term to describe the resultant jute situation: there will be a veritable jute famine.

A crisis in raw jute supply in September is deemed a possibility by the IJMA which has now decided to defer the further unsealing of looms from 1 June. In a Press Note issued on 11 May, the IJMA has mentioned the factors that have weighed with it in its deferment decision:

Owing to the lack of rain since that time (9 April when the IJMA announced its decision to permit its members to unseal an additional 1% of their looms with effect from 1 May and indicated that a further 1% or 1½% would be unsealed from 1 June) it is now evident that next season's jute crop will be late and although, given rain in the near future, it is hoped that the eventual size of the crop will not be materially affected, the Association nevertheless thinks it essential in present circumstances to defer the further unsealing of looms from the 1st June.

The Association is also considering the desirability of curtailing the production of jute manufactures from June or July onwards to such an extent as will ensure that the available supplies of raw material will last until new crop jute is received in quantity by the mills. In the interests of overseas buyers, of the country's foreign exchange earnings and of the jute mill industry itself, it is hoped that such a course of action will, not be necessary, but it will be generally agreed that from all angles a policy of controlled and gradual adjustment of production is

preferable to a crisis in September involving the total closure of mills.

Provided that the new crop proves a satisfactory one, the Association will aim to restore any cuts in production that may have been made and to continue its policy of progressive unsealing of looms from October 1960.

So, everything now depends on the weather conditions in the next few days. Even if the rains come a bit late than usual the crop can still be plentiful; but if the rains are inordinately delayed it will be indeed a serious matter for the world of jute. Even if Weather takes a prominent hand in the proceedings, it is up to those in the world of jute to ensure that raw material shortage, even if it is acute, in one season does not completely upset the overseas market. Somewhat higher prices are inevitable but the foreign consumer should be able to feel confident that the situation is not exploited by speculators to extract unduly high prices. In this light, the latest IJMA action is to be welcomed. The indication that mills may be asked to curtail production is a clear warning to the speculators in raw jute.

It is also gratifying to note that the East India Jute and Hessian Exchange has taken the view that a position of emergency prevails in the jute trade and industry. Heavy margins have been imposed on the May delivery. With effect from 12 May an additional slab of special margins have been imposed on trading on the basis of marginal price levels. The margins are Rs 51 for hessian and Rs 134 in case prices of hessian 40 x 10 cz May and B Twills May are Rs 51 or more and Rs 134 or more respectively. For August delivery the special margins will be Rs 23 for hessian and Rs 50 for B Twills in case prices are Rs 50 or more and Rs 132 or more. In the case of raw jute for September the special margin will be Rs 25 per maund in case closing price is Rs 41 or more. Further, maximum prices for August Delivery in goods and September Delivery raw jute have been fixed as follows: Hessian Rs 51, B Twills Rs 134 and raw jute Rs 43.50. These rates will be in force from 12 May to 31 July 1960.

Prospects

LATEST export figures revealing larger shipments of tea and an all-round improvement in domestic consumption have encouraged the Tea trade to view the future outlook for the commodity with moderate optimism. In this context, it is thought that the 1960-61 season for North-Indian teas should make a satisfactory start, especially in view of the fact that the new crop may be delayed by a few weeks due to drought conditions prevailing in several growing areas

and the possibility of the crop being damaged.

The smart rise in exports to outside markets, during the period from July 1 last year and the middle of April this year, was mainly due to the substantial buying by the Sudan and Irish Republic. The purchases by these countries were sufficiently larger to offset the effect of the smaller off-take by Britain, Russia and Persian Gulf countries.

In respect of domestic consumption, it is generally felt that, if prices are not allowed to rise too much, it will grow much higher. In the context of the growing competition for Indian tea in world markets, it is recognised by concerned interests that the great potential of domestic market with a rising population should be fully explored. Once this is successfully done, Indian tea need not worry about its fate in markets abroad.

According to trade sources, stocks of tea in Calcutta, at the end of April 1960, amounted to 277,550 packages as compared to 294,994 packages at the close of April last year. Out of this, 164,928 packages were held in public warehouses and 112,632 packages in private warehouses. The corresponding figures for the end of April 1959 were 200,913 packages and 94,081 packages respectively. Besides, there were 208 packages of tea afloat as compared to 2,000 packages on the same date last year.

In the Internal Sale held in Calcutta this week, offerings were 23,095 packages of Dusts. Demand was good, but less active than in the previous sale. Orthodox dusts met with fair enquiry, but genera-

G. S. SUNDARAM,
Secretary.

lly sold at 2 nP per pound below last rates, except for the plainest kinds which often inclined dearer. Legg-cut Dooars descriptions were well supported although easier by 2 nP to 4 nP per pound.

Medium CTC teas came to a lower market, the brighter kinds registering a decline of about 6 nP. The poorer teas were 8 nP easier and sometimes withdrawn without a bid. The best CTC descriptions were irregular and lower. Following rates were quoted: Medium Dooars Dust Rs 1.98 to Rs 2.08; Medium Assam Dust Rs 1.34 to Rs 2.06; Medium Assam CTC Dust Rs 2.10 to Rs 2.28 and Best CTC Assam Dust Rs 2.40 to Rs 2.75. Also, 337 packages of Leaf grades were offered for internal consumption. There was a good demand.

In the Cochin market, offerings were 1.4 million pounds. Quality from all districts showed a further seasonal decline. There was a good demand for all teas with the exception of high-grown teas. High-grown Broken were virtually neglected and the majority were withdrawn without bid. Similar Fannings met with a limited demand at easier rates. Good Mediums and Mediums declined by 10 to 15 nP, while low-medium teas received better support and were easier by 5 nP to 10 nP. Plain kinds were sold irregularly 5 nP lower. There was better enquiry for black leaf descriptions, which were the strongest feature of the sale. Whole Leaf grades were firm. Following rates were quoted:

ed;—Low Medium Rs 1.80 to Rs 1.85; Medium at Rs 1.85 to Rs 1.95; Good Medium Rs 1.95 to Rs 2.10 and Quality Rs 2.20 to Rs 3.00.

Tea shipments from Cochin, during the first quarter of the current year, have registered an increase of over 4 million pounds as compared to the figure for the same period of last year. Against 16,500,191 pounds shipping during January-March 1959, the quantity exported in January-March 1960 totalled 20,530,367 pounds.

In the Colombo market, the quality of the offerings was irregular with some invoices from western districts declining. There was a strong demand for high-grown Dimbula Broken Orange Pekoes and, after opening firm, the market hardened appreciably with prices irregularly dearer. Coloury mediums were fully firm. Low-grown continued to sell well at fully firm rates. A feature of the sale was the improved demand for better medium and high-grown BOP Fannings, which rose by 10 to 20 cents per pound.

In London auction, offerings consisted of 30,304 packages. The market continued to rule steady and prices followed previous rates. Useful liquoring teas were sold above valuation, while buying of the thinner liquoring and plainest descriptions was restrained. Traders feel that, from now on, the tendency for plain tea prices to go down when quality teas go up will not be as marked as in the past,

since plain teas are now less plentiful.

Tea stocks in London, as on 29 April 1960, were 158.53 million pounds as compared to 159.70 million pounds in the previous week. The total amount to be landed on the same date was 9.06 million pounds. Total afloat was 16.15 million pounds including from Calcutta 3.95 million pounds; from Chittagong 136,000 pounds; from Cochin 1.40 million pounds; from Ceylon 6.96 million pounds and from other Ports 3.70 million pounds.

Cotton Futures Firm

THE cotton futures market in Bombay which started on a sluggish tone depicted a firm tendency toward the close of the past week. The market moved within narrow limits for the major part of the week as interest was at a low ebb due to the absence of fresh bull support. But the persistent rumours that the Government of India might enhance the "ceiling"

prices for Indian Cotton for the 1960-61 season commencing from next September caused a smart rise in prices. Report of allocation of the balance of Indian cotton quotas to mills also lent fresh support to the market. The trade has been urging the Government for the past few months to increase the "ceiling" since the present "ceiling" levels fixed years ago are thoroughly unrelated to the prevailing conditions. The Textile industry and trade also appealed to the Government for lifting control over cotton, but it appears that the later instead of relaxing control, may tighten it up next month. A similar proposal for augmenting the floors by about 50 per cent per candy is also reported to be receiving sympathetic attention of the authorities. The rates for the Jharilla August after early dealings upto Rs 779.00 dropped to Rs 774.00 and finished around Rs 774.75.

SPOT MARKET:

The spot market at Sewri has evinced somewhat moderate interest in Laxmi, Kalagin, Jayadar, Digvijay CO2, L147 and Vijay following the release of some quota to the needy mills by the Textile Commissioner. Among the imported styles Jinga, Busoga, Sudan, Bukhedi, US cotton below 1" and Pakistan styles found favour with the spinners.

Total quantity of cotton permitted for import during the current year totals 1,220,000 bales. The

Indian Finance

14 May 1960

total quantity licenced and actual arrivals from 1 September last year till 16 April are as follows:—

Variety.	Quantity licenced.	Actual Arrivals.*
Egyptian	116,139	146,089
Sudan	72,697	58,384
East African	115,607	64,404
Peru, Pakistan		
& others	100,458	45,688
US cotton	295,063	50,795

*Includes quantity licenced in the previous season.

COTTON CONSUMPTION:

From the available figures a declining trend in the consumption of Indian cotton is clearly discernible. For example the consumption in March sharply dropped to 13,857 bales as against the 369,175 bales in February. It is alleged that the Textile Commissioner's directive to the Indian mills to restrain consumption of indigenous growth and other effective measures are responsible for this deep decline. Assuming that the present trend continues, the consumption of indigenous cotton during the second half of the current season will come about 21 lakhs while the actual consumption in the first half of the season totalled 23.45 lakh bales.

FOREIGN COTTON:

The restraining measures adopted by the Textile Commissioner in the consumption of Indian Cotton naturally reflected in the increased demand for imported varieties. The total consumption of foreign styles in March shot upto 54,107 bales from 45,583 bales consumed in February. It is also estimated that the current rate of imported varieties consumption may be pushed up further following the heavy arrivals which might start soon and due to the liberalisation in issuing import licences.

NEW YORK:

The movements in the New York futures market were more or less quietly steady, prices recording small gains during the early part of the week. The total exports during the week ended 28 April shot upto 317,158 bales. According to the report of the Commodity Credit Corporation, entries into the 1959 loan for the last week of April were 2,622 bales stepping up the season's total to 334,933 bales. The purchases made by the CCC under Choice 'A' programme for the week were to the tune of 2,559 bales. The informations divulged by the Bureau of Agricultural Economics of the United States reveal that mid April parity was 39.02 cents which indicates a 26 cent rise from the mid March parity.

LIVERPOOL:

Trading in the Liverpool futures market maintained a quiet tone throughout the week under review with prices fluctuating within a 10 point range. The May premium over July fell to 25 points. The Sudan Contract moved upto 100 points in conformity with the advance in the actual position.

Firmer Tendency in Tin Prices

TIN prices have been developing a firmer tendency during the past few weeks. On the London Metal Exchange, the rate has moved up to £791 from £783 a ton quoted at the beginning of last week. This is mainly due to the decision made by the International Tin Council to end the Buffer stock manager's authority to operate in the £780 to £830 a ton price range from 1 July, 1960. The Buffer stock manager shall only be allowed to sell the commodity from his stock when the price is above £830 a ton. In the past two years, he has been able to sell at over £780; and this is one of the reasons why the market has remained between £780 and £790. But the Buffer Stock manager has sold such tin at these levels that his remaining supplies are probably small. The ITC, therefore, appears to be resigned to the fact that the market will have to rise, especially when the scope for increasing supplies from normal trade sources is small.

Many operators on the London Metal Exchange are now afraid that serious shortage of tin may develop over the next few years. This fear is based on the fact that the world's remaining tin deposits are being used up and they are not being replaced. In this respect, Bolivia has already been forced to inform the Council that it is unable to fill its export quota. Elsewhere in the world, too, many dredges are working and will soon be exhausted. This is not a short-term problem; but something which can be progressively worse over the year-end.

Sugar

Sugar markets are ruling quiet despite brisk demand for summer and marriage seasons, as supply position is reported to be satisfactory following a further release of 1.85 lakh tons by the Government of India. But, despite the fact that there are no releases for free sale in Uttar Pradesh, the Punjab and Bihar, the commodity is available in the open market at Rs 115 per bag against the controlled rate of Rs 108.50.

Crushing operations, which are continuing in a few factories in the Moradabad division, are likely to close down by the middle of the month. In this connection, it may be added that the sharp increase in production by over 3 lakh tons during the current season so far

has been greatly helpful in easing the supply position and it has not been possible for the retail trade to rig up prices as it did about this time last year. It would appear, however, that the trend of consumption has been significantly upward and that the total may even be about 22 lakh tons during the 1959-60 season, while the output is expected to be well over 23 lakh tons. In the light of the latest developments, it may not be possible to increase the carry-over into the next season.

Gur

Gur prices have fallen slightly due to poor demand. In the Hapur market, daily arrivals averaged 150 maunds and that, too, out of stocks retained by the producers. In the Muzaffarnagar market, Chakku has eased by 25 nP to 16.75 a maund.

Khandsari

In the Hapur market, Khandsari prices are ruling steady due to brisk demand from the consuming areas, mainly the South, Saurashtra, Kutch and Gujarat.

Loading facilities are also reported to be satisfactory.

In the Muzaffarnagar market, however, prices have declined by about Rs 2 a maund due to slack demand. Daily arrivals averaged 300 to 400 maunds. Superior quality is quoted at Rs 38 to Rs 41 a maund, according to quality.

Foodgrains

The Hapur Foodgrains market remains depressed. Although arrivals of "rabi" grains are still small, demand is slack. The Rice market is quiet, thanks to easy supply position and heavy stocks both with the trade and the Government. Gram has eased by about 50 nP a maund on quieter advices from the Punjab where new grain is coming to the markets. Maize and Bajra are now out of the market and the stocks are lying flat.

The Punjab, which is popularly known as the granary of Northern India, has registered a slight fall in the production of Wheat crop during the 1959-60 season. The main reason for the fall in output is stated to be the late receipt of

winter rains, which adversely affected the yield per acre.

The total area under wheat in the State is estimated at 5,250,000 acres as against 5,237,000 acres in the preceding year. On the other hand, the total outturn is estimated at 20.97 lakh tons as against 21.22 lakh tons in the previous year.

So far as the Gram crop is concerned, the total area sown is estimated at 6,231,000 acres as against 6,324,000 acres. The decrease in area is attributed to unfavourable climatic conditions at the sowing time. The total production is estimated at 18.63 lakh tons as against 20.09 lakh tons in the preceding year.

Shellac

Conditions in the Calcutta Shellac market have continued to remain firm, thanks to good demand from overseas buyers and the reports of an increase in shipments last month. According to the figures released by the Indian Lac Exporters' Association, ship-

ments in April are higher at 39,839 packages as against 35,663 packages in March. These comprise 26,418 packages of shellac (18,327); 10,800 packages of seed-lac (14,871) 867 packages of but-tonlac (630) and 1,754 packages of other varieties (1,835). Figures shown within brackets were the shipments made in March.

Coffee

At the last Coffee export sale of the 1959-60 crop, held at Mangalore, the Coffee Board exposed 867 tonnes out of which 741 tonnes were sold and 126 tonnes withdrawn. The following were the range of prices: Plantation A Rs 232.10 to Rs 248.10; Plantation B Rs 221.50 to Rs 232.15; Plantation Triage Rs 180 to Rs 190.35; Arabica Cherry Flats Rs 186.70 to Rs 195 and Plantation Parchment Flats Rs 132.30 to Rs 132.40.

The following types and grades of coffee have been released for internal consumption in the Pool

sales held at Madras to the whole-salers (quantity in kilos and prices

Gold & Silver

The decision of the Maharashtra Government to approve of the heavy margins on purchases, suggested by the bullion authorities, exercised a bearish effect on bullion prices. The Government's approval brought into force a margin of Rs 3,000 per bar on outstanding purchases in the Jeth contract in silver. Similarly, purchases in the Jeth contract in gold will bear a margin of Rs 60 per tola. The Government have also accepted the suggestion that the delivery of spot metals against the maturing Vaisakh contracts be postponed further by ten days.

The setback in prices has also been aided by the falling demand for the ready metal. Reports of large receipts in Delhi and Calcutta brought forth heavy selling pressure from those centres in the Bombay market. Gold receipts, both fine and unrefined, in Bombay aggregated as much as 17,000 tolas as against an offtake of only 3,000 tolas. Silver also amounted to as heavy as 46 bars as compared to an offtake of only 5 bars.

Thus, the yellow metal has dropped as much as Rs 5.69 from the top level of Rs 138.69 recorded only on last Thursday, May 5. Likewise, silver dropped by Rs 3 to Rs 227 from Rs 230 per bar. The sharp fall in these metals has been mainly attributed to the end of the busy season as also the marriage season. The monsoon will also set in the next couple of weeks and will lead to the cessation of demand for precious metals during the next three months.

Art Silk Yarn

The Art Silk Yarn market has continued to be buoyant and specially the imported goods have recorded a steep rise during the past week. Bemberg Cupressa for June delivery, which recorded a low of

Rs 1878 in the previous week, shot up to Rs 2,068 per 700 kilos before terminating at Rs 2,050. This spectacular rise in price is attributed to the shortage of goods in several imported deniers, while certain bull operators have, no doubt, made a successful attempt so far to dominate the market. In view of the rising trend of the market, consuming centres have also been frantically buying their requirements, while expectations that arrivals will be small have emboldened the bull traders to accumulate lines in June delivery. The sharp rise in imported goods has given fillip to prices of Indian rayon yarns also.

Oils & Oilseeds

On the Bombay Oilseeds Exchange, prices showed a mixed trend. While castorseed and linseed suffered a moderate setback, the overall tendency in groundnut remained firm. Trading in cottonseed was listless.

In the Castorseed section, fears, that the burden of spot supplies might prove heavy, tended to deter the buyers from being aggressive. The heavy discount of about Rs 10 per candy indicated for ready castorseed, grown in Bihar and Uttar Pradesh, induced the operators to believe that those qualities might constitute the bulk of the offerings. Although a section of the operators claimed occasional deals in castor oil with the UK and the USA, the overall export outlook was not sufficiently encouraging and hence support was generally cautious. Castorseed was quoted at Rs 32.75 and Castor Oil, commercial quality, at Rs 17.69.

Apprehensions of heavy delivery characterised trading in the Linseed section. Operators felt that the bulk of the supplies lying in Bombay might be tended against the maturing contract in view of the prevailing heavy discount for

ready linseed. Although some shippers claimed demand for linseed oil from the UK at about £108 per ton for May delivery, the support was halting. Linseed ready was quoted at Rs 31.62 and Linseed Oil at Rs 15.94.

Trading in the Groundnut section was featured by a moderate improvement in the supply position. With only a few weeks left for the start of the monsoon, stockholders and growers were inclined to adopt a more selling policy. With the result, the inflow tended to increase, particularly in some of the producing areas. The weakness in overseas prices of groundnut extraction also contributed to the easier tendency in prices. Groundnut Bold quality was quoted at Rs 44 and Groundnut Oil at Rs 23.19.

The weak sentiment in the Madras seeds and oils markets on Wednesday is in a way ascribable to the Indo-US wheat agreement signed last week in Washington by India's Food Minister Mr S. K. Patil and President Dwight Eisenhower. There is a fear that commodities prices may stage a decline. Whether there is anything genuine in this fear, has to be proved yet, but there is the weakening influence by this food-grains deal which today put the buyers to considerable hesitation against transactions. Also a general recession in price levels of commodities other than oils and seeds is anticipated preventing bold bids for the oils and seeds transactions.

The following prices were obtained on Wednesday in the closing market of the groundnut and groundnut oil, castor oil, gingelly oil, gingelly seeds and groundnut cake.

Groundnut oil, per candy of 500 lbs ex-Madras godown expeller Ready 3 per cent F.F.A. Rs 391 to Rs 391/8. May Rs 392; June Rs 393/8; July Rs 394/395. Groundnut kernels per candy of 531 lbs; Coromandel Rs 200; Peanut Rs 192.

Arrivals of groundnut were lower on Wednesday to the region of merely 50 tons. Throughout last week and upto Tuesday this week, the local daily arrival averaged about 100 tons of summer crop with small winter crop unloading. In the Southern points the arrivals of groundnut continued to be maintained between 350 to 500 tons daily. Price of groundnut in Southern centres remained firm in the neighbourhood of Rs 200/202 per candy.

Castor Oil: Per candy of 500 lbs Tirupattur Rs 310. Coconut oil per tin Rs 39/8. Gingelly oil per maund Rs 23. Gingelly seed (1st sort ex-tremely in short supply) nominally priced at Rs 85/86 per bag and 2nd sort was today quoted at Rs 76/77. Groundnut cake was sold at Rs 26/12 per bag of 160 lbs with gunny. It was hard to obtain groundnut oil at £121/10 for UK and also cake for £32/10 per ton. Burma rate was unquoted.

The slightly easier conditions during the end of last week in groundnut firming up rapidly from Monday onward. Madras City had steady arrivals of summer crop.

But, the oil position weakened the to reluctance of Calcutta vaanspathi interests to continue buying at the rate quoted last week. Brisk bull covering in Bombay of groundnut kernels was responsible for the stiffening of the kernels quotations. Exporters did not support this price rise and the groundnut registered a loss between Rs 20 to Rs 22 per ton but oil gained Rs 35/36 per ton.

In groundnut, the price per candy was Rs 185 per summer peanut and Rs 195 for superior last Friday. The same quotations continued till the end of the week. But Monday's rates for these gained ten rupees per candy. Coromandel closed yesterday at Rs 200 and peanut at Rs 192 and the same rates continued at today's closing too.

In groundnut oil, the bazar demand was fulfilled by the local power-driven chekku or rotary crushers. They have been quoting at far less rate than expeller varieties. Their rate is Rs 15 lower than the expeller quotations. Therefore, local bazar interests sought only these quantities which came in full to meet with these domestic demands. Calcutta factories took up nearly 1,200 candies both from Madras and Southern millers at the usual price. The oil price fluctuated a little like this: Last Friday Ready per candy was quoted at Rs 393; May at Rs 394/8; June Rs 393/8 and July Rs 397. Saturday's rates for the oil were: Ready Rs 395/8; May Rs 395/8; June Rs 397/8 and July Rs 400. During the beginning of the week on Monday the oil prices were: Ready Rs 394; May Rs 395/8; June Rs 397; July Rs 398. On Tuesday the prices of the commodity came lower down like this: Ready Rs 391/8; May Rs 393; June Rs 394; July Rs 395. The closing price of oil for different positions today showed a small fluctuation towards lower level. Last week spot oil was bought by both Bombay and Calcutta interests at Rs 392 per candy.

The June valda had good business in groundnut oil. The price of Rs 393/8 quoted middle of last week improved Rs 397/8 by the end of the week. The week began also with June at Rs 397 per candy, but the quotation declined to Rs 394 yesterday, a decline of Rs 3 per candy. Today the quotation came down still further to Rs 393/8.

The July valda opened almost towards the end of last week and activities did not count much. Movement of the groundnut crop should have a say after June in this position. Transactions therefore were based on this uncertain trend. Even otherwise the July position began being quoted at Rs 397 per candy on the opening day and went upto Rs 400 by the close of last week. This week the position began at Rs 398 lower than last week's closing. It came down Monday still lower down to Rs 395 at which it continued today.

Hides and Skins

This week tanned cow hides were steady in arrivals and they were well absorbed. United Kingdom had reduced its offtake and the negotiations made were of fifths in all

weights. Since 10/12 lb weights was in good demand, the market remained firm and U.K. had to pay at least a penny more for lb.

Locally inferior fifths was in good demand with the resultant unaltered price which United Kingdom dealers were not prepared to pay. In tanned buffalo hides there were meagre arrivals. Price of this variety was firm. In both cow and buffalo calf skins demand was poor and foreign export business could not be transacted owing to locally high prevailing prices which overseas buyers were not willing to offer.

Even in tanned skins only 2,000 goat skins were cleared leaving about 6,000 pieces in the market and in sheepskins the selling was limited to only 16,000 pieces leaving over 40,000. Goatskins had limited overseas enquiry. The price quoted was 3d lower. It was a sellers' market as buyers were not forthcoming. Prime tanned sheepskins continued to be in good demand and the price offered was higher from 6d to 1d per lb. Medium quality sheep skins were not in demand.

The following are the prices of tanned skins per lb:

Tanned cow Prime 5/5 1/2 lb: Rs 3 to Rs 3.25; 6/6 1/2 lb Rs 2.75 to Rs 3.00; 8/8 1/2 lb Rs 2.31 to Rs 2.37; 10/12 lb Rs 1.94 to Rs 2; Buffalo: 12/13 lb Rs 1.44 to Rs 1.62; Buff Calf 1 1/2 lb Rs 3 to Rs 3.25; Cow Calf 1 1/2 lb Rs 4.62 to Rs 5; Goat Prime 5 1/6 lb Rs 10.25 to Rs 10.50; 8/9 lb Rs 9/12 to Rs 9.37; Sheep Ordi: 6/7 lb Rs 8.50 to Rs 8.75; Sheep Prime 6/7 lb. Rs 10.62 to Rs 10.75.

The following were the prices of raw skins per 100 with lastweek's prices given in brackets: Bangalore Raw Goat skins Rs 530/600 (Rs 590/630) White Wool Sheep Rs 600/650 (Rs 630/660); Black Wool Sheep Rs 460/500 (Rs 460/500); Bezvada Raw Goatskins Rs 550/585 (Rs 575/585); He Sheep Rs 620/635 (Rs 600/610); She Sheep Rs 470/485 (Rs 500/510).

During the month of April exported skins from Madras Port was 6,181 bales to U.K., the Continent, U.S.A., Japan, Yugoslavia, Aden, Australia and New Zealand.

St. John's Church, Calcutta, is 190 years old. To preserve the character of this historic building it was necessary to replace the old roof with a light weight roof of similar design which could be supported by the old walls. Prestressed concrete provided the answer.

The old 1 ft. 6 in. thick, heavy roof (dead load 225 lbs./sq. ft.) of tiles and lime terracing on timber burghas was replaced by a precast prestressed concrete light roof (dead load of 40 lbs./sq. ft.).

The job was completed within four months.

The East India Distilleries and Sugar Factories Limited

Problems Facing Sugar Industry—Expansion Programme

Chairman, Mr C. R. Srinivasan on Taxation Problems

Presiding over the Sixty-second Annual General Meeting of the Shareholders of the Company held on Friday, the 29th April, 1960, Mr C. R. Srinivasan, Chairman, said:—

Gentlemen,

The Accounts of our Company for the year ended 30th September 1959, together with the Directors' Report thereon were posted to you on 4th April and with your permission I shall take them as read. You would have noticed with pleasure that the Company continues to prosper and against a capital of £750,000 our Reserves now stand at over £1,500,000. The Accounts have been presented in the same form as hitherto and when read with the notes published along with them, they provide all the information needed to assess the working of the Company during the year under report. I am of course at your disposal if there is anything more you would like to know.

There was a suggestion made at the last Annual Meeting that we might send out along with these accounts those of the Company's main subsidiary, Parry & Co., Ltd. Its results are included in the consolidated accounts now before you at pages 8—11 and since we are a sterling concern registered under the English Act, the accounts as presented have been framed in conformity with the requirements of that Act. Still I gave due consideration to the suggestion made and came to the conclusion that far from enlightening it may tend to confuse shareholders. But I shall be happy to furnish copies of Parry & Company's Accounts on application. I appreciate the natural and understandable desire to assess the value of the purchase of the Ordinary Capital of Parry & Co., in 1956 on the basis of actual results. A study of the Parry & Co., Ltd., accounts however would not disclose the fact that because of the tax benefits arising, we transferred certain industrial and trading interests of Parry & Co., Ltd., to the parent Company. To shareholders who have any misgivings on the advantages of purchase, I am free to give the assurance that our entire investment in Parry & Co., Ltd., has been fully recovered by the return we have already received.

The financial results of the year's working are set out in detail in the Directors' Report and I do not propose to cover the same ground again. There is one point, however, to which I would invite your attention, that is the creation of a Dividend Equalisation Reserve of

£150,000 from this year's profit. This should serve as abundant assurance to shareholders concerned over the maintenance of dividends in the future. In this context, it is but right that I should refer to the subject of Preference Dividends. Section 18 (3E) of the Indian Income Tax Act which was introduced in the Finance Act, 1959 required companies to pay all dividends with tax deducted. Provision was made for the grossing up of the tax where the Articles of Association of the Company provided for the net dividend at the rate stipulated. The Parry & Co., Ltd., Articles contain this provision. The Articles of this Company do not. It was to cover this lacuna that Extraordinary General Meetings jointly and severally of different classes of shareholders were convened late in February. But these meetings were adjourned sine die following the withdrawal of Section 18 (3E) of the Income Tax Act in the Indian Finance Bill introduced on the 29th February 1960. We are awaiting the enactment of the Finance Bill into law before taking up the proposal again to alter the Company's Articles of Association suitably. I am sorry that meantime payment of the final dividend on the Preference Share Capital for the year ended 30th September has had to be held up. I crave the indulgence of these shareholders to bear with us a little longer.

In my speech last year I drew attention to the new scheme of taxing companies introduced by the 1959 Finance Act and I pointed out that although the rate of tax on profits had been reduced to 45% and the Wealth Tax on companies and Excess Dividend Tax removed, the onus for the payment of the tax at the prescribed rates on shareholders' dividends had been thrown on the companies. I said then that what the combined effect of these two imposts would be, was not easy to assess but the results might well be that the total levy on companies would be increased. It gives me no pleasure to record that what I feared a year ago has come to pass. The representations made to the Finance Ministry by the various Chambers of Commerce bear this out. There was general expectation that these representations would yield some results. These expectations have not materialised to any extent. This year's Finance Bill confirms the tax rate on companies' profit for the assessment year 1960-61 at 45%. I am afraid Government have taken a short-sighted view and the conditions for further and fresh capital formation have been

seriously prejudiced. This is unfortunate when the paramount need of the hour is to reinforce the internal resources of the country for the service of an expanding economy.

In the last para of the Directors' Report you would have noticed the statement that the Company is now committed to the erection of a Compound Fertiliser Factory near Madras costing approximately £3 million. It was expected that I would be in a position to disclose to you in detail the arrangements contemplated for financing this major project. I regret these arrangements are still incomplete and I am not in a position yet to give you the full picture. We are on the last lap of our negotiations with Government and various interests concerned and it is not in the interests of the Company to prejudice results by premature disclosures or discussions.

At the same time I can quite understand you would like to know in broad outline how we propose to finance the project. To the extent possible I shall be glad to take you into confidence. We require £3 million to integrate the project and it is proposed to find the whole of it from outside sources. Our plans are to raise approximately a quarter of the total requirements by a fresh issue of Ordinary Shares with a modest premium and the balance we propose to cover by medium term loans partly in India and partly in U.K. so as to cover our exchange requirements.

You are aware that the present capital of the Company consists of 549,950 Ordinary Shares of £1 each and 200,000 Preference Shares of £1 each. Under the terms of our Articles both classes of shareholders are entitled to participate in the rights issue we make. I believe you are equally aware that the shares of the Company are held in two registers one in India and the other in England and shareholders in both countries are entitled to participate in the new issue. On a rough estimate a third of the Ordinary Shares and a fourth of the Preference Shares are held on the London Register. On the attractive terms we propose to offer, I have no doubt, shareholders in this country will snap up all that is offered to them. I hope those on the London register will follow suit and in so doing cover in part our needs in respect of foreign exchange. In all probability we shall be making the new issue of shares within the next 3 months. Only one other point of interest I shall draw attention to in this context

and that is, that on current earnings we shall be able to service the new capital also.

I have so far dealt with the financial aspects of the Fertiliser Factory. It is a major step in industrial expansion that we have undertaken. Naturally you would like to know the reasons which have weighed with us in deciding to go forward. One of the interests transferred from Parry & Co., to this Company is the Fertiliser Department. Primarily there was a tax advantage in so doing but the transfer also cleared the way for a large scale development which your Board felt must be undertaken in this field both in the interests of the Company and the country.

You are aware I have expressed in earlier meetings the need to gear our development to the dynamic requirements of the country. The prosperity of this country is largely conditioned by the way it solves the food problem. The deficit in this respect cannot be covered by bringing new land under the plough but only by intensive cultivation and a progressive increase in the yield per acre. Fertiliser is the answer to the problem and we say it from direct knowledge and experience of its potentials. Our fertiliser business has increased steadily and substantially since 1956 and credit is due to Parry & Company for the way the foundations were laid and developments envisaged.

The expansion would have been even more marked had adequate quantities of nitrogenous fertiliser been available from the Government Pool. A word on how this pool operates will not be out of place. Out of the total nitrogen available from indigenous manufacture and from imports, Government of India make allocations to State Governments in line with their demands. Each State Government then decides on distribution policy and makes allocations to the mixing firms on the basis of this policy. Generally speaking the State Governments with which we work have shown appreciation of the value of balanced fertiliser application and I believe there is a growing awareness of the services which the mixing firms render to the agricultural community as a whole. By these services I refer not only to the supply of balanced mixtures but also to the ceaseless propaganda done through large and experienced selling staff which more than anything else has tended to make the South the most fertiliser-minded zone in the country, with a consequent improve-

ment in our agricultural production vis-a-vis the rest of the country.

It has been obvious to your Directors for some time that if we could persuade Government to allow us the manufacture of a fertiliser containing nitrogen and we are allowed to distribute our own production in addition to what we get from the Government Pool, our fertiliser business would not merely develop on sound lines but also at a much faster rate. Until recently the possibility of the private sector being permitted to enter into the field of nitrogen production was not seriously considered. Fortunately there was a change in the outlook and immediately we took advantage of it.

And finally we succeeded in securing an industrial licence in January this year to establish a factory at Ennore near to Madras to produce 51,000 tons per annum of Ammonium Phosphate. As stated in my circular of the 8th March to shareholders, a contract has been placed for the construction of a new factory at a cost of approximately £3 million. The contractors are Messrs. Simon Carves, Stockport, England, and the contract provides for a turn-key job complete within 24 months of our securing the import licence. This I expect will shortly be forthcoming as our financial proposals including exchange cover are now before Government for approval.

A point of some importance in this context may be referred to here. One of the results of the increasing tempo of fertiliser business in South India is the inevitable increase in the imports of sulphur and rock phosphate. Both of these commodities are imported in bulk, that is to say they lie in the holds of the ship without packing material. Madras Port Trust authorities have made admirable arrangements for handling bulk export cargoes but partly no doubt due to lack of knowledge of the industrial developments and in part I must say due to lack of foresight, there have been no adequate preparations made for the handling of the greatly increased quantities of bulk import cargoes that will be coming through in succeeding years. I understand the various Chambers of Commerce are taking steps to bring to the notice of the Port authorities this pressing need and I confidently hope their representations will not fall on deaf ears.

Before I pass on to the next subject that I propose to cover, namely sugar, may I say a word about our subsidiary, Andhra Fertilisers Private Ltd. You will be glad to hear that the factory is nearing completion and in all probability, we shall go into production from July next. This should provide us a further vantage point in our fertiliser development programme.

In my speeches of the last three years I have sought to rationalize the developments of the sugar industry as they emerged from time to time. These attempts, in retrospect, have proved themselves of

limited value because of the imponderables in dealing with what is essentially an agricultural industry. Uneven production over a period of years is largely responsible for many of the problems posed. In 1954-55 the total production of sugar in the country was 15.89 lakhs of tons; in 1955-56 it moved up to 18.56 lakhs of tons; in 1956-57 production touched 20.29 lakhs tons. In 1957-58 production came down to 19.78 lakhs tons, in 1958-59 to 19.18 lakhs tons. In 1959-60 production has already exceeded the previous year's production up to 31st March by about 3 lakhs of tons and bids fair to close up at round about 23 lakhs, an all time record. Consumption has steadily moved up and is now estimated at round about 21 lakhs of tons. Last year when demand threatened to outstrip supply, control measures were imposed in Northern India while in the South voluntary control was deemed sufficient for the purpose. With the prospects of 1959-60 production not merely covering normal demand but also providing sufficient buffer stocks for the future, I believe the lifting of control lies in the offing.

The problems that face the sugar industry at the moment however arise from the impending application of the price-linking formula for one thing and the incidence of the Tariff Commission's Report on sugar for another. The price-linking formula was announced in 1958 as applicable for the year 1958-59 but the terms of its application are still to be announced. Meanwhile the Tariff Commission was called upon to inquire into the cost structure of sugar. Presumably its findings will qualify the terms of the price-linking formula when applied. The Tariff Commission's Report has just been published together with an announcement that Government of India accept its main recommendations. It would perhaps be premature to express any final opinion on the implications of their recommendations and I assume that an opportunity will

be provided for the industry to make its representations on the report to Government before any positive action, especially in relation to the price-linking formula, is taken by the Government.

There are one or two points arising from the Report which immediately strike the eye and which we have no doubt will be duly canvassed and considered by the industry affected and timely representation made to Government. The Commission has not conceded the claim for any rehabilitation allowance in the fair price they have fixed. Secondly only a 12% return on employed capital has been allowed by way of addition to the cost of production to cover the commitments of the manufacturing units in respect of bonus, interest, dividend, commission, tax, etc. The genesis of their cost structure and the rationale behind their recommendations call for close examination. But one thing is clear. Neither of these recommendations are in line with accepted standards professed and practised by industrially advanced countries in the West. In the new economy that we are building up in this country conflicting interests should be conciliated and co-ordinated if the foundations are to endure. In protecting the interests of the cane grower, it would be unfortunate, if any impression is produced that Government is yielding to pressure. We have set a target of 30 lakhs of tons of sugar production for the Third Planning period and if this is to eventuate, obviously the goodwill and co-operation of manufacturing interests are necessary and they should be given suitable and sufficient safeguards for the service they are expected to render in the build-up of the new economy. So far as the South Indian sugar manufacturing interests are concerned, they have pursued an enlightened policy and have for years, of their own accord, observed the SISMA formula which extends adequate recognition for quality cane at fair price; a

bonus is offered in addition to the price fixed by Government. The price-linking formula now proposed is in essence only a variation of the SISMA formula and the advantage of the latter is that it has proved its value over a period of years. Hasty and ill-considered action may well provoke a train of reactions by no means helpful for the purpose in view. A note of caution is all that I desire to urge at this juncture.

There is only one other point that I shall touch on before I conclude. The expansion which I forecast last year in respect of our Pottery is now being undertaken at our Ranipet Factory where we have decided to instal a third kiln and to effect a number of improvements to the plant already in service including the conversion of the two present kilns to oil-fired burning. The greater part of the cost will be incurred in India and we have received an import licence for part of the items which have to come from overseas and we expect to receive a licence for the remainder in the near future. I am glad to say the whole cost for this expansion of the pottery section will be met from our existing resources.

For the rest a brief review of our operations finds place in the Directors' Report and I shall leave it at that. And now before I close let me express my warm appreciation of the ready and willing co-operation I have uniformly received from my colleagues, staff and labour throughout the year.

I now formally move the adoption of the Directors' Report.

The Director's Report and the Accounts for the year ended 30th September 1959 were unanimously adopted. Mr. R. Venkataswamy Naidu was re-elected to the Board, and the Auditors, Messrs. Lovelock & Lewes, were re-appointed.

N.B. This does not purport to be a Report of the Proceedings of the General Meeting.

Investment Gossip:

CONDITIONS in the stock market continue to be buoyant and Indian Iron is now again leading the uptrend. Besides the purely speculative interest, the market leader also seems to be favoured for prospects of expansion which is now rumoured to include diversification of activities.

Elsewhere in the markets, there have been other impressive price rises and the interim clearing imposed in three shares in Calcutta has not halted the upward march.

The boom is sustained mainly by speculative interests and if the investor is chary of extending commitments, it is because the rise in prices has long ceased to bear any relation to present or even the distant future yields.

It is evident that the big food deal with the US is being interpreted bullishly. The absence of any further curb measures seems to have strengthened the belief that authority's armoury has already been depleted of weapons that can possibly be used to curb speculation on the stock market only.

The present upsurge is generally considered unwarranted but prices are daily scaling new highs. Authority showed itself very much perturbed a few weeks ago when the price levels were comparatively low.

Similar situations in some of the commodity markets are being met with stern measures. In the jute futures market for instance heavy margins and price ceilings have been imposed.

It is undeniable that the outlook for equities is good. Now that the end of the steel shortage in the country is near at hand, engineering companies will be able to go into full production. Increased activity of engineering companies in its turn will stimulate industry in general. A national plan for export is now under consideration and engineering industries which have already made some headway in the export field may be expected to make a good showing.

What applies to Engineering, applies to most industries as well. Even so, the investor cannot afford to ignore the basic criteria while making his investments. It is also incumbent on authority to ensure that the stock market continues to retain its essential characteristics at all times. The present hectic rise in prices does not seem to be

conducive to sustained interest being evinced in equities by the investor. Violent fluctuations will drive investors away from the stock market thereby making it difficult for entrepreneurs to attract funds to industry.

NEW ISSUE NOTES

The Aluminium Industries Limited, Madras, will be issuing 2 lakh right shares at Rs 12.50 per share in the ratio of one share for every four shares held to those shareholders whose names are registered as on 1 June 1960. The amount is to be paid in full on application. Transfer Books will be closed from 21 to 26 June, 1960.

The Pearl Cycle Industries Private Limited, which has been converted into a public limited company, will shortly enter the market for Rs 15 lakhs and offer to the public 15,000 equity shares of Rs 100 each. These shares are stated to have been underwritten by ICICI and the Investment Corporation of India. The new factory is expected to go into production in the near future.

Subject to the Government sanction, Blue Mountain Estates Limited has proposed to increase the authorised capital from Rs 1 crore to Rs 2 crores by the creation of 50 lakh shares of Rs 2 each. The proceeds will be utilised to meet the costs of the expansion programme of the company.

It is learnt that the equity issue by J. K. Rayon has been over-subscribed by four times. In the circumstances, the allotment of shares will be made in consultation with the Bombay and the Calcutta Stock Exchange authorities.

Subject to the sanction of the Controller of Capital Issues, the Bank of Maharashtra Limited has decided to issue one equity right share, at par, for every four shares held.

INVESTMENT NOTES:

The 5½ per cent Bearer Debentures of the National Insulated Cable Company Limited, shortly due for redemption, are likely to be extended for another five years at an enhanced rate of 6 per cent interest. Outstanding Debentures for Rs 10 lakhs are due to be redeemed in July.

The shares of the Indian Copper Corporation have firmed up further

Rs 5.19 from Rs 4.90 quoted in the previous week. The main inspiration for the sustained demand is derived from the encouraging working report issued by the company for the first quarter of the year. There are also rumours of the company's proposal to capitalise further the Reserves. Above all, the electrolytic plant is expected to begin production soon.

It is learnt that the Central Government have sanctioned several more small steel blast furnaces to be set up in Madras, Maharashtra, Gujarat, West Bengal and Madhya Pradesh. Two will be in Madras, three in Maharashtra and Gujarat and one each in West Bengal and Madhya Pradesh. Two blast furnaces, each with an annual capacity of 15,000 tons, sanctioned earlier, have already gone into operation in Madras and Orissa.

INVESTMENT BRIEFS:

Bisra Stone Lime Company Limited has announced an interim dividend of Rs 1.25 per share, subject to tax, for the year ended 31 March 1960, payable on or after 5 June. Transfer Books will be closed from 22 May to 5 June, 1960.

Colombatore Pioneer Mills Limited has recommended a taxable dividend of 25 per cent for 1959 as against a tax-free dividend of 20 per cent paid previously.

Radhakrishna Mills Limited has announced a taxable dividend of 9 per cent against a tax-free dividend of 6 per cent for 1958.

BALANCE-SHEET BRIEFS:

The Ahmedabad Manufacturing & Calico Printing Company Limited (Calico Mills), Ahmedabad, has reported a substantial rise of Rs 45.33 lakhs in the gross profit to Rs 2.04 crores for the year ended 31 March, 1960. The directors have recommended a final dividend of Rs 17, making a total of Rs 31.00, subject to tax. Out of this, one rupee is to be paid out of the profits exempt from income-tax. Thus, the net dividend is maintained at Rs 22.00 per share.

The Alock Ashdown & Company Limited has shown a higher net profit of Rs 6.57 lakhs against Rs 4.61 lakhs for 1958. The directors have recommended a taxable divi-

dend of 17 per cent on the Ordinary shares.

The Shivrajpur Syndicate Limited has incurred a loss of Rs 1.43 lakhs for the year ended 30 November 1959. A taxable dividend Rs 5.00 is recommended out of Reserves.

The net profit of the Hindustan Machine Tools Limited amounts to Rs 41.96 lakhs for 1958-59 as against Rs 30.71 lakhs for the preceding year. The company is now completely Indianized.

The rapid progress, being made by Ashok Leyland Limited, is reflected in the sharp rise in the net profit to Rs 56.45 lakhs for 1959 as against Rs 40.66 lakhs for the previous year. A dividend of 8 per cent is recommended against 6 per cent.

The National Pipes & Tubes Company Limited has earned a profit of Rs 6.76 lakhs for the year ended 30 September 1959 against Rs 6.45 lakhs. A taxable dividend of Rs 1.50 is recommended. This works out to a net dividend of Rs 1.05 against Rs 1.25 per share.

The net profit of the Thummalapally Rubber Company Limited is lower at Rs 1.30 lakhs against Rs 1.43 lakhs for 1958. A dividend of 30 per cent, taxable, is recommended against a similar distribution on the former occasion.

The Lucky Valley (Nilgiri Hills) Tea Estates Limited has earned a profit of Rs 90,510 for 1959 as against Rs 74,360 for 1958. A taxable dividend of 10 per cent is recommended against a tax-free dividend of 10 per cent for the preceding year.

JENSON & NICHOLSON (INDIA) LIMITED.

NOTICE is hereby given that the Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, 10th June, 1960 at 11 a.m. for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1959 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 1st to 10th June, 1960, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

NOTE:—A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

COMPANY REPORTS

Bengal Coal Maintains Net Dividend

Balance-Sheet Reviews:

Thanks to a substantial rise in profits, the Bengal Coal Company, Limited has been able to recommend a gross dividend of 25 per cent (final 15 per cent with interim 10 per cent) for the year 31 October, 1959. This works out to a net dividend of 17½ per cent, same as in the previous year.

Sales are higher at Rs 6.36 crores against Rs 6.27 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 40.14 lakhs as against only Rs 23.91 lakhs in the previous year. Apart from providing Rs 10,075 for Capital Reserve, the Depreciation amount is raised to Rs 19.50 lakhs from Rs 17.25 lakhs; Development Rebate Reserve to Rs 6.42 lakhs from Rs 3.79 lakhs and General Reserve to Rs 8 lakhs from Rs 5 lakhs. Taxation provision is, however, reduced to Rs 19.50 lakhs from Rs 17.25 lakhs. Raisings are shown at 2.84 million tons against 2.80 million tons and despatches at 3.01 million tons against 3.07 million tons.

The paid-up capital is shown at Rs 1.20 crores; Share Premium Account at Rs 10 lakhs; Capital Reserve at Rs 10,075; General Reserve at Rs 1.20 crores and Other Reserves at Rs 54.69 lakhs. The gross block at Rs 6.99 crores is depreciated by Rs 1.69 crores, to show a net block value of Rs 2.30 crores.

Excellent Results of IBP

The Indo-Burma Petroleum Company Limited has produced excellent working results for last year, sales having risen to Rs 1.61 crores from Rs 1.50 crores. The net profit, after providing for Depreciation and Taxation, is substantially higher at Rs 39.45 lakhs against Rs 31.14 lakhs in the previous year. Apart from providing Rs 5 lakhs for Dividend Equalisation Reserve, Taxation provision is raised to Rs 31.40 lakhs from Rs 31.27 lakhs. The Depreciation amount is, however, reduced to Rs 4.07 lakhs from Rs 4.23 lakhs; Development Rebate Reserve to Rs 75,399 from Rs 1.52 lakhs and General Reserve to Rs 4.00 lakhs from Rs 5.00 lakhs. The directors have recommended a final dividend of Rs 1.50, making a total of Rs 2.50 per share, subject to tax, as against a net dividend of Rs 2.00 for the preceding year.

The balance-sheet, as at 31 December 1959, shows a paid-up capital of Rs 1.50 crores divided into 10 lakh Ordinary shares of Rs 10 each and 50,000 Preference shares of Rs 100 each. Against this, Share Premium Account is shown at Rs 31.38 lakhs and Reserves at Rs 1.33 crores. The gross block works out to Rs 1.01 crores; total depreciation to Rs 52.21 lakhs and the net block to Rs 48.56 lakhs.

Dunlop changed hands at Rs 42.62 to Rs 44; Indian Cable at Rs 33.12 to Rs 34.50; Indian Aluminium at Rs 28 to Rs 28.50; Hindustan Motor at Rs 20.37 to Rs 21; Orient Paper at Rs 44.00 to Rs 44.80; Rohtas at Rs 34.81 to Rs 35.02; Shree Gopal at Rs 28.50 to Rs 29.50; Aluminium Corporation at Rs 18.25 to Rs 18.56; BIC at Rs 8.31 to Rs 8.87; Sirpur at Rs 18.19 to Rs 19.06; Associated Battery at Rs 35.37 to Rs 36.37; Union Carbide at Rs 48.87 to Rs 50.50 and Angelo Brothers at Rs 22.06 to Rs 22.75. Rallis moved between Rs 114 and Rs 117, to close finally at Rs 116.50 with NICO quiet at Rs 27.62 against Rs 27.87.

Madras
SHARES of Ashok Leyland, Aluminium Industries and Travancore Rayons continued to be prominent today in the Madras Stock Exchange transactions. The market was generally firm. Sugars and Breweries were steady. Textiles proved good and Plantings were unchanged with Blue Mountain and Consolidated Coffee proving very active.

Government Securities: Madras Government's 4% 1964 loan was marked up at Rs 100.36. Kerala Government's 4% 1971 Loan was quoted higher at Rs 99.75. Mysore Government's 1971 bearing 4% remained at Rs 100.10 4% Madras Government 1971 Loan was quoted at Rs 100.00. 1970 Madras Government's 4½% Loan was marked at Rs 101.90, the same denomination of Mysore Loan was obtainable at Rs 102.00. The rest of the Government loans continued to be quoted at the market rates.

Banks: Rs 100 paid Andhra ex-dividend was available at Rs 99.85 and Rs 85 paid share of the same bank was available at Rs 82.32 also ex-dividend. The Canara Bank shares were all marked up probably due to paucity of these scrips. The Rs 50 paid up was quoted at Rs 80.00, the Rs 50 paid up Canara Banking was quoted higher also at Rs 71.00. The Rs 100 paid Canara I & B Syndicate 'A' was raised up to Rs 188.00 from Rs 180.00, the Rs 10 paid 'B' share of the same bank was also quoted higher at Rs 18.00 and the one rupee paid share of 'C' denomination was listed higher at Rs 1.88 Pandyam Bank continued to be quoted at Rs 39.25 and the Punjab National ex-dividend at Rs 20.00.

Electrics: This counter remained unaltered. Kumbakonam was available at the same rate of Rs 10.15, Negapatnam at Rs 9.60 and South Madras at Rs 10.10 and Salem-Erode at Rs 12.50. West-Coast was also quoted at this rate.

Sugars & Breweries: Transactions took place in Cauvery at Rs 141.00 and E.L.D. at a higher rate of Rs 56.00 in this section. India Sugars with 12½% taxable dividend could be had at Rs 13.12, K.C.P. at Rs 21.00, Mysore at Rs 56.90 ex-dividend, Kirlampudi at Rs 79.00 and United Breweries at Rs 84.00.

Plantings: Blue Mountain was the most fancied scrip throughout this week and today's price went up to Rs 4.55, ten nP higher than last closing. Athimattam was conti-

nuing at Rs 1.25, Badra at Rs 3.97, Balanoor at Rs 17.70, Be Be at Rs 3.65 and Chembra at Rs 4.55. Coch'n Malabar ex-dividend, was marked at Rs 8.25. Coffee Lands was steady at Rs 25.00 while Consolidated was strong at Rs 25.90. Coonoor was quoted at Rs 27.75 with 10% free of tax dividend. Coorg and Cottanad were respectively marked at Rs 5.70 and Rs 14.50. Devashola was unaltered at Rs 32.00, Devon at Rs 18.00, Halleyburia went up by 25 nP to Rs 15.75. Kailas was quoted higher at Rs 5.52. Kil Kotagiri was marked down at Rs 5.47. Lingapur continued steady at Rs 7.00 as well as Kumerkode at Rs 5.85 and Kurchimala at Rs 8.75. Mercara with 20% taxable dividend was available at Rs 9.90, and Midland was unaltered at Rs 12.75. Neelamalai was taken up slightly higher at Rs 4.93. Nilgiri was unchanged at Rs 7.75. Osoor was the same at Rs 3.70. Ouchterlony Valley with 15% dividend free of tax, was available at Rs 5.50. Likewise Peermade with the same amount of dividend was marked at Rs 23.25. Periakaramal went up to Rs 3.83. Highland was taken up at the quoted price of Rs 15.10. Pullangodes improved slightly to Rs 1.97. Sheveroy was unchanged at Rs 1.93. Stanes Amalgamated continued lower at Rs 14.90. Thamarapalli was quoted at Rs 30.50 with taxable 30% dividend. Travancore Rubber was quoted at Rs 15.82 and Travancore Rubber & Tea was available at Rs 8.25. Waterfall was transacted at Rs 3.50.

Textiles: In Adoni Spinning transactions were made at Rs 8.20 as also in Buckinham at improved rate of Rs 204.00. This has gone up by Rs 3.50 during the last twenty four hours. Bangalore Woollen also appreciated by Rs 4 to Rs 201.00. Cambodia was at Rs 10.00. Coimbatore Pioneer with 25% taxable dividend was quoted at Rs 370. Dhanalakshmi was at Rs 224.00. Kothari was bought at Rs 12.60. Lakshmi was the same at Rs 154. Madura was lower at Rs 33.40. Mettur was unaltered at Rs 436.00. Radhakrishna was traded at Rs 28.35. Rajapalayam remained at Rs 135.00. Travancore Rayons was bought at Rs 36.50 while Vasanta Mills with 16% taxable dividend was available at Rs 240.30. Other shares were at the same market rates.

Miscellaneous: Aluminium Industries were taken up at Rs 28.12. Ashok Leyland went up to Rs 9.15. Dalmia Cement appreciated to Rs 12.30. Enfield also was quoted higher at Rs 16.50. F.A.C.T.s was lower at Rs 11.20. Hindustan Lever remained at Rs 37.82. India Cement was marked at Rs 6.35. Mysore Paper improved to Rs 24.40 while Mysore Stone continued at Rs 13.10. National Rubber Mfrs. at Rs 13.00, with 8½% taxable dividend and Ogale Glass with 8% taxable dividend at Rs 5.40 remained unchanged. Orissa Cement was available at Rs 14.00. Parrys Confectionery was quoted at Rs 4.35 Rallis remained at Rs 115.00. Spencer was steady at Rs 20.50. Standard Motors during the week had gained at Rs 15.25. Textool registered gain at Rs 169.25. Tube Investments were quoted at Rs 272.00 and Western India Plywoods were available at Rs 274.00.

ANNUAL REPORT OF NPC

The activities of the National Productivity Council has helped to generate a wide-spread consciousness and an urge in the industries to know about and seek the utilisation of productivity techniques, says the annual report of the Council for 1959-60, which has just been published.

The report adds that the country-wide campaign launched by the NPC has evoked a great response from the industries as evident from the recognition given by them to the productivity programmes and the rising demand for the services of the Council.

The Council's programme during the year included organisation of training courses, sponsoring of productivity study teams and training abroad, promotion of technical knowledge through inter-plant visit and in-country productivity teams, besides dissemination of information on the productivity techniques. The Council organised Seminars and conferences and provided advisory services to the industries. Research on problems relating to productivity and collection of case data were also taken up.

An important objective of the Council, the Report says, is to foster the establishment of Local Productivity Councils (LPCs) in all important centres of the country. These Councils which comprise employers, workers, Government, professional organisations and institutions, function as the spearheads of the productivity movement. During 1959-60, 29 Local Productivity Councils were established, making a total of 36 LPCs functioning now.

The Information activities of NPC, which aimed at the dissemination of the concept of productivity and creation of an urge in industries to introduce productivity techniques, were stepped up.

The Council laid special emphasis on the training of personnel in industries for equipping them in the techniques which would help to raise the level of productivity. 85 Training Courses were organised at various places in the country and 1,533 persons participated in these Courses. Over 62 Seminars, conferences and symposia were also held at different places of the country. Likewise, the talks given by the NPC Training Officers in Business Management Courses of the Small Industries Service Institutes as well as other technical institutions, also proved popular. In addition, seven In-Country Teams and 11 Inter-plant visits, which aimed at promoting technical exchange within the country,

were sponsored during the year under review.

The Council sponsored training activities and productivity study teams abroad with the aid received from foreign sources. Seven productivity teams on plastics Industry, Cotton Textiles, Small-Scale Industries, Management Organisation and Training, Road Transport, Factory Buildings Layout and Construction, and Coal-Mining, were sent abroad during the year under TCM aid. During the same period, 37 persons were sent abroad under this aid programme for training in subjects of Industrial Engineering, Industrial Management and Industrial Relations. An additional batch of 20 persons were sent to France for training in Scientific Management under the French Government Fellowship aid. This programme is expected to expand further with the finalisation of the negotiations which are being conducted for sending similar productivity teams and trainees to USSR and the East European countries.

The NPC also rendered advisory services to industries for demonstration as well as for diagnostic and implementation purposes. As many as 104 industrial units received advice during the year. A campaign has also been launched to collect case data from the industries, indicating the utilisation of specific productivity techniques and the benefits derived from them.

ECONOMIC AND SOCIAL LIFE OF VILLAGES

Thirty-five villages in each of the States in India will be selected, during the 1961 Census to study the economic and social life of the community.

The villages to be selected will be "typical villages" as far as possible. Where there are concentrations of Scheduled Tribes, Tribal Villages will be included, each representing a particular tribe. Similarly, villages which are important from the point of view of cottage industries and handicrafts will also be embraced by this study.

The purpose of the enquiry is mainly to collect basic information about the layout of the villages and amenities available to the population, such as educational, medical, communications, postal, etc. The study follows the old Indian Census tradition of conducting sociological enquiries apart from the presentation of the census data in the Census Report.

The draft questionnaire, prepared for this purpose, shows that the information sought will be under various heads: duration of a person's residence; religion; marriages; inheritance; property; indebtedness; education; diet; furniture; ornaments; consumer goods; industry; etc.

Similarly, questions will be asked on local legends, description of houses, distance from the nearest railway station, bus route, post office and telegraph office, religious practices, festivals, recreation centres, co-operatives, schools, etc.

14 May, 1960

SHAPING OF STEEL

Now ready to go into operation at the Durgapur Steelworks this 42" Blooming Mill, with control pulpit shown in the background, represents the latest in engineering design for this type of Rolling Mill. Hot steel ingots from the 'soaking pits' are rolled into 'blooms' on this Mill—the first step in the shaping of steel.

A panoramic view of the Burnpur works of The Indian Iron & Steel Company Limited

This is the town that never sleeps—the town of steel. Night and day, the vast works throb with activity as men and machines labour to feed the iron and steel-hungry industries of the nation. Using the most modern production technique the Company manufacture, under a system of rigid quality control, a wide range of products including rails, structurals, blooms, sheets, billets, slabs, pig iron, spun iron pipes, vertically-cast iron pipes and iron, steel and non-ferrous castings.

WORLD OF FINANCE

Analysis of 1959-60 Busy Season

THE 1959-60 busy season has finally ended, its departure having been sounded as early as the third week of April when the banking returns prominently displayed slack season attributes. While an analysis of the season just ended is attempted below, it may be pointed out here that the season has revealed no rigours that were not foreseen in these columns. With demand for industrial credit showing little signs of declining during the 1959 slack season, the 1959-60 busy season was not expected to be less rigorous in the demand for funds that it would throw up than earlier seasons. In the event, the demand for funds exceeded the expansion in Bank credit during the 1958-59 busy season and the meeting of the enhanced demand was attended with greater strain on the resources of the banking system.

In a sense, the 1959-60 busy season is not strictly comparable with the 1958-59 season or the 1957-58 season. The 1957-58 busy season was hardly busy in the sense of the banking system being subjected to strains in affording busy season, accommodation to industrial and agricultural credit seekers. For one thing, demand for busy season funds failed to rise to expected heights consequent on the slow-down in the rate of industrial production. Secondly, Governmental disbursements were seeping into the banking system and the resultant rise in bank Deposits exceeded the pace of growth in Advances. In the circumstances, far from being bothered about resources for meeting busy season demand for money, the banks found themselves in the embarrassing situation of idle resources piling up in a busy season. This experience was exceptional and during the 1958-59 busy season, all the busy season signs were again in active evidence.

The 1959-60 busy season has in almost all respects turned out to be even more busy than was the 1958-59 season. However, one significant difference needs to be noted. Because of the impact of the Diwali disbursements reflected in the banking returns for the week ended 30 October 1959, the true character of the 1959-60 season has suffered a slight distortion. However, even without making allowance for this fact, the 1959-60 busy season has proved to be unprecedentedly busy. This is borne out by changes in respect of almost all the relevant items in the banking returns, with the exception of note circulation. Active note circulation during the 1959-60 busy season has risen by about Rs 197 crores against a rise of Rs 217 crores in the previous season. It is necessary, in this connection, to bear in mind the distortionist rise in active note circulation that occurred on the eve of the 1959-60 busy season. However, the fact that Active note circulation rose by a magnitude of nearly Rs 200 crores suggests that during this period, the contractionist effect of the balance of payments deficit has been mitigated by virtue of the deficit being smaller.

It is interesting to note that the deposits of the Scheduled Banks with the Reserve Bank are shown to have gone up by Rs. 24 crores while, during the 1958-59 busy season Banks'

Advances/Deposits ratio (%age)									

deposits rose only by Rs 7 crores. Such a sharp rise in the midst of a busy season represents a contra-seasonal phenomenon and seems to belie the busy season character that is revealed by changes in the other items in the banking returns. The reason for this abnormal rise in Banks' deposits is to be found in the directive issued by the Reserve Bank in the second week of March calling upon the Scheduled banks to keep 25 per cent of their deposits accruing after 11 March 1960 with the central banking institution. It may be recalled that the proportion of such additional reserves to be kept with the Reserve Bank has, in terms of a subsequent directive, been raised to 50 per cent.

The most noteworthy aspect of the busy season changes is that which relates to the expansion that has taken place in the Advances of Scheduled Banks. While, during the 1958-59 season, such expansion occurred for an amount of Rs 180 crores (shared in the proportion of Rs 40 crores and Rs 140 crores by the State Bank and other Scheduled Banks respectively) during the 1959-60 season, the growth of Advances was of the order of Rs 190 crores. This excludes the rise in Advances that occurred on the eve of the 1959-60 busy season in connection with the Diwali disbursements. While the Advances of the State Bank rose by Rs 56 crores, the increase in the Advances of other Scheduled Banks worked out to Rs 133 crores. The rise in the Advances of the State Bank was more than covered by the expansion in its deposits which amounted to nearly Rs 59 crores. So far as the other Scheduled Banks were concerned, the rise in Deposits, though exceeding the rise in the 1958-59 busy season by nearly Rs 10 crores, was as nothing compared with the expansion that had taken place in Advances. The expansion in Advances that could not be fully covered by the rise in Deposits worked out to Rs 76 crores and was met by the banks by increased borrowing from the Reserve Bank to the extent of Rs 30 crores and disinvestment in giltedged to the tune of Rs 46 crores. For the first time in recent years, the other scheduled banks have thus disinvested in giltedged on a considerable scale, and this fact provides a measure of the stringency experienced by the banking system in meeting the busy season pressure for funds.

It is intriguing that the State Bank should have disinvested in giltedged for an amount of Rs 6 crores since there are hardly any signs of strain by way of the rise in Deposits falling short of the expansion in Advances. It is worthy of mention in this connection that, during the 1958-59 busy season and in circumstances similar to those which obtained during the 1959-60 season, the State Bank added to its giltedged portfolio by nearly Rs 25 crores. Thus, the 1959-60 busy season could be seen to have revealed a pattern of changes

that is similar to that disclosed by the 1958-59 season with only one point of difference, namely, that, during the 1959-60 season, the banks' deposits with the Reserve Bank have shown an abnormal expansion. However, the difference in the magnitude of the changes in respect of the various items is significant and is evidence of the greater strains experienced by the banking system in meeting the 1959-60 busy season demand.

Sudden Rise in Bank Advances

THE Reserve Bank returns for 13 May 1960 are largely featureless, with neither evidence of unseasonal demand for funds nor testimony as regards the commencement of the 1960 slack season. Active note circulation has declined by Rs 3.06 crores to Rs 1901.43 crores. On the other hand, there has been outflow of rupee coin for Rs 0.98 crores. In the result, the Reserve Bank's cash in the till has risen by Rs 2.16 crores to Rs 15.40 crores.

In the Banking Department, there is a suggestion of intergovernmental transactions. Balances of State Governments have risen by Rs 7.01 crores to Rs 25.92 crores, though there has also been a rise of Rs 1.68 crores to Rs 53.01 crores in their ways and means borrowings from the Reserve Bank. With this is linked the decline of Rs 8.41 crores to Rs 51.89 crores in the Deposits of the Centre. Meantime, from the State Bank's return, it is inferable that the Reserve Bank has purchased Rs 5 crores of securities from that institution. Since the Reserve Bank's rupee investments in both departments are practically unchanged, it may be concluded that there has been some element of reverse ad hoc. (Indeed, figures relating to Treasury Bills outstanding in recent weeks indicate that there has from time to time been considerable cancellation of ad hoc treasury bills; the implication of this will be examined next week).

Banks' Deposits have continued to rise, to be placed Rs 10.66 crores higher at Rs 99.08 crores; the share of the State Bank is around Rs 9 crores. At the same time, there has apparently been greater reliance on the Reserve Bank for borrowings, since the Other Loans and Advances of the Reserve Bank are higher by Rs 1.80 crores at Rs 119.32 crores.

Lastly, Balances Held Abroad are again lower by Rs 1.05 crores at Rs 13.77 crores—and a transfer from the Issue Department may be said to be imminent.

According to the return of the State Bank for 13 May, Deposits have been marked up by Rs 2.81 crores at Rs 631.63 crores. There has been disinvestment in giltedged for Rs 5 crores. Advances are lower by Rs 0.55 crores at Rs 216.83 crores and, in consequence, cash in

hand and with Reserve Bank has moved by Rs 8.98 crores to Rs 36.70 crores.

The return of the Scheduled Banks for 6 May shows the considerable impress made by the demand occasioned by monthly early disbursements. The total of Advances is higher by nearly Rs 10 crores at Rs 1139.62 crores. Thus, the rise of Rs 4.61 crores to Rs 1973.82 crores in gross Deposits was insufficient for enabling the Scheduled Banks to meet this demand. Hence, borrowings from the State Bank have been increased by Rs 3 crores, and the indebtedness to the Reserve Bank is higher by nearly Rs 4 crores. Moreover, cash balances stand reduced from Rs 181.39 crores to Rs 179.60 crores. The gilt-edged portfolio, reflecting State Bank purchase of securities, is higher by Rs 4.72 crores at Rs 746.32 crores.

Misguided Disinflationary Policy

By Paul Einzig

THE recent batch of disinflationary measures adopted by Mr Amory has been subject to a certain amount of criticism on the ground that they do not allow sufficiently for the character of the inflation they try to cope with. If it were a demand inflation pure and simple the discouragement of consumer demand by means of hire-purchase restrictions would be a correct measure. But the present inflation is primarily due to the increased volume of wage payments. Wage increases unaccompanied by a corresponding increase in productivity tend to result in both demand inflation and cost inflation, and in fact both are running concurrently. The hire-purchase restrictions are directed solely against the increase in consumer demand resulting naturally from the higher wages, without affecting the trend towards higher wages and higher costs.

Assuming that the restrictions will succeed in reducing the demand for manufactures bought on hire-purchase, what will be the position? The purchasing power created by wage increases will remain in existence. And there is no reason to suppose that the recipients of higher wages, having been discouraged from spending the surplus on goods bought on instalments, will dutifully save the unspent surplus. The chances are that, since under the new terms they cannot afford to buy consumer durable goods, because of the high amount of the minimum deposit and of the monthly instalments, they will spend their money on other consumer goods instead.

This means that there will be a decline in the demand for washing machines and television sets, but an increase in the demand for butter and vegetables. The prices of washing machines and television sets are inelastic and are most unlikely to fall as a result of the decline

in the demand. On the other hand the prices of butter and vegetables are highly sensitive and will respond to the increase in the demand. The net result will be an increase in the cost of living, fully expressed in the all-important cost of living index.

That the possibility—indeed I feel justified in regarding it a probability—of such an effect of the hire-purchase restrictions has been overlooked by Mr Amory and his economic advisors is due in part to the inadequacy of the state of applied economics in Britain. In Sweden a sample survey was carried out some years ago to ascertain what was the alternative to spending on consumer durable goods under hire-purchase. The majority of the answers collected indicated that a restriction on hire-purchase terms would mean an increased demand for goods whose prices would react more easily to the additional demand and whose prices would have a stronger effect on the cost of living index. This finding induced me to revise my attitude in favour of hire-purchase restrictions in conditions such as prevail in Britain today. But no similar sample survey has been carried out in Britain, and few Governments are able and willing to learn from other countries.

The official British attitude is of course understandable. The Government wants to avoid, as far as possible, to discourage an expansion of the capital goods industry which had a lean time until quite recently and which is only just getting into its stride. On the other hand, the expansion of capital goods production might endanger stability unless the overload is reduced in some other direction. And since it is easier to achieve this in the sphere of hire-purchase than in any other sphere the Government has taken the line of least resistance, by concentrating its disinflationary drive largely on that sphere.

Admittedly it would be incomparably more difficult to achieve the desired end by checking the increasing trend of wages. By such means it would be possible not only to maintain the prevailing stability of the cost of living but even to reduce it, in spite of the expansion of the consumer demand through lower prices and the expansion of capital goods production. But while hire-purchase restrictions could be adopted by a stroke of the pen, resistance to wage demands would mean industrial troubles which the Government wants to avoid. The monetary disinflation through special deposits does not appear to be sufficient to induce employers to resist wage demands, or to induce the trade unions to moderate their claims. Sharper measures would be called for in order to attain that end. Should inflation develop in spite of the recent measures the Government may have to strengthen its resistance. But it would be so much easier to prevent inflation than to check it once it has got into its stride.

Still-born

THE summit conference is dead—dead even before it was properly born. As we get busy with the obituaries—some of them, one suspects, prepared even before it was properly dead—the four distinguished midwives are packing up their cases. Considering how clumsily they have botched their job, one can hardly be censorious of the allegedly morbid public interest in Royal lying-ins. The conventional gynocologists at least produce live-babies. For eighteen months, the world has been incessantly told to look forward to this great event. Though normally bored by such advance publicity, a nagging public conscience has made people shake their normal political apathy and take a more than languid interest in the matter. All the resources of mass media of communication have been pressed into service and the 'summit' was 'sold' with great perseverance. Chief among those who broke the consumer resistance to it was, ironically enough, Mr Khrushchev. And now that they have worked themselves up to it, they find that they have been 'had' once again.

There can be little doubt that the man who wrecked the conference was Mr Khrushchev. He may have had his provocation and his reasons, but he could certainly have salvaged the conference if he had cared to. It would appear from his calculated boorishness ever since he came to Paris, that he had already made up his mind that he did not want the summit, at least, not now. The equivocation in the reasons he assigned for asking for an adjournment of the summit and the conditions he wanted fulfilled for attending the present conference shows that he wanted, for some reason, to scuttle the present 'summit' somehow. If it was his desire to have at the conference table a representative of the US who could answer for future American conduct in advance, there was hardly any sense in having had the summit this May at all. Mr Khrushchev, along with the rest of the world knew that Mr Eisenhower's term ended this year and he was ineligible for reelection. Secondly, and more crucially, how does this anxiety about a firm settlement square with the willingness to participate in the present conference, if America abased itself publicly over the spy-slight? The future resident of the White House might repudiate both the settlement and the penance and that might give merely another opportunity for Mr Khrushchev to be rude in homely Russian.

Over the spy-incident, Mr Khrushchev had certainly a strong case, but it is not as high as he has chosen to put it. His own residence has no stone-proof walls for him cheerfully to throw missiles about, though, of course, his glass house is slightly more opaque than the American. If Mr Khrushchev was even half as forthcoming on the Russian spies caught in the act in Switzerland, he has not said a word about it, we would know where he gets the steam for his moral indignation. Again, he has a good point in the assertion that the West is quick enough to suspect aggressive postures—as for instance, over Berlin—and on that pretext, refuse to talk with the Russians. The Americans have been guilty of more than mere threat of actual technical aggression. There can be, according to him, no possibility of dis-

cussion unless the act of aggression is repudiated and promise of future good conduct given. Though intelligible, this is the sort of language that the late John Forster Dulles used to employ and from which it has taken the better part of two years to wean the Americans.

The summit was scaled on the assumption that once on the top, the leaders will talk 'turkey' or in other words, on the basis of political realism. Self righteousness, however comforting on the plains, was understood to be an embarrassing burden on this expedition to the political Everest. The way Mr Khrushchev is acting, he is wanting to sulk at Namche Bazar.

Speculation about why he decided to scuttle the conference is natural and perhaps not immediately rewarding. Plainly, either Mr Khrushchev is genuinely upset about the spy-incident, or he is obliged to pretend that he is. In the light of known facts about Khrushchev and the power politics in the communist world, the latter seems to be more likely. Over the last few years the pattern of his behaviour has revealed a curious zig-zag—an alteration between shaking of the hand and shaking of the fist. This has been attributed to the exigencies of his own power manoeuvres inside the Soviet Union and the communist world. The personal ascendancy of Khrushchev in the Soviet Union is not yet challenged enough for him to disregard the hard core of orthodox communist opinion that does not want a settlement with the west. If he appears to condone the spy-incident, he may get into real trouble. That, rather than the need for talking to another US President, is the likely reason for his desire for postponement. Time, and diplomatic function may heal the present exacerbation and perhaps Adenauer may not be there next year. These calculations may well have weighed with Mr Khrushchev. For the sake of the future, we hope they have.

Apart from the failure of the conference, Mr Khrushchev's behaviour has been depressingly childish. Even if he were putting on an act, his incivilities to Mr Eisenhower and the coarseness of his language at the Press Conference—we do not know whether it reads better in Russian—reveal an amour propre far too easily ruffled. This has nothing to do either with his shrewdness as a politician or his honesty as a statesman. Even if he were neither of both, decencies of public life require that a man keep a reasonably civil tongue in his head and that his vocabulary (especially at a press conference) is printable.

Non-industrial Public Undertakings

[Industrial undertakings in the public sector have been dealt with in a leading article in last week's issue—Ed.]

THE principal non-industrial public undertakings for which the Government of India are responsible are mostly newer concerns of a commercial, financial, general development or miscellaneous character. The more relevant

particulars—namely, capital structure, number of persons employed, annual wages bill and net profit—regarding these enterprises, numbering 20 in all, are brought together in a table in this article. It will be seen from this table that the aggregate paid-up capital of these concerns (excluding the Employees' State Insurance Corporation which involves no capital investment) is nearly Rs 78.0 crores, generally as of 1958-59. Of this, the Government of India alone have paid up as much as Rs 77.4 crores. If the Reserve Bank of India which stands in a special category as a central banking institution is also excluded, the aggregate capital employed (paid-up capital plus borrowed capital) in the remaining 18 concerns comes to nearly Rs 126 crores.

The aggregate number of persons employed in 14 of these concerns (other than the Export Risks Insurance Corporation, National Small Industries Corporation, Refinance Corporation, Reserve Bank of India, National Projects Construction Corporation and Western Shipping Corporation, for which the relevant data are not available) is nearly 80,550. And the aggregate wages bill for the year, generally as of 1958-59, of 15 of these concerns (other than the Export Risks Insurance Corporation, National Small Industries Corporation, Refinance Corporation, Reserve Bank of India and Rehabilitation Finance Administration, for which the relevant data are not available) comes to about Rs 24 crores.

As for net profit as per cent of capital employed, most concerns (other than the State Trading Corporation, Reserve Bank of India and State Bank of India) have not fared well. It may be broadly stated that while the employment potential of and the income generated through wages and salaries by these concerns are greater than those of industrial public enterprises for comparable volumes of capital investment, their profit-making capacity seems to be generally limited. While some of these concerns are not intended to make any profit, some others may be reasonably expected to be profitable. Where the concerns connected with shipping and air transport have not been quite profitable, it is doubtful if substantial surpluses will accrue therefrom to the exchequer during the Third Plan period. So much by way of general remarks on the state of the non-industrial public undertakings.

More specifically, the profitability or otherwise of the different categories of these non-industrial public undertakings would have to be examined in the light of their respective activities. For example, in the commercial category to which the State Trading Corporation belongs, the profit-making objective is clearly there. With the expansion in the S.T.C.'s export and import activities, its net profit before taxation has gone up from Rs 1.05 crores in 1957-58 to Rs 2.82 crores in 1958-59. Since the S.T.C. has been established to organise exports from, and imports into, India of such goods and commodities as the Corporation might from time to time determine and also to engage in general trade in such goods and commodities in India or

elsewhere in the world, a steady expansion in its trading activities may be postulated with a degree of certainty. In which case, its profit-making potential may be rated greater than what it is now.

But not all the undertakings in the financial category are designed or expected to be so very profitable. Notably such enterprises as the Industrial Finance Corporation, the Refinance Corporation and the National Industrial Development Corporation operate with a pronounced promotional bias in their financing activities. The I.F.C., for example, charges only 7 per cent per annum on its loans to public limited companies and co-operative concerns although it has to pay as much as 4½ per cent per annum on the loans it draws from the Central Government; if it gets loans at a lower rate of interest from the Government, it will probably charge a lower rate of interest on what it lends. The I.F.C.'s profit-making capacity thus seems to be rather limited in spite of the substantial scale of its operations.

The Refinance Corporation is not likely to fare any better, for, the very low rate of interest of 1 per cent charged by the Government of India on their Rs 5 crores loan to the Corporation in the first year (1958) of its operations is something special and exceptional. As the rate of interest on the Government's loans to the Corporation is to be fixed every year by the President of India, as the particular P.L. 480 loan itself which has earmarked Rs 26 crores for being lent to the Corporation carries 2½ per cent interest and as the Corporation itself can charge 5 per cent to its member banks, it may be expected that the rate of interest charged by the Government will be progressively stepped up in future years. In which case, the profit-making capacity of the Refinance Corporation will be even more limited than that of the I.F.C.

As for the National Industrial Development Corporation, its financing activities have been confined to the sorely needed rehabilitation

and modernisation of cotton textile and jute industries but will be soon extended to some other industries as well. As overdue rehabilitation and necessary modernisation have to be done as cheaply as possible, the N.I.D.C.'s financing operations have necessarily to be promotion or development-oriented. There is, therefore, no question of this Corporation ever functioning as a profit-making concern.

If even these financial institutions are not expected to be very profitable—the profit-making capacity of even the State Bank of India is more likely to decrease than to increase in the wake of its less profitable financing operations covering agricultural co-operatives, warehousing, small-scale industries, etc.—there is no question of such undertakings as the Export Risks Insurance Corporation, the Indian Handicrafts Development Corporation, the National Small Industries Corporation and the institutions connected with national research development, employee's state insurance and rehabilitation of displaced persons ever functioning as enterprises capable of yielding surpluses to the exchequer. As a matter of fact, it has been laid down that the Export Risks Insurance Corporation should work on 'no profit' basis in the interests of export promotion; the activities of the Handicrafts Development Corporation have been directed towards organising the handicrafts industry at home and developing foreign markets rather than taking up any direct trading activities; it has been stated on behalf of the Small-Industries Corporation that its aims and objects are purely promotional and that it has, therefore, very little scope to function as a profit-making unit; such surpluses as the Employees' State Insurance Corporation may have in a year will ultimately go to the benefit of the employees and not to the State; and the institutions providing rehabilitation finance and the Research Development Corporation are clearly not intended to be profit-making concerns. Even the National Projects Construction Corporation which has been sponsored to undertake construction works like private contractors is in

no position to operate as profitably as the latter are notoriously able to do.

Although the Life Insurance Corporation stands in a separate category and its profit-making potential is undoubtedly great, such profits as it may make will benefit the policy-holders more than they will benefit the State. As for the enterprises connected with overseas shipping, international air transport and hotel accommodation, they have to operate in highly competitive fields and are, therefore, not likely to be very profitable for a good many years to come.

All in all, the profit-making potential of most non-industrial public undertakings (other than the S.T.C. and the Reserve Bank) seems to be comparatively less than that of the purely industrial enterprises in the public sector. The Planning Commission's expectations that State enterprises should be so operated as to produce surpluses for general development seems, therefore, to be a rather tall order. Apart from the fact that it ignores political and consumer considerations that will always influence the pricing policies of State enterprises, it also overlooks the twin point that a good many public undertakings in a way subsidise development and that their capacity, if any, for building up reserves for expansion will itself subserve development.

There is always the unstated assumption that public enterprises should operate not so much for profit as for the benefit of the public. This assumption gets crystallised in the expectation that at least two parties—labour and consumer—must have a fairer deal. It will be politically difficult for even a State monopoly to put up its prices at will; the Indian railways which have always found it no easy going to raise, even moderately, freight rates and passenger fares are an instance in point. So long as the political pressures and the promotional bias of most State enterprises are very much there, it is hardly to be expected that they will be in a position to operate very profitably. In which case, their rather low profit-making capacity will be no conclusive proof of their inefficiency.

Companies in Eastern Region

THE trends in corporate activity to which attention was drawn in the Third Statutory Annual Report on Company Law Administration are confirmed by the latest review for the Eastern Region covering the half year ending March 1960. By the third year of the working of the Act, the deterrent effects of the new legislation had worn off and their place taken by a sturdy revival of confidence in the prospects of the corporate sector, which was duly reflected in the statistics of new floatations. The figures underlined the rapid increase in promotional activities in the private sector which belied the fears that the new Companies Act would prove to be a restrictive influence. Among the different States, West Bengal had the largest number of new company registrations, which did not support alarmist reports heard from time to time that capital was being scared away from this problem State. The same features are accentuated in the half-yearly review.

The Eastern Region, under the jurisdiction of the Regional Director with his headquarters in Calcutta, comprising the States of West Bengal, Bihar, Assam and Orissa, has been described as the industrial heart of the country. This region produces all the tea grown in Northern India, and almost all the jute and jute manufactures in the whole country.

Four integrated steel plants are located in this region which produces the bulk of iron ore, coal and the entire output of copper. In spite of the deterioration of the Hooghly, Calcutta retains its position as the major outlet for India's exports. Developments in the corporate sector in this region give a reliable indication of the country's economic health.

During the half year under review, 234 new companies were registered in this region. Of these 16 were Public Limited Companies with an authorised capital of Rs 9,64,00,000; 205 were Private Limited Companies with an authorised capital of Rs 14,59,90,000; and 13 were companies limited by guarantee.

West Bengal accounted for the largest number of new registrations with 204 companies having total authorised capital of Rs 20,71,60,000. In the corresponding period of the previous year, 187 companies with an authorised capital of Rs 7,11,33,000 were registered. Of the new companies registered during the half year ending March 1960, 14 were public limited companies with an authorised capital of Rs 8,64,00,000; 178 Private Companies with an authorised capital of Rs 12,07,60,000, and 12 companies limited by guarantee. The largest floatation of the year was a public company with an authorised capital of Rs 5 crores.

Processing and manufacture accounted for the largest number of new floatations. The following table gives the industry-wise break up of the new registrations.

OCTOBER 1959 TO MARCH 1960 (REGISTRATION).

Classification.	Public.	Private.	Total Companies.	Guarantee Company.
Agriculture and Allied activities	2	2	4	...
Mining and Quarrying	...	2	2	...
Processing and Manufacture of food stuffs, textiles, leather products thereof	1	14	15	...
Processing and manufacture of metals and chemicals and products thereof	5	52	57	...
Processing and manufacture not elsewhere classified	2	21	23	...
Construction and utilities	...	3	3	...
Commerce (Trade and Finance)	2	61	63	...
Transport, Communication and Storage	2	9	11	...
Community and Business Service	...	5	5	12
Personal and other services	...	9	9	...
Grand Total	14	178	192	12

In Bihar six companies with total authorised capital of Rs 36,30,000 were registered. Of these one was a public company and the other five private companies. In the corresponding period of the previous year, ten private companies were incorporated.

In Assam, one public company with an authorised capital of Rs 1,00,00,000 and four private companies with total authorised capital of Rs 1,24,30,000 were incorporated during the period as compared with six private companies in the corresponding period of the previous year.

In Orissa, 18 private companies with an authorised capital of Rs 1,11,70,000 and one company limited by guarantee were incorporated during the period.

The last annual report had stressed that it is Government's policy to remove all companies from the live registers as are no longer engaged in any trade or manufacture. This

process of weeding out, which is to be completed by end of the current year, continued during the period under review, and the names of 537 companies having paid-up capital of Rs 91.12 lakhs were finally struck off under Section 560 of the Companies Act. Thirtyeight Public and Private companies with total authorised capital of Rs 3,14,52,000 went into liquidation in the region during this period and 52 public and private companies with an authorised capital of Rs 3,75,11,000 were finally dissolved.

The statewide break-up is given in the following table:

Companies Going into Liquidation:			
State.	No.	Authorised Capital	
West Bengal	33	Rs. 1,86,32,000	
Bihar	3	" 27,70,000	
Assam	...	" "	
Orissa	2	" 1,00,50,000	
Total	38	Rs. 3,14,52,000	
Companies Finally Dissolved:			
West Bengal	49	Rs. 3,64,11,000	
Bihar	3	" 11,00,000	
Assam	...	" "	
Orissa	...	" "	
Total	52	Rs. 3,75,11,000	

In addition to the above one company limited by guarantee went into liquidation and two companies limited by guarantee were finally dissolved in West Bengal.

The intensification of the drive against irregularities in complying with the provisions of the Act has resulted in a sharp increase in the number of prosecutions against defaulting companies and their officers during the period under review. The number of complaints received from the public indicates growing awareness of the facilities provided by the Act to safeguard the rights of the shareholders.

World Trade in 1959

COMPARISONS between the foreign trade of primary producers and that of advanced countries are hardly relevant, when the former are compelled to reduce imports and have to pay interest on a new external debt. Manufacturing countries in spite of their increased imports are in a position to do better for themselves and a full analysis of world trade in 1959 shows not only that the United States and Canada lost ground but that the UK retained its markets although in the sterling area both Japan and Germany continued to expand their sales. The increased volume of trade helped the five major exporting countries namely, the USA, Britain, Germany, France and Japan, and a gratifying feature was the increase in the export of machinery and transport equipment as well as the export of chemicals and metals. The enlargement of German export trade is well known and has led already to questions about the need to increase imports or to export capital. However, the most important change of the year was the increased demand for raw materials. Australia certainly gained therefrom and the restoration of normal trade with Japan was reflected in the larger takings of Japanese textiles. The relaxation of restrictions operating against dollar imports had the welcome result of increasing purchases of American goods.

Political disturbances hampered trade with the Middle East but foreign trade with Soviet Russia increased but not to the same extent as that of the United States. This may be the reason for the adverse balance of payments about which the USA was worried last year. But it may also be due to the prolonged steel strike.

The analysis presented by the OEEC suggests that European common market countries showed recovery particularly in their exports to USA and the common market countries fared better in exports than the UK. North American countries generally did not increase their share of Europe's trade but the UK like Germany obtained a bigger share of the group now called the Outer Seven. As may be expected, the very considerable changes in Lancashire had their own effect on textile exports but in 1959 Germany sold more textiles than the USA, Canada and Japan which lost ground in most markets. A remarkable increase in the UK exports of plastic materials and goods is derived from the steady growth in the chemical industry. But German performance was equally striking. A point to note is that the reduction in export of fertilisers by both Germany and Britain. This might be the direct result of the growth of domestic manufacture in many countries abroad. The larger exports of iron and steel from the integrated industry of Western Europe is in contrast to the reduction noted lately under exports from USA and the UK. The trade in motor cars also underwent many changes and British exports especially in commercial vehicles picked up last year, but in volume Germany was ahead of Great Britain. A further fall in the export of bicycles is in part due to structural changes in the industry, the displacement of the pedal bicycle by the moped. The United States has no share in the bicycle trade as an exporter, but, like Germany, she has a large trade in new ships, although her performance is easily surpassed by that of Japan. In regard to aircraft, the UK is still the foremost supplier for other countries and it looks as if the aircraft industry being integrated further is likely to find compensation in the export trade when Defence orders go down as expected.

They are so neat!

HEAD OFFICE: 1, GHAT STREET, CALCUTTA-1

"Packet tea is NOT a luxury"

You mean to say then, Bhai Sahib, that packet tea is bought in really large quantities? Surely, the poorer folk do not go in for tea in packets?

What makes you think so, my friend? Brooke Bond alone produce over 184 crores of packets every year. If packet tea were a luxury, would it sell in such astronomical numbers?

After all, out of our population of 360 million only 7 lakhs i.e. one in 514 earn more than Rs. 250 a month. Our average family income is assessed at Rs. 130 per month.

There...you've hit the nail right on the head. In a country like ours no industry can be built up on a truly large scale unless it serves the millions rather than just the well-to-do few. This is something Brooke Bond realised many years ago. They have endeavoured ever since to bring packet teas within the reach of everyone.

But what is the price of a packet of Brooke Bond Tea?

Brooke Bond market a whole range of packets—guaranteed for quantity and quality—of which the prices vary from 3 nP to Rs. 5.75 nP. But—and this is the crucial fact—nine out of ten of these packets sell for less than 50 nP! And, as you can imagine, they are bought by the humbler people—from the largest cities to the remotest villages.

It's obvious then, Bhai Sahib, Brooke Bond's packet tea really is tea for the people.

NATIONAL NOTES

Coal Target

The Coal Council of India is reported to have approved a tentative target of 95 million tons of coal, which approximates to the projections of demand which had been worked out earlier for the last year of the Third Plan. This will be 35 million tons more than the Second Plan target and 42 million tons more than the level of production that on present indications is likely to be reached by the end of the second plan period. Production last year was over 47 million tons. The shortfall in reaching the Second Plan target raises the question whether the necessary measures to double coal output in the course of next six years have been worked out in detail.

The Council is reported to have made gradewise allocations of the additional output. Equally important is the problem of allocation of the responsibility as between the undertakings in the public sector and the private sector for the increased production that is envisaged. In 1959 the mines in the private sector contributed 40.4 million tons of the total output. Barring natural calamities, private sector mines may be expected to reach their target by 1961. Actually in last December, production was running at the level of

43.7 million tons per year very near the target.

The large developments under way in the public sector may be expected to bear fruit during the Third Plan period, enabling the State-owned collieries to make up for the shortfall in the Second Plan. But a realistic approach will not, for that reason, fail to utilise to the fullest extent potential that exists in the private sector. This may call for relaxation of the restrictions under which private undertakings have to operate in this field. The spokesmen of the industry have already served notice that, under present conditions with production confined to contiguous areas, it will not be possible for the private sector to raise output by more than 7.20 million tons by 1955/56. At the same time it has been pointed out that, if companies are allowed to work new areas for which they hold leases and prices are fixed at a level that leaves an adequate margin of profit, the private sector mines could produce nearly half the additional quantity required to reach the target.

The industry has a grouse that the Coal Prices Revision Committee's report is being treated by the Government as the last word on the subject and its representatives have been denied the opportunity of explaining the incorrect assessments on which the report was based. An evaluation of the element of fuel cost in the cost of manufactured products in different industries will facilitate a practical approach to the problem of coal prices. What the President of the World Bank had to say in his address to the UNESCO conference last August on the importance of charging adequate rates for electric power is also relevant to the problem of expanding coal output.

Tourism

The Third Plan Programme for the Development of Tourism looks both outward and inward. That is to say, the total provision of rupees five crores for the programme has been allocated in almost equal shares for development of tourist centres which attract foreign visitors and for providing facilities at centres which are of interest to home tourists. Doubts arise whether it will be possible to classify tourist centres into two such exclusive categories. To take one instance, Banaras continues to be a big draw for both variety of tourist. But it is obvious that the two require different facilities, or the same facilities at different levels.

The home tourists can have the satisfaction that claims neglected for so long will now get a hearing. The provision of Rs 10 lakhs to assist private institutions running Dharmasalas, etc for improving essential amenities should make a large difference, if the amount is put to effective use by

the managements of these institutions. As regards facilities in general, the Tourist Development Council has drawn up an impressive programme for development of transport and communication including provision of air strips near important tourist centres. The schemes for increasing their attractions are even more impressive. These include winter sports at Gulmarg, water sports in Maithon, not to speak of boating in Kaziranga, and flood lighting everywhere.

Health Plan

The eradication of malaria has been given top priority in the Union Health Ministry's Third Five Year Plan, with an allotment of Rs 45 crores out of the total allocation of Rs 300 crores. Though the life history of the malaria parasite was first unravelled in an Indian laboratory, India is still one of the few countries where malaria continues to be a menace to public health. As late as 1952, morbidity from malaria was estimated at 100 million cases and nearly a million people used to die of the disease. Malaria control operations costing about Rs 25 crores a year had cut down the morbidity to ten million cases a year. The programme of control covers nearly 230 million out of the total population. But the danger of fresh outbreaks will persist so long as the disease lurks in some isolated pockets and the risk is aggravated by the fact that the mosquito in course of time is capable of developing immunity to DDT.

The emphasis therefore has shifted from control to eradication which is to be effected by an intensive five year campaign in two phases. Though the initial cost will be comparatively heavy, cost of maintenance will be low enough to be carried by the routine health programmes and extensive spraying operations can be suspended after a few years. The Technical Co-operation Mission of the United States, which has already made available Rs 38.2 crores towards the control programme, will be cooperating in the campaign for eradication of malaria and contributing nearly half the cost. The experts of the Health Ministry are satisfied that the allocation under this head is adequate for the purpose. But they are not equally happy with the pruning to which the rest of their plan has been subjected by the Planning Commission.

Though the total allocation for Health Programmes in the Third Plan is larger than in the First and Second Plans, it is proportionately smaller; it works out to 4.3% of the total outlay as compared with 5.9% and 5.7% in the First and the Second Plans. The programmes for water supply have come in pretty drastic treatment. The original estimate of Rs 200 crores under this head put forward by

the Ministry has been cut down to Rs 88 crores. The frustrated experts are asking what is the use of elaborate health schemes, when the progress achieved in other fronts is likely to be wiped out by waterborne diseases which will continue to levy a grim toll, until it is possible to assure supply of safe drinking water in the urban and rural areas. The World Health Organisation has identified the Lower Gangetic Valley, especially the Calcutta industrial area, as the focal centre for the spread of cholera in India and South East Asia. The Rs 100 crore project for a Metropolitan Water Board to serve the Calcutta industrial area is still under investigation. But it is not necessary to take a tragic view of the situation.

The Environmental Sanitation Committee had assessed the cost of water supply schemes covering the whole country at Rs 1200 crores. Even if the entire amount asked for by the Ministry had been given by the Planning Commission, only a fringe of the problem would be touched during the Third Plan period. What the situation requires is a new approach to the problem of water supply and formulation of schemes for rural areas which will minimise the cost. Much can be done in the Community Projects and Extension Blocks to stimulate local effort without drawing on the Health Ministry's budget.

The breakdown of traditional sanctions against pollution of water sources has aggravated the problem in rural areas. If it is possible to educate the people to observe the elementary rules of sanitation, even existing resources like ponds can serve their purpose till such time as country has money enough to provide every village with a protected water supply.

FOREIGN NOTES

"Leisure & Recreation"

If one were to hazard a guess on what is the fastest-growing "industry" in the United States today "leisure and recreation" would hardly be the answer. Yet, that is exactly the finding of one of the nation's leading investment companies, which has made a comprehensive study of the subject.

The firm of Francis I. Du Pont and Company estimates that "leisure" spending by American will reach the record total of \$43,000 million this year, up some \$2,000 million from last year. Moreover, the Company foresees a continuing rise to more than \$50,000 million a year during the 1960's.

ASTOUNDING as these figures appear at first, they are more readily understandable when one stops to think that they are the outgrowth of what has long been one of the major socio-economic trends in the United States.

The American labour force is constantly growing. More than 66 million persons now are gainfully employed, all of whom—virtually without exception—enjoy paid vacations each year. In addition, in nearly all industries the basic 40-hour five-day work week prevails. On top of this, Americans enjoy high pay-scales and living standards—which all adds up to ample leisure time and enough money to spend in putting it to good use.

There arises the question of just what Americans are doing with their leisure time—on what recreational pursuits are they spending their money? As the Du Pont study points out, there is a clear trend toward active leisure in sports as well as in other pastimes.

The fastest growing sports today are hunting, fishing, archery and skiing. Golfing and bowling also are on the increase. And water sports—skindiving, swimming, boating, etc.—show signs of assuming major proportions. As an example, the number of "pleasure" boats in use, from small rowboats to large motorboats, has jumped from 2.4 million in 1947 to 7.8 million today.

With the growth of active sports has come a relative decline in "spectator" sports—such as baseball and boxing. With television available at home, attendance at motion pictures houses also is off. Even so, the study shows that "spectator" activities still hold a high place, over-all, in American leisure-time habits.

Also interesting to note is that the increasing stress on participation sports has not dimmed interest in cultural pursuits. The Du Pont study reveals a noticeable

increase in book reading, for instance, as well as in spending for records, phonographs and similar equipment—particularly in high-fidelity and the newer stereophonic sound recordings.

More time also is being devoted to the theater, the opera and concerts; outlays for these purposes last year were nearly double what they were a dozen years ago. And photography, long a hobby with many Americans, still ranks as a major leisure pursuit.

The growth of the "recreation" industry, the study finds, is furthered also by a shift in the public attitude with regard to financing leisure activities. With employment and incomes high, people seem to have little reluctance to finance their recreation through credit.

Here is how the nation's principal leisure time outlays rank: gardening and other home "do-it-yourself" projects, \$12,000 million; travel, \$10,000 million; television, radio, phonographs and records, \$3,800 million; reading material, \$3,300 million; fishing, \$2,600 million; boating, \$2,500 million; spectator amusement, \$2,200 million; swimming and other aquatic equipment and activities, \$1,300 million; dining "out" for pleasure, \$1,100 million; hunting, \$1,000 million; bowling, \$1,000 million; gold, \$800 million; photography, \$700 million.

The study points to some possible—though still largely undefined—changes ahead in American recreational activities. For one thing new leisure pursuits could come to the fore as time goes by: private flying is offered as one example. For another thing, recreational standards and interests are bound to be influenced by continuing social and economic progress—particularly the kind of progress that seems to be bringing more and more of the American work force into professional, executive and technical positions.

Ghana Pound

The advertisement regarding the Ghana £ as equal to the pound sterling was needed to clear up doubts. The fact that Ghana is a member of the IMF and a contributory to the World Bank after achieving independence requires mention, as also the fact that the Ghana £ is equal to \$2.80 cents. The High Commission's announcement fixes Ghana's position in the sterling area but of more consequence for the future is Ghana's mineral wealth including gold and her position as the leading exporter of cocoa, the chief market being the USA. The loans taken for development can be serviced by manganese and other exports, and aluminium production may be a strong proof of the economy. The election which suits Dr Nkrumah's purposes will not mark any break in the trade and financial connections of the republic though British mining enterprises will operate in future under different conditions. That Ghana's national

income compares very well with that of either India or Ceylon may not require special notice because the economic future is bound up with cocoa, the price of which is stabilised by a marketing board that serves the growers even more than the British firms that take most of the crops from the peasants.

The wide vogue of the pound as a currency unit may explain the preference of Ghana for a familiar unit. The connections of Barclay's Bank with West Africa also go to explain the preference for the pound. The Irish, Turkish, Israeli and Egyptian pounds are independent but so are the South African, New Zealand and Australian currency, expressed as pounds whose value is linked with that of sterling. It is only in the Caribbean federation that the pound is less familiar than the dollar, whereas in Africa it is the British currency that is the monetary unit most familiar to the people. One may add that the pound like the peso or dollar is the monetary unit in many lands, and the change in the value of sterling affects pounds in other lands to some extent because of the long-standing connection of foreign countries with the sterling area.

Candidate Out Front

The US election prospect is clearer though the choice of candidates for the Presidency belongs to the party conventions in August. In West Virginia, the primary has been won by Senator John Kennedy proving that a Bostonian and a Catholic could score against Senator Humphrey even in Wisconsin where the Catholic vote proved decisive. The West Virginia result may suggest that without any Republicans coming out to support Senator Kennedy, the local registered Democrats had no difficulty in picking the winner. If Mr Truman has affirmed his interest in Mr Symington as a potential President, the Democrat party has now chosen to ignore the listed handicaps of Mr Kennedy as an Irish-American Catholic, a millionaire from Massachusetts, and a Harvard graduate too. Though Senator Kennedy may not add his own name to the Profiles in courage he has drawn, it is now certain that the party leaders are not worried by Senator Kennedy's failure to satisfy Protestant bishops or to indicate his views on US aid for birth control propaganda. The theory that the Papacy may try to influence a Catholic president has not taken root and it is perhaps the change in the Vatican that has made the US Voters grasp the fact that the Vatican is not a secular state interested in domestic issues.

That Governor Smith of New York lost to Hoover in 1928 was due to religious prejudice in the South the Dry's zeal, the Puritan streak in New England and the 100 per center's mistrust of hyphenated Americans. But there is a new generation and two more States

also and the election managers certainly have an eye on the prominent Catholic element in California and New York when it comes to pushing Mr Kennedy forward as a relatively young but experienced candidate able to beat favourite sons set up by other States merely to test the strength of rivals. That the Republican party clings to Mr Nixon, already approved by Mr Eisenhower has in a way simplified the problem for the Democrats who hope that the situation abroad will favour them and the economic recovery will help them to regain control of the Executive branch of Government. The choice of a candidate for Vice-President may be easier for the Republicans who will perhaps support Mr Mitchell mainly as a Catholic but the position of Veep is largely ornamental and the party conventions will naturally concentrate on finding the smartest, biggest vote getter before the final contest takes place in November. The outcome of the Summit talks will have no effect on the outcome as a third term for Eisenhower is ruled out and the record of the Administration is not invulnerable. That is Mr Kennedy's advantage of which he has made use in the South and the Middle West. He favours more aid to India. So Delhi can relax.

Troubles for Apartheid

The Commonwealth Premiers, apart from deciding on the admission of Malaya and Nigeria, did not reach any conclusions. The status of South Africa as a republic in the future is left open because of the objection of many Commonwealth countries to apartheid. The referendum that Dr Verwoerd holds cannot settle the issue, even of making South-West Africa a fifth Province, or getting the support of Australia. Whether South Africa will go on her own way and ignore current sentiment in Canada as well as Ghana may well be open to argument. But it is clear that Mr Louw's explanations in private have not had much effect and the UN resolution on inter-racial tension cannot be disregarded by Mr Louw.

Talk of a boycott of South African goods has been in the air for months but the facts and figures are against any hasty course. The really important exports are diamonds, gold and uranium and the sterling area cannot do without the dollars that South Africa puts into the Commonwealth kitty. The value of Simonstown as a naval base may be doubted, but the British investor must be aware that his capital still rests on the continuity of the British connection and the Union does not depend much on shipments of wool, hides or fruit at present. As an importer of food, mainly for the large native population, South Africa is handicapped but having gold to pay for maize, she may negotiate long-term agreements with the USA or Australia.

STATES NOTES

Unemployment in UP

A study undertaken by the Labour and Employment division of the UP Government, in collaboration with allied departments, for tackling the unemployment problem at the district levels, has underlined the complexity inherent in it. In view of the aggravating pressure of underemployment and also because of the limited scope of approach at the district level, the study report does not envisage early elimination of the unemployment problem.

For an effective solution, the report suggests break-up of the problem in terms of specific action at a number of points. Particular attention has to be paid to rural areas where unemployment is widespread. Failure to derive fullest benefits from new sources of irrigation is, according to the study report, one of the deficiencies making rural employment problem more difficult. Intensification and diversification of agriculture is fundamental for increasing employment opportunities in the rural areas. The report, however, stresses that in implementing developmental programmes, the authorities concerned should give equal importance to ensuring that the development programmes are utilised so as to support increased production through existing agencies. For, "it is the combined effect of production achieved through these agencies and the development achieved through the new programmes which determines the impact both on employment and on the condition of the local, State and national economy".

As the main planks of the rural employment programme the report suggests development of co-operative marketing and processing and better arrangements for supply and credit. The development of small-scale industries is emphasised, and provision of greater credit is recommended. The report reveals the existence of great difficulties in the way of a small entrepreneur obtaining the assistance being provided by the Government.

Rural Electrification

Rural electrification is projected for a big increase during the Third Plan. According to tentative proposals, 15,000 villages and small towns will be electrified during the Third Plan period. The number of villages and small towns that will have been electrified by 1960-61 is 17,400. Implementation of the Third Plan schemes, will therefore, bring the benefits of electrification to a total of 32,400 villages

and small towns. The progress already achieved in extending electricity to more than 17,000 villages and small towns is remarkable considering that in 1955-56, only 7,400 such places in rural areas were electrified. The headway made in this field reflects the effect of the programmes formulated by the Government for accelerating electrification. Firstly loan assistance was made available on a liberal scale by the Centre. Secondly, the Centre also put through a scheme at a cost of Rs 15.8 crores paid to the States, for increasing employment opportunities through expansion of power facilities.

The major source of supply of electricity to rural areas is the grid main. Centres fed by diesel station are in comparison small. In future extension of electricity, the setting up of small hydro-stations of the capacity of 25 to 50 kw in the hilly areas has been planned. These stations would serve as pilot stations for building up load in the area.

Dependence on imports for some of the materials required for rural electrification is considered to be a factor that tends to slow down progress. While, such materials as insulators, conductors, distribution transformers etc are being manufactured in the country, others like switchgear and lightning arresters are being imported. There is also much scope for bringing down the cost of electrification. Economic designs and proper standards for rural line construction have to be evolved.

Food Production in Punjab

Reports emanating from Patiala pinpoint the feverish preparations that are being made by the Punjab Government with a view to increasing the agricultural production of the State. The State's Agricultural department, has already formulated a comprehensive agricultural extension programme laying special emphasis on, extensive irrigation facilities, reclamation of land, soil conservation, and the adoption of up-to-date methods of agriculture. The department has already instructed the officers in the district levels to devote more and more attention to the successful implementation of these plans, and to drive home to the people the advantages that will be derived from them. Provision is also embodied in the scheme for facilitating the grant of subsidy to the agriculturists for the purchase of adequate manure. Toward this end the departmental authorities have chalked out a revised scheme with a view to ensuring the farmers the timely subsidies so that they can proceed with their agricultural operations, and it has been forwarded to the Government for their approval.

The task of distributing fertilisers, which had hitherto been vested in the Agricultural depart-

ment has been transferred to the co-operation Department and the fertiliser loans will henceforth be granted only to the members of the co-operative societies. According to a report recently published by the Government more than 50 per cent of the loans granted during the previous financial year for the reclamation of waste lands through manual labour has lapsed. The report also pointed out some of the loopholes in the operation of minor irrigation schemes in the State.

The new scheme also envisages the installation of about 52 seed farms in the State and an amount of Rs 50,000 has been earmarked for distribution in the districts of Hissar, Kangra, Ferozepore and Karnal.

Andhra Ministry

The crisis in the Andhra Cabinet seems more serious than what appears on the surface. It looks as if the latest charge against the rebellious Industries Minister, Mr A. C. Subba Reddy, that he defied his Chief Minister's mandate by contesting in the election to the Pradesh Congress Election Committee, was only the last straw. Mr Reddy, divested of his portfolio, is charged with failure to attend the Cabinet meeting even while he was in Hyderabad, openly expressing views against the State Ministry's land reforms and showing discourtesy to his cabinet colleagues.

For the election to the Pradesh Congress Election Committee, according to the Chief Minister Mr D. Sanjeeviah a panel of names approved by the Andhra cabinet, was asked to be elected unanimously. The Industries Minister, on the contrary, disobeyed the Chief Minister's mandate. This has been construed as an act of gross indiscipline. An explanation was asked for, followed by a demand for tendering an apology. But Mr Subba Reddy refused to relent.

It is not clear whether there was really unanimity in the choice of the panel of names to the election committee as claimed by Mr Sanjeeviah. Conflicting versions have been given by the two Ministers. If there had not been any unanimity as claimed by Mr Subba Reddy, then there seems to be validity in his contention that he had to stand for election irrespective of the consequences.

It is agreed on all hands that the Chief Minister should command the confidence of his cabinet colleagues and also discipline. There appears a wise view that if only Mr Sanjeeviah had acquainted the Congress High Command early with the problem, this climax might have been avoided.

In Andhra Pradesh, conflicts among Congressmen and among Cabinet members have become more a rule than an exception. But this time the differences have come to the surface because the Minister against whom charges have been hurled has chosen to stand firm.

Stability is yet to come to the Andhra Ministry and if proof is needed about the general feelings that party bickerings take most of the time of the Ministers and their followers, this episode is an eloquent testimony.

Money and Games

The economics of sport are hardly known but the decline and fall of amateurism cannot be overlooked. Dr B. C. Roy when opening the CIT stadium in South Calcutta spoke of sport for sport's sake, whether to plead for a reversal of current trends or to emphasise the Sports Council's preference for amateur sport. The educational aids provided may suggest that the pro is, not particularly wanted by the Stadium and the seats are meant to encourage more than paid attendance. That football as in the UK has been commercialised and transfer fees are up is now accepted and yet the hope is that local talent would be spotted and promptly assisted to flourish.

As the new Stadium has got donations from the leading clubs it is apparent that there is goodwill from those who believe only in gamemoney. The emphasis laid on athletics also is perhaps derived from the Russian example of making popular heroes of successful performers. It may be claimed that in the absence of princely patronage big business has done something to keep sportsmen from emigrating for well-paid professionalism, and the official notice taken of major sporting achievements is another hopeful feature in some eyes.

Small Industries in Andhra

The Andhra State Government have received about two hundred and fifty proposals to establish small scale industries around Hyderabad and Secunderabad. These schemes would be examined by a specially set up Government Committee, and the sponsors would be permitted to go ahead cutting short red tape.

The object of quickening up these schemes is to relieve unemployment around the twin-cities. But as a long range programme, the Government proposes to establish an industrial estate in the old city of Hyderabad south of the Moosi river. Priority would be given by the State to schemes having maximum employment potential and which would have a long lease of continuance in the State.

West Godavari district is to be chosen for the experimentation of the Package Plan under the Ford Foundation. West Godavari is the most fertile of Andhra districts where the maximum facilities would be afforded to the tillers and encouraged to produce the maximum foodgrains, particularly, paddy in the area.

Sugar Industry

For the second time since the launching of the First Plan, the sugar industry has demonstrated its remarkable resilience. As under the First Plan when production staged a dramatic recovery after setbacks in the early years, sugar production has, following two adverse seasons during 1957-58 and 1958-59, picked up in the 1959-60 season and is currently running at a peak level of nearly 23 lakh tons. The increase in production achieved during the current season should provide a good start for the progress of the industry under the Third Plan in which a target of nearly 30 lakh tons has been envisaged for it. While in the light of the developments that characterised sugar production in the First and Second Plans an additional production of 5 lakh tons does not seem impracticable, it has been becoming increasingly clear that the mill interests have real misgivings on the score of lack of an incentive element in the return on employed capital recommended by the Tariff Commission in their recent report and which has since been accepted by the Government. The Tariff Commission's refusal to concede the claim of the industry for special rehabilitation allowance has also left the industry high and dry. Speaking on behalf of the mill interests, at the annual general meeting of the shareholders of the East India Distilleries and Sugar Factories Limited, Mr C. R. Srinivasan, Chairman of the company observed that neither of these recommendations is in line with accepted standards professed and practised by industrially advanced countries in the West.

The impending implementation of the price-linking formula in respect of sugarcane has also agitated mill interests. The formula represents an attempt to correlate sugarcane price to the quality of cane supplied by growers and as such this should be a step that should be welcomed by the mills, since by placing a premium on quality, it would tend to improve quality. The usefulness of such quality-based price for sugarcane has been demonstrated by the successful application of the SISMA formula over a period of years in the Southern continent. But a voluntary formula and one prescribed by the Government represent different things. The sugar mills have real apprehensions that the Government will yield to pressure from the side of cane growers in fixing the terms of the formula. Unless the conflicting interests of growers and sugar mills are recon-

ciled in fixing the terms of the formula, its implementation will only pose an additional problem for the industry. Voicing the concern of mill interests, Mr Srinivasan has warned against any hasty and ill-considered action.

Sparking Plugs

Inaugurating the public enquiry into the continuation of the protection granted to the Automobile Sparking Plug Industry on 6 May Mr K. R. P. Aiyangar, the Chairman of the Tariff Commission briefly reviewed the history of protection accorded to the industry by the Government. The first enquiry into the claims of the industry was conducted by the Commission in 1954 and on their recommendations the rate of import duty of 25 per cent ad valorem on sparking plugs was enhanced to 92½ per cent ad valorem. Again in 1956 the Commission recommended the continuation of protection till the end of 1960 in order to encourage the indigenous industry in proceeding with its manufacturing schemes.

As the protection provided to the industry is scheduled to expire on 31 December this year, the Tariff Commission was again engaged to undertake the present enquiry. The scope of the enquiry extends over sparking plugs of 14 mm. and 18 mm. including resistor types. In assessing the demands for these plugs in the country to the Commission resorted to two methods in their previous enquiries. The first method consisted of calculating the indigenous manufacture of automobiles and the number of them plying on the roads and estimating their requirements of sparking plugs based on a time and mileage factor. When the second method was adopted they first computed the approximate consumption during the past few years and then projected from those figures the demand for subsequent years.

The last enquiry was helpful in assessing the standard of local products and the public expressed their satisfaction on home-made products. Nevertheless, the Commission received a few complaints alleging the inferior standard of Indian goods, but later it was proved that the allegations were baseless and the improper selection of plugs in regard to heat range and not their inferiority that was responsible for these complaints.

Whether the protection shall be continued or not depends on a number of factors. The cost of production in India is comparatively higher than in foreign countries. This will naturally tell upon the price. Only by maximising production by the two units engaged in the manufacture of the plugs, namely, the Motor Industries Co. Ltd., Bangalore and the Auto Accessories (India) Private Limited, Bombay, and lowering costs can the industry play the role of a feeder to the automobile industry.

Mogul Line

The notice of annual meeting (the 82nd in fact) issued to the shareholders of the Mogul Line is of special interest because two new Directors are obviously nominees of the Union Government. The Chairman of a State-owned shipping line (a retired official) and a serving Government official from the Transport Ministry are to be on the Board. This may mean that the Mogul Line, assigned a share in coastal trade under the Irwin award, is now a pukka Indian Company and State-controlled too. The latest Budget memorandum does not indicate the nature or extent of the Government's interest, because the acquisition is recent and paid out in sterling but it will not be surprising if the Government has acquired a majority of the shares held in the UK (owing to the Mogul Line's identification with the Haj pilgrim traffic) after the reorganisation of the P. & O. group in March. This need not be a consequence of Mr Mundhra's connection with Turner Morrison's affairs in the past but based on an arrangement to maintain essential contacts with the Persian Gulf and the Arabian peninsula via Karachi.

The objections to Indians buying foreign held shares do not apply to a State contract, enabling Government to buy about 80 per cent. While the Mogul line is invariably associated in the public mind with the famous case arising from a conspiracy in restraint of trade, the new association with the Ministry of Transport may make it a semi-public concern—a company whose ships are available easily for the near trades. The yearbooks give no indication of the financial structure of the shipping company operating over a long period in the East through the A.S.N. Co. and there is no history like George Blake's account of the BISN to let the public know about the origins and expansion of the Mogul Line. Perhaps a query in Parliament will help to enlighten those intrigued by the notice, for it is clear that IFC loans are not the reason for Government's present association with the Company. On the other hand sudden virtual nationalisation, with a subsequent decision to leave management to old experienced hands, may have taken place by substantial investment and the terms of transfer may be made known to the annual meeting which is now to be viewed as a striking event—far more significant than the merger of Bombay Steam with Scindia Steam.

Metric System in UK?

A brief report that the UK too is considering a decimal coinage may inspire local faith in the naya-paisa. The South African decision to adopt a decimal coinage may be without weight, as compared with the general view that a decimal coinage of pounds divided into florins and groats may be more acceptable to the general public than the usual LSD. The Mint may have no views and a Royal Commission may be able to give practical advice on a change-over that will help both shoppers and slot-machines. The Noodle

mentality of blind hostility to change, will not present an obstacle since computers have replaced clerks and the Chancellor of the Exchequer may find it easier to introduce decimal currency if Australia and New Zealand move in the same direction. The fact that currency today is less vital than credit for the national economy may also help to promote change and it is perhaps necessary to emphasise the North American reliance on decimal coinage and Japan's familiar Sen and Yen as reasons for a change that may make it easier to work out prices in the head. Since no silver will be called for, and the existing token coins can be called in for melting and reissue, the UK may fall in line, more so, as the West Indies and some other areas are more familiar with the US decimal currency than the British. It would perhaps be easier to collect income-tax in future as a percentage—like the 30 per cent now deducted from dividends paid out in India—and the making of comparisons may be easier while a new cachet may be given to two-shilling shares quoted on the stock exchange. The most familiar of these is Indian Copper which has suddenly and definitely regained its position as a market leader. The £10 certificate for 100 shares in Indian Copper Corporation is a quite familiar unit for market men today and those calling thousands over the telephone will find it easier to fix prices. That too is one of the uses of the decimal system—adopted by the Railways but postponed by the Customs and Excise to October.

Another Paper Mill

The advent of another paper mill will excite attention here and now. The Indian trade Journal records that in December 1959 a licence was issued to McLeod & Co. for starting in Bilaspur (MP) a new paper mill to produce 30,000 tons of printing and writing paper per annum and to produce 30,000 tons of pulp. This may mark the diversification of McLeod interests away from tea and jute. It may also suggest that an outlet for paper-making machinery exists. Telco has been already licensed to manufacture plant as also Bertam Scott in Titaghur. Installed capacity in the paper industry last year is put at 321,000 tons per annum and output was up to about 3,00,000 tons. The newsprint output was far below capacity though demand for newsprint is rising fast like that for paper.

Oil India

The first of the two turbo-alternator sets, designed for India's first gas-turbine power station at Zaloni, the new Oil India township at Nahorkatiya, left the United Kingdom on 15th March and arrived in Calcutta last week.

One of the world's most modern forms of power generation, these gas turbines, will be driven by natural gas to be produced from the Nahorkatiya oilfield.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

The ideological formulation of the Indian political situation is interesting. The question at Calcutta, was, it seems 'whether India has fulfilled the bourgeois democratic revolution: if not, at what stage it was. The phraseology is obsolete but the problem is immediate. The Communist Party is trying to decide whether or not the time has come to break decisively with the Congress and set up as the progressive party. The Congress is now, conceded in communist circles, to have spearheaded the bourgeois revolution against 'Imperialism.' If this job has been completed, so the theory runs, the time has come for 'Socialist' (that is to say, the Communist Party) to take over.

★

In this context, the incipient quarrel between the 'moderates' (and these include Nambudiripad and Dange) and the extremists (the internationalists like Joshi and what is known as the Bengal group, though not all communists from Bengal necessarily belong to this group) has apparently reared its head and there could be no unanimity. The 'official resolution' prepared after a lot of discussion was not endorsed but opinion on it was freely aired. It has been referred to a committee (whose composition reflects the larger division) for further study and final formulation for discussion in January next. 'Passing the buck' to a committee is an old parliamentary dodge, and this fact alone was conclusive proof that fears about the Communist party resiling from the Amritsar thesis would be unfounded.

★

The broad lines of approach of the party was indicated by Mr Nambudiripad (whose displacement of Ajoy Ghosh is no indication of the shift rightwards but of the inconclusive nature of the power pulls within the party). He said at a press-conference in Trivandrum: "The council was agreed on two points: (1) a reactionary offensive is being launched by forces both inside and outside the Congress against the progressive aspects of the Congress Government's policy such as land reform, emphasis on industrialisation, the role to be played by the public sector etc. and it is necessary for the left and democratic movement to combat this; (2) this struggle against the reactionary

offensive should not lead to a slackening of the struggle against the Congress Government." This formulation of the two points of agreement skilfully hides a hundred mental reservations among the partymen. On the question of how 'reactionary' (an useful portmanteau dirty word, this) the Congress or even Mr Nehru has become, the National Council was deeply divided. Some saw Mr Nehru as overwhelmed by the right-wing of his party and having abjectly surrendered on such 'crucial' questions as state trading, cooperative farming. On the question of 'left' combating this, there was even more violent disagreement. The party is deeply divided on the question of 'left unity'. Some seem to feel that the recent bye-election in Calcutta in which they went it alone and won shows that they could snap their fingers at the splinter groups in the left. Others would wish to be more circumspect. This particular worry in its obverse form is, by the way, racking PSP leadership also, the regional alignment of the opposite views on the question in both the parties is interesting. In Bengal, where the communists feel that they could do without the PSP's help, the PSP itself is having qualms about having been wobbly over left unity. The communists from Kerala, however, see the lesson of their last year's tribulations as the need for a greater coordination of efforts

with the left. But, the PSP in Kerala is in no fraternal mood. Elsewhere too, the non-communist left may solve the communist dilemma for them. Bitter experience has taught them, virgil-like, to fear the Dannaus though their hands proffer gifts. Those among the communists who think that the stage is set for them to take over, should be living in a world of their own. In such calculations, there is, I think an unavowed factor taken into account; and that is the Congress without, or after, Nehru. As some communists see it, their real enemy is the Swatantra party. (Rajaji, on the other hand, does not, except in propagandist contexts, return the compliment. He considers the Congress, Swatantra party's real opponent, his thesis being that Congress policies are, in essence, Communist.) There is little doubt that the communists are uneasy about the rise of the Swatantra party and would relieve the Congress of some of its propagandist duties. Indeed, the various factual investigations that the party is to undertake, gathering of detailed information on the development of the economy since independence, of patterns of capital formation and possible monopolist tendencies (both indigenous and foreign) can, if at all, only provide ammunition for the Congress. But, to think that in the foreseeable future, the communist can not only do without the other leftist support, but could even supersede the Congress is a mere pipedream.

★

But there is an important qualification for this assertion: and that is that the communists' political programme for the future does not include an atavistic return to vio-

ience. That such a development is a distinct possibility is clear from the muted exchanges over the so called Amritsar thesis. Mr Nampoodiripad said at the Press Conference I quoted earlier from, that 'it has not been challenged by anybody so far.' (This was, significantly, in answer to a question whether the thesis would be reviewed at the coming party congress). Obviously, Mr Nampoodiripad does not want to commit himself to what may happen between now and when the party congress meets. It is an open secret that ever since the trouble started in Kerala, there has been a section of the party that has gone sour over

the Amritsar line. After all, they seem to argue, that the parliamentary game is really not up our alley. Orthodox communism has always scoffed at it and experience in Kerala has only proved it right. The Sino-Indian question has now solidified into a near permanent problem and when particular manifestations of the problem takes place, what the communists will do is anybody's guess. So far, the moderates among the party leadership have succeeded in keeping the wilder section under control, out the very inconclusiveness of the discussions—though not on particular question of border disputes—is an indication of what in com-

munist parlance is known as 'inner contractions'.

Two considerations that are likely to weigh with the communist leadership. Firstly, the general elections are not far off. If only as a line, the Amritsar thesis has its value as provider of a certain political respectability and it would be silly to repudiate it just when it is likely to be most useful. Secondly, there can be no doubt that they have isolated themselves from popular opinion on the Sino-Indian disputes. This fact may not matter in a bye-election with a particular local background. If the communists were to draw a wider moral

flattering to their self esteem from this and conclude that they could disregard public opinion on this question and still survive as a political force, they would be deluding themselves.

The progress that has been chalked out by the Jay Engineering Works Ltd in its Silver Jubilee Year is, by any manner of reckoning, highly creditable. Thus, the pleasant function that was held this week to herald one such achievement, must not be deemed to be some specious or boastful self-publicity, but, on the other hand, a fitting recognition of and tribute to the good work that has so far been put in to make the company what it is today. Established in 1935, prewar production was confined to the manufacture of Sewing Machines, and, in the second half of its first decade, the plant had to be made available for war production. In effect, therefore, Jay Engineering, as it is known today, may be said to have started operations only in, say, 1945. Today, with the verve and inspiration provided by Sir Shri Ram, the company's Chairman, Jay Engineering's single unit factory can claim to be the largest in the world. The emphasis, I may add, is equally on Sewing Machines and on Electric fans—the two articles of mass consumption in a country which itself is in the throes of expanding industrially and thus bringing about a rise in the general standard of living. Incidentally, last week's ceremony was ostensibly to mark the record production of 50,000 fans in a month. The capacity of outturn for Sewing machines is 25,000. (The objective of 50,000 fans a month was laid down for 1960—and has been achieved in the fourth month of the year). The self sufficiency of Jay Engineering products can be gleaned from the fact that the imported materials—in the form of special alloy steels—accounted for merely 5 per cent of the total cost. I understand that another Sewing machine factory is in the blue print stage for implementation; during the Third Plan; and serious consideration is being paid to the possibility of manufacture of sealed units for refrigerators and air-conditioners. At present foreign collaboration for this purpose is being sought. Another aspect of the company's working which imbues the company with the attribute of pioneering activities is the fact that its products first started the real diversification of Indian exports. In 1948-49, 469 Sewing machines and 331 Electric fans were exported. This year, the target is 48,000 Sewing machines and 40,000 Electric Fans—a hundredfold increase, that is to say, in a period of 11 years. I use Usha fans myself, so, it is no surprise to me that Jay Engineering, by reason of the excellent quality of its products, is able, in the face of severe competition abroad, to carve out a large export market for its products.

GATEWAY GOSSETT

Problems of Maharashtra

NOW that the bifurcation of Bombay has become a reality, the people of the State of Maharashtra are free to devote their attention to the raceme of problems confronting them. The architects of the new State appear to be in right earnest to ensure the healthy growth of the infant. It was only a few days back that Mr Y. B. Chavan, the State Chief Minister, in his address at the banquet held by Mr B. D. Garware, the Chairman of the Economic Development Council, alerted the business community to whack up the industrial activities to super-sonic speed for the industrialisation of the State. And they are currently engaged in discussions over the social integration of the State. The seminar organised jointly by the Indian Committee of Cultural Freedom, the Asian Office of the Congress for Cultural Freedom and the Sadhana Weekly of Poona, has provided an opportunity for bringing the views of mature brains to one platform.

Mr Justice P. B. Gajendragadkar, in his presidential address, highlighted the importance of achieving the social and economic integration of the Bombay city with other parts of the State. He added that Maharashtra should absorb and assimilate the broadening, widening, tolerant, and catholic atmosphere of its capital and the latter, in its turn, must absorb the Maharashtrian aspirations in regard to its socio-economic progress. The realisation of this aim, as it is quite evident, is by no means a task of small magnitude. The citizens will have on their part to be quite alive to their responsibilities in helping the authorities in the implementation of various schemes. They must also endeavour to generate an atmosphere of confidence in the minds of the linguistic minorities that their cultures and languages will be enabled to develop in their own lines.

Apart from attaining the social integration, the achievement of economic self sufficiency also calls forth concerted effort. On the economic plane, certain areas in the new State of Maharashtra square a total area of 1,18,459 square miles which forms 10.07 per cent of the area of the Indian Union, are notoriously backward and underdeveloped. This is in striking contrast with the highly industrialised state of Bombay city. The problem posed by this unhappy position will naturally require the special attention of Government. The promotion of industrial ventures, apart from lifting the underdeveloped areas from their

backwardness, will provide more employment to the people. This idea must constitute one of the significant planks in the policy of the Government. The fact that the cooperative movement in the State has forged ahead should augur well for the quick rehabilitation of the rural areas. The number of cooperative societies increased from about 18,000 in 1954-55 to 25,000 in 1958-59 and membership from 21 lakhs to 33 lakhs. Maharashtra has roughly two-thirds of the number of societies in bilingual Bombay. The percentage of the population covered by the cooperative movement is 45.1 and this is greater than that in bilingual Bombay.

In his inaugural address Mr Chavan has pointed out that Government are contemplating the setting up of a number of industrial estates in different parts of the State with a view to providing the State with adequate number of technical personnel to create in the people a liking for industrialisation. The important industries of the State are cotton textiles, general and electrical engineering, chemicals, sugar, vegetable oils including hydrogenated oils, paper and paper boards, soap and the like. Fortunately, Maharashtra has an abundant supply of forest wealth. Besides, the State is also not lacking in minerals like manganese and salt. Salt is produced in the coastal areas while manganese is mined in Vidharba districts and to some measure in Ratnagiri districts. Iron ore is also available in the districts of Ratnagiri and Chanda. These raw materials can be profitably converted into useful products.

The development of agriculture in the State should be carried out side by side with the development of industries. About 63.97 per cent of population depends on Agriculture for their livelihood. About one sixth of the area under oil seeds and one fourth of the area under cotton in the whole of India are in this State.

As pointed out by Mr C. D. Deshmukh, the Chairman of the University Grants Commission, the new State could confidently look to its future because it possessed three advantages which it has derived from the erstwhile Bombay state. Maharashtra has retained a "lion's share" of the administrative cadre, which had elicited praise from every quarter. One language could prove to be of immense assistance to solve the problems with greater ease of communication if the people co-operated actively with the authorities in implementing the various schemes for the development of the State. He also stressed that the people must be fully conversant with the developments in the national and international scene. He also brought home to the people the paramount importance of exerting themselves to the maximum for the welfare of the nation, for the national excellence was a clear index of individual performance.

OLYMPUS

Rayon's Great Future

THE Indian Institute of Public Opinion (New Delhi), the only organisation of its kind in the field to take periodically national political polls, also carries out at times some useful economic surveys on a countrywide sampling basis. One such survey recently completed by the Institute is concerned with the urban pattern of consumption of rayon fabrics. In this eminently relevant survey—relevant because rayon seems to be both a substitute for and a supplement to cotton cloth—a random sample of 1,312 urban households has been drawn from all the Indian States except Assam. To a question by this correspondent whether the size of the sample is sufficient for giving valid results, the Research Director of the Institute has replied that still smaller samples are drawn for surveys of the kind in the United States and that, in any case, a sample of about 1,300 households is more than sufficient to cover the urban population which is just a fifth of the total Indian population. The results of the survey may, therefore, be taken to have no more than the usual margin of error inevitable in surveys of the kind.

These results show that rayon cloth already commands a broad-based urban market and that it has a potentially bigger mass market.

The principal finding is that just under a fourth of India's urban population now uses rayon cloth and that there is a growing desire to increase its purchases. A rather surprising result of the survey is that over half the total volume of rayon purchases is accounted for by urban groups with less than Rs 300 by way of monthly income. Yet another result is that a rayon-using family in each of the four low-income groups, namely, Rs 1-50, Rs 51-100, Rs 101-200 and Rs 201-300, spends, on the average, Rs 30, Rs 73, Rs 76 and Rs 101 per annum on rayon cloth. Since these four groups together account for three-fourths of all urban households, there is here, both relatively and absolutely, a big mass market for rayon cloth. Almost identical results, in the opinion of this correspondent, may well be obtained in a possible rural survey in respect of the low-income groups because handloom-woven rayon cloth is generally known to be no less popular in the rural areas than in the urban.

It is in the twin context of a potentially bigger rural mass market for rayon cloth and of the eminently suitable character of rayon yarn in handloom weaving (which is, by and large, village industry) that the future of the rayon industry would need to be assessed as well as planned. Fortunately for the handloom industry, the weaving sector of the rayon industry has developed much earlier than its yarn producing sector. So much so, there are, as of 1958, as many as 45,000 handlooms working exclusively on rayon weaving and 51,000 handlooms working on rayon and mixed fabrics. Although as many as 45,000 power-

Scruffy and Smarty

Smarty: "What happened?"

Scruffy: "I asked the boss for an increment and got thrown out instead! I just don't understand. I work hard and you can't say I am inefficient!"

Smarty: "Now, now. Don't lose heart. Perhaps, you should blame your clothes...."

Scruffy: "What do you mean clothes? I spend a lot on them."

Smarty: "Perhaps, your choice of cloth is not good. I'd suggest you buy BINNY'S suitings. BINNY'S Quality Control their production. Defects, invisible to the naked eye, that might have crept into the cloth are carefully eliminated at every stage of production. That is why BINNY'S suitings are smart looking and long lasting."

BINNY-

a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Anticrease Suitings - Tussore - Union Fabrics - Towels - Silk Sarees - Rugs - etc.etc.

REMEMBER, you can buy all your requirements of BINNY'S fabrics at our controlled rates from authorised BINNY'S Stockists who display this Sign board.

looms are also working on rayon fabrics, it is significant that only under 1,000 looms in the textile mills have been devoted to rayon weaving. This is a significant trend because, from the beginning, the sector of rayon yarn manufacture and the sector of rayon cloth weaving have been working on a complementary basis.

Since there is already a big gap between the requirements of the weaving sector and the producing capacity of the yarn sector, the official estimate being 70 million lbs of indigenous rayon yarn production per year at the end of the Second Plan as against the estimated requirement of 100 million lbs per year for the weaving sector, the future progress of the industry would appear to lie in the direction of establishment of more rayon grade pulp and yarn producing units to cover the far wider gap which can be easily foreseen beyond the Second Plan period. It is, therefore, entirely possible to plan the development of the rayon

industry in such a way that rayon cloth weaving will be confined to the handloom and small-scale (powerloom) sectors and rayon pulp and yarn manufacture to the large-scale sector. After all, there is so much to do in the yarn manufacturing sector because indigenous production of viscose and acetate yarns, as of 1959, has reached a level of about 36 million lbs only, valued at nearly Rs 9 crores. In the light of the trends disclosed by the I.L.P.O.'s survey of rayon consumption and the trend of demand for rayon yarn by the weaving sector, it would appear that at least a five fold expansion of rayon yarn production may have to be planned for the Third Plan period.

A Diet Survey

A diet survey of textile workers in Ahmedabad was completed last year under the auspices of the Indian Council of Medical Research. The results of this survey are given below:—

Per month per capita income group.	Rice.	Wheat.	Other cereals.	Pulses.	Leafy vegetables.	Other vegetables.	Fruits.	Ghee and oil.	Milk and milk products.	Meat, fish and eggs.	Sugar and gur.	Coconut and condiments.

5% RUPEE DEBENTURE STOCK 1970

INTEREST FOR THE HALF-YEAR ENDING 30TH JUNE 1960.

Notice is hereby given that interest at the rate of Rs. 25/- (less Indian Income Tax) per Rs. 1,000/- of Stock will be paid on 1st July, 1960 to Debenture Stockholders registered in the books of the Company on 23rd June, 1960. Applications for transfers received at the Company's Office at Victoria House, Post Box 304, Chowringhee Sq., Calcutta, upto 23rd June, 1960 will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 24th June, 1960 to 30th June, 1960 both dates inclusive.

By Order of the Board,

D. H. P. HENDERSON

A G E N T.

Victoria House,
Calcutta, 16th May, 1960.

According to another survey concerning the energy cost of activities by Ahmedabad textile workers, the values observed there are stated to be consistently higher by about 15 per cent, on an average, than in Coimbatore for comparable jobs such as spinning, weaving, roving and carpentry work. Conditions with regard to age, service in the mills and environmental temperature were similar in both places. The conclusion of the survey is that the content of the mechanical work going into the job might have been higher in Ahmedabad than in Coimbatore but that it would be hazardous to conclude that the textile workers of Coimbatore are more efficient than their counterparts in Ahmedabad.

Rajaji on Land Ceilings

The founder and leader of the Swatantra Party, Mr C. Rajagopalachari has initiated the legal battle against the land ceiling bills all over the Indian States by a memorandum to the President. This avowedly refers to the recent Madras Land Reforms (fixation of Ceiling on Land) Bill, 1960. He has in this memorandum which has been signed also by well known citizens of Madras, asked the President "whether the fixation of ceiling on one type of property only like agricultural land does not offend Article 14 of the Constitution of India for the reason that other types of resources with 'glaring inequalities' are free from such limitation." The Memorandum says that the condition precedent for exercise of the power given by Article 31(2) of the Constitution is the presence of a public purpose, such presence in legislation of this nature being a justiciable question open to canvassing in courts of law."

Couched in the most legalistic terms, the memorandum refers to what it calls a "large volume of competent legal opinion which takes the view that a 'public purpose' mentioned in Article 31(2) covers and contemplates only a concrete and definite purpose and excludes a general objective or the implementation of any ideology, political or economic."

After citing appropriate case judgments, the memorandum draws the attention of the President to the fact that a mere policy of socialism would not be acceptable to courts as 'a public purpose.' It is also pointed out that the said public purpose for which the lands would be acquired must be one definite purpose and not implementation or execution of a "general dogma promoting, in the view of the Government, general welfare."

That the application of ceiling only to particular type of agricultural land constituted discrimination against one type of property and that property should include all items of properties and all items of incomes and that, therefore, the application of ceiling on agricultural land was a matter not free from difficulty and raised constitutional question of extreme public importance are other points strongly stressed in the memorandum.

Even if the Ceiling Bill in Madras and other States in India get the assent of the President, the memorandum forewarns legal action against them by parties. But on the advice that such court tests would be premature before the Bills became enactments they have been restrained from such court action. In this connection, the memorandum says the President's right to refer matters of public importance to the "Supreme

Court is quite untrammelled and there are legal precedents where bills have been so referred for opinion."

In urging the Bill's reference to the Supreme Court, the Memorandum says that the course of litigation would take different forms in different states with varying orders in various stages of litigation and in order to avoid this confusion in respect of a matter "affecting the entire country in a most vital and important matter, the Honourable President be pleased to refer the Madras Land Reforms (Fixation of Ceiling on Land) Bill 1960 as a test issue, to the Supreme Court of India, for its advice under Article 143 of the Constitution of India on the questions formulated hereunder: While it is true there are many details and differences in the Bills promulgated in various States, the structure is common and most of the controversies, certain to rage round the Bills, will be settled largely by having these two questions referred:

(1) Is the purpose of Madras Land Reforms (Fixation of Ceiling on Land) Bill 1960 a public purpose within the meaning of Article 31 (2) of the Constitution of India?

(2) Is the Madras Land Reforms (Fixation of Ceiling on Land) Bill 1960 not discriminatory against property in the shape of agricultural land only and therefore violative of Article 14 of the Constitution of India?"

The memorandum does not omit to refer to the exemption granted in the said bill to sugarcane cultivation without limit. This discrimination is called unfair, and the memorandum goes on: "Obviously direct sugarcane cultivation by factory owners cannot be a matter of greater public concern and importance than cultivation of rice or maize which are staple foods. Granting this even, there is no reason why the factory owners cannot buy sugarcane from other people's farms as, in the greater part of India, they do."

As regards compensation contemplated in the Bill, though the payment of this is placed beyond judicial review, nonetheless the question, the memorandum argues, whether the relevant provisions satisfy at all Article 31 of the Constitution (by giving what is called fair compensation to property compulsorily acquired) is not and cannot be, beyond judicial investigation.

The principles formulated for purpose of this Bill "are a travesty of law, providing as they do, something which in name alone is compensation," the memorandum says. Furthermore it refers to the Bill as one with provisions merely to conform to Constitution's requirements, but really "flouting the spirit and true purpose of the provisions of the Constitution." The President of India would see, the memorandum adds, that the provisions for compensation are "illusory, unfair and unreasonable and do not represent compensation in the true sense of the term."

This may only be the first step by the Swatantra Party to fight the Madras Bill, patterned on the socialistic principles of the Ruling Party all over India.

Jute Famine

PROSPECTS of raw jute supply during the next season are still uncertain in the continued prevalence of drought conditions in most jute growing areas. There have been reports of rains in some areas in the past few days but the amount of rain is said to be too meagre to make much difference to the overall position. Some seem to believe that chances for a good crop are now rather remote as valuable time for preparation work has been irretrievably lost. It would, however, appear almost certain that good quality jute will be in short supply. The late rains may leave little time for careful preparation which is essential for quality production.

But it would also be wrong to conclude even at the present juncture that jute supply in the next season will fall far short of demand. For, Pakistan which is also facing almost a similar situation, is still optimistic about a satisfactory turnover next season. With a view to off-setting the prolonged drought, the East Pakistan Administration has completely withdrawn all restrictions on the cultivation of jute. According to the Authorities although the drought may adversely affect the crop in the low-lying areas, there would be no shortage of jute on account of the vastly improved sowing programme under implementation. It is further pointed out that the effect of the drought is grossly exaggerated by interested parties.

In India too we have the improved jute production programme under which supply of seeds and fertilizers to the farmer is being accelerated. What can be achieved by Pakistan can be achieved by India also.

The heavy margins imposed have resulted in business coming to a standstill in the futures market. The spot market, consequently, is weak and prices have declined over the past few days. Around mid week there have been reports of business in hessian with Argentina and the UK and consequently hessian prices have somewhat recovered.

The increase in jute goods stocks to 76,600 tons from 71,900 tons has completely been ignored by the market in view of the calculation that production in coming months will not be high due to paucity of the raw material. Stocks of all varieties have increased: hessian to 29,300 tons from 27,900 tons, sacking to 32,500 tons from 29,400 tons and others to 14,800 tons from 14,600 tons. Even so, the statisti-

cal position is good as stocks are still much below one month's production except in the case of other varieties. Output during April is almost unchanged at 91,000 tons as against 91,100 tons in the previous month. This is due to the fact that mills have worked 208 hours in both months. Production of hessian is unchanged at 37,000 tons but that of sacking is 600 tons less at 44,400 tons. Other varieties are higher by 500 tons at 9,600 tons. May production will show a small rise as one per cent of the looms has been reopened effective 1st May.

The news that US hessian consumption during April is lower by 9 million yards at 72 million yards as compared with the previous month has also not adversely affected sentiment, presumably because of the expectation that in the context of the scarcity of raw material, there would not be any undue accumulation of unsold stocks. But the April US burlap consumption pattern clearly indicates that consumers in US are in no mood to pay the present high prices. Consumption has largely been met from stocks which have declined to 262 million yards from the previous month's level of 276 million yards. The total stocks are made up of 134 million yards of spot and 128 million yards of afloat. The corresponding figures of the previous month are 139 million yards and 137 million yards.

	As on 12 May	Low 18 May	As on 18 May
Hessian:	Rs.	Rs.	Rs.
45" x 11 ozs.	58.00	53.25	54.65
40" x 10 ozs.	53.00	48.75	50.50

Sacking—August	134.00	129.25	131.00
Raw Jute—Sept.	43.50	38.50	39.10

The jute goods market ruled easier largely because of the absence of activity in the futures market. The cumulative effect of the lack of mill interest in the raw jute market and the absence of foreign enquiries, sentiment was to render easier. Indications from US were that due to the recent spurt in prices, consumers there were turning toward substitute packaging materials. 40" x 10 oz Hessian Ready was at one time quoted as low as Rs 48.75 but recovered to close on Wednesday at Rs 50.50. Likewise, B Twills Ready closed at Rs 134.50 after being lower at Rs 131.50.

Fall in Output

FEARS were entertained for some time past that there would be a delay in the arrivals of the new tea crop and a possibility of the crop being damaged by the continued dry and hot weather. These are now confirmed by the production figures released this week.

Production in North India has declined by 3.5 million pounds to 16.4 million pounds in April as compared with the corresponding month of last year. It is feared that the output, during the current month, may also be affected. As a result of the drought in many districts, there is evidence that quality has been affected. For, the first and second flush teas, which are usually harvested before the rainy season, constitute generally the best teas of North India producers.

The decline in last month's output need not cause much concern about the overall size of this year's crop. It is generally felt that the loss in earlier months may be recouped later in the season unless whether conditions turn to be adverse. Looking ahead, the prospect is, that the price of quality teas may improve in the face of greater demand, although the outlook for plainer teas cannot be assessed too optimistically.

In general, the shift in demand from plainer to good quality teas is in line with the trends at the auctions held recently in London. Demand on the London market has been fairly good and prices, generally speaking, have recorded no significant change. But, for any useful liquoring invoices, buyers are paying above valuations. Arrivals of the new season's teas from Northern India are expected to be delayed and it is felt that this is probably responsible, in a large measure, for the good interest shown by buyers for any teas above average quality.

Meanwhile, the first export sale of the new season's Darjeeling teas was held this week. Offerings were 14,864 packages. The market opened on a quiet note and the demand was limited. The more flavoury invoices were sold readily, although generally below valuations. Medium quality types received less enquiry and withdrawals were heavy. More interest was shown in Broken and Fannings grades than in Whole Leaf grades. The cheapest varieties, however, generally found buyers at prices slightly below valuations. The demand weakened further as the sale progressed and withdrawals became more frequent.

In the Internal Sale, offerings were 22,389 packages of Dusts and 248 packages of Leaf grades. There was only a fair demand, which was less general than in recent weeks. Orthodox grainy descriptions were taken up at 10 nP below last rates following limited enquiry. Leg-cut Dooars dusts were irregular, but generally lower by 6 nP to 8 nP. The brighter medium CTC kinds met with active support at slightly easier rates. The lesser and more fibrous types were a weak feature of the sale and difficult of sale. Following rates were quoted: Medium Dooars Dust Rs 1.92 to Rs 1.98; Medium Assam Dust Rs 1.88 to Rs 1.98; Medium Assam CTC Dust Rs 2.02 to Rs 2.24 and Best CTC Assam Dust unquoted.

In the Colombo market, offerings were 6,336,859 pounds. The quality of teas showed a further decline. Best Dimbuls continued in strong demand at firm to dearer rates. Other Dimbuls were irregular according to quality, while very plain high-grown and mediums were 3 to 8 cents per pound easier. Low-grown were sold at fully firm to dearer rates, but very common descriptions were 3 to 8 cents lower.

Tea production in Ceylon increased to 45.4 million pounds in March from 32.8 million pounds in the corresponding month of last year. Exports have also risen sharply to 34.22 million pounds in February from 28.45 million pounds in February last year. The improvements in exports was due to the increased offtake by all the consuming countries, particularly the UK which increased her offtake from 20.98 million pounds in the first two months of 1959 to 24.4 million pounds in the period under review.

Tea stocks in London, as on 6 May, have declined to 154.68 million pounds from 158.53 million pounds in the previous week. The total amount to be landed on the same date was 10.44 million pounds. Total afloat was 13.82 million pounds including from Calcutta 3.56 million pounds; from Chittagong nil; from Cochin 727,880 pounds; from Ceylon 6.47 million pounds and from other Ports 3.06 million pounds. The average price realised at the auction, during the week ended 6 May, was 49.44d per pound against 49.20d in the previous week and 54.77d a year ago.

Shipments of tea from the Cochin Port, in the first quarter of the current year, were higher at 20.33 million pounds as compared with 16.5 million pounds in the corresponding period of 1959. Out of the total exports in January/March 1960, offtake by the UK increased to 10.27 million pounds from 7.24 million pounds in the corresponding period of the previous year, as did that by Canada to 1.91 million pounds from 1.71 million pounds. Exports to Australia and Egypt also increased to 1.16 million pounds from 1.04 million pounds from 876,820 and 100,130 pounds respectively.

Futures Subdued

THE cotton futures market in Bombay continued to bulk quiet during the past week mainly due to the conspicuous absence of any fresh developments. The spurt which characterised the market early this week, caused by the expectation that the Government of India would permit an increase in the "ceiling" rates for the succeeding season, proved to be short-lived on rumours that a further import quota of 200,000 bales might be issued. The lack of any encouraging reports from the textile market also tempted tired bulls

to liquidate a part of their holdings. The Jarilla August contract moved irregularly between Rs 772 and Rs 780 on account of alternate bouts of buying and selling by leading operators.

SPOT MARKET:

In the spot market at Sewri moderate activity prevailed. However, mills evinced good interest in Laxmi, Vijay, Digvijay, Co2, Kala Gin, Jayadhar, and Wagad varieties. As the spinners have already covered their requirements against additional quotas allotted to them, they were absent in the market. Consequently the fresh arrivals of new crop cotton from producing centres had no effect on the deterioration in price levels. Wagad dropped to Rs 880 from Rs 890, Kala gin to Rs 830 from Rs 840 and Kalyan lost about Rs 20. Digvijay also eased by Rs 15 to Rs 1010 (lower variety) while the best variety fell to Rs 1125.

Among the imported growths, Busoga, Sudan, Mwansa and Ame-

rican 15/16 found good favour with buyers. Prices of Sudan registered a further rise thanks to the sustained interest evinced by mills. Enquiries for Egyptian cotton new crop for shipment September-October were also not lacking, due to the fresh rumour that new arrivals will be cheap. The increased interest shown by mills for American cotton had its repercussions on other imported growths. The price of African cotton recorded a further decline. Nevertheless some stray interest was shown for the Syrian growths.

Some of the mills were willing to surrender their import quota allocations because of the burdensome premium assessed on them. The premium for cotton stapling, 1.3/16" and above is fixed at Rs 160 per bale and for cotton stapling between 1.1/16" and 1.3/16" totals Rs 120. The mills complained that the recent enhancement of cotton prices in the imported varieties coupled with the prohibitive

premium levied will not make import remunerative.

The quantity licenced for import from 1 September 1959 to 30 April 1960 amounted to 7.71 lakh bales while the actual arrivals were only 4.01 lakh bales. On the export front the conditions were quiet.

According to a recent provisional estimate the production of cotton textile mills during the month of April totalled 136 million bales of yarn and 407 million yards of cotton cloth.

Speculation over the formulation of new cotton policy and framing of hedge contract for the next season commencing from September have already been afoot in the Cotton and Textile circles of Bombay. The high prices in cotton, the yawning gap in between supply and demand and the resultant huge premium have compelled the trade and industry to plead for the de-control of cotton in the ensuing season. The East India Cotton Association has recently requested the Union Commerce Minister to remove the control imposed on cotton so as to equate with the prevailing conditions. Fearing that this request may not find favourable consideration from the authorities, the EICA has forwarded a set of suggestions. They include a with a salutary revision of the tune of Rs 40 and Rs 60, the removal of some varieties which are not grown sufficiently from the schedule attached to the Textile Commissioner's notification, and replacing them by new ones along with a salutary revision of the schedule with appropriate classification of cotton according to their merits and their present position. The Associations also suggested that once the cotton price policy has been fixed for the year, there should not be any change during the currency of the Season.

SUPPLEMENTARY IMPORT LICENCES FOR LONG JUTE AND JUTE CUTTINGS TO USER MILLS

The Government of India have observed with concern the recent abnormal rise in jute and gunny prices.

The industry has represented that this is due to the apprehension of delay in the arrivals of our new crop, which may in turn result in some mills running short of raw material at the beginning of the coming season.

Government had previously stated that production in industry will not be allowed to suffer for want of raw material. In view of delayed sowings and consequent delay in jute arrivals in the market, Government have authorised the Jute Commissioner to issue supplementary import licences for long jute and jute cuttings, in addition to quantities recently released, to user mills, on the basis of their actual requirements, assessed in consultation with the industry.

Prospects for Rubber

OF late, the Rubber market in London has been extremely active. The rate for the commodity is presently quoted at 3sh 6d a pound as against 3sh quoted two weeks ago. The present level is the highest point touched since September, 1955. The steady rise in prices is attributed to higher advances from Singapore where dealers are reported to have been buying vigorously, possibly on behalf of Russia and China.

Whatever the cause of the upswing, London dealers have certainly been taken by surprise. Many have been working on the assumption that prices may fall, partly because of higher production and partly due to the apparent absence of Russian interest. The position now is, that nearby supplies in all the main consuming centres are extremely scarce and dealers have been falling over each other to get the material they need.

Present indications are, that the 1960 output of natural rubber in India will show an improvement over last year's. The rubber-producing regions of Kerala and Madras have had fairly satisfactory rains during the past two months. Drought, which adversely affected production last year, is not likely to do the mischief in the months ahead. The only apprehension of the growers now is, whether the monsoon rains, which are due to begin shortly, will assume severe proportions and necessitate stoppage of tapping of the trees.

Again, consumption has been on the increase and this is expected to continue for a few years to come in view of the spectacular expansion of the manufacturing industry. Apart from the expansion schemes undertaken by the three existing major units, licences have been issued for four tyre factories, one each for Kerala, Bombay, the Punjab and West Bengal and they are expected to go into production within the next two years. The expansion schemes of the smaller factories, concentrating on the production of sundry items, are also there.

Coffee

According to the figures released by the Coffee Board, receipts of the 1959-60 crop into the Pool, up to the end of April, amounted to 45,755 tonnes consisting of 24,860 tonnes of Plantation; 6,080 tonnes of Arabica Cherry and 14,815

tonnes of Robusta. The corresponding receipts of the 1958-59 crop, up to the end of April last year, were 43,433 tonnes, comprising 17,726 tonnes of Plantation; 7,127 tonnes of Arabica Cherry and 18,680 tonnes of Robusta.

The total internal releases, for the period January to April 1960, have amounted to 9,203 tonnes as against 9,996 tonnes in the corresponding period of last year. The amount of coffee sold for export out of the 1959-60 crop was 6,412 tonnes as against 8,672 tonnes sold for the corresponding period of last year.

The following were the average prices (per 50 kilos) secured for the principal types or grades of coffee in the export sale held on 4 May 1960: Plantation A Rs 237.18; Plantation B Rs 226.15; Plantation Triage Rs 186.13 and Arabica Cherry Flats Rs 187.87. The following were the average prices realised for the principal types or grades in the Pool sales held in April 1960: Plantation A Rs 215.04; Arabica Cherry Flats Rs 179.54 and Robusta Cherry Flats Rs 155.15.

Foodgrains

Thanks to the agreement with the USA for the import of grains and further credit curbs, prices in the Foodgrains market have been displaying an easier tendency. Indigenous Wheat has revealed a marked weakness in the Bombay market with the prices of the popular varieties declining by Rs 20 per candy. The slump is attributed mainly to the recent strong rumours that the Madhya Pradesh Government will shortly remove its ban on exports of wheat from that State. These rumours are a sequel to the food deal with the USA.

At present, the movement of wheat is free within the limits of the former Bombay State with Bombay City being cordoned off for exports. It is felt that the prices may stabilise at slightly lower levels if exports from Madhya Pradesh are allowed freely; but a recovery in the event of a status quo being maintained is not ruled out.

The Rice section continues to rule quiet in view of the easy supply position and comfortable stocks with the Government. Gram has also declined on easier advances from the Punjab where the new crop is reaching the market in larger quantities. Pulses have continued to be easy for want of outside support.

Sugar

Sugar prices have remained almost stationary around Rs 114 per bag. According to the latest reports, production in the country till the end of the first week of May, was 23.5 lakh tons as compared to 19.19 lakh tons in the last season. A few mills like Seohara,

Dhampur and Amroha, in the Moradabad division, and others in Eastern Uttar Pradesh are still reported to be busy with crushing.

It is reported that about 3,500 bags of sugar are still lying unsold with the Sugar Dealers Syndicate, Muzaffarnagar. The stocks consisted of the quotas allotted by the State Government for months of February and March.

Gur

The Hapur Gur market is ruling steady with prices showing a slight improvement over last levels, thanks to better demand and dwindling stock position. Daily arrivals averaged 200 to 250 maunds.

Khandsari

Due to booking restrictions, demand for Deshi Khandsari remains slack. Punjab buyers are interested in the inferior quality while the medium and superior qualities are in moderate demand from Gujarat and Saurashtra. In the Muzaffarnagar market, daily arrivals averaged at 400 maunds, while stocks are estimated around one lakh maunds. Inferior quality is quoted at Rs 32 to 34 and the superior at Rs 38 to Rs 39 per maund.

Silk

There was no change in the price of filature silk in the Bangalore Silk market during April. However, charka silk prices tended to show a distinct decline, particularly in the case of Superfine and 1st and 2nd Qualities Cottage Basin remained unchanged at between Rs 36.00 and Rs 39.00. While there was no change in the price of reeling cocoons, seed cocoons showed a marked rise during the month.

In the Varanasi market, moderate rise in price was noticed for filature and cottage basin silk. Charka silk prices, on the other hand, registered a decline of Rs 2.00 to Rs 3.00.

In West Bengal, there was a decline of Rs 0.50 to Re 1.00 per lb in the price of Charka silk. Reeling cocoons showed some advance in price. Handspun yarn declined from Rs 16.50 to Rs 16.00 per lb.

In Bihar, excepting for Daba reeling cocoons (Tasar) and tasar raw silk weft, the price range remained unchanged from the previous month's rates. Daba reeling cocoons declined by 2 points to quote Rs 60.00 to Rs 62.00. Tasar raw silk weft improved by 2 points to quote Rs 26.00. Mulberry raw silk, warp, and silk waste showed nominal rise while the rates for weft (raw silk) as also for reeling cocoons declined.

Gold & Silver

The assumption of powers by the Government of Maharashtra to impose margins on any contracts has had little effect on the trading

sentiment as judged by the behaviour of the Bombay bullion market. It is stated that, despite measures so far taken, the bull grip on the market has persisted. The bull operators are said to have made arrangements to deposit margins which are estimated at about Rs 1 crore.

Although the Vaisakh contract has been extended by ten days, the buyers are expected to insist upon delivery of spot metals in view of the present heavy premia. The trading, in the next few days, will, therefore, be crucial from the angle of the bear operators. Whether the Government takes other measures or not remains to be seen. Meanwhile, silver arrivals amounted to 35 bars as against an off-take of only 10 bars. Unrefined metal receipts were 28 bars. Gold receipts amounted to 5,000 tolas including 3,000 tolas of unrefined metal. Offtake totalled only 2,000 tolas. The following table will show the price trends:

	Gold		
	May 5th	May 12th	May 16th
	Rs	Rs	Rs
Spot	138.69	129.81	133.50
Vaisakh	135.00	130.06	129.50
Jeth	131.37	127.31	129.50
Ashad	130.56	126.69	128.37
Silver			
Spot	231.25	219.50	219.00
Vaisakh	222.50	219.19	220.34
Jeth	218.50	215.44	216.78
Ashad	217.87	215.06	216.47

Oils & Oilseeds

Prices on the Bombay Oilseeds Exchanges showed a mixed trend. While Castorseed and Linseed ruled firm, Groundnut and Cottonseed remained quietly steady.

Following the reported enquiries from the Communist countries for castor oil and higher advances from London, prices in the Castorseed section moved up. Moreover, confidence in the market revived following the fixation of freight rates at \$25 per ton including \$5 as clearing charges. This decision almost coincided with a broader buying interest in castor oil in overseas markets. Some exporters claimed business in commercial oil at 15.25 cents per pound. The UK was also stated to be in the market around £119 per ton. Castorseed ready was quoted at Rs 33.37 and Castor Oil, commercial quality, at Rs 18.12.

Although trading in the Linseed section was initially affected by fears of heavy tenders based on the belief that the prices would go down with increasing arrivals, lower levels attracted good support on an optimistic reckoning of the export outlook for linseed oil. The tendency in linseed oil in the UK was also stated to be steadier with the shippers reporting demand around £109 per ton. Linseed ready was quoted at Rs 32.75 and Linseed Oil at Rs 16.44.

The behaviour of the Groundnut section revealed a measure of

Sky's the limit...

NOW 50,000 USHA FANS MADE EVERY MONTH

In 1946 we made only 250 fans per month. In 1950 production increased to 1,000 and today we are making over 50,000 fans every month.

This is the finest example of determination combined with latest techniques and know-how. We have still higher plans to make more fans and create new standards in quality and design.

Ours is the biggest single unit fan factory in the world. USHA fans are exported to almost all the countries in the world where fans are used.

USHA Made in the biggest fan factory in the world

The most popular fan on sale today

JAY ENGINEERING WORKS LTD. CALCUTTA

caution at higher levels. Operators feared that the pre-monsoon unloading of spot supplies might affect the prices adversely. Although the crushers and vanaspathi interest lent good support, purchases were confined to their immediate requirements. The lull in exports of groundnut extraction also discouraged aggressive buying. Groundnut Bold quality was quoted at Rs 43.75 and Groundnut Oil at Rs 23.12.

The Madras groundnut kernels and groundnut oil market was steady and firm on Wednesday. In the southern markets, the price of groundnut kernels proved strong with a tendency to look up. Also forward positions continued to be firm though July transactions in oil was not bright due to uncertainty of rains for good kernel harvest reachable at the market points that time. Other oils too firmed up in the local market. While local arrivals of groundnut kernels averaged daily 120 tons, the outer markets in the South received at the rate of about 400/420 tons daily. All these have been quickly absorbed locally and by Andhra, Bombay and Calcutta, with the result oil prices also continued steady in these centres.

The following are Wednesday's closing prices of oils and seeds in the Madras Oils and Seeds Exchange.

Groundnut oil per candy of 500 lbs ex-Madras godown expeller Ready 3 per cent F.F.A. 394. May 394; June 397; July 395.50.

Groundnut kernels per candy of 531 lbs; Coromandel Rs 200; Peanut Rs 191/192. Castor oil per candy of 500 lbs Tirupattur Rs 310. Coconut

oil per tin Rs 29/8 to Rs 39/12. Gingelly oil per maund Rs 23. Gingelly seeds Superior variety (no stock) Medium Rs 76/77 per maund. Groundnut cake Rs 26/12 per bag of 160 lbs ex-gunny.

All along the week since last Wednesday, the groundnut market firmed up. But oil was a bit easier. Good arrivals marked both in the local market and other places. Operators from Andhra, Bombay and Calcutta also went in for these stocks along with local demand for crushing. This support was responsible for the groundnut maintaining the price level steady. But there was only a limited demand for oil and the vanaspathi dealers bought their needs from local small scale units whose price was below that of the official rate at the exchange. Their offer was even at the rate of Rs 382 or Rs 383 per candy. Rangoon did not show great interest this week though small quantities were bought during the week-end. Groundnuts marked a net gain of about Rs 12 to Rs 13 per ton and oil lost by about Rs 20/22 per ton in price.

For May 3rd week delivery groundnut oil was offered at Rs 394 per candy and some took delivery eight annas less per candy. There were better activity in June position. But in July valda interest sagged.

Beginning this week the prices of groundnut oil and kernels continued the same: May 16 (Monday) Oil Ready Rs 393; May Rs 393; June Rs 393; July Rs 394; Kernels Coromandel Rs 200 and peanut Rs 190/191. Closing prices of Tuesday May 17 were Oil Ready Rs 394; May Rs 394; June Rs 394.50 and July Rs

394; Kernels Coromandel Rs 200 and peanut Rs 191 per candy.

Thus it would be seen except for the July position in oil other prices continued to be firm. Even if there were some fluctuations during the negotiations they were only very little in the margin of eight annas or so. May trading proved of the nature of short covering and May quotation fluctuated with the ready line.

Upcountry Markets: In southern region summer crop of groundnut kernels is moving in a steady stream. Villipuram, Panruti, Tirukoilur, Cuddalore, Vriddachalam, Tiruvannamalai and Tanjore/Pattukkottai areas have reported good receipts. The price of groundnut in these areas range between Rs 202 to Rs 205 per candy. The increase is also due to feverish buying by crushers in all these centres.

There is no change reportable in gingelly seeds and oil prices, castor oil, coconut oil locally.

Last week Burma bought 150 tons of groundnut oil at Rs 1,800 per ton in tins. The following are the latest ruling prices of oils and seeds in some of the foreign markets:

	Per ton
Groundnuts July/August	£ 75/-
Castorseed May/June	£ 65/10
Nigerseed nominal	£ 56/-
Groundnut oil spot	£ 122/-
Groundnut oil June/July	£ 122/-
Castor oil BSS, Bulk, May/June	£ 126/-
Castor oil Commercial	£ 121/-
Coconut oil Srait bulk June	£ 117/10
Coconut oil Ceylon	£ 119/120
Tobaccoseed oil in drama nominal June/July	£ 126/-
Groundnut oil cake (expeller)	£ 32/5 to £ 32/10
Groundnut deoiled	£ 30/5 to £ 30/10

The following prices were quoted in southern markets for groundnut kernels and groundnut oil:—

	Per 531 lbs*	Per 500 lbs†
Cuddappah/Yerragantla	204	395
Guntur/Bezwada	213	392/8
Vriddachalam	200	397/8
Nandyal	204	395
Villipuram	200	388
Pollach nominal	205	395
Tanjore	205	390
Tiruvannamalai	200	386
Salem	205	395

*Groundnut kernels. †Groundnut oil.

Hides and Skins

Tanned cow hides prices were unaltered with moderate arrivals. Export demand continued to be weak. Turnover was limited in foreign dealings. Inferior fifts continued to be in good demand locally. Therefore slightly increased prices were quoted to export markets. In tanned buffalo hides there continued to be good demand both internally and from America and United Kingdom. Latter countries were unwilling to follow Madras prices. All varieties of tanned cow calf were demanded by Hamburg.

Local prices were unchanged and continued to be same as of last week in tanned skins. Tanned buffalo calf skins were easy and export prices were reduced from one to two pence.

Tanned goatskins absorbed locally was 5,000 pieces leaving 5,000 in the market and tanned sheep skins sold

were 38,000 leaving 53,000 for still further disposal. Prices proved lower by 12 nP per lb. for goatskins and for sheep skins quotation was 30 nP lower. Raw skins prices continued to be easy.

Bangalore raw goat skins per 100: Rs 560 to Rs 575: White wool sheep Rs 600 to Rs 620: Black Rs 450/500: Bezwada Raw goat skins Rs 525/530: He sheep Rs 615 and she sheep Rs 465.

The following are the prices for tanned skins per lb: Tanned cow prime 5/5½ lb Rs 3 to Rs 3.37: 6-6½ lb Rs 2.75 to Rs 3. 8/8½ lb Rs 2.31 to Rs 2.37: 10/12 lb Rs 1.94 to Rs 2.00: Buffalo 12/13 lb Rs 1.44 to Rs 1.69: Cow Calf 1½/2 lb Rs 4.62 to Rs 5.12: Buffalo Calf 1½/2 lb Rs 3 to Rs 3.37: Goat Prime 5½/6 lb Rs 10.25 to Rs 10.50: 8/9 lb Rs 9.12 to Rs 9.37: Sheep ordinary 6/7 lb Rs 8.50 to Rs 8.87: Prime 3/7 lb Rs 10.62 to Rs 10.87.

NOTICE is hereby given that the Twenty-sixth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Tuesday the 7th June 1960 at 4-30 P.M. to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October, 1959.
2. To declare a dividend.
3. To appoint Directors in place of those who retire but are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.,
Managing Agents.
N. D. SIRUR,
Managing Director.

Bombay,
14th April, 1960.

N.B.—The dividend, when declared, will be made payable at the State Bank of India, Bombay, on and after Monday the 20th June 1960 to those Shareholders whose names stand on the Register of Members on the 28th May 1960. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

Detailed Notice of the above Meeting is already published in the Press and is also sent to the Shareholders individually.

Sustaining Influences

Investment Gossip:

ALTHOUGH there has been a sagging tendency in the stock market during the past few days, the undertone has continued to remain steady. Investment interest seems to be at a low ebb but operators continue to derive encouragement from the trends of corporate activity in the country.

It would appear that the revival of interest in Indian Irons has stemmed from a number of factors. Firstly, as has been pointed out last week, the rumour about the company's plans for diversification is taken as a favourable point. Secondly, an increase in steel retention price is expected to improve the company's profit margin and thirdly, a considerable section of the operators seems to believe that in the present context Indian Irons are comparatively still low-priced.

The main sustaining influence is, of course, the scarcity of most popular scrip. The fact that the Life Insurance Corporation has not given any indication that it may emerge as seller has obviously given further encouragement to the bulls.

The Summit fiasco has had some disturbing effect on sentiment and the marking down of prices in the past two days, especially in Indian Irons and some other speculative counters is to be attributed to the growing tension in the international situation. But this reaction will prove to be temporary even as it has in the London Stock Exchange.

Last week's interim clearing has clearly demonstrated that the bull hold on the market cannot be easily dislodged. High prices for equities are now generally considered quite in tune with the state of the economy. Most companies have expansion plans for the next few years and considering the response to the new issues some of which will begin to pay a dividend only after some time, it is clear that investors are prepared to take a chance at the growth prospects. This explains the absence of large-scale selling even at the higher levels.

New Issue Notes

A new cable company, known as the Omega Insulated Cable Company (India) Limited, has been formed for the manufacture of VIR, PVG and paper-insulated cable with an authorised capital of Rs 2 crores. The company has been issued an indus-

trial licence by the Government of India. The factory will be situated in Madras. The factory is expected to go into production by the end of next year.

The recent issue of Rs 20 lakhs, offered by the Adarsh Chemicals Limited, is reported to have been heavily over-subscribed by as much as 22 times. Allotment of shares will be made during the next fortnight in consultation with the stock exchange authorities in Bombay.

Dalmia Cement (Bharat) Limited and the Orissa Cement Limited have offered for sale, at par, to the general public from their holdings 2 lakh equity shares of Rs 10 each in Dalmia Iron & Steel Limited. The offer is made in order to comply with the regulations of the Calcutta Stock Exchange for enlisting the shares of the company. The list will remain open from 16 May to 30 May, 1960.

The Dalmia Iron & Steel Limited has established recently steel casting plants in collaboration with a Belgian concern and these have started working from the middle of 1958. As the company has proposed to add shortly a few more machines to manufacture spun cast iron into pipes, the additional capital expenditure is expected to be about Rs 5 lakhs to the existing total gross capital expenditure of this section amounting to Rs 57 lakhs as on 30 September 1959. The authorised capital of the company is Rs 5 crores and the subscribed and paid-up capital is Rs 40 lakhs, divided into 4 lakh equity shares of Rs 10 each.

Investment Notes:

At the annual general meeting held recently by the Elgia Mills Limited, it was decided that payment of all dividends for the year 30 September 1959 should be deferred. The directors have been requested to re-examine their recommendations regarding the payment of dividends on the 8 per cent and 5 per

cent Cumulative Preference shares in the light of representations from the shareholders as well as the latest pronouncement of the Union Finance Minister on the subject.

The steady expansion of the Standard Vacuum Oil Company's activities is of growing significance to India's five-year development programme. During the past 10 years, Stanvac has built a complete new refinery in Bombay. In partnership with Government, Stanvac is also carrying on a large-scale search for oil in West Bengal. It has expanded its marketing services. It has increased its purchases of Indian products as well as its employment and training of Indian nationals. In these 10 years, Stanvac has invested more than Rs 4,620 lakhs in India, including all the company's net income earned in India, all reserves set aside for replacement of worn-out equipment and Rs 352 lakhs in foreign exchange. Its net income in its refining and marketing operations over the 10-year period has averaged about Rs 188 lakhs a year, or an average of 7.5 per cent of total Stanvac equity and borrowed capital. The income from sales in India amounted to Rs 72.46 crores in 1959. Expenses were Rs 71.26 crores, leaving a net income of Rs 1.20 crores after providing for Taxation of Rs 2.85 crores.

Investment Briefs:

Kamant Engineering Corporation Limited has recommended a dividend of 7½ per cent, subject to tax, for the year ended 30 September 1959. The net dividend works out to 5.425 per cent as against 5 per cent paid previously.

Elphinstone Spinning & Weaving Mills Company Limited has proposed a dividend of Rs 7 per share, subject to deduction of tax, for 1959. The dividends for 1957 and 1958 were passed over. Travancore Cements Limited has recommended a taxable dividend of

6 per cent for 1959 against a tax-free dividend of 6 per cent in the preceding year.

India Sugar has announced a taxable dividend of 12½ per cent for the year ended 30 September 1959 against a tax-free dividend of 10 per cent paid for the previous year.

Balance-Sheet Briefs:

Godfrey Phillips India Limited has reported a gross profit of Rs 31.34 lakhs for 1959 against Rs 29.54 lakhs for 1958. The directors have recommended a taxable dividend of 26 per cent. The net dividend works out to 18.2 per cent against 20 per cent.

The working of the Hindustan Pilkington Glass Works Limited has resulted in a profit of Rs 28.38 lakhs for the year 31 October 1959 as Rs 11.60 lakhs for the previous year. A taxable dividend of 12 per cent (net 8.4 per cent) is recommended against 6 per cent.

Amar Dye-Chem Limited has shown a substantial rise in the gross profit to Rs 58.81 lakhs for 1959 from Rs 16.75 lakhs. A maiden dividend of Rs 12.00 per share, subject to tax, is recommended.

The National Rubber Manufacturers Limited has earned a profit of Rs 7.47 lakhs for 1959 as against Rs 4.42 lakhs. A taxable dividend of 8.5 per cent is recommended. This works out to a net dividend of 5.95 per cent against 6 per cent.

The net profit of the Travancore Rubber & Tea Company Limited is Rs 12.49 lakhs against Rs 8.12 lakhs. The dividend has been raised to 7½ per cent (taxable) from 5 per cent.

The working of Jenson & Nicholson (India) Limited has resulted in a profit of Rs 4.32 lakhs against Rs 2.31 lakhs. The directors have recommended a net dividend of 4.2 per cent (gross 6 per cent) against 6 per cent paid previously.

The gross profit of the Mahendra Mills Limited, Ahmedabad, has risen by Rs 5.27 lakhs to Rs 34 lakhs for 1959. A taxable dividend of 8 per cent is recommended against a tax-free dividend of 6 per cent.

The Arvind Mills Limited, Ahmedabad, has shown a substantial rise in the net profit to Rs 29.79 lakhs from Rs 18.90 lakhs. A final dividend of Rs 25 per share is recommended. This makes a total of Rs 40, subject to tax. The net dividend works out to Rs 28 per share, the same as in the preceding year.

Excellent Results of Guest, Keen, Williams

Balance-Sheet Reviews

Despite increased competition and difficulties in obtaining adequate supplies of raw materials, Guest, Keen, Williams, Limited has maintained its overall production. This is reflected in the working results for the year ended January 2, 1960. Although sales are slightly lower at Rs 9.74 crores against Rs 10.38 crores, the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 86.70 lakhs as against only Rs 56.92 lakhs in the previous year, mainly due to the cut in manufacturing expenses from Rs 1.30 crores to Rs 1.17 crores.

In respect of allocations, the Depreciation amount is raised to Rs 27.06 lakhs from Rs 22.68 lakhs; Additional Depreciation Reserve to Rs 3.57 lakhs from Rs 2.59 lakhs; Development Rebate Reserve to Rs 33.01 lakhs from Rs 8.42 lakhs and General Reserve to Rs 5.69 lakhs from Rs 1.36 lakhs. The Taxation provision is, however, reduced to Rs 35.60 lakhs from Rs 74.20 lakhs. The directors have recommended a final dividend of Rs 1.60 making a total of Rs 2.40 per share. This works out to a net dividend of 16.81 per cent against 24 per cent paid for the preceding year.

The balance-sheet, as at 2nd January 1960 shows a paid-up capital of Rs 2.00 crores divided into shares of Rs 10 each. The Share Premium Account is shown at Rs 58.94 lakhs; General Reserve at Rs 1.06 crores; Capital Reserve at Rs 32.57; Additional Depreciation Reserve at Rs 26.14 lakhs; Taxation Equalisation Reserve at Rs 11.28 lakhs and Development Rebate Reserve at Rs 41.43 lakhs. The gross block at Rs 6.75 crores is depreciated by Rs 2.15 crores to show a net block value of Rs 4.59 crores.

According to the directors' report, the first phase of the company's Calcutta Works Development Programme was completed only toward the end of the year and did not have any significant influence on trading results of 1959. Operating costs continued to rise and this coupled with the cost of servicing loan capital and bank borrowings has resulted in a reduction in the profit margin.

At an extraordinary general meeting of the company, held on 29th May 1959, it was resolved to allot and issue to Joseph Sankey & Sons Limited, equity shares in exchange for their equity shareholding in Sankey Electrical Stampings Private Limited. The application for consent to the exchange of shares is still under consideration by Government and the terms of the exchange, therefore, have been amended to exclude any reference to dividends for the financial period ended 2nd January, 1960.

Chairman—Mr. R. Calow.

Better Results by Cheviot Mills

The working of the Cheviot Mills Company Limited, during the year ended 30 November 1959, has resulted in a net profit, before providing for Depreciation and Taxation, of Rs 5.65 lakhs as against Rs 3.12 lakhs for the preceding year. A sum of Rs 1.07 lakhs (Rs 1.06 lakhs) is provided for Depreciation; Rs 1,500 (Rs 43,300) for Taxation; Rs 50 lakhs (nil) for General Reserve; Rs 30,000 (nil) for Contingency Reserve and Rs 4,426 (Rs 888) for Development Rebate Reserve. The directors have recommended a final dividend of Rs 8, making a total of Rs 12.50 per share, subject to deduction of tax. This works out to a net dividend of Rs 8.75 against Rs 5.00 paid for the preceding year.

Against a total paid-up capital of Rs 25.95 lakhs, Share Premium Account is shown at Rs 3.94 lakhs and Reserves and surplus at Rs 19.23 lakhs. The gross block at Rs 86.23 lakhs is depreciated by Rs 59.63 lakhs to show a net block of Rs 26.60 lakhs.

Kothari Textiles Do Well

Thanks to reasonably good prices obtained for fine and superfine counts of yarns, the Kothari Textiles Limited has been able to report a substantial rise in the net profit from Rs 2.42 lakhs to Rs 24.80 lakhs for 1959, although sales are slightly lower at Rs 1.42 crores against Rs 1.59 crores. After setting aside a sum of Rs 7.47 lakhs for Development Rebate Reserve, the Depreciation amount is raised to Rs 8.84 lakhs from Rs 2.40 lakhs. The directors have recommended a gross dividend of 10 per cent (net 7 per cent) against nil in the previous year.

According to the directors' report, the new mill at K. Vadamathurai, Coimbatore, went into production by the end of March 1959. By June 1959, 12,000 spindles, out of the new 24,000 spindles, came into operation and worked one shift. Power for the third shift is expected only about in July 1960. Erection of this further 12,000 spindles is proceeding apace and out of this, 7,000 spindles are already working two shifts. In a month's time, it is expected that this entire 12,000 spindles will start working on two shifts.

The paid-up capital is Rs 85.20 lakhs divided into 6.72 lakhs equity shares; 1.20 lakhs 6 per cent tax-free Cumulative "A" preference shares and 60,000 6 per cent tax-free Cumulative "B" preference shares, all of Rs 10 each. Against this, General Reserve is shown at Rs 8 lakhs; Reconstruction Reserve at Rs 9 lakhs; Dividend Equalisation Reserve at Rs 1.25 lakhs and Development Rebate Reserve at Rs 7.47 lakhs. The gross block amounts to Rs 1.70 crores; total depreciation to Rs 49.34 lakhs and the net block to Rs 1.20 crores.

Dividend Passed by Adoni Spinning

In spite of good working, the Adoni Spinning & Weaving Company has not found it possible to declare the dividend even for the preference shareholders. This is mainly due to the fact that the company has to provide a sum of Rs 5.44 lakhs for Development Rebate Reserve on account of 12,000 spindles, which were installed during the year and came into operation. If this sum had been available, the company could have provided not only for the normal depreciation, but also declared dividend on the preference shares.

The rise in sales from Rs 43.80 lakhs to Rs 71.94 lakhs is reflected in the net profit, which has risen to Rs 6.52 lakhs from Rs 3.74 lakhs. The Depreciation amount is reduced to Rs 99,157 from Rs 3.61 lakhs.

The paid-up capital is shown at Rs 49.93 lakhs and 6 1/2 per cent First Mortgage Debentures at Rs 5,00 lakhs. Development Rebate Reserve provision amounts to Rs 5.44 lakhs. The gross block at Rs 73.05 lakhs is depreciated by only Rs 7.21 lakhs to show a net block of Rs 65.84 lakhs.

Tungabhadra Industries Wipe out Debit Balance

Thanks to a rise in sales from Rs 3.22 crores to Rs 3.53 crores, the Tungabhadra Industries Limited has been able to report a higher net profit of Rs 11.51 lakhs for the year ended 30 September 1959 against Rs 6.76 lakhs in the previous year. The Depreciation amount is reduced to Rs 5.05 lakhs from Rs 5.74 lakhs. The net profit is adjusted against the debit balance of Rs 5.90 lakhs brought forward from previous year, leaving a surplus of Rs 56,308, which is carried forward. As a result, the directors have not able to recommend any dividend.

The paid-up capital is Rs 30.59 lakhs against which Reserves are shown at Rs 29,686. The gross block amounts to Rs 68.69 lakhs; total depreciation to Rs 17.69 lakhs and the net block to Rs 51 lakhs.

During the year under review, the production of vanaspathi, refined oil and hard oils aggregated to about 15,300 tons as against about 13,800 tons in the previous year. Due to higher prices of raw materials, the prices of finished goods also had to be adjusted, which resulted in a higher turnover in spite of a slightly lower production.

The company has taken steps to install a Solvent Extraction Plant at its factory at Kurnool. The plant is expected to be commissioned shortly.

The working results of the business under the name and style "Tungabhadra Merchandise Agency" have been satisfactory.

Bijonagar Tea Results

The Bijonagar Tea Company, Limited, in the same managing agency group, has also reported a higher profit of Rs 8.69 lakhs against Rs 4.68 lakhs for 1958. Apart from raising the Depreciation amount from Rs 1.54 lakhs to Rs 1.73 lakhs and Taxation from Rs 1.10 lakhs to Rs 2.75 lakhs, a sum of Rs 37,000 is set apart for Development Rebate Reserve; Rs 1.50 lakhs for Capital Reserve and Rs 1.50 lakhs for General Reserve. The directors have recommended a dividend of 14 per cent, subject to tax. This works out to a net dividend of 9.8 per cent against 8 per cent paid for the previous year.

The paid-up capital is Rs 8,69,125 divided into 34,765 shares of Rs 25 each. Against this, reserves and surplus amount to Rs 30.49 lakhs. The gross block is Rs 35.77 lakhs; total depreciation Rs 11.78 lakhs and the net block Rs 23.98 lakhs.

Malhati Tea Raises Dividend

Malhati Tea Syndicate Limited, in the managing agency of D. C. Ghose & Company, has reported satisfactory working results for 1959. The net profit, before providing for Depreciation and Taxation, is higher at Rs 5.64 lakhs as against Rs 4.08 lakhs in the preceding year. The directors have provided Rs 1.20 lakhs (Rs 1.01 lakhs) for Depreciation; Rs 1.80 lakhs (Rs 1.10 lakhs) for Taxation; Rs 8.872 (Rs 11,308) for Wealth Tax; Rs 26,000 (nil) for Development Rebate Reserve; Rs 1.00 lakh (nil) for Capital Reserve and Rs 50,000 (nil) for General Reserve. A taxable dividend of Rs 1.50 per share is recommended against a tax-free dividend of Rs 1.00 for 1958.

Although the outturn is lower at 1,047,760 pounds against 1,082,000 pounds, the average price realised is higher at Rs 2.18 against Rs 1.94 per pound. The estimated crop for the current year is 960,000 pounds.

Against a paid-up capital of Rs 9 lakhs, Reserves and surplus are shown at Rs 23.38 lakhs. The gross block at Rs 30.05 lakhs is depreciated by Rs 10.38 lakhs to show a net block of Rs 19.69 lakhs.

Cautious Trading: Mixed Trends

Watch-Dog Writes:

STOCK markets have given a mixed performance during the week under report. Selected shares have continued to meet with good support, while a few shares in the forward list are facing some selling pressure.

No doubt, the disappointing Summit Conference in Paris has introduced an element of caution among marketmen. However, with floating stocks not large and with investors unwilling to part with their holdings, the bulls appear to be in a more advantageous position than the bears.

Activity on the Calcutta Stock Exchange was confined to a few selected scrips, while conditions in other counters remained generally quiet and dull.

Despite profit-taking at bulges, the main body of shares on the Bombay Stock Exchange closed with gains.

Trading on the Madras Stock Exchange was overshadowed by fears of a stricter margin on forward trading.

Conditions on the London Stock Exchange remained unsettled due to international political developments.

Calcutta

Calcutta, Friday Evening.

EXCEPT for a few selected shares which forged ahead on special considerations, prices in other counters on the local Stock Exchange developed a slightly easier trend last week. Although the hectic activity, noticed during the past two weeks, continued to be in evidence till Tuesday, operators turned somewhat cautious from mid-week following the news of the collapse of the Summit Conference in Paris. There was some liquidation of holdings, resulting in the bullish fervour being checked to some extent.

But, it must be said that the bull operators were still able to push up prices, as holders were not prepared to cash profits even at the present high levels. Further, those speculators, who had made unexpectedly large profits recently in certain commodities, had plenty of money to play with. There was, however, a disposition among certain operators to book profits at bulges due to persistent rumours that further action might be taken by the Government to make business in the forward list more difficult.

The Glitged section was devoid of interest. There were no buyers at all and the general trend of prices was downward. While the absence of demand for long and medium-

dated scrips continued, even the short-dated loans ceased to be in demand. 3 per cent 1986 Conversion Loan changed hands at Rs 72.95 to Rs 73.70.

Bank shares remained generally quiet on the thought that bank profits might be affected rather badly due to the recent credit squeeze measures. Punjab National remained unchanged at Rs 20.12, while United Commercial improved to Rs 67 from Rs 65.25.

After the lapse of many weeks, Jute shares came in for some enquiry at improved levels following the steady decline in the prices of raw jute from the recent high levels and the news of the Government decision to import more jute from Pakistan. Birlas were enquired upto Rs 31.87 from Rs 31.37 due to diversification of company's activities, while Anglo-India were wanted upto Rs 221 from Rs 229; Bally upto Rs 255 from Rs 238; Ganges upto Rs 11.75 from Rs 10.75; Khardah upto Rs 176 from Rs 162 and Megna upto Rs 12.37 from Rs 11.62. Howrah were, however, on offer at Rs 22.50 to Rs 22.87; National at Rs 29.50 to Rs 30 and New Central at Rs 27.75 against Rs 28.31.

Trading in the Coal section was rather restricted in sympathy with general trend of the market. Selected shares, however, continued to receive support at every setback in prices on the hope that the private collieries might be encouraged to extend their activities to new areas in view of the need for raising production to meet the demand. Bengal remained firm at Rs 345 and so also New Beerbhoom at Rs 24.75. Central India, however, turned quiet at Rs 13.00 against Rs 14.12 and Western Bengal at Rs 8.44 against Rs 9.00 on lack of fresh support. Burrakur fluctuated irregularly between Rs 19.69 and Rs 20.19 on alternate buying and selling, to finish at Rs 19.87.

Trading in the Tea section revealed a cautious undertone. First, the news of the decline in output last month discouraged operators to go in for buying. Secondly, the results of the first export sale of Darjeeling teas were considered to be rather discouraging, especially with regard to quality. Finally, it was feared that the output in the current month might also be affected due to drought, thereby reducing the profitability of the industry. A general feeling that the fall in output in April and May might be made good later, however, induced some buying at the lower levels. Brooke Bond changed hands at Rs 17.61 to Rs 18.12 (Rs 17.81); Bishnauth at Rs 21.12 to Rs 21.37 (Rs 21.25); Hantapara at Rs 151 to Rs 154.50 (Rs 152); Jayshree at Rs 17.50 to Rs 17.75 (Rs 17.62) and Methoni at Rs 23.25 to Rs 23.44 (Rs 23.37). Figures shown within brackets were the closing rates for the week.

Sugar shares ruled comparatively steady due to encouraging production figures for the current season and the consequent hope of an improvement in the earnings of various companies. Raza/Buland had buyers at Rs 13.50 to Rs 14.12; Carew at Rs 11.87 to Rs 12; Ramnugger Cane at Rs 23.87 to Rs 26.87 and SKG at Rs 14.19 to Rs 14.31. Cawnpore were, however, quiet at Rs 15 against Rs 15.37 with UP maintained at Rs 18.25.

In the Engineering section, keenest attention centred round Indian Irons due to strong rumours that the company was seriously contemplating to go in for some new engineering project in collaboration with a foreign concern. After opening higher at Rs 26.22, Indian Irons advanced further to Rs 26.53 at which level some selling pressure brought down the scrip to Rs 25.60, to finish the week better at Rs 26.11. TEXMACO were marked down at one time to Rs 25.90 from a high of Rs 26.85; Jessop to Rs 24 from Rs 24.75 and Braithwaite to Rs 30.44 from Rs 30.69 to improve toward the close to Rs 26.30; Rs 24.06 and Rs 30.69 respectively. Thanks to the publication of engineering results, G. K. Williams firmed upto Rs 44.72 from Rs 44 on good investment demand. Britannia were marked at Rs 13.56 and Kumardhubi at Rs 7.50.

In the Miscellaneous section, Paper shares were in the forefront on the hope that the Government might make an early announcement with regard to the increase in the selling price of paper. Orient Paper were pushed upto Rs 47.00 from Rs 43.80 (Rs 47.00); Titagur upto Rs 40 from Rs 39.44 (Rs 40.00); Shree Gopal upto Rs 29.06 from Rs 28.50 (Rs 29.00); India Pulp upto Rs 22.37 from Rs 22.06 (Rs 22.06) and Sirpur upto Rs 19.00 from Rs 17.81 (Rs 19.00). Figures shown within brackets were the week's closing rates.

The following table shows the price trends of other scrips:

	High	Low	Closing
	Rs.	Rs.	Rs.
I. Cable	34.62	33.44	34.00

B.I.C.	8.56	8.25	8.44

Madras

LAST week's buoyant conditions continued to prevail in the Madras Stock Exchange today. In fact the position improved appreciably in so far as high prices were concerned. Sellers were absent and resulted in the boosting of prices around. Tea, Coffee and rubber shares came in for very good support. Textiles vastly gained, particularly Travancore Rayons. The price of this scrip jumped up sharply in sympathy with Bombay rayon shares. Madras also appreciated in the textile counter. Cement shares in the industrials came in for good support and enquiry followed next by Indian Aluminium shares.

In making Orient
Fans, new methods are constantly being
replaced by newer methods. Orient's
Engineers are working continuously
for improved quality, better
methods and increased output.
One of the new techniques Orient
has adopted is pressure die casting—
a technique which is used for the
first time in the country for
producing a fan body and rotor. This
leadership in technique is typical of
Orient's progressive Engineering—
this is the chief reason why Orient
Fans have such a remarkable
performance and incomparable finish.

WORLD OF FINANCE

Reverse Ad Hocs in Recent Weeks

IN recent weeks, as disclosed in the weekly statistical supplement to the Reserve Bank of India Bulletin, there appears to have been, on at least three occasions, cancellation of ad hoc Treasury Bills in fairly sizable dimensions. During the week ended 22 April, outstandings of Government of India Treasury Bills declined by roughly Rs 26 crores to Rs 1279.61 crores; in the following week, there was a further fall of Rs 17.53 crores to Rs 1262.08 crores; finally, in the week ended 13 May, a drop of a little over Rs 7 crores was registered under the relevant head. The institution of what we have termed "reverse ad hocs" is not, we may hasten to point out here, an innovation of just the recent past. But almost always in the past, the cancellation of ad hocs was found to be linked up with one kind of governmental borrowing effort or the other. That is to say, in the new loan week of the Central Government, for example, the "surplus" cash balances were used to reduce the liability on Treasury Bills as such; again, whenever Government have, in pursuance of keen demand for securities, created special securities and sold them in the first instance to the Reserve Bank, cancellation of ad hocs took place; similarly, consequent upon new loan realisations by State Governments, in the week in which the latter might make large repayment to the Centre, reverse ad hocs were again in evidence. But how is it that, this year, the Central Government found it possible to show thus their flexible use of a monetary device like deficit financing, despite there apparently being no particular considerations like new loan issues?

Our first reaction was to study whether the solution was to be discovered in the decision not long ago to deposit future accruals under Public Law 480 counterpart funds with the Reserve Bank instead of the State Bank. But the absence of any upward movement in Other Deposits in the return for the Banking Department of the Reserve Bank—it is under this head that, presumably, such new accruals will be credited and shown—rules out such an easy solution of the conundrum. (The procedure to be adopted for the new accruals is likely to be fascinating; we hope in a future issue of Indian Finance to work out exactly what happens when the funds do gather; and the implications are both interesting and exciting).

Then, there was the off-chance that, without any publicity whatever as indeed they had done in the last Friday in December 1959, Government might have put through a funding operation in respect of Treasury Bills; twice since the Second Plan started, such funding of ad hocs has been effected. In the one case, it was made public that a special issue of 4 per cent 1973 in an amount of Rs 300 crores was being created and would be made over to the Reserve Bank in cancellation of Treasury Bills of like amount. But, in December last year, funding of the order of Rs 150 crores was quietly put through; and it was only in the Finance Minister's Budget speech

that confirmation in this respect was available. Nor was this absence of publicity the only difference. In the earlier case, the special issue was not to be sold to the public; in the latter, the funding took the form of various amounts of various medium term loans, with no particular disability that they could not be sold by the Reserve Bank. But this second solution also fails to convince, because the amounts involved in the earlier two cases were Rs 300 crores and Rs 150 crores, whereas the transactions of the three weeks in point add up to scarcely Rs 50 crores.

It is at this stage that the obvious solution offers itself. During the week ended 15 April, the Central Government's balances were swollen by receipts from State Governments, and were placed at Rs 75.08 crores, or some Rs 25 crores more than their "traditional minimum." What could be more natural than for Government out of such surfeit to cancel ad hoc Treasury Bills? Even so, in the following week, there should have been special receipts which enabled the Centre to maintain its cash balance at above the Rs 50 crore mark while simultaneously instituting reverse ad hocs for roughly Rs 17 crores. Again, in the week ended 6 May, the Centre got a fair sized payment from the States; and so, in the following week, the Centre's cash was drawn upon to cancel ad hocs for a further amount of Rs 7 crores.

What does the foregoing show? We believe this is important evidence of the flexibility of monetary policy in this country; and it is logical as well. If Government are short of cash, Nasik and Treasury Bills are available; if Government have a balance surplus to their needs, the interest liability is reduced by cancellation of ad hocs.

We are not yet clear in our mind as to the impact on deficit financing of two sets of transactions both of which are in the offing. One is the "release" of funds by the State Bank in respect of moneys re-lent to this country from the counterpart funds which have accrued with the State Bank and which are on deposit with that institution; the obvious implication is the prospect of further "reverse ad hocs." Another is the deposit of such funds henceforth with the Reserve Bank; and the inference is that, as heretofore, the Centre will have to create money to pay for the surplus wheat and rice obtained from the USA.

So, it should happen that the changes in respect of fresh receipts of counterpart funds will relate mainly to Other Deposits and Investments, both in the return of the Banking Department of the Reserve Bank. Government would effect sales of ad hoc Treasury Bills in favour of the Reserve Bank; and the proceeds would be used to pay the US Embassy for the surplus commodities landed. In turn, the US Embassy would deposit such funds with the Reserve Bank, this being placed by the Reserve Bank under the head of Other Deposits. Now, the institution of deficit financing would in the first instance be reflected in the return for the Issue Department, since Investments in the Banking Department are statutorily limited to marketable securities. But the balance-sheet total on the liabilities side of the Banking Department would rise as a result of the deposit of the counterpart funds. Hence a transfer of marketable securities would require to be made from Rupee Securities in the Issue Department to Investments in the Banking Department. That is to say, it may happen in the future that deficit financing will be reflected in the Banking Department rather than in the Issue Department as heretofore.

Sharp Contraction in Note Circulation

Slack season indications are to the fore in the latest banking returns. According to the statement of the Reserve Bank for 20 May, Active Note Circulation has declined by the sizable amount of Rs 21.38 crores to Rs 1880.06 crores; and Rupee Coin has returned from circulation for Rs 0.49 crores. Currency has been contracted against Rupee Securities for Rs 15 crores by transfer to Investments in the Banking Department. Consequently, the Reserve Bank's cash in the till has improved by Rs 6.85 crores to Rs 22.26 crores.

In the Banking Department, it is noteworthy that the Centre's balances are higher by Rs 6.11 crores at Rs 57.99 crores notwithstanding its liability in respect of maturing Treasury Bills that had been purchased and discounted by the Reserve Bank. This portfolio is lower by Rs 8.41 crores. Since Investments are higher only by Rs 1.41 crores, the implication is that there has been no recourse to created money. But the State Bank is known to have purchased securities for Rs 5 crores. So, it is likely that the Centre instituted countervailing deficit financing for Rs 5 crores against the maturities, and that this was concealed by sale of securities to the State Bank. State Governments, too, increased their Deposits by Rs 3.56 crores to Rs 29.47 crores after reducing ways and means borrowings from the Reserve Bank by Rs 1.70 crores to Rs 51.31 crores. On the other hand, the Reserve Balances of member banks appear to have declined by Rs 4.84 crores to Rs 94.24 crores; but, since the State Bank's cash in hand and with Reserve Bank fell in the relevant week by some Rs 12 crores, the implication is that other Scheduled Banks added to their Reserve Balances by something like Rs 7 crores.

Lastly, as far as concerns the Reserve Bank returns, the disquieting fall in Balances Held Abroad continues, and the latest decline registered is one of Rs 2.11 crores to Rs 11.56 crores.

The return of the State Bank for 20 May shows that Deposits have fallen by Rs 5.46 crores to Rs 626.17 crores. It is remotely possible that this decline might relate to making over of agreed amounts from the counterpart funds on deposit with the State Bank. In slack season fashion, the total of Advances is lower by Rs 1.98 crores at Rs 214.86 crores. The gilt-edged portfolio is higher by Rs 5 crores; as a result, cash balances have been drawn on for something over Rs 12 crores. A rise of Rs 6 crores under Other Assets suggests further purchase of gilt-edged in the offing.

During the week ended 13 May, gross Deposits of Scheduled Banks went up by Rs 4.12 crores to Rs 1977.95 crores. Also, the total of Advances has declined by Rs 3.76 crores to Rs 1135.86 crores. Nevertheless, indebtedness to the Reserve Bank has gone up by Rs 1.51 crores to Rs 49.16 crores. Gilt-edged investments are shown higher by Rs 5 crores, wholly on account of State Bank purchases in that week. As a result, cash balances have been marked up by Rs 4.72 crores at Rs 184.32 crores; but, since the State Bank in that week reported an increase of roughly Rs 9 crores in cash, it is clear that other Scheduled Banks suffered a fall of around Rs 4 crores in this regard.

TENDERS for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 24 May 1960. Total amount offered was Rs 2,30,00,000. Tenders at Rs 99.325 were accepted in full and those

at Rs 99.310 were allotted approximately 91 per cent. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted shares being Rs 2.745 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 30 May 1960. Successful tenderers should make payment on Friday, the 3 June 1960. Other conditions are as usual.

During the week ended the 20 May 1960 Government of India Treasury Bills for Rs 47,93,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 25 to 28 May 1960 at Rs 99.326 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 18 to 21 May 1960.

The Economic Effects of the Summit Failure

By

Paul Enzig

EVEN those of us who did not attach sanguine hopes to the outcome of the Paris summit meeting were shocked by the deliberate and brutal way in which Mr Khrushchev has torpedoed the conference. It foreshadows a period of international political tension, with the possibility of acute war scares from time to time. From an economic point of view it means the abandonment of hopes of an early reduction of defence expenditure both in the Communist countries and in the free world. It also means prolonged uncertainty with periodical scares that are liable to affect Stock Exchanges and foreign exchanges.

Instead of spending less on arms, the democratic countries will have to spend more. This necessarily means that less will be available for civil expenditure or for much-needed tax reductions. It also means that less will be available for the support of under-developed countries. The latter will be affected by the increased expenditure on arms both in the free world and in the Communist Bloc. For Moscow will not be in a position to be too liberal with economic aid to uncommitted countries—unless they are prepared to sell their birthright for a mess of pottage by committing themselves in favour of the Communist camp.

A few years ago an increase in military expenditure in the Soviet Union would have meant mainly longer hours and smaller pay

for the Soviet worker. In the meantime, however, the Soviet Government has committed itself to shorter working hours and higher standard of living. It would incur unpopularity if changes were made in the opposite sense, and even if at least part of the promises were not to be implemented. This means that even an increase in the output would not make it possible for the Soviet Union to give economic assistance outside the Communist Bloc on any appreciable scale.

In any case, Mr Khrushchev will now have to say goodbye to his seven year plan. Manpower and industrial capacity will have to be diverted to arms production instead of expanding productive capacity for consumer goods as promised.

Nor is the outlook in the free world very promising. In most Western industrial countries industries are working almost to full capacity. It is impossible to superimpose an arms drive over the present activity without curtailing the production of capital goods and consumer goods for civilian requirements. Any attempt at eating our cake and keep it would overstrain our economies. So we too have to revise our expectations of an increased standard of living.

On the other hand it is possible—I would not put it higher than that—that the aggravation of the international outlook might produce a salutary effect on the labour situation in the free world. In face of a danger to our security and freedom, the scramble for higher wages and shorter hours might possibly come to be moderated. Even though the situation is not comparable with that of 1940, nevertheless it is conceivable that the realisation of the need for strengthening the national defences might induce the trade unions to exercise self-restraint. The Governments may not have unsurmountable difficulty in appealing successfully to business firms to set an example by restraining dividend payments and by cutting prices rather than increasing their profits. In that case the change of the situation, so far from producing inflationary effects, might operate in the opposite direction.

In any case, there is no reason for any pessimism about the prospects of either sterling or dollar. The immediate reaction to the breakdown in Paris was a weak tendency in sterling against the dollar and against the Western European currencies. There was no justification for it. After all, we all stand to be affected in the same way by an aggravation of the international political situation. Indeed, a war scare should strengthen sterling and even more the dollar, because many Western Europeans would become anxious to place at least the Channel, but preferably the Atlantic between their money and Soviet tanks. There is certain to be a flow of refugee funds to London and to a much larger extent to New York.

Taxing

WE do not know whether Professor Parkinson has got round to formulating his law on Taxes, but if he has, it would probably read like this: Expenditure expands to consume the tax revenue available. This not particularly original theory will find striking confirmation in the 92nd report of the Estimates Committee of the Lok Sabha. Our New Delhi Correspondent's despatch the week before last discussed this report at some length and drew some interesting conclusions. The figures themselves are eloquent. Out of an additional tax effort of Rs 792 crores only Rs 188 crores were actually available for the Plan. The Finance Ministry has demurred to this particular inference on the ground that it is the result of relating additional tax receipts to additional non-Plan expenditure. If, it is argued, a different kind of 'pairing off' is done, as for example between tax yield and the expenditure on the Centre's Plan financed from revenue and revenue grants for the State Plan, the result would be more flattering. On the basis of a four year computation from 1956 to 1960, the Ministry puts additional tax yield at Rs 556 crores of which Rs 70 crores are to go to the States as their share. As against the Rs 486 crores left with the Centre, Centre's own revenue expenditure on the Plan and the grants to the States from revenue account for Plan purposes come to Rs 422 crores. On this basis it is argued that only Rs 64 crores has gone for non-Plan purposes. This argument is a little specious for, as per the Second Plan, surplus of Rs 252 crores was to be obtained from current revenues at 55-56 levels of taxation for the Plan. In the Finance Ministry's reckoning, it is tacitly assumed that no such surplus is available for the Plan. The Estimates Committee too seems, on the basis of certain figures supplied by the Planning Commission, unimpressed by this argument. This basic fact seems to be contained in the following figures:

	(Rs in Crores)
Revenue receipts during the Plan period	3,372
Non-Plan expenditure	2,932
Balance available for the Plan	440

Considering that the Plan expected taxes to finance it to the extent of Rs 1200 crores and that taxes to the extent of Rs 1044 crores were actually found, it is depressing to be told that only a little over a third of it was actually available for the Plan.

There are, doubtless, explanations and extenuations. The more familiar are increase in non-Plan expenditure due to more onerous commitments under Defence, non-plan developmental expenditure, civil administration, statutory grants to States and debt servicing, and certain other 'book adjustments'. Of these Defence expenditure is something that recent developments along the border do not permit us seriously to challenge. Non-Plan development expenditure again, is something that has certain amount of justification. It may be difficult to avoid such expenditure entirely, and, it may seem pettifogging to object to developmental expenditure merely because it has not been listed as part of the Plan. Indeed it is also possible to 'exaggerate' the achievements of the Plan by including these items in the Plan itself, for much of such ex-

penditure was being normally incurred long before planning came on the scene. The Planning Commission, it may therefore be argued, has resisted a temptation to which most others would only too easily have yielded. But on principle, such expenditure should be reduced to the minimum under an economy of 'total planning'.

Cost of civil administration, is the one thing to which Parkinson formulations have the clearest application. A certain fatalistic acquiescence to a proliferating and increasingly expensive bureaucracy is a world-wide mental attitude today. Every now and then we hear of demand for economy in civil administration and official readiness to consider it. But there is no real conviction either in the demands in their functions or acceptance and there seems little likelihood of any significant reduction of such expenditure. The Pay Commission's recommendations have already created fresh commitments whose precise quantum is still uncertain.

The other items like increase in statutory grants to States are equally unamenable to any significant reduction. As things stand at present, the dependence of the States on the Centre will not be any less in the near future.

But when all the excuses have been made, two fundamental issues have to be faced: Is there not an element of bad faith involved in the fact that only so little of taxes demanded in the name of the Plan should, for whatever reason, be available for the Plan itself? People did not render up the taxes for being administered more expensively. If in politics there can be no taxation without representation, in public finance there can be no taxation without strict accountability of its use for the purpose it was taken. Secondly, the morale of the people is not likely to receive any boost by being told that the surplus from current revenues for the Third Plan is unlikely to exceed Rs 200 crores. This means, according to the Planning Commission, an additional tax effort to the tune of Rs 1150 crores by the Centre alone for the Third Plan. It may well be that the Planning Commission's estimate of surplus from current revenues is unduly pessimistic. But it is depressing to be asked to provide another Rs 1200 crores just after having paid nearly the same amount of which only a third was really used for the purpose for which it was taken. It would be hardly surprising if people felt that not only their purse but their patience was being taxed.

Future Demand for Energy

THE National Council of Applied Economic Research has just published its painstaking projection study* of the pattern of demand for energy in the next 15 years in India. This study may well serve as an invaluable aid in

*Demand for Energy in India: 1960-1975. This study, reflecting the collective judgment of the National Council, has been carried out by the Energy and Natural Resources Section headed by Dr J. Dubash, under the guidance and direction of Dr P. S. Lokanathan, Director-General.

Indian Finance

Established 1928

28 May, 1960

The Wise Man in his attitude towards the World has neither Predilection, nor Prejudices. He is on the side of what is Right—The Analects of Confucius

perspective planning if the demand pattern it has charted for the future is acknowledged as the most likely one. Of course, this study, like any other projection-study of the kind has at least two major limitations. One of these is that as any projection has necessarily to be done within a framework of assumptions, it can be valid only in the measure that the assumptions themselves are reasonably valid. And the other limitation is that as there will always be some future imponderables which cannot be precisely figured out in advance, a certain amount of guesswork, statistically intelligent though it be, is a necessary part of any exercise in projection. Notwithstanding these limitations which are common to all projections of the kind, the National Council's study strikes one as manifestly dependable for the broad purposes of planning.

As for the study's assumptions which would need to be considered at the outset, to say, as the National Council itself has admitted, that "the assumptions on which it is based cannot be exact" would not mean that they may not be valid ones. These, it must be recognised straightway, have the merit of being clearly stated—a merit which in a way reinforces their validity. This is particularly true of what may be called the central basic assumptions of the study. The most important of these is that the future course of the Indian economy will "follow the lines postulated in the model given in the Second Five Year Plan with a slight modification towards the end of the period when the per capita income, by 1975-76 is assumed to be Rs 564 in lieu of Rs 546 given in the Plan frame". So upgraded, the model is as under:

	1956-61	1961-66	1966-71	1971-76
National Income, at 1952-53 prices, at the end of the period (Rs crores)	13,480	17,260	21,680	28,200
Per capita income at the end of the period (Rs)	331	396	466	564

It is too late in the day to question the desirability of this model though there may be some doubt on the score of its feasibility in the light of achievement to date. Although the likely per capita income in the end-year of the Second Plan may only be around Rs 300, the probability of development in the subsequent Plan periods, taking place broadly in accordance with the model can still be assumed in view of the twin circumstance that the Third Plan will start with a broader and more diversified industrial base and also ensure an accelerated pace of agricultural development. It would thus appear that the National Council's assumption regarding the growth of national income in the next 15 years is a reasonably valid one. And it is crucial too because the growth of energy consumption as a necessary overhead—of economic growth "conditions and is, in turn, conditioned by the latter". As a corollary to this assumption, the National Council's study has also worked out a broad sub-division of national income into constituent sectors on the basis of likely shifts in occupational distribution and changes in productivity. These sectoral breakdowns which

form part of the assumption regarding national income are given below.

Sector.	(In Rs crores)			
	1960-61	1965-66	1970-71	1975-76
Agriculture and allied pursuits	6,170	7,400	8,800	10,600
Mining and manufacture	2,910	4,250	5,900	8,500
Trade, transport and communications	2,300	2,900	3,540	4,600
Services	2,100	2,710	3,440	4,500
Total National Product	13,480	17,260	21,680	28,200

Another assumption which is related to the first is based on some historical trends and international comparisons. According to these comparisons, "at intermediate levels of development—when there are marked changes in the structure of production, mainly consisting in the greater expansion of industry and other activities where energy inputs are proportionately higher and in a more intense growth of domestic consumption—supply requirements will increase at least as rapidly as Gross National Product." It is, again, validly assumed that India is at this intermediate stage of development, for, already the income elasticity of total energy consumption is about 0.6 and that of primary energy (consumed predominantly in the productive sectors as distinct from the sector of domestic consumption) about 1.6.

The third basic assumption is "that such resources as are necessary to put through a programme of energy development outlined in this study will be available, as and when called for, out of the aggregate resources required for overall economic development." This, in turn, is related to, and therefore as valid as, the first assumption. The projections made by the National Council on the basis of these and some other assumptions are statistical exercises of no mean order; their range and detail and the scientific care with which all relevant available data have been sifted and utilised in the process compel admiration.

The final results of the series of projections are, summed up in the following table. This table presents the pattern of gross demand for energy by source, in terms of million tons of coal equivalent, in the period 1960-75. It will be seen from this table that nuclear power will be making a rather meagre contribution to energy consumption by 1975. Although nuclear power, according to the National Council, compares unfavourably with thermal power and hydro-power at present (with regard to both capital as well as unit costs), it is recognised that it might be competitive in about a decade, that is, by 1970 or so, when thermal power costs are expected to go up and nuclear costs come down and that, in any case, the cost per kWh of nuclear power would be practically the same, from the very beginning, as that of thermal power at places remote from the coalfields.

Year.	(mtce)			
	1960	1965	1970	1975
Coal	62.4 (76.5)	97.1 (74.5)	149.8 (72.5)	227.4 (71.2)
Hydro power	8.7 (10.6)	15.5 (11.9)	28.0 (12.6)	40.2 (12.6)
Petroleum	10.6 (12.9)	17.0 (13.0)	27.3 (13.2)	44.2 (13.9)
Nuclear power	—	1.0 (0.6)	3.2 (1.7)	7.5 (2.3)
Total primary energy	91.7 (100.0)	130.6 (100.0)	206.3 (100.0)	319.3 (100.0)
Secondary energy	97.3	99.3	97.6	88.0
Total energy	179.0	229.9	303.9	407.3

N.B.: (i) Gross consumption includes losses.
(ii) Figures in brackets are percentages of total primary energy demand.
(iii) Secondary energy is obtained from cattle dung, firewood and agricultural wastes.
(iv) Thermal power is included in coal.

In the light of this recognition as well as of the advanced research under way in Britain for basing nuclear power stations on the fusion reaction of 'heavy hydrogen' atoms (which have merely to be obtained from ordinary water) and, thus, for producing still cheaper electricity, it would appear there is a case for possible greater reliance on this source than on petroleum. While the energy that can be obtained by way of heat and electricity from coal and by way of hydro power may well be, more or less, according to the pattern projected by the National Council, the most likely shortfall will be in petroleum supplies. It is here that nuclear power may be required to make a substantially greater contribution than what has been forecast by the National Council.

The projections of demand for primary energy by consuming sectors for 1965, 1970 and 1975 would also need to be known to have a broad idea of the power-hunger of economic development. The relevant estimates worked out with meticulous care by the National Council are presented in three numbered tables at the end of this article. The figures are in terms of thousand tons of coal equivalent. Here 'effective consumption' must be understood to mean consumption at the place where it is actually consumed; it does not include consumption required to process and transport the energy to the place of actual consumption. A shorter table is also given below to sum up the estimate of demand for energy by sectors in the period 1960-75 in terms of million tons of coal equivalent. No interpretation of these tables is, however, attempted here as the figures will speak for themselves in the light of the National Council's projections of national income by sectors.

Punitive Publicity

THE unfinished business of the last parliamentary session includes the Taxation Laws (Amendment) Bill. The tax holiday provisions in the Budget and withdrawal of development rebate for motor vehicles and office equipment are perhaps less controversial than the proposal to publicise default or evasion. The protection of secrecy is removed, because of the official decision to accept the Tyagi Committee's recommendations. The Bill, of course, offers essential relief in regard to payment received as interest on small savings, past or future.

28 May 1960

Most of the clauses are drafted in order to keep up with the interpretation given by the Courts about tax law and procedure. The aim is admittedly both correct and expedient. The ceiling set for donations in cash or kind (7½ per cent of income or Rs 1.5 lakhs) is liberalised to some extent. Inter company investments and tax due on dividends drawn have produced complaints and the Finance Act has dealt already with exemption of dividends in regard to investments made since 1959.

By far the most interesting legal change contemplated is in regard to the secrecy rule. The Gift Tax, Expenditure and Wealth Taxes are equated with income tax, so that breach of the law and penalties imposed can be made known. The USA is familiar with the elimination of the rule. The Goldfine Case, an offshoot of the inquiry into Mr Sherman Adam's use of influence from the White House, was concerned mainly with detailing what was done by a Boston party to placate local revenue officials by bearer cheques. There can be no trial by television in India, but the Gazette can set out names and the officials or managing agents of companies involved can also be named. That such publicity can be damaging is, of course, the whole point of the change for the Tyagi Committee prescribed publicity as a remedy for the evil of evasion.

When appeals are pending, names will be shrouded in secrecy, but even when conviction takes place, there is discretionary power to withhold publicity, provided the interests of the Central revenues are duly safeguarded. That is to say, compounding *ex post facto* is allowed. The very fact that the incometax Investigation Committee's reports dealt only with nameless cases and voluntary disclosures and satisfaction of computed liability were allowed is one reason for a drastic change. But it has been argued that foreign practice on this point does not give adequate guidance and there has been objection to the very notion of furnishing names on request for information about tax payable. This may lead to prosecution by disgruntled rivals or displaced employees. A further argument is that credit rating may be affected by the provision of information (even to banks or insurers). This argument is not very impressive, nor is there any special sanctity for incometax records since banks have to open their books for official investigators and seizure of business records on orders from above is not uncommon. The fact that sales tax or other authorities may make use of information secured from Central records is to be taken as a serious argument, when a new type of discipline has to be imposed on a business society.

The need to relate wages and bonus to profits earned, like the Tariff Commission's anxiety to ascertain costs in order to determine fair prices validate the proposal. And in any case, only a microscopic minority of a million assesses will be touched by the removal of the shield of secrecy. Prof. Kalder's views on tax reform—the need to lighten the load for the well-to-do by doing away with evasion—must also be given special weight though the Matthal Commission earlier had declined to consider publicity a promoter of purity.

The great debate on corruption raging for months is, of course, a relevant and timely consideration in examining the virtue of additions to Sec 59. The voluntary agencies set up to preserve standards in public life are not likely to object, though the Chambers of Commerce now appear to be critical of the amendments by additional clauses. The extra-legal connections between revenue officials and assesses cannot be disregarded in view of the cases reported in the USA during and after the term of Mr Truman in office. The practice in New Zealand is not so reliable as the practice in USA which forces lobbyists to name their clients, specify the fees received, and

mention the purposes of such payment. Results are, of course, evaluated by the private pay masters. The salaries of US film stars, their tax liability and the private companies that retain the literally viable assets are known to the public at large. Even legislators have to give information about payment of salary to relatives and it may be recalled that an MP in India was expelled for seeking extra satisfaction from his seat. That old story acquires some force now. The wording of the Bill indicates that only penalties above Rs 6,000 will be normally notified; the small fry will escape presumably. But where a Court imposes a penalty, the same will be recorded. Journals reporting taxation cases will have more material to publish, but perhaps that is an inconsiderable advantage.

The current guesses about the volume of 'black funds' and the cash held outside the banking system may justify an approach that is also grounded in the familiar demand for freedom of information to tell all is more than a private plea. The data secured from inquiries may be one reason for a change that will prejudice only the non-conformist meaning the evader. The other may be the need to effectively dispel the impression that the authorities are 'soft' on the well-to-do law breakers. The swift and summary treatment of smugglers and even violators of Prohibition laws is assuredly a reason for giving publicity to cases of evasion in respect of either incometax or the gift tax. The wonted leniency is out of tune with the present need to put teeth in the law and the brief preliminary discussion last month has established the strength of the Treasury's case for more revenue—and more publicity too. The law, if it is enforced, may help to maintain capitalism and instead of vague mysterious hints as of yore there will be a list in cold print—of those who failed to discharge obligations to constituted authority.

Flow of Foreign Capital into India

THE accelerated flow of foreign capital in recent years into India is part of a political change easily measurable by Mr Eisenhower's impressive visit to Delhi but the figures in the Reserve Bank bulletin for April are concerned not with the results of Indian missions abroad or the visit of foreign missions but with the results achieved by new agencies through new methods. Since 1960 has been marked by new plans for many new plants, the only point to consider is whether economic planning inhibited foreign capital. It has not done so, and the latest mission (that of the three experts who wrote about India today to Mr Black) to assess prospects and needs has only endorsed the view that more should be done for India soon. The temptation to look upon the performance of foreign capital as superior always can be ignored. What is important is that foreign concerns in India mostly follow the Ford Motor Co of England, a public company, in retaining the bulk of the earned profits for financing expansion even in new, risky countries, and the balance carried forward in the latest Ford report is almost equal to the company's capital. That comes out as very significant, as also the fact that the adverse balance of payments was not corrected to any degree by the inflow of foreign capital into India in 1958. Apart from the preponderance of institutional support for Indian enterprises of promise, the salient feature is the association of former importers of goods with the suppliers of capital or capital goods for instance, in the rayon industry or chemical and dyestuffs manufacture. The analysis calls attention to the foreign liabilities of what is

called the official sector. This is parallel to the fall in India's foreign assets but it has no relation to what the private sector has achieved. The rise in India's external debt raises new problems, but the foreign investor is not concerned with the steel plants' operating results but with facilities available for remittance of interest due or the earned profits.

Far more important is the indication of foreign aid in developing manufactures in India. The UK is still the leader and offers of aid in the new lines like motor and cycle manufacture are calculated to enlarge employment than any rise in bank deposits. The bulletin's estimate of Rs 570.64 crores offered as the gross total for foreign capital invested at the end of 1958 is derived from the detailed calculations as to extra capital put in even in the tea planting industry. But the 1958 figures are to be taken as representing a trend for investments in 1959-60 are invested with more importance and what has been done by collaboration with foreign interests can be ascertained from the new year number of the Bombay journal, *The Hyphen*. Mr Hennessy, with his Indian experience notes that the re-invested profits raise the volume of investment made by Great Britain and the UK thus accounts for 81 per cent of the total foreign capital in India. Indeed the previous reduction was due mainly to the nationalisation of the KGF and the life insurance companies.

New companies with manufacturing programmes for chemicals, tractors and machinery have come in and Indian capital too, has participated in the expansion undertaken. There is also the Durgapur Steel project and Rio Tinto's aid for the extraction and Smelting of base metals in Rajasthan. What Japan has done to help in glass, vacuum flask manufacture, electrical wires, toys and watches calls for brief mention like the steps taken by German chemical firms to get the dyestuffs

New frontiers

From the beginning of time human eyes have looked up into space and wondered, and wondered, desired to possess the moon.

Today, man has travelled far on the road of knowledge: today he is about to inherit the moon.

We may not yet know all the details of that first flight which will send him hurtling through space. But of this we are sure, he will need Oxygen to sustain him. And of this too we are sure, that Oxygen will have helped to cut or weld his space-ship and its equipment.

INDIAN OXYGEN LIMITED Twentyfive Years' Service

10AX-80

industry started in India also. ICI is also in the picture as the Bulsor project of Atul Products proves, and ICI happens to be the sponsor both of explosives-making and insecticides. The Italian thrust is apparent in Montecatine coming into India for aluminium production also in the near future. The Bata Shoe Co. is not foreign, but it is worth noting that at Mokameh ghat it has its own tannery and hide-collecting agency. The rubber shoes from Faridabad and the leather footwear from Dighaghat support the export trade, valued at Rs 1 crore. The IBM's operations in India, using local talent only, call for mention proving that Mr Watson's policy of getting local participation in a developing economy is still followed closely. There is a chance of IBM entering the typewriter field also and combining output from its Japanese and Australian subsidiaries with Indian production.

The latest news about dredger making in India is a sign that other foreign enterprises are ready to back local manufacture. Paper making machinery, cement and sugar mill machinery is being fabricated in India by arrangement with foreign suppliers and the saving on foreign exchange may augment the resources for future investment. Leaving aside the objects of further industrial development, the new opportunities given for local investors by enterprises increasing capital steadily like Mahindra and Larsen & Toubro must be taken into account as also the fact that the joint collaboration agreements help to reduce the strain on the balance of payments.

The fact that India's needs determine the choice of allies in industry requires no specific description and it is evident that the democratic tradition conditions the flow of capital like the prewar framework of regulation for development. New entrants go along with the record of still-growing enterprises like Union Carbide or Hindustan Lever. If the second industrial revolution has to be measured not by consumer goods made here but by machinery to support industrial growth, the advantages of more foreign capital appear undeniable and the assurance that the private sector in India has room to grow is supported by indications relating to fertiliser production of which the EID & SF project is fully representative, because it hinges on the co-operation of Simon-Carves as well as the steady market prepared by Parry's of Madras.

Approach to People's Car

(Contributed)

A CASUAL reader of Indian newspapers in recent months is apt to get the impression that the most urgent problem confronting the country at present is the manufacture of cheap cars! But those who are familiar with India's economic background cannot but feel concerned at the considerable confusion and contradiction in official policy. On the one hand, the Planning Commission and the Finance Ministry exhort the people to curb conspicuous consumption and augment savings; on the other hand, the Ministry of Commerce and Industry gives top priority to a scheme to produce cheap cars and sell them to the public on "attractive" hire-purchase terms. According to the Finance Ministry, India's per capita income is only about Rs 290 per year. Yet the Minister for Industry proudly proclaimed in the Lok Sabha: "We will have the people's car—of the people, manufactured by the people, for the people of the country"; and he added that "this shall be done at the earliest possible time". It is reported that a Committee of Secretaries of Union Ministries has recommended that the manufacture of cheap cars should be in the public sector, in

a parliamentary democracy, policy decisions are taken by the Cabinet in consultation with Parliament. But in this case, it would appear, the decision to undertake the production in the public sector has already been taken by the Secretaries even before the matter has come up before Parliament!

Apart from the contradiction in official policy, it would be worthwhile to consider whether there is a genuine demand from the people for a cheap car and if it is possible and desirable to satisfy it. So far as one could observe, there has not been any popular demand for cheap cars. The demand has been for cheap transport. And this demand could be met by adopting simpler and less expensive measures such as increasing the production of bicycles, motor cycles and scooters and by making them available at much cheaper prices than at present; by increasing substantially the number of passenger buses and by giving liberal permits for taxis. If instead of resorting to these methods, Government choose to flood the country with cheap cars, it will surely have undesirable consequences.

In the first place, it may affect adversely the efforts now being made by Government to persuade the people to increase their savings and divert them into productive purposes. Mr B. N. Das Gupta, a member of the Jha Committee argued in his minute of dissent: "It is so obvious that the purpose of savings will be totally defeated if a cheap automobile is introduced in this country at this stage so as to enable the people of the income group of Rs 15,000 annually to possess this handsome luxury. Such an opportunity, if created by Government, will easily divert all the savings to this investment which by no means can claim priority." Secondly, introduction of cheap cars will create difficult problems of traffic congestion. It should be remembered that the bulk of the cheap cars will be sold in Calcutta, Bombay and Madras and these cities are already confronted with acute congestion. The Jha Committee refers to the "extremely good road conditions" in European countries. But what is the position in India? The roads in our country are notoriously narrow and overcrowded and it will be extremely unwise to add indiscriminately to the number of vehicles on the roads. Before manufacturing cheap cars, Government should ensure that the existing roads in cities as well as in the rural areas are widened wherever possible and that new roads are constructed in such a way as to be able to cope with the growing volume of traffic. Any attempt to inundate the country with cheap cars in the present stage of our development will only result in considerable congestion, confusion and carnage on the roads. Thirdly, the demand for cheap cars may affect adversely the demand for bigger cars. As Mr Das Gupta says, "already the economic levels for medium sized cars have not yet been achieved—any inroad into this demand by small cars will affect them so much that a meagre increase of demand in future years may not have any favourable effect on production cost".

These arguments can be ignored only at peril to our economy. After several years of acute scarcity, our foreign exchange position has improved to some extent at present. This opportunity should be utilised to strengthen the existing automobile units so as to enable them to improve their efficiency and reduce the cost of production. At the same time, serious efforts should be made to reduce the excessive burden of taxation on motor vehicles.

In any case, there is not the slightest justification for the public sector to take up the manufacture of cheap cars. Mixed economy has indeed no meaning if Government is to enter even those spheres where private enter-

prise is eager and enthusiastic to develop. As many as 24 parties are reported to have submitted proposals to the Jha Committee for producing cheap cars; and if Government is unable to accept any of them, the obvious course would be to shelve the matter for the present. Cheap cars are not such an urgent need that Government should spend the scarce resources in producing them.

It is interesting to note that Japan which is one of the most advanced industrial nations in the world did not give priority for the production of motor cars till recently. The London Financial Times (May 12, 1960) has pointed out that "as recently as 10 years ago it was officially estimated that there were less than 1,000 privately owned cars in all Japan". It is only now that efforts are being made to produce cars for the middle class people. But this policy appears to cause some anxiety to the Government of Japan. The Financial Times says that Government today is worried that "the biggest traffic jams in history are in the making". With a view to cope with this situation Japan has now embarked on a highway building programme costing £770 million.

We in India, therefore, should proceed with caution in regard to our approach to this problem. The Ministry of Commerce and Industry should not be allowed to rush through the scheme without carefully considering all its implications. The Ministry is concerned only with the production and distribution of cars. It is not concerned with other consequences that would follow to the country as a whole if it is decided to produce cheap cars. The Planning Commission, the Ministry of Finance, the Ministry of Transport and State Governments like West Bengal—all these bodies should consider the proposal in all its aspects before Mr Manubhai Shah is allowed to have his way.

Foreign Trade...
Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies
ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

Common Ground

The importance of strengthening the country's industrial base and ensuring a rapid rate of progress are spotlighted from different angles in the President's address to the annual meeting of the Indian Chamber. As an objective of national economic policy this will command universal assent. It is in drawing attention to the obstacles that stand in the way to the realisation of the common objective and the measures that should be taken for that purpose, that such addresses by experienced spokesmen of business and industry could serve a useful purpose. It would have been surprising if the speech had not dealt at length with the disincentive effects of Government's policy of taxation and controls. But coming so soon after Mr G. D. Birla's remarkable speech at the New York Management Association, criticism of Government policy is liable to be dismissed as just another routine performance. This would be unfortunate, for there are certainly points where controls cramp initiative in the private sector.

Mr Shah has drawn attention to the low ratio of increase in national income to gross investment in India as compared with Japan and Germany. The bulk of the investment over the last ten years

has been in large irrigation and power projects and basic industries like iron & steel which has not yet been reflected in statistics of national income. But Mr Shah is on strong ground in drawing attention to the comparatively higher level of expenditure on buildings and other less productive items in public sector enterprises, and that may be one of the factors responsible for the low rate of growth of national income in spite of substantial stepping up of investment. It is rather surprising to find Mr Shah making the claim that the country has all the raw materials that it needs. A glance at import statistics would have enabled him to keep his enthusiasm in leash. Most of the controls seek justification in the need to conserve foreign exchange to pay for imports of essential industrial raw materials.

Ports

The programme recommended by the Intermediate Ports Development Committee appears to be the minimum necessary if Coastal Shipping is to play its proper role of relieving the Railways of their load of bulky cargo. Incidentally it may also help Coastal Shipping to get over the difficulties which were highlighted in the Chairman's speech to the last annual meeting of Scindias. Though reservation of coastal traffic has been in force since 1950, the development of coastal trade has not been up to expectations. Against the target of 4,12,000 grt, coastal tonnage has only reached the level of 2,65,000 grt. Even the reduced tonnage has not been able to get sufficient cargo. Cargo lifting last year registered a drop of nearly 100,000 tons. While the Rail-Sea-Coordination Committee had recommended diversion of bulk cargoes from rail to sea route, what has actually occurred is a diversion in the reverse direction. Cargoes which were formerly moving by sea are now carried by rail. While this has increased the strain on Railways, it also leads to wastage of transport facilities.

The main reason for the diversion of coastal traffic from the sea route is the lack of handling facilities at the intermediate ports along the country's long coast line. Apart from the six major ports, the others are mostly open roadsteads which are idle during the monsoon, that is, for more than half the year. The lack of handling facilities, adds to the cost of carriage by sea. And as goods can be shipped only during certain months of the year, the rail route is naturally preferred even for bulky goods when the destination is a place between the major ports.

Until the important ports lying between the major ports each of which serves a considerable area, are equipped with adequate facilities and converted into all weather ports, coastal shipping will not be able to develop its full potential.

The recommendations of the Committee for the development of intermediate ports give first priority for the development of Tuticorin and Mangalore as all weather ports. Next come Paradip in Orissa and Porbander in Gujarat. Very little was done for intermediate and minor ports in the Second Plan, the bulk of the allocation being taken up by the expansion schemes of the major ports. The programme of development envisaged by the Committee's recommendations will serve to correct the lack of balance in the development of port facilities which has handicapped the country's coastal shipping while adding to the strain on the Railways.

The Public Relations Officer of the Southern Railway has drawn attention in a communication to the Press to the phenomenal growth of goods traffic on the East Coast line which has increased from 672.2 million ton-miles in 1950-51 to 1,250.9 million ton-miles in 1959-60. The large number of goods trains that the railways are obliged to run leaves practically no capacity for the additional passenger trains for which there is insistent demand. It is also relevant to mention that the goods traffic which has practically monopolised the line mainly comprises bulky freight like coal, iron & steel, fertilisers, food grains etc which can be profitably carried by sea if the intermediate ports are equipped to handle the cargo in all weathers. Apart from other considerations, the programme for development of intermediate ports should have strong public support if one of the indirect results is to relieve overcrowding in passenger trains.

Power in Perspective

The programme for development of atomic power during the Third Five Year Plan will be seen in perspective if it is viewed against the requirements of power in the next decade and a half and availability from conventional sources. The National Council of Applied Economic Research, which studied the problem of energy requirements, has estimated that in the next 15 years energy requirements will grow from 70 million tons to 260 million tons of coal equivalent. As it is doubtful if even half the requirement could be provided by coal, it is of the utmost urgency to develop alternative sources of energy. India has unutilised hydroelectric resources which are large, though by no means unlimited. But the development of hydroelectric power involves heavy investment in dams and reservoirs which will be economic only as part of a multipurpose project. Even as it is, atomic power stations compare favourably with hydroelectric projects in respect of capital cost.

The Atomic Energy Commission has estimated that the capital cost

of an atomic power station will be Rs 1700 per kilowatt. This compares with the Rs 2240 per kw. for Rihand, Rs 1837 for Koyna, Rs 2006 for Periyar I, Rs 3529 for Kundah I and Rs 2824 for Kundah II. The running cost, that is the fuel and operating cost, per unit will be only 1.3 and 2 nP a unit, as compared with 2.6 nP per unit for thermal stations situated in areas remote from coalfields. If allowance is made for larger interest and depreciation charges on the higher capital cost of nuclear power plants, the cost per unit is comparable with that of thermal plants. So in opting for a programme for development of nuclear power, the difficulties that have to be overcome are not economic but technical, and political. The Atomic Energy Commission's decision to send delegations to both USA and the USSR underlines this point. The Commission has plans to set up a chain of nuclear power stations to generate a million kilowatts by end of the Third Plan. It is interesting to note that many of these stations will be smaller than the first station to be set up in Bombay-Ahmedabad region whose exact location is still under consideration. As compared with installed capacity of 2.3 lakh kilowatt of this station, the others will produce between 50,000 and 1,50,000 kilowatts. Operation of a large plant will be economic only if it could be connected to a grid already being fed with larger amounts of power from conventional sources. The smaller size of the other plants that are proposed to be set up will give greater flexibility in the matter of location, so that areas remote from coal fields, which do not now have well developed power systems, could also derive the benefit of the new source of power.

Consumer Income & Spending in US

Consumer income and spending are at record levels in the United States, and so is the volume of consumer credit. It is almost inevitable, therefore, that the question should arise as to whether this indebtedness perhaps foreshadows a curtailment of consumer outlays later on.

It is difficult to answer this question definitively for bound up with it are subjective decisions and personal financial appraisals of millions of individuals and families. It is possible, however, to draw some important and basic conclusions from studies that have been made on this subject—most notably one study completed recently by the U.S. Federal Reserve Board (FRB).

Concerned as it is with national monetary policy, the Board is hardly likely to be complacent about rising consumer indebtedness. Yet, on the basis of its study, it can be said that the expansion of consumer credit is not, and at its present pace is not going to be excessive. Quite to the contrary, it seems to be well within the financial capability of the American consumer and promises to help sustain the high level of spending which is an important support for general economic activity.

In substance, what the Board's analysis indicates is that credit buying is no larger, proportionately, than it was a few years ago. A good part of the past year's increase in indebtedness can be attributed to new forms of credit which are taking their place on the American economic scene.

During 1959, the study shows, Americans added to their instalment, or time-purchase, debts the sizeable sum of \$5,400 million, and so far in 1960 they have continued to boost these purchases at close to the same rate. The total consumer credit outstanding now comes to more than \$50,000 million, of which upwards of \$40,000 million comprises instalment buying.

Yet it is important to note that while the dollar total of U.S. instalment buying has been climbing, its rate of rise has been falling for nearly a decade. The 1959 rise, for instance, was 16 per cent, compared with 23 per cent back in 1955, also a year of sharply expanding consumer credit.

There are, moreover, some notable improvements evident in the way consumer credit is being used today. Behind the 1955 rise, for instance, was an upsurge in automobile credit, which jumped nearly

three times as fast as all other types of credit.

In 1959, however, the picture was much sounder and far better balanced. The increase in auto instalment loans was only 17 per cent, and most of the credit extended was used to purchase a wide variety of other goods and services. It also is significant that the average automobile loans has become smaller during this past year—a development in which the successful introduction of the new and generally less expensive compact cars may well be a factor.

In assessing the credit situation, it also is important to bear in mind that 1959 was a year in which a number of new forms of credit came into widespread popular use. Chief among these were the so-called revolving credit accounts, which give a customer six months or more to pay for purchases and permit him to make new purchases before the outstanding balance is paid up. This type of credit, which already amounts to an estimated \$1,000 million and accounts for more than 40 per cent of instalment credit at department stores and mail order houses, has had an obvious influence on the growth of consumer indebtedness.

It was in 1959, also, that many banks began to introduce their own charge account and check-credit plans for depositors. And of course, it was a year in which the ubiquitous credit card, permitting a customer to finance nearly everything from restaurant meals to hotel bills, became so normal a part of daily living that for more than a few individuals cash seemed to be exception and credit the rule.

Even so, the American people as a whole are using no greater share of their total disposable—after-tax—personnel income to repay instalment debts than they have been for the past several years. And while, at 13 per cent, this proportion seems to exceed by a wide margin the nine per cent of 10 years ago, it should be remembered that disposable—which means spendable—income also has gone up—and at an even faster rate.

Thus, from a statistical viewpoint, it is entirely reasonable to say that an instalment repayment ratio of 13 per cent imposes a smaller burden on the American people, when measured against their current disposable income of \$345,000 million a year, than did the nine per cent ratio of 1950, when measured against that year's total disposable income of \$208,000 million.

Nigeria's Future

Nigeria's future now seems far more assured than that of any African territory for promises at conferences are being kept and independence will be followed by automatic membership of the British Commonwealth. Regional rivalries may persist but the steady North will be dominant and Nigeria as an independent State will

have advantage of a strong peasantry, a hereditary aristocracy and the democratic traditions of Islam in the north especially. The minerals of Nigeria especially columbite and tin are now supplemented by oil which makes the West African country potentially a big contributor to world trade. Not groundnuts, cocoa or palm oil but petroleum will be the strongest card in Nigeria's suit in the future. The absence of an industrial tradition makes Nigeria a major market for most foreign manufacturers and if outside investment in plantations, (for instance rubber) increases, there may be more customers for consumer goods. The improvement of communications from the ports is of decisive importance but overseas capital may be available only for extractive industries and export trade. The continuance of Nigeria in the sterling area is to be taken for granted and the access to the London capital market will be maintained, as 3 per cent and 4 per cent sterling loans are due to be repaid in 1963, 1964 and 1966.

The federal structure of Nigeria marks it off from the Union of South Africa which concentrates political power in Pretoria. The smooth evolution of political agreement distinguishes it from Kenya and even if the Cameroons are detached for administrative and other reasons, the Nigerian outlook is settled by the large area and a population put at 33 million. There is no doubt as to the growth of cotton manufacture or oil crushing. The steady increase in electricity output supports the hope of many secondary industries coming up rapidly. The present trading connections with India are small and only the sale of handloom goods from Madras has made Nigeria familiar. The STC can hardly compete with the United Africa Co. (a Unilever subsidiary) and the interest shown in East African market's possibilities has not yet been developed by officials.

Afghan Attitude

Afghanistan, at one time an ally of Turkey and Iran in the Saadabad pact ensuring neutrality between the Axis and the Entente, has clearly dropped out of the Middle Eastern picture. Objections to the use of Pakistani bases by US planes are derived not from the Soviet Premier's lead but from a consciousness of what a buffer State requires of the Central Treaty Organisation blessed by the USA. The Afghan view may be said to accord with that of India, but it may be also a sign of US economic aid having failed to impress Afghanistan where the governing elite hopes to keep its position by getting Russian support. The Afghan attitude is logical, because Pakistan has made light of Pukhtistan demands and adheres to the Durand Line as the boundary. The withdrawal of Britain from India has made it necessary for most Afghans to look to Moscow only

and the conflict between Egypt and Iraq has made it necessary to look beyond the Morlen World. Her interest lies mainly in keeping the Oxus as a boundary after minor rectifications and to see that China cancels out Russia in Central Asia.

The neutral's problem is one of survival and the equipment is not impressive, though arms aid for the Soviet Union plus conscription may make the kingdom more effective than Nepal to hold its own. If US bases in Pakistan are neutralised, the ability of Afghanistan to keep on its course will be strengthened and Turkish or Persian denials in connection with the intrusion of the U-2 are taken as less important than a general declaration against any encroachment on air space. The land-locked State has disadvantages that air transport cannot remove and that is why Kabul looks to the north nowadays. The people have to be reassured that there is also the reason to stand well with Moscow; oil imports for a country without railways are vital and the Afghan protest against US plane's intrusion shows that foreign policy does not rest on ideals but on appreciation of national interests. The stoppage of flights may reassure Kabul, but it is only the end of the cold war that can make Afghanistan hope for a guarantee of neutrality like that available to Nepal.

Growth Stocks

New mutual funds, through which investors' holdings are channelled to "growth" stocks, are increasing on the Australian money market. An interesting newcomer is Delin Australian Fund Incorporated, registered in Sydney (New South Wales) as an unlimited company to acquire flexibility in the issue and repurchase of shares. It is sponsored by Development Finance Corporation Ltd., a Sydney company with strong overseas affiliations. Capel National Fund, sponsored by Capel Court interests in Melbourne (Victoria) was announced in March. It is offering to the public 40,000,000 shares at 4/8d, plus service fee 4d, making each 5. Another Melbourne company is the Second Australian Capital Fund, sponsored by the Commercial Bank of Australia and the Australia United Corporation. This company named "growth" stocks which it favours for its portfolio. Most of these stocks are already popular with investors, and many also show low yields. The company states in its prospectus for an issue of 1,000,000 shares of 10, that it places emphasis on companies considered to have better than average growth potential. The industries covered in the list include wireless, cement, paper, bitumen, tobacco, sugar, industrial gases, containers, textiles, chain stores, newspapers, pipes, and chemicals. Others are mining and engineering companies, and rubber-producing industries. Altogether there are 417 companies in the list, with duplications of the type of industry involved.

STATES NOTES

Pharmaceutical Education

Presiding over the 15th annual conference of the UP Pharmacists' Association, Dr S. Rohatgi, Vice-President of the Pharmacy Council of India, made a strong plea for the allocation of funds for pharmaceutical education. The present position of pharmaceutical education belies the importance that must attach to it. The Third Plan programmes for health that have been drawn by the Centre make no mention of pharmacy although considerably larger outlay than under the Second Plan has been proposed to be spent on health during the Third Plan. The impression that pharmacy is receiving short shrift at the hands of the Government is unavoidable and rests on other grounds as well. Proper standards in respect of practising pharmacists and manufacturing chemists have been consistently shirked by the Government. What is even stranger is that, while the basic qualifications of new entrants to pharmacist course have been raised, the qualifications of the manufacturing chemists have been downgraded and left to the discretion of the manufacturing concerns. That this omission on the part of the Government would lead to a fall in the quality of pharmaceutical products is not to be doubted. There is also a deplorable lack of understanding of the significance and purpose of drug control. The Drugs and Pharmacy Act does not insist on even a basic education in pharmacy for those who are vested with control of the trade. Bombay is an exception and the experience of the drugs control in that State affords undeniable proof of the advantage of having properly trained personnel to administer the Drug and Pharmacy Act. In view of the harmful consequences possible in the lack of insistence on educational qualification, the appointment of people with requisite qualification and experience in the trade is a matter that can no longer be treated as unimportant.

Kisans Impatient

The All-India Kisan Sabha which met at Ghazipur last week, has, in terms of a number of resolutions, urged early and effective measures to end exploitation of the peasantry. The resolutions as becomes a communist sponsored body are radical in content and tone and have been couched without reference to the progressive legislation that is being passed to improve agrarian relations. The call

for land ceilings embodied in one of the resolutions has, for example, no present relevance since the Congress ideology has already inspired legislation on this subject in most of the States. The Sabha almost obliquely accepts the good work already done to introduce land reform measures, but holds the view that they remain ineffective because of lacunae in law. That the legal enactments relating to land reform measures passed by the various State Governments are not perfect would be admitted. But it is pure ideological opposition to attribute pro-landlord leanings to the legislators for such defects in the law. Similarly, to say that agriculture is being hampered not by lack of investible surplus, but by outmoded agrarian relations is to stretch the ideological line too far.

The concern at the lagging pace of agricultural production expressed in one of the resolutions passed at the conference would be shared by all. The Sabha has suggested acceleration of development work along all lines. In respect of irrigation, it has recommended concentration on small and medium projects in the Third Plan. Measures such as distribution of better seeds and fertilisers which would raise living standards of agriculturists are also suggested. But it will not recognise the need for betterment levies on the farmers. The greatest stumbling block to progress in agriculture, according to the Sabha, is the administration which it condemns as being bureaucratic overcentralised and disinterested in agricultural development. The logical next step from this is the creation of an entirely different and new cadre to man the administration.

Small Industries in Bihar

One of the declared policies of the Government of India is the promotion of the growth and development of small scale industries, in order to build up a strong economy. This task is allotted to the State Governments under the Constitution. But considering the magnitude of the task, the limited resources available to the State Governments, and the vast field they have to traverse, the Government of India has assumed the task of furnishing the States both financial and technical aid.

The Bihar Government, on their part, have done some remarkable service to this cause by way of advancing loans and grants under the Bihar State Aid to Industries Act. They have so far defrayed an amount of Rs 8,07,995 during the First Five Year Plan and a sum of Rs 83,04,038 during the first three years of the Second Plan to various entrepreneurs and small industrialists. They have also envisaged a plan to make available to them more than Rs 3.6 lakhs for the remaining period of the Second Plan. In addition to these loans,

the Directorate of Industries have advanced loans to the tune of Rs 77,58,610 for the development of type foundry, cold storage and preservation, automobiles, manufacture of ready made garments, house-hold utensils, leather goods, gur and khandari, radio components, steel trunks, agricultural implements, pharmaceuticals and medicinal goods, cane and bamboo goods hosiery and the like. Apart from all these assistances the Government procure for the small industrialists machines and other implements on hire purchasing scheme from the National Small Industries Corporation Limited, New Delhi. The Corporation has supplied so far about 170 machines costing nearly Rs 8 lakhs to twenty-six small scale industries in the State.

Growing Monopoly

The Madras Transport Department is translating its ambitions into services. Long-distance buses to Trichy, Salem and other towns from Madras will be supplemented by inter-district services. The absence of private competition on the new routes notified is one reason: the other is the addition to the fleet at its disposal. In spite of complaints levelled against the nationalised City bus service, the State Government is eager to follow the example of Bombay and even if goods haulage is out of the question, the long-distance transport is quickly being acquired for the State. The link up with Kanya Kumari district will make Tuticorin port more accessible but the passenger traffic or tariff will not yield very large profits. How the railways regard road competition sponsored by the State Government with bus fares below third class railway fares cannot be known at once, but it is certain that the tax on railway fares will yield much less. The demand for trucks and tyres will certainly increase and the higher duty on high-speed diesel oil is seen to be no brake on expansion of road transport. In a sense, Madras is only following Travancore's example offered twenty years ago and has decided to make the most of improvements and extensions to high-ways after the war.

Comparisons with Kerala road services will always occur and the standard of road service from Nagercoil, for instance, will obviously be based on what Kerala does for those who go by Express buses. But Madras seems to believe in a single class service and may lose some traffic in consequence. The withdrawal of State transport from inter-State or suburban routes may not take place in spite of plaintive protests about the indifferent service provided, for the whole object is to keep up a large transport department, not so much for revenue as to prove that the State can run by itself, as in Ceylon, a mono-

poly and add to its assets. Municipalities are given no chance to break into the preserve though they can do the job quite competently and help themselves to follow the best example.

An Unusual Approach

The new Chambal Valley project is associated with the name of Acharya Bhawe. Not dams but meetings with outlaws have been arranged and the success of the Mission to meet dacoits in public vindicates the unusual approach of the Acharya. The Police have been eclipsed by the federation but officers have shown appreciation of a procedure that entails surrender to the law and trial by courts. The co-operation of the State Governments with an unofficial agency is due to the realisation that a peace mission is cheaper than combing out the ravines. The depreciation of the use of force, though punishment is to follow the crimes admitted, makes Acharya Bhawe's voluntary mission unique though there is the precedent of Telengana for his walking forth boldly into trouble spots. The mission is a success and puts all doubts in Delhi to flight. It ends the troubles inherited from the old princely States and it may be added that those who surrender are of high caste, proving that family feuds have led to defiance of the law.

The revelations made over a week may not lead to the bestowal of a medal for the Acharya, but it will open many eyes to the value of a new approach to conventional methods or correctional discipline. The comments on Home Guards may prove chastening to the authorities, so also the effective disposal of fire arms surrendered. The Bhawe project, derived from the dacoits' own faith in a holy man or superman may compel the State Governments to see whether their police system is really up to the mark, whether they should not get any talent from outside to raise both morale and methods. In any case, the treatment of those charged must take into account the controversy following the execution of Carryl Chessman after 12 years of harrowing suspense in San Quentin.

New Houses

A statistical inquiry into building activity in Calcutta, Bombay, and Madras between 1955-56 and 1957-58 undertaken by the Reserve Bank confirms the postwar impression that investment in buildings has increased, that additions and alterations have taken place, and the volume of funds flowing into real property in big cities has been substantial. The trend may have strengthened since what is really important is that suburban housing construction Bombay has risen steadily and afforded relief

to the middle class, also that the range of ownership by occupiers has been steadily extended.

The Reserve Bank bulletin for April analyses the results of a sample survey to indicate not only the net worth of investment but the trend towards larger non-residential premises, the increased use of both steel and cement as well as the proportion of wages to other costs of building. The Calcutta Municipal records helped while engineers and architects furnished data about built-up space and costs. Only in Calcutta did the volume of new construction decrease since 1955-56 in marked contrast to Bombay. Data available in Madras was not so complete but the preponderance of new construction by intending owners is established by the figures: The volume of speculative building activity is not ascertainable, but it may be said by many that sites, not buildings, have been the medium of speculation. The contribution of the Improvement Trust to the maintenance and revival of building must of course, be large and instalment purchase of houses by the middle class supported the rise of new colonies, imposing inevitably a strain on the City Corporation services. The decline in non-residential construction must have been reversed since 1957-58 for a rage to build new shops to let has developed. And removal of accommodation or rent control now envisaged may lead to extra investment in non-residential premises in populous or fashionable areas. The inquiry has not led to the acquisition of data on the degree of overcrowding, the proportion of suburbs to metropolitans and the amount of mortgage debt incurred for construction through co-operative housing societies,

though in Madras City cheap credit has been admittedly a factor in the building boom that goes on at present. The replacement of large vacant compounds by middle class housing estates occupied by owners is calculated to reinforce municipal revenue and the current level of rents also favours an increase in the yield of property tax, though outlay on streets and lighting has to be recovered by a betterment levy.

Industrialisation in MP

The National Council for Applied Economic Research which conducted a techno-economic survey of Madhya Pradesh has, in its report, indicated bright prospects of the industrialisation of the State. The State has known and potential resources particularly of minerals and forests in such richness and plenty that their effective utilisation would make it one of the industrial regions of the country. What however is needed is "a strong well-integrated administrative and planning machinery".

The survey has found a target of 5 per cent increase in the per capita income for the State and an increase of 8 per cent in the total income of the State as quite feasible. Toward this, the survey has suggested a ten-year programme of planned action involving a total investment outlay of Rs 2,090 crores. The distribution of this outlay between different sectors of development as proposed by the survey is: largescale manufacturing industry 25 per cent, transport and communications 21.5 per cent, agriculture and allied fields 21.8 per cent, power 9.6 per cent, mining 6.6 per cent, construction of

schools, houses and hospitals 8 per cent and small-scale industries 1.9 per cent.

One favourable factor which the State shares exclusively for industrial development is the absence of the problems of over-population and acute "overt" unemployment. While this is attributable to lower population pressure and the large size of agricultural holdings, this represents an advantage in so far as the problems connected with the transfer of population from agriculture to industries an inevitable stage in industrial development, is considerably mitigated. However the present manpower is largely unskilled and must needs be properly trained before industrial development could make headway.

The pattern of investment recommended by the survey report is estimated to increase the output of large industries by 270 per cent, mining by 44 per cent and small-scale industries and services by 30 per cent and 88 per cent respectively.

Package Plan in Gujarat

The efforts that are being made by the Directorate of Agriculture of the Gujarat State in enhancing the agricultural output are indeed timely and commendable especially viewed against the background of the low agricultural yield of the State and the food deficit which at present runs to more than 1 million tons. The Directorate has already formulated a five-year plan to double the food production with the financial and technical assistance of the Government of India. The 'package plan' as the new plan is termed, envisages a total outlay of Rs 1 crore and contemplates a State wide campaign and aims as a first step toward food self sufficiency an increase of 20 per cent in the agricultural yield.

A striking feature of the package plan is the increased emphasis laid on replacing the antiquated methods of cultivation by modern and upto-date ways. This is particularly beneficial to the State whose low average yield per acre promises abundant scope for adopting intensive methods of cultivation. Efforts are also being made to help the farmers in purchasing improved seeds, better manures and ensuring them better returns for their products. Toward this goal, the Government have already appointed a five-member committee to conduct a detailed enquiry into the problem of manufacturing more nitrogenous fertilisers in the State. Besides, the Government have constituted a State Co-operative marketing body with a capital of Rs 20 lakhs under its disposal for securing good remuneration to the sweat and toil of the tillers.

As a prelude to the new scheme the authorities contemplate a pilot

scheme in Surat district which will later be extended to the other parts of the State.

Kerala's Third Plan

While most of the State Third Plans have reached their way to the desk of the Planning Commission for consideration and approval of that body, the Kerala Third Plan does not look like being ready before the end of June. The delay is attributable to the political instability from which the State suffered until quite recently. Preparatory work on the draft Third Plan was being done by the Communist Ministry before it was supplanted by the Presidential rule, and some disruption in work was unavoidable in an atmosphere of uncertainty that pervaded the last days of the Communist Ministry. The work started by the Communist Ministry reached finalisation during the days of the Presidential rule. The various working groups which have been constituted to prepare the draft plan drew one envisaging an outlay of Rs 380 crores. The draft had, however, to go through a phase of revision at the end of which the outlay was slashed down to Rs 180 crores.

The Pattachi Ministry which assumed office as a sequel to the victory of the United Democratic front over the Communists had its own ideas of what the Third Plan should be like. One of the first acts of the Ministry was to constitute a popular non-official study team to check up on the programmes suggested by the officials and to suggest changes if there was need for them. The study teams numbering eight were to submit their reports by May 5, but only three of them seem to have completed the work. The finalisation of the draft plan has, in the circumstances, to await the submission of reports by the remaining five study groups.

Rumours circulating among knowledgeable circles seem to indicate an outlay of Rs 200 crores in the draft plan that is being worked out now. A major share of the total outlay is expected to be set apart for industrial and power projects.

B. L. SETHI
GENERAL MANAGER

Vinoba's most recent enterprise, is the most challenging of all. But the entire logic of his was leading to it. Vinoba rarely takes the name of Gandhiji, in which he reveals a fastidiousness that many politicians conspicuously lack. He talks about non-violence even less often, in this providing a piquant contrast to Gandhiji himself who was rather garrulous on the subject. But the winning of the souls

Calcutta Madras New Delhi

of the dacoits of Chambal Valley is the supreme test to which a vision of life based on non-violence can be put. Moreover, Vinoba won his spurs, so to speak, by releasing the terror-stricken Telangana from the grip of violence and fear. This is how Tennyson describes the situation in Telangana when Vinoba went there in 1951: "The communists refused to surrender their arms, and went into underground opposition against the very people with whom a few

months before, they had been co-operating. The party was declared illegal, and its members went into hiding in the hills and jungles, emerging at night to murder landlords and divide up their lands among the poor. The villagers dare not disclose the rebels' whereabouts for fear of their reprisals. And most of them distrusted the police, as much as they did the communists. They were caught in a murderous crossfire." It was in this scene Vinoba appeared. In a

few months, the deathly pall of fear lifted. The communists have never again regained their hold in the area.

In dealing with the dacoits of the Chambal area on the terms in which Vinoba does, there are obviously many difficulties. None is perhaps more keenly aware of them, than Vinoba himself. The Chambal ravines have offered the principal preoccupation of the Governments of the area and some-

thing like a concerted police action has at long last started yielding results. The police, understandably, are anxious to press home their advantage and are inclined to think of Vinoba's experiment, as, to put it mildly, inopportune. Vinoba's clear enunciation of the consequences of surrender by the dacoits is, theoretically, a clear indication of his intention of not poaching on Caesar's preserves. But in practice, they involve considerable ambiguity. The dacoits themselves have their reservations and those who have surrendered in fact, may have their own calculations to verify. There certainly has been a certain amount of naive enthusiasm among Vinoba's followers, who probably 'exceeded' their briefs in their ardour to convert. But these hazards that are clearly worth risking in an enterprise of this magnitude. After all, in the political battles that Gandhiji fought there were many lapses and that did not make those who jeeringly flung at Gandhiji his own precepts anything other than cheap jibers. Considering the terrain, it is very unlikely that there ever would come a time when the police would completely succeed in ridding the valley of the fear that haunts it by their methods. Whether Vinoba would succeed where the police failed remains to be seen. But, that the attempt was worth making none with any imagination can doubt.

In the days that have elapsed since the Summit was scuttled, there has been a strange lack of honest-to-goodness front page news. I wonder whether this is because more people in most parts of the world are more shaken at the failure of the Summit than they have cared to admit publicly. This, I suppose, is heartening sign. At least there is the hope that, at the eve of the next Summit, the principal countries involved will tread more warily and seek to prevent precisely the kind of development that reduced the Paris Summit to the proportions of a farce. Nor, I trust, is it strictly necessary that the cold war will become more frigid; though, in this respect, we have to wait for what Mr Khrushchev will have to say. That he will disclaim about the Americans, there can be no doubt; but I don't believe that he will by deed—though he has done by word—intensify the cold war. For, it will be plain to the Russian leader that he has over-played his hand, and while for Communist consumption he may be compelled to take up uncompromising stances—and possibly insulting as well—the competition for the goodwill of the "neutrals" should be an influence to moderate his tirades. And now, as they say on All India Radio, the weather, which is about all that has been prominently in the news. Tidal waves have wreaked havoc; rain has saved a suffering Calcutta public; bull speculators on the jute markets somewhat lost their grip as a consequence; and the monsoon might, we have been told, reach Calcutta fully a month ahead of its time.

GATEWAY GOSSIP

Refinance Corporation

THE working of the Refinance Corporation for Industry during the year ended 31 December 1959, shows that the facilities offered by the Corporation are yet to be fully utilised. The total application for refinance made in 1959 amounted to Rs 223 lakhs and the applicants numbered only three. Even this small amount had not been fully taken up as total drawings amounted to only Rs 85 lakhs. It is not as though the Corporation does not have sufficient funds at its disposal. The Government of India alone have provided a sum of Rs 26 crores from the US PL 480 counterpart funds.

It cannot be argued that the discouraging performance of the Corporation is due to any lack of demand for money, because during the past year, private sector industries have made substantial borrowings for their expansion programmes and new ventures. Again it cannot be maintained that the facilities offered by the Refinance Corporation are superfluous since there are already other institutions to cater to the financial needs of the private sector, like the Industrial Finance Corporation of India, the Industrial Credit and Investment Corporation of India, the State Financial Corporations and other similar institutions set up in recent years. These institutions, no doubt, have come to play an important role in the affairs of the private sector industries but it cannot be concluded that they are adequate to meet their ever increasing credit needs. A rapid industrialisation of the country has been planned and the private sector is, and will be, given a substantial portion of the task. If this expansion programme is to be fulfilled as scheduled, it is essential that private entrepreneurs are enabled to obtain requisite funds expeditiously.

The fact that, despite the large demand for money last year, the Refinance Corporation has not been popular with entrepreneurs, is responsible for the criticism that the conditions governing the working of the Corporation are far from conducive to an expansion of its activities. Criticism is mainly directed against the rate of interest charged. It may be noted that there is no direct link between the industrial borrower and the Corporation. Funds are routed through those banks who are shareholders of the Corporation with the result that the cost of borrowing works out to 6½ per cent, five per cent charged by the Corporation and 1½ per cent by the banks. It has also been pointed out that the fact

that the Corporation's loans are for a period of three years to seven years only is another deterrent, since those who want to start new enterprises with the financial assistance of the Corporation in most cases will not be in a position to accumulate adequate funds to repay the loans within the short period.

Speaking at the second annual general meeting of the Corporation, Mr H. V. R. Iengar, the Chairman, has drawn attention to the fact that the Corporation is designed to serve a particular section of private entrepreneurs. "We provide refinance for a medium term only, viz., three to seven years. There is, undoubtedly, need for an institutional arrangement of this type, but the inelasticity of the time element does not suit more than a small proportion of the entrepreneurs. The facilities we provide are only suitable for those who find that they can repay their loan within a period of seven years or those that can, within that period make other arrangements for raising finance".

According to Mr Iengar, the argument that the rates of interest charged by the Corporation are higher is based on the assumption that the cost of medium term finance should be comparable to the cost of short term working capital. However, steps are to be taken to widen the field of operations of the Corporation. There is first the proposal to make the refinance facilities available to a large number of banks. At present only banks who are shareholders are eligible for loans. The change seeks to extend the facility to all banks by deleting the condition that limits eligibility for loans to banks who are shareholders. This will in turn involve the abolition of the system of allotting quotas to member banks. The second proposed change pertains to the present limitation as regards industries eligible for assistance. It is now proposed to extend the Corporation's facilities to all industries, which in its opinion, are in conformity with the purposes of development plans. The third proposal seeks to relax the rigidity imposed on the working of the refinance arrangement. The existing condition in this regard is that member banks should have a spread of a minimum of 1½ per cent between the rate at which they borrow and the rate at which they lend. When this proposal is accepted banks will be free to fix their lending rate. However, this will be subject to the approval of the Corporation. Referring to the comparative stagnation of the Corporation's activities, Mr Iengar has noted that there is a school of thought that the fact that banks have substantial deposits of the Corporation's funds may itself be the reason for the lack of interest in the refinance facilities. It has been decided, therefore, that a substantial portion of the funds should be invested in Government securities.

Are you in need of a loan for your industry?

The problem of finance faces a small industrialist like any other entrepreneur. To help solve this problem, a scheme for the co-ordinated provision of finance has been evolved by the various financing agencies with the assistance of the Central and State Governments.

The State Bank is ready to assist small industrialists with advances against raw materials, manufactured articles and ready stocks etc., as well as with advice as to any other source from where credit can be obtained.

There may be a branch of the Bank in your town. Why not take your problem to the Agent who will be glad to be of assistance?

The Ganga's Traffic Potential

WITH the publication, by the National Council of Applied Economic Research (New Delhi), of the findings of its survey of the traffic potential of the Ganga, a river-rail controversy is conceivably in the making. But it may also be that no such controversy will actually emerge if further investigations about the cost of operating steamers today, construction of approach roads, ghats and shore and terminal facilities and about the extent of State assistance to river transport, river conservancy, etc establish the possibilities of economic operation of steamers or country craft. In any case, a river-rail controversy would be premature now in view of the fact that the National Council's study is only of an exploratory character. Incidentally, Dr P. S. Lokanathan, Director-General of the National Council, has viewed this as a question of co-ordination and collaboration between the railways and the waterways rather than as one of competition between the two. Whether the Railway Board, with its rather competitive approach to road transport and coastal shipping, will come to share his view remains, however, to be seen.

Quite apart from the question of comparative costs, whatever they be, of rail transport and river transport, there is the question of possible diversion of traffic from the railways to the waterways.

The latter question will probably have no disquieting import from the point of view of the railways if the traffic potential of the waterways turns out, after a series of surveys, to be of inconsequential proportions. The National Council's Ganga Traffic Survey itself, covering a stretch of as much as 400 miles between Allahabad and Rajmahal (Bihar), has assessed the traffic potential at only 200,000 tons in terms of cargo and 80,000 in terms of passengers. In an expanding economy such as that expected in the Third Plan period, it is not inconceivable that there will be some substantial traffic which cannot be handled by the railways but which can be more conveniently moved by road as well as by river. It is in this context that waterways appear as a supplemental form of transport. This is particularly true of the Ganga.

If, thus, river transport comes to be recognised as a modest but necessary supplement or complement, wherever possible, to the railways, the rest is a matter only of coordination. The National Council's study has, therefore, rightly emphasised that "without proper co-ordination with railways, no river service can be successful or economic" and that, as far as the Ganga is concerned, there should be proper rail-river coordination at Manihari Ghat in North Bihar and at Rajmahal in South Bihar. The case for such co-ordination is presented in the following passage quoted in extenso from the Council's report:

"In spite of various improvements planned on the railways there will be difficulties in moving the large volume of coal and steel produced in Bihar by the

end of the Second Five Year Plan. A large proportion of 60 million tons of coal and 5 million tons of steel will have to move across Bihar by railways. These targets are expected to expand further during the Third Five Year Plan. It should therefore be in the interest of the railways that some portion of Bihar's traffic is moved by water transport inside Bihar, and then sent to Assam or West Bengal by rail routes. For the river transport user, coordination would mean that a consignor, say in Buxar, will be able to obtain a single document which he can despatch to the consignee in Assam, or Calcutta, or some station in Bihar to enable the latter to collect the goods at destination on presentation of documents, and that all intermediate rail-cum-river or road-cum-river arrangements will be such as to effect movement without delay, loss, or damage in transit."

Given such rail-river coordination, the suggested resumption of steamer services—a Ganga despatch service from Patna to Rajmahal with proper arrangements for co-ordination with railways at Manihari Ghat (in North Bihar) for Assam traffic and at Rajmahal (in South Bihar) for West Bengal traffic, a Ganga service from Patna to Buxar for inter-district movements of goods and passengers and a Gogra service from Patna to Darauli for inter-district movements of goods and passengers—should go some way in relieving the expected traffic pressure on the railways during the Third Plan period. With the possible introduction of these principal steamer services and of a few short distance and ferry services, it is expected that the traffic potential, as estimated by the National Council's survey, will be as follows:

	(Maunds)
Rice and agricultural produce ..	11,15,000
Sugar ..	40,000
Jute ..	12,00,000
Tobacco and cigarettes ..	70,000
Salt ..	12,000
Cotton piecegoods ..	70,000
Petroleum and petroleum products ..	4,50,000
Stone, sand and building materials ..	15,00,000
Sundries and smalls ..	11,14,000
Total ..	55,71,000*

*Or nearly 200,000 tons

It may be seen from the above breakdown of the traffic potential according to composition and volume that coal and iron and steel do not figure therein. Coal, it is stated, is railway's traffic by tradition; iron and steel will be mostly the railway's traffic via Mokameh. The above total of traffic potential, however, excludes the likely traffic in timber, fire-

wood, straw, cattle, cement, iron and hardware, stationery, machinery etc., for which no firm data are available. The estimates are thus cautiously conservative, as the survey report itself has stated. If technical, handling and other ancillary facilities are provided, the estimated traffic can be further developed. At the same time, it is stated, movement of goods by river between Bihar and West Bengal can be resumed and developed considerably after the Ganga barrage is completed, as this may make possible a direct navigation route for steamers. Perhaps, it is only when the traffic potential develops further in such ways will any investment outlay, which should be substantial in this case, be justified. The Ganga-Brahmaputra Water Transport Board, on whose behalf the National Council has carried out the Ganga traffic survey, may be expected to follow it up with estimates of the magnitude of investment that will be required and of the cost of haulage, per ton for different mileages, by river.

The Consumption Survey under Way

The National Council has also taken on hand a household consumption survey with the aim of studying the consumption patterns of Indian people. The survey will cover 2,000 sampled households in 21 villages and 5 towns representing all the States. The field investigations, which will be completed during the next five weeks, will collect data on consumption practices and preferences as well as on household composition and incomes. Besides these data about the production practices will be collected from the farming households. The present survey, for which the Foreign Agriculture Division of the US Department of Agriculture is partly responsible by way of sponsorship, is a part of the Council's projected larger study of the present and future demand and supply of agricultural commodities in India.

The present survey will be of enormous significance if the sample of 2,000 households (as against the 10,000 or 11,000—sample drawn in a National Sample Survey) is deemed sufficient for giving valid results in the Indian conditions of diversity—economic, social, regional, etc. To a question by this correspondent on this point, the American statistical expert in charge of the survey has replied that the 2,000-sample is sufficient. This correspondent, however, is not wholly convinced by the reply; it may be that this will be explained more fully in the survey report in a convincing manner. The National Council may also do well to explain if the ascertained food consumption pattern of rural households "in the last month" can be taken as uniformly prevalent in each month of a year.

Mr Kamaraj on Congress Policy

THE budget session of the Madras Legislature that concluded only a couple of weeks ago, turned out to be one of the stormiest ever to be held. The session which began with a fairly general appreciation of the achievements of the Government, ended on a controversial note over the land ceilings bill. After the adjournment of the legislature, a sort of political calm seems to have settled down over the State. Though echoes could still be heard from Congress and Swatantra platforms, the controversy has lost the focus and point which only the legislature could lend. The respite from legislative business is being utilised by the Ministers to contact their constituencies and keep them in touch with Congress policies and programmes.

Chief Minister Mr K. Kamaraj and Industries Minister Mr R. Venkataraman, who are presently touring the Tanjore district are evidently on such a mission. The two Ministers have covered a number of villages and small towns in their tour. Amidst the score of public functions which they attended what appeared to be their first concern was the upholding of the Congress prestige among the people. For it was this theme which ran through almost every speech which they made during

the tour. The two between themselves almost exhausted every imaginable ground to justify Congress principles and the Government's own doings.

The Swatantra party was the particular target of Mr Kamaraj Nadar's attack. The party, he observed at Tiruvayyar, had no positive programme and only wanted perpetuation of the present serious inequalities of income. The land ceilings bill, which has been criticised by the Swatantra party as being discriminatory, was shown to be justified in view of the imposition of steeply graded taxes on the higher reaches of income. The graded income tax, excess profit tax, estate duty and the expenditure tax were cited as examples. The charge of corruption levelled by the Swatantra party against the Congress Government was, Mr Kamaraj observed at Tiruvayyar, only a scare which had no basis in the absence of failure to bring out specific instances of corrupt practices.

Because the Swatantra party has concentrated its attack of Congress policies on the land ceilings bill, Mr Kamaraj was at great pains to justify Government's action in bringing forward such a measure. Choosing the egalitarian aspect of the measure for his defensive ground Mr Kamaraj asked "How long can well-to-do and privileged classes hope to live a life of ease and pleasure when millions are languishing in poverty and misery and what is the point in talking all kinds of irresponsible things when any progressive measure is launched?". Maharajas and Zamindars had been liquidated. Landlords belonged to the same feudal class and therefore must go. The argument that there would be little

left as surplus for redistribution, has, in the circumstances, no relevance. Mr Kamaraj also did not seem to mind the concealed disposal of lands by present owners to evade the provisions of the ceilings bill. In a reference to such concealed deals being effected by landowners Mr Kamaraj pointed out that there was nothing wrong in that since such distribution was the very object which the bill aimed at.

The Dravida Munnetra Kazhagam, now the chief opposition party in the legislature, was also not spared from criticism. DMK's ideal of Dravidanad was shown to be chimerical and the party, Mr Kamaraj pointed out, was not sure of what it was proclaiming. The combination of the DMK, the Communist party and the Swatantra party represented the union of strange bed-fellows who had no positive programme in common except the desire to pull down the Congress.

While criticising the opposition parties Mr Kamaraj also took care to explain the positive programmes and policies of the Congress and to present its achievements in the best light. He particularly sought to drive home the democratic character of the party and its faith in the people. The party has, of course, adopted the socialist ideology, but it drew up its ideology with great plan and thought. The ideal of the Congress party Mr Kamaraj observed was the greatest good of the greatest number and toward this, it was concentrating on the liquidation of poverty, illiteracy, providing minimum comforts to the poor in the villages, shelter and means of livelihood and enlarging employment opportunities in the State.

Mr Venkataraman in his speeches treaded almost the same ground covered by Mr Kamaraj. However it was the achievements of the Congress Ministry that he sought to stress in his speeches. Referring to the progress in the field of industry and education, Mr Venkataraman stated at Kumbakonam that the Madras State was easily the top most in the matter of education among the States in the country. The State had 26,000 primary schools as against 18,000 villages. Education upto the 8th standard was free to the poor. Moreover there were 16 polytechnics, 6 engineering colleges and 4 medical colleges. In agricultural production, the State stood foremost with the record of 1,300 lbs per acre as against the average of 800 lbs for the country as a whole. They had set apart Rs 22½ crores for loans to agriculturists in the budget year. In Neyveli they were providing plenty of employment opportunities and disbursing nearly Rs 15 lakhs monthly salary.

Referring to irrigation facilities Mr Venkataraman said that they had harnessed nearly 95 per cent of the Cauvery rivers while in neighbouring Andhra Pradesh, 90 per cent of Godavari waters and 95 per cent of the Krishna rivers flowed into the sea. Mr Kamaraj referred to the big legislative revolution that has been achieved by introducing the ceilings bill.

At almost every place which the two Ministers visited there was unmistakable evidence of popular enthusiasm for the Congress policies and therefore as a boost to the morale of the Government, the campaigning seems to have been highly successful.

CONSENT of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government does not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

(A copy of this Prospectus having attached thereto the documents mentioned below has been duly delivered for registration to the Registrar of Companies, Bombay, as required by Section 60 of the Companies Act, 1956).

The subscription List will be open at the commencement of the banking hours on the 30th day of May 1960 and will close at the discretion of the Directors at any time after the close of banking hours on the 4th day of June 1960 but not before the 2nd day of June 1960.

All applications must be made at and received by the banking offices of the Bankers set out in the instructions on the back of application forms during Banking hours.

SYNTHETICS AND CHEMICALS LIMITED

(Incorporated under the Companies Act, 1956 on 21st January, 1960).

AUTHORISED CAPITAL:

15,00,000 Shares of Rs. 100/- each 15,00,00,000

ISSUED CAPITAL:

4,50,000 Equity Shares of Rs. 100/- each 4,50,00,000

The Company has been formed by Kilachand Devchand & Co. Private Ltd. for establishing a plant for the manufacture of synthetic rubbers in India in collaboration with The Firestone Tire and Rubber Company of Akron, Ohio, U.S.A., Kilachand Devchand & Co. Private, Limited, Directors of the Company and their associates and friends and The Firestone Tire and Rubber Company will subscribe for the following Equity Shares of Rs. 100 each:

Name	Equity Shares
Kilachand Devchand & Co. Private, Ltd., Directors, associates and friends	1,72,000
The Firestone Tire and Rubber Company of Akron, U.S.A. and Mr. Elton Henry Schulenberg and Mr. Walter Dale Waugh who are to take Directors qualification shares	1,12,500
The balance of 1,65,500 Equity Shares of Rs. 100 each is now offered for the public subscription.	

No shares are to be allotted for a consideration other than cash.

The 4,50,000 Equity Shares will be payable as follows:

on application	Rs. 25 per share
on allotment	Rs. 25 per share
The balance of Rs. 50 per share is payable in two calls of Rs. 25 each.	
The first call will not be made payable before the 30th September, 1960. The second and last call will not be made payable before the 31st December, 1960.	
Failure to pay the allotment money or any call when due will render the share liable to forfeiture.	

BOARD OF DIRECTORS:

Name	Description and Occupation	Address
Shri Tulsidas Kilachand	Merchant.	95, Nepean Sea Road, Bombay-6.
Shri Ramdas Kilachand	Merchant.	95, Nepean Sea Road, Bombay-6.
Shri Elton H. Schulenberg	Director, Vice-President and Treasurer, The Firestone Tire and Rubber Company.	1200 Firestone Parkway, Akron, 17, Ohio, U.S.A.
Shri Walter Dale Waugh	President, Firestone International Company.	1200 Firestone Parkway, Akron, 17, Ohio, U.S.A.

The Consents of the Auditors, Bankers, Legal Advisers and Brokers to act in their respective capacities have been filed with the Registrar of Companies Act, 1956.

OBJECTS OF THE COMPANY.

The Company was incorporated on 21st January, 1960 with the objects mentioned in the Memorandum of Association. The main object of the Company is to set up a Plant for the production of synthetic rubbers and latices of the butadiene-styrene type with a capacity of 20,000 long tons a year styrene Plant with a capacity of 9,000 long tons per year and a Butadiene Plant with a capacity of 15,000 long tons per year will also be set up so as to supply the raw materials for the Synthetic Rubber Plant.

COMMENCEMENT OF BUSINESS.

The Company will in due course supply for a Certificate to commence business as required by the Companies Act.

It will be seen that the consumption of rubber in India already exceeds the production of natural rubber. The deficit is met partly by the import of natural and synthetic rubber. Apart from the use of rubber in the manufacture of tyres, other uses of rubber are also increasing such as conveyor soling, etc. It is expected that with the increase in motor vehicles, bicycles and other uses of rubber, the deficit will increase year by year requiring larger imports of rubber and larger expenditure of Foreign Exchange. India's requirements of rubber of all kinds by the year 1965-66 are estimated to exceed 85,000 tons.

28 May 1960

SYNTHETICS AND CHEMICALS LIMITED, ANNOUNCEMENT—(Contd.)

The Government of India has already approved the programmes for increasing the production of natural rubber in India. But taking into account the time that is required for rubber trees to mature, and the decrease in rubber yield of ageing trees, the production of natural rubber is not likely to exceed about 30,000 tons by 1965-66, thus leaving a large gap between the production of natural rubber and the total expected consumption. An appreciable part of this gap will have to be filled by the use of synthetic rubber.

Moreover, synthetic rubber is being more and more used for mixing with natural rubber and in some products is taking the place of natural rubber.

It is expected that the whole of the production of the Company's Synthetic Rubber Plant will be sold without any difficulty, and the demand is likely to be such that the Plant will have to be increased.

PROFITS.

On the basis of the existing prices the Directors are of the opinion that, in the absence of any unforeseen circumstances, the Company should be in a position to pay reasonable dividends on the issued Equity Shares.

TECHNICAL PARTICIPATION.

The Company has entered into an Agreement dated the 25th day of March, 1960, adopting the Agreement between Kilachand Devchand & Co., Private Ltd. and The Firestone Tire and Rubber Company of Akron, Ohio, U.S.A. dated 30th January, 1960.

The main points of the agreement are:—

The Firestone Tire and Rubber Company of Akron, Ohio, U.S.A. (hereinafter referred to as "FIRESTONE") will provide required technical information, know-how, expert advice and supervision, and will be responsible for design, layout, procurement, engineering construction and initial operations of the plants, namely Styrene (9,000 tons per annum), Butadiene (15,000 tons per annum) and Synthetic Rubber and Latices (20,000 tons per annum) and all attendant facilities.

Firestone will furnish to the Company necessary formulae, specifications and technical assistance and know-how for manufacture of synthetic rubbers and latices and will help to maintain quality of the same. They will further provide assistance in organising a Rubber Technical Service.

For a period of 10 years after the Synthetic Rubber Plant goes into production, Firestone will continue to provide technical information and assistance.

Payments to Firestone for services:—

- U.S.A. \$750,000 (dollar seven hundred and fifty thousand) to re-imburse FIRESTONE for its expenses in relation to the work of designing, engineering, construction and start up service to be paid in two equal instalments, the first to be paid at the end of the first year after the Agreement becomes effective and the second to be paid at the end of the first year after the synthetic rubber plant goes into production and meets the guarantees set out in Exhibit "C" to the Agreement.
- A disclosure fee of U.S.A. \$300,000.00 (dollar three hundred thousand) to be transmitted by FIRESTONE to its associates in the field of styrene and butadiene production, the said disclosure fee to be paid on such date as may be agreed to by the Company.
- A continuing know-how and technical service fee of U.S.A. \$285,000.00 (dollar two hundred and eighty-five thousand) each year for a period of ten (10) years after the synthetic rubber plant goes into production and meets the guarantees set out in Exhibit "C" to the Agreement, by instalment and terms to be agreed upon, such fee to include any payments which FIRESTONE may have to make to its associates in providing styrene and butadiene know-how.
- All Indian Federal, State or municipal taxes which may be imposed on non-Indian employees of FIRESTONE and (unless otherwise agreed) their foreign sub-contractors during their residence in India while engaged exclusively on work pertaining to the Agreement.
- The cost of Firestone for obtaining from its associates the know-how and other technical information regarding the Styrene and Butadiene Plants is included in the amounts to be paid to FIRESTONE.

The Firestone Tire and Rubber Company of Akron, Ohio, U.S.A., was founded by Harvey S. Firestone in 1900. During these 60 years of continuous progress, the Company has expanded into a worldwide organization with seventy-one factories in nineteen countries employing 80,000 people. One of Firestone's more important tyre plants was established in Bombay, India, twenty-two years ago.

Although the manufacture and sale of a widely diversified line of tyres and other rubber products still represents a major portion of Firestone's total business, the Company has in recent years expanded its operations into a number of other important fields which include metal products, textiles, plastics, chemicals and synthetic rubber.

Firestone is not only one of the largest producers of synthetic rubber in the world, but it also produces a large part of its requirements of the butadiene which is the principal component of synthetic rubber.

Firestone's most important asset is its ultra-modern research facilities and its capable research and development organization which can mean so much to the continued dynamic progress of the Company.

Firestone will be willing to discuss the licensing of know-how in respect of other products including coral and diene rubbers at any time in future.

LOCATION.

The Uttar Pradesh State Government and the Government of India had originally planned for a Synthetic Rubber Project to be located in U.P. based on the large availability of Alcohol as a by-product of the Sugar Industry. It is therefore intended to set up this Plant in Uttar Pradesh. A suitable site admeasuring approximately 1,200 acres situate near Bareilly is available and steps are being taken to obtain the same with the assistance of the Uttar Pradesh Government. The proposed site has railway facilities and is centrally situated for obtaining Alcohol from all Centres of Alcohol production within the State.

Messrs. Kilachand Devchand & Co. Private, Ltd. as Promoters have initiated proceedings for acquiring a part of the land under the provisions of the Land Acquisition Act and to obtain the rest by purchase.

RAW MATERIALS.

For production of Synthetic Rubbers and Latices it is necessary to set up plants for Styrene Monomer and Butadiene and therefore, provision is made

to manufacture Styrene Monomer and Butadiene. The production of these intermediates, viz., Styrene and Butadiene would require about 14,000,000 gallons of Alcohol. Arrangements have been discussed with the Government of U.P. for obtaining the required quantities of Alcohol at reasonable prices. The other principal raw material, viz., Benzene required production of Styrene will be available from the Steel Plants and steps are being taken to arrange for Benzene supply at reasonable price on long-term basis. Except for a few special chemicals which will have to be presently imported, most of the other chemicals are available in the Country.

START OF PRODUCTION.

The Plants are expected to go into production in 1962.

CAPITAL OUTLAY AND WORKING CAPITAL:

The estimated requirements are as follows:	Rs.
(i) The complete cost of plants including land, buildings, machinery (inclusive of designing and engineering fees, transport, customs duty and erection), site preparation and housing	13,00,00,000
(ii) Preliminary and issue expenses, (including brokerage) and payment to Promoters	20,00,000
(iii) Repayment of any borrowed moneys	Nil
(iv) Working capital	1,30,00,000
(v) Any other expenditure	Nil
Total	14,50,00,000

Part of the above expenditure can be deferred.

PRELIMINARY EXPENSES AND ISSUE EXPENSES.

The preliminary and issue expenses which are payable by the Company are not expected to exceed Rs. 5,00,000 including brokerage on shares not exceeding Rs. 1,65,500, other expenses of the issue are approximately Rs. 1,75,000 and other Preliminary expenses approximately Rs. 1,59,500.

PAYMENT TO PROMOTERS.

Kilachand Devchand & Co. Private, Ltd. have rendered valuable service to the Company. They have formulated, negotiated and brought to fruition the present scheme for the manufacture of synthetic rubber and latices which has been approved by the Central Government and they have obtained a licence for establishing the project. They have made arrangements whereby the foreign collaborators, Foreign Commercial Banks and Financial Institutions and Indian Banks have agreed to make available to the Company the very large sums in foreign currencies and in rupees which are mentioned below. They have arranged with the Government of Uttar Pradesh for acquiring land totalling 1,200 acres for the purposes of the Company and have arranged for the purchase of other land for the purpose of the Company. They have negotiated arrangements with the Government of Uttar Pradesh for obtaining alcohol, water power and other facilities for the Company in connection with the foregoing work. Kilachand Devchand & Co. Private, Ltd. have incurred considerable expense in travelling to U.S.A. and U.K. in consulting technical and legal advisers, in negotiating various agreements, in viewing and inspecting various plants and processes and in carrying out negotiations over a long period.

They have agreed to transfer to the Company the benefits of all agreements, arrangements and negotiations made by them. By an agreement dated 25th March, 1960, the Company has agreed to pay to them a sum of Rs. 15 lacs (Rupees fifteen lacs) to reimburse them for the expenses incurred by them and for transfer to the Company of the agreements, arrangements and benefits of the negotiations entered into by them.

In addition, Kilachand Devchand & Co. Private, Ltd. have agreed to advance money to the Company for meeting its expenses until the Company becomes entitled to commence business. These advances will be repaid by the Company to them.

FINANCING.

- The Firestone Tire and Rubber Company have agreed by the Agreement dated 30th January, 1960 to provide \$3,625,000 to be paid in cash in U.S.A. and other foreign currencies as required for purchasing the machinery, equipment and initial stores. A portion of the above sum will be utilised to pay for 1,12,500 Equity Shares in the Company at par. The balance will be advanced by way of long-term loan to the Company carrying interest at the rate of 6 per cent per annum.
- The Bank of America National Trust and Savings Association, Bankers Trust Company, The Chase Manhattan Bank and The First National City Bank of New York have by an agreement dated 22nd April, 1960, agreed to advance U.S.A. \$1,500,000 each totalling to \$6,000,000 carrying interest at the rate of 6 per cent per annum and upon the terms contained in the said Agreement with the Company.
- The Export Import Bank of Washington has agreed to give on a long term loan of Rs. 3,92,00,000 from PL. 480 funds. The Agreement is being drawn up.
- The repayment of above loans (b) and (c) is to be guaranteed by The State Bank of India, The Bank of Baroda Ltd., and National and Grindlays Bank Ltd. The said Banks have addressed letters dated 10th day of May, 1960, setting out the terms on which they will be willing to give their guarantees to the foreign institutions.
- The Promoters—Kilachand Devchand & Co. Private Ltd., the Directors and their associates and friends have agreed to subscribe for ordinary capital of the Company at par of a face value of Rs. 1,72,00,000.
- The working capital will be arranged for when required.

The balance of the requirements of the Company will be covered by the capital now offered to the public for subscription and by other finance to be arranged for.

The Government of India have expressed their readiness to provide foreign exchange in U.S. dollars to the extent of \$3,375,000 to meet any foreign exchange requirements not covered by other arrangements.

The First Boston Corporation (of New York) is to be paid by the Company a fee (to be finalised) for assistance in concluding the negotiations for the loan (b) above and the fees of their lawyers and their expenses have to be paid by the Company.

SYNTHETICS AND CHEMICALS LIMITED, ANNOUNCEMENT—(Contd.)

MINIMUM SUBSCRIPTION.

The minimum amount which in the opinion of the Directors must be raised by the issue of shares in order to provide the sums required to be provided as per paragraph five of Schedule II to the Companies Act, 1956 upon which the Directors will proceed to allot shares offered by this Prospectus is the subscription of the 4,50,000 Equity Shares of the nominal value of Rs. 4,50,00,000 payable in cash.

BROKERAGE.

In respect of the shares now offered to the public the Company will pay brokerage at the rate of Re. 1/- per share to Banks and recognised brokers on allotments made in respect of applications bearing the stamps of such Banks and brokers.

PURCHASE OF PROPERTY.

Proceedings were initiated by Kilachand Devchand & Co. Private Ltd. for acquiring lands in Uttar Pradesh before the Company was incorporated. The lands are to be acquired directly in the name of the Company.

The Company has entered into an Agreement dated 25th March 1960 with Messrs. Kilachand Devchand & Co. Private Ltd. for taking over the benefit of the proceedings for acquiring the lands by paying the actual cost incurred by Kilachand Devchand & Co. Private Ltd.

DIRECTORS' INTEREST.

Mr. Tulsidas Kilachand and Mr. Ramdas Kilachand are interested as Directors and shareholders of Kilachand Devchand & Co. Private Ltd., the Promoters of the Company, and as such in the Agreements between the Company and Kilachand Devchand & Co. Private Ltd., herein referred to.

Messrs. Elton Henry Schulenberg and Walter Dale Waugh are Officers of The Firestone Tire and Rubber Company at Akron, Ohio, U. S. A. and Firestone International Company, Akron, Ohio, U.S.A. (a division of The Firestone Tire and Rubber Company) respectively and as such are interested in the payments to be made by the Company to The Firestone Tire and Rubber Company.

Mr. B. K. Daphtary is a member of Daphtary, Ferreira and Divan, who are Legal Advisers of the Company and as such interested in any fees to be paid by the Company to the said firm.

Mr. Tulsidas Kilachand and Mr. B. K. Daphtary are directors and shareholders of The Bank of Baroda Ltd., which is one of the banks guaranteeing the loans from the American banks and the Export Import Bank of Washington and is one of the bankers of the Company. Mr. Ardeshtir Darabshaw Shroff is a shareholder of the said bank.

Mr. Pratapsinh Mathuradas is a Director and Shareholder of The State Bank of India which is also guaranteeing the said loan and is one of the bankers of the Company.

Mr. Kishore Maneklal Premchand is a partner of Premchand Roychand & Sons one of the Brokers of the issue, and as such is interested in the brokerage which may be received by the said Company.

All Directors are interested in the usual remuneration to be paid by way of fees for meetings attended, and will be paid their travelling expenses, if any.

INSPECTION.

Originals and/or copies of the Memorandum and Articles of Association of the Company, Consent of the Controller of Capital Issues, Licence issued by the Government of India for establishing the industrial undertaking, Auditors' Report, contracts and agreements can be inspected at the registered office of the Company during usual business hours on any working day until the subscription list is closed.

APPLICATION FOR SHARES AND ALLOTMENT.

Application must be made for a minimum of five shares or multiples of five shares.

Applications for shares must be made on the Application Form attached to this prospectus and delivered before the close of the subscription list to any of the offices of the Banks set out on the back of the application form, accompanied by the full amount payable on application. The application money must be paid in cash or by cheque or bank draft. Money orders will not be accepted. Cheques or drafts must include a sum sufficient to cover all commissions and Bank charges. Where no allotment is made, the deposit will be returned by cheque on the Company's Bankers at Bombay and where a partial allotment is made, the unutilised balance after adjusting the allotment money will be returned by cheque on the Company's Bankers at Bombay. Bank commission, if any, will be payable by the applicant. No interest will be paid by the Company. The shares when issued will be subject to the Memorandum and Articles of Association of the Company.

The instructions contained in the application forms must be carefully followed.

Further copies of the Prospectus and application forms will be available from the Brokers named above, at the Company's Registered Office and at the offices of the Banks set out on the back of the Application form.

The Directors do not bind themselves to allot the full number of shares applied for and reserve the right to reject any application wholly or in part without assigning any reason therefor. Applications which are not complete or which are not accompanied by proper payment as above may not be considered.

The Share Certificates will be issued within nine months from the date of allotment.

The Company has no debentures or debenture stock outstanding.

BANKS IN BOMBAY.

- (i) State Bank of India.
- (ii) The Bank of Baroda Limited.
- (iii) The National and Grindlays Bank Limited.

Fresh Measures to Curb Speculation

RAW jute prices have continued to rule firm, although Assam Bottoms for May-June delivery on Tuesday was somewhat lower at Rs 50 per maund after having been done up to Rs 54 per maund on Monday. It is now generally believed that the next jute crop will be considerably delayed. This will mean a period of very little supply of raw jute after July till the new crop begins to arrive in quantity. At long last, the drought seems to have ended and sufficient rains have fallen in the course of the past few days to enable cultivators to proceed with their work. Latest information from the growing areas seems to indicate that the acreage under jute may not be less than last year's. In other words, though delayed, the new crop may not suffer any diminution in its size.

In the meantime, the Indian Jute Mills Association is getting ready to meet all emergencies. At its meeting on the 20th May, the IJMA has decided that "the production of jute goods should be restricted either by a progressive scaling of looms from the beginning of July, or by a block closure of the mills for an appropriate number of weeks in September", with a view to bring about a substantial reduction in the consumption of jute by the mills. This decision stems from the calculation that notwithstanding Government's decision to issue supplementary licences for the import of a further quantity of raw jute from Pakistan, there is no likelihood of the supply position showing any substantial improvement until the arrival of the new crop. Which of the above two alternative courses is to be adopted will perhaps be decided at the IJMA meeting early in June when "it should be possible to assess more accurately both the availability of jute and the extent to which the new crop has been delayed by the drought". On the information at present available, the IJMA, however, can see "no alternative to a curtailment of production in the mills".

The Government announcement regarding supplementary licences for the import of Pakistani jute cannot bring any speedy relief for the simple reason that Pakistan too is carrying only meagre stocks. Even if we are prepared to pay the present enhanced price, it is doubtful if supplies can be got in

time to avert the crisis that is fast developing in Indian mills.

One may not be far wrong if one concludes that now that the rains have come, the next crop will be of a satisfactory size. But it is not the size of the next crop that is causing the present worry. The problem is how to keep the mills going till the new crop becomes available.

The jute goods market ruled generally steady last week due to continued buying interest both for near and forward delivery goods. Although overseas enquiries were conspicuous by their absence, sellers were reserved presumably in view of the IJMA decision to curtail production from July. The high price levels, however, do not benefit the mills as the price of raw jute has also continued to outstrip the increase in the price of goods. The spurt in the price of goods is inevitable as the supply of jute goods will steadily decline in the coming months if the mills are obliged to curtail production due to an inadequate supply of the raw material. The foreign buyer may feel aggrieved that he is forced to pay high prices for his requirements. But in the present context of the shortage of raw jute, the spurt in prices of goods cannot be entirely attributed to profiteering. It is true that the giddy heights to which goods prices have been taken now will have an adverse effect on jute goods exports as consumers will be turning to substitutes which offer comparatively stable price levels.

Prices in the jute goods market were steady in the first half mainly in sympathy with the firm raw jute market. With the IJMA announcement on Wednesday that mills have been permitted voluntarily to seal such additional proportion of their looms as would ensure that their supplies of raw jute would last until new crop jute is available, with effect from June 6, prices declined sharply. Hessian 40"x10 oz Ready which was quoting at Rs 51.75 last Thursday was taken up to Rs 54.25 on Tuesday. Following the latest IJMA announcement the rate declined to be finally placed on Thursday at Rs 52. The fluctuations in B Twills Ready were sharp. Last Thursday's rate was Rs 136.50 but by Tuesday it was as high as Rs 145. Subsequently sentiment turned easier with the rate coming back to Rs 138.50 by close on Thursday. In the raw jute section, Assam Bottoms moved up briskly from Rs 47 to Rs 54 to be pushed down steeply to Rs 49.50 by close on Thursday.

The following is the Press Note issued by the IJMA on 25th May:—

Following the announcement on Friday, the 20th May, of the Association's intention to restrict the production of jute goods from the 1st July, 1960, the price of raw jute rose, as a result of speculative activity by more

than Rs 5 per maund. The prices of jute goods also rose and, although the increase was not proportionate to the rise in jute prices, it is nevertheless most detrimental to the interests of overseas buyers and to India's export trade in these commodities.

In these circumstances it is clear that earlier and more drastic action is required to bring raw jute prices down to realistic levels, and at their meeting this morning, the IJMA Committee unanimously decided that as from Monday, the 6th June, 1960, member mills should be permitted to seal such additional proportion of their looms as would ensure that their supplies of raw jute would last until new crop jute was available, on the understanding that they would be permitted to make up the hours of work so lost at any time after the 1st November, 1960.

It is felt that this arrangement which provides that the loss of output in the coming months will be restored in subsequent months, is in the best interests of overseas buyers and the Association trusts that it will have the desired effect on the jute market. The Association will not hesitate to take such further measures as may be necessary to put an end to excessive speculation in raw jute, in which it is assured that it will have the full support of the Government of India.

E. R. W.
TUBES FOR
ELECTRICAL
EQUIPMENT

Highly suitable for use in a wide variety of electrical equipment, E.R.W. Tubes manufactured by Indian Tube, can be employed to great advantage in Transformers, Condensers, Refrigerators and Air-Conditioning machinery. Close dimensional tolerances and a smooth finish are standard features of E.R.W. Tubes. In addition, their great strength combined with their light weight render them eminently suitable for electrical appliances.

"Packet tea is NOT a luxury"

You mean to say then, Bhai Sahib, that packet tea is bought in really large quantities? Surely, the poorer folk do not go in for tea in packets?

What makes you think so, my friend? Brooke Bond alone produce over 184 crores of packets every year. If packet tea were a luxury, would it sell in such astronomical numbers?

After all, out of our population of 360 million only 7 lakhs i.e. one in 514 earn more than Rs. 250 a month. Our average family income is assessed at Rs. 130 per month.

There...you've hit the nail right on the head. In a country like ours no industry can be built up on a truly large scale unless it serves the millions rather than just the well-to-do few. This is something Brooke Bond realised many years ago. They have endeavoured ever since to bring packet teas within the reach of everyone.

But what is the price of a packet of Brooke Bond Tea?

Brooke Bond market a whole range of packets—guaranteed for quantity and quality—of which the prices vary from 3 nP to Rs. 5.75 nP. But—and this is the crucial fact—nine out of ten of these packets sell for less than 50 nP! And, as you can imagine, they are bought by the humbler people—from the largest cities to the remotest villages.

It's obvious then, Bhai Sahib, Brooke Bond's packet tea really is tea for the people.

WORLD OF TEA

Decline in Exports

ACCORDING to trade sources, exports of Tea from North-East India have declined by 6.58 million pounds to 7.99 million pounds in April from 14.57 million pounds in the corresponding month of last year. Total exports, in the first four months of the year, are lower at 78.11 million pounds, as compared to 81.06 million pounds in the corresponding period of 1959.

A trade review points out that a close balance between demand and supply last year resulted in relatively steady prices in the world's tea markets, the average annual price for 1959 showing little change from that of 1958. The prices of quality teas were well maintained during most part of the year, although there was some reduction in the price differential between the prices of quality and plain teas toward the end of the year.

The survey adds that, during the past year, total exports of tea from the sterling area fell by both quantity and value, due to reductions in exports to the UK and the dollar area. Total exports fell by 54 million pounds and £14 million; but were still 7 and 3 per cent respectively higher than in 1957.

Total shipments of tea from India and Ceylon each fell by about 7 per cent in both quantity and value during 1959 as compared with a year earlier. The smaller producers each increased their exports by quantity, but only in the case of East Africa was there an increase in value.

Against a fall in exports to the dollar area and the UK, India increased her exports to the majority of other countries. Ceylon's exports of tea were also mainly affected by the fall in shipments to the UK; but there were reductions in exports to some Middle East countries.

Meanwhile, in the Internal Sale held in Calcutta this week, offerings were 22,990 packages of Dusts and 429 packages of Leaf grades. There was a good general demand for Dusts at easier rates. Grainy orthodox descriptions declined by 12 nP per pound, while the small and powdery types in this category met with a better enquiry. Medium CTC types met with an active enquiry. Where quality was maintained, these were fully firm and sometimes dearer. The plainer and more fibrous types declined in price. The few Darjeelings, on offer, were difficult of sale. Following rates were quoted:—Medium Doars Dust Rs 1.82 to Rs 1.92;

Medium Assam Dust Rs 1.78 to Rs 1.94; Medium Assam CTC Dust Rs 2.02 to Rs 2.26 and Best CTC Assam Dust unquoted.

In the Cochin market, 2 million pounds of Leaf tea were offered for exports. Against good general demand at easier rates, black leaf teas, particularly Fannings, were firm. Other sorts were irregularly 5 nP to 10 nP per pound easier following quality. Best liquoring teas were lower by 10 nP to 15 nP per pound.

Production of tea in South, during March 1960, fell to 10.5 million pounds from 11.2 million pounds in the same month last year. This puts the total South Indian tea output, in the first quarter of the year, lower at 29.7 million pounds as compared to 32.2 million pounds in the January-March, 1959.

In the Colombo market, offerings amounted to 7,632,034 pounds. The few best Dimbuls maintained quality; but second, invoices and most other types showed more falling off. Best Dimbula BOPs were irregularly easier following quality; but below the best were lower. Medium BOPs were firm to dealer; but other mediums were 5 to 10 cents lower. Low-grown teas were firm to dealer. Low Brown Fannings were generally firm.

Competition at the London tea auctions has not been quite as strong as in the past few weeks. The strength of demand in the weeks following Easter was mainly a reflection of the Assam situation where the first and second "flushes" of the tea crop have been suffering severely as regards quantity (though not quality) from the prolonged drought. As rain has now fallen in Assam, London dealers are worrying less about a possible shortage of teas this year.

Most of the autumn teas from North India have now been sold at the London auctions. During the remaining sales of the season, buyers will be working through what is left of last summer's plain "rains" teas. Ceylon teas, however, will continue to come in throughout the summer and the Ceylon Government have just announced an increase of 5 million pounds in their allocations for the London market during the first half of this year.

According to the Board of Trade, London, tea imports into the UK, during March 1960, increased to 47.05 million pounds from 29.78 million pounds in the corresponding month of last year. This puts the total imports into the UK, in the first quarter of the year, higher at 153.13 million pounds as compared to 133 million pounds in the first quarter of 1959.

Supplies of Indian tea to the UK improved slightly from 79.14 million pounds in January-March 1959 to 79.79 million pounds in the first quarter of this year; but those of Ceylon tea rose sharply from 30.73 million pounds to 36.3 million pounds.

WORLD OF COTTON

New Curbs Unsettle Markets

THE ready cotton market at Sewri observed hartal from Thursday to Saturday last week as a mark of resentment against the new curbs imposed by the Government of India on cotton transactions which will be enforced from 1 August. The sales of cotton, as revealed by the Government order, shall be made from the first day of August only to mills: specially nominated for that particular purpose by the Textile commissioner. The purchasing mills will pay the ceiling prices and the quality will be certified by appropriate committees appointed by the authorities. The new procedure is intended to ensuring the observance of ceilings and render the transactions genuine with regard to quality, weight and price of cotton. However, sales for export and inter-trade sales will not be drawn under the purview of the new order. It remains to be seen how far the contemplated procedure will be able to eliminate the prevailing malpractices.

In the futures market the announcement of the imposition of stricter controls came like a bolt from the blue and precipitated a sagging tendency during the first part of the week, but later the prices rebounded. Apart from this, the trade seems to have been influenced by the steady statistical position brought about by a sharp reduction in crop and slower imports. Moglai Jarilla August during the first half of this week opened at Rs 775 to rebound to Rs 781.50 and reacted to Rs 779.78.

The announcement of stricter controls generated panicky conditions in the Sewri market. The merchants, on their part, are fearing a complete elimination from the market for they will be entirely left to the whims and discriminatory treatment of the Government. Cotton merchants however, were eager to dispose of as much of cotton as possible so as to take advantage of the high prices. Mills were also anxious to accumulate cotton for their requirements fearing that they would find it difficult to secure adequate cotton during August-November period.

Indian mills have consumed about 27.5 lakh bales of cotton during the first seven months of this season. Although quotas were issued for importing cotton to the tune of 12 lakh bales for the season, actual arrivals amounted only to four lakh bales till the end of April.

Among the indigenous growths,

Bengal Deshi was transacted at Rs 750 and Rs 880, Oomra at Rs 820-860, Dhollera at Rs 820-840, Jarilla at Rs 840-900 and Vijay Broach at Rs 995 nom.

Among the foreign growths Kar-nak changed hands at Rs 1775 and Rs 2200, Sudan Average at Rs 1575 and Rs 2100, American 1.8" and below at Rs 1175 and 1200 and American Midling 1.5/32 at Rs 1280 and Rs 1245. Demand for the American styles continued, while African BP 52, Bussoga of UNUG seed, Jinga and Mwanza commanded interest at steady prices. Business was done in Sudan mostly in higher and medium Sakel varieties.

PIECEGOODS:
In the cloth market quietly steady conditions prevailed during last week. With the approach of the end of the busy season, the tempo of activity in the domestic sector was slow. There was good upcountry demand for current season goods like the gadlapat, coatings and flannels, but in shirtings poplins, sucs, pyjama patts and cheaper varieties of voiles the offtake was rather restricted.

On the export front demand was slack and due to the absence of bulk buying from oversea traders, trading in this section was restricted to needy bookings only.

DURGAPUR mills are rolling

After 3½ years of building, the new Durgapur Steelworks is in production.

Open hearth furnaces began operating in the middle of April; by the end of April the 42" Blooming Mill, designed to roll more than a million tons of steel a year, was ready for its first ingots. At the beginning of May this mill and the following 32"

Intermediate Mill both began rolling; now the Continuous Billet Mill is coming into operation, delivering the raw material for India's other development plans.

So now, Durgapur steel is beginning to be a real force in India's industrial future.

Davy-United at Durgapur

As well as all the Rolling Mill Plant, Davy-United are responsible for the Iron and Steel Foundry and the Central Engineering Maintenance Department, which are already in production, the Sleeper Plant and the Wheel and Axle Plant—in fact for over a quarter of the new steelworks.

ONE OF THIRTEEN BRITISH COMPANIES WORKING FOR INDIA

Pepper Markets Turn Weak

PEPPER prices, which had been ruling very firm during the past many weeks, have now suffered a sharp setback in the absence of shipper enquiry and trade support. In the Cochin market, the rate has gone down to Rs 295 from Rs 315 per cwt quoted in the previous week. The London market is also in an uncertain state. The main bearish factor were the advices from Singapore regarding the new Lampong crop.

A number of estimates of the size of the Indonesian Lampong crop of black pepper have been reaching the London market, nearly all of them making it much larger than the last year's crop. Some estimates predict a crop of 25,000 tons against last year's 9,000 tons, while a good many more give figures of around 15,000 tons.

No reason are given for such a dramatic increase. The favourable weather in Indonesia and the fact that the eviction of the Chinese there had less serious consequences than was feared, cannot in themselves explain the increase. It is even suspected that the above estimates may have been put out by dealers interested in bringing about a fall in prices.

On the other hand, overseas buyers are keeping away from the Indian market for the present on the expectation that the Singapore advices are true and that prices will come down substantially by the end of June or July when the new crop is expected to reach the market. Except for the stray business done with Russia a few days ago, no appreciable business has been concluded with foreign countries. The USA is reported to be quiet.

Meanwhile, India's exports of black pepper rose by 1,100 tons in 1959 as compared to the previous year, mainly due to larger import of the commodity by the USA. India exported 15,214 tons of black pepper as against 14,114 tons. The USA took 5,101 tons against 3,818 tons in 1958.

Rubber

According to the figures released by the Rubber Board, both production and consumption have risen in March as compared to the previous month. Production is shown at 1,295 tonnes against 1,155 tonnes and consumption at 3,964 tonnes against 3,178 tonnes. While stocks with the estates and dealers have declined to 3,747 tonnes from

4,440 tonnes, those with the manufacturers have risen to 5,454 tonnes from 5,143 tonnes. The quantity of raw rubber, imported during March, was 800 tonnes of Group 2; 356 tonnes of Group 3; 3 tonnes of Group 4; 243 tonnes of Group 5 and 887 tonnes of Group 6. Total 2,288 tonnes. Exports during March were nil.

Conditions in the rubber market in London remain unsettled. Prices have fallen back after the close of dealings in the May position in Singapore. This has led to hopes that the recent squeeze may be over. Although the news of the breakdown of the Summit Conference has induced some short-covering, the market is still worried about the possibility of the recent squeeze being renewed shortly.

Dealers say that, whatever the precise reasons for the present situation, it springs from a "paper" shortage rather than a physical one. The trouble appears to be, that operators in, at least, some markets have got to deliver rubber in the near future which they have not yet bought and which they are finding great difficulty in buying. They are all apparently in need of Grade 1 rubber and not of so called "off grades".

Coffee

The Coffee Board has released a quantity of 1,107,000 kilograms of Coffee for export out of the 1959-60 crop, consisting of 348,000 kilograms of Plantation A; 270,000 kilograms of Plantation B; 36,000 kilograms of Plantation Triage; 117,000 kilograms of Arabica Cherry/Gleanings Flats and 336,000 kilograms of Robusta Cherry Flats. The last date for tender is 8 June, 1960.

At the major Pool sale held in Coimbatore, a quantity of 430 metric tons of coffee was exposed sale. Following was the bidding range (prices per 50 kilos, ex-bag ex-works):—Plantation PB Rs 240 to Rs 250; Plantation A Rs 225 to Rs 230; Plantation B Rs 210 to Rs 225; Arabica Cherry Rs 180 to Rs 185; Robusta Rs 165 to Rs 170 and Plantation Triage Rs 190 to Rs 200.

Ginger

Production of dry Ginger in India, during 1959-60, was about 13,400 tons, grown in an area of 37,000 acres. These figures show respectively an increase of 8.9 per cent and 3.6 per cent over the corresponding figures for the previous year. India exported 72,000 cwts of ginger, valued at Rs 52 lakhs, in 1959.

Sugar

Production of sugar till 7 May came to 23.50 lakh tons and, for the rest of the season, it can be expected to be about 40,000 tons. With estimated production of 23.90 lakh tons and the opening stock of 1.73 lakh tons as on 1 November 1959, the total available supply for the season amounts to 25.63 lakh tons.

On the basis of the total release of 7.79 lakh tons for the first five months (at an average of 1.56 lakh tons per month) and allowing for higher average despatches of 1.75 lakh tons per month for the last seven months, total consumption for the season will come to 20.04 lakh tons for the whole season. This will leave a carryover of 5.13 lakh tons, which should go a long way off in Government taking courage in both hands for decontrol.

According to the figures released this week, consumption of sugar in West Bengal declined from 247,000 tons in 1952/53 to 212,000 tons in 1957-58. In Uttar Pradesh also, there is a decline in consumption from 281,000 tons to 264,000 tons in the same period. In Andhra, it rose from 48,000 tons to 73,000 tons; in Assam from 21,000 tons to 62,000 tons; in Bihar from 103,000 tons to 131,000 tons; in Bombay from 375,000 tons to

522,000 tons and in Kerala from 31,000 tons to 44,000 tons. Among other States, the increase in consumption was from 92,000 tons to 118,000 tons in Madras; from 82,000 tons to 88,000 tons in Mysore; from 14,000 tons to 25,000 tons in Orissa; from 140,000 tons to 148,000 tons in the Punjab and from 59,000 tons to 75,000 tons in Rajasthan.

Meanwhile, sugar prices have registered modest gains in the Hapur market, to quote Rs 114.75 per bag. With the supply position comfortable, conditions in the Muzaffargarh market have remained quiet and the rates for the commodity are moving between Rs 115 and Rs 117 per bag.

Gur

In the Hapur market, ready Gur prices are fractionally higher due to a revival of outside demand. Stocks are estimated at 26,000

maunds, the corresponding figure for last year being 81,000 maunds. Pansera quality is quoted at Rs 15 to Rs 15.37 per maund.

Khandsari

Khandsari prices have declined by a rupee a maund following the withdrawal of marriage season demand. Enquiry from Gujarat is negligible. With the result, stocks in the Muzaffarnagar market have increased by 25,000 maunds to 1.25 lakh maunds. Superior quality is quoted at Rs 38 to Rs 39 per maund.

Foodgrains

Conditions in the Hapur Foodgrains market have remained depressed. Despite increased arrivals in the market and the rising demand, wheat prices have remained almost unchanged. In the Pulses section, prices have shown a slight improvement on revival of support from the stockists at lower levels. The Rice section ruled

quiet, thanks to the easy supply position.

Gold & Silver

Although price movements were irregular and narrow, the Bombay Bullion Exchange displayed a distinctly easy tone in the week's trading. The imposition of ex-parte margins in the contracts from Tuesday disturbed the sentiment in both the gold and silver sections.

With the price in gold Ashad declining below the margin rate of Rs 127, bull operators in the metal escaped the ex-parte margin. Arrivals amounted to 7,000 tolas as against an offtake of only 2,000 tolas. Ready gold changed hands at Rs 130.56, to 131.06, to finish at Rs 130.75. Sovereign ruled quietly steady at Rs 88.25.

Despite the severe fall in prices, Silver Ashad attracted margin, as it closed above Rs 213 the marginal rate. Bulls of Ashad silver, therefore, had to pay, on their outstanding long position, margin

at the rate of Rs 3,000 per bar to the Bullion Association on Tuesday. Arrivals were very heavy at 55 bars as against an offtake of only 12 bars. Silver ready (.996) changed hands at Rs 214.75 to Rs 215.44, to finish at Rs 215.

Yarn

Easy conditions prevailed in the Yarn market and prices declined further in the absence of upcountry enquiries. Reports from the rayon cloth market were not very encouraging. Upcountry weavers, therefore, preferred to keep away from the market. Some of them deferred their purchases of yarn on expectation that prices would decline further in the near future.

The bull squeeze in Cupressa Bamberg yarn appeared to have ended as a result of the imposition of higher margins on bulls by the market authorities. Bear operators hammered down the June delivery at one time to Rs 1,920 from Rs 2,000 per 100 kilograms.

With the result, a special clearing had to be effected during the week.

Trading in the Cotton Yarn section was listless with prices moving within a narrow range. Export enquiries were very poor. Nylon yarns were the only exception to the general trend of the market.

Oils & Oilseeds

Barring Linseed which was steady, Oilseeds prices were irregularly lower in the week's trading.

In the Groundnut section, activity remained subdued on most days of the week. Although prices displayed a steadier tendency on support from Saurashtra and the local professional bulls, presumably prompted by the Government decision to consider on merits of applications from individual established exporters for the export of groundnut oil linked with the export of groundnut cake, higher levels attracted considerable selling from weak holders following the issuance of tenders against the maturing contract for the first time. Moreover, with the start of the monsoon, stockists were eager to dispose of their supplies, while crushers and vanaspathi manufacturers were inclined to buy only their immediate requirements. Groundnut Bold quality was quoted at Rs 43.25 and Groundnut Oil ready at Rs 22.62.

Prices in the Castorseed section tended to recover in earlier stages on revival of support as well as profit-covering by bears. Rumours were also current about further business in oil with the Communist countries. Selling soon emanated, as business was done in the maturing contract at a discount of around Rs 10.50. Castor ready was quoted at Rs 33.75 and Castor Oil, commercial quality, at Rs 18.50.

The most important bullish influence in the Linseed section came from abroad. The UK was stated to be steadily revising its price ideas. With the result, shippers could book business for a moderate quantity at £111 to £113½ per ton. Linseed ready was quoted at Rs 32.75 and Linseed Oil at Rs 16.25.

Trading in the Cottonseed section remained listless in the midst of scattered deals.

It has been a week of declining prices in the Madras groundnut oil and groundnut kernels market. With good rains in the growing regions giving encouraging picture of future harvest, and also, good arrivals of summer crops into the markets, both local and in southern side, the price of groundnut kernels has been kept lower. Bombay and Calcutta interests were also inclined to depress futures in oils with the result spot trading too looked considerably easy. Summer crop arrivals in the City averaged hundred tons daily while in Southern Centres it was between 400/450 tons daily.

Wednesday's prices in the seeds and oil exchange closed considerably less than last week this day: Groundnut oil per candy of 500

lbs ex-Madras godown expeller Ready 3% F.F.A. Ready Rs 383: May Rs 383; June Rs 384; July 383. Groundnut Kernels per candy of 531 lbs: Coromandel Rs 198: Peanut Rs 190. Castor oil per candy of 500 lbs Tirupattur Rs 310: Coconut oil per tin Rs 39.25 to Rs 39.50. Gingelly oil per maund Rs 23.50 to Rs 23.75. Gingelly seed per bag Rs 77.78. Groundnut oil cake per bag of 160 lbs ex-gunny Rs 27.50. Groundnut oil Price in U.K. £121 to £121/10 per ton. Burma unquoted.

Steady and good arrivals of summer crop in important centres in the South helped groundnut market to maintain more or less a steady level. There was only

INDIAN COPPER CORPORATION LIMITED.

(Incorporated in England)

DIVIDEND NO. 34.

NOTICE IS HEREBY GIVEN that at the Thirtysixth Annual General Meeting to be held in Committee Room No. 1 of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday, the 27th July, 1960 at 11-30 A.M. the Directors will recommend payment of a Dividend (No. 34) for the year ended 31st December, 1959 of 27% (6.48 pence i.e. 36 Naye Paise per unit of stock) subject to deduction of Tax, in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 31st August, 1960 to all members registered in the books of the Company at the close of business on the 17th June, 1960. The Registers of Members will be closed from the 18th June, 1960 to the 9th July, 1960, both days inclusive.

The profit for the year ended 31st December, 1959 was £1,202,259 (against £997,848 for previous year), out of which have been provided £1,175,000 for depreciation (£1,150,000 last year), £439,949 for Taxation (against £467,282), £56,250 for Development Rebate Reserve (against £50,625), £125,000 for General Reserve (against £125,000) and £Nil for Gratuities (against £7,156), leaving a net profit of £406,060 (against £197,785). With £71,312 brought in from 1958, the balance available is £477,372 (against £318,146) and after providing £370,251 for the abovementioned proposed Dividend of 27% subject to deduction of Tax (Dividend No. 33 of 18% free of Income Tax last year—£246,834) the balance carried forward is £107,121 (against £71,312 brought in from previous year).

By Order of the Board,
G. A. Carver,
Secretary.

Gillander House,
Netaji Subhas Road,
Calcutta-1.

Dated the 25th May, 1960.

limited buying support to groundnut oil. Local vanaspathi and Calcutta interests were the main supporters for oil during last week only. Burma took up last week small quantities at Rs 1,775 per ton in tins. Small scale producers of groundnut oil continued to get good offers from large buyers because of their lower price than from big crushers whose prices remain always higher by Rs 10/12 per candy. Improvement of summer crop arrivals in South was also a contributory factor to lower price levels. Thus there was a restricted buying resulting in a loss by about Rs 15 to Rs 16 per ton for groundnut oil this week. Groundnut kernels lost very little.

Local groundnut kernels arrivals were absorbed readily during the earlier part of the week, but stocks began to accumulate when oil prices began to weaken later on.

It was difficult to make deals even around Rs 392 per candy of groundnut oil. Weakness reported in Bombay market further contributed to the dullness. Holders lost their morale in a way and began offerings at still lower levels. In May there was only nominal quotation in oil with practically no business.

June vaida had some support around Rs 386.50 per candy though in the middle of last week the rate quoted was Rs 397/396. Steep decline set in from last week end. The positions given below would indicate the price trends in all vaidas.

July vaida had moderate activity. Buyers were inclined to support this position only at a small discount over the June position. The following were the rates which ruled for groundnut oil and kernels from Thursday, May 19:

Thursday (May 19): Groundnut oil: Ready 394; May Rs 394; June 395; July Rs 395; Kernels: Coromandel: Rs 200; peanut Rs 191/192; Friday (May 20): Ready Rs 391; May Rs 391; June Rs 391; July Rs 390; Kernels Peanut Rs 191/192; Coromandel Rs 200/201; Saturday (May 21): Ready Rs 386; May Rs 386; June 386.50; July Rs 385.50; Kernels Peanut Rs 190/191; Coromandel Rs 198/199; Monday (May 23): Ready Rs 385.50; May Rs 385.50; June Rs 386; July Rs 385; Kernels Peanut Rs 188/189 Coromandel Rs 198/199; Tuesday (May 24): Ready Rs 383; May Rs 383; June Rs 384; July Rs 383; Kernels Peanut Rs 188/189; Coromandel Rs 199/200.

Thus the evidence is clear that due to suppression of forward dealings prices by Bombay, Madras prices had been considerably influenced from the middle of last week. The decline in groundnut oil price from Monday this week to Tuesday and today has been also considerable. Oil Ready lost Rs 2.50 per candy, June Rs 2.00 and July Rs 3.00. Even the price of kernels had come down by a rupee or two per candy.

Upcountry Markets: Southern centres received good summer crops, some centres recording bet-

ween 100 to 120 tons daily. Crushers were keen on buying and prices of these quantities improved better than those obtained in Madras City. Goods were taken around a pucca parity of Rs 203/205 per candy. In the Circars and

the Ceded Districts no change was reported in the price trend. Sowings of early winter crop in Pollachi and Coimbatore areas have been mostly completed. While the growth of these plants are reportedly satisfactory summer rains are expected.

OTHER OILS AND SEEDS:

Gingelly seed:		
Chanda/Warora quality	Rs 86/87 per bag	
Rajasthan	Rs 79/80	
Tuni/Rajahmundry	Rs 78/77	
Local varieties	Rs 77/78	

The following are the latest ruling levels in foreign market for some of the important oils and seeds:

Groundnuts May/June	£ 74/- per ton
Nigerseed May/June	£ 55/10 per ton
Castorseed May/June	£ 65/10 per ton
Groundnut oil May/June (bulk)	£121 to £121/10 per ton
Castor oil bulk May/June	£120/- per ton
Castor oil commercial	£123/- per ton
Tobacco seed oil (drums) June	£126/- (nominal)
Coconut oil Straits (May/June)	£113/10 per ton
Coconut oil Colombo	£116/10 per ton
Groundnut oil cake (Expeller) 54% June	£ 33/5 per ton
Groundnut oil deoiled cake: 50% June	£ 30/15 to £31/- per ton
Groundnut oil deoiled cake: July	£ 30/7/6 to £31/- per ton

The following are the prices prevailing for groundnut oil and kernels in the upcountry markets:

	Groundnut kernels 531 lbs	Groundnut oil 500 lbs
Guntur/Bezwada	210	395
Vidhachalam	203	384
Nandyal	204	392.50
Villipuram	203	384
Cuddappah/Yerragantla	203	385
Pollachi nominal	205	392.50
Tanjore	205	392.50
Tiruvannamalai	200	385
Salem	205	392.50

The following are the closing prices of Cochin Pepper today:

Ready Rs 285; July Rs 293.75; August Rs 312.25 (All in cwt.) Ungarbled Rs 650 per candy of 600 lbs.

Hides and Skins

In the skins and hides market there were good arrivals of tanned cow hides with good clearance. For United Kingdom good prices were offered for medium weight advanced by over 2nd per lb with steady offering from U.K. Inferior fifts of 8/8½ lb remained unchanged. Prices for 5/5½ lb remained easier.

With meagre arrivals, tanned buffalo hides commanded higher prices. In tanned cow calf skins, premium and semi-premium quality were negotiated for U.K. at a lower level of prices. In most cases the reduction stood in the neighbourhood of 2/3d per lb.

Sales of market quality tanned goatskins went up to 4,000 pieces and tanned sheepskins to 100,000 pieces. Bazar stocks left over were 5,000 tanned goatskins and 60,000 tanned sheepskins. Price of market quality goatskins however went down by 25 nP per lb and that of sheepskin by about 12 nP per lb. Good class goatskins Run and thirds and fourths in 5½/6 lb and 5/9 had enquiries for export on a lesser rate by 3d to 6d per lb.

The raw skin market continued to be easy. The following are the prices (last week's in brackets):

Bangalore raw goatskins Rs 520/540 (Rs 560/575); White Wool Sheep Rs 550/585 (Rs 600/620); Black Wool Sheep Rs 420/485 (Rs 450/500) Bezwada raw goat skins Rs 480/490 (Rs 525/530); He sheep Rs 600 (Rs 615) She sheep Rs 450 (Rs 465).

The following prices for tanned skins prevailed in the market per lb: Tanned cow prime 5/5 lb Rs 3 to Rs 3.7; 6/6½ lb Rs 2.75 to Rs 3.00; 8/8½ lb Rs 2.31 to Rs 2.37; 10/12 lb Rs 1.94 to Rs 2.00; Buffalo 12/13 lb Rs 1.44 to Rs 1.69; Cow Calf 1½/2 lb Rs 4.62 to Rs 5.12; Buff Calf 1½/2 lb Rs 3 to Rs 3.37; Goat Prime 5½/6 lb Rs 10-25 to Rs 10.50; 8/8½ lb Rs 9.12 to Rs 9.37; Sheep Ordinary 6/7 lb Rs 8.50 to Rs 9.87; Prime 6/7 lb Rs 10.62 to Rs 10.87.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Notice is hereby given that the Register of Members and the Transfer Books of the Company will be closed from Monday, the 20th June 1960, to Thursday, the 14th July 1960, both days inclusive.

Notice is also hereby given that the dividends for the year ended 31st March 1960, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company on Thursday, the 14th July, 1960.

Dated at Bombay this 24th day of May 1960.

By Order of the Directors,
For and on behalf of
The Tata Iron and Steel
Company Limited,

Tata Industries, Private Limited,
Managing Agents,
J. J. Bhabha,
Agent.

NEW and improved Tel-O-Set miniature pneumatic instruments are low in cost, easily installed, compact and require minimum maintenance. They can handle a broad range of temperature, pressure, flow and liquid level applications...

With all their simplicity, these instruments are highly sensitive and respond instantly to change. They operate on a pneumatic-balance principle which eliminates lost motion and friction.

Honeywell Tel-O-Set indicators, recorders and controllers are today's most advanced miniature instruments.

Curb-fears Subdue Sentiment

Investment Gossip:

A subdued tone has come to prevail in the stock markets during the past two or three days. Earlier dealings this week were characterised by a firm trend with most equities finding support at higher levels. The reactionary tendency that has latterly developed is still largely confined to the more speculative counters. Even so, the decline in values is not steep and part of the lost ground has been regained in later dealings.

It is not strange that some selling pressure has developed in the speculatives. All the principal markets are rife with rumours about more stringent curb measures to come. Already the Madras Stock Exchange has imposed a margin of 4 per cent on clearing shares. In the absence of any announcement from the Reserve Bank so far, the market is left guessing as to the nature of the curb measures that are believed to be in the offing. The readiness with which operators are reacting to the various rumours that have come to be circulated from time to time, would seem to suggest that the generality of marketmen have veered round to the view that the present level of equity prices is unjustifiably high.

The selling pressure may be partly attributed to the fact that a big new issue is now on the market and more are in the offing. The sustained interest in new issues and selected industrials clearly shows that investors continue to have a preference for shares with growth prospects.

As for the outlook for equities in general, there is every reason to hope that conditions conducive to the efficient functioning of private enterprise will continue to prevail in the country. Indications are again available that Authority is as much anxious as Private enterprise to put an end to the futile controversy between the two sectors.

But it is not the long-term outlook that is presently influencing operators. The inflationary psychology seems to be the main driving force and till last week there was discernible a tendency to resist whenever lower levels were reached.

New Issue Notes

SYNTHETICS & CHEMICALS LTD.

With the sharp increase in sales of automobiles and development of road transport, consumption of rubber has sharply increased in recent years and it has become necessary to import large quantities for overcoming the shortage. With the increasing consumption of rubber for manufacturing goods of various types, the gap

between demand and supply should be reduced as far as possible by augmenting indigenous production. Although there was opposition for some time in particular quarters to the idea of producing synthetic rubber within the country, it is now realised that the manufacture of synthetic rubber will not adversely affect the production of natural rubber.

A mammoth project, Synthetic and Chemicals Ltd., is to be started, in Bareilly, Uttar Pradesh, based on indigenous raw materials in collaboration with foreign interests. The Government of India have made it a condition that the manufacture of synthetic rubber should be based upon alcohol, especially when power alcohol is easily obtainable in large quantities in the State.

Synthetics and Chemicals Limited has now come to the market for raising Rs 1.65 crores in equity shares of Rs 100 each from the public out of the issued capital of Rs 4.5 crores, the authorised capital being Rs 15 crores. Kilachand Devchand and Company, Private Limited, directors, associates and friends, will subscribe for 1,72,000 shares and the Firestone Tyre and Rubber Company, the foreign collaborators, for 1,12,500 shares. A sum of Rs 25 per share is payable on application and Rs 25 on allotment. The balance is payable in two calls of Rs 25 each. The subscription list will open on 30 May and will close at the discretion of the directors on 4 June, but not before 2 June.

Besides being the first project for the manufacture of synthetic rubber in the country, this is one of the big capital issues offered this year. The Government of India have expressed their readiness to provide foreign exchange in US dollars to the extent of \$3,375,000 to meet any foreign exchange requirements, not covered by other arrangements. It may be expected that the public response to the issue will be quite good, especially when the whole of the production of its synthetic rubber plant will be sold without any difficulty. The demand is likely to be such that the capacity of the plant will have to be increased.

A new cable-manufacturing company, known as the Traco Cable Company, Limited, with an authorised capital of Rs 1 crore has been formed. The issued capital is Rs 40 lakhs. The company proposes to manufacture electric wires, cables and flexi-

bles. The factory will be situated at Tirupanthura (Kerala State). The Kerala Government will take shares worth Rs 10 lakhs, while a Japanese firm, which is providing technical assistance, will be investing Rs 18 lakhs.

It is understood that the recent issue of the Phillips Carbon Black Limited has been oversubscribed by over 18 times. It is reported that lots will be drawn for the allotment of shares in respect of applicants for shares ranging from 50 to 250. The applicants for shares 300 and above will get an allotment of about 5.6 per cent of shares applied for.

The Albion Plywoods Limited has proposed to raise the capital of the company and issue right shares, at par, in the proportion of one new Ordinary share for every one existing share, to those shareholders whose names are registered as on 6 June, 1960.

The Aluminium Industries Limited, Madras, has obtained the Government sanction for issuing 2 lakhs right shares at Rs 12.50 (including premium), payable in full on application, to those shareholders whose names are registered as on 21 June, at one share for every four shares held. Last date for the receipt of applications is 1 August. The new shares will rank for dividend from 1 August.

Investment Notes:

The approval of the Controller of Capital Issues has been obtained by the Cheviot Mills Company, Limited for acquiring the undertaking and assets of the Orient Jute Mills Company, Limited. This approval is subject to the modification that the ratio shall be 100 ordinary shares of Rs 10 each in Cheviot for every 11 ordinary shares of Rs 100 each in Orient Jute.

The Chairman of the British India Corporation Limited has struck a note of optimism about the outlook for the company. He says that the confidence in the future of the Corporation is redoubled, especially when a comprehensive scheme is under preparation and the leading position of the two woollen mills will be fully assured.

Among Bombay textile scrips, Standards have staged a spectacular rise to Rs 1,760 from Rs 1,310 quoted a week ago. There are rumours that the company may issue 9 or 4 shares for every one share for undertaking new industrial venture. The market

is left conjecturing as to what type of new industrial undertaking will be launched. There have been vague talks of oil refinery being set up with foreign collaboration in Gujarat. There are also indications that a Fertilizer project may be undertaken on a big scale. There is also a rumour that a plan for manufacturing paper may be set up in Gujarat.

Investment Briefs:

Kamani Engineering Corporation Limited has recommended a taxable dividend of 7½ per cent for the year ended 30 September, 1959. The net dividend works out to 5.425 per cent against 5 per cent paid previously.

Cambodia Mills, Coimbatore, have passed over the dividends, both on the Ordinary and Preference shares, for 1959.

Balance-Sheet Briefs:

The Indian Copper Corporation Limited has reported a substantial rise in the net profit from £197,785 to £406,000 for 1959. The directors have recommended a taxable dividend of 27 per cent. This works out to a net dividend of 18.9 per cent against 18 per cent. Transfer Books will be closed from 18 June to 9 July, 1960.

The working of the Bombay Uganda Company, Limited has resulted in a profit of Rs 2.04 lakhs against Rs 1.66 lakhs for 1959. A final dividend of Rs 6.50 per share is recommended. This makes a total of Rs 9.00, subject to tax, for 1959.

The Alembic Glass Industries Limited has earned a profit of Rs 21.14 lakhs against Rs 12.80 lakhs. A taxable dividend of Rs 25.00 (net Rs 17.50) is recommended against a tax-free dividend of Rs 15.00 paid for 1958.

The gross profit of the Ahmedabad New Cotton Mills Company, Limited has dropped from Rs 9.04 lakhs to Rs 7.18 lakhs. The directors have recommended a taxable dividend of Rs 25 (net Rs 17.50) against Rs 20 paid for 1958.

The Nutan Mills Limited has reported a gross profit of only Rs 7.75 lakhs against Rs 12.97 lakhs. A taxable dividend of Rs 25 is recommended against a tax-free dividend of Rs 20 per share.

The working of the Saraspur Mills Limited has resulted in a loss of Rs 9.26 lakhs. The directors have proposed a dividend of Rs 20 per share, less tax. The company paid a tax-free dividend of Rs 20 per share previously.

The Asoka Mills Limited has incurred a loss of Rs 1.94 lakhs against a profit of Rs 2.74 lakhs. The directors have recommended a taxable dividend of Rs 25 per share after making a transfer from the Dividend Equalisation Reserve. In the previous year, a tax-free dividend of Rs 20 per share was paid.

The Raipur Manufacturing Company, Limited has shown a net profit of Rs 9.46 lakhs against Rs 98,499. A final dividend of Rs 23 is recommended. This makes a total of Rs 35.00 per share, subject to deduction of tax. The net dividend works out to Rs 24.50 against Rs 23.00 previously.

Satisfactory Results of Godfrey Phillips

Balance-Sheet Reviews:

DESPITE greater competition and the appearance of new brands in the cigarette market, Godfrey Phillips India Limited has reported satisfactory working results for the year ended 31 December 1959. Total sales have increased appreciably from Rs 3.33 crores to Rs 3.54 crores, while the net profit, after providing for Depreciation and Taxation, is higher at Rs 13.38 lakhs as against Rs 10.20 lakhs in the previous year.

Except for Depreciation which is raised to Rs 5.04 lakhs from Rs 4.89 lakhs, all other allocations have been reduced.—Taxation provision from Rs 14.75 lakhs to Rs 12.75 lakhs; Development Rebate Reserve from Rs 40,000 to Rs 33,500 and Gratuity Reserve from Rs 1.23 lakhs to Rs 93,483. The directors have recommended an Ordinary dividend of 26 per cent, subject to tax. This works out to a net dividend of 18.2 per cent against 20 per cent paid previously.

Results, since the close of the year, have continued to be satisfactory. The directors have taken steps to increase the manufacturing capacity to meet the growing demand. The directors state that, although prospects seem fair, the company operates in a field in which margins are small and in which unforeseen events can speedily produce very material changes.

The balance-sheet, as at 31 December 1959, shows a paid-up capital of Rs 70 lakhs, divided into 4 lakh Ordinary shares of Rs 10 each and 30,000-5½ per cent Cumulative Preference shares of Rs 100 each. Reserves are shown at Rs 4.74 lakhs, excluding Gratuity Reserve at Rs 7.60 lakhs. The gross block amounts to Rs 71.58 lakhs and this is depreciated by Rs 41.40 lakhs to show a net block value of Rs 30.18 lakhs.

New India Investment Corporation Earns Higher Profits

Although "Dividend Income" is maintained at Rs 2.36 lakhs, the New India Investment Corporation Limited has earned as much as Rs 5.01 lakhs for 1959 as against only Rs 1.83 lakhs in the previous year, thanks to the substantial rise in sales of State Government securities and shares from Rs 6.43 lakhs to Rs 16.91 lakhs. A sum of Rs 117 (Rs 134) is provided for Depreciation and Rs 2.75 lakhs (Rs 50,000) for General Reserve. No provision is made for Taxation against Rs 75,000. The directors have recommended a taxable dividend of Rs 6.50 per share against a tax-free dividend of Rs 3.75 previously.

The paid-up capital is Rs 23,31,600 divided into 31,088 shares of Rs 75 each. Against this, General Reserve is shown at Rs 10 lakhs and Contingency Reserve at Rs 1.00 lakh. The market value of the company's investments, a sat 31 December 1959, exceeds the book value by Rs 12.10 lakhs.

Modern Mills Release Good Results

The Modern Mills Limited has reported good results for the year ended 31st October 1959. Although sales are lower at Rs 1.67 crores against Rs 1.71 crores, the accounts reveal a net profit of Rs 12.77 lakhs as against a loss of Rs 2.48 lakhs incurred in the previous year. The profit was made mostly in the superfine section and in the dyeing and bleaching departments which took up outside processing work. During the current year, the mills have increased their superfine production with the liberal quotas of foreign cotton granted by the Government to the textile industry.

In respect of allocations, a sum of Rs 4.36 lakhs (Rs 3.37 lakhs) is provided for Depreciation; Rs 36,000 (Rs 42,545) for Taxation; Rs 65,806 (Rs 2.19 lakhs) for Development Rebate Reserve; Rs 1.22 lakhs (Rs 1.20 lakhs) for Gratuity Reserve and Rs 8.15 lakhs (nil) for Machinery Rehabilitation Reserve. The directors have recommended a dividend of Rs 5 per share, subject to deduction of tax, as against Rs 3 in the previous year, free of tax. In this connection, it may be added that the dividend for the previous year was paid out of reserves.

The paid-up capital is shown at Rs 46,47,350; Share Premium Account at Rs 2.80 lakhs; Machinery Rehabilitation Reserve at Rs 15.50 lakhs; Development Rebate Reserve at Rs 2.85 lakhs; Investment Reserve at Rs 20,000 and General Reserve at Rs 17.50 lakhs. The gross block at Rs 1.44 crores is depreciated by Rs 70.50 lakhs to show a net block of Rs 73.68 lakhs.

THE BRITISH INDIA CORPORATION LIMITED

DEFICIT WIPED OFF—SURPLUS IN 1959 WORKING RESULTS

Chairman, Sri H. S. Chaturvedi's Review

Address by: Shri H. S. Chaturvedi, Chairman and Managing Director, to the shareholders of the British India Corporation, Limited, at the Fortieth Annual General Meeting of the Corporation held in Kanpur on Wednesday, 18th May, 1960.

Gentlemen,

It gives me great pleasure to welcome you to the Annual General Meeting which, unlike recent years, has been called within a reasonable time after the close of the year.

The Audited Accounts and the Report of the Directors have been in your hands for some time, and, with your permission, I shall take them as read.

From the letters of appreciation received from various shareholders, it is evident that a feeling of satisfaction obtains at the results achieved during the year. After a period of great anxiety, it is but natural that the shareholders should feel happy at the turn in the affairs of the Corporation.

You will observe that the accounts for the year 1958 showed a deficit of Rs 19,28,478 to be carried forward. After wiping off this loss, the accounts for 1959 yield a surplus of Rs 21,18,442. The net indebtedness of the Corporation to its bankers, which amounted to nearly Rs 2½ crores on 31st December, 1958, has been reduced to Rs 134 lakhs on December 31, 1959. The results for 1959 reveal a marked all-round improvement.

On the question of dividends representations have been received from a number of shareholders urging that dividends on Preference Shares should be distributed free of tax. Shareholders have also drawn attention to the Finance Minister's latest pronouncements on this subject in the course of the 1960 Budget Debate in the Lok Sabha. The matter is not free from doubt and difficulty and it might be desirable to reconsider it in all its aspects. The Board of Directors only desire to do what is right and proper.

I shall now proceed to give you a brief sketch of the activities of the Corporation. As you are aware, the B.I.C. Group, through its branches and subsidiaries, comprises Woollen, Leather and Cotton industries, while its wholly owned subsidiary, Begg, Sutherland and Co. Private Ltd., are interested in Sugar, Engineering and Brush-making as Managing Agents.

WOOLLEN BRANCHES—LALIMU AND DIHARIWAL

The two units have achieved an all time record during the year. Their goods continue to enjoy the highest reputation for quality. Our Mills manufacture practically

every type of woollen and worsted cloth; new shades and designs are introduced periodically to meet changing requirements, and the competitive position in the market has been fully maintained. The following figures relating to the orders booked are indicative of the steady progress of the Mills:—

	(Rs. in lakhs)
1957	499.83
1958	537.55
1959	542.08

For our supply of raw wool, we are largely dependent upon the foreign markets. Notwithstanding the fact that the licences issued were inadequate, the Mills were, by judicious purchasing and utilisation of a wider variety of imported wools, able to maintain production at a two-shift level. Indian wools are being utilised in larger proportions, despite the fact that suppliers do not always adhere to quality standards. With the introduction of effective controls on quality admixtures we hope to make increasing use of Indian wools for our various ranges.

The two Woollen Mills have also made a significant contribution to the country's foreign exchange earnings. In 1959, our woollen exports amounted to Rs 31.42 lakhs as against Rs 12.86 lakhs in 1958. A bigger export drive has been planned for 1960.

The Board of Management is conscious of the fact that unless we modernise our plant, it will not be possible successfully to withstand competition for long. A comprehensive scheme is under preparation, covering a phased programme of rehabilitation spread over 4/5 years, and with its implementation the leading position of our Mills will be fully assured.

LEATHER BRANCHES—COOPER ALLEN AND NORTH WEST TANNERY

In addressing you last year, I mentioned that in spite of the stupendous nature of the problems confronting the management in the Leather units, the position was steadily getting better and preparation, covering a phased that 1959 would show a distinct improvement. I am glad to say that this has been achieved in full measure. Despite an unprecedented increase in the cost of raw materials, the trading loss for the year is negligible in comparison with past years. An extensive reorganisation has been carried out in all departments; this has resulted in the reduction of fixed overhead ratio; turnover has increased and the shoe factory, which has achieved an improvement in production, is showing better results. In short, there is every reason to look to

1960 for still better results. Exports which amounted to Rs 34.73 lakhs in 1958 have risen to Rs 44.12 lakhs in 1959. In the home market, however, the incidence of excise duty on leather footwear continues to operate as a serious handicap. For the same reason, Army boot orders are extinct, and it is a factor which seriously militates against the most economic utilisation of the factory's production capacity.

We have thought it desirable to make a provision of Rs 12 lakhs for obsolescent stores and spare parts.

COTTON TEXTILE UNITS—ELIGINS AND CAWNPORE TEXTILES

The Elgin Mills Company has an established name in the Cotton Textile Industry. With the purchase of Cawnpore Cotton Mills by Elgin, its capacity for production will increase considerably in the near future. The new Mill has been styled as Elgin No. 2, and it has already gone into production.

As will be seen from Elgin's Balance Sheet, the working results have improved and it has made a satisfactory profit during the year. Sales amounted to over Rs 355 lakhs, as against Rs 298 lakhs in the previous year. Although cloth and yarn prices realised were lower than in the previous years, their impact on the net results has been more than offset by higher productivity, better sales, and a prudent cotton purchase policy.

Cawnpore Textiles Ltd., has also done well during the year. While there was an adverse balance of nearly Rs 13 lakhs carried over from previous year, the results for the last year showed a net profit of Rs 8,72,022.

Having regard to the highly competitive nature of the Cotton Textile Industry, and the necessity for expanding export trade, we have decided to install automatic looms at Elgin No. 2 generally to maintain our competitive strength by replacing old machinery with the latest types, within the resources available to us.

Looking back on the anxious days of the past few years, there is reason to feel gratified at the progress that has been achieved. When I first addressed you in 1958, I referred to the soundness of the B.I.C. foundations and I said that there was no cause for panic. In my address to you last year, I reiterated my optimism. The results of 1959 justify me in saying that our confidence in the future of the Corporation is redoubled and we can look forward to the B.I.C. growing from strength to strength.

I would like to express on behalf of myself and my able colleague, Mr H. L. Khanna, to all members of the staff and work people in our various units our warmest thanks for their devoted service throughout the year. The management are deeply appreciative of their co-operation and I am

happy to report that your Directors have, in recognition of our employees' good work, declared a bonus payment after a lapse of five years.

In the vacancy caused by the retirement of Mr R. L. Powell, the Hon'ble High Court was pleased to appoint Mr K. M. Wilcox as Executive-cum-Secretary Director. Mr Wilcox is not new to the Corporation which he has been serving for more than a decade. His elevation has been very well merited, and I am confident that he will prove to be a great asset to the B.I.C.

Finally, I wish to place on record my grateful thanks to the Directors for the keen interest which they have evinced and their valuable contribution towards the revival of the B.I.C. They have more than borne their burden and the management are grateful to them for their cooperation and counsel.

N.B. This does not purport to be a record of the proceedings of the above Annual General Meeting.

Recovery After Initial Setback

Watch-Dog Writes:

THE recent bullish progress in stock markets has abated somewhat this week. Operators have turned cautious due to persistent rumours about the possibility of heavier margins and restrictions on trading in the forward list. Although prices have staged a marked recovery toward the close in the absence of any decision taken so far by the Reserve Bank, the undertone remains hesitant.

Except for Tea shares which met with selective support, trading on the Calcutta Stock Exchange was generally dull.

On the Madras Stock Exchange, the general tone was subdued and prices displayed a slightly easier tendency.

Calcutta

Calcutta, Friday Evening.

TRADING in the local stock market showed a mixed pattern during the week under review. While a few selected scrips of the Birla group were keenly sought after at enhanced levels and Tea shares met with selective buying, speculative issues were subjected to heavy selling pressure till the middle of the week. Price movements in other counters were rather irregular on alternate buying and selling.

In general, the bullish fervour, noticed during the past few weeks,

has subsided to some extent and the mild shake-out in values was brought about by rumours with regard to the possibility of imposing margins on forward transactions as was done by the Madras Stock Exchange authorities. The news, that a move was afoot on the part of the commercial banks to raise their interest rates on advances, was also a contributory factor. Some operators, however, appeared to lend support to a few shares on individual merits.

The Gilt-edged market continued to remain dull in the absence of any buying interest. Institutional investors kept out of the market due to monetary stringency. The volume of business was reduced even below the recent attenuated levels. 3 per cent 1986 Conversion Loan, after improving at one time to Rs 73.70, receded at the close to Rs 73.30.

Bank shares improved moderately with United Commercial having buyers upto Rs 68.50 from Rs 67. Punjab National, however, remained unchanged at Rs 19.75.

Although Jute shares were still more or less neglected, their prices remained unaltered in the absence of selling pressure. This was mainly due to the fact that the recent rains in the jute-growing areas gave a sense of relief to the holders of jute shares. The IJMA's decision to permit the mills to seal as many looms as they liked from 6 June gave rise to a feeling that the mills could adjust their production according to the availability of raw jute and cross the hurdles without any material loss.

Howrah met with business at Rs 22.50 to Rs 22.81; Birlas at Rs 32.37 to Rs 33; Ganges at Rs 11.62 to Rs 12.06 and New Central at Rs 29.37 to Rs 31.00. National were rather sticky at Rs 29. Kelvin were enquired up to Rs 153 from Rs 145 and Kamarhatty up to Rs 164 from Rs 160.

Coal shares were rather quiet, reflecting lack of follow-up support at the recent high levels. There was a general disposition to await whether the private collieries would be encouraged to produce more in the coming years. The only firm features were Amalgamated and New Beerbhoom, quoting Rs 24 and Rs 24.87 respectively. Central India, however, turned quiet at Rs 12.87 against Rs 13.12 and South Karanpura at Rs 12.56 against Rs 12.69. Western Bengal were done at Rs 8.56 to Rs 8.81, while Burrakur fluctuated erratically between Rs 19.25 and 20, to finish the week at Rs 19.56.

After a long period of neglect, Tea shares came in for good enquiry at improved levels on second thoughts with regard to the prospects for the industry due to reports of rains in Assam and Dooars areas. The proximity of dividends for last year was another contributory factor. Above all, it was expected that, with the fall in production and the rising consumption within the country the position of the industry might improve

substantially as supply might even fall short of demand. Brooke Bond had buyers at Rs 18 to Rs 18.25; Bishnauth at Rs 21.37 to Rs 22.37; Grob at Rs 14 to Rs 14.25; Hasimara at Rs 24.75 to Rs 26.37; Hantapara at Rs 150 to Rs 156; Jayshree at Rs 17.75 to Rs 18.06; Rydak at Rs 36.37 to Rs 37.25 and Tezporo to Rs 18.50 to Rs 18.81.

Sugar shares were selectively firm on the feeling that the earnings of the companies might have improved with the rise in production during the current season. Higher levels, however, attracted some profit-taking at the close. Raza/Buland were at one time taken upto Rs 14.37; Ramnugger up to Rs 27.25 and Balrampore up to Rs 4.00, to finish at Rs 14.12; Rs 26.75 and Rs 4.00 respectively. Carew moved narrowly between Rs 11.81 and Rs 11.94 with Dyer Meakins having recovered to Rs 21 from a low of Rs 20.37. Belsund were quiet at Rs 13.75 against Rs 13.87 on reports of lower profits for last year.

In the Textiles section, attention was mostly concentrated on the shares of those companies which had diversified their activities. In this respect, Kesoram and Jayshree were keenly sought after up to Rs 32.25 and Rs 16.06, to ease off at the close to Rs 30.75 and Rs 15.31 respectively on profit-taking. Bowreah were a steady feature at Rs 174, while Cawnpore closed quiet at Rs 7.31 against Rs 7.94 and Elgins at Rs 19.94 against Rs 20.06.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to heavy bull liquidation till the middle of the week on lower Bombay advices. After opening firm at Rs 26.23, Indian Irons were depressed at one time to Rs 25.31 at which level some bear-covering coupled with replacement buying induced to a recovery to Rs 25.76, to close finally at Rs 25.70. In sympathy, Jessop were marked down to Rs 23.69 from Rs 24.25; Britannia to Rs 13.25 from Rs 13.56 and TEXMACO to Rs 26.30 from Rs 26.70, to close better at Rs 24.12; Rs 13.44 and Rs 26.65 respectively. G. K. Williams were, however, a firm feature, having sustained support upto Rs 44.75 from Rs 44.37. Kumardhubi were enquired up to Rs 7.50 from Rs 7.19, while Marshalls were on offer at Rs 5.81 against Rs 6.12.

In the Miscellaneous section, Paper shares continued to be in good demand although profit-taking erased some of the extreme gains at the close. Among Mining issues, Indian Copper were a special feature and the share, after dropping down to Rs 4.90 from Rs 5.10, recovered fully to Rs 5.11 following the release of encouraging results and the increase in net dividend for last year. Hindustan Motor attracted sustained support up to Rs 21.50 from Rs 20.37 on rumours of the possibility of the dividend being doubled. Follow-

ing were the price trends of a few other selected scrips:

	Week's High	Week's Low	Week's Closing
Paper Shares	Rs	Rs	Rs
Orient Paper	47.75	46.20	47.25
Shree Gopal	30.62	29.00	30.62
Sirpur	19.19	18.44	18.56
Bengal	102.80	99.00	102.00

A. Chemical	26.62	26.25	26.31

Madras

Except Travancore Rayon, cleared securities were less active in the Madras Stock Exchange today. Practically there was no business in Banks and Public Utilities shares. Only moderate business was reported in sugars with Travancore and Decan shares being prominent, EID proving sellers. Tea and rubber shares commanded a small turnover.

Government Securities: Meagre business continued this week also in Government securities with the undertone running very quiet. Unlike last week, there were not practically any offer in Government of India securities. Nor were there many sellers. Madras Government Loans had some support, notably 4 per cent 1964 at Rs 100.50.

Banks: This proved an extremely uninspiring and dull counter. No business was reported.

Plantings: Both tea and coffee shares had enquiries but they were not so active as they were last week. Blue Mountain shed its value by 5 nP from its last closing to be bought at Rs 5.10, but this is better than last week end's closing rate of Rs 5.07. Chembra too did have a sliding rate at Rs 4.51 from Rs 4.55 of early week price. Cochin Malabar continued at the same Rs 8.20. Consolidated Coffee was steady at Rs 26.20 at which business was reported done today. Haileyburia however increased in value from Rs 15.50 to Rs 15.65. Upward trend probably was halted further on the higher margin imposition and therefore Highland tea shares with some others were quoted lower. Highland, for instance, was priced at Rs 14.90 from its last week's Rs 15.12. Cottanad had support only at Rs 14.00 less by 50 nP than Monday or last week closing. Midland was marked down at Rs 12.30, ten nP lower. Ossoor had buyers at the lesser rate of Rs 3.65 than yesterday. Periakaramalai had been steadily supported at the same rate of Rs 3.90. Pullangode improved fractionally to Rs 2.01. Travancore Rubber and Tea slightly improved to Rs 8.60. United Nilgiri got good demand at reduced price of Rs 22.12, the same at which this stood last Friday. Monday's rate of this share was better at Rs 22.25. Like others in the line Wartyhully declined to Rs 3.47 but Waterfall improved by 10 nP to Rs 4.40. Rubber shares

like Nenmeny remained at Rs 19.50, Mercaras were steady at Rs 9.20, and Nilambur was unchanged at Rs 19.25.

Textiles: As in last week, interest centred round the cleared scrips, notably Travancore Rayons, which again met with the speculative interest at Rs 38.75. This scrip was quoted at Rs 40.40 last week end, closed lesser at Rs 39.75 Monday and still less today at the above rate. Nevertheless this share truly reflected the Bombay sentiment on rayon shares, Adoni Spinning had offers at Rs 8.15, and Anglo-French at Rs 108.00. Bangalore Woollen dropped down to Rs 199.00 from Rs 200.50, Buckingham's temporary rise by one rupee to Rs 207.00 went down again to Rs 206.00. Cannanore likewise shed its quotation by a rupee to at Rs 164.00. Coimbatore Cotton was supported at the same rate of Rs 148.00. but other Coimbatore spinning shares continued steady without gaining any further. Janardana, however, put up its value higher at Rs 71.00 from Rs 70.00. Radhakrishna too was bought at a slightly increased value at Rs 28.25. Madura continued steady at Rs 33.50 as well as Mettur at Rs 436.00. Lakshmi remained unaltered at Rs 158.00. Other scrips in this section remained steady but most of them continuing their last week's values.

Miscellaneous: Here too slight recession was visible. Ashok Leyland went down to Rs 9.00, Aluminium Industries too lost a few points at Rs 28.00. It was Rs 28.20 during last week, went down to Rs 28.10 and today it closed at Rs 28.00. Industrial shares did not go up steeply as they did during last fortnight. Even here the buoyant note of last week was not sustained. Only cement shares had a moderate turnover, with rates however lower than last week. Andhra Cement continued at Rs 10.50, Dalmia Cement improved to Rs 12.35 and India Cement reported negotiations at Rs 6.68, at least 28 nP higher than last week end closing, though on the second day of the market opening this week this had lost only a couple of nP at the counter.

THE INDO-BURMA PETROLEUM COMPANY LTD.

NOTICE IS HEREBY GIVEN that the Preference Register of Members of the Company will be closed from the 13th June 1960 to 1st July 1960 both days inclusive for the purpose of payment of the dividend for the half year ending 30th June 1960 on the 2nd July 1960 at the rate of Rs. 3.50 per share less tax to be deducted in accordance with the provisions of the current Finance Act.

SHAPING OF STEEL

Now ready to go into operation at the Durgapur Steelworks this 42" Blooming Mill, with control pulpit shown in the background, represents the latest in engineering design for this type of Rolling Mill. Hot steel ingots from the 'soaking pits' are rolled into 'blooms' on this Mill—the first step in the shaping of steel.

Towards
**A SINGLE
SIMPLE
SYSTEM**

Another major step has been taken towards the goal of
establishing a single, simple system of weights and measures
in the country.

On October 1, 1958, Metric Weights were permitted
in selected areas of the States and Union Territories.
In these areas, only Metric Weights will be legal from
October this year.

From April 1960, Metric Weights are allowed also
in the rest of the country excepting Jammu and Kashmir.

Metric Weights will become compulsory throughout the
country by April 1962.

WORLD OF FINANCE

"Need for A Banking Plan"

A PLAN for economic development would hardly be realistic if the situation in the banking system is left out of consideration. Any attempt at economic uplift (from a stage of under-development) should, to be effective, also take into its purview a reorganisation of the banking system. This aspect, however, does not appear to have so far received sufficient notice, although we have drawn frequent attention to this subject. It is therefore reassuring now to find that, on the eve of the Third Five Year Plan, the central banking authority has taken up the matter and brought it to the forefront. In its Annual Report on the "Trend and Progress of Banking in India for 1959," the Reserve Bank has drawn the pointed attention of the Indian banks to the urgent need for "study" and reorganisation. The Report appears to have taken note of some of the major problems of Indian banking. The need for "cost studies" and "rationalisation" of banking charges has been stressed, and the necessity for examining the various issues relating to expansion of banking business, rationalisation of charges, policies, procedures, etc., has been emphasised.

Though the published profits of banks appear to have improved slightly in 1959 as compared to 1958, the net profits (available for distribution of dividends, allocation to reserves, etc.) after provision for taxes and bonus to staff, have declined in the case of 22 larger Indian banks out of 25 which have Deposits of Rs 5 crores and over. If the weekly average of the total of Advances of these banks is taken with the weekly average of their Deposits during 1959, it will be seen that, by and large, the banks fully utilised the accretions to Deposits during the year. But, if the rate of interest on Deposits had not been reduced in time, the position would have been serious by now. The earning capacity of banks would thus appear to be far from being encouraging. In such a situation, therefore, and particularly with the recent impounding of part of new accretions to Deposits, the need for examining the cost structure generally and of individual banking services and rationalisation of the banking charges, on the basis of such study, becomes a matter of urgent necessity. These points have been discussed, in recent years, by, among others, Dr N. N. Law, Chairman of United Bank of India Ltd, in his speeches to the shareholders. He drew pointed attention to these aspects again in his speech this year, when he has suggested that an "enquiry into the manner in which and the extent to which the rising operating expenses have so far been absorbed, and whether the process has not adversely affected the banking system and the sound growth of the national economy, would prove to be a very useful study". In the same address, Dr Law also emphasized that, "besides meeting the rising costs, the banking system must have a better pattern of earnings to be able to provide better and newer services", and that adoption of new techniques of Advances (apparently referring mainly to Term loans and Character loans), necessary

for economic development, "needs to be backed by better built in cushion".

However, it is common knowledge that, in spite of the facilities of the Refinance Corporation and the encouragement given by the Reserve Bank of India in this regard, the Indian banking system has by and large not yet been found enthusiastic about Term loans to industrial undertakings. There can be no doubt that industrialisation would be better facilitated if the borrowing units could be ensured of the supply of funds for the specified period, even though the rate of interest may be related to the Bank Rate and thus subject to variation. Nevertheless, the banking system cannot be entirely blamed for not going ahead with this type of loans. Unless and until the profitability of banks improves satisfactorily, banks may be taking a great deal of risk if they were to embark on such innovations. Can the banks, in the present conditions, afford to take such a risk?

A thorough study of the Indian banking system with a view to reorganising it to suit the changing requirements of the national economy is a matter which would require collective and concerted efforts, on the part of the Indian banks; and this has been emphasised by the Reserve Bank of India, in suggesting that the Indian Banks Association should organise Study Groups for "a collective and comprehensive stock-taking of the problems, policies and procedures". The Reserve Bank has, at the same time, offered its "requisite co-operation and help" to the Indian Banks Association. It may be recalled that Mr B. K. Dutt, Managing Director of United Bank of India, had drawn up, in December 1956, a tentative study for a Banking Plan which was acclaimed by knowledgeable quarters, and which can still form the basis for such a "comprehensive stock-taking". Unfortunately, however, although this tentative plan was drawn up at the instance of the Indian Banks' Association, no step appears to have been taken so far.

Now that the Reserve Bank of India has brought these matters into sharp focus and has offered its co-operation and help, the Indian banking system must take note of the situation and act quickly. The urgent necessity to-day is a joint and concerted effort. No institution in the system can live and prosper in isolation. Sporadic individual action can be of little avail to-day. A Plan must be drawn up with the co-operation of all the individual units in the system; and, in this regard, great responsibility lies with the Indian Banks' Association. The Association should not only be able to organize collective thought and give a proper lead; if necessary, it should also be prepared to re-organise itself, in such a manner as would elicit the co-operation and support of all the various banks in the country, not excluding the smallest units.

Again, Steep Fall in Note Circulation

A CONTRACTION in note circulation of true slack season proportions has been recorded for the second week in succession. According to the returns of the Reserve Bank for 27 May, Active Notes have fallen by a further steep Rs 19.06 crores to Rs 1860.99 crores; and the contraction in the last two weeks exceeds Rs 49 crores. Furthermore, Rupee Coin has returned from circulation in the amount of Rs 0.79 crores. Currency has been contracted against Rupee Securities for Rs 10 crores by transfer to Investments in the Banking Department. Consequently, the Reserve Bank's cash has improved by Rs 9.65 crores to Rs 32.11 crores.

An increase of around Rs 24 crores to Rs 255.62 crores in Investments in the Banking Department implies recourse to deficit financing, since, in the first place, the transfer from the Issue Department was only Rs 10 crores and since, in the second place, there is evidence of inter-governmental transactions. But it is important to note that roughly another Rs 10 crores of the rise in Investments is due to counter-vailing deficit financing in respect of maturing Treasury Bills in the Reserve Bank's portfolio of bills purchased and discounted. It is the balance alone, of around Rs 5 crores, which really represents created money. The State Governments have apparently benefited fairly considerably; their Deposits are marked higher by Rs 5.02 crores at Rs 34.49 crores, the while that their indebtedness to the Reserve Bank stands reduced by Rs 9.23 crores at Rs 42.08 crores. But, with the institution of deficit financing, the Centre was able to meet this liability by drawing down its cash by Rs 5.88 crores to Rs 52.01 crores. There is apparently also an indication of slack season attributes in regard to member bank figures contained in the Reserve Bank statement. For, 'Reserve Balances are sharply higher by Rs 9.40 crores at Rs 103.64 crores; but, then, the State Bank has reported an increase of around Rs 12 crores in cash in hand and with Reserve Bank, so that other Scheduled Banks apparently had to draw somewhat upon their statutory balances with the central banking institution. On the other hand, the decline of Rs 6.33 crores to Rs 108.45 crores in the Other Loans and Advances of the Reserve Bank is surely indicative of an easier banking position, since it would largely relate to reduction of indebtedness by Scheduled Banks.

It is disquieting to note that Balances Held Abroad have further fallen, in declining by Rs 2.11 crores to Rs 9.54 crores. It would appear either that export performance recently has not been satisfactory or that receipts of foreign assistance have suddenly slowed down.

The return of the State Bank for 27 May is largely featureless. Deposits are slightly higher by Rs 2.71 crores at Rs 628.88 crores. However, for the first time this year, the State Bank is free of debt in respect of borrowings from the Reserve Bank. The gilt-edged portfolio is unchanged at Rs 384.22 crores, but Other Assets are shown lower by Rs 6.34 crores at Rs 11.56 crores. With the total of Advances declining by Rs 0.73 crores to Rs 214.12 crores, cash in hand and with Reserve Bank is substantially higher by Rs 12.50 crores at Rs 36.82 crores.

The statutory statement of the 'position of Scheduled Banks as at 20 May 1960 shows that gross Deposits are practically unchanged at Rs 1,977.66 crores against Rs 1,977.95 crores; but, in the relevant week, the State Bank reported a fall of Rs 54 crores in Deposits, so that Other Scheduled Banks definitely experienced an increase of corresponding amount. The beginnings of slack season influence are suggested by the fall of Rs 8.15 crores to Rs 1,127.71 crores in the total of Advances, of which the State Bank accounted for about Rs 2 crores. The rise of Rs 5 crores in the gilt-edged portfolio is wholly ascribable to the State Bank. The accretion of Deposits with other Scheduled Banks has enabled the latter to reduce borrowings from the Reserve Bank by almost exactly Rs 4 crores. In the end result, cash balances are lower by Rs 3.15 crores at Rs 181.17 crores; but, with the State Bank having shown a drop of Rs 12 crores in that week, it is clear that other Scheduled Banks added to their cash balances by roughly Rs 9 crores.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 31 May 1960. Total amount offered was Rs 2,25,00,000. Tenders at Rs 99.325 were accepted in full and those at

Rs 99,310 were allotted approximately 86 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.745 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Calcutta, Kanpur and New Delhi up to the close of business on Monday, the 6 June 1960 and at Bangalore, Bombay, Madras and Nagpur up to 11 A.M. on Tuesday, the 7 June 1960. Successful tenderers should make payment on Friday, the 10 June 1960. Other conditions are as usual.

During the week ended the 27th May 1960 Government of India Treasury Bills for Rs 40,24,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 1 to 4 June 1960 at Rs 99.326 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from the 25 to 28 May 1960 amounted to Rs 1,24,50,000.

Towards Western European Economic Unity?

By
Paul Enzig

It looks as though my forecast that Mr Khrushchev would restore economic unity in Western Europe will prove to be correct. Had it not been for the wrecking of the summit meeting, both trading groups, the Common Market and the Free Trade Association, would be busily engaged by now in preparing for their cold economic war that was to result from the implementation of the Hallstein Plan. It is true even before the Paris failure the Common Market decided to defer the Hallstein Plan for six months. But preparations were made for a major showdown at the GATT conference in Geneva. The United States Government was even firmer than President de Gaulle in opposing the Free Trade Association and had every intention to organise resistance to it at Geneva. Instead, the American spokesman came out strongly in favour of its recognition, twentyfour hours after Mr Khrushchev delivered his unacceptable ultimatum in Paris. So it is an ill wind that brings no one any good. Even though the restoration of Western unity is small compensation for the Paris failure, that is no reason for not being grateful for small mercies.

The Lisbon meeting of the Free Trade Association welcomed the change of heart on the part of the Common Market and expressed itself eager to negotiate a settlement. There are of course no indications on what lines the

compromise is likely to be reached. But the deterioration of relations with the USSR has made it virtually certain that some compromise will be reached, or at any rate an active clash between the rival groups will be avoided.

It remains to be seen how far the British Government will be prepared to go towards joining the Common Market without unduly antagonising (a) Commonwealth interests; (b) British agriculture; (c) British industries liable to be affected unfavourably; and (d) the other participants in the Free Trade Association. But the trend is distinctly towards free trade.

For two years now the cost of living index has been kept stable in spite of the rise in wages, and the Government is most anxious to prevent the impending increases from causing a resumption of the increase in the cost of living. The most effective way to that end would be drastic cuts in tariffs. It is true it would hit hard a number of industries which can only prosper while being protected against Western European competition. But their loss would be the gain of many other industries. That would be small comfort for those firms which would suffer the disadvantages of freer trade. But any unemployment resulting from such a change would be easily absorbed, judging by the fact that proportion of the unemployed has now declined to 1½ per cent. Continental competition would force prices down, and this would offset the effect of rising costs due to higher wages.

The Government can, we'll afford to face the unpopularity of free trade in Lancashire and elsewhere. The next general election is far removed and the Opposition shows signs of disintegration. Tory Rightwing opposition to liberalisation, too, can be ignored. Even some measure of weakening of the economic links with the Commonwealth, which until recently would have been politically impossible, might be found acceptable, owing to the realisation by Government of the importance of gaining access to the expanding markets of the increasingly prosperous Western European countries. The German miracle has been followed by a French miracle and an Italian miracle, so that between them these countries, together with the Low Countries, constitute a most important market which the Commonwealth could ill afford to lose.

Taking all in consideration it would not be surprising to find that Britain will go a long way towards meeting the Common Market point of view. It remains to be seen how far her trading partners in the Commonwealth and in the Free Trade Area will be prepared to follow her, and how far France will be prepared to waive her resistance to Britain's inclusion in the Common Market. Anyhow the next three or four months are likely to be of decisive importance.

Post-summit Tremors

THE political Everest that unexpectedly turned out to be a political Vesuvius is still smouldering. Rumbblings are still heard but whether they are portents of fresh eruption or only the final spurt of an already spent-force is an open question. Perhaps it is the former. Marshal Malinovsky's reported order to the Chief of the Russian Rocket Forces 'to strike at any base from which a plane took off and infringed Soviet Air Space' has an ominous rather than 'looking-back-in-anger' ring. Certainly, it has struck terror in the hearts of the unfortunate countries who have formally got entangled in the mesh of regional pacts. The Soviet defence Minister's 'warning'—he distinguished it from 'threat', a distinction with no appreciable difference as far as these countries can see—included the prospect of not only the shooting down of intruding planes but also of 'striking back at the bases from which the violator plane took off'. He also added for good measure that the 'violation' he had in mind was not only of Soviet territory but also of 'socialist countries'. Whether are not the acrimonious exchanges over the U-2 incident had made countries like Pakistan and Norway uneasy, the present warning is sure to send them into panic. Pakistan's denunciation of the US use of Peshawar for the spy-flight in the recent meeting of the SEATO and Norway's decision to make reconnaissance flights conditional on express prior permission are indices of the state of mind of the committed allies of the US. The Marshal's speech announcing these orders contained some heavily ironic references about the illusions of the West regarding the striking power of Soviet Rocketry. The provocation was the doubt expressed about the way the American spy plane was shot down. The Soviet Defence Minister boasted that the West had as yet no planes and with 'such a ceiling which our Soviet rockets could not hit'. A further indication that the Cold War has plumbed new depths below the freezing point was had in the formal disavowing of 'camp David spirit', from which the only moral now drawn is that the 'imperialists are not to be trusted'.

All this does little to relieve the oppressive sense of human inadequacy that has been caused by the failure of the summit. In effect, all the old cold-war postures are once again coming into fashion. Phrases we had learnt to forget come back to mind with a vivid shock of recall. If Marshal Malinovsky had had a 'facile gift of phrasing, he might have referred to "instant massive retaliation at times and places of our choosing" is one. Even the justifications have an old ring, though, here the Marshal has a fortuitously valid case in the American mistake. The intruding plane has to be shot because one does not know whether it carries a nuclear bomb. Mr Dulles, in the complacency no longer available in view of present relative strength in striking power of the power of strategic Air command, used to make similar excuses for retaliating even before the striker had begun to hit. The assumption in both cases is that it is right to shoot first and then ask the questions. It did not trouble Mr Dulles, that such subsequent inquest may be highly embarrassing to the

country quick on the trigger; for it may well turn out that the intruder was no dealer of death but one who had merely lost his way. An even more horrifying prospect is the unleashing of a nuclear war from which we all thought we had shrunk to such an extent as to make it impossible. But the Marshal's exercise in brinkmanship makes all the world wonder whether it can ever be sure of waking up alive the next morning. Even if such a war is still unlikely, the immediate consequence of this threat is further stiffening of attitudes on the other side and more frenzied thinking on newer kinds of weapons.

The Marshal may, of course, be bluffing. But who would gamble on that? Nor can we draw much comfort from the guess that all this is the result of some internal convulsion inside the Soviet Union and the communist world. For, if Mr Khrushchev is merely putting on an act because of internal stresses, there is no certainty that the stresses may not eventually overwhelm him. If, on the other hand, he has himself become disillusioned about co-existence, the prospect is equally bleak.

The pity of it all is that the US has so hopelessly placed itself in the wrong, first by allowing the spying on the eve of the summit and then by trying to justify it, that it has no firm moral ground under its feet. The result is that it finds itself wobbling when it tries to strike an attitude moral enough to denounce Soviet brinkmanship. At the Security Council meeting, no one was really convinced of the American justification of the spy flight. But the smaller nations on the Council showed enough awareness of the complexities of international political ethics to thwart Russian efforts at impaling the US on the stakes. Perhaps even Russia had not hoped anything beyond the squeezing the last ounce of propaganda advantage by this reference to the Security Council. The earlier effort (by smaller nations) to salvage the summit was forlorn, but the call to keep talking—presumably at lesser heights, from which a fall may not have such shattering consequences—gives enough time to recover the lost tempers. But there is not much cause for immediate hopes, since forces far beyond the power of smaller nations to control are operating. What is even worse luck, even deferred hopes may be unfounded, if Marshal Malinovsky's threats are genuine. No doubt, words have been eaten before and will be in future. That is one cause for comfort. But the real hope of mankind is still the one that is to be wrung out of despair; mankind cannot, despite every evidence to the contrary, have lost its instinct of self preservation to such an extent as to deliberately set about destroying itself.

For a Prosperous Madhya Pradesh

IN the techno-economic survey of Madhya Pradesh, the second major State survey completed by the National Council of Applied Economic Research, there is to be found, as in the first one covering Bihar, that integrated

Indian Finance
Established 1929

4 June 1960

The Wise Man in his attitude towards the World has neither Predictions nor Prejudices. He is on the side of what is Right—The Analects of Confucius.

assessment of the resources potential as a sound and scientific precondition for integral planning. This assessment has logically led the National Council to suggest a comprehensive ten-year plan for a prosperous Madhya Pradesh—a plan which, on the face of it, may look somewhat ambitious, involving as it does a total investment of Rs 2,090 crores over the 1961-71 period. This magnitude of investment, if it comes to be accepted as both possible and necessary, will be higher by Rs 290 crores, as compared to a possible Rs 1,800 crores which the State could reasonably expect on a per capita basis if the aggregate investment visualised for all-India over the Third and Fourth Plan periods is of the order of Rs 25,000 crores. If the National Council has considered it necessary to suggest some weighting in favour of Madhya Pradesh, it is because there are vast untapped potentials of agricultural, mineral and forest resources in the State and relatively larger investments are required in the infrastructure, that is, in the power and transport sectors, for exploiting those potentials. There can be no two opinions on the need for such weighting in favour of a State like Madhya Pradesh which is a by-word for poverty and agricultural and industrial backwardness.

This backwardness and poverty alike are reflected in the low per capita income of Rs 247, as of 1957, in the State as compared to Rs 281 in the same year for India as a whole. An index of agricultural backwardness in particular is to be found in the fact that the average acre-yields of such crops as wheat, rice, maize, gram, sugarcane, cotton and groundnut range between 66 per cent and 87 per cent of their all-India average yields. This low level of productivity is mostly attributable to the circumstance that only about 5 per cent of the cropped area in the State is irrigated, as compared to 17 per cent in all-India. And this, in turn, is responsible for the very low intensity of cultivation practices in the State. Against this background, the high participation rate (50.7 per cent), that is, the percentage of working force in agriculture to total rural population, which is very much higher than in most other States, means that the agricultural population can eke out, only a bare subsistence from the land. The National Council has, therefore, rightly suggested that as much as 21.8 per cent of the proposed 10-year aggregate investment of Rs 2,090 crores be made in the sector of 'agriculture and allied activities including irrigation'. If this proportion is much higher than the corresponding figure of 15 per cent estimated for all-India, it has necessarily to be so in the conditions of agriculture in Madhya Pradesh.

A similar reasoning applies equally well to the sector of large-scale industries in which the suggested investment will account for 25.5 per cent of the State's aggregate ten-year investment, as against the corresponding esti-

*Techno-Economic Survey of Madhya Pradesh. The field survey was carried out last year, under the general direction of Dr. P. S. Lokanathan, by a team headed by Mr. M. V. Divatia (Project-Director). There were 13 economists and technical officers and four foreign and two Indian technical consultants in the team.

mate of 20 per cent for all-India during the same period. The need for a relatively higher level of industrial investment is underlined by the fact that the sector of large-scale industries now accounts for only about 4 per cent of the State income as against the 10 per cent of national income for India as a whole. If 'mining' is also considered together, it will be found that these two sectors alone will absorb 32.1 per cent of the State's aggregate investment as against the corresponding estimates of 23 per cent in all for all-India. That the larger part of the proposed investment in these two sectors together will have to be made by the Centre in the public sector is understandable in the context of the Government's overall industrial policy as also of the known inadequacy of surpluses within the State for industrial investment. The National Council has no choice in the matter. If, still, it has visualised an aggregate private industrial and mining investment, over the ten-year period, of about Rs 154 crores, it may be because private capital from the more prosperous States is expected to be attracted to Madhya Pradesh in the wake of large-scale public investment in heavy industries and in the power and transport sectors.

PHASING OF INDUSTRIAL INVESTMENT IN M.P.

Industry	(Rs Crores)	
	Third Plan	Fourth Plan
Steel (New)	...	220.0
Steel (Expansion)	150.0	...
Heavy Electricals	24.0	20.0

Caustic Soda	...	2.0
Coal Carbonisation	3.8	3.8
Refractories	1.0	3.0
Cement	5.3	5.3
Paper	14.5	10.5
Sugar	2.0	2.0
All other proposed industries	6.4	3.4
Total	251.5	285.0

An industrial investment of the order of about Rs 535 crores would not be possible without a correspondingly heavy investment in the power and transport sectors. The deficiencies in these sectors, from the point of view of development of industrial and commercial centres, are due to the twin circumstance that railways and roads in Madhya Pradesh were originally designed for through traffic between the northern and southern parts of India and the great power potential of the State has not hitherto been investigated for historical reasons. Since investment in the infrastructure mostly belongs to the public sector, the National Council has rightly suggested that the larger part of the outlays on power and transport be made by the Centre and the State Government together, with the private investment (Rs 71 crores over the ten-year period) being limited to road transport. Again, since the proposed investment in power and transport is absolutely necessary for the establishment of industries, the National Council's plan for Madhya Pradesh is essentially an industry-oriented plan. Even the relatively high investment in agriculture is partly intended to make more raw materials available for the agro-industries.

If this industry-oriented plan for Madhya Pradesh comes to be implemented broadly on the lines suggested by the National Council in the light of its careful appraisal of the resources potential, the State may well rank as 'one of the highly industrialised as well as agriculturally prosperous States by about 1971'. An average annual growth rate of about 8 per cent in the total State income, or about 5 per cent in the per capita income, during the period 1961-71, achievable with a total investment of Rs 2,090 crores and an assumed capital-output ratio of 3, may well

be sufficient to bring the economy of Madhya Pradesh to the stage of self-sustaining development, although the National Council is not dogmatic on that score. That nearly four-fifths of the entire investment of Rs 2,090 crores will have to be made by the public sector to ensure the basic conditions for a 'take-off' is an eloquent commentary on the role of public investment in an under-developed economy. It is obvious that in the absence of such public investment, the private sector in agriculture, industry, mining, transport and commerce will be condemned to a state of prolonged stagnation.

But the question is whether, as far as the proposed plan for Madhya Pradesh is concerned, public investment is likely to be made according to the pattern charted by the National Council. There is good reason for optimism on this score. For one thing, it is highly probable that the proposed investment of about Rs 645 crores by the Centre will be actually made over the ten-year period because the larger part thereof will be in mining and heavy industries for which the State has abundant reserves of coal, iron ore and limestone and in railways for which there are already more schemes than can be conveniently implemented during the period. For another, private investment of the order of Rs 453 cores over the period may also be reasonably expected to fructify because it is relatively not much and the larger part of it will be in agriculture, mining, construction and road transport. The only difficulty will be in respect of the public investment of the order of Rs 992 crores by the State Government

itself over the period. It is here that an element of uncertainty is foreseen by the National Council which has estimated a gap of Rs 210 crores in the State's own resources after taking into account all possible additional resources from tax and non-tax sources, small savings, market loans and Central assistance. This gap virtually represents the proposed weightage in favour of Madhya Pradesh and the case for increased Central assistance to meet it is, therefore, pretty strong.

Financial Position of Sugar Industry

REHABILITATION of plant and machinery is one of the urgent problems confronting the sugar industry in India. Most of the factories came into existence over three decades ago. In the meanwhile, the consumption of sugar has shown a steady increase and in the coming years the demand for it is bound to go up still further. It is therefore important to ensure that the sugar industry is always kept at a high level of efficiency so that apart from meeting the internal requirements it may also be possible to build up an export market for this commodity.

What then is the present financial condition of the industry? In the presidential address at the last annual session of the Indian Sugar Mills Association, a reference was made to the 'alarmingly poor' financial position of the country. The President said: 'Many units are actually incurring losses and returns on capital and also reserves are declining. The industry in the north, particularly, is faced with near-crisis conditions'. The President of the Indian Sugar Mills Association emphasized the need for 'large funds' because the normal depreciation would be 'wholly inadequate to cover even a fraction of the rehabilitation charges'.

Now that the full text of the Tariff Commission's report is available, it will be worthwhile to examine in some detail the financial position of the sugar industry. The Commission, it will be recalled, has not favoured a uniform allowance for rehabilitation to all the units in industry in the fair price selling of sugar. It has recommended that the Government should make the necessary arrangements for making available financial assistance to the units in the sugar industry on similar lines as those made for cotton and jute textile industries for the renovation and modernisation of their plant and equipment. Those units which require assistance are asked to make out a case for rehabilitation. The Commission's conclusion is that only a few factories in East UP and Bihar regions require financial help to rehabilitate their plant and machinery.

The Commission has made this recommendation on the basis of the detailed analysis of the working results of the sugar factories in different regions. The relevant particulars are given in the table at the end. It will be noted that some factories are composite units, engaged in the production of goods other than sugar. The figures reveal that 23 units in the East UP producing only sugar made gross investment in fixed assets of about Rs 89 lakhs between 1953-54 and 1957-58. Their fixed assets had depreciated to the extent of about 65 per cent of the value of gross block, and their net worth, that is, paid up capital and reserves, declined steadily mainly as a result of the depletion of reserves caused by lower profits. But their surplus and depreciation funds amounted to about 99 per cent of the value of gross block in 1957-58. A portion of the surplus was used as working

capital but a substantial part ranging from 42.6 per cent in 1953-54 to 70.6 per cent in 1957-58 was invested in shares or debentures of associate companies or shares and debentures of other joint stock companies. The position of the seven units in the same region producing sugar and other products was also satisfactory, considering the fact that the reserves plus bonus issues constituted in 1957-58 about 169 per cent of their original paid-up capital. The study of the financial results of the factories in the other regions, as given in the following tables, goes to show that by and large the industry has done well. The rate at which the industry has expanded and increased its capacity during 1954-58 was much greater than that in the preceding period of 1937-54. According to the Commission the gross fixed assets increased by Rs 33 crores between 1954-58 as compared with Rs 39.65 crores between 1937-1954. The Commission argues that since the owners of the industry who invested originally Rs 31 crores have increased the value of their equity to Rs 58 crores it is they should be called upon to bear the burden of carrying out the necessary rehabilitation programme. The Commission says that it is "against canons of social justice to claim that, since they have applied the resources they had for expansion, the consumer should now be called upon to pay the cost of their rehabilitation programme which,

all the available statistics show, was delayed so long". The Government has accepted the recommendation of the Commission, and has pointed out that financial assistance will be given for rehabilitation more or less on the same lines as those given for the cotton and jute industry. The reaction of the sugar industry to this recommendation is not yet known. But it is to be hoped that Government will adopt a helpful policy so as to expedite the programme of modernisation. In the case of the cotton textile and jute industry, the process of rehabilitation has not progressed as rapidly as it should have; and it is necessary to ensure that further delay does not take place in regard to the sugar industry. The Government's concern to protect the interests of the consumer is understandable. It is all the more important therefore that rehabilitation of the sugar industry is carried out as quickly as possible. The Exchequer at the Centre and in the States is deriving substantial revenue from the sugar industry every year. The Centre alone raises about Rs 58 crores per year through excise duty. State Governments collect about Rs 10 crores per year as cane cess and although the object is to develop sugar cane, only a meagre portion of the revenue is spent for this purpose. Besides, the sugar factories pay Rs 1 crore per year as cooperative societies' commission. Therefore, there should be no difficulty in providing the industry with timely and adequate financial assistance to enable it to expedite its scheme of modernisation.

Change in Turkey

WHETHER the failure of the Paris conference shaped events in Turkey need not be debated, but the fact of a quiet, orderly revolution, really stands out. There are no ancient institutions to abolish—the Sultanate went before the Caliphate—no traditions to scrap eagerly. Only the dismantling of the Police State of the so-called Democrats has to take place before a constitution to suit Anatolian desires is prepared. Turkish alignment with the west, politically and culturally, is achieved by the Army's sudden plunge into politics. Turkish antipathy to the people's democracy in the Balkans is taken for granted, though neutralist sentiment is bound to develop in Turkey as in Greece after the fall of Menderes. The very fact that the next head of the Government will be Ismat, the lieutenant of the Ghazi and the victor of Mudania where the convention created the new Turkey may convey to the world the impression that Turkey is going back to the principles and policy of the Thirties, clinging to nationalism rather than entangling alliances. That policy paid, for the Treaty of Lausanne was amended in 1936 to suit Turkish desires and Turkey got the Sanjak of Alexandretta, the only scrap of territory retrieved from the old Ottoman empire.

The cardinal difference between the Iraqi and Turkish revolution, between Egypt and Turkey's attitude, deserves emphasis in view of the international recognition accorded promptly to the change of regime. It is admitted implicitly that Menderes had misused his parliamentary majority since 1957 and had destroyed civil liberty and put curbs on the Press as well as politicians. Hence the change in Turkey is more a restoration of the status quo ante than a start on a different course, though some glimpse already an adaptation of parliamentary rule to suit Ankara's changed circumstances. The work of Kemal Pasha is going to endure with the Republicans getting the approval of the Army—a stable element because the prewar regime had eroded the rights of the people and misused the power vested in it by the voters. The revolution was marked by no barricades—it was quite

like the change of regime in the Lebanon three years ago when the fact of American intervention was faced calmly and the war of nerves in the Middle East was got over. There is no such competition for favours but it may be suspected that the U-2 episode will make Turkey reluctant to either provide bases or to range herself indefinitely against the Soviet Union.

The revival of nationalism in Europe since 1957 is carried farther by the cataclysmic changes in Istanbul and Ankara. To that extent, Asian countries will sense that Turkey has parted company with the USA, also that anti-Russian sentiment is not the basis of Turkish policy, because the Army demonstrated effectively its own lack of confidence in the Menderes government and the Colonels made it clear that Turkey, not her allies, comes first with them. The difference as compared with the changes of 1958 in Pakistan call for passing mention mainly because Turkey is not a Succession State but the rump of an empire, that goes back to Byzantine days. The post-war Balkan pattern may be upset to some extent, since Turkey may elect to follow Yugoslavia, accept US economic aid for industrial growth but ward off demands for control of her own strategic positions including the Dardanelles.

Moscow will certainly be disinclined to make demands on Turkey in future, repeat charges or assume that precautions in Bulgaria and Rumania must always be taken. The change of regime may even help the Greeks in Cyprus to revive the demand for union with Greece, but the Turkish minority in Cyprus may look hereafter to Ankara and not to London for upholding its rights. The Russians may try to offer aid for development plans, provide markets for chrome and tobacco and regain a footing lost in the Forties by a careless demand for Kars and other provinces.

New Industries

Industrial licensing, to go by the record for January alone, is more liberal this year and the use of metals by manufacturers is to be encouraged since shortage of iron and steel is ending. The undertakings approved by the Government are not so large as varied and production covers springs as well as castings, tin sorter machinery as well as conduit pipes. A curious item may be found in the diversification of activities by a flour mill engaging in the production of electric motors and the Indian Telephone Industries producing condensers for fluorescent lighting. If concerns in Moradabad get almost automatically licences for metal ware, the manufacture of minor electrical equipment in Bombay seems to be the rule and Rallis' expansion of fan manufacture is now definitely on the cards like the manufacture of flexible wire and cable in Bombay. The local manufacture of heaters also is now contemplated and political organisations will approve the proposal to make amplifiers as also tape-recorders.

The production of tipping wagons by the Associated Cement Company is part of its development programme to use its mines and quarries fully. The entry of Kirloskar into the refrigerator field under a phased programme seems logical but the most impor-

tant item in the licences issued in January is that given to EID & SF for its Ennore project to make 4,680 tons of ammonium phosphate per mensem. This is the scheme that was mentioned at the annual meeting on April 29 as derived from its arrangement with Simon-Carves.

Of equal interest is the scheme of New Central Jute to produce 40,000 tons of soda ash, making it clear that like Rohtas, New Central is now a composite industry. The Plans of Boake Roberts to produce fine chemicals and essences at a factory near Madras City calls for bare mention like the inception of resin making for plywood at Dandeli in North Kanara. Spencer & Co in Madras has been licensed to make carbon dioxide and the Indian Oxygen Co means to make both nitrogen and argon.

Textiles do not figure much in the programme of current development but paper makers are still looking ahead and Bengal Paper is to have a capacity of 11,400 tons of printing and writing paper and some one has an approved scheme for a mill in Jilwarpur, Darbhanga district, may be to use local bagasse for paper making. The expansion of soap output by making 100 tons of liquid soap is part of the diversification of interests undertaken by India United Mills. The steady recovery in the shares since October rests on the basis of the Indo-groups getting on to manufacture of textile accessories and equipment. Also of more significance perhaps is the entry of Assam Silimanite into the field of refractories production in Ramgarh with as much as 44,720 tons per annum. When oil companies produce chemicals, it is only natural for mining interests to turn to refractories. One other point calls for notice. Tomco has a new plant at Ghaziabad to produce laundry and toilet soap as also glycerine and the recent spurt in the shares in Bombay is perhaps based on the prudent investor's appreciation of greater earning potential and the chances of a new issue to finance expansion on the familiar Tata lines.

The State Bank

The opening of the 400th branch of the State Bank at Kairana in UP by Mr Morarji Desai, Union Finance Minister, marks the fulfilment of an obligation that was laid down by the State Bank of India Act. The relevant section of the Act states that "notwithstanding anything contained in sub-section (4), the State Bank shall establish not less than four hundred branches in addition to the branches referred to in sub-section (3) within five years of the appointed day or such extended period as the Central Government may specify in this behalf..." That it has been possible to reach the target of branch expansion within the specified period is owing to a variety of factors by no means fortuitous.

As a concomitant of such growth there has taken place a spectacular increase in the resources as well the business transacted by the State Bank. The total deposits of the Bank which stood at Rs 188.0 crores in June 1955 have steadily risen to Rs 615.0 crores in April 1960 and formed 31.9 per cent of the total deposits of all the scheduled banks in India as compared to 19.1 per cent in June 1955. There was also a parallel increase in the Bank's advances including bills from Rs 110.0 crores in June 1955 to Rs 185.3 crores in June 1959. With an increase in the gilt-edged investments of the Bank from Rs 87.0 crores in June 1955 to Rs 297.4 crores in June 1959 the role of the Bank in the gilt-edged market assumed prominence.

Branch expansion formed only one phase of the transformation that was envisaged for the State Bank by the All-India Rural Credit Survey. To recall its recommendations, the object was "the creation of one strong, integrated, State-sponsored, State-partnered commercial banking institution with an effective machinery of branches spread over the whole country, which, by further expansion (including further, but minor, amalgamation where necessary), can be put in a position to take over cash work from non-banking treasuries, provide vastly extended remittance facilities for cooperative and other banks, thus stimulating the further establishment of such banks, and, generally, in their loan operations, in so far as they have a bearing on rural credit, follow a policy which while not deviating from the canons of sound business, will be in effective consonance with national policies as expressed through the Central Government and the Reserve Bank". There are ample indications that the Bank is striving its utmost to live up to this role. A successful debut has already been made in the provision of funds to small-scale industries, while considerable extension of facilities for agricultural financing has also been effected.

Fair Prospect

An encouraging estimate of the prospects of engineering goods exports has been made by the Chairman of the EEPG at press conferences in Madras and in Bombay. The estimate is firmly based on the steady increase in exports during the last three years and on the findings of the Council's delegation to the Western Hemisphere. Exports have increased from Rs 4 crores in 1958 to Rs 6 crores in 1959, and the record of the first four months of the current year shows that the target of Rs 8.5 crores has not been set too high. The development of new markets in the USA will help to maintain this rate of increase and Mr Agarwal envisages that engineering goods exports will reach the level

of fifty to sixty crores in another five or six years. Indian industry is now in a position to export different types of iron and steel castings. The level of exports indicated by Mr Agarwal could be reached even earlier if the interest stimulated by the Council's delegation to the United States is followed up by the establishment of feeder industries in India. The availability of finance from counterpart funds under the Cooley Amendment to PL 480 should be an incentive for joint Indo-US ventures in this field which will ensure a steady market for Indian engineering manufactures in the United States.

The success of Japan in the US market has now created confidence among the exporters who hope to raise targets on the basis of quality and prices. But compared with Japan the export organisation is weak and Mr Agarwal pleaded for a special export house to deal in engineering goods destined for markets abroad. The coming exhibition in Ceylon may help to interest overseas buyers and the rise in light engineering exports this year promises some benefits like the reduction in shipping freights from Indian ports made on representations by exporters of sewing machines, fans, GI buckets, etc. Shipments of engineering goods to Burma, Ceylon and Malaya this year are rising and the promotion Council had derived benefits from the surveys made by missions. There is now an export trade in razor blades, printing types, steel trunks and furniture and the market may not be confined to Indians abroad. Umbrella fittings also go abroad and the higher price of stainless steelware and cutlery has not apparently affected the export trade.

FOREIGN NOTES

US Budget Prospects

It looks as though the United States will have a balanced budget in the current (1960) fiscal year ending this June 30, after all. And it is even beginning to look as if the net surplus in the US Government's accounts will be larger than originally estimated.

News of this sort is always welcome, of course. But it is doubly welcome now, in that it lays to rest the oft-heard fears that government's budgetary position would not come up to expectations.

Authority for this latest optimistic appraisal of the government's finances is none other than Budget Director Maurice H. Stans. In a Congressional appearance last week before the Ways and Means Committee of the US House of Representatives, he stated that that the Eisenhower administration now expects to equal or to slightly better the \$200 million surplus forecast for this fiscal year.

The general view at this moment seems to be that the surplus will approximate \$300 million. There even is some speculation—unofficial, of course—that it could go as high as \$500 million.

That original \$200 million projection was made last January when President Eisenhower sent his budget message to Congress. However, because of disappointing corporation tax collections, there has been some fear that this surplus, slim at best, would not be achieved—indeed, that a deficit might result. Corporate tax receipts have been running more than \$500 million below expectations, largely because last year's lengthy steel work stoppage has kept below anticipated levels the earnings of many companies in the steel industry and in related industries.

But it is evident now that other important influences have combined to offset this budgetary disappointment. For one thing, net expenditures will not be, as large as expected. For another, a marked increase in individual income tax receipts, reflecting the sizeable gains in the total personal income of all Americans, has gone far toward making up for the reduced corporate tax revenues.

Statistically, when all the accounts settled, both budget receipts and expenditures will probably be a few hundred million dollars below the January estimates of \$78,000 million and \$78,400 million respectively. However, the drop in spending promises to be a little larger than the drop in tax revenue.

Contributing to the reduction in outlays are improvements in the fiscal positions of the US Commodity Credit Corporation (CCC), keeper of the nation's agricultural reserves, and the Export-Import Bank of Washington, one of the nation's major international lending institutions. Both of these agencies are benefiting from unexpectedly large cash returns which are helping to reduce their net outlays.

The CCC is doing better than expected because it has been exporting more government-held cotton, and is paying out less in corn price supports to American farmers, than it had anticipated. The Export-Import Bank has been benefiting from unexpectedly early repayments of some of its loans to foreign governments. In addition, lower interest rates have reduced the estimated budgetary cost of carrying the US public debt.

But it is the revenue side of the ledger that offers the most striking evidence of economic improvement. An upsurge in individual income tax receipts has shown up in the tax cheques the US Treasury Department has been processing since April 15, the final deadline for completing the tax payments covering the previous calendar year. And this upsurge is the obvious result of rising personal incomes which went up, in the aggregate, from an annual rate of \$380,000 million in August 1959 to a rate of \$392,100 million in December.

What is more, the rise has continued into 1960. During April, the latest month for which such data are available, total personal income hit an annual rate of \$397,400 million. For the first four months of 1960, it averaged out at an annual rate of \$394,300 million, nearly \$21,000 million or about 5.5 per cent higher than in the corresponding period of 1959.

This income rise, it should be noted, represents a substantial advance in the real purchasing power of the American people. After adjustment for price changes, the year-to-year income gain still amounts to a sizeable four per cent.

The Taiwan Issue

F. M. Montgomery's visit to China has produced official disclaimers in London but his opinions are not likely to be ignored. The argument that Formosa belongs properly to China has been endorsed and the cordial reception at Peking is not the only reason for the case presented. The chances of a change in US foreign policy need not be discussed, but it is patent that UN trusteeship for Formosa is ruled out, as also the theory that China is divided like Korea or Vietnam. No plebiscite can be held on the island to ascertain whether Chiang-kai-shek commands complete local loyalty. But the Chinese Government is likely to press its own claim as part of its general anti-American

policy. The island republic with 10 million people mostly refugees, has acquired undue importance and as a US protectorate retained international standing also. The failure of the Paris talks may force the USA to examine whether Taiwan can be the perennial issue in the cold war or whether the exclusion of China from the UN is the price to be paid for keeping the US Seventh Fleet in the Central Pacific. Conventional views on defence are changed by the US episode and in the missile age a big navy does not seem impressive.

F. M. Montgomery's views on China may be ignored in Washington but in Britain, they are bound to affect current thinking on world problems. The fact is that Taiwan is kept alive by US subsidies and its rice and sugar exports are not enough to foot the heavy bill for defence. The problem of withdrawal is made doubly difficult by the re-election of Chiang-kai-shek. And if an attack is mounted by China very difficult issues will arise though Japan is now an ally of America. The Eisenhower visit to Tokyo may lead to a clarification of US aims in the Far East and the failure of the Rhee regime even makes it urgent. The chances of an agonising appraisal (after the Presidential election) may be kept in view because the hope of a summit meeting is not yet dead. The distaste for negotiation with China may even be removed by the association of uncommitted nations which see the solidarity of the Communist block even after M. Gromyko's complaint failed to impress the Security Council.

Independence will come to Somalia as also to the Belgian Congo. But while riots keep the Congo's name in the papers, the future of Somalia is hardly mentioned. An election has in February made it clear that the end of Italian rule was desired by the people and the unification of Somalia with British Somaliland was also desired. The new element is the local mistrust of Ethiopia. But the guarantee of a subsidy to a perpetually insolvent State makes for apprehensions abroad. There have been disputes over grazing rights and Ethiopia feels that her access to the coast must be ensured by international treaty.

The USA is very much interested in the development of Ethiopia and if a greater Somalia to suit the people on the Burning Coast is created, there, perhaps, will be a conflict, though the USA will take care to see that Somali minerals are not left to Egypt which feels that Arab influence must extend rapidly beyond the Red Sea, as it is a part of S. W. Asia. Britain does not favour giving much to the Somali tribes out of Kenya or other territory, mainly because a lot of money was spent in the past on chasing the Mad Mullah and the Somali territory has yielded only a little gum and hides and skins for sale in Aden.

Much depends also on French evacuation of Somalia territory because control of the Jibuti-Addis Ababa railway is vital for a new republic that can just preserve its independence against Ethiopian pressure. The locally entrenched Italians are likely to retain commercial influence always in Somalia and may ship salt to the East. But Britain must be willing to pay for the Somalia after the union of territories even if the Horn of Africa is as unpromising as Cape Horn. Unlike Libya, with its oil, a counterpoise to Egypt, the territory has no value in European eyes and past promises to the Somalis have only bred local discontents and created a middle class that makes politics an end in itself. If Somalia collapses nobody will care to move in because the desert tribes will revert to the conditions of the past and Ethiopia will be told that Somalia is or can be a buffer against Egyptian designs. As a ward of the UN, the Eritrean territory has done well for itself but the future is rather dubious. Somalia is not, like Afghanistan, the recipient of Russian aid plus US bounty. It is not like Liberia endowed with rich iron ore ready for shipment to the USA. It is going to be the world's newest poor relation.

Cambodia

The recent election in Laos held to decide what direction her own foreign policy should take may have influenced Cambodia. Not the fear of Chinese intervention in her affairs nor the intrusion of South Vietnam may be the reason for the neutralist King to hold a referendum. Uncomfortable in relation to Siam, the Kingdom of Cambodia cherishes not only neutralist ambitions but hopes of US aid on a large scale. Mr Chou-en-Lai's recent visit gives added importance to the proposed vote which will give Prince Norodom a doctor's mandate. The elections are to be free and open, but not supervised. But the whole object is to get popular approval for the policy of a King who may be regarded as the daring young man on the flying trapeze. A referendum is one way of scotching local communism. Previous association with France may well explain Cambodia's recourse to a Napoleonic device. The outcome will be a demonstration of confidence in the King by his five million subjects. Buddhism is a political factor as in Burma, and the convincing defeat of the Reds by U Nu's party may help the court to get extra strength. It may also lead to more US purchase of rubber, kapok and pepper from the Mekong valley. Mineral development and extraction is ill-developed as compared with the Federation of Malaya and the election is to be taken as a prelude to development on lines similar to that of Malaya where Japanese capital has flowed into joint ventures.

STATES NOTES

Climate for Industrialisation

The UP Government claims exceedingly good results for the steps it has taken for creating the proper climate for industrialisation of the State. The claim is verifiable from figures of additional employment created, extent of loan assistance made available and extent of self-help evoked. So far as employment is concerned, every Rs 3,500 invested in the small-scale sector has been able to find direct employment for an unemployed hand. Similarly for every rupee of loan help that the States small scale industries sector received from the Government, it has been able to supplement it with self-help to the tune of Rs 2.6, while the all-India figures is only Rs 2.

State participation in the development of the small scale sector by means of loan aid through various lending agencies has also been considerably stepped up, and during the last 15 months an amount of Rs 1.50 crores is reported to have been made available to small scale units. Overdraft facilities from the State Bank to meet the needs for working capital amounted to Rs 75 lakhs during the last two years. The target of facilities from the State Bank during the current year is expected to be raised to Rs 2 crores. Encouraging progress is also claimed in respect of the utilisation of the credit available from the State Financial Corporation for hire purchase of machinery by the small units. UP which has lagged behind West Bengal, Bombay and Madras in the utilisation of such credit so far, hopes to head the list in future.

Evidently the subject of industrialisation is being treated as a "life and death" question. It was such earnestness which the State's Chief Minister Dr Sampurnanand sought to drive home by his slogan "industrialise or perish". The Third Plan outlay on the small scale sector is sought to be raised from the original figure of Rs 21 crores to Rs 25 crores and greater attention will be paid to the development of depressed areas.

Unemployment Enquiry

Though largely rural in character, the problem of unemployment has other confusing aspects. The Bihar Government is one of the few states to have the problem thoroughly inquired into by a Committee constituted for the purpose in 1954. The Committee consid-

ered all possible avenues for new employment and recommended measures for increasing employment opportunities in the State. After nearly five years since the Government took up for implementation the suggestions of the Committee, the unemployment problem is not found any the less severe than it was when the Committee was set up.

It will be agreed that the problem almost everywhere is of such magnitude as not to admit of any short-term solution. Development has to be stepped up along all lines such as intensive farming, pisciculture, mining, industries etc for a measurable reduction in unemployment. So far as rural unemployment is concerned, a slight mitigation is the most that can be expected from the present efforts of the Government. Educated unemployment is also inevitable in so far as the rate of progress in economic development falls short of the rate of expansion in education. Though a developing economy tends to expand the field of employment for the educated unemployed by means of converting a good part of wage work into salaried work, the trend in educated employment in India has not confirmed this connection. It is generally on expansion of education that most State Governments place reliance for providing jobs for the educated unemployed. Single teacher schools and high ratio of teachers to pupils form part of the measures that are being implemented on a national scale. Revision of school and university syllabus to suit the technical and technological needs should also be helpful in reducing unemployment.

The Bihar Committee also considered the problem of unemployment among women and made several suggestions with a view to providing more opportunities for women of middle class families. The growing demand for ready made garments is considered to provide very appropriate avenue for the self-employment of middle class women.

Bogus Firms

A startling increase in the number of bogus firms making money by racketeering of foreigners has been reported from the UP. The police investigations reveal the existence of as many as 30 such firms which prey on foreigners. Such firms have been known to exist in the State since 1956 when a few cases came up for investigation. That their number should have increased since then is indeed strange and would seem to indicate lack of proper vigilance on the part of the authorities. But the police have been helpless in the face of a problem that is difficult to track down for want of proper evidence. The victims of the racketeering are mostly foreigners and their evidence is indispensable for conviction. This, however, would

involve them in a costly trip to this country. This is a circumstance that tends to give a freer field for such fraudulent business to flourish. The fact that the foreign victims are not drawn from one country alone but belong to countries as far-flung as the British West Indies, British Guiana, Kuwait, Gyaba, Nigeria, West Africa, Ireland, Malaya, and Singapore is another circumstance that makes conviction of the men involved in such crimes difficult.

Only a microscopic few involved in this business has been known to have been convicted. The majority go scot free because of lack of legal ground for conviction. The State police are up against the most difficult problem they have ever faced. There is only one solution and that is to secure the evidence of the victims on commission in the countries they hail from. This is reported to be receiving the consideration of the authorities.

Mill Industry in the South

The mill industry in South India is not confined to the district of Coimbatore and in fact, the largest textile unit is outside. The annual report of the Southern India Millowners' Association for 1959 indicates that in spite of

cotton shortage and industrial unrest the majority of mills fared better than in 1958 and the larger output of cloth met good demand. Since superfine cloth accounts for only 5.9 per cent of the year's production of 301 million yards the preponderance of medium cloth is now well established. Larger deliveries of yarn to the handloom industry ensured a reduction in mill stocks. Last year South India produced 436 million lbs. or 25.3 per cent of the country's total output, but the year's production suffered by the closure of the Harvey Mills for 65 days which is why output is up by only 33 million lbs. on 1958 total. Since the production of yarn above 40 counts is shown at 6.4 per cent only it is evident that the shortage of foreign cotton hampers the mills to some extent and export incentive schemes do not help very much.

The South Indian mills did not gain much from the scheme for installing automatic looms in 1959-61. The Association asked the State Government to endorse its plea for larger allocation of automatic looms in the southern region because of the excess of yarn following an increase of spindles since June 1957 by 2.1 million. The Madras Government backed the application but the Centre allotted the looms only to the established composite mills because

of its view that new undertakings would not be in a position to export all the cloth produced on automatic looms. The figures relating to the capacity of mills indicate that the number of spindles used or the size of the paid-up capital has no bearing on profits earned although a large, old unit like Lakshmi mills has the advantage of 496 looms to use up yarn. There are hardly any mule spindles now, but only a few mills have automatic looms for instance, Kothari Textiles and Radhakrishna Mills. Anyway B. & C. with 120,288 spindles and 2,788 looms including 2,450 automatic looms stands out easily as the largest unit. The mill statement curiously leaves out Mettur Industries with 25,556 spindles and 603 looms. Undoubtedly the most powerful and prosperous unit in Madras has not furnished data while the Loyal mills of Kolipatti also has not given figures relating to its productive capacity. However, privately-owned units like Gobald Textiles have furnished

data regarding employment and machinery installed. The great differences in size, resources and output stand out as also the fact that South India with 133 spinning mills contains only 48 composite mills (out of 294 in India). The mill industry employing 1,91,637 workers including 28,706 women is the largest organised industry in South India and the mills in Mysore are a long way behind. Though Bangalore mills with 1,157 looms is definitely a major unit and far more prosperous and better known than S.K.R. mills which has set up a branch at Chitaldrug. The millowners' report refers to the 'new power tariff, the persistence of labour unrest despite a rise in dearness allowance paid in Coimbatore and makes it clear that after the adverse experience few mills can stand an addition to the wages bill. The report does not indicate how much staple fibre and rayon yarn is consumed at present, but it is fairly obvious that South India Viscoise when its plant is in

operation in 1961 will command a large market in the South, mainly because the popular preference for rayon will influence the textile industry's output in future to a greater degree than now.

Cooperatives in Rajasthan

The Rajasthan Government have ambitious plans for extending cooperation during the Third Plan. The working Group on Cooperation set up by the Government have proposed the bringing of all the villages and 80 per cent of the rural population within the co-operative fold. This, as the report of the working group has pointed out, calls for the setting up of 8,000 new service cooperatives, with an average membership of 150 to cover 12 lakhs of rural families.

The rural population of the State in 1951 was 130 lakhs or 26 lakh families. The increase in 1961 is estimated at 4 lakh families rais-

ing the total number of rural families to 30 lakhs at the beginning of the Third Plan. 80 per cent of these 30 lakh families would be brought within the co-operative fold by the end of the Third Plan. Considering that by the end of the Second Plan only 7 lakh families will have been covered, the additional number of families that would have to be covered to attain the target of 24 lakh rural families is 17 lakhs.

The report says that the broad objective of the Third Plan is to bring the entire rural population within the co-operative fold, but it admits that it may not be possible to achieve this because of the lack of experience in working out co-operatives. The credit requirements, short medium and long term for the 24 lakh families at the end of the Third Plan is estimated at 4,200 lakhs. Service co-operatives will get a subsidy of Rs 900 spread a period of five years.

The scheme for sponsoring the net work of cooperatives is part of the larger plan for stepping up agricultural production in the State. The other aspects of the work connected with increasing agricultural production are also being seriously taken up. The scheme now being considered for covering almost the entire area of the State with improved seeds during the Third Plan period is worth mention. The additional food production by this measure alone is estimated at 2.5 lakh tons.

Water Problem

The Madras Government have now no illusions about the charitable mindedness of their neighbours. Apparently thwarted in their attempts to get a sizeable supply of water for both irrigation and drinking purposes for this State, they have decided to launch upon what they describe "medium irrigation projects." Every district of the State would be surveyed for this purpose in the coming Plan at a cost of about Rs 27 crores.

Finances are restricted and it is expected the outlay may be cut to Rs 15 crores covering about twenty projects. The Parambikulam Project is always there and Madras Government has high hopes of getting on with it. Mr Pattom Thanu Pillai's stress to consider the scheme de novo notwithstanding.

The irrigation expenditure during the First Plan was Rs 20.19 crores and it was less in the Second Plan at Rs 14.45 crores. Conserving of the irrigation water is given prominence by soil seepage prevention through cementing the bed of channels. The Valgal channels, irrigating Ramanathapuram district, would be remodelled and the Mettur Cauvery canal system in the Tanjore district would be cement lined to lessen seepage of water. At least a hundred channels would be taken for remodeling in the Valgal scheme during the next Plan.

WORLD OF BUSINESS

People's Radio

Consumer comforts have been receiving considerable attention from the Government of India in recent times. There is already a proposal for manufacturing cheap cars in the country. And now the leading radio manufacturers have finalised arrangements with a view to producing cheap radio sets so as to suit the pockets of the common man. The new scheme was drawn up in New Delhi at convention called by the Union Ministries of Commerce and Industry and Information and Broadcasting.

In that meeting the radio manufacturers have unanimously decided to devote more than twenty-five per cent of their production for making the cheap sets. In this endeavour they will receive considerable backing from the Union Government by way of additional imports of component parts required for the industry. According to the present calculations more than 50,000 radio sets capable of receiving medium and short wave stations will be put into the market by the end of the next year, each set costing about Rs 125 including all taxes except the local sales tax. The very fact that the new venture coincides with the All-India Radio's expansion programme to cover the entire population by its medium wave transmission seems to be a good augury for the successful implementation of the plan. Fresh rumours are also afloat about the possibility of reducing the licence fees for the cheap sets by about 50 per cent by the authorities.

It has also been determined to enhance the indigenous production of radio components so as to cater to the entire requirements of the industry within a year or two and thereby doing away with the import. It may be recalled that more than 25 per cent of the component parts required by the industry are at present being imported which accounts for foreign exchange expenditure to the tune of Rs 10 crores a year and the increased production of those parts will undoubtedly be of immense assistance to the country in stopping this heavy drain. Besides, the measures for augmenting the production of transistorized radio sets have also received careful attention from the representatives of the industry. Arrangements have been finalised to utilise 25 per cent of the import quota from the current licencing period for importing transistor valves. It is heartening to point out that the first transistor set under the new scheme

will be made available in the market by the end of this year and another 50,000 sets will be added to this by the end of the next year.

Kosi Makes Headway

The three unit Kosi project estimated to cost about Rs 44.76 crores has made considerable headway. Revealing the progress in the working of the scheme, the progress report states that a sum of Rs 20 crores has already been expended over the various heads of work under the Kosi scheme up to the end of March 1960. The first unit consists of a barrage across the River Kosi about three miles above Hanumanagar. (The work of Unit 1 is expected to be completed by the middle of 1962). The second unit consisting of an embankment has already been completed. The report also states that the Head Regulator for the East Main Canal is practically finished and the left under sluices are nearing the final stages. Excavation driving of sheet piles, concreting and stone protection work of the spillway proper in a length about 500 feet has been initiated. About 20 lakhs of cubic feet of concrete has been poured in the structure of barrage so far.

The construction of the concrete portion of the Barrage and Head Regulators and the prestressed concrete bridge over the barrage has already been entrusted to competent contractors. Orders for the supply of materials worth about Rs 91.50 lakhs has been placed with different firms.

More than 60 per cent of the 236 million cubic feet of earth work involved in the main canal falling under Unit 3 of the project and 80 per cent of work in the branch canals have been completed. The Bharat-Seyak Samaj to which the construction of canal structures valued at Rs 10 lakhs has been entrusted will also carry out earth-work in a number of tributaries. The Kosi scheme when completed besides affording protection against floods, will irrigate more than 14 lakh acres annually in the Bihar State.

In 1949 the Concrete Association had helped Madurai Municipality in constructing low-cost concrete houses. The Association had also exhibited a low cost house with provision of a verandah, living room, kitchen, bath and windows at a cost of Rs 1,750. This model low cost-house is constructed with hollow block walls, pre-cast R.C.T-beam roof, concrete door and window frames. All other components of the house are also made of pre-cast blocks. The model house installed at the Chitral Exhibition in Madurai had been worked at a cost of Rs 5.75 per sq. foot. (Present rate of the traditional brick-cement-timber housing is around 16/18 per sq. ft. in Madras city.) The Concrete Association house has 9" thick walls. The cement used is stated to be only 5 per cent. Use of soil cement blocks had helped to bring down construction cost by 25 per cent. Mr Thadane said this type of construction of houses met with

considerable success in East Punjab and Mysore in a limited extent.

An interesting feature of the house is about its roof which Mr Thadane said did not need centering. The entire operation of laying out the roof takes only a fraction of the time needed for building other conventional types. The roof is not only stronger and durable, it is also fire-proof. The walls are provided with 1" cement mortar ceiling tiles which provide vastly improved thermal insulation.

There is as yet an extremely conservative outlook in South against concrete houses. This conservatism has to be fought by bolder experiments and promotional propaganda. In South India there are many such houses of the type described by Mr Thadane, but it does not mean that they should not be experimented upon.

Both bauxite and cheap electrical energy are available, the bauxite from Salem's Shevaroy Hills, eight miles north of Salem town, and electrical energy from the Kundah Project. The bauxite has been tested to be the best in India for aluminium production. The aluminium content of this ranges from 50 per cent. In the run-of-mine ore to about 60 per cent in picked pieces. A special 220 kw line has been laid from Kundah to Salem and will be extended to Mettur to the new plant location.

The Concrete Association of India had decided to offer their advice to house builders. Laboratories would be set up by the Association in Madras, Calcutta and New Delhi. These laboratories would first of all test soil suitability and offer suggestions to prospective house-builders on the various cement and concrete mixtures at a nominal charge.

This was decided by Mr K. V. Thadane, Regional Engineer, at Madurai where he spoke to newsmen about the Association's plans to help house-building at cheap cost. The Association had put up model cheap houses in exhibitions so far. But only now it has come forward to offer its help in soil testing. Even then Mr Thadane said that these laboratories would be set up only if sufficient demand is forthcoming in the regions concerned.

WORLD OF BOOKS

A Modern Philosophy of Management

LOOKING back over the last decade, it seems that trade unions have heavily encroached on management prerogative in industry. Exasperated managers, seeing their area of action restricted first by Government and then by trade union action, are often bewildered as to what 'rights' remain in their hands. "Where will it end?" they ask, when faced with yet another union demand impinging on the formerly sacred area of management prerogative. Certainly the old idea of the manager as an autocrat, the master to whom his employees are servants, has gone for good. Even the legal theories derived from the British customary law known as the Law of Master and Servant have been replaced by the new principles of "social justice" evolved by the industrial courts. Does this mean that all management's prerogatives are open to attack by trade unions, that no area remains sacrosanct?

In order to see the new developments in their proper perspective, it may be well to consider what we mean by management in industry. Here it may be relevant to study the theory advanced by Neil W. Chamberlain, Professor of Economics at the

Graduate School of Business of Columbia University, in one of a series of lectures published under the title of "Labor".* In these lectures he seeks to examine the organisations of labour and business and the collective bargaining relationship between them, and the impact of unionism on an industrial economy. A book intended primarily for students, it has much to commend it to the manager. Of course all managers will say that they have no time for such study, but their multifarious duties will be seen in a better perspective if they can pause from time to time to study the changing background against which their everyday decisions have to be made. They may suffer from less frustration when they can see their problems in perspective.

In considering the role of management we can in these more democratic days dismiss as feudalistic the idea of the autocratic manager. Even paternalism is no longer acceptable in a state which by its constitution guarantees equal rights to all its citizens. More recent approaches to the role of management have identified its function as decision-making. Management it is argued, has to decide what line of products or services shall be produced, on what scale, by what methods, and at what prices the goods or services shall be sold. But this is an oversimplification. Many factors enter into a single decision made by management, and many people other than management are involved in the decision-taking. For example, if the workers are not prepared to produce at the rates decided by management, then that decision is bound to be infructuous. The

*"Labor" by N. W. Chamberlain, McGraw-Hill, U.S.A.

whole object of unions is to obtain better wages and conditions of employment for their members, but if this is to be considered an area for management decision, then unions are bound to encroach upon management functions. Few people would deny nowadays that unions should have a voice in the settlement of wages, because their interests are deeply involved, but the same argument can apply to the whole range of subjects which affect the security and wellbeing of the workers.

Unions have justified their claims to a voice in business decisions on the democratic principle that decision-making should be shared by those whom the decisions affect. Writers such as Elton Mayo argue that decision-making is, in any case, a group process, that it is not merely the man at the top who decides, for instance, the speed of the assembly line, but every worker who by working that speed 'shares' in the decision. Mary Parker Follet, another well-known American writer on management, declared that all management decisions are really the result of the "law of the situation", that each decision is inevitably built up out of the environmental circumstances, and that conflict could be avoided if both management and workers would recognise this "law". The area for actual decision is extremely small, because the facts of the situation speak for themselves, and, if only all those involved would appreciate this, agreement would be comparatively simple. What is really necessary is clear channels of communication at all levels to allow the facts to speak for themselves.

These theories, says Mr Chamberlain, may justify participation in decision-making by all levels, but do not clarify the function of management. He points out that all the time "demands" are being made on an enterprise from all directions and from all sorts of groups. Each level within the business has its own area of aspiration. On any issue there will be many viewpoints. Each group will be seeking to make a "bargain" in its own interest—workers, technicians, salesmen, managers, shareholders, suppliers, and customers. Because of the number of individuals and groups involved, because of the number of issues involved, it is necessary to have a co-ordinator of all this bargaining, to see that the numerous bargains or decisions are consistent with each other. The unique function of management, according to this line of thought is "the co-ordination of the bargains of all those who compose the business." There are two necessary conditions in the exercise of this function if the organisation is to survive. First, the cost of agreeing on all this complex of internal bargains must be less than the cost of disagreeing, and secondly, as far as the economic side is concerned the "total outflows of the firm must be matched by its inflows."

Indian Finance

It is obvious that no ambitious manager would be satisfied with seeing himself merely as a neutral co-ordinator. Naturally he has his own area of aspiration, like any other group. He wants to use his initiative, to expand production, build new plant, initiate research. This he can only do when the inflow exceeds the outflow and leaves a residuary profit.

Apply this theory to management in India today, and it certainly sheds some light on the situation. Take the case of management faced with the problem of closing down a branch sales office in an area which has in recent years changed its composition so that business is adversely affected. To the man at the top it seems a clear case that the unit will soon become uneconomic, but before he can take action there are numerous groups and individuals who have to be consulted. First he must obtain figures from the accounts department to check his impressions. Then he must consult the Senior Sales Manager and the Area Sales Manager. Between them they have to consider how the local work will be re-allocated and whether the officers and the staff can be transferred. This will involve consultation with various other officers to whom the work and staff may be transferred, and who will therefore be affected by any decision. Now the Area Sales Manager may not want to lose prestige through reduction of the number of local offices under his control and the other local officers may not want to be burdened with additional work. If all the staff cannot be transferred, then the question of redundancy arises and here the manager will find himself in the area in which the union functions, and he will probably be up against the most difficult of all the "bargains" which he has to make.

If the manager is wise or has experience of handling such problems, he will not attempt to announce a decision to any of these individuals or groups. He will consult them before taking his decision, even if he sees that decision as inevitable. In effect his ultimate decision will embody the joint thinking of a number of persons and groups represented by them. If he merely rides roughshod over them, he cannot expect willing co-operation. He has to reach a "bargain" of some kind with each of them to ensure future smooth working. Now the manager often does not resent the opposition of the lower managerial levels, realising that their interests are affected and he must approach them tactfully, and yet he resents the opposition of the union. If, however, he can see his job as that of a "co-ordinator of bargaining", he is less likely to resent the necessity for bargaining with the union. He will be able to see them as one of the groups and to recognise that their viewpoint is no less selfish than that of other managerial staff and technicians.

pelled the then Finance Minister, Mr T. T. Krishnamachari, and the Reserve Bank authorities to anticipate the kind of relief that would need to be provided if the financing of the 1956-57 busy season was to be successfully put through. The bill market scheme, which had been gathering dust in the armoury of central banking weapons, was cleaned and oiled and made ready for use. Credit lines for Rs 150 crores against usance bills were approved.

★

But, simultaneously in point of time, a new development appeared on the banking horizon which, to this day, thwarts the healthy and sustained progress of the banking system. I refer to the Deposits war that was touched off in those stringent days of 1956. Nobody bothered about what the bank rate was. As against the 3½ per cent which constituted the official lending rate, rates of interest that banks were prepared to pay for their money were rather higher. The argument on every hand was that, since 1956 had shown that the expansion in Deposits was not keeping pace with the increase in the demand for funds, only the allurements of a higher rate of interest could be depended upon to entice new money from the new classes of Depositors who, in the wake of Governmental expenditure on the Plan, were being created. This chaotic state of interest rates not merely provoked but compelled the Reserve Bank into taking action. Contrary to the advice from various sundry students of the money market, the Reserve Bank, I am sure, felt that raising of bank rate were best avoided. But, in February 1957, it could desist no more from action. The effective rate at which banks could borrow from the central banking institution was raised to 4 per cent against Government securities and slightly higher than that against usance bills, though bank rate remained unchanged at 3½ per cent. It was only in May of that year that the de facto bank rate also became the de jure bank rate.

★

Not least of the reasons why the financing of the 1956-57 busy season was less difficult than it might have been was because, with imports restricted, the rise in Deposit resources came to be more easily discernible. During the 1957 slack season, the heightened tempo of new Deposit accruals was pro-

nounced. Due to the sustained high level of demand for banking finance during 1956, banks' profits for that year were spectacularly good. So much so, when slackness overtook the banking economy in the middle of 1957, both by way of an increase in Deposits and a decline in Advances, banks nevertheless persisted in the competition for Deposits—persisted, that is to say, in greedily taking up new and costly money, which, over the immediate future, they could not use—because the bankers reasoned that this slackness was only a temporary phenomenon. The Deposits War, incidentally, was also of benefit to the Central Government and the Second plan. For, embarrassed by this superfluity of resources, in order to cut their loss, bankers found no alternative to stepping up considerably their investments in gilt-edged. The gilt-edged market suddenly revived, and revived on a scale known only during the war years. The new loans were a success, but the demand was still there, and the Reserve Bank sold sizable parcels of gilt-edged through the tap. But, as the refrain has it, the Deposits War continued.

★

Then came the 1957-58 busy season. Suddenly, for no reason whatever, the expansion in bank credit was not as large as had been anticipated and planned for. Meantime, new Deposits by the crore continued to pour into banks' coffers. So, we had the curious spec-

tacle of banks in the midst of the busy season adding to their gilt-edged portfolios. The 1958 slack season further accentuated the gap between gathering resources and the uses that banks had for such funds. Investment in gilt-edged went up by leaps and bounds. The Advances-Deposits ratio came down sharply and was very comfortable indeed on the eve of the 1958-59 busy season. It was at that stage, finally, that sense began to dawn. An inter-bank agreement was concluded whereunder, from 1 October 1958, the maxima that the signatories could pay on their Deposits were fixed. The 1958-59 busy season was fully as stringent as the previous busy season had not been. Nevertheless, by virtue of the vast increase in Deposits, the Advances-Deposits ratio did not inch up too high. But, because banks had been compelled to invest their idle resources—idle, costly resources—in gilt-edged, the financing of that busy season required recourse to central banking credit on a considerable scale. Stringency was fairly pronounced; the Reserve Bank was taken aback at the quantum of credit expansion; banks were urged to use restraint in the matter of granting Advances; and the banking system was called upon to effect a reduction in Advances of the order of Rs 100 crores during the 1959 slack season. The borrowing programme of the Central and State Governments was again a success, because new, costly deposits being "purchased" by the banks could not be allowed to lie idle. Came further wisdom. And the maxima in terms of the interbank agreement were reduced somewhat from 1 September 1959. We now come to recent experience, and the colossal expan-

sion in bank credit that took place during the 1959-60 busy season. Alarmed by a disquieting trend in prices, the Reserve Bank authorities weilded for the first time a weapon that they were possessed of, namely, raising the statutory deposit requirements. At first, banks were called upon to keep with the Reserve Bank an additional 25 per cent of all new accruing Deposits. A few weeks later, the additional deposit requirement was raised to 50 per cent of new resources.

A further factor which has complicated the banking situation is the receipt of counterpart funds in respect of accretions under public law 480 and their deposit with the State Bank of India. When first bank Deposits began to rise, it was fashionable to assert that the receipt of counterpart funds was all that really made the difference. It is now crystal clear that counterpart funds have accounted for rather less than half of the new Deposits accruing in recent years. But the original secrecy about the magnitude of counterpart funds served to obscure the real rise in banking resources that was taking place. So, the Deposits War continued.

And where are we today? The Reserve Bank, quite correctly, apparently wishes to avoid any tinkering with bank rate. It realises only too well that dear money is

not the answer to inflationary pressures or tendencies in India. But it also realises that a tough money policy has to be followed, if orthodox money market students outside India are to be convinced that this country is taking all possible steps to hold the price line. It is, I know, difficult to persuade our foreign friends that inflation can be kept in abeyance without the use of the bank rate weapon. Therefore, the need for selective monetary control, the necessity of raising the additional statutory deposit requirements. And, against such a background, how are our banks placed? Put simply, the banks cannot hope to recover from gilt-edged investments the cost of their new Deposits, after taking into account the additional reserves that have to be maintained with the central banking institution. In all conscience, bank expenses are high. So, the outlook is one for profits to be further squeezed. With the Reserve Bank's directive on Advances, the extent to which bankers can hope to increase their earnings is rather limited in scope. Hence, either an increase in the rates charged for Advances or a reduction in the rates paid for Deposits may be said to be inevitable. I am personally hoping that the Indian Banks Association will not, as it did in 1958 and 1959, wait for the end of the slack season before revising downward the maxima of the interest payable on Deposits. I am hoping that, by

the end of the month at the latest, agreement will have been reached on a further sizeable reduction in the rates that the signatories to the agreement may pay for their money.

The implications of the current banking situation include the near certainty that banks will be in no position to invest further in gilt-edged. The outlook for the new loan programme of the Central Government is obscure, if not altogether bleak. The monetary authorities must have realised that, when they raised the additional deposit requirements, the flow of funds from the banking sector for investment in gilt-edged was bound to diminish. Hence it is that we have reached a vicious stage in banking. Banks cannot earn more, and cannot support the borrowing programme of the Central and State Governments in the manner in which the increase in their Deposits would suggest or dictate.

As I said at the beginning of this article, I am unable to see a silver lining to this overhanging firmament of stormy clouds. But there are certain things that need obviously to be done. As the Report on the Trend and Progress of Banking in 1959 has suggested, study of banking costs and rationalisation of banking charges are urgently necessary. In this wise, we may hope soon to have a proper adjustment of the interest rates that banking constituents pay. Se-

condly, the banks must recognise that it is not the seductive qualities of high interest rates which entice new Deposits; it is, rather, the Governmental disbursements percolating back into the banking system. As such, they should have no compunction and less hesitation about a speedy reduction—and a large reduction at that—in the rates of interest payable on Deposits. Thirdly, the Reserve Bank has to recognise that banking finance plays an insignificant role in contributing to inflationary pressures. The measures of the last two and a half months must be reversed as soon as is convenient. It is only by their reverse that banks can be expected to make the borrowing programme of the Central Government a success. It is the success of the borrowing programme of the Government which in turn will ensure that dependence on deficit financing is minimised.

So, for banks: increase your charges, reduce what you pay on your Deposits. For the Reserve Bank: reverse your temporary measures, and encourage both investment in gilt-edged and the financing of industry. It is by such ways that the strength of the banking system can be vouchsafed, so that production—which is the only answer to inflation—can be fostered and helped by the banking system.

Problems of Third Plan

ALTHOUGH discussions on the Third Five Year Plan are still continuing, a rough idea as to the shape in which it may finally emerge can, however, be derived. It looks almost certain that the total outlay will be in the environs of Rs 10,000 crores. One also frequently hears that the Plan should necessarily be big because it is to serve as the take-off stage for the Indian economy. Ten years of planned development have brought the country to a stage wherein, given some further concerted effort, the economy has every chance of becoming self-generating.

The main criticism against a massive Third Plan is that, in the name of a rapid development of the country, it would be unjustifiable to increase the loan burden of the coming generation. Already the foreign assistance taken in the form of loans is considerable and it will require years of hard-work to liquidate. The Third Plan as conceived by Authority will require a larger quantum of foreign assistance than had been taken during the current Plan period. In other words, the nation's foreign indebtedness will be greatly increased.

The problems of the Third Plan form the theme of the "Spring Lecture" delivered at Poona early this week by Mr B. R. Bhagat, Deputy Minister of Finance. Mr Bhagat argues that a big Third Plan seems to be the logical outcome of the planned endeavour undertaken so far. The Five Year Plans are designed to take the country progressively higher in economic development. The first two Plans have made some progress in this direction and the Third Plan is necessarily to continue this process. But the question as to what should be the rate of progress in the next five year period, has elicited differing views. Mr Bhagat, however, says that "it is now generally conceded that the aim should be to secure during the Third Plan period a rise in national income of at least 5 per cent per annum". According to him the objective should also include the continuing strength of the economy so that it can sustain the rate of growth in the subsequent five year periods also.

Once it is accepted that these should be our objectives in the next Plan period, it is easy to admit the proposition that our efforts should be proportionate to the desired result. This is now a Rs 10,000 crore Third Plan has come to be formulated with its emphasis on the development of basic industries, food self-sufficiency and increased production of agricultural raw materials. It is not as though a massive Third Plan is justifiable only from the need for continuing the tempo of development or the popular expectation for a rapid development. There are certain factors in the economy which make a large Third Plan feasible. Mr Bhagat has pointed out that in the first place development which has occurred over the last ten years will act as the foundation for further development. Big strides have been made in industrialisation, transport development and the production of basic materials. "In short our efforts in the last 10 years have resulted in an industrial base which can provide every useful starting point for development." Further, the Third Plan is better placed than its predecessors in that the considerable investment undertaken in the Second Plan will begin to yield during its early years. Other advantages are the greatly strengthened institutional framework, improved experience in planning of the Administration and the various measures initiated in the past few years to rehabilitate the rural population. Mr Bhagat includes in his list of favourable factors, the integrated system of direct taxation that has been evolved, the increased power of the Reserve Bank in the field of credit control, the reform of Company Law, the various control measures and the nationalisation of life insurance. In the sphere of agriculture too, although progress has not been as expected, sizable headway has been made toward strengthening of the agriculture base. The recently concluded long-term food agreement with the US for the import of 17 million tons of foodgrains will further help augment investment in this sector. The picture, however, is not without its dark patches. The unsatisfactory aspects in the present situation in the country are the low level of foreign asset, the high level of prices and the uncertainties on the northern frontier.

It is against this mixed background that the major problems of the Third Plan have to be considered. Mr Bhagat says that these are three-fold: "First, there is the basic problem for any developing economy—the problems of resources, internal and external; second, there is the problem of phasing, i.e., the problem of ensuring at each point of time over the Plan period that the balances in the system are maintained; and third, there is the problem of maintaining the level of prices fairly stable and of evolving an appropriate price policy to ensure reasonable stability."

Referring to the problems of resources, both internal and external Mr Bhagat admits that "there is a limit beyond which it is neither feasible nor is it desirable to rely on external resources". External assistance will perforce have to be taken but internal re-

sources must bear the brunt of the burden. The position would not have been as difficult as it had proved to be during the Second Plan, if savings had been adequate. Shortage of internal savings was responsible for the heavy dependence of the Second Plan on external resources. If the Third Plan is not to encounter the same rough weather as its predecessor, it is essential that savings are stepped up. This will inevitably mean restraint on consumption. It is a fallacious argument that development can occur without any restraint on consumption. Another glaring fallacy that one often comes across in arguments against a big Third Plan is to treat resources as though they are a fixed entity. Mr Bhagat has rightly averred that "resources for economic development are not some fixed pre-existing quantity; but the resources themselves are a result of development. The essential point is that the pool of resources itself can be—and indeed must be—enlarged."

CSO's Paper on National Income

THE Central Statistical Organisation has recently issued its usual annual paper on India's national income. It is seen from this paper that the national income, in terms of current prices, has increased from Rs 9,980 crores in 1955-56 (end-year of the First Plan) to Rs 12,470 crores in 1958-59 (preliminary), that is, by 25 per cent. But, in terms of constant (1948-49) prices, it has increased from Rs 10,480 crores in 1955-56 to Rs 11,690 crores in 1958-59, that is, by only 11.5 per cent. As the 'constant prices' estimate is at once an index of the real progress made by the economy, one immediate inference may be that the real progress registered in the first three years of the Second Plan has either been substantially less than what one would have expected from the high level of investment during those years or been only a little higher than what the increased population would have required during the period. No dogmatism is, however, possible on

this score because the real progress registered by the economy under the Second Plan is not, as of today, measured in terms of 1952-53 prices at which that Plan's original model was constructed. This, incidentally, underlines the need for maintaining a national income series in terms of 1952-53 prices so that even a lay man can figure out whether or not the nation's economy is progressing broadly according to plan. But, unfortunately, this sound suggestion advanced by some quarters in October last appears to have been in vain. One wonders what political or technical reasons there can be for not doing this.

In the absence of a national income series at 1952-53 prices, the most that can be done here is to find out in a rough manner what real progress has been made in the first three years of the Second Plan in terms of that Plan's model. Here, the examination is confined to per capita income which, according to the C.S.O.'s paper, has increased from Rs.261 in 1955-56 to Rs 313 in 1958-59 in terms of current prices and from Rs 274 in the former year to Rs 294 in the latter in terms of constant (1948-49) prices. It would appear that an increase of 7.3 per cent in per capita real income as compared to 1955-56 is not very impressive. But it is even less impressive when it is found, on a rough-and-ready estimation, that the per capita income should have been only round Rs 280 in 1958-59 in terms of 1952-53 prices—just about the same as what has been worked out for 1955-56 in the Second Plan model at 1952-53 prices. If this estimate is broadly correct, it would mean that the real progress registered till 1958-59 has been just sufficient to cover the increase in population.

Since the population has been increasing in recent years at an annual rate of 1.8 or 2.0 per cent, it will be a great achievement if the per capita income reaches a level of about Rs 300, at 1952-53 prices, in the end-year (1960-61) of the Second Plan, as against the original estimate of Rs 331 for 1960-61 in that Plan's model. At this rate of real progress, the Second Plan will end up with some short falls in achievement in relation to its original size, although there may be no such short falls in relation to its revised (and reduced) size. If it is in this context that the Rs 10,000 crore Third Plan (now in the stage of finalisation at the Cabinet level) seems to be

(AT 1948-49 PRICES)

Sector	1955-56	1956-57	1957-58	1958-59
Agriculture and allied activities	5,020 (47.9)	5,250 (47.7)	5,010 (46.0)	5,580 (47.7)
Mining, manufacturing and small enterprises	1,760 (16.8)	1,840 (16.7)	1,860 (17.1)	1,870 (16.0)

N.B.—Figures in brackets are percentages of national income.

THE ACID TEST

WITH 18 SULPHURIC ACID PLANTS
ALREADY INSTALLED OR UNDER INSTALLATION BY THEM,
SIMON-CARVES ARE CONFIDENT OF...

Production of Sulphuric Acid is an unfailing index of a country's industrial growth and economic independence.

There has been a threefold rise in the production of this key chemical in India in the last seven years, and with this rise is associated the name of Simon-Carves.

The total capacity of Simon-Carves acid plants already commissioned is more than half the entire acid production of India in 1958.

The world-wide experience of Simon-Carves in designing, engineering and constructing Sulphuric Acid plants, is at the service of India.

rather inadequate for the twin purpose of reaching its own physical targets and of making good the shortfalls of the Second Plan.

It may be that the proposed size of the Third Plan will be adequate for the purpose if there is already in evidence any pronounced dynamism in the two major sectors of agriculture and industry. The C.S.O.'s paper shows that the share of the agricultural sector in real national income has increased from Rs. 5,020 crores in 1955-56 to Rs. 5,580 crores in 1958-59. The dynamic element here is the proved effectiveness of aids to agriculture in a year of good rainfall, this element is likely to operate to greater effect during the Third Plan period when the irrigation potential created during the Second Plan period comes to be more fully utilised, thereby minimising the hazards of erratic seasons. The other dynamic element in the agricultural sector is the intensive use of resources in fertilisers, manures, improved seeds, etc., in all existing irrigated areas, by stages, from the current year onwards.

The dynamic element in the industrial sector is by now pretty obvious, although the C.S.O.'s paper shows that the share of 'mining, manufacturing and small enterprises' in real national income has increased from Rs. 1,760 crores in 1955-56 to only Rs. 1,870 crores in 1958-59. It may be that the contribution of factory establishments and small enterprises to national income has been underestimated. As for factory establishments, the C.S.O.'s paper itself has the following to say in a brief note:

"Some provisional data based on the results of the Sample Survey of Manufacturing Industries for 1954 to 1958 received recently from the Indian Statistical Institute together with other data on the subject have been examined and estimates of contribution to national income have been prepared. These are under study in consultation with the Advisory Committee on National Income. As such the entire series of estimates in this sector is likely to be revised. For the present, however, estimates have been prepared on the lines followed in the previous years."

As for small enterprises, there is known to be a large element of guesswork in the statistical estimation of their contribution to national income. With the present diversification in the structure of industrial production and with the visible boom in the small enterprises sector, it may be expected that the factor of dynamism will be increasingly in operation in the industrial sector in the years immediately ahead. As for the other sectors, no valid comments are possible. Still the relevant figures are given below to give a broad idea of the pattern of sectoral contributions to real national income in recent years.

THE PENINSULA

Labour Relation in Railways

AT the fourth annual convention of the National Federation of Indian Railwaymen held last week in Mysore the Communist tactics of strike was squarely denounced and any move to induce strike threat was decided to be resisted at the General Council draft resolution discussion. Mr Khandubhai Desai did not mince matters when he called attention of the workers to the importance of maintaining peaceful relations between the workers and administrators. Strike was an outmoded weapon he declared and added that the National Federation of Indian Railwaymen had effected revolutionary change in the outlook of the railway administration.

The Convention also decided to stand by the Government in its China policy and offer all help to meet the external aggression by China.

Union Railway Minister Mr Jagjivan Ram in his inaugural speech hoped that the railwaymen, who had the required skill and strength to meet the national challenge would rise to the occasion by providing quick and sufficient transport that the nation today required.

The Railway Minister stated that the Indian Railways moved 114,000,000 tons of freight at the end of the First Five Year Plan. The tonnage of this was expected to go up to 162,000,000 tons by the end of the Second Five Year Plan. The freight expected to be hauled by the railways by the end of the Third Plan was 235,000,000 tons and more, Mr Jagjivan Ram said. This responsibility, he hoped would be shared by the railwaymen with cheer and determination.

Regarding provision of amenities to railway staff, the Minister stated that the Government had been taking a progressive policy having spent as much as Rs 11 crores yearly from the revenue account. In 1956/57 the amount expended on the same was only about Rs 6 crores. Better living accommodation, recreational and medical facilities are also being provided to railwaymen, he told the Convention.

Adverting to the recommendation of the Central Pay Commission implementation, the Minister said the initial cost worked out approximately to Rs 13 crores yearly. This would increase progressively in the coming years. Adjustments in the railway freight rates had, therefore, become necessary in addition to levy of a supplementary charge of five p per rupee on goods and coal traffic effective from April 1, 1960. In regard to the other recommenda-

tions of the Pay Commission, Mr Jagjivan Ram informed the Convention that they were under examination. Anomalies would inevitably arise while implementing the Pay Commission's recommendations and he suggested that the Federation should always be free to discuss them within the framework of the Government's recommendations already conveyed to the Federation.

Regarding increasing incidence of railway accidents of certain categories, the Minister disclosed that carefully conducted analytical studies of these had shown that failure of human element on the part of railway staff alone was responsible for quite a high percentage of accidents from 40 to 50 per cent. Unstinted cooperation of the railway staff and their organisations at all levels was necessary to eliminate them, he said.

Mr S. R. Vasavada, President of the National Federation of Indian Railwaymen in his address said that acceptance of the principle of arbitration was in perfect keeping with the policy laid down in the Second Five Year Plan. It was also the most valuable right for which workers and their organisations must live and, if necessary, fight.

Instances were many when the Railways conceded workers' demands only after wild agitations, Mr Vasavada said, and remarked this would create a feeling among workers that they won't get their grievances redressed unless they resorted to coercive agitation. He regretted that the Government did not accept in toto the Pay Commission's recommendations. Having been a party before the Pay Commission, he felt the Government were bound to accept in full its award.

Mr Vasavada's announcement at the Convention of the Government's acceptance to hold consultations with the Federation on all questions arising out of the Pay Commission Recommendations would probably allay the fears of the public against any future cry of strike and other agitations inconveniencing the users of this national transport. It may be hoped that for some good length of time, the public could expect a smooth railway administration.

Mr Vasavada appealed to the Planners to take into consideration the life of the common man while preparing the Third Five Year Plan. After two plans described as successful by them, he complained, there was not the additional purchasing power which ought to have simultaneously developed with the completion of plans. Only a bold attempt should be made to attack this problem, he stressed.

Continuous agitation by workers hampered productivity, Mr Vasavada conceded, but was it not better to accept and abide by the code of discipline whereby all disputes are settled by negotiations and arbitration and allow no occasion to arise for either party to

resort to means which endangered industrial peace nad goodwill? He believed that the democratic set up in this country would rule out all possibility of strife and discontent in the industrial field. Force should be eliminated from industrial relations, he stressed, and only if settlement was made through peaceful means could either party become inheritors of the goodwill of the nation, he stated.

Mr Vasavada urged the workers to realise their task of going from milestone to milestone: which was what they were exactly achieving in respect of their own grievances. Every grievance redressed meant traversing a milestone and they had many such to cross to attain their target. He asked the workers to accept the settlement to be reached by the sub-committee of the Federation with the Railways and cry halt to further agitation. Mr Vasavada also, in passing, referred to the dangers of the Indian borders by Chinese aggression and wanted internal peace to meet the external dangers.

The Labour policy of the Railway administration was assailed by Mr A. P. Sharma, General Secretary, National Federation of Indian Railwaymen, in his annual report. The Railway Administration he said lived from ad hoc and indefinite labour policy allowing projections of political parties to interfere with railway labour who were exploited only for party purposes rather than for genuine trade union motive.

Mr Sharma was equally strong against Railway Administration's yielding to coercive methods and acts of rowdism by a section of railwaymen. Undesirable and fissiparous tendencies were encouraged by the so called production and station committees, he said, and feared that in the absence of a more realistic attitude there was danger of lawlessness developing throwing constitutional-minded employees into the laps of hooligans.

Mr Sharma also entered a caveat against the attitude of the State towards industrial problems which had been made more difficult, by the administrators of public undertakings confusing themselves with the Government of the State. He also gave a warning that as long as some clear distinction was not drawn between the Government of the State and the management of the public undertaking, none of the industrial problems in the public undertakings was going to be solved satisfactorily. There was no uniform policy for private and public wings of the industry. The Government insisted upon private sector to accept arbitration and refused to apply the same principle to the public sector. Mr Sharma also accused the Government for non-implementation of labour laws in public sector.

The total membership of the Federation is about 260,000 and there are 282 branches spread over the entire railway system.

Markets Subdued

The prompt steps taken by the Indian Jute Mills Association coupled with the improvement in weather conditions in the growing areas seem to have markedly curbed the speculative propensity in the jute markets. The IJMA's announcement that member mills are free to embark upon scaling of looms after 6 June if they so desire on the basis of their raw jute stock position has unnerved operators in the raw jute section. The move has made it clear that no mill will be obliged to replenish its raw jute stock by purchasing any sizable quantity at unjustifiably high prices. The fact that the possibility that there will be a period in which there may be practically no jute on offer has been sought to be met by a reduction in output by such of those mills as may have no adequate raw material to work all their looms in operation now, has come as severe blow to those who were basing their calculations that mills would perforce have to buy raw jute at any price before the new crop is available in quantity.

In the meantime, there has been encouraging news from the jute growing areas. The recent rains have revived the hope that the new crop may not suffer much setback. Perhaps the only adverse effect to be expected is some inevitable delay in the arrival of the new crop—six to eight weeks. It is even believed that the crop may actually turn out to be better and larger than earlier anticipated as late rains usually turn out to be favourable to the healthy growth of the jute plant. It is also to be expected that Authority will take concerted measures to promote jute production with special care this year.

A third factor has also been at work in arresting the wayward price level in the jute markets. The price ceiling imposed by the East India Jute and Hessian Exchange has considerably restricted the scope for speculation even though it has also severely curtailed the hedging facilities. The reported postponement of consideration of the plea for the removal of the ceiling has evidently stemmed from the anxiety on the part of the ELHE to make sure that the factors favouring unbridled speculation have been subdued.

The decline in jute goods springs primarily from the weakness of raw jute which in its turn is now being governed by the latest IJMA decision and the improvement in weather conditions in the jute growing areas. The possibility of

a sealing of looms has failed to revive enthusiasm mainly because foreign buyers have continued to keep out of the market. Few now expect an expansion of foreign enquiry even at current prices. Since the turn of the year, Indian hessian has been losing ground in its principal market—US. As for sacking there has been very little fresh foreign interest.

In the absence of foreign business, the jute goods market displayed an easy trend during the week ended Thursday. With the decline in raw jute prices, sentiment steadily deteriorated. The market opened on Friday on a quiet note following selling pressure in the futures section, coupled with absence of foreign interest. Hessian 40"x10 oz ready was quiet at Rs 51.00 with B Twills also lower at Rs 138.50. There was a slight improvement in sentiment on Saturday with Hessian gaining half a point to Rs 51.50 and B Twills quoting at Rs 139.50. Indications of a revival of interest in goods from China, especially

in hessian, imparted some steadiness to the market on Monday but higher levels could not be maintained due to profit-taking. Hessian closed at Rs 51.25 with B Twills, however, steadier at Rs 140.00. The trend again became rather quiet on Tuesday in the absence of fresh incentives and the quotations were as follows: Hessian ready Rs 51.00 and B Twills Rs 139.50. The downtrend gathered further momentum on Wednesday following selling pressure and profit-taking. Hessian ready reacted to Rs 49.50 while B Twills Ready lost Rs 4 to be placed at Rs 135.50. On Thursday prices lost further ground on unabated selling pressure to close as follows: Hessian Ready Rs 48.25 and B Twills Ready Rs 132.50.

The raw jute market opened with old crop jute quoting around Rs 49 basis Assam Bottoms. New crop Assam Bottoms October delivery was quoted at that time at Rs 41. In the first few days of the week under review, the rate fluctuated around this level on indica-

tions of scattered mill interest. But from Wednesday, an easier trend set in and Assam Bottoms declined steadily to be finally placed on Thursday at Rs 47.

United Industrial Bank Ltd.

TWENTIETH REPORT

Directors' Report for the year ended 31st December, 1959

GENTLEMEN,
The Directors beg to place before the shareholders the Balance Sheet and the Statement of Profit and Loss Account for the year ended 31st December, 1959. The Auditors' Report is also annexed.

2. During the year under review the Bank incurred a loss of Rs. 92,984.93 nP, and this was primarily due to the fact that interest amounting to Rs. 2 lacs and odd from certain advances could not be applied to Profit and Loss Account as the amount was not covered by the relative securities held and the Directors considered that until the amount was recovered in cash from the concerned borrowers it should be held in Suspense account. Deducting the sum of

Rs. 4,107.11 nP, being the profit brought forward from the previous year, there remains a loss of Rs. 88,877.82 nP to be carried forward.

3. Shri M. K. Bhattacharyya, having retired, Shri V. G. Pal, a retired officer of the State Bank of India, has been appointed as the General Manager of the Bank as from the 16th October, 1959.

4. The following Directors retire under the Articles (but, being eligible, offer themselves for re-election):—
(1) Shri Jadu Nath Roy.
(2) Dr. Satya Churn Law.

5. The Shareholders are requested to appoint Auditors for the ensuing year and fix their remuneration.
The Auditors, Messrs. Lovelock & Lewes, retire under the Articles, but, being eligible, offer themselves for re-appointment.

6. Shri Priya Nath Roy, Director, being out of station, could not sign the Balance Sheet.
*For and on behalf of
Board of Directors,
JADU NATH ROY,
Chairman.

Calcutta,
The 22nd April, 1960.

Trends in Prices

THE recent drought has affected the quantity as well as quality of the good second flush teas, which are usually produced at this time of the year. It is felt that, if weather conditions do not improve, gardens will find it difficult to recover the loss fully. It is, however, evident that the North Indian season will make a slow start; not much tea is likely to be available until July and the offerings in the first few auctions may be limited.

The outlook will, therefore, be governed by the supply and demand position. In view of the shortfall in production during the earlier months of the season, gardens may try to increase the crop later, resulting in a larger supply of plain teas. Again, Ceylon has produced a bumper crop of 45.4 million pounds in March against 32.8 million pounds in the corresponding month of last year. Since most of the production is of the plain grades, there should be an adequate supply of this category in the coming months. Africa, China, Formosa and Pakistan are also expected to place substantial quantities on the world markets.

Moreover, there is little evidence to show that favourable prices of the last season can be realised for Common teas this year. Producers will find it their worth while concentrating on fine plucking and good manufacture. It is, therefore, possible that the present trend—higher prices for quality teas and lower for plain grades—may be accentuated further in the coming weeks, as buyers are anxious to obtain good grades.

In this context, the annual report, issued by Messrs J. Thomas & Company Private Limited, states "that the market position is fundamentally sound. Prospects for the coming season may, therefore, be regarded as considerably brighter than in recent years. Naturally, the law of supply and demand will play its part in determining the state of the market. In this respect, Calcutta seems to hold a slight advantage over London. It is almost certain that a similar Middle Eastern enquiry will continue which, in conjunction with strong internal demand, should ensure economic prices for Common and low medium teas. This is also likely to produce a narrow price margin between the lowest and the best quality teas. Finally, there is every prospect that the trend of the market will follow similar lines of the previous season. However, if exceptionally unfavourable weather conditions should result in an appreciable

shortfall in the North Indian output, then the market barometer should be fixed at "set fair" for most of the season."

Meanwhile, in the second export sale of the new season's Darjeeling teas, offerings were 13,043 packages. The market opened on a subdued note, but brightened up considerably toward the close. The cheaper sorts were sold fairly readily at or a little below valuation, while the few best invoices with attractive flavour were also sold well. Medium quality varieties were the weakest feature of the sale and there were considerable withdrawals, prices being up to one rupee per kilo below valuations.

As was the case in Sale "A", there was more interest in Broken and Fannings grades than Whole Leaf grades in the case of medium varieties. In the Export Quota section, no business was transacted and there were sellers at 1 nP per kilo with no buyers. In the New Season's Quota, there were sellers at 3 nP per kilo; but buyers showed interest at 2 nP per kilo.

In the Cochin market, seven and a half lakh pounds of Dusts were offered for internal consumption. Against good general demand, prices declined in view of the poor quality of the offerings. Best Liquoring teas were firm, while other sorts were irregularly 5 nP to 10 nP per pound easier.

In the Colombo market, a total of 7,556,833 pounds was offered. Quality showed little change; but many high-grown sorts were lacking in colour. Better liquoring Dimbula Brokens met with less competition and were easier by 10 to 30 cents per pound. Prices for "below the best" types were irregular except the very poor descriptions, which were 10 cents per pound lower. Coloury mediums were firm to dearer, while BOPs were dearer by 3 to 8 cents. Small low BOP Fannings were irregular, but generally firm.

In London auction, offerings were 22,794 packages. Although demand for North Indian and other miscellaneous tea offerings was less general than last week, there was nevertheless good competition for nearly all descriptions. Bright liquoring coloury teas were sold well at fully steady to dearer prices with the best CTC Assams the strongest feature. Orthodox Assams were sold well, providing they were not thin liquoring. African teas met with irregular support to begin with; but prices, on balance, were generally steady.

As far as the auctions are concerned, there is a much better demand for North Indian teas as compared with last week's rather selective and sometimes indifferent buying interest. Prices are mostly in seller's favour. This better level of buying is attributed by trade quarters to a feeling among blenders that they ought to stock up with the best of the available old season's tea in view of the possibility of a shortage of new season's quality teas from North India.

Futures Rule Firm

THE cotton futures market in Bombay ruled firm last week due to short-covering and fresh support. The upward trend in prices was accelerated by the end of the week and this has been attributed to the growing apprehension in the minds of the traders that there might not be any cotton tender against this contract if the present demand from mills continued for a couple of months. Expectation of a more liberal distribution of local cotton quota to spinners and the possibility of an increase in ceiling prices for the 1960-61 crop, also pushed up the values during the latter part of the week. Besides, the cheerful conditions that prevailed in the spot market added stimulus to the futures section. Mills were reported to be active buyers of all sections of indigenous varieties. Trade interests were disappointed at the failure of the talks with the Textile Commissioner in which they stressed the paramount importance of modifying the recent orders curbing the cotton transactions with effect from 1 August. Jarilla August after opening at Rs 792 moved up to Rs 794.50; to react to Rs 790.50 and closed at Rs 793.

SPOT MARKET:

The spot market at Sewri, which opened after three days' halt, evinced a revitalised demand for almost all varieties of indigenous growth, thanks to the issue of additional quotas to the mills for domestic cotton. Spinners and millers were reported to have covered their immediate requirements of foreign and local growths. Among the indigenous varieties, mills showed interest in Kalagin, Kalyan, Laxmi, Jaidhar, Digvijay and L147 CO2 and among imported varieties Busoga, East African BP 52, Mwanza and Jinja were in renewed demand. Some upcountry mills enquired for new crop of Egyptian cotton in view of cheap rates. The discount rate on sales of Egyptian cotton has been retained at 11.5 cents during the week under review.

The production of cloth and yarn for the months of January to April this year, according to the figures revealed by the Textile Commissioner are as follows:—

	(Figures in Millions)	
	(yards)	(lbs)
	1959-1960	1959-1960
Production Cloth		Yarn
January	430-419	151-191
February	592-403	137-139
March	406-410	141-140
April	407-407*	140-136*

*The figures are provisional.

Indian Finance

During the beginning of this week Bengal Deshi changed hands at Rs 750-880; Oomra at Rs 820-860; Dhollera at Rs 820-840; Jharilla at Rs 840-900; Vijay Broach at Rs 995. Among the foreign styles Karnak was transacted at Rs 1775-2200, Sudan Average at Rs 1600-2125, American 1.1/8" at Rs 1175 to 1200, American Good Middling 1.5/32" at Rs 1230-1245.

The total receipts of cotton in Bombay for the period commencing from 1 September to 19 May were as under:—

Growth	1959-60	1958-59
Khandesh	58,103	90,923
Vijay	101,184	258,923
Surti	23,697	77,612
Kalyan	9,284	87,276
Dholera etc.	21,576	64,040
Gaorani 6 and 12	20,556	35,122
Madhya Pradesh	28,203	66,692
Punjab	132,387	158,062
Rajasthan and UP	66,039	45,767
Andhra	15,370	2,833
Madras	1,509	1,486
Mysore	8,655	5,693
West Bengal		86
Pakistan	28,223	
American	72,203	49,775

sorts	16,167	1,433
Coast Ports	16,640	89,131
Total Bales	853,632	1,208,673

×

FOREIGN COTTON:

Relatively small price fluctuations were prevalent in the New York futures market. The last current crop contract registered appreciation of about 15 points over the week while changes in the new crop contracts varied from 5 points down to 6 points up. Unfavourable weather conditions affected the California, Texas and Oklahoma growths. The re-planting in California and Mississippi has been completed.

Entries and repossession for the week ended 20 May were to the tune of 2 bales and 5641 bales respectively and thereby pushed the total up to 334,946 bales and 254,108 bales respectively. The net loan stocks during the above mentioned week amounted to 80,838 bales.

The Commodity Credit Corporation sales and purchases under the Choice 'A' programme for the week stood at 12,811 bales and 250 bales respectively. New Orleans advices reveal that about 18,858 bales were sold for unrestricted uses on 25 May. The total sales from the beginning of bids on 28 September last, total 543,630 bales.

The Alexandria futures market, during the week under review, registered some losses and consequently Karnak and Ashmouni were transacted at 120 and 288 points down respectively. Demand in the spot market continued on the low side and there was a small recession in the premia for all the varieties barring Menufi. The Sudan Gazira Board auctions on 24 and 25 May amounted to 7200 and 1991 bales respectively.

4 June 1960

Falling Trend in Sugar and Gur Prices

SUGAR prices have recorded a fall of Rs 2 during the week, to quote presently at Rs 113 per bag. The supply position of the commodity has improved considerably. The quota released for sale, during the past two months, is lying idle, while dealers have not shown any keenness to lift it. The crushing season has almost come to a close and the total production in the country has touched a new peak of about 24 lakh tons.

After shooting up to Rs 122 per bag at the peak of the marriage season during the last fortnight, sugar prices, in the Kanpur market, have now come down to Rs 116. This downward trend is partly due to higher allotment to confectioners by the district authorities.

Also, in the Muzaffarnagar market, prices have developed a downward trend due to better supply position and the rate is quoted at Rs 114 per bag. Following higher production, rumours about the sugar decontrol have revived in the market. Trade circles expect that the coming quota will be released for sale in the open market.

In the London market, too, sugar prices have shown a slightly easier tendency due to continued uncertainty about Cuba's intentions in regard to the International Sugar Agreement. Cuba is reported to have already sold all but 300 tons of the export quota allowed for her under the agreement. It is fairly certain that the International Sugar Council will not be willing to increase export quotas unless the world sugar price moves in to what it regards as the "desirable" price range of 3.25 to 4 cents a pound.

There are, however, reports that the next year's Cuban crop may be comparatively small—perhaps no more than 5 million tons. The present move about Cuba's surplus and her attitude to the International Sugar Agreement may, therefore, give place to quite a different situation in the coming season.

Gur

In the Hapur market, Gur prices have also displayed an easier tendency. Arrivals out of the stocks, retained by the cultivators, are about 200 maunds. Stocks are estimated at 25,000 maunds as against 77,000 maunds in the corresponding period of last year.

Pansara dry quality is quoted at Rs 15.37 per maund.

In the Muzaffarnagar market, prices sagged by 25 nP to 50 nP a maund in the absence of demand from Gujarat and Madhya Pradesh.

Khandsari

Khandsari prices, in the Hapur market, have registered a fall of Re 1 a maund. Demand from the consuming areas of Gujarat and Saurashtra is slack and the producing centres are nursing heavy stocks. The production from "galawayat" will begin soon after the onset of rains. Superior quality is quoted at Rs 37 to Rs 38 per maund.

In the Kanpur market, prices have gradually climbed down on account of selling pressure from the producing centres coupled with the expectation of early decontrol of sugar on the return of the Union Food Minister from his foreign tour.

Foodgrains

The bearish trend in Foodgrains prices, witnessed since the beginning of "rabi" grain arrivals, seems to have cried a halt. Led by Gram, Wheat and Coarse grain prices have registered modest gains. In the Pulses section, Peas and Arhar have also registered gains due to support from the stockists, although outside buying interest is slack.

Thanks to a comfortable supply position, the Rice section remains quiet. Stocks both with the trade and the Government are reported to be fairly heavy while the Government's procuring scheme is still continued in the surplus districts of the Uttar Pradesh State.

Rubber

The Kerala Government have just finalised the details of a scheme to plant 20,000 acres of the Government lands with rubber next year. Twentyfive per cent

of this area will be made available to the planting companies and the distribution will be through public auctions. Ten to fifteen per cent will be planted directly by the Government. The rest will be given on lease to individuals and co-operatives who wish to undertake rubber planting. They will be given loans and other assistance through service co-operatives. The idea is to convert two to three lakh acres of forest and other suitable lands into rubber plantations during the Third Plan period.

Meanwhile, private reports from Malaya say that the output of rubber is currently running at a high level. Reports from Indonesia—accounting for about one-third of the total world supplies—however, suggest that production on estates is declining "alarmingly".

It is felt that this year will again see a deficit, probably of around 40,000 tons of natural rubber. Available figures confirm

USHA FAN PRICES REDUCED

Announcing a reduction in our current prices, we offer our customers the benefit of our increased production of over 50,000 USHA fans every month.

Less Rs. 5 on all ceiling fans and air circulators

Less Rs. 2.50 on all table and pedestal fans

Made in the biggest fan factory in the world

USHA The most popular fan on Sale today.

JAY ENGINEERING WORKS LTD. CALCUTTA

this expectation. Rubber production in Malaya—the main rubber producer—declined by nearly 16 per cent in February when the output totalled 54,689 tons. Another decline is indicated for March, although Malayan sources expect April figure to be "nearly back to normal".

Most dealers in London say that, at present, the prospective supply and demand for Grade 1 rubber will be roughly in balance during the coming months. They add that the only thing, that is likely to upset the balance, is a renewed outburst of buying from the Communist China. It, however, looks as if that China is not now interested in buying at the current prices.

Pepper

The Pepper market has been ruling quiet during the past few weeks, the rate being quoted at Rs 280 per cwt in the Cochin market. The export performance has, however, been satisfactory. Exports

from India, for the first five months of the season (November 1959 to March 1960), totalled 251,999 cwts against only 114,475 cwts in the corresponding period of the previous season. Out of the exports, USA's share was the highest, at 147,074 cwts.

According to the latest reports, most of the Malabar crop has been sold and the present fall in prices is not expected to affect seriously the growers until the position is clearer toward November. It is just possible that the Singapore trade is forcing prices down to cover its commitments.

The Indian crop is now estimated at just over 26,000 tons—one of the largest in recent years. Lampong crop, expected in September, is estimated to be as high as 25,000 tons as against 10,000 tons last year. This estimate may well be exaggerated and the true position, which may be nearer 15,000 tons, may hold the price reasonably near the current levels.

Ginger

Exports of dry Ginger from India, during March, were slightly lower at 9,446 cwts as against 11,015 cwts in February. Out of the total exports, Calicut accounted for 5,231 cwts; Cochin 2,584 cwts and Bombay 1,438 cwts. Total exports, for the five months ended March 1960, are, however, higher at 36,861 cwts as against 34,501 cwts in the corresponding period of last year.

Bangalore Silk

During the week ended May 26, a decline of Rs 2.00 per lb was noticed in respect of T Narsipur and Kanakapura Filature Silk. The rates for Government Filature silk was revised by the Bangalore Silk Marketing Co-operative Society on May 17, 1960. The revised quotations for T Narsipur and Kanakapura were at the week-end Rs 40.00 to Rs 41.25, and Rs 42.00 per lb., respectively, as

Indian Finance

against their previous week's prices of Rs 42.00 to Rs 43.25 and Rs 44.00. Kollegal and Channapatta silk rates were not quoted. As regards Charka silk and reeling and seed cocoons the variation was minor.

The demand for all qualities of raw silk was reported to be moderate while the supply was stated to be limited. There was a moderate improvement in the price of Charka silk varieties especially 1st and 2nd Qualities.

Reeling cocoons maintained more or less a steady trend. Mugur area cocoons, however, quoted a slightly lower rate, namely Rs. 1.60 to Rs 2.00 as against Rs 1.70 to Rs 2.10 per lb in the previous week.

As regards seed cocoons the rates for Mysore seed cocoons ruled higher at between Rs 5.75 to Rs 9.00 per 1000 as against Rs 4.00 to Rs 7.00 during the previous week. Foreign seed cocoons remained steady.

Gold & Silver

Prices on the Bombay Bullion Exchange suffered a sharp setback, being influenced by the continued inflow of the metals. With a record large receipts in the market of unauthorised gold and in the absence of any encouraging offtake in the ready section, Gold ready lost as much as Rs 2.25 over the week. The difference between the spot and Ashad delivery also narrowed down to only Rs 1.12 from the previous level of Rs 2.69. The spot premium continued to decline on the operation of ex-parte margin and selling pressure from Delhi. Ready gold changed hands at Rs 126.69 to Rs 127.19, to finish at Rs 127.12. Sovereign was quoted at Rs 86.75. Arrivals amounted to 2,000 tolas; but the unrefined metal receipts totalled 6,700 tolas. Including the unauthorised receipts, the market estimated the total receipts at 26,700 tolas, while offtake was hardly 4,000 tolas.

In the Silver section, speculative activity was restrained due to the operation of ex-parte margins. Sentiment was also affected adversely by the continued inflow of the metal. Discouraging spot advice acted as an additional depressant. Arrivals amounted to 35 bars as against an offtake of 10 bars. Unrefined metal receipts amounted to 39 bars. Ready silver (below .996) changed hands at Rs 212.81 to Rs 213.12, to finish at Rs 213.06.

Yarn

Easy conditions continued to prevail in the Bombay Yarn market. Acetate and Nylon yarns suffered heavily due to selling pressure from the upcountry stockists. The Staple-Fibre yarn section, however, presented a better trend with a small improvement in ready prices.

The offtake in Cotton yarn continued to be limited. Reports from the cloth market were not encouraging. The end of the marriage season in some parts of

4 June 1960

the country was considered another bearish factor. Weavers from the Punjab, Delhi, Benares and Surat complained of growing accumulation of stocks and were, therefore, not inclined to purchase more yarn.

*

Oils & Oilseeds

The market for Oils and Oilseeds displayed an uncertain behaviour with the prices of Castor and Linseed showing a declining trend. Consequent upon the rise in the freight rates by \$20 effective from June and the higher floating stocks of castor in the local market, estimated at around 20,000 candel, bulls started unloading. There was also some selling pressure from Delhi and Agra. Although the long-range outlook for Castorseed was considered to be bullish, the pressure of spot supplies precluded aggressive support and hence prices sought lower levels. Castor ready was quoted at Rs 33.62 and Castor Oil, commercial quality, at Rs 18.12.

In the Linseed section, traders were inclined to be cautious on account of the possibility of larger arrivals in future. Ready was quoted at Rs 33.25 and Linseed Oil at Rs 16.25.

Prices in the Groundnut section ruled, however, steady. The Government decision to consider, on merits of application, the export of groundnut oil under the present export promotion scheme gave rise to a belief that the export incentive would be liberalised shortly. It is stated that a suitable increase in the incentive will go a long way in providing fresh fillip to the export of groundnut oil, especially so far as the trade with Burma is concerned. While the trade is awaiting an indication of the future policy in this connection, the possibility of a bigger incentive has failed to arrest the downward tendency in groundnut futures. Ready Bold was quoted at Rs 43.25 and Groundnut oil at Rs 22.75.

Trading in the Cottonseed section continued to be dull with the transactions remaining few and far between.

With the tapering off of the summer groundnut crop arrivals both in the local and southern-side markets, there is a significant spurt in the prices of both groundnut oil and kernels in Madras. Almost upto the middle of last week, that is by Friday opening, the easier trends in prices that were evident earlier continued, but Friday later closings indicated improvement in prices of both items. Local groundnut arrivals had dwindled to about 40 tons daily. While Villipuram centre alone reported about 100 tons of daily arrival of summer crop, other centres obtained less volume in the neighbourhood of 35 to 40 tons daily. Prices here also proved to be hard. There was not much change in other seeds or oils though in gingelly seed due to paucity of arrivals the price had gone up to Rs 80 per maund.

The closing prices of groundnut oil and kernels in today's market were:

Groundnut oil per candy of 500 lbs ex-Madras godown expeller Ready 3% FFA: Ready 391: June Rs 397: July 395. Kernels per Candy of 531 lbs: Coromandel 204: Peanut Rs 194. Castor oil per candy of 500 lbs Tirupattur Rs 305/306. Coconut oil per tin Rs 39.50. Gingelly oil per maund Rs 23.75. Gingelly seed per maund Rs 80 (superior) Rs 77/80: other varieties. Groundnut cake Rs 27 per bag of 160 lbs ex/gunny. United Kingdom price of Groundnut oil per ton 121/10. Groundnut cake £33 per ton. Alleppey Coconut oil: Ready Rs 650: June 664: July 672. All are buyers' rates.

The easier tone in the groundnut oil market took a turn for the better last Friday. It was more or less the same in the case of groundnuts too. These registered small declines during the last ten days. But the poor arrivals gave a fillip to higher quotations. The forward position which were weakened by Bombay did not sustain itself this week and a few days before. The West Coast rains lend pressure to bear operations in forward positions only earlier in the week. When price increase came, it came in a striking manner both in spot rates and forward positions. Sizeable gains were made therefore by both oil and groundnuts. Oil which lost much last week gained its position during the last few days.

The arrival position of groundnuts in local market week end from 80 tons to 40 tons this week. Last week there was regular flow of about 100 tons daily. Therefore price levels of coromandel variety remained around

Rs 198 per candy. On some days last week the rate went down to Rs 196 per candy. The increased price for nuts which began Friday went upto Rs 200 per candy from Rs 198 and it gained another couple of rupee today to be quoted at Rs 202. Likewise peanut price also registered an increase by a couple of rupees at Rs 191 from Rs 189. Earlier last week the quotation was ranging between Rs 187/189 for this variety.

*

Hides and Skins

Prices of tanned cow hides in the Madras market went up by a couple of nP for 10/12 lb average, while the lesser 8/8 lb stood steady. In the lighter weights of 5/5 lb the quotation was about 3 nP lower. There was further decline by about 6 nP in still lighter weight of average 4/4 lb. Arrivals of cowhides were good and absorption was also similar.

In the CIF section, good quantities of 8/2 lb fifths were traded at 45d to 46d. U. K. wanted to import 10/12 lb average. Price of this variety was very firm. Buffalo tanned hides stood firm this week and prices remained unaffected.

In both tanned cow calf and buff calf there was very small turnover. U.K. importers were indifferent. The local market sold out 6,000 pieces of tanned goatskins and only 8,000 pieces of tanned sheepskins, leaving in the market about 7,000 goatskins and 53,000 sheepskins. Prices for these varieties were lower.

Tanned goatskins export business was reported at a lower rate of 3 to 6d per lb. Inferior fifths were made available at still lower quotations. Other varieties like the medium and light weight were lower by about 6d per lb.

Prime or semi-prime sheep skins were not much in demand since prices were not inclined to come down, and sellers too were indifferent to get into larger commitments.

The report of the May 23 London Public Auctions disappointed local skins and hides trade in view of the alleged sales there and the stocks being held over the next auction. Even sales which were affected had to be done at lower levels, it was reported.

The following are the prices of raw skins per hundred: (last week's prices in brackets): Bangalore Raw Goat Rs 475/500 (Rs 520/540); Whitewool sheep Rs 500/565 (Rs 550/585); Blackwool sheep Rs 420/450 (Rs 420/485); Bezwada Raw goat Rs 420/435 (Rs 489/490); He sheep Rs 585 (600); She sheep Rs 435 (Rs 450).

The following are the prices of tanned skins per lb:

Tanned cow prime 5/5 lb Rs 3 to Rs 3.37; 6/6 lb Rs 2.75/3.00; 8/8 lb Rs 2.31 to Rs 2.37; 10/12 lb Rs 1.94 to Rs 2.00; Buffalo 12/13 lb Rs 1.44 to Rs 1.69; Cow calf 1 1/2 lb Rs 4.62 to Rs 5.12; Buff calf 1 1/2 lb Rs 3.00 to Rs 3.37; Goat Prime 5 1/6 lb Rs 10.25 to Rs 10.50; 8/9 lb Rs 9.12 to Rs 9.37; Sheep Ordy 6/7 lb Rs 7.25 to Rs 8.00; Sheep Prime 6/6 lb Rs 10.62 to Rs 10.87.

MORE PIPES

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

NOTICE is hereby given that the Forty-second Annual General Meeting of the Members will be held at the Registered Office of the company, No. 4, Bankshall Street, Calcutta on Wednesday, the 29th June, 1960, at 3-30 P.M. for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1959.
- (2) To declare Dividends.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their remuneration.
- (5) To consider and if thought fit to pass with or without modification, the following Resolution which will be proposed as an Ordinary Resolution namely:

"That Shaw Wallace & Company Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August, 1960, on the terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents a draft whereof has been submitted to this Meeting and approved and signed by the Chairman thereof".

The Transfer Register will be closed from the 20th June, 1960 to 29th June 1960, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a member of the Company.

By Order of the Board
SHAW WALLACE & COMPANY LIMITED
Managing Agents.

Calcutta,
28th May, 1960.

EXPLANATORY STATEMENT, MEMORANDUM OF INTEREST AND ABSTRACT.

(Pursuant to Sections 173 (2) & (3) and 302 (3) of the Act).

At a General Meeting of the Company held on the 20th August 1959, notice of which had been duly intimated to you, the approval of the members was accorded to the proposal that Shaw Wallace & Company Limited be re-appointed as the Managing Agents of the Company for a further period of ten years from the 15th August, 1960, the terms and conditions specified in the draft Agreement submitted to and approved at that Meeting.

Thereafter, application was made to the Central Government in terms of Section 326 of the Com-

panies Act, 1956, for its approval to the proposed re-appointment of the Managing Agents and the Department of Company Law Administration has approved of the re-appointment on condition that the period of re-appointment is reduced to 5 years and the commission of 10 per cent of the net annual profits of the Company proposed to be paid to the Managing Agents by way of remuneration is determined in accordance with sliding-scale prescribed by the Government subject to the payment of a "minimum remuneration" of Rs. 25,000/- per annum in the event of absence or inadequacy of profits in any year.

The conditions imposed by the Department of Company Law Administration have been considered and approved by your Directors and have been accepted by the Managing Agents and the Department of Company Law Administration has been advised accordingly. The accompanying notice is accordingly issued to convene a General Meeting of the Company and specifying the resolution to be passed by the Members to give effect to the re-appointment.

A copy of the draft Agreement referred to in the Resolution set out in the convening notice is available for inspection by the Members at the Registered Office of the Company between the hours of 10 A.M. and 5 P.M. on any business day upto the date of the Meeting and will be available during the Meeting.

The following abstract of the proposed Agreement is commended to the consideration of the Members of the Company:

1. The period of re-appointment of the Managing Agents shall be 5 years from the 16th August, 1960 provided that the Managing Agents shall be entitled to resign their office on giving not less than one month's notice in writing on this behalf.
2. The remuneration payable to the Managing Agents shall be in accordance with the following scale of commission on the net profits of the Company computed in the manner laid down in Sections 349 to 351 of the Act, subject to the payment of a "minimum remuneration" of Rs. 25,000/- in the event of an absence or inadequacy of profits in any year, namely:
 - (1) 10% on the first Rs. 10 lakhs net profits or fraction thereof.
 - (2) 9% on the next Rs. 10 lakhs net profits or fraction thereof.
 - (3) 8% on the next Rs. 10 lakhs net profits or fraction thereof.
 - (4) 7% on the next Rs. 10 lakhs net profits or fraction thereof.
 - (5) 6% on the next Rs. 10 lakhs net profits or fraction thereof.

- (6) 5½% on the next Rs. 25 lakhs net profits or fraction thereof.
- (7) 5% on the next Rs. 25 lakhs net profits or fraction thereof.
- (8) 4% on any sum over one crore of rupees or fraction thereof.

3. Clause 6 (which is identical to Clause 6 of the previous draft Agreement) provides for the reimbursement of expenses incurred by the Managing Agents on behalf of the Company.
4. Clause 9 (which is identical to Clause 9 of the previous draft Agreement) provides that the Managing Agents and any "Associate" thereof as defined in the Act shall be entitled to retain any remuneration which may be earned by them from any Firm, Body Corporate, or other Concern in respect of sales, purchases, or the supply or rendering of services under Contracts entered into by such Firm, Body Corporate or other Concern with the Company.

The remaining Clauses of the proposed Agreement specify the powers exercisable by the Managing Agents and include administrative details.

These do not differ from the corresponding provisions of the previous Agreement.

Mr. H. K. Stringfellow a Director and a Member of your Company is also a Director and Member of M/s. Shaw Wallace & Co. Ltd. and may be deemed to be interested in the proposed resolution. The Managing Agents may be deemed to be interested in their re-appointment to the extent of the remuneration proposed to be paid to them.

THE NEW SAMANBAGH TEA COMPANY LIMITED.

"That Shaw Wallace & Company Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August, 1960, on the terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents a draft whereof has been submitted to this Meeting and approved and signed by the Chairman thereof."

The Share Transfer Register will be closed from the 20th June

1960 to 29th June, 1960, both days inclusive.

By Order of the Board
SHAW WALLACE & COMPANY LTD.
Managing Agents.

Calcutta,
the 30th May 1960.

Note:—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

EXPLANATORY STATEMENT, MEMORANDUM OF INTEREST AND ABSTRACT.

(Pursuant to Sections 173 (2) & (3) and 302 (3) of the Act).

At a General Meeting of the Company held on the 20th August 1959, notice of which had been duly intimated to you, the approval of the members was accorded to the proposal that Shaw Wallace & Company Limited be re-appointed as the Managing Agents of the Company for a further period of ten years from the 15th August, 1960, on the terms and conditions specified in the draft Agreement submitted to and approved at that Meeting.

Thereafter, application was made to the Central Government in terms of Section 326 of the Companies Act, 1956, for its approval to the proposed re-appointment of the Managing Agents and the Department of Company Law Administration has approved of the re-appointment on condition that the period of re-appointment is reduced to 5 years and the commission of 10 per cent of the net annual profits of the Company proposed to be paid to the Managing Agents by way of remuneration is determined in accordance with sliding-scale prescribed by the Government subject to the payment of a "minimum remuneration" of Rs. 30,000/- per annum in the event of absence or inadequacy of profits in any year.

The conditions imposed by the Department of Company Law Administration have been considered and approved by your Directors and have been accepted by the Managing Agents and the Department of Company Law Administration has been advised accordingly. The accompanying notice is accordingly issued to convene a General Meeting of the Company and specifying the resolution to be passed by the Members to give effect to the re-appointment.

A copy of the draft Agreement referred to in the Resolution set out in the convening notice is available for inspection by the Members at the Registered Office of the Company between the hours of 10 A.M. and 5 P.M. on any business day upto the date of the Meeting and will be available during the Meeting.

The following abstract of the proposed Agreement is commended

to the consideration of the Members of the Company:

1. The period of re-appointment of the Managing Agents shall be 5 years from the 16th August, 1960 provided that the Managing Agents shall be entitled to resign their office on giving not less than one month's notice in writing on this behalf.
2. The remuneration payable to the Managing Agents shall be in accordance with the following scale of commission on the net profits of the Company computed in the manner laid down in Sections 349 to 351 of the Act, subject to the payment of a "minimum remuneration" of Rs. 30,000/- in the event of an absence or inadequacy of profits in any year, namely:
 - (1) 10% on the first Rs. 10 lakhs net profits or fraction thereof.
 - (2) 9% on the next Rs. 10 lakhs net profits or fraction thereof.
 - (3) 8% on the next Rs. 10 lakhs net profits or fraction thereof.
 - (4) 7% on the next Rs. 10 lakhs net profits or fraction thereof.
 - (5) 6% on the next Rs. 10 lakhs net profits or fraction thereof.
 - (6) 5½% on the next Rs. 25 lakhs net profits or fraction thereof.
 - (7) 5% on the next Rs. 25 lakhs net profits or fraction thereof.
 - (8) 4% on any sum over one crore of rupees or fraction thereof.
3. Clause 6 (which is identical to Clause 6 of the previous draft Agreement) provides for the reimbursement of expenses incurred by the Managing Agents on behalf of the Company.
4. Clause 9 (which is identical to Clause 9 of the previous draft Agreement) provides that the Managing Agents and any "Associate" thereof as defined in the Act shall be entitled to retain any remuneration which may be earned by them from any Firm, Body Corporate, or other Concern in respect of sales, purchases, or the supply or rendering of services under Contracts entered into by such Firm, Body Corporate or other Concern with the Company.

JAGATJIT COTTON TEXTILE MILLS LTD.

NOTICE

Notice is hereby given that the next Annual General Meeting of the Shareholders of the Company will be held at its registered office at 'THAPAR HOUSE', 25, Bra-bourne Road, Calcutta, on the 29th June, 1960, at 11 A.M. to transact the following business:

AGENDA

1. To receive the Directors' Report and to pass the audited accounts of the Company for the year ended 31st January, 1960.
2. To declare dividends.

The Directors have recommended:—

- (i) 7.17% subject to Tax on Preference Shares.
- (ii) 14.27% subject to Tax on Equity Shares.

3. To elect Directors in place of those who retire.

(a) Sardar Bahadur Mohan Singh being longest in office retires by rotation and being eligible offers himself for re-election.

(b) Lala Karam Chand Thapar also retires by rotation and as he is an Associate of the Managing Agents of the Company, a Notice has been received from a Shareholder proposing his re-election. A Special Notice as such is hereby being given for passing the following Resolution with or without modification as a Special Resolution:—

Resolved:

"That pursuant to Section 261 of the Companies Act, 1956, Lala Karam Chand Thapar, an Associate of the Managing Agents of the Company, be and he is hereby re-elected as a director of the Company."

(c) Dewan Anand Kumar also retires by rotation and being over 65 years of age, a Notice has been received from a Shareholder proposing his re-election. A Special Notice is hereby being given for passing the following Resolution with or without modification as an Ordinary Resolution:

Resolved:

"That Dewan Anand Kumar, who is above 65 years of age, be and is hereby re-elected as a director of the Company and that the age limit as specified under Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors for the Current year and to fix up their remuneration. The present Auditors M/s. S. P.

Chopra & Co. retire and are eligible for re-appointment.

5. To transact any other business that may be brought forward with the permission of the Chairman.

Note:—

- (i) The Share Transfer Books of the Company will be closed from the 16th June, 1960 to 29th June, 1960 (both days inclusive).
- (ii) A Member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member to attend and vote instead of himself.

By Order of the Board

KARAM CHAND THAPAR & BROS. (Private Limited)
Managing Agents.
Calcutta, 4th June, 1960.

Explanatory Note:

Pursuant to Section 173 of the Companies Act, 1956.

Item No. 3

(b) Under the Articles of Association of the Company, the Managing Agents are entitled to appoint their nominee Directors on the Board of the Company. A resolution under Section 261 of the Companies Act 1956 is necessary for Lala Karam Chand Thapar who is an Associate of the Managing Agents, to continue as a Director of the Company whose office is liable to termination by retirement by rotation. A Notice as required under Section 190 of the Companies Act has also been received.

Item No. 3

(c) A notice has been received by the Company for Dewan Anand Kumar's continuing as a Director of the Company notwithstanding his age of above 65 years. Under Section 281 of the Companies Act, 1956, the appointment of the person who is above 65 years of age needs the approval of the Company in the General Meeting specifically declaring that the age limit of 65 years shall not apply to him. In view of the valuable services he has rendered to the Company it is desirable that the Board should continue to receive the benefits of his advice.

Uncertainty

Investment Gossip:

EQUITY prices have been drifting lower during the week just ending. Now that the Bombay Stock Exchange has joined Madras in tightening up the margins on cleared shares, it is generally expected that some such step is imminent in Calcutta also.

The fact that Madras and Bombay have deemed it fit to impose restrictions on trading has confirmed the general belief that the excessive rise in prices noticed in recent trading is partly at least brought about by speculation.

Marketmen themselves realise that pushing up prices to unjustifiably high levels would inevitably invite Government intervention. But fears about further curb measures notwithstanding, the higher levels have been well maintained till last week and even now price levels are not much related either to dividend or growth prospects. Evidently, investors find no suitable alternative to investing in equities. This perhaps explains the absence of any widespread profit-taking even at the higher levels.

The present mood of investors is best brought out by the uniformly good response to new issues which have come on the market during the past few months. The trend, if anything, is stronger today. It is reported that the response to the Synthetics and Chemicals issue has surpassed all expectations. All this proves that there is a plethora of money seeking profitable investment and, in existing conditions, equities are indeed a good buy.

Even so, the price-rise that has occurred has rightly been viewed with considerable concern by the generality of marketmen. They are perhaps reminding themselves that Authority which showed itself concerned when prices were much lower would not remain a passive spectator for long. The National Development Council is shortly to discuss the spurt in prices in many a commodity market as well as in the stock market. And marketmen are naturally inclined to await further developments before moving one way or the other.

New Issue Notes

It is learnt that the response to the public issue of the Synthetics and Chemicals has been overwhelming. A premium of Rs 210 per share is mentioned in unofficial dealings in Bombay.

The directors of the Phillips Carbon Black Limited have announced that the recent issue has been 19 times over-subscribed. Lots have been drawn in case of

applications for 250 shares or less. Successful applicants for 50, 100 and 150 shares will get 10 shares each and those for 200 and 250 shares will get 15 shares each. Applicants for 300 shares and above will, however, secure an allotment. In determining the respective allotments, there will be some grouping of applicants, but this will not extend to applications of 1,000 shares or more. In all, 70 per cent of the capital on issue is being allotted to applicants for less than 1,000 shares. Letters of regret and refund pay orders in respect of the unsuccessful applicants for 250 shares or less will be issued from 1st June 1960, while allotment letters and the relative refund pay orders will be issued to successful applicants from 16th June 1960.

The Albion Plywoods Limited has offered for sale 75,000 Ordinary shares of Rs 10 each, at Rs 13, payable in full on ex-right basis. The application lists will open on 11 June and will close on 21 June.

The present issued and subscribed capital of the Albion Plywoods Limited is Rs. 10 lakhs, divided into one lakh Ordinary shares of Rs 10 each. The directors have decided to issue further capital of Rs 10 lakhs, divided into one lakh ordinary shares of Rs 10 each, to be offered to the existing shareholders whose names stand registered as on 6 June, in the proportion of one for every share held.

Jayant Paper Mills Limited—a new company formed to undertake the manufacture of certain special qualities of paper—is expected to enter the market for raising capital in the second or third week of June. The authorised capital will be Rs 1 crore, divided into one lakh Ordinary shares of Rs 100 each. The issued capital will be Rs 25 lakhs. Out of this, the promoters, directors and their friends will subscribe for Rs 12.50 lakhs. The balance of Rs 12.50 lakhs will be offered to the public.

A new company will shortly be formed by the house of Khataus in collaboration with a Swedish firm for undertaking the manufacture of tungsten carbide, tipped drills

and detachable bits. The capital outlay of the project is estimated at Rs 1.33 crores and the foreign exchange is placed around Rs 63 lakhs. The issued capital will be Rs 60 lakhs in the form of equity shares. The Swedish firm will be taking up Rs 36 lakhs. The balance of Rs 12 lakhs will be offered for public subscription.

The Directors of J. K. Cotton Spinning and Weaving Mills Co. Ltd., in consultation with Bombay and Calcutta Stock Exchanges, have allotted 6,20,000 Equity Shares in the manner following:—For 50 and below 100 15 Shares; For 100 and Below 150 25 Shares; For 150 to 250 50 Shares; For 300 to 450 100 Shares; For 500 to 1000 150 Shares; For 1050 to 2000 200 Shares; Above 2000 Ten Per cent.

Investment Briefs:

Katras Jherria Coal Company Limited has recommended a final dividend of Rs 6, making a total of Rs 9.50 per share, subject to tax, for the year ended 31 January 1960. The net dividend works out to Rs 6.55 against Rs 6.50 per share.

Sendra Coal has declared a dividend of 3½ per cent, taxable, for 1959 as against nil for the previous year.

Carnore Spinning has paid a final dividend of 8½ per cent, making a total of 17 per cent, taxable, for the year ended 31 March, 1960 as against a tax-free dividend of 15 per cent.

Singareni Collieries Company Limited has proposed a taxable dividend of 7½ per cent for 1959 against a tax-free dividend of 7½ per cent previously.

The West Coast Paper Mills Limited has decided to pay the arrears of dividends on the Preference shares for the period ended 30 June 1958 out of the profits of the company for the current year.

Balance-Sheet Briefs:

The profit of the Indian Standard Wagon Company Limited has improved by Rs 3.95 lakhs to Rs

23.68 lakhs for the year 31 March, 1960. The directors have recommended a dividend of 2½ per cent on the Ordinary shares. This works out to a net dividend of 19.95 per cent against 20 per cent paid for 1958-59.

The working of Sen-Raleigh Industries has resulted in a higher profit of Rs. 23.73 lakhs for the year ended 30 September 1959 as against only Rs 11.28 lakhs. The directors have recommended a net dividend of 5.6 per cent (gross 8 per cent) against 6 per cent paid in the preceding year.

The Soorah Jute Mills Company Limited has earned a profit of Rs 12.61 lakhs for 1959 as against Rs 10.39 lakhs for 1958. A taxable dividend of 25 per cent is recommended. This works out to a net dividend of 17.5 per cent against 15 per cent.

The net profit of the Krishna Industrial Corporation Limited is higher at Rs 4.83 lakhs for the year ended 30 September 1959 as against Rs 3.32 lakhs. A taxable dividend of 10 per cent is recommended against a tax-free dividend of 10 per cent.

THE INDIAN STANDARD WAGON COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting (being the forty-first Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Friday the 24th June, 1960, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1960, and the Directors' and Auditors' Reports thereon.
2. To declare Dividends. The dividends, if declared, will be paid to the shareholders whose names appear in the Registers of Members on the 24th June, 1960, or to their mandatees.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

The Registers of Members and the Transfer Books of the Company for both Ordinary and Preference Shares will be closed from the 15th June, 1960 to the 24th June, 1960, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,

MARTIN BURN LIMITED

F. G. LIVERSEDGE

Irregular Price Trends

Watch-Dog Writes:

STOCK markets have started the week on an uninspiring note and, in the absence of any fresh incentive, price movements have remained narrowly irregular. The awareness, that more stringent official measures may be adopted to check the unbridled speculation, has induced some caution in the minds of the operators, who are reluctant to enlarge their commitments.

Extremely dull conditions prevailed on the Calcutta Stock Exchange.

The upward revision of margins, decided by the Board, seemed to have little effect on the Bombay stock market.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Extension of date for submission of coupons and applications in respect of "A" Second Preference shares and new Ordinary shares.

Notice is hereby given that the extended period for submission of coupons in respect of the "A" Second Preference shares and the new Ordinary shares in terms of the Company's Circular dated the 12th October 1959 expires on the 31st May 1960. As some shareholders have not yet exercised their right to obtain shares by submitting the requisite coupons, the Directors have extended the period for submission of coupons to 30th June 1960, and the Company's bankers have accordingly been authorised to receive applications on and after the 1st June 1960 upto but not later than the 30th June 1960 in respect of such coupons. Provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9% per annum (which the Directors have decided to charge) shall be paid to the Company's bankers as under:—

(i) For applications with coupons from resident shareholders from 16th December 1959 to the date of payment; and

(ii) For applications with coupons in the case of non-resident shareholders from 1st June 1960 to the date of payment.

The Directors have also resolved that the last date for receiving applications in respect of "A" Se-

Activity on the Madras Stock Exchange was restricted in the absence of buying support.

The London Stock Exchange finished the week on a satisfactory note. Wall Street closed barely steady.

Calcutta

Calcutta, Friday Evening.

THE week's trading on the local Stock Exchange was unimpressive, as fresh support was of a halting nature. Fears of imminent official measures to curb excessive speculation on the eve of the Government's borrowing programme lulled speculative counters for a time. While the prominent bull operators availed themselves of the opportunity to book profits at the recent high levels, investors did not show any interest in view of the uncertain outlook for the immediate future.

But, the chill wave subsided soon and, as the week progressed, a mild recovery followed with the Miscellaneous section providing some bright features on intrinsic merits. Even the news of the new measures taken by the Bombay Stock Exchange authorities had little influence on sentiment due to a general feeling

that prices would continue to remain bullish unless the authorities resorted to the use of other weapons in their armoury. In this respect, there was a general disposition to await the outcome of the National Development Council meeting.

In the absence of buyers and, with almost everyone wanting to sell at the quoted rates, the Gilt-edged market was devoid of activity. The tendency was, therefore, for prices to sag slowly due to small offerings. After opening lower at Rs 73.20, 3 per cent 1986 Conversion Loan receded further to Rs 73, to finish better at Rs 73.12 at the close.

Bank shares were quietly steady with fractional changes either way. Punjab National changed hands at Rs 19.50 to Rs 19.69 and United Commercial at Rs 68.50 to Rs 69.

The buying enquiry in Jute shares, that was noticed in the previous week, seemed to have subsided in view of the uncertain outlook for the industry. Advances from the gunny market indicated that foreign buyers' interest would continue subdued unless prices moved down to reasonable levels. There was, however, not much selling pressure due to reports of rainfall in many jute-growing areas and the consequent belief that the mills might not experience much difficulty in obtaining their supplies of the raw material later in the season. Howrah changed hands at Rs 22.25 to Rs 22.75; Birlas at Rs 32.37 to Rs 32.50; Anglo-India at Rs 220 to Rs 222; Ganges at Rs 11.62 to Rs 11.81 and New Central at Rs 30.56 to Rs 31.50. National, after being marked down at one time to Rs 27.62 from Rs 28 due to speculative selling, finished better at Rs 28.25. Khardah were, however, supported up to Rs 21.25 from Rs 21.12.

Coal shares remained quiet in the absence of any indication so far whether the expected incentives for increasing production would be forthcoming. Central India were on offer at Rs 12.75 to Rs 12.94; Western Bengal at Rs 8.44 to Rs 8.56 and East Indian at Rs 30.37 to Rs 31.06. Bengal were a steady feature at Rs 326, while Burrakur fluctuated narrowly between Rs 19.19 and Rs 19.44, to close finally at Rs 19.37.

In an otherwise dull session, Tea shares were fairly active on second thoughts with regard to the prospects for the industry. First, the sound statistical position encouraged the hope that the new marketing season would begin well on 13 June when the first export sale would be held. Secondly, it was expected that the dividends for 1959 would be satisfactory. Finally, it was believed that the position of the industry might improve tremendously in the course of the next few months in view of the reports of rainfall in the Assam and Dooars areas. Brooke Bond met with business at Rs 18.37 to Rs 18.62; Bishnauth at Rs 22.69 to Rs 23.25; Grob at Rs 14.44 to Rs 14.62; Hasimara at Rs 25.31 to Rs 25.81; Jaysree at Rs 17.94 to Rs 18.25 and Tezporé at Rs 19.69 to Rs 19.87.

Sugar shares ruled generally firm on expectation that, with the substantial rise in production during the season just ended, the earnings of various companies might have

improved. Belsund were enquired up to Rs 14.50 from Rs 13.81; Ramnugger Cane up to Rs 26.75 from Rs 26.62 and Raza/Buland up to Rs 14.03 from Rs 13.87. SKG remained remarkably steady at Rs 14.56 with Dyer Meakin rather quiet at Rs 20.50 against Rs 21.

Textile scrips developed a slightly reactionary tendency due to scattered liquidation on reports of the deteriorating labour relations over the issue of the implementation of the recommendations of the Wage Board. Jaysree were on offer at Rs 14.94 to Rs 15.12; Elgins at Rs

SHREE GOPAL PAPER MILLS LIMITED.

NOTICE

NOTICE is hereby given that the next Annual General Meeting of the Shareholders of the Company will be held at its registered office at 'THAPAR HOUSE', 25, Brabourne Road, Calcutta, on the 29th June, 1960, at 10.30 A.M. to transact the following business.

AGENDA:

- To receive the Directors' Report and to pass the audited accounts of the Company for the year ended 31st December, 1959.
- To declare dividends. The Directors have recommended:
 - 11.3/7% subject to Tax on 1st Preference Shares.
 - 10% subject to Tax on 2nd Preference Shares.
 - 17.6/7% subject to Tax on Ordinary Shares.
- To elect Directors in place of those who retire. Shri Brahma Shume Shere J. B. Rana, Seth R. K. Jaidka and Seth B. P. Poddar being longest in office retire by rotation and being eligible offer themselves for re-election.
- To appoint Auditors and to fix their remuneration. The present Auditors, M/s. Price, Waterhouse, Peat & Co. retire and are eligible for re-appointment.
- To transact any other business that under the Articles may be transacted at the Annual General Meeting.

NOTE:

- The Share Transfer Books of the Company will be closed from the 16th June, 1960 to 29th June, 1960 (both days inclusive).
- A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member to attend and vote instead of himself.

By Order of the Board
KARAM CHAND THAPAR & BROS. (Private Limited)
Managing Agents.
Calcutta, the 4th June, 1960.

19.50 to Rs 19.87 and Kesora at Rs 30.44 to Rs 30.62 against Rs 15.19; Rs 19.94 and Rs 30.75 respectively quoted in the previous week. New Victoria were sticky at Rs 1.50 with Cawnpore easing off further to Rs 6.94 from Rs 7.31.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments till Wednesday. Against the previous week-end closing of Rs 25.45, Indian Irons opened lower at Rs 25.38 and receded further to Rs 25.20 due to selling pressure. Some short-covering coupled with replacement buying at the latter level, however, induced the scrip at one time to Rs 25.58, to close finally at Rs 25.42. The settlement rate was fixed at Rs 25.30 as against last settlement of Rs 26.04. The following table shows the output during the last months (figures in metric tons):—

	May	April
Saleable Steel ...	56,406	44,751
Pig Iron ...	83,903	90,876
Steel Ingots ...	71,579	74,806
Despatches ...	58,663	33,126

Among other engineering issues, Texmaco touched a low of Rs 26.15 and a high of Rs 26.85, to finish at Rs 26.60. Jessop changed hands at Rs 23.75 to Rs 24.12; Britannia at Rs 13.25 to Rs 13.37; Kumardhubi at Rs 7.25 to Rs 7.50 and Marshalls at Rs 5.75 to Rs 5.94. Indian Standard Wagon firmed up to Rs 97 from Rs 94 on the publication of encouraging results for the year ended 31 March, 1960.

Miscellaneous issues ruled generally steady with price movements confined to a narrow range. An exceptional feature of the week's trading were Hindustan Motor, which were persistently supported up to 21.75 from Rs 20.87 on expectation of a higher dividend for last year. Orient Paper met with business at Rs 46.70 to Rs 47.25; Shree Gopal at Rs 29 to Rs 30.37; Sipur at Rs 18.44 to Rs 18.75; Indian Cable at Rs 34.56 to Rs 34.75; Indian Aluminium at Rs 26.69 to Rs 27; Indian Oxygen at Rs 34.37 to 36.25; Indian Copper at Rs 4.93 to Rs 5.06; Rohtas at Rs 36.19 to Rs 36.62; Dunlop at Rs 41.37 to Rs 41.85; India Steamship at Rs 11.25 to Rs 11.50; Associated Battery at Rs 34.50 to Rs 34.75; Union Carbide at Rs 39.50 to Rs 41.50 and Aluminium Corporation at Rs 17.50 to Rs 17.62.

Madras

Dull conditions prevailed today in the Madras stock exchange. Except cleared scrips other counters remained uninteresting. There was poor response in textiles. Limited transactions were made in tea share. Cements in the industrial section proved better.

Government Securities: State loans declined this week. Madras 1971 4 per cent was below par. Mysore also was like that. Andhra followed Kerala in this respect. The short dated loans remained unchanged. Madras Government 1960 3 per cent was quoted at Rs 99.50, Mysore's of the same date and denomination at

Rs 99.70 and Kerala 1956-61 was quoted at Rs 98.00. 4 per cent Madras 1971 was quoted at Rs 99.85, that of Mysore and Kerala was quoted at Rs 99.75 and Rs 99.75 respectively. Andhra State Loan of the same denomination proved even less attractive at Rs 99.65.

Banks: Bank showed a subdued tone with less activity. Andhra continued to be quoted below par at Rs 99.85 for its Rs 100 paid shares and Rs 82.50 for its Rs 85 paid shares. There was no change in the Indian Overseas Bank which continued at Rs 166.00, or even in the Pandyan Bank which remained at Rs 39.25. Punjab National was lower at Rs 19.37 and proved weaker than last week's price which was Rs 19.50.

Electrics: Prices were almost grounded in electric shares. It looks as if these shares are not favoured by investors whose neglect of these scrips cannot but mean this. Bernampur continued to be below par at Rs 6.50, Cochin continued unchanged at Rs 10.30, Karaikkal was also below par for several weeks at Rs 9.75, Negapattinam too was the same at Rs 9.60, South Madras could not improve beyond Rs 10.12 and West Coast was steady at Rs 12.35.

Sugars & Breweries: Though this week it could not be said that there was better interest in these shares than last week, interest, in Sugars, however seemed to be sustained. Deccan proved good at Rs 14.25 today and it opened even less at Rs 14.20 beginning of this week. EID likewise attracted attention at Rs 55.50. It looks EID would continue this strength due to larger production and consumption of sugars in this State itself. Cauvery did not go beyond Rs 143.00 nor India Sugars which weakened to Rs 13.60. Mysore was wanted at Rs 77.00, Travancore slightly better at Rs 11.62. United Breweries remained unaffected at Rs 91.00.

Plantings: Cochin Malabar improved to Rs 8.23. Coffee Lands maintained its position steady at Rs 24.75, while Consolidated Coffee shares lost a few points at Rs 26.00. Cowcoody improved to Rs 6.05. Gokul had demand at Rs 1.97 and Haileyburia moved upto Rs 15.75, Blue Mountains had sales at Rs 5.00, which was fractionally lower than its last week's quotation. Kumerode too was available below last week's listed price at Rs 5.45. Manar tea shares were available at Rs 2.70. Midland rubber improved to Rs 12.48, Non-such was better at Rs 26.30 and Osoor livened up to Rs 3.63. Puthutotam declined to Rs 2.83 as well as Talayar at Rs 1.80. Travancore Rubber continued at Rs 15.62 with 10 per cent dividend taxable and Travancore Rubber & Tea shares with 7½ per cent taxable dividend continued at Rs 8.60. Wartyhully was at Rs 3.50 while business was done in Waterfall at the improved price of Rs 44.35.

Textiles: Textile shares proved steady. It is true there was not so much rage for the Travancore Rayons which after declining to Rs 38.50 again went up to Rs 38.90 today. Anglo French interested quite a few at an improved rate of Rs 104.00. Likewise Bangalore Woollen also improved a little at Rs 200.00, but Buckingham Mills continued at the same rate of Rs 203.00. Among the Coimbatore mills shares Dhana-lakshmi had been fancied at Rs 225.00. Kothari ex-dividend continued at Rs 12.55. Madura was quietly steady at Rs 33.25. Rajalakshmi (7 per cent ted) was sold at Rs 73 and Rajapalayam continued at Rs 135. Tirupathi improved its value at Rs 10.10. Vijayeswari was quoted at Rs 106.00.

Miscellaneous: Aluminium Industries probably had stopped its rise at Rs 27.00 at which it was steady. Andhra Cement was only slightly better at Rs 10.40. Dalmia Cement was the same today at Rs 12.30. Transactions improved in FACT's at Rs 11.00 though this is lower than this week's opening at Rs 11.05. Forest Industries met with good support at Rs 3.20. India Cement improved with moderate demand at Rs 6.60. Met-tur Chemicals were also fancied at lower level of Rs 12.20. Mysore industrial shares did not alter in the counter. The National Rubber Manufacturers remained at Rs 13.00. Ogale Glass was only a rupee higher than its face value, while Parry Confectionary continued at Rs 4.46. Rallis was steady at Rs 115.00, Spencer too at Rs 20.30, Textool was better at Rs 170.50, higher than last week. WIPlywoods was strong at Rs 300.00.

BHILAI LARGEST PRODUCER OF SALEABLE PIG IRON

The Bhilai Steel Project produced the largest quantity of saleable pig iron in India during 1959, according to the annual report of the Ministry of Steel, Mines and Fuel for the year 1959-60.

The Bhilai Steelworks produced 292,435 tons of pig iron for sale to the consumers during the year.

The report stresses the year 1959 was an important year in India's steel economy. It was the first year in which production of iron and steel showed large increases.

The production of saleable pig iron recorded a sharp increase from 441,000 tons in 1958 to 752,403 tons in 1959. Here, the contribution of Works at Bhilai and Rourkela was large, the report adds.

The prospects for 1960-61 are brighter, the report continues. There will be more pig iron for sale as compared even to 1959.

The supply position of many items of steel like structurals, bars and rods, and plates is likely to improve as a result of the production of billets and structurals at Bhilai and plates at Rourkela.

About Bhilai, the report states significant progress was made in the construction during the year.

The first open hearth furnace was commissioned in October 1959. The primary mill to convert steel ingots into blooms was commissioned in November 1959 and the billet mill to produce saleable steel sections went into operation towards the end of 1959. By the end of the December, the second coke oven battery and the second blast furnace also went into production.

During the first eleven months of the financial year 1959-60, under review, about 4,45,000 tons of coke, 3,91,150 tons of pig iron, 70,700 tons of steel ingots, 44,250 tons, of blooms 31,050 tons of billets, 1,600 tons of sulphuric acid 2,000 tons of ammonium sulphate and 17,000 tons of coal tar were produced.

Practically, all the equipment and stores to come from the USSR have arrived in India. Construction has reached the peak and will begin shortly to taper off. Of the permanent township of 7,500 houses 4,805 houses have been built and occupied. The other houses are in various stages of construction. This is besides a number of temporary houses and construction colonies for the workers.

In the current year, the third coke oven battery and the third blast furnace, the remaining four open hearth furnaces, the rail and structural mill and the merchant mill will be completed, resulting in capacity to roll the entire steel into saleable sections. The mechanised iron ore mines would also have been completed and regular supplies for continuous production in the three blast furnaces established, the report concludes.

WORKING OF ENFORCEMENT DIRECTORATE

During the year 1959-60, the Enforcement Directorate, Ministry of Finance, registered 1241 cases of violation of the Foreign Exchange Resolution Act for investigation. The Director adjudicated 223 cases during the period and imposed a total fine of Rs 57,29,327 on the offenders.

Since its inception on May 1, 1956, 3503 cases have been registered by the Directorate. Several of these involved well-known industrial concerns and prominent industrialists of India.

The work of adjudication of cases by the Director was started in March, 1958, and since then as many as 410 cases had been adjudicated by him up to March 31, 1960. The total fine imposed on offenders in those cases was Rs 66,56,620. Apart from the cases adjudicated by the Director, 32 cases were sent up to courts for trial. Of these, 26 ended in conviction and six in acquittal. A total fine of Rs 62,800 was imposed in cases decided by courts.

Excellent Results of National Rayon

Balance-Sheet Reviews

THANKS to the satisfactory working of all the plants, the National Rayon Corporation Limited has produced excellent results for the year ended 31 December, 1959. Sales have shown a substantial rise to Rs 7.52 crores from Rs 6.37 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 74.86 lakhs against Rs 43.36 lakhs in the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 94.50 lakhs from Rs 92 lakhs and the Taxation provision to Rs 84 lakhs from Rs 55 lakhs. The amounts provided for Debenture Redemption Reserve and Gratuity Reserve are maintained at Rs 10 lakhs and Rs 3 lakhs respectively. The directors have recommended a dividend of Rs 22 on the Old ordinary shares and Rs 21.27 on the New ordinary shares, both subject to tax. The dividend paid for the previous year was 14 per cent, free of tax.

The balance-sheet, as at 31 December, 1959, shows a paid-up capital of Rs 4,15,34,440 divided into 2,41,121 Ordinary shares and 1,74,246 Preference shares, both of Rs 100 each and less, Calls unpaid Rs 2,260. Share Premium Account is shown at Rs 26.27 lakhs and 54 per cent Mortgage Debentures at Rs 1.50 crores. Against these, General Reserve stands at Rs 49 lakhs; Deferred Taxation Reserve at Rs 40 lakhs; Debenture Redemption Reserve at Rs 50 lakhs; Development Rebate Reserve at Rs 6.85 lakhs and Gratuity Reserve at Rs 13.50 lakhs.

The gross block at Rs 11.70 crores is depreciated by Rs 5.26 crores to show a net block of Rs 6.44 crores.

According to the directors' report, the installation of the Tire Cord Plant is progressing satisfactorily. The list of machinery and equipment to be imported has been finalised and orders are going through, while sizable quantities of indigenous materials required for this project have already been covered. It is expected that the bulk of the machinery will arrive at about the end of this year so as to facilitate completion and commissioning of the plant before the end of 1961.

Import licence for putting up a few more Spinning Frames and balancing equipment has been obtained and it is very likely that they will also be pressed into commission during 1961.

Arrangements have been made for putting up a 100-ton/day Sulphuric Acid Plant, which is expected to start working sometime in the beginning of next year. This will more than ensure the supply of entire requirements of Sulphuric Acid, both for the Tire Cord Plant and the expansion of the main Rayon Plant.

As regards the Corporation's project for manufacturing Cellophane Paper, a loan on deferred terms of payment has been arranged with the Industrial Credit and Investment Corporation of India, to cover the foreign exchange content of the equipment to be imported.

Necessary steps have been already taken to duplicate the Caustic Soda Chlorine Plant to take care of the increased requirement of this raw material for the Corporation's expansion programme on hand.

Lower Profit for Belsund Sugar

Despite a marked rise in sales from Rs 75.26 lakhs to Rs 1.26 crores, the net profit of the Belsund Sugar Company Limited has shown a decline to Rs 6.73 lakhs for the year 30 September 1959 as against Rs 7.14 lakhs in the previous year. These figures are arrived at after providing for depreciation and taxation. The Depreciation amount is raised to Rs 1.89 lakhs from Rs 68.489. After transferring Rs 1.00 lakh from Development Reserve, the directors have provided Rs 2.06 lakhs (Rs 4.12 lakhs) for Taxation; Rs 50,000 (same) for General Reserve and Rs 1.79 lakhs (nil) for Development Rebate Reserve. The directors have recommended a taxable dividend of Rs 1.40 per share against a tax-free dividend of Re 1.00 previously.

Against a paid-up capital of Rs 19,49,050, General Reserve stands at Rs 7.75 lakhs and Development Rebate Reserve at Rs 1.79 lakhs. The gross block amounts to Rs 43.95 lakhs; total depreciation to Rs 27.46 lakhs and the net block to Rs 10.50 lakhs.

The quantity of cane crushed is higher at Rs 31.21 lakh maunds against 24.91 lakh maunds; but the recovery percentage is lower at 10.15 per cent against 10.47 per cent.

The extension of the factory, increasing the crushing capacity to 1,200 tons per day, is practically completed. It is expected that the 1960-61 season shall be started with full extended capacity.

Arvind Mills Maintain Net Dividend

The Arvind Mills Limited has reported satisfactory working results for 1959. Sales are slightly lower at Rs 3.42 crores against Rs 3.59 crores, while the net profit, before providing for Depreciation and Taxation, is higher at Rs 84.07 lakhs against Rs 83.23 lakhs in the previous year.

In respect of allocations, a sum of Rs 10.06 lakhs (Rs 14.11 lakhs) is provided for Depreciation; Rs 33.90 lakhs (Rs. 47 lakhs) for Taxation; Rs 3.00 lakhs (nil) for General Reserve and Rs 5 lakhs (Rs 3.50 lakhs) for Development Rebate Reserve. The directors have recommended a final dividend of Rs 25, making a total of Rs 40 per share. This works out to a net dividend of 28 per cent, same as in the previous year.

In the last report, it was mentioned that the additional plant would go into production some time by the middle of 1960. In this connection, the directors state that, in view of the difficulty in obtaining machinery in time, their expectations have not been fulfilled. It is, however, hoped that the plant will start operations early next year.

The paid-up capital is Rs 86.25 lakhs against which Capital Reserve stands at Rs 4.20 lakhs; General Reserve at Rs 183.50 lakhs; Dividend Equalisation Reserve at Rs 40 lakhs; Contingency Reserve at Rs 12 lakhs; Rehabilitation Reserve at Rs 47 lakhs and Statutory Development Rebate Reserve at Rs 8.50 lakhs. The gross block amounts to Rs 2.85 crores; total depreciation to Rs 1.40 crores and the net block to Rs 1.45 crores.

Further Progress made by National Rubber

During the year ended 31 December 1959, National Rubber Manufacturers Limited has recorded further progress in respect of the expansion programme undertaken by the company. Apart from construction of additional structures and provision for supply of additional power and other auxiliary services, all major plant and machinery, with the exception of Belt Press and some Cycle Tube manufacturing machines, were received toward the end of the year. Expansion of manufacturing capacity, already sanctioned in respect of Cycle Tyres and Tubes, V-Belts and Fan Belts, was already completed.

It is gratifying to note that turnover has recorded a further to Rs 2.00 crores from Rs 1.63 crores, representing an increase of 23 per cent over 1958. The net profit, before providing for Depreciation and Taxation, is higher at Rs 10.67 lakhs against Rs 6.86 lakhs. The directors have provided Rs 2.67 lakhs (Rs 2.43 lakhs) for Depreciation; Rs 1.80 lakhs (Rs 48,464) for Taxation; Rs 50,000 (nil) for Dividend Equalisation Reserve and 1.44 lakhs (Rs 3.22 lakhs) for Development Rebate Reserve. The directors have recommended a taxable dividend of 8 per cent on the Ordinary shares against a tax-free dividend of 6 per cent.

Against the paid-up capital of 59,76,022, reserves and surplus are shown at Rs 9.30 lakhs. The gross block at Rs 83.55 lakhs is depreciated by Rs 33.68 lakhs to show a net block value of Rs 49.88 lakhs.

Bombay Gas Company Results

The Bombay Gas Company Limited has presented the report for the year ended 31 December, 1959. The profit, after providing for Taxation of Rs 2.50 lakhs, amounts to Rs 1.90 lakhs. Deducting Rs 1.04 lakhs, the income from investments, the net profit actually amounts to Rs 0.86 lakhs. Even this is not the real picture of profit. For, during the year, there has been an extra income of Rs 1.52 lakhs from the supplementary bills. Without this, even the meagre profit of Rs 0.86 lakhs would have turned into a loss. Adding the carry forward from the previous year of Rs 1.18 lakhs, there is an available balance of Rs 3.08 lakhs.

The directors feel that the profit of Rs 1.90 lakhs is not quite adequate as to justify the payment of any better dividend than 6.5 per cent, less tax. This works out to a net dividend of 4.55 per cent. After payment of this dividend, there is a balance of Rs 48,173, which is carried forward to next year.

It is to be noted that the profit, during the year, has gone down to a considerable extent in comparison with earlier years due to the continuous increase in the cost of raw materials and labour. For the year, manufacturing expenses have gone up from Rs 66.73 lakhs to Rs 71.31 lakhs. Since the close of the accounts, there have been further increases in the cost of raw materials and freight. According to the present increase, these will entail additional expenditure of

Rs 1.35 lakhs during the current year. Besides, the company expects an increase under other heads like wages and salaries to the extent of about Rs 90,000. Moreover, there are chances of further revision of coal price, which will involve further additional expenses.

In respect of other allocations, the directors state that it has not been possible to make any provision for Rehabilitation resulting in the productive capacity of the plant and machinery being greatly hampered.

The balance-sheet, at 31 December 1959, shows a paid-up capital of Rs 40 lakhs against which Reserves are shown at Rs 23.29 lakhs and Capital Reserves at Rs 3.97 lakhs. Total gross block amounts to Rs 89.59 lakhs and this is depreciated by Rs 47.06 lakhs to show a net block value of Rs 42.53 lakhs.

It is quite clear from the present financial position of the Company that, unless the Bombay Government agree to a rise in the price payable for gas supplied by the Company, the Company will be hard put to declare dividends to shareholders in future.

India Sugars Earn More

The working of the India Sugars and Refineries Limited has resulted in a substantial rise in the net profit to Rs 16.83 lakhs for the year ended 30 September 1959 from Rs 5.30 lakhs in the previous year. Sales have risen to Rs 1.96 crores from Rs 1.33 crores.

The directors have set apart Rs 4.65 lakhs (Rs 4.94 lakhs) for Depreciation; Rs 50,000 (Rs 35,000) for Taxation and Rs 70,000 (Rs 8,000) for Development Rebate Reserve. They have recommended a taxable dividend of 12 1/2 per cent against a tax-free dividend of 10 per cent.

SQUARE PATH

ALTERNATORS

SINGLE PHASE
AND
THREE PHASE

RANGE
FROM 3 TO 25 KW

Switch on to the comforts of electricity

KIRLOSKAR ELECTRIC COMPANY have now taken up the manufacture
of ALTERNATORS—a new addition to the already familiar range of
KIRLOSKAR products.

These Alternators when coupled to KIRLOSKAR Diesel Engines
are called GENLITE SETS, which can bring light and power to your
home, firm, plantation or small workshop. Therefore, with KIRLOSKAR
Alternators, you can now enjoy the comforts of electricity.

WORLD OF FINANCE

State Bank and the Banking System

IN last week's Clive Street Gossip, Eaves-dropper analysed the progress of banking in recent years. He had remarked that, at one time, the accrual of counterpart funds with the State Bank was made so much of that it was contended that growth of Deposits with the banking system generally was disappointingly small. By now, however, it is crystal clear that the increase in Deposit resources of the banking system, even if counterpart funds were to be excluded, is of vast dimensions. How spectacular this new accretion has been will be realised if the figures for the State Bank are excluded. Incidentally, it would also be worth our study to see in what sense and to what extent the State Bank as such has been able to attract new Deposits. The following table shows the changes under four important heads in the figures of the State Bank (that is, Imperial Bank just on the eve of the nationalisation announcement) and in the figures of other Scheduled Banks.

	STATE BANK		
	(In crores)		
	17-12-1954	26-2-1960	Change
Deposits	233.82	604.82	+371.00
Cash	41.31	36.18	- 5.13
Investments	97.36	381.35	+283.99
Advances	100.72	190.49	+ 89.77

	OTHER SCHEDULED BANKS		
	(In crores)		
	17-12-1954	26-2-1960	Change
Deposits	703.13	1305.96	+602.83
Cash	89.88	124.41	+ 34.53
Investments	252.73	382.79	+130.06
Advances	433.53	870.50	+436.97

Taking, first, Deposits, it will be noticed that the State Bank appears to have experienced a much larger proportional increase than have the other Scheduled Banks. But regard must be had for the fact that, as the State Bank Chairman pointed out early in March this year, the State Bank has lodged with it some Rs 300 crores of counterpart funds and all of this amount accrued with that institution only after nationalisation. This means that, in the last five years odd, the State Bank showed an increase in "normal" Deposits running only to some Rs 71 crores, or an increase of roughly a third; and, against this, the other Scheduled Banks are seen to have done comparatively rather better. So, even in the mopping up of Deposits from the up-country and the new banking centres, it would appear that the other Scheduled Banks can claim to have given better account of themselves than the State Bank.

Strangely, the State Bank has reported a decline in its cash balances, including money at call and short notice; but the other Scheduled Banks have added to their cash, although not in proportion to the rise in Deposits. Thirdly, if allowance is made for the fact that the State Bank, as a matter of policy, contra-invested in gilt-edged against the special Deposits, then the State Bank would appear actually to have disinvested against "normal" Deposits. Other Scheduled Banks, on the

other hand, have significantly added to their gilt-edged portfolio.

Lastly, in the matter of Advances, the State Bank has reported slower expansion vis-a-vis the other Scheduled Banks. But, whereas the increase in the State Bank's "normal" Deposits has not been sufficient to cover the expansion in Advances, the other Scheduled Banks, in spite of doubling the quantum of Advances, had this rise fully covered by the increase in Deposits. What does all this prove or suggest?

A number of things, we suggest; for, the last week saw the fulfilment of a branch expansion target by the State Bank, with 400 new offices opened in the period since July 1955, and the figures show that, while Deposits of "new" branches have risen significantly from less Rs 1 crore to Rs 28 crores, Advances in such new offices have also gone up from hardly Rs 16 lakhs to over Rs 22 crores. It is of course obvious that the new activities postulated by agricultural financing, etc., will have entailed unprofitable working, and special provision is indeed made in the State Bank's accounts for meeting such liability. Fortunately for the State Bank, the adventitious profit on counterpart funds deposited with it has enabled its growth in profits to keep pace with the general improvement that, until last year, was noticeable in banking earnings. Then, to what extent has the State Bank "competed" unfairly—a question that used often enough to be raised?

It may be realised, in the first place, that expansion in commercial banking has proceeded much further in the case of other Scheduled Banks than in respect of the State Bank. Whether in relation to new Deposits or increase in Advances, there can be no doubt on this score. In the second place, there can have been no significant "switch-over" of accounts from the other Scheduled Banks to the State Bank; else, the rise in Deposits of the State Bank would have been rather more pronounced.

In the third place, all new rural money has not been unprofitable. It is only because the State Bank is "pioneering" non-banked areas, that its new offices are particularly susceptible to loss, at least for a short term of years. Other Scheduled Banks have also been engaged in opening new branches, but their experience has not been too unsatisfactory.

In the fourth place, more lasting support for gilt-edged has emanated from the other Scheduled Banks rather than from the State Bank; after all, Rs 300 crores of contra investments will sooner or later—and, perhaps, sooner rather than later—be sold back to the Reserve Bank, as and when drawings are made on the special Deposits with the State Bank.

At that stage, it will be clear, as it is not now, that the State Bank has not been competing enough with other Scheduled Banks. While the recently completed programme of branch expansion should start "paying" in the course of the next two years or so, further expansion and pioneering will have to depend, not on fortuitous profit from counterpart funds, but on additional profit to be made from enlarged commercial banking activity. This is a factor that should make banking conditions even more competitive in the near future.

Bank Deposits in Sight of Rs 2000 Crores

MONTH early disbursements have interrupted the stately progress of the 1960 slack season, with the Reserve Bank returns for 3 June revealing an expansion of Rs 6.00 crores to Rs 1867.88 crores in Active Note

circulation; and Rupee Coin has also gone out into circulation in the considerable amount of Rs 1.35 crores. Because Balances Held Abroad, as shown in the Banking Department, had fallen to an unworkably low level, the inevitable has happened, and a transfer of Rs 5 crores has been made from Foreign Securities in the Issue Department. But, because the week's expansion in currency circulation could be met by drawing down the Reserve Bank's cash in the till, which stands reduced by Rs 8.24 crores at Rs 23.87 crores, there has been a countervailing transfer of Rs 5 crores from Investments in the Banking Department to Rupee Securities in the Issue Department.

Inter-governmental transactions have been considerable; the State Governments have apparently had to meet large-scale liabilities, presumably in respect of loans and advances instalments against which had to be repaid. In the event, Balances of State Governments are sharply lower by Rs 17.70 crores at Rs 16.79 crores, the while that their indebtedness to the Reserve Bank also rose by Rs 2.34 crores to Rs 44.42 crores. The Central Government, as recipient of such largesse, have experienced an increase of Rs 14.68 crores to Rs 68.70 crores in their Deposits.

Investments in the Banking Department are lower by Rs 15 crores at Rs 240.59 crores, whereas, as we have seen, the countervailing transfer accounted only for Rs 5 crores. The missing Rs 10 crores, however, does not constitute reverse ad hoc; for, the State Bank is known to have augmented its gilt-edged portfolio by such an amount in the week.

Apparently, beginning of the month disbursements have had a severe impact on the position of Scheduled Banks. For, the Other Loans and Advances of the Reserve Bank have risen unseasonably by Rs 11.78 crores to Rs 120.23 crores. At the same time, however, Reserve Balances of member banks are practically unchanged at Rs 97.68 crores; and the State Bank, partly for purchase of gilt-edged, ran down its cash in hand and with Reserve Bank by nearly Rs 15 crores. So, it would be implied that other Scheduled Banks added considerably to the statutory deposits with the Reserve Bank during the week; and this, in turn, would suggest that other Scheduled Banks experienced a perhaps considerable increase in Deposit resources in the pertinent week.

The import surplus, or the inadequate flow of foreign aid, is continuing to eat sharply into our foreign exchange reserves. After transfer of Rs 5 crores from the Issue Department, Balances Held Abroad in the Banking Department are shown to be higher only by Rs 0.97 crores. So, the foreign exchange loss has exceeded Rs 4 crores during the week. At this rate, and unless either the trend in exports or the receipt of foreign aid improves, the prospect is for week by week transfer from Foreign Securities in the Issue Department to Balances Held Abroad. Furthermore, with the commitment for some element of repurchase of currency from the International Monetary Fund later this month, it is almost certain that our foreign exchange reserves will touch a new low. No doubt, continuing drawings will be made on our holdings of Foreign Securities.

The return of the State Bank for 3 June indicates a rise of Rs 4.96 crores to Rs 633.34 crores in Deposits. Also, the month-early demand for funds has caused a rise of Rs 1.48 crores to Rs 215.80 crores in the total of Advances. Due presumably to some earlier commitment, there has been an addition of

New Delhi since 1956 (when the first PL480 deal was concluded) that this country could look forward, from year to year, to some 3 million tons of American foodgrains to meet the marginal food shortage turned out to be the reverse side of the coin on which the word "complacency" was writ large. For another, this time it is much more than a mere "hope"; it is a definite deal carrying with it the element of certainty for a period of 4 or 5 years. Since the element of uncertainty, howsoever slender it may be, will not be there from year to year, there is a still greater likelihood of complacency setting in both at the administrative and the public levels and a still lesser chance of the requisite effort being made to achieve food self-sufficiency.

The danger of complacency, flowing from the certainty of food imports under such favourable terms as those of the latest PL480 Agreement, is all the greater when the Food and Agriculture Ministry will inevitably continue to think and function more in terms of food distribution than in terms of greater domestic production. The vast administrative machinery of this Ministry which has been fashioned all along to devote most of its energies to such questions as imports, prices, procurement, movement, distribution, zoning, cordoning, trading, licensing and the like has acquired something of a vested interest in a perpetual food problem in the sense of scarcity, and it will therefore be a miracle if Mr Patil's "dynamic" impact on it turns it in the right direction. As of today, however, we have only his word that the "attempt" to achieve food self-sufficiency will be made and that there will be no slackening of effort at the administrative level in this regard.

But what chance is there of the attempt succeeding when the latest PL480 deal will not be turned to the greater advantage of Indian agriculture in the short or the medium term? The assurance that "the emphasis will be upon the Agricultural Sector including construction of food reserve storage" will not be enough where the projects to be financed either from loan or from grant under the deal are expected to have a wide non-agricultural range. PL480 deal or no PL480 deal, a certain irreducible minimum allocation will be made in the Third Plan for agriculture and irrigation and this will in any case be financed. But this minimum will not be sufficient for stepping up food production to the point of self-sufficiency. To get a relatively small part of this minimum financed by the counterpart funds will only mean that the minimum itself is rendered partly dependent on such funds.

It is in this context that the idea of making the larger part of the counterpart funds under the latest PL480 deal available as so much additional finance for a series of labour-intensive agricultural and irrigation schemes for raising the food production potential in a period of 3 years or so should have commended itself to the attention of the authorities. Having 50 per cent of the 84.5 per cent of the counterpart funds (Rs 607 crores in all) as "grants" (which, as giveaways, are neither healthy for the beneficiary nor good for the benefactor) while the loan part thereof carries a rather high rate of interest (3½ per cent as compared to the 2½ per cent or so of the previous PL480 deal), and getting a few major irrigation projects (which, in any case, will be completed; PL480 deal or no PL480 deal) financed by a relatively small part of the counterpart funds will be of no particular advantage in the light of the felt need for earmarking substantially large additional funds for agriculture and irrigation. It is difficult to see how Mr Patil's hope of achieving food self-sufficiency by the end of the

Third Plan when production will have to be of the order of 100 million tons or so to cater to the then population, will be fulfilled otherwise.

The Food Minister's just pride over the successful conclusion of the latest PL480 deal should be tempered not only by the thought that he has not bargained for a more judicious and effective disposal of the counterpart funds from the point of view of achieving food self-sufficiency but also by the circumstance that the loaned counterpart funds will carry a higher rate of interest than is warranted by a food loan of the kind (which, may it be noted, is not of the same character as a foreign exchange loan for the import of capital goods and technical knowledge), especially in the context of the all-too-obvious American anxiety to find markets for their accumulating food surpluses. Much the better arrangement would have been to keep the 'grant' portion at about the same low percentage level as in former PL480 deals and have the loan portion at a rate of interest of, say, 1½ per cent. The whisper in some American as well as Indian circles that the PL480 loans may not be ultimately repaid and that, therefore, more "grants" would be preferable is galling to the self-respect of this nation.

A loan, whatever be its size, is a tremendous moral obligation, especially where it covers food; what sort of morality will it be to think in terms of not repaying it? Has it not been rightly said in a Tamil proverb that "even if the mouth does not appreciate, the stomach will"? Since, as a food loan, it will have to be repaid in a spirit of gratitude (which, of all the human virtues, is the most difficult one to practise), it would be prudent on the part of the Government to utilise as much of the loaned food as possible directly in the production of more domestic food and thereby bring about, at the earliest, a situation in which there will be no further moral and material commitments of the kind and the nation's morale will not be sapped by continued dependence on imported food. Well may this country take a leaf out of the experience of Russia and China which have always been particular about food self-sufficiency!

This is all the more necessary in the context of internal and external political factors. If a war breaks out (God forbid!), practically no shipping will be available for bringing food even if this country is then aligned with the United States. It may be that there will then be a repetition of the war-time famine in more than one deficit State of the Indian Union. If self-sufficiency is not achieved with a sense of urgency, there is no knowing how this country will be able to face the external dangers, known as well as unknown. Even the veriest tyro knows that self-sufficiency in food is a defence necessity of the first magnitude which has no narrow "autarchic" implications. If even the latest PL480 deal, which is a great blessing in the sense that it will partly enable the price line to be held during the Third Plan period, is not effectively and directly utilised in the production of more domestic food, even the fortunes of the Congress Party which is the greatest force making for stability and ordered progress may be adversely affected. The sands of time seem to be running out pretty fast.

"Popular" Strike

A strike that will certainly prove popular (just like an oil war) with many, is the proposed strike by the Incometax department staff. Of course, only some classes threaten action and no decision has been yet taken. But the hint dropped at Hyderabad by the tax

collecting officials about going on strike, if demands based on the Pay Commission report are not met, will certainly make a difference to many who have to prepare and submit returns in June. The casual replacement or dilution of labour, as in a dock dispute, is altogether impossible and the assesses know it as well as the staff. The warning given at Hyderabad by the subordinate staff is ominous, but only to the Government. But since Mr Gopala Reddi claims that arrears are being collected and reduced and the yield of income-tax in India is going up steadily, the avoidance of trouble seems very necessary.

The incometax cases in hand may also suffer if a major dispute with employees develops. The usual remedy of an Ordinance may be tried but it will create a bad impression and stiffen the attention of the NGO's whose main point may be unexpressed—that the subordinates get no pickings while the higher-ups are able to feather their nests and that too even after retirement. However, the lapses of others are not now mentioned so much as the failure of the authorities to give relief due to staff even while cutting holidays for the offices. The Prime Minister may be expected to deal promptly with the pending question, while the staffs will be content to withdraw from work, if nothing is done by 14 June. But a strike may easily lead to trouble in the Customs and Excise also and the interruption of Central revenue collections must be guarded against. There may be outside backing, not only from Leftist politicians, for a strike by keymen and nobody will readily subscribe in this case to the US doctrine that "there is no right to strike against the public". The course of events will be watched carefully, if conciliation is tried and whether a Whitley Council is set up for the staff, now with a load of grievances as well as papers about reliefs and refunds.

Student Indiscipline

In identifying interference of politicians as the primary cause of student indiscipline, the committee of the UGC which has just reported on the question has not made any new discovery. The unabashed exploitation of students during times of elections has been a subversive of all discipline in educational institutions. Politicians who depended on the services of students for achieving their objectives were only too ready to give them moral support when they fell foul of college or university authorities. And the latter were helpless against pressure from quarters with a large potential for troublemaking.

The role that students have been obliged to play in revolutionary situations, or in crises of war, giving up or suspending their studies in the large national interest, has come to be regarded as setting the pattern for normal times. The result has been progressive erosion of educational standards and the complete disruption of discipline in educational institutions.

This fact has been clear for a long time, that the first step to restoration of the proper atmosphere in educational institutions should begin with an agreement among the political parties to leave them outside the range of the

rivalries of party politics. But recognition of the causes has not yet been followed by prompt action to eliminate them. Political parties have allowed their inhibitions to frustrate effective action. A tentative beginning was made in Madras two years ago, to reach a gentlemen's agreement among political parties to keep students out of politics, which appeared to be working well. But, in the meantime, the "mass upsurge" in Kerala exerted a pull in the opposite direction and, in any case, the Madras example has not been followed up. And even in that State the tentative proposals have not been finalised.

The UGC committee's report will come up for consideration before the Vice-Chancellors meeting in Poona who may be expected to endorse this recommendation of the committee. But it depends on the political parties when, if at all, it is implemented.

To wait for all the parties in the country to agree on a code of conduct will indefinitely postpone effective action. The Congress as the largest party in the country, which is also responsible for the Government at the Centre and in the States, will have to take the lead in the matter and save the students from being sacrificed at the altar of petty party politics. If agreement on a self-denying ordinance proves elusive, the Government must seriously consider legislation declaring educational institutions 'out of bounds' for political parties.

Problem of Storage

Addressing press conferences in Calcutta and New Delhi on his return from his triumphant visit to the United States, the Union Food Minister has given details of the agreement under which India will be getting 17 million tons of US food grains in the course of the next four years. But certain implications of a transaction of this magnitude, which will make tremendous calls on facilities of transport, handling and storage, require further elucidation and especially its effect on the internal trade in food grains.

The first doubt that arises is in respect of adequacy of storage accommodation to deal with imports of the order of four million tons a year, of which one millions tons will be intended for reserve stock. Mr Patil indicated that storage space for two million tons was ready even now (presumably this includes private godowns) and this will be increased by another three million tons by the time it was used up. He did not consider that any special storage facility for the remaining twelve million tons would be necessary as this represented the quantity required to meet current deficits estimated for these years. Even so will it be possible to transfer the grain straight from the ships as they arrive in port to the retail shops? And if there is a time lag between arri-

val of grain in port and its distribution to consumers, where will it be stored, as available accommodation will be taken up by the imports intended for the reserve stock?

The Food Minister, has of course stated that the programme of imports would be flexible and that purchases would be regulated with reference to requirements from time to time, transportation, storage accommodation and other factors. But will it be possible to estimate requirements so finely and dovetail import programme with transport and distribution to consumers, that no extra storage space will be required? Moreover, will a storage space for five million tons be sufficient to operate a buffer stock of that size?

The reserve cannot be held indefinitely in storage without risk of deterioration rendering the grain unfit for human consumption. Most of the grain coming from the United States would have already been in storage for three or four years. The stock will have to be renewed from year to year by internal purchases. In a year of bumper harvest, when the internal surplus may be of the order of three million tons, it may be necessary to provide for storage of up to eight million tons. And operation of a buffer stock will mean that the Government will have to enter the trade in food grains on a very large scale. This means that apart from the total size of the storage accommodation, the location of the silos and warehouses should also receive careful consideration. It will be necessary to provide adequate storage accommodation both in the surplus areas as well as in the major consuming centres.

Bhutan A Buffer?

The recent deliberations of the Bhutan Assembly excited unusual interest in India. The claims made regarding the connection of maps (and the objections to Chinese maps) may be viewed as correct if it were not for the suggestion that Bhutan is irked by the treaty of 1949. The territorial concession made by India after the confirmation of the protectorate is forgotten. What Bhutan sees or feels is the fact of Chinese authority in Tibet, the hints relating to a Himalayan sub-federation. Bhutan evidently is not impressed very much by the assurance that foreign policy and defence will be looked after by the Indian Government. The difference between Bhutan and Sikkim is obvious at present—the latter is content with the existing position, whereas Bhutan is feeling her oats. There is also the fact that British Indian authorities even after the scientific survey of Sir Joseph Hooker never felt impelled to make Bhutan like Manipur a state under a Resident's influence, because the ethnic and other differences were obvious. The affinity with Tibet has created a Tibetan refugee problem for

Bhutan also. But what probably impresses Bhutan most is the successful Chinese assault from the North, on Mount Everest, supporting the claims advanced against Nepal.

The interest of Nepal in becoming a buffer State, getting help from China as well as India may condition Bhutan's future attitude and the Nepali treaty of 1956 with China may help Bhutan to rise above the level of a protected princely kingdom. The real importance of the Bhutanese representations about maps may be said to lie in a desire to know what case the Indian officials are putting forward in Peking at present, whether the special interests of Bhutan are represented and upheld by an appeal to the records or old maps. The fact that Nepal's claims to special influence in Tibet have lapsed quietly may be in the background of Bhutan's objections to Indian maps which do not mark off the Bhutanese boundary as an international frontier. A subsidy including arms like that given to Afghanistan in the past may only lead to the withdrawal of objections but the question is whether republican India will pay a subsidy before getting the right to build roads and station troops in Bhutan. Renegotiation of the treaty may be expected in Bhutan after the visit of Chou-en-Lai to Nepal but continuing unrest in Tibet is a warning to Bhutan also and if the Chinese in Tibet make good their claim to a part of Ladakh (not difficult as some competent observers note) the Indian government must make concessions to Bhutan and preserve the latter's frontier with Tibet in India's own interest. All this is perhaps sensed by Bhutan's leaders already—hence the pleas and points about maps.

FOREIGN NOTES

Credit Regulation in US

AS an instrument of national monetary policy, the US Federal Reserve Board (FRB) keeps a sharp eye on economic and financial developments that may call for new moves in the field of money and credit regulation. It is therefore of more than passing significance when the Board announces a change in its general policy directions.

Such a change has just been announced. The Board has approved the reduction of its rediscount rate from 4 per cent to 3.5 per cent at two of its twelve districts, Philadelphia and San Francisco. And once such a move starts, it normally spreads to all other FRB regions as well.

Yet one should resist the temptation to place too much significance on this latest move. True, by reducing the rediscount rate—the charge federal reserve banks on loans to commercial banks—the Board is in effect stimulating economic activity by making credit and borrowing easier. But it would be a mistake to interpret this as a sign that the FRB sees the economy in imminent danger of a downturn, and hence in need of this kind of stimulus.

On the contrary, FRB spokesmen—the Board seldom issues official explanations of its moves—have made it clear that the rate reduction actually seems from the underlying soundness of the American economy. The statement widely attributed to one such FRB spokesman is that “the economy is on a solid base and inflationary psychology has diminished.”

Under such circumstances, there is less need to follow a policy of credit and monetary restraint. Thus, the FRB seems to be in the enviable position, seldom attained in this imperfect world of easing its policies in the interest of the long-term objectives of economic growth with stability—that is, without any real fear of inflationary pressures.

The Board actually has been following what has been called a “neutral” policy for some months now. This means that it has been making no moves of any great consequence in the direction of either tightening or loosening its policies, although there have been some signs in recent weeks that it was relaxing a little of its pressure on commercial banks by making more lendable funds available to them.

This “neutrality” has tended to reflect the fact that the economy, while obviously prosperous, was

not expanding as rapidly as some forecasters had predicted when the year began. Several cross-currents have been evident. Industrial production, for instance, is no higher now than it was at the end of 1959; new orders have not been especially exuberant, and recently short-term commercial interest rates have tended downward.

On the other hand, more than counterbalancing these developments have been the recent strong rises in such important economic indicators as retail sales and gross national product (GNP)—the nation's total output of goods and services. Homebuilding also seems to be showing new signs of strength, while business borrowing has kept pace with the normal seasonal pattern.

Prices, meanwhile, have fluctuated in narrow ranges. The consumer price index has shown little change since last autumn, despite a spurt in April, and the wholesale price index, while also drifting slightly higher, is virtually at the same level as two years ago.

What seems to have tipped the scales in favour of an overt move toward credit ease has been the calm reaction of the American people—consumers and businessmen alike—to the international situation growing out of the collapse of the summit meeting. Of particular moment has been the evident disinclination to go on spending sprees or to stock up in anticipation of later shortages. And this regarded as a good test of current attitudes toward inflation—or the lack of inflation.

If things work out as the FRB apparently hopes—indeed, expects—economic activity will continue to advance steadily and soundly, unaffected either by a deflationary dip or an inflationary boom.

Out of Step

Fidel Castro who made many allegations against the USA has now been told off. There will be no aid to Cuba which is now pro-Communist rather than pan-American. Whether the USA will keep its naval bases on lease and whether she will continue to buy Cuban sugar in bulk may be in doubt. The visit of M. Mikoyan early this year to Havana led to a contract for sale of Cuban sugar for Russian goods. The barter deal was made much of by Senor Castro who thinks the Cuban revolution must embrace the conquest of local American capital, previously friendly to the Batista regime despite its defects. Agrarian reform led to grave fears about the future of US interests in Cuba and the State Department was inclined to contrast the mild Leftists of Caracas with the fire-eaters of Havana. The USA felt that Cuban leaders were in a hurry and their eagerness to undo the mistake of dictators was leading them into dangerous experiments. Cuba has a single crop economy and its tourist traffic has

fallen off sharply owing to the recurrence of disorders.

Antipathy to dictators is not the only mark of the Castro regime—it is authoritarian and its opponents have been dealt with severely. The Cuban leaders object also to US control of the Panama Canal zone, the tight grip of US Fruit Co on the Banana Republics and, of course, the drain due to the dominance of US capital in an undeveloped republic like Cuba. There are other Islands that can always offer sugar and tobacco to the USA, in case Cuba is out of the market, and the announcement regarding technical aid is a hint that Senor Castro cannot overlook though his local savings movements, based on lotteries, may be running smoothly. The expression of American displeasure will be viewed by some as a result of the failure at Paris, by others as a consequence of Castro's careless talk about Yankee Imperialism. There has long been a heavy import surplus in Cuba and conscription has long imposed a burden on the island economy. A break in the price of sugar is certain, but that will not help either Cuba or the foreign investor.

Crisis in South Africa

While the South African Government in celebrating the jubilee of Union, made possible by the Liberals in power in England, takes the line that its policy is correct and beneficial, organised industry is concerned over the signs of disunity, the danger to mining output and exports, if African labour is deliberately segregated. The crisis in South Africa is one that demands a change of policy and the handling of race relations will obviously be the acid test. Mr H. F. Oppenheimer even earlier writing in Optima (the house organ of the Anglo-American Corporation) argued that the real issue today is not the relations between Beder and Briton, but between White and Black. While 50 years of stable government have made South Africa prosperous, the African population has gained very little from development. This, says Mr Oppenheimer, is the black mark earned by a bipartisan policy which has ignored both African nationalism and the pressure of liberal opinion abroad. White labour must be ready to concede the claims of African workers also to advancement, he has urged. The founders of South African Union missed Rhodes' plea for equal rights for the civilised man as also the rise of new African States to the north. It may be hard to resist South Africa's claim to become a Republic but Mr Oppenheimer calls attention to the problem of continuing development on the basis of political stability. The fall in South African mining shares this year may touch only the investor abroad but the flow of new capital might suffer and the gold-mining industry will be able to

provide less for itself and others. The growth of secondary industry despite high wages and a limited market, might also come to an abrupt end. The reconversion of South Africa into a farming and pastoral community is now impossible and the Chairman's frank address to the Anglo-American Corporation's share-holders is a warning against the pursuit of mistaken and prejudiced policies. That South Africa has so far given nothing for the under-developed countries and the educational system too has been distorted by the passion for apartheid are common-places. No early improvement can be foreseen, but if an economic boycott abroad awakens rudely the South African government, it is just possible that the idea of a multi-racial community, as in Malaya, will not be rejected offhand. Mr Oppenheimer too subscribes to the theory of the winds of change blowing across Africa today and a minimum of fundamental rights for the subjects, as distinguished from the citizens, is regarded as the essential beginning of a new chapter in South African history.

Queen's Visit

The formalities are concluded, and Queen Elizabeth's promised visit early next year to Delhi will begin a new era in Indo-British relations. Both President and Prime Minister accept tacitly the view that a Royal tour will help Commonwealth relations, just as Pakistan has conceded already. It may even help to improve Indo-Pakistan relations by calling attention to the historical and durable association of British with the sub-continent; and to the intimate economic ties strengthened after independence. The points of resemblance between the Crowned republic of Britain and the countries in the new Commonwealth may require no formal exposition. But the visit will serve to show that British interest today is not limited to Borneo or Hongkong for the sake of oil or trade. There will be certainly a better sense of free India's achievements, before and after the Royal visit in the cold weather, and tourism too may receive a good fillip from the example set by the Court. The essential point that British example has influenced so far Indian politics and economics may require less emphasis than the other essential point that India had a long history before her contact with the British and her record is not like that of West Africa, rescued from ju-ju for justice not long ago. Sir William Hunter told British students that Indian history does not begin in 1757 and the British phase was only one of many in an ancient and civilised land. The new, implicit community of aims and continuity of administration yet may provide a stronger foundation for action in concert hereafter, for instance in scientific research or leprosy relief and the Indo-British industrial partnership may take new forms.

STATES NOTES

Lantern Industry

The period 1958-59 for the lantern industry has been one replete with difficulties especially in the supply of raw materials. The unprecedented paucity of tinplate and galvanised wire required for the industry had its repercussions on production, the total output of which registered a steep decline to 3.80 million in contrast to 5.48 million of 1955. But on a clear analysis of the affairs of the industry, one can understand that the lack of raw materials was not solely responsible for the disquieting state of affairs. It is partly due to the closing down of four established production units. Nevertheless, as pointed out by Mr Hruska, in his presidential address to the Fifth Annual General Meeting of the Lantern Manufacturers Association held in Calcutta, the existing eight units can fully cater to the needs of the country if they employ fully their production capacity.

In addition to the shortage of raw materials, their irregular and unsatisfactory distribution, also hindered the industry to keep pace with the production programme of the factories. Arrangements for the import and distribution of tinplates under the DLF scheme also failed to live upto expectations and the industry was at no time able to procure the particular type of tinplates with correct gauges. The procedure adopted by the authorities appears to be really cumbersome and often resulted in inordinate delays and tremendous hardship to the industry. With a view to obviating the difficulties of the manufacturers, Mr Hruska suggested that if the Government are bent upon importing the tinplates under the DLF scheme, it would be of immense help to the manufacturers if the Iron and Steel Controller should assess the aggregate demands of the industry prior to the calling of global tenders.

The price of the indigenous tinplates has shot upto Rs 1458.50 per ton since the recent levy of additional excise duty. This price is much more than that of the imported varieties. This has, in its turn, pushed up the prices of finished products by 5 to 7 per cent. Fearing that the future of the industry will be affected Mr Hruska urged the authorities for a suitable revision of the excise duty.

However, it is gratifying to note that the industry has developed an export market in East Africa, Malaya, Ceylon, Burma, and Persian Gulf countries. Exports of this commodity from 1956 to 59 amounted to the tune of Rs 5.01,

121.00. The industry can, if adequately assisted, cope with the foreign competition and supply its products at competitive prices.

Railways' Progress

Union Deputy Railway Minister, Mr. S. V. Ramaswamy, said that the Southern Railways were working at a loss of Rs 6 crores yearly for the last four years.

But the Minister's contention was that high cost of coal for the Southern Railways involved them in a loss of Rs 2 crores. Pilferage of equipment and other things including the coal on its way to the Southern points from the coal belt area accounted for another couple of crores loss and the implementation of the Second Pay Commission Report meant expenditure of another Rs 2 crores.

The Minister announced the revival of the Talsamannar-Colombo ferry service by the Southern railways from June 1 next. The suspension was due to loss that was regularly incurred to the tune of a lakh of rupees yearly, the Minister stated, but resumption of this six-day week service, welcomed by the Ceylon Government, was due entirely to humanitarian grounds. The Minister who had been to Ceylon and Talsamannar stated that accumulation of passengers from both sides and the plight of the passengers made them reopen the service.

As for the obligations the railways had to face on the completion of the Neivelli lignite mining, the Minister did not go beyond the declaration that whatever was expected of the railways when the Lignite mining gets into stride in Neivelli they would do it and were prepared for doing them. Probably the lignite, might be carried to Bhadravathi Iron Works and a railway line from Neivelli to Bhadravathi might be possible.

Regarding fresh railway lines in the Third Plan period, Mr. Ramaswamy stated that the Planning Commission's allotment of Rs 1225 crores would be utilised only for the laying of 1200 miles of new lines. These lines had already been committed for. Therefore no new lines would be possible. These lines are: 600 miles in the steel belt area, 300 miles in the coal mining area and 300 miles in Kotawals and Balladilla, to benefit the Dandakaranya Project. These lines in the Dandakaranya area would also to make more iron ore exports. Principally for iron ore export priority had been given to the last mentioned schemes Mr Ramaswamy explained.

As regards the completion of the Tambaram-Villupuram electric traction, the Minister stated soon a decision on the use of direct current was expected and before the end of the year the scheme might be put through. Already civil engineering works had been completed in this line. It looks as if the expert decision would only be in favour of direct current provision. There was difference of view about changing the present d/c into a/c current, but then the latter seems to be ridden with technical

problems. So the experts might plump for d/c traction which will continue upto Villupuram. If and when electrification scheme gets through beyond Villupuram, the Minister said then there would be the possibility of resorting to a/c traction system.

Hard Foundation

Progress in iron and steel output is already reflected in the rising output of iron ore in India though the demands of export trade may be responsible for the marked increase by 29 per cent over 1958 output. The larger demand for one at home may not limit exports to Japan which has become an important buyer of iron ore from Orissa as well as Goa. The STC has developed an important line of export and domestic supply also to the State-owned steel plants. The use of lower grade ore is also gaining ground and shipments to East Germany, Hungary and Czechoslovakia represent an important development in the trade. Though steel-making in Japan rests on import of iron ore from many countries, it is recognised that the countries having iron deposits are better able to develop the steel industry. But the USA too is a big buyer of foreign ore like Japan. And since India has only iron ore in abundance, the only metal industry that has developed fast is iron and steel on the basis of a larger output of iron ore for the new steel works.

Company Report

THE STERLING GENERAL INSURANCE COMPANY LIMITED, NEW DELHI

A YEAR OF CONSOLIDATION

INCREASE IN CAPITAL, DIVIDEND AND RESERVES

THE sixteenth Annual General Meeting of the Sterling General Insurance Company, Limited was held on June 6, 1960, when the Accounts of the Company for the year ended December 31, 1959, were passed. The following is an extract from the Directors' Report and Accounts.

PREMIUM EXCEEDS ONE CRORE TWENTY LACS

The gross premium booked during the year amounted to Rs 1,20,14,000 and the net premium amounted to Rs 44,80,000. The gross premium has been maintained at about the level of the previous year but the net premium has been reduced due to increased reinsurance. This has enabled the Company to strengthen its financial position by increasing the percentage of underwriting reserves, which have been increased from 45% to 50%, 44.4% to 50% and 61% to 70% in the Fire, Accident (Miscellaneous) and Marine departments, respectively.

INCREASE IN PROFIT

After paying management expenses and claims, writing off bad debts, and providing for departmental reserves, the working of the year resulted in a net profit of Rs 2,15,220 (Rs 1,39,838 in 1958). Adding to this Rs 3,610 brought forward from the previous year and Rs 1,457 being the amount of dividends forfeited, the total profit came to Rs 2,20,287.

Textile Industry in Vidarbha

The liquidation of the Laxmi Bank as officially approved by the Bombay High Court, has evidently not been an isolated incident. By hastening the closure of yet another textile mill, the Mohota Mills of Akola, it has deepened the crisis in the textile industry in Vidarbha. The 9-unit strong cotton textile industry of Vidarbha most of them small units with very meagre working capital, has never recovered completely from the aftermath of the crisis that swept the cotton textile industry during 1958. For several years now, many of them have been hovering on the brink of closure.

Working class interests have been clamouring for radical measures to stem the textile crisis in Vidarbha. The Government have already responded by assuring to take over the Sawatram Mills. This is only a palliative and could offer only temporary relief. The idea of a textile corporation to take over all closed mills has been mooted by a trade union representative. This is open to the objection of introducing an element of backdoor nationalisation in the textile industry. In the interest of workers' welfare it may be the duty of the Government to take over closed industrial units and keep them running.

INCREASED CAPITAL AND DIVIDEND

The paid up capital of the Company increased by Rs 1,30,398 and now stands at Rs 14,93,938. At the same time, the Company has increased its dividend from 5% (free of tax) for 1958 to 9%, subject to tax.

SUBSIDIARY COMPANY

During the year under report, the Central Mercantile Assurance Company Ltd. became a subsidiary of the Company.

ASSETS EXCEED Rs. 89 LACS

The total assets of the Company amounted to Rs 89,81,142 at the end of the year.

WORLD OF BUSINESS

Exchange Control

In spite of challenges through writ petitions by the affluent and aggrieved exchange control is both legal and logical and the Reserve Bank's little book "An Outline of Exchange Control" should help those affronted by foreign exchange regulations to appreciate the why and the wherefore. As an inheritance from the British Raj, exchange control may be termed tyrannical, but the system goes with trade control and Stafford Cripps' name may sanction its continuance. If some liberalisation in trade has not helped to remove prejudice, monetary agreements have made for less rigidity. Protecting the balance of payments is an overriding objective and the banks are called in to help. The preliminary section does not say anything about the Vesting Orders which took away the dollar assets of Indians, but later on, it says much about enforcement regarding declaration of assets held abroad by Indian citizens. There are new rules about Travel allowances and remittances or insurance premium payments. Foreign investors can draw dividends, while foreigners employed here can still send money home.

Most of the rules are meant to ensure that India gives as little and gets as much as possible. Self-interest is certainly writ large in the rules, so that it may be said that the current principles and procedure are as far removed from US practice as can be conceived. Under the present rules, shares cannot be bought in London, because they are cheaper, and that is a real drawback, as some still argue. The export of capital is taboo, but money can be brought home from Malaya or Ceylon for use here. The regulations cut across protests against exchange control practised in Ceylon or Pakistan. In order to check smuggling of gold new notes were issued in 1958 and even foreign travellers cannot bring in Indian money without declaration and permission, but they can bring their own native money and are quite free to spend it. Foreigners with funds in India have to follow rules and the usual rule of secrecy is probably violated by the exchange regulations in force, so that India does not allow the freedom and sanctity of contract obtaining, say, in Switzerland.

The outline does not indicate where Nepal stands whether it is like Pakistan or Ceylon, and whether the Bank of Nepal holds rupees for buying Indian goods.

But the outline reveals the different status of different currencies. Even the Escudo is rated strong like the Swiss franc or the Iraqi dinar floating after Iraq got out of the sterling area. The outline makes no mention of the penalties for evasion, the technique employed for smuggling gold or foreign currency, and treats Indo-China as a unit with the plastre even after the French left Saigon for good and Vietnam fell apart into two parts that can never agree. The status of the Turkish, Egyptian and Israeli pounds is also left to conjecture. In the outline, printed by the Examiner Press under the Reserve Bank's authority, it is strange to find Guadeloupe misspelt, while it is equally strange to find Tunisia called a French Protectorate even today.

The Bluest Chips

Though Indian Iron and Indian Copper shares are quoted regularly in London and the Directory of Directors finds a place for Indians on the board of the Indian Copper Corporation, there is no share that can be called international. It is US demand that makes a share international, and only listing in New York gave added status to Royal Dutch Oil shares. The American demand for European shares is the counterpart or sequel to acquisition of European holdings in US companies. The revival of Amsterdam as a capital market is bound up with the US desire to go in steadily for shares like Philips Lamp, Royal Dutch and AKU (the Dutch rayon combine). The decline and fall of many European bourses did not reduce the attraction of internationals. The prospect of the European Common Market became an attraction for many, and if the formidable forecaster, Roger Babson advised plainly against Americans investing in European concerns the fact of West German recovery made a powerful impression as well as the record of concerns like Ciba and Nestle. But Swiss securities are not the only internationals. If Mexican Eagle in the past loomed large, it is now recognised that the real growth stocks of today are Philips Lamp and Unilever. The firmness of Unilever in London despite the troubles in Africa, including the Congo, seems a recommendation like the long standing Dutch connection.

It is estimated that over half of Philips Electric capital is held outside Holland and the scramble for Philips shares in New York has excited comment a year ago. A merger of interests with Siemens might render Philips of Eindhoven more powerful and pervasive in Europe. And it is not improbable that the ECM may bring about a combination between the Dutch AKU and Sna-Vlascosa leading to a division of export markets for convenience. Integration in prospect makes the internationals more active and the fact that the

current yield on Philips Elec. shares is as low as 1.6 per cent has been mentioned to indicate that worldwide demand for Philips shares after the war has made it the bluest of blue chips, far better than De Beers with its fat dividends from diamonds. The New York market has made also for brisk dealings in Electrical and Musical Industries, Bowater and other shares with an American connection. But it is Philips which has glowed really through recent years and US investment trusts have been keen buyers of international scrips.

There is perhaps a moral for Indian investors who have taken kindly to Philips Elec. and regard its local manufacturing programme of radios as a bull point. The current rating of Philips India reflects the optimism of shareholders in what is obviously a growth stock like Union Carbide or Indian Oxygen. Those now denied access to stock markets abroad are certainly keen on buying shares that have an international cachet and many hope that foreign collaboration will be the strongest recommendation, as in the case of Philips Carbon Black.

Problems of Chemical Industry

In his presidential address to the Annual General Meeting of the Indian Merchants Association held in Calcutta on 27 May, Mr M. K. Roy, alleged that the restrictive import policy pursued by the Government of India had brought untold miseries to the chemical trade in general. In order to remove these unpropitious conditions and to strengthen the industry, the need for a more liberal and sympathetic approach can hardly be emphasised. It was only in the fitness of things that Mr Roy made a fervent appeal to the authorities for a revision of the basic years for fixing quotas to established importers of chemicals especially in regard to items like mercury, bleaching powder, camphor, ultra marine blue, menthol etc.

However, in spite of these hardships, it is gratifying to point out that the production of chemicals in the country registered an appreciable increase during the year under review. But the fact that the indigenous production was far below the requirements and was able to meet only a fringe of the mounting demand clearly indicates the paramount necessity of expediting the activities of the trade with a view to dispensing with imports altogether.

Dealing with the canalisation of imported materials through the State Trading Corporation, Mr Roy pointed out that the sudden change in the Government's policy has brought, in its wake, monetary losses and other difficulties to the members of the Association who had been all these years functioning as indispensable link between the producers, importers and con-

sumers. Since licences have already been issued to the State Trading Corporation, Mr Roy urged the authorities, as a remedial measure, to adopt salutary changes in the policy so as to entrust at least the distribution of these chemicals to the normal channels of trade. Apart from these, he also desired that the STC should, as far as possible, confine its activities to entering into trade agreements or such promotional activities with foreign traders so as to expand the country's foreign trade, leaving, for all practical purposes, the actual trading operations to the normal channels of trade.

Besides, Mr Roy also drew pointed attention to the fact that there exists tremendous scope for enhancing the exports of chemicals from the country which will fetch in a sizable amount of foreign exchange. In order to help those concerned, as suggested by the speaker, certain facilities will have to be provided to the exporters in the nature of allowing considerable concessions in the railway freights (on the movement of these commodities for export purposes) and the like. It will be recalled that the railway freight for certain chemicals from producing centres to the ports is heavy particularly in the case of alumina ferric, sodium bichromate and barytes.

Sikkim's Copper

The directory of Indian metals and mines does not find a place for the copper located in Sikkim though the small occurrence in Panch Mahals is mentioned. The discovery at Rongpo on the border of Sikkim may render the Sikkim Mining Corporation started in February 1960 important enough to attract more Indian aid. But the Sikkim Government holds 50 per cent of the capital of Rs 1 crore and 49 per cent is held by the Indian government, though the investment may only afford a regular return later on. Local labour is being now trained to work the mines in the Teesta valley and the erection of a smelter is contemplated already. Both zinc and lead are found with copper at Khantal and it is hoped that the help of Indian geologists and technicians will give Sikkim a regular revenue and help India to get the metals needed to supplement what little is obtained. The long search has been crowned with distinct success and good results are reported from the mines situated conveniently near Gangtok, the capital. Copper, more than oranges or whisky, may be the strongest card in Sikkim's suit and the lift in copper and brass prices may even help to get ore refined at the smelter in India. The output initially may not be large but when larger power supply is available next year, the mining operations will increase in scale and importance to justify economic aid given under this treaty with Sikkim.

Indian Finance

11 June 1960

VICE-CHANCELLORS of Universities are meeting at Khadakwasla on the fifteenth of this month to discuss student indiscipline and a committee of the University Grants Commission has prepared a report for them. It would have been remarkable if the report had anything new on a subject so pathetically overworked. And yet the problem itself has assumed menacing proportions. Hardly a day passes without reports of organised misdemeanour by young thugs who pass for students. One day it is the railway servant who asks them for the fare that is manhandled; the next, it is the invigilator who asks them to hand up the little aid to memory under the cuff. I wonder whether there has been in recent times any year in which examinations have not had to be suspended because some one found the questions too 'stiff' and therefore, broke the furniture, tore up the answer books and dragged forcibly the others away. There are a hundred other acts of individual and organised irresponsibility, from petty annoyance to fellow-students, especially of the other sex, to strikes and hartals, often for the flimsiest of reasons. What is particularly depressing is that none of these proceeds from an excess of youthful joie de vivre—the sort of mad defiance of authority that gets you sent down from the university for a prank like the legendary stealing of the policeman's helmet on the beat-race night. For high spirits is what the Indian student of to-day seems conspicuously to lack.

There has been no dearth of diagnosticians: The list of commissions and committees that have reported on University Education in general and on the particular problem of indiscipline is long. The UGC committee's report could therefore add little to what was already known. The 'manifest and complex' causes are listed as 'interference by politicians, changing social values, loss of authority and prestige of the teachers, increase in the number of students, the prevailing system of examinations, lack of healthy interest in physical and cultural activities and the abuse of students' Union as a bargaining counter.' I have no wish to add to the tedium of discussion by rehearsing these well-known hypotheses. But on the basis of these 'facts', the committee has drawn certain further sociological inferences about 'attitudes and values governing student behaviour that are worth discussing. That politicians have been straying into the academic world doing much harm to students by involving them in practical politics is well known. But the committee

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

puts this down not only to the politicians' predatoriness where power is concerned with the students being a mere victim of power-manoeuvres. They see evidence of a profound distortion of values among the students themselves. It is the politician and not the intellectual or the scholar or even the saint, who according to the committee, is the student's hero. I believe that this is rather an exaggeration, but if true, it will fall into the larger national pattern. In that case, this finding will be an interesting footnote to the recent AICC discussion over the rival prestige-potentiality of the parliamentary wing and the non-parliamentary wing of the party. Within the party itself, politics has come to be thought in terms of power publicly wielded by one and that is why there is such a mad scramble for candidature for political office. In other words, in the larger national sphere, as in the student world, "the politician has tended to become the successful man par excellence because of the prominence he seems to have in public life. Teachers and students also, therefore, try to become 'politicians' in their small worlds."

It is rather difficult to deny that the politician occupies a rather larger share of the national scene than is his desert. But that is not perhaps a particular distortion of relative values in this country. Judged by the amount of newspaper space they occupy, politicians all over the world project their images more persistently than any other comparable group. It is true that the Indian press does print at wearisome length all the platitudes of all the politicians, but I am not sure that this helps the public at large to think any the better of them. But there are two important differences between India and certain other countries like Great Britain. First, in the national context, there is a genuine public consciousness of modes of success other than political in England. In other words, at the shrine of the bitch-goddess success, there are other favoured worshippers beside a politician. Take, for example, a television personality or a pop singer or Diana Dors (for whose life story, the News of the World paid over £30,000 last January). A politician, by comparison, despite a cer-

tain attempt at a glamour boy build-up for Mr Macmillan, is not a hero for the British public. In the US, likewise, the image of a successful man is probably not the local senator but Liberace and of a successful woman—not Mrs Roosevelt—but Gina Lollabrigida. Even at higher levels, there is a far greater range of publicly recognised and genuinely respected achievement. In India, it is rarely that greatness in spheres of scholarship science or technology get comparable prestige.

The second reason is that in a country like Britain, there is substantial real achievement in spheres other than politics that simply cannot be ignored. This is particularly so in seats of learning. University for University, any one in England has at any particular point of time more men whose depth of scholarship and range of intellectual interests would compel respect from the most brazen than in India. This, in a sense, is the real tragedy of our universities. There are of course exceptions and they are precisely those who are most acutely conscious of the aridity of the intellectual atmosphere in which they are compelled to live.

I am aware that British universities have their 'politics' as was

demonstrated by the recent election to the Oxford Chancellorship. Some of C. P. Snow's novels expose the involutions of intrigues in the senior common room. But the factional squabbles and worse that disfigure some of our universities are of a different order altogether.

If then, the politician is the hero of the Indian student, and his acts of indiscipline proceed from an over-eager rehearsal of the seamy side of politics, the remedy obviously is two-fold. First and most importantly, to make him realise that success as such is an unworthy end to pursue. If at an university the young mind and imagination have no worthier aim in life than success, heaven alone can save our country. I know it is somewhat an odd evocation in the context of some of our universities, but Arnold's Oxford and Forster's Cambridge appear before my mind's eye. (Ironically, Arnold's scholar gypsy thought of Oxford as too worldly. I shudder to think of what he would have thought of some of our universities.) "As Cambridge filled with friends, it acquired a magic quality. Body and spirit, reason and emotion, work and play, architecture and scenery, life and art—these pairs which are contrasted elsewhere were there fused into one. People and books reinforced one another, intelligence joined hands with affection, speculation became a passion and discussion was made profound by love." Even for achieving a measure of worldly achievement, it is absolutely essential that the universities keep alive an intrepid venturesomeness of the spirit, which alone can open new worlds.

CALCUTTA MADRAS NEW DELHI

Of course, universities have their practical tasks and equipping them for the life in the wider world is one of their duties to their alumni. But even here, any university worth the name should offer an image of practical achievement more prepossessing than a politician intriguing for power. It ought to hold up, if not the poet or thinker as hero, at least the scientist or doctor or engineer as hero. I am appalled at the poverty of spirit which, in the face of the clearest evidence of relative achievement of the politician and, say, the scientist in modern times, chooses to be a politician. And this choice is made, not at the market place, but at the University campus. What could all those people, for whom the national

laboratories have been built be doing? It would have sounded odd to me if somebody told me that young men who heard Rutherford on the atom were thinking of the hustings or day-dreaming of 10, Downing street. Which leads me on to the proposition that something needs to be done about the University teachers before anything can be done about university students.

But of course, the politicians are only part of the reason for student indiscipline. By all means let us have a gentleman's agreement among political parties to leave the young well alone. But we would still have students who would break invigilators' heads because the question paper was too

'stiff'. Here we have a complicated vicious circle which starts, as all these things do, with bread and butter. The brutal truth is that not more than 10 per cent of the people who crowd the colleges and universities have any business to be there at all. But they get there, by hook or crook for by one of those farcical distortion of values that bedevil much of our national life, a degree from an university is considered essential for everything from landing a wife to landing a job. And so you find them by the hordes in overcrowded colleges, parasitically lived on by people who see in education racket of some scope. A whole range of subsidiary enterprise, from making 'bazar notes' to stealing question papers has

grown around this circumstance. There is little wonder that the level of attainment is shamefully low and questions that are slightly out of the ordinary stump them. Even the brighter boys find it difficult to cope when they encounter a real challenge to their intellect abroad, since there has been a continuous watering down of standards. Unless the Universities are in a position to end this scandalous state of affairs, there is no real hope.

What then is to be done? I hate to multiply class distinctions, but it would appear that we may have to have two kinds of universities and colleges. One kind in which only the best will be allowed after a very rigorous entrance test and the products of which will eventually form the elite. The other which will peddle degrees as at present. I make this suggestion because it is difficult to scrap the whole thing immediately, for, the social dislocation it will cause would be tremendous. In about fifteen years time, it should be possible to so reduce the value attached to the degree emanating from the latter as to make merit find its level. By then, the only places that can call themselves Universities without any sense of shame would be the former kind.

This is no easy proposal to put through. The task of separation of the sheep from the goat may well founder for much the same reasons which have brought the Universities where they are today. Would the necessary high-minded readiness to jettison the bogus or at least relegate it to a secondary place be forthcoming? One should hope so, for the alternative is too desperate. After all, if politicians are self-denying enough to leave the campus, there is no reason why the idea of admission being regulated by merit in at least some colleges and universities should sound naively hopeful. Once this happens, and these universities have teachers of the highest calibre—for as in the case of students, only 10 per cent of the teachers at the Universities to-day have any business to be there—we will have the beginning of a real intellectual ferment in our universities. The problem of indiscipline may still remain but it would no longer be of student indiscipline for the buyers of degrees cannot with propriety be called University Students. In the real universities themselves, it is not inconceivable—though I hope not—that from time to time a student will get rusticated. But the reason would be, not that he cheated at the examination but that, like Shelley, he wrote an atheistic pamphlet, or whatever is its modern equivalent intellectual audacity. It would be a sad thing to happen, but compared to what happens to-day, it would be a healthy thing.

Industrial Prices and Production

IN a recent representation to the Government of India the Federation of Indian Chambers of Commerce and Industry has pleaded for a new approach to the question of industrial prices wherever they are fixed by the authorities. It is suggested in this connection that an industry which is subjected to price regulation may be enabled to provide substantial funds for rehabilitation, modernisation and expansion from internal resources and that the return on investment in such an industry should have some relationship with the return in other industries so that it may be in a position to compete for new funds from the capital market. A number of concrete suggestions have also been advanced by the Federation, particularly in regard to rehabilitation and return on capital.

As regards rehabilitation, the Federation has drawn pointed attention to the lack of a uniform policy for grant of allowance therefor in fixing prices payable to producers. It is a pertinent question why rehabilitation allowances have been granted in the case of certain industries like steel and cement while they have not been allowed in the case of other industries like sugar and paper. The Federation has referred here to the fact that the Supreme Court, in considering the award of bonus to workmen, has uniformly held that rehabilitation should be considered as a prior charge and that adequate provision should be made therefor. On the other hand, there is the question whether in the case of industries producing commodities of general or universal consumption like sugar and paper the consumer can be justifiably expected to foot the bill of rehabilitation through a price increase on that score. It is here that the National Industrial Development Corporation with its special financing arrangements can come into the picture. Only, the Corporation's finances would have to be augmented for the purpose. But the Federation has made no such suggestion probably because the rehabilitation finance that can be provided by the Corporation will still be loan finance.

As regards the return on capital employed, the Federation has pointed out that since 1958 the Tariff Commission has been generally allowing a return of 12 per cent on the basis of the value of net assets. This return, it is further pointed out, is to provide for increased provision for labour welfare, bonus and gratuity to employees, managing agency commission, besides interest on bor-

rowing, taxation of profits and payment of dividends to preference and equity shareholders. The Federation's calculation is that on the basis of a return of 12 per cent, after meeting the various charges, the net return to the equity shareholders, free of tax, will hardly amount to 4 per cent. In the case of the sugar industry it is stated to be 3.86 per cent and in the case of the cement industry, 3.82 per cent. In the case of coal, the return is stated to be as low as 2.42 per cent. The Federation's contention is that such a low net return, free of tax, to the equity shareholder is very inadequate and that in the present market conditions it is difficult to raise even preference capital at less than 6.5 per cent free of tax. It is in this context that the Federation's point that, before 1945, the Tariff Board used to treat managing agency commission as an item of cost seems to be relevant. The Federation's further point that bonus and gratuity should also be treated as items of cost is based on the view that they are definitely items of revenue expenditure.

Another concrete suggestion made by the Federation is that the Tariff Commission, in its assessment of costs, should take into account the actual expenditure incurred on the works side. Theoretical assumptions of production being nearly equal to capacity and consumption of raw materials, it is pointed out, would be hardly realistic in any assessment of works costs. Objection is also taken to the Tariff Commission's procedure of working out the 'fair' works costs as an average of the costs of all producers. The Federation's contention is that in such a situation, the producers whose costs are above the average will have no inducement for expanding capacity and production. Perhaps this contention is rather weak because it may be reasonably expected that high-cost producers may well increase their production to achieve greater economies and thereby reduce the costs. Even if this contention is supposed to be correct, there is still the question whether suitable criteria can be evolved for selecting the 'marginal' unit whose costs, according to the Federation, should provide the basis for determining the 'fair' works costs.

The Central Advisory Council of Industries will be meeting some time this month. It will be appropriate to take stock of the industrial progress in 1959 in the context of the Council's forthcoming meeting. A long table is given at the end of this despatch to give a broad picture of industrial production, in terms of value at 1957 prices, in the last two years, namely, 1958 and 1959. These value figures, according to the Ministry of Commerce and Industry, are rough approximations and are intended merely to convey the orders of magnitude involved. It will be seen that almost all the newer and younger industries are covered and that some older indus-

tries like the textiles are not covered.

The aggregate value of industrial production in the organised sector in 1959, at 1957 prices, has amounted to Rs 1,359 crores as against Rs 1,212 crores (at 1957 prices) in 1958. This total value does not cover the textile group's production.

This table is given on the eve of the forthcoming meeting of the Central Advisory Council of Industries.

INDUSTRIAL PRODUCTION IN 1958 AND 1959

(In terms of value at 1957 prices)

Industries	1958 (Rs lakhs)	1959 (Rs lakhs)
I. Chemical and Allied Industries:		
Alum (all varieties) ..	19	20
Ammonium sulphate ..	1,075	1,088
Bichromates ..	52	60
Bleaching power (stable) ..	49	38
Calcium carbide ..	34	37
Caustic soda ..	378	438
Chlorine liquid ..	112	134
Copper sulphate ..	35	52
Dyes (all varieties) ..	377	559
Glue ..	43	68
Glycerine (refined) ..	173	195
Hydrogen peroxide ..	28	34
Industrial Alcohol ..	100	122
Insecticides and pesticides ..	139	169
Leather cloth ..	143	184
Matches ..	2,617	2,889
Moulded plastic goods ..	350	397
Paints and varnishes ..	1,080	1,215
Pharmaceuticals & drugs ..	5,400	6,500
Phenol f. moulding powder ..	32	44
Potassium chlorate ..	47	45
Polystyrene ..	95	165
Power Alcohol ..	87	75
Rayon staple fibre ..	566	808
Rayon yarns ..	817	883
Salt (common) ..	630	470
Soap ..	1,968	2,016
Soda Ash ..	299	316
Sodium sulphide ..	25	29
Sulphuric Acid ..	431	511
Superphosphates ..	351	523
Textile Auxiliaries and detergents ..	106	139
Titanium dioxide ..	50	60
Welding gases ..	248	293
Zinc oxide ..	284	288
Total I ..	18,427	20,854
II. Industrial and other machinery:		
Agricultural machinery ..	83	144
Arc Welding Electrodes ..	166	180
Ballbearings ..	143	122
Cement machinery ..	62	46
Chemical and Pharmaceutical machinery ..	71	75
Compressors ..	2	32
Cotton textile machinery ..	568	709
Construction machinery ..	32	62
Cranes and bridges ..	50	..
Diesel engines (vehicular) ..	288	563
Grinding Wheels ..	74	72
Industrial Blowers ..	14	22
Industrial Boilers ..	9	6
Jute machinery ..	118	178
Mining machinery ..	9	12
Machine Tools ..	378	441
Oil Mill Machinery ..	29	51
Power Driven Pumps ..	220	236
Rice, Dal and Flour Mills ..	29	42
Road Rollers ..	47	71
Sugar machinery ..	191	250
Steel structural ..	1,200	1,224
Tea Processing machinery ..	71	82
Twist Drills ..	86	66
Unclassified industrial machinery ..	8	22
Weighing machines ..	37	48
Total II ..	4,522	5,383
III. Electrical Equipment:		
Cables and Wires ..	1,263	1,277
Conduit pipes ..	585	435
Control gear & switchgear ..	200	225
Dry cells ..	518	576
Electrical Accessories and Fittings ..	280	290
Total III ..	6,739	6,982
IV. Transport Equipment:		
Ancillary Automobiles ..	506	606
Automobiles ..	4,158	5,544
Auto Rickshaws ..	26	54
Bicycles ..	1,367	1,486
Buffers, plungers and castings ..	66	38
Motor cycles ..	72	89
Locomotives ..	374	396
Railway signalling and brake equipment ..	115	50
Scoters and autocycles ..	59	53
Trailers, Transport ..	68	46
Total IV ..	6,811	8,341
V. Light Engineering Industries:		
Air conditioners ..	178	169
Balls and Nuts ..	680	700
Crown Corks ..	43	49
Duplicators ..	12	12
Enamelware ..	123	108
Expanded Metal ..	244	210
Hurricane Lanterns ..	105	122
Oil Pressure Lamps ..	34	39
Razor Blades ..	107	130
Electrical Instruments ..	158	15
Scientific Instruments ..	150	273
Machine Screws ..	24	32
Wood Screws ..	65	83
Sewing Machines ..	949	429
Shuttles and Bobbins ..	184	299
Steel Files ..	81	86
Total V ..	2,703	2,617
VI. Mining, Metals and Metal Manufacture:		
Aluminium Sheets and Cables ..	679	809
Aluminium Virgin Metal ..	311	648
Antimony ..	17	21
Armenical Copper rods ..	11	5
Brass (copper & similar alloys) ..	97	91
Coal ..	9,521	9,786
Copper (Sheets & Circles) ..	120	105
Copper Virgin Metal ..	251	245
Copper and Brass pipes and tubes ..	4	3
Finished Steel ..	7,527	9,774
Iron Ore ..	2,970	3,389
Lead Pipes & Tubes ..	7	15
Lead Virgin Metal ..	43	50
Pig Iron ..	4,347	6,493
Zinc Sheets & Strips ..	46	55
Total VI ..	26,326	32,350
VII. Miscellaneous Industries:		
A. O. Sheets ..	744	712
Cement ..	3,403	3,772
Ceramics ..	409	387
Quartz ..	1,491	1,508
Glass ..	913	898
Leather Footwear ..	1,052	1,073
Paper & Paper Board ..	3,795	4,350
Plywood (Commercial & Teacheft) ..	473	472
Refractories ..	450	477
Rubber Footwear ..	1,468	1,540
Sugar ..	18,552	19,766
Tea ..	10,853	11,383
Tyres & Tubes (Auto) ..	1,120	1,298
Tyres & Tubes (Bicycle) ..	490	593
Vanaspatti ..	7,195	7,512
Wheat flour ..	3,231	3,556
Total VII ..	55,630	59,385

Scruffy and Smarty

Scruffy: "You get the bouquets and I the brickbats. Why? I was the best speaker in the college."

Smarty: "Who is denying that? But sloppy dress and a good speaker never go together."

Scruffy: "Why not? After all, they've come to hear me and not to look at me!"

Smarty: "But you must impress them first. Why not choose a good cloth? BINNY'S preferably. BINNY'S Quality Control their production. Defects, invisible to the naked eye, that might have crept into the cloth are carefully eliminated at every stage of production. That is why BINNY'S suitings look smart and last long."

BINNY-

a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make: Shirts - Khaki Drills - Bleached & Dyed Drills - Anticrease Suitings - Tussore - Union Fabrics - Towels - Silk Sarees - Rugs - etc. etc.

REMEMBER, you can buy all your requirements of BINNY'S fabrics at our controlled rates from authorised BINNY'S Stockists who display this Sign board.

THE BUCKINGHAM & CARNATIC COMPANY LIMITED
THE BANGALORE WOOLLEN, COTTON & SILK MILLS COMPANY LIMITED
Managing Agents: BINNY & CO. (Madras) LTD.

THE PENINSULA

Techno-Economic Survey

A summary of the report of the techno-economic survey of Madras State conducted by the National Council of Applied Economic Research was today released to the Press at a Press Conference in the Madras Secretariat. The Council's Chairman, Dr P. S. Loganathan, explained certain details about which reporters and correspondents sought clarification. The full and complete report, upon which usually well-informed criticisms could be made, would be available only by July end. A glance of the released summary of the report would immediately reveal lack of many details and existence of many gaps in the Council's recommendations.

Industries Minister Mr R. Venkataraman and Finance Minister, Mr C. Subramaniam were present to intervene here and there and clarify certain details which Dr Loganathan could not by himself do.

The one-year survey has nothing to do with the Planning Commission's projects in Madras State. It is only an advisory body, which has been requested to do the survey because of its acquaintance with the technical procedure of assessing the State's economic resources and suggest, on the basis of their findings, appropriate measures to step up the rate of growth of the economy through expansion and diversification of economic activities and to raise the standard of living.

The Madras State, according to the Council's findings, has a relatively diversified pattern of economic activity with well developed agriculture, widespread industrial activity and good transport and communications. The characteristic feature of the economy, however, the summary points out, is

the high pressure of population on limited resources which has led naturally to severe unemployment both in rural and urban areas. A suitable way should be opened up to reduce unemployment to the minimum and find new jobs at a high technological level so that the average per capita output of Rs 230 (1956), lower than the All-India level of Rs 261 (1956) is raised.

Agriculture, the survey points out, having been very well developed, future development pattern of this State will necessarily be dominated by industrial growth. Availability of skilled labour and the aptitude to learn new skills, the existence of many large scale industries, large population providing a large market and a "well ordered political system" are the advantages which the Council believes Madras State has to its credit. It wants better utilization of existing underutilized industrial capacity. Transport facilities and availability of power need to be improved.

Thus the National Council has suggested that the State should plan for the coordinated expansion of all the three sectors—primary, secondary and tertiary—with definite and deliberate emphasis on industries as strategic action.

The Council has assumed that Madras would keep pace with All-India rate of growth of doubling the national income of 1956 by 1971, and it feels that the total investment needed to double the State income of Rs 7,300 million in 1956, will be of the order of Rs 20,000 millions. The tertiary income may be assumed to increase at a slightly lower rate than total income (95%—an increase of Rs 2,780 million) leaving an increase of Rs 4,500 millions to be obtained from the primary and secondary sectors.

The Council's recommendations are:

1. Madras needs more engineering and processing industries with a reorientation for obtaining raw materials or semi-finished materials for being finished and exported. Therefore great emphasis is laid on quick and cheap transport. It lays stress on a vigorous programme for development of large-scale industries which are relatively small in number in this State making the State compare unfavourably with Bombay or West Bengal. Big industries would help create ancillary units. In the next five years, the Survey says, Madras can expect to have three leaders in the Neyveli industrial complex, comprising chemical and engineering industry; the Salem complex centered around iron, steel and aluminium industries and the Tuticorin complex based on chemicals and fisheries. It has recommended that both small and large scale industries should grow side by side.

The Council places more emphasis on non-resource based industry. These industries will increase income and employment directly

and will open up scope for many ancillary industries. The Council's recommendation with regard to engineering (metal-based) and chemical industries are calculated to develop physical resources based on consumer goods industries, which are important because of their high employment potential.

2. Engineering Industries: Additional capacities in the following industries are recommended: Ball and roller bearings (one million units), bolts, nuts and rivets (160,000 tons). Shot and chilled iron (1000 tons), tea processing machinery, power station equipment, industrial gas cylinders, industrial blowers, air compressors, machine tools, diesel engines, power transformers (1 million kva); electric fans, (1 lakh units) and ACSR conductors (5,000) tons.

Substantial expansion of the capacity of the following engineering industries is also suggested: bicycles, machine screws, railway wagons, steel pipes and tubes, structural fabrication, metal containers, sugar mill machinery, automobiles and accessories, pistons and piston rings, power driven pumps, dry batteries, storage batteries, galvanized and barbed wires, textile machinery, agricultural tractors and enamel wares.

Doubling of the installed capacity of the following industries is also recommended: automobiles and trucks, motor cycles, vehicular type of diesel engines, electric motors, abrasives, small tools and distribution transformers.

The State's weakness in engineering industry is inadequacy of intermediate processing facilities like foundries and forges. The Council has recommended manufacture of grey iron castings, malleable iron castings, steel castings, steel forgings, steel press work, aluminium castings, electrical steel sheets, re-rolled steel and alloy tool and special steel.

The Council considers Salem to be the best location for rolling and re-rolling, Madurai for malleable iron castings, Coimbatore for grey iron castings and Madras for the rest of the items.

3. Chemical and Allied industries of the State need to double their present installed capacity. The Council's recommendations in respect of these industries are: 2,000 tons of domestic and sanitary ware and tiles at Ranipet or Neyveli, 2000 tons of insulators at Neyveli, 25,000 tons of refractories, 250 tons of carborundum, refractories and crucibles at Tiruchirappalli or at Salem, 20,000 tons of sheet glass at Salem, 1,000 tons of neutral and Pyrex-glass at Madras and 350 tons of optical glass at Madras.

It also recommends the doubling of the capacity of the Mettur and Dharangadhara Chemicals (in Tirunelveli district) to attain a daily output of 200 tons of caustic soda. A soda ash plant with 200 tons daily output can also be installed in Madras it says.

Establishment of an extraction plant for such chemicals like po-

tassium chloride, bromide and gypsum from bittern with annual capacity of utilising 60,000 tons of bitterns is also held feasible in Madras because the State produces large quantity of salt from seawater. A 20,000 tons plant is suggested to be erected at Tuticorin.

4. On the scope for the establishment of industries based on forest products, the Council is of the view that there is scope for making writing, printing and wrapping paper in Madras. Bamboo, wattle, blue gum and sugarcane bagasse (with waste-paper as alternative) should provide for a 15,000 ton plant for making wrapping paper at Mettur Dam, a 15,000 ton plant for rayon pulp and paper pulp manufacture at Bhavanisagar and 25,000 ton plant for making printing and wrapping paper at Nellikuppam or Neyveli and a 6,000 ton plant for paper. It also recommends the installation of a 4,500 ton capacity plant for manufacturing particle board at Kodaikanal using wattle bark. There is also scope for two plants for the manufacture of hard board each with an annual capacity of 6,000 tons at the Nilgiris.

5. Increase of sugar production by 15,000 tons daily in fifteen plants is another recommendation. With the present level of sugar production, the Council thinks a plant with a capacity for processing 20,000 tons of molasses yearly to produce PVC, ethylene, and its derivatives, acetic acid and acetic anhydride, should be possible.

The establishment of a plant for gelatine production to supply the proposed raw film factory at Ootacamund is also recommended. Besides it had suggested a capacity of 5½ tons of ossein and 11 tons of dicalcium phosphate.

It is possible to establish about 20 solvent oil extraction plants each capable of processing of oil seeds daily and five plants for crushing cotton seeds with 75 tons daily capacity.

Quality hand made paper from textile mill-linters with 90,000 lbs yearly output is also considered be possible.

6. Coming to the need for an iron plant, the Council recommends a capacity of 30,000 tons of pig iron at Salem and Coimbatore and 200,000 tons of steel at Salem.

7. As regards small scale industries the Council has recommended establishment of 42 new small scale units with a total of 267 units at an investment of Rs 60 millions with employment potential of 11,360.

Establishment of an Industrial Investment Trust is also recommended to accept contributions from individuals for investing in profitable enterprises. Setting up of an industrial consultants' organisation to make techno-economic evaluations of potential for industrial development and a consortium of various financial agencies to give financial help to new undertakings is also suggested.

8. Agricultural development, the Council reports, is crucial in Madras in that it has to feed not only the additional 12 million mouths in 1971 but has also to meet the increasing demand for food arising from growing urbanisation, and it has to provide raw materials for a number of consumer goods industries such as textiles, sugar, leather and vegetable oils, whose growth is a sine qua non for providing employment. The Council, however, feels that Madras, with its large area

under irrigation with improved practices, offers little scope for further development except through more intensive cultivation. Changing of crop pattern by the end of Fourth Plan when the State would have almost exhausted its water resources may have to be thought of. However the Council States that the agricultural output value in Madras would have increased by 67% in 1971. Income from other primary activities like, mining, fishing and animal husbandry is also expected to grow rapidly. In all, the additional net primary output in 1971 may be Rs 2,150 million, i.e. 65% over 1956 level.

9. The Council agrees that power bottleneck poses to this State a serious problem. The State's power policy, it has reported, should be based upon creating surplus rather than catching up with demand. Madras would start its III plan with a heavy deficit of power that has been estimated at about 2,230 million units. This deficit in production would continue after the Third Plan. Power demand would increase from 3,232 million units in 1959-60 to 4,776 million units in 1960/61 and to 9,513 million units in 1965/66, i.e. the demand would double itself.

The contemplated power development in Madras from the present installed capacity of 530,000 Kw to about a million Kw, excluding 300,000 Kw from the Neyveli Thermal project, will only meet the additional requirements arising out of the development of agriculture, industry, transport and so on. The Council thinks the Madras State should additionally invest for power increase or get additional power from the neighbouring States or establish a nuclear power station as early as possible.

10. Since the Madras State needs to import raw materials like coal, iron, steel etc to feed the non-resource based industries and also because industrial output from Madras is destined for markets all over India and outside India as well, transport facilities have to be strengthened very much in future.

An investment outlay of Rs 3,500 million for transport development for fifteen year period from 1956 is recommended.

The Council thinks that the addition to man-power supply during the next fifteen years will be of the order of 2.8 millions. The new jobs created during the same period, if the proposed outlay of Rs 20,000 million is invested, will be around two million. It is clear, the Council affirms, that the problem will continue to plague the economy even after 1971.

The Council feels that the State Government must play a dominant role in promoting economic development not only by extending all facilities to private sector, which has a crucial role to play in the future but also by imposing on itself many activities which will strengthen the overhead facilities and provide a base for quick industrial growth. It has suggested a State Development Agency for coordinating efforts of different departments and for disseminating information and guidance. The programme of development envisaged during the next decade in the report is:

	Investment in Million rupees
Primary sector	2,000
Industry	5,000
Transport	3,500
Power	1,500
Housing, Education and Health	8,000
Total	20,000

Over 10 years ago, the TISCO Research and Control Laboratory at Jamshedpur, illustrated above, was Shalimar Tar waterproofed and is, today, still waterproof.

Proof enough that bituminous proofing is the best.

Throughout India, crores of rupees worth of Government property, industrial establishments and private homes are protected from dampness of ceilings, walls and floors, from acid and alkali action by Shalimar Tar bituminous based protective materials.

WORLD OF TEA

Exports

ACCORDING to official sources in Calcutta, earnings from the export of tea, in the first two months of the current year, improved to Rs 17.48 crores from Rs 14.74 crores in the corresponding period of last year. This was in contrast to the fall noticed in tea exports during 1959 when earnings declined to Rs 126.39 crores from Rs 136.54 crores in the previous year.

It is interesting to note that direct exports of North-East Indian tea to the UK, during the year ended 31st March 1960, declined to 167.18 million pounds from 173.90 million pounds in the corresponding period of 1959. While shipments to London auctions declined sharply from 164.55 million pounds in 1958-59 to 155.76 million pounds, those against private sales and forward contracts increased from 9.35 million pounds to 11.42 million pounds.

Exports from Ceylon have, however, increased to 103.49 million pounds in the first quarter of the current year from 87.83 million pounds in the corresponding period of last year. With the exception of Egypt, shipments to almost all destinations recorded an increase. The UK increased her offtake from 30.25 million pounds to 38.61 million pounds and the Continental countries from 3.48 million pounds to 5.15 million pounds.

Shipments to the USA and Canada improved from 11.44 million pounds and 3.26 million pounds in January/March 1959 to 13.59 million pounds and 3.32 million pounds respectively in the period under review. Australia and New Zealand also increased their offtakes from 8.79 million pounds and 2.73 million pounds to 12.53 mil-

lion pounds and 2.97 million pounds respectively.

Exports from the Cochin Port declined to 3.89 million pounds in April 1960 from 4.37 million pounds in the corresponding month of last year. In spite of this decline in total exports, shipments to the UK, the major buyer, increased to 2.15 million pounds from 1.52 million pounds in April, 1959. Exports to New Zealand also improved to 118,170 pounds from 75,880 pounds. Shipments to other destinations, however, recorded a decline with the US offtake falling from 590,770 pounds in April 1959 to 253,800 pounds in the month under review. Exports to Canada, too, fell from 892,010 pounds to 485,600 pounds as did those to Australia from 287,650 pounds to 151,120 pounds. The USSR also reduced her offtake from 969,320 pounds to 852,920 pounds and Holland from 79,680 pounds to 33,240 pounds.

Meanwhile, an optimistic view of the outlook for Tea is taken by Sir James Jones, the Chairman of James Finlay and Company, London. In his view, there is no surplus of tea at present and world tea consumption should continue to grow, especially in Eastern producing countries where the scope for raising tea consumption is described as enormous. The tea trade in London is now awaiting some indication of the size of the new Pakistani crop though, according to the Pakistani Government, a clear picture will not emerge for some time.

In the final Internal Sale held this week, offerings were 15,391 packages of Dusts. Demand was good, but selective. Cleanly-sorted orthodox kinds met with active enquiry although generally selling at slightly lower rates. The more fibrous types were, however, considerably easier and sometimes difficult of sale. Legg-cut Doors teas were sold well.

The small weight of bright medium CTC dusts available was keenly competed for at firm and sometimes dearer rates; but the poorer end-of-the-season types provided a weak feature of the

sale. Following rates were quoted: Medium Doors Dust Rs 1.78 to Rs 1.92; Medium Assam Dust Rs 1.74 to Rs 1.92; Medium Assam CTC Rs 2.02 to Rs 2.26 and Best CTC Assam Dust unquoted.

Production of tea in Ceylon increased sharply to 46 million pounds in April from 39.4 million pounds in the same month last year. This put the total Ceylonese outturn, in the first four months of the current year, higher at 157.9 million pounds as compared to 139.6 million pounds in the corresponding period of 1959.

Tea stocks in London, as on 27 May, totalled 142.55 million pounds as against 145.55 million pounds in the previous week. Total amount to be landed on the same date was 10.69 million pounds. Total afloat was 93.24 million pounds including from Calcutta 1.02 million pounds; from Chittagong nil; from Cochin 2.52 million pounds; from Ceylon 4.08 million pounds and from other Ports 1.71 million pounds.

Cotton Situation Unsettled

TRADING in the cotton futures market in Bombay during the past week was in a state of stalemate as the prices which pierced the ceiling of Rs 790 were reluctant to climb down. In private trading the quotation ranged around Rs 795, deriving inspiration from the expectation of an increase in the ceiling of the forthcoming new crop and the issue of fresh quotas for the indigenous varieties.

Meanwhile the agitation of the cotton trade gathered momentum over the recent orders issued by the Government of India controlling the sales of cotton to mills which will be applicable from 1 August next. From almost all the quarters of the country representations were despatched to the authorities voicing the grievances of the traders. Reports received from New Delhi give an indication that the authorities are probably in favour of a blanket control on cotton during the ensuing season.

According to the official version, the Government were forced to take recourse to the new control measures fearing that there will be a pronounced paucity of cotton during the next season too. It is gathered that the Government are contemplating the appointment of about 150 nominees all over the country for the distribution of cotton to the various mills. About the clamour for a higher ceiling on cotton from the trade, it appears that the opinions of the authorities

Indian Finance

are divided on the issue and the situation in cotton is at present in an unsettled condition.

SPOT MARKET.

The clarification of a Government spokesman about the order of 13 May has led to a frantic covering and buying of all available varieties of good cotton. Among the imported varieties Busoga BP 2.52, Jinga, Sudan and US cotton below 1" and 1.18" to 1.532" met with less interest while among the indigenous styles spinners evinced keen interest in Vijay, Digvijay, Surti, Jaydhar, and Laxmi.

According to official information, the total quantity of foreign varieties licenced for imports and the actual arrivals between 1-9-59 and 14-5-60 were as follows:—

Variety	(bales of 400 lbs)	
	Qty.	Actual
East African	123,360	94,791
Sudan	80,967	63,149
Egyptian	170,230	167,496
Peruvian, Pakistan & Others	113,238	46,421
USA	307,765	88,128
Total	795,560	468,985

FOREIGN.

Trading in Liverpool futures market continued on a more active scale. The near position which suffered declines during the last week on liquidation coupled with switching operations, staged a remarkable recovery. The May position witnessed rapid fluctuations before going off the board strongly at 22.60 d. The near July position was also able to generate adequate strength from trade covering thanks to the improved demands from mills for actual cotton. New crops were substantially supported by American buying with only light hedge selling to meet the demand.

NEW YORK.

Futures trading in the New York cotton market was sluggish. The fluctuations in the prices were rather insignificant in thin trading. The new crop position eased slightly on account of light commission house selling inspired by the propitious climatic conditions. The net changes were 3 points up for the current crop contract and 3 to 20 points down for the new crop contracts. The export sale of raw cotton during 1959-60, according to the estimates of the US Department of Agriculture totalled about 6.58 million bales. Indigenous consumption also registered a slight increase by 3 lakh bales to 9 million bales. Entries into the loan during the week ended 27 May were nil while repurchases amounted to 3,372 bales. The purchases of the Commodity Credit Corporation under the Choice 'A' programme being nil the total purchase stood at the previous week's level. Crop Plantation and replanting have been completed but the lack of rainfall has put the planters in melting pot.

Stocks Rise

PRICES have continued to display a declining trend in the jute markets during the week ended Wednesday due to lack of mill interest in raw jute coupled with the absence of any sizable foreign enquiry. Over the past week, raw jute, basis Assam Bottoms, has declined by three rupees while ready hessian and sacking have lost Rs 1.70 and Rs 2.50 respectively.

The reactionary tendency has stemmed from the realisation on the part of speculators who have been so long dominating the market, that powerful forces have begun to work against the continuance of high price levels.

Reports from the jute growing areas have confirmed that the new crop, though delayed, will not show any serious setback; the general expectation is that it will be good in quality and plentiful in quantity. The problem that is facing the industry is one of meeting the gap in supply of the raw material during the period between the end of this season's jute supply and the arrival in quantity of next season's harvest. The IJMA has devised an effective remedy and that is to give freedom to mills to

adjust their production according to the availability of raw jute in their godowns. It is now reported that a goodly proportion of the mills in West Bengal has decided to carry out the necessary changes with effect from 6 June. It has been estimated that the looms sealed by these mills will work out to about 2 per cent of the total loomage of the industry. This will mean that roughly mills have now 11 per cent of their looms sealed, as against 9 per cent effective 1 May.

The fact that May-end stocks of jute goods have recorded a rise of 5400 tons over the previous month-end level has also contributed to the lowering of price levels. Total stocks are placed at 82,000 tons as against 76,600 tons at the end of April. At the corresponding date a year ago stocks stood at 99,400 tons. May-end stocks are made up of 34,600 tons hessian, 33,800 tons sacking and 13,600 tons other varieties. It will be seen that the main contribution to the overall increase in stocks has come from hessian, the rise in which is to the tune of 5,300 tons. The increase in the sacking section is comparatively small accounting for a rise of 1,300 tons. Other goods are however lower by 1200 tons. The increase in stocks is not unexpected for a number of reasons. In the first place it is well known that following the steep rise in goods prices during the past couple of months, foreign buyers have ceased to evince much interest in the Calcutta market. The plea that the rise in goods prices is due to the spurt in raw jute prices is unlikely to leave the buying pattern undisturbed for the simple reason

that overseas buyers have alternate packaging materials ever ready to meet their requirements both in quality and price. May-end stock figures perhaps reflect this fall in overseas demand and the slight increase in production as a result of the unsealing of the 1 per cent looms from the first of the month. While a fuller picture of the conditions obtaining during the month can be assessed only after the publication of the figures pertaining to production during the month, from the sizable rise in hessian stocks, it would appear that this category of goods has not been having satisfactory reception in its principal foreign market.

The adjustments made by the industry in order to cope with the present shortage of raw jute are no doubt the best way out of the difficult supply situation in raw jute. But the curtailment of production is not without its risks and one of these is the resumption of the upward trend in goods prices. Although May-end stocks will contribute further toward sobering sentiment, there is the possibility that if the current comparatively lower levels begin to attract attention of overseas buyers, speculators may find a favourable point in the curtailment of mill production and consequently goods prices may be pushed up. The result would be to drive the overseas consumer to substitutes again. It is against this violent fluctuations in prices that effective remedial measures have to be taken by the industry and trade and authority as the future of the industry will largely depend on the success in ensuring stable price levels.

STOCKS OF JUTE GOODS AT THE END OF MAY, 1960.

Ashok Leyland Limited

Early Steps to Increase Capacity of Factory

Sir A. Ramaswami Mudaliar, Chairman, Reviews Company's Progress

The following is the Speech of Sir Ramaswami Mudaliar, Chairman, Ashok Leyland Limited, Delivered at the Eleventh Annual General Meeting of the shareholders on the 1st June 1960.

Gentlemen,

I have great pleasure in extending to you a cordial welcome to the 11th Annual General Meeting of your Company.

The Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1959, has been circulated to you, and with your permission, I shall take them as read.

Your Company has made steady progress in its manufacturing programme during the year under review. This progress has been in two directions, both of which are essential. In accordance with the understanding which we have with the Government of India, the Company has to maintain progress in the development of indigenous manufacture, so replacing the foreign and imported content of the vehicles manufactured. It has also an equal duty to increase its production so as to meet the growing demands for the vehicles of your Company. These two aspects of manufacture require a continuous expansion of the plant and machinery and of the buildings which must house them. There is a further requirement which is as essential as either of the above, and that relates to the recruitment and training of skilled labour.

The first phase of our building programme was virtually completed in 1958 and was referred to by me at our last meeting. But we could not afford to stand still and 1959 saw the installation of additional plant and machinery required to complete the machining of engine components, to provide to some extent for the early production of the rear axle and gearbox and to enable us fully to equip our own tool room as a preliminary to producing our own Jigs, Tools and Fixtures. All these activities necessarily involved an increase in the number of employees from 954 at the end of 1958 to 1473 at the end of 1959. The increase in the production of the Leyland Comet chassis during the year reflected the increase in the demand for the Comets and the popularity of this vehicle. In the year 1959, the increase in the output of these vehicles has been 2½ times the output in 1956, but even this increase has been totally inadequate to meet the requirements of the demands as they stand in your order books. The

Comet has established a reputation for good performance at low cost per mile, which has enabled your Directors to plan with confidence for an output far in excess of your Company's original conception. All motor manufacturers in this country have, however, been faced with difficulties which they had not anticipated before and which to a certain extent have reacted on the enthusiasm with which they have planned progress. The recent levy of excise duties on motor cars of a certain horse power, on tyres and on various other auxiliaries, however necessary they may be from the point of view of revenue to meet the demands of projects for Five Year Plan, is I venture to state, a little arbitrary and militates against certain other aspects of Government's policies and projects. The increasing awareness of the Government of the need for a larger outlay on the construction and maintenance of the Highways in the country, of strengthening the bridges on such Highways and of utilising road transport for passengers and for goods over long distances, has been welcomed in the country. In a vast country like India, it is inconceivable that rail transport can be available in every nook and corner, at any rate, unless a staggering amount of capital is invested in such rail expansion. It is therefore hoped that the incidence of the excise duties on the development of road transport, will be carefully studied, and as a result of such study, a review of such incidence will lead to the abolition or at least the lowering of the heavy excise now levied on motor vehicles.

In spite of this adverse factor your Directors have taken the view that expansion of the production of the number of vehicles in your Factory is absolutely essential and that early steps should be taken to increase the capacity of the Factory for the production of this increased number. After discussion with the Directors of Messrs. Leyland Motors Ltd., your Directors, in consultation with that Company's Vice-Chairman who visited your Works last year, came to the conclusion that it would be advantageous to the Company to produce at least 5,000 Comet chassis per annum and at the same time to provide for a production of 1,000 heavy duty Leyland Engines of the 0.600 and 0.680 type, and at the same time consequentially to add at least 20% to the total productive capacity for the manufacture of spare parts.

The increased target requires additional capital expenditure. The

import of plant and machinery necessary for the purpose, the addition of buildings to house such plant and machinery would involve a fairly substantial increase of capital expenditure. As a preliminary to the serious consideration of raising the necessary capital for this expansion programme, a call will shortly be made on all the recent issue of partly paid shares to make them fully paid-up. Also the Directors approached you recently for increasing the authorised capital of the Company to Rs. 10 Crores and your consent was readily given to the proposal. Having regard to the expansion programme, it may be stated at once, that the capital which will be issued will be much less than the authorised capital and is proposed to be issued not all at once, but over a period. The problem however of raising the necessary capital has been found to be more complex than it may appear at first sight. The foreign exchange required for obtaining the plant and machinery and accessories, was far greater than the foreign exchange resources that would be available by the increase of the issued capital on the basis of issuing 51% to local subscribers and 49% to Leyland Motors, which is now the existing relationship in capital between the two sets of investors. It has been calculated that to meet all the requirements of foreign exchange for the purpose, a basis of 60% for Leyland Motors and 40% for the local investors would be required unless the Government of India was prepared to give the necessary additional foreign exchange. Consultations have therefore, been held between your Directors and the Directors of Leyland Motors Ltd. on the one hand and the Government of India on the other. The informal consent of the Government of India has been obtained for the increase in the shareholding of Leyland Motors to 60% for a period of 10 years by which time the foreign exchange position of the Country would enable the Government to restore the position of the two sets of shareholders to a 50/50 basis. Negotiations were then continued with the Leyland Directors and you will be glad to know that Sir Henry Spurrer and his colleagues have consented to meet the extra demand on foreign exchange by agreeing to invest 60% in the capital of the Company and by further agreeing to have the proportion brought down to 50% at the end of a 10 year period.

I have already referred to the elimination of the imported contents of our vehicles and we have programmed to produce the rear axle by the end of 1960 and gearbox before May 1961. This enlarged manufacturing programme and the increase in our output require the recruitment of skilled labour—a problem in facing which we are met with difficulties and anxieties. Your Directors have always been conscious that the rate of our progress must ultimately be governed by the rate at which we can train artisans. We have given our attention to this problem for sometime and today about 170 men are receiving training in this Factory. These training facilities will shortly be augmented to meet future requirements. In the years 1960 and 1961 your Directors plan to train not less than 800 artisans in addition to those trained men we may be able to recruit.

I must now refer to a subsidiary project which your Company has undertaken in collaboration with Leylands. I referred to this project last year when we were at the stage of consultation with Government over this project. The

may be expected to take place and final proposals in these matters will be placed before the shareholders within a few months, so that thereafter, with your approval, the formal consent of the Government may be obtained to these proposals. These far reaching plans involving capital expenditure of a high order, and the new building programme, necessitated by the decision to implement the proposed expansion, bring in their wake additional responsibilities on those who are in charge of the Factory and its administration. This Factory will then be equipped with plant and machinery necessary to make modern heavy commercial vehicles, which will compare favourably with similar factories in Europe. Indeed, Sir Henry Spurrer, Managing Director of Leyland Motors Ltd., in a recent speech, forecast a day not far distant, when your Factory will have an output of Leyland vehicles greater than that of Leyland's Lancashire Factories. I stated that this expansion would involve heavy responsibilities on all connected with the Company. An arduous task lies ahead, in which everyone connected with our project will have to play their due part and share the burden with the consolation that the Factory, a most modern one, has forged ahead with the production of one of the most essential types of vehicles required in the Country.

I have already referred to the elimination of the imported contents of our vehicles and we have programmed to produce the rear axle by the end of 1960 and gearbox before May 1961. This enlarged manufacturing programme and the increase in our output require the recruitment of skilled labour—a problem in facing which we are met with difficulties and anxieties. Your Directors have always been conscious that the rate of our progress must ultimately be governed by the rate at which we can train artisans. We have given our attention to this problem for sometime and today about 170 men are receiving training in this Factory. These training facilities will shortly be augmented to meet future requirements. In the years 1960 and 1961 your Directors plan to train not less than 800 artisans in addition to those trained men we may be able to recruit.

I must now refer to a subsidiary project which your Company has undertaken in collaboration with Leylands. I referred to this project last year when we were at the stage of consultation with Government over this project. The

proposals were finally approved by Government and a licence for the establishment of a Foundry called The Ennore Foundries Private Ltd., was issued on the 14th August 1959. This private company is a subsidiary of Leyland Motors Ltd., and your Company, the former having 75% of the shares and your Company 25% of the capital of the Company. The Foundry will have a management entirely separate from Ashok Leyland and the buildings for the Foundry are well in hand, the installation of the plant and machinery having commenced. Melting for proto-type castings is expected to commence in July, but full scale production of castings will not take place until the first half of 1961. Thereafter, it is expected that the new Foundry will not only meet all the needs of your vehicle factory, but will also have surplus capacity to enable it to sell castings to the automobile industry in general. This project will further, progressively reduce the foreign exchange required for the vehicle production, as the import of castings will be discontinued.

I must apologise for having taken so much of your time, but I felt you should have a fairly complete picture of accomplishments up to date, and of the programme of the future with its hopes and expectations on the one hand and with the responsibilities and anxieties on the other. But with the assistance which has been so liberally given, and will continue to be given by Messrs. Leyland Motors, I feel confident that the progress we have aimed at, will be achieved. The Directors of Leyland Motors are ready and willing to visit India and to see the set up here and give assistance and advice in every way. During the year under review, we have had two visits from Mr. West, Vice-Chairman, and early in 1960, Mr. Markland, Works Director and Mr. D. G. Stokes, Sales Director, visited the Factory, and gave invaluable advice both with regard to the work of the Factory and with regard to the expansion forecast. I am sure it will be your wish that I should convey to them and above all to Sir Henry Spurrer, who has been an enthusiastic supporter of our plans of expansion, our thanks for their help and guidance.

I must readily recognise also the enthusiastic help and co-operation that has been extended to your Directors by the officers, staff and work people both on the factory side and on the administrative office side. This co-operation has been readily forthcoming as the workers and staff have seen the growth of the factory from time to time and our relations with all of them have been cordial. I should like to convey our thanks to all of them.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Bright Outlook for Cashewnut

THANKS to the tight statistical position, the outlook for Indian cashewnut is considered to be bright. With dwindling supplies of raw nuts from Africa, the floating stock in the country is estimated to have declined to as low as 2,500 tons. The new African crop is expected to come into the market only in November next. As such, there is a belief that the supply position will be difficult in the next few months.

Again, the Indian crop is reported to have been affected by untimely rains and a shortfall of about 10,000 tons is likely in the domestic output this year. Prices are, therefore, expected to go up in the coming weeks. Moreover, Russia is now a keen buyer of Indian cashewnuts and she is reported to have purchased as much as 65,000 cases, for shipment during the next few months, at rates varying from 54 to 55 cents per pound.

Meanwhile, business in the US market has been somewhat halting as this country is reported to have insisted on shipment during July/September at 56 cents per pound; but the trade is not willing to enter into long-term commitments in view of the tight statistical position.

Pepper

It is learnt that futures trading in Pepper will be started in Bombay by the end of this year. In this connection, the Forward Markets Commission has asked the Pepper and Ginger Merchants' Association to submit its scheme for forward trading in the commodity. Trading will be permitted only after the necessary formalities are completed.

This will be the second forward market for black pepper in the country, the first one being at Cochin. Although Kerala produces almost 90 per cent of black pepper in the country, the export business is handled largely by shippers in Bombay. Business in the new market is expected to be carried on in ungarbled variety.

Pepper prices, in the meanwhile, have revealed an easy trend during the past few days. In the Cochin market, the rate is quoted around Rs 295 per cwt for the ready position. Export enquiries have shrunk and leading shippers state that they have not been able to put through fresh business with Russia and America, as foreign

buyers think that the Indian rates are high in view of the cheaper supplies from Singapore and Indonesia.

Reports are current that the Indonesian crop has been extremely good this season. The export outlook for Indian pepper is, therefore, not considered to be bright.

Coconut Oil

Prices of Coconut Oil have continued to display a firmer tendency. In the Cochin market, the rate is quoted at as high as Rs 3,945 per ton. According to the present indications, demand for the commodity, both for industrial and domestic uses, will remain strong during the current year. This is based on the restrictive import policy for copra and coconut oil, while the prospects for any substantial increase in indigenous production are considered meagre.

But, world supply of coconut oil is expected to remain more or less at the last year's level. There is considerable uncertainty about the world export of coconut oil and copra this year. This is mainly due to the fact that damage to the Philippine coconut crop, caused by the cyclone havoc in late 1959, has not been fully assessed. Slight increase in exports is, however, expected from Malaya and Indonesia.

Exports from Ceylon are expected to decline in view of substantial increases in domestic consumption. According to a FAO report, coconut oil prices are likely to remain relatively high in the world market this year. Supplies of other edible oils are likely to enlarge owing to better cottonseed and soyabean crops in the USA.

Sugar

The Government of India have decided to release two lakh tons of sugar. There will be no release for free sale from the factories in Uttar Pradesh, Bihar and the Punjab except a small quantity which will be released to each factory for sale to their employees. In this connection, it would be recalled that the release of sugar was raised by 10,000 tons from 1.75 lakh tons per month to 1.85 lakh tons in April, 1960. During the current month, it has been further raised by 15,000 tons, bringing the monthly release to two lakh tons.

Allotment will be made at prices fixed by the Government. The controlled ex-factory price for Uttar Pradesh and North Bihar factories is Rs 37.85 a maund and for factories in the Punjab and South Bihar Rs 38.35 for ISS D-29 grade with the prescribed price differentials for other grades. The fixed f.o.r. destination prices in respect of allotments to Kanpur and Calcutta will be Rs 38.60 and Rs 39.85 a maund respectively for sugar of ISS D-29 grade.

In the Hapur market, rumours of decontrol have revived again and the rate is quoted around Rs 112 per bag. In the Muzaffarnagar

market, rates have eased further by Rs 1.50, to quote Rs 113 per bag, thanks to the easy supply position.

Khandsari

In the Hapur market, Khandsari prices have eased by about Re 1 a maund as the demand from the consuming areas of Gujarat is poor. Traders as well as manufacturers are anxious sellers due to easy supply position of crystal sugar. The rates are moving between Rs 31 and Rs 38 per maund, according to quality.

In the Muzaffarnagar market, prices have sought lower levels due to slack outside demand. Small business is reported done with Saurashtra and the Punjab destinations. Superior quality is quoted around Rs 38 a maund.

Gur

The Hapur Gur market continues to rule quiet, the rate being quoted at Rs 14.75 a maund for the superior and Rs 14.25 for the wet kotha qualities. Outside demand remains poor, while daily arrivals, out of the stocks retained by the cultivators, are about 250 maunds. Total arrivals, since the beginning of the season, are about 5.80 lakh maunds as against 6.61 lakh maunds in the corresponding period of last year.

In the Muzaffarnagar market, gur Chakku prices have, however, improved further due to lower arrivals. Demand from Gujarat and Madhya Pradesh is good. Arrivals have declined to an average of 2,000 maunds a day. Total arrivals are put at 16.65 lakh maunds, whereas stocks are estimated at 2.75 lakh maunds.

Foodgrains

Quiet conditions are witnessed in the Foodgrains market in view of the better arrivals of "rabi" grains. Wheat prices have recorded a fall of 25 nP a maund. Since the Uttar Pradesh Government are not anxious to buy wheat, it is likely that some relaxation in the grain procurement policy of the State Government may be announced soon. The State Government are, however, buying the commodity at Agra and other centres at Rs 13 to Rs 15 a maund.

The Rice section is also ruling quiet. Gram prices have recorded a modest decline to Rs 13.75 a maund on lower advices from the Punjab where the new crop is arriving in larger quantities. Moreover, the demand is slack. The market for Barley is, however, ruling steady. In the Pulses section, Peas have registered modest gains due to support from stockists.

Production of the principal food crops in the Punjab—Gram and Wheat—has recorded a fall during the year 1959-60. The decline has been attributed to unfavourable climatic conditions at the time of sowing and late winter rains,

which affected the growth of the crops and consequently lowered the yield per acre.

The setback in Gram production has been more marked due to lower acreage under the crop as compared to 1958-59. The production has fallen from the record level of 20.90 lakh tons to 18.63 lakh tons. Daily arrivals this season have dwindled to 15,000 maunds as against 40,000 maunds last year.

Despite a slight increase in area under the wheat crop, production has fallen from 21.22 lakh tons to 20.57 lakh tons due to unfavourable climatic conditions. The Punjab has doubled its production during the past twelve years. The Punjab Government have evolved improved varieties of wheat suited for different agro-climatic conditions.

The following table gives area and production figures of wheat in the Punjab, including former PEFSU region (areas in thousand acres and production in thousand tons):—

Year	Area	Production
1959-60 (estimate)	5,250	2,097
1958-59	5,237	2,122
1957-58	5,009	2,010
1956-57	5,140	2,114

The following table gives production and area under Gram:—

Year	Area	Production
1959-60 (estimate)	6,231	1,863
1958-59	6,324	2,090
1957-58	5,718	1,654
1956-57	6,390	2,022

Bangalore Silk

The prices of raw silk of all qualities did not register any change during the week ended 3rd June, 1960 as compared to the previous week.

The rates for filature silk of all Government Filatures were quoted between Rs 40 and Rs 42 per lb. Domestic basin silk was quoted between Rs 36 and Rs 37 per lb and Charka silk of all qualities between Rs 24.50 and Rs 32 per lb. The movement of Domestic basin and Charka silk was reported to be moderate while the demand for Filature silk was noticed to be dull. The prices of imported raw silk registered a fall, to be quoted at Rs 45 per lb.

Prices for reeling cocoons, particularly in rainfed areas, were quoted slightly higher, Rs 1.87 to 2.00 as against Rs 1.60 to Rs 2.00 in the previous week. There was no change in the prices in other areas.

Prices for seed cocoons showed a slight increase. Rates quoted for Mysore seed cocoons were Rs 7.50 to Rs 8.50 per 1000 seed cocoons as against Rs 5.75 to Rs 9 in the previous week. There was no change in the prices quoted for foreign race seed cocoons.

Yarn

Easy conditions continued to prevail in the Bombay Yarn market. Prices of Acetate and Nylon yarns declined further in the absence of support, while Rayon and Staple-Fibre yarns were subdued. Prices of Cotton yarns remained mostly unchanged.

The easier tendency in prices was mainly due to the fact that weavers in upcountry centres were reluctant to augment their stocks of yarn on fears that the demand for rayon cloth would be subdued in the coming months. It was also felt that the onset of the monsoon and the end of the marriage season were likely to

have an adverse effect on the overall demand for rayon cloth in the country.

Imports of rayon yarn into Bombay, during May, amounted to 2,364,387 pounds. Principal suppliers were UK with 9.79 lakh pounds; Italy with 5.34 lakh pounds and Japan with 4.24 lakh pounds. Imports of synthetic yarn amounted to 1.96 lakh pounds and of cotton yarn 55,704 pounds. Exports of cotton yarn from Bombay, during May, were estimated at 5.3 lakh pounds and of cotton-sewing thread 44,706 pounds.

Gold & Silver

After ruling initially firm, prices on the Bombay Bullion Exchange developed an easier tendency due to heavy receipts in the ready section. Selling by Chokseys and liquidation in futures by the prominent bulls with a view to avoid a further margin, were also contributory factors.

Comparatively speaking, Gold ended with a small gain following fair support. Arrivals amounted to 5,000 tolas as against an offtake of only 2,500 tolas. Ready rates moved between Rs 125.81 and Rs 128.03, to finish at former level. Sovereign was quoted at Rs 85.25.

Pressure of arrivals and reduced spot demand were the main factors responsible for the easier tendency in the Silver section where spot rates moved between Rs 211.62 and Rs 212.06, to finish at Rs 211.62. Arrivals amounted to 45 bars against an offtake of 12 bars. Unrefined metal receipts amounted to 35 bars.

Oils & Oilseeds

The market for Oils and Oilseeds ruled firm last week. The

main inspiration was derived from the reports that exports of groundnut, its oilcakes and castor oil had increased till the end of last month as compared to the figure for the corresponding period of last year. Higher advices from Saurashtra were another contributory factor.

In the Groundnut section, crushers and vanaspati interests continued to lend scattered support, although the spot demand tended to subside in view of the pre-monsoon nervousness. Moreover, the export trade in groundnut oil, HPS groundnut and oilcakes continued to be at a low ebb. In the ready section, Groundnut Bold was quoted at Rs 44.26 and Groundnut Oil at Rs 22.87.

In the castorseed section, prices scored modest gains on prospects of business with the USA in view of the buyers' desire to obtain maximum supplies from India before the scheduled upward revision in freight rates from July 1. Ready castor was quoted at Rs 33.37 and Castor Oil, commercial quality, at Rs 18.06.

The Linseed section revealed a steady undertone, as shippers claimed periodical deals in linseed oil at about £110½ per ton. The gradual depletion of local supplies and reduced arrivals also imparted stability to the market. Ready Linseed was quoted at Rs 32.87 and Linseed Oil at Rs 16.31.

Trading in the Cottonseed section continued to remain dull.

Groundnut kernel prices have gone up very much beyond reasonable expectations in Madras. The reason is ascribed to the feverish buying by the rotary mill section which has the advantage of the compounded levy. Arrivals of

groundnuts too have not been very much because the City market is getting an average of daily about 35 tons. In Southern regulated markets, the average daily receipts vary between 40 to 50 tons. But the groundnut oil price movement has been erratic. Kernel prices even in Southern markets had appreciated very much to Rs 208-210 per candy of 531 lbs.

The following are Wednesday's prices: Groundnut oil per candy of 500 lbs ex-Madras godown expeller 3 per cent FFA Ready: Rs 395; June Rs 399; July Rs 395; August Rs 392-393 (nominal). Kernels per candy of 531 lbs Coromandel Rs 220; Peanut Rs 207-208. Castor oil per candy of 500 lbs Tirupattur Rs 305; Coconut oil per tin Rs 39-8; Gingelly oil per maund Rs 23-4; Gingelly seed per maund Rs 77-80. Groundnut cake per bag of 160 lbs ex-gunny Rs 27-8. United Kingdom price of groundnut oil was £121-10 per ton and cake was sold at £33-5 per ton. At Alleppey coconut oil rates were: Ready Rs 657.50; June Rs 664; July Rs 668; All sellers.

The fall in arrivals of summer crop is also another reason for the spurt in groundnut kernel prices. In line with the trend in Bombay, a cautious attitude was witnessed in regard to groundnut oil buying. Shippers did practically nothing to accord support to the market. The Government of India have invited suggestions from established shippers who had exported during 1959 under the incentive scheme to indicate the quantum of incentive they require to push up groundnut oil export. The Secretary of the Oils & Seeds Merchants Association here feels no large scale export could materialise even with proposed higher incentive measures. Because the difference between Indian price levels and overseas rates is appreciable. Groundnut's thus marked considerable gains upto Rs 50 per ton during the week while groundnut oil improved slightly over last week's.

Superior kernels from Kalahasti and other centres were taken up early at Rs 205 or Rs 206 per candy. Last Thursday prices did not indicate any change. But the next day the coromandel variety were taken up at Rs 210 and the peanut was quoted at Rs 200 per candy. The rate continued the same till Saturday when another considerable gain was recorded by kernels trading, coromandel at Rs 214 per candy and peanut at Rs 205-206. Today's prices went higher even while market opened and continued high at Rs 220 for Coromandel and Rs 207-208 for peanut.

Calcutta and local vanaspati factories continued absorbing sizable quantities of groundnut oil when June quotation remained at Rs 394. Ready was quoted at Rs 392 on Thursday last and depreciated to Rs 390 Friday and Saturday. Monday's rate was one rupee higher. Tuesday opening in Ready rate was Rs 395.

In forward positions activity continued to be small. June position itself was erratic. Last Thursday this closed at Rs 396 with little support. Subsequent two days witnessed a stability at Rs 394 per candy. Monday's opening was higher at Rs 397 and one rupee more was added to the rate on the next day. July position too was not even. Thursday's opening continued to be the closing rate at Rs 393. Friday last there was abrupt fall to Rs 389.50 with no enquiries in this void. Only another fifty nP was gained by this position on week's closing. With better support, Monday's rate was at Rs 393 as also the next day. Even then July did not attract much attention this week.

August vaida opened only Monday at Rs 391 nominal. It went up to Rs 393 Tuesday on stray enquiries. Today it opened at Rs 392 and nominally remained at Rs 393 towards close with no transactions on board.

Summer peanut crops harvest is almost over in the South. Arrivals had not been much at these points. No rains from these areas have yet been reported. Digging up of the coromandel variety needs a couple of good summer showers. Most likely the harvest may commence by the fag-end of this month. If rains come earlier, it may begin a week before. In all these centres buying was very much in evidence despite poor arrivals. Prices therefore improved around Rs 208-210 per candy for groundnut kernel. New winter crops in Pollachi and Coimbatore area are reported to be in good condition. These areas received small rains, it is reported.

Gingelly oil seeds continued to be firm though good quantities were received from Vizianagaram area by sea. These were quickly absorbed in the market.

Chanda-Warora quality Rs 85-36 per bag; Rajasthan quality Rs 80 per bag; Tuni-Rajahmundry Rs 77-78 per bag and other local varieties Rs 77-80.

The following prices were quoted for groundnut kernels and oil in Southern markets:

	(a)	(b)
	Rs	Rs
Guntur-Bezawada	207	395
Vridhachalam	208	386
Nandyal	208	390
Villipuram	210	387
Cuddappah-Yerragantla	206	385
Pollachi nominal	210	395
Tanjore	210	393
Tiruvannamalai	208	388
Salem	210	395
(a) Groundnut kernels per 531 lbs.		
(b) Groundnut oil per 500 lbs.		

Hides and Skins

There was a decline in the skins and hides market. Clearances and prices also receded due to lack of overseas demand particularly from the UK. Poor offtake of tanned cow hides was responsible for lower price of 4-4½ lb by over 4 nP per lb. The higher weights

groups however remained unaltered in prices. Demands for these were not much anyway.

Only the fifths proved to be strong in the c.i.f. section, and in premium marks poor business was reported. Demands from Communist countries have slowed down. The Yugoslavian imports of 10-12 lb average hides receded to sizable extent.

Inferior fifths are available lower by half to one penny per lb. Tanned buffalo hides also continued to be unchanged in prices. There is continuously poor demand for both cow and buffalo calf skins of tanned variety. In tanned skins market quality goat skins sold were only 3,000 pieces and sheepskins, however were taken up to the extent of 12,000 pieces. Left over were 5,000 tanned goat skins and 62,000 sheepskins. The latter ruled lower in the market.

France imported 8-9 goat in the Run, thirds and fourths and fifths lower by 3d than last week. 5½-6 and 11-12 lb average could be had 6d easier per lb. Also middle class

skins could be had for the same lowered prices.

The prices of raw skins were easier. The following are the quotations with last week's in brackets: Bangalore Raw goat skin 430-470 (Rs 475-500); Bangalore raw white wool sheep Rs 520-590 (Rs 500-565) and Bangalore Black wool Sheep (Rs 400-450 (Rs 420-450); Bezawada raw goat skins Rs 415-420 (Rs 420-425); He sheep Rs 550 (Rs 580); She sheep Rs 400 (Rs 435).

HERCULES INSURANCE COMPANY LIMITED

(INCORPORATED IN ENGLAND)

The Liability of Members is Limited.

NOTICE IS HEREBY GIVEN that the TWENTY FIFTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Friday, the 29th July, 1960 at 3 P.M. for the purpose of:

1. Considering the Accounts, Balance Sheet and the reports of the Board of Directors and Auditors for the year ended 31st December, 1959.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring.
4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. Sanctioning the payment of Rs. 31,400 to the Directors as their fees for services rendered during the year ended 31st December, 1959.
6. To consider and, if thought fit, to pass, with or without modification the following resolution which will be proposed as a Special Resolution, namely:

"That the Articles of Association of the Company be altered in manner following:—

- (a) Articles 17 to 21 shall be deleted and the following new Articles numbered 17, 18, 19 and 20 substituted therefor:

CERTIFICATES

17. The certificates of title to shares and duplicates thereof of when necessary shall be issued under the Seal of the Company which shall be affixed in the presence of (i) two Directors or persons acting on behalf of the Directors under a duly registered power of attorney; and (ii) the Secretary or some other person appointed by the Board for the purpose and two Directors and their attorneys and the Secretary or other person shall sign such share certificate; provided that, if the composition of the Board permits of it, at least one of the aforesaid two Directors shall be a person other than a Managing or whole-time Director.

MEMBERS RIGHT TO CERTIFICATE

18. Every member shall be entitled free of charge to one certificate for all the shares of each class registered in his name or, to several certificates each for one or more of such shares, but in respect of each certificate for less than ten shares, the Directors shall be entitled to charge a fee of Re. 1/- or such less sum as they may determine. Unless the con-

ditions of issue of any shares otherwise provide, the Company shall, within three months after the date of either allotment and on surrender to the Company of its letter making the allotment or of its fractional coupons of requisite value (save in the case of issues against letters of acceptance or of renunciation or in cases of issue of bonus shares) as the case may be, complete and have ready for delivery the certificates of such shares. In the case of transfers of shares, the Company shall within one month of receipt of the application for registration of transfer of any of its shares issue the certificates of such shares or shall issue within fifteen days of such receipt, Pucca transfer receipts autographically signed by a responsible official of the Company and bearing an endorsement that the transfer has been duly approved by the Board or that no such approval is necessary. Every certificate of shares shall specify the name of the person in whose favour the certificate is issued, the shares to which it relates and the amount paid up thereon. Particulars of every certificate issued shall be entered in the Register of Members maintained in the form set out in the Act or, in a form as near thereto as circumstances admit, against the name of the person to whom it has been issued, indicating the date of issue. In respect of any share registered in the joint names of several members the Company shall not be bound to issue more than one certificate and delivery of a certificate to one of several members registered jointly in respect thereof shall be sufficient delivery to all such members.

AS TO ISSUE OF NEW CERTIFICATES

19. If any certificate of any share or shares be surrendered to the Company for subdivision or consolidation or if any certificate be defaced, torn or old, decrepit, worn-out or where the cages in the reverse for recording transfers have been duly utilised, then, upon surrender thereof to the Company, the Board may order the same to be cancelled and may issue a new certificate in lieu thereof; and if any certificate be lost or destroyed, then, upon proof thereof to the satisfaction of the Board, and on such indemnity as the Board thinks fit being given, a new certificate in lieu thereof shall be given to the party entitled to the shares to which such lost or destroyed

certificate shall relate. In the case of loss the new certificate shall be given within six weeks from the receipt of notification of the loss. Where a certificate has been issued in place of a certificate which has been defaced, etc., lost or destroyed it shall state on the face of it and against the stub or counterfoil that it is issued in lieu of a share certificate or is a duplicate issued for the one so defaced, etc., lost or destroyed, as the case may be, and, in the case of a certificate issued in place of one which has been lost or destroyed, the word "duplicate" shall be stamped or punched in bold letters across the face thereof. For every certificate issued under this Article, except for a certificate issued in place of an old, decrepit or worn-out certificate or in place of a certificate the cages in the reverse whereof for recording transfers have been duly utilised, there shall be paid to the Company the sum of Rs. 2/- or such smaller sum together with such out of pocket expenses incurred by the Company in investigating evidence as the Board may determine.

PARTICULARS OF NEW CERTIFICATE TO BE ENTERED IN THE REGISTER

20. Where a new share certificate has been issued in pursuance of the last preceding Article, particulars of every such certificate shall also be entered in a Register of Renewed and Duplicate Certificates indicating against the name of the person to whom the certificate is issued the number and date of issue of the certificate in lieu of which the new certificate is issued and the necessary changes indicated in the Register of Members by suitable cross-references in the "Remarks" Column. All entries made in the Register of Members or in Register of Renewed and Duplicate Certificates shall be authenticated by the Secretary or such other person as may be appointed by the Board for purposes of sealing and signing the share certificate under Article 17 hereof.

- (b) In Article 28, the words "or confer a right to participate in profits" shall be added at the end of the Article.

- (c) In Article 50, the words "his debts, liabilities and engagements solely or jointly with any other person to or with the Company whether the period for the payment, fulfilment or discharge thereof" shall be deleted and the words "moneys called or payable at a fixed time in respect of such shares whether

the time for payment thereof" substituted therefor.

- (d) In Article 51, the words "fulfilment or discharge of such debts, liabilities or engagements" shall be deleted and the words "of the moneys called or payable at a fixed time in respect of such shares" substituted therefor.

- (e) In Article 52, the words "satisfaction of the debts, liabilities or engagements of such member" shall be deleted and the words "payment of such part of the amount in respect of which the lien exists and is presently payable" substituted therefor.

- (f) Article 77 shall be deleted.

- (g) In Article 152, after the words "whilst carrying interest" the words "rank for dividend or" shall be inserted.

- (h) Article 158 shall be deleted and the following new Article substituted therefor:

"158. The Directors may deduct from any dividend payable to any member sums of money, if any, presently payable by him to the Company on account of calls made on shares in the Company held by him".

- (i) In Article 167, the word "three" shall be deleted and the word "six" substituted therefor.

The Share Transfer Books will be closed from the 22nd July to the 29th July, 1960, both days inclusive.

By order of the Board

E. K. SRINIVASAN

Managing Director.

Calcutta, 7th June, 1960

Note—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 29th July, 1960.

The explanatory statement as required under Sec. 173 of the Companies Act, 1956, has been sent to the shareholders.

Investment Briefs:

The Bombay Burmah Trading Corporation has recommended an interim dividend of 8.8 per cent, subject to tax. This works out to a net dividend of 6.16 per cent as against 6 per cent, paid in the preceding year.

Podar Mills Limited has recommended a dividend of Rs 12 for 1959 against Rs 18 per share (including a bonus of Rs 8) for the previous year.

Larsen & Toubro Limited has paid Rs 1.80 per share, subject to tax, for the year ended 31 March 1960 against a tax-free dividend of Rs 1.25 for 1958-59.

Lack of Investment Interest

Investment Gossip:

THE measures that are being taken by the various stock exchanges in the country are beginning to have some effect on the speculators. The decline in rates that has occurred in the course of the past two or three days seems to have directly resulted from the step latterly taken by the Bombay Stock Exchange.

The curb measures initiated by the Bombay Stock Exchange so far include the tightening up of the margin rates, the reduction of the exemption limit and the lower making-up prices fixed in regard to some scrip at the last settlement. It has been further made clear that if the situation so warranted, the making-up prices will be kept at the previous level in the current settlement also. It would appear that the indication that the

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Fourteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on 15th July, 1960 at 3 p.m. for the following purposes:—

- (1) To consider the Profit & Loss Account for the year ended 31st December, 1959, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
- (2) To declare a Dividend on the Ordinary Shares.
- (3) To appoint Auditors and to fix their remuneration.
- (4) To elect Directors in the places of four Directors retiring.

The Share Transfer Register of the Company's Ordinary Shares will be closed from 6th July to 15th July, 1960, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board

(D. A. Houghton)

Calcutta Director & Secretary.

4, Bankshall Street,
Dated, 1st June 1960

current settlement rates might be pegged at the previous level no matter what the prevailing levels, has discouraged the bull operators and at the same time brought new hope for the bears. With a view to prevent any strengthening of bearish tendencies, the stock exchange authorities have deemed it necessary to make the further announcement that the rates may be actually raised if, in their opinion, equity prices have been unduly depressed. The stock market has reacted to this with a moderate recovery in rates all along the line.

It is clear, therefore, that the various stock exchange authorities are to tackle the situation with a view to re-establish stability in equity prices.

It is, however, too early to affirm with confidence that stock market operators are fully convinced of the need for keeping to realistic price levels. Friday's recovery seems to point to the continued dominance of the bulls.

The fact that there has been a marked diminution of genuine investment activity in the stock markets for the past few weeks is a clear indication that investors at least are in no mood to take increasing interest in equities. Presumably they are confining their attention to new issues.

New Issue Notes

Polychem Limited has proposed to increase the share capital, subject to the consent of the Controller of Capital Issues, from Rs 60 lakhs to Rs 1.20 crores by issuing 80,000 Ordinary shares of Rs 50 each, at par. These new shares will be issued in the ratio of one share for every share held. The funds will be utilised from financing the company's expansion programme.

Ruby Rubber Works Limited, Madras, has proposed to issue 25,000 10 per cent taxable Cumulative Preference shares of Rs 10 each, to holders as on 4 July, 1960 the proportion of 10 preference shares for every 36 equity shares held.

MEETINGS AND DIVIDENDS PROPOSED

Company	Meeting Date	Dividend Proposed (Rs Per Share)	Transfer Books Closed
CALCUTTA:

*Rs 21.27 on new ordinary shares and proportionate dividend for 1958.

Investment Notes:

It is learnt that Messrs Simon Carves Limited, London, who are primarily responsible for the erection of the first Coke Oven Battery at the Durgapur Steel Works, have made an application for registering a subsidiary company in this country to take advantage of the opportunities offered by India in the development of more industries during the Third Plan period.

A Japanese firm will set up plants in collaboration with two Indian manufacturers to produce small paper-manufacturing plants. These plants will be capable of producing one to five tons of paper per day. The target for the Third Five-Year Plan is 900,000 tons for the entire paper industry, big and small.

In Bombay, Voltas shares have shot up by 25 points on aggressive buying. There are reports that the "Carrier" is going to establish a factory at the company's new site near Thana; that Voltas Limited may invest about 20 per cent in the new air conditioning project and that the company will get sole distributing rights.

East India Distilleries Limited, Madras, has convened an extraordinary general meeting on 24 June to consider the following proposals:—(1) Changing the Preference dividend from 7 per cent tax-free to 9 per cent, subject to tax, for the financial year commencing on or after 1 October 1958 and (2) to empower the directors to issue the 2,50,050 unclassified shares of £1 each, either as Ordinary shares ranking pari passu with the existing ordinary shares or as preference shares ranking pari passu with the existing preference shares.

Ashok Leylands Limited has made a call of Rs 2.50 per share on the 25 lakhs equity shares, making them Rs 5 fully-paid. The amount is payable on or before 15 July, 1960.

Mild Rally After A Nose-Dive

Watch-Dog Writes:

STOCK markets have suffered one of the sharpest setbacks after the recent upward movement. Sentiment has been demoralized not only by the notification issued by the Bombay Stock Exchange authorities clarifying the special deposit making-up prices, but also by the fears that the Government may take fresh measures to check excessive speculation. The only relieving feature of the week's trading is the small recovery in prices noticed toward the close, thanks to short-covering and some replacement buying at the lower levels.

Following weaker Bombay advices, prices on the Calcutta Stock Exchange developed a reactionary tendency, although the closing tone was better.

The Bombay Stock Exchange recorded an all-round sharp decline in values due to sizable bull liquidation, being induced by the Board's clarification of the recent directive to curb speculative activity. The market, however, showed some signs of recovery at the close.

Restricted trading and an easy tone were the main features of trading on the Madras Stock Exchange.

Wall Street finished the week on a firm note.

Calcutta

Calcutta, Friday Evening.

REOPENING after the long weekend due to "Id" festival, the local stock market displayed a firm undertone with prices responding to selective support. But, the market developed a reactionary tendency on Wednesday due to weaker Bombay advices and, with the speculative scrips giving way on renewed offerings from local as well as Bombay operators following the notification issued by the Bombay Stock Exchange authorities clarifying the special deposit making-up prices, the weakness spread even to other shares unaffected by the directive. The selling pressure, however, soon ran its course and the market showed signs of recovery toward the close, thanks to short-covering and some replacement buying. Assisting the sentiment was a further notification pertaining to "havala" rates, which might be fixed at a higher level than the normal making-up prices if the Bombay stock ex-

change authorities felt that equities were unduly depressed.

Conditions in the Gilt-edged section ruled extremely dull. There were sellers in most of the Loans with buyers reserved. As a result, prices tended to sag even on small offerings. Interest from institutional investors was conspicuous by its absence, while enquiry from other sources proved to be very limited. There were also no signs of official support by way of open market operations, which is usually at its peak at this time of the year. 3 per cent 1986 Conversion Loan opened at Rs 73 and, after improving at one time to Rs 73.25, receded at the close to Rs 72.90.

In sympathy with gilt-edged, Bank shares remained quiet with Punjab National being offered at Rs 18.81 against Rs 19.25. United Commercial changed hands at Rs 68 to Rs 68.50.

Jute shares were depressed due to lower advices from the gunny market following the news of a sharp increase in stocks with the mills at the end of last month and the continued absence of any enquiry from overseas buyers. Howrah was marked down at one time to Rs 22.12 from Rs 22.56; Birlas to Rs 31.62 from Rs 32 and New Central to Rs 30.25 from Rs 31.25, to finish better at Rs 22.25; Rs 31.75 and Rs 30.50 respectively. National had sellers at as low as Rs 27.00 against Rs 28.25 and Megna at Rs 11.94 against Rs 12.37. Among higher-priced shares, Anglo-India were a steady feature at Rs 215 and Delta at Rs 149.

Coal shares displayed, on the whole, a steady trend, thanks to the Government decision to allow the private collieries to extend their activities in new small areas. Bengal were well maintained at Rs 326, while East Indian had buyers at Rs 30.25 to Rs 30.50; Western Bengal at Rs 8.41 to Rs 8.56 and South Karanpura at Rs 11.94 to Rs 12.31. Burrakur fluctuated rather irregularly between Rs 19 and Rs 19.37, to finish at Rs 19.12.

Tea shares were fairly steady. Higher levels, however, could not be retained till the close due to profit-taking, being influenced by an anxiety to await the results of the new season's first export sale, to be held on Monday next. Attention was, however, mostly confined to the scrips of the Assam and Doorga gardens. Brooke Bond changed hands at Rs 18.19 to Rs 18.50; Bishnauth at Rs 22.62 to Rs 22.87; Groh at Rs 14.25 to Rs 14.44; Hasimara at Rs 24.75 to Rs 24.87; Hattikhira at Rs 13.75 to Rs 13.81; Jayshree at Rs 18.75 to Rs 19.25 and Tezapore at Rs 19.37 to Rs 19.75.

Sugar shares were selectively firm on expectation of improved earnings for various companies in view of a substantial rise in production for the season just ended. Raza/Buland met with business at Rs 13.87 to Rs 14.12; Belsund at Rs 14.50 to Rs 14.56; Cawnpore at Rs 15.37 to Rs 15.50; Ramnugger

at Rs 26.44 to Rs 26.50 and SKG at Rs 14.69 to Rs 15.00.

Textile scrips met with selective support, although there was a general disposition to await further developments in the textile situation. Jayshree closed better at Rs 16.00; Cawnpore at Rs 6.69 and Kesoram at Rs 32.75 after touching low levels of Rs 14.94; Rs 6.62 and Rs 30.62 respectively. New Victoria were quiet at Rs 1.44. Elgin were enquired upto Rs 19.87 from Rs 19.75.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to heavy selling pressure till Thursday on weaker Bombay advices. After opening at Rs 25.34, Indian Irons were gradually marked down to Rs 24.67 at which level some short-covering induced a minor rally to Rs 24.91, to finish the week at Rs 24.89. In sympathy, TEXMACO were at one time pushed down to Rs 27.15 from a high of Rs 27.75; G.K. Williams to Rs 43 from Rs 43.50 and Jessop to Rs 23 from Rs 23.87, to finish better at Rs 27.50; Rs 44.25 and Rs 23.50 respectively. Britannia had, however, support up to Rs 13.56 from Rs 13.37 and so also Braithwaite up to Rs 31.62 from Rs 31.50. Indian Galvanizing were more or less maintained at Rs 24.12. Burn were keenly sought after upto Rs 526 from Rs 477 on rumours of the company's proposal to make a right issue.

Miscellaneous issues moved with the general trend of the market. Following were the price trends of a few selected scrips:

	Week's Low	Week's High	Week's Close
Orient Paper	47.25	46.45	46.80
Shree Gopal	29.62	28.69	29.00
Sirpur	18.81	18.00	18.12
Bohats	37.94	37.06	37.62
Dunlop	42.50	41.87	42.25
H. Motor	21.56	20.81	21.37
I. Cable	34.50	33.81	34.50
I. Aluminium	27.62	26.62	27.50
I. Oxygen	40.87	39.00	39.00
I. Steamship	11.12	11.00	11.06
I. Copper	5.07	4.94	5.07
BTC	8.06	7.87	7.87
Asso. Battery	34.81	34.37	34.81
Union Carbide	39.75	38.12	38.12
Phillips	25.12	24.75	25.00

Madras

The Madras stock exchange opened here 7 June this week, Monday being a holiday for Bak-i-rid. It was all a seller's market with values very much lower than last week's. Cements and engineering shares alone commended enquiries while plantings and textiles proved to be very dull. The volume of business turned over too was very small considering this to be only the opening of the week's market.

Government Securities: The Madras Government's 31% 1962 loan was listed lower at Rs 99.30. Sellers offered the Madras 3% 1960 Development Loan at Rs 99.40 and business was reported in this even lower at Rs 99.30. The 41% Mysore Loan of 1970 continued at Rs 102.00. Kerala Government's 1970 41% Loan was available at Rs 100.97 and Andhra's 4% 1971 was saleable at Rs 99.65.

Banks: Enquiries were for the Rs 100 paid Indian Bank shares at Rs 172 and also for Indian Overseas Bank at Rs 168. The Punjab National continued its last week's quotation at Rs 19.35 and Pandyan too at Rs 39.25.

Electrics: South Madras shares were rated 5 nP lower than last week's closing of Rs 10.10. Enquiries or other shares were practically nil. Berhampur continued below par at Rs 6.50, as well as Negapatnam at Rs 9.60. Karaikkal did not improve beyond Rs 9.75 and Negapatnam had no enquiries at Rs 9.60. The rest of the shares were the same as if last week's.

Sugars and Breweries: India sugars had some sellers at Rs 13.50, as well as Kirlampudi at Rs 74, a rupee lower than last week's. Travancore shares showed some improvement at Rs 11.65. Cauvery was available at Rs 14.2. Deccan did not alter at Rs 14.15. United Breweries was stable at Rs 95.

Plantings: There was very poor turnover in this section. Coffee shares were offered at Rs 24.25 and Rs 25.40 respectively. Athimattam tea shares improved nominally to Rs 4.80. Blue Mountain came up for offer at Rs 4.97, less by 3 nP of last closing. Chembra also lost fractionally at Rs 4.45. Cochin Malabar was offered at Rs 8.30 and after transactions was offered even lower at Rs 8.25 today. Halleyburia was listed at Rs 15.75 and Gokul was quoted less at Rs 1.95. Kales rubber was offered for Rs 5.37. Lakshana was lower by 25 nP today at Rs 20.75. Midland improved at Rs 12.50. Nonsuch was bought at a higher rate at Rs 26.50. Ouchterlony continued steady at Rs 5.03. Periakamalai however was indifferent at Rs 3.77, lower today than on Friday last when it was available for Rs 3.80. Pathuthotam's improvement to Rs 2.85 was nominal. Savamalai shares were transacted at Rs 4.20, lower by 5 nP. Tirumbadi was quoted at Rs 1.76 along with the rest of the planting shares which were dull in outlook today. Velimalai continued at Rs 6.40, and Wartyhully improved by 5 nP to Rs 3.55.

Textiles: There was not much to enthuse here also today. The Travancore Rayons came down Rs 38.25, a fall by another 25 nP from last weekend's Rs 38.50. This share too came up for sale unlike previous week. The newly listed shares of South India Viscose came down considerably in the list today to Rs 156.50 from Rs 159.00 last Friday when markets closed for that week. Vijayakumar shed a couple of rupees of its value at Rs 138. A few Buckingham shares were bought at an improved rate of Rs 205.00, a rupee higher than last week's rate. Bangalore Woollen remained, however, at Rs 200. Anglo-French maintained at Rs 105. Cambodia was available at Rs 10.10, Coimbatore Cotton (Rs 100 paid) at Rs 150, Coimbatore Spinning (at Rs 64.00) Kothari was offered at Rs 12.55 and Lakshmi was the same as last week's at Rs 158.50. Madura too did not change at Rs 33.10.

Miscellaneous: Aluminium Industries did not sustain its tendency to go higher in value being quoted

today at Rs 23.98 from Rs 26.75. Andhra Cement with taxable dividend was quoted only at Rs 10.40. Ashok Leyland continued to be bought at Rs 885. This had encouraging support and is proven by its improved value on the opening day today better than Rs 8.80 last week. Dalmia Cement, however, continued to be value at lower levels and today's rate of Rs 12.20 was certainly poorer than its last week's outlook. India Cement, however, reflected the popular favour for this cement shares and today it was available only at a higher rate of Rs 6.65, an increase of five nP. F.A.C.T.s also was fancied at Rs 11.05. Marikar did not improve beyond Rs 51. Mysore Chemical and Fertilisers was below par at Rs 9.90. Mettur Chemical was steady at Rs 12.35. Orissa Cement could be had only at Rs 13.80. Panyam Cement was stable at Rs 85. Spencer was sought after at a slightly increased quotation of Rs 20.37. This investment gained another three rupees at Rs 305. Standard Motor improved to Rs 16.70. Western India Plywoods was quoted at Rs 300.

Now York
PRICES on Wall Street displayed a firmer tendency with a good distribution of gains up to almost two points. As a matter of fact, the Dow Jones Industrial Average broke through the closing high of last April and rose to its best level since early February. The improvement in sentiment reflected short-covering and re-investment demand, attracted by such factors as progress toward the settlement of rail labour disputes, an expected recovery in steel output, higher heavy fuel oil prices in the mid-continent area, brisk car sales in the last ten days of May and some expressions of confidence concerning business prospects in the second half of the year. The advance in prices was led by Assorted Steels, Oils, Motors, Electronics and Rails.

In Briefs
The United Industrial Bank Limited has reported a loss of Rs 92,965 for 1959 as against a loss of Rs 44,810 in the previous year. The loss is primarily due to the fact that interest amounting to Rs 2 lakhs and odd from certain advances could not be applied to Profit & Loss Account, as the amount was not covered by the relative securities held.
Alemic Chemical Works Company Limited has shown a rise in net earnings from Rs 32.35 lakhs to Rs 38.55 lakhs for 1959. A dividend of 16 per cent, subject to tax, is payable on an Ordinary capital increased by Rs 20 lakhs.
The net profit of the Binod Mills Company Limited has risen from Rs 1.17 lakhs to Rs 1.54 lakhs. The directors have recommended a taxable dividend of Rs 7.50 per share.
The net profit of the Udayasiri Rubber Company Limited has risen from Rs 35,252 to Rs 72,926. A taxable dividend of 15 per cent is recommended against a tax-free dividend of 7 1/2 per cent.

Encouraging Results of Indian Standard Wagon

Balance-Sheet Reviews

THE working results of the Indian Standard Wagon Company Limited for the year ended 31 March 1960, are encouraging. Although production has been hampered due to shortage of steel and sales are lower at Rs 5.51 crores against Rs 5.80 crores, the net profit for the year, after providing for Depreciation and Taxation, is higher at Rs 23.68 lakhs against Rs 19.73 lakhs in the previous year, thanks to a cut in the value of purchase of raw materials from Rs 3.35 crores to Rs 2.61 crores. The Depreciation amount is raised to Rs 4.68 lakhs from Rs 3.33 lakhs, while Plant Replacement Reserve is maintained at Rs 5.00 lakhs and General Reserve at Rs 1.00 lakhs. The sum provided for Development, Rebate, Statutory Reserve is higher at Rs 2.41 lakhs against Rs 1.25 lakhs. Taxation provision is, however, reduced to Rs 22.88 lakhs from Rs 24.64 lakhs and General Development Reserve to Rs 2.68 lakhs from Rs 3.38 lakhs. The directors have recommended a dividend of 28 1/2 per cent on the Ordinary shares. This works out to a net dividend of 19.94 per cent against 20 per cent.

The directors look forward to the time which, it is hoped, will be soon when the increase in the production of steel results in a steady flow of supplies to fabricators. When this position does obtain and an increased quantity of work can be undertaken, it may be possible to improve the output.

With an increase in the number of wagon manufacturers and a possible falling oil in demand for wagons from the Government of India in a few years' time, the directors are turning their attention to the creation of a wagon export market.

The balance-sheet shows a paid-up capital of Rs 58.65 lakhs dividend into 1,55,940 Ordinary shares of 25 each and 19,665 Preference shares of Rs 100 each. Against this, reserves are shown at Rs 76.82 lakhs. The gross block at Rs 1.25 crores is depreciated by Rs 72.85 lakhs to show a net block value of Rs 51.88 lakhs.

	1958	1959	1960
Year ended March			
Sales	55,050,477	58,040,663	63,167,400

Dividend Raised by Delta Jute

Thanks to increased profits, the Delta Jute Mills Company Limited has recommended a taxable dividend of Rs 14 (including the final dividend of Rs 8) per share for the year ended 30 November, 1959. This works out to a net dividend of Rs 9.80 against Rs 6.00 per share previously.

Although sales are lower at Rs 12.91 crores against Rs 13.34 crores, the net profit, after providing for Depreciation and Taxation, amounts to Rs 7.21 lakhs as against Rs 4.24 lakhs in the previous year, mainly due to a cut in the value of jute consumed from Rs 74.36 lakhs to Rs 65.09 lakhs. Apart from providing a sum of Rs 1.50 lakhs, the Depreciation amount is raised to Rs 3.81 lakhs from Rs 1.95 lakhs. Taxation provision is reduced to Rs 40,000 from Rs 57,843 and Development Rebate Reserve to Rs 1.31 lakhs from Rs 2.83 lakhs. The sum provided for Development, Rebate, Statutory Reserve is higher at Rs 2.41 lakhs against Rs 1.25 lakhs. Taxation provision is, however, reduced to Rs 22.88 lakhs from Rs 24.64 lakhs and General Development Reserve to Rs 2.68 lakhs from Rs 3.38 lakhs. The directors have recommended a dividend of 28 1/2 per cent on the Ordinary shares. This works out to a net dividend of 19.94 per cent against 20 per cent.

The directors state that, in view of the parity between the prices of raw jute and finished goods and the probability of production being curtailed, the results for the current year are likely to be less favourable.

During the year, orders were placed for the remainder of the modern slip draft machinery required to supply the light yarns for 87 1/2 per cent of the mill's complement of looms and orders have subsequently been placed for modern machinery for the sacking wefts yarns also.

Against the paid-up capital of Rs 33 lakhs, General Reserve stands at Rs 16.38 lakhs; Dividend Equalisation Reserve at Rs 4.40 lakhs; Emergency Reserve at Rs 13.75 lakhs and Superannuation Reserve at Rs 2.40 lakhs. The gross block is shown at Rs 1.03 crores; total depreciation at Rs 54.62 lakhs and the net block at Rs 48.13 lakhs.

Raymond Maintains Distribution

The expansion and modernisation schemes of the Raymond Woollen Mills Limited were successfully implemented during 1959. This resulted in greater efficiency and steady improvement in the quality and quantity of production.

Sales have risen to Rs 24.4 crores from Rs 22.01 crores, while the net profit after providing for Depreciation and Taxation, amounts to Rs 16.48 lakhs against Rs 15.24 lakhs in the previous year. The directors have provided Rs 6.85 lakhs (Rs 4.60 lakhs) for Depreciation; Rs 2.20 lakhs (Rs 2.25 lakhs) for Rebate; Rs 2.40 lakhs (Rs 2.40 lakhs) for Development; Rs 60,000 (Rs 40,000) for Investment; Depreciation Reserve and Rs 25.50 lakhs (Rs 6.50 lakhs) for General Reserve. A taxable dividend of Rs 11.50 is recommended. This works out to a net dividend of Rs 8.00 per share, same as in the previous year.

The company's factory for the manufacture of Engineers' Steel Files worked satisfactorily during the year under review. The expansion programme of this branch side, doubling the capacity of the factory at a total cost of about Rs 1.50 lakhs is expected to be completed during the current year.

The paid-up capital, is shown at Rs 3 crores divided into 75,000 Ordinary and 25,000 5 per cent Cumulative Preference shares, both of Rs 100 each. Against this, reserves and surplus are shown at Rs 20.27 lakhs. The gross block at Rs 1.70 crores is depreciated by Rs 81.75 lakhs to show a net block of Rs 87.86 lakhs.

Cambodia Mills Incur Loss

The difficult conditions experienced generally by the textile industry are fully reflected in the working results of the Cambodia Mills Limited for the year 1959. Although sales are higher at Rs 1.13 crores against Rs 68.75 lakhs, the accounts reveal a loss of Rs 3.19 lakhs against a loss of Rs 14.84 lakhs in the previous year. No depreciation has been provided for the year. In the previous year, a sum of Rs 5,543 was set apart for Wealth Tax and Rs 18,500 for Development Reserve. For obvious reasons, the dividend has been again passed over.

The directors state that, as a result of allotments of foreign cotton for which the company became eligible by its expanding yarn exports and which are hitherto denied to the company and a coarse count spinning mill, they have been able to operate on a more balanced spin plan.

The subscribed capital is shown at Rs 21 lakhs divided into 2 lakhs ordinary shares of Rs 10 each and 1,000-7 per cent Cumulative Preference shares of Rs 100 each. Against this, Reserves and surplus are shown at only Rs 18,500. Gross block amounts to Rs 41.24 lakhs; total depreciation to Rs 28.08 lakhs and the net block to Rs 25.18 lakhs.

Decline in Profits of Mysore Sugar

Although sales are higher at Rs 3.92 crores against Rs 3.80 crores, the net profit of the company, before providing for Depreciation and Taxation, has shown a substantial decline to Rs 27.60 lakhs for the year ended 30 June, 1959 from Rs 34.58 lakhs in the previous year. The directors have set apart Rs 7.79 lakhs (7.22 lakhs) for Depreciation; Rs 8.00 lakhs (Rs 19 lakhs) for Taxation; Rs 1.27 lakhs (Rs 49,065) for Development Rebate Reserve and Rs 5 lakhs (Rs 6 lakhs) for Plant Rehabilitation Reserve. A taxable dividend of 30 per cent is recommended against a tax-free dividend of 30 per cent paid for 1957-58.

The paid-up capital is Rs 21,79,280 divided into 2,17,928 shares of Rs 10 each. Against this, reserves and surplus are shown at Rs 99.45 lakhs. The gross block of Rs 1.62 crores is depreciated by Rs 1.02 lakhs to show a net block of Rs 60.45 lakhs.

The quantity of cane crushed is lower at 3.53 lakhs tons against 3.84 lakh tons and the sugar manufactured at 35,771 tons against 39,520 tons. There is a slight setback in alcohol production consequent on the fall in demand.

Kamani Engineering Records Highest Production

The Kamani Engineering Corporation Limited has recorded the highest production for the year ended 30 September 1959, being 10,030 tons of galvanized and painted steel structures as against 9,374 tons in the previous year. The sale value of the manufactured products and erection work undertaken amounted to Rs 1.32 crores out of a total turnover of Rs 1.68 crores. This figure, in spite of the higher production, may appear to be lower than that of the previous year; because some of the projects supplied their own steel free of cost and its value does not figure in the value of the turnover as only the engineering and manufacturing costs were charged.

In response to the country's call for earning foreign exchange, an Export Sales Department was set up, which did considerable groundwork in introducing the company and its various productions throughout the world. The results of the first few overseas tenders in which the company participated was encouraging.

Most of the plans for development were finalised. The company has achieved further improvement in the already high standard of the quality of products. In spite of acute shortage of foreign exchange, the company was able to secure total orders worth Rs 2.90 crores during the year.

The net profit for the year, before providing for Depreciation and Taxation, is higher at Rs 14.23 lakhs as against Rs 13.92 lakhs for the previous year. The directors have provided Rs 4.41 lakhs (Rs 7.01 lakhs) for Depreciation; Rs 4.85 lakhs (Rs 4.05 lakhs) for Taxation and Rs 92,128 (Rs 24,603) for Development Rebate Reserve. A taxable dividend of 71 per cent is recommended on the Ordinary shares. This works out to a net dividend of 4.25 per cent against 5 per cent for the previous year.

HIGHLIGHTS OF THIS ISSUE

There is a Consensus in India that Capital from whatever source is welcome.

But it is also recognised that there are limits to the rate of inflow of foreign Capital.

The First Leading Article, however, contends that the channel of flow can be both widened and deepened.

Rs 110 Crores Target for Credit Contraction

FOR the third year in succession, Mr H. V. R. Iengar has seen it fit, on the threshold of the slack season, to address a letter to Scheduled Banks in calling upon them to seek a certain minimum of contraction in Advances as the target they should set themselves. In each of the previous two years, the decline in Advances that the Governor of the Reserve Bank thought desirable was Rs 100 crores. This year, he has suggested that the magnitude of reduction should be somewhat higher at Rs 110 crores. We may point out here that we had anticipated, in the issue of 30 April, that there would be a call for a larger quantum of credit contraction; however, we had felt that the target should be set even higher at Rs 125 crores. In the same article we had argued that, "this time, the motive, both implicit and explicit, will not be desirability in such wise of freeing resources with the banking system, so that the financing of the next busy season would not present a too serious problem; it will presumably be frankly admitted that the price trends necessitate recourse to various measures of selective monetary control". That is to say, both in 1958 and in 1959, it was the lesson learnt from the monetary stringency experienced during the 1956-57 busy season which impelled the Reserve Bank Governor to persuade the banks to bring about a certain minimum contraction in Advances, so that the financing of the succeeding busy season would present less difficulty than might otherwise have been faced. Here, too, our anticipation has been confirmed. The text of Mr Iengar's letter to the Scheduled Banks begins as follows:—

"I have from time to time expressed, both publicly and in private communications to bankers, the concern felt by the Reserve Bank at the movement of the price level. This has been continuously on the increase since the commencement of the Second Five Year Plan. Notwithstanding two good harvests of foodgrains and a substantial rise in industrial production in 1959, the current index of wholesale prices is about 9 per cent higher than a year ago. It seems all too probable that the uptrend will continue in the slack season, if effective steps are not taken in the meantime."

Mr Iengar goes on to admit that monetary measures as such have only a somewhat limited effect. He adds: "Nevertheless, it is essential that these steps are taken." What are these measures and why is it essential that they should be instituted?

It is not at all implied, in the letter or elsewhere, that the Reserve Bank or the monetary authorities in this country are against dear money. It is not even an inference that we may safely make. True, there have been stray instances whereat the monetary authorities in their individual persons have tried to stress the inutility of bank rate weapon in Indian conditions. So, there are the other measures which have to be taken, and their essentiality is for quite another reason.

At this stage, it is also proper that we should clarify our stand on the kind of monetary policy that we believe would be best suited

to Indian conditions. We have, particularly since the planning era began, been consistently against dear money. In successive stages, in years past, we have been gratified to find that, with a re-ordering of the structure of interest rates, despite the recurrent pressures on money, interest rates have tended to soften. We do not believe that it is either necessary or desirable that bank rate—or de facto bank rate—should be lower than 3½ per cent. Indeed, we see no reason why we can competently or justifiably or reasonably suggest that bank rate needs to be brought down from its present level of 4 per cent. There is nothing unharmonious about bank rate at 4 per cent and the yield on short dateds being rather lower at, say, 3½ per cent. The whole structure of monetary interest rates needs to have a tenuous link with the primary rate, or the lending rate of the Government, which is 4 per cent. This does not mean that, as was the case spectacularly during 1956, the rate of interest offered by Scheduled Banks for their Deposits should considerably exceed bank rate. And now, that link between Deposit rates and bank rate is being sought to be forged through inter-bank agreements, instead of through conventions as happens in the United Kingdom. The disparity between the term money rates and bank rate has been far too small, and the future of banking earnings will decide whether the rates charged for Advances are to go up. In either case, because they are faced with such a situation for the first time, India's bankers are being left with no alternative than to subject the whole matter of interest rates to the closest possible scrutiny, since otherwise banking profits are being threatened to be squeezed out of existence.

So, we are not here trying to be apologists for cheap money. But we have always maintained that chaos existed in the structure of interest rates in India, and our suggestions from time to time have been with a view to ridding the Indian economy of such evidence of chaos. We now believe that there is now greater hope than ever before of being able to achieve this re-ordering of interest rates.

Selective monetary control, which may be said to have been instituted with the beginning of the Second Plan, took on a new aspect from March this year when, for the first time, the Reserve Bank utilised its powers of varying the reserve ratios. In other respects, directives from time to time have been issued limiting the quantum of Advances which banks might extend against particular commodities which happened to be in short supply. The Reserve Bank Governor has himself admitted that measures taken in the organised sector of the money market are of but limited avail in checking trends in prices. Why, then, their essentiality? It seems to us that, for foreign consumption, the Reserve Bank must be able to prove that the Indian monetary authorities are making every possible effort to hold the price line and thereby to make it clear that, if bank rate weapon is being scrupulously avoided, it is because that weapon is futile in the context of the kind of money market that India possesses. Action there must be, and, if, in the event of spectacular increase in bank Deposits, an attempt is made to reason that these Deposits are being allowed to aggravate inflationary tendencies, the Reserve Bank can turn round and say: India is exercising the strictest vigilance as to the availability of banking finance for commodities in short supply, the Reserve Bank has been anxious about the excessive liquidity of the banking system and the Reserve Bank has consequently deactivated fully half of the newly accruing resources.

But the measures taken by the Reserve Bank will somewhat affect Government's borrowing programme. In the 1959 slack season, the Deposits of the banking system rose by Rs 115 crores; and, moreover, as between the last Friday of April and the last Friday of October of the year, Advances contracted by Rs 81 crores. Thus, of the Rs 196 crores comprising new resources or released resources, banks used as much as Rs 178 crores to add to their investment portfolio. What is likely to be the experience in the 1960 slack season?

We may be sure that the growth in Deposits will be maintained, if it does not quicken. Our view is the rise in Deposit resources may amount to Rs 125 crores, and we are of the view that contraction in Advances may also rise to Rs 125 crores. But this does not mean that banks will be in a position to utilise the bulk of such new or released resources for purchase of gilt-edged.

This is because, in the first place, half of the new Deposits, or Rs 62 crores, will go to swell the statutory balances with the Reserve Bank. Then, as on the last Friday in April 1960, borrowings from the Reserve Bank and State Bank totalled Rs 58 crores; and since this will be an indebtedness which in the first instance will have to be paid off, a further sum of roughly Rs 60 crores becomes unavailable for investment in gilt-edged. All that would remain would be around Rs 128 crores. We may add that it is unlikely that the full amount of Rs 128 crores will in fact be invested in marketable securities. For, with the lesson learned from the 1959-60 busy season, we would not be surprised if banks used their accruing or released resources in September and October this year for purchase of Treasury Bills, either at auctions or of the Intermediate type. This reluctance to invest in Government securities would be aggravated by the fear that, whether owing to pressure from international monetary agencies or for any other reason, the Indian monetary authorities might be compelled to raise bank rate. So, unless there is more categorical assertion than we have so far known that this country believes the bank rate weapon to be inapplicable to Indian conditions, the outlook is for but feeble support for the Government's borrowing programme this year.

In a sense, then, Mr Iengar's letter to the Scheduled Banks was fully to be expected. While every confidence can be placed in the Scheduled Banks co-operating fully with the Reserve Bank in this matter, we would like to urge at this juncture that a statement of policy on interest rates generally and the bank rate in particular needs to be made by the central banking authority.

Foreign Balances Decline Again

THE returns of the Reserve Bank for 10 June show that there has been spill-over of month-early disbursements into the second week. Active notes have been marked up by Rs 12.84 crores to Rs 1880.72 crores. There has been outflow of rupee coin for Rs 0.74 crores. Cash in the till has been drawn down by Rs 13.57 crores.

For replenishing Balances Held Abroad, a transfer of Rs 10 crores has been made from Foreign Securities in the Issue Department. Against this, a countervailing transfer of Rs 10 crores has been made from Investments in the Banking Department to Rupee Securities.

The Central Government have received some payment from the State Governments, since the latter's balances are lower by Rs 8.05 crores while the former's Deposits have im-

proved by Rs 4.38 crores. Reserve Balances of member banks are higher by Rs 14.03 crores, mainly on account of the State Bank. The decline of Rs 11.25 crores to Rs 86.23 crores in Other Deposits may be linked with the further fall of Rs 5 crores in Balances Held Abroad, and may conceivably relate to repurchase of currency from the International Monetary Fund.

Investments are lower by Rs 20 crores, of which only Rs 10 crores is accountable by transfer to the Issue Department. Moreover, the Reserve Bank is known to have purchased securities for Rs 15 crores from the State Bank. There would therefore appear to have been reverse ad hoc for an amount of Rs 25 crores. The strain on the banking system as a result of month-early disbursements is indicated by the rise of Rs 6.23 crores to Rs 126.47 crores in the Other Loans and Advances of the Reserve Bank.

The return of the State Bank for 10 June shows that Deposits are lower by Rs 2.23 crores at Rs 630.61 crores. There has been disinvestment in gilt-edged for Rs 15 crores, which has gone immediately to benefit cash in hand and with Reserve Bank, which is marked higher by Rs 13.55 crores at Rs 35.67 crores. Advances have risen by Rs 2 crores to Rs 217.56 crores, and, with Other Assets also showing a rise of Rs 5 crores, the State Bank figures as a borrower of Rs 6.50 crores.

The return of the Scheduled banks for 3 June shows the impact of month-early disbursements, with the total of Advances rising Rs 7.48 crores to Rs 1132.65 crores. Gross Deposits are higher by almost exactly Rs 2 crores at 1988.42 crores. Cash balances seem to have declined by Rs 1.90 crores to Rs 185.96 crores, but, since the State Bank, in the relevant week, drew down its cash by Rs 15 crores, it would appear that other Scheduled Banks added to their cash balances by Rs 13 crores.

Exhortation, Compulsion, or Bank Rate?

By Paul Enzig

SINCE the beginning of the Government's disinflationary drive in January, there has been no lack in the variety of devices employed. We had increases in the Bank rate, manipulation of the Gilt-edge market, restriction on hire-purchase, special deposits, budgetary standstill, and to discourage excessive wage increase credit expansion or expenditure. All these and various other measures may be classified into three categories. At the one extreme there are the measures bordering on physical controls—hire purchase restrictions, special deposits. At the other extreme there are the efforts to achieve voluntary action by peaceful persuasion.

Halfway between them there is the time-honoured orthodox system of running the country with the aid of the Bank rate.

The first category is very much against Conservative political philosophy and is therefore unpopular in the City. Yet it is remarkable how the adoption of hire-purchase restrictions and of special deposits has been allowed to pass without any violent protests on the part of the business community and the Conservative Party. When Mr Butler as Chancellor of the Exchequer removed the last remaining hire-purchase restrictions the business world assumed that we had seen the last of them. That this Government of all Governments, after its recent victory at the general election, should depart from Tory principles to such extent as to adopt measures amounting to planning is indeed remarkable.

When special deposits were first adopted during the early part of the War I heard a Liberal M. P. remark: "This is not Socialism in our time—it is Socialism in no time." It was a Government controlled by a Conservative majority that resorted to the system of commandeering the resources of the banks, amounting to forced loans. And it was a purely Conservative Government that revived the device after its abandonment was decided by the Labour Government, even if it was completed by the Conservative Government that succeeded it.

The almost complete absence of protests shows the extent to which departures from the Conservative-Liberal creed of laissez-faire have come to be accepted. On the other hand there is still much resentment against the opposite extreme of governing by exhortation. No section of the community is prepared to submit to it, and the Government's appeals for lower prices, for checking credit expansion, for moderation in wage demands or dividends, for curtailment of consumer spending, have fallen on deaf ears.

Almost all bankers take the view that the Bank rate is the proper means for regulating the economy. If the Government thinks there is too rapid expansion the remedy is in its own hand. It is true interest rates are already very high and their further increase would inflict much hardship all round. If only the banks listened to the official exhortations there would be no need to inflict on the community even higher interest rates that would hit not only industries guilty of over-expansion but also struggling industries.

For reasons best known to themselves, the British banks, while disliking measures of compulsion, are equally averse to peaceful persuasion. They want the Bank rate and nothing but the Bank rate to serve as the main if not only instrument of economic policy. The general public disagrees with this view, but the general public is not so articulate as the banks, and its voice is not heard. At any rate not until the next general election which is far away. —(Copyright).

Inflow of Foreign Private Capital

THE report on the International flow of private capital recently published under UN auspices, extracts from which have appeared in the daily press, is factually somewhat behind times. This does not, however, invalidate its major findings, though the period under review mainly 1956-58, makes the overtones more sombre than they seem now. In the case of India, the period was particularly bad on the foreign exchange front, but since then things have generally looked up, though the flow of private foreign capital is not anywhere the rate it should be. The general economic weather during the period too was such as to make the picture gloomier. The main events of the period are listed by the report itself as "the short-lived but sharp recession in the United States economy with its international repercussions, the strong performance of the West European economy, oversupply in the oil industry, deterioration in the external position of the United States, and the related shift in relative liquidity and capital market conditions in the United States and Western Europe." From the point of view of the under-developed countries, the effect of even the brighter patches in this picture, like West European recovery was factually and figuratively to throw them into the shade. In fact, this paradox gives greater sharpness to the point made by the main conclusion of the report.

This conclusion is simply stated: private capital has tended to flow more readily into areas where there was less need for them. As the report puts it, "a major proportion of the total annual outflow of long term private capital from the main capital exporting countries goes to other advanced industrialised countries and to a small group of relatively high-income countries which are undergoing rapid development". And as between the advanced industrialised countries and the rapidly developing countries, the scales are weighted in favour of the former. This finding is not particularly new: in fact, it falls into the general pattern of "the rich getting richer and the poor poorer", which has been a postulate of international economies of post war years and which poses the most important challenge to our conscience and ingenuity. But in the context of flow of private capital, as distinguished from general flow of capital from Governments and other international agencies, some facts have to be borne in mind if excessive expectations and corresponding excessive despondency are to be avoided. No responsible person doubts that for the capital hungry under-developed nations capital from whatever source, is welcome. If therefore, an underdeveloped nation this side of the Iron Curtain is serious about development it will do everything in its power consistent with its general pattern of planning to attract private foreign capital. This means that suitable incentives and assurances must be given and certain climate of opinion created. As far as India is concerned all responsible quarters and successive investigators, especially from the US have expressed the opinion that opportunities for fresh capital are great and that the incentive and assurances are adequate if

not generous. But having said this it would be as well to recognise that there are limits to the rate of inflow of foreign capital that have nothing to do with incentives. Under the best auspices it cannot ever be at the rate at which capital flows into developed countries. Given a certain basic level of development two countries thrive symbiotically on each other. But in such cases capital flow has nothing to do with priorities. In the case of under-developed countries, priorities are unevadable. And the ability of private capital to provide what these countries put high in the list has steadily shrunk in the present century. Except for certain highly specialised industries like Oil with international ramifications, the capacity for providing the capital on the requisite scale is not available any longer to what might be called the 'private sector.' And significantly, these are the industries in which there is a greater readiness to export capital without water-tight prior assurances and incentives.

Thirdly, it is important to recognise that there can be no indiscriminate welcome to foreign private capital in an undeveloped country trying to impart to its economy a self-sustaining capacity for growth. What such an economy needs is strength in its foundations and not frills at the top. It is therefore likely, it will put down fairly low in the list the kind of enterprise that is merely seeking fresh markets but for which the country itself has no immediate use. (Significantly, these are the kind of enterprises which ask for assurances and incentives more shrilly than entrepreneurs in basic industries who have had wide international experience already.) If Indian incentives are studied, it will be found that it does work on this hypothesis of a strict order of priority in our needs. The concessions embodied in section 15 (c) and section 56A of the Income Tax Act, for instance are highly selective and the industries specifically listed therein are those that we would wish to have and for which alone we are willing to provide the incentives.

There is another aspect of the matter. Though there is a limit to domestic capital resources available for investment in the private sector, it is possible that an indiscriminate invitation to foreign capital may actually act detrimentally to domestic initiative. Indeed, there is a limit to the specific incentives for foreign capital. Some would say that the proper length to go would be to place foreign private capital at roughly the same position as domestic private capital. Others, a little more generous and making allowance for the extra enticement needed to one who comes to strange shores, would put it slightly higher and no more. Indian incentives are based on the second principle.

In practice, the chances of grievances on the score of discrimination can be reduced to a minimum by collaborate efforts between Indian and foreign private interests in particular lines. This is what is in fact happening today and it is in this particular channel that private foreign capital can find the readiest flow. This arrangement makes possible the supply of special technical knowledge to the

Indian Finance

Established 1928

The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right.—The Analects of Confucius.

Indian partnership, of which there is as much need in underdeveloped countries as of capital as such. It is in the fitness of things that Indian entrepreneurs rather than government should actively work for the inflow of foreign private capital, especially in the secondary and tertiary sectors of the economy. As far as India is concerned, the process has been fairly rapid: for there were already selling organisations which had merely to convert themselves into manufacturing units and in some cases, take in Indian capital. A certain amount of fresh capital has also flown in, but there is a great deal more that could probably be done.

Another channel through which private capital flows is subterranean or at any rate not readily noticed. It is the extended credits that foreign firms give to underdeveloped countries. These do not enter into the calculations made by the report, though it recognises its existence. It is true that such disguised use of capital cannot be, in the nature of things, on a very large scale. But considerable ingenuity has gone into the devising of it and certain tax concessions have been extended to such arrangements and its practical use cannot be underestimated.

In the ultimate analysis, private foreign capital flows for much the same reason that any capital flows: a spirit of enterprise, a reasonable assurance of a fair return on investment over a period and of its immunity from expropriation in that order. In the case of under-developed countries, there are historical and contemporary economic reasons (as distinguished from political reasons, which alone get widely publicised) that make the even flow of such capital difficult. Though comparisons with the mutual relations between developed countries are bound to make things look hopeless for under-developed countries, there is no need to write off the possibility of usefulness of private capital. For on a parity of reasoning, the task of economic development itself would seem forlorn. Within limits, there is much that can be done in widening and deepening the channel of flow and remove particular constructions, and it is a job worth doing.

Financial Trends in Asian Countries

(Contributed)

A STUDY of the financial position of the Asian countries will be interesting and instructive. Most of them have won their independence recently and are now trying vigorously to improve the living standards of their people. But in this task they are confronted with serious difficulties which are largely due to historical factors. Countries like India have been fortunate in having political stability, an efficient administration and well-developed financial institutions. But many other countries of Asia and the Far East do not have these advantages. Ministerial instability, absence of an organised banking system and lack of effective administrative machinery—all these factors have stood in

the way of the efficient utilisation of their resources.

Chronic deficit is a common feature of the budgets of most countries of this region. According to a Survey issued by the United Nations, in Malaya the budgetary deficit rose from M\$75 million in 1955 to M\$288 million in 1959; in Indonesia from Rp 2,090 million in 1955 to Rp 12,040 million in 1958; in Pakistan from Rs 629 million in 1955-56 to Rs 1256 million in 1959-60 and in Thailand from 658 million baht in 1955 to 1,180 million baht in 1960. The deficits obviously are due to the fact that expenditure increases at a faster rate than revenue.

The main taxes levied in these countries are the taxes on income and wealth, land tax, import and export duties, taxes on consumption and stamp duties. The chief items of expenditure are defence, economic development and social services. Defence absorbs a considerable amount of the expenditure in most countries. It varies from about 5 per cent in Ceylon and 10 per cent of total (current and capital) expenditure in Japan, the Federation of Malaya and the Philippines to over 40 per cent for Afghanistan, Formosa and Southern Viet Nam.

As it often happens in India, in other Asian countries revenue is sometimes underestimated and the expenditure over-estimated. But the reverse is also true in many countries. In Burma, for example, the draft estimate for 1958-59 placed the revenue at 1025 million Kyats and expenditure at 1317 million Kyats but, according to the revised estimates, the revenue and the expenditure stood at 952 million Kyats and 1375 million Kyats respectively. Consequently the deficit increased from 292 million kyats to 423 million kyats.

The gap between revenue and expenditure is made up in many countries by resorting to monetary expansion, usually in the form of central bank credit. As the United Nations' analysis points out "avoidance of central bank financing is difficult for countries without adequately developed financial institutions and even for countries that have acquired some financial sophistication, since most Governments prefer the ease with which they can extract finance from central banks to the difficulties involved in going to the money market for funds. Thus management of the public debt as an effective tool of fiscal policy hardly exists in many countries of the region."

In this connection it is worth referring to the technique of borrowing adopted by the Government of Formosa. In June 1959 the Government offered two types of short-term government bonds to the public—A Bonds, amounting to NT\$300 million (New Taiwan Dollar) and meant for the non-banking sector with a 30-month maturity and with 18 per cent interest per annum payable quarterly; and B Bonds, amounting to NT\$100 million and meant for banks with a 14-month maturity carrying 9 per cent interest for the whole period payable at maturity. All bonds were freely negotiable and could be used as collateral but not as reserve against bank deposits. The high interest rates were considered "realistic" because of the need to encourage savings "in a setting of continuous currency depreciation". The offerings, of course, were successful.

Credit policies in Asia generally cannot be as successful as in advanced countries because of the lack of financial institutions. As a result, the bulk of the money supply with the public takes the form of currency in circulation rather than bank deposits. The United

Nations' Survey points out that in the ECAFE region, excluding industrial Japan and entrepot Hong Kong, net active currency typically forms between a half and three-quarters of the money supply in the hands of the public. It is over 70 per cent in China, Iran and Malaya including Singapore, over 60 per cent in Burma, Cambodia, India, Indonesia, Pakistan, Thailand and Southern Viet Nam and over 50 per cent in Formosa and Southern Korea. Only in the Philippines and Ceylon, does the amount of currency in circulation fall a little below deposit money.

However, it is encouraging to note that efforts are being made to accelerate the economic development of the countries of this region. Stock exchanges are proposed to be set up in Bangkok and Singapore. At present these exist only in Hong Kong, India, Japan, Pakistan and the Philippines. The number of commercial banks in various countries is increasing and special institutions are being set up to provide finance for large scale and small scale industries. Foreign aid is being received in increasing quantities by the countries of this region from the USA, from World Bank and from Communist countries. At the same time, attempts are also being made to encourage the flow of private capital from the advanced countries.

It can therefore be expected that in the near future the countries of Asia and the Far East will be able to improve steadily their financial position and to increase the living standards of their population.

The tables on page 1142 give the trend in the revenue and expenditure of some important countries of the ECAFE region.

The Slippery Summit

By N. C. M.

THE lady protests too much, so the pose of chastity hardly deceives. Did not the Swiss Government very recently order two officials of the Soviet Embassy out of Switzerland for espionage? And was not the 400-ton Soviet auxiliary warship repeatedly observed in Greek waters engaged in espionage? To say nothing of the less recent, countless instances of Soviet's violation of international sanctities.

It is true perhaps that Khrushchev caught the States bathing and ran away with their clothes. So also in his threat to sign a separate peace treaty with East Germany (on the analogy of USA's peace treaty with Japan) like Petruchio's, to tame the shrew with her own weapon. But of the consequences, the precipice just below the Summit, Khrushchev cannot possibly be unaware. In his Baku speech, he himself pointed out that after the separate peace treaty with East Germany, the Western allies "will naturally not be able to reach Berlin by land, water or air" and if they try to use force for the purpose, "this force will be opposed by force from the other side based on law and right". It is certainly not due to Khrushchev's love for peace that the fall from the slippery summit does not already set an avalanche in motion.

Observers as far intellectually removed from each other as Gaitskell and Walter Lippman have said the U-2 flight before the Summit meeting was a blunder. To that major blunder, there was also a minor one, viz., first, the State Department denial of U.S. overflights of Russia and then the forced admission. Whatever, however, the size of the blunder might have been, Khrushchev made the most of it. He not only made the Summit

meeting fail, but made America look foolish, and he did it the rustic or proletarian way, or rather the Khrushchev way. He might just as well have kept away, at least, he might have spared himself the trouble of heaping insults on America and her President. But that was not to be. He wanted to rub it in and did it.

The issue is no longer really between Capitalism and Communism. The Capitalism of 1960 is not that of Marx, it is 'passe', already undergoing changes before our eyes. Since there now remains only a veneer of Communism as the residuary remnant in Russia, Communism has been turned into Russian Nationalism or Russianism. America leads the democracies of the world in the cold war. So the issue might be re-stated as one between Americanism and Russianism. And by the unexpected, large-scale irritation Khrushchev has so deliberately caused, the issue will be, if anything, accentuated.

But what could be the reason for this volcanic indignation on the part of Khrushchev? As a seasoned politician, one should have thought that he would take the U-2 incident in his stride. Why, on the other hand, first the denial and, later on, the admission from US? As an adult State, with all the diplomatic acumen an adult State is supposed to have, one should have thought that the U.S. also would take the incident in her stride. Then again, why the vain boasts? Time owns up to "a week of confusion" in U.S. diplomacy. Perhaps not a week only.

No Summit meeting would be worth calling, if Russia were out of it. The Washington Naval Conference of 1921 would have been meaningless, with Japan out. For, as that Conference had to limit the naval armaments of economically unexhausted Japan, the present Summit meetings have to limit and control the newest ones which Russia has been making.

There are suggestions that Red China might have contrived the break-up of the Summit meeting and Red China's record so far tends to make the suggestions acceptable. Her simultaneous intervention in Korea and rape of Tibet, the frequent shelling of Quemoy and Matsu, her brusque treatment of Indonesia and India converge on the assumption that Red China is spoiling for a fight to an even greater extent than Khrushchev. Red China's publicists prate a lot more of war than Russia's.

from Russia, on Summit meetings (written by Bulganin on the 8th January, 1958) proposed a meeting of 20 nations. Since then, the number has been whittled down and Russia has been edging away. Not too long ago, Gromyko insisted on parity between the two sides by the inclusion of Poland and Czechoslovakia. It would seem that the spectre of parity haunts the Conference still; and Russia, obviously at a disadvantage, cannot afford to contribute to its success. The Conference's success would be Russia's failure.

The capitally important question now is—after the Summit, what? Is another Pearl Harbour in the offing? The Russo-Japanese War also began like that, only the first casualties were only two. But of the two, Artist Verestchagin was one.

With militarists so obviously in control in both Russia and America, nothing is impossible. Those who ride tigers cannot dismount.

Role of the Police in the Welfare State

M. SUR

THE Report of the Kerala Police Reorganisation Committee, under the chairmanship of Mr N. C. Chatterjee, Senior Advocate of the Supreme Court, makes interesting reading. This committee* was set up in January, 1959, by the Communist Government of Kerala largely as a result of the protests voiced by both employers and labour against the action of the police in the preceding period of industrial unrest, and it completed its work under the present Government of the State early this year. Its principal terms of reference were to enquire into the role of the police in the Welfare State, and whether existing provisions of law were adequate to secure fulfilment of the objectives of the Constitution, particularly in the sphere of employer-employee, landlord-tenant, and capital-labour relations. The committee was also to consider the duties of the police in relation to the exercise of civil liberties, communal and linguistic tensions, demonstrations and property disputes, and whether in view of public criticism the use of fire arms by the police should be totally excluded.

In its main conclusions the committee stress that the objectives of the police organisation in free India must undergo a radical change, and that the police must be looked upon as the first servants of the public, laying more emphasis on their constructive role than on the negative and coercive aspect. For this purpose the police should be trained in social welfare work and encouraged to participate in social welfare activities; in fact the whole pattern of instruction should be changed in order to impart a spirit of service in the force. It is suggested that to prevent damage to the reputation of the police by improper news coverage, police-public relations should be developed under a full-time Public Relations Officer. These two measures, if carried out, should help to change the whole attitude of the public towards the police. Their present attitude of suspicion and criticism is not surprising when one reads that the pattern of instruction in police training institutions has not radically changed from

*Its other members were a Senior Advocate of Madras, the President of the All India Railway Men's Federation, Madras, a Personnel Manager, and the Inspector-General of Police, Trivandrum.

the days of British rule. Is this so in other States also, one wonders?

The chapter in the report on the role of the police in the context of employer-employee relations is of particular interest because it boldly tackles the problem of rival unions as the root cause of the present embittered labour-management relations, and the resulting threat to law and order. Only one representative union should be recognised as the sole bargaining agent in a bargaining unit, it declares, and where there is only one union claiming representation in a unit, that union should be compulsorily recognised. Where more than one union claim recognition, the one with the majority following should be certified as the bargaining agent, and rival claims should be settled, if necessary, by secret ballot of all permanent workers with service of one year or more, a minimum of 25 per cent of the votes being required for the certified bargaining agent. This would be to follow the American pattern of labour relations, but it has sometimes been objected that recognition of only one union in a unit would offend the provision of the Constitution giving citizens the right to form organisations of their own choosing. The committee, however, make a clear distinction between the right of association and the right of recognition. Only the former is assured by the Constitution. "Conferring the right of recognition only on the most representative union in order to secure orderly industrial relations does not constitute the denial of the right of association to any section of the workers. Under the legislation we are recommending there will be provision for even a minority union to achieve the position of the majority union, thus securing recognition at a future date by effective constructive organisational work." Weak unions, say the committee, have been encouraged by the failure to legislate for recognition of the most representative union and compulsory collective bargaining with it. Stronger unions will become more realistic, and where there is no rival union to confuse the issue, employers will learn to develop faith in mutual negotiation.

Though the committee's recommendation seems the democratic solution of the problem of rival unions, it is strange how strong and illogical is the opposition to it. The INTUC, for instance, will not give its support to the idea of the compulsory recognition of the most representative union in the unit, although its President at its last annual session deplored Government's present policy of recognising at the centre trade union organisations representing only a small minority. "By recognising even such minority organisations," he said, "government is simply delaying and even obstructing the early solidarity of the trade union movement. Once the government decides to honour the democratic principle of recognising the majority organisation alone, the minority organisations will be compelled to choose and merge with some larger organisations." The same argument surely applies with equal force at the factory as at the national level.

Dealing with complaints that the police in Kerala had interfered in industrial disputes, the committee found no evidence to support allegations made by workers and unions. When the matter became one of law and order, naturally the police were bound to intervene. Another question raised was whether the right of owners of factories to remove goods during a strike should be restricted, but the committee saw no need to modify existing law in this respect. On the problem of

whether the police should give protection to those who continued to work during a strike, the committee commented that willing workers had the right to work just as striking workers had the right to abstain from work. While peaceful persuasion to remain away from work was allowable, picketing with violence, in the opinion of the committee, was to put a "premium on inefficient trade unionism". A strike should succeed or fail on the organisational strength of the men and their loyalty to the union. Whilst there was no need, in the opinion of the committee, to charge the law which gave protection to willing workers, a Code of Conduct should be evolved by which employment during a strike could be restricted to the necessary minimum, such as maintenance of essential services, protection of lives and property.

Dealing with the ethics of the use of force by the police, the committee points out that law without the sanction of force would be ineffective, but recommends that armed police be kept in reserve instead of being displayed at political meetings and assemblies. If it becomes necessary to disperse a mob then the police should first use tear smoke or canes; lathis should only be used if canes prove ineffective. Use of firearms should only be resorted to where serious damage to public or private property is anticipated, where a crowd is armed with deadly weapons, or where riot seems inevitable through the aggressive attitude of contending groups. It should be made very clear to the police that firing is only a last resort and "that responsible police officers should be in a position to intervene at an earlier stage and avoid the necessity to resort to the use of firearms."

This report should have a wider application than to the State of Kerala alone.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

Water for Industry

A note on the irrigation needs prepared by the Madras Government highlights the extent to which the water resources of the State have been utilised for purposes of irrigation and the very little scope that exists for further extension of the irrigated area, unless it is possible to secure water from outside the State. The report of the National Council of Applied Economic Research on the techno-economic survey of the State also underlines the same point when it notes that agriculture being already very well developed offers very little scope for increasing productivity or for providing more employment. The Report, therefore, has recommended a programme of industrial development with the emphasis on engineering and chemical industries. One point which requires further examination is whether the shortage of water which has set a severe limit to the further growth of agriculture will not itself stand in the way of industrial development also.

The need of large quantities of water for agriculture and food raising is widely understood. But it is not equally well known that industrial needs of water are also of the same order. Most manufacturing and other industrial processes require larger quantities of

water than of any of the other raw materials consumed. In advanced industrial countries the competing uses have posed the problem of rational utilisation. According to a United Nations Survey, the industrial use of water is steadily increasing. In 1955, industries in the United States are estimated to have used a daily average of 119.8 billion gallons of water, the same quantity used for irrigation. In 1965 industrial use would have increased to 180 billion gallons and irrigation to 148 billion, while by 1975 industries would be using 246 billion gallons against irrigation requirement of 170 billion gallons. It may be pointed out that most of the water used in industry is used several times over as in mining, manufacturing and steam power plants. It is also estimated that manufacture of paper (in the United States) requires 163,000 litres of water per ton; synthetic fuel 265,000 litres per kilolitre; acetic acid 417,000 to 1,000,000 litres per ton; ammonium sulphate 835,000 litres per ton; calcium carbide 125,000 litres per ton; potassium chloride 167,000 to 209,000 litres per ton and rayon 835,000 litres per ton of yarn. These figures will give an indication of the quantities of water that will be required to sustain steady growth of industry.

It may, however, be pointed out that, unlike agriculture, all the water used in industry is not totally consumed, but is returned to the watercourses and may be available for other uses. In the United States irrigation is estimated to account for 80 per cent of the total consumption. Even so the margin of availability of water for industrial purposes in Madras is not encouraging. According to the Madras Government's note on irrigation needs, out of the 16 million acre feet of water carried by the rivers of the State 14.5 million acre feet have already been utilised for irrigation purposes. It is evident that in the selection of industries and industrial processes the availability of adequate supply of water will have to be taken into consideration. Inter-State collaboration for ensuring optimum use of water resources will be clearly in the national interest.

Combined Operation

In his inaugural address to the Tamilnad Sarvodaya Sammelan, Mr Jaya Prakash Narayan made the interesting suggestion that the political parties in the country should start combined operations to increase agricultural production. The problem of stepping up agricultural output is undoubtedly of national importance, but it is difficult to see what positive contribution political parties could make to its solution. An agreement to keep food outside the range of party political controversies will no doubt facilitate administration in times of shortage, when it is necessary to enforce a system of controls and procurement. Where in any

particular area, production is hampered by political factors, a truce among the parties may also help to eliminate these difficulties. But Mr Narayan has evidently over-rated the influence of politicians when he suggested that all parties could unite in going round the villages and mobilising the ryots to work for increased agricultural production. There may be reasons why ryots do not evince as much interest as they should in their principal source of livelihood. But a combined appeal from politicians is hardly likely to transform apathy into enthusiasm.

The achievement of increased agricultural output is essentially a problem of administrative organisation designed to create the conditions for the adoption of the particular combination of techniques suited to each locality. The wide range of variation in the local conditions and the economic status of the cultivators add to the complexity of the problem. This is further aggravated by the differences of opinion among agricultural economists and technicians on the proper choice of objectives and techniques. The entry of politicians into the scene will be hardly conducive to the emergency of consensus at the technical level.

National Service

With a determination that could have been reserved with advantage for a better purpose, Dr Shrimali has again come forward with the ill-conceived proposal for compulsory national service, this time at the conference of Vice-Chancellors held in Poona last week. The proposal bears on its face the stamp of amateurish dabbling which has been the bane of education in this country. It is not, therefore, surprising that the fairly full reports of the speech in which Dr Shrimali attempted to justify the proposal do not contain a single valid argument in its support. Dr Shrimali has declared that the main justification of the scheme must be in terms of its educational character and value; but he has nowhere explained what these are.

What conceivable educational advantage could there be in introducing a break in the educational career of those who intend to pursue higher studies and that, too, at the critical age of seventeen? As for the others, who wish to seek employment after leaving school the purpose in view has nothing to do with education. The object, as Dr Shrimali has explained the position, is not to complete their education, but to keep them out of the employment market for at least one year. The Union Minister has referred in this connection to the growing volume of unemployment. The existence of a heavy backlog of unemployment is undeniable. But it has to be met by the creation of new job opportunities and not by forcibly keeping back new entrants to the work force. A large number of the stu-

dents leaving school, as Dr Shrimali has stated, may not be able to secure jobs immediately. But that does not alter the fact that every one of them hopes to get a job. In fact, the heavy incidence of unemployment only accentuates the anxiety to get an early start in the race for jobs. To force them to spend one year in camps after leaving school will only breed a dangerous sense of collective frustration which will manifest itself in forms which will not be comfortable for the authorities.

And what will be the sort of service which these groups of frustrated young men will be able to render the villagers and what is the contribution that they can make to the solution of rural problems? Most of these have their origin in the poverty of the villages of which the massive structural unemployment is the virulent symptom. What the villagers require is not advice, or directions on better ways of living, but the wherewithal to sustain an improved standard of living. Is it seriously claimed that the national service by high school students will improve the economic status of the countryside? To the extent that they replace paid workers, that will only help to aggravate unemployment and depress standards still further.

Much is made of the character-building potentialities of the national service scheme. Whether these potentialities are actually realised depends on the sort of leadership that it is possible to provide for the national service camps. The Minister's speech itself says enough about the inadequacies of the general run of teachers to raise grave doubts whether they can be depended upon to provide suitable camp leadership.

Railroad Mergers

The zoning of Indian railways was completed ten years ago and the results of integration have not been doubted. But in a country where railroads are owned by jointstock companies, subject yet to Government regulation, the zonal idea is gaining ground. The failure of most US railways to earn profits, repay debt and even to escape receivership is known. Competition has not prevented a fall in operating efficiency on minor roads, though the Pennsylvania RR. and N. Y. Central may show fine results. If combination in the UK had produced little after nationalisation in the USA combination is taken as the key to success in future and the bigger railroads are joining together. Anti-trust rules will not stand in the way of sanction is got by application to the federal government.

Consolidation is approved and in 1959 the Norfolk and Western and the Virginia formed forces. Mergers of airlines are also canvassed at present. The Baltimore and Ohio and the Chesapeake and Ohio are combining to operate over 11,000 miles of track and the New York Central also is now thinking of joining. The bulk of the coal traffic will go to the new system which will cover Michigan as well as Maryland. The new mergers are not pulled out by financiers, from their hats but, continued to restore earnings to a depressed industry, facing airline competition for passengers and trucks for carriages of goods. The trading of shares by exchange has already stimulated investors' interest. In depressed rail stocks and eighteen railroads are looking at mergers hopefully after the B & O and C & O arrangement.

S. N. K. SUNDARAM, Mg. Director.

The small New England railways also are moving fast towards amalgamation. The US government is expected to bless the merger schemes and the railway unions too will not be displeased by the discreet promise of prosperity. The success of fast freight trains on the C & O may bring more traffic to the Atlantic ports from places like Detroit and St. Louis and the rail route to Canada will get more traffic because of the new St. Lawrence Seaway. Uniform rates and better service are on the cards and diesel traction may become universal, if the railroads get the green light from the Inter-State Commerce Commission which sees that in this century railroads must combine to survive.

Crime About Law

The forcible removal of a notorious anti-Semite from the Argentine to Israel has provoked controversy, not about the antecedents of Eichmann but about the propriety of violating the political asylum afforded already. The theory that Argentina has no extradition laws and lucky embezzlers can get away is not well-founded. Those who leave the USA hurriedly for Mexico or Brazil in fear of prosecution for fraud have found that the local police are ready, able and willing to help in their capture and removal. The case of Eichmann is different from that of Jabez Balfour, the man who decamped with the funds of the Liberator Building Society. Balfour was a precursor of Horatio Bottomley, another M.P. who went to prison after conviction for fraud. The whole issue really turns on Argentina accepting the verdict of the Court held at Nuremberg to try war criminals. If Goering and Co. could be punished the case against Eichmann is a decidedly strong one. But Israel was not in the picture in 1945 and her claim to deal in her own way with Eichmann rests both on the restitution in cash made by Bonn and the proceedings in Israel against those who dealt badly with Jewish refugees. The appeal to a higher law is made confidently by Mr Ben Gurion who will find that only the Arab States are ready to plead for Eichmann. Liberal lawyers who intervene in South African treason trials will perhaps be reluctant to take up the case of Eichmann for the charge is genocide and the USA, Britain and France have treated culpability (even under Government orders, as sufficient reason for condemnation. The episode proves that espionage has its own successes and, the disaster to the U-2 mission has been offset by a ringing victory for the canny kidnappers, in this case, of a healthy adult. There is little chance of an appeal to the Hague Court for the German Government will not accept Eichmann as a protégé entitled to legal protection and a determined Israel may prove that it can yet make an example of Eichmann even after his years of concealment.

There is no question of jurisdiction or competence, only of punishment to fit the crime.

Germany's Part

Dr Hermann Abs writing in a special supplement of the FINANCIAL TIMES of London refers to the Federal Republic's increasing investment abroad. This is calculated to strengthen faith in Indian missions undertaken to attract outside capital. The export trade surplus is, of course, the basis of capital export, but a good deal was patently of a non-recurring nature. Liberalisation of imports might reduce the outflow of capital in future, according to Dr Abs and large shipments of capital goods may even provoke a fresh complaint of German dumping.

The plea for extra investment abroad is qualified by an argument that profits must be earned on any investment and German private capital must be afforded guarantees against political risks. The European Investment Bank to sustain the Common Market must have some freedom. Repatriation of foreign investments in Germany is bound to take place gradually. But alongside this process private capital must be free to move and a convention is required for guaranteeing fair treatment. The legal framework must be ensured by adequate agreements with the countries seeking capital from Germany.

The revival of German investment in Africa supports the hope that Germany will help. Reference is made to projects for starting manufacture of paper in Ethiopia, extraction of minerals in West Africa and rubber in Liberia. Free entry for African products like cocoa and cotton into the German market will be viewed as a consequence of aid offered by West Germany.

Latin America is viewed as a more promising outlet and 750 million DM. has been invested in the area already. The Argentine and other countries are moving from economic nationalism in order to secure foreign capital. Both Brazil and Argentina are equipped with new steel plants and Germany is now interested in getting Canadian iron ore from Labrador. Germany is trying also to invest in Canada. This is rendered easy by the trend towards concentration at home and the ECM scheme has stimulated mergers and the whole postwar trend is being reversed quietly, for instance, in the Ruhr steel industry. The revival of the Mannesmann tube interests is attested by acquisition of new interests in Brazil and Canada and opening of new sheet steel mills in Bremen. Leasing of facilities by agreement is part of the pattern of co-operation which links heavy industry with chemicals. The return of State assets to private enterprise by people's shares has stimulated the consolidation of the metal-using industries including motorcars. The

anxiety to give private enterprise more scope and opportunity is derived from the existence of the East German Republic under Russian protection. The really significant change (from the Indian angle) is the rise in Germany's imports (since 1956) especially of food materials and semi-manufactures. The German imports of leather goods, textiles and ready-made clothing are up and Franco-German trade registered a sharp rise in 1958-59. But the biggest trading partner at present is the USA and this was attested by Germany's large sales of cars, machinery and chemicals.

Company Towns

Prince Philip's observations on Company towns—his comparison between Jamshedpur and Kitimat in British Columbia—are likely to create a new interest in the value of planning places for employees. The lack of popular appeal noted in the case of Gary, Indiana, may be one reason for Prince Philip's avowed distaste for company towns. But Jamshedpur raised on Sakchi came into being in the days of State laissez-faire and private paternalism, when J. N. Tata had to look after everything from raising capital to providing sanitation. Whether private enterprise did its planning well then is hardly the issue. The company towns make the worker, even after his working hours, feel that the employer is watching him and he has no place in local self-government.

The absence of democracy is the point of the Prince's critical remarks and it is possible that TISCO may try to rectify the defects to which an eminent outsider is alive. Industrialisation need not debar the worker from now acting as a free citizen, like the suburban householder working in a City office. The claims of civic freedom must be reconciled with efficient administration and the trade unionists too must be given a voice in the management of the town. This is hardly revolutionary doctrine at present and what Aluminium Ltd. has done in Canada must be yet distinguished, for BC is a new country and Bihar is a very old region in many ways. The arrangements suited to a boom town or mining town dependent on coal may be unsuited to an era of adult suffrage. What the English mining companies did in Kolar may have no relevance and what Kipling wrote about Jamalpur, a rail-road town run by a company to the exclusion of democracy. The new freedom postulates a change and the planned community like Tyrone, N. M. built by the Phelps Dodge Corporation for copper miners, can give attention to the other elements of a good life besides modern plumbing which, as some say, is not the only ingredient of civilisation.

Kerala's Industrial Policy

The Kerala State Congress-P.S.P. coalition Ministry has recognised the vital role the private sector in industry can play in the economic progress of the State and has issued open invitations to entrepreneurs to invest in the State with a number of concessions.

A press note issued in Trivandrum on the subject this week said that it was determined to "create a climate for industrial peace, the lack of which in the recent past, was presumably one of the reasons why promoters of large-scale industries were hesitant to choose Kerala as their venue even in cases where the natural advantages in the State are otherwise attractive".

Undoubtedly the reference is to the fear of investors about the Communist regime's attitude towards private investment in Kerala.

The Press note recognised large-scale industries were absolutely essential as nuclei around which many small-scale industries could grow. Every effort, therefore, should be made for the establishment of as many large industries as possible whether in the private or in the public sector, the Note stressed.

Of course the Kerala Government conceded the principle that in a socialist democracy labour should be enthusiastic partner in the common task of development. While upholding the legitimate claims of labour, the Government of Kerala wanted to stress the importance of discipline and the supreme need for the maintenance of high productivity standards at present.

The following incentives are proposed to be given by the Kerala State for private entrepreneurs in the realm of large-scale industries. Provision of land by acquisition if necessary; supply of cheap power; assistance to obtain licence for the establishment of industry and import of machinery and to obtain raw materials and in suitable cases, and subject to the overall policy of the India Government in this regard financial participation, either directly by investment in shares or by way of loans and guarantees etc.

Additionally to the above forms of assistance medium industries would be given sites of setting up "industrial townships" for a group of medium industries and these would be fully developed like industrial estates except buildings.

For small-scale industries the Kerala State proposes to accord Provision of built-up factory accommodation at concessional rates in

Industrial Estates, supply of machinery on easy hire-purchase terms, provision of special credit facilities at low interest rates, assistance in securing raw materials such as iron, steel, brass copper and other metals, concessions according to the stores purchase programme, marketing assistance through chain stores and technical assistance and training facilities through industrial extension service.

For Village and cottage industries and industrial co-operatives, in addition to the usual help rendered by such bodies as the All-India Handloom Board, Handicrafts Board, the Fair Board etc., the State Government would set up more dye houses for handlooms and render assistance in securing quality dyes and chemicals.

All coir industries units would be brought under the cooperative fold. The Government would assist the manufacturing sector of this coir industry to introduce modern machinery and new techniques of production to compete with foreign manufacturers.

The Press Note stressed the need to find what it believes the "lasting solution for the chronic unemployment" in the Kerala State.

In the light of the above programme of State assistance, the Kerala State hopes that a large number of entrepreneurs would come forward to establish industries in the State.

Hydraulic Research

At the four-day research session of the Central Board of Irrigation and Power in Trivandrum last week important conclusions are expected to have been reached on various subjects such as model and prototype studies of hydraulic structures, design of hydraulic structures, problems pertaining to river training and flood protection, canals design, hydrology, soil technology and foundation engineering, irrigation practices, navigation, rural electrification and construction materials.

Chief Engineers from All-Indian States and researchers from all over the country have submitted over three scores of research papers on the above subjects. Other participants in the important technological research on hydraulics included Ceylon Engineers, members from the Technical Cooperation Mission, and representatives from Unesco and other specialised International agencies concerned with the subject of hydraulics.

Dr K. L. Rao, who is President of the Central Board of Water and Power Commission for this year, presided.

An announcement was made by him that the Government of India were considering the institution of a Special Board of Direction for Research in Hydraulics and Power Engineering.

Dr Rao said that rivers being the greatest assets for the nation, their economic exploitation was certainly of utmost importance for

the country's development. Hydraulic science, therefore, had to be mastered by our Engineers.

Engineers should have to be familiarized with hydraulics. Dr Rao suggested that the Central Board of Irrigation and Power should gather all information concerned in the development of research on hydraulic science, and conduct experiments, in what he called, hydraulic museums by experts on the line. Concentrated research was possible only in a few research laboratories that should be developed for this specific purpose. Basic and fundamental research work should have to be undertaken by Indian Universities. Hydro-dynamics Institute would be most helpful for tackling, what he thought to be some of the basic problems of hydraulics.

Special units for observing field data useful for application to vast works, structural research about which nothing is being done in India, vibration and seismic proof structures researches were all necessary to the country, Dr Rao stressed.

In his inaugural address to the session, Mr Pattom A. Thanu Pillai, Chief Minister, Kerala State, said that Kerala engineers held the hope that the state could use up to the last drop of water received by Kerala soil by rains and it was a mistaken notion that Kerala was not in a position to use all the waters it received as rains.

He wanted the experts to help in achieving that aim. In Kerala they had peculiar problems like sea erosion, water salinity, food shortage and high population. No part of the State's 350 mile coast line was ever free from attacks of any of these problems, he stated. Mr Pillai laid stress on methods of higher production of food for his State's growing population, and toward this, it was pointed out methods should be discovered for successfully utilising the waters that quickly assume salinity due to sea erosion. He was happy that problems such as the ones facing the Kerala State have also become the subject of outside engineering studies. "We are practically at the beginning of things so far as national development is concerned," Mr Pillai bluntly told the experts.

Nobody would agree that everything has been done to exhaust the hydel resources of the country, nor, for that matter, the hydro-electric resources. In Kerala, in particular, scores of small hydel schemes could come into being with proper investigation and application of the results of researches, without politics interfering in the work that waits to be executed with patience. Such a type of work has become pressing, as Mr A. O. Oommen Technical Member, Kerala State Electricity Board, pointed out to the convention. In contrast to Kerala, there is Andhra with very vast river projects needing concerted research and execution patiently for benefit of not only the sprawling Andhra State

but also quite big chunks of adjoining territories of Bombay, Mysore, Madras and even Kerala if it comes to that. Kerala's hydro-electric potentiality was said to be 2,100 mega watts, but about 5 per cent alone of this had so far been exploited. Only about 10 per cent of this would have been exploited after the completion of the 2nd Plan. The total capacity waiting for exploitation, however indicates the magnitude of the problem. The Hydraulic Research convention should devise economic ways and methods for expediting progress with the least dependence upon foreign resources.

MP Third Plan

The planning sub-committee constituted by the Madhya Pradesh Congress to suggest 'social and economic objectives' to be achieved during the Third Plan has found that it would be quite feasible to finance a plan outlay of Rs 400 crores from resources that could be raised during the Third Plan period. In this light the Committee has indicated scope for raising revenue from practically all sources. Additional taxation recommended by the committee at Rs 50 crores will be shared by the rural sector and urban sectors. In the urban sector, the committee has suggested fresh levies by way of revision of motor vehicles tax, health and education cess, sales tax on presently exempted items, tax on incomes accruing out of house rent, cess on minerals and export of forest produce lying within the competence of the State Government, and tax on enhanced evaluation of non-agricultural lands.

The rural levies include standardisation of land revenue betterment levy and introduction of uniform irrigation rates and agricultural income tax. The betterment levy and irrigation rates are expected to fetch in nearly Rs 10 crores during the Third Plan. In respect of rural taxation, the committee points out that since under the second Plan the rural sector has escaped lightly from taxation, the prospective levies during the Third Plan should not bear on them heavily.

For raising non-tax revenue the committee has suggested two special schemes namely, nationalisation of the State's road transport and formation of mineral trading corporation. It is further stated that the State's income could be increased from current revenues at current levels of taxation, loans from public share of small savings, grants and loans from Central Government and miscellaneous capital receipts by effecting economies in expenditure and keeping the non-developmental expenditure firmly under control. As steps for economising expenditure, the committee recommends coordination of Government departments, and discouragement of further increase in Government personnel.

Monetary & Credit Control

Bank shares are depressed, in spite of the steady progress made by Indian banking. The rise in deposits in 1959 was certainly followed by larger advances and the bigger banks benefited naturally. There is more money in the banks, but credit curbs are also there and the banks, as in other countries, have been called upon to apply selective restrictions. Advice to help industry with long-term loans has been offered but banks must be careful in this matter, having regard to past experience, especially, in Bengal. The freezing of interest rates has not helped to prevent a rise in operating costs, and the Bank Commission has got its work cut out to deal with employees' claims. This is not a real problem, as service charges have been raised already, and clients have been quickly told to foot the bill. The competition of chit funds, and the PO savings banks is mainly with non-scheduled banks at present and that is why the latter cannot show the same satisfactory results as the big banks. The improvement in results may be due to legislation, but it looks as if the British exchange banks can still show better results than the Indian banks.

The performance of the foreign sector is a point to consider in evaluating even the results of the State Bank's expansion, though that rests on the diversion of US rupee funds. It is known that the cash ratio is much higher than in the UK and if advances are to rise soon, the ratio must be lowered. This is one of the lessons brought home by a reading of 1959 balance sheets. The chance of a reduction of rates paid on deposits are cautiously canvassed. Even with less assistance from the Reserve Bank in the busy season, by the variation of interest rates, the banks can meet the demand for funds. And South Africa exceptionally may offer some guidance to India about monetary and credit control, though one point about South Africa is that mining finance houses always loom larger than banks. The stagnation of some institutions strengthens the case for mergers and both American and British postwar experience is clearly in favour of mergers. The same may be said of mergers in the insurance field. How the Bank of Baroda has gained and how British insurers have become more stable and efficient through mergers in 1959 are widely known, but no conscious effort has been

made apparently to stimulate amalgamations in India.

A Fragile Industry

A technical survey of the Indian glass industry undertaken with US experts' aid has revealed the existence of surplus capacity. The progress of the best known factory, Hindusthan Pilkington in 1959 confers extra importance on the assessment of growth and the restricted supply of raw materials like soda ash. The findings are not quite favourable to the small and scattered units whose equipment is poor and obsolete. The concentration of manufacture in large modern factories is advisable. Working results of Ogale Glass and Travancore Ogale for 1959, showing a rise in profit leading to higher dividends, suggest that the bigger units alone can benefit from the fall in imports, produce soda bottles, etc. for which the demand is up. The old units in some States must certainly go out and the new units helped by foreign enterprise, Japanese, Belgium etc must get extra consideration, if only because of the experts' conclusions about fuel used, supply of refractories and utilisation of research facilities.

The decline of the glass bangles industry, for which tariff protection was devised makes it unnecessary to think of cottage industry at present. The manufacture of beads can also be ignored. The factories are to be advised about improving their output and it is certain that the industry will cease to be fragile, if there is a big demand for sheet glass and glass bricks for construction as now expected. The most important indication is that postwar progress has been patchy and the glass industry needs rehabilitation.

STC and Fruit Export

The State Trading Corporation is currently engaged in a drive to promoting the export of fruit products to the neighbouring countries of West Asia and Europe in collaboration with the established fruit manufacturers and exporters. The Corporation has already appointed a food and plantation division and now they are finalising a list of manufacturers who will be included in the contemplated scheme for stepping up the export of processed fruit.

Mr K. Rangaswami, the Regional Manager of the Corporation, who recently toured South India, is fully convinced of the immense scope for the export of pineapple juice and slices, provided the products are of good quality and are offered at competitive prices in the foreign markets.

The Corporation is fully conscious of the innumerable difficulties in pushing through the proposal. It may be noted that the present scheme is designed in such a way as to obviate the hardship of exporters and make the drive more effective. It is gathered that the Corporation will provide all the

necessary incentives to the manufacturers to step up exports. These will include the supply of adequate sugar of good quality, cheap tin containers, concessional freight charges and the relevant technical "know-how". Besides, the individuality of the manufacturers will be maintained even though the Corporation alone will deal with the export.

At present a large part of the fruits grown in the country goes to waste because of the lack of adequate facilities for fruit preservation. The export promotion drive launched by the STC should encourage the development of the fruit preservation industry. Mere patchwork at some points will not alone solve the problem. Proper storage and processing facilities are essential prerequisites.

An Aluminium Factory for the South

The rupee thirteen crore aluminium plant at Salem will be an accomplished fact according to a decision taken at a high level conference in Madras. There are definite advantages in making this plant an integrated one, making ingots and fabricated materials alike. If it was intended only for ingot making the cost of the mill would be only Rs 10.9 crores. But the new decision had raised the outlay by Rs 2.1 crores.

Global tenders would be invited for the supply of machinery and its erection. Messrs Monte Catini, the Italian firm, will execute the scheme also participating in its shares structure. The Madras Government will invest a substantial amount, most likely 51 per cent, but a final decision is yet to be made on this. As the system in vogue since some time, a substantial portion of the scheme would have to be in deferred payment. The sponsor of the scheme will visit Italy in connection with the scheme's implementation. Central Government's license has been obtained already. The installed capacity of the plant is 10,000 metric tons of aluminium ingots annually capable of doubling this output after sometime.

Ashok Leyland

Representing the South Indian enterprise in the field of automobile manufacture, the firm of Ashok Leyland has been making remarkable contribution to the development of the automobile industry in the country. Specialising in the production of the heavy type of Leyland vehicles with the collaboration of Messrs Leyland Motors Ltd of England, the company has been engaged in a two-pronged programme intended to increase the proportion of indigenous components as well as the scale of production. The company has achieved an increase of nearly 250 per cent in the output of vehicles between 1956 and 1959. As per the agreement with the Government of India, the company is also under

obligation to maintain steady progress in the development of indigenous manufacture.

The company completed the first phase of the building programme in 1958 and embarked on installation of additional plant and machinery during 1959. This was done to complete the machining of engine components and to provide for the early production of the rear axle and gear box. A further expansion programme to reach a target of at least 5,000 Comet Chassis per annum and to provide for a production of 1,000 heavy duty Leyland Engines of the 0.800 and 0.680 types, is being chalked out. Dealing with the implications of this scheme, Sir A. Ramaswami Mudaliar, Chairman of the Company observed in the course of his speech at the eleventh annual general meeting of the company that the programme involves arduous efforts in raising the capital funds needed and in training the technical personnel. The additional capital expenditure, it was observed, would be met through increase in the authorised capital of the company and by calling for full subscription of the partly paid up shares. Foreign exchange has been arranged to be secured by obtaining the sanction of the Centre to raise the share capital of the collaborating firm of Leyland Motors to 60 per cent. The company, as forecast by Sir Henry Spurrier, Managing Director of Leyland Motors, bids fair to become, in the not distant future, the largest producer of Leyland vehicles.

Sir Ramaswami Mudaliar has in his speech, also referred to the adverse impact of the recent levies on motor cars of a certain horse power, on tyres and on various other auxiliaries. This, as he has pointed out militates against the development of road transport.

New Cable Factory

The plans for a new cable factory to be located near Avadi have made substantial progress and the Omega Insulated Cable Co intends to set up a plant that will produce underground cables in addition to copper wires and VIR cables. The association of Delhi interests with this Madras venture calls for notice, as also the assurance of technical aid by Antony Gibbs and Sons. The paid-up capital of Rs 2 crores is to be raised by an approach to the market and it is known that the site has been secured and arrangements completed for erecting a new factory that will employ 1,600 persons. The recent techno-economic survey of Madras foresees a substantial increase in the output of electric equipment and it may be added that large new enterprises have been set up by Crompton and the English Electric Co in recent years. The advent of a new cable manufacturer will certainly interest local investors who have found that the record of cable companies including Aluminium Industries of Kundra is distinctly encouraging.

THE National Conference on Community Development in Srinagar has recommended that a special committee should be set up by the Government of India to examine the adequacy of the Programme Evaluation Organisation to meet the current needs of evaluation of this vital programme. There is a certain piquancy in the circumstance: it is as though an examinee were to suggest that the examiner must himself take a stiff paper first to prove his credentials. Part of the reason for this suggestion is pique, for the PEO has just published a not too flattering report. Not that there is not a certain amount of justification for the Community Development administration's complaints about the way evaluation is being done. I shall deal with this matter presently, but it does occur to me that a watchman to watch the watchman and an evaluator to evaluate the evaluator are a pointless waste of manhours. It shows a bureaucratic approach to a problem from which, it was hoped, that those who deal with community development would free themselves first and set an example to the rest of the country. It is no doubt true that as official evaluators of their work, the PEO has certainly to prove that its approach and modes of audit of achievement are as objective as possible. But defects in evaluation are best removed by mutual discussion between the CDA and the PEO and by coming to certain agreed norms and methods of judgment of achievement. In fact, if a committee is appointed, help may have to come from those who are responsible for community development. This would merely lead to a lot of washing of dirty linen and recrimination whereas a quiet session together may resolve most of the difficulties.

Indeed, the principal difficulties are unavowed and psychological with which committees can hardly grapple. There appears to be an impression among the CD workers that the PEO approaches its job in a spirit of condescension toward those who are actually engaged in the work. It is the old story of the Inspector General from the Capital coming down on the local yokels and finding them wanting. The field workers also feel that these chaps with their well-pressed suit and sola topi superciliously mouthing a lot of city jargon have no clue either to rural psychology or the actual physical problems involved in the work. To the instinctive antagonism that any auditor arouses in the 'audited' is added these further obstacles to a meeting of minds. The Programme Evaluator, on the other hand, feels and often says that figures are being cooked and window dressed

for his benefit; that often the villagers have no conception and much less any enthusiasm of the fundamental implications of the programme; that his necessary and essentially serious job is being resented for no other reason than the inadequacies it exposes.

Now these are familiar difficulties and the answer to them is not a committee to evaluate the methods used but a realisation on both sides that the really important thing is the community: therefore they should pull together instead of in different directions. It must be remembered that PEO was conceived in a spirit of a high-minded readiness to submit oneself to continuous and searching scrutiny of achievement. The Evaluators too must remember that theirs is a complex reckoning in which statistical measures of tangible results can be misleading. The profound changes in the mental attitudes of the people are difficult to detect and measure quantitatively. Above all, the most important thing in endeavours of this sort is 'morale'. Obviously there can be white-washing or smoke-screening, but if the people and the administration get the idea that they are being officially faulted, or worse, damned with faint praise, the will to succeed may get sapped. In any event en rapport between the CDA and PEO is absolutely necessary if the programme is to succeed.

The particular grievance of the CDA is that the PEO should have attempted to evaluate Community Development Programme which now extends to over three thousand blocks by a study of as few as eighteen of them. It also feels that even as 'sample survey', no attempt has been made to verify that the evaluation is representative of the whole programme, for according to the Srinagar Conference, the selection of blocks for investigation has been determined by its nearness to the headquarters of the evaluator. It is rather difficult to form any opinion about the justice of these complaints in the absence of the actual report. (I am relying for my purposes on press reports.) But it would seem that the general impression given by the language of the conclusions is that the evaluators do consider their study representative enough for them to be stridently generalised. "There are lights and shades

in the picture of the Community Development Programme in actual operation. The shades, however, predominate and one gathers the impression of an inadequately co-ordinated endeavour, governmental, rather than popular in character, and, sustained more by hope than by achievement." Again, "People's attitudes and reactions in most of CD blocks are not yet generally favourable to the success and growth of the CD programme. The majority of the villagers do not regard it as their own programme and seem to rely mainly on the government for effecting the development of rural areas. The basic philosophy and approach of CD programme, are therefore, inadequately subscribed to by the people."

These conclusions are perhaps stated a little too broadly to be supported by a study of only 18 blocks, but it would be the height of complacency for the CDA to think that they are for that reason completely unfounded. For they accord to some extent with the impressions formed by other observers. But the kind of basic revolution in attitudes that is being attempted by the community projects is not achieved easily and without sliding off into former habits of thinking and feeling. The trouble seems to have been that too much has been attempted, quantitatively speaking, in the early years of the community development idea.

It is true that so much needs to be done all over the country that it would be invidious to have made distinctions between areas. But it seems to me that certain comparatively developed rural areas, where the population has achieved a certain amount of 'sophistication' should have been chosen more or less as 'demonstration blocks'. The ground would already have been prepared and the kind of suggestion and help that the community development authority can give will find a ready soil. Even now, there are blocks which have done comparatively well and these would in all probability be those which have had a progressive agricultural community with some tradition of communal and cooperative endeavour. These are the places that should form the nursery of the idea. The package deal programme which is now being tried in select areas all over the country is a recognition of the soundness of this argument. Of course, in the original distinction between the Community Development Block and the National Extension Block some kind of distinction was kept in mind, but when the so called 'post-intensive blocks' came into being the distinction got blurred and there was only a dull grey of mediocrity of achievement.

There is yet another thought that strikes me as I read the dismal catalogue of activities started by the Community Project authorities which were subsequently abandoned. The reasons why these do not strike roots are various. One of them, the fairly common one, explains the heavy mortality among new clubs and social organisations that are started anywhere in the world. There are clubs with which all of us are familiar

which are started with trumpets and fanfares and within a few months are frequented only by the secretary who finds the club premises a home away from home. But there is another more important reason obliquely revealed by the rather highfalutin way in which the evaluation report phrases the purpose of such activities: "The central purpose of social education programme is to inculcate in the rural people community sense, corporate outlook and social consciousness. This is done through the organisation of social institu-

tions such as community centres, women's organisations, youth clubs etc." It seems that the villagers have not much use for the newspapers that are bought for the community centres and so on, nor for that matter for the sports equipment acquired at considerable cost. All this seems to me to set about the business the wrong way. I am not surprised that "women's organisation as conceived by CDA die a natural death in the villages, for there is no real use for them. The women's club has always been there in the village but it did not

meet at the community centre with tables and chairs and possibly addressed condescendingly by a city socialite doing social service'. The natural venue of the women's club was the river ghat and more cohesion and community sense were created than would be by self-conscious 'ladies clubs' in a hundred years. Take again the Radio. I have listened to the so-called rural programmes. The folksy bonhomie, self-conscious illiteracies of dialectal speech affected by these programmes and the tedious explaining in words of one syllable

some quite elementary point in agriculture which the listener probably knows ten times over is enough to make any self-respecting villager rush out in sheer exasperation. No wonder the Radio is out of order at the community centre. And all the time there are traditional institutions of getting together—the temple festival and the Jathra or the Harikatha—dying of inanition and neglect. The essence of the community development idea is that the innovations should harmonise with the existing pattern and by a process of slow transformation all that is best in modern science and technology will get absorbed in the tradition making what is a half dead community into a vital one. This can be done only by entering sympathetically at the thought processes of the rural folk and taking them along with you. Dependence on government is no particular rural vice and considering how many things a villager lacks, it is amazing he is not as shrill in his demands as his urban counter-part. In current jargon, community development is yet to reach its take off stage, both socially and economically. The 'lights and shades' therein are very much the same intensity as in the rest of our endeavour. And considering that it is in some respects most difficult of all our tasks, the temptation to yield to the comfort of despair should be strenuously resisted.

Well, they have started making portable typewriters, too, in India. It is fantastic the way, week by week, that you hear of new products being manufactured. I have, of course, a more immediate interest in the typewriter; not for me any worry, if the stenographer, for whatever the reason, takes French leave. For, I am quite fond of typing, and though mistakes do creep in, they are not so many that I feel disgusted with my lack of prowess. Indeed, for a writer—much more so for a reporter—the ability to type is an important asset, almost a prerequisite. I remember reading somewhere that the reporter usually favours the hunt and peck system; there is nothing like touch, and if the typewriter should hum beneath your fingers, you do find both satisfaction and inspiration. The news to hand is that Blackwoods India Limited, a JK organisation, has commenced production of the Jaykay typewriter, a portable model. The installed capacity is said to be 1,000 units a month. I presume that only English typewriters will be turned out. Does this mean that JK have considerable faith in the continuance of English in this country? Godrej were the first to produce, as they claimed, an "all-Indian" typewriter. JK's enterprise in arranging for the indigenous production of the Jaykay typewriter, with a preponderant proportion of the parts being found indigenously, deserves as much to be commended.

EAVESDROPPER.

The Controversy Over Textile Wages

IN a rejoinder to the AICC Research Department's criticism of the reactions of the cotton mill industry to the recommendations of the Textile Wage Board, Mr Ramanath A. Podar, Chairman of the Bombay Millowners' Association, has just stated that the wage increases recommended by the Board would not have been in their present form if its members (including the millowner representatives) had not wrongly persuaded themselves about the 'mandatory' character of the 15th Labour Conference's resolution according to which "the lowest wage should not go below a 'need-based' wage". Mr Podar is, of course, right in this contention because the 'recommendatory' character of the 15th Labour Conference's resolution has, in a way, been confirmed by the refusal of the Central Pay Commission to apply the 'need-based' wage formula of that resolution to Government employees "at the present level of our economic development." This has also been explicitly confirmed by the Finance Minister's statement, during the Parliamentary debate on the Pay Commission's Report, that "the Labour Conference's recommendations have not been accepted by the Government and cannot, therefore, be binding on it". If one of the parties to the tripartite resolution has thus disputed its 'mandatory' character, the employers who constitute another party cannot be logically accused of flouting the resolution. Still, it may be noted in this connection that while the Pay Commission has explicitly recognised the 'theoretical soundness' of the wage formula, it is by no means clear from Mr Podar's rejoinder if the Bombay Millowners' Association has also so recognised it.

The second contention in Mr Podar's rejoinder is that it would not be right to take 1949, a particularly bad year for the industry, to establish the point that productivity in the industry has increased since then. As production depends on such factors as the quantity and the type of cotton available, the volume of cloth turned out in different categories and the reed and pick used, Mr Podar seems to be right in his contention that productivity should not be assessed merely by relating the total output to the number of workers employed. In this connection, he has quoted the instance of 1955 when, with the employment of 7.52 lakh workers, the industry produced

5,094 million yards whereas in 1958, with a slightly bigger labour complement of 7.76 lakhs, the industry produced only 4,927 million yards. Mr Podar's logical conclusion is that it would not be right to assert, merely on the basis of these figures, that since 1955 the level of productivity has fallen.

Mr Podar, however, does not dispute the fact that there has been some increase in productivity. His own views thereon would need to be quoted in extenso:

"Comparison of productivity in different years is thus a complicated matter and no satisfactory basis has yet been established to make a reliable assessment in this regard. Nevertheless, after taking into account several variable factors, some efforts have been made to estimate the increase in productivity which is believed to be approximately 10 per cent. But this increase is partly due to labour's work effort and partly to the use of modern equipment. In these circumstances, there is no warrant for the assertion that whatever increase has taken place in productivity is entirely due to labour's exertions. In any case, the workers are already reaping the reward for the increased productivity as the level of wages in the corresponding period has risen by 18 per cent."

Incidentally, it has been estimated by Mr P. K. Bhaumik in a recent study published in the official organ ('Economic Review') of the AICC Research Department that the productivity of capital (that is, value added as percentage of productive capital), as of 1957, is as high as 46 per cent which ranks the cotton textile industry as the second highest from that point of view as against the 52 per cent in the case of the general and electrical engineering industry. According to the same study, labour productivity, measured as an overall figure of value added per worker employed, is as low as Rs 1,920 which ranks the cotton textile industry as the fifth, the first four in the order of ranking being iron and steel, general engineering and electrical engineering, woollen textiles and sugar. But a composite index which represents the product values of capital and labour productivities in inverse relation shows that the cotton textile industry (with its 88.3) occupies the fourth rank after the iron and steel industry (with its 249.5), the general and electrical engineering industry (143.3) and the woollen textile industry (93.2). Mr Bhaumik, however, has constructed this index only for 1957. It is a matter for examination whether a composite index of the kind, if constructed for different years, will provide a more reliable assessment of the trends in productivity in the cotton textile industry.

Adverting to Mr Podar's rejoinder, it may be further stated that the industry's contention is that its wage costs per unit of production

are abnormally high. If it is true, as Mr Podar has argued, that the industry's wage cost for every yard of cloth produced is the highest in the world, it may have partly accounted for the rather low volume of exports of Indian cotton textiles in recent years (69,000 metric tons in 1958 and 72,000 tons in 1959) as against 91,000 tons, 82,000 tons and 100,000 tons respectively in the years 1955, 1956 and 1957. Mr Podar, however, has not referred to this question of wage cost in the context of export promotion; a reference to it here does not also imply that the wage cost should be reduced by cutting down wages or by increasing workloads. What is worthy of note here is that unless productivity in the cotton textile industry is increased, its wage cost per unit of production is bound to be high.

In this connection, Mr Podar has quoted the figures of a "competent authority" in India, according to whom the wage cost per unit of production in India on different ranges of counts is higher by 30 to 55 per cent than in the Japanese textile industry. While this is the position, there seems to be no alternative to rapid modernisation of cotton mill machinery. Unless this is done, productivity in the industry cannot increase at a faster rate than the increase in wage costs resulting from the Textile Wage Board's recommendations.

Markets of the Sixties

What is believed to be a pioneering study has just been taken on hand jointly by two non-official research organisations in New Delhi—the Indian Institute of Public Opinion and the Marketing Research Corporation of India. This research enterprise, which will combine economic projects' techniques with an elaborate all-India interviewing of anything from 3,000 to 5,000 sampled households, is intended to study the growth of income over the next ten years and the development of consumption patterns by States, by towns and by villages. The inspiration for this enterprise has been provided by that excellent study—"The Markets of the Sixties"—produced by the Editors of "Fortune" and by particular studies of such institutions as the Stanford Research Institute in the United States. The work already being done in the Planning Commission's Perspective Planning Division headed by Mr Pitamber Pant, whose able studies of the detailed pattern of growth are being studied by leading authorities abroad, is also believed to have provided further inspiration for this pioneering study by the Indian Institute of Public Opinion and the Marketing Research Corporation.

The significance of this study lies in this that it will fill up some crucial gaps in Indian economics. These gaps pertain to the

structure of distribution of incomes in both urban and rural areas and to the manner in which the rupee is currently spent and is most likely to be spent as income grows under the Plans. The first step in this regard is to determine whether income is going before one knows what people are going to do with their increased incomes and what are likely to be marketed. A concerted effort is certainly called for to measure market growth in this manner in the sixties. The Managing Director of both research institutions in New Delhi is therefore inviting leading industrialists and firms to cooperate with this project with the object of bringing out the kind of detail which businessmen will need in order to obtain more information on the growth patterns of their particular markets, say, for cloth, for soap, for consumer durables such as radio receivers and sewing machines and for a hundred and one other household appliances. It is stated that it will take a year to complete the study.

GATEWAY GOSSIP

Growth of Small Industry

ADDRESSING a conference of small industrialists in Poona recently, Prime Minister Nehru said that the time has come for undertaking the development of small industries in right earnest, as some of the basic requirements such as steel and electricity are now available in adequate measure. Although the problems of the development of the small industries have been engaging the attention of the authorities ever since planned progress has been embarked upon, a major portion of the nation's resources has had necessarily to be applied toward the construction of major projects. The position at the threshold of the Third Plan has considerably changed as during the past ten years some of the major tasks have either been completed or fast nearing completion. It is expected that the outlay on small industries under the Third Plan will be sizably larger than in the Second Plan.

Indigenous steel production has considerably increased with the commissioning of the three public sector steel factories and the expansion of the units in the private sectors. The end of steel shortage is in sight and the small industries will be enabled to grow rapidly as there will be no need to depend on imports which require foreign exchange. Power is another essential prerequisite for small industry if it is to be efficient. During the first two Plan periods, production of electric

energy has taken big strides and rural electrification has been an important item in development programmes of the States.

The report of the Small Industries Board published toward the end of January this year has revealed that the growth of small industry has been rather slow so far. One of the main impediments noted by the report is the shortage of raw materials such as iron and steel, copper, zinc and basic and heavy chemicals. Another point that emerges from this report is that the growth of small industry is not uniform throughout the country. It would appear that most of the States have yet to show active interest in fostering the growth of small industries.

A number of expert bodies have studied the problems facing small industry in India from time to time. The Ford Foundation Team has attributed this sector's slow growth to a number of disabilities such as lack of initiative on the part of the private sector, too much reliance on Government, outdated modes of production and marketing, lack of credit facilities etc. The Japanese Team of Experts who submitted their report to Government a few months back has pointed to the need for taking effective steps for providing adequate finance to small industries. The team has noted that in the prevailing conditions in India, small industries require the special care of Government if they have to grow to their full stature.

The success of the small industries in the final analysis depends on their ability to stand on their own feet. Government guidance and assistance will, of course, have to be given, but these can go only upto a point. It is, therefore, essential that the plans for the development of small industries are drawn with a view to making them self-reliant. The Planning Commission have indicated how this sector has to be developed. They have pointed out that it should be "a progressive and efficient decentralised sector which is duly integrated, on the one hand with agriculture and, on the other, with large scale industry. It is therefore wrong to argue that small industry is sought to be developed at the expense of the large scale industry. Mr Nehru has emphatically stated that the large and medium industries and small industries will be able to develop side by side. By accepting the principle of common production programmes for large and small industries, Government have ensured the proper growth of both. Most of the main recommendations of the expert bodies are being implemented and there is no gain-saying the fact that the small entrepreneur will now find it quite easy to start new enterprises.

It is, however, to be noted that the main problem of the development of small industries will continue to be the provision of adequate finance. It is undeniable that there are now several Govern-

ment sponsored institutions routing State Aid loans to small entrepreneurs but it is generally felt that the assistance is still encumbered by involved procedures which tend to discourage the small entrepreneur.

Irrigation in Madras

It is the earnest hope of the Madras Government that sooner or later, the Andhra State would be willing to share the surplus waters of the Krishna and the Godavari rivers with Madras. In this, the Madras Ministry certainly reflects more than the combined will of population.

Once in a way, the Madras Government used to discuss the problem of irrigation in the presence of the region's members of Parliament, local legislators business and industrial representatives and the departmental specialists. Last week one such conference was held at the site of the progressing North Arcot District's Sathanur Project when the future needs of the State's water supply for irrigation for feeding the rapidly growing population of Madras were assessed and reexamined.

Even with the implementation of the Third Plan Projects, a Government Note circulated on the site to attending members reported, "it may not be possible to meet the enormous food demand and further expansion could come about only by importing water from outside, and ways and means for securing a reasonable share of the surplus waters of the neighbouring States are being examined." It mentioned also that the question of diversion of the Andhra State's Godavari and Krishna river waters was under consideration of the Southern Zonal Council. The Note also mentioned the Government of India's proposal to revive "the allotment of the surplus waters to various States." This proposal by the Central Government to allot "the surplus river waters" to needy neighbouring States is being mentioned for the first time by Madras, whereas no indication about this proposal has ever been given by any of India Government's spokesmen on the subject.

Conforming to the recent technoeconomic survey of this State's agriculture, the Government Note stated that, in this State over 15,000,000 acres are under "fairly stable cultivation." The acreage of cultivation has been growing steadily from 1953 to 1958. The total irrigated area in 1953-54 by canals, tanks and other sources was 53.92 lakh acres. In 1954-55 it was 53.61 lakh acres, in 1955-56

it was 53.06 lakh acres, in 1956-57 it was 54.27 lakh acres and in 1957-58 it rose to 55.71 lakh acres. Figures for the next year were not given.

With the present 5.6 million acres under irrigation, the Madras State finds it difficult to feed its 34,000,000 population.

The State has exploited all its thirteen river waters. The Cauvery, the most exploited river in the world, irrigates 15.12 lakhs acres, the Vaigai and Periyar 2.50 Palar 1.73, Thambraparani 1.16, Vellar 1.06, Ponnai 0.75, Kade, yar 0.60, Kortaliyar 0.26, Araniar 0.24, Cooum and Adyar 0.14 and Varahanadhi 0.07 lakh acres. The tanks also irrigate vast tracts and the total number of tanks in the State with irrigating water sources is 33,500. Along with these sources, the State has fostered and is anxious to foster irrigation through underground pumping and also through lifts.

Madras State rivers are estimated to carry about 16,000,000 acre feet of water of which 14.5 million acre feet have already been utilised. The remaining could not be utilised as this quantity is from occasional floods. The biggest State river, the Cauvery, gets its waters from 31,000 square miles, covering a deltaic area of over 3,000 miles, entirely in Tanjore district.

Regarding new reservoirs, the Government Note pointed out that existing irrigation areas would be the first charge and only surplus waters are to be compounded.

In this conference, the Parambikulam Aliyar Project taken up for execution during the Second Five Year Plan was also referred to. This is said to be a multi-purpose project. These are of course inter-State rivers flowing through Kerala and emptying themselves into the Arabian Sea. According to the agreement arrived at on the sharing of the waters with the Kerala State, the Note said that the waters of the Nira river fully, a maximum of 16,500 MCft from Parambikulam river and the surplus Sholiar water after meeting the Sholiar Power House requirements in Kerala will be diverted to the Madras State. An integrated development of these rivers would irrigate 240,000 acres in the famine areas of Coimbatore and Madras districts and also enable generation of 75,000 kw of power. This project is described 'mammoth' by the Note which adds that it requires the construction of seven reservoirs, 12½ miles of tunnels, two weirs, 30 miles of contour canal, mostly in hilly region, and 128 miles of lined canals. The estimated cost of this project is Rs 30.34 crores.

Preliminary work of laying roads at project area, and staff quarters in different dam sites has already started, the Government of Madras having spent Rs 134.69 lakhs so far.

The object of the lengthy note describing in minute details the

State's irrigation resources is to emphasise that the Madras State has almost reached the tether end and would have to look out elsewhere for water. Very little scope would remain after the next plan in so far as exploitation of river and other water sources of the State is concerned.

Better control through storage of upland flows of waters is also not left in the existing Cauvery, Vaigai and Tambraparani uplands. A reservoir across Marudayar drawing part of the flood flows from the Coleroon may help a bit of the water-hungry Coleroon margins. The minor irrigation schemes like formation of new tanks, anicut construction, supply channels, excavation to existing irrigation sources and other local small sources capable of yielding quick results are also given proper attention.

The Second Five Year Plan's targeted amount of Rs 308 lakhs for irrigation expenditure would have been exceeded by Rs 116 lakhs programmed to be spent during 1960-61. Up to the end of 1959-60, the Madras State Irrigation Department has completed 3,816 works and another 320 works would be completed during 1960-61.

There are twentytwo irrigation schemes for the Third Plan period. The total cost of these is estimated at Rs 2,721.72 lakhs. All these works would stabilise water supply over 86,000 acres of already irrigated lands which have uncertain water supplies. Over 37,000 acres of new lands would be brought under plough. The additional foodgrains output by these has not yet been computed.

For diversion of west flowing rivers a sum of Rs 500 lakhs has been allotted in the Third Plan. For a reservoir across Ayyar in the Kolli Hills of Salem district another sum of Rs 442 lakhs has been budgeted.

The Note circulated at this Conference also referred to the State's Power Grid and said that the total installed capacity of this grid would be more than doubled during the Second Five Year Plan. From production of 256,000 KW the capacity would have grown to 571,000 KW. Power generated from the stations would be transmitted to load centres by 5,500 miles of HT lines.

Regarding the outlay the Note stated that originally the provision was Rs 5,325 lakhs. But the first three years' expenditure during the Second Plan amounted to Rs 4,163 lakhs. The fourth year's grant was Rs 2,322 lakhs including Rs 934 lakhs of the Canadian aid to the Kundah scheme. Another amount of Rs 1,199 lakhs has been envisaged for the next year and thus the outlay would be of the order of Rs 7,695 lakhs compared to the original provision of Rs 5,325 lakhs. The Canadian aid of Rs 934 lakhs should have also to be noted in this connection.

Fuelling of Viscount aircraft
at Palam airport

“When fuelling modern types of turbine engined aircraft, absolute cleanliness of the fuel and freedom from contamination of any sort, including water, are of primary importance...Burmah-Shell have formulated a most efficient Quality Control procedure based on nearly 30 years' experience in fuelling aircraft in India.”

Extract from a Burmah-Shell publication

Rise in US Burlap Consumption Steadies Market

CONDITIONS in the jute markets have continued to be comparatively stable during the week ended Wednesday. During the early sessions, sentiment was easier with prices conceding further ground. Following the publication of the figures for US burlap consumption in May, there has been a moderate recovery all along the line. Heavy

goods too have benefited as there have been reports of fresh enquiries both from the Government of India and foreign interests.

The raw jute market has been generally easier and this is largely due to the belief that the scarcity period may not last long. Authoritative assessment of the state of the new jute crop has confirmed trade indications that, now that the drought has ended, the crop would be as big as that of the current season. The fact that imports from Pakistan in recent months have sizably increased may also have contributed to the slackening of the speculative fervour. The latest weekly crop report shows that sowings completed so far are only slightly lower than those of last year at the corresponding time. Moreover, the demand for the raw material, if anything, has diminished, what with the sealing of looms effective 6 June by a large number of mills and the indication that more mills

may be obliged to take a similar step in the near future.

It would appear that the slightly higher production of jute goods during May has been partly responsible for the rise in May-end stocks. Output during May totalled 91,700 tons as compared with 91,000 tons the previous month. It is evident that the slightly higher output in May is due to the unsealing of 1 per cent looms as the hours worked in May and April are the same at 208. The May total is made up of 37,700 tons of hessian 44,500 tons sacking and 9,500 tons of other varieties. These compare with April output of 37,000 tons hessian, 44,400 tons of sacking and 9,600 tons of other varieties. From the two sets of figures pertaining to stocks and production, it may be deduced that despatches of gunnies during the last month are slightly on a higher level than during April.

The report from the USA regarding burlap consumption dur-

ing last month is even more encouraging. The news that burlap consumption in US in May amounted to 73.7 million yards should have come as a pleasant surprise to the trade. That a rise in consumption would be recorded during last month was rather unexpected because buyers usually do not evince much interest during the summer months. The May figure compares with the 72.1 million yards in April and 70.5 million yards in the corresponding month of the previous year. The fact that May-end stocks in US are placed at 262.9 million yards comprising 145.1 million yards of spot and 117.8 million yards afloat as against the total April-end stocks of 262.0 million yards contains the cheering indication that the increased consumption in May has been taken care of by increased import as stocks have been maintained at more or less the previous month's level. It is gratifying to note that despite the wide fluctuations in the price in hessian that had prevailed in recent months, burlap has continued to be popular with US consumers. The decline in prices during the past few weeks should help hessian maintain its position in this important market. It is, however, to be remembered that frequent instability of the jute goods market will, sooner or later, result in foreign consumers steadily turning their attention in favour of substitutes.

The jute goods market remained weak with prices displaying a sagging tendency most of the time last week but toward close sentiment steadied up following news of higher burlap consumption in May coupled with fresh inquiries in heavy goods. The market opened last Thursday on a quiet note in the absence of fresh business. The only activity discernible was in near delivery heavygoods. Hessian 40"x10 oz June delivery closed at Rs 48.10 with B Twills at Rs 133.50. The next two sessions witnessed further deterioration and at close on Monday hessian 40"x10 oz June was marked at Rs 47.35 with B Twills at Rs 132.25. From Tuesday, however, there was a revival of interest consequent on encouraging US burlap consumption figures. Hessian 40"x10 oz June improved to Rs 47.90. Following reports of fresh interest from Burma and a Government of India tender for 6000 bales, heavy goods too recovered to close higher at Rs 133.60.

In the raw jute section the first half of the week witnessed a declining tendency in the absence of mill interest. It would appear that the talk of more mills sealing looms, improved imports from Pakistan and encouraging new crop reports have all combined to depress speculative interests. Assam Bottoms which was quoting at Rs 44.50 last Friday came back to a low of Rs 41 before slightly recovering to close at Rs 42.50 on Wednesday.

New Season Starts Well

THE first Export Sale of the New Season's teas has started well. Although the sale had a somewhat hesitant start, the later improvement in demand was good enough to produce a distinctly better tone in the market when compared with the first sale of last year. There was a good domestic demand, while enquiries for plain grades were maintained at a reasonable level.

An important factor contributing to the improvement is probably a sharp fall in North Indian output during May. Production has fallen to 20.8 million pounds from 34.2 million pounds in the same month last year. The total output in the current season, up to the end of May, is also substantially lower at 37.2 million pounds than the last year's corresponding figure of 54.1 million pounds. This short setback is attributed to the prolonged drought in the tea-producing areas of the North during the past few months. Latest indications are that the crop prospects have brightened.

Anxiety is, however, shown with regard to the disappointing trend of quality production. The recent drought has not only reduced the size of the second flush harvest, but also drastically affected its quality. It is, therefore, feared that, in order to make the shortfall in production, the producers will try to raise their output later in the year. If they do so and if Ceylon at the same time maintains her large excess in production, there may be a big surplus of Common teas.

Meanwhile, in the export sale held this week, offerings were 23,024 packages. Whole Leaf grades and Broken were sold readily; but the Orange Fannings were a weak feature. Other Fannings met with only a fair demand. There was a selective and limited enquiry for CTC Assams, while non-with Legg-cut teas were neglected. There was a limited demand for Darjeeling teas at generally easier rates. Clean Black Pekoe Rs 4.80 to Rs 4.90; Plain BP Rs 4.24 to Rs 4.44 and Plain Fannings Rs 4.20 to Rs 4.30. Owing to the lack of suitable teas, no other rates are given.

In the Colombo market, offerings were 5,683,407 pounds. The demand was strong for the restricted quantity on offer. The better liquoring Dimbula type Broken improved, while Mediums showed lesser rises. Black Leaf Broken were irregularly easier.

Tea shares were resumed in London this week after the Whit-sun break and 20,376 packages of North Indian and other miscellaneous growths were on offer. In view of the fact that a good part of the offerings were of end-of-the season character, a fairly satisfactory demand prevailed. Any good liquoring invoices were sold well; but other sorts met with an indifferent market.

Tea stocks in London, as on 4 June, were 139.43 million pounds as compared to 142.55 million pounds in the previous week. Total amount to be landed, on the same date, was 8.15 million pounds. Total afloat was 9.35 million pounds including from Calcutta 894,000 pounds; from Chittagong nil; from Cochin 1.84 million pounds; from Ceylon 4.20 million pounds and from other Ports 2.42 million pounds.

According to the figures released this week, output of tea in the major producing countries of the world, amounted to 1,376.1 million pounds in 1959 as against 1,366.5 million pounds in the previous year. Consumption has, however, declined sharply to 1,473.6 million pounds from the record high level of 1,683.5 million pounds in the previous year. This was very close to the absorption of 1,469.2 million pounds in 1955.

While tea consumption in non-producing countries fell from 1,180.4 million pounds in 1958 to 998.6 million pounds last year, that in the producing countries at 475 million pounds showed a fall of 28.1 million pounds. With the

exception of the USA and Irish Republic, tea consumption in all non-producing tea countries recorded a decline, with the UK off-take falling from 555.9 million pounds in 1958 to 498.4 million pounds last year.

Among the producing countries, India absorbed 238 million pounds; Pakistan 39 million pounds and Ceylon 21 million pounds in 1959 against 245 million; 44.8 million and 24.8 million pounds respectively in 1958. Consumption also declined in Indonesia from 19.8 million pounds to 18 million pounds and in East Africa from 10.4 million to 9.0 million pounds.

Trading Still Suspended

TRADING in the cotton futures market in Bombay continued to remain suspended during the last week also as the Jarilla August contract tended to ride above the ceiling level of Rs 790. Despite the fact that there was no reported official trading, the contract was quoted unofficially around Rs 807. Expectation of the fixation of a higher ceiling price for raw cotton during the pendency of this contract allured the traders to bid high.

Shipment of raw cotton from the country during the first nine months of the current season totalled about 1.57 lakh bales. Japan, as usual, turned out to be the largest single consumer of our cotton and accounted for nearly 1.3 lakh bales. The traders who were expecting the announcement of a higher ceiling rate from the Government of India have to wait for an indefinite period, like hornbills waiting for a shower to quench their thirst. However it is anticipated that the much awaited day will not be far off, for the issue is under the consideration of the authorities.

SPOT MARKET:

Active conditions were witnessed in the spot market at Sewri. The mill demand for long staple varieties of cotton staged a smart rally during the period under review. Good buying interest was reported among indigenous styles, particularly in Vijay, Digvijay Co 2 and L 147, Kalyan, Wagad, Laxmi and Jaydhar.

Among the imported varieties, renewed interest from local and other mills was reported in African styles, and higher grades of Sudan Cotton. American cotton met with moderate demand.

The consumption trend also favoured bulls. The consumption of indigenous growths by mills during the month of April was estimated to be at 3.40 lakh bales and of imported stuff at 60,481 bales.

FOREIGN COTTON:

Trading in Liverpool futures market was less active when compared to the previous week's transactions. But the lack of any weight of hedge selling to offset the occasional trade covering and American buying of the forward position, helped the price lines to hold firm. Trading in actual cotton was considerably restricted due to the intervention of the Whitsuntide holidays. The week's total sale accounted for 13,000 bales. Renewed eastern buying of the Egyptian medium and long stapled Karnak and Menoufi pushed up the price slightly high. East African price registered a slight decline. Registered export sales against 1960-61 programme have pierced the 6.5 million mark and are, as is quite evident, heading to total 7 million bales.

PIECE-GOODS:

Activity in the market for cotton piece goods showed a pronounced improvement during the week under review. Fair inquiries were reported to have been made by local and overseas dealers for a variety of goods but the aggregate offtake was not in any way encouraging.

In the home market, the activity hovered around forward deals. The shortage of funds had its repercussions in the purchasing front, where the offtake was rather small. Good enquiry was reported for sarees and dhoties in the medium section. Even shirtings and poplins were able to attract a premium of three to six pice a yard. Business done in superfine goods proved to be insignificant.

Singapore accounted for a moderate business for both dyed and bleached mercerised shoe canvas. Restricted booking was reported in bleached long cloth and mulls. Bangkok booked small quantities of long cloth, bleached mulls, poplins, and grey canvas. There were fairly a good deal of enquiries from Australia for flannels, drills, and grey canvas and calendered shirtings. The United Kingdom also evinced keen interest in the usual qualities, but the disparity in the prices prevented the buyers from making any appreciable off-take.

Business on a small scale was done with East Africa in grey drills, and Sassoon sheetings, while West Africa accounted for a moderate quantity of domestic and grey bafts. Good demand was reported for poplins, from Sudan. Eritrea and Ethiopia booked small quantities of bleached mulls and sheetings and grey calendered sheetings.

Easier Tendency in Sugar Prices

SUGAR prices have declined sharply during the past few weeks. In the Hapur market, prices have tended to go down further and are quoted at Rs 111.50 per bag in the open market against the controlled rate of Rs 108.50. A section of the industry fears that the offtake of the commodity in the country will shrink further in the coming months. It is felt that the market rates will drop to the level of controlled prices in the near future.

Although confronted with heavy stocks, the industry is not likely to urge the Government to decontrol the commodity at the present juncture. The industry is of the view that consideration of the issue should be deferred till a clear picture of the production trend for 1960-61 season is available. It is pointed out that it is essential to build a buffer stock of 5 lakh tons, apart from the normal carryover, before the commodity is decontrolled.

The question of decontrol was discussed at the meeting of the Indian Sugar Mills Association in Delhi toward the end of last week. The members were said to be of the view that the present was not the opportune time for removing the control on the commodity. Although the production was higher by about five lakh tons during the current season, it was pointed out that a further increase in the next season should depend on the supply of cane, which is an uncertain factor in the sugar economy of the country.

Gur

In the Hapur market, ready Gur prices have recorded modest gains on good demand, which was confined to superior dry quality. Loading was, however, very much restricted. Daily arrivals, out of stocks retained by cultivators, were about 250 maunds.

Khandsari

The Khandsari market ruled quiet due to slack demand. Stockists and producers were reported to be anxious sellers in view of the marked increase in crystal sugar production and expectations of early decontrol of sugar. Superior quality was quoted at Rs 36 to Rs 38 per maund.

Foodgrains

Conditions in the Hapur Foodgrains market remained generally

steady. While Wheat recovered early losses on poor daily arrivals, Gram and other coarse grains were steady. In the Pulses section, Peas and Arhar improved fractionally on better outside demand and stockists' support.

The latest reports from North India indicate that the wheat procurement drive in the Punjab may be suspended, as the target for the buffer stock has already been attained. This possibility has imparted an easy tone to wheat prices in the Punjab State. With the arrivals of the new crop rising to 10,000 maunds per day in several important mandies, the pressure of supplies has increased. In the Bikaner division of Rajasthan, too, the inflow has risen to 20,000 maunds per day. Meanwhile, the Punjab Government have removed the ban on the production of maida and sooji from indigenous wheat.

The world wheat surplus of recent years are expected to continue for at least a considerable time to come. This is one of the main conclusions of a review of the world wheat situation just published by the International Wheat Council. Although preliminary estimates of the total 1959 crop put it at 5.6 per cent lower than in 1958, at 212 million metric tons, output is still as much as 11 per cent above the 1954-58 average. However, a better balance emerged last year in so far as the distribution of the world's crop among the main growing areas was concerned.

The market for Gram continues to rule steady. The all-India final estimate of Maize for 1959-60 puts the area and production at 10,457,000 acres and 3,615,000 tons respectively as against the partially-revised estimate of 10,457,000 acres and 3,381,000 tons for 1958-59. This shows a substantial increase of 234,000 tons in production, though area remains at the same level. It should be added that the production during 1959-60 is the highest on record.

Coffee

The Coffee Board has put down the revised estimates for Coffee for the year 1959-60 at 47,465 tonnes, made up of 25,150 tonnes of Plantation; 6,800 tonnes of Arabica Cherry and 15,515 tonnes of Robusta varieties. The Board have decided to set apart a total of 20,200 tons of coffee (13,000 tonnes of Plantation; 2,800 tonnes of Arabica Cherry and 4,400 tonnes of Robusta) for export out of the 1959-60 crop. It is stated that this is the highest quantity set apart for export in any year so far.

The estimate for 1960-61 is placed at 53,000 tonnes, made up of 32,000 tonnes of Arabica and 21,000 tonnes of Robusta. If this figure is realised, it will be the highest production on record.

Rubber

The consumption of Rubber by the manufacturers in India has now reached the 5000-ton mark. At this rate, the total annual consumption will be over 60,000 tons. It is understood that the tyre-manufacturers have submitted a memorandum to the Government of India for an upward revision of tyre prices on the ground that their cost of production has risen and that there must be a compensatory increase in prices.

A point on which there is considerable anxiety among the manu-

facturers is the payment they are called upon to make to the Rubber Board's Pool the difference between the imported price of rubber and its internal price, if the imported price is lower than the Indian controlled price. This matter is likely to be considered when the Tariff Commission's report is before the Government of India.

Meanwhile, the Rubber Study Group believes that there will be a surplus of 185,000 tons. The trade generally expects a range up to 200,000 tons in natural rub-

18 June 1960

ber. The year 1957 created a record in natural rubber consumption at over 2,100,000 tons or 7 per cent more than the 1958 level of consumption. The world price of rubber has dropped from the recent high level of over Rs 240 per 100 pounds to about Rs 190.

*

Shellac

Conditions in the Calcutta Shellac market remained practically unchanged. Pure TN was quoted at Rs 72 per maund with sellers at Rs 75. Shipments, during the current month till the 7th, were 15,043 packages comprising 10,063 packages of shellac; 4,294 packages of seedlac; 335 packages of button-lac and 351 packages of other varieties.

According to the Indian Lac Cess Committee, total production of Baisakhi crop, for 1960, in the Indian Union is estimated at 8 lakh maunds. The normal annual yield, based on the average of final estimates for ten years preceding 1959, was 7.30 lakh maunds.

Bihar tops the list in production with an estimated output of 3.98 lakh maunds against 3.34 lakh maunds in the preceding year. The Baisakhi crop is reported to have suffered, this year, for want of rain during April and May last. The arrivals of the lac crop in the markets have dropped and the quality of the lac, coming in the markets, is reported to be poor.

*

Bangalore Silk

Bangalore Silk market continued to reflect the same trend of prices during the week ended 10 June, as that of previous week. There were no signs of change in the prices of flature silk which were quoted between Rs 40.00 to 42.00 per lb. Domestic basin silk was quoted between Rs 36.00 to 37.50 per lb as in previous week. Rates of different grades of charka silk ruled between Rs 24.50 to Rs 32.00 per lb.

There was no change in the prices of reeling cocoons during this week, when compared to the previous week rates of Rs 1.90 to Rs 2.56 per lb.

Prices of Mysore Seed cocoons, however gained appreciably to be quoted between Rs 10.50 to Rs 14.50 per lb when compared to the previous rates of Rs 7.50 to Rs 8.50 per 1000 seed cocoons. Rates of Foreign race seed cocoons reflected an opposite trend being quoted lower by about Rs 2.00 per 1000 seed cocoons.

*

Gold & Silver

Despite the absence of demand from the Calcutta, Madras and Delhi operators, conditions on the Bombay Bullion Exchange remained generally steady, thanks to local support.

The Silver section displayed a fairly steady tendency, being supported by disquieting reports about the political situation in Tibet.

Arrivals amounted to 20 bars as against an offtake of 10 bars. Unrefined metal receipts amounted to 19 bars. Ready rates moved between Rs 211.31 and Rs 211.87, to finish at Rs 211.81.

Prices in the Gold section staged a moderate recovery, being influenced by the buying from Akola, Madras and other centres. Arrivals totalled 4,000 tolas as against an offtake of 3,000 tolas. Ready rates moved between Rs 125 and Rs 125.50, to finish at Rs 125.47. Sovereign ruled very steady at Rs 85.50.

Oils & Oilseeds

Prices on the Bombay Oilseeds Exchange displayed generally a firmer tendency, thanks to better advices from Saurashtra and other centres and covering by dealers after the declaration of options in castor. Hopes were also entertained that the offers, sent by the local shippers, would be accepted.

In the Groundnut section, a majority of the operators felt that the sustained shortage of supplies would enable the market to withstand the seasonal decline in

prices. The fact, that the country would have to manage with the existing supplies till the new crop became available in November, instilled fresh confidence among the buyers. Groundnut Bold was quoted at Rs 45 and Groundnut Oil at Rs 23.37.

The behaviour of the Castorseed section reflected a measure of uncertainty. A section of the shippers claimed steady business in castor oil with the UK and the Continent at £119½ per ton for the commercial quality and £126½ for the BSS quality. Ready rate was

CHILDREN'S SPECIAL London - Bombay - Calcutta: Sunday, 24th July 1960
Calcutta - Bombay - London: Monday, 12th September 1960

AIR-INDIA

quoted at Rs 33.50 and Castor Oil, commercial quality, at Rs 17.75.

Trading in the Linseed section was largely of a speculative nature in the absence of important influences. Although some ship-pers claimed Canadian enquiries, export business was almost negligible. Ready Linseed was quoted at Rs 32.50 and Linseed Oil at Rs 16.19.

Trading in the Cottonseed section continued to remain dull.

The recent New Delhi announcement on the compounded levy on larger groundnut oil crushers has been adversely interpreted in the groundnut oil market in Madras which predicts no chances of the oil prices coming down. While groundnut oil quotations seemed to be either steady or slightly on the downgrade during middle of last week, there was a slow tendency for them to look up and they have firmed up at the higher levels on Wednesday.

Groundnut kernel prices, too, for both superior coromandel and summer peanuts, have been going up with little basis for the belief they would come down.

Arrivals of groundnut kernels in the local market has been on the average of 55/60 tons daily. The position in Southern market centres of groundnut inflow seems to be tight. On the whole, these centres are receiving only about 200/225 tons daily.

United Kingdom price of groundnut oil too has not gone down with

the present position for spot oil being £121/- per ton. Burma is keeping its figures crossed for the moment. Even Groundnut cake spot price at London has gone up to £34 to £34/5 per ton. Groundnut kernels per ton for spot is quoted at U.K. at £74/10.

The following are Wednesday's closing prices:

Groundnut oil per candy of 500 lbs. ex-Madras godown expeller Ready 3% F.F.A Rs 397.50; June: Rs 400; July: Rs 396; August: Rs 394.

Kernels per candy of 531 lbs. Coromandel 217/218; Peanut Rs 208/209.

Castor oil per candy of 500 lbs. Tirupattur Rs 305.

Coconut oil per tin Rs 40/-.

Alleppey: Ready Rs 670 (Ready); Rs 670 (June); Rs 676 (July) All are buyers' rate.

Cochin Pepper: Per Cwt Ready Rs 320.50; July Rs 317.50; August: Rs 325; Ungarbled Rs 1,750 per ton.

As it would have been from the rising prices of both groundnut oil and groundnut, it was the latter which firmed up very considerably during the past week. Small scale crushers indulged in hectic buying and naturally this led to increase in prices far in excess of oil parities. On the other hand, groundnut oil did not mark any suitable increase and one major contributing factor was the small prices quoted by major centres like Calcutta. Shippers did not interest themselves also. Madras

and Calcutta vanaspathi interests had to come in for fresh stocks of oil daily. It was anticipated that due to the commencement of the South-West monsoon bear selling from professionals may have to be faced and consequently lower prices of groundnuts. But stocks having dwindled locally, this anticipation did not materialise. Oil which was lying low for some weeks recorded a gain of about Rs 33/35 per ton. Groundnuts made greater gain of Rs 40 or so per ton.

Arrivals locally of groundnut kernels were in both varieties. North Arcot Chittoor districts had released winter crop. Buyers went in for superior varieties from Kalahasti in the beginning even at the price of Rs 220 per candy. But on the whole the price for both varieties per candy did not alter. If at all, they had a tendency to look up as the price-trend indicated herein from Thursday 9 June upto Tuesday 14 June would show:

	G. Kernels.	per 531 lb candy.
	Coromandel.	Peanut.
	Rs	Rs
June 9	215/216	202/208
June 10	216	208
June 11	216/217	208
June 13	217/218	207/208
June 14	217	208

As for groundnut oil, local interests went in for oil supplies sources rather than for groundnuts which are ruling very high both locally and in the interior. It was why even Calcutta was keen on day-to-day oil

offerings for their vanaspathi manufacture from the oil bought here.

It was futile to think of having the supplies of oil at a rate lower than Rs 392 during the latter part of last week. At a higher rate of Rs 394 per candy nearly 1,000 candies of oil were bought by local interest. This was on the compounded sales tax levy basis. Local bazar interests had to go in from the bigger suppliers also due to lack of stock from their usual sources.

Forward positions were not active. June vaida had only a small volume of business. Equally so was the position in August position. July had some early transactions. The price offered was around Rs 392/396 but steadied to Rs 395 latterly. August was taken up at Rs 392/393 though on last week's closing a small deal took place at Rs 394.

The following price line, was seen from Thursday 9 June to Tuesday 14 June:

	G. Nut oil Per 500 lbs candy.	Ready June	July	August
	Rs	Rs	Rs	Rs
June 9	392	395	392	390
June 10	393	396	393	391.50
June 11	396	400	396	394
June 13	395	399	395	392
June 14	396	400	394	393

In groundnut oil cake closing price, on 15 June was 27.75 per bag of 160 lbs. The cake market maintained a firm undertone.

Gingelly oil was quoted on 15 June at Rs 23.50 per maund. Local gingelly seed was priced at Rs 77/78 per bag.

	Per bag
Chanda/Warora quality	Rs 85/80
Rajasthan	Rs 80
Tuni/Rajahmundry	Rs 77/78

The following prices ruled in Southern centres for groundnut oil and kernels:

	(1)	(2)
Guntur/Bezawada	213	400
Vridhachalam	212	392
Nandyal	208	395
Villipuram	210	392
Cuddappah/Verragantla	205	390
Pollachi nominal	210	395
Tanjore	212	395
Tiruvannamalai	208	392
Salem	212	395

(1) Groundnut kernels per 531 lb candy.
(2) Groundnut oil per 500 lb candy.

Hides and Skins

Bakrid holidays interrupted regular inflow of tanned cow or buffalo hides into the market centres. In certain higher grade weights the prices were less than last week, but other quotations for lower grades remained steady and firm.

In c.i.f. section, business reported has been small. Light weights were available at reduced quotations from one to two pence per lb. Even this reduction did not evoke response. Fifths continued to be in demand at firm price level. Inferior fifths could be had lower by 1 to 2d per lb.

In buffalo tanned hides with small arrivals and less local demand prices declined by 2 to 3 nP per lb. In both tanned cow and buff calf no business was done.

Even tanned goatskins marketed

amounted to about 1,000 but market quality sheepskins marketed went to about 64,000 pieces. Bazar continued to have sizeable stocks in tanned goatskins at over 12,000 and 69,000 in tanned sheepskins.

Due to Russian enquiries for raw skin prices this week's quotation for

these per 100 was better than last week's prices shown in brackets: Bangalore raw goatskins Rs 440/525 (Rs 430/470); Whitewool sheep Rs 540/590 (Rs 520/590); Blackwool sheep last week's price Rs 400/450 and this week's price unquoted. Bezawada raw goatskins Rs 430/440

(Rs 415); He sheep Rs 530 (Rs 550); She sheep Rs 380 (Rs 400).

The following prices were quoted for tanned skins per lb: Tanned cow prime (5/5½ lb) Rs 3.12 to 3.37; (8/8½ lbs) Rs 2.37 to 2.44 (10/12 lb) Rs 2 to Rs 2.12; Tanned buffalo (12/13 lb) Rs 1.62 to Rs 1.75; Tanned

cow calf (21½ lb) Rs 4.62 to Rs 5.00; Tanned buff calf (1½/2 lb) Rs 3.37; Tanned goat prime (5½/6 lbs): Rs 9 to Rs 9.50; (8/9 lbs) Rs 9.50 to Rs 10; Tanned sheep ordinary: (6/7 lb): Rs 7.25 to Rs 7.50; Tanned sheep prime: (6/7 lb) Rs 10 to Rs 10.25 market quality—

Memoirs of an Elephant—I

"When I was very young... good-looking and adventurous..."

It was the 1880s—the place was Assam.

At that time these strange creatures, human beings, were all over the place here busily unearthing some black stone they called "coal". They started putting mile after mile of iron rails on the ground just to carry these ugly looking rocks. Left to me, I would have carried them on my back—that's self reliance! All the same, I used to help them build the railway.

One day, on my day off from work I took a stroll into the forest. I remember splashing through some dark sticky fluid during my walk and when I got back I got quite a reception!

It seems that I had discovered something they called OIL. From that minute on there was no peace, and for the past 70 years the pace has been hectic here at Digboi: they have drilled about 1,000 oil wells in this time.

I casually asked one of the AOC workers why they are so interested in oil. He told me that oil is vital to Indian Industries, and that Digboi is the first commercially producing oil field in the country.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office:
PALAI, KERALA STATE.

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

HERCULES INSURANCE COMPANY LIMITED

(INCORPORATED IN INDIA)

The Liability of Members is Limited.

NOTICE IS HEREBY GIVEN that the TWENTY FIFTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Friday, the 29th July, 1960 at 3 P.M. for the purpose of:

1. Considering the Accounts, Balance Sheet and the reports of the Board of Directors and Auditors for the year ended 31st December, 1959.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring.
4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. Sanctioning the payment of Rs. 31,400 to the Directors as their fees for services rendered during the year ended 31st December, 1959.
6. To consider and, if thought fit, to pass, with or without modification the following resolution which will be proposed as a Special Resolution, namely:

"That the Articles of Association of the Company be altered in manner following:—

- (a) Articles 17 to 21 shall be deleted and the following new Articles numbered 17, 18, 19 and 20 substituted therefor:

CERTIFICATES.

17. The certificates of title to shares and duplicates thereof when necessary shall be issued under the Seal of the Company which shall be affixed in the presence of (i) two Directors or persons acting on behalf of the Directors under a duly registered power of attorney; and (ii) the Secretary or some other person appointed by the Board for the purpose and two Directors and their attorneys and the Secretary or other person shall sign such share certificate; provided that, if the composition of the Board permits of it, at least one of the aforesaid two Directors shall be a person other than a Managing or whole-time Director.

MEMBERS RIGHT TO CERTIFICATE.

18. Every member shall be entitled free of charge to one certificate for all the shares of each class registered in his name or, to several certificates each for one or more of such shares, but in respect of each certificate for less than ten shares, the Directors shall be entitled to charge a fee of Re. 1/- or such less sum as they may determine. Unless the con-

ditions of issue of any shares otherwise provide, the Company shall, within three months after the date of either allotment and on surrender to the Company of its letter making the allotment or of its fractional coupons of requisite value (save in the case of issues against letters of acceptance or of renunciation or in cases of issue of bonus shares) as the case may be, complete and have ready for delivery the certificates of such shares. In the case of transfers of shares, the Company shall within one month of receipt of the application for registration of transfer of any of its shares issue the certificates of such shares or shall issue within fifteen days of such receipt, Pucca transfer receipts autographically signed by a responsible official of the Company and bearing an endorsement that the transfer has been duly approved by the Board or that no such approval is necessary. Every certificate of shares shall specify the name of the person in whose favour the certificate is issued, the shares to which it relates and the amount paid up thereon. Particulars of every certificate issued shall be entered in the Register of Members maintained in the form set out in the Act or, in a form as near thereto as circumstances admit, against the name of the person to whom it has been issued, indicating the date of issue. In respect of any share registered in the joint names of several members the Company shall not be bound to issue more than one certificate and delivery of a certificate to one of several members registered jointly in respect thereof shall be sufficient delivery to all such members.

AS TO ISSUE OF NEW CERTIFICATES.

19. If any certificate of any share or shares be surrendered to the Company for subdivision or consolidation or if any certificate be defaced, torn or old, decrepit, worn-out or where the cages in the reverse for recording transfers have been duly utilised, then, upon surrender thereof to the Company, the Board may order the same to be cancelled and may issue a new certificate in lieu thereof; and if any certificate be lost or destroyed, then, upon proof thereof to the satisfaction of the Board, and on such indemnity as the Board thinks fit being given, a new certificate in lieu thereof shall be given to the party entitled to the shares to which such lost or destroyed

certificate shall relate. In the case of loss the new certificate shall be given within six weeks from the receipt of notification of the loss. Where a certificate has been issued in place of a certificate which has been defaced, etc., lost or destroyed it shall state on the face of it and against the stub or counterfoil that it is issued in lieu of a share certificate or is a duplicate issued for the one so defaced, etc., lost or destroyed, as the case may be, and, in the case of a certificate issued in place of one which has been lost or destroyed, the word "duplicate" shall be stamped or punched in bold letters across the face thereof. For every certificate issued under this Article, except "or a certificate issued in place of an old, decrepit or worn-out certificate or in place of a certificate the cages in the reverse whereof for recording transfers have been duly utilised, there shall be paid to the Company the sum of Rs. 2/- or such smaller sum together with such out of pocket expenses incurred by the Company in investigating evidence as the Board may determine.

PARTICULARS OF NEW CERTIFICATE TO BE ENTERED IN THE REGISTER.

20. Where a new share certificate has been issued in pursuance of the last preceding Article, particulars of every such certificate shall also be entered in a Register of Renewed and Duplicate Certificates indicating against the name of the person to whom the certificate is issued the number and date of issue of the certificate in lieu of which the new certificate is issued and the necessary changes indicated in the Register of Members by suitable cross-references in the "Remarks" Column. All entries made in the Register of Members or in Register of Renewed and Duplicate Certificates shall be authenticated by the Secretary or such other person as may be appointed by the Board for purposes of sealing and signing the share certificate under Article 17 hereof.

- (b) In Article 28, the words "or confer a right to participate in profits" shall be added at the end of the Article.

- (c) In Article 50, the words "his debts, liabilities and engagements solely or jointly with any other person to or with the Company whether the period for the payment, fulfilment or discharge thereof" shall be deleted and the words "moneys called or payable at a fixed time in respect of such shares whether

the time for payment thereof" substituted therefor.

- (d) In Article 51, the words "fulfilment or discharge of such debts, liabilities or engagements" shall be deleted and the words "of the moneys called or payable at a fixed time in respect of such shares" substituted therefor.

- (e) In Article 52, the words "satisfaction of the debts, liabilities or engagements of such member" shall be deleted and the words "payment of such part of the amount in respect of which the lien exists and is presently payable" substituted therefor.

- (f) Article 77 shall be deleted.

- (g) In Article 152, after the words "whilst carrying interest" the words "rank for dividend or" shall be inserted.

- (h) Article 158 shall be deleted and the following new Article substituted therefor:

"158. The Directors may deduct from any dividend payable to any member sums of money, if any, presently payable by him to the Company on account of calls made on shares in the Company held by him".

- (i) In Article 167, the word "three" shall be deleted and the word "six" substituted therefor.

The Share Transfer Books will be closed from the 22nd July to the 29th July, 1960, both days inclusive.

By order of the Board

E. K. SRINIVASAN

Managing Director.
Calcutta, 7th June, 1960

Note—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear in the Company's Register as on the 29th July, 1960.

The explanatory statement as required under Sec. 173 of the Companies Act, 1956, has been sent to the shareholders.

As the above notice appearing in our last issue contained an error, the corrected version is published.

Manager.

Subdued Trend

Investment Gossip:

AFTER the late revival last week, stock markets have relapsed into a mood of caution. The more speculative counters have suffered a setback although some selected industrials have continued to remain steady.

The prevailing situation would appear to be still one of a tussle between the bulls and bears, but both have been told at least by one important stock exchange that neither will be allowed to have their own way. The Bombay Stock Exchange authorities have made it difficult for speculators of either kind to dominate proceedings for any length of time by tightening of margins and what amounts to fixing of "floor" and "ceiling" to the scrip in the cleared list. Tightening of margins has also been imposed by other stock exchanges except Calcutta. It is evident that the Calcutta Stock Exchange authorities are confident that after the measures taken by the other exchanges, a similar action by them would not be necessary.

It would appear that Authorities concerned with the healthy working of the stock markets in the country are, for the time being, content to let the matter be tackled by the various stock exchanges. This is not to say that one need not expect any further official measures to curb speculation. As a matter of fact it is not improbable that the steep rise in the prices of shares of some of the new issues even before allotments have been made, would be engaging the attention of Authorities even now.

The fact that speculators are unable to maintain their high levels for long during the past two or three weeks clearly shows that the widely held opinion that share values have become unrealistic is being taken serious notice of by operators. The warning is being repeatedly given that share prices have touched unjustifiably high levels even on the basis of the most optimistic dividend or growth prospects. Investors are naturally reluctant to extend their commitments in the face of such warnings. With investors out, trading on the stock markets will lose their significance and it is idle to expect the authorities to allow such a state of affairs to continue for long.

New Issue Notes

Subject to the Government sanction, Shree Niwas Cotton Mills Limited has decided to raise the

Ordinary capital from Rs 80 lakhs to Rs 96 lakhs. The fresh capital will be issued at par to the existing shareholders in the ratio of one share for every five shares held.

Polychem Limited has proposed, subject to the Government sanction, to raise additional capital of Rs 40 lakhs by issuing, at par, 80,000 Ordinary shares of Rs 50 each, to the existing shareholders in the ratio of one for one. This issue will double the present equity capital to Rs 1.20 crores. The additional capital is needed for the company's expansion programme.

Adarsh Chemicals and Fertilizers Limited has started posting allotment letters in respect of its recent issue. The company has applied to the Bombay Stock Exchange for the listing of its shares, both ordinary and preference.

The managing agents of Selected Satgram Collieries Limited have offered for sale, to the public, 3,000 equity shares of Rs 100 each at Rs 112 per share cum-dividend. The company has recommended a gross dividend of 16 per cent for 1959. The application list will be kept open from 21 June to 24 June, 1960.

Parrys Confectionery Limited has obtained the Government sanction to capitalise the Share Premium Account for the issue of 2.50 lakh equity shares of Re 1 each as bonus in the ratio of one bonus share for every three shares held.

We understand that Messrs Raymon Engineering Works Limited, manufacturers of railway wagons, rolling stocks and components, etc, have obtained the necessary sanction from the Government of India for issuing to the public, at par, 3,99,400 equity shares of Rs 10 each and 20,000-6½ per cent tax-free Redeemable Cumulative Preference shares of Rs 100 each. Payments will have to be made on the following basis—Rs 5 per share on application and Rs 5 on allotment in the case of equity-shares; and Rs 50 per share on application and Rs 50 on allotment in the case of Preference shares. We also understand that further details with regard to the issue will be announced before the end of the month.

Investment Notes:

Messrs Blackwoods India Limited, member of the J. K. Organisation, have completed production of Jaykay Portable Typewriters, containing only 9 per cent foreign components, within a short period of less than six months from the date of installation of the plant without any foreign collaboration—technical, financial or otherwise. The anticipated capacity of the plant is 12,000 machines per year. The necessary plant and machinery were acquired from Germany in the middle of 1959 and the erection and installation were completed within a very short period. Messrs Blackwoods India Ltd. were given an industrial licence by the Government of India in 1958 for the manufacture of portable typewriters in the country. There has been an acute shortage of portable typewriters in India for the last three years, and the Jaykay portable Typewriter—India's first portable—would be a boon to the general public. It is learnt that Blackwoods have further lines of development under consideration and are negotiating for foreign collaboration for the manufacture of various other office appliances.

Investment Briefs:

Cauvery Spinning has recommended a taxable dividend of 13 per cent for the year ended 31 March, 1960 against a tax-free dividend of 9 per cent for the previous year.

India United Mills Limited has passed over the dividend for 1959.

Mahindra and Mahindra have announced that the dividend has been revised from 87½ nP to 97½ nP per share for the year 31 October, 1959.

New India Assurance has declared a dividend of Rs 4.50 and a bonus of Rs 1.20 per share for 1959, subject to tax. These work out to a dividend of Rs 3.99 against Rs 4.00 per share paid for 1958.

Andhra Cement has recommended a taxable dividend of 10 per cent for 1959 against a tax-free dividend of 7½ per cent for 1958.

Balance-Sheet Briefs:

The net profit of the Metal Box Company (India) Limited has risen from Rs 97.59 lakhs to Rs 108.29 lakhs for the year ended 31 March, 1960. The final dividend of Rs 1.60 per share, subject to tax, is payable on a capital increased by the new shares. The interim dividend of 90 nP per share was paid on the old capital. A dividend of Rs 1.75, free of tax, was paid for 1958-59.

Shree Gopal Paper Mills Limited has reported a higher profit of Rs 89.33 lakhs for 1959 as against Rs 78.41 lakhs for the previous year. A taxable dividend of Rs 17.67 per share is recommended against a tax-free dividend of 12½ per cent.

The working of the Travancore Cements Limited for 1959 has resulted in a loss of Rs 88,787 against a profit of Rs 5.83 lakhs. A taxable dividend of 6 per cent is proposed. The net dividend works out to 4.2 per cent against 6 per cent in the preceding year.

The Coimbatore Pioneer Mills Limited has reported an increase in the net profit from Rs 17.36 lakhs to Rs 22.89 lakhs for 1959. A taxable dividend of 25 per cent is recommended against a tax-free dividend of 20 per cent.

The Bihari Mills Limited, Ahmedabad, has shown a profit of Rs 1.98 lakhs against Rs 1.21 lakhs. The directors have recommended a dividend of Rs 16 and a bonus of Rs 9, making a total of Rs 25 per share for 1959. The net dividend works out to Rs 17.5 against Rs 21 previously.

The net profit of the Nenmeny Rubber & Produce Company, Limited is slightly lower at Rs 1.87 lakhs against Rs 2.00 lakhs. A taxable dividend of 15 per cent is proposed against a tax-free dividend of 15 per cent.

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY LIMITED.

NOTICE is hereby given that the Board of Directors has sanctioned payment of dividend on the 5% Cumulative Preference Shares in the Company for the half year ending 30th June, 1960.

The Preference Share Register and Transfer Books of the Company will be closed from the 23rd June to the 29th June, 1960 both days inclusive. Payment will be made on or after 1st July, 1960 to those Preference Shareholders whose names appear on the Company's Register on the 29th June, 1960 or to their mandatories.

By order of the Board,

ROHTAS INDUSTRIES LIMITED

Dalmianagar (Bihar)

NOTICE is hereby given that an Extraordinary General Meeting of the shareholders of Rohtas Industries Ltd. will be held at the Registered Office of the Company at Dalmianagar (Bihar) on Thursday, the 14th July, 1960 at 11 A.M. for the purpose of considering and, if thought fit, for passing, with or without modification, the following resolution which will be proposed as an Ordinary Resolution:—

(To be proposed as an Ordinary Resolution):

"RESOLVED that the appointment of Messrs. Ganga Corporation (Private) Ltd., Allahabad as sole selling agents for the sale of Asbestos Cement products for Punjab, Himachal Pradesh, Rajasthan, Uttar Pradesh, Madhya Pradesh, Bihar and Delhi on the terms and conditions enumerated in the agreement, submitted to this meeting and approved by the Board of Directors of the Company, be and is hereby approved and confirmed."

By Order of the Board
For ROHTAS INDUSTRIES LIMITED,

For SAHU JAIN LIMITED,
A. K. JAIN
Managing Director,
Managing Agents.

Calcutta,
15th June, 1960.

N.B. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the company. Proxy in order to be effective must be received by the company not less than 48 hours before the meeting.

Explanatory Note:

Under Section 294 of the companies Act, 1956, appointment of sole selling agents is required to be approved by the company in General Meeting within a period of six months of the date of appointment. Messrs. Ganga Corporation (Private) Ltd. had been working as sole selling agents of the Company in respect of Asbestos Cement products, previously also. Their last agreement, however, expired on 29th February, 1960. A fresh agreement for their appointment in the said capacity and effective from 1st March, 1960 has been approved by the Board of Directors on the terms and conditions enumerated in the said agreement which is available for inspection of the shareholders on all working days during business hours at the Registered Office of the company and the same will be placed before the shareholders at the above meeting.

The Directors of the Company or the Managing Agents have no interest in the said agreement.

Conflicting Trends

Watch-Dog Writes:

STOCK markets have again witnessed a quiet session this week and the trend of prices is somewhat conflicting. While the speculative issues have registered a sizable fall in prices due to sustained bull liquidation on lower Bombay advices, a few other scrips have looked up on growth prospects. The undertone, however, remains fully steady.

Sentiment on the Calcutta Stock Exchange remained generally subdued. The only relieving feature of trading was the sustained support lent to a few selected miscellaneous issues.

Although the Bombay Stock Exchange gave a cheerful performance in early dealings, values displayed a slightly reactionary tendency toward the close under pressure of liquidation.

Prices on the Madras Stock Exchange showed a mixed trend.

Calcutta

Calcutta, Friday Evening.

THE impressive recovery in prices, that was noticed on the local Stock Exchange toward the previous week-end, proved to be shortlived. The market witnessed again a sharp recession in values, especially of the speculative issues, due to sustained liquidation, although a few firm features developed in the Miscellaneous section, thanks to encouraging corporate results.

In general, all the happenings in Bombay had their reflection in the local market where the equities moved in tune with their counterparts in Bombay. With the adoption of new measures to regulate prices of the speculative issues in Bombay, some of the local operators were wondering whether the Calcutta Stock Exchange authorities would follow suit. Others had, however, the feeling that there would not be any necessity for the authorities to impose any restriction, especially when the present sluggish trend in the speculative issue continued. Their feeling was based on the fact that the pace of movements of values would be ultimately decided by the prospects of dividends and growths of the companies concerned. This might probably be the reason that the undertone of the market remained fully steady.

The Giltedged section continued to remain dull with business reduced to small dimensions. Enquiry

from institutional investors was conspicuous by its absence, while that from other sources remained meagre in the extreme. Only a few short-dated loans met with some business. 3 per cent 1986 Conversion after opening lower at Rs 72.90, improved at one time to Rs 73.30, to recede again toward the close to Rs 73.05 on profit-taking.

Bank shares were featureless with price movements confined to a narrow range. Punjab National changed hands at Rs 19.12 to Rs 19.25 and United Commercial at Rs 68 to Rs 68.50.

Jute shares remained depressed. Operators seemed to be worried about the prospects of a further cut in mill production in view of the shortage of raw jute. Howrah were marked down at one time to as low as Rs 22 from Rs 22.25; National to Rs 26.50 from Rs 27 and new Central to Rs 29.44 from Rs 30.44, to finish better at Rs 22.50; Rs 26.75 and Rs 30.75 respectively. Kinnison were offered at Rs 161 against Rs 169; Kelvin at Rs 151 against Rs 160 and Kamahatty at Rs 145 against Rs 161. Champdany were, however, nearly maintained at Rs 114.50.

Coal shares displayed, on the whole, a steady trend on the general feeling that all the restrictions on the industry might be removed soon in order to enable the private collieries to augment their production for meeting the rising demand for the commodity. Amalgamated had buyers upto Rs 24 from Rs 23.81; Bengal upto Rs 328 from Rs 325; Central India upto Rs 12.44 from Rs 12.19 and Western Bengal up to Rs 8.44 from Rs 8.31. Equitable were a shade quieter at Rs 29.62 against Rs 29.81. Burrakur, after opening lower, firmed upto Rs 19.75, to close at Rs 19.56.

Although dealings were few, Tea shares were fully steady on reports of the first export sale of the new season having a fairly good start and the prices of plain grades being maintained at a reasonable level. There was, however, a general disposition to book profits at bulges in view of the obscure outlook for Common grades. Bismuth changed hands at Rs 22.25 to Rs 22.44; Grob at Rs 14.19 to Rs 14.31; Hantapara at Rs 148 to Rs 151; and Jayshree at Rs 18.67 to Rs 19.31.

Quieter advices from the commodity market had a depressing effect on the Sugar section where only a few selected issues came in for good support. Prominent amongst these were Ramnugger Cane having buyers at Rs 26 to Rs 26.37; SKG at Rs 14.37 to Rs 14.59; Cawnpore at Rs 15.44 to Rs 15.50 and Raza/Buland at Rs 14.06 to Rs 14.12. Dyer Meakin were, however, on offer at Rs 20.9 against Rs 20.50.

The Textile section gave a better performance, aided mostly by reports of higher consumption in cotton piecegoods recently. The

best levels, however, were not maintained due to profit-taking. Jayshree m.c. with business at Rs 15.44 to Rs 15.75 (Rs 15.62); Cawnpore at Rs 6.76 to Rs 6.87 (Rs 6.87); Elgins at Rs 19.50 to Rs 19.75 (Rs 19.65) and Kesoram at Rs 31.50 to Rs 32.31 (Rs 31.87). Figures shown within brackets were the week's closing rates.

In the week's dealings, the worst affected were the speculative issues under the lead of Indian Irons which, in turn, were subjected to settlement adjustments till Wednesday. Against the previous week-end closing of Rs 25.04, Indian Irons opened lower at Rs 24.81 and receded further to Rs 24.44 at which level some short-covering induced a smart recovery to Rs 24.85, to finish the week at Rs 24.78. In sympathy, TEXMACO were marked down at one time to Rs 26.65 from a high of Rs 27.20; GK Williams to Rs 46.69 from Rs 49.75 and Jessop to Rs 23.56 from Rs 24.12, to close finally better at Rs 26.75; Rs 47.25 and Rs 23.75 respectively. Burn were keenly sought after upto Rs 538 from Rs 519 on prospects of a right issue, while Indian Galvanizing were supported upto Rs 25.12 from Rs 24.69 on reports of good working. Britannia were slightly lower at Rs 13.37 against Rs 13.56, while Braithwaite improved to Rs 32.75 from the recent low of Rs 31.56.

Of all the sections, the Miscellaneous was fairly active and provided a few bright spots on various considerations. Prospects of increase in shipbuilding imparted strength to India Steamship which were in demand upto Rs 11.50 from a low of Rs 11.22. Indian Aluminium were wanted up to Rs 29.56 from Rs 27.50 due to excellent growth prospects. Following

THE MODERN MILLS LIMITED.

NOTICE OF 19TH DIVIDEND.

NOTICE IS HEREBY GIVEN THAT a Dividend of Rs. 5/- (less tax) per share of Rs. 50/- for the year ended 31st October, 1959, sanctioned by the Shareholders at the Twenty-sixth Annual General Meeting held on the 7th June, 1960, is made payable at the State Bank of India, Bombay, on and after Monday, the 20th June 1960 to those Shareholders whose names stood on the Register of Members on the 28th May 1960. Madras

Industrial shares proved strong with continued buying fervour in the Stock Exchange here on Tuesday. The notable scrip that advanced on good enquiries was Spencers which spurted to Rs 5.25 from the week's beginning quotation of Rs 4.75. Textiles were as usual firm. Bank shares were also steady on the expectation of better half-yearly results by the month end. Teas were subdued and rubber commanded continued support.

Government Securities: No change was observable in Government Securities which continued at the marked prices. 4 per cent 1963 Madras Loan had sellers at Rs 100.35. The 4½ per cent 1970 Madras Loan was offered at Rs 101.80. The 4 per cent 1964 Madras Loan had been bought at Rs 100.45, while 4 per cent 1968 Andhra State were selling at Rs 100.05. Mysore Government 4½ per cent 1970 Loan was continuing at the listed price of Rs 102.00 as also the 4 per cent 1971 Kerala State Government loan at Rs 99.70.

Banks: The Canara Banking Rs 10 paid share receded to Rs 17.75 while trading was made in the fully paid Indian Bank shares at the improved price of Rs 174.00. This was a couple of rupees higher than the last week's ruling price. Indian Overseas Bank shares too improved on speculative interest to Rs 169.00. The week's rate for this opened a rupee less yesterday. Indo-Commercial Bank "A" Rs 100 paid shares receded to Rs 39.00. Pandyan and the Punjab National continued at Rs 39.25 and Rs 19.15 respectively.

Electric: There has been no improvement in these public utilities. All of them continued at the listed quotations. Interest was next to nothing in this counter. Berhampur was still below par at Rs 6.50. Karaikkal too was like that at Rs 9.75. Negapatam was another to continue at Rs 9.60. Tirunelveli-Tuticorin was at Rs 12.37 and West Coast at Rs 12.35.

Sugar and Breweries: In the expectation of a declaration of rights by the Deccan Sugars, following E.I.D., its shares began to appreciate. It was at Rs 14.10 Monday from Rs 13.95 last. Friday and today's buying rate was Rs 14.70. E.I.D. was however, in the background. Last weekend it closed strong at Rs 55.25. Monday's quotation was lower at Rs 54.90 and today it was quoted another fifteen nP lower at Rs 54.75. K.C.P. went up, however, by another

rupee to Rs 24.00. Kirlampudi remained at Rs 74.00, stronger today than last week's Rs 72.00. India Sugars maintained this week its improved tone at Rs 13.10 with 12½% t.c.d. Others remained the same as last week's prices.

Plantings: Tea shares had good support. Cochin Malabar which was strong last weekend at Rs 8.20, improved at the week's opening to Rs 8.25. It went up again today on buying support to Rs 8.27. Coffee Lands had enquiries at the better rate of Rs 24.25 and Consolidated Coffee shares were quoted 20 nP higher at Rs 24.70. Coonoor Tea was bought at Rs 27.50, higher by 30 nP than last weekend's closing. Attikan was enquired after at Rs 2.98. Coorg remained at Rs 5.60. Anandam was bought unchanged at Rs 14.75. Kailas was in demand at Rs 5.35. Karikode was steady without change below par at Rs 9.45. Kil Kotagiri lost value at Rs 5.26 this week, but picked up to be quoted at Rs 5.34. Kurchimala also softened to Rs 8.60. Mamallay improved to Rs 42.00. Ouchterlony valley was fancied at lower rate of Rs 4.95. Peernade improved to Rs 22.30 adding 10 nP to its value this week. Periakaramal was unchanged at Rs 3.73. Pullan-gode has buyers at Rs 1.94 though it was available only at a higher rate of Rs 1.98 with 5 per cent taxable dividend. Stanes, Amalgamated was the same at Rs 15.25. Swintons were sold at Rs 2.90, following better enquiries. Nonsuch too had buyers at Rs 26.50. Talayar was lower fractionally at Rs 1.82. Twyford's improvement was due to persistent enquiries at Rs 13.15. United Nilgiri was ten nP lower at Rs 22.00. Waterfall lost only 5 nP at Rs 4.00 today.

Textiles: Firm conditions prevailed in textiles this week. Adoni had been quoted and bought at Rs 8.50. Anglo-French was firm at Rs 105.00. Bangalore Woollen were needed at Rs 195.00, though the value was lower by Rs 2 than last week-end quotation. No change was noticed in the Coimbatore group of mills. Dhanalakshmi was available at Rs 223.00. Buckingham was unchanged at Rs 205.00. Lakshmi was the same at Rs 157.00. Madura was also bought at Rs 32.80 ten nP lower than yesterday's rate. Kannapiran with exdividend was available at Rs 7.65. Mettur Industries had some buyers at Rs 432.00. From last week-end quotation of Rs 35.90, Travancore Rayon went upto Rs 37.10 on Monday and was today 10 nP lower at which shares changed hands. South India Viscose advanced impressively from Rs 147.50 last weekend to Rs 151.00 this week. Venkatesa Mills also registered improvement at Rs 146.00.

Miscellaneous: Aluminium Industries which was hovering between smaller margins in the rate of Rs 23.20, today was quoted at Rs 22.20. Ashok Leyland did not alter at Rs 8.75. Enfield was quoted at Rs 13.15. F.A.C.T.s was offered at Rs 10.80, which was lower than last week's rate of Rs 10.90. India Cement went upto Rs 6.65. Kiloskar Electricals remained unaltered at Rs 13.20. Mettur Chemicals was the same at Rs 12.25. Mysore Lamp was priced at Rs 24.50 and Mysore Machinery

Manufacture was on par at Rs 10.00. Parry's Confectionery was the best fancied shares today at Rs 5.75. Spencer was attractive at Rs 20.37 while Standard Motors remained firm at Rs 16.70. Textool maintained its position at Rs 171.50. Tube Investments jumped upto Rs 312.00 from Rs 305.00 on good buying. Western India Plywoods was unaltered at Rs 303.00.

NEED OF CO-OPERATIVE EFFORT FOR COMMUNITY'S UPLIFT

The importance of voluntary and co-operative effort in the upliftment of the community was emphasised by the Defence Minister, Shri V. K. Krishna Menon, speaking yesterday afternoon on the occasion of the foundation-stone laying of the Kasturba Nagar Colony to be built under the low-income group scheme in the Jullundur Cantonment.

On arrival at the Cantonment Board Office, the Minister was introduced to the Board members and later accorded a rousing and affectionate welcome by the residents of the cantonment as he drove in a jeep loaded with garlands through the streets decorated with festoons, bunting and arches to the site of the colony.

In a welcome address, Shri T. R. Jain, Vice-President of the Cantonment Board, said that the scheme, primarily intended for Board employees and defence personnel, was designed ultimately to provide living accommodation to 200 low-income group families in two and three tenements. In the first phase, construction of 40 three-roomed and 68 two-roomed tenements was being undertaken to be completed during the current financial year. This was the second project of its kind, the first having been inaugurated by the Defence Minister at Meerut last month.

The achievement of independence, the Minister said, meant to the common man improved living conditions, including better amenities, more food, schools for his children's education, proper accommodation and adequate hospital facilities. It was necessary that accommodation should be provided for servicemen in the cantonments under hygienic conditions so that they could remain fighting fit and keep up high morale. He hoped that after the establishment of a new cantonment at Chandigarh, it would be possible to release some accommodation in the existing cantonments for civilians.

The Minister was the guest of honour at a garden party given by members of the Cantonment Board.

Earlier, the Defence Minister, accompanied by Lt-Gen. Daulat Singh, Corps Commander, paid a visit to a cavalry regiment in the Kapurthala area, where he was received by Lieut.-Col. J. B. Rodgers, Commandant of the regiment.

Addressing the officers, jawans of the regiment, the Defence Minister assured them that Government always had the interests of servicemen at heart. He said that Government decision on the recommendations of the Raghuramiah Committee on the improvement of their service conditions would be announced shortly.

While it was the responsibility of the armed forces to defend the country against any external aggression, the Defence Minister said, India, as a peace-loving nation, was also committed to avoid a war, but if it became inevitable, the country would be prepared to face it. He said that Government were doing their best to open up areas near the country's northern borders, hitherto inaccessible, through a road construction programme which was now in the process of being implemented.

Referring to Kashmir, Shri Krishna Menon expressed gratification at the rapid strides made by the State in the economic field.

The Minister went round the unit lines, and when, before taking leave, he met the jawans, he was greeted with shouts of "Long live Krishna Menon".

The Minister, who arrived at the Adampur airfield by an IAF Viscount shortly after noon today, returned to Delhi at 8 p.m. He was seen off at the airport by Lt-Gen. Daulat Singh, Shri R. S. Randhawa, Commissioner of Jullundur Division and Brig. Udharn Singh, Station Commander.

RESEARCH ON SUITABLE COLOUR FOR VANASPATI

The Government of India have appointed a committee to intensify and co-ordinate the researches in selected institutions for finding a suitable visible colour for vanaspati.

The Committee will survey the available colours and the extent to which they satisfy the specifications prescribed for the purpose; initiate systematic research in respect of such of these colours as appear to be promising particularly with reference to their non-toxicity and stability to simple methods of removal; consider suggestions received in this connection from members of the Committee and refer them for further examination to laboratories and maintain a continuous watch over the progress of these researches.

Members of the Committee include Dr K. Venkataraman, Director, National Chemical Laboratory, Poona; Dr B. Mukerjee, Director, Central Drug Research Institute, Lucknow; Dr R. S. Thakur, Deputy Chief Scientific Officer (Army), Research and Development Organisation, New Delhi; Dr V. Subrahmanyam, Director, Central Food Technological Research Institute, Mysore; and Dr N. N. Dastur, Principal, Dairy Science College, Karnal. The Chief Director, Sugar and Vanaspati, of the Government of India will be the convenor.

Dunbar Mills Pay Dividend After 1956

Balance-Sheet Reviews:

THE Dunbar Mills Limited has produced excellent working results for 1959, thanks to the export incentive given by the Government. Sales are higher at Rs 1.94 crores against Rs 1.84 crores, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 19.82 lakhs against only Rs 2.81 lakhs in the previous year. Apart from raising Development Rebate Reserve to Rs 2.00 lakhs from Rs 82,700, a sum of Rs 10.06 lakhs is provided for Depreciation and Rs 1.00 lakh for General Reserve. The directors have recommended a taxable dividend of Rs 10 per share on the equity capital including the 9,500 Right shares issued by the company. The previous dividend paid was Rs 6 per share for 1956.

With a view to modernise the mills, most of the Spinning Ring Frames were converted into High Draft System and the conversion of the remaining Ring Frames is expected to be completed during this year.

The balance-sheet, as at 31 December 1959, shows a paid-up capital of Rs 28.50 lakhs against which General Reserve is shown at Rs 26.38 lakhs and Development Rebate Reserve at Rs 2.83 lakhs. The gross block at Rs 1.50 crores is depreciated by Rs 80.62 lakhs to show a net block value of Rs 68.67 lakhs.

Bowreach Cotton Passes Ordinary Dividend

The Bowreach Cotton Mills Company Limited has also reported encouraging results for the same year. While sales have risen to Rs 2.17 crores from Rs 1.78 crores, the net profit amounts to Rs 17.63 lakhs against a loss of Rs 1.53 lakhs incurred in the previous year. A sum of Rs 9.66 lakhs is provided for Depreciation; Rs 1.00 lakh for General Reserve and Rs 2.65 lakhs for Development Rebate Reserve for 1958 and 1959. The directors have recommended only the arrears of dividend on the 8 per cent Cumulative Preference shares for the period from 1 January 1952 to 31 December 1958.

Under the modernisation scheme of the mill, the New Blow Room Plant has been started and installation of the machineries is under progress. To meet the consumers' changing taste, a Mercerising unit has also been ordered.

The paid-up capital is Rs 36 lakhs divided into 24,000 Ordinary; 6,000-7 per cent Non-Cumulative Preference shares and 6,000-8 per cent Cumulative Preference shares, all of Rs 100 each. General Reserve amounts to Rs 2.50 lakhs and Development Rebate Reserve to Rs 2.65 lakhs. Total gross block amounts to Rs 1.26 crores; total depreciation to Rs 56.02 lakhs and the net block to Rs 70.21 lakhs.

Lower Profits for Caledonian Jute

The present managing agents of the company have tendered their resignation from the close of business on 29 February 1960. From 1 March, 1960, the company has been managed by the Board of Directors.

The accounts for the year 30 November 1959 reveal a net profit of Rs 8.75 lakhs as against Rs 8.41 lakhs for the previous year with sales shown at Rs 95.06 lakhs against Rs 1.07 crores. A sum of Rs 2.64 lakhs (Rs 2.87 lakhs) is set apart for Depreciation; Rs 2.25 lakhs (Rs 27,000) for Taxation; Rs 407 (Rs 1,889) for Development Rebate Reserve; Rs 75,000 (Rs 1,50 lakhs) for General Reserve and Rs 30,000 (nil) for Contingency Reserve. The directors have recommended final dividend of Rs 5, making a total of Rs 12 per share, subject to tax, as against a tax-free dividend of Rs 15 in the previous year.

Against a paid-up capital of Rs 23 lakhs, reserves and surplus are shown at Rs 27.52 lakhs. The gross block stands at Rs 84.60 lakhs; total depreciation at Rs 49.12 lakhs and the net block at Rs 35.48 lakhs.

Andrew Yule & Co. Ltd. ceased to act as Managing Agents with effect from 1st March, 1960.

Mim Tea Produces A Record Crop

The Mim Tea Company Limited has produced a record crop of 2,493 maunds for 1959 against 1,978 maunds in the previous year. The average price realised is, however, lower at Rs 3.46 against Rs 3.93 per pound. Estimates for the current year have been framed for a crop of 2,500 maunds.

The net profit for the year, before providing for depreciation and taxation, is lower at Rs 39,511 against Rs 46,058 in the previous year. The depreciation amount is raised to Rs 16,471 from

Rs 12,492, while Development Rebate Reserve is reduced to Rs 372 from Rs 761. The directors have recommended a taxable dividend of Rs 10 per share as against nil for the previous two years.

Andrew Yule & Company, Limited will cease to act as Managing Agents of the company with effect from 15th August, 1960. The proposal to appoint them as Secretaries and Treasurers for a period of five years from date has been approved by the Central Government.

The paid-up capital is Rs 1.59 lakhs, divided into 1,590 shares of Rs 100 each. General Reserve amounts to Rs 3.35 lakhs; Investment Realisation Surplus to Rs 15,239 and Development Rebate Reserve to Rs 1,133. The gross block at Rs 5.41 lakhs is depreciated by Rs 2.26 lakhs, to show a net block of Rs 3.16 lakhs.

Murphulani Tea Earns Less

In view of the decline in the net profit from Rs 1.69 lakhs to Rs 1.39 lakhs, the Murphulani (Assam) Tea Company, Limited has recommended only a taxable dividend on the Ordinary shares at Rs 2.00 per share and on the Preferred Ordinary shares at Rs 2.50 per share. The previous dividends were the same but free of tax. A sum of Rs 38,540 (Rs 22,560) is set apart for Depreciation; Rs 85,000 (Rs 1.38 lakhs) for Taxation; and Rs 55,000 (Rs 85,000) for General Reserve and Rs 492 (Rs 371) for Development Rebate Reserve.

The crop harvested is lower at 4,982 maunds against 5,171 maunds and also the average price realised at Rs 2.52 per pound against Rs 2.75 per pound.

Andrew Yule & Company, Limited will cease to act as Managing Agents of the company with effect from 15 August, 1960 and the proposal to appoint them as Secretaries and Treasurers for a period of five years from that date has been approved by the Central Government.

The paid-up capital is Rs 3.75 lakhs divided into 17,500 Ordinary shares and 20,000 Preferred Ordinary shares, both of Rs 10 each. Against this, General Reserve amounts to Rs 8.38 lakhs.

The gross block amounts to Rs 16.59 lakhs; total depreciation to Rs 6.60 lakhs and the net block to Rs 9.99 lakhs.

WORLD OF FINANCE

Wanted: A Realistic New Loan Programme

IT is nearing the end of June, and, by this time last year, the Central Government new loan had been announced. The new loan last year took the form of a 10 year 3½ per cent issue and a 20 year 4 per cent issue. New loan realisations totalled Rs 184 crores, and, of this, cash subscriptions accounted for Rs 94 crores. As pointed out last week, investments in gilt-edged during the 1959 slack season by Scheduled Banks totalled Rs 174 crores. However, at new loan time itself, there was evidence to show that subscriptions emanating from sources other than Reserve Bank added up, in cash, to around Rs 60 crores. The State Bank presumably put in Rs 25 crores, other Scheduled Banks subscribed between Rs 15 crores and Rs 20 crores, and the balance came from other institutional investors and the public at large. If the 1959 slack season period is taken as a whole, the State Bank is seen to have absorbed a total of Rs 104 crores of gilt-edged. These are the gilt-edged facts of last year, and all that remains to add is that, in October 1959, a second tranche of the Central Government loan was made, in the form of Rs 20 crores worth of 3½ per cent 1974 and Rs 25 crores of 3½ per cent 1969. Against this background, what are the prospects of the Central Government loan this year?

The Budget for 1960-61 assumes market borrowings to the tune of Rs 250 crores. Provision for discharge of debt is shown at Rs 109 crores, of which Rs 60 crores relates to the 4 per cent 1960-70 and Rs 44 crores in respect of 2½ per cent 1960. The earliest date of maturity of the former is 15 September 1960, and the latter matures on 15 July. Both these dates, for reasons we shall be setting out, assume an important significance. Thus, if regard is had for maturities, the net new cash sought is in the regions of Rs 140 crores, which is almost exactly the same as last year, if cash subscriptions during 1959-60 may be said to have comprised: (a) cash subscriptions at the time of the new loan and (b) the second tranche loans amounting to Rs 45 crores. On such a reckoning, and especially since the Budget figure of Rs 250 crores from market loans presumably includes subscriptions to the Prize Bonds, it is indeed a modest borrowing effort that is contemplated for the current year. Unfortunately, modest though the target is as compared to the successful borrowing operations of the last 3 years, there is reason to believe that, unless certain necessary steps are taken in framing the new loan, the current year's borrowing effort may turn out to be a relative failure.

We had shown last week that there was a distinct difference in the position of Scheduled Banks on the eve of the 1960 slack season as compared with the corresponding position last year. There are additional reasons why the capacity of the banking system to support Government borrowings will be further restricted this year. In the first place, we have to revise the figure we had given last week of Rs 125 crores as our anticipation of the magnitude of the rise in the Deposits

of the banking system which was likely to take place during the currency of the 1960 slack season. This is because a significant contributor to growth in banking Deposits will be conspicuously absent. We refer to the fact that Public Law 480 counterpart funds will not, in the current year, accrue with the State Bank, as they had done until recently. Thus, it is possible that the rise in bank Deposits during the 1960 slack season does not exceed Rs 75 crores. Of this, it may be noted, only half represents fresh resources with the banking system. For the moment, we may assume that credit contraction will be around Rs 125 crores. Of this total of Rs 200 crores of new or released resources, fully half will be required:

- a) to reduce indebtedness to the State Bank and the Reserve Bank;
- (b) to make the additional statutory deposit with the Reserve Bank against new Deposits; and
- c) to add slightly to cash in hand.

Thus, it is patent that, as against Rs 174 crores invested in gilt-edged during the 1959 slack season, the very maximum that banks will have on hand this year will be Rs 100 crores. In the light of the anticipation that, with industrial production advancing stridently, every busy season of the future will witness a new record of expansion in Advances, banks will desire to invest perhaps a quarter of such resources in the most liquid possible investment, Treasury bills. We are now left with Rs 75 crores as the maximum which the banks will have on hand for investment in marketable securities.

Our view is that, in the present uncertainty about interest rates generally and the bank rate in particular, banks will be greatly reluctant to put their money into even medium term securities, since there would be a risk of capital depreciation. So, if banks are to be enticed into lending support to the Government borrowing programme, a new loan will have to be so planned as to include an issue which will cater to the needs and preferences of the banking system. It is not, we may urge at this juncture, that we are not confident of the Government being in a position to raise Rs 140 crores from their new loan programme this year—but it is going to be more important than ever before that there should be two tranches of the new loan. The first tranche may be timed so as to have the subscription lists opened, say, one week after the 2½ per cent 1960 matures. The second tranche should be timed with regard for the maturing of the 4 per cent 1960-70 on 15 September 1960. We shall not presume to indicate, at this stage, the form and substance that the second tranche of the new loan should take. There will be time enough to plan that, and the experience of the slack season till then may have considerably changed the picture of prospects. We believe it is necessary here to indicate what the form and substance of the first tranche of the new loan should be.

In the first place, we suggest that the subscription lists should open around 22 July 1960.

In the second place, two loans should be offered. A loan of Rs 60 crores should be directed at the banking system, and a second loan of Rs 65 crores should be meant for other institutional investors.

In the third place, the loan meant for the banks should be a 5 year issue. Except as a result of pressure, it is doubtful if banks will be minded of their own accord to put

their money, in the present context of money market conditions, into securities with a longer maturity. As it is, as at the end of 1959, securities with the Scheduled Banks maturing within 5 years had declined to 35.1 per cent of total investments from 40.8 per cent as at the end of 1958. There need be no apprehension that such a shortdated issue will add to maturing obligations during the Third Plan. After all, what it should be important for the Government is to ensure that their funding operations are continuously carried through successfully. The funding operation in respect of the two loans maturing in this year may itself prove difficult, unless the bold step is taken of including in the new loan programme an issue meant specifically for the banking system. After all, the last time that a shortdated issue was offered at new loan time was in 1956, when the 3½ per cent 1962 made its appearance. It is true, there was a re-issue of that loan in 1957, but the fact remains that banks have been compelled, by the mere fact of unavailability of shortdated issues, to go in for longer maturities. A sound banking position requires that the proportion of securities maturing within 5 years does not fall, and for this reason alone if for none other, a 5 year loan to be included in the 1960-61 borrowing programme would not only be desirable but imperative.

In the fourth place, we wish to suggest that an interest coupon of 3½ per cent for a 5 year loan would be far too high, just as a running yield of 3½ per cent would be unattractively low as far as the banks are concerned. Why, therefore, not introduce, as it were, the Metric system into Governmental borrowings? That is to say, the interest coupon to be offered on the 1965 loan should be, in our opinion, 3.4 per cent. The gradations of a quarter and a half per cent that we have had in the foot pound system have been far too steep to take into account the delicate situation in regard to yields available at any given time. In the past, this has been sought to be made good largely by jockeying the issue price, and a larger discount usually goes hand in hand with a lower interest coupon; and this also partly helped to enlarge the size of the redemption yield. We see no reason why, at the time of issue, there should be any difference between the running yield and the redemption yield. That is to say, every new loan could be issued at par, and fractional adjustments could be made in the interest coupon, thanks to the adoption by India of the Metric system.

In the fifth place, the second loan in the first tranche of the borrowing programme should be a re-affirmation of Governmental borrowing from strength. Since the second loan would be mainly addressed to other institutional investors, there is no reason why it should be a medium term, though, at the same time, we see even less reason for such new loan to be an extra-long term. It would be enough if the second loan were to mature in 15 years: and it would be sufficient show of Governmental borrowing from strength if the interest coupon were kept down to 3.75 per cent if the loan is to be issued at a discount, and 3.8 per cent if it is to be issued at par. We would favour a 3.8 per cent 1975 issued at par; but, since there is an already existing 3½ per cent 1974, Government would presumably, if this suggestion were to find favour, prefer a re-issue of that loan.

Thus, we believe that the first tranche of the new loan should comprise, briefly, Rs 60 crores in the form of 3.4 per cent 1965 and Rs 65 crores in the form of 3.8 per cent 1975.

Charging Giant Open Hearth Furnace at the Burnpur works of The Indian Iron & Steel Company Limited

The great ladle tilts, disgorging its cargo of molten metal into the open hearth. Here is the last stage in the ordeal by fire which transforms iron into the master metal—Steel.

STEEL, the starting point of all industries.

Slack Season Fall in Note Circulation

The returns of the Reserve Bank for 17 June 1960 show a slack season contraction in currency. Active note circulation has declined by Rs 21.53 crores to Rs 1859.19 crores. Rupee coin has returned from circulation in the considerable amount of Rs 1.60 crores. With both Rupee Securities and Foreign Securities unchanged, the Reserve Bank's cash in the till has improved by Rs 23.09 crores to Rs 33.43 crores.

In the Banking Department, it is to be noted that the balances of the Central Government are, with a rise of Rs 21.34 crores during the week, unusually high at Rs 92.43 crores. There is no indication of deficit financing, just as, in the week ended 10 June, when Central Government balances rose by Rs 4 crores odd to a still unusually high figure of Rs 71 crores, there had been, instead of deficit financing, the cancellation of ad hoc Treasury Bills for Rs 8 crores. What is the cause of buoyancy in Central Governmental revenues in this regard?

A possible hint in this respect is the indication, in the explanatory memorandum for 1960-61, that funds to be re-loaned or granted to India from US counterpart funds that have already accrued under Public Law 480 will total Rs 80 crores during the year. It is barely possible, though by no means certain, that the buoyant receipts on the part of the Central Government may be related to such moneys as have been granted or re-loaned to India from the counterpart funds.

Another possibility is that the buoyancy of Central Government revenues during June is owing to the quarterly instalment due in respect of advance payment of taxes under Section 18 A of the Income-Tax Act. Our own view is that a combination of these two factors possibly accounts for the Central Government balances having risen so considerably in the course of the last three weeks.

However, it is surprising that the Central Government should permit their balances to be Rs 42 crores higher than the traditional minimum of Rs 50 crores. The only possible reason why the Central Government may have desisted from "reverse ad hocs" might be, because, in the next week, they might have a considerable liability in respect of payments to the State Governments.

Indeed, the low level of State Government balances, at Rs 9.23 crores, suggests the prospect of large scale receipts from the Centre. During the week under review, the ways and means borrowings of State Governments from the Reserve Bank have further risen by Rs 4.29 crores to Rs 50.00 crores.

Reserve Balances of member banks are lower by Rs 4.20 crores at Rs 107.51 crores, but this is due wholly to the State Bank. On

the other hand, some small improvement in the position of Scheduled Banks is insinuated by the decline of Rs 4.47 crores to Rs 121.99 crores in the Other Loans and Advances of the Reserve Bank.

Finally, Balances Held Abroad have again declined by Rs 1.79 crores to Rs 13.76 crores.

The return of the State Bank for 17 June 1960 is largely featureless. Indebtedness to the Reserve Bank is lower by Rs 6.50 crores and now stands at a nominal figure. Deposits have improved by Rs 0.50 crores to Rs 632.11 crores. There is an unseasonal rise of Rs 1.12 crores to Rs 218.71 crores in the total of Advances. With gilt-edged holdings unchanged and a drop of over Rs 4 crores in Other Assets, cash in hand and with Reserve Bank has been drawn down by Rs 4.78 crores at Rs 30.90 crores.

According to the return of Scheduled Banks for 10 June 1960, the one interesting change is the further rise of Rs 0.81 crores to Rs 1133.46 crores in Advances. This has been accompanied by a drop of Rs 3.35 crores to Rs 1985.07 crores in gross Deposits. It may be that the decline in Deposits and increase in Advances both reflect the impact of beginning of the month disbursements. The gilt-edged portfolio shows a drop of Rs 14½ crores, wholly on account of the State Bank. Similarly, the rise of Rs 4.11 crores to Rs 51.22 crores in borrowings from the Reserve Bank has been due to the State Bank figuring in that week as a borrower of Rs 6.50 crores from the central banking institution. In the result, cash balances have improved from Rs 185.00 crores to Rs 196.79 crores—again, this rise is ascribable to the State Bank.

Treasury Bills

Tenders for Rs 2,00,00,000, of 91 days' Government of India Treasury Bills were opened on Tuesday, the 21 June 1960. Total amount offered was Rs 2,02,00,000. Tenders at Rs 99.315 and above were accepted in full and these at 99.310 were allotted approximately 99%. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.745 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 27 June 1960. Successful tenders should make payment on Friday, the 1 July 1960. Other conditions are as usual.

During the week ended the 17 June 1960 Government of India Treasury Bills for Rs 1,75,38,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 22 to 25 June 1960 at Rs 99.326%. Sales can be stopped at any time without notice if Government think it necessary.

India Prizes Creditworthiness

ONCE again, India has proved that, foreign exchange difficulties withal creditworthiness is an attribute to be prized. It may be recalled that, in 1957, India purchased currencies from the International Monetary Fund in a total amount of \$200 million, the equivalent of half of India's quota with the IMF. That transaction consisted of what, in IMF parlance, was the drawing of two tranches. The first tranche was equivalent to one quarter of the quota or \$100 million. This tranche and the gold tranche (which, in India's case, amounted to \$27.5 million and represented India's subscription to the IMF in gold and convertible currencies) are, by IMF practice, normally made available to member countries without much difficulty. In addition to the first tranche and the gold tranche, which we drew upon immediately, India also sought and obtained a standby arrangement in respect of \$72.5 million. During 1957, this was also drawn upon. The IMF expects that members who avail of its resources will complete the repurchase transaction in a period of 3 to 5 years. While there is some degree of flexibility in the completion of re-purchase of the first tranche and the gold tranche, the IMF also expects that the second or any subsequent tranches be re-purchased in 3 years' time. As such, India was committed to honour this transaction and repurchase rupees from the IMF in an amount of \$72.5 million by the end of June 1960. In this context, in his Budget speech, Mr Morarji Desai, the Finance Minister, said:

"....I would like to mention that we had drawn in 1957 from the International Monetary Fund, a credit of \$200 million, including a stand-by-credit of \$72.5 million. Under the Fund rules, a stand-by-credit is repayable within three years. We have, therefore, repaid \$50 million during this month (February 1960) and propose to pay the balance of \$22.5 million in June 1960."

There were, it may be recalled, two separate transactions during February 1960 whereunder repurchase of rupees for \$50 million was completed. In the last week's issue, we had pointed out, in World of Finance, that the decline of Rs 5 crores in the foreign exchange reserves of the Reserve Bank seemed to be linked with further repurchase of currency from the IMF. In the light of the Finance Minister's Budget speech, we may now take it that, in fact, the changes under Other Deposits and in foreign balances in the Reserve Bank returns for 10 June 1960 related to the completion of the repurchase of rupees in regard to the second or standby tranche of \$72.5 million.

There remains, therefore, 127.5 million dollars worth of rupees with the IMF which we are under commitment to repurchase at the latest by 1962. For our part, we had hoped that it might become possible for India to effect repurchase of currencies in respect of the first and gold tranches as well even before the Third Plan started. However, recent trends in the balance of trade negate any such hope. On the other hand, by virtue of the repurchase just completed, as also because India's quota with the IMF has increased by

\$200 million, we can still reasonably expect to be able to draw upon the IMF in case of urgent need. On the basis of the old quota, it may be noted, the standby arrangement could be for an amount that was the difference between half the quota and the amount represented by the first tranche and the gold tranche in the aggregate. In the light of the new quota, inclusive of the standby arrangement, India could hope to purchase a total of \$300 million of currencies. The increased subscription in the form of gold would apparently become immediately available, amounting to \$50 million. So, any prospective standby arrangement would be for \$122.5 million. In other words, there is a nest-egg of \$172.5 million available with the International Monetary Fund for overcoming balance of payment difficulties during the Third Plan.

We would nevertheless urge that, before any standby arrangements are concluded, it would be proper if we made an effort at the repurchase of currencies relating at least to the gold tranche under the old quota of \$27.5 million.

India's scrupulous habit of honouring commitments was proved, it may be recalled, by the return of silver obtained on Lend-Lease from America during the Second World War; and, in the latest instance, there has been similar desire to keep our creditworthiness above reproach. However, the foreign exchange difficulties that are likely to be encountered during the Third Plan will be such as will entail either request for deferment of maturing liabilities or foreign aid that is not limited by being for "specific" projects. It should be, we suggest, part of Third Plan foreign exchange planning to start negotiating as soon as possible for deferment of payment of instalments due to overseas creditors.

Thus, planning in the realm of foreign exchange will, in respect of the Third Plan, have three aspects. In the first place, the generous assistance of friendly foreign countries must be sought. In the second place, all possible steps must be taken to promote exports. Lastly, negotiations must be conducted with a view to securing postponement of liabilities to repay loans which will mature during the Third Plan period. Now that India's creditworthiness has been proved time and again, there should not be much difficulty in thus resolving, or seeking to resolve, the foreign exchange problem appertaining to the Third Plan.

Inner Cleanliness

THE repetition of vague charges, and some introspection too, have forced the Congress Party to deal with the issue of inner cleanliness. The disclosure of assets by Ministers and legislators have been suggested after the Swatantra Party made an issue of corruption in the party and Mr C. D. Deshmukh's name was mentioned as the first originator of complaints about the fall in public morality. The Congress President's action is presumably meant to create a private, voluntary tribunal to deal with matters that cannot

Indian Finance

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

be aired in open court. Up to a point, a court of honour, is satisfactory, but it will be agreed that the Congress Party has now decided to keep the money power away from politics. This may be attuned to Mr Sanjeeva Reddi's desire to draw in poorer persons into the party to run for election and to seek office on the score of merit, not money. The A.I.C.C. Session at Poona has evidently made the Congress Working Committee realise that the party's purity is a matter of more importance than putting in elected men into the executive.

The procedure of commissions of inquiry has made it easy for a panel of politicians to look into what may be dangerous connections for Ministers and others. No longer will Chief Ministers have to appoint persons to hear complaints and to clear their colleagues, as in the Punjab. The 'personal' files of Ministers will help in the issue of election tickets, reappointment to office or the bestowal of the usual consolation prizes. While the President of the Congress can put cases before the panel, it is perhaps the private inquiry agent who will deal with it before a case is stated. The Special Police Establishment now deals with officials; for the non-officials some other agency is wanted and it has to be unofficial, though the procedure may well savour of imitation of the Communists who evince a striking zeal for the good name of their party in order to make it appear to the uninspired a fellowship of the dedicated.

It is perhaps a consequence of the Congress losing Gandhiji suddenly that the issue of inner cleanliness has cropped up. But it is all to the good that the 'party leadership attaches real value to a good name. This may be the result of election reverses, the fissures in the Punjab organisation as well as the belief in 'dual' leadership. The P.C.C. presidents will certainly not lose moral authority if legislators' record is to be scrutinised and the discreet rewards drawn from patrons in the business world appraised critically. The exact value of Swaraj for Swadeshi businessmen cannot be indicated readily but the monetary value of patriotism has been apparent over a long period to the faithful in the rank and file also. After Mr Kamaraj's rejection of the idea of free land for the elect who had made sacrifices in the past for the party the Congress President's plan for a panel is logical. The Madras Government set its face against Bhoodan for the benefit of its own partisans when more eligible and deserving applicants were not helped and the conflict of interests produced complaints of partiality. This too is derived from the current preference for purity in the party, reflected in the plan for a panel to examine charges. Perhaps the panel will also help to protect party funds gathered for the election and introduce strict audit in the place of gentleman's agreements now in vogue.

But the major issue raised is whether the party office records will go before the income-tax department whether publicity will be given in case of complaints or default and whether the party will care to prescribe penalties. That Mr Nehru has tacitly approved

the new procedure for enforcing purity is inferred from the outline given. There will be embarrassment if liabilities are declared by politicians and the absence of savings made clear, along with the need for extra remuneration. There is perhaps a real case for increments for State Ministers but the Congress High Command is concerned only with the immediate issue, namely, protection of the party's reputation.

Some will say that the reforms come late, with rather poor grace and the feathering of many nests is almost complete in most places. But the Congress is thinking of the elections of 1962, the acid comments of the Swatantra party and the rules of the game now being applied to the Congress party. The theory that Congress is far more than a party is more or less renounced by Mr Sanjeeva Reddi's plan for a panel. It is accepted that the tax and other laws apply to the Ministers and others in a privileged position and the 'peddling of influence' for a cash consideration would also be strictly limited. The Lynskey Tribunal's work is not forgotten nor the fate of Mr Belcher and Mr Gibson though the Labour Party was in power in 1948.

The Congress has come to see that the best practice obtaining abroad retains its value for India today, because the application of strict rules will be better than a party purge, provoking both protests and appeals. That the procedure applies already to officials (though their returns are not punctual or complete, as has been said) is perhaps the main merit of the Congress President's plan for a panel. The fact is that factions in many States render a party tribunal to deal with special complaints necessary and the improvement of internal discipline may be expected to follow the creation of machinery devised to promote purity. There is perhaps an admission that the party in the rough and tumble of political life has not escaped damage, but that is to be repaired now, and the Congress accepts that (as the advertisements put it) inner cleanliness comes first always.

Finance for the Private Sector

(Contributed)

THE letter addressed recently by the President of the Federation of Indian Chambers of Commerce & Industry to the Prime Minister regarding the sources of funds for the private sector deserves wider publicity than it has received. The occasion for this letter was the speech delivered by the Prime Minister some time back in the course of which he had said that the private sector depended too much for finance on the Government. The Federation has attempted to refute this argument and to show that actually the amount of finance received by the private sector from Government is relatively negligible.

"The impression that the private sector is far too dependent on financial assistance from Government cannot, in our humble opinion, be substantiated" says the Federation's President. He adds, "In the first place, I would like to point out that there is hardly any industry in India which receives subsidy from Government, either State or Central. There are, however, cases where Government, through some of its institutions, have rendered financial assistance either to the starting of new industries or to the rehabilitation and modernization of some industrial units. In this manner, the growth and development of some Indian industries has been encouraged by Government and we believe this encourage-

ment is due to the conviction of the authorities that for various reasons, some not directly connected with the promotion of these industries, such assistance is found necessary. Considerations of regional development or of maintaining in employment workers who would otherwise have been out of such employment and similar reasons have led to some units receiving financial assistance from Government".

Quoting the estimates given by the Planning Commission, the Federation's President points out that in the Second Plan the amount of money provided by the Government institutions to the private sector has not been appreciable. According to the Planning Commission's estimate, the overall gross fixed capital investment in the private sector was expected to be Rs 825 crores to be financed as follows:—

Loans from Institutional Agencies:	(Rs crores)
Industrial Finance Corporation of India	40
State Finance Corporations	17
National Industrial Development Corporation	10
Industrial Credit and Investment Corporation	14
Refinance Corporation	6 say 85
Direct Loans participation by Central and State Governments	20
Foreign Capital	200
New Issues	120
International and other resources:—(Depreciation Reserves, Retained Profits, Borrowings from Banks, Advances from Managing Agents, etc.)	400
Total	825

It will be seen that apart from foreign capital which was expected to provide Rs 200 crores, the bulk of the finance for the private sector was to come from internal sources like depreciation reserves, retained profits, borrowings from banks, advances from managing agents etc. It cannot be argued, therefore, that the Government has been the main source of finance for the private sector. Even in regard to the sum of Rs 85 crores which has been provided by the various financial institutions, it should be remembered that the amount is given to a sector which it is the official policy to assist by all possible means. The Federation stresses the fact that in terms of total investments made in the private sector, the assistance extended by these institutions is a small percentage and though such assistance may be vital to some of the units, taking the private sector as a whole, the total assistance is not of any serious magnitude. Moreover, the difficulty in obtaining foreign exchange has also been responsible to some extent in making the private sector resort to government for financial help.

The most important point made by the President of the Federation is that it is the Government's own financial policy which makes it difficult for the private sector to obtain the necessary resources for development purposes. As the President observes, "even the small dependence on the financial institutions sponsored by Government would not be there if the fiscal policy of Government left adequate savings in the hands of the individuals". Moreover, the banking system in India has not been enabled to play its part in providing term loans for industrial development as in the case of Germany, Japan and elsewhere.

The Prime Minister's reply merely says that he has passed on the Federation's data to the Planning Commission. He has also added that the controversy going on about the private and public sectors is "wholly unnecessary and

is rather harmful". But so long as Congress is wedded to the Socialist ideology and official economic policies are influenced largely by political considerations, the controversy between the two sectors cannot be entirely avoided. What is, however, essential is to ensure that the controversy, wherever it becomes unavoidable, should be kept at a high level and should be based on facts rather than on unfounded allegations. In the coming years, investment in the public sector is bound to take place on a massive scale. In fact, profits from the public sector are estimated to yield Rs 470 crores (excluding railways) during the next Plan. Therefore, care should be taken to see that the public sector is subjected to strict scrutiny so that waste and extravagance are avoided. Equally important is the need to ensure that the private sector which is being assigned a vital role in the Third Plan conducts itself with the maximum efficiency.

So far as the controversy regarding finance for the private sector is concerned, there is no doubt that the Federation's case is strong. If the fiscal policy is suitably altered and greater incentives are given to the people to increase their savings and invest them in productive undertakings, there will be less dependence of the private sector on Government. There should be a greater recognition on the part of the Government of the fact that a flourishing private sector is essential to our rapid economic progress. If the private sector is enabled to function more efficiently, it will be possible for the Government to obtain more revenues in the form of taxes which in turn will help the authorities to undertake multifarious activities for the benefit of the people.

Socio-Economic Survey of Calcutta: A Critical Analysis

CALCUTTA occupies a strategic place in the Indian economy. It is the second largest Indian city and is the eleventh among the largest cities in the world. In the last few years particularly the city has been confronted with a host of problems which have defied solution. Unemployment, housing shortage, slums, traffic congestion, defiance of law and order—these are some of the problems which have been causing considerable concern not merely to the State Government but to the country at large. It is obvious that unless these difficulties are tackled speedily and effectively, the economy of West Bengal and that of the eastern region cannot be developed rapidly. But before schemes are drawn up for improving the conditions in Calcutta, it is necessary to have some precise information regarding the nature of the problems facing this city. The Socio-Economic Survey of Calcutta city, sponsored by the Research Programme Committee of the Planning Commission and conducted by the Departments of Economics and Statistics of the Calcutta University, provides us with valuable and interesting information about the various aspects of the social and economic conditions of this city. Its publication on the eve of the commencement of the Third Five Year Plan is, therefore, opportune. The Survey has stretched over a period of five years, 1954-59. Data relating to 18,533 households were collected, a household having been defined as consisting of one or more persons who live together and have a common kitchen from which they take their meals.

An outstanding fact brought out by the Survey is that about a quarter of the population of the city live a single life without

their families, and they form more than half of the households. The vast majority of these people are males and married; and are educationally backward. Over 85 per cent of these people are concentrated in three groups of occupations—unskilled manual work, skilled labour and trading; about 87 per cent earn less than Rs 100 per month, their average earnings being Rs 73 per month. In 1957-58, Calcutta's population consisted of about 35 per cent women and 65 per cent men.

As regards occupational distribution, the Survey reveals that a little less than 40 per cent of all earners are engaged in the various distributive trades while about 16 per cent are in the manufacturing operations. About 14 per cent are employed in public utility concerns, 12 per cent in domestic services and another 12 per cent in the public and private services, and a little more than 2 per cent in construction. About 57 per cent of all earners work under single proprietorships or private households, about 25 per cent work in limited liability concerns and a little more than 10 per cent in Government offices. The corporate sector is increasing in importance as provider of jobs, the proportion of earners in this sector rising from 20 per cent of the total in 1955-56 to 26 per cent in 1957-58. About one-third of all earners are doing purely unskilled manual work.

Dealing with the trend of incomes, it is pointed out that the per capita money income in the city is higher as compared to the all-India average. The level of money earnings has risen between 1954-55 to 1957-58 at least by as much as 30 per cent in four years. In 1954-55 the annual per capita income amounted to Rs 492 which increased to Rs 560 in 1957-58 that is, by about 13.7 per cent. The Survey comments as follows: "Thus while money incomes have risen, real incomes have actually declined on account of the greater rate of increase in the general price level. Per capita real income has actually declined by 4 per cent in 3 years. But one encouraging aspect is that during these four years the distribution of the total family income among the population of the city has not become more unequal in spite of the inflationary rise in prices. The rich are getting richer, while the poor seem to be improving their position at least in terms of money".

On the subject of unemployment, the Survey says that it is heavily concentrated in the younger age-groups. Most of the unemployed, that is, 70 to 75 per cent do not possess any skill or special qualification. Unemployment is also found to some extent among persons with engineering and technical diplomas or certificates as well as among typists and stenographers.

Conditions of housing are, of course, very unsatisfactory. Only about 7.5 per cent of the households surveyed lived in separate flats or complete houses which possessed amenities like bathroom, water tap, kitchen and separate toilet. It is estimated that schemes of slum clearance would involve an expenditure of about Rs 300 crores. The Survey throws some light on the social habits of the people such as reading, tea drinking, visit to cinema and visit to relatives. Data relating to social habits have been collected from the people of the age group 20 to 54. It is stated that only out of every six adults read any kind of books. Among persons with comparatively low educational qualifications (that is, below school final standard) only about 31 per cent read newspapers, 12 per cent read books and only 6 per cent read journals. Tea drinking is more popular among the adult population of the city than the reading of books. Nearly 81 per cent or

nine out of every eleven adults are addicted to tea-drinking. The popularity of the cinema is increasing steadily as well will be clear from the rising number of cinema halls and the "mile-long serpentine queues" seen in front of almost every such hall. Another fact revealed by the Survey is that of the adults in the age-group, 20 to 54, nearly 63 per cent do not pay any visit to their relatives while less than one-third are in the habit of doing so.

These, then, are the broad conclusions of the Survey. The Departments of Economics and Statistics of the Calcutta University have done a good job in assembling and analysing a lot of useful data. But the Survey is open to criticism. In the first place, it is not clear why so much importance is given to linguistic factors in analysing economic problems. An unemployed person has been defined as one who has no gainful occupation on the date of investigation but who is actively seeking jobs at current rates of remuneration. Having given this definition it was wholly unnecessary to find out how much unemployment exists among the various groups like those of Bengali, Hindi, Urdu, Oriya etc. One could as well analyse this problem in terms of the religious beliefs of the population or their political affiliation! In an economic Survey of this type considerations of linguistics appear to be entirely out of place particularly at a time when petty parochial feelings are being whipped up by unscrupulous politicians.

Secondly, the Departments need not have spent their time in investigating what appear to be rather trivial affairs. For instance, one of the topics examined was: "How close are the ties of relationship as seen in the monthly visits paid by adults to their relatives?" One fails to appreciate what useful purpose would be served by gathering data regarding the visits paid by citizens to their relatives.

However, the Survey has done a service by focussing attention on some of the grave issues confronting the Calcutta city. It is now for the authorities concerned to tackle these problems with speed and efficiency. This is a task in which the Central Government, the State Government and the Calcutta Corporation should act together effectively. The Central Government's responsibility is by no means small, considering the fact that about 45 per cent of the country's foreign trade is passing through the Calcutta port. There are about 1400 industrial units in the city, including a number of jute mills, cotton mills, shipbuilding and repairing firms, engineering industries etc. It has the largest number of companies registered under the Companies Act, and the tempo of business activities is faster here than in Bombay. The Central Government, therefore, should see to it the difficulties facing Calcutta are tackled with sympathy, understanding and urgency. The State Government also should be more alert. It should create suitable conditions so as to encourage industrialists to expand employment opportunities. In this connection, the attempt in the private sector to employ only local people is to be deeply deplored. Employers should be free to choose the right men for their jobs irrespective of linguistic and regional considerations. If Government try to bring pressure in this matter, the problem of unemployment, far from improving, may get worse.

The State Government should also see to it that the Calcutta Corporation conducts its affairs with a sense of responsibility. Hitherto, the Corporation has unfortunately allowed itself to be dominated by petty politics with the result that it has not paid proper

attention to civic problems. It is necessary, therefore that in the interests of West Bengal and the country at large the various authorities—Central, State and local,—should cooperate together and tackle the problems of Calcutta in a spirit of determination.

Demand for D-Marks

By Paul Enzig

THE foreign exchange market is seldom uneventful for any great length of time. Its main feature at present is a strong demand for West German currency. For the last ten years or so D-Marks had a very firm undertone most of the time. This was one of the results of the "West German miracle"—the economic recovery brought about by Dr Erhard's sound policies. The D-Mark was for years stronger than sterling, and for some time even stronger than the dollar. This conclusively proves that in matters of currencies it is present position and future prospects that count and not past history. The D-Mark commands confidence in spite of the checkered career of the German currency between the two Wars.

The German gold reserve, which underwent a decline during 1959, has once more reached the record figures attained at the end of 1958. The firmness of the D-Mark and the influx of gold has been largely due to the influx of foreign funds. Even though German banks are not permitted to allow interest on foreign balances and deposits, and the sale of German Treasury Bills to foreign buyers has been stopped, it is possible to earn a yield of more than 7 per cent on high class fixed interest bearing securities. Foreign holders also benefit by the premium on forward D-Marks if they choose to cover the exchange risk in preference to speculating on an appreciation of the D-Mark.

The breath of industry

Oxygen—feeding the flame that knifes through steel, welding enormous broken castings and bubbling through molten metal to make pure steel—the flow of Oxygen in modern industry never ceases. From tiny workshops to the great steel plants and shipyards, wherever there is metal to be worked, Oxygen is on the job.

INDIAN OXYGEN LIMITED

Twentyfive Years' Service

The revival of the firm trend of the D-Mark is both the cause and the effect of a revival of revaluation talk. Once more as in 1957 there is much speculation on the possibility of a revaluation or at any rate of a widening of the margin between the upper and lower limits of its fluctuations which would entail a rise to its upper limit. While in 1957 the German authorities allowed revaluation talk to proceed largely uncontradicted, this time official statements have emphatically disclaimed any intentions to revalue. Nevertheless, as is usual on such occasions, many people take the official disclaimer with a grain of salt.

Yet if a Government is determined not to resort to revaluation it cannot be forced to revalue. What might happen is that the influx of funds might frustrate the effort of the official monetary policy to restrain inflation by means of tight money and high interest rates. So far there are no indications that this would happen.

The firmness of the D-Mark is all the more remarkable since West Germany is at last beginning to feel the world-wide pressure making for wage inflation. For a long time wage inflation in West Germany has been restrained by an influx of refugees from East Germany. It seems, however, that that influx cannot keep pace with the increased demand for labour. The trade unions have come into their own and are pressing forward with their wage demands. In this respect Germany is no longer in a better position than Britain or other industrial countries.

In face of the situation a leading German banker suggested in an article higher taxation and investment in underdeveloped countries. Whether it would be practicable to adopt these remedies on a sufficient scale to make an appreciable difference remains to be seen. Meanwhile the German gold drain threatens to lead to a new maldistribution of gold. This time the American gold reserve is more or less static, while the German gold reserve has increased far beyond the requirements of West Germany. The Sterling Area gold reserve, which is nearly large enough for the immense requirements it is supposed to cover, has been increasing only to a very moderate extent lately. In the circumstances the demand for D-Mark is most inopportune, yet there are no signs to indicate that it is likely to subside in the near future.

Sterling rally Stresses the Reserve of Confidence

By W. T. C. KING

STERLING showed a heartening degree of resistance during the testing-time associated with the breakdown of the Summit conference in Paris during May. It came through this phase with much less strain than had generally been apparent on previous occasions of heightened tension in international politics, which is a testimony to the underlying reserve of confidence in sterling that has built up since the exchange crisis of 1957, and since the granting of formal "external" convertibility at the end of the following year. In the past fortnight, however, the exchange has come under some pressure. On June 2, the sterling-dollar rate, which had stood at around 2.81 dollars beginning of the month dipped slightly below its parity of 2.80 dollars, for the first time since the raising of the Bank of England discount rate from 4 per cent to 5 per cent last January.

The principal factor in this pressure appears to have been the pull of tight money condi-

tions on the European Continent, especially the stringency produced in West Germany by the efforts of the monetary authorities there to contain a threatening excess of demand in an economy already fully employed.

Spasm Of Pessimism:

A variety of factors, however, have evidently been acting in the exchange market. The initial pressure on sterling was accompanied by a spasm of pessimism in the City about Britain's own economic problem, and this mood seems to have been both an effect, and a partial cause, of the weakening of sterling.

Market psychology, however, is all too prone to swing to extremes and the City on this occasion had begun to fear that pressures on capital account might be obliterating, or even reversing, the further rise in the gold and convertible currency reserves that was to be expected from seasonal factors. In fact, the reserves rose in May by £10,000,000, after providing the regular £5,000,000 repayment to the International Monetary Fund, bringing their total to £1,021,000,000, or £62,000,000 above the low point reached at end January. The publication of these reassuring figures caused a marked rebound in market sentiment, and a rallying of the sterling-dollar rate to the right side of parity again.

Two significant international developments played a part in this process. On the one hand, the Federal Reserve Board authorised a reduction in rediscount rates, the first downward move since the authorities were trying to coax the American economy out of its recession a couple of years or so ago; and the Federal Reserve Banks of Philadelphia and San Francisco came down on June 2, from 4 per cent to 3½ per cent.

This move was expected to extend shortly to other Federal Reserve districts, and thus had an immediate effect on the rate for United States Government three-month Treasury bills, which dropped by more than ½ per cent to 2½ per cent. The margin below the London Treasury bill rate has thus widened to more than 1½ per cent, whereas at the beginning of this year there was a substantial margin the other way round. Any fear that sterling and London money rates might this year have to face a renewed strain from New York rates, has thus reached.

West German Position:

On the same day that these reductions in American rates were announced, steps in the opposite direction were taken in West Germany. A distinctive characteristic of the incipient inflationary strain in Germany is that it has not been accompanied by pressure upon the German balance of payments, or upon the exchange rate and the external reserves. On the contrary, both the export surplus and the reserves have been mounting strongly.

The German monetary authorities were thus facing in more acute form, a dilemma that has become familiar to them in recent years. If measures of domestic disinflation took the conventional course, and included a general increase in interest rates, they would be liable to pull in still more mobile funds from overseas, to the probable embarrassment of other monetary authorities, not to mention the resultant undesired injection of liquidity into the German money market. In consequence, in the disinflationary steps taken earlier this year, the German authorities had been concentrating upon making money scarce, rather than dear; but it had seemed evident that if these measures did not achieve a sufficient effect, they would sooner or later have to be flanked by higher interest rates. This, indeed, was one of the possibilities that had been troubling some observers in London.

Novel Precaution:

But when the German authorities launched their new drive against inflation, and duly accompanied it by a further rise in rates, they took novel precautions with the object of confining the effects of the rise in rates to the domestic economy.

The rediscount rate of the Bundesbank was raised from 4 per cent to 5 per cent, and its loan rate went up to 6 per cent while minimum reserve requirements were stiffened further. But it was decreed that deposits held in West German banks on account of non-residents should no longer carry interest, and that Treasury bills and bonds would no longer be saleable to non-residents. It remains to be seen whether these unusual measures will succeed in fully insulating overseas markets from the pressure of the German disinflationary drive. Attempts to discriminate between different categories of funds, and to set up artificial barriers, are apt to create stresses of their own; and in the end ways of circumvention are devised. Indeed, from the outset it was reported that non-resident funds were being withdrawn from German banks for employment in German equities. For the time being, however, this experiment has lifted one of the potential strains from sterling, and may even be lending it a little positive support by inducing some reflux of funds.

Changing Needs Overseas:

In spite of these two reassuring developments on the international front, and of the satisfactory performance of the sterling area's central reserves in the past few months, banking circles in London are prepared for some increase in strain later in the year, notably because of the changing needs of the overseas sterling area. Britain's own balance of payments in the calendar year 1959, the latest period for which detailed estimates are available, was in surplus to the extent of £145,000,000 on current transactions as a whole. But this was not sufficient to finance Britain's net long-term lending overseas, and its other commitments on capital account (such as repayment of indebtedness).

Substantial drafts on the gold and exchange reserves were avoided only because Britain was, in effect, borrowing on short-term to finance a considerable part of its lendings at long-term. These short-term borrowings were last year achieved almost automatically, without the necessity of offering differentially high interest rates, because the majority of the independent territories of the overseas sterling area were building up their London funds again, after a phase of depletion.

The experience in 1960 is likely to be different from this. It is to be hoped, indeed, that Britain's own current surplus may be larger than that for 1959. The disinflationary measures recently taken are, of course, intended to ensure that it will be so. But it cannot be expected that the surplus will be large enough to cover all the long-term capital commitments.

A Gap To Be Filled:

Once again, there is likely to be a gap that has to be filled, either by a net intake of short-term funds, or by drafts on reserves. But this year many of the territories of the outer-sterling area are stepping up their imports and relaxing import restrictions, and are unlikely to have a surplus of floating funds that will come to rest in London.

On the contrary, it will be surprising if there is not, over the year as a whole, a net reduction in their London funds. During the first quarter, the independent territories ran

25 June 1960

down their sterling balances from £1,830,000,000 to £1,774,000,000; but these demands were approximately balanced by net new deposits by dependent territories (their total rose from £873,000,000 to £900,000,000), and by Western Europe (up by £21,000,000 at £408,000,000) and Latin America (up by £13,000,000). The grand total of sterling balances held by countries, as distinct from the international organisations, was virtually unchanged over the quarter, at £3,496,000,000. A year previously, it stood at £3,337,000,000.

On the home front, Britain awaits definite evidence of the effects of the several measures of restraint. It is too soon to be able to ascertain whether these will, or will not, suffice to prevent an undue build-up of demand. The first effects, so far as they can be discerned, are moderately reassuring. The pace of increase of bank advances has slackened significantly, there has been some decline in sales of motor vehicles on hire-purchase, and a fairly sharp fall in values of second-hand cars. On the other hand, the total level of activity in the economy apparently continues to rise.

"Sons of the Soil"

M. SUR

THE Central Government's Act for the compulsory notification of vacancies to the Employment Exchanges was gazetted to come into force in West Bengal from 1st June. This has sparked off quite a controversy on the question of whether preference in the matter of employment should be given to "sons of the soil". Actually the Employment Exchange (Compulsory Notification of Vacancies) Act does not touch on this question at all. It is aimed at providing the Employment Exchanges with reliable information and statistics regarding vacancies in any establishment (which covers offices or any place where industry, trade, business or occupation is carried on, except those that come under the Union or State Public Service Commissions, or those carrying remuneration of less than Rs 60 per month). Employers are required to notify all vacancies, but the manner in which the vacancies shall be filled is left open. The Employment Exchange may send candidates for interview, but there is no obligation on the employer to recruit only from persons sent by the Exchange.

However some persons see in this Act the "thin edge of the wedge", alleging that once the Employment Exchanges are informed of vacancies they will start interfering with the employer's right to select his own men, or they will use the Act to press for the employment of "sons of the soil". The fact that it is a Central Act should make clear that no restrictions are intended as to the employment of persons of one State or another. The Indian Constitution ensures not only equality of citizenship, but of opportunity also, and this should make discrimination between persons of one State and another illegal. Nevertheless feelings are strong both for and against a policy of preference for "sons of the soil".

A reference to the Directorate of the National Employment Service in Calcutta elicited the information that the policy of that Service was that where possible preference in employment should be given to those with some years' residence in the State, since it was felt that migration of more persons to Calcutta to increase the multitude of the city's unemployed should be discouraged. This seems reasonable enough. Calcutta is already burdened with a population which it can neither house nor employ.

This, however, is not the view of those who seized the opportunity for an outcry

against employment of non-Bengalis in Bengal, and who sponsored an unofficial "Employment Week", demanding "reservation of all avenues of employment for the next twenty years to raise the percentage of Bengali employment in industries in the State." A public meeting at the end of this week was presided over by a judge.

Almost simultaneously the West Bengal Labour Minister was reported in the press to have told the Employment Advisory Committee that the State Government had been pressing for an Act not only for compulsory notification of vacancies, but for compulsory recruitment, because it wanted to ensure a fair deal for "children of the soil" in the matter of employment opportunities in the State. Did this mean that the Labour Minister was taking a different line from the Employment Service? What did he mean by "children of the soil"? Many correspondents in the newspapers had no doubt about it and declared roundly that the Minister meant those whose mother tongue was Bengali. Certain trade unions which had been pressing for more employment for Bengalis began demanding that at least 80% of vacancies should be filled by people recommended by the Employment Exchange. Non-Bengalis domiciled in the State began to be alarmed. One wrote "if non-Bengalis domiciled for long in West Bengal are not sons of the soil, who are they? Are they to be considered as aliens in the land of their birth?"

To those who deplore the dissipated tendencies already too evident in the Indian Union, and the exacerbation of these tendencies caused by linguistic controversy, this further evidence of exclusiveness is very alarming. It must be added, in fairness to West Bengal, that the demand for restriction of employment opportunities did not first arise in that State. Other States have been loud in claiming jobs for their linguistic groups—Bihar for the Biharis, Assam for the Assamese and so on. The writer knows of cases where not only trade unions but State Government officials have opposed the employment by private firms of persons from other States, and even gone so far as to object to an employee whose family had been resident for generations in the State but had its origins outside.

It is obvious that general unemployment is a powerful factor in this exclusiveness, but it should not be allowed to put the problem right out of perspective. Mobility of labour is an asset in any country with an expanding economy. How could new steel works like Durgapur be staffed by local people? What would be the sense in saying employment at Durgapur should be limited to Bengalis because it lies in Bengal. The Bihar border is not far away and surely the region rather than the State should be considered when it comes to economic development?

If Bihar, for example, were to refuse jobs to non-Biharis and West Bengal were to retaliate, what would happen? Thousands of Bihari labourers engaged on loading and unloading and transport in Calcutta would be thrown out of employment and would not be able to find re-employment in Bihar, and it is even doubtful if they could be replaced adequately by Bengalis.

Bengal is one of the most advanced industrial regions in India, and Calcutta is certainly the country's largest industrial centre. Figures of new companies started in the Eastern region for the half year ending March, 1960, show 204 in W Bengal, as against 6 in Bihar, 5 in Assam and 19 in Orissa. The capital represented is over 20 crores in W. Bengal as compared with under 4 crores in the other three States put together. Obvi-

ously a large proportion of this capital has been put up by non-Bengalis. Is it reasonable to demand that these enterprises should employ only Bengalis? Many companies with their head offices in Calcutta have branches and units scattered over the country. It does make sense to argue that only Bengalis should be employed in these head offices. Those who interpret "sons of the soil" in its most restricted sense are being carried away by their emotions.

Many companies have agreements with their trade unions to give preference in employment for lower grade jobs to the sons of existing or retiring employees. Shortage of employment has made this an urgent demand with many unions, but in some cases it has the effect of drawing more migrants into the big cities while the residents remain unemployed. However it is a demand hard to resist. It may in certain circumstances be advisable to discourage migration into areas where unemployment is already heavy, but this is a matter to be decided on economic and not on emotional grounds. On the other hand, when the need for qualified men is urgent, if they are to be tied down to the State of their origin, the country will be the loser. Companies operating on a national scale must also have freedom to transfer their higher staff according to the exigencies of their business and the qualifications of their employees.

This is overall a problem which should be studied by the Planning Commission, and the Union Government should give some guidance on it, so that it can be viewed in its proper economic perspective. It is discouraging to those who believe in unity to find these matters being approached almost entirely on a narrow, emotional basis, which can only result in further division and rivalry.

Village Housing

Government of India's decision to increase the quantum of assistance under the village housing scheme is belated recognition of the importance of rural housing to any programme of balanced national reconstruction. While the Second Plan recognised that a large number of the 54 million houses in the rural areas needed rebuilding or reconditioning, policy was based on the assumption that, with a little guidance and some measure of assistance, village communities could provide themselves with improved housing through their own efforts. A Village Housing Scheme of limited scope was introduced in October 1957. The Scheme, based on the principle of "aided self-help," envisaged development of housing projects in about 5,000 selected villages all over the country during the Second Plan period. The Government of India agreed to provide financial assistance in the shape of long-term, interest bearing loans not exceeding 50 per cent of the cost of construction (subject to a maximum loan of Rs 1,500 per house) repayable in annual instalments over a period of twenty years. The scheme itself got off to a late start and it was only in 1959 that a beginning could be made toward its implementation. By the end of 1959, only about Rs 100 lakhs had been sanctioned as loans to the villagers in different States.

The difficulties in implementing the Scheme as it stood were con-

sidered at the Housing Ministers' Conference held in Hyderabad last November, when it was pointed out that the average villager found it difficult to contribute fifty per cent of the cost of construction nor could he make it up by labour contribution which normally did not amount to more than 30 per cent of the cost. The Government have now decided to increase the quantum of loan assistance from 50 per cent to 66 per cent and the maximum of the loan from Rs 1,500 to Rs 2,000. The change should accelerate the pace of house construction in the villages and should be welcomed as an earnest of a more adequate programme under the Third Five-Year Plan.

House construction in the villages, to the extent it provides a steady volume of employment to local labour, will help to check the blind migration to the cities that has aggravated the problems of overcrowding, unemployment and destitution which urban authorities have been attempting to tackle with little success. The programme of slum clearance will make little headway so long as a continuous stream of villagers lured by "city lights" creates new slums faster than old ones are cleared. A comprehensive rural housing programme which helps to keep the villagers at home will indirectly relieve the acute housing shortage in urban areas.

An adequate rural housing programme will have to cover a wider field than the mere provision of houses. May be, of improved design. As much attention should be paid to improvement of the environment as to the construction of the buildings, if the villages are to become attractive residential areas. The villages should be provided with easy approach roads and communications as well as satisfactory arrangements for the disposal of domestic refuse. Due to increase in population and the limited area available for housing sites, disposal of refuse cannot be left to natural agencies. The house plots generally are too small to have sufficient space for compost pits in each backyard. Centralised arrangements will have to be made for composting. The introduction of bio-gas plants if practicable, will mean a great step forward. The programme of rural housing offers a field for fruitful co-ordination of activities of the different Ministries of Housing, Health, Communications and Agriculture.

Persisting Disparity

The disparity in the scale of emoluments of employees of the Central and State Governments has been a chronic source of discontent among the employees of the worst affected States. The wide range of remuneration of people doing the same sort of work under different Government agencies is an unfortunate relic of the past for which there is no present justification under a regime of centralised planning for the establishment of a socialist pattern of society. The recommendations of the Madras Pay Commission which have been accepted by the State Government reduce the gap to some extent, but the persisting difference will continue to be a source of heartburning which

will react on the efficiency of the administration. Even after the recommendations have been implemented, the minimum remuneration of a clerk in Madras will be only Rs 100 including allowances, against Rs 115 under the Central Government, Rs 120 in Bombay and Rs 126 in West Bengal. The N.G.O. in Madras can, however, have the poor comfort that he is comparatively better off than his compeer in Mysore, where the total minimum remuneration of clerks is as low as Rs 60 per month.

The reasons advanced by the Commission for accepting the inevitability of disparity deserve careful scrutiny. The argument from limited resources has little validity when State resources are being progressively centralised and development expenditure is largely underwritten by the Centre. When uniformity is being zealously pursued in other fields, there is no justification for retaining an incongruous disparity in the salary scales of Government employees. The Commission have pointed to average earnings of factory workers in Madras which was only Rs 978.9 per annum against the all-India average of Rs 1,233.9, in justification of a lower salary scale for Government servants in Madras as compared with those in Central Government service. On the other hand, it can be argued that the lower level of salaries in Government service has, over the years, depressed wages all along the line. When wage rates are negotiated between workers and managements in industry, the earnings of Government servants are taken as standards.

The Commission have also argued that the State service offers advantages which mitigate the difference in emoluments. State employees, it is pointed out, enjoy educational concessions, more liberal house rent allowances and better prospects of promotion. But it seems that the Pay Commission themselves are not convinced by their own elaborate arguments. Immediately after setting out the comparative advantages of the State Government Service, the report gives away the show by urging the acceptance by the Governments, both at the Centre and in the State, of the suggestion of the Central Pay Commission that a scheme of recruitment to the Central Services, particularly Class III and Class IV, from among the employees of the State Government should be worked out in detail and accepted.

Timely Facts

A wealth of information regarding two important sectors of workers in India has been brought together in the latest publication of the India Branch of the ILO, in the series, "Recent Developments in Certain Aspects of Indian Economy". The first part covers all aspects of the Plantation Industry in a short compass, while the second deals with the conditions of employment of white collar workers, in Government offices, Life Insurance Corporation, banks, shops and commercial establishments.

*Recent Developments in Certain Aspects of Indian Economy—V. Published by the International Labour Office, India Branch, New Delhi, 1960. Price Rs. 2-50. Pp. 159.

as also journalists, teachers and nurses.

The first part traces the story from the beginning, from the time a century ago when the Plantation Industry was built up by workers in conditions approaching slavery, the reforms effected by awakening of conscience among the administrators, and brings it up to the present stage when plantation labour has been assured of a fair deal. The year 1947, the year of Independence, marked a turning point in the fortunes of workers in Plantations and was followed by a decade of steady progress, as indicated by rise in wages. To take an instance, during this period the monthly cash earnings of male workers in Assam plantations increased from Rs 17-13-11 in 1947-48 to Rs 47-48 nP in 1955-56. The study provides the factual basis for the stabilisation of employer-employee relations in an industry which is of vital importance to the nation, both on account of its employment potential and as earner of foreign exchange.

The study of non-manual workers covers untrodden ground, and underlines the emergence of this category of workers as a class conscious entity. The growth in numbers of non-manual workers has been accompanied by growing volume of unemployment among the educated.

Expansion of industry, which is suggested as the only sure remedy, is a time consuming process; in the meantime, the repercussions of the tensions building up in this sector are being progressively felt over wider fields. The study highlights the wide range of disparity in the wages of Government servants under the Centre and in the different States, as well as the very low prevailing level of salaries of teachers and nurses whose obvious effect would be to keep away, suitable persons from these professions.

US Trade Policies

If recent developments are any criterion, the US Tariff Commission is in the process of building a kind of legal fence around the 25-year-old US Trade Agreements Act, one that is fully in keeping with the long-standing liberal trade policies of the United States Government.

This is apparent from the nature of a recent commission ruling, which was far more significant than the case it involved. The ruling was concerned on the surface only with the question of lamb and mutton imports—hardly an exciting or major trade problem. But in rendering its decision, the commission went beyond the facts in this case to state, in effect, just how far a domestic producer must go in demonstrating that he has suffered or is threatened by "serious injury" from imports, and thus qualify for tariff or quota relief under the Act's "escape clause."

In rejecting the move for restrictions on imported lamb and mutton, the Commission made this point: Any finding of serious injury "must be imminent, and not remote, conjectural or based on mere suspicion, fear or possibility."

This means that if domestic producers claim they have been injured economically by an inordinate increase in imports resulting from a US tariff cut, the burden of proof rests with them, and it must be based on solid, factual evidence. They must, first of all, prove that the injury is real. And if they claim a threat of future injury, they must demonstrate it clearly on the basis of current developments rather than apprehensions about what possibly could happen at some later date.

This kind of reasoning should be welcome news indeed to both American importers and foreign exporters. For there is little doubt about the escape clause has been that one of the lingering complaints the alleged uncertainty of its application.

The right of a nation of safeguard its own commercial interests can hardly be questioned, of course. And this is doubly so in the case of the United States, which has always acted with moderation in this regard while pursuing an essentially liberal and open trade policy.

The view sometimes has been expressed, however, that American producers did not know just what safeguards they could count on in hardpressed by imports, while foreign producers could not always be sure that their success-

ful selling efforts to the vast and receptive American market would not be endangered by an escape clause action.

Nor is this merely a matter of domestic versus foreign interests. As the New York newspaper *Journal of Commerce* has pointed out, "where an escape clause action achieves a curb on imports, the American producers winning the action win only at the expense of other (and usually more efficient) American producers."

The fact that very few escape clause actions are initiated and even fewer ever win final approval does not detract from the significance of the principle the Tariff Commission has laid down. The record shows that over the last 18 months the Commission has rejected 18 of 22 applications for import relief filed by American companies. And it is demonstrable fact that the President who must approve each Commission recommendation before it becomes final, has been even less disposed to authorize any upward modifications of US tariff concessions.

This record could incite either that the complaints of the American companies had little validity or that the Commission has undeniably been following a policy in keeping with the liberal US trade traditions, or both. But, praiseworthy as the record has been, it still could not be expected to dissipate completely the charge of uncertainty—no matter how tenuous or little justified—that surrounded its activities.

The prime virtue of this latest ruling, then, is that with it the Commission has delineated and effectively limited the field of escape clause relief. And in the words of Commission Chairman Joseph, E. Talbot, this is "more important than lamb or mutton."

Party in Peril

The British Labour Party is again swept by a crisis that is due mainly to the retreat staged this year by the Executive in regard to the goal of nationalisation. The maintenance of unity in a political party that is now in opposition is now as difficult as co-operation with Socialist political parties abroad or adopting a new attitude towards nuclear weapons. Since State control of industry is accepted by the Conservatives like the grant of aid to undeveloped regions or the precise preservation of individual freedom, the Labour Party is now in difficulties over policy, accentuated by the challenge to Mr Gaitskell by the big trade unions. Some discontent has been occasioned by Mr Alfred Robens' acceptance of the post of Chairman of the Coal Board in the place of Sir James Bowman to carry out reorganisation. The dilution of labour and the freezing of wages are held inevitable and the miners may become restive as in 1925 and the democratic tradition may be threatened by the rise of militant groups. The har-

dening of the arteries in the party has led to complaints already from the unions about middleclass leadership and the intellectuals too are not agreed on ultimate aims.

The election reverse last year has led to a defeatist mood and that, even more than the weak argument over the Suez debacle, has made for a cleavage of opinion which may not help the liberal party but will help the Conservatives who scored a decisive victory in the municipal elections this year. The Labour Party's post war achievement is dimmed by the Conservatives' adoption of a new policy for Africa and the persistence of trade and currency troubles for which Labour can offer no lasting remedy. The decline of both the French and German socialist parties perhaps has a bearing on the altered position of British labour. The wind of change is obviously unkind to the party that is hampered also by the decline of the caucus. The parliamentary party naturally overshadows the trade union wing today and it is the former that is faced with the task of reappraisal, made difficult by the renewal of contacts with Russia and the revival of European nationalism. The disappearance of differences over relations with the USA is of some importance in the light of election prospects in the USA and it is fairly obvious that if the party really got over Ramsay MacDonald's defection in 1931, it has now less scope for manoeuvre over disarmament to which it is pledged formally.

Tourism in Europe

In spite of a rise in prices and the higher cost of travel, compared with 1950, Europe expects a larger number of US tourists this year. Plans to get more foreign customers for hotels and airlines appear quite legitimate in view of the record number of tourists in the UK in 1959 especially the rise of 10 per cent in US tourists. Tourism as a regular source of foreign exchange is appreciated and the North Americans spent more than European and Commonwealth visitors to Britain. Their free spending habits are based on the absence of curbs on travel abroad, though it is clear that tourist traffic flows strongly to countries nearest for instance from Australia to New Zealand, through the similarity of living conditions and currency in use. The tradition of pilgrimages is a factor that compels many to take the road to Rome and summer vacations exert a powerful influence on many who choose to take time off.

The extensive use of rented cars is a new development meant to attract American custom and petrol is available at a discount for Americans moving by road in Italy and France. The excellence of guidebooks and the availability of couriers for innocents abroad require mention and the vivid night life also casts a spell on

Americans in Paris. Travellers' cheques help foreigners to buy quality goods cheaper and Scandinavia too offers cut prices for Americans buying useful articles or mere souvenirs of a trip abroad taken for pleasure, not business. Hiking and camping are of very limited interest, except to Germans. But there is now a new rival to Austria since the Russian Intourist is trying to get US visitors and special exchange rates are offered to incoming tourists by Hungary also. The Indian Government cannot get summer visitors to try India but the cold weather crowd may get larger if plans are formed to improve hotels, relax rules and to make the best impression on foreign visitors by stilling the clamour for presents or alms.

Signs of Secession

The elections in the Belgian Congo viewed as a prelude to independence have attracted favourable comment up to a point. The chances of a coalition regime headed by M. Lumumba are canvassed but tribal rivalry is an element that the leaders have to take into account. The contiguity of the Katanga province to Rhodesia has created a separatist sentiment and it was clear even in February that big mining interests, mixed up inextricably through Tanganyika Concessions' connection with Union Miniere have their own views or plans for the Congo of the future. Rhodesia is not unwilling to promote secession. There is the classic case of Panama detached from Colombia under American inspiration.

The Congo is very large and the stakes very great so cutting off the upper Katanga can be thought of more readily than tackling on Ruanda-Urundi to Uganda. If the provincial assembly by a simple plurality votes itself out of the new Congo federation, the link-up with Rhodesia will be facilitated and Katanga, as a new State, will be endowed by foreign capital. The Rhodesian military precautions reported last week were perhaps undertaken in order to make sure of successful secession. There is big US capital also interested in the Belgian Congo through the Rhodesian copper companies (sterling) and, of course, South African mining enterprise is a participant in most Rhodesian ventures through the Chartered Company of South Africa. If North Rhodesia were still under Company rule, the arrangements with Katanga would be far easier to make. The Colonial Office would not come in the way and Katanga could be absorbed more easily into North Rhodesia itself after the largescale, sudden withdrawal of Belgian officials and technicians. Sir Roy Welensky's frank views about the Belgian Congo's accession to freedom do not preclude a take-over without any bid.

Mysore's Third Plan Projects

The Mysore State's Third Plan projects had undergone some alterations. Emphasis has been laid on the establishment of fertilizer plants in view of the fact that plenty of power supply would be available from the Sharavati Hydel Power scheme which will be commissioned in 1962 December. The State Government has already appointed a retired Chief Electrical Engineer, Madras State, as Administrator for the Sharavati Hydel Project.

The Government of India project to develop Mangalore as an all-weather West Coast Port would be of a great advantage to Mysore and possibilities of exploring the hinterland of the area have been opened up. On the basis of a fertilizer factory in the State and the consequent development of the States steel works, the minimum traffic which Mysore alone would offer to Mangalore port is estimated at one lakh tons of coal and 165,000 tons of rock phosphate annually. The import of rock phosphate will be from North Africa and these are intended for the proposed fertilizer project. A railway line connecting the project site with Mangalore would be only about 30 miles.

Whether this fertilizer plant would be in the private or public sector is not yet decided, but Mysore State is prepared for an allotment of Rs 2.5 crores.

"Indian Finance" had already reported that the draft Third Five-Year Plan of Mysore would be of the order of Rs 279 crores out of which Rs 100 crores would be from public loans, small savings additional levies and other small contributions from local bodies.

The World Bank Mission had received a detailed report from Mysore State for utilisation of the rich iron ore deposit in Bellary. It is believed that Bellary offers a big chance for smelting of iron ore and the export of pig iron.

Bijapur district in Mysore would be taken up for intensive development since this district is very backward.

The forest and mineral resources of the State would also be exploited. The Third Plan schemes may thus be considered as the beginning for the big exploitation because much remains to be done in this field and poor progress was due to lack of communications and port availability. The final draft of the State's Third Five-Year Plan now under scrutiny by the Planning Commission would be available by early July.

South Food Zone

After a phase of mistrust, the Southern Food Zone, according to

Mr A. N. Thomas, Union Deputy Food Minister, is having a smooth run. With a good crop during the current year which is expected to exceed production during the last year by more than 2,00,000 tons, anxiety about adequacy of supplies for the requirements of the South Food Zone has lifted. For the first time since the creation of the zone, mill-owners of Andhra Pradesh are reporting considerable accumulations with them. Increased production has not been the only cause for this. Tightening of measures against smuggling of foodgrains to areas outside the zone has had the same effect. The millowners have made representations to the Government for permission to export their stock to areas such as Bombay which are outside the zone. Purchase by the Union Government would also relieve millers of their burdensome stock. But delayed payment for stocks supplied following the closure of the "Pay and Account offices" in Vijayawada has deterred such sale by millers to the Union Government. Since the Government have expressed willingness to reopen these offices on condition that substantial quantities were supplied, clearance of stock with millers should not prove difficult.

Keeping Kerala adequately supplied with its requirements is the most important element in the successful working of the South Food Zone. It was on this account that difficulties developed during the last year. The Communist Government then in power in Kerala were accused by the Madras Government of illegitimately drawing off its supplies. However the present supplies position should permit of a flow of supplies that should meet Kerala's needs. Mr Thomas has also assured that the Government are making substantial supply of rice to the deficit Kerala State from Andhra Pradesh. Inadequacy of railway wagon for movement of rice to Kerala poses a problem which has to be overcome. A vigilant watch has also to be maintained over the price for rice which has not shown any fall corresponding to the increase in production particularly in Andhra Pradesh.

Industrialisation in UP

The decision of the UP Government to launch a programme for starting more industrial institutes in the State during the Third Five Year Plan will be widely acclaimed. According to the new scheme, which will entail an expenditure of more than Rs 8 crores, about 32 new industrial institutes will be inaugurated in the State for imparting technical instructions to 8,000 girls and boys in various trades and vocations. The implementation of the scheme has become a certainty, for, the Craftsmen Training Committee has accorded its approval to the proposal. The Committee also agreed to the proposal for conducting

evening classes for the benefit of the workers who are presently employed in the industrial units and other centres, and the reorganisation of the training wing of the Directorate of Training and Employment at the cost of Rs 4 crores.

More than 1000 candidates will be provided technical instructions in the initial stages under the apprentice training scheme. These classes will be held in selected centres to suit the convenience of the workers where they will be taught workshop mathematics, reading of blue prints, elementary trade theory and the use of precision instruments.

The contemplated reorganisation of the training wing of the Directorate of Training and Employment envisages an addition of about 1500 seats to the industrial units. In addition to this, provision has also been made to provide accommodation to the trainees as well as the instructors.

Besides, the Committee also sanctioned a sum of Rs 94.54 lakhs in order to finance the training schemes in the Industries, Agriculture, Community Development, Education and Social Welfare Departments. The private institutions will also receive financial assistance to the tune of Rs 18.67 lakhs.

It is to be admitted that the endeavour of the UP Government will provide only a slim chance for bridging the yawning gap between the demand and supply of technicians in the country. Similar efforts on the part of other State Governments are also eminently desired.

Rajasthan Plan

The Rajasthan Government have slashed the outlay on the Third Plan from Rs 279 crores as fixed in the original draft prepared six months ago to Rs 207 crores. The downward revision of the plan outlay was rendered necessary by a smaller Central Plan than was expected a year ago.

The State's contribution to the Rs 207 crores Plan has been tentatively fixed at Rs 98 crores. The balance of Rs 109 crores is expected to be provided by the Centre. Central assistance during the Second Plan was of the order of Rs 66 crores.

The important allocations for the various departments as stated in the revised frame are as follows: Agriculture Rs 10 crores, Minor Irrigation Rs 8 crores, Animal Husbandry Rs 7 crores, Cooperation Rs 5 crores, Community Development Rs 14 crores, Irrigation Rs 23 crores, Power Rs 40 crores, Industries and Mines Rs 12 crores, Roads Rs 18 crores, Education Rs 30.60 crores, Rural Water Supply Rs 4 crores, Democratic Decentralisation Rs 7.70 crores, and Welfare of Backward Classes Rs 4 crores.

The allocations for roads, education irrigation and power sections have been considerably

affected by the cut in the original plan outlay. But those for agricultural objects have remained more or less unchanged. In respect of industries there has been a slight increase and the allocation includes an amount of Rs 2 crores for the State's participation in the share capital of industries.

The new estimates of outlay excludes the cost of the Rajasthan Canal and the development of its command area which may be Rs 45 crores and Rs 8 crores respectively. No provision has been made for the dam across the Beas river at Pang which is now definitely to be taken in the next plan.

Railways in Kerala

With the Railway Minister's tacit declaration that the Railway Board had committed themselves to the construction of only 1,200 miles of new lines in the Third Five Year Plan and that nothing more could be done without extra allotment from the Planning Commission's Rs 1,225 crores, the Kerala Railway Users' Association has hit upon a new plan by which they hope to persuade the authorities to concede the suggestion of laying four lines in Kerala State.

If the Union Government says there are no funds for the construction of the lines asked for by the Association, then it suggests permission be given for formation of a corporation with limited liability to take up the work. It had also suggested that provision might be made in the articles of association of the corporation enabling it to surrender the lines to the India Government after 25 years of working on payment of compensation.

The railway lines asked for by the Association in Kerala are: Ernakulam-Alleppey, Kayamkulam, Ernakulam-Bodinaicknur, Trichur-Kollengode and Tellicherry-Mysore. About the economic necessity for these lines it is a hard fact these lines would provide the badly needed communication for trade and commerce between the State of Mysore, Madras and Kerala.

But the suggestion of the Association would not be in conformity with the policy of the Government who had nationalised railways long ago. When the general tendency is towards nationalising even road transport, it is hardly likely that the Government of India would ever accede to the request of the Kerala Railway Users' Association. Certainly privately managed railway communication would be careful about the returns over the capital outlay. Furthermore the present difficulty will be with regard to steel and other equipment shortage and therefore this suggestion born out of bad necessity for railway communication in the above areas for trade development is not likely to meet with any response. But it is worthwhile the Railway administration examines closely the desirability to open up these lines as early as possible.

WORLD OF BUSINESS

Steel in Plenty

The Australian steel industry generally, regarded as a war baby has rapidly grown to maturity and the rising steel output is the base of further economic development. Western Australia also with its iron ore reserves expects to start steel-making. It is the increase of 50 per cent in three years that calls for notice, even more than the cheapness of Australian steel compared with US or British-made steel at present. High wages do not raise costs and Broken Hill Proprietary, the largest industrial unit in Australia, is investing £26 million on its current development programme. The mineral extraction industry provides a stable domestic market for Australian steel. With a rated output of four million tons, Australia may become an exporter of steel to S. E. Asia and this prospect may cause some concern to India whose steel plants must have export outlets in picture. The manufacture of steel tubes is firmly established already and vehicle manufacturers abroad are buyers of welded tubing which finds use also in the manufacture of condenser coils, refrigerators, stoves, etc.

The export of steel alloys and products has expanded and Malayan mining enterprises are among the regular customers. The making of machine tools has grown apace and a new export line is found in the despatch of boilers. The base metal producers are among the steadiest customers for Australian metal-making firms at present and the steel industry is no longer limited to one State. The manufacture of road-making machinery locally is among the developments reported lately. Lighter engineering items like diesel engines are offered for export and Burma has placed an order for 600 pump-sets needed for irrigation and Malaya is getting steel rail-cars under the aid scheme. This falls under Colombo Plan aid. Orders from India for windmills for use in dry regions are also part of the industrial expansion which has resulted in the conversion of Australia, a primary producer relying on wheat and wool exports, into a new industrial rival for Japan too. One may add that Australia at present makes more steel than India and might command a market abroad for motor-cars as well as steel pipes in future.

Textile Impasse

A strike threat in the textile industry over the implementation of the Textile Wage Board's recom-

mendations is looming large in UP. The Suti Mill Mazdoor Sabha has given a call for a token strike in the local mills on June 27. Political parties including the Jan Sangh have extended their support to the proposed strike and a campaign is now in full swing to ensure the success of the strike.

The State Government have already apprehended trouble between labour and textile mill interests over the implementation of the Wage Board recommendations and are striving hard to avert a showdown between labour and management in the textile industry. A tripartite conference has been convened in the first week of July to settle the disputed points between labour and employers. The Conference will be presided over by Dr. Sampurnanand and will be attended by eleven employers' representatives and as many of workers.

So far as the imminent strike of June 27 is concerned, any move to avert it seems futile. For, the strike is being launched as a bargaining move to wring concessions from employers at the tripartite conference. Agreement at the tripartite meeting may however prevent a prolongation of the present deadlock. Such agreement does not seem impossible. For it has been learnt that the textile mill-owners are agreeable to recognise workers' claim for a wage increase as recommended by the Wage Board. This, however, is contingent on the willingness of workers to accept rationalisation. This suggestion for rationalisation is viewed with suspicion by trade unions for fear of possible increase in workload unrelated to increase in wages. It is this issue that has to be resolved at the tripartite conference. Since the recommendations of the Textile Wage Board have no statutory validity, it is on the good counsel offered by the State Government that hopes have to be pinned for a settlement of the dispute. Instances of agreement arrived in Bombay and Calcutta over the same troubled question may prove valuable.

Production of Fertilisers

The plea that the private sector should do more for increased fertiliser output has been certainly anticipated by many companies which have drawn up production programmes for making acids and heavy chemicals on which future fertiliser output is based. The new coke ovens will make their own contributions but it is now found that FACTS expansion programme at Alwaye like the diversification of interests by Blue Mountain Estates and the Cuddalore fertiliser project dovetail into the current agricultural development programme in India. Fertilisers are indispensable for intensive cultivation. The creation of a large fertiliser plant at Kothagudem is derived from the Singa-

reni Collieries' expansion programme and the A. P. Fertilisers—Government-sponsored undertaking turning out 60,000 tons of urea in addition to other fertilisers, will perhaps be in commission before the Neyveli fertiliser plant is in operation. The idea that private interests exploit users of fertilisers has been disposed of by an official inquiry into the conduct of ICI in the UK. There is no risk of monopoly, though home prices will perhaps be higher in India than that of imports secured from Japan. The advantage held by India, the availability of organic manure to supplement synthetic manure, calls for notice though any fall in oil-cake exports might have consequences for the strained balance of payments.

But a larger supply of plantation products might be looked for and a contraction in food imports predicted on the score of improved yields secured by application of fertilisers. The ICAR too thinks of fertilisers as the key to successful farming and the success of new floatations for production of fertilisers inspires a hope that investment in this branch of industry will increase especially after it is known that small scale farming in Germany is a success mainly because of an ample and assured supply of fertilisers. The Fertiliser Association of India for many years has prepared a handbook of great interest relating to needs and possibilities and the handbook has made it clear how much the existing establishments, for instance, EID & SF have achieved to extend tobacco and sugarcane cultivation. The strict regulation of the trade to prevent adulteration or other evils is inevitable and the country's needs may be said to justify strict control in this case.

Rubber Cultivation

The extension of rubber cultivation, and that too through the nucleus of public sector in Kanyakumari may compel one to ask why the existing estates in the district are not allowed to expand as expected. The experimental plantation may be due to a desire to make up on rubber the losses sustained on cinchona or the State Government's desire to give the Forest Department something to do in addition to cashew growing on the east coast. The experiment will, however, help other rubber-growers to explain what it takes to bring an estate into actual bearing, what is the capital cost per acre and what is the cost of production. However, the experiment will not help the growers who have been waiting for a revision of prices after the Tariff Commission's inquiry into costs by a check on actual expenditure incurred on selected estates.

The high price of rubber abroad, the shortfall in South Indian production and the high cost of synthetic have reinforced the case presented by rubber growers who point to the rise in taxes, wages and bonus as also the need to get extra capital to make use of reserve areas for cul-

vation of rubber. The wisdom of avoiding imports and helping home production to rapidly expand has been stressed often and yet no decision regarding rubber prices has come though strong rumours were current last month that the plantation companies' main demand for a rise in price had been accepted by the Tariff Commission. Apart from the small investor's stake in the estates, there is the need to get more rubber in the near future to find growing industries and if the Madras Government plantation shows what it costs to bring an estate into bearing, many will see that Indian rubber estates are not heavily capitalised as feared at one time and the steady rise in yield per acre is a satisfying feature of some company reports. For instance, Travancore Rubber and Tea, managed by Aspinwall & Co., Alleppey.

Palm Gur in Madras

In order to develop the Madras State Palm-gur and sugar industry which is carried on with obsolete machinery, a Rs 10 crore five-year scheme was outlined at Madurai last week by Mr. Gajanan Naik, Union Government Adviser on Palm gur production.

Long term loans would be made available for the purchase of equipment and machinery for provision of working capital for the industry.

Production and sale of palm jaggery would be reorganised on scientific lines through cooperatives at an estimated cost of Rs 4 crores. Twenty thousand film evaporators, a new method of closed neera boiling for jaggery, would be supplied to cooperatives in the State, a hundred godowns would be constructed in important production and marketing centres and provision would be made for fuel and raw material supply and for short term off-season loans for artisans.

Mr. Gajanan Naik further pointed out that one hundred neera selling units would be started in urban areas of the State at a cost of Rs 60 lakhs. From these units, pre-cooled and attractively bottled Neera could be made available for consumers.

White palm sugar producing units would cost Rs 1 crore. There would be a cooperatively-owned institution for production and marketing of palm leaf, fibre and timber products at a cost of Rs 2 crores. Waste lands would be utilised for palm tree plantations.

In Madras State, Mr. Naik stated about 3,00,000 depended upon palm gur and palm products industries for their livelihood. During the season they earned an average of one rupee daily. If the industry was organised on scientific and co-operative lines according to Mr. Naik's idea, he was sure the daily income of the persons would go up to Rs 3.

Palm products exported to thirty countries by India were valued at Rs 3 crores worth of foreign exchange. Forty-two varieties of brushes were made out of the fibre and exported, he said.

OWING to the combined ineptitude of the Kishi government and the State Department in Washington, Mr. Eisenhower has been subjected to needless embarrassment. At the best of times, this trip had its difficulties: There was widespread feeling in Japan that the centennial courtesy—diplomatic relations between Japan and the US were established in 1860—was gratuitously marred by being made to synchronise with the satisfaction of the security treaty between the two countries. During the last six months, long before the summit fiasco was even considered remotely possible in the form it took, there have been violent demonstrations against it. And about the time of the collapse of the Paris meeting, the pact was ratified by the Lower House only after the police removed the opposition members. And the week before last when Mr. Hagerty was mobbed and had to be rescued by a helicopter, surely the time had come to tell the President that the trip must await a more propitious hour. For some inexplicable reason, it was thought necessary that the visit must go through as scheduled but when the violence did not abate and when there was possibility of personal danger, the Japanese government asked Mr. Eisenhower to postpone the trip and the President had to agree. Though, considering everything, this was a wise decision, coming as it did after a whole series of bungling, it had given precisely the handle that the earlier decision to go through with the visit professedly sought to avoid. In fact, things have been made worse by the kind of briefing he had been given earlier and the kind of words put into his mouth. For instance, in a statement before take-off, the President said, as quoted by Time, "As you know, there have been public warnings that I should not visit the Far East at this time. If the trip now ahead of me were concerned principally with the support of a regime or a treaty or a disputed policy, if it were intended merely to bolster a particular programme, or to achieve a limited objective, such a journey would have no real justification. But this trip represents an important phase of a programme whose paramount objective was and is, to improve the climate of international understanding. We should not permit unpleasant incidents and sporadic turmoil inspired by misled or hostile agents to dim for us the concrete and gratifying results." I do not know why the Presidential advisers thought it necessary for the President to protest so much and so explicitly about not wanting to bolster a particular regime, with Formosa on the itinerary; or gratuitously to refer to a treaty,

with one setting off a series of riots. And above all, what a hopeless misreading of the situation to put such brave words into his mouth when it was plain that when it came to the sticking point, the trip may have to be cancelled! Even the bare possibility—let alone the near certainty of it, after the rough handling of Hagerty: after all it is rare for a press secretary to find himself in a situation to be rescued by helicopters after his car has been made immobile—should have made them choose your words, or better still, keep your own counsel.

The reason for this is the incredible obtuseness of the President's advisers. Any agitation is, in their eyes, a communist agitation and they triumphantly point to the singing of the Internationale as conclusive evidence of the fact. We who are used to processions, led even by congressmen shouting 'Inquilab Zindabad' know that it is no war cry of the proletariat but a slogan hallowed by use and affection. Again, for some reason, it seems to these people inconceivable that there may be valid reasons for Japanese with no communist axes to grind to object to an involvement which puts them in danger of a brush with a truculent and increasingly powerful neighbour. Neutralism is a dirty word with many people in the State Department, but is it inconceivable that a people who have been humiliated and defeated in a war only fifteen years ago and have experienced first-hand the horrors of nuclear weapons, should desire to be left alone? One can understand uninformed and wishfully thinking men-in-the-street making mistakes of the 'moods of the people'; but when people whose job it is to inform themselves and the President about these things delude themselves, and the President, it is inexplicable. And when Mr. Hagerty who was, as things turned out, on a sort of reconnaissance mission implied at a press conference after his 'rescue' that only a handful of communist professional agitators are against the treaty, one does not know whether to laugh or cry. Curiously, Americans on the spot have been pertinaciously trying to keep the boys back home informed about the true state of affairs. Robert Trumbull of the New York Times, for instance, wrote on the 13th of this

war. As it turned out, submitted hope turned to ashes in the mouth and international relations have become embittered and suspicious as at no time since the death of Stalin. The communists have naturally turned their propaganda guns full blast and neutralist opinion is, to put it mildly, not inclined to absolve the US of clumsiness, if not something worse, in the events that led to the collapse of the summit. It can hardly be denied that the most severe blow to Mr. Eisenhower's personal and Presidential prestige has been dealt by recent events. The hopes of bringing to a close his Presidency in a blaze of glory have been dismally shattered. The subsequent events have only made matters worse for him personally.

The impact of all these on the American Presidential election is largely a matter of speculation. The American politicians themselves are in several minds. Even in normal times, an election year is hardly one in which one can expect some clarity in party positions. This year, the summit fiasco has added to the confusion. Republicans, trying to live down the summit and U-2 disasters, and acting on the principle that attack is the best form of defence, try to traduce critics of the administration as, in effect, fifth columnists. Though nothing like a revival of McCarthyism is in evidence, it is clear that, if necessary some Republicans would certainly be willing to call criticism of the way the summit was 'botched' as Un-American. All kinds of meanings have been read into Khrushchev's desire to deal with the next President and the fear hinted that the next president, if democratic, will sell

the pass at the next summit. Some Democrats morbidly afraid of being labelled as not tough enough to communists, have fallen over backwards in professing their anti-communism. One of them has repudiated Stevenson's reasoned criticism of the administration over the summit and called him what no republican would have dared call him—'an apostle of appeasement.' Others, as reported, by Mr Robert Bendiner in the New Statesman, are trying 'a reverse twist' and accusing the Republicans as too soft to the Russians.'

All this, of course, may be the lunatic fringe, though in an election year you never can tell. But politicians of both parties are ready enough to concede the legitimacy of criticism and to set the limits thereof. Thus Mr Bendiner reports that Kennedy promptly repudiated the contemptible insinuations about Stevenson. Indeed he went to the extent of saying that the President could have with no loss of face, expressed regret.

Will the next President be a Democrat? This, of course, is the

64,000 dollar question. The chances are, he will, unless some overwhelming domestic issue, suddenly emerging, upsets all calculations. The series of disasters starting with the U-2 flight has undoubtedly left the administration's reputation at its nadir. This is a piece of luck for the Democrats, though as I showed above, its use has its dangers. The big question mark may yet be the personality of the contestants. Stevenson is still undecided, if not actually out of it. I personally think it a safe bet

that if he stands, he will be the next American President. (In this, of course, I may merely be unconsciously indicating my preference, which need not coincide with the American electorate's.) On the Republican side Mr Rockefeller's plans too, are not clear. There is perhaps a slightly better chance of his entering the fray at the last moment than Stevenson's. Whoever gets elected, he will have his hands full with the Russians. And this is a thought that may well deter many another intrepid spirit. EAVESDROPPER.

Long, long ago, mathematicians in India hit upon the idea of using the zero. This led to the use of numerals—a revolution in the art of calculation. To live, man must count, weigh and measure. Governments must draw up their budgets, business concerns must assess their performance and even individuals must keep a close watch on their earnings and expenditure. All this is done with the language of numbers based on the zero. For, without it, it would be difficult, if not impossible, to transact business on a national or a global scale, or work out the ambitious plans for economic regeneration.

Thanks to the use of numerals, it is possible to calculate that the consolidated after-tax profit from Standard-Vacuum's Marketing and Refining Operations during 1959 amounted to Rs.120 lakhs, representing a 3.0 per cent return on the capital employed; or that Stanvac paid Rs. 2,687 lakhs as taxes and duties—an amount which was almost 22 times Stanvac's net income; or that Stanvac worked on a margin of profit of roughly 1.4 naye paise for every gallon of product sold.

Again, it is the language of numbers based on the zero that enables us to convey the fact that, during the year, Standard-Vacuum expended Rs. 89 lakhs in new additions to plants and equipment of its Marketing Operations, Rs.102 lakhs on its Refining Operations and Rs.106 lakhs for search of oil in West Bengal.

Planning in the States

WAYS and means of accelerating the pace of industrialisation of Maharashtra were discussed at the two day Maharashtra Commercial and Industrial Conference held in Bombay last week. This is the second meet of its kind and is sponsored by the Maharashtra Economic Development Council which itself has its origin in the first Maharashtra Development and Industrial Conference held in December 1956. With a view to giving a fillip to industrial activity to the Maharashtra region of the former bilingual Bombay State, the Maharashtra Chamber of Commerce brought together in a conference all Maharashtra interests to discuss matters of industrialisation. The conference was inaugurated by Mr Y. B. Chavan, and evoked spontaneous response from a number of Chambers of Commerce in the region. The underlying idea of the conference is to present to the authorities the needs of the State both in agricultural and industrial development as the representative of the various commercial and industrial interests in the region. Prof. D. R. Gadgil who is the President of the Maharashtra Economic Development Council, in a special note prepared for the conference, has outlined the main principles that should govern the formulation of the development plan for the Maharashtra State. Any future plan must have as one of its main objectives the uniform development of the whole State. Prof. Gadgil has given as an example of past lopsided development, the growth of the railway transport system in the country. The development of the railways followed largely the needs of export and import of an alien Government not much interested in the economic development of the country; and that explained the comparative slow growth of the interior regions. Economic activity in general was also confined to the main port towns. The planned development programme undertaken during the past 10 years has somewhat reduced this concentration. In order to remedy this defect, it is essential that the areas that have not received the requisite notice are now given special attention. Industrially backward regions are those that do not provide the basic industrial facilities in such measure as the favoured regions. Industries tend to concentrate in regions where transport, power, water etc., are readily available. It will be evident, therefore, that if backward areas are to attract entrepreneurs they should also provide the requisite facilities without undue

difficulty. Prof. Gadgil has further suggested that since one of the drawbacks of these regions is the lack of knowledge in industry and finance, it will be necessary to bring into these areas active elements well-versed in such technique.

Another important direction in which the State Plan must direct its concerted effort, according to Prof. Gadgil, is the utilisation of the large available man-power. This is to be done on the acceptance of the principle that no one in the country should go hungry. From this it will be easy to require something in return from those who get their food from the Government. Prof. Gadgil concludes his note with a plea for bringing the State Plan to the remotest corner of the State. That is to say, the people must be enabled to take active interest in the development programme and this is possible only if the State Government retain in their hands sufficient freedom in drawing up their plans. The present practice of abdication all initiative in favour of

the Planning Commission, Prof. Gadgil avers, has stood in the way of real progress in the States.

The need for ensuring uniform development of the State has also been stressed by Dr. C. D. Deshmukh, in his presidential address to the conference. He has pointed out that the desire to develop the State as a whole should not be taken as a step to reduce the importance of the city of Bombay. On the contrary, the fuller development of the backward areas will only further enhance the importance of the city. In any event it is only proper to view Bombay city as the natural centre of activity for the whole of the State. One of the misconceptions that Dr. Deshmukh rightly wants to be removed is the notion that only certain sections of the people can make good businessmen. Such a notion was perhaps valid in ancient times but not in these days of vast technological developments. It may be true that a new managerial class is emerging in the modern industrial society but what is to be noted is that this class has

nothing to do with class or caste in its origin. It is primarily based on a particular kind of talent that has come to characterise modern managerial class.

As Governor Sri Prakasa has noted at the annual meeting of the Productivity Council, one of the main tasks of the planners in our country is to ensure that the migration from rural to urban areas is put an end to. Even with all that has been done to rehabilitate the rural population, the urban area continues to attract people from the villages. This is a phenomenon that requires to be thoroughly enquired into because the success of all our development programmes depends to a large extent on effectively arresting this continued migration. The obvious reason for the attraction of the urban areas is the increased facilities available in the latter for a better living. So long as the rural areas are lacking in some of the essential requisites like medical and educational facilities it will be difficult to reduce sizably the attraction of the urban areas.

The moment fell flat

This was her moment of triumph. But as she reached high to display her handiwork to proud parents, they heard the rip of fabric. This fabric was recently sewn into a pretty dress. So new was the dress that it had only been washed once! But look how it has shrunk!

If only someone had told this child's dismayed mother to look for the label 'Sanforized' on every yard of cotton fabric, this dress would not have shrunk out of fit.

Look for **'SANFORIZED'** on the label and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

OLYMPUS

Rehabilitation Problems

DR B. C. ROY, Chief Minister of West Bengal, and Mr P. C. Sen, Rehabilitation Minister, were in New Delhi last week to discuss with the Prime Minister, Mr Nehru, the continuing problem of rehabilitation of displaced persons with particular reference to the Dandakaranya scheme. According to a press note issued by the Prime Minister's Secretariat, there was "general" agreement as to the steps to be taken to expedite rehabilitation of displaced persons and the proper functioning of the Dandakaranya Authority. The Central Government's "hope" is that the major part of the work of the Ministry of Rehabilitation will be over within a period of twelve to fifteen months. It is thought that such part of the work as may still remain can be distributed to other Ministries of the Government of India or to the West Bengal Government so that the Ministry of Rehabilitation as such could be closed.

As far as the Dandakaranya Authority is concerned, it has been agreed that it should be given a considerable measure of autonomy and be asked to prepare a general five-year plan and a more specific plan for the year. It will prepare its own budget which will then have to be approved by the Government of India. According to the press note, it is expected that the Dandakaranya scheme will continue to develop in a big way for many years to come. To begin with, however, its chief function will be to rehabilitate displaced persons from East Pakistan. For this purpose the first priority will be given to the displaced persons at present in camps in West Bengal. Later, other displaced persons will also be considered for further rehabilitation. The attempt will be to build up integrated communities which means not only agri-

culturists but skilled workers and artisans. Displaced families sent to Dandakaranya will be provided with shelter, certain facilities and work pending full rehabilitation. During the initial period their work may be subsidised. All those who are sent to Dandakaranya, the press note concludes, will have the assurance of being rehabilitated there.

This "general" agreement between the Central Government and the West Bengal Government has held out the "hope" that the problem of refugee rehabilitation may be fully solved after 14 years from the time of Partition. The anxiety of the Central Government to wash its hands of this vexed problem as early as possible is understandable, all the more so because the Bengali rehabilitation problem, unlike the Punjabi rehabilitation problem, has been unduly protracted in point of time and been unduly taxing to the patience of the Government here. But the dimensions of the problem, as revealed by the minutes, just available of the sittings of the Estimates Committee relating to its 96th and 97th reports, are such that the "hope" may not have an early or easy fulfilment.

One crucial aspect of the problem is that the Bengali refugees, unlike the Punjabi refugees, have been generally reluctant to be rehabilitated anywhere outside West Bengal. That this attitude still continues could be easily seen from the recorded evidence of the representatives of the United Central Refugee Council, Calcutta. These representatives were of the view that "if the Government had seriously and honestly pursued the problem on the lines suggested by the Committee of Ministers (in 1954), they could have found sufficient land in West Bengal itself for rehabilitating even the additional 40,000 families who had migrated during that period (1954-58) and who were primarily agriculturists." They suggested that the Bainanama scheme which had since been stopped should be kept open for some more time because it provided scope for displaced persons to get some land from the landlords and to resettle

by themselves on that land. They also pointed out that a Committee set up by the West Bengal Government had reported on the availability of two lakh acres of dry land in Midnapur, Bankura, etc., but that its proposal in this regard was not pursued. According to another witness, Mr Aurobindo Ghosal, M.P., there was a feeling that no proper assessment had been made as to whether there was scope for settlement of displaced persons in West Bengal itself. He added that in a district like Purulia there was sufficient space which could be reclaimed and where displaced persons could be settled.

An official witness, however, stated before the Committee that in West Bengal, due to the very large land hunger among people, not enough land was available for resettlement of displaced persons within the State. Even then the West Bengal Government had tried to reclaim land at Bagjola, Sonarpur and Arapanch with the loans given by the Agriculture Ministry of the Centre and settle agriculturist displaced families there. A large number of displaced families were actually taken down to rehabilitation sites after land had been reclaimed with their help through spending lakhs of rupees. As soon as the land had been reclaimed, the local landless people put forth their claims of title to that land although their names did not appear anywhere in the revenue records. The Government, the official witness continued, did not want to use force to throw the local landless out of that land because that would have resulted in bloodshed.

Evidence on the availability of land outside West Bengal for rehabilitation purposes was equally conflicting. According to Mr Tridib Kumar Choudhuri, M.P., in 1956 there were 1.02 million acres of land available outside Bengal for the displaced persons from East Pakistan. Up to 1958, the Government could prepare schemes for rehabilitation on such land to the extent of about 50,000 acres only. In terms of the number of displaced persons settled, the schemes were ready for taking 40,000 people in 1958, out of whom rehabilitation was actually afforded to 17,000 people only. The official witness, on the other hand, stated that the total amount of land estimated to have been available outside West Bengal included forests, banjars and water-logged areas and that, if such uncultivable land was excluded, the extent of land available for settlement of displaced persons was certainly not one million acres or so. Even the Bainanama scheme could not be kept open by the Central Government as it led to land speculation and trouble in West Bengal and in the neighbouring States where there was great shortage of land.

It would appear that the official witness had made out a case for greater reliance on the Dandakar-

anya scheme for rehabilitating 20,000 families (out of the existing 32,000 camp families) by the end of its first phase upto 1961. Other schemes in Uttar Pradesh, Madhya Pradesh, Rajasthan and West Bengal were also expected to absorb a certain number of camp families. Leaving aside the possibilities of these schemes, the question, arises whether 20,000 families can be rehabilitated in Dandakaranya by the end of 1961. Not more than 400 or 500 families seem to have been settled there so far. According to the United Central Refugee Council, displaced persons have been reluctant to move to Dandakaranya because of their bitter experience in the past. The policy of the Government in offering the Dandakaranya scheme as the sole avenue of rehabilitation to displaced persons under the threat of stoppage of doles would not persuade them to go there. In the Refugee Council's view, certain non-camp displaced families who are ready to go to Dandakaranya but who have not been selected by Government for rehabilitation there should be first settled so that they might set an example for camp families and encourage them to move in.

It seems to be pretty clear that in the context of the officially-confirmed scarcity of land for rehabilitation purposes in West Bengal and in other States, there is no alternative to the Dandakaranya scheme for settling the larger part of the refugee population. But the problem of persuading (or compelling) the camp families to go to Dandakaranya will still be there. Whether the assurance contained in the press note of the Prime Minister's Secretariat to the effect that "displaced families sent to Dandakaranya will be provided with shelter, certain facilities and work pending full rehabilitation" will induce the camp families to go willingly and cheerfully to Dandakaranya is by no means clear. Much will depend on the attitude of the United Central Refugee Council and of the opposition parties in West Bengal. If they do not cooperate with the West Bengal Government in the matter of persuading the camp families to go to Dandakaranya, compulsion as such may not solve the problem which, then, may well come back to the Centre. It may be a wise thing to send the families to Dandakaranya only after the facilities for permanent rehabilitation have been fully created there. After all, the Government of India have been holding the baby for so many years. It should not mind holding it for some more years. Against the expectation of "fullest cooperation between the Central Government and the West Bengal Government in all matters concerning rehabilitation of displaced persons and the Dandakaranya scheme" may have to be set the unpredictable attitudes of the opposition parties and of the refugee families themselves in West Bengal.

Indian Finance

Namaste and good-bye, my friends

Over the last 3 years I have had the pleasure of talking to you about an industry which is vital to India's economy—the tea industry. And in answering your questions we have learned a great many things about the tea industry... how it employs a million people, how it contributes crores for public revenue and earns vital foreign exchange.

But all good things must come to an end and it is time for me to bid you good-bye.

Before doing so, I would like to leave you with the thought that tea is important not only to India but to you—because you spend your hard earned money on a packet of tea and you are entitled to judge whether you get a fair deal.

Yes, complex as it is, the most important man in the tea industry is still you, the consumer.

It is for you that Brooke Bond have established 5 factories, 32 branches and over 2000 depots. Your demand for good tea keeps the huge Brooke Bond organisation striving to maintain and improve their unrivalled standards. It is to serve you that Brooke Bond have perfected their system of direct distribution whereby over 5 lakh shops receive supplies at least once a week, if not more often, throughout the year. For nothing is more important to Brooke Bond than to make sure that they give consumers good tea and full value for their money.

Yes, your interests are in good hands, my friends.

Namaste!

Brooke Bond India Private Limited

Pay Commission's recommendations

There is a general agreement that the Madras Pay Commission, whose recommendations were announced here early this week, has done an exceedingly good job in revising the salaries of the Government servants. The new scales would at present add Rs 5 crores to the Rs 26 crores of salary bill and the increase is expected to go to over Rs 7 crores considering the involvement of pensionary contribution.

The Pay Commission's recommendation of a minimum wage of Rs 60 for a peon under the Government (last grade employee) was accepted by the Government. For the 'white collar' jobs, the Government have accepted the Commission's recommendation of the minimum of Rs 100 per month.

Generally the Madras Pay Commission had taken the line of the Central Pay Commission in fixing the D.A. and merging the bulk of it with the basic pay. The revised dearness allowances in line with the Central Pay Commission are: Rs 10 up to a basic pay of Rs 150, Rs 20 upto a basic pay of 150 and below Rs 300. There will be no dearness allowance for employees drawing more than Rs 300 as basic pay though there will be marginal adjustments in the case of those drawing pay between Rs 300 and Rs 320.

Thus the revised pay scales have to be understood as representing firstly a formal increase due to the absorption of the bulk of dearness allowance with pay and secondly, as a real increase representing the improvement of the revised scales over the existing scales. A like-for-like comparison can, therefore be made only between total emoluments in both cases.

It is interesting to note that the Pay Commission has drastically cut the existing 500 grades into one hundred. This is indeed a simplified process which removes confusion lending itself to various kinds of interpretation of the departmental heads. Unduly long scales have been considerably abridged. Employees at various levels would hereafter reach their maximum emoluments much sooner in their career and will have the benefit of the higher maximum in the revised scales for longer periods. Retirement prospects are thus improved. Higher rates of increment have been generally provided in later stages in keeping with the increased domestic commitments of the employees at that stage. Overlapping of scales between promotion posts and feeder posts have been reduced to the minimum thereby ensuring real monetary increase on promotion.

Technical staff serving in the various development departments of Government have been given a substantial order of increase. This was a long standing complaint against the Government. The Pay Commission's recommendations in respect of these categories of staff have been accepted in toto.

For example a Junior Engineer who was getting Rs 150-10-250 would, in the revised scale get Rs 225-15-375.

Assistant Engineers getting hitherto Rs 253-30-2/380/40/2/560 would get Rs 350-25-650. Biannual increments have been scrapped and there would be only annual increments.

Lower Division clerks in the present scale of Rs 45-3-60-2-90 would get Rs 90-4-110-3-140. Upper division clerks would get according to the new recommendation Rs 125-5-175 against the present scale of Rs 80-5-110-3-125.

The substantial beneficiaries are the teachers, employed all over the State, whether under Government, local board or aided institutions.

There are about 1.73 lakhs of Government servants in the whole State of whom about 40,000 are gazetted officers. There is no appreciable increase in the pay of non-technical gazetted officers.

Explaining the recommendations to Pressmen at the Secretariat Mr C. Subramaniam, State Finance Minister, stated that there are 1.13 lakh teachers in the State under all agencies.

The Wage increase for the last grade government servants would total Rs 15.26 lakhs, Rs 28.74 lakhs for lower division clerks, Rs 9.27 lakhs for the upper division clerks, Rs 28.56 lakhs for police constables, Rs 16.85 lakhs for head constables and Rs 5.12 lakhs for sub-inspectors.

But the teachers getting Rs 237 lakhs account for about 43% of the whole expenditure involved in these recommendations, Mr Subramaniam said.

As for industrial workers the Government have accepted the revised scales of comparable staff.

Weightage is also given in the formula of pay fixation. The Government have accepted the Commission's recommendation of giving one increment for every three completed year of service for non-Gazetted staff in addition to the fixation at the next stage.

Even temporary contingent and work-charged establishments of the Government get the benefits of the pay revision.

Computed on the basis of percentage, the new scales represent for lower grade teachers in Government schools 239 per cent of present basic pay, for police constables and higher grade teachers 217 per cent, for lower division clerks and secondary grade teachers 200 per cent and for upper division clerks 156 per cent.

For pensioners drawing Rs 100 or less there is an additional increase of Rs 4.

There is also the house rent allowance of Rs 10 below the basic pay of Rs 90, Rs 15 between basic pay of Rs 90 and Rs 300 and Rs 20 between basic pay of Rs 300 to Rs 500.

The Government do not feel hopeful of attaining parity with Central Government's pay scales since the resources of the State are not enough for this.

There is one interesting recommendation of the Commission in respect of the 17000 Government em-

ployed peons whose annual wage bill is about Rs 1.2 crores. The Commission has observed that the new recommendation would involve an additional amount of Rs 15 lakhs annually. The institution of peons is largely a relic of the past when labour was cheap and a man's position in society indirectly depended on the number of retainers he had. These notions have to be radically revised, the Commission has said, and recommended that in large offices such as the Secretariat there should be a reception room with adequate telephone arrangements and a small pool of peons from which officers could draw instead of a peon being attached to each office.

The Government of Madras have also fallen in line with Central Government's decision on cutting the annual festival holidays to 15 a year instead of 26 as at present. The second Saturday of the month will be observed a holiday instead of the penultimate Saturday.

The Finance Minister claimed that the new scales of pay reflected the goal towards a welfare state and provided a transition from what was merely a police state.

The Commission consisted of Mr K. Ramunni Menon, I.C.S. (Retired Chief Secretary, Madras), Mr P. Ramakrishna Iyer, I.C.S., and Mr G. Ramachandran, I.A.S.

The Commission was appointed in February last year and the report consisting of 500 printed pages was submitted to Government on April 5, 1960.

What matters in the Commission's recommendations is the grouping of comparable kinds of work. The reduction of the grades into a hundred was made possible only by this grouping. Also the scope for injustice has been considerably narrowed down. It would be obviously not proper to compare the present recommended scales with the Central Government's.

Thus the Madras Government have boldly committed themselves to the additional involvement. Compared to the Central Government's attitude which would accept a commitment upto only Rs 18 crores, Madras Government's decision has been hailed by the Press as a good example setter. State Government servants have other facilities in the present set up like school fees abolition for their children, free medical aid and others.

These represent additional benefits and all told the Madras Government servants' increased salaries should be deemed to be a good beginning towards, if one may hope, reaching the Central pay level.

Thus by and large, the Commission's report has been well met by the public. It is only the reaction of the employees is yet to be gauged.

Finally, the acceptance of the Commission's recommendations only go to show how anxious the Government were in meeting the demand of their employees who have been caught in the vortex of rising prices which the concerted efforts of the States and Centre have failed to bring down.

“As a direct result of research by the Oil Industry, refining processes are becoming increasingly complex, for as a result of this research not only are new and more specialized products being produced, but methods have also been devised for more efficiently converting Crude oil to meet the constantly changing pattern of commercial requirements. With a capacity to refine 2.6 million tons of Crude oil per year, the Burmah-Shell Refinery is the largest in India.”

WORLD OF JUTE

Early Steadiness Not Maintained

JUTE markets which displayed a hardening tendency earlier in the week closed on Wednesday on a quiet note. Last Week's news of a rise in US burlap consumption during May has been followed by reports of fresh business in both the principal categories of goods. US and Argentine have been showing increasing interest in hessian while Australia has been making sustained inquiries in cornsacks. Toward the close of

the week, substantial business has been reported done with Cuba and this news has somewhat helped to arrest the downtrend in prices. In the meantime the Government of India are reported to have invited tenders for the supply of near delivery B Twills. It is no surprise, therefore, that prices were marked up. As regards the near and distant deliveries of raw jute there have been fresh doubts: raw jute arrivals last month have fallen to very low levels and there have been reports of heavy rains in the growing areas. But these bullish factors soon lost their influence in the absence of fresh business coupled with the weakness of the raw jute section.

Although the trend of raw jute arrivals during May has confirmed the belief that old crop supplies will dwindle to meagre proportions at the far end of the current season, the fact that mills have continued to evince little interest in old crop jute has rendered higher price levels untenable.

Mills, however, have been showing some interest in new crop but here too sellers could conclude business only at discounted rates. It would appear that so far the paucity of old crop supplies and reports of excessive rainfall in the growing areas seemed to have had little effect on the rate of mill purchases. Presumably sellers have realised that mills are determined to cut down consumption rather than pay high prices for their raw material requirements. Despite unfavourable weather reports from the growing areas there has been nothing so far to show that the outturn would be adversely affected. News from Pakistan is quite encouraging and indications are that the setback due to the drought would be fully offset by increased sowings. Indicative of the return of realistic trading conditions is the decision of the East India Jute and Hessian Exchange to remove the margins effective 1 July on transactions up to 300 bales of B Twills, 300,000

yards of hessian and 1500 maunds of raw jute.

The jute goods market opened the week on Thursday on a rather subdued note but soon the trend tended to be upward. The improvement in sentiment largely stemmed from the reported purchase of 10,000 bales of B Twills for near delivery by the Government of India against their earlier tender. Hessian 40" x 10 oz June steadied up to close at Rs 48.40 on Friday with B Twills at Rs 134.75. Saturday witnessed a further substantial improvement in rates following covering business in both hessian and sacking. The uptrend in prices was also helped by reports of sizable business done in hessian with US and the Argentine. Hessian 40" x 10 oz June gained 20 nP to be placed finally on Saturday at Rs 49. B Twills added another Rs 1.75 to stand at Rs 136.50. The firmness, however, proved short-lived as when the market reopened on Monday prices began to yield ground on selling pressure. The reactionary tendency stemmed from the futures section which ruled easier presumably following lower advices from the fibre market. By close of the day, hessian 40" x 10 oz June came back to Rs 48 with B Twills marked down by Rs 2.50 at Rs 134. Sellers dominated proceedings on Tuesday and although there was some covering business in heavy goods, sentiment continued to be weak. Hessian 40" x 10 oz June dropped another 50 nP to close the day at Rs 47.50 while the loss in B Twills was 85 nP at Rs 133.15. Prices yielded further ground on Wednesday also following selling pressure in the futures market. Reports of business in cornsacks with Australia and in Heavy Coes with Cuba had little effect on sentiment and Hessian 40" x 10 oz June lost another 50 nP to be placed at Rs 47 while B Twills dropped Rs 1.15 to quote at Rs 132.

The raw jute market ruled steady in early dealings and sellers in new crop were rather reserved while mills showed some interest. Assam Bottoms old crop June-July delivery was quoted at Rs 43.50 on Friday and improved further to Rs 44 the next day following continued mill interest in near delivery new crop. Presumably sellers were influenced by the fact that arrivals of raw jute during the eleven months ending May 1960 were substantially lower 5,480,000 bales as compared with 6,199,800 bales in the corresponding period of last year. The low level of arrivals seemed to have had little effect on mills who continued to ignore old crop. It may be noted that such a development has been anticipated by the industry and the recent IJMA decision to allow mills freedom to seal looms is intended to tide over the crisis in raw material supply till the new crop moves into the markets in quantity. From Monday sentiment in raw jute became easier and Assam Bottoms old crop June-July declined to Rs 41.50.

WORLD OF TEA

Crop Prospects

THE drought, which prevailed in the North Indian tea districts, during the early months of this year, was broken by welcome rain in the latter part of May, although some districts still remained very short of rain at the end of the month. The drought has naturally varied in its intensity in different districts. According to the existing records, the drought, in virtually all areas, has been unprecedented.

According to the monthly review, issued by Messrs Carrut Moran & Company Private Limited

for May, the warm winter in Darjeeling led to an early and large first flush; but hot dry winds in April and early May encouraged red spider and affected new growth. It seems certain that these conditions, followed by heavy rain when the drought broke, will limit the quantity of second flush tea. Nevertheless, from the few teas seen so far of this growth, it seems that a few invoices of good quality may be offered.

In the Dooars, most areas received useful rain in March, which gave an abundant early flush and put many gardens ahead of the previous season in crop until the middle of April. Nevertheless, good rain has fallen during the latter part of May and favourable conditions from now onwards may well result in little or no over-all loss of the crop over the whole of the year.

Cachar has suffered possibly more than any other district as, with favourable climatic conditions, estates in this area can

make a sizable proportion of their whole crop in April and May. It seems doubtful if any higher level of prices, which might reasonably be anticipated, can compensate this district for its losses. A few estates had not even made a pound of tea by the middle of last month.

The various districts of Assam have experienced widely varying fortune. While Upper Assam has generally suffered from a shortage of rain, this has not been so severe and the drought is unlikely to have such lasting effect. In many estates, it seems reasonable to hope that any loss in crop will be fully recovered by the end of the season, given favourable weather conditions from now onward. From this district, there may be a short, but possibly a good second flush. Some attractive tip has been seen from some gardens, making orthodox grades.

While some estates seem likely to be very short in crop this year, it is still too early to anticipate any

substantial decline in the total North Indian crop over the whole season. Much will depend on the climatic conditions over the remaining months of the season. Producers will, however, naturally look to a rather higher level of prices, particularly for their lower grades if their losses are to be offset.

At this stage of the season, there seems some reason to hope that the market for Common teas will open on a rather higher basis than last year. But, the large crops, being manufactured in Ceylon and South India since the beginning of April, must be viewed with some anxiety by North Indian producers.

Meanwhile, stocks of tea in Calcutta warehouses, at the end of May, were lower at 184,235 chests as against 216,889 chests on the corresponding date of last year. Teas afloat were also lower at 1,937 chests as compared to 8,559 chests. The decline in both spot and afloat stocks of tea is attri-

buted to lower outturn in North-East India where 37.2 million pounds were produced up to the end of May as against 54.1 million pounds in the corresponding period of last year.

Although there is a fall in the quality of tea on offer, the market for good teas remains firm in London. Dealers are saying that they expect considerably higher prices later in the year when the "second flush" North Indian teas begin to come on to the market. The large Ceylon crop (158 million pounds), in the first quarter of this year as compared to 140 million pounds in the same period of last year, may do something to alleviate the shortage. But, the heavy rain in Ceylon, while increasing the quantity, has rather

spoilt the quality of the crop, so that, in spite of Ceylon, a fairly severe shortage of fine teas is to be expected later in the summer.

Tea stocks in London, as on 10 June, totalled 134.99 million pounds as compared to 139.43 million pounds in the previous week. Total amount to be landed on the same date was 8.60 million pounds. Total afloat was 18.80 million pounds including from Calcutta 2.22 million pounds; from Chittagong nil; from Cochin 5.02 million pounds; from Ceylon 9.16 million pounds and from other Ports 2.41 million pounds. The average price realised at the auction held during the week ended 40 June was 46.73d per pound as compared to 48.38d in the previous week and 55.69d a year ago.

Stalemate Lingers

THE stalemate in the Bombay cotton futures market continued during the past week also and the official trading was rendered impossible as the contract tended to rule above the effective ceiling. Unofficially, the price of the contract fluctuated between Rs 801.50 and Rs 808. The brokers and dealers were, therefore, left inactive, and no silver lining can be expected in the gloomy horizon unless the ceiling rates are enhanced substantially and the weather conditions also continue to be propitious throughout the season. Meanwhile, the trade is eagerly waiting for the announcement from the authorities regarding the higher ceilings and the delay in enunciating the Government of India's policy for the ensuing season has left the trade gasping.

STOCK MARKET:

In striking contrast to the phlegmatic conditions that prevailed in the futures market, the spot market at Sevri continued to be cheerful with broadening mill demand for indigenous cotton. The mills were eager to cover their requirements fearing that scarcity of cotton may occur at any time. Hectic buying was reported by mills from Ahmedabad, South India, and other upcountry centres. Keen interest was reported in Kalyan, Jayadhar, Laxmi Co 2, L 147, Digvijay and Vijay.

Among the imported styles, Mwanza cotton continued to be in the limelight. It is stated that the Ahmedabad interests purchased more than 7,000 bales of this growth alone. Sudan, Busoga BP, 52 and some varieties of American cotton were also in moderate demand.

Advices received from the shippers divulge the information that Washington has issued an authorisation to enable India to purchase 320,000 bales (500 lbs each) of American cotton under the PL 480. Although the staple length of the new authorisation is not specified, it is understood from reliable centres that the entire quantity will consist of staple 1" and below. The information of the new allocation to the Textile industry was like a shower for a thirsty land, for, apart from relieving considerably the present shortage of medium staple domestic cotton, it can, to a great extent, help to check the rise in prices of cotton of this grade. From the beginning of the current season, the Government of India have so far issued import licence for foreign cotton to the tune of 12.10 lakh bales (400 lbs each)

Indian Finance

and by the time the current season ends import allocations are expected to approximate 16 lakh bales.

This would, as is anticipated, help to start the coming season in a more confident and comfortable manner.

The estimates of mill production for the month of May indicate an improvement of 7 million yards of cloth to 414 million yards. Yarn production also shot up to 138 million pounds. The cloth stock with the mills also rose to 2.75 lakh bales from 2.74 lakh bales in the previous month.

The quantity of cotton licensed for import and actual arrivals thereof from the beginning of the current season till the beginning of June are as under:—

	(from 1.9.59 to 4.6.60)	(in bales of 400 lbs)
Variety	(a)	(b)
American	394,744	137,298
Egyptian	180,184	176,618
Sudan	87,231	72,464
East African	131,662	109,928
Peru, Pakistan & Others	118,338	52,810
Total	912,159	549,118

(a) Qnty. licensed.

(b) Actual Arrivals*

*Arrivals include quantity licensed during the previous season too.

NEW YORK COTTON MARKET

Trading in the New York cotton futures market continued to be light and the net changes in the prices were rather insignificant. Cotton owned by the United States Government, sold for unrestricted use during this month totalled 53,429 bales. This has pushed the aggregate sales under this programme to 3,509,096 bales.

The total entries into the 1959 cotton loan during the week ended 10 June remained unchanged at 334,946 bales. Repossessions for the above period were to the tune of 5,172 bales taking the total to 186,177 bales.

LIVERPOOL COTTON MARKET

Activities in the Liverpool cotton futures market have been practically nil. Occasional trade covering orders failed to hold prices against light hedge selling and the new crop position was reported to be a shade easier. Demand for ready and shipment cotton is gradually recovering. Sales during the last week in all the available growths amounted to 11,600 bales.

Trading in the yarn and cloth market has been well maintained and the general inquiry continued to be on the increase.

ALEXANDRIA:

Reports from Alexandria reveal that during the week under review prices for all contracts registered some improvements. However, the week witnessed dull sessions with routine dealings for the major part. The spot market was also reported to be calm.

Export sales from the beginning of the current season till the end of May amounted to 1,106,325 bales.

Squeeze in Rubber?

ACCORDING to reports from London, there is a good deal of confusion in the London market on just what are the basic facts behind the recent developments in natural rubber. It is generally accepted, however, that the recent sharp rise in top grade rubber for immediate delivery was a consequence of some dealers finding themselves forced to buy at any price to meet commitments entered into previously.

The price for top grade rubber, which rose to 42½d per pound last month, has now fallen back by almost 3d pound and the immediate pressure on supplies is reported to have eased considerably. But, the current level is still above the previous peak of last November and the price is still very sensitive to market developments.

With the market in this mood, dealers in London say that there is still the possibility of a new squeeze. The latest figures for commercial stocks of natural rubber in Britain show that, although the total stocks at the end of April were seven per cent higher than at the end of March, they are still one-sixth below the level of the comparable figure of last year. Furthermore, some of these stocks are believed to include rubber earmarked for re-export to the Soviet Union. If this is correct, commercial stocks of rubber in Britain, at the end of April, were sufficient only for a week's supply for the whole country.

Meanwhile, the Keraia Government's scheme to bring, under rubber cultivation, three to four lakh acres within the next five to six years is receiving enthusiastic support of the people. According to the bare outline approved by the Government, it is proposed to make available, for rubber cultivation, 20,000 acres of forest lands next year. Of this, 4,000 acres will be given to landless peasants in 7-acre plots. Another 4,000 acres will be divided into 10-acre plots, which will be sold at a tariff price to middle-income group of cultivators. No financial assistance is contemplated for them. Another 2,000 acres divided into plots of about 500 acres will be sold in auctions and they are intended for planting companies. The rest will be cultivated directly by the Government.

Pepper

The Pepper market is still extremely sensitive to any rumours that may happen to appear. Price movements in the Cochin market are erratic, being influenced by alternate buying and selling in both ready and forward positions. If Russia stands for some time, there are chances of Malabar going down, since growers and holders who are holding high-priced goods are likely to get tired. It is within the bounds of possibility that those growers, who are stiff at present, may become easy sellers when prices fail to improve and

is the possibility of getting a remunerative price for natural rubber. It is not known how long the present insulated price policy will continue and how long the Government will be prepared to concede the demand of rubber growers to provide an economic price. The natural rubber industry in South, which has had no occasion so far to compete with synthetic rubber, will have to do in the near future when the synthetic rubber industry is established in this country.

Coffee

According to the Coffee Board, receipts of coffee seeds from the 1959-60 crop, up to the end of May 1960, amounted to 47,833 tonnes against 44,885 tonnes in the corresponding period of last year. Receipts of the Plantation variety were the highest on record totalling 25,045 tonnes in the season under review against 17,697 tonnes in the 1958-59 season. Though the arrivals were slow, the bulk of the coffee has been cured and made available for release. The next crop is estimated at the peak figure of 53,000 tonnes comprising 31,000 tonnes of 1958-59.

The release of coffee, in the internal market during May, amounted to 2,407 tonnes against 2,338 tonnes in the corresponding month of last year. Total offtake by the internal market, in the first five months of the current year was, however, lower at 11,551 tonnes as compared to 12,384 tonnes in the corresponding period of last year.

The coffee sold for export, out of the 1959-60 crop, up to 6 June this year totalled 8,271 tonnes comprising 7,256 tonnes of Plantation variety; 684 tonnes of Arabica Cherry and 331 tonnes of Robusta. Tenders have been invited for the sale of 720 tonnes and are due on June 23, 1960.

The total export allocation, out of the 1959-60 crop, as now recommended by the Board, stands at 20,000 tonnes, made up of 13,000 tonnes of Plantation variety; 2,750 tonnes of Arabica Cherry and 4,250 tonnes of Robusta. This is a peak figure for exports of Indian coffee, the previous best being 16,400 tonnes shipped out of the 1958-59 crop.

Foodgrains

In the absence of any marked rise in "rabi" grain arrivals, Foodgrains prices are ruling steady in the Hapur market. Wheat, Gam and other coarse grains have remained almost stationary, while Peas and Arhar prices have improved slightly due to brisk support from East Uttar Pradesh

the time for the new crop comes nearer. The rate is presently quoted around Rs 315 per cwt.

Although stocks in London are still at their highest for several years, it appears that a very large part of the total (700 tons) is held by a single firm. In any event, the market is still extremely sensitive to rumours from the East.

The Singapore market is ruling steady with an uncertain undertone. Most of the holders there are reported to be making time to sell out at higher prices before the arrivals of new crops of Sarawak, Lampong and Muntok. White pepper appears to be giving way under pressure of selling from Sarawak and Singapore, as the Continental demand has so far proved thin. On the whole, the future of the pepper market appears uncertain. Unless New York puts in an aggressive buying at Singapore, prices are likely to go down.

Sugar

Sugar markets have continued to rule quiet, thanks to the easy supply position. In the Hapur market, the rate is quoted at Rs 112.50 per bag.

Figures furnished by the Indian Sugar Mills Association show that production during May was 72,000 tons against 33,000 tons in the corresponding month of last year. This brings the total production, for the season up to 31 May, to 23.94 lakh tons as against 19.04 lakh tons that was produced last season by this date.

The offtake from the factories, during last month, was 2,000 tons more than during the same month last year. Total despatches, up to May-end this year, was 11.23 lakh tons as against 12.20 lakh tons by the same date last season.

Khandsari

Khandsari prices have been moving in sympathy with those of crystal sugar. There has been a good demand from the consuming areas of Gujarat and Rajasthan; but loading facilities are restricted.

Gur

After an early fall of Re 1 per maund to Rs 14 for the dry quality, ready Gur prices, in the Hapur market, have improved to Rs 14.37 due to loading restrictions. Demand is, however, modest from the consuming areas. Stocks are put at 21,000 maunds as against 65,000 maunds on the corresponding date of last year.

Oilseeds

Narrow price movements were noticed in the Bombay Oilseeds market. Hopes of a seasonal setback in Groundnut failed to materialise in view of the sustained strength in the spot section. The fact, that the country had to manage with the existing stocks for at least five months more, lent strength to the section. Reports of steady export business in

and Bihar following the availability of better loading facilities.

The Rice section continues to rule quiet with prices hovering within a narrow range. Talks are expected to take place soon with Burma on rice purchases from that country. The food purchases from the USA are in the nature of stock-piling, which do not prevent the Government from purchasing their normal supplies from the overseas market. The 2-lakh ton Burmese deal is now practically over. To ensure fresh supplies, negotiations are expected to begin in a few weeks' time with the representatives of the Burmese Government.

Yarn

Irregular price movements characterised trading the Bombay Yarn market. While Staple-fibre yarn was easy, bamberg yarn showed a marked improvement due to fresh support from the up-country centres. Rayon and cotton yarns remained mostly unchanged.

Poor export enquiries and local demand had a bullish effect on the market. Some manufacturers were reported to have effected a cut of 5 to 10 per cent in the prices of their cloth.

Gold & Silver

Sentiment on the Bombay Bullion Exchange remained generally subdued due to the onset of the monsoon and increased arrivals. Moreover, advices from Calcutta were not conducive to a rise and prices moved to and fro aimlessly.

In the Gold section, trading in Shravan delivery started at Rs 126.69 and, after registering a high of Rs 126.81, dropped down to Rs 126.53, to finish at Rs 126.60. Arrivals amounted to 5,000 tolas against an offtake of only 2,500 tolas. Ready rates moved between Rs 126.19 and Rs 125.84, to finish at Rs 125.90. Sovereign ruled very steady with small business done at Rs 85.50.

Silver arrivals were heavy at 60 bars against an offtake of only 12 bars. Unrefined metal receipts amounted to 55 bars. Ashad delivery began at Rs 212.94 and moved up to Rs 213.12, only to recede later to Rs 212.81, closing finally, better at Rs 212.87. Ready rates (.916) moved between Rs 212.69 and Rs 212.37 to close finally at Rs 212.44.

Oil & Oilseeds

Narrow price movements were noticed in the Bombay Oilseeds market. Hopes of a seasonal setback in Groundnut failed to materialise in view of the sustained strength in the spot section. The fact, that the country had to manage with the existing stocks for at least five months more, lent strength to the section. Reports of steady export business in

"I am in urgent need of a loan for my factory. What shall I do?"

"Have you tried the State Bank? They have a plan to help small industrialists."

The State Bank of India, through its many branches, is ready to offer help and advice to small industrialists in need of a loan. Please call on the Agent of the branch in your town for full particulars.

STATE BANK OF INDIA
INDIA'S LEADING BANK

groundnut oilcake and meal also encouraged the buyers. Groundnut Bold quality was quoted at Rs 45.50 and Groundnut Oil at Rs 23.69.

The West Coast India, Pakistan and the US Conference is reported to have increased freight rates for castor oil shipments to America by \$5 to \$30 per ton. The revised rates will take effect from 1 July. This proposed increase has been received by the exporters with a sigh of relief in the context of the recent rumours that

the Conference would restore the original level of \$45 per ton.

It is claimed that a substantial business has recently put through with some of the Communist countries and that more deals are likely to be concluded shortly. The overall outlook is considered to be encouraging in the absence of selling by Brazil due to the record business done so far. But, the market's main concern is over the floating supplies, which are placed around 25,000 candelas. Meanwhile,

Castor ready was quoted at Rs 34 and Castor Oil, commercial quality, at Rs 18.06.

In the Linseed section, business was largely of a routine nature. Operators were not inclined to enter into commitments on reports of higher crop estimate in Argentina. The outturn in Argentina, during 1959-60 season, appears to be 8.25 lakh tons against 6.20 lakh tons in 1958-59. Linseed ready was quoted at Rs 33 and Linseed Oil at Rs 16.69.

Hides and Skins

Better than the previous weeks, the tanned cow hides section showed an improvement in both clearances and arrivals. There had not been any increase in prices in the popular selections of 8/8½ and 10/12 lbs. In other varieties sellers noted a decline ranging from 4 to 8 nP per lb.

In the c.i.f. section despite outside India enquiries, particularly from the United Kingdom, dealings were restricted. Prices for the fifths and Run and fourths were erratic and quite unsettled. Inferior fifths were dealt with at 46d to 47½d, for 5/5½ lbs and 40½d to 41d for 8/8½ lbs. The 10/12 lbs were at a price of 39d per lb. According to reports outside India importers desire still further decline to make sizeable offers.

Tanned buffalo hides this week showed scarcity with prices remaining unaltered.

Cow calf tanned skins were cheaper this week particularly for export varieties at 2d to 3d lower than last week. A good volume of business was transacted with United States of America in tanned buffalo calf. With other Continental Ports and U.K. showing interest in buffalo calf, the good stocks still available in this may be cleared soon. On account of export inquiries prices of buffalo calf skins remained tight.

Only 2,000 tanned goat skins and 35,000 tanned sheepskins were traded in the local market. Bazar stocks were counted at 10,000 tanned goat and 70,000 tanned sheep skins. These sheep skins took an easter trend at 50 to 65 nP lower.

Raw Skins:

(Last week's prices in brackets)
Per Hundred: Bangalore raw goat skins Rs 435/540 (Rs 440/525); Bangalore raw white wood sheep Rs 500/630 (Rs 540/590); Bangalore Raw Black Wool sheep Rs 380/420; Bezwada raw goat Rs 440/450 (Rs 430/440); Bezwada raw he sheep Rs 535 (Rs 530); Bezwada raw she sheep Rs 385 (Rs 380).

The following are the prices of tanned skins per lb: Tanned cow prime (5/5½ lb): Rs 2.62 to 2.75; (8/8½ lb) Rs 2.31 to Rs 2.44; (10/12 lbs): Rs 2 to Rs 2.12; Tanned Buffalo (12/13 lbs) Rs 1.62 to Rs 1.69; Tanned cow calf (1½/2 lbs) Rs 4.37 to Rs 4.75; Tanned buff calf (1½/2 lbs) Rs 3 to Rs 3.12; Tanned goat prime (5½ to 6 lbs) Rs 8 to Rs 9; (8/9 lbs) Rs 9 to Rs 9.25; Tanned sheep ordinary (6/7 lbs) Rs 7.25 to Rs 7.50.

Buff calfskins 6 bales, tanned goatskins 86 bales.

Japan imported one bale of tanned goatskins and 61 bales of tanned sheepskins; Rijeka imported 48 bales of tanned cow hides. Aden bought 10 bales of cowhides; Dundedin 20 bales of tanned goatskins and Lytle ton got tanned goatskins 4 bales and two bales of sheepskins. And Sydney got 11 bales of dry salted goatskins.

The first fortnight's June export totalled 2,878 bales.

Sen-Raleigh Industries Of India Limited

Chairman's Review

The 13th Annual General Meeting of the Sen-Raleigh Industries of India Ltd., was held in Calcutta on the 23 June, 1960. Mr. Abhijit Sen, Chairman of the Company, said:

It is with pleasure tinged with sorrow that I welcome you to the 10th Annual General Meeting of the Company. It gives me pleasure to report that the Company's operations once again show a satisfactory trend but it is with the deepest regret that I have to record that the hand that guided the destinies of the Company to this stage is no longer at the helm of our affairs. The sudden loss of the Chairman and founder of this Company has removed from the scene an almost legendary figure in the annals of the Bicycle trade and industry in the Indian Sub-continent. He entered the Bicycle trade at the turn of the century when the Bicycle was considered a luxury and after devoting his whole life to the pursuit of popularising the Bicycle as the only means of personal transport for the people of this country, he left the world satisfied in the knowledge that his efforts had not been in vain and independent India had recognised the need for bringing cycling to the masses. It was not for nothing that he was acclaimed as the father of the Indian Bicycle Trade & Industry by the admiring trade of the country.

The Directors' Report and Accounts of the Company for the period ending 30th September, 1959 have been circulated and with your approval, I shall take these as read. You will find that with an improvement in the level of production—largely of complete Bicycles—there has been a corresponding improvement in the trading results of the Company and this has allowed your Directors to recommend a higher rate of dividends for Ordinary Shares.

A matter, I am sure, that has been engaging the minds of all members is the effect on this Company of the merger in the U.K. of the Bicycle and Moped interests of our Associates—Raleigh Industries Ltd. and Tube Investments Ltd. The merger does not affect the separate identity of this Company and your Company will continue to manufacture and market Bicycles and Freewheels under the Raleigh concessions granted to them exactly as it has been doing in the past.

Once again the year 1959 was a record year for the Bicycle Industry in India, and it is a happy thought that whilst the overall increase in production of the Industry, over the previous year (including the performance of the

Small Scale Sector) was of the order of 30% for Bicycles, your Company was able to achieve an expansion of approximately 50% in its production and sales of Bicycles over its 1958 figures although the import level of materials was not substantially in excess of 1957 levels.

No little part in the improved working was played by a more consistent import licensing policy—a consequence of the assurance held out by the Minister for Industries to the Cycle Manufacturers' Association of India in March 1959 that simpler and more effective import licensing procedures were on the way. We are grateful to the Commerce & Industries Ministry for moving with the times and introducing a rational import licensing policy which has remained with us now for over a year and has helped considerably in fostering expansion of industries.

The demand for bicycles and particularly for the products of your company shows no sign of slackening. If retail margins are any guide to consumer preferences, the past financial year must have seen an unprecedented demand for our products for in spite of the fact that much larger deliveries were effected during the period, the retail margins maintained a uniformly high average throughout the year. This demand has continued into the present year which also opened on a note of high optimism and not even the imposition of an excise duty on various bicycle components—notably Rs. 2/- per Freewheel and Rs. 4/- per Rim with an overall impact of Rs. 10/- on a complete bicycle has resulted in a slackening of demand for bicycles in spite of the fact that most manufacturers took this opportunity to adjust their prices to counter rising costs as well as excise levies. In line with other manufacturers' prices of our products were also adjusted.

Your Company's future activities are necessarily linked partly with the present industrial policy followed by the Government of India, and partly with the development of the Third Five-Year Plan which is now gradually taking shape. Very recently the Government have issued various notifications on the revised procedures relating to industrial licensing which for the first time in many years give a fairly clear picture of what industries Government feel would require immediate development and what industries are now considered by the Government to be so developed that issue of industrial licences should be restricted. The

Bicycle industry falls within the latter category where applications for expansions or for new capacity may be rejected for the time being without reference to the Licensing Committee.

In view of this, it is time to think along lines of branching out into such allied lines of Light Engineering manufacture as are considered more essential to the development of the country by the Government of India at the moment, and where capacities are granted more easily and fed to the fullest extent by release of raw materials. Our reputation for quality and for technical ability in developing Light Engineering production would stand us in good stead to obtain Industrial licences and capacities in such lines and would allow a fuller utilisation of our resources.

Diversification into new lines of manufacture is expected to help turnover considerably and reduce overheads as there is better scope of obtaining material requirements in these lines and production could grow. Diversification would not mean a shift from our main line of activity which is and will remain the manufacture of Bicycles and its components and accessories—and first call on the resources of the Company would always be for expansion in the Bicycle industry provided capacities were available and could be fed adequately with material.

Whilst the immediate prospects of Bicycle expansions are clouded, it is only right to mention that the long term prospects of obtaining further capacities in this industry appear brighter. From information available the targets for the Third Five-Year Plan period for bicycles are expected to be double of those of the present Plan period. In planning for our future full consideration is being given to doubling our own capacities wherever practicable should industrial sanctions for such capacities be forthcoming.

A new development in the Indian bicycle scene has been the successful operation of a Bicycle export pool organized by the Cycle Manufacturers' Association of India which in its first year of operation came very near to reaching a self-imposed target of export for complete Bicycles. It is a pleasure to be able to report that your Company played a prominent part in helping to achieve the export target and its share of India's Bicycle export business in 1959 was nearly 70%. In general, there was appreciation of the quality of your Company's products in the markets where these were introduced.

On the labour front, a three-year agreement was concluded with the recognized Union in August, 1959 and the effects of this agreement will be evident in the next few years. Whilst the Company's own relations with its workers were generally satisfactory, intra-Union and inter-Union strife for leadership continued and on more than one occasion in the year under review and even as recently as last month smooth operation of the factory was marred by violent clashes and unbridled rowdism. It is unfortunate that different shades of political opinion or different views on trade unionism can so far affect workers that forgetting the basic tenet of the solidarity of the workers there are these outbursts of violence which can neither benefit the worker individually or collectively nor the Company where they serve. It is hoped that good sense will prevail amongst the different sections of workers and that the quieter conditions that have followed the immediate disturbances at Asansol have come to stay with us for good. Workers should realise that violence cannot effect a reconciliation between divergent shades of opinion—far less can violence ever completely annihilate a divergent point of view.

I have to report the retirement of Mr. L. C. Clarkson who as Works Director of Raleigh Industries Ltd., had been one of first people concerned with the planning of the Indian factory. His place is filled on our Board by Mr. L. L. Roberts who is the present Works Director of Raleigh Industries Ltd., in-charge of Home and Overseas factories.

With the expansion of activities of the Company, it has been considered necessary by your Board to appoint a whole-time Director, and the Company has been very fortunate in obtaining the consent of Mr. D. Chakraverti to join its Board. He joins this firm after a distinguished career in Civil Aviation both in India and abroad. He brings to the Company an administrative and technical experience which will benefit the Company greatly in its development schemes.

Before I close it is my pleasant duty to thank my colleagues, the staff and the workers of the Company, our foreign associates and our dealers for another year of unfailing support to the Company.

NOTE: This does not purport to be a record of the proceedings of the annual general meeting.

Chairman's Speech

NATIONAL RUBBER MANUFACTURERS LTD.

23 Per Cent Increase in Sales

Mr K. N. Mookerjee outlines project for Automobile Tyre and Tubes Manufacture

Chairman's address by Mr. K. N. Mookerjee at the 14th Annual General Meeting of the Company, held on 24th June, 1960.

Gentlemen,

It is my pleasant duty to extend to you all a hearty welcome to the 14th Annual General Meeting of your Company. The Directors' Report and Audited Accounts for the year ended 31 December, 1959 have been in your hands for some time now and with your permission I take them as read.

CHANGES IN THE BOARD

You have already learnt from the Directors' Report that during the year under review a void was created by the death of two senior members of your Board of Directors, namely, A. V. George and S. K. Sen. It was also a great misfortune of the Company to have lost during the year K. G. Mookerjee, who was the Founder-Chairman of the Company upto 1956. Let us place on record our sincerest appreciation of the services rendered and the valuable contribution made by them towards the growth and progress of this concern.

Mr. K. Kheshvala, a partner of a leading firm of Stock-Brokers in Bombay, who was appointed to fill one of the casual vacancies in the Board, retires and under the provisions of the Articles of Association of the Company offers himself for re-appointment.

ACCOUNTS

The Accounts for the year 1959 indicated that the rising trend of

sales was fully maintained during the year and that the turnover exceeded Rs. 2 crores, registering an increase of 23% over that of 1958. To cope with the higher demand for the Company's products and to render better services to their customers, two new Sales Offices were opened during the year under review, one at Kanpur (U. P.) and the other at Kottayam (Kerala). You will have noticed from the Directors' Report that inspite of certain major hurdles, including rise in the cost of raw materials, the margin of net profit recorded a satisfactory improvement over that of the previous year.

DIVIDEND

I have pleasure to say that it has been possible for your Directors to recommend payment of a higher rate of dividend on the Ordinary Shares and that they intend to honour the contractual obligation of the Company in the matter of payment of Preference Dividend, free of tax, so long as there is no insurmountable bar to the same. Instead of leaving the question of preference dividend to be settled as between a Company and its shareholders, it would have been better if the Government had laid down clear statutory provisions so as to eliminate the present uncertainty, which might cause genuine hardship to the Preference Shareholders as well as any embarrassment or onerous difficulties to a company in honouring their commitments to shareholders.

INDUSTRIAL GROWTH AND RUBBER INDUSTRY

Satisfactory progress was achieved in 1959 in the sphere of industrial production in India resulted in greater demand for the products of the rubber industry, including some of the items manufactured by your Company. This was reflected in higher sales achieved by your Company during the year under review. With the improvement and expansion of roads, bicycles have established their popularity as a means of personal transport of the common people in India. Demand for bicycle tyres and tubes must in consequence considerably increase in the coming years.

The rubber manufacturing industry in India forged ahead during the year under review. A number of new units entered the field of rubber manufactures, three for Bicycle Tyres, three for Auto-

mobile Tyres, two for Bicycle Tubes and one for Industrial V-Belts and Fan Belts. Besides, some of the existing units effected substantial expansion of manufacturing capacity. Quantitatively there was an appreciable rise in the production of major items of Tyres and Tubes and Industrial Products in 1959 over that of 1958.

PROGRESS OF EXPANSION

It gives me great pleasure to inform you that your Company have been playing a significant part in the planned development of the rubber industry. You will have noticed from the Directors' Report that your Company recorded a substantial increase in production of all items and that the sanctioned expansion of capacity in respect of Cycle Tyres and Tubes, V-Belts and Fan Belts was fully achieved. While the overall progress can be taken to be satisfactory, some items of production recorded lack of support.

Steps have been taken for further expansion of manufacturing capacity, in respect of Transmission and Conveyor Belting and Cycle Tubes to meet the growing demand in the country. The second Belt Press for manufacture of beltings and some additional Cycle Tube manufacturing machines have already arrived and are under installation. They are expected to go into production during the second half of 1960. If conditions continue to be as satisfactory as now, your Company expect to complete their present expansion programme by the end of 1960.

You will be glad to know that your Board of Directors in pursuance of their policy of progressive expansion of the industry in larger spheres decided to sponsor a project for the manufacture of Automobile Tyres and Tubes. Sanction for setting up a factory in West Bengal with an annual capacity of 1,80,000 numbers each of Tyres and Tubes in the first stage has been obtained. Negotiations are in progress and it will be the privilege of the promoters of this project to make available to you an opportunity of participating in the issue of share capital of the

Particulars	1958	1959	Percentage of variation
Consumption (Natural & Synthetic)	38,052 tons	43,003 tons	+13%
Production (Natural)	24,330 "	23,996 "	-4%
Deficit	13,722 "	19,007 "	+43%
Import:—			
Natural	11,900 tons	14,500 tons	+22%
Synthetic	3,500 "	4,500 "	+29%

new Company on mutually agreeable terms and conditions.

EXPORT PROMOTION

It is encouraging to note that the total export earning of India in 1959 reached a level of Rs. 626 crores resulting in an increase of 10.2% over that of 1958. The rubber manufacturing industry took its due share in the export drive, the value of exports of Tyres and Tubes and other rubber products (excluding Footwear) having risen from Rs. 26.72 lakhs in 1958 to Rs. 29.98 lakhs (estimated) in 1959 representing an increase of 12.2%. As I pointed out last year, your Company has adopted a policy of progressively increasing the export of their products and it gives me much pleasure to inform you that the value of exports made by your Company in 1959 was 75% higher than that of 1958. It goes without saying that this performance compares very favourably with the export achievement of rubber manufacturers as a whole as also with the total export earnings of India during the year under review. Your Directors are confident that your Company's products command bright prospects for export, provided the cost of production thereof, particularly in respect of raw material and labour, do not prevent export prices from being remunerative in competition and necessary assistance including fiscal encouragement is forthcoming from the Government of India.

I am glad to say that the Chemicals and Allied Products Export Promotion Council has been doing some useful work in promoting export of rubber products. As I mentioned in my last year's speech, the rubber manufacturing industry has great potentials for export and I am sure all units of the said industry would earnestly take up export programmes taking advantage of the various facilities. Much would, however, depend on the maintenance of quality and competitive prices for export.

RAW MATERIALS

The general supply position in respect of raw materials and stores, with the exception of raw rubber, was on the whole satisfactory in 1959. A disquieting feature during the year under review was rising prices of major raw materials e.g., raw rubber and textiles, particularly in the later part of the year, the full effect of which would be reflected in the cost of production in 1960.

The situation with regard to raw rubber supply has been particularly disconcerting throughout 1959 and also in recent months. This would be evident from the following data:—

According to the Rubber Board's estimate the overall gap in 1960-61 would be 35,000 tons, to be met by imports which at current prices would cost approximately fourteen crores of rupees in foreign exchange. The rising trend of the deficit is sure to be accentuated in coming years with the progressive expansion of the rubber manufacturing industry.

The unsatisfactory position indicated above has been further aggravated by two significant factors. Supply of local rubber has been adversely affected in respect of both quantity and price, due to the elements of uncertainty about new prices, if any to be recommended by the Tariff Commission. Secondly, the world price of rubber sharply rose above the Indian price and prevailed at this higher level over a major part of 1959. On top of this there is an import duty of 5% which further enhances the cost of imported rubber. The validity of import licences being only for 3 months, the licence-holders are obliged either to import at a very high price with unduly heavy drainage of foreign exchange or to procure rubber from Indian sources causing unhealthy pressure on the limited indigenous supply.

In my opinion, fixation of some new statutory price on the recommendation of the Tariff Commission would by itself be ineffective and meaningless as long as there is so large a deficit in indigenous production to be met by imports, particularly when the world rubber price continues to be higher than the statutory Indian price. It is, therefore, essential that a suitable scheme should be formulated by the Government and requisite machinery set up in consultation with both planters and manufacturers to ensure supply of the entire consumption requirement from indigenous and overseas sources at the same price. I do hope that the Government would consider this significant aspect of the problem in all seriousness.

I would now refer to certain other specific measures that may be adopted to check the unsatisfactory situation regarding rubber supply:—

(a) Governments' decision on Tariff Commission's recommendation regarding new prices, if any, should be announced immediately to prevent speculative holding of stocks and selling at premium, (b) some judicious control over distribution should be introduced along with price control to ensure regular supply of indigenous rubber, (c) import licences should be issued with longer validity, (d) some reasonable relief in respect of the higher import prices including abolition of import duty should be extended to encourage larger imports and (e) the area under rubber cultivation should be extended and higher yield per acre should be secured by means of a vigorous programme of replanting.

and better tapping methods etc., progress in respect of which has not so far been satisfactory.

In my last year's speech I pointed out the need for developing rubber plantations in the Andaman & Nicobar Islands. It is gratifying to learn that suitable land for cultivation of rubber on a commercial scale in these Islands is being surveyed and that planting is likely to commence shortly.

It is a happy augury that in course of the next five years or so India is likely to be largely self-supporting in regard to important raw materials for the rubber industry which have hitherto been exclusively imported as would be indicated by the annual production capacity sanctioned for each vis-a-vis estimated annual requirement by 1965-66 (in parenthesis): Synthetic Rubber: 20,000 tons (26,000); Reclaimed Rubber: 7,000 tons (13,500); Sulphur: 200/300 tons (per day) (4,000); Accelerators, Anti-oxidants, Retarders, etc: 2,250 tons (2,500); Carbon Black: 22 million lbs. (90); Rayon Tyre Cord: 4,000 tons (12,000).

Arrangements should also be made for adequate indigenous production of Bead Wire and Tube Valves for Tyres and Tubes, the estimated consumption of which are likely to be 4,000 tons and 30 million numbers per annum by 1965-66.

IMPORT POLICY

Till such time as full production is achieved by the various projects mentioned above, imports of the respective materials should be liberally allowed. It is indeed gratifying to note that the Government of India have appreciated this point and have further liberalised their import policy during the current licencing period including introduction of licencing on an annual basis in respect of raw materials for the entire rubber industry, as suggested by me last year. This would undoubtedly facilitate better production planning by the various constituent units of the rapidly expanding rubber goods industry in India, particularly the newer ones. I repeat that the validity of import licences for raw rubber should be for a longer period of at least six months if not for one year.

RESEARCH

It is encouraging to note that the Indian Rubber Manufacturers' Research Association, which came into existence last year, has recorded satisfactory progress since then, thanks to the active support and co-operation of the Ministry of Commerce & Industry, the Council of Scientific and Industrial Research, the National Chemical Laboratory and the Industry itself. It is understood that the Technical Committee set up by the Council of the Association has drawn up a scheme of research covering problems of rubber-science and technology and that the scheme

has already been put into operation with the active assistance of the National Chemical Laboratory. I do hope that the Association would render useful service to the industry and thereby make outstanding contribution to the latter's development and expansion.

LABOUR RELATIONS

It gives me much pleasure to say that the tradition of cordial relations between all categories of employees and the management of the Company was fully maintained throughout the year under review and contributed to larger production.

ACKNOWLEDGMENTS

Before starting the formal business of the meeting I heartily thank you all for coming here today and also other Shareholders, the Officers, Staff and Workers as well as the Dealers, Customers, and Suppliers of the Company for their valued co-operation and active support readily extended to your Company during 1959. I shall be failing in my duty if I do not make a special reference in this connection to the continued assistance received from Messrs. Goodyear Tyre & Rubber Company of India Private Limited.

Note:—This does not purport to be a record of proceedings of the Annual General Meeting.

INDIA NOW IMPORTS LESS OF IRON AND STEEL

With the commissioning of the steel plants in the public sector in the beginning of 1959, the imports of iron and steel during the year declined to 750,000 tons. In 1958 India had imported 1.17 million tons.

The production of steel during the year was 1.77 million tons against 1.3 million tons in the preceding year. The increase came mainly from Tatas and Indian Iron. Likewise the production of salable pig iron recorded a sharp increase from 441,000 tons in 1958 to 752,403 tons in 1959—largely as a result of the contribution from Bhilai and Rourkela.

The prospects in 1960-61 in regard to iron and steel are brighter still. There will be more pig iron for sale as compared to 1959. The supply position of many items of steel like structurals and bars and rods and plates is likely to improve as a result of the commissioning of further units at the new plants.

The shortage is, however, expected to continue in respect of items like sheets, tinplates, wire and tool and alloy steels. Of these, tool and alloy steels and wire are being licensed both to the actual users and the trade.

In regard to the other scarce items, imports are being arranged in exchange for the export of scrap, pig iron and semis from the new steel works.

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE is hereby given that the Twentyseventh Annual General Meeting of the Company will be held at the Registered Office, 59C Chowringhee Road, Calcutta on Wednesday, the 20th day of July 1960 at 12-30 p.m. for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March 1960 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.

Special Notice of intention to propose the re-election of Mr. Kasturbhai Lalbhai and Sardar H. S. Malik, C.I.E., O.B.E., who are both 55 years of age, has been received.

4. To appoint and fix the remuneration of the Auditors.
5. To transact any other ordinary business of the Company.

Special Business
1. The consideration of the following Resolution which will be proposed as a Special Resolution: "That the consent of the Company be accorded by this Special Resolution with effect from the 1st April 1960 to the holding by the following Directors of their offices or places of profit under the Company, namely:

Mr. P. M. Desai—Branch Manager
Mr. R. Lawford—Chief Engineer and Head of Production Department"

2. The approval of the appointment by the Board of Sole Selling Agents in Ceylon.

Explanatory Statement and Note

1. The consent of the Company by Special Resolution is requisite to the holding of their offices or places of profit by certain Directors of the Company.

2. The approval of the Company is necessary to the Board's appointment of a Sole Selling Agent.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby also given that the Ordinary Share Register of the Company will be closed from the 1st to the 20th July 1960, both days inclusive.

By Order of the Board,
F. P. GILBERT
Secretary.

59C Chowringhee Road,
Calcutta,
24th June, 1960.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by three orders of which complete copies are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this new industrial undertaking at Santargachi, District Howrah, of which a copy is open to public inspection at the Registered and Head Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed with regard to it.

A licence has been obtained from the Central Government for the manufacture of new articles, namely, Pressed Steel Tanks, Points and Crossings, Cranes, etc., in the existing industrial undertaking at P. O. Jagacha, Santargachi, District Howrah, West Bengal, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed with regard to it.

A copy of this Prospectus having attached thereto the documents required by Section 50, of the Companies Act, 1956, has been delivered for registration to the Registrar of Companies West Bengal.

An application has been made to the Calcutta Stock Exchange for permission to deal in and for official quotations of the shares of the Company.

The subscription list will open at the commencement of banking hours on 27th June, 1960, and will close at the close of banking hours on 4th July, 1960, or earlier at the discretion of the Directors.

RAYMON ENGINEERING WORKS LIMITED

(Incorporated on 13th November, 1954, at Calcutta under the Indian Companies Act, 1913).

AUTHORISED SHARE CAPITAL

divided into:		Rs. 1,00,00,000/-
(1) 8,00,000 Equity Shares of Rs. 10/- each	Rs. 80,00,000/-	
(2) 20,000 6½% Redeemable Cumulative Preference Shares of Rs. 100/- each	Rs. 20,00,000/-	Rs. 1,00,00,000/-

ISSUED SHARE CAPITAL

Subscribed & Paid Up Share Capital—		Rs. 1,00,00,000/-
4,00,600 Equity Shares of Rs. 10/- each	Rs. 40,06,000/-	Rs. 40,06,000/-

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION—

(1) 3,99,400 Equity Shares of Rs. 10/- each	Rs. 39,94,000/-	
(2) 20,000 6½% Redeemable Cumulative Preference Shares of Rs. 100/- each	Rs. 20,00,000/-	Rs. 59,94,000/-

*The Preference Shares will confer upon the holders thereof the right to a fixed cumulative preferential dividend of an amount which after deduction therefrom of an amount calculated at the lowest rate for deduction of tax (including super-tax, if any) at source prescribed by the Income-tax Act in force at the time will leave a net amount equivalent to 6½% per annum on the capital for the time being paid up thereon.

OPTION

No share or loan capital is under option or agreed to be put under option.

DIRECTORS:

- Sri M. C. RAY**, 2, Brabourne Road, Calcutta. Managing Director: Raymon & Co. (India) Private Ltd., Raymon Minerals Private Ltd., Raymon Constructions Private Ltd. Director: General Pharmaceuticals Private Ltd.
- Mr. H. J. SILVERSTON**, 29, Netaji Subhas Road, Calcutta. Solicitor. Partner, Orr, Dignam & Co., Solicitors & Attorneys-at-Law, 29, Netaji Subhas Road, Calcutta. Director: McLeod & Co. Ltd., Kumar-dhubi Fireclay & Silica Works Ltd., Lodna Colliery Co. (1920) Ltd., The India Jute Co. Ltd., English Electric Co. of India Private Ltd., etc.
- Sri R. N. BANERJEE**, C.S.I. C.I.E. I.C.S. (Retd.), 17 Friends Colony, Mathura Road, New Delhi. Ex-Secretary Commonwealth Affairs India. Ex-Secretary, Ministry of Home Affairs Government of India. Ex-Chairman, Union Public Service Commission.
- Sri C. N. CHANDRA**, C.I.E., I.C.S. (Retd.), Friends Colony, Mathura Road, New Delhi. Ex-Secretary Ministry of Finance, Govt. of Punjab. Ex-Secretary, Ministry of Rehabilitation, Govt. of India.
- Sm. MANASI RAY**, 2, Brabourne Road, Calcutta. Director: Raymon & Co. (India) Private Ltd., Raymon Minerals Private Ltd., Raymon Constructions Private Ltd.
- Sri D. M. NETERWALA**, Liberty Building, Marine Lines, Bombay. Director: General Pharmaceuticals Private Ltd., Cambata Ferromanganese Private Ltd., Raymon Minerals Private Ltd., etc.

REGISTERED OFFICE:

2, Brabourne Road, Calcutta-1.

MANAGING AGENTS:

Messrs. Raymon & Co. (India) Private Limited.
2, Brabourne Road, Calcutta-1.

BANKERS TO THE ISSUE:

State Bank of India, Strand Road, Calcutta.
Punjab National Bank Ltd., Canning Street, Calcutta.

SOLICITORS:

Messrs. Orr, Dignam & Co.,
29, Netaji Subhas Road, Calcutta.

AUDITORS:

Messrs. Price Waterhouse Peat & Co.,
B-4, Gillander House, Calcutta.

BROKERS TO THE ISSUE:

Managing Brokers:

Messrs. Place Siddons & Gough (Private) Ltd.,
6, Lyons Range, Calcutta-1.

Brokers:

Messrs. Bativala & Karani,
Union Bank Building,
Dalal Street, Bombay.

Messrs. Lewis & Jones,

Apollo Street,
Bombay-1.

Messrs. Paterson & Co.,
22, Errabalu Chetty Street,
Madras-1.

Messrs. Harbans Singh Mehta & Co.
33, Regal Buildings,
Parliament Street,
New Delhi.

CONSENTS

The consent in writing of the Bankers, Solicitors, Auditors and Brokers to act in their respective capacities have been filed with the Registrar of Companies. The Auditors of the Company have given and have not up to the date of delivery to the Registrar of Companies, West Bengal, of this Prospectus for registration, withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their Report, set out below, in the form and context in which it appears.

1. TERMS OF PAYMENT OF THE ABOVE SHARES

EQUITY SHARES

- (a) On application: ... Rs. 5-00 per share
(b) Balance: ... Rs. 5-00 per share on allotment

PREFERENCE SHARES

- (a) On application: ... Rs. 50-00 per share
(b) Balance: ... Rs. 50-00 per share on allotment

2. DIVIDEND AND CAPITAL

The Company in general meeting may declare a dividend to be paid to the members according to their rights and interest in the profits of the Company and may, subject to the provisions of Section 207 of the Companies Act, 1956, fix the time for payment.

No dividend shall be payable except out of the profits of the Company during the year or any other undistributed profits and no dividend shall carry interest as against the Company.

Preference Shares: The Preference Shares will confer upon the holders thereof the right to a fixed cumulative preferential dividend of an amount which after deduction therefrom of an amount calculated at the lowest rate for deduction of tax (including super-tax, if any) at source prescribed by the Income-tax Act in force at the time will leave a net amount equivalent to 6½% per annum on the capital for the time being paid up thereon. Under the Indian Income-tax Act as recently amended by the Finance Act 1960 the lowest rate for deduction of tax at source is 30% so that the dividend payable in respect of the Preference Shares will in fact be 9 2/7% from which tax at source will have to be deducted by the Company at the rates prescribed by the Act, that is to say for instance (a) in the case of an individual resident in India the prescribed rate for deduction at source is 30% for income-tax and nil per cent for super-tax so that in fact such person will receive 6½% on each Preference Share, and (b) in the case of a body corporate resident in India (including an Indian Company) the prescribed rate for deduction is 20% for income-tax and 10% for super-tax so that it will also receive 6½% on each Preference Share. The Preference Shares shall also confer on the holder thereof the right on winding up to payment off of capital and areas of dividend in priority to the equity shares but shall not confer any further right to participate any profits or assets.

(2) Subject to the provisions of the Companies Act, 1956, the Company shall have the option to redeem the whole or any part of the said Redeemable Preference Shares at par at any time or times after the expiry of 10 years from the date of issue on giving not less than six months previous notice in

RAYMON ENGINEERING WORKS LIMITED

writing specifying the date of redemption and, in the case of partial redemption, the number of shares to be redeemed.

2. OBJECTS OF THE COMPANY

The Company was incorporated on the 30th November, 1954, with the objects mentioned in the Memorandum of Association of the Company and in particular to undertake the manufacture of locomotives and engines of all kinds, of railway wagons and all other rolling stock and components and the sale thereof.

The Company obtained a certificate of entitlement to commence business on the 10th December, 1955.

4. MANUFACTURING LICENCES

(1) The Government of India issued under the Industries (Development and Regulation) Rules, 1952, a licence No. L/17A/4/55 dated 5th August, 1955, for manufacture of 312 covered broad gauge railway wagons and 26 broad gauge bogey underframes per month.

(2) The Government of India subsequently issued under the Industries (Development and Regulation) Rules, 1952, a licence No. 7(4) (59) 1A(LI11)/58, dated 5th May, 1959, for the manufacture of the following items, the installed capacities of which it is stated will be fixed after the Company goes into production:

- Components for Rolling Stock.
- Points and Crossings.
- Railway Steel Sleepers and Pressed Steel Tanks.
- Structural Steel Work Fabrication of all descriptions.
- Cranes of all descriptions.

5. PLANT SITE, CONSTRUCTION OF WORKSHOPS, POWER, ETC.

The Company constructed workshop sheds and other buildings and facilities for the manufacture of railway wagons at Santargachi, District Howrah, West Bengal, which is six miles away from the business centre of Calcutta and has a private railway siding through which raw materials required for the manufacture of the products can be delivered at site and the finished products can be conveniently delivered to the railways direct from the work siding.

24 bighas of land together with existing structures such as workshop building, office building, stores and other buildings were acquired and modernised by the Company. Another 141 bighas of land for the purposes of putting up workshops and factory buildings for the manufacture of the items such as cranes, points and crossings, rolling stock, etc., and extension of the works and sheds for railway wagons has been acquired and delivered to the Company by the Government of West Bengal (on behalf of the Company) under the Land Acquisition and Development Act, 1948. An agreement is shortly expected to be finalised and entered into with the Government of West Bengal for the land acquired and delivered to the Company and the terms of the agreement are being prepared by the Government which it is expected will include among others the following terms.

- The Company will have to deposit the entire cost of the acquisition with the Collector, Howrah, on demand.
- Employment of displaced persons as far as possible in the unskilled and semi-skilled category of labour to be employed at the Company's works.

The acquisition cost of this land will be calculated at the 1946 rate and will be met from out of the proceeds of this issue. It is not expected to exceed Rs. 2,91,000.

Supply of power has been arranged with the Calcutta Electricity Supply Corporation Ltd., Calcutta, and the necessary equipment, namely, transformers, switches, etc., have already been imported from the United Kingdom for this purpose. Cable-laying work is in progress for the supply of 6 k.v. 2000 k.w. power which is considered adequate for the requirements of the undertaking.

Satisfactory arrangements for the supply of water have been made by the Company.

6. WORKSHOP BUILDING, PLANT, MACHINERY & EQUIPMENT

Buildings and sheds of the total value of Rs. 16,22,000 have already been erected and/or remodelled and plant and machinery for the workshops of a total value of Rs. 9,60,000 have already been installed. Further plant and machinery of a total value of Rs. 20 lakhs have been imported and are at present against advances given by the Banks (vide paragraph 13) and are at present pledged to the Bank and are to be paid for partly out of the proceeds of this issue and partly from the loan from the Industrial Finance Corporation of India. Plant and machinery of the value of Rs. 14,97,000 (approx.) remains to be purchased and it is proposed to purchase them in consultation with the Company's Technical Consultants. The Company has submitted an application for an import licence in respect of the said plant and machinery to the Chief Controller of Imports, Governments of India.

About 2,000 tons of structural steel have already been imported from Japan and West Germany to be utilised to erect the shops under the expansion programme of the undertaking.

7. RAW MATERIALS

The principal raw materials required by the Company are semi-finished and finished steel, steel castings and pig iron. These are indigenous materials and with the establishment of the different Steel Plants in India, an adequate supply of raw materials are readily available. The location of the Company's Works at Santargachi, West Bengal, places it in close proximity with the principal sources of raw materials.

3. PRESENT PRODUCTION

The Company has obtained an Educational Order from the Railways for the manufacture of 250 railway freight wagons at Rs. 11,539 per wagon making a total order of Rs. 28 lakhs to be delivered by 30th September, 1960; the Company has already manufactured and delivered to the Railways 21 freight wagons against this Order and because production was initially delayed due to non-availability of matching steel, the allocation of which is under Government control, it is reasonably expected that an extension of the delivery period can be negotiated with the Railways should such be necessary. Steel structural fabrication capacity of 100 tons per month has already been established.

9. TECHNICAL COLLABORATION

The Company has entered into arrangements with Messrs. Hoesch Export G.m.b.H., Dortmund, West Germany, and appointed them the Technical Advisors of the Company for an initial period of five years. Messrs. Hoesch Export G.m.b.H. is the export organisation for the vast Hoesch Industrial Combine in West Germany, who are world famous in the steel, iron, machinery, locomotive and rolling stock manufacturing industries. The technical assistance to be given by Hoesch will be through their parent and various associate concerns as follows:—

- | | |
|--|--|
| 1. Messrs. Hoesch Werke A.G., Dortmund, West Germany. | Rolled steel, tubes, wire and wire products, high quality steel, special steel, forgings, spring steel, steel castings, etc. |
| 2. Messrs. Orenstein-Koppel Und Lubeker Maschinenbau Aktiengesellschaft, Dortmund, West Germany. | Wagons of different description, cranes of different description, coaches of different description, Locomotives, etc. |
| 3. Messrs. Maschinen Fabrik Deutschland, Dortmund, West Germany. | Machine tools of different description, points and crossings, etc. |

An Agreement has been reached with Messrs. Hoesch Export G.m.b.H. under which provision is made (inter alia) for:

- Technical assistance in the selection, purchasing and procuring on behalf of the Company of all engineering stores, steel and other industrial raw materials, tools, equipment and machinery.
- Hoesch will collaborate with the Company in respect of contracts undertaken for the designing, manufacture and erection of various engineering chemical and other industrial plants and factories for the public and private sector and Hoesch will undertake the preparation of designs, project reports, manufacturing drawings and specifications and will assist and advise the Company in the fabrication and erection part of such contracts on such terms as will be mutually arranged from time to time.
- Hoesch, through its associated concerns, will undertake the designing and supply of jigs tools and fixtures and dies as required by the Company and will design and advise on all steel structural and other steel fabrication work undertaken by the Company in India.
- Hoesch will provide the Company with the best possible knowledge and technical know-how with particular reference to modern developments in welded structures and designing.
- From time to time as and when required by the Company Hoesch will render to the Company technical services and know-how and engineering data and advise the Company on the best and most economical methods of production of the various items manufactured or to be manufactured by the Company under its production plans including any expansion programme of the Company. For such purposes Hoesch will send to the Company's Works specialised foreign technical personnel on short visits as and when required to advise the Company so as to put it into optimum production according to the best modern methods. The cost of journey to and fro by plane + Rs. 100/- per day on account of the boarding and lodging will be borne by the Company.
- Hoesch will afford training facilities to the engineers of the Company sent to their Works in Germany as may be mutually arranged.
- In consideration for the rendering of the technical services the Company will pay Hoesch an annual fee of £2,500/- Sterling payable either in Sterling or in equivalent Deutsch Marks for the duration of the Agreement and reimbursement of expenses.

The above Agreement has been approved by the Government of India in terms of its letter No. M. E. Ind. 2088/G/60 of the 15th June, 1960.

Messrs. Hoesch Export G.m.b.H. have agreed that a member of their Company will shortly join the Board of Directors of the Company.

10. MANAGEMENT AND TECHNICAL STAFF

The Company is managed by Raymon & Company (India) Private Limited, the Managing Agents of the Company, who will under the advice and assistance of the Company's Technical Collaborators, Messrs. Hoesch Export G.m.b.H., be responsible for implementing the Production Plans of the Company. The Works are staffed with qualified and experienced engineers and technicians, many of whom have long experience in Railway and engineering workshops in India. Through the collaboration arrangements with the Technical Collaborators of the Company, qualified foreign technical personnel will be sent to India to occupy key positions in the different divisions of the Works. The Company has also arranged with its Technical Collaborators for specialised training of its selected qualified Indian engineers at the Works of the associated Hoesch concerns at Germany.

11. MARKET AVAILABILITY & PROSPECTS

With the progress of industrial development and materialisation of various agricultural and industrial programmes under the different Five Year Plans, the entire pattern of railway transport system has been undergoing gradual changes. Adequate transport facilities are being planned and developed to cope with the movement of raw materials and finished products to and from the Steel Projects at Durgapur, Rourkela and Bhilai, and Chemical Fertilizers, Coal, Sugar, Jute, Heavy Machineries, and various other industries throughout the country. In years to come, as India proceeds towards the fulfilment of its various programmes towards industrial and agricultural self-sufficiency, there will be a growing increase in the volume of railway traffic. New routes, growth of new towns and ports and healthy industrial and commercial activities all over India will constitute a heavy traffic programme. Each ton of finished steel requires the movement of about six tons of raw materials and other ancillary stores. All these represent a substantial increase in railway transportation required for the haulage of raw materials to factory sites, and of the finished products to the centres of consumption and ports of export.

The Indian Railway Equipment Advisory Committee at its Fifth Meeting held in Bombay on 24th April, 1959, has concurred as follows:—

"The capacity of wagon building has progressively increased and the target of 36,000 numbers of 4-wheeled wagons per year would remain."

RAYMON ENGINEERING WORKS LIMITED

The total production of wagons in India are as follows:—			
1936	...	...	16,109 wagons.
1937	...	...	16,954 "
1938	...	...	13,597 "
1939	...	...	10,150 "

In the Programme of Industrial Development, 1960-61, the Planning Commission has observed that the demand for fabrication of structural including wagon manufacture would be estimated at 5,00,000 tons by 1960-61. If the tonnage of 36,000 numbers wagons at 4½ ton average per wagon (which will work out to 2,50,000 tons) is taken out from 5,00,000 tons, the balance has also been stated in the said Programme that the present capacity of production for fabrication of structural items is estimated at 1,26,000 tons. The structural fabrication items are therefore short in supply by 1,24,000 tons, i.e., the demand is by far greater than the present supply. The demands are expected to considerable increase under the successive Five Year Plans of the Government of India. The Company expects to receive from the Railway Board large orders for wagon manufacture on completion of the Educational order in hand.

The other items in the manufacturing programme are components and equipments of rolling stock and are used by the Railways principally; correspondingly the demand for such items will progressively increase with the development of the Railways and other industries.

On the basis of the existing trends the Directors are of the opinion that in the absence of any unforeseen circumstances the Company should be in a position to declare its first dividend on the Equity Shares in about 1962.

12. PRODUCTION PLANS

The production plans are as follows:—
Rolling Stock: Wagons.

The Wagon Section has commenced production and is the parent unit which controls and administers all other units. For the present, the Works will produce 1,000 wagons per annum. For the expansion proposed, sheds, buildings, machinery etc., have been designed and selected in such a way that they can be switched over to welded type wagon manufacture. The licensed capacity granted to the Company by the Government of India is 14 wagons production per day, in terms of 4 wheelers approximately 35,000 tons per year, which is the second largest licensed capacity sanctioned by the Government of India.

Rolling Stock: Components.

Production in this Section has already commenced and shall be stepped up within the next few months with the addition of machinery and equipments already imported. The tooling up of machinery and equipment for the department has been so planned that the Works besides being self-sufficient for component for wagon production will be able to cater to Government requirements and requirements of other Wagon, Locomotive and Automobile manufacturers.

In the Rolling Stock Section, there is provision for a wagon assembly shop, wagon paint shop, forge and smithy shop, and general machine and tool shop. The Rolling Stock Section has been laid out on modern lines on a belt system which would involve feeding of raw material at one end of the manufacturing process and the delivery at the other end of the finished product.

Structural Steel Shop including Manufacture of Cranes:

In view of the enormous quantity of structural steel work expected to be required under the future Five-Year Plans, the Company's factory is being tooling up to undertake such work on a large scale.

The Structural Steel Fabrication Shop will be developed concurrently with the development of the wagon manufacturing unit and a fair portion of equipment installed in the Rolling Stock Section will serve the dual purpose of assisting in the support of the structural unit. The installed capacity in this section will be 4,500 tons per year. The present capacity is 1,200 tons per year.

The manufacture of Cranes is being taken up in the proposed expansion programme. It will be a subsidiary unit of the Structural Department. At present it is proposed to import and also procure from local suppliers all electric motors, hoisting equipment and mechanical gear, chains, hooks, drums, etc. Complete structure with end carriages, trolleys, etc., will be fabricated in our works. Manufacture of the Crane will be undertaken in technical collaboration with Messrs. Orenstein-Koppel und Luebecker, Maschinenbau A.G. (an associate concern of the Technical Consultants of the Company), the world-famous manufacturers of the O & K Cranes, Wagons, Coaches, Locomotives, etc. The target of production is 90 five-ton cranes annually, commencing from the early part of 1961.

Points & Crossings:

This Shop has been planned to turn out for the first two years of production 900 tons per year of Railway Points and Crossings for 90-lb. rails, production commencing from early part of 1961. The plant and machinery for this Shop have been selected by Messrs. Hoesch Export G.m.b.H. in consultation with Maschinen Fabrik Deutschland—one of the foremost manufacturers in West Europe of this item and one of the associate concerns of the Company's foreign collaborators.

Pressed Steel Shop:

The Shop will not only produce all Pressed Fittings for Rolling Stock such as axle guards, body brackets, end ventilators, etc., but also pressed steel sleepers. The target of production is 5,000 tons per year. Production will commence within the next six months—machinery and equipments have been imported. It is also proposed to commence manufacture by end of 1961. Pressed Steel 'Tanks' in consultation with M/s. Hoesch Export G.m.b.H. (Technical Department), Dortmund, West Germany.

Crey Iron Foundry:

This Unit which is in the Company's expansion programme will be entirely a separate unit. The Foundry will mainly produce Cast Iron Sleepers (broad gauge) for 90, 75, 60 and 50 lb. rails with reverse jaws as the basic unit, and the target of production will be 5,000 tons of Cast Iron Sleepers per annum. It will be gradually increased to meet the Railway and market demands. The present demand of the Railway is 2,50,000 tons approx. of Sleepers per annum and the market demand is about 1,00,000 tons approx. per annum. Our Company has been asked by the Railway Board to set up capacity to take on orders for cast iron sleepers.

Other smaller castings for Rolling Stock such as brake blocks, standard plates, buffer washers, etc., will also be manufactured in the Foundry.

13. FINANCIAL ACCOMMODATION WITH BANKERS

The Company has credit facilities with its Bankers, Punjab National Bank Ltd., Canning Street, Calcutta, up to an aggregate of Rs. 32 lakhs outstanding at any one time and the facilities were arranged for the purpose of purchasing raw materials for the manufacturing of railway wagons and for purchase of structural steel for the construction of the workshops against pledge to the Bank. As at the 30th day of April, 1960, an amount of Rs. 22,62,135.27 nP. is outstanding on this account.

The Company has imported machine tools from Noble & Lund, U.K., WMW Export, East Germany, and China National Machinery Import Corporation, Shanghai, of an amount of Rs. 17,90,741.00 through credit facilities extended by the Bank of China, Calcutta, against pledge of the machine tools. As at the 30th April, 1960, an amount of Rs. 20,72,863.04 nP. is outstanding on this account, which is inclusive of customs duty, port, clearing, warehousing and Bank interest charges.

The amount outstanding with the Banks will be reduced (except as regards working capital) partly out of the public issue and partly out of the loan to be taken from the Industrial Finance Corporation of India so as to release all the materials and machinery presently held by the Banks as security.

LOAN CAPITAL

(1) The Industrial Finance Corporation of India, Reserve Bank Building, Parliament Street, New Delhi—1, has sanctioned a loan to the Company of the sum of Rs. 30,00,000/- on their usual conditions some of which have been indicated in their Memorandum of terms which has been accepted by the Company and others which will be laid down by the Corporation before the payment of the loan is made. This loan is to be secured by a fixed charge on the existing and future assets of the Company, viz., land, building, engines, machinery, plant, electric and other installations, railway siding, car, implements, equipments, furniture and fixtures, tools, accessories, articles, etc., and also a floating charge on machinery stores and machinery spares, both present and future. Interest will be payable on the loan at such rate as is fixed by the Corporation in this behalf from time to time with the prior approval of the Central Government, subject nevertheless, to a minimum rate of 7½ per annum with a rebate of ½ provided instalments of principal and interest are paid on due dates. The amount of loan is repayable in 10 annual instalments from 1st April, 1962, and ending on 1st April, 1971. Interest is payable half-yearly on 20th June, and 20th December each year. In addition, the Corporation will have the right to appoint two ex-officio directors and will as is usual in respect of its loan also exercise certain controls over the Directors and the Managing Agents of the Company so long as any portion of the loan remains outstanding and for which purpose the Articles of Association will have to be approximately amended.

(2) The Company has no debentures or debenture-stock outstanding.

14. CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The capital outlay required to implement the production plan in respect of all manufactures is Rs. 1,30,00,000/- of which Rs. 1,00,00,000/- will be met by the share capital and Rs. 30,00,000/- by the loan sanctioned by the Industrial Finance Corporation of India. Of the share capital of Rs. 40,06,000/- consisting of 4,00,600/- ordinary shares of Rs. 10/- each have already been subscribed by the Managing Agents and the Directors and their friends. Part of the additional capital to be raised will be utilised towards reducing the loan account with the Punjab National Bank Ltd. and the Bank of China against which the plant and machinery and structural steels already imported are pledged.

In respect of the public issue under this Prospectus, the minimum subscription by which the Directors will proceed to allot is Rs. 40,00,000. Any short of the amount to be raised from the public will be as required met by borrowings from the Company's Bankers and/or the Managing Agents of the Company who have given a letter of undertaking in this regard or from other sources.

The capital outlay envisaged is as follows:—

ASSETS		CAPITAL OUTLAY				To be spent from		REMARKS
		Total outlay as per scheme.	Amount (approx.) already spent as at 31st March 1960		Balance (approx.)	I.F.C. Loan	Share Capital to be raised

Expenses for the Issue-Brokerage	1,35,000	...	...	...	...	...	...	
General Expenses	1,15,000	...	...	2,50,000	...	2,50,000	...	
	1,30,00,000	40,06,000	53,11,000	36,83,000	30,00,000	59,94,000	...	

Note: Out of the capital to be raised by the present issue and the loan of the Industrial Finance Corporation of India, the borrowings mentioned in the Table above will be reduced and the rest will be utilised towards capital requirements.

25 June 1960

RAYMON ENGINEERING WORKS LIMITED

15. DIRECTORS

The Articles of Association provide that the qualification of a Director, other than an ex-officio Director, shall be the holding in his own name or jointly with any other person, whether beneficially or as a trustee or otherwise, of Equity Shares in the Capital of the Company of the nominal value of Rs. 1,000/-.

Article 95 provides inter alia that unless otherwise determined by the Company in general meeting, each Director shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board, a fee of Rs. 100/- per meeting of the Board attended by him. The Board, a fee of Rs. 100/- per meeting of the Board attended by him. The Directors shall also be entitled to receive a commission (to be divided between them in such manner as they shall from time to time determine and, in default of determination, equally) of 1 per cent to the net profits of the Company (computed in the manner laid down in Sub-section (1) of Section 198 of the Act) in any financial year. Other remuneration, if any, payable to a Director is to be determined in accordance with and subject to the provisions of the Articles of Association and of the Companies Act, 1956.

Any Director who serves on any Committee or who devotes special attention to the business of the Company or performs other services outside the ordinary scope of his duties may, subject to the provisions of Section 310 of the Companies Act, 1956, be paid such extra remuneration as the Board may determine. The Directors are entitled to be paid their reasonable travelling and hotel and other expenses incurred in the execution of their duties as Directors.

The number of Directors of the Company is fixed by the Articles of Association at not less than three nor more than nine. Provision is also made in Article 112 for the appointment of an alternate for an absent director.

Raymon & Company (India), Private Limited, the Managing Agents of the Company, are at liberty to appoint one-third of the total number of Directors and to remove from office any person so appointed at any time and whenever any person so appointed ceases to be a Director to appoint another in his place. Such Director are ex-officio Directors within the meaning of the Articles of Association of the Company and such one of them as from time to time and at any time is named by the Managing Agents is entitled to be the Chairman of the Board.

Subject to the provisions of Section 255 of the Companies Act, 1956, an ex-officio Director shall not be liable to retirement by rotation.

16. INTEREST OF DIRECTORS

1. Sri M. C. Ray is a Director and member of Rayman & Co. (India), Private Limited, Managing Agents of the Company.

2. Sm. Manasi Ray is a Director and member of Rayman & Co. (India), Private Limited, Managing Agents of the Company.

3. Mr. H. J. Silverston is a Partner in the firm of Messrs. Orr, Diggam & Co., the Solicitors of the Company who will be paid their professional charges for services rendered to the Company.

4. Mr. C. N. Chandra has been appointed the Business Adviser of the Company on a salary of Rs. 2,540/- per mensem with an allowance of Rs. 250/- monthly for entertainment and a conveyance allowance. As a Director Mr. Chandra has waived the sitting fees and the 1% commission payable to Directors pursuant to Article 95 of the Articles of Association.

All the Directors are interested to the extent of the shares in the Capital of the Company subscribed for and allotted to them and to the Companies in which they are interested.

17. MODIFICATION OF RIGHTS

Rights attached to Equity shares, preference shares and any other class of shares in the capital of the Company may be modified under the provisions of Section 106 of the Companies Act, 1956, as permitted by Article 59 of the Articles of Association.

18. RESTRICTIONS AS TO ATTENDANCE, PARTICIPATION AND VOTING AT GENERAL MEETINGS

So far as Equity shares are concerned, every member present in person or if a body corporate, through a representative or by proxy, is entitled to have one vote. On a poll the voting right of such member, whether present in person or by representative or by proxy, is to be in proportion to his share of the paid-up Equity Share Capital of the Company.

So far as Preference Shares are concerned, every member of the Company having such Preference Share Capital has a right to vote only on resolutions or questions placed before the Company which directly affect the right attached to the Preference Shares. A resolution for winding up of the Company or for repayment or reduction of its Share Capital is to be deemed directly or indirectly to affect the rights attached to the Preference Shares. Every member of the Company holding any Preference Share Capital is only entitled to vote on every resolution on question placed before the Company at any meeting if the dividend due on such capital or any part of such dividend has remained unpaid in the case of Cumulative Preference Shares in respect of an aggregate period of not less than two years preceding the date of commencement of the meeting.

Where the holder of a Preference Share has a right to vote, he shall, if present in person, have one vote upon a show of hands and upon a poll, he shall, whether present in person or proxy, have a voting right in the same proportion as the capital paid-up in respect of the Preference Shares bear to the total paid-up Equity Share Capital of the Company.

No member is entitled to exercise any voting rights either personally or by proxy at any meeting in respect of any share on which any calls or other sums have not been paid in regard to which the Company has exercised any right of lien.

The voting rights are in all respect in accordance with the provisions of Section 87 of the Companies Act, 1956.

19. BORROWING POWERS

The Articles of Association provide that the Board may, on behalf of the Company from time to time, raise or borrow and secure the repayment of any sum or sums of money in such manner and upon such terms and conditions in all respects as it may think fit provided that the amount borrowed and outstanding (apart from temporary Bank Loans) shall not, without the sanction of the Company in General Meeting, exceed the aggregate of the

Company's paid-up Capital and free reserves, that is, reserves not set aside for any specific purpose.

20. RESTRICTIONS ON THE RIGHT TO TRANSFER SHARES

Subject to the provisions of Section 111 of the Companies Act, 1956, the Directors may, without assigning any reason, decline to register any transfer of partly paid-up shares to a transferee of whom they do not approve or any transfer of shares on which the Company has lien.

No transfer will be registered unless a proper instrument of transfer duly stamped and executed by and on behalf of the transferor for the transferee in accordance with Article 39 of the Company's Articles of Association is delivered to the Company along with the certificate or if no certificate is in existence the Letter of Allotment in respect of the shares.

No transfer shall be made to a minor or person of unsound mind.

21. ISSUES OTHERWISE THAN IN CASH

65,000 Equity Shares of Rs. 10/- each have been issued to Raymon & Co. (India), Private Ltd. in consideration for the acquisition of 24 Bighas of land with buildings and steel structures at Santragachi, Howrah District West Bengal for which the Controller of Capital Issues gave his consent by his letter No. R348-001/58 dated 5th January, 1959. Save as aforesaid no shares or debentures have, within the two preceding years, been issued or agreed to be issued as fully or partly paid-up otherwise than for cash.

22. BROKERAGE

(1) Brokerage will be paid by the Company to members of any recognised Stock Exchange and to Banks @ 0.75 nP. per Share in respect of the 20,000 Preference Shares and @ 0.18 nP. per Share in respect of 3,99,400 Equity Shares allotted in respect of applications bearing their stamps.

(2) A Commission will also be paid by the Company to the Managing Brokers referred to in this Prospectus at the rate of 0.25 nP. per Share on all the 20,000 Preference Shares and at the rate of 0.7 nP. per share on all the 3,99,400 Equity Shares offered and actually allotted to the public.

23. EXPENSES OF THE ISSUE

The Expenses of the issue including brokerage, commission and general expenses will not exceed Rs. 2,50,000/- and are payable by the Company.

24. AUDITOR'S REPORT

The Directors,
Raymon Engineering Works Ltd.,
2, Brabourne Road,
Calcutta-1.

Dear Sirs,

We have examined the books of Account of Raymon Engineering Works Ltd., which we have audited for the two years ended 31st March, 1959, and those from the date of incorporation of the Company on 30th November, 1954 to March, 1957 audited by Messrs. Chartered Accountants.

B-4, Gillander House,
Calcutta, 8th June, 1960.

25. MANAGING AGENTS

Raymon & Co. (India), Private Limited are the Managing Agents of the Company on the terms of an Agreement dated the 10th day of May, 1960, and their appointment was from 7th February, 1956 for a period of ten years. Such appointment received the approval of the Government of India under the Indian Companies Act, 1913, and approval was confirmed later by the Government of India by their letter No. 41(19)-CL/55 of 7th February, 1956.

The Managing Agents receive as remuneration in respect of their services as Managing Agents a sum of the net profits of the Company for each financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956, with a minimum remuneration of Rs. 12,000/- per annum. They are also entitled subject to the provisions of the Act to the reimbursement of all expenses incurred either wholly or proportionately on behalf of the Company and are entitled to charge the Company rent for office premises leased to the Company. The Managing Agents are entitled to payment of compensation for loss of office the limit of which will be determined by mutual agreement but will not exceed five times the average annual remuneration earned during the three preceding years.

By virtue of Section 330 of the Companies Act, 1956, all managing agency agreements are to terminate on the 15th August, 1960. The Central Government by its letter No. 9 (129)—C. 111/59 of the 18th June, 1960, has approved the reappointment of the Managing Agents on the terms of a draft Agreement the principal terms of which provide as follows:—

The Managing Agents will hold office up to the 14th day of August, 1965. The remuneration proposed to be paid to them in respect of their services as Managing Agents for each financial year or part thereof of the Company the following remuneration is based on the net profits of the Company determined in accordance with the provisions of the Companies Act, 1956:

- 10 per cent on the first 10 lacs net profits or fraction thereof;
- 9 per cent on the next 10 lacs net profits or fraction thereof;
- 8 per cent on the next 10 lacs net profits or fraction thereof;
- 7 per cent on the next 10 lacs net profits or fraction thereof;
- 6 per cent on the next 10 lacs net profits or fraction thereof;
- 5 per cent on the next 10 lacs net profits or fraction thereof;
- 4 per cent on any sum over one crore of rupees net profits.

In the event of loss or inadequacy of profits in any financial year, the Managing Agents shall be entitled to receive by way of minimum remuneration the sum of Rs. 12,000/- for such financial year.

The Managing Agents are entitled to be reimbursed by the Company and expenses incurred by them on behalf of the Company as may be determined by the Board of Directors of the Company subject to the provisions of the Companies Act, 1956. The Managing Agents are to provide the Company with office accommodation at Calcutta and at such other places in India which they may be able to provide such accommodation and the Company will pay to the Managing Agents such rent and outgoings as the Board may from time to time determine. In the event of the Managing Agents being entitled to compensation for loss of office, the limit of such compensation will be governed by Section 366 of the Companies Act, 1956.

Authorised Capital of Raymon & Co. (India) Private Ltd. is Rs. 30,00,000/- divided into 10,00,000 Equity Shares of Rs. 3/- each. The Subscribed and Paid-up Capital is Rs. 15,12,000/- divided into Equity Shares of Rs. 3/- each.

26. MATERIAL CONTRACTS

The following contracts, not being contracts in the ordinary course of business which are or may be considered material, have been entered into by the Company during the two years preceding the date of this Prospectus:

(1) Agreement dated 15th July, 1957, with the Export Corporation WMW Export Deutscher Innen Und Aussenhandel of Berlin for the purchase of plant and machinery of a total approximate value of Rs. 13,09,120/- and the Company's cable dated 3rd January, 1958, amending the terms of payment and acceptance of the party with modification dated 24th March, 1958, and acceptance dated 6th August, 1958, with the Export Corporation WMW Export Deutscher Innen Und Aussenhandel of Berlin for the purchase of machinery of approximate value of Rs. 1,26,889/-. (3) Five Agreements dated 4th July, 1958, 29th August, 1958, 6th November, 1958, 6th November, 1958 and 12th November, 1958, with China National Machinery Import Corporation, Shanghai China for the supply of machine tools of approximate value of Rs. 7,34,120/- (Note: Part of the Agreement, dated 6th November, 1958, for purchase of cranes of a total value of Rs. 2,37,040/- has since been cancelled). (4) Agreement dated 10th May, 1960, with Messrs. Raymon & Company (India) Private Limited, appointing the latter as the Managing Agents for a period of 10 years with effect from the 7th day of February, 1956. (5) Agreement dated 24th July, 1957, with Messrs. Raymon & Company (India) Private Limited, for the purchase of land, structures thereon, machinery, generating sets, etc., for a consideration of Rs. 6,50,000/- which was paid by the issue of 65,000 fully paid Equity Shares of Rs. 10/- each in the Share Capital of the Company. (6) Letter dated 7th June, 1960, recording the terms on which Messrs. Hoesch Export G.m.b.H. of Dortmund, West

Germany, are to be Technical Consultants to the Company and the nature of the technical assistance and cable dated 8th June, 1960, accepting the same, letter dated 10th June, 1960, to Hoesch supplementary to the letter of the 7th June, 1960 and accepted by cable dated 20th June, 1960, (7) Agreement with Sri M. C. Ray on behalf of the Ordinary Shareholders dated 8th June, 1960 for modification of rights of Preference Shareholders, (8) An order not in writing for 6 mobile cranes valued at Rs. 41,658/- purchased by Messrs. Raymon & Co. (India) Private Limited on behalf of the Company and transferred to the Company at the purchase price on 29th November, 1958, (9) An order not in writing for electric cables valued at Rs. 25,681.95 nP. purchased by Messrs. Raymon & Co. (India), Private Limited on behalf of the Company and transferred to the Company at the purchase price on 29th September, 1958, (10) Agreements dated 12th March, 1959, 28th November, 1958, and 17th October, 1958, with the Bank of China, Calcutta, for loan/advances account for Rs. 4 lakhs, Rs. 6.50 lakhs and Rs. 8.80 lakhs respectively at interest of 6% p.a. or 1% over Bank rate whichever is higher against the purchase of machine tools which are pledged to the Bank, (11) Order on the Calcutta Electric Supply Corporation Ltd., dated 2nd July, 1959, for the supply of power of 6 KV for a reserved load of 2000 KW at Rs. 2,26,000/-, (12) Agreement dated 28th April, 1960, with Messrs. Northern India Steel Industries, Bombay, for the sale of used power generating set for a consideration of Rs. 67,000/-, (13) Agreement dated 31st May, 1960, with set at Rs. 55,000/-, (14) Agreement not in writing for the sale of second-hand motors to M/s. Nimai Bros. on 18th June, 1958 for Rs. 1,600/-, (15) Agreement not in writing for the sale of second-hand motors sold to M/s. Banvarilal Dhan on 24th June, 1958 for Rs. 5,270/-, (16) Agreement not in writing for the sale of second-hand boiler sold to M/s. Balnichi Rice Mills, Hooghly, on 29th September, 1959 for Rs. 8,500/-, (17) Agreement not in writing for the sale of second-hand motor sold to Biharilal Saha on 3rd December, 1959, for Rs. 11,401/-, (18) M/s. Philips India Ltd.'s offer of 2,170 ft. P.L.C. cables dated 20th April, 1960, and our acceptance dated 29th April, 1960, (19) Loans without interest made by Mr. M. C. Ray from time to time between 1st April, 1959 to 31st May, 1960 to the Company amounted to (as at 31st May, 1960) Rs. 4,18,100/-, (20) Letter dated 28th May, 1960, to Sri C. N. Chandra recording terms of his appointment as Business Adviser of the Company, (21) An Agreement to sanction a loan of Rs. 30,00,000 by the Industrial Finance Corporation of India, New Delhi, on the terms set out in the letter LA. 534-30/264 dated 6th January, 1960, from the Industrial Finance Corporation of India enclosing their Memorandum of terms on which the loan of Rs. 30,00,000 will be made, letter LA. 534-391 dated 8th January, 1960, from the Industrial Finance Corporation of India clarifying the purpose for which the loan may be utilised by the Company and letter dated 15th January, 1960, addressed to the Industrial Finance Corporation of India accepting the terms on which the loan will be made, (22) An Agreement evidenced by its letter dated 21st January, 1959, entered into with the Punjab National Bank Ltd., for cash credit facilities as follows:—

- Rs. 12,00,000 cash credit against stocks of rolled steel, etc., hypothecated or pledged to the Bank—Interest 2% above Bank Rate with a minimum of 6% per annum—margin 10%.
- Rs. 5,00,000 cash credit against Government supply bills on a margin of 20%—Interest 2% over Bank Rate with a minimum of 6% per annum.
- Rs. 15,00,000 letter of credit limit for import of iron and steel materials—margin 5%.

All the above credit facilities have been guaranteed by Sri M. C. Ray and Sm. M. Ray. The Bank has subsequently been given by way of collateral security an equitable mortgage on the land and the structures thereon by the deposit of title deeds on 6th November, 1959, registered with the Registrar of Companies, West Bengal, on 13th November, 1959.

(23) Letter of undertaking of the Managing Agents RC/321 dated 16th June, 1960, undertaking to loan to the Company such amount not exceeding Rs. 20,00,000 as may be required by the Company in the event that there is a shortfall in the capital to be raised out of the proposed public issue of Rs. 59,94,000.

27. APPLICATION FOR SHARES AND ALLOTMENT

Applications for Equity Shares must be for a minimum of 50 shares or multiple of 50 shares, and for Preference Shares, 10 shares or multiples of 10 shares, and must be made on the form accompanying the Prospectus which can be had from the Company's Bankers or Brokers to the Issue.

All application forms duly completed must be lodged together with the amount of Rs. 5 per share in respect of Equity Shares and Rs. 50 per share in respect of Preference Shares, with either of the following Banks, namely:—

- State Bank of India,
Strand Road, Calcutta
- Punjab National Bank Ltd.,
Canning Street, Calcutta

or with any of their Local Head Offices at Bombay, Madras, Delhi and Branch Offices at Bangalore and Kanpur.

or with any of their Branch Offices at the following places, namely, Brabourne Road, Calcutta, Karimjee House, Bombay, Armenian Street, Madras, Minto Road, Delhi, Nayagunge Kanpur and Bangalore City.

The remittance should be made by cheque or draft which, if it is desired to avoid payment of Bank charges, must be drawn either upon one of the above Banks to which the application form or cheque or draft is being sent, said towns (or upon a Branch of any of the above Banks situated in any of the above towns) or upon a Branch of any Bank situated in the centre to which the application is being forwarded.

All cheques or drafts drawn on Banks situated at places other than those mentioned above should include a sum at the rate of 0.25 nP. per cent (minimum 0.62 nP.) of the amount remitted to cover all the commission and Bank charges; otherwise the application is liable to be rejected.

Cheques or drafts should be drawn in favour of "State Bank of India or Punjab National Bank Ltd. a/c Raymon Engineering Works Ltd. Equity of "State Bank of India or Punjab National Bank Ltd. a/c Raymon Engineering Works Ltd., Preference Issue" in the case of applications for Preference Shares. For the applicants' protection, cheques or drafts should be crossed "A/c Payee only." A separate cheque or draft must accompany each application.

25 June 1960

RAYMON ENGINEERING WORKS LIMITED

Allotment will be notified by despatch of an allotment letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part, in either case without assigning any reason. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant in which event, Bank commission, if any, will be payable by the applicant.

28. SHARE CERTIFICATES

Share Certificates will be issued in exchange for Letters of Allotment within 9 months.

29. INSPECTION OF DOCUMENTS

A print copy of the Memorandum and Articles of Association of the Company, copies of the Material Contracts listed in this Prospectus, the three consent orders of the Controller of Capital Issues, the two Manufacturing Licences, the letter No. M. E. Ind. 2088/G/60 of the 15th June, 1959,

Record Production of

Maize

According to the Directorate of Economics & Statistics, Ministry of Food & Agriculture, the All-India Final Estimate of maize for 1959-60 puts the area and production at 10,457,000 acres and 3,615,000 tons respectively as against the Partially Revised Estimate of 10,457,000 acres and 3,381,000 tons for 1958-59 indicating a substantial increase of 234,000 tons or 6.9 percent in production of maize during 1959-60 over the previous year, though the area remains at the same level. Production of maize during 1959-60 is the highest on record.

SHAW WALLACE & COMPANY LIMITED

Dividend on Preference Shares

The Directors have declared an Interim Dividend of 3%, subject to deduction of Tax under Section 18(3)(D) of the Income Tax Act, 1922, on the Company's Preference Shares in respect of the year 1960, payable to Members whose names appear in the Preference Share Register on the 15th July 1960. Warrants will be posted on or after that date to the addresses or in accordance with the instructions, recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 8th to the 15th July, 1960, both days inclusive.

By Order of the Board

SHAW WALLACE & COMPANY LIMITED

D. F. R. MALLOWS

Director.

4, Bankshall, Street, Calcutta. 1
22nd June 1960.

The average yield per acre of maize during 1959-60 works out to 774 lbs. which is 6.9 per cent higher than 724 lbs. for 1958-59 and 11.1 per cent higher than the average of 698 lbs. for the five years ending 1958-59. The per acre output during 1959-60 is the highest on record.

Increase in area during the current year has occurred mainly in Punjab, Rajasthan and Bombay States and is attributed generally to favourable weather conditions at the time of sowing. This increase has, however, been offset by the decrease in area reported mainly in respect of Jammu and Kashmir and Bihar.

The increase in production during the current year is accounted for mainly by Uttar Pradesh and Punjab and to a lesser extent by Bihar and is ascribed generally to favourable climate conditions during the period of growth. The large increase in the case of Uttar Pradesh is also reported to be due partly to intensive kharif campaign. The increase in the above States has been offset considerably by decrease in production mainly in Madhya Pradesh, Bombay and Andhra Pradesh. The decrease in outturn in these States is due largely to adverse seasonal conditions during the period of growth. The crop sustained heavy damage due to continuous and heavy rains in Bombay and Madhya Pradesh during August-September-October.

All-India Final Estimate of Dry Chillies, 1959-60

The All-India Final Estimate of dry chillies, 1959-60, puts the current year's area and production at 1,499,000 acres and 339,000 tons respectively, according to the Directorate of Economic and Statistics, Ministry of Food and Agriculture. As compared with the Partially Revised Estimates of 1,471,000 acres and 326,000 tons for 1958-59, the estimates for 1959-60 shows an increase of 28,000 acres or 1.9 per cent in area and 13,000 tons or 4.0 per cent in production.

The increase in area during the current year has been shared mainly by Rajasthan, Andhra Pradesh, Bihar and Madras and is attributed generally to favourable

referred to in paragraph 9 of the Prospectus, the Report of the Auditors on the Accounts of the Company for the last five financial years, may be inspected at the Registered Office of the Company during usual business hours (Saturdays excepted) until fourteen days after the opening of the subscription list.

Extraordinary of the 10th June, 1960, and will have immediate effect.

THE INDIAN GALVANIZING CO. (1925) LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the thirty-fourth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Wednesday, the 13th July, 1960, at noon, to consider the Accounts of the Company for the year ended 31st December, 1959, to transact other ordinary business and the undernoted special business:—

SPECIAL BUSINESS:

NOTICE is also hereby given of the following resolution:—

(To be proposed as a Special Resolution)

"That in compliance with the provisions of Section 360 of the Companies Act, 1956, consent be and is hereby accorded to the sale by the Company to its Managing Agents, Balmer Lawrie & Co. Ltd. of the following assets at the prices stated:—

Cycle	Rs. 50
Motor Car	8500
Refrigerator	300
Electric Cooker	150

payment being due within one month of the date of completion of the said sale."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 6th July, 1960 to 13th July, 1960, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON,
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.
3rd June, 1960.

Note—A member entitled to attend and vote at this Meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

Pivotal Shares Lose Ground

Investment Gossip:

EXCEPT for the continued steadiness of selected miscellaneous industrials and the lively interest in new issues, there is not much activity in the stock markets. The more speculative counters are subdued presumably because of indications of further credit curb measures.

Although the increase in the British Bank Rate to 6 per cent and the raising of special deposit rate of banks to 2 per cent cannot be expected to influence stock-market operators in India, these credit measures imposed by the British authorities will serve as a reminder that authority in this country may also be considering similar, if not identical, measures.

There are also other restraining influences in the investment situation. It would appear that Government announcement as regards the steel retention prices may be delayed in view of the greater time required by authority to examine fully the claims of the steel companies. This perhaps explains the weakness of speculatives in general and Indian Irons in particular. The fact that a large parcel of Indian Irons has changed hands has also contributed to the subdued tone of this scrip.

The proximity of the Government loan programme—it is expected to be launched next month—is also having its impact on market sentiment. Depletion of funds to the tune of about Rs 200 crores representing the approximate total amount of the Central and States loans cannot be easily ignored by operators.

It is not improbable that the international situation has something to do with the present general tendency to proceed cautiously at the higher levels. Above all, the fact that investors have continued to keep out of the market seems to have been mainly responsible for the decline in activity. The new issues, however, have been uniformly successful with almost all of them several times oversubscribed.

The interest of the investor in new issues, rather than in blue chips at current prices, seems to suggest that, in his view, and from the standpoint of yields, prices of blue chips are too high. Such a state of affairs arises because investors for "growth" are today stronger than the investors for yields.

Raymon Engineering

Investment Special:

One more new issue For the Investor which, undoubtedly, will attract considerable over-subscription has been announced this week by Raymon Engineering Works Limited.

First, as to the details of the issue. The public is offered Rs 39.94 lakhs of equity shares of Rs 10 each, and Rs 20 lakhs of 6½ per cent Redeemable Cumulative Preference shares of Rs 100 each. In each case, half of the face value of the share is payable with the application, the other half being due on allotment. Also, it has been made clear that the preferential dividend will be so calculated as "will leave a nett amount equivalent to 6½ per cent per annum on the capital for the time being paid up thereon." Thus, in terms of the Finance Act 1960, "the dividend payable in respect of the Preference Shares will in fact be 9-2/7 per cent from which tax at source will have to be deducted by the Company at the rates prescribed by the Act". The subscription list is to open on 27 June 1960 and will close on 4 July 1960 or earlier at the discretion of the Directors.

Next, as to why the investor should find this new issue particularly attractive. There can be no doubt that, today, the shareholder is more interested in the growth prospects of his investment than in the running yield that he is able to get from it. From this point of view, the expansion of Raymon Engineering is so certain, the prospect of increased earnings so encouraging, that the investor in "growth" scrip will, especially in view of the commanding premia which recent new issues have attained to, be anxious to get for himself a parcel of Raymon Engineering.

What does Raymon Engineering do? The objects of the company, as mentioned in the Memorandum of Association, envisage in particular the "manufacture of locomotives and engines of all kinds, of railway wagons and all other rolling stock and components and sale thereof." A license has already been obtained from Government, in 1955, for the manufacture of 312 covered broad gauge railway wagons and 26 broad gauge bogey under-frames a month. A subsequent license has also been obtained, whereunder manufacture of the following has been approved:

- (1) Components for Rolling Stock;
- (2) Points and Crossings;
- (3) Railway Steel Sleepers and Pressed Steel Tanks;
- (4) Structural Steel Work Fabrication of all descriptions; and
- (5) Cranes of all descriptions.

The company's works are situated in Santragachi, about six miles from Calcutta. The Wagon and rolling stock sections have already commenced production and the

factory is being tooling up to undertake structural steel work on a large scale for which a big demand is expected in the next few years. The company has arrangements with Messrs. Hoessch Export G.m.b.H for technical collaboration for implementing its production plans. These arrangements include the appointment of foreign technical personnel to key positions in the different divisions of the works and the training of its selected Indian engineers at the works of the associated Hoessch concerns in Germany.

After manufacture commences, Government are to determine the capacities to be sanctioned in respect of these items.

So: Take an engineering company; let it have a strong and respected Board of Directors; let it have, moreover, profitable lines of manufacture assured; that it will be a growth scrip is therefore implicit, and all that remains to be seen is not whether the Raymon Engineering new issue will be a success, but to know the magnitude of over-subscription that will greet this highly desirable public offering For the Investor.

£R\$

Sen Raleigh

The fact that the bicycle industry now finds a place in the list of industries which may not readily get Government sanction for expansion at least in the near future, shows the rapid strides this industry has taken in recent years. In 1959 the overall increase in production over the previous year was about 30 per cent and Indian bicycles are now participating in the export trade as well. The record of Sen Raleigh has been impressive last year as it has been able to achieve an expansion of nearly 50 per cent in its production and sale of bicycles over 1958. It is significant to note that this has been achieved with imports of materials standing almost at the same level as in 1957.

Sen Raleigh's share in the country's bicycle export is also quite substantial at 70 per cent. Mr Abhijit Sen, the Chairman, has told the annual general meeting of the company on Thursday that, in view of the possibility of Government not sanctioning additional capacity for the cycle industry, the time had come to think in terms of diversification of its production. Mr Sen has mentioned light engineering manufacture as the possible direction for branching out. In this regard, he has rightly pointed out that the chosen lines of expansion should be such as are likely to get ready Government sanction.

The demand for bicycles continues to be quite good in the country and as pointed out by Mr Sen the levy of an excise duty of Rs 10 on a complete cycle in the last budget has not, as feared, resulted in a slackening of demand.

Goodyear's New Tyre Factory

Goodyear's 6-crore Indian tyre and rubber manufacturing plant is steadily taking shape at Ballabgarh, near Delhi, with the commencement of construction work from last week. It is understood that the factory will be the most modern tyre factory in India and will operate the very latest equipment. A special feature is that it will introduce in this country, 3T, described as a revolutionary new processing of tyre fabric. The factory is expected to be completed early in 1961.

£R\$

New Issue Notes

The public issue of equity shares by the East Anglia Plastics (India) Limited has been about 18 times over-subscribed. The directors have decided to allot shares to each and every applicant and there will be no ballot. Applicants for 100 to 300 shares will get 10 shares per application; for 400 to 900 shares will get 20 shares; for 1000 to 1,200 shares will get 35 shares and for 1,400 to 10,000 shares will get 5 per cent. Allotment letters and refund pay orders will be despatched from 16 July, 1960.

A new company under the name of the National Oxygen Corporation Limited is proposed to be formed shortly to undertake the manufacture of Oxygen, acetylene, calcium carbide and urea. The authorised capital will be Rs 3 crores and the issued capital Rs 1 crore in the form of one lakh equity shares of Rs 100 each. The factory will be located near Bombay.

Subject to Government sanction, the Structural Engineering Works Limited has, it is learnt, decided to raise the ordinary capital from Rs 30 lakhs to Rs 45 lakhs, by making a right issue, at par. The new shares will be issued to the existing shareholders in the ratio of one share for every two shares held.

To carry out its programme of replantation of rubber, the Devona Tea & Produce Company limited has proposed to issue 25,000 equity shares of Rs 10 each, at par, to the existing shareholders in the ratio of one for every two shares held.

£R\$

Investment Notes:

THE shares of the West Coast Paper Mills have been ruling very firm during the past few days, having buyers up to Rs 217 from Rs 191.50. The main inspiration is derived from the reports that the company has applied to the Government for permission to double the capacity of its plant. There is a belief in certain circles that the company will be obliged to make a right issue after the receipt of the necessary sanction.

The Ordinary shares of the New Standard Engineering Company Limited have also moved up to Rs 142 from Rs 124 on sustained support. It is reported that the company has, under contemplation, an ambitious expansion programme, aimed at diversifying its activities.

The heavy engineering project, undertaken by the Associated Cement Companies Limited, is reported to be making satisfactory progress. The company has already received licences of a total value of about Rs 199 lakhs for importing machine tools, equipment and structural steel.

The Calico Mills, Ahmedabad, have obtained permission to issue Debentures of the second series for Rs 1.48 crores. These will rank pari passu in point of security with the Debentures of the first series.

Balance-Sheet Briefs:

SHAW Wallace & Company Limited has reported a net profit of Rs 65.22 lakhs for 1959 as against Rs 51.49 lakhs in the previous year. A dividend of 15 per cent, taxable, is recommended against a tax-free dividend of 10 per cent for 1958.

The working of the Saran Engineering Company Limited has resulted in a profit of Rs 2.65 lakhs for the year ended 31 March, 1960 as against Rs 98,852. A taxable dividend of 35 nP against a tax-free dividend of 25 nP per share is recommended.

The profit of the Tezpur Tea Company Limited has risen from Rs 6.19 lakhs to Rs 10.76 lakhs for 1959. A dividend of 25 per cent, taxable, is recommended against a tax-free 12½ per cent.

Larsen & Toubro Limited has reported a substantial increase in the gross profit from Rs 35.73 lakhs to Rs 49.04 lakhs for the year ended 31 March, 1960. The directors have recommended a taxable dividend of Rs 1.80 per share. This works out to a net dividend of Rs 1.26 against Rs 1.25 per share.

The gross profit of Shree Digvijay Cement Company Limited has increased from Rs 42.64 lakhs to Rs 48.09 lakhs for 1959. A taxable dividend of Rs 9 per share is recommended. This works out

to a net dividend of Rs 6.30 against Rs 9.00 paid for the preceding year.

The working of the Andhra Cement Company Limited has resulted in a profit of Rs 8.56 lakhs for 1959 against Rs 5.07 lakhs. The directors have recommended a taxable dividend of 10 per cent.

The net profit of the Travancore Cements Limited is slightly lower at Rs 8.58 lakhs against Rs 9.36 lakhs. A taxable dividend of 6 per cent is proposed against a tax-free dividend of 6 per cent.

The Vikram Mills Limited, Ahmedabad, has earned a profit of Rs 3.77 lakhs for 1959 against Rs 11,630. The directors have recommended a taxable dividend of Rs 50 per share.

The working of the Raja Bahadur Motilal Poonam Mills Limited has resulted in a profit of Rs 5.21 lakhs against Rs 2.38 lakhs. The dividend is passed over.

The Ajit Mills Limited has earned a profit of Rs 2.36 lakhs against Rs 1.72 lakhs. A taxable dividend of Rs 32 per share is recommended. The net dividend works out to Rs 22.40 against Rs 25 per share.

The net profit of the Coimbatore Pioneer Mills Limited is higher at Rs 22.90 lakhs against Rs 17.36 lakhs. A taxable dividend of 25 per cent against a tax-free dividend of 20 per cent is recommended.

The Sivananda Mills Limited has been able to report an increase in the net profit from Rs 11.13 lakhs to Rs 15.93 lakhs. An Ordinary dividend of 22 per cent (taxable) is recommended against a tax-free 15 per cent.

The Cannanore Spinning & Weaving Mills Limited has shown a slight rise in the net profit from Rs 7.54 lakhs to Rs 10.34 lakhs for the year ended 31 March 1960. The directors have paid a final dividend of 8½ per cent, making a total of 17 per cent (taxable) against a tax-free dividend of 15 per cent.

Selective Support

Watch-Dog Writes:

TRADING in stock markets has been devoid of liveliness and, except for a few selected shares which have moved up on influential support, fluctuations in other shares are confined to a narrow range.

Although activity on the Calcutta Stock Exchange remained restricted, prices in the Miscellaneous section responded to selective support.

After a steady start, popular counters on the Bombay Stock Exchange gave way on scattered selling due to settlement considerations.

There was moderate activity on the Madras Stock Exchange.

Unsettled conditions prevailed on the London Stock Exchange.

Price movements on Wall Street were irregular with losses ranging up to one dollar.

★

Calcutta

Calcutta, Friday Evening.

IRREGULAR trends in prices characterised trading on the local Stock Exchange where attention was mostly directed toward selected Miscellaneous issues. In general, the market was highly erratic, indicative of a keen tussle between the bulls and the bears. Some of the bulls found it difficult to sustain the market in their favour in view of the heavy financial outlay involved due to the heavy carry-forward charges fixed at the last settlement.

Bear operators were, however, trying to depress the market at the opportune times. Apart from the inordinate delay in the announcement of the increase in steel retention price, the news of the rise in UK Bank Rate from 5 to 6 per cent was regarded as a strengthening of the prospect of a rise in the Bank Rate in India as a measure to curb the inflationary tendencies. With the result, prices showed an indecisive trend till the end of the week. But, in the confusing atmosphere, a few of the miscellaneous share came in for sustained support at enhanced levels, thanks to growth prospects.

The Gilt-edged section remained dull. The long-dated loans continued to be on offer, while the medium-dated ones were out of favour. There was a general disposition to await the terms and size of the Central Government loans, to be floated in the middle of next month. Meanwhile, 3 per

cent 1986 Conversion Loan opened lower, but improved steadily toward the close to Rs 75.65.

Bank shares remained steady although price movements were confined to a narrow range. Punjab National changed hands at Rs 19.19 to Rs 19.25 and United Commercial at Rs 68 to Rs 68.25.

Sellers continued to predominate in the Jute section in view of the prospects of a further cut in production following shortage of raw material supplies. There was also a general reluctance to enter into any commitments before the uncertainty concerning the outlook was relieved. Howrah were offered at as low as Rs 22.19 against Rs 22.50; Ganges at Rs 11.69 against Rs 12; National at Rs 25.94 against Rs 26.75 and New Central at Rs 29.31 against Rs 30.81. Among higher-priced scrips, Kamarhatty were well maintained at Rs 145; Kankarrah at Rs 81 and Kinnison at Rs 161. Thanks to the diversification of activities, Birlas had buyers at Rs 30.50 to Rs 30.87.

Coal shares were generally steady. Bengal were boosted upto Rs 343 from Rs 323 on reports of the company's proposal to make a right issue. Amalgamated changed hands at Rs 24.37 to Rs 25; Central India at Rs 12.97 to Rs 13.19; Western Bengal at Rs 8.31 to Rs 8.44 and South Karanpura at Rs 11.94 to Rs 12.12. Burrakur were at one time pushed up to Rs 20.12 from Rs 19.56 on speculative buying, to close finally at Rs 19.81 on profit-taking.

There was little doing in the Tea section. Operators were at a loss to interpret the prospect of the industry for the current season. Some brokers entertained an optimistic idea, while others had the foreboding of a period of gloom. It was feared that the loss in production for certain gardens might be too big to be compensated for by a rise in the price of the commodity. Bhatkawa changed hands at Rs 18.81 to Rs 19; Brooke Bond at Rs 17.25 to Rs 17.69; Bishnauth at Rs 22.37 to Rs 22.50; Dhela-khat at Rs 23.56 to Rs 23.76; Grob at Rs 14.12 to Rs 14.31; Jayshree at Rs 19.31 to Rs 19.69 and Jullibari at Rs 24.44 to Rs 24.62.

Sugar shares came in only for selective enquiry on reports that the Government was not likely to de-control sugar until a clear picture with regard to production was available. Belsund and Cawnpore were well maintained at Rs 13.62 and Rs 15.44 respectively, while Champarum turned quiet at Rs 20.75 against Rs 21.12. SKG moved narrowly between Rs 14.56 and Rs 14.75.

The textile industry's willingness now to implement the Wage Board's recommendations and the possibility of a settlement of the labour dispute invited some attention to the Textile scrips. Jayshree were taken up to Rs 15.87 from Rs 16.00 (Rs 16.00); Dunbar up to Rs 225 from Rs 209 (Rs 218); Elgins up to Rs 20.25 from Rs 19.62 (Rs 20.25) and Kesoram up to Rs 31.50 from Rs 31.25 (Rs 31.37). Figures shown within brackets were the week's closing rates. Cawnpore were a narrow market around Rs 6.75.

In the Engineering section, price movements were mostly influenced

by the speculative activity in Indian Irons which, in turn, were subjected to alternate buying and selling. Against the previous week-end closing of Rs 24.80, Indian Irons opened lower at Rs 24.68 and, after improving at the time to Rs 24.71, receded gradually to Rs 24.42 due to selling pressure on reports of a possible delay in the announcement of the steel retention price and fears of a possible rise in Bank Rate as in the UK, to finish the week at Rs 24.53. In sympathy, TEXMACO were marked down to Rs 26.55 from a high of Rs 26.80; G. K. Williams to Rs 47.62 from Rs 48.25 and Jessop to Rs 23.75 from Rs 24.19, to finish better at Rs 26.60; Rs 47.75 and Rs 24.12 respectively. Britannia were, however, enquired up to Rs 14.87 from Rs 13.62. Indian Galvanizing, after being taken upto Rs 26.19 from Rs 25.12, receded at the close to Rs 25.50 on reports of the dividend being again passed over for last year. Kumardhubi were quiet at Rs 7.06 against Rs 7.25 with Marshalls well maintained at Rs 5.85.

The Miscellaneous section provided a few firm spots due to sustained support from influential quarters. Dealings were very prominent in Alkali Chemicals which were taken upto Rs 31.87 from Rs 29.25; in Dunlop Rubber upto Rs 45.06 from Rs 42.50; in Hindustan Motor upto Rs 21.22 from Rs 20.31. Indian Copper, after hardening to Rs 5.31 from low of Rs 5.18 on rumours of the company's proposal to convert the present two-shilling into rupee shares, receded at the close to Rs 5.18 on lack of confirmation. Orient Paper changed hands at Rs 45.55 to Rs 45.70; Indian Cable at Rs 34.12 to Rs 34.50; Shree Gopal at Rs 29 to Rs 29.50; Indian Aluminium at Rs 28.81 to Rs 29.31; Rohtas at Rs 38.44 to Rs 38.75; Indian Steamship at Rs 11.25 to Rs 11.41; Aluminium Corporation at Rs 18.31 to Rs 19.06; Indian Oxygen at Rs 38.50 to Rs 39.12; Sirpur Paper at Rs 17.56 to Rs 18.37; Union Carbide at Rs 39.25 to Rs 39.62; BIC at Rs 7.62 to Rs 7.69 and National Rubber at Rs 14.12 to Rs 14.62.

Madras

There has been a fair tendency since the past fortnight in the stock market to be cautious. What was once feared an overbought position seems to have been liquidated and a sound position has returned. The gilt edged section still continues to be poorly patronised. A few of these are sought even lower than the below-par levels. Mysore Loans alone were somewhat active with other State Loans left untouched. There was not much activity in Bank shares this week, and public utilities, continued featureless. Sugars were slightly easier. Teas were better and due to profit-taking decline on Tuesday. Good absorption was seen in cement and industrial shares. Textiles, were unchanged.

GOVERNMENT SECURITIES: Short-dated loans continued at the same rate. The Madras Gov-

ernment 3 per cent 1968 Development was quoted below par at Rs 99.40. The 1968 4 per cent of the same State loan was the same at Rs 109.40. The 4 per cent Mysore State Loan 1967 and 1968 were each sold at Rs 100.15. Kerala's 1970 4½ per cent Loan continued at Rs 100.97. Andhra's 1970 4½ per cent Loan was available at Rs 101.90.

BANKS: Banks did not note any change this week. The Rs 10 paid share of the Canara I & B Syndicate gained its last week's loss to be priced at Rs 17.75 on Tuesday. Pandyan remained the same at Rs 39.00 as well as Punjab National at Rs 19.15.

ELECTRICS: Nothing was so desolate as this counter. South Madras was offered at Rs 10.05 and Berhampur went further down to Rs 6.25, 25 nP lower than all these weeks. Vellore was marked, at Rs 11.50, Negapatam at Rs 9.50, Salem-Erode at Rs 12.50 and West-Coast at Rs 12.35.

SUGARS & BREWERIES: Sugars were slightly easier on Tuesday, Cauvery proved sellers at Rs 139.00. Deccan which gained 50 nP by the beginning of this week lost three nP only and was quoted at Rs 15.47. Mysore Sugar went into selling at Rs 57.12, ruling better than last week's Rs 56.90. EID was bought at Rs 55.25. Travancore too was placed higher at Rs 11.70, having gone up by five nP only. KCP continued at Rs 23.00. United Breweries at Rs 101.50. This scrip was quoted only at Rs 97.50 last week-end and it maintained its strong position after two days' operations in the Stock Exchange.

PLANTINGS: Stray Tea shares commanded some business while Coffee was unaffected. Attikhan improved to Rs 2.90, but Blue Mountain continued at Rs 4.90 this week, better by 6 nP than the previous week. Cochin Malabar attracted attention at Rs 6.65 having registered an increase of 10 nP this week. On Monday it was better at Rs 8.70. Coffee Lands gained another ten nP at Rs 24.71, while Consolidated Coffee was better this week at Rs 25.80. Coorg Tea shared the popularity with the rest at the higher rate of Rs 5.40 jumping up by 10 nP this week. Haileyburia shed value at Rs 15.65. Highland went up to Rs 15.25. Kil Kotagiri was unaffected at Rs 5.35. Nelliampathy, after losing a couple of nP this week beginning regained its old value of Rs 2.75. Nonsuch was bought at a better price of Rs 26.75. In this share the increase this week was as much as 25 nP above Rs 26.50 of last week's quotation. Ossoor slid to Rs 3.60 and Oucen-terloni was fractionally below last week's price at Rs 4.92. Parkside was better at Rs 26.75 and Peer-made went up to Rs 22.85 from Rs 22.65. Periakaramalai was bought at a slightly higher price of Rs 3.77. Other rubber shares continued at the marked levels, Vellimalai being quoted lower at Rs

6.15 and Wartyhully at Rs 3.45. Waterfall was slightly better at Rs 4.07.

Textiles: These were not very much altered since last week. Cambodia gained slightly at Rs 10.12 as also Cauvery spinning at Rs 14.50. Coimbatore Cotton and others of this group had not bettered their value after this week's business though last week's prices of these shares were slightly lower. Both Bangalore Woollen and Buckingham continued at the same price of Rs 195.00 and Rs 205.50 respectively. Lakshmi ruling at Rs 158.00 at last closing, opened at Rs 159.00, Monday and today it closed at Rs 161.50. The Rs 25 paid share of the same Mill did not change at Rs 77.50. Loyal had support at Rs 33.77 better by 22 nP today. Madura continued its last week's quotation of Rs 32.50. Mettur too was the same this week at Rs 432.00. Radhakrishna was quoted higher by 25 nP at Rs 28.75. Rajalakshmi declined by Rs 1.50 to Rs 77.00. South India Viscose lost a rupee today from its Rs 148.00 from last weekend. Travancore Rayon was unchanged at Rs 37.50 which was Monday's closing rate. It had improved to this level from Rs 36.99 of last week's closing.

Miscellaneous: Aluminium Industries ruled steady although Tuesdays demand was only 10 nP lower than the ruling price of Rs 23.25. Andhra Cement went upto Rs 14.25, a good increase from Rs 10.50 of last week's closing and also Rs 11.00 ruling Monday. Ashok Leyland declined at the beginning of this week to Rs 8.42 and improved today by 3 nP at Rs 8.45. Binny's Engineering shares spurted to Rs 185.00 from Rs 178.00. Dalmia was good at slightly lower level of Rs 12.15 today though it opened higher Monday by 20 nP. FACTS registered a better tone at Rs 10.50. India Cement improving to Rs 7.00 yesterday declined to Rs 6.90, but should be considered higher than Monday price. Krilokar Electrics receded to Rs 13.10. Mettur Chemicals had gained ten nP at Rs 12.35. Parry's Confectionery went down to Rs 5.90 from Rs 6.10 of last weekend's quotation and it lost another 28 nP at today's transactions being quoted at Rs 5.62. T. Stanes also improved to Rs 30.00. W. I. Plywoods remained the same at Rs 303.00.

London

UNSETTLED conditions prevailed on the London Stock Exchange. The announcement of the rise in the Bank Rate from 5 to 6 per cent made buyers very cautious and, under small selling, jobbers quickly lowered prices. The outstanding feature was a sharp decline in gilt-edged securities as a result of the higher Bank Rate.

New York

ALTHOUGH there was a slight turn for the better in the business news background, prices on Wall Street continued to ease. The pattern was one of mostly fractional changes either way with losses eventually outnumbering gains. A recovery, however, developed toward the close under the lead of Steels, Rails and Electronics.

Excellent Results of Shree Gopal Paper

Balance-Sheet Reviews:

THANKS to the high level of working efficiency, the Shree Gopal Paper Mills Limited has produced excellent working results for the year 1959. Production is higher at 19,011 tons against 17,182 tons and this is possible due to the increased quantities of pulp becoming available from the new pulp mills.

Sales of paper have risen to Rs 4.27 crores from Rs 3.69 crores, while the net profit, before providing for Depreciation and Taxation, is substantially higher at Rs 1.02 crores against Rs 86.03 lakhs in the previous year. Apart from providing Rs 8 lakhs for General Reserve, the Depreciation amount is raised to Rs 12.54 lakhs from Rs 9.07 lakhs and Development Rebate Reserve to Rs 24.75 lakhs from Rs 2.48 lakhs. Taxation provision is reduced to Rs 25.20 lakhs from Rs 43.50 lakhs. The directors have recommended a taxable dividend of 17 6/7 per cent against a tax-free dividend of 12½ per cent on the Ordinary shares.

According to the directors' report, the lower paper prices, which came into effect early this year, are bound to affect the results of the company. The impact of the revised prices on the profits will be actually reflected in the working of the company during the current year; but the directors hope that the loss in profit will be made up to a great extent by the increased production expected from the New Mill.

The paid-up capital is shown at Rs 2,07,99,775 and Share Premium Account at Rs 11.35 lakhs. Capital Reserve stands at Rs 21,250; General Reserve at Rs 45.75 lakhs; Raw Materials Reserve at Rs 3.00 lakhs; Contingency Reserve at Rs 2.50 lakhs and Dividend Equalisation Fund at Rs 19.50 lakhs. The gross block at Rs 3.41 crores is depreciated by Rs 1.27 crores to show a net block value of Rs 2.14 crores.

Belvedere Jute Pays More

Despite a decline in sales from Rs 1.27 crores to Rs 1.24 crores, the Belvedere Jute Mills Company Limited has reported a higher profit, after providing for Depreciation and Taxation, of Rs 6.32 lakhs for 1959 as against Rs 5.40 lakhs in the preceding year. A sum of Rs 1.85 lakhs (Rs 1.74 lakhs) is set apart for Depreciation; Rs 5.80 lakhs (Rs 89,000) for Taxation; Rs 1,782 (Rs 2,285) for Development Rebate Reserve; Rs 1.50 lakhs (Rs 3.00 lakhs) for General Reserve and Rs 21,000 (nil) for Contingency Reserve. The directors have recommended a final dividend of Rs 8.50, making a total of Rs 13.50 per share, subject to tax. This works out to a net dividend of Rs 9.45 per share against Rs 7.50 previously.

In view of the disparity between the prices of raw jute and finished goods and the probability of production having to be curtailed until the new crop arrives, results for the current year are likely to be less favourable.

The balance-sheet, as at 31 December 1959, shows a paid-up capital of Rs 35 lakhs, divided into 28 lakh Ordinary shares and 7,000=7 per cent Cumulative Preference shares, both of Rs 100 each. Against this, reserves and surplus are shown at Rs 30.71 lakhs. Total gross block amounts to Rs 98.02 lakhs; total depreciation to Rs 56.64 lakhs and the net block to Rs 41.38 lakhs.

Satisfactory Results of Tide Water Oil

The Tide Water Oil Company (India) Limited has reported satisfactory results for the year ended 31 October 1959 despite the fact that the market conditions toward the end of the year were becoming increasingly competitive. Sales have risen to Rs 66.84 lakhs from Rs 62.35 lakhs, while the net profit, before providing for Depreciation and Taxation, amounts to Rs 2.92 lakhs against Rs 2.39 lakhs in the previous year. A sum of Rs 13,363 lakhs (Rs 13,761) is provided for Depreciation; Rs 1.31 lakhs (same) for Taxation and Rs 3,193 (Rs 2,504) for Development Rebate Reserve. The directors have recommended a final dividend of Rs 1.50, making a total of Rs 2.20 per share for the year, subject to deduction of tax. A tax-free dividend of Rs 1.50 per share was paid previously.

The Central Government have approved the appointment of Messrs Andrew Yule & Company Limited as Secretaries and Treasurers for a period of five year from 15th August, 1960. In this connection, an extraordinary general meeting will be on tht 21 June, 1960.

Against the paid-up capital of Rs 6.00 lakhs, reserves and surplus amount to Rs 9.39 lakhs. The gross block at Rs 2.56 lakhs is depreciated by Rs 1.73 lakhs to show a net block value of Rs 82.745.

Rise in Sales of Bharat Carbon

Although there is enhanced demand for the company's goods in the stationery line and the sales from Rs 45.31 lakhs to Rs 50.98 lakhs in 1959, lower rates due to competition had to be quoted in tenders, specially for Government business, which resulted in fall in the ratio of gross profits.

The net profit for the year, before providing Depreciation and Taxation is only slightly higher at Rs 3.13 lakhs against Rs 2.85 lakhs previously. Apart from providing Rs 10.691 for Depreciation, the Depreciation amount is raised to Rs 68,217 from Rs 57,817 and Taxation provision to Rs 1.27 lakhs from Rs 1.20 lakhs. The directors have recommended a taxable dividend of 10½ per cent for the year against a tax-free dividend of 9 per cent.

During the year, the company purchased another printing press at Calcutta to which is attached Calcutta Exchange Gazettee and Daily Advertiser.

The paper mill could not go into operation earlier, as electric power was not made available in time. However, the paper mill is now running satisfactorily and there seems to be a bright future for the company.

Against a paid-up capital of Rs 16.50 lakhs, reserves and surplus are shown at Rs 3.04 lakhs. The gross block stands at Rs 20.12 lakhs, which is depreciated by Rs 5.04 lakhs to show a net block of Rs 15.08 lakhs.

Indore Malwa Pays out of Reserves

The difficult conditions generally experienced by the textile industry are fully reflected in the working results of the Indore Malwa United Mills Limited. The net profit for 1959 is shown at Rs 67,574 against Rs 34,109 for the previous year. The sum provided for Development Rebate Reserve is reduced to Rs 41,000 from Rs 1.10 lakhs. After transferring a sum of Rs 3.23 lakhs from General Reserve, the directors have recommended a taxable dividend of Rs 7 per share against a tax-free dividend of Rs 5 per share in the previous year when a sum of Rs 2.50 lakhs was transferred from General Reserve. The debit balance brought forward from the previous year's account remains at Rs 12.53 lakhs.

Against a paid-up capital of Rs 50 lakhs, General Reserve stands at only Rs 45,680 and Development Rebate Reserve at Rs 1.51 lakhs. The gross amounts to Rs 1.65 crores, total depreciation to Rs 1.21 crores and the net block to Rs 43.47 lakhs.

Elphinstone Spinning Resumes Dividend After 1956

Thanks to a marked improvement in the conditions of the cloth and yarn markets during the second half of the year, the Elphinstone Spinning and Weaving Mills Company, Limited has been able to report a net profit of as much as Rs 18.39 lakhs for 1959 as against a loss of Rs 4.53 lakhs incurred in the previous year. A sum of Rs 3.19 lakhs is set apart for Development Rebate Reserve. The directors have recommended a taxable dividend of Rs 7 per share for the year. The previous dividend recommended was Rs 5 per share, tax-free, for 1956.

Against a paid-up capital of Rs 55 lakhs, General Reserve stands at Rs 10 lakhs; Taxation Reserve at Rs 7.52 lakhs; Development Rebate Reserve at Rs 3.19 lakhs and surplus realised on acquisition of land at Rs 1.31 lakhs. The gross block amounts to Rs 1.51 crores; total depreciation to Rs 80.85 lakhs and the net block to Rs 70.40 lakhs.

Jagatjit Cotton Results

Despite a rise in sales from Rs 2.34 crores to Rs 2.67 crores, the Jagatjit Cotton Textile Mills Limited has reported a net profit, after providing for Depreciation and Taxation, of Rs 13.12 lakhs for the year ended 31 January, 1960 as against Rs 11.12 lakhs for the preceding year. A sum of Rs 9.99 lakhs (Rs 8.74 lakhs) is provided for Depreciation; Rs 6.75 lakhs (Rs 10.50 lakhs) for Taxation; Rs 3.50 lakhs (Rs 2.80 lakhs) for Development Rebate Reserve and Rs 4.00 lakhs (Rs 2.50 lakhs) for General Reserve. A dividend of 14-2/7 per cent, subject to tax, is proposed on the Ordinary shares. This will give a dividend of 10 per cent net as in the previous year.

Budget for Last Year of 2nd Plan

THE last of the Budgets for the Second Plan period has the heartening news to give us that the revised expenditure target of Rs 4,500 crores, set in May 1958, is likely to be exceeded by over Rs 100 crores. Meantime, also, it is known that investment in the private sector will be considerably higher than the original target of Rs 2,400 crores. It therefore seems certain that, from the point of view of investment, the Second Plan will be more fully a success than was the First Plan, whereunder there was a shortfall in expenditure of the order of 15 per cent. However, due mainly to higher costs and a certain quantum of underestimation, there will, in respect of the Second Plan, be a shortfall as to some physical targets. But what is of significance is that difficulties of different kinds have been surmounted and that rather more than the so-called "core" of the Plan will be completed by the allotted time. This should give the country the confidence necessary to proceed with what will undoubtedly prove to be a much larger undertaking in the form of the Third Plan.

Mr Morarji Desai has been the steward of India's finances during the critical part of the Second Plan. As he took over the Finance portfolio, there was depression on every side. A "make-do" Budget had been presented by Mr Nehru, before Mr Desai formally assumed office. Drastic import restrictions had already been imposed, but the drain on foreign exchange reserves was something fierce. The higher cost of civil administration had already eaten away into a good part of the new taxes raised. Government's borrowing programme was fitful, and signs were only then emerging of the prospect of the target from market loans being attained over the Plan period. The price situation was not only unsettled, there was the real threat that, if unchecked, creeping inflation would gather momentum. The discernible turning point in India's—and in the Second Plan's—fortunes came in August 1958 when, under the aegis of the World Bank, a meeting of India's creditor countries was arranged in Washington to consider how our crisis could be met and overcome.

The revised estimates for 1959-60 indicate how magnificently the picture has changed since the dark and gloomy days of mid-1958. This, partly, is of course due to the emphasis that Mr T. T. Krishnamachari placed on excise duties as a source of governmental revenue. But, partly, also, Mr Desai can take credit for the improved collections arising from his reorganisation of the corporate tax structure. In the final analysis, however, the most important contributory factor has been the reality of the beginnings of a dynamic economy in action. Even in 1958, when production was thought to be lagging, and which was responsible for a modicum of bleakness about implementing the Second Plan, it is now clear, in retrospect, that the very poor performance of the cotton textile industry obscured the real gains in output and served to distort the index of industrial production. In 1959, the textile industry, thanks to a good foodgrains crop, recovered, and a sharp rise has been registered in industrial output. But the full magnitude of the progress achieved in industrialisation is not reflected in the index of industrial production, because a great number of new industries have been set up which are not included in that index. As output rose, and as the range of articles manufactured widened, the scope for excise duties as well as the size of collections greatly increased. This, indeed, is the central point about the 1960-61 Budget presented by Mr Desai last week, bearing testimony as it does to larger collections in the current year and to the extension of the excise duties net in the Budget year. We may note here that, if past experience is any guide, the figures given by Mr Desai as the revised estimate for 1959-60 and the Budget estimate for 1960-61 in respect of excise duty yields are likely to prove to be underestimates. It is in this light that there is just a glimmer of hope that even the public sector investment on the Plan, at Rs 4,800 crores, will be achieved by March next year. However, this last will depend also on Government's ability fruitfully to spend on the Plan the improved revenues that may accrue.

A comparison of the Actuals for 1958-59 with the Budget and revised estimates for that year proves to be extremely interesting, and serves to show the expansionary trend already evident in the

economy as also to confirm that Indian Finance Ministers have got into the habit of regularly underestimating receipts.

Main	(In Rs Crores)		
	1958-59	1958-59	1958-59
	Budget	Revised	Actuals
Heads of Revenue	Estimates	Estimates	
Customs	170.00	136.00	138.29
Union Excise Duties	304.76	301.15	312.94
Corporation Tax	55.50	56.00	54.33
Taxes on Income	161.50	162.50	172.01
Total Revenue	767.99	728.20	757.89

There has similarly been a tendency to overestimate expenditure.

Main	(In Rs Crores)		
	1958-59	1958-59	1958-59
	Budget	Revised	Actuals
Heads of Expenditure	Estimates	Estimates	
Direct Demands on Revenue	94.45	99.63	98.52
Debt Services	40.00	42.06	48.63
Civil Administration	290.44	197.72	193.49
Miscellaneous	80.21	92.09	86.14
Defence Services (net)	278.14	266.87	250.93
Total Expenditure	796.01	788.15	763.14

In the result, the deficit on revenue account, placed at Rs 28.02 crores in the Budget, increased to Rs 59.95 crores in the revised estimates, but, in the Actuals, turned out to be no more than Rs 5.25 crores. Particular attention may be drawn to the rises recorded in the revenue from excise duties, and from Taxes on Income. Equally interesting are the trends for 1959-60 as between the Budget and the revised estimates.

Main	(In Rs Crores)		
	1959-60	1959-60	1959-60
	Budget	Revised	Actuals
Head of Revenue	Estimates	Estimates	
Customs	132.77	160.00	
Union Excise Duties	324.32	350.82	
Corporation Tax	58.75	78.00	
Taxes on Income	166.25	152.00	

In the light of the experience of past years, therefore, it is a reasonable assumption that the Actuals will exceed the revised estimates. And so, the revenue deficit for 1959-60, which has been reduced from Rs 59.08 crores in the Budget to Rs 15.30 crores in the revised estimates, may be converted in the Actuals into a surplus.

Mr Morarji Desai's expectations of revenue for the coming year are Rs 866.45 crores at existing levels of taxation as against the revised estimate for the current year of Rs 838.66 crores, which itself is about Rs 58 crores more than the original expectations. The expenditure on revenue account is put down by him at Rs 980.35 crores as against the revised estimate for the current year of Rs 854.05 crores (which was about Rs 15 crores more than the original estimate). The deficit anticipated (taking into account receipts from new taxation) is of the order of Rs 60 crores, which is roughly the same amount as the original deficit estimate for the current year.

On the revenue side, the expectations for the coming year are higher under almost every head. Wealth tax receipts are put at a lower figure, presumably because of the loss from this source by the abolition of wealth tax on companies. The increase in corporation tax and the fall in the head "income tax other than corporation tax" is probably due to the new system of taxation under which, among other things, certain sums which were shown as deductions from dividends will not have to be paid directly as advance tax under Section 18A by the companies. (Advance taxes are treated as current receipts under government accounting). It is difficult to say without further analysis whether the increase in corporate tax receipts (Rs 57 crores) and the decrease in other income tax receipts (about Rs 20 crores) anticipated for the coming year would by themselves justify the inference that the new system leaves the tax payers worse off than before. It may be that the increase envisaged in the receipts of corporation tax is no more than the rise due to higher earnings anticipated. It may be that there is an element of adjustment which is not quite apparent at first sight. In any event, the proposition that the new scheme of taxation is fiscally more onerous has other data to support it, though the Finance Minister has chosen to take the view that it is far too early for him to make up his mind. He has, however, met partially influential representations on the question by making some concessions to small companies and by giving some relief on dividends paid out of profits of earlier years under the old system. Certain other procedural changes (like abolition of differential rates of

deduction of tax from dividends) have also been made, though the net amount of tax receipts are ensured to be the same as before.

On the expenditure side, the biggest increases are under civil administration, "social services" and defence. The administrative cost increase is due to the implementation of the Pay Commission's recommendations, which is expected to cost annually Rs 53 crores. This figure apparently includes the railways' share also, for, the actual increase estimated is slightly over Rs 34 crores. And even this increase somewhat exaggerates the Government's "extravagance", for, this includes the provision for more than one year's expenditure, since no provision was made in the current year's Budget for the increased payments due from July 1959. The Finance Minister gave the usual assurance about efforts at economy but it is doubtful whether any significant reduction will take place.

As regards defence, the increase envisaged was far below the expectations of the most sanguine, and therefore came as a distinctly agreeable surprise. It is only about Rs 31 crores more than the current year's revised estimate, which itself is only about a crore of rupees more than the original estimate. In terms of the percentage of total expenditure, there has even been a slight reduction. As Mr Desai rightly anticipated, no one will grudge this particular extra burden in view of what is at stake. We have also no doubt that the estimates framed will have taken fully into account the needs of the situation. Since the estimates were framed, before the latest note for Mr. Chou En-lai, there would have been no complacent underestimate of the threats to our security. While it would be too much to hope that the coming meeting of the two Prime Ministers would miraculously resolve the border disputes, it may well turn out that Mr Desai's fear that he may have to come again before Parliament for fresh authorisations for defence expenditure may prove unfounded.

Mr Desai's new taxation proposals have understandably leaned heavily on indirect taxes. That the Finance Minister has not increased direct taxes, has been noted with satisfaction and even glee, and this is evident from the reaction of the Stock markets to his proposals. And, even among the indirect taxes, Mr Desai has spared items that can be considered articles essential to the common man. Cotton textiles, rayon, yarn, vanaspathi, sugar and tobacco (confounding, incidentally, as regards the last, the local hoarders) have all got off scot-free. That his levies fall heavily on light engineering industry and road transport is unfortunately true. But a Finance Minister who is to find fresh revenue and, at the same time, avoid increase in direct taxes (because of its adverse effect on capital formation); eschew increase in indirect taxes on essentials (because of their adverse effect on the cost of living); reduce to the minimum the Budgetary deficit (because of its inflationary characteristic), cannot but lay his hands on sources like the one Mr Desai has in fact done. There is no doubt a case for reconsidering the extent of such levies, especially those connected with road transport and the automobile industry, but that would really be a case of marginal adjustment. The case for rationalisation of the taxation of road transport is, however, strong and one on which some kind of inquiry (and, what is more important, effective action) is urgent.

In the understandable preoccupation with new taxes, some of the real concessions that the Finance Minister has announced have not received the notice they deserve. For instance, owners of real property (constructed before 1950) will have a reduction in respect of the entire tax levied by any local authority, as against only half of such levy as at present. Secondly, concern for promotion of scientific research is practically demonstrated by the liberalisation of conditions of allowance made therefor in computation of business income. Development rebate is still there without any further "strings" (as was widely feared) and Section 15C of the Income Tax Act has been given a fresh lease of life so that new undertakings may be encouraged.

The overall budgetary position for the next year shows a deficit on revenue account (without taking into account from new taxes) of Rs 84 crores. Capital outlay will amount to Rs 371 crores, loans to States and others to Rs 531 crores and debt repayment to Rs 140 crores. The total disbursement of Rs 1126 crores will be met by market borrowing to the extent of Rs 250 crores; Rs 90 crores from small savings; Rs 362 crores (or nearly a crore a day) from foreign assistance; Rs 239 crores from loan recoveries and other miscellaneous receipts, leaving a deficit of Rs 177 crores to be met by expansion of treasury bills. The overall deficit financing for the entire Plan period is expected to be slightly over the estimated Rs 1200 crores. The estimate of Plan outlay was put by the Finance Minister at Rs 4600 crores.

MR MORARJI DESAI has not seen fit to make the readjustment in the corporate tax structure that he had promised last year, when he fixed the rate for advance payment of tax at 45 per cent; and his plea is that there is not enough experience to go on to justify any tinkering with that rate. This surely is weak and not very convincing reason for his decision apparently to defer a reconsideration of what the proper rate of tax should be, so that the effective revenues to the Central Government are unchanged. Having made this reservation, I might suggest that the Finance Minister can justly be said to have done the impossible—although he has received not a little help from the fact that revenues are beginning, for the first time since the planning era started, to reflect the impact of a dynamic economy in action. For, it was widely apprehended that the three factors on the basis of which the Finance Minister would necessarily be required to draw up his Budget would entail substantial new tax proposal. But the revised estimates for the current year show how Mr Desai's task in this regard was minimised. On the one hand, the rise in defence expenditure has been negligible; few could have hoped that the Budget figure would be exceeded by a mere crore of rupees. On the other hand, the improvement on the receipts side of the Revenue Budget amounts to the considerable figure of Rs 58 crores. It is now expected that customs revenue will fetch more than Rs 17 crores over the Budget figure; that excise duties will show an improvement of Rs 26 crores; and that realisations from Corporation Tax will be better than the Budgeted figure by Rs 11 crores. So, for the current year, the revenue deficit stands reduced by Rs 44 crores at Rs 15 crores. (It may be noted that the revised expects a decline of Rs 14 crores in the taxes on income; my own view is that such decline may not materialise in full, and that with further improvement in the actuals, 1959-60 may not prove to have a revenue deficit at all).

I wonder who slipped up about the taxation of bonus shares. For, if there was one concession that the Finance Minister could have given, with profit and not loss to the central exchequer, it was a reduction in the rate of tax on bonus shares; no useful purpose is served by the impost as it exists today. So long as the excess dividends tax was on the statute books, companies might have considered four or five years "purchase" of the dividends tax, by opting for the bonus tax in the intention that, thereby the liability as to dividends tax would be minimised. But, today, no company would be anxious to incur the tax burden implied by a capitalisation of reserves; and the shareholder for his part is likely to be satisfied with such increase in dividend as comes his way. On the other hand, had the rate of bonus taxation been reduced, some companies there are which, anxious to restore balance between capital and assets, would have been prepared to undertake a small liability; and their reasoning would also have been that on the ex-rights basis, the share prices would have readjusted downward, thereby enabling new small investors to be attracted.

A Not "Exacting" Budget

By
Eavesdropper

crores, already reduced in the revised estimate to Rs 15 crores, has every chance of being converted into a small surplus. I presume that there has been such deliberate under-statement of revenues, because the Finance Minister, possibly for political rather than any other sort of reason, could find no way of convincing his colleagues in the Cabinet that a reduction in the corporate tax rate was not only desirable but even mandatory. Fortunately, this is not so great a pity as it might have been. The expansionary economy implies that companies, too will be able to take in their stride one year of unfairly high taxation. But it will be incumbent on the Finance Minister, in the Budget for 1961-62, to "rectify" the corporate tax rate. It cannot at that time be claimed that there is an insufficiency of data; and the clincher to the argument will be the necessity to enable companies to find internally the resources for the expansion and development that they will have to take on hand for the Third Plan. But, for a year, I am afraid, and in respect of advance tax for a year besides, companies will be liable to bear the higher rate of taxation.

The bonus tax, I am afraid, does nobody any good. And it is still not too late to reduce the rate.

It is good, however, that the Finance Minister has resisted the temptation to secure larger immediate revenues from readjusting the requirements in respect of Development Rebate. While, from the point of view of the companies, a "spread" would have "equalised" surpluses available for distribution, Government perhaps are not anxious that current revenues should be buoyant; for, in that event, tax reliefs would be in order. Nevertheless, I think that the "spread" idea is still a good one, because, with the requirement of tax deduction at source on dividends, and the "grossing" element on reserves built up in the past all too meagre, the effective return to the shareholder in a dynamic, progressive company is likely to be affected. This, again, is a notion worth considering in the next Budget.

The borrowing effort is commendable; this is one aspect of the Budget in which Mr Desai has been helped by circumstances, but also one where the Finance Minister has taken full advantage of such favourable situation. There is, firstly, the innovation of the Prize Bonds; not quite an innovation, because it was tried, though without much success, during the wartime. However, Mr Desai can hope for a greater attractiveness in the present context of high rates of personal taxation. For, a tax-free windfall is bound to be attractive, and the disadvantage of there being no interest offered on the Bonds will be quite offset by the fact that no loss (except for depreciation of currency over the five year period) can accrue, while the gain can be considerable. Secondly, the target for market borrowings has been fixed reasonably at Rs 250 crores. While I personally believe that much more can be secured, we have to take cognisance of the complaint that a large governmental borrowing programme allegedly "drains" the market of funds for the private sector. I disagree violently with this view. Money meant for ordinary shares will never find refuge in gilt-edged. On the other hand, quite a bit of money ordained for gilt-edged quite often finds sanctuary in ordinary shares nowadays. But much will depend on how the banking situation develops over

the 1960 slack season. In the current fiscal year, the budgeted figure has been more than attained; but, because conversion subscriptions were so considerable, net borrowings were less than in the previous year. Today, there is a much greater expansion of demand from industrial users of money. To such extent, it may happen that the surplus with banks available for investment in gilt-edged will be affected. Again, however, evidence there is already of a record rise in the Deposit liabilities of Scheduled Banks. To such extent, the capacity of the banking system to absorb gilt-edged will improve. My hunch is that, the Prize Bonds apart, the target for market borrowings will be easily achieved; and what the Prize Bonds will attract will be pure "profit".

Not that the Budget is devoid of concessions, I might point out at this stage. The most important of these is the credit given for the full, instead of half of, the amount of local taxes payable on property built before 1950. This may conceivably set off a boom in old houses. For, capital gains is always there, land and buildings still constitute one of the best hedges against inflation—and where else is taxation so just? Then, there is the extension of concessions for new industrial undertakings. Small but significant reliefs have been announced in the sphere of expenditure tax. Companies with small profits will attract a lower rate of tax than the 45 per cent for the generality of the corporate sector. Some relief is also given to investment companies attracting Section 23A of the Income-tax Act. Even the excise duties have been so devised as to touch the "luxury" articles rather than consumer goods. (However, in this last respect, it seems to me that road transport has again been penalised, and this might, though indirectly, affect consumer goods prices. I am not against the levy of the tax on passenger cars, though I suppose I will have to cough up a bit more if I should buy a car! but road transport of goods has to be encouraged and fostered, and Government seem bent on doing just the opposite. I think a rationalisation of the whole complex of motor vehicles taxation, in every one of its aspects, is urgently called for).

We can, I suppose, also hope for inflationary tendencies to be kept better in check during the Budget year. If production is the answer to inflation, both agricultural and industrial output are satisfactory enough. If deficit financing imperils the economy, the threat will be minimised by the lesser reliance on created money in the Budget year. (Indeed, it may happen that deficit financing in 1960-61 will amount to no more than a nominal Rs 50 crores). To sum it up, Mr Morarji Desai's Budget for 1960-61 is a better and less exacting Budget than anybody could have hoped for.

IF the stock markets have reacted to Mr Morarji Desai's second Budget bullishly, it is because he has largely fulfilled the expectation that he would not ignore the need for accelerating capital formation if the main objective of rapid economic development in the country is to be achieved. It was generally anticipated that, were the Union Finance Minister to present his Budget for 1960-61 without any addition to direct taxation, buyers would abandon the reserve that they had been exercising ever since the turn of the year and begin to lend active support to equities. That is what has been happening during the past few days and, although some may think that the rise has been rather overdone, the fact remains that the Budget has undoubtedly improved the investment climate in the country.

The post-Budget behaviour of the market can be better appreciated if one will note the hopes and apprehensions that were apparent before the Budget proposals were made public. The need for increased outlay on defence and the additional funds required for implementing the Central Pay Commission's recommendations, not to speak of the continued large funds that had to be found for Plan efforts in the final year of the Second Five Year Plan, were inescapable factors facing the Finance Minister in his task of formulating the Budget for the next fiscal year. Most calculations as regards the amount of additional revenue to be raised agreed that fresh effort would have to fetch something like Rs 80 crores. Speculation, therefore, centred round the question as to how this amount could be mobilised. Assuming that Mr Morarji Desai would realise that direct taxation had already reached its peak in the country, it was believed that he would try to get his requirements only through indirect taxation.

The Budget has shown that the market guess about the mode of collecting additional revenue was correct. Mr Desai, however, had a pleasant surprise up his sleeve for the market, as he announced that new tax proposals would net only about Rs 23 crores. He has left the balance of the revenue deficit of about Rs 60 crores uncovered. It is true, it is debatable that some of the new excise duties may, in their effect, retard progress in particular industries; but it is undeniable that, by and large, the comparatively smaller additional indirect tax burden will have little repercussion on industry in general.

It is significant to note that the revised estimates for the current year have disclosed a greatly reduced deficit of only Rs 15 crores as against the original estimated deficit of Rs 59 crores. Excise revenue has proved to be much more than anticipated by the Finance Minister, and this is steadily rising and, will net in a sizably large income in the next year in view of the fact that most plan projects are

Bullish Reaction to Budget

By Watch-dog

either come to fruition only recently or will soon come into fruition. Mr Desai has no doubt taken into account the rising trend of excise revenue, but it would appear his estimates are still on a conservative basis. It may, therefore, be expected that the uncovered deficit will be more than covered by increased revenues next year. There will thus be a strong case for some relief in direct taxation in the next Budget. The Committee of the Federation of the Indian Chambers of Commerce and Industry, however, thinks that there is already a case for a reduction of the direct tax burden.

Coming to the Budget proposals for 1960-61, the position may be briefly put as follows: There is no fresh direct taxation, and indirect taxation is much less than generally anticipated. Mr Desai has demonstrated further his concern for the private sector industries by giving small but significant concessions. These may be listed as follows:

- (1) Extension of tax holiday by another five years to new companies.
- (2) Wealth tax on companies has been abolished.
- (3) Excess Dividend tax has been abolished.
- (4) Indian companies to be given credit for a sum equal to 10 per cent of dividend distributed out of past taxed profits.

It is to be remembered that the present schemes of depreciation allowances and development rebate reserves for tax saving by companies have been left unchanged. These are big concessions and will contribute to the growth of the corporate sector.

Extension of tax holiday for new companies by another five years will go a long way toward fostering the establishment of new industries.

The tax credit of 10 per cent on past taxed profits may perhaps be considered as too meagre, but its significance lies in the fact that it shows that the Finance Minister has given recognition to the principle that profits once taxed should not be taxed again.

The Budget has its disappointing features, too. These are:

- (1) Continuance of the high rate of tax on bonus shares.
- (2) The adoption of the provisional rate of 45 per cent for company taxation as final.

Of these, it is rather difficult to understand why no change was

made with regard to the former. It should have been evident to the Finance Minister that a reduction in the tax would help both the corporate sector and the Exchequer. A lower bonus tax will enable the companies to capitalise their reserves and thereby pay the bonus tax to Government.

The adoption of the rate of 45 per cent on company taxation has caused bitter disappointment. But Mr Desai has this to say about his decision. "We have not had sufficient experience of the effect of this rate. I do not therefore propose to make any change in this rate but to adopt it as the final figure." Although this seems to indicate that a change in the rate may still be effected, the feeling has gained ground that the rate of 45 per cent has come to stay. This inference seems to have been derived from the Finance Minister's reported reference to corporate taxation at a meeting of the Congress Parliamentary Board.

More than by the small mercies shown by the Finance Minister in the shape of the absence of proposals for direct taxation and the smaller than expected indirect taxation, the stock markets seem to have been influenced by psychological factors. In the first place, Government revenue is buoyant and they are bound to be increasingly so with the progress of industrialisation. Consequently, Government's hunger for funds in coming years may not be as acute as in the past years. Another big dose of deficit financing promised by the Budget is taken as a bullish factor for the stock market; for, it is argued that, if other prices appreciate, equities, too, should move with the general trend or that part of the created money will seek investment in equities.

It is also probable that both operators and investors have derived the inference from Mr Desai's modus operandi that, within the freedom allowed to him by the socialistic pattern, he has proved to be a friend of private enterprise. It is true, he seems to be second to none in Government in advancing socialism, but he has not ignored the fact that the same policy that has put socialism as the ultimate aim has also declared that that socialism is to be achieved through a mixed economy. Private enterprise is not merely to be allowed to continue as long as it can last under continuous Government pressure but to be fostered as it is responsible for a goodly portion of national production.

1960-61 Budget Supplement

A word about the present bullish fervour. One can hardly quarrel with the operators for their unbounded enthusiasm in the immediate post-Budget sessions. Mr Desai's second Budget no doubt deserved such exuberance, for he had more than fulfilled expectations as regards new levies. Perhaps, it is also true to some extent that this is no occasion for sticking strictly to yield considerations. Most industrial concerns, whose equities are quoted on the stock markets, are rapidly expanding; and, if anything, this process will be further intensified in the coming five year plan period. So, investors are somewhat justified if they look more to growth considerations than to yield prospects. But it will be imprudent to ignore completely the return on the investment in equities.

There are also other reasons to temper the present enthusiasm with caution. It must be remembered that company chairman after company, chairman has declared that the new dispensation in company taxation, while it has undoubtedly simplified the procedure, nevertheless has proved to be heavier in its incidence than the previous tax system. Contrary to expectations, Mr Desai has not chosen to revise the rate of 45 per cent. Secondly, it must be remembered that, after the last year of the current five year plan, there will begin the first year of the Third Plan with its massive outlay. The Third Plan is supposed to constitute the "take off" stage for our economy which will then become self-sustaining. It follows therefore, that tax efforts have to be further intensified in order to mobilise the larger resources that will be required to implement a plan of about Rs 10,000 crores. It is not pessimism to remind investors about the big task ahead of the nation in the next five year plan period. This is not, again, to minimise the great strides that the economy will have taken by the beginning of the Third Plan and consequently the much higher rate of investment it can sustain. But this is only to caution that, if enthusiasm is allowed to run ahead of the realities of the situation, there may be trouble ahead for the investor.

The Finance Minister has himself spoken about the need for holding the price level. It is generally believed that, as a result of the 1960-61 Budget, there will be further impetus to the price spiral. So, it may be expected that Government will take concerted measures to curb inflationary tendencies. Appropriate fiscal measures may be necessary; and, already, rumour has it that the Bank rate may be raised. Even though one week has elapsed without any move in this direction by the Authorities, the possibility cannot be ruled out. Investors may also do well to remember that big brother LIC is there always in the background, capable of bringing about corrective changes in equity price levels both ways.

1960-61 Budget Supplement

The New Union Budget

By B. L. Jalan

MR MORARJI DESAI'S second Budget was, as I had predicted a few hours earlier, a birthday Budget. It is indeed a very happy coincidence that the Finance Minister's birthday falls on the Budget day. This Budget, on the whole, would seem to continue the policy incorporated in his first Budget, introduced a year ago. The underlying objective of this policy would appear to be two-fold. In the first place, it seeks to cry a halt to the previous policy of substantially enhancing the burden of direct taxation year to year, both by raising the rates of the traditional taxes, such as, the Income-tax and the Corporation Tax and by introducing new taxes like Wealth Tax, Expenditure Tax. These new taxes were no doubt spectacular in the general impression they produced on the minds of the common people as heralding the definite advent of an ultra-socialistic fiscal policy, but their actual effect on industry was disastrous. They acted as strong disincentives to private investment and production. They also acted as strong deterrents to the participation of foreign enterprise and capital in the industrial development of this country. Besides, the great complexities of all of those measures and the utter novelty of at least one of them, namely the Expenditure Tax, not only produced dismay and uncertainty in the minds of business people, but also imposed terrible strain on the tax-assessing and tax-collecting machinery of the Government. Mr Morarji Desai, who is justly famous for his grasp of the problems of administration in the fast-changing socio-political conditions of India and for his appreciation of the significant role of private enterprise in the rapid and many-sided expansion of the Indian economy, no doubt realised the need for crying a halt to the pre-nod policy and making at least some adjustments in the system of direct taxes so as to mitigate their evil effects to some extent. In the second place, the new policy seeks to tap new and expanding sources of revenue by extending the system of excise duties to certain important new commodities that were being thrown out by the process of economic development. There can definitely be no doubt that this is a policy of extending the coverage of taxation so as to reach the many hundreds of millions of people—workers, small traders, etc.—who are no doubt sharing in the expanding national income, but who cannot be effectively reached by direct taxes. It may be mentioned, in this connection, that in 1957-58, in the whole of India, the number of persons assessed to Income-tax was only about 6 lakhs.

Before Mr Desai came to the Centre, he had already become famous as an outstandingly successful administrator who had led

the State of Bombay through a very difficult and, sometimes, critical period to remarkable stability and progress. His two years as the Union Minister of Finance shows him also to be an outstandingly capable Minister of Finance. He is no believer in set doctrines or cheap, popular, slogans. As a veteran statesman, he can easily penetrate to the heart of a problem and can hit upon the best practicable measures in a given situation, however difficult and complex it might be. Thus, for instance, he carefully weighs the disadvantage of a fairly substantial deficit against that of going too far in the imposition of new taxes and decides that he would rather leave uncovered three-fourths of the revenue deficit than impose taxes which would prove unduly deterrent to production and investment or even consumption. He fully appreciates that the possible evil effect of an overall deficit of over Rs 150 crores, as proposed in his Budget, may be more than counter-balanced by the good effect of an accelerated rate of investment and production. This certainly is an eloquent testimony to his great insight into the practical working of economic and financial forces in the modern world with special reference to the context of the Indian situation.

While it is fit and proper that the wholesome features of the fiscal measures, introduced by Mr Desai in his two Budgets, should be fully appreciated, it is equally necessary to point out that these measures would be of somewhat limited value in so far as the national objective of a rapid and well-balanced development of the economy is concerned. It is time that the Government realised that a modern nation cannot achieve greatness if the activities of its citizens are to be largely regulated by a network of restrictions. To obtain what would be the optimum economic development in terms of speed and progress, it is necessary that the resources of enterprise, leadership and organizing ability, that have been acquired by the business community over these many decades of economic growth, should be fully harnessed side by side with all the resources of the Government to the task of rapidly developing economy to the self-sustaining, take-off, stage. For this purpose, it is necessary that the new fiscal policy should be carried further so as to remove completely the deterrents and disincentives generated by the previous policy and create adequate new incentives for investment and production and also, further, for the participation of foreign enterprise and capital on a large scale, which is absolutely necessary to achieve the objective of rapid and well-balanced economic development.

The Planning Commission seems to have assessed the foreign exchange gap for the Third Five Year Plan at Rs 2,500 crores. This could be effectively bridged by increasing inflow of foreign capital. Foreign capital, however, will remain shy so long as deterrents like Wealth and Expenditure Taxes continue to awe the potential investors and assurance is not given that fair and adequate compensation would be paid in case of nationalisation. The Constitution, as amended, does not hold out such a promise.

A positive approach could be pursued by putting a stop to further increases in civil expenditure, which has been mounting at a very fast rate, by scrutinizing and rationalising development expenditure and by concentrating on those sectors of the economy only which remain untapped by private enterprise. This requires, indeed, a change in our ideological outlook in the interest of larger needs of the country, namely, more speedier economic growth and removal of unemployment. It is hoped that the Finance Minister will carry his policy initiated last year to achieve its logical end in that direction.

Levy on Motors

The new excise on electric motors is a graded one. The rate of 15 per cent ad valorem applies to motors used for circuits of less than 10 amperes and pressure not exceeding 250 volts and for motors using over 400 volts the rate is fixed at 10 per cent. For motors over 10 H.P. also the rate is 10 per cent but for others, it is 15 per cent. The 15 per cent rate applies to parts also. This may be well taken to mean that starters are exempt. But manufacturers wonder if pumps that are fitted to motors will be subject to the excise and whether rural buyers taking pumpsets will be called upon to pay the new tax. In the past S.T. on motors and starters was high—that on pumps was low. But the new excise may lead to a mark-up in the prices of pump too. The dynamo and ignition systems also may be subject to tax like motors. The Finance Bill is not clear on that point, and the manufacturers hope to get clear rulings about the definition of electric motors and parts.

That Indian-made motors are dearer than British and it is important control that has led to an expanding market. This may be remembered even in setting out the official case for the levy. But manufacturers who can be trusted to pass on the new tax to buyers are aware that manufacturing costs will be raised soon by the new duty on iron and steel, the rise in railway rates. Further, the textile and other industries will have to buy new electrical equipment at enhanced prices, so that the probable increase in price may exceed the 15 per cent prescribed.

The outlook for exports even on a small scale is dimmed by the prospective rise in prices. Subsidies at the expense of the Indian consumer cannot be thought of, and the rise in power tariffs in the Southern States may limit the expansion of demand for motors. This section of the engineering industry is not very well placed and it is also feared that rural electrification may be affected by the sudden levy. There is also a risk that agriculturists will try to secure compensation by asking for higher prices for produce and the inflationary aspect of the new levy cannot be ignored at present.

The Central Excise staff is now trying to get on to the new item films. Data about sales and stocks is being gathered to get revenue under 50 nP per metre rules imposed by the Finance Bill. The new levy distinguishes between newsreels and shorts subject to 15 nP per metre and advertising shorts subject to 50 nP per metre. And it may be asked why metre, when the usual accepted trade term is footage and Hollywood is still on its feet (not metres). The Finance Minister's reference to the probable yield as Rs 75 lakhs in a year has led to some queries about the tax procedure. It looks as if all prints and copies of films will come within the scope of the excise. And there is the query as to raw film wasted in shooting. A lot of film is shot, viewed, and promptly rejected. And films, more than newspapers, are exposed to rigorous editing before exhibition.

This means a bigger rise in cost of film production than supposed, but producers, notably independents, will not be deterred, because the Indian Film Federation takes the tax in its stride and the picture business in recent years has been on the upgrade. It is assumed the new tax will not lead to a cut in the length of films as desired by audience and the trade will not go in for 16mm films on the score of the rate of excise being only 35 nP per metre.

The S. I. Film Chamber expects that budgets for new productions will not be inflated very much and the producers may only enter a formal protest. Film stars' salaries may not be pruned as widely suggested, and the renters alone may be called upon to foot the bill. The fact that imported films bear a tax does not impress the Indian industry which is content to point out that foreign studios, with vast resources and a global income, can afford to pay, if a local outlet for foreign films is secured. The Indian film industry—in spite of age and number of films—cannot compare with US companies which are troubled only by quotas, not by codes. Even the Television menace has passed away suddenly. There is, however, a chance that entertainment tax will be stabilised and the industry will be probably more careful in using raw film as a result of the excise.

STEPHEN HOUSE, 4, Dalhousie Square East, Calcutta-1.

IN the field of direct taxation, the Finance Minister's budget for 1960-61 is significant, more for what it has omitted to do rather than for what it has done. Some concessions have no doubt been given under the Finance Bill in regard to income tax, wealth tax, and expenditure tax: but the significant omission is that it has not given the much needed relief in respect of direct personal taxation. It was hoped that this year's Finance Bill would include suitable provisions for amending the Income Tax Act so as to eliminate the deterrent effect on investment arising from the present heavy burden of personal taxation. It is well-known that the combined incidence of the taxes on income and wealth of individuals is so high in India as to be expropriatory in character. It has been estimated that on income, the incidence of the wealth tax in individuals ranges between twenty-five and forty per cent of the income. Since on unearned incomes exceeding Rs 70,000 the income-tax and super-tax aggregate to eighty-four per cent, we have the result that in the higher income brackets the income tax and the wealth tax alone take away more than the entirety of the income. Such a tax structure is not consistent with the requirements of a developing economy, which call for greater and greater production of the various kinds of goods required by the people. For production to increase in this manner, there should be greater investment in productive enterprises. In order that investment may take place there should first be an investible surplus left in the hands of the people. If those income groups which invest their savings in productive enterprises are subjected to regressive taxation of the kind mentioned above, the question arises as to how there can be expansion of economic activity. It has to be mentioned here that if investment in productive enterprises is to increase, the capacity to 'save' should be made larger among the middle and high income groups; otherwise what is gained by any tax reliefs will merely go into consumption expenditure. It is note-worthy that in the highly industrialised countries it is the high income groups on whom the personal income tax rates are lower. For instance, for an income of Rs 333,333, the personal income tax rates are 53.4 per cent in West Germany, 44.7 per cent in the USA, and 40.2 per cent in France, (all highly industrialised countries), while in India the rate for that income is almost 70 per cent! Since we want economic development to take place speedily, we could usefully draw from the experience of these countries and see that direct personal taxation is not as regressive as it is now on the high income brackets. The failure to effect this very necessary reform is the most significant omission in the present budget proposals.

There appears to be an under-estimation of the revenue from Income and Corporation Taxes for

The Budget & Direct Taxation

1960-61. The Budget for 1959-60 estimated the Corporation Tax at Rs 58.75 crores; in the Revised Estimates for 1959-60 the figure is Rs 78 crores—an increase of Rs 19.25 crores; perhaps the actuals may show it to be even larger. Such being the case, the Finance Minister's statement in his budget speech that for 1960-61 the receipts from Income Tax and Corporation Tax are likely to improve by Rs 10 crores only needs some explaining. The following Table shows the receipts from the Income and Corporation Taxes during the last five years:—

1955-56	Rs	118	crores
1956-57	"	135	"
1957-58	"	133	"
1958-59	"	143	"
1959-60	"	151	"

For 1960-61, the Finance Minister has estimated the Corporation Tax at Rs 135 crores and the income Tax at Rs 52.94 crores, which makes a total of Rs 187.94 crores. The Finance Minister has however stated that as a result of the merger of company income-tax in the Corporation Tax there is a decline of Rs 27.28 crores in the share of Income Tax payable to the States and that it is proposed to make good this loss to the States by a specific grant. If this amount is deducted from Rs 187.94 crores, the balance is Rs 159.66 crores, which is only about Rs 8 crores more than the figure of Rs 151 crores given in the above Table for 1959-60. The Revised Estimates for 1959-60 place Income Tax at Rs 72.68 crores, while for 1960-61 it is taken as Rs 52.94 crores. This is probably due to the company income tax being fixed, under the Finance Bill at 20 per cent instead of the 31½ per cent of last year. Even so it is highly doubtful whether income tax receipts during 1960-61 will be so low as to be only Rs 53 crores. There appears to be a considerable under-estimation of the receipts from Income Tax during 1960-61. The economy continues to be buoyant, and there is no reason to apprehend any fall in incomes, so, as to result in reduced income-tax receipts. On the other hand, with the progress of industrialisation, the indications are that incomes will increase, yielding greater revenue. Incomes will increase further if direct personal taxation were reduced for the middle and high income groups. For the savings effected thereby will get invested in productive channels, which will generate more income, and this in turn will bring forth more tax revenue: the case for relief in direct personal taxation is thus clear, and it is much to be regretted that this relief has not been given in the Finance Bill 1960. It is difficult to understand why this relief has not been given, when Government themselves are admitting the need for encouraging investment, as can be seen from the

following passage in the 'Economic Survey' for 1959-60 released with the current budget papers on 29th February: "The domestic resources available for investment have not shown any marked rise. . . . A developing economy has necessarily to move forward progressively to higher levels of investment. The task of policy is, therefore, the difficult one of promoting and fostering the growth of investment on sound lines" etc. Without appearing to be overcritical we would like to ask what the present budget has done to foster the growth of investment.

We would like to point out here that the budgetary position is not such as to leave no room for adopting measures to foster the growth of investment. According to some authoritative quarters, by fixing company taxation at 45 per cent the Revenue is gaining by several crores of rupees, and so there is considerable scope for relief in personal taxation so as to encourage investment in productive enterprises. This point may be explained a little further by referring to the available figures of revenue from company taxation. In 1957-58 which is the latest year for which classified revenue statistics are available, the total income of companies was Rs 220 crores. Out of this, company tax including the excess dividends tax, tax on issue of bonus shares, and the wealth tax on companies amounted to Rs 117 crores. That year the income-tax on dividend income was Rs 12½ crores; deducting this from the above sum of Rs 117 crores, the net yield to Government was Rs 104½ crores. Under the new system of company taxation at 45 per cent, the position in respect of the above total company income of Rs 220 crores would be that the companies would be paying Rs 99 crores, and in addition the shareholders will be paying Rs 12½ crores, which aggregates to Rs 111½ crores: thus there is a clear gain of Rs 7 crores to the Revenue. Seven crores out of Rs 220 crores represents 3½ per cent. This means that if company tax were fixed at 41.75 per cent, Government would be realising the same net revenue which they used to get. Said the Finance Minister in 1959: "As part of the scheme of simplification of company taxation, I propose to combine in the income tax and super tax rates of companies, the net incidence of the present taxes on income, excess dividends and wealth. . . . I propose a rate of 20 per cent for income tax and 25 per cent for super tax, that is to say, a total of 45 per cent. This rate will secure the same revenue as is at present derived from the taxes on the wealth and profits of companies" etc. We have already seen that this rate of 45 per cent secures more than that amount of revenue, and that in point of fact, the rate should not have been higher than

41.75 per cent. According to a news item which has appeared in the dailies on March 1st this year, when some members of the Congress Parliamentary Party's Committee on Finance pleaded for an abatement on corporate taxation below the 45 per cent level as this rate had shown yields in excess of anticipation, the Finance Minister said that he would not lower this level even if collections were considerably higher. He is reported to have not only ruled out any reduction in the company taxation but to have stated that if at all any change was necessary in the future the case was for increasing it! The case, however, as pointed out by us herein, is for a reduction in the company tax by at least 3.25 per cent. In the budget estimates for 1960-61 the Finance Minister has estimated the Corporation Tax at Rs 135 crores, which, on the basis of the 45 per cent rate, means that he expects company profits to be Rs 300 crores. Since by fixing the company tax at 45 per cent the Revenue is gaining by 3.25 per cent, the additional accretion to the Revenue, in absolute terms, will be Rs 9½ crores. If we add on to this a further sum of Rs 10 crores which represents the possible extent to which the receipts from income tax are under estimated in the 1960 budget, the resultant position is that from income tax and company tax alone the Revenue is obtaining an additional Rs 20 crores under the new dispensation! In support of this we would point out that for 1958-59 while the budget estimates placed the income tax receipts at Rs 84.5 crores, the actuals are now seen to be Rs 96.2 crores—an underestimation to the extent of Rs 11.7 crores in the 1958 Budget! When Government themselves admit the need for encouraging investment (as mentioned earlier in the quotation from the Economic Survey) one cannot help feeling that the 1960 budget could very well have taken credit for the above sum of Rs 20 crores, and given the much needed relief in personal income tax.

We may now proceed to take note of the various changes in regard to direct taxation of personal incomes, wealth, expenditure etc., introduced under the Finance Bill 1960. In doing so, it needs hardly to be stated that the rates of income tax and super tax for individuals, Hindu Undivided Families and Firms remain unchanged. It is only in regard to company taxation that there are major changes. In keeping with the reform of corporate taxation declared under the 1959 budget, the wealth tax on companies is abolished by Section 13 of the Finance Bill which provides that no wealth tax shall be levied on any company for any financial year commencing on or after the 1st April 1960. The declaration to abolish the Excess Dividend Tax has also been implemented by necessary changes in the rate Schedule relating to company taxation: the provisions relating to

reduction in the rebate in the event of excess dividends have even omitted. The effective rates of company taxation are fixed with reference to three categories into which company incomes are classified, i.e. (i) dividend income derived from a subsidiary Indian company; (ii) dividend income derived from an Indian company, which is not a subsidiary and which was formed and registered on or after 1st April 1959; and (iii) the rest of the income, which will include also dividend income from non-subsidiary Indian companies, formed and registered on or before 31st March 1959. For incomes falling under category (i), the rate of tax is 30% in the case of all companies, be they big or small, public or private, or Indian or Foreign. By big or small we mean companies with income exceeding Rs 25,000/-. For incomes falling under category (ii) the rate is 35% for small public companies, 40% for private companies and big public companies, and 53% for foreign companies. For incomes falling under category (iii) the rate is 40% for small public companies, 45% for private companies and big public companies, and 63% for foreign companies. Here it has to be mentioned that the tax at the rate of 30% on the face value of any bonus shares or the amount of any bonus issued to shareholders is retained in the Finance Bill. The retention of the tax on issue of bonus shares surpasses comprehension. Both in the United

Kingdom and in India high-power Commissions have given a finding to the effect that bonus shares are not income in any sense of the term. The bonus tax was introduced as a check to the avoidance of the excess dividends tax; so, with the abolition of the excess dividends tax, the bonus tax has lost what little justification it had for retention in the revenue code. The failure to abolish the bonus tax is another significant omission in the 1960 budget.

Section 18 of the Income Tax Act throws, inter alia, an obligation on the principal officers of companies, before paying any dividends, to deduct therefrom (and also to credit to Government's account the amount so deducted) income tax and super tax at the rates prescribed in the Finance Act of each year. The provisions in this regard in the Finance Bill of 1960, in so far as they relate to recipient companies may therefore be taken note of as it is part of new system of company taxation. These provisions are contained in Part II of the First Schedule to the Finance Bill. Stating it briefly and without attempting to be too precise, the rates at which deduction is to be made are as follows:

- on debenture interest, the rate is 30% where the recipient is an Indian company, and 63% where the recipient is a foreign company.
- On dividends distributed by Indian companies engaged in

any of the industries specified in Section 56A of the Income Tax Act, the rate is 20% irrespective of the recipient company being Indian or foreign;

- on dividends from any subsidiary Indian company not engaged in the Section 56A industries, the rate is 30% irrespective of the recipient company being Indian or foreign; and
- on dividends from non-subsidiary Indian companies formed and registered on or after 1st April 1959, and not engaged in the Section 56A industries, the rate is 30% where the recipient is an Indian company and 53% where the recipient is a foreign company.

For Indian companies the rate of company tax as fixed in the Finance Bill is 45%; but in respect of dividend income and income by way of debenture interest, the rate of company tax as fixed in the Finance Bill is 45%; but in respect of dividend income and income by way of debenture interest, the rate at which tax is to be deducted at source is only 30%. As this will affect the revenue receipts, the Finance Bill makes a change in Section 18A also which relates to the advance payment of tax. Before the amendment, Section 18A did not apply to incomes in respect of which provision is made for deduction of tax at source. After the amendment, Section 18A applies to all incomes other than salary incomes. The effect of this is that in the case of Indian companies advance tax at the rate of 15% is recoverable in respect of their dividend income and income by way of debenture interest.

Here, it is appropriate to take note of the position in regard to the deduction of tax on the dividends in respect of tax-free preference shares. Under the Finance Bill 1959, the position was that the dividend in such cases had to be grossed up in such a manner as to leave, after deducting 30% from the grossed up amount, an amount equal to the guaranteed dividend. For instance a tax-free dividend amount of 7% will have to be grossed up to Rs 10 from which tax will be deducted at Rs 3 and the balance of Rs 7 paid to the shareholder. This meant that though the tax on Rs 7 was only Rs 2.1 (@ 30%), the company had to pay Rs 3, thus suffering a loss of 0.9 rupees to the detriment of the ordinary shareholders. In the case of some companies the relevant provision of the Finance Act 1959 (i.e. Section 18 (3E) read with Section 18 (3D) was interpreted to mean that tax at 30% was to be deducted from guaranteed dividend amount. For example, the amount payable to the shareholder in the above instance was stated to be Rs 7 minus Rs 2.1, i.e. Rs 4.9. In order to resolve these difficulties, the Finance Bill 1960 drops sub-section (3E) from Section 18, and makes sub-section

1960-61 Budget Supplement

(3D) applicable to all dividends. The effect of this is that it is left open to companies to declare whatever dividends they please; but from the dividend so declared they should deduct tax at 30% and pay the balance only to the shareholder. That is to say, what is paid to the shareholder should only be 'the dividend amount minus tax thereon at 30%'. Therefore, if the shareholder is to receive Rs 7, the dividend amount will be Rs 10, and the tax element will be Rs 3. Clearly this does not help matters. A better provision would therefore be for the statute to say that it shall be permissible for the company to pay the tax payable by the shareholder on his dividend without treating it as part of the shareholders' income. If such an amendment were made, then where the company gives a dividend of Rs 7 to the shareholder, it will pay from its own funds Rs 2.1 as tax to Government. This is probably more in conformity with the real intention of the Statute.

Before leaving the subject of company taxation, three concessions relating to it, which have been given by the Finance Minister, deserve to be mentioned. These are:—

(a) Since tax has to be deducted at 30% when distributing dividends, in cases where dividends are distributed out of past taxed profits, there is double taxation of the profits. A new Section 49BB proposed in the Finance Bill provides some relief to the company in such cases. The company will be given credit equal to 10% of the dividends distributed out of the past taxed profits. For this purpose dividends will be deemed to have come out of the distributable income of the year to which the dividend relates and only to the extent of the insufficiency thereof will the dividend be deemed to have come out of past profits. While the concession is sound in principle, it is not understood why the relief should have been limited to 10% of the dividend amount coming out of past profits. Unless the relief is increased to 30% (i.e. the amount by which tax is required to be deducted at source now) double taxation is not avoided. All the same, despite its inadequacy, the concession now given should be welcomed.

(b) Under Section 15C of the Income Tax Act, profits, up to 6% of the capital employed, of new industrial undertakings which begin to produce or manufacture goods in any part of India within thirteen years from 1st April 1948, have been specifically exempted from payment of both income tax and super tax. The concession thus will not apply to industrial undertakings which commence production on or after 1st April 1961. The concession now given under the Finance Bill 1960 is to extend this time limit for commencement of production up to 31st March 1966.

1960-61 Budget Supplement

(c) The third concession with regard to company taxation is in respect of Section 23A. It may be recalled that this Section prescribes a minimum distribution of profits by closely controlled corporations. Among other things, the Section requires investment companies to distribute ten per cent of their profits. This is now changed to 90% by the Finance Bill 1960. This is a welcome change since investment companies are a source of capital supply, and any plough-back of their profits will therefore be of advantage to the corporate sector. Section 23A further requires companies whose accumulated profits and reserves exceed their capital or cost of fixed assets, to distribute 90% of their profits. This is now reduced to 80% by the Finance Bill 1960. These two concessions in Section 23A will, we believe, be widely welcomed.

Next we may take note of three concessions which have been given in regard to 'Property Income', 'Business Income' and 'Donations for charitable purposes'. These are:—

(a) Section 9 of the Income Tax Act relates to the assessment of 'Property Income'. Income under this head is a notional figure based on the bona fide annual value of the house property consisting of any building and lands appurtenant to it, belonging to the assessee. This annual value is determined with reference to the rental which the property might reasonably be expected to fetch. From this figure, as the law stands at present, half of the tax levied by any local authority is deemed to be the tenants' burden and deducted if it is paid by the landlord. What the amendment under the Finance Bill 1960 provides is that in the case of property the construction of which was completed before 1st April 1950, the full amount of such local taxes, if borne by the owner, will be allowed to be deducted in computing the taxable income from the property.

(b) Section 10 of the Income Tax Act relates to the assessment of the profits and gains of business, profession or vocation. In computing such profits the Section provides that certain allowances shall be made. One such allowance is any sum paid for scientific research related to the business. The amendment now made by the Finance Bill 1960 is that any sum paid for scientific research will be allowed whether or not such scientific research is related to the class of business carried on by the assessee.

(c) Section 15B of the Income Tax Act gives an exemption from tax in respect of donations for charitable purposes; the aggregate of such donations however should not be less than Rs 250/- or more than 5% of the assessee's total income or Rs 100,000/-, whichever is less. The amendment made by

the Finance Bill 1960 is that such donations may be upto 7½% of the total income or Rs 150,000/-, whichever is less.

So far for the changes made in regard to Income Tax. We may now conclude this article after taking note of the changes made by the Finance Bill in regard to the Wealth and Expenditure Taxes, as also the Gift Tax. In regard to the Wealth Tax there is only change, i.e. the abolition of the Wealth Tax on companies, which we have already mentioned in detail earlier.

In regard to the Expenditure Tax, there are four changes made by the Finance Bill 1960. These are:—(i) the exemption given

under clause (d) of Section 5 of the Expenditure Tax Act is henceforth restricted to passage concessions enjoyed by foreigners employed in India; (ii) a deduction upto Rs 1,500/- will henceforth be allowed in respect of expenditure incurred on leave travel in India; (iii) a deduction upto an aggregate maximum of Rs 3,000/- will henceforth be allowed in respect of education of children in India; (by aggregate maximum we mean for all children together; the limit of Rs 8,000/- for foreign education, however, continues); and (iv) taxes paid by the assessee to foreign Government, will henceforth be allowed in full: (under the existing law only a part thereof is allowed).

Finally, in regard to the Gift Tax, only one change is made by the Finance Bill 1960, and that relates to the advance payment of Gift Tax. Under Section 18 of the Gift Tax Act, if, within fifteen days of making a gift, an assessee pays by way of advance tax such percentage of the value of the gift as is specified in the section, he is eligible for a credit equal to ten per cent of the amount so paid as advance tax. The amendment now made is that in order to be eligible to this rebate the full gift tax leviable on the gift should be paid as advance tax. The amount of the ten per cent credit can therefore be obtained only by way of a refund after the completion of the assessment.

you have just opened A METAL BOX CONTAINER!

Salted or plain, cashewnuts need to be sealed in a specially designed container in an inert atmosphere. This way they retain their freshness and flavour for long periods. Thanks to the container's protective qualities, India has been able to export large quantities of cashewnuts to distant lands and to earn valuable foreign exchange. The U.S.A. alone buys Rs 11 crores worth every year, making the humble cashewnut India's second largest dollar earner.

In the country's drive to expand the export of consumer goods, Metal Box, leaders in the packaging field, are playing an important role. Already, over Rs 30 crores worth of consumer goods—mostly perishables—are finding their way abroad in Metal Box containers. Scientifically designed for protection, and superbly printed for sales appeal, Metal Box containers are showing how correct packaging helps to establish Indian goods in foreign markets.

Metal Box are also taking a direct part in the country's drive to earn foreign exchange by rapidly expanding the export of containers, closures, hardware and publicity media.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COLLAPSIBLE TUBES for toothpaste, ointments and adhesives
CROWN CORKS for carbonated drinks
R.S. CLOSURES for bottled products
RIGID TUBES for pills
COMPONENTS for radio, automobile and electrical industries
PUBLICITY MATERIALS including advertising tablets and calendars
PLASTIC PRODUCTS including Diathene bags, foil laminate pockets and injection mouldings
HARDWARE including trays and table mats

Excise and the Exchequer

EXCISE duties are becoming increasingly significant as a source of revenue to the Central Exchequer. In fact, among all taxes, direct and indirect, excise today constitutes the largest single source of revenue to the Government of India. The revenue from excise as a percentage to the total tax revenue of the Union Government has recorded an impressive increase in recent years. From only 14 per cent in 1948-49 there has been an increase to as much as 45.17 per cent in 1959-60. The trend is shown in the following table:

TABLE.
(Revenue in Rs. crores).

Year.	Total tax revenue of the Union Government.	Revenue from Excise.	Excise as a percentage to total revenue.
1949-50	357.28	67.85	18.99
1950-51	404.52	67.54	16.70
1951-52	512.85	85.78	16.73
1952-53	444.03	83.03	18.70
1953-54	420.58	94.98	22.98
1954-55	455.78	108.22	23.74
1955-56	485.06	145.25	29.94
1956-57	573.14	190.43	33.23
1957-58	695.77	273.62	39.33
1958-59	692.20	301.15	43.51
1959-60	725.73	327.80	45.17

In the budget for 1960-61, excise duties have been extended to a number of new commodities and adjustments have been made in existing duties on certain items. The yield from excise duties in the next fiscal year is estimated at Rs 379.94 crores—an all-time record—out of the total revenue of Rs 919.98 crores.

It will be worthwhile to refer briefly to the evolution of excise duties in the Indian fiscal system. The Taxation Enquiry Commission has pointed out that of the present excises, the earliest was the levy on motor spirit introduced in 1917. The object was to curtail the consumption of petrol in India and to conserve it for war purposes. The next item to be subject to excise was kerosene in 1922. In the subsequent years other commodities such as steel ingots, tyres, tobacco, mill cloth, art silk, cement, soap and footwear. In 1920-21 excise revenue as percentage of total tax revenue was only 4.7. By the beginning of the Second Five Year Plan this percentage had increased to 30.

Excise duties are now levied on nearly 40 commodities. These include necessities like kerosene, sugar, matches, footwear, soap and cloth as well as luxuries such as rayon, woollen fabrics, motor cars, fans and bulbs. Excise is also applicable to several industrial materials like steel, cement, coal, tyres, diesel oils, plants, aluminium etc.

The following table shows the trend in revenue from excise on certain important commodities:

	(In lakhs of Rs)	1958-59	1959-60
Basic duties	Accounts Revised		
Motor spirit	...	32.52	36.00
Kerosene	...	4.15	6.10
Sugar	...	52.27	47.36
Matches	...	19.21	18.00
Steel ingots	...	7.29	10.00
Tyres and tubes	...	7.16	10.50
Tobacco	...	49.09	43.74
Vegetable product	...	3.86	5.00
Cotton cloth	...	57.40	43.00
Artificial silk	...	1.96	1.53
Cement	...	13.91	16.50
Footwear	...	1.05	1.10
Paints & Varnishes	...	1.27	1.30
Vegetable non-essential oils	...	10.02	13.09
Refined diesel oils & vaporizing oils	...	9.60	24.00
Industrial fuel oil	...	4.77	8.00
Rayon and synthetic fibres & yarns	...	86	2.20
Motor cars	...	20	3

The additional excise duties levied on sugar, textiles and tobacco in lieu of sales tax are estimated to yield Rs 12.90 crores, Rs 20.49 crores and Rs 7.30 crores in 1959-60 as compared to Rs 6.79 crores, Rs 5.22 crores and Rs 4.11 crores respectively in 1958-59.

Excise duties are sought to be justified on the ground that indigenous industries which have developed under tariff protection should be made to replace the loss of customs revenue on imports. Besides excise duties help to widen the base of the tax structure.

It is now generally agreed that we have already reached the saturation point so far as direct taxation is concerned and that, in the coming years, the emphasis has to be mainly on indirect taxation. This in effect means that increasing reliance has to be placed on excise since the other indirect taxes like import duties, export duties and the taxes on passenger fares yield comparatively only a negligible amount and, moreover, these are not capable of yielding a steadily increasing amount of revenue. Excise alone has this advantage and hence its growing importance in the fiscal system. As Mr Morarji Desai said in his budget speech on the 29th February:

"In the context of planned development, it is essential in dealing with the budgetary needs of each year, to think in terms of broadening and adjusting the bases of taxation so that the revenue raised continues to expand with the years. The proposals for the coming year, particularly those widening the base of taxation, have been formulated with the needs of the Third Plan in view. While direct taxation will be kept under constant and continuous review so as to make it yield the maximum resources, the bulk of the expansion in taxation will have to come from indirect taxation".

In resorting to excise duties, however, it is essential to ensure that it

1960-61 Budget Supplement

does not result in adverse effects on industries or on other sections of the economy. It is well known that a few years ago, the Indian cotton textile industry was confronted with a very difficult situation because of excessive taxation. It is particularly necessary to see that the excise on industrial raw materials does not affect production costs. In the last few years the revenue from excise duties levied on industrial raw materials and intermediates (such as steel, cement, etc.) has gone up from Rs 3.46 crores in 1948-49 to Rs 80.07 crores in 1959-60 and in the budget for 1960-61, many more such commodities have been brought within the scope of excise. It is not possible to say at this stage to what extent these duties will raise the costs of production. But it is essential to see that the trend in production is carefully watched and if genuine difficulties are brought to the notice of the Government they should be looked into promptly and sympathetically. This is particularly important in view of the need to step up exports. The Government, of course, have evolved a procedure for giving relief in excise duties to commodities which are exported. But it is pointed out that the procedure is rather cumbersome and moreover, the rebate does not in all cases fully compensate for the extra burden incurred on account of excise duties.

Coming to the specific proposals of the next year's budget it will be seen that the new imports on road transport amount almost to 50 per cent of the total tax proposals. This, it is feared, is likely to retard the rapid expansion of the automobile industry. A higher excise on cars may perhaps have some justification, but it is difficult to appreciate the levy on commercial transport. Similarly the enhancement of the duty on diesel oil also appears to be rather excessive. It will be recalled that diesel oil was subject to excise duty first at 25 nP. In 1956 and later it was raised to 80 nP. It has now been decided to increase the duty by another 25 nP. This is sought to be justified in view of the "growing imbalance between the internal production and consumption of this commodity" which is stated to be causing a considerable drain on the foreign exchange resources. But the fact remains that these imports will have an adverse impact on road transport. The need to relieve the pressure on railways and to expand road transport vigorously has never been felt more acutely than now and, at this stage, such heavy taxation would appear to be hardly appropriate.

In the circumstances of today, what we need is a steady and substantial increase in production. This alone will enable us to check the inflationary tendencies and to execute our plans smoothly. But output can increase only when there is a growing demand for the various products. Excise duties, if they prove excessive, may retard consumption and this in turn will have an adverse impact on production and employment. It is necessary therefore to see that the excise duties are levied and administered in such a way as will help the economy to expand at a more rapid rate than hitherto.

1960-61 Budget Supplement

IT redounds greatly to the credit of the Railway Board that it has done, for the first time, a critical appraisal of the performance of Indian Railways during the Second Plan period in the background of the prevailing economic conditions. That this appraisal has been made by the Railway Board itself, instead of by a relatively independent body like the Programme Evaluation Organisation of the Planning Commission, does not detract from its value, for, the Board has brought to bear on its study the utmost possible objectivity. The happy idea informing this well-come addition to the usual Railway Budget papers suggests, incidentally, that the springs of creative thinking do not necessarily get dried up in the care-worn ranks of the permanent administration. It is to be hoped that this appraisal brochure will become a regular annual feature like the Economic Classification of the Central Government Budget issued for the first time in 1957-58. If, thus, the new feature is continued next year, by the time the Second Plan formally ends the country will have a nearly complete "success story" of the Railway Plan which accounts for a fourth of the entire public sector outlay of the Second Plan—a picture that will be available much earlier than the Planning Commission's own review of the whole Plan.

Even in the first appraisal, which is the subject of this article, the success story covering the first three years of the Railway Plan in some lines and four years in some others is most heartening because there is now every cer-

The Railway Plan's Success Story

tainty that the staggered financial performance will be more than matched by physical achievement as much in relation to the targets of the industrial and agricultural sectors of the economy as in relation to the Railway Plan's own targets. The most significant fact emerging in the first context is that the use of rail transport in terms of ton miles has outpaced by 2.0 times the rate of industrial growth in the first three years of the Second Plan. This ratio is derived from the increase of 14.1 per cent in industrial production between 1955 and 1958 and the increase of 28.2 per cent in rail traffic in terms of ton miles between 1955-56 and 1958-59. The Indian Railways can take just pride in the fact that their performance has been distinctly better than in the United States and the Soviet Union where in the early years of development the use of rail transport in terms of ton mileage tended to vary between 1.5 and 1.8 times the rate of increase in commodity production.

That is not all, for, in absolute terms also the Indian Railways have, by and large, fulfilled the increased demands made on them in the wake of expansion commodity production. This is seen from a comparison of rail movement with production of selected commodities which account for 60 per cent of the total originating traffic on the Railways. The following table, specially constructed out of the figures given in the Railway Board's brochure, provides in a nutshell the relevant comparison:

Serial No.	Commodity	1955-56		1958-59	
		Production in '000 tons	Rail movement in '000 tons	Production in '000 tons	Rail movement in '000 tons
1.	Coal	38,226	35,337	45,300	43,253
2.	Cement	4,487	3,956	6,062	5,012
3.	Iron & Steel	2,661*	3,655†	2,971*	5,595†
4.	Manganese ores	1,584	1,378	1,200	974
5.	Other Metallic ores	5,404	4,373	6,723	5,807
6.	Foodgrains	68,494*	9,044	76,673*	11,946
7.	Raw Jute	712	512	925	727
8.	Tea	284	258	316	285
9.	Paper & Paper Products	324*	256	81	332*
10.	Jute Manufactures	1,027	290	1,062	261
11.	Raw Cotton	818*	739	892*	541
12.	Cotton Textiles	715	548	727	430
13.	Oilseeds	5,843	1,768	8,919	1,497
14.	Sugarcane	59,587	3,408	70,915	N.A.
15.	Sugar	1,615	1,336	1,918	1,383
16.	Salt	2,979	1,858	4,135	1,781

(a) Includes imports; (b) Includes machinery, etc.

A closer look at the above figures will show that rail movement has increased, more or less, pari passu with the increase in production of such commodities as coal, cement, iron and steel, metallic ores other than manganese ore, foodgrains, raw jute, tea and paper and paper products. In the case of manganese ore, the movement of which is substantially influenced by export demand, rail transport has followed a pattern similar to that of production and export. In the case of the remaining commodities there has been no increase in

and is being played by the Indian Railways in the economic and industrial development of the country is seen as all the more remarkable.

So much about railway performance in organic relation to the needs of other sectors, although that by no means exhausts the story. As for the performance in relation to the Railways' own physical targets, it is even more heartening to be told that the tempo of construction and reconstruction activity and the progress of financial expenditure (with only 22 per cent remaining to be incurred in the fifth and final year of the plan) are such that the end-year targets of 162 million tons of goods traffic and 15 per

Year	Broad Gauge		Metre Gauge	
	Lbs. of coal consumed per 1,000 gross ton miles	Passenger Goods	Lbs. of coal consumed per 1,000 gross ton miles	Passenger Goods
1950-51	192	164	234	203
1955-56	182	154	221	187
1956-57	185	152	219	179
1957-58	183	149	208	178
1958-59	184	147	216	190

As for operational efficiency, the position may be summed up in the following figures of equated net ton miles per wagon day:

Year	B.G.	M.G.
1955-56	538	171
1956-57	567	180
1957-58	593	192
1958-59	568	134

The Railways have achieved this high level of efficiency by reducing

cent increase (over 1955-56) in passenger traffic will have been reached. When this anticipated success is considered along with the already achieved success by way of self-sufficiency in the indigenous production of wagons, steam locomotives and coaches and with the fact that indigenous production of railway stores and equipment has been at a faster rate than what was originally expected, the physical achievement of the Railway Plan are brought into their proper focus.

What is no less remarkable is that the efficiency with which the Railways have executed their plan has been matched by efficiency in two other directions, namely, fuel consumption and operation. As regards fuel consumption, the year-to-year position is presented by the following efficiency index:—

empty haulage as well as by increasing the quantity loaded in each wagon. In highlighting this fact, the Railway Board has rightly emphasised, in the light of comparative figures, that the performance of the Indian Railways in regard to the utilisation of the wagon stock compares quite favourably with that of the advanced countries like Canada and the United States.

Major Developments in Indian Economy

Production Trends Satisfactory

Rise in Prices

Part A of Mr Morarji Desai's Budget Speech

Sir,

I beg to present the statement of the estimated receipts and expenditure of the Government of India for the year 1960-61.

2. The usual Economic Survey reviewing the major developments in the economy during the current year and indicating broadly the outlook for the coming year has been circulated along with the budget papers. I propose here to dwell only on such aspects of the economic situation as have a direct bearing on the budget for the coming year.

3. Agricultural production recorded a large increase in 1958-59 and there has been a marked recovery in industrial production in recent months. Despite these encouraging trends in production, both wholesale prices and the cost of living have shown a significant rise. The foreign exchange reserves held by the Reserve Bank have maintained a measure of stability during the year. There has been some improvement in export earnings and some reduction in imports, but the major factor in the stability of our foreign exchange position has been the larger availability of external assistance. The trends in money supply and credit indicate that the expansionary impulse in the economy has been fairly strong. The stock markets have been buoyant practically throughout the year. These pointers, taken together, indicate the need in the coming year for active vigilance in regard to domestic price trends and continued austerity in imports backed by accelerated effort to step up exports.

4. The investments undertaken in the last few years are beginning to yield results and we should expect substantial increases in output in the coming year. At the same time the demands for domestic consumption and investment are increasing while the urgent need to build up exports remains. It is essential in this situation to ensure to the maximum extent possible that aggregate demand does not outstrip the supplies available. 1960-61 is the last year of the Second Five-Year Plan, and care must be taken to see that the economy is in a state of healthy balance when the year ends and the Third Plan commences.

PRODUCTION

5. The prospects for agricultural production in the current year

are good. Despite floods in some parts of the country and drought in some others, the Khariff crop is expected to be about as good as last year, and the Rabi sowings so far have been satisfactory. Food production in 1959-60 will, it is hoped, be around the same high level as last year, although some reduction in the output of raw cotton and jute is likely.

6. Industrial production has shown an increase of about 7.4 per cent over the first ten months of 1959. This is a substantial improvement over the rate of increase of 1.7 per cent in 1958 and 3.5 per cent in 1957. A notable feature of the year was the increase in the production of iron, steel and aluminium which together accounted for over a third of the rise in the index of industrial production. Among the other industries which recorded substantial increases in output were automobiles, diesel engines, machine tools, sugar machinery, superphosphates, soda ash, cement and paper and paper board. The output of mill cloth was about the same as in 1958, although the off-take was distinctly larger partly on account of the revival of export demand. The production of handloom and powerloom cloth went up by about 100 million yards. The production of jute manufactures over the year was slightly lower than in 1958, but it has been looking up since September last. Although the foreign exchange position continues to be tight, it has been possible to ensure, by and large, that industrial production is not hampered on that account. Actually, the increase in industrial production has been larger than the index would suggest, as the industries which have come into existence after 1951 are not included in that index.

7. In part, the increase in industrial production mentioned earlier has been on account of fuller utilisation of capacity. But there has also been expansion in installed capacity in a number of industries such as iron and steel, aluminium, paper, basic chemicals, cement, power-driven pumps, sewing machines and bicycles. Progress is being made in the production of finished machinery and equipment as well. The construction of the first phase of the heavy electrical project at Bhopal is nearing completion and it has been decided to accelerate the remaining phases of

the project and to provide for substantial expansion. The capacity of the heavy machinery project at Ranchi is also to be expanded so as to produce 80,000 tons of machinery a year. A number of plants for fertilisers, drugs and pharmaceuticals and intermediates are also being established and will go into production during the Third Plan period. The industrial potential of the country has grown considerably over the last few years, and is becoming rapidly more diversified. Government are anxious to see this process carried through further. Small-scale industries have also continued to receive encouragement and support from Government, and certain steps to assist banks to make larger loans to small industries are under consideration.

8. Indian shipping continued to expand steadily during the year. The total gross tonnage under the Indian flag at the end of 1959 was about 7,40,000 which is expected to reach the Plan target of 9 lakh tons by the end of 1960-61. With the establishment of the Shipping Development Fund in the current year, Indian shipping companies have now a permanent source from which to obtain rupee finance for their development. In the present context of a shortage of foreign exchange, it is important to develop the Merchant Fleet and save the large amount paid as freight in foreign exchange. I hope that in this effort we shall receive cooperation and assistance from foreign ship-owners, who have had an earlier start and that restrictive practices, which hamper the full utilisation of our shipping tonnage will be given up.

MONETARY TRENDS

9. The rate of increase in money supply which had slowed down in 1958 picked up again in 1959, the increase in the course of the year being Rs 170 crores, as compared to Rs 75 crores in the previous year. The increase in bank credit to Government was smaller in 1959 than in the previous year. On the other hand, the contractionist effect of the transactions of the private sector with the banking system was smaller and the foreign exchange reserves which had shown a decline in the previous year went up in 1959.

10. The deposit resources of scheduled banks increased by Rs 254 crores in 1959. The addi-

tion to the investment of these banks in government securities was Rs 151 crores as compared to Rs 204 crores in 1958. The net borrowings of the scheduled banks from the Reserve Bank were small and except during periods of pressure for funds, money rates generally tended to remain at lower levels. The maximum deposit rates fixed in October 1958 under a voluntary agreement among the larger banks were lowered by 1 per cent in September 1959.

11. The stock markets were buoyant for most of the year and the gilt-edged securities maintained a firm trend. Several of the new industrial issues during the year were oversubscribed. The index of variable dividend industrial securities, which had risen by 14 per cent in 1958, rose further by about 17 per cent during 1959. While, in a growing economy the capital markets should reflect confidence and optimism, it is essential to keep a watch on any unhealthy speculative tendencies.

PRICES

12. The general index of wholesale prices has shown a rise of about 4½ per cent over the twelve months ending January 1960. The index for rice came down from 108 in November 1958 to 92 in March 1959, but it rose again to 112 by October. There was a seasonal decline to around 101 by December 1959. The index was 104.3 at the end of January 1960. Wheat prices at the end of last month were about 25 per cent lower than about a year ago. While, on the whole, the indices for cereals and pulses have shown a fall, 'food articles' as a group have gone up, mainly because of the rise in the prices of edible oil, gur and tea. Industrial raw materials went up more sharply and the index for manufactures has also shown an upward trend in recent months. The All-India cost-of-living index for December 1959 was 124 as compared to 122 a year earlier.

BALANCE OF PAYMENTS

13. As I mentioned earlier, the Reserve Bank's sterling assets have been relatively stable, their level on 19th February 1960 being Rs 203 crores, as compared to Rs 211 crores a year earlier. During this period we made the gold payment towards the enlargement of our quota in the International Monetary Fund and repurchased from it

1960-61 Budget Supplement

rupees equivalent to \$20 million. Welcome as this improvement is it must be borne in mind that basically our current earnings are far short of our payments, and the gap is being met by foreign loans and credits.

14. For the year 1958-59 the current account deficit in the balance of payments was Rs. 339 crores as compared to Rs. 476 crores in 1957-58. Imports were lower by Rs. 157 crores; imports on private account showing a fall of Rs. 176 crores while Government imports rose by Rs. 19 crores. Export earnings in 1958-59 were about Rs. 19 crores less than in 1957-58 due mainly to recessionary conditions abroad. Receipts on account of official donations and other invisible items were less in 1958-59 by a crore as compared to 1957-58. The current account deficit of Rs. 339 crores was met by capital inflow of Rs 320 crores and by a drawing down of foreign exchange reserves by Rs. 19 crores. Allowing for a net outflow of Rs. 23 crores on account of miscellaneous transactions the total fall in reserves, however, came to Rs. 42 crores.

15. For the first half of 1959-60 the current account deficit was Rs. 142 crores as compared to a deficit of Rs. 211 crores in the first half of 1958-59. The improvement was accounted for by an increase in export earnings of the order of Rs. 19 crores and a reduction in imports amounting to Rs. 53 crores. The receipts on account of official donations were, however, Rs. 3 crores less. As against a deficit of Rs. 142 crores, foreign exchange reserves were drawn down by Rs. 27 crores, the balance being met mainly by external assistance.

16. While on the subject of the balance of payments and foreign exchange reserves, I would like to mention that we had drawn in 1957 from the International Monetary Fund, a credit of \$200 million, including a stand-by-credit of \$72.5 million. Under the Fund rules, a stand-by-credit is repayable within three years. We have, therefore, repaid \$50 million during this month and propose to pay the balance of \$22.5 million in June 1960.

FOREIGN ASSISTANCE

17. As the House is aware, a Conference of friendly countries was convened by the World Bank in March 1959 to discuss how India could be assisted to meet the foreign exchange requirements of the current Plan. Following this Conference, the United Kingdom Government granted a loan of £19 million, about Rs 25 crores. The United States Government sanctioned a further loan of \$20 million, about Rs 9½ crores, from the Development Loan Fund in July 1959 for the import of steel for projects in the private sector. An agreement under PL 480 was signed with the United States Administration in November 1959 for import of foodgrains, and other agricultural commodities valued at \$257

million, about Rs 122 crores. Canada has authorised grants totalling \$25 million, about Rs 11 crores for import of wheat, raw materials, fertilisers and scientific equipment. During the current financial year the World Bank sanctioned further loans totalling \$85 million, about Rs 40½ crores. Three agreements were signed during the year with the USSR, for loans and credits totalling 1680 million roubles, about Rs 201 crores. The bulk of this assistance is towards the Third Plan. The Governments of Czechoslovakia and Yugoslavia have also agreed to extend credits upto Rs 23 crores and Rs 19 crores respectively during the Third Plan period.

18. As in previous years, we have continued to receive assistance under the Colombo Plan from countries like Australia, Canada and New Zealand. We have received technical assistance from the United Nations Expanded Programme of Technical Assistance, other specialised agencies of the

United Nations and the Indo-French technical cooperation programme. We have on our side, also given assistance to friendly countries. Our economic and technical assistance to Nepal under the Colombo Plan is expected to amount to Rs 1.33 crores during the current year. We have provided scholarships and training facilities for overseas students and sent a large number of experts to help the Governments of these countries.

FINANCIAL YEAR 1959-60

20. I shall now deal with the revised estimate of the current year and the budget estimates of the coming year.

21. The budget for the current year estimated the revenue at Rs 780.10 crores and expenditure met from revenue at Rs 839.18 crores leaving a revenue deficit of Rs 59.08 crores. On the trend of actuals the revenue is now estimated at Rs 838.66 crores and expenditure at Rs 854.05 crores, leaving a deficit of only Rs 15.39 crores.

22. The improvement of Rs 58.56 crores in revenue is due mainly to

better collections under Customs and Union Excises. Customs receipts are now estimated to go up from Rs 132.77 crores to Rs 160 crores; our original estimate, based largely on the trend of actuals for 1957-58, has proved to be too conservative. Union Excises would yield Rs 350.82 crores against the budget estimate of Rs 324.32 crores. With the progressive increase in production the revenue has shown an all round improvement, notably under steel ingots, cement and tyres and tubes. The enhancement in the duty on mineral oils during the year has also contributed to this improvement. The revenue from Income Tax including Corporation Tax, is likely to go up by Rs 5 crores but the yield from Wealth Tax, Expenditure Tax and Gift Tax taken together, will be less by Rs 1.6 crores. The surcharge on iron and steel which is transferred to the Iron and Steel Equalisation Fund, is likely to yield Rs 9 crores more while grants from the US Government under the PL 480 programme will be Rs 13 crores less.

23. Civil Expenditure this year is now estimated at Rs 610.35 crores against the original budget of Rs 596.50 crores and Defence Expenditure at Rs 243.70 crores against the original estimate of Rs 242.68 crores.

24. The increase of Rs 13.35 crores in Civil Expenditure is the net effect of variations over a number of heads. Debt services are now estimated to cost Rs 7.26 crores more due chiefly to larger payments for interest on external loans. Transfer to the Steel Equalisation Fund of the surcharge on iron and steel accounts for an increase of Rs 9 crores. Expenditure on displaced persons is more by Rs 5.48 crores due to the conversion of certain outstanding loans into grants and to larger provision for transfer of sale proceeds of evacuee property, which are taken in reduction of the Capital expenditure on the payment of compensation to displaced persons. Payment of States' share of Union Excise Duties is now expected to exceed the budget provision by 2.30 crores following the expansion of revenue. Production has also been made for payment to the States of a grant of Rs 3.46 crores to compensate them for the loss in their share of income-tax following the change in the company taxation this year. These increases would be partly counterbalanced by a drop of Rs 13 crores in the grants from USA under PL 480 programme to be transferred to the Special Development Fund.

25. The revised estimate of the net Defence expenditure on revenue account during the current year shows an increase of Rs 1.02 crores over the budget. This is made up of an increase of Rs 6 crores under the Air Force, offset by reductions in the Navy and in Non-effective charges and by a slight increase under "Receipts and

Recoveries". The increase in the Air Force budget is mainly due to liabilities carried over from 1958-59 on stores purchased from abroad and new proposals sanctioned during the course of the year. The reduction in expenditure on the Navy is mainly due to less expenditure on stores. The provision made for temporary increases in pensions of Service personnel under "Non-effective Charges" is unlikely to be required this year and has been included in the budget for the next year.

FINANCIAL YEAR 1960-61

26. Before dealing with the estimates for the coming year, I would like to mention one or two matters which affect the estimate of that year. The first relates to a major change in the financial arrangements between General Revenues and Post and Telegraphs. The surplus of the Post & Telegraphs Department, after payment of interest on the capital charge, has so far merged in the General Revenues. Part of the surplus is treated as an outright contribution to General Revenues and the balance is retained *pro forma* by the Department on which an abatement of interest is allowed. These arrangements were recently reviewed, particularly against the background of the need to encourage the Department to build up adequate reserves against its growing capital investment. With rapid expansion and technological advance, the pace of capital investment of the Department has increased considerably in recent years, the total capital at charge having risen from Rs 38 crores in 1948-49 to Rs 121 crores at the end of last year. But the accretions to the Renewals Reserve Fund have not been adequate with the result that replacements have to be partly financed from interest-bearing capital. It has therefore, been decided to place the P & T Department with effect from next year in the same position as the other great commercial department of Government, viz. Railways vis-a-vis General Revenues. The Department would in future pay a dividend to the General Revenues at the rate in force from time to time for the Indian Railways on the mean capital at charge during the year. The balance of the surplus, after payment of the dividend, will be retained by the Department for strengthening its Reserves, particularly the Renewals Reserve Fund.

27. The second matter concerns the Central Pay Commission. The Commission which was appointed in August, 1957, to enquire into the structure of emoluments and conditions of service of Central Government employees submitted its Report in August, 1959. The decisions of Government on some of the major recommendations of the Commission were announced in Parliament on the 30th November, 1959. The other recommendations of the Commission are being examined and Government's decisions thereon will be

announced as early as possible. The annual expenditure for Government as a whole, on the implementation of the recommendations of the Commission, including the interim relief already granted, is of the order of Rs 44 crores, which is likely to rise ultimately to Rs 55 crores roundly per annum. The recommendations of the Commission accepted by Government take effect from the 1st July, 1959, but no provision is being made in the revised estimates for the current year on this account as the payments will all be made in 1960-61. The budget for that year thus includes more than a year's provision for this expenditure.

28. Honourable Members had expressed some concern last year about the growth of Civil expenditure. The question of securing maximum possible economy consistent with efficiency and avoiding wastage in public expenditure has continued to receive close attention. The reports of the various teams of the Committee on Plan Projects and the Special Re-organisation Unit of the Ministry of Finance have been made available to Parliament from time to time. A continuous watch over the growth of expenditure, particularly non-developmental expenditure, is kept by the Central Economy Board and the Internal Economy Committee set up in the various Ministries. Studies of particular sections of activity in each Ministry have been initiated with a view to improve the methods of work and secure economy with efficiency. Government have imposed a ban for one year on the creation of fresh posts and the filling up of vacant posts unless they are related to the Plan or are required for security purposes. Ad hoc cuts have also been made in the provision for travelling allowances.

29. For the next year, on the basis of existing taxation, the revenue is estimated at Rs 896.45 crores and expenditure at Rs 980.35 crores, leaving a deficit of Rs 83.90 crores on revenue account.

30. The revenue from Customs has been assumed at the same level as the current year's revised estimate of Rs 160 crores. Union Excise Duties are estimated at Rs 358.91 crores, an increase of Rs 8.09 crores over the revised estimate, which allows for the progressive increase in production and a full year's revenue from the increases levied during the current year. The receipts from Income-tax and Corporation Tax are likely to improve by Rs 10 crores. Revenue from Wealth Tax will decline by Rs 5.5 crores due to the merger of the tax on companies in their Income tax. Apart from the increase of Rs 1.43 crores in the sale proceeds of opium, the revenue from other principal heads is not expected to differ materially from the current year's revised estimates. Interest receipts would go up by Rs 7.44 crores mainly due to the anticipated receipt from two steel companies and the Khadi and Village Industries Commission. Of the other major variations, mention may be made of an increase of Rs 7 crores in the receipt from the surcharge on iron and steel and Rs 8 crores in grant from the US

1960-61 Budget Supplement

Government under the P. L. 480 programme. But these increases will be partly set off by a drop of Rs 4 crores in the contribution from the Posts and Telegraphs following the revised arrangements mentioned earlier. The share of income-tax payable to the States next year shows a decrease of Rs 27.26 crores as a result of the merger of company income-tax in Corporation Tax, but as I mentioned in my speech last year, it is the intention to make good the loss to the States by a specific grant till the next Finance Commission reports on the allocation of income-tax and necessary provision is being made in the expenditure estimates for this purpose. The profits of the Reserve Bank have been taken at Rs 40 crores, the same as in the current year.

31. Expenditure next year is estimated at Rs 980.35 crores of which Rs 272.26 crores will be on Defence Services and Rs 708.09 crores under the Civil heads.

32. Civil Expenditure next year shows an increase of Rs 97.74 crores over the revised estimates. Expenditure on Debt Services is likely to be Rs 9.45 crores more on account of the progressive increase in the internal and external debt. Development and Social Services, including Community Development, are expected to cost Rs 27 crores more in the terminal year of the current Five-Year Plan. The two self-balancing items of surcharge on iron and steel and grants from the USA under P.L. 480, for which corresponding credits are assumed in the revenue estimates, account for an increase of Rs 15 crores. Ad hoc grants to the States to compensate them for the loss in their share of income-tax next year would be Rs 28 crores more. The rest of the increase is spread over a number of heads. Detailed explanations for these variations have, as usual, been given in the Explanatory Memorandum.

33. Defence expenditure next year is estimated at Rs 272.26 crores against the revised estimate of Rs 243.70 crores, an increase of Rs 28.56 crores. Army estimates show an increase of Rs 26.75 crores and Navy estimates Rs 3.46 crores, while the expenditure on Air Forces will be Rs 2.94 crores less. Non-effective charges show an increase of Rs 1.29 crores. The overall increase in the Defence expenditure is mainly due to the additional commitments of the Armed Forces, the further expansion of the Territorial Army and the National Cadet Corps and the provision for increased payments to Defence personnel on the basis of the recommendations of the last Pay Commission. As I have mentioned elsewhere, the provision included in the current year, under non-effective charges for an increase in the rates of small pensions to Service personnel has been carried over to the coming year. The reduction in the Air Force estimates is mainly due to the inclusion in the current year's revised of substantial amounts on account of liabilities carried over from the previous year.

34. The estimates of the Defence Services have been prepared against

1960-61 Budget Supplement

the background of the present threat to our borders and I am sure the House will not expect me to dilate at any length on the measures which have been taken and are under consideration for safeguarding the territorial integrity of the country. It may be that later in the year, if circumstances necessitate it, I may have to come before this House for additional funds; but I have no doubt that Government will have the support of all sections of this House in taking all the measures necessary for ensuring the security of the country.

CAPITAL EXPENDITURE

35. I shall now give a brief account of the provision made in the

estimates for capital outlay. The current year's budget provided for a total capital outlay of Rs 420.14 crores, excluding the adjustment for the transfer of capital assistance from the United States to the Special Development Fund which is notionally treated as capital expenditure. The revised capital requirements are now estimated at Rs 362.85 crores, a decrease of Rs 57.29 crores. The savings occur mainly under two heads. The Railways now expect to spend only Rs 85.03 crores against the original estimate of Rs 121.81 crores. Net expenditure on purchase of foodgrains shows a fall of Rs 21.01 crores due mostly to larger sale proceeds and recoveries.

36. Against the revised estimate of Rs 362.85 crores for capital outlay this year, the next year's provision stands at Rs 370.84 crores. If the special item of Rs 95.24 crores in the current year for payment of additional subscription to the International Monetary Fund is excluded, the capital requirements next year exceed the current year's revised estimate by Rs 103.23 crores. This increase is spread over a number of heads and reflects the additional allotments to fulfil the Plan targets during the last year of the Plan. Outlay on industrial development, mainly on coal and oil development would cost Rs 30.56 crores more. The Railways and Posts and Tele-

graphs would also be spending Rs 35.78 crores and Rs 3.60 crores more respectively than in the current year. Foodgrains transactions would also involve an increase in the net outlay of Rs 19.41 crores.

37. In addition to the direct capital outlay just mentioned the estimates provide Rs 283.18 crores this year and Rs 331.51 crores next year for loans to States and Rs 221.74 crores this year and Rs 176.74 crores next year for loans to other parties including Port Trusts, Government-owned Corporations and foreign Governments.

38. Next year's estimates include a total provision of Rs 889 crores for

in India's service

With a heritage of over a century we lay claim to a creditable record of service in promoting India's economic development. The watchword is one of endeavour in the service of the Nation

KILLICK INDUSTRIES LIMITED

KILLICK HOUSE, HOME STREET, BOMBAY

IMPORT AND SERVICE OF HEAVY MACHINERY AND AIRCRAFT • GENERAL INSURANCE • ELECTRICITY • COTTON TEXTILES • MANGANESE • COAL • CEMENT • PORTLAND AND WHITE • LIGHT ENGINEERING • SHIPPING

implementing the Plan, Rs 173 crores in the revenue budget and Rs 716 crores in the Capital budget. Out of this provision, Rs 64 crores in the revenue budget and Rs 175 crores in the capital budget are for assistance to the States. In addition, the Railways will be spending Rs 34 crores from their own resources and the States Rs 251 crores. Thus the total Plan outlay in 1960-61, including interest on loans on river valley projects which are added to capital during the period of construction and short-term loans, will amount to Rs 1,174 crores.

39. During the three years ending 1958-59, the total Plan outlay by the Central and State Governments together was of the order of Rs 2,450 crores. The budget provision on this account for the current year is Rs 1,121 crores and the next year's outlay as mentioned already is estimated at Rs 1,174 crores. After allowing for the usual shortfall in expenditure, the actual outlay in the public sector over the five-year period will be near about Rs 4,600 crores. Investment in the organised private sector is expected to reach the total envisaged in the Plan; it may even slightly exceed this. In irrigation, power, industry, mining and transport as also in the field of social services, the achievements will, I feel sure, be impressive.

WAYS AND MEANS

40. The current year's budget provided for a net expansion of treasury bills of Rs 237 crores of which Rs 15 crores were expected to be issued to the public. On the latest trends, the net expansion is now estimated at Rs 190 crores. The improvement of Rs 47 crores is due to several factors. The revenue deficit is now expected to be Rs 44 crores less than estimated. Capital expenditure, as explained earlier, will show a saving of Rs 57 crores and other debt heads an improvement of Rs 32 crores. This improvement of Rs 133 crores will be partly counterbalanced by a decrease of Rs 71 crores in external loans and additional provision of Rs 15 crores required to raise the closing cash balance to the normal level of Rs 50 crores.

41. The borrowing programme envisaged by the budget was carried through successfully. In the budget I had taken credit for a market loan of Rs 225 crores; the actual receipts amounted to Rs 229 crores. Two loans were floated in July 1959; the 3½ per cent Bonds 1969 at an issue price of Rs 98.85 and the 4 per cent Loan 1979 at par. Conversion facilities were offered to the holders of the 3 per cent Second Victory Loan 1959-61 and the 2½ per cent Hyderabad Loan 1954-59 which were due for repayment during the year. The total subscriptions to these loans amounted to Rs 184 crores, of which Rs 89 crores came by way of conversion. Later, to meet the demand for investment from the market, it was decided to create further issues of 3½ per cent Bonds 1969 for Rs 25 crores at Rs 99.4 and of 3½ per cent Loan 1974 for Rs 20 crores at Rs 99.65. In accordance with the usual practice, these issues were taken over by the

Reserve Bank on its investment portfolio for being sold in the market later.

42. Hon'ble members will recall that in the Budget Speech for 1958-59 mention was made of the proposal for the gradual funding of a part of the Treasury Bills held in the Issue Department of the Reserve Bank. A beginning was made in July 1958, when, in consultation with the Reserve Bank, Treasury Bills of the value of Rs 300 crores were funded. This process was continued during the current year, when a further Rs 150 crores worth of Treasury Bills were funded into dated securities.

43. Small Savings have shown a steady improvement in recent years. The net collections of Rs 78 crores during 1958-59 were the highest reached so far. This year they are expected to go up to Rs 82 crores against the budget estimate of Rs 85 crores. While the response has been encouraging, the collections are still far short of the average of Rs 100 crores a year envisaged in the Plan. The Small Savings movement is more than a routine device for mobilising savings. It has a great psychological appeal in providing an opportunity for the ordinary man and woman to participate in the national effort for development. I would, therefore, appeal to every family in this country to save more and contribute its share in making the movement a greater success.

44. I may mention, at this stage, certain steps taken by Government during the year to popularise the savings movement. The House will remember that in the last session, legislation was promoted to provide the facility of nomination to depositors in the Post Office Savings Bank and holders of Savings Certificates. A new Pay Roll Scheme has been introduced for the benefit of the employees in large establishments and factories, which permits deductions to be made from the wages, with the consent of the employees, for investment in Small Savings. The National Savings Advisory Committees at the Centre and in the States have been merged with the Savings Boards of the Women's Savings Campaign and constituted into composite Boards, one at the Centre and one in each State, with adequate representation of women workers. The various agency system for the sale of Savings Certificates have been reviewed and rationalised and a standardised agency system, both for the urban and rural areas is expected to be introduced shortly. The commission due to the agents is at present claimed and disbursed through the treasuries which are always not easily accessible, particularly in the rural areas. To meet this difficulty, the responsibility for the payment of the commission is proposed to be transferred to the post offices in the coming year.

45. In response to suggestions made from various quarters from time to time, Government have decided to issue Prize Bonds. The

notification setting out the terms will issue tomorrow and the Bonds will be placed on sale from the 1st April next. The issue will be in the form of bearer bonds in two denominations of Rs 100 and Rs 5. The bonds will not carry interest and will be repaid after five years but the holders will participate in quarterly drawal of prizes, which will be free of income tax. The total number of prizes to be awarded every quarter will be 40 in respect of each series of one lakh units of Rs 100 bonds, the prizes ranging between Rs 25,000 and Rs 500. In the case of each series of ten lakh units of Rs 5 bonds, the number of prizes offered every quarter would be 278, the prizes ranging between Rs 7,500 and Rs 50.

46. For the next year's budget, credit has been taken for a market borrowing of Rs 250 crores including the receipts from the prize bonds which I just mentioned. The net credit from small Savings has been taken at Rs 90 crores allowing for a small increase of Rs 8 crores over the likely receipts this year. According to the latest information available, foreign assistance next year is expected to amount to Rs 362 crores.

47. The overall budgetary position next year may now be summarized. At the existing level of taxation, there will be a revenue deficit of Rs 84 crores. Capital outlay will amount to Rs 371 crores, loans to State Governments and others to Rs 531 crores and debt repayments to Rs 140 crores. This total disbursement of Rs 1,126 crores will be met to the extent of Rs 250 crores from market borrowing, Rs 90 crores from Small Savings, Rs 362 crores from foreign assistance, Rs 128 crores from loan recoveries and Rs 119 crores from miscellaneous receipts, leaving a deficit of Rs 177 crores which will be met by the expansion of treasury bills.

DEVELOPMENTAL PLANNING

48. Before I deal with the problem of covering the large revenue deficit in sight, I should like to say a few words on the implications of planning for development, for, it is in relation to these that all our budgets have to be framed. The essential objective of our plans is to lift the economy from stagnation and to get it moving forward to higher levels of production and better standards of living. We embarked on this task some ten years ago, and we shall be completing the Second Plan by the end of the next fiscal year. In this period, our economy has made notable advances in several directions. One has only to look at the major industrial projects which are coming up and see something of the varied programmes of rural development that have been and are being implemented to realise the growing dynamism of the economy. Economic development is not, for us, a vague or remote ideal;

1960-61 Budget Supplement

it has to be part of our daily thought and work. Undoubtedly, we have had our share of difficulties, and, I have no doubt, we shall continue to have some hereafter. These difficulties and stresses and strains are a part of the process of economic and social growth.

49. At the end of the Second Plan the country would have reached a level of development at which it can hardly afford to halt. It is vital that the pace of development is not merely maintained but accelerated. This is the essential task of the Third Five Year Plan. The first pre-requisite of success for this is increased agricultural production. This is axiomatic and we cannot afford, even for a moment, to lose sight of it. But, other sectors of the economy like industry, mining, power, transport and communications have also to be developed rapidly if the economy is to grow at a rapid enough pace over the next 10 or 15 years. The Third Five Year Plan has to keep this perspective in view.

50. It is perhaps a platitude to say that in this country we face all the time a crisis of resources in developing our economy. But I would be failing in my duty if I do not stress the point that mobilising the resources required for this is not going to be easy and will entail progressively harder work and larger sacrifices by all sections of the community. There will be need also for substantial external assistance. We are anxious to make the period of dependence on special external assistance as short as possible. I am not referring here to the normal flow of external capital, this, I hope, will continue. Private capital is apt to flow in more readily when the foundations of development have been well laid out. The scope for foreign investment in India will thus grow. But, our aim is to get as early as possible to a stage where the bulk of our investment programmes is based on the domestic output of capital goods and equipment. How far we can advance in this direction depends upon a number of factors, of which the availability of sufficient foreign exchange in the next few years is the most crucial. I feel I am right in saying that the needs of developing economies are now increasingly appreciated in the more advanced countries, and I am confident that, provided we as a nation put in the best effort we can, the necessary support from abroad will be forthcoming. What is vital, at this stage, is a clear recognition of the urgency of economic development, for preserving and strengthening the democratic values we cherish and the realisation that such development is not possible unless some restraint is kept on consumption and we submit ourselves to a high degree of fiscal and monetary discipline.

51. I now turn to the proposals for dealing with the revenue deficit for the coming year.

1960-61 Budget Supplement

Revenue Deficit Partly Covered By New Proposals

New Revenues from Indirect Taxes

Adjustments in Direct Taxes

Part B of Finance Minister's Budget Speech

52. Honourable Members may recall that while presenting the budget proposals for the current year, I placed before the House certain broad considerations which Government took into account in deciding the extent to which the revenue deficit of a year should be covered by additional taxation. I suggested that the long era of revenue surpluses was perhaps coming to a close; for the first time the actuals for 1958-59 have disclosed a small revenue deficit of Rs. 5 crores. I also suggested that exceptional circumstances affecting the deficit of a year should be taken into account in deciding upon the extent to which the deficit should be covered and that due regard should be given to the amount of additional taxation raised in recent years. I also ventured to underline the need for the continuous mobilisation of resources for financing the increasing needs of planned development. The considerations I placed before the House last year apply with equal force to the budget of the coming year and although the large revenue deficit next year is due, in the main, to larger outlay on development in the last year of the present Plan and the increased requirements of Defence in the interests of national security, I am convinced that a part of the deficit should be covered by additional taxation. As in the current year, I propose that about a fourth of the deficit in sight, may be covered by new taxation.

53. In framing the taxation proposals for the coming year, I have had in mind something more than the immediate needs of that year. I mentioned earlier the continuous need to raise additional resources for development. In the context of planned development, it is essential, in dealing with the budgetary needs of each year, to think in terms of broadening and adjusting the bases of taxation so that the revenue raised continues to expand with the years. The proposals for the coming year, particularly those widening the base of taxation, have been formulated with the needs of the Third Plan in view. While direct taxation will be kept under constant and continuous review so as to make it yield the maximum resources, the bulk of the expansion in taxation will have to come from indirect taxation.

Indirect Taxation

54. In the field of indirect taxation, my proposals cover both the adjustment of rates of existing taxes and the levy of taxes on certain new commodities. The proposals are explained in detail in the memorandum circulated with the budget papers and I propose to mention them only briefly.

55. My first proposal is to levy a duty of Rs. 200 per metric tonne on tin plates and tinned sheets. Suitable adjustments would be made where duty paid steel is used in their manufacture. The yield in a full year is estimated at Rs. 208 lakhs.

56. My second proposal is to impose a small duty of Rs. 10 per metric tonne on pig iron. Pig iron used in the manufacture of steel will be exempted from the duty, which is expected to yield Rs. 60 lakhs a year.

57. My third proposal is to levy a duty of Rs. 500 per metric tonne on aluminium sheets and circles and Rs. 300 per metric tonne on aluminium ingots. Necessary adjustments will be made in the duty on circles, sheets, etc., when duty paid ingots are used in their manufacture. The estimated yield is Rs. 86 lakhs.

58. My next proposal is to levy a duty of 10 per cent *ad valorem* on all types of internal combustion engines used as prime movers for transport vehicles. A lower rate of 5 per cent *ad valorem* will be charged on stationary types of these engines which are generally used in industry and for agricultural purposes. The yield is estimated at Rs. 107 lakhs a year.

59. I also propose to levy a small tax on certain essential cycle parts. A duty of Rs. 2 on each free wheel and Rs. 4 on each rim will be levied. This will ensure the realisation of Rs. 10 of each completed cycle without bringing into the excise net a large number of small assemblers of cycles and manufacturers of cycle parts. The annual yield is estimated at Rs. 100 lakhs.

60. Electric motors and parts thereof are not now subject to tax. It is proposed to levy a duty ranging from 5 per cent to 15 per cent *ad valorem* on various types of motors used for different purposes. The revenue from this is estimated at Rs. 46 lakhs a year.

61. A duty on exposed cinematograph films is also being levied. It will vary from 10 naye paise per metre to 50 naye paise per metre depending on the type of the films. News reels and shorts would be subject to the lower rate of duty. The yield from this is estimated at Rs. 75 lakhs.

62. My last proposal for new excises relates to silk fabrics on which a duty of 30 naye paise per square yard will be levied. The handloom sector will not be affected by this measure which is expected to yield Rs. 30 lakhs.

63. I shall now turn to the adjustments in the existing rates of duty on certain commodities.

64. The House will remember that in 1956 an excise duty was

levied on the larger passenger motor cars while all commercial vehicles and small and medium cars, motor cycles and scooters were not taxed. I now propose to levy a duty ranging up to 15 per cent *ad valorem* on all types of motor vehicles. The total revenue is estimated at Rs. 625 lakhs.

65. Refined diesel oil was made subject to duty in 1956 when a tax at 25 naye paise per imperial gallon was levied. Although the tax has since been raised to 80 naye paise per imperial gallon, the consumption of this commodity has been increasing rather rapidly. The growing imbalance between the internal production and consumption of this commodity is causing a considerable drain on the foreign exchange resources of the country. I, therefore, propose to raise the basic rate of duty by a further 25 naye paise per imperial gallon. This will bring in a revenue of Rs. 504 lakhs a year.

66. Complete footwear manufactured in power operated factories

was subjected to an excise duty in 1955 but a large number of small scale units were kept out of the scope of the taxation. Some of the larger units are reportedly adopting a deliberate policy of decentralisation to evade taxation. Mainly to protect the revenue, I propose to levy an excise duty on machine made soles and heels made of materials other than leather or wood. The rate of duty will be 15 per cent *ad valorem* and will yield a revenue of Rs. 20 lakhs a year.

67. In the field of textiles, I propose to make two changes with some revenue significance. I propose to remove the existing total exemption on fabrics produced from staple fibre yarn and cut pieces of cotton textiles, the so-called fents. The former will now be treated on par with artificial silk fabrics. In the case of cut pieces, the present definition is being revised and small specific duties, at levels substantially below the fabric rates, will be levied. These changes are estimated to yield Rs. 195 lakhs a year of which Rs. 65 lakhs will accrue to the States.

FOR 25 YEARS

THE MARK OF FINE FABRICS - - -

For quarter of a century, the word SHREE NIWAS has stood for quality fabrics at low prices. There are SHREE NIWAS varieties for every member of the family for every occasion.

SHREE NIWAS COTTON MILLS LTD.
BOMBAY-13.

68. Electric fans, bulbs and batteries were first made subject to excise in 1955 and no change has since been made in the rates of duty on these commodities. The production trends indicate that these lines are expanding and they can bear an increase in taxation. I propose to raise the existing duties by 50 per cent with a suitable increase in the duty on components. These changes will yield a revenue of Rs. 90 lakhs a year.

69. The tea industry has been complaining of the difficulties caused to it by the imposition of a number of taxes at various stages by different agencies. We propose to explore the possibility of removing this hardship by a suitable readjustment of the excise duty, bearing in mind the financial interests of the State Governments concerned, and the need

to secure that their resources are not adversely affected. To enable this to be done, we are raising the permissible maximum limit of the excise duty from 19 naye paise to 30 naye paise per lb. This is merely an enabling measure and does not involve any change in the effective rates of the duty now imposed ranging, as the House is aware, from 2 naye paise to 12 naye paise per lb.

70. A few other minor readjustments are also being made about which I need not weary the House. The total financial effect of these changes is to bring in an additional revenue of Rs. 27 lakhs a year of which Rs. 5 lakhs will accrue to the States.

71. The net effect of the various measures which I have mentioned is to increase the revenue by Rs. 21.73 crores, of which Rs. 70 lakhs will accrue to the States.

72. With regard to customs duties, I propose to make no change except for an increase in the duty on wines and spirits and other alcoholic liquors. Following the changes in excise duties, provision is being made, wherever necessary, for the levy of a countervailing import duty, so that the indigenous producer is not placed at a disadvantage. The changes in the customs levy are estimated to yield a revenue of Rs. 2.5 crores in the coming year.

Direct Taxation

73. I now turn to direct taxation. I do not propose to make any change in the rate structure of personal income tax. With regard to company taxation, steps are being taken to implement in its entirety the new scheme of company taxation introduced in the current

1960-61 Budget Supplement

year's budget. Formal action is being taken to abolish the Wealth Tax on companies and the tax relating to excess dividends with effect from the financial year commencing on the 1st April, 1960.

74. The House will remember that last year, for purposes of advance payment for the assessment year ending the 31st March, 1961, I had provisionally adopted a rate of 45 per cent for company taxation. We have not had sufficient experience of the effect of this rate. I do not, therefore, propose to make any change in this rate but to adopt it as the final figure. Smaller companies with a total income not exceeding Rs. 25,000 will continue to be assessed at a figure 5 per cent less. Last year I had promised to consider certain matters connected with the new system of company taxation, and I am making two provisions in the Finance Bill, one relating to the assessment of dividends paid out of profits taxed in the past and the other relating to taxes on companies holding less than 50 per cent share in the capital of another company, and have taken them into account in my estimates of revenue.

75. I propose to make two changes in regard to the deduction of tax at source. The House will remember that it was decided last year that tax should be deducted at source at a rate of 30 per cent on dividends paid to resident individuals and at 45 per cent on dividends paid to Indian companies. It has been represented that this difference in the rate of deduction at source has given rise to some difficulties. I, therefore, propose to apply a uniform rate of 50 per cent for deduction of tax from both the individuals and companies. In order that this change may not affect the revenue receipts, I propose to amend Section 18A so as to enable Government to collect from Indian companies the remaining 15 per cent as advance tax on the dividends received by them.

76. The existing provision with regard to the deduction at source from dividends paid to preference shareholders also appears to be causing some difficulty. The amount of the dividends which companies are required to pay to the shareholders is governed by the terms of their contract with them and Government would not like, as the current Finance Act implies, to make any assumptions regarding such amounts. I accordingly propose in the Finance Bill to provide for the deduction at source from the payments to these shareholders as in the case of any other dividends, leaving the actual amounts of these dividends for the companies themselves to decide.

77. I would briefly refer to a few other proposals to amend the Income-tax Act. The period for which exemption is available under section 15C to new industrial undertakings is proposed to be extended by a further five years. The limit up to which donations for charitable purposes qualify for exemption from tax is proposed to be increased from 5 per cent of total income or

1960-61 Budget Supplement

Rs. 1,00,000 whichever is less, to 7½ per cent of total income or Rs. 1,50,000 whichever is less. At present, the amounts paid to scientific research associations and educational institutions to be used for scientific research are allowed as deductions in computing the business income of the donor if the scientific research is related to the class of business carried on by him. It is proposed to allow this deduction even if the scientific research is not related to such business. In respect of properties constructed before 1st April, 1950, the full amount of taxes levied by a local authority and borne by the owner, is proposed to be allowed to be deducted in computing the taxable income from the property, as against half the amount of such taxes allowed at present. My next proposal is with regard to the taxation of co-operative societies. At present, the business income of such societies is exempt from tax. This exemption is justified having in view the objective of the Co-operative Societies Act of 1912, namely, to facilitate the formation of co-operative societies for the promotion of thrift and self-help among agriculturists, artisans and persons of limited means. However, as the House is aware, of late, co-operative societies have widened their fields of activity and are carrying on substantial business involving transactions of a large scale with non-members. There is no justification for a complete tax exemption of business profits in their case. It is, therefore, proposed that while the business incomes of co-operative societies connected with agriculture, rural credit and cottage industries should continue to be wholly exempt from tax, the business incomes of other societies should be exempt only up to a sum of Rs. 10,000. These proposals will not materially affect the revenue.

78. A few amendments of a comparatively minor character are proposed to Expenditure Tax and Gift Tax Acts. The amendments to the Expenditure Tax Act provide for allowances for expenditure incurred on leave travel in India as well as education of children in India. It is also proposed to allow in full the taxes paid by an assessee to a foreign government instead of only a portion as at present. The amendment to the Gift Tax Act provides that the advance tax payable will be at the same rate as the tax payable on regular assessment. These changes are not expected to have any significant effect on revenue.

NET EFFECT OF PROPOSALS

79. I may now summarise the net effect of the budget proposals. The changes in the Union Excise duties, exclusive of the revenue accruing to the States, are expected to bring in an additional revenue of Rs. 21.03 crores. Changes in the customs duties, largely consequential on the changes in Union Excise, are expected to bring in Rs. 2.5 crores. The total additional revenue would thus stand at Rs. 23.53 crores, reducing the revenue deficit from Rs. 83.9 crores to Rs. 60.37 crores and the overall deficit from Rs. 177 crores to Rs. 153 crores. I propose to leave the

revenue deficit uncovered; the overall deficit will be met by the expansion of treasury bills.

CONCLUSION

80. Next year's budget would cover the last year of the current Plan and I would like to mention briefly what the position at the end of that year would be so far as the implementation of the present Plan is concerned. In an earlier part of my speech, I mentioned that at the end of the budget year, the total Plan outlay would have reached a figure of about Rs. 4,600 crores. During the current Plan period, we have, at the Centre, raised substantial sums of revenue for meeting our Plan commitments including the assistance provided to the States from the revenue budget. Over the period of five years covered by the Plan, I expect that we would have an accumulated revenue surplus of over Rs. 50 crores, after meeting all our commitments for the Plan and providing very substantial assistance to the States for implementing their Plans. I know that there has been some criticism about the extent to which we have had to resort to deficit for meeting the capital expenditure of the Plan. Even here, I venture to suggest that our record has not been as bad as some of our critics make out. In the first three years of the Plan, the total amount of deficit financing amounted to Rs. 885 crores or so. In the current year, assuming that the State Governments do not contribute to this in any significant measure and they are unlikely to do so, the amount of deficit financing is likely to be Rs. 190 crores. Taking a figure of Rs. 153 crores for the coming year, the total amount of deficit financing during the Plan period would have amounted to only a little over the sum of Rs. 1,200 crores envisaged in the Plan. Although our performance in the matter of savings has not been as good as we could wish, our record in the matter of raising resources and limiting deficit financing to the minimum amount, possible and practicable, has, I think, been quite good.

81. There is, however, no reason to take a complacent view of the situation. The end of the Second Plan merely marks the beginning of the Third Plan, which will require greater efforts and larger sacrifices on the part of the community if the country has to sustain, as it inevitably must, a larger Plan. The path of our progress is bound to be difficult until our economy gets over the hump and becomes self-generating. Until this position is reached, which one might hope may be at the end of the next Plan, we shall have to strain every nerve to mobilise the maximum resources, from both taxation and savings, to enable the country to make the progress that is imperative to our survival. It is perhaps a truism to say that no one, much less an under-developed country like ours, can stand still or stay stagnant. We have to move forward and make whatever sacrifices are necessary for this. I have no doubt that this will be done and I would ask the House to consider the budget, which I am placing before it, against this background.

SUMMARY OF FINAL ESTIMATES

Revenue	(In lakhs of Rupees)		
	Budget 1959-60	Revised 1959-60	Budget 1960-61
Customs	132.77	160.00	160.00

Supplementary Charge on Goods Freight

Railway Minister Presents 1960-61 Budget Proposals

Pay Commission's Recommendations to Cost Railways Rs. 13 Crores Annually

Railways to Assume Responsibility as Carriers

Presenting the Railway Budget for 1960-61, the Railway Minister, Shri Jagjivan Ram, said today that the revenue surplus for the coming year, after meeting the large commitments arising from the Pay Commission's recommendations, etc. would be about Rs 4.5 crores on the basis of existing fares and freights.

For the current year, he said, the revised estimate of surplus had been placed at Rs 14.75 crores, as against the Budget figure of Rs 21.19 crores. A provision of about Rs 20 crores had been made in the Budget year for the implementation of Pay Commission's recommendations from 1-7-1959 to 31-3-1961.

"The railways' increasing commitments," he said, "make it imperative that suitable adjustments be made in freight rates."

He announced that with effect from April 1 this year a supplementary charge of five naye paise per rupee would be levied on freight of goods and coal traffic, excluding export ores, military, postal and the railways' own traffic. The anticipated yield would be about Rs 14 crores per year.

The Minister recalled that an increase of only 4 per cent had been made in the freight rates from October 1, 1958 as against an overall increase of about 13 per cent recommended by the Railway Freight Structure Enquiry Committee.

The Railway Minister placed the Budget estimate of passenger earnings for 1960-61 at Rs 125.50 crores, a small increase of Rs 1.42 crores over the current year's revised estimate. The estimate of goods earnings was placed at Rs 291 crores on existing freight rates, Rs 27 crores over the revised estimate for the current year. Gross traffic receipts for 1960-61 were placed at Rs 450.50 crores on existing fares and freights, and at Rs 464.50 crores with the proposed adjustments in freight rates.

The Budget estimate of ordinary working expenses was placed at Rs 326.90 crores, an increase of Rs 34.98 crores over the revised estimate for the current year. This increase included a sum of Rs 20.12 crores for implementation of the Pay Commission's recommendations from July 1, 1959 to March 31, 1961 and Rs one crore for the initial effect of assumption of liability as 'carriers' by the Railways, as recommended by the Railway Freight Structure Enquiry Committee.

FINANCIAL RESULTS FOR 1958-59

The Railway Minister said that the gross traffic receipts during 1958-59 came to Rs 390.21 crores and fell short of the revised estimate by Rs 4.17 crores. The drop was mainly under goods traffic and to a minor

extent under other coaching earnings. Economic factors principally, and road competition partially, were the contributory factors.

The net surplus was about Rs 8.93 crores, as against the revised estimate of Rs 13 crores, the shortfall of Rs 4.07 crores practically corresponding to the drop in earnings. The entire surplus was credited to the Development Fund as in the preceding year.

SECOND PLAN PROGRESS

The Railway Minister disclosed that during the first four years of the Second Plan up to March 1960, the railways would have spent about Rs 872 crores out of the total allotment of Rs 1121.50 crores. "We hope that we would cover the balance by the end of the second Plan period," he added.

Reviewing the achievement of physical targets during the first four years of the Plan, the Minister said that the doubling of nearly 700 miles would have been completed and about 600 miles of new lines opened with similar additional mileages in various stages of execution. In the planning of execution of these works, he said, the priorities given to the requirements of the steel plants had conformed to their varying needs. A number of new lines in the steel and coal belts had been completed in time to feed the raw products into the steel plants.

Final location surveys for nearly 900 miles were in progress, as a preliminary to construction.

PROGRESS OF ELECTRIFICATION

The electrification of the Durgapur-Gaya, Asansol-Sini-Tatanagar-Rourkela sections and the Rajkharwan-Dongoapoli section on the Eastern and South Eastern Railways was expected to be completed during the Second Plan period.

Contracts for the supply and erection of overhead equipment for the Gaya-Moghalsarai and Khargpur-Tatanagar sections were likely to be placed soon. Civil engineering works were in progress on Sealdah-Ranaghat and Dum Dum-Bongaon sections. On the Igatpuri-Bhusawal section also, the civil engineering survey was proceeding. On the Madras-Tambaram-Villupuram section, 80 per cent of the civil engineering works were complete, and the technical details were being worked out to undertake the electrification.

TRAFFIC PROSPECTS

During the third year of the Plan, the Minister said, there was some setback in the economic development in the country. Subsequent trends, however, indicated a revival of vigour in the national economy. "The current and the future outlook

seems much brighter," the Minister stated. He referred in this connection to the progressive development of steel production, the opening of the Rajendra Pul near Mokameh and the setting up of two new refineries at Gauhati and Barauni.

The Minister observed: "Having regard to these prospects, it is anticipated that the railways may be called upon to carry 17 million tons of additional traffic in the ensuing year, thus concluding the Plan by the achievement of the target of 162 million tons."

The increase in passenger traffic at the end of the first three years of the Plan was nearly 12 per cent. During the current year, the increase might be higher than the average for the three earlier years. "It seems evident," the Minister remarked, "that the anticipated increase of 15 per cent by the end of the Plan will be exceeded."

A saving of about Rs 90 crores in foreign exchange in the railways' second Plan allocation was expected.

THIRD RAILWAY PLAN

Developments in the third Five Year Plan of the railways, the Minister said, hinged upon the transport needs which will emerge out of the agricultural and industrial growth. Until a complete picture of these developments had been finalised, the Railways' Plan would remain undefined. The matter was at present under the consideration of the Planning Commission.

The Minister said: "We are aiming at a rapid advance with a view to the development of self-generating economy and in this endeavour the heavy industries will have a prominent share. There is, therefore, little doubt that the dominant role of rail transport in this expanding economy will continue." The railways, he said, would not shrink from added responsibilities or greater burdens.

TRANSPORT POSITION

The Minister reviewed the transportation position and said that, during 1958-59, the depressed economic climate led to a shortfall in the anticipated increase in traffic. The trends in the current year, however, were refreshing and the indications were that the year will end up with an increased tonnage of a little over 10 million tons. This would still be less than the estimated figure of 14 million tons, the difference being mainly due to a drop in the output of coal production.

Considerable churning had been done to improve the turn-round of wagons, and about 10 per cent more traffic than in 1958-59 was now being carried with only 3 per cent increase in wagon supply.

The Minister appealed for the co-operation of trade and industry in ensuring that stocks of minerals, coal and other non-perishable goods are built up at the source during the busy season so that they could be shifted to the consuming centres during the slack season, thus maximising the utilisation of railways rolling stock and obviating a considerable waste for which ultimately trade and industry had to pay.

Train Speeds and Punctuality

The speeds of goods trains, the Minister said, had registered a general improvement on all the Railways. With the improvement in facilities and removal of restrictive factors coupled with the persistent drive which railway administrations had initiated, it was hoped that this important feature of operation would show a significant change for the better in the future.

The problem of punctuality of passenger trains had received the Railway Ministry's constant attention. The results attained for all trains during the period April to October 1959 were 82.9 per cent on broad gauge and 81.8 per cent on metre gauge, as compared to 76.3 per cent and 79 per cent respectively during the corresponding period in the previous year.

The Minister referred to the introduction of longer and heavier freight trains as an effective solution to the railways' problems in the steel and coal belts, and said that with growing industrialisation, this solution would equally apply to some other areas as well.

Revised Estimates For 1959-60

Dealing with the current year's revised estimates, the Minister said that passenger traffic which showed signs of revival towards the end of the last year had maintained this trend. The revised estimate of passenger earnings was now placed at Rs 124.03 crores, an increase of 5.73 crores on the budget figure. An increase of Rs 1.20 crores was anticipated under other coaching earnings, and about Rs 1.60 crores under 'Sundries', partly accountable to an increased turnover in departmental catering.

Goods earnings had been assessed at Rs 264 crores, registering a shortfall of Rs 8.58 crores against the budget amount of Rs 272.58 crores. In view, however, of the anticipated increase under passenger, other coaching and sundries, it was not proposed to alter the overall budget figure of Rs 422.03 crores for gross traffic receipts.

The ordinary working expenses for the current year were estimated in the net to exceed the budget figure of Rs 283.71 crores by about

Rs 8.21 crores. The bulk of this increase amounting to about Rs 6 crores was due to unavoidable or unforeseen items of expenditure, such as expenditure on repairs to track, bridges and other assets damaged by abnormal floods on a number of railways, increase in the price of coal and in the excise duty on coal and fuel, increase in the price of other supplies, increased consumption of coal due to supplies of greater proportion of inferior quality etc. The Minister said that as a result of continued strict control over expenditure increases had been limited largely to unavoidable items.

The contribution to the Depreciation Reserve Fund had been maintained at Rs 45 crores. The surplus was now expected to be Rs 14.75 crores. This would be credited to the Development Fund.

The revised estimate of expenditure on works, machinery and rolling stock during the current year had now been placed at Rs 196.10 crores, or a reduction of about Rs 39.08 crores from the Budget grant. The shortfall was mainly under rolling stock and electrification; difficulty in the availability of matching steel had led to a drop in wagon manufacture, while some delay in the delivery of electric locomotives and in the procurement of overhead equipment was responsible for shortfall of expenditure under electrification. It was expected to overtake these shortfalls in the Budget year.

The Minister said that it was anticipated that the balances at the end of 1960-61 in the Depreciation Reserve Fund and the Revenue Reserve Fund together would be about Rs 71 crores. The Depreciation Reserve Fund opened at the beginning of the second Plan with a balance of Rs 98 crores, but with the extensive rehabilitation programme under way there had been substantial inroads into the Fund which was likely to close with a balance of about Rs 18 crores. The Minister said that he was alive to the need of building up an adequate amount in the Depreciation Reserve Fund. This matter, among others, would be specifically remitted to the next Convention Committee.

The Revenue Reserve Fund remained undisturbed and the balances would stand at about Rs 53 crores.

The Minister said that the temporary loan of Rs 10.88 crores from general revenues for the Development Fund, asked for in the 1959-60 Budget would not be sufficient now because of the lower surplus anticipated in the revised estimate of the current year. Consequently, the loan would have to be stepped up to Rs 14.93 crores. In the ensuing year, a loan would again be necessary, but of a smaller amount.

Convention Committee

The period covered by the 1954 Convention would expire on March 31, 1961, and the Minister announced that he would shortly come up with a request for the setting up of the next Convention Committee to review the working of the present Convention and submit recommendations in advance of the next quinquennial period (1961 to 1966).

Pay Commission Recommendations

The cost of the implementation of the Pay Commission's recommendations, the Railway Minister said, worked out approximately to Rs 13 crores per annum. A total provision of about Rs 20 crores had been made in the 1960-61 Budget to cover payments due both in respect of the Budget year as well as in respect of the current year from July 1, 1959.

Special machinery had been set up to do the work in connection with the implementation of Government's decisions as expeditiously as possible. Nevertheless, it would not be feasible to complete the work and to make the payments in the current year. These would be made in the next year, including also, the amounts due in respect of the current year.

Budget Estimates for 1960-61

Dealing with the budget estimates for 1960-61, the Minister said that the upward trend in passenger traffic during the current year might taper off and the budget estimate of passenger earnings for 1960-61 had been placed at Rs 125.50 crores, providing a small increase of Rs 1.42 crores over the current year's revised estimate. The estimate of other coaching earnings had been placed at Rs 25 crores, or practically at the same level as during the current year. The estimate of goods earnings provided an increase of Rs 27 crores and had been placed at Rs 291 crores at existing freight rates on the basis of anticipation of about 17 million tons of additional goods traffic. Sundry earnings were estimated at Rs 10 crores, at the same level as the revised estimate. After allowing for a small variation in traffic suspense the gross traffic receipts for 1960-61 were estimated at Rs 459.50 crores on the existing fares and freights. The budget estimate of ordinary working expenses for 1960-61 had been placed at Rs 326.90 crores, providing an increase of Rs 34.98 crores over the revised estimate of Rs 291.92 crores for the current year. This increase included a sum of Rs 20.12 crores for implementation of the recommendations of the Pay Commission in respect of the period from July 1, 1959 to March 31, 1961. Rupee one crore was provided to cover the initial effect of the proposed assumption of carrier liability by the railways in the course of 1960-61. The balance of the increase of Rs 13.86 crores had to be viewed in relation to the anticipated additional traffic receipts of Rs 28.47 crores. There would be increase in expenditure necessitated by the requirements of additional traffic as well as by other factors.

The provision for Open Line Works chargeable to Revenue in 1960-61 had been placed at Rs. 14 crores. With further outlay on capital works an increase of about Rs 2.75 crores was anticipated in the dividend payable to the general revenues.

The provision for Open Line Works chargeable to Revenue in 1960-61 had been placed at Rs. 14 crores. With further outlay on capital works an increase of about Rs 2.75 crores was anticipated in the dividend payable to the general revenues.

Allowing for variations, the likely revenue surplus for the budget year for credit to the Development Fund after meeting the large commitments arising from the Pay Commission's recommendations etc.,

would work out to the very small figure of about Rs 5 crores only.

Railways' Responsibility as 'Carriers'

The Minister said that the examination of the Railway Freight Structure Enquiry Committee's recommendations relating to the responsibility of the railways as carriers had been completed, and taking into consideration also the long-standing demand of the trading public in this matter, it was proposed to implement the recommendation and to bring up the necessary legislation for this purpose at an early date.

Adjustments in Freight Rates

"These increasing commitments," the Minister said, "make it imperative that suitable adjustments must be made in freight rates."

While making a statement in connection with the implementation of the Railway Freight Structure Enquiry Committee's recommendations, the Minister said, he had explained that instead of an overall increase of about 13 per cent recommended by the Committee, only an increase of 4 per cent was being made to minimise the incidence on the general price structure. "In the present circumstances, as explained, I propose with effect from April 1 next to levy a supplementary charge of 5 naye paise per rupee on freight of goods and coal traffic excluding export ores, military, postal and railways' own traffic," the Minister announced.

He said that the incidence of this increase on an average would be less than 5 naye paise per maund, or about one-eighth of a naye Paise per seer. The anticipated yield would be about Rs 14 crores a year.

The Minister added: "I have deliberately kept the proposed increase as low as possible."

The Budget estimate for works, machinery and rolling stock had been placed at Rs 222.81 crores, of which rolling stock accounted for Rs 79.08 crores, plant and machinery Rs 4.64 crores, construction of new lines and restoration of dismantled lines Rs 55.86 crores, track renewals Rs 27.20 crores, other open line works, etc. Rs 54.30 crores. Investment in road services Rs 1.75 crores.

The provision for railway users had been kept at about Rs 2.20 crores while that for staff amenities and staff quarters at about Rs 9 crores.

ECONOMY IN FUEL CONSUMPTION

All except 4 of the 41 recommendations made by the Expert Committee on Coal Consumption on Railways made in August 1958 had been accepted and a majority of those requiring action by the railways had been implemented. An inspection organisation was being set up under railway control to ensure that coal loaded by collieries conformed to the specified grades. The procurement of coal would be done under contracts executed by the suppliers with the Railways, so that the Railways themselves might deal with the collieries which did not give satisfaction, instead of leaving this to the Coal Controller. The Railway Minister said that it was imperative that coal washeries should be set up as early as possible, so that

a consistent quality of coal supplied to the railways might be ensured. He also referred to other directions in which efforts to effect fuel economy were being made.

EXTERNAL ASSISTANCE

Dealing with the external assistance, the Railway Minister disclosed that negotiations in respect of a further loan of \$80 million from the US Development Loan Fund had been practically finalised.

The loan of \$85 million from the World Bank received in September 1958 had been fully utilised. In July 1959, a further loan of \$50 million was negotiated with the World Bank.

SELF-SUFFICIENCY ON RAILWAYS

The railway Minister said that self-sufficiency had been the key note of the policy pursued by the Railways. He reviewed the progress made in various directions, and said that a steel foundry of 7,000 tons capacity was being set up at the Chittaranjan Locomotive Works with a provision for expansion to 10,000 tons.

The Chittaranjan Locomotive Works were expected to turn out 173 locomotives during the current year and 168 in the following year. Telco was likely to deliver 100 locomotives in the current year and the same number in the following year. The Minister mentioned that the Arbitrator who was appointed to determine the prices payable to Telco, for locomotives to be supplied from April 1, 1958 to March 31, 1960 had awarded a price of Rs 3,80,917 per locomotive against the price of Rs 3,92,861 claimed by Telco and Rs 3,74,994 offered by the Railway Board.

EXPORT OF ROLLING-STOCK

Dealing with self-sufficiency in steam locomotives, the Minister said: "A stage has been reached when we can enter the export market. The standard of manufacture is high and our costs are competitive. Similarly, in respect of wagons and coaches, we are self-sufficient, and here again we can build for export."

Analysis of purchases made by the railways during 1958-59 showed that, excluding raw materials and basic steel, imports accounted for only 10 per cent of the total purchases. Railway administrations had been instructed to purchase a limited number of specified items exclusively from small scale industries and they had been authorised to give a price preference up to a maximum of 15 per cent to those recognised by the National Small Industries Corporation.

The Railway Minister also stated that a special drive had been instituted for the reclamation and utilisation of the ferrous scrap to the maximum extent possible for railways' own use instead of disposing it off as waste material. A significant effort on the utilisation of scrap by the Railways was the conversion of worn out broad gauge exles and steel sleepers for use on metre gauge. A "Material Economy Display" had been set up at Delhi, where items manufactured in Railway workshops from scrap had been exhibited to demonstrate what could be done.

PRODUCTIVITY CELL.

A Productivity Cell had been set up in the Railway Board's office to improve productivity in railway workshops by the introduction of incentive bonus on the Chittaranjan pattern. This step had been taken in consultation with Labour Federations, and their full support had been assured in this endeavour.

The activities of the Railway Research, design and Standards Organisation had been expanded. It had been decided to set up an advisory committee manned by technical experts and scientists of repute to advise on the programme of research and technical development.

Apart from a number of steps taken to improve freight services, the question of reduction in freight rates for stimulating exports had continued to receive attention. Concessions were extended to 16 additional commodities, raising their number to 25.

For expeditious clearance of export traffic, all such traffic had been up-graded in the preferential traffic schedule.

CHANGE-OVER TO METRIC SYSTEM.

The railways had gone over to the decimal coinage system in the case of passenger fares with effect from September 15, 1957, and in the case of freight with effect from October 1, 1958. A beginning would be made with the metric system of weights and measures by the commercial departments of the railways adopting this system with effect from April 1, 1960.

PASSENGER AMENITIES.

The Minister said that he was glad to be able to say that over-crowding had been appreciably checked.

During 1958-59, 170 new trains were introduced and the run of 85 trains was extended. During the current year, up to December 1, 1959, 178 new trains had been introduced and the run of 118 trains was extended.

With regard to the provision of sleeping accommodation to third class passengers travelling over 500 miles without any additional charge, the Minister said: "The long-term objective is to provide at least one such coach on each long-distance train". He said that the construction of 200 more broad gauge sleeper coaches and an equal number of metre gauge coaches of the new design had been ordered for this purpose.

ACCIDENTS ON RAILWAYS.

The Minister said that it was gratifying that there had been no major accident during the current year. A comprehensive review of accidents on Indian railways, which had been prepared, showed that, in the light of the increasing volume and tempo of traffic, the position was satisfactory, but there was no complacency and sustained attention was being given to tackle the problem as well as the problem of effective liaison with State Governments in the matter of security of railway travel.

"The problem of corruption is no small task", the Minister said. "It

was a reflection of the general standard of morality in the country. It is, therefore, a big national problem. We are, however, pursuing this evil with determination". The assistance and co-operation of various chambers of commerce, trade union officials and railwaymen had been sought, to make the drive for eradicating corruption more effective.

The Minister regretted that, in spite of every effort, the incidence of alarm chain pulling had not only remained unabated but had tended to show an increase. The evil of ticketless travel had also continued. Sustained efforts had continued to secure further improvement in regard to reduction and prevention of claims for goods lost or damaged.

DEPARTMENTAL CATERING.

The departmental catering, the Minister said, had come to stay. Its turn-over had risen to over Rs 2 crores per year. Public opinion was being associated increasingly with the catering departments.

The Minister also dealt with the functioning of various non-official committees, the deliberations of the Parliamentary Consultative Committees, the holding of the International Railway Congress Association Permanent Commission meeting in New Delhi, the efforts being made to combat crime on the railways, the re-organisation and consolidation of the Railway Protection Force as a national force and other allied matters.

STAFF WELFARE.

During the first three years of the Second Plan, 36,000 staff quarters had been constructed and 9,000 were

1960-61 Budget Supplement

expected to be added during the current year. Provision for another 10,000 quarters had been made in 1960-61, bringing the total to 55,000 quarters during the Plan period. The Minister also referred to the provision of educational facilities, the setting up of subsidised hostels, training schemes for railwaymen, the setting up of holiday home at Phalgam, the encouragement of co-operative activities amongst railwaymen, and the encouragement of sports activities on the Indian railways. He mentioned in particular the performance of Kumari Arati Saha, who, he said, had "raised the national prestige by becoming the first Asian girl to swim across the English Channel".

LABOUR RELATIONS.

The relations with railwaymen throughout the year remained cordial. Unfortunately, the Minister said, the endeavour to combine the two Railway Federations did not succeed. Ultimately, he decided in August 1959, that the All-India Railwaymen's Federation would be accorded the same privileges and facilities as the National Federation of Indian railwaymen. "I still hope that the two Federations may unite, which I am convinced will prove more beneficial to the employees", he said.

An Officer on Special Duty who had been appointed to study and report on the question of participation of workers in management, had submitted his report and the proposals were under scrutiny.

1960-61 Budget Supplement

The Finance Bill, 1960

(AS INTRODUCED IN LOK SABHA)

A
BILL

to give effect to the financial proposals of the Central Government for the financial year 1960-61.

BE it enacted by Parliament in the Eleventh Year of the Republic of India as follows:—

Short title and commencement.

1. (1) This Act may be called the Finance Act, 1960.
(2) Save as otherwise provided in this Act, section 3 to 17 inclusive shall be deemed to have come into force on the first day of April, 1960.

Income-tax and super-tax.

2. (1) Subject to the provisions of sub-sections (2), (3) and (4), for the year beginning on the 1st day of April, 1960,—

(a) income-tax shall be charged at the rates specified in Part I of the First Schedule, and, in the cases to which Paragraphs A, B and C of that Part apply, shall be increased by a surcharge for purposes of the Union and a special surcharge, calculated in either case in the manner provided therein; and

(b) super-tax shall, for the purposes of section 55 of the Indian Income-tax Act, 1922 (hereinafter referred to as the Income-tax Act), be charged at the rates specified in Part II of the First Schedule, and, in the cases to which Paragraphs A, B and C of that Part apply, shall be increased by a surcharge for purposes of the Union and a special surcharge, calculated in either case in the manner provided therein.

(2) In making any assessment for the year ending on the 31st day of March, 1961,—

(a) where the total income of an assessee, not being a company, includes any income chargeable under the head "Salaries" or any income chargeable under the head "Interest on Securities" or any income from dividends from which income-tax has been or might have been deducted under the provisions of section 18 of the Income-tax Act or in respect of which by virtue of section 49B of the Income-tax Act, as continued in force by sub-section (4) of section 19 of the Finance Act, 1959, he is deemed himself to have paid the income-tax imposed under the Income-tax Act, the income-tax payable by the assessee on that part of his total income which consists of such inclusions shall be an amount bearing to the total amount of income-tax payable according to the rates applicable under the operation of the Finance Act, 1959, on his total income the same proportion as the amount of such inclusions bears to his total income;

(b) where the total income of an assessee, not being a company, includes any income chargeable under the head "Salaries" on which super-tax has been or might have been deducted under the provisions of sub-section (2) of section 18 of the Income-tax Act, the super-tax payable by the assessee on that portion of his total income which consists of such inclusion shall be an amount bearing to the total amount of super-tax payable according to the rates applicable under the operation of the Finance Act, 1959, on his total income the same proportion as the amount of such inclusion bears to his total income.

(3) In making any assessment for the year ending on the 31st day of March, 1959, or for the year ending on the 31st day of March, 1960, or for the year ending on the 31st day of March, 1961, where the total income of a company, other than the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956, includes any profits and gains from life insurance business, the super-tax payable by it shall be the aggregate of the tax calculated—

(i) on the amount of profits and gains from life insurance business so included, at the rate applicable to the Life Insurance Corporation of India in accordance with the Finance Act of the relevant year; and

(ii) on the remaining part of its total income, at the rate applicable to the company on its total income.

(4) In cases to which section 17 of the Income-tax Act applies, the tax chargeable shall be determined as provided in that section, and with reference to the rates imposed by sub-section (1).

(5) In cases in which tax has to be deducted under section 18 of the Income-tax Act at the prescribed rates, the deduction shall be made at the rates specified in Part III of the First Schedule.

(6) For the purposes of this section, and of the rates of tax imposed thereby, the expression "total income" means total income as determined for the purposes of income-tax or super-tax, as the case may be in accordance with the provisions of the Income-tax Act, and the expression "earned income" has the meaning assigned to it in clause (6AA) of section 2 of that Act.

Amendment of section 19, Act 12 of 1959.

3 In section 19 of the Finance Act, 1959,—

(i) after sub-section (3), the following sub-section shall be inserted, and shall be deemed always to have been inserted, namely:—

"(3A) The amendments to the Income-tax Act made by section 5, section 7, section 12, section 14 and section 15 shall, in relation to dividends declared or payable by a company in respect of the previous year relevant to the assessment for the year ending on the 31st day of March, 1961, have effect on and from the 1st day of April, 1959."

(ii) in sub-section (4), after the words "declared or payable by a company", the words and figures "on or before the 30th day of June, 1960," shall be inserted, and shall be deemed always to have been inserted.

Amendment of section 9.

4. In section 9 of the Income-tax Act, in sub-section (2), for clause (a) of the third proviso, the following clause shall be substituted, namely:—

"(a) in the case of a property the construction of which was completed before the 1st day of April, 1950, the total amount of such taxes and in the case of any other property, one-half of the total amount of such taxes, shall, notwithstanding anything contained in such law, be deemed to be the tenant's liability for such taxes; and".

Amendment of section 10.

5. In section 10 of the Income-tax Act, in sub-section (2), for clause (xiii), the following clause shall be substituted, namely:—

"(xiii) any sum paid to a scientific research association having as its object the undertaking of scientific research or to a university, college or other institution to be used for scientific research or to a university, college or other institution to be used for research in social science or statistical research related to the class of business carried on;

Provided that such association, university, college or institution is for the time being approved for the purposes of this clause by the prescribed authority;"

Amendment of section 14.

6. In section 14 of the Income-tax Act, for sub-section (3), the following sub-section shall be substituted, namely:—

"(3) The tax shall not be payable by a co-operative society, including a co-operative society carrying on the business of banking—

(i) in respect of the entire amount of its profits and gains of business carried on by it, if it is—

(a) an agricultural or a rural credit society; or
(b) a society engaged in cottage industry; or
(c) a society engaged in the marketing of the agricultural produce of its members; or

(d) a society engaged in the purchase of agricultural implements, seeds, livestock or other articles intended for agriculture for the purpose of supplying them to its members; or

(e) a society engaged in the processing of the agricultural produce of its members, to the extent to which such process is ordinarily employed by a cultivator to render the agricultural produce raised by him fit to be taken to the market, and is not a society engaged in the performance of any manufacturing operations with the aid of power;

(ii) in respect of so much of its profits and gains of business carried on by it as does not exceed ten thousand rupees, if it is a co-operative society other than a co-operative society referred to in clause (i);

(iii) in respect of interest and dividends derived from its investments with any other co-operative society;

(iv) in respect of any income derived from the letting of godowns or warehouses for storage, processing or facilitating the marketing of commodities;

(v) in respect of any interest on securities chargeable under section 8 or any income from property chargeable under section 9, where the total income of the co-operative society does not exceed Rs. 20,000 and the society is not a housing society or an urban consumer's society or a society carrying on transport business or a society engaged in the performance of any manufacturing operations with the aid of power;

Provided that nothing contained in this sub-section shall apply to—

(i) the Sanikatta Salt Owner's Society;

Today a plaything in a
child's hands... But it has already played its part in

a cycle of events that will change his future... this fragment of a
rate which brought to the project site a great conveyor belt
or lengths of high pressure hose or, perhaps, Dunlopillo
for the new workers' hospital—all of it helping
to build something big and grand. The
project? One of scores going up
in each Five Year Plan with the
promise of a better life for the
people of some forgotten region.

DUNLOP

Manufacture in India: Tyres and Tubes, Accessories, Braided Hose,
Transmission, Vee and Conveyor Belts,
Bicycle Rims, Dunlopillo.

(ii) a co-operative society carrying on insurance business in respect of the profits and gains of that business computed in accordance with rule 9 in the Schedule.

Explanation.—For the purposes of this sub-section, an 'urban consumer's co-operative society' means a society for the benefit of the consumers within the limits of a municipal corporation, municipality, municipal committee, notified area committee, town area or cantonment."

Amendment of section 15B.

7. In section 15B of the Income-tax Act, in clause (b) of the second proviso to sub-section (1), for the words "one twentieth of the assessee's total income" and "one hundred thousand rupees", the words "seven and a half per cent. of the assessee's total income" and "one hundred and fifty thousand rupees" shall respectively be substituted.

Amendment of section 15C.

8. In section 15C of the Income-tax Act, in clause (ii) of sub-section (2), for the word "thirteen", the word "eighteen" shall be substituted.

Amendment of section 18.

9. In section 18 of the Income-tax Act.—

(i) in sub-section (3D), after the words "declaration and payment of dividends", the brackets and words "(including dividends on preference shares)" shall be inserted;

(ii) sub-section (3E) shall be omitted.

Amendment of section 18A.

10. In section 18A of the Income-tax Act.—

(i) in clause (a) of sub-section (1), for the words "In the case of income in respect of which provision is not made under section 18 for deduction of income-tax at the time of payment",

the words "In the case of income other than income chargeable under the head 'Salaries'" shall be substituted, and after the words "the amount of such inclusions bears to his total world income", the following words shall be inserted, namely:—

"The income-tax and super-tax so calculated shall be reduced by the amount of income-tax and super-tax which would be deductible during the said financial year in accordance with the provisions of section 18 on any income (other than income chargeable under the head 'Salaries') included in the said total income;"

(ii) in sub-section (3), for the words "to which the provisions of section 18 do not apply", the words "which is not chargeable under the head 'Salaries'" shall be substituted;

(iii) in sub-section (6),—

(a) for the words "regular assessment, so far as such tax relates to income to which the provisions of section 18 do not apply", the following words shall be substituted, namely:—

"regular assessment (reduced by the amount of tax deductible in accordance with the provisions of section 18 on any income, other than income chargeable under the head 'Salaries', included in such assessment), so far as such tax relates to income other than income chargeable under the head 'Salaries'";

(b) in the second proviso, for the words "to which the provisions of section 18 do not apply", the words "other than income chargeable under the head 'Salaries'" shall be substituted.

Amendment of section 23A.

11. In section 23A of the Income-tax Act.—

(i) in sub-section (2), in clause (i), for the words "ninety per cent.", the words "eighty per cent." shall be substituted;

(ii) in Explanation 2, for the figures "100%", where they occur, the figures "90%" shall be substituted.

Relief to company in respect of dividend paid out of taxed profits.
Insertion of new section 49BB.

12. After section 49B of the Income-tax Act, the following section shall be inserted, namely:—

"49BB. (1) Where in respect of any previous year relevant to the assessment year commencing after the 31st day of March, 1960, an Indian company or a company which has made the prescribed arrangements for the declaration and payment of dividends within India, pays any dividend wholly or partly out of its profits and gains actually charged to income-tax for any assessment year ending before the 1st day of April, 1960, and deducts tax therefrom in accordance with the provisions of section 18, credit shall be given to the company against the income-tax, if any, payable by it on the profits and gains of the previous year during which the dividend is paid, of a sum calculated in accordance with the provisions of sub-section (2), and where the amount of credit so calculated exceeds the income-tax payable by the company as aforesaid, the excess shall be refunded.

(2) The amount of income-tax to be given as credit under sub-section (1) shall be a sum equal to ten per cent. of so much of the dividends referred to in sub-section (1) as are paid out of the profits and gains actually charged to income-tax for any assessment year ending before the 1st day of April, 1960.

Explanation I.—For the purposes of this section, the aggregate of the dividends declared by a company in respect of any previous year shall be deemed first to have come out of the distributable income of that previous year and the balance, if any, out of the undistributed part of the distributable income of one or more previous years immediately preceding that previous year as would be just sufficient to cover the amount of such balance and as has not likewise been taken into account for covering such balance of any other previous year.

Explanation II.—The "distributable income" of any previous year shall mean the total income assessed for that year as reduced by—

(i) the amount of income-tax and super-tax payable by the company in respect of the said total income;

(ii) the amount of any other tax levied under any law for the time being in force on the company by the Government or by a local authority in excess of the amount, if any, which has been allowed in computing the total income;

(iii) the amount paid to any charitable institution or fund to the extent to which it is exempt from tax under section 15B; and

(iv) in the case of a banking company, the amount actually transferred to a reserve fund under section 17 of the Banking Companies Act, 1949,

and as increased by—

(a) any profits and gains or receipts of the company not included in its total income; and

(b) any amount attributable to any allowance made in computing the profits and gains of the company for purposes of assessment which the company has not taken into account in its profit and loss account."

Wealth tax not to be levied on companies from 1960-61.

13. Notwithstanding anything contained in the Wealth-tax Act, 1957 (hereinafter referred to as the Wealth-tax Act), no tax shall be charged in respect of the net wealth of a company for any financial year commencing on or after the 1st day of April, 1960.

Amendment of section 5.

14. In section 5 of the Wealth-tax Act, in clause (xx) of sub-section (1), for the words "if on the relevant valuation date, the provisions of this Act are not applicable to the company by reason of the provisions contained in that section", the following words shall be substituted, namely:—

"for a period of five successive assessment years commencing with the assessment year next following the date on which the company is established, which period shall, in the case of a company established before the commencement of this Act, be computed in accordance with this Act from the date of its establishment as if this Act had been in force on and from the date of its establishment."

Amendment of section 5.

15. In section 5 of the Expenditure-tax Act, 1957 (hereinafter referred to as the Expenditure-tax Act), in clause (d), for the word, brackets, figures and letter "clause (via)", the words brackets, figures and letters "sub-clause (a) of clause (via)" shall be substituted.

Amendment of section 6.

16. In section 6 of the Expenditure-tax Act,—

(i) in sub-section (1).—

(a) for clause (g) the following clause shall be substituted, namely:—

"(g) any expenditure incurred by the assessee in respect of the education of himself or any of his dependants, and where the assessee is a Hindu undivided family, of any member of the family—

(i) if the expenditure is incurred in India, subject to a maximum of rupees three thousand per year; and

(ii) if the expenditure is incurred in any country outside India, subject to a maximum of rupees eight thousand per year;";

(b) after clause (i), following clause shall be inserted, namely:—

"(j) any expenditure incurred by the assessee for travel in India in connection with his proceeding on a holiday and any expenditure incurred on behalf of the assessee by his employer by way of travel concession or assistance in connection with his proceeding on leave in India, subject in the aggregate to a maximum of rupees one thousand five hundred per year;";

(ii) for sub-section (4), the following sub-section shall be substituted, and shall be deemed always to have been substituted, namely:—

"(4) If the assessee proves in any year that, in respect of any sum out of which any expenditure incurred is chargeable to tax under this Act, he has paid in any foreign country any income-tax, wealth-tax, expenditure-tax gift-tax or estate duty under any law for the time being in force in that country; and that any such tax or duty has been included in the expenditure chargeable to tax under this Act, he shall be entitled to a deduction of the full amount of such tax and duty paid in the foreign country."

Substitution of new section for section 18.

17. For section 18 of the Gift-tax Act, 1958, the following section shall be substituted, namely:—

Rebate on advance payments.

"18. If a person making a taxable gift pays into the treasury within fifteen days of his making the gift the amount of tax due on the gift calculated at the rates specified in the Schedule, he shall, at the time of assessment under section 15, be given credit, in addition to the amount so paid, for an amount equal to ten per cent. of the amount so paid."

Explanation.—If a person makes more than one taxable gift in the course of a previous year, the amount of tax due on any one of such gifts shall be the difference between the total amount of tax due on the aggregate value of all taxable gifts so far made, including the taxable gift in respect of which tax has to be paid, calculated at the rates specified in the Schedule and the total amount of tax on the aggregate value of all the gifts made during that year excluding the taxable gift in respect of which tax has to be paid."

Amendment of Act 32 of 1934.

18. The Indian Tariff Act, 1934 (hereinafter referred to as the Tariff Act), shall be amended in the manner specified in the Second Schedule.

Amendment of Act 1 of 1949.

19. In the Indian Tariff (Amendment) Act, 1949, in sections 4 and 5, for the figures "1960", the figures "1961" shall be substituted.

Amendment of Act 1 of 1944.

20. In the First Schedule to the Central Excises and Salt Act, 1944,—

(a) in Item No. 1, for the entry in the third column, the entry "Twenty-eight and three-fourths naye paise per imperial gallon" shall be substituted;

(b) in Item No. 4, for the entry in the third column, the entry "One rupee and forty-five naye paise per imperial gallon" shall be substituted;

(c) in Item No. 8, in the second column, for the words "Sugar" means any form of sugar containing more than ninety per cent. of sucrose, the words "Sugar" means any form of sugar in which the sucrose content, if expressed as a percentage of the material dried to constant weight at 105° Centigrade, would be more than ninety" shall be substituted;

(d) in Item No. 10, for sub-item (2), the the following sub-items shall be substituted, namely:—

"(2) For cycles (other than motor cycles)—

(a) tyres . . . Sixty naye paise per tyre or fifteen per cent. ad valorem, whichever is higher,

(b) tubes. Thirty naye paise per tube or fifteen per cent. ad valorem, whichever is higher.

(3) All other tyres . . . Fifteen per cent. ad valorem;";

(e) in Item No. 12.—

(1) for sub-items (b) and (c), the following sub-items shall be substituted, namely:—

"(b) if it contains 40 per cent. or more by weight of silk; (c) if it contains 60 per cent. or more by weight of rayon or artificial silk; or

(d) if manufactured on a handloom;";

(2) after sub-item (4), the following sub-item shall be inserted, namely:—

"(5) Cotton fabrics, not other Thirty-seven naye paise wise specified per square yard;";

(3) Explanation III in the second column shall be omitted;

(f) in Item No. 12A.—

(1) for sub-items (ii), (iii) and (iv), the following sub-items shall be substituted, namely:—

"(ii) if it contains 40 per cent. or more by weight of silk; (iii) if it contains cotton and less than 60 per cent. by weight of rayon or artificial silk;

(iv) if it contains no cotton and less than 40 per cent. by weight of wool and less than 40 per cent. by weight of rayon or artificial silk; or

(v) if manufactured on a handloom;";

(2) the Explanation in the second column shall be omitted;

(g) after Item No. 12A, the following Item shall be inserted, namely:—

"12B. SILK FABRICS—

Silk Fabrics include all varieties of fabrics Thirty naye paise manufactured either wholly or partly from per square yard.

(i) if it contains 40 per cent. or more

by weight of wool;

(ii) if it contains cotton or artificial silk or both and less than 40 per cent. by weight of silk;

(iii) if it contains no cotton and no artificial silk and less than 40 per cent. by weight of wool and less than 40 per cent. by weight of silk; or

(iv) if manufactured on a handloom;";

(h) the existing Item No. 12B shall be re-numbered as Item No. 12C;

(i) in Item No. 14, in the entry in the third column, for the figures and words "19 naye paise per lb.", the figures and words "30 naye paise per lb." shall be substituted;

(j) for Item No. 17, the following Item shall be substituted, namely:—

"17. FOOTWEAR—

Footwear includes all varieties of footwear, whether known as boots, shoes, sandals, chappals or by any other name, and component parts thereof—

(1) Footwear produced in any factory including the precincts thereof where on fifty or more workers are working, or were working on any day of the preceding twelve months and in any part of which the process of manufacturing footwear is being carried on with the aid of power or is ordinarily so carried on, the total equivalent of such power exceeding two horsepower.

(2) component parts of footwear in, or in relation to the manufacture of, which any process is ordinarily carried on with the aid of power.

(3) (b) (ii) and (3) (b) (iii), the entries "Seven rupees and fifty naye paise per fan", "Fifteen rupees per fan" "Five rupees and twenty-five naye paise per motor", "Two rupees and sixty-five naye paise per motor", "Two rupees and sixty-five naye paise per rotor", "Ten rupees and fifty naye paise per motor" and "Five rupees and twenty-five naye paise per rotor" shall, respectively, be substituted;

(4) (k) in Item No. 18, for the entries in the third column against sub-items (1), (2), (3) (a) (i), (3) (a) (ii), (3) (a) (iii), (3) (b) (i), (3) (b) (ii) and (3) (b) (iii), the entries "Seven rupees and fifty naye paise per fan", "Fifteen rupees per fan" "Five rupees and twenty-five naye paise per motor", "Two rupees and sixty-five naye paise per motor", "Two rupees and sixty-five naye paise per rotor", "Ten rupees and fifty naye paise per motor" and "Five rupees and twenty-five naye paise per rotor" shall, respectively, be substituted;

(5) (l) in Item No. 19,—

(i) for the entries in the third column against sub-items (1) (i), (1) (ii) and (1) (iii) and (2), the entries "Ten naye

paise per bulb", "Forty naye paise per bulb", "Eighty naye paise per bulb", and "Forty naye paise per foot" shall respectively be substituted;

(ii) for sub-item (3), the following sub-items shall be substituted, namely:—

(3) Sodium and mercury vapour discharge lamps . . . Five per cent. ad valorem

(4) All sorts, not otherwise specified . . . Fifteen per cent. ad valorem;";

(m) in Item No. 20, for the entries in the third column against sub-items (1) (2) and (3), the entries "Fifteen per cent. ad valorem", "Fifteen per cent. ad valorem" and "Seventeen and half per cent. ad valorem" shall respectively be substituted;

(n) in Item No. 21, for sub-items (5), (6), (7), (8), (9) and (10), the following sub-items shall be substituted, namely:—

(5) straw board, other than corrugated board . . . Five naye paise per lb.

(6) Duplex and triplex board . . . Ten naye paise per lb.

(7) pulp board, not otherwise specified including grey board and mill board . . . Ten naye paise per lb.

(8) corrugated board . . . Fifteen naye paise per lb.

(9) coated board (including art, chrome and board for playing cards). . . Fifteen naye paise per lb.

(10) paper and paper board, all sorts, not otherwise specified . . . Fifteen naye paise per lb.

(o) in Item No. 24, in the third column for the words "plus eighty naye paise per imperial gallon" the words "plus one rupee and seventeen naye paise per imperial gallon" shall be substituted;

(p) in Item No. 25, for the entries in the third column against sub-items (a) and (b), the entries "Sixteen per cent. ad valorem plus sixty-five rupees per ton" and "Sixteen percent. ad valorem plus thirty rupees per ton" shall respectively be substituted;

(q) for Item No. 27, the following Item shall be substituted, namely:—

"27. MOTOR VEHICLES—

'Motor Vehicles' means all mechanically propelled vehicles adapted for use upon roads, and includes a chassis and a trailer; but does not include a vehicle running upon fixed rails,—

(1) Autocycles, motor cycles, scooters, One hundred and seventy-five rupees each.

(2) Motor vehicles of not more than 16 H. P. by Royal Automobile Club (R.A.C.) rating . . . One thousand rupees each.

(3) Motor Cars of more than 16 H. P. by Royal Automobile Club (R.A.C.) rating, constructed or adapted to carry not more than nine persons . . . Three thousand rupees each or fifteen per cent. ad valorem whichever is higher.

(4) Motor vehicles, not otherwise specified . . . Two thousand five hundred rupees each or twelve and half per cent. ad valorem whichever is higher;";

(r) after Item No. 28, the following Items shall be inserted, namely:—

"29. CYCLES, PARTS OF CYCLES OTHER THAN MOTOR CYCLES, NAMELY—

(i) free wheels . . . Two rupees each.

(ii) rims . . . Four rupees each.

30. INTERNAL COMBUSTION ENGINES, ALL SORTS, NAMELY—

(i) those designed for use as a prime-mover for transport vehicles and have been given for that purpose some special shape, size or quality which would not be essential for their use for any other purpose. . . Ten per cent. ad valorem.

(ii) others . . . Five per cent. ad valorem.

31. ELECTRIC MOTORS, ALL SORTS AND PARTS THEREOF, NAMELY:—

(1) those designed for use in circuits of less than 10 amperes and at a pressure not exceeding 250 volts. . . Fifteen per cent. ad valorem.

(2) those designed for use in circuits at a pressure exceeding 400 volts, and (i) with a rated capacity not exceeding 10 H.P. . . Ten per cent. ad valorem.

(ii) exceeding 10 H.P. . . Five per cent. ad valorem.

(3) all others . . . Fifteen per cent. ad valorem.

(4) parts of electric motors . . . Fifteen per cent. ad valorem.

32. CINEMATOGRAPH FILMS, EXPOSED—

(1) News reels and shorts not exceeding 500 metres. . . Of a width of 35 mm. or higher. . . Ten naye paise per metre.

"(5) Cotton fabrics, not other . . . Thirteen naye paise wise specified per square yard."

23. For the year beginning on the 1st day of April, 1960, no duty under the Central Excises and Salt Act, 1944, or the Tariff Act shall be levied in respect of salt manufactured in, or imported into, India.

Declaration under the Provisional Collection of Taxes Act, 1931.

It is hereby declared that it is expedient in the public interest that the provisions of clauses 18, 19, 20, 21 and 22 of this Bill shall have immediate effect under the Provisional Collection of Taxes Act, 1931.

THE FIRST SCHEDULE

(See section 2)

PART I

Income-tax and surcharges on income-tax

Paragraph A

(i) In the case of every individual who is married and every Hindu undivided family whose total income does not exceed Rs. 20,000 in either case—

Rates of Income-tax

Where the individual has no child wholly or mainly dependent on him or where the Hindu undivided family has no minor coparcener,	Where the individual has one child wholly or mainly dependent on him or where the Hindu undivided family has one minor coparcener,	Where the individual has more than one child wholly or mainly dependent on him or where the Hindu undivided family has more than one minor coparcener.

	Rs. 3,000 of total income.	Rs. 3,300 of total income.	Rs. 3,600 of total income.	Nil
(1) On the first	2,000	1,700	1,400	3%
(2) On the next	2,500	2,500	2,500	6%
(3) On the next	2,500	2,500	2,500	9%
(4) On the next	2,500	2,500	2,500	11%
(5) On the next	2,500	2,500	2,500	14%
(6) On the next	2,500	2,500	2,500	18%
(7) On the next	5,000	5,000	5,000	18%

(ii) In the case of every individual who is not married and every individual or Hindu undivided family whose total income in either case exceeds Rs. 20,000 and in the case of every unregistered firm or other association of persons, not being a case to which any other Paragraph of this Part applies;—

(1) On the first	1,000 of total income	Nil
(2) On the next	4,000	3%
(3) On the next	2,500	6%
(4) On the next	2,500	9%
(5) On the next	2,500	11%
(6) On the next	2,500	14%
(7) On the next	5,000	18%
(8) On the balance of total income		25%

Provided that for the purposes of this Paragraph—

(i) no income-tax shall be payable on a total income which does not exceed the limit specified below;

(ii) the income-tax payable shall in no case exceed half the amount by which the total income exceeds the said limit;

(iii) the income-tax payable by an individual who is married or a Hindu undivided family whose total income exceeds in either case Rs. 20,000 shall not exceed the aggregate of—

(a) the income-tax which would have been payable if the total income had been Rs. 20,000;

(b) half the amount by which the total income exceeds Rs. 20,000;

The unit aforesaid shall be—

(i) Rs. 6,000 in the case of every Hindu undivided family which as at the end of the previous year satisfies either of the following conditions, namely:—

(a) that it has at least two members entitled to claim partition who are not less than eighteen years of age; or

(b) that it has at least two members entitled to claim partition who are not lineally descended one from the other and who are not lineally descended from any other living member of the family;

(ii) Rs. 3,000 in every other case.

Surcharges on income-tax

The amount of income-tax computed at the rates hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) A surcharge for purposes of the Union equal to the sum of—

(i) five per cent. of the amount of income-tax; and
(ii) where the earned income included in the total income exceeds Rs. 1,00,000, five per cent. of the difference between the amount of income-tax which would have been payable on the whole of the earned income included in the total income if such earned income had been the total income and the amount of income-tax payable on a total income of Rs. 1,00,000;

(b) A special surcharge at fifteen per cent. of the difference between the amount of income-tax on the total income and the amount of income-tax on the whole of the earned income, if any, included in the total income if such earned income had been the total income;

Provided that—

(i) no surcharge for purposes of the Union shall be payable where the total income does not exceed the limit specified below;
(ii) where the total income does not exceed the limit specified below, and where the total income includes any dividends on ordinary shares, such limit shall be increased by Rs. 1,500 or the amount of the said dividends, whichever is less;

Provided further that—

(a) where the total income includes any dividends on ordinary shares, the surcharge for purposes of the Union and the special surcharge shall not in each case exceed half the amount by which the total income exceeds the respective limits applicable in either case;

(b) the surcharge for purposes of the Union and the special surcharge, both together, shall not exceed half the amount by

which the total income exceeds the limit specified below;

The limit aforesaid shall be—

(i) Rs. 15,000 in the case of every Hindu undivided family which satisfies as at the end of the previous year either of the following conditions, namely:—

(a) that it has at least two members entitled to claim partition who are not less than eighteen years of age; or
(b) that it has at least two members entitled to claim partition who are not lineally descended one from the other

and who are not lineally descended from any other living member of the family;

(ii) Rs. 7,500 in every other case.

Explanation.—For the purposes of this Paragraph, in the case of every Hindu undivided family governed by the Mitakshara law, a son shall be deemed to be entitled to claim partition of the coparcenary property against his father, or grand-father notwithstanding any custom to the contrary.

Paragraph B

In the case of every local authority,—

Rate of income-tax

On the whole of the total income ... 30 per cent.

Surcharge on income-tax

The amount of income-tax computed at the rate hereinbefore specified shall be increased by a surcharge for purposes of the Union of 5 per cent. of the amount of income-tax.

Paragraph C

In every case in which under the provisions of the Income-tax Act, income-tax is to be charged at the maximum rate,—

Rate of income-tax

On the whole of the total income ... 25 per cent.

Surcharges on income-tax

The amount of income-tax computed at the rate hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) a surcharge for purposes of the Union of five per cent. of the amount of income-tax; and

(b) a special surcharge of fifteen per cent. of the amount of income-tax.

Paragraph D

In the case of every company,—

Rate of income-tax

On the whole of the total income ... 20%

Paragraph E

In the case of every registered firm,—

Rates of income-tax

(1) On the first Rs. 40,000 of total income	Nil
(2) On the next Rs. 35,000 of total income	5%
(3) On the next Rs. 75,000 of total income	6%
(4) On the balance of total income	9%

PART II

Super-tax and surcharges on super-tax

Paragraph A

In the case of every individual, Hindu undivided family, unregistered firm and other association of persons, not being a case to which any other Paragraph of this Part applies,—

Rates of super-tax

(1) On the first Rs. 20,000 of total income	Nil
(2) On the next Rs. 5,000 of total income	5%
(3) On the next Rs. 5,000 of total income	15%
(4) On the next Rs. 10,000 of total income	20%
(5) On the next Rs. 10,000 of total income	30%
(6) On the next Rs. 10,000 of total income	35%
(7) On the next Rs. 10,000 of total income	40%
(8) On the balance of total income	45%

Surcharges on super-tax

The amount of super-tax computed at the rates hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) A surcharge for purposes of the Union equal to the sum of—

(i) five per cent. of the amount of super-tax; and
(ii) where the earned income included in the total income exceeds Rs. 1,00,000, five per cent. of the difference between the amount of super-tax which would have been payable on the whole of the earned income included in the total income, if such earned income had been the total income and the amount of super-tax payable on a total income of Rs. 1,00,000;

(b) A special surcharge at fifteen per cent. of the difference between the amount of super-tax on the total income and the amount of super-tax on the whole of the earned income, if any included in the total income, if such earned income had been the total income.

Paragraph B

In the case of every local authority,—

Rate of super-tax

On the whole of the total income ... 16%

Surcharge on super-tax

The amount of super-tax computed at the rate hereinbefore specified shall be increased by a surcharge for purposes of the Union of 12½ per cent. of the amount of super-tax.

Paragraph C

In the case of every association of persons being a co-operative society as defined in clause (5B) of section 2 of the Income-tax Act,—

Rates of super-tax

(1) On the first Rs. 25,000 of total income	Nil
(2) On the balance of total income	16%

Surcharge on super-tax

The amount of super-tax computed at the rates hereinbefore specified shall be increased by a surcharge for purposes of the Union of 12½ per cent. of the amount of super-tax.

Paragraph D

In the case of every company, other than the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956,—

Rates of super-tax

On the whole of the total income ... 55%:

Provided that—

(i) a rebate at the rate of 45 per cent. on so much of the total income as consists of dividends from a subsidiary Indian company; at the rate of 40 per cent. on so much of the total income as consists of dividends from any other Indian company formed and registered on or after the 1st day of April, 1959; and at the rate of 35 per cent. on the balance of the total income shall be allowed in the case of any company which—

(a) in respect of its profits liable to tax, under the Income-tax Act for the year ending on the 31st day of March,

1961, has made the prescribed arrangement for the declaration and payment within India of the dividends payable out of such profits in accordance with the provisions of sub-section (3D) of section 18 of that Act; and

(b) is such a company as is referred to in sub-section (9) of section 23A of the Income-tax Act with a total income not exceeding Rs. 25,000;

(ii) a rebate at the rate of 45 per cent. on so much of the total income as consists of dividends from a subsidiary Indian company; at the rate of 35 per cent. on so much of the total income as consists of dividends from any other Indian company formed and registered on or after the 1st day of April, 1959; and at the rate of 30 per cent. on the balance of the total income shall be allowed in the case of any company which satisfies condition (a) but not condition (b) of the preceding clause;

(iii) a rebate at the rate of 45 per cent. on so much of the total income as consists of dividends from a subsidiary Indian company; at the rate of 22 per cent. on so much of the total income as consists of dividends from any other Indian company formed and registered on or after the 1st day of April, 1959; and at the rate of 12 per cent. on the balance of the total income shall be allowed in the case of any company not entitled to a rebate under either of the preceding clauses:

Provided further that—

(i) the amount of the rebate under clause (i) or clause (ii) of the preceding proviso shall be reduced by the sum, if any, equal to the amount or the aggregate of the amounts, as the case may be, computed as hereunder:—

(a) on the aggregate of the sums computed at the rate of 100% in the manner provided in clause (i) of the second proviso to Paragraph D of Part II of the First Schedule to the Finance Act, 1959, as reduced by the amount, if any, which is deemed to have been taken into account, in accordance with clause (ii) of the said proviso, for the purpose of reducing the rebate mentioned in clause (i) of the said proviso to nil; and

(b) on the amount representing the face value at the rate of 30% of any bonus shares or the amount of any bonus issued to its shareholders during the previous year with a view to increase the paid up capital;

(ii) where the amount of the rebate arrived at in accordance with clause (i) or clause (ii), as the case may be, of the preceding proviso, only so much of the amounts of reduction mentioned in sub-clauses (a) and (b) of clause (i) of this proviso as is sufficient, in that order, to reduce the rebate to nil shall be deemed to have been taken into account for the purpose:

Provided further that the super-tax payable by a company, the total income of which exceeds rupees twenty-five thousand, shall not exceed the aggregate of—

(a) the super-tax which would have been payable by the company if its total income had been rupees twenty-five thousand; and

(b) half the amount by which its total income exceeds rupees twenty-five thousand.

Explanation.—For the purposes of this Paragraph, where any portion of the profits and gains of a company is not included in its total income by reason of such portion being agricultural income, the amount representing the face value of any bonus shares and the amount of any bonus issued to its shareholders shall each be deemed to be such proportion thereof as the average of the total income of the company in the five previous years in which the company has been in receipt of taxable income immediately preceding the relevant previous year bears to the average of its total profits and gains (excluding capital receipts) for the preceding five years aforesaid, reduced by such allowances as may be admissible under the Income-tax Act which have not been taken into account by the company in its profit and loss accounts for the preceding five years aforesaid.

Paragraph E

In the case of Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956,—

Rate of super-tax

On the whole of its profits and gains from life insurance business ... 22.5%

PART III

Rates for deduction of tax under section 18 of the Income-tax Act at the prescribed rates.

In every case in which under the provisions of section 18 of the Income-tax Act, tax is to be deducted at the prescribed rates, deduc-

THE SECOND SCHEDULE (See section 18)

PART I

In the First Schedule to the Tariff Act.—

(i) in Item No. 22(1), for the existing entries in the fourth column against sub-items (a), (b), (c), (d), and (e), the entries "Rs. 6 per Imperial gallon", "Rs. 1 per bottle", and "50 naye paise per bottle", "25 naye paise per bottle" and "Rs. 7.50 per Imperial gallon", respectively, shall be substituted;

(ii) in Item No. 22(2), for the existing entries in the fourth column against sub-items (a), (b), (c), (d) and (e), the entries "Rs. 12 per Imperial gallon", "Rs. 2 per bottle", "Rs. 1 per bottle", "50 naye paise per bottle" and "Rs. 15 per Imperial gallon", respectively, shall be substituted;

(iii) in Item No. 22(3), for the existing entries in the fourth column against sub-items (a) and (b), the entries Rs. 80 per Imperial gallon and "Rs. 50 per Imperial gallon", respectively, shall be substituted;

(iv) in Item No. 22(4)—

(1) for the existing entries in the fourth column against each of the sub-items (a) and (b) (ii), the entry Rs. 150 per Imperial gallon of the strength of London proof or 125 per cent ad valorem, whichever is higher" shall be substituted;

(2) for the existing entry in the fourth column against sub-item (b) (i), the entry "Rs. 200 per Imperial gallon or 125 per cent ad valorem, whichever is higher" shall be substituted;

(v) in Item No. 27(4) (a), for the existing entry in the fourth column, the entry "The rate at which excise duty is for the time being leviable on kerosene" shall be substituted;

(vi) in Items Nos. 29(1), 48, 63(4), 63(10), 66(a), 66(1) and 75(8), to each of the respective entries in the fourth column, the words "plus the excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty" shall be added.

PART II

Item No.	Name of articles	Nature of duty	Standard rate of duty	Preferential rate of duty if the article is the produce or manufacture of	Dura- tion of protective rates of duty
1	2	3	4	5	6

In the first Schedule to the Tariff Act,—

(i) after Item No. 73(20), the following items shall be inserted, namely:—

73 (21) Electric motors, all sorts, and parts thereof.

Revenue
The excise duty for the time being leviable on like articles if produced or manufactured in India and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty leviable on the article under any of the other items in this Schedule.

73 (22) Internal combustion engines, all sorts.

Revenue
The excise duty for the time being leviable on like articles if produced or manufactured in India and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty leviable on the article under any of the other items in this Schedule.

(ii) after Item No. 75(18), the following item shall be inserted, namely:—

75 (19) Mechanically propelled vehicles adapted for use upon roads, including chassis and trailers, but not including vehicles intended to run upon fixed rails.

Revenue
The excise duty for the time being leviable on like articles if produced or manufactured in India and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty leviable on the article under any of the other items in this Schedule.

STATEMENT OF OBJECTS AND REASONS

The object of this Bill is to give effect to the financial proposals of the Central Government for the next financial year and to provide for certain connected matters. The Notes on Clauses explain the various provisions contained in the Bill.

NEW DELHI:

The 29th February, 1960.

MORARJI DESAI.

Notes on clauses

Clause 2 prescribes the rates of income-tax and super-tax for the financial year 1960-61 and for deduction of tax at source from interest on securities, dividends, etc. For assesses other than companies, the same rates as prescribed by the Finance Act, 1959, continue. The distinction between the surcharge for purposes of the Union and the special surcharge has been clarified in the various parts of the First Schedule.

In the case of companies,

(i) the rate of income-tax has been fixed at 20 per cent. as against the existing rate of 31.5 per cent. (30 per cent. income-tax and 1.5 per cent. surcharge on income-tax).

(ii) the effective rate of super-tax on an Indian company with a total income exceeding Rs. 25,000 has been fixed at 25 per cent. so that the aggregate rate of income-tax and super-tax applicable to such a company will be 45 per cent. as against 51.5 per cent. as at present.

(iii) the effective rate of income-tax and super-tax on Indian branches of foreign companies has been fixed at 63 per cent. as against 61.5 per cent. as at present.

(iv) the effective rate of super-tax on dividends received by parent companies (Indian or foreign) from their subsidiary Indian companies continues at 10 per cent.

(v) on dividends receivable by any company from an Indian company (not being a subsidiary company) formed and registered on or after 1st April, 1959, the effective rate of super-tax otherwise payable has been reduced by 5 per cent. in the case of an Indian company and 10 per cent. in the case of a foreign company.

(vi) bonus issues out of premiums received in cash will be taken into account for the purposes of super-tax like other bonus issues.

(vii) super-tax payable with reference to excess distribution of dividends has been withdrawn.

(viii) the general rate for deduction of super-tax at source on interest on securities, dividends, etc., payable to Indian companies has been reduced from 25 per cent. to 10 per cent., the total effective rate of deduction on account of income-tax and super-tax thus being reduced from 45 per cent. to 30 per cent.

(ix) the rate for deduction of super-tax on dividends payable by an Indian company (other than a subsidiary company) formed and registered on or after 1st April, 1959 to a foreign company has been reduced from 43 per cent. to 33 per cent.

(x) the rate of super-tax for the Life Insurance Corporation of India has been fixed at 22.5 per cent. so that the aggregate rate of income-tax and super-tax remains at 42.5 per cent. as at present, and

(xi) the rates of super-tax applicable to the Life Insurance Corporation of India for the financial years 1958-59, 1959-60 and 1960-61 have been made applicable also to such other companies as carry on life insurance business in respect of their profits from such business.

Clause 3 makes the following amendments to section 19 of the Finance Act, 1959:—

Sub-clause (i) inserts a new sub-section (3A) with a view to clarifying that interim dividends declared or payable by a company even before 1st April, 1959 but in respect of a previous year relevant to the assessment year 1960-61 will not be grossed up in the assessments of the shareholders.

Sub-clause (ii): Sub-section (4) of section 19 provided that the benefit of grossing would be available for dividends declared in respect of a previous year relevant to the assessment for 1959-60 or an earlier year. In order to clarify that this benefit will be available only where the dividends are declared in relation to the accounts of a previous year not later than the previous year relevant to the assessment year 1959-60, a suitable amendment has been proposed in sub-clause (ii).

Clause 4 amends section 9 of the Income-tax Act to provide that the whole of the taxes levied by a local authority, and borne by the owner in respect of a property constructed before 1st April, 1950 shall be treated as the tenant's burden which would be taken into account in determining the annual letting value on the basis of the full rent payable by the tenant.

Clause 5 amends clause (xiii) of sub-section (2) of section 10 of the Income-tax Act so as to extend the benefit of that clause to any sums paid to a scientific research association or to a university, college or other institution to be used for scientific research, whether or not such scientific research is related to the class of business carried on by the assessee.

Clause 6 amends sub-section (3) of section 14 of the Income-tax Act so as to provide that profits and gains from business carried on by co-operative societies (other than those carrying on insurance business) shall be wholly exempt only in the case of co-operative societies which are connected with agriculture rural credit and cottage industries. In the case of other such societies profits and gains from business will be exempt up to Rs. 10,000 only.

Clause 7 makes an amendment to section 15B of the Income-tax Act to extend the benefit of exemption from tax in respect of donations for charitable purposes upto seven and a half per cent. of the assessee's total income (as reduced in the manner provided in that section) or Rs. 1,50,000 whichever is less.

Clause 8 amends section 15C of the Income-tax Act so as to extend the period within which a new industrial undertaking may begin to manufacture or produce articles to be eligible for the exemption provided by that section, by another five years.

Clause 9 makes the following amendments in section 18 of the Income-tax Act:—

Sub-clause (i) clarifies that tax shall be deducted under sub-section (3D) in respect of all dividends including dividends on preference shares.

Sub-clause (ii) deletes sub-section (3E).

Clause 10 makes the following amendments to section 18A of the Income-tax Act:—

Sub-clause (i) extends the scope of sub-section (1) of section 18A and provides that for the purposes of the advance payment of tax, all incomes other than 'salaries' will be taken into consideration. It has, however, been clarified that while computing the amount of advance tax, credit shall be given for all taxes deductible at source under section 18 on all such incomes.

Sub-clauses (ii) and (iii) are consequential upon the amendment proposed in sub-clause (i).

Clause 11 amends section 23A of the Income-tax Act so as to reduce in the case of companies dealing in or holding investments the statutory percentage for distribution of dividends from 100 per cent. to 90 per cent. A consequential amendment has been made in clause (i) of sub-section (2) of section 23A.

Clause 12 inserts a new section 49BB to give credit to an Indian company which distributes dividends in respect of a previous year relevant to the assessment for the year 1960-61 or a later year out of profits already taxed in the assessments for 1959-60 and earlier years. The amount of credit to be given for this purpose is a sum equal to 10 per cent of the dividends distributed out of past taxed profits. The credit is to be given against the company's tax liability on its income for the previous year in which the dividend is paid.

Clause 13 provides that no wealth-tax shall be charged in respect of the net wealth of a company for any financial year commencing on or after 1st April, 1960.

Clause 14 makes a formal amendment to section 5(1) (xx) of the Wealth-tax Act 1957, consequential upon the abolition of wealth-tax on companies, so as to retain the existing exemption from wealth-tax for the prescribed number of years in respect of shares held in a company established with the object of carrying on a new industrial undertaking in India.

Clause 15 amends clause (d) of section 5 of the Expenditure-tax Act, 1957, with a view to restricting the exemption mentioned therein to passage concessions enjoyed by foreigners employed in India.

Clause 16 makes the following amendments in section 6 of the Expenditure-tax Act 1957:—

Sub-clause (i) amends clause (g) of sub-section (1), so as to allow a deduction of Rs. 3,000 for expenditure incurred on education in India and inserts a new clause (j) in sub-section (1) providing for a deduction of Rs. 1,500 for expenditure incurred on travel in India by the assessee while on holiday or during leave.

Sub-clause (ii) amends sub-section (4) with retrospective effect to provide for the deduction of taxes paid by the assessee to a foreign Government in full.

Clause 17 amends section 18 of the Gift-tax Act so as to provide that the advance tax paid is the same as the tax payable on regular assessment.

Clause 18, read with the Second Schedule, proposes certain changes in the Import Tariff:—

(a) The rates of duty on wines, spirits and other alcoholic liquors are being increased by approximately one-fourth to one-third of the existing rates.

THIS IS YOUR
GUARANTEE
FOR QUALITY
CABLES

GLOSTER
CABLES

Gloster Rubber insulated Cables for all industrial and domestic purposes are now manufactured at our factory in Fort Gloster, Sauria, S. E. Rly. All our Cables are manufactured with selected raw materials under a new process which prevents damage due to handling in manufacture. This ensures quality to be maintained at the highest level.

In addition to the rigid tests carried out in our own laboratories, all our Cable reels are independently tested and certified by the Director of Inspection (Metallurgical), Government of India and a specimen certificate attached to every reel, is shown above.

Insist on the above certificate label on every reel of GLOSTER CABLE—THIS IS YOUR GUARANTEE FOR QUALITY
