In the Colombo market, offerings amounted to 6,726,479 lbs. There was considerably less demand and quality showed a further decline. High-grown teas were irregularly lower following quality. Medium Broken eased by 10 cents per pound except for the very poor descriptions which were even lower. Common sorts and "tea for price" were 10 to 20 cents lower; but other low-grown including Persian Gulf types were only slightly easier. High-grown Broken Orange Pekoe Fannings were distinctly lower with the exception of a few better liquoring types.

In Mincing Lane, offerings were 27,542 packages including 15,714 packages from Northern India. The market opened on a very quiet tone and prices for all descriptions showed a further falling away in many cases. Withdrawals were heavy. Plain Broken Pekoe was quoted at 3sh 4d a pound.

Futures Apathetic

THE Cotton market was easier once again. Acute stringency in the money market along with talks of more imports of foreign cotton and the resultant sharp drop in prices of long-staple indigenous cotton led to a somewhat apathetic attitude in the futures section. Prices moved narrowly; but the tendency remained somewhat lower. The credit curbs are now having effect on the psychology of the tradesmen, who are not inclined to hold on, even for some time, to actual stocks, and hence whatever profit is available is tried to be booked. The ICC August delivery, after moving between Rs 761 and Rs 754.50, was placed at Rs 756. Trading in August contract started in February, and weekly movements in prices till now have been as follows:—

Week Ended	High Rs	Low Rs	Close Rs
Feb. 20	761.00	741.00	757.75
Feb. 27	761.50	753.50	757.75
March 5	777.00	768.50	770.50
March 12	774.25	766.25	771.00
March 19	772.50	757.50	759.00
March 26	762.75	756.25	759.00
March 30	759.00	754.50	756.00

The ICC Moglai Jharilla March contract expired on 25 March at the official ceiling rate of Rs 820 plus a penalty of Rs 25 for sellers who were not able to deliver the goods. Business in this contract started on 22 June 1959 at Rs 672.25 and the lowest rate reached for the season was Rs 661.25 on 16 July 1959. From this stage onwards, the market started recording impressive gains, aided mainly by most unfavourable weather conditions and continued rains in most of the cotton-growing

tracts as a result of which the crop estimate was successively reduced to about 3.9 million bales from the initial estimate of about 5 million bales. The material fall in the crop output led to acute scarcity of desirable qualities of cotton required by the domestic textile industry and resulted in pushing up prices much above the official ceilings. Tenders issued in this contract amounted to 4,450 bales out of which 3,650 bales were accounted for by Laxmi "A" 7/8 staple; 500 bales of Punjab American 216F 7/8; and 300 bales of Cambodia 29/32".

Spot Market: As indicated earlier, spot prices for long-staple cotton have declined by about 5 to 10 per cent from the highest levels recorded some time back. CO2 Nagar was reported at Rs 1,260 as against Rs 1,300; Laxmi good quality at Rs 1,000 as against Rs 1,100; Laxmi inferior at Rs 1,050 as against Rs 1,100; Digvijay at Rs 1,085 as against Rs 1,125; Vijay at Rs 1,065 as against Rs 1,100. L147 was reported at Rs 1,060 as against the peak level of Rs 1,000 and 197/3 at Rs 1,000 as against Rs 1,090. Moglai was reported at Rs 910 from Rs 940; Kalyan good quality at Rs 990 from Rs 1,020; Kalyan average at Rs 955 as against Rs 980 and Wagad at Rs 900 as against Rs 935.

Among foreign varieties, Sudan XG3S for May/June delivery changed hands at Rs 1,790; Sudan SG6S at Rs 1,440 and Sudan SG4S at Rs 1,670. Syrian for April/May delivery was done at Rs 1,110. Among African varieties, Bushoga came to business at Rs 1,250; BP/52 at Rs 1,315; Jingia at Rs 1,137 for April/May shipment and Rs 1,155 for prompt shipment. American 15/16" was done at Rs 960 and Pakistan at Rs 1,040.

Imports: As already indicated last week, in these columns, the total import allocations of foreign cotton issued so far during the current season amount to 1.02 million bales. Out of this, actual allocations issued to the mills are placed at 825,000 bales. Quantity licensed for import from 1 September 1959 to 12 March 1960 has increased to 593,530 bales and it is expected that, by the end of March, the quantity licensed may increase to about 710,000 bales. The variety-wise break-up of the quantity licensed and actual arrivals of foreign cotton into India from 1 September 1959 to 12 March 1960 are as follows (figures in bales of Sea Island "Andrews" Cotton—400 lbs):—

	Quantity Licensed	Actual Arrivals
Egyptian	152,212	111,586
Sudan	57,498	54,780
East African	87,919	42,271
USA	214,452	33,914
Others	81,449	25,648
Total	593,530	268,199

Sea Island "Andrews" Cotton:

In view of the low price of Rs 2,237 fetched in the first auction of the season at Colimbore for one of the best quality of long-staple cottons

in the world (1.36"), Sea Island "Andrews", the Kerala Sea Island Cotton Plantations have suggested that the Government of India should purchase the entire quantity of Sea Island "Andrews" cotton produced in the States of Kerala and Mysore at a reasonable price of not less than Rs 1.12 per lb of Kapas and distribute the same to the consuming mills in place of imported Sudan or American cotton which the Government of India can easily do. If this is not possible, it has been suggested that the State Governments and the Government of India should jointly subsidise the cultivators to the extent of the actual cost of production in the interest of the future development of this cotton. The suggestion of exports of this type of cotton, however, does not seem possible.

Cloth Market:

The Cloth market was slightly better with expanded offtake from upcountry centres and it is expected that the tendency will remain good for another month or two. The Union Minister for Commerce and Industry has expressed the view that there was no reason for the rise in prices of textiles and that the cotton requirements would be adequately met. The Government are, however, no doubt, concerned over this rise in prices of cloth and the trend is being awaited.

BHILAI'S 3rd OPEN HEARTH

The construction of the open hearth furnace No 3 of the Bhilai Steel Project has been completed and it is expected to start production of steel soon. The furnace has already been heated up preparatory to its being commissioned for making steel. Like the two other furnaces already commissioned, this furnace is also of 250-ton capacity and will produce 500 tons steel in two charges daily. Work is also fast proceeding on the open hearth furnace No 4 where mechanical erection of cooling water preparation plant is nearing completion. The Bhilai steel works will have six open hearth furnaces of 250-ton capacity each. Six furnaces together will produce one million tons of steel ingots annually to be rolled into 620,000 tons of finished products and 150,000 tons of billets for the re-rolling mill.

ELECTRICITY OUTPUT & CONSUMPTION

The total electricity produced by the public utility power stations in India in November 1959 amounted to 1,234.1 million kWh, of which 994.0 million kWh were sold to ultimate consumers. Corresponding figures for November 1958 were 1,022.9 million kWh and 854.6 million kWh, and for November 1957 were 489.9 million kWh and 409.8 million kWh respectively. These figures show that the annual increase in electricity production is about 21 per cent. The all-India electricity supply statistics for the month of November, 1959, are based on 815 returns received from the public electricity supply undertakings.

Sugar Decontrol Urged

THE recent speech made by the President of the Indian Sugar Mills Association will give one an insight into the reasons for the current scarcity of sugar and its high price. He has pointed out that, while deterioration in crop conditions has contributed toward the fall in production, the main reason is the imposition of control on ex-factory prices of sugar and that, too, at uneconomic levels, particularly when there is no control on the other two competitors for cane, i.e., gur and khandasari.

He has added that controls can never provide an escape from the normal law of supply and demand and, if production is sufficient to meet the demand, prices will inevitably find their normal level. He has, however, expressed the view that the abolition of controls will, on the one side, remove the scare of scarcity and, on the other, enable factories to draw sufficient cane supplies by competitive cane prices.

It is learnt that the Government of India are thinking in terms of a capacity target of 3.25 million tons and a production target of 3.0 million tons for the sugar industry by the end of the Third Plan period. To raise the installed capacity of the industry, it is felt that preference should be given to schemes of expansion rather than to setting up of new units, as the average crushing capacity of sugar mills can easily be increased considerably.

In the case of new sugar mills, preference will be given to co-operative units. The production of sugar by the co-operative units, at the end of the Third Plan period, is expected to account for about 30 per cent of the total production in place of 10 per cent at present.

Meanwhile, sugar prices have declined during the week under review, thanks to easy supply position. Latest reports indicate that the production of sugar for the season may exceed 2.2 million tons. Supplies of sugarcane to factories are reported to have increased appreciably following the closure of crushers manufacturing gur. In the Hapur market, the rate is quoted at Rs 112 per bag. In the Muzaffarnagar market, rates are moving between Rs 113 and Rs 115 per bag.

The sugar market in London is still in a confused state. The Russian sugar deal with Cuba has not proved the boom to the market it was expected to be and prices still linger around 3 cents a pound. One reason for this is the doubt expressed about American sugar production, especially in relation to its purchase from Cuba. The US Government have, for some time past, been trying vainly to persuade Congress to give them free-

dom to adjust import quotas for sugar when they like.

The market fears that the International Sugar Council, at its next meeting, may decide that the time is now suitable for increasing the export quotas, which will have the effect of bringing more supplies and thereby disturbing the rather delicate price structure. But it is pointed out in London that, under the terms of the International Sugar Agreement, if export quotas rise automatically it the New York price of Cuban raw sugar goes above 3.25 cents per pound. The price is within striking distance of this level and the Council may prefer to let events take their own course rather than to try to influence them in any way.

Gur

In the Hapur market, ready Gur prices have registered fractional gains during the week due to revival of demand. Daily arrivals have dropped to an average of 500 maunds, as cultivators are reported to be busy with harvesting. Stocks are estimated around 41,000 maunds. Pansera quality is quoted at Rs 16.50 and the Balti variety at Rs 16.25 a maund.

Sowing of cane for the next season is in full swing and an increased acreage is expected in West Uttar Pradesh.

Khandasari

The Khandasari market remains depressed. Loading facilities are, however, reported to be adequate; but demand has been poor at higher levels. Some buying enquiry is reported from Gujarat and Saurashtra side.

The manufacture of khandasari is still being continued and the total production in the country is likely to touch a new high of 500,000 tons.

In the Mazaffarnagar market, prices have declined by Re 1 to Rs 3 per maund for different varieties due to keen selling by stockists. Local stocks are reported to have risen to 150,000 tons.

Foodgrains

Quiet conditions were witnessed in the Hapur Foodgrains market. The average quality Wheat has registered a further modest fall, to be quoted at Rs 17.25 a maund. Daily arrivals of wheat in the open market average 50 maunds and the supplies are being further augmented by sales through fair-price shops.

The Rice market is also ruling quiet, thanks to the easy supply position and heavy stocks with the trade. Harvesting of coarse grains has begun in some areas. Maize and Barja prices have slightly declined due to withdrawal of seasonal support. Harvesting of Arhar will begin after a month and the crop prospects, apart from areas affected by hailstorm, are considered to be bright.

Depressed conditions are being witnessed in the Delhi grains market. Slack demand from the local and outside consuming centres due to the expectations of early arrivals of new crop from the Punjab and

the reports of the beginning of new "rabi" crop arrivals in Uttar Pradesh are the main contributory factors for this trend.

Pepper

The Pepper market is ruling quiet, reflecting the uncertain outlook for the commodity. In Cochin, the rate for the ready position is quoted around Rs 262 per cwt. In the New York market, the rates for both spot and forward deliveries are quoted at 55¢ cents per pound.

Exports of black pepper from India were substantially higher at 76,888 cwt in January as against 52,655 cwt in December 1959 and 39,185 cwt in January 1959. Thus, total exports, for the first quarter of the current season (from November 1959 to January 1960), aggregated in the corresponding period of the 1962, 204 cwt as against 93,296 cwt previous year. Arrivals of black pepper in Bombay, for the three months ended January 1960, totalled 21,892 cwt.

Rubber

It was known for some time past that Rubber prices had been fluctuating rather uncertainly during much of February and part of March, pending an announcement with regard to sales by the United States Government. These uncertainties are now ended with the announcement that the American Administration will be making further sales of rubber, before the end of the fiscal year, in addition to sales of 50,000 tons already agreed upon. The Administration intends to sell between 50,000 and 75,000 tons each fiscal year. Britain is also steadily selling stockpile rubber and 50,000 tons of Russian stockpile rubber is coming on to the market shortly.

In these circumstances, it was expected that the price would fall sharply. But the price of the commodity has remained surprisingly steady around 3sh a pound. The strength of the market, in the face of the above factors, stems from steady Chinese purchases in Singapore. Chinese buying there is reported to be at the rate of around 3,000 tons a week and this, coupled with steady demand from the United States and Europe, has kept supplies in the Eastern markets fairly tight.

The statistical position of the commodity, however, continues in favour of steady prices. According to the Internal Rubber Study Group, world production last year of natural rubber was 2,065,000 tons, while consumption was 2,105,000 tons—a deficit of around 40,000 tons. It seems, therefore, that even the expected stockpile sales this year will not seriously affect the overall statistical position. The view in London is that rubber prices are likely to remain steady and may well become higher as the year progresses and local shortages may develop in the West.

Bullion

MOVEMENTS in the bullion market in Bombay during the week under review were narrow but irregular, but the tendency was characterised

by subdued conditions. However, the undertone in gold was somewhat diffident due to apprehensions that, at some stage, the credit curb measures might also be tightened for the precious metals. However, as there will be seasonal offtake in silver for another six weeks or so, the white metal was kept relatively better. Business in Baisakh and Jeth delivery started during the week. Gold spot commanded a premium of 87 nP per tola over Chaitra, Rs 1.75 over Baisak and Rs 2.69 over Jeth. Silver spot commanded a premium of 25 nP over Chaitra, Rs 1.87 over Baisakh and Rs 3.12 over Jeth. Floating stocks of gold and silver in Bombay are estimated around 20,000 tolas and 700 bars respectively.

Gold Chaitra delivery after early decline to Rs 129.25 recovered to Rs 130.19 to recede to Rs 129.12 while Baisakh delivery stood at Rs 128.25 and Jeth Rs 127.25 at the close. Silver Chaitra moved between Rs 216.75 and Rs 217.37 to quote at Rs 216.62 at the close while Baisakh delivery stood at Rs 215.12 and Jeth at Rs 213.94. Sovereign was placed at Rs 86.25.

Yarn

A quietly steady tendency was noticeable in the yarn market in Bombay. Business was restricted due to the implications of the financial difficulties of some parties which no doubt cast its shadow. In art silk yarn, Bemberg Cupressa April delivery moved between Rs 1,784 and Rs 1,797 while June delivery was quoted at premium of Rs 28. Stiple fibre April was put through at Rs 684 to Rs 693 while June delivery was placed at Rs 695. Cotton yarn prices were on the whole steadier except for small decline in fine counts following some decline in long staple cotton prices.

Metals

Reports that the import policy for Zinc for April to September period will remain unchanged led to some buying support. Zinc ready, was quoted at premium of Rs 28. Staple at Rs 132. Tin for ready and for next month delivery was quoted at Rs 135. Lead moved narrowly, around Rs 75 due to slow offtake and Copper was steady. Brass scrap was stagnant at Rs 178. Aluminium scrap was quoted at Rs 1.47 per lb.

Oils & Oilseeds

The long awaited announcement of export quota of 20,000 tons of HPS groundnuts till the end of June has at last materialised, but this had very little effect on the groundnuts market except for a short lived small rise. Castor seeds, on the other hand, showed some improvement on buying by shippers on prospects of export business. Castor crop estimate is placed between 115,000 and 120,000 tons. Arrivals of new crop have commenced in Gujarat, while the movement of the crop in UP has been delayed due to somewhat unfavourable weather conditions. US buyers are indicating the price of 14¢ cents without much active buying, while conditions in the UK market are still somewhat subdued on account of recent heavy shipments

still not completely sold out. As pointed out last week, prospects of fresh business in castor oil with the UK look remote. Small business of almost 300 tons of BSS oil with France was reported at £122 during the early part of the week. As for groundnut oil, there was practically no export business with the UK, but, due to higher contango and crop estimate of 425,000 tons, there is not much scope for rise in linseed prices. The announcement of export quota of 50,000 tons of linseed oil cake till the end of September had a steady effect. Cottonseeds were on the whole quietly steady.

Castor seeds for May delivery, which were done as low as Rs 168.37

on 23 March advanced to Rs 173.00. Business in castor, linseed and cottonseeds delivery and in groundnut for August is expected to start on 1 April. Castor oil commercial was put through at Rs 17.37 to Rs 17.56. Groundnut May delivery improved to Rs 210 from 206.75 to be placed at Rs 209. Groundnut oil April-May delivery changed hands at Rs 21.94 to Rs 22.12. Linseed May delivery, after being put through at Rs 32.31, advanced to Rs 33 to recede to Rs 32.81 to rally to Rs 33. Linseed oil ready came to business at Rs 15.56 to Rs 15.75 per quarter. Cottonseeds May delivery moved between Rs 149.75 and Rs 148.75.

THE BOMBAY DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

The Annual General Meeting of The Bombay Dyeing and Manufacturing Co. Ltd., will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, the 21st April 1960, at 4-30 P.M. to transact the following business:—

1. To adopt the Directors' Report, and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1959.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in the place of Mr. Pratapsinh Mathuradas who retires by rotation, and being eligible offers himself for re-appointment.
4. To appoint a Director in the place of Mr. J. D. Choksi who retires by rotation, and being eligible offers himself for re-appointment.
5. To appoint Auditors for the current year and to fix their remuneration.
6. AND for the purpose of considering, and if thought fit, to pass (with or without amendment as may be permissible) the following Resolutions as Special Resolutions, and/or Ordinary Resolutions as specified below:—

SPECIAL RESOLUTIONS

I. "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, approval be and it is hereby accorded to a contract being entered into, in terms of the draft placed before the meeting and for the sake of identification initiated by the Chairman, between the Company and the Managing Agents, Messrs. Nowrosjee Wadia and Sons (Private) Ltd., to be operative as from one month after the date of this meeting until the 15th day of August 1965, in respect of purchase by and sale or supply to the Company of goods in which the Managing Agents regularly trade or do business, (such as Rings, Ring Travellers, Lubricating Oils, Hair and Leather Beltings, other Leather Goods

such as Pickers, Picking Bands and Buffers, Shuttles, Sprinklers and Sprinkler Equipment, Machine Cloths, Ginning, Pressing and Delinting Machinery, Floor Polishing Machines, Homogenizers, Machinery and Machinery spare parts and Mechanical Handling Equipment) or in which they may trade or do business, and in respect of sales to the Managing Agents by the Company of sundry items of articles produced, dealt in or owned by the Company, (such as Cloth, Yarn, Waste, Petrol, Tubular Banding, Soap, and such other Sundry stores and ancillary items) as well as in respect of the supply or rendering of any service by the Company to the Managing Agents, and the supply or rendering of any service (other than that of Managing Agents) by the Managing Agents to the Company, including the giving of loans or deposits by the Managing Agents to the Company at interest not exceeding the State Bank of India's rate of interest and including service as agents for insurers for insuring the risks of the Company subject to the conditions that all payments to be made to the Company by the Managing Agents shall be made within one month from the date of such transaction; and that the prices charged to or received by the Company shall be such as are not less favourable to the Company than the market rates, or which are otherwise reasonable, and that the terms and conditions of the said supplies shall be as sanctioned by the Board of Directors."

II. "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, approval be and it is hereby accorded to a contract being entered into, in terms of the draft placed before the meeting and for the sake of identification initiated by the Chairman, between the Company and the Firm of Messrs. Ghia Pallonji & Co., Bombay (who are or may be

deemed to be 'associates' of the Managing Agents of the Company, and one of whose partners is a relative of one of the Directors of the Company and of the Managing Agents of the Company), to be operative as from the date of this meeting until one month after the Annual General Meeting of the Company in the year 1965, in respect of purchase by and sale or supply to the Company of chemicals and such goods in which they trade or do business (such as Caustic Soda, Soda Ash, Zinc Chloride, Sodium Bicarbonate and various other chemicals) or in which they may trade or do business, and in respect of sales to the Firm by the Company of sundry items of articles produced, dealt in or owned by the Company, as well as in respect of the supply or rendering of any service by the Company to the Firm and the supply or rendering of any service by the Firm to the Company subject to the conditions that all payments to be made to the Company by the Firm shall be made within one month from the date of the transaction; and that the prices or amounts charged to or received by the Company shall be such as are not less favourable to the Company than the market rates, or which are otherwise reasonable, and that the terms and conditions of the said supplies shall be sanctioned by the Board of Directors."

III. "RESOLVED that the Company hereby approves of the sale to the Crown Spinning and Manufacturing Co. Ltd., of a piece of land on the northern side of the Company's Dye Works situated at Cadell Road, Mahim, admeasuring about 6000 to 7000 square yards, at the price of Rs. 85/- per square yard, subject to the condition that the betterment charges (if any) under the Town Planning Scheme relating to this locality, which may become payable in respect of the said plot, shall be borne and paid by the purchasers."

IV. "RESOLVED that Clause 3 of the Memorandum of Association of the Company be and it is hereby altered by deleting from sub-clause (IX) thereof the following introductory words, namely: "With the consent of the shareholders assembled in General Meeting."

V. "RESOLVED that Clause (VI) of Article 118 of the Articles of Association of the Company be and it is hereby amended by deleting therefrom the following introductory words, namely: "With the consent of the shareholders assembled in General Meeting."

ORDINARY RESOLUTION

VI. "RESOLVED that, pursuant to the provisions of Section 359 of the Companies Act, 1956, the Company hereby authorises Messrs. Nowrosjee Wadia and

Sons (Private) Ltd. the Managing Agents of the Company, to retain during the entire period of their Managing Agency, i.e. upto the 15th August 1965, the commission or other remuneration earned, or to be earned, by them in the business of agents of Insurers, and in particular of the Queen Insurance Co. of America, and in the business of agents or representatives of other principals with whom contracts have been or may be entered into for the supply of goods to the Company, provided the prices or amounts charged to the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable; and also to retain the interest in respect of any loans or deposits made by the said Messrs. Nowrosjee Wadia & Sons (Private) Ltd. to or with the Company, provided that the rate of interest charged to or paid by the Company does not exceed the rate of interest of the State Bank of India."

Explanatory Statement Under Section 173 Annexed in Respect of the Above Resolutions.

The drafts of the Contracts referred to in Special Resolutions Nos. I and II are open for inspection by any Member at the Registered Office of the Company on all working days from 10-30 A.M. to 1 P.M.

By Order of the Board,
NOWROSJEE WADIA & SONS
(Private) LTD.,
NEVILLE N. WADIA
Director,
Managing Agents.

Bombay, 10th March, 1960.
Note:—

- (a) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.
- (b) The Share Transfer Books of the Company will remain closed from Monday the 7th March 1960 to Thursday the 31st March 1960, both days inclusive.
- (c) The Dividend when declared will be made payable at the National and Grindlays Bank Ltd., Bombay, on or after the 28th April 1960, to those members whose names stand on the Register of the Company on the 31st March 1960, and the Dividend Warrants will be duly posted to them.
- (d) The Members are requested to notify immediately any change of address to the Company.
- (e) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of items I to VI set out above is annexed to the Notice of the Annual General Meeting posted to all the Members individually.

The Central Bank of India Limited

Marked Expansion of Economic Activity

A Re-Appraisal of Programme by Government Essential

Balance Sheet Figures Cross Rs. 200 Crore Mark

Chairman, Sir Homi Mody's Survey

Speech delivered by Sir Homi Mody, K. B. E., Chairman, The Central Bank of India, Ltd., at its Forty-ninth Annual General Meeting held on Wednesday, the 30th day of March, 1960.

Ladies and Gentlemen,

In presenting to you the Annual Report of the Directors and the audited Statement of Accounts, I shall begin with a few observations on the economic situation in India and abroad.

2. During the year under review, there was an appreciable improvement in the political and economic climate of the world as a whole. There was a welcome thaw in the cold war and a general expansion of world trade. Industrial production was on the up-grade and reached higher levels in most countries. At the same time, there was greater awareness, on the part of the industrially advanced nations, of the necessity of helping in the economic development of under-developed areas, and it is possible foreign aid on a substantially larger scale might be available to our country in the coming years, with prospects of a more even spread amongst the countries which are in a position to lend.

3. As was to be expected, there was a marked expansion of economic activity in India in 1959. Agricultural production which had slumped badly in 1957-58, staged a welcome recovery in the following year, with the index number moving up from about 114 to 131. This improvement, which was due more to favourable seasonal conditions than to any other factor, should not, however, lull us into a false sense of security, because, with the alarmingly rapid growth of our population, a sustained and accelerating increase in agricultural production is a fundamental condition of our economic progress.

4. Industrial production also recorded a sizable improvement and, in particular, there was a substantial increase in the output of capital and intermediate goods. Industries like iron and steel, non-ferrous metals, electric power and automobiles showed considerable progress; consumer goods industries registered only a meagre improvement. The general index which had been moving very slowly in previous years, rose from 139.7 in 1958 to 149.4 in the first ten months of 1959.

5. The most disquieting feature in our economy is the persistently upward movement of the general price level. The index number of wholesale prices showed a net rise of 7 points to 117.5 in 1959, and it has risen by a further two points in the first two months of this year. All groups of commodities are experiencing an upward pressure, which is evidently a reflection of the strain which the large development programmes are placing on the available supplies.

6. A progressive increase in commodity prices implies, of course, a corresponding fall in money's worth. The deterioration in the value of the rupee, which has amounted to as much as 29 per cent since India became independent, cannot be disregarded on the ground that this is a phenomenon which is not peculiar to this country. Indeed, in a pitifully backward economy like ours, the maintenance of price stability is of the utmost importance for the very reason that the people's capacity to bear additional burdens is limited. As the Governor of the Reserve Bank recently stated, the task of maintaining stability in the value of the currency is not within the sole competence of the monetary authorities. For this purpose, as he rightly pointed out, "fiscal and monetary policy must be integrated-fiscal policy including, of course, a policy with regard to deficit financing".

7. Government should, therefore, undertake a re-appraisal of the programmes they have been pursuing in these last few years. Mounting fiscal burdens, industrial imbalance and abnormal deficit financing can have only one result—a creeping and, therefore, all the more dangerous inflation, which neither the monetary weapon nor selective credit controls can put right. In this connection, I would reiterate a suggestion I made at the last of the series of instructive lectures delivered by Sir Oliver Franks in Bombay that the time had come for the appointment of an independent body of experts for making a survey of our monetary system at this crucial stage of our development. Such a Committee would be able to tell us, among other things, how far our programmes of development are related to the maintenance of a reasonable price level, to what extent the

working of the monetary system has been conducive to the maintenance of stability and how imperative is the need for harmonising the monetary, credit and fiscal policies of Government. My suggestion has received a fair measure of public support, but it may be too much to hope any action will follow.

8. Meanwhile, the pattern which Government have set themselves is proceeding apace. The Second Five-Year Plan which started off with a flourish, and which, after its formulation, had its targets periodically scaled upwards with a cheerful disregard of such mundane considerations as means and resources, is nearing its end, with the hard core to which it had to be reduced implemented with the aid of large foreign credits, heavy deficit financing and bouts of fresh taxation. Its chequered career has apparently taught little to our planners. The Third Five-Year Plan is now being hammered out, in respect of which the net foreign exchange requirements are expected to be about Rs. 2,000 crores. Even if, as seems likely, foreign credit of this magnitude is obtainable, should we not bestow some thought on the way we are mortgaging our future? Apart from that, are we receiving value for the money that is spent and are the objectives of our economic policy being achieved in full measure? It is time our planners rid themselves of such meaningless slogans as "take-off stage" and "self-generating economy" and did some hard thinking, always remembering that the Plans are for the people and not the people for the Plans.

9. It is a matter for satisfaction that, at the present moment, a reconnaissance team nominated by the World Bank and headed by Sir Oliver Franks is engaged in the task of assessing the size, scope and content of the Third Plan and the extent of external aid that its implementation would need. Let us hope the deliberations of this expert body may assist in the formulation of a well-balanced plan which would take India substantially farther on the road to economic advance without exacting too heavy a price in the process.

10. The inflationary trend has naturally been reflected in the additions to money supply. During the year under review, money sup-

ply with the public increased by Rs. 170 crores, the increase being more than twice as large as in the previous year. This was due to an improvement in both the foreign exchange position and in the lending operations of banks. The foreign balances held by the Reserve Bank, which had fallen by Rs. 109 crores in 1958, recorded a net rise of Rs. 24 crores in the year under review, thanks to the generous assistance received by India from foreign countries. Simultaneously, there was an expansion of Rs. 129 crores in the credit advanced by commercial banks to the private sector, compared with an increase of only Rs. 22 crores in the previous year, and this helped further to add to the volume of monetary circulation.

11. Deposits of Scheduled Banks continued to rise and reached the figure of Rs. 1,827 crores, showing an increase of Rs. 253 crores during the year. An interesting feature is that demand liabilities which had contracted in 1958, now show a modest increase. Presumably, money is becoming more useable owing to the quickened tempo of business activity.

12. Scheduled Banks' credit moved up during the year by Rs. 99 crores. There has been in the last few years a steady advance in the volume of industrial finance provided by Banks, and this has to a certain extent had the effect of blurring the distinction between the busy and the slack season. As a result of various factors, the investment portfolio of Banks showed a substantial rise, mostly in Government Securities.

13. I shall refer to only one other item in this survey of economic and banking conditions. The Reserve Bank have recently thought fit to apply the credit squeeze and have issued certain directives to Banks. The question which arises, however, is how far limitations placed on bank credit can serve as a corrective to the general advance of the price level in the prevailing situation. The experience of selective credit controls is none too encouraging. On this, I shall only quote the following from the Report of the Board of the Reserve Bank issued in August 1959:—

"Selective controls are not designed to correct the general

inflationary pressures within the economy; nor is their success to be judged precisely by the extent to which the prices of the relevant commodities have fallen. The controls may be expected to exercise only a limited, perhaps a marginal, effect on prices, more particularly when Banks have large liquid resources".

14. In this connection, I would invite the Reserve Bank's attention to an article which appeared in the "Financial Times" of the 19th February, which refers to the credit agreement recently concluded in Norway after discussion between the Ministry of Finance and the Bank of Norway, on the one hand, and the Joint Consultation Council representing the country's Banks and Life Insurance Companies, on the other. Consideration might be given to the advisability of instituting some such consultative machinery between the Reserve Bank and the Scheduled Banks in our country.

15. I shall now proceed to deal with some of the salient points in the Bank's Balance Sheet and Statement of Accounts for the year.

16. You will notice at the outset that the Subscribed Capital at Rs. 3.15 crores shows an increase of Rs. 45,750/- as compared to 1953. You will also find an item of a little over Rs. 1 lac as Share Premium Account. Both these are the result of the decision taken at the last Annual Meeting to allot the Shares represented by fractional Certificates and Coupons that had remained unrepresented for many years by their original holders.

17. Another new item, which finds a place in the Balance Sheet, is the Development Rebate Reserve amounting to Rs. 75,000/-, which has been created out of the year's earnings. The Sinking Fund in respect of Lands and Buildings, which used to be grouped in the past with the 'Reserves', has now been placed under 'Other Liabilities' as required by the Banking Companies Act.

18. You will have noticed that the total of our Balance Sheet figures has crossed the Rs. 200 crore mark. It now stands at Rs. 223 crores, representing an increase of Rs. 24 crores over the figures of the previous year. The aggregate working funds were also higher at Rs. 192.74 crores at the end of the year.

19. The total of our Deposits again registered an increase and stood at a little over Rs. 180 crores. A particularly satisfactory feature is the way in which Demand Deposits have started moving up. In relation to the total Deposits of all Scheduled Banks in the country, our share amounts to 9.9%, which is a measure of the place we hold in the banking structure of the country.

20. There was an even larger increase in our figure of Advances which rose to nearly Rs. 120 crores at the end of 1959. This necessitated recourse to borrowings from Banks to a greater extent than in 1958. The advent of the

busy season, which normally brings about a heavier demand for bank accommodation for financing the movement of crops, was delayed last year, resulting in funds lying idle for a good part of the second half of the year. In addition, the Reserve Bank's curb on foodgrains advances curtailed the lending activities of many of our Branches located in predominantly agricultural areas. But for this, the average of our Advances for the year, which was nearly Rs. 119 crores, would have been still higher. The peak was touched in May when the record figure of over Rs. 128 crores was attained. Our Bank accounted for 12.4% of all Scheduled Banks' advances outstanding at the end of the year.

21. The Investment portfolio was augmented in the course of the year by Rs. 1.99 crores and amounted to Rs. 54.92 crores. For the first time after many years, the total market value of our holdings has exceeded the book value by a margin of something like Rs. 30 lacs. When we consider how far we have come from the disastrous position which existed in 1952, we have cause for infinite satisfaction at the turn that has taken place in our fortunes.

22. Turning to the Profit & Loss Account, the first thing that attracts notice is the improvement of Rs. 48.68 lacs in our gross earnings, despite the increased deduction of tax at source. Owing to the larger volume of business handled under Advances and Bills, there was an increase of Rs. 44.60 lacs in earnings by way of interest, exchange and commission. Contrary-wise, on the debit side, interest charges were up by Rs. 18 lacs on account of the increase in Deposits. The resultant net improvement in our earning potential was, however, nullified by the heavy increase in total operating cost, of which Establishment Expenses accounted for as much as Rs. 27.83 lacs, reaching the very high figure of Rs. 334.38 lacs, which represents an increase of almost Rs. 1 crore in the past five years. In relation to the gross earnings and net income, the ratio of establishment expenses for the year works out to 37% and 65.1% respectively.

23. Despite the expansion in our gross earnings, it is disappointing to find that the net profits, far from showing an improvement, actually disclose a drop of about Rs. 2 lacs from the 1958 figure. The percentage of net profits in relation to gross earnings has been sliding down from year to year, as shown by the decline from 13.7% in 1955 to 11% in 1959. It is primarily due to the incidence of the mounting Establishment Charges, to which I have referred. This downward trend in profits could be arrested in only one way, and that is, by the entire staff striving to improve efficiency, discipline and happier relations between them and the Management, and thereby contributing to the development of

the Bank's business. Now that a Tribunal has been appointed with comprehensive terms of reference, I shall content myself with expressing the fervent hope that its findings may result in the creation of happier and healthier conditions for all who are engaged or have an interest in the development of our banking system.

24. During the year, we opened 18 new Offices and closed down 10 unprofitable ones, leaving 306 Offices at the close of the accounting period.

25. I think I should give some explanation of the Board's recommendation regarding the Dividend payable to Shareholders. The Board decided that, while compulsorily deducting at source the tax payable on Dividend, as required by the law, the Bank should, nevertheless, pass on to Shareholders the two benefits accruing to the Bank, viz., reduction in the tax payable by the Bank from 51½% to 45% and the abolition of the Excess Dividend Tax. As you will remember, an Interim Dividend of Rs. 1.90 per share, subject to tax, which is equivalent to Rs. 1.33 net, was paid for the half-year ended 30th June. It was felt that if a final Dividend of Rs. 2.40 per share, subject to tax, which works out to Rs. 1.68 net, was declared, the object in view, viz., sharing with the Shareholders the benefits accruing to the Bank, would be achieved. Accordingly, if this recommendation is accepted by you, the Shareholders will get a net Dividend of Rs. 3.01 per share, as against Rs. 3.50 per share paid for 1958, which, I hope, will not be considered unsatisfactory in view of the prevailing conditions.

26. After being associated with the Bank for nearly thirty years, Mr. Dinshaw D. Romer recently resigned his place on the Board of Directors. His knowledge of legal and business matters and his sound judgement were of great value, and his colleagues were sorry he had to sever his connection on account of failing health. They have placed on record their appreciation of the valuable services rendered by him during his long association with the Bank.

27. Before I conclude, I am sure you would wish me to express our grateful acknowledgments to our Vice-Chairman, Mr. C. H. Bhabha, who has been devoting so much of his time and energies to the affairs of the Bank. He has done not a little for the improvement and expansion of its business, and we greatly appreciate the ungrudging service he has been rendering to the Bank. Our General Manager, Mr. N. K. Karanjia, has been continuing to shoulder the heavy burden of his office with rare zeal and devotion, and it must be a matter of great satisfaction to him that, under his able stewardship, the Bank has been making such satisfactory progress. To Mr. E. C. Cooper, the Deputy Manager, Mr. V. C. Patel, the Chief Accountant, the other Officers-in-charge at the

Head Office and the Branches, the members of the Staff and the Local Advisory Committees at various centres, I would also like to convey our grateful thanks. With goodwill on all sides, I am confident the Bank will play an even more useful and progressive role in the future in the development of the commerce and industry of the country.

Note:—This does not purport to be a record of the proceedings of the above Annual General Meeting.

ASHOKA CEMENT LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the shareholders of Ashoka Cement Ltd. will be held on Friday, the 29th April, 1960 at 11 A.M. at the Registered Office of the Company at Dalmianagar (Bihar) to consider and if thought fit to pass with or without modification the following resolution, which will be proposed as a Special Resolution:—

(To be proposed as a Special Resolution)

"RESOLVED that the regulations contained in the printed document submitted to this meeting and for the purposes of identification subscribed by the Chairman thereof, be and the same are hereby approved and that such regulations be and are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all the existing Articles thereof".

Explanatory Statement

Since the introduction of the new Companies Act, 1956, revision of some of the provisions of the Articles of Association of the Company has become necessary. It is recommended that new set of Articles of Association be adopted to incorporate the provisions of the Act and to revise other provisions to conform to the provisions of the new Companies Act, 1956.

The Clauses 34A, 60A, 64A, 79A, 88A, 90A, (2nd para), 99 (2nd para), 100 (2nd para), 103A, 107 (1) (3a) (5, 2nd para) (14), 113A, 119A, 135 (2nd para), 136A and 137A have been inserted as per agreement entered into with the Industrial Finance Corporation of India in connection with the loan of Rs. 50 lacs taken from them.

The Directors have, however, no interest in adopting the new set of Articles of Association of the Company excepting as members of the Company.

What is Good for LIC...

Investment Gossip:

STOCK market sentiment has sizably improved during the past few days and Friday's trading was marked by a confident undertone. Most equity prices have now regained a good part of the loss sustained immediately after the announcement of the recent Reserve Bank credit squeeze measures. Presumably, both investors and operators have derived the impression that Authority will take early steps to remove difficulties in the way of genuine investment. It would also appear that the recovery has stemmed from a feeling of relief at the fact that the settlements in important centres have not been as difficult

as apprehended. Funds seeking investment in equities seem to have been augmented this week due to the return of subscription money in respect of a recent heavily oversubscribed issue. The revival is as it should be.

The reported purchase of some equities as well as preference shares last week-end by the Life Insurance Corporation is naturally attributed to the investment committee meeting held in Calcutta last week. Anyway, expectations have been fulfilled in some measure and the stock market seems to be pleased with the result. Perhaps, it is felt that other investors would also come to think that what is good for the LIC should be good for them also.

Prospects for equities have never been so good as they are now. If investors have believed that, after the Central Budget, the outlook has improved, there is no reason now to reverse that view, the RBI directive notwithstanding. But the directive should serve as a warning to those who indulge in excessive speculation. This week in Parliament, kerf transactions have again come in for ministerial attention. Effective action against illegal trading in the stock and other markets has been promised. This need not, of course, cause any worry for the Investor.

ERs

New Issue Notes

The Western India Industrial Corporation Limited, Mysore, has called an extraordinary general meeting on 18 April to obtain the consent of the shareholders for a public issue of 22,000 equity shares of Rs 10 each, at par, without offer to the existing shareholders, with a view to making the capital structure of the Corporation more broad-based.

The Adarsh Chemicals & Fertilizers Limited will shortly be in the market with a capital issue of Rs 40 lakhs, comprising 24,000 equity shares and 16,000—6½ per cent tax-free Redeemable Cumulative Preference shares, both of Rs 100 each, to be issued at par. The subscription list is expected to open in the first week of April. The entire issue has been underwritten. Of the proposed issue, 600 equity shares have already been taken by promoters and directors; 11,400 equity shares and 3,000 Preference shares will be taken up by the directors and their friends; and the LIC has agreed to take 5,000 preference shares. Thus, the actual offer to the public is 12,000 equity shares and 8,000 Preference shares. The company's factory will be situated in Udna in the Surat district. The ICIC has agreed to give a loan of Rs 10 lakhs in foreign exchange equivalent to meet the cost of the machinery and plant. A sum of Rs 25 is payable with application and Rs 25 on allotment in the case of equity shares, while Rs 12.50 is payable on application and Rs 12.50 on allotment in the case of Preference shares, which are redeemable at the end of 10 years.

Balance-Sheet Briefs:

Among the Finlay group of mills, the Finlay Mills Limited has reported

a higher net profit of Rs 21.14 lakhs for 1959 as against Rs 4.09 lakhs in the previous year. A taxable dividend of Rs 23 per share is recommended.

Similarly, the Gold Mohur Mills Limited has shown a net profit of Rs 16.40 lakhs against Rs 4.81 lakhs previously. The Ordinary dividend is Rs 21.50 a share, subject to tax.

The Swan Mills Limited has earned a net profit of Rs 20.10 lakhs against Rs 8.20 lakhs for 1958. The Ordinary dividend is Rs 36 per share, subject to tax.

The working of the Lakshmi Cotton Manufacturing Company Limited has resulted in a profit of Rs 6.01 lakhs against a loss of Rs 3.52 lakhs incurred in 1958. A higher dividend of Rs 25 (taxable) is recommended against Rs 15, tax-free, in the previous year.

The Vishnu Cotton Mill Limited has earned a net profit of Rs 1.63 lakhs against a loss of Rs 9.02 lakhs. The dividend on the Ordinary shares is passed over.

The net profit of the Jay Shree Tea Gardens Limited has risen substantially to Rs 14.61 lakhs for 1959 from Rs 9.70 lakhs in the previous year. The directors have decided to pay a net preference dividend of 6 per cent on the Cumulative Redeemable Preference shares. No final dividend is recommended on the equity shares; but the interim dividend declared was Rs 1.40 per share.

Mahindra & Mahindra Limited has shown a net profit of Rs 25.14 lakhs for the year ended 31 October 1959 as against Rs 19.12 lakhs for the previous year. The directors have recommended a dividend of 12½ per cent on the increased capital, which works out to a net dividend of 87½ p per share, against Rs 2.20 paid for the previous year.

The net earnings of the Travancore Rayons Limited are placed higher at Rs 62.06 lakhs for 1959 against Rs 46.19 lakhs for 1958. The directors have recommended a gross dividend of 20 per cent (net 14 per cent) against 12½ per cent tax-free.

Investment Notes:

A new factory at Ennore, near Madras, which should produce about 51,000 tons per annum of compound fertilizers based on ammonium phosphate is to be built by the British firm of Simon-Carves Ltd of Stockport, Cheshire. The contract, which is valued at about £3,000,000, has been placed by the East India Distilleries & Sugar Factories Ltd. In addition to the compound fertilizer plant, the factory will include plants for the production of synthetic ammonia, sulphuric acid and phosphoric acid, together with equipment for handling incoming raw materials and outgoing finished products. The factory is scheduled to come into production in two years.

ERs

Investment Briefs:

Kohinoor Mills Company Limited has recommended a dividend of Rs 9.50, subject to tax, for 1959. The net dividend works out to Rs 6.65 a share against Rs 10 paid for the previous year.

The Industrial Investment Trust Limited has recommended a gross dividend of Rs 6 per share (net Rs 4.20) against Rs 6 tax-free for the previous year.

Thirumalai Rubber, Madras, has declared a taxable dividend of 7 per cent for the year ended 30th September 1959 against 10 per cent.

THE STOCK EXCHANGE BOMBAY

ESSAY COMPETITION

Under the auspices of the Shantilal J. Smarak Fund and M. C. Baxi Prize Fund, the Exchange invites essays on the following subjects:

- The Origin and Growth of the Stock Market in India—With special reference to the Stock Exchange at Bombay.
- The Future Role of the Stock Market in India.

The panel of Judges consists of Shri A. D. Shroff, Director of Tata Sons, Ltd., Dr. B. K. Madan, Executive Director of the Reserve Bank of India, and Shri H. T. Parekh, General Manager of the Industrial Credit and Investment Corporation of India, Ltd.

There are three prizes as under:

- Shantilal J. Smarak Prize ... Rs. 2,500
- M. C. Baxi Prize ... " 1,500
- Third Prize ... " 1,000

Additional prizes may be awarded on the recommendation of the Judges. The last date for submission of essays is the 31st of July, 1960.

Copies of the Rules and Regulations for the Essay Competition can be had from the Exchange on request.

KANKNARRAI COMPANY, LIMITED.

NOTICE OF ANNUAL GENERAL MEETING.

NOTICE is hereby given that the One Hundred and fifty-first Annual General Meeting of Members will be held at the Registered Office of the Company, 4 Clive Row, Calcutta, at 11-15 a.m. on Friday, the 13th May, 1960, for the following purposes:—

- To receive and consider the Audited Accounts for the year ended 31st December, 1959, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- To appoint a Director in place of one retiring.
- To appoint Auditors and to fix their remuneration.

Notice is also given that the Share Transfer Books of the Company will be closed from the 9th May to the 13th May, 1960, both days inclusive.

A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

COMPANY REPORTS

Chitavalsah Jute Reports Higher Profits

Balance-Sheet Reviews:

FAIR trading conditions and the availability of raw material at reasonable rates are fully reflected in the working results of the Chitavalsah Jute Mills Company Limited for the year ended 31 July 1959. While sales have been maintained at Rs 1.57 crores, the net profit, before providing for Depreciation and Taxation, has risen to Rs 18.07 lakhs from Rs 16.69 lakhs in the previous year. The directors have provided Rs 4.93 lakhs (Rs 3.53 lakhs) for Depreciation; Rs 3.10 lakhs (Rs 6.30 lakhs) for Taxation; Rs 3.56 lakhs (Rs 1.75 lakhs) for Development Rebate Reserve; and a taxable dividend of Rs 1.50 is recommended on the Ordinary shares against 12½ per cent tax-free.

The balance-sheet, as at 31 July 1959, shows a paid-up capital of Rs 35.15 lakhs against which General Reserve is shown at Rs 33 lakhs and Development Rebate Reserve at Rs 5.43 lakhs.

The gross block at Rs 1.10 crores is depreciated by Rs 59.87 lakhs to show a net block value of Rs 49.96 lakhs.

Modernisation of the Sacking Weft Spinning was completed during December 1959 and the remainder of the mill modernisation of the Warp side should be completed by June 1960.

During the year under review, the company bought 1,698 out of 2,235 shares of Rs 70 each fully paid-up of Vizianagram Press and Mills Company (Private) Limited, thus making the latter company its subsidiary.

Azam Jahi Mills Pay Dividend

Thanks to a net profit of Rs 1.22 lakhs as against a loss of Rs 388, the Azam Jahi Mills Limited has been able to recommend a dividend of Rs 4 per share for the year ended 30 September 1959 against nil previously. The improvement in earnings is mainly due to the benefits derived from incentive schemes for export introduced by the Government of India.

Sales are slightly lower at Rs 1.20 crores against Rs 1.25 crores. A sum of Rs 31,000 against Rs 30,000 is set apart for Development Rebate Reserve. In the absence of sufficient profit, the directors have not provided any sum for depreciation.

The subscribed and paid-up capital is Rs 72 lakhs, divided into 72,000 equity shares of Rs 100 each. General Reserve is shown at Rs 12.12 lakhs. Investment Reserve at Rs 3.15 lakhs; Development Rebate Reserve at Rs 61,000 and Dividend Equalisation Fund at Rs 1.00 lakh. The gross block at Rs 1.92 crores is depreciated by Rs 68.18 lakhs to show a net block value of Rs 1.24 crores.

Brushware Pays 50 nP

There has been a contraction in the turnover of the company during the year ended 30 November 1959 in the absence of Government orders pursuant to their policy of giving preference to small-scale industries. As a result, sales are lower at Rs 3.33 lakhs against Rs 5.15 lakhs.

The net profit for the year is, however, slightly higher at Rs 22,438 against Rs 13,677. A sum of Rs 1,922 (Rs 3,400) is provided for Depreciation; Rs 9,000 (Rs 5,500) for Taxation and Rs 5,500 (nil) for Rehabilitation Reserve. The directors have recommended a dividend of 50 nP, taxable, as against 50 nP per share, tax-free, paid for the previous year.

The matter of registration of the factory as a small-scale industry is being actively pursued and the directors hope that the approval of the Central Government will be received.

STOCK EXCHANGES

Price Flutter

Watch-Dog Writes:

STOCK markets now seem to be giving hints of returning sobriety. The week's trading has, on balance, presented a picture of satisfactory performance, thanks to reports of purchases of a few selected shares by the LIC. The tendency of prices, however, remains somewhat irregular, as some of the bull operators have suffered reverses in the recent debacle.

The Calcutta Stock Exchange was in a more confident mood and prices moved higher in most sections.

On the Bombay Stock Exchange, selected shares recorded handsome gains on fresh speculative support and short-covering.

A slightly improved tone was visible on the Madras Stock Exchange.

Calcutta

Calcutta, Friday Evening.

THE improvement in sentiment, that was noticed on the local Stock Exchange last week, was more pronounced during the week under review when further gains in prices were recorded by most sections due to fresh bull support. The main inspiration for the bulls was derived from the reports of the purchases made by the LIC, especially of Bengal Coal, Jessop, Titagarh Paper and Hindustan Motor preferences.

Another contributory factor was the hope entertained by some operators, that something better might come out from the representations made to the Reserve Bank in regard to the availability of loans against budia transactions. Above all, there was a general feeling that the return of large sums, locked up as a result of over-subscription in respect of some recent issues, should substantially augment the floating funds. But for the revival of the rumours with regard to the possibility of an increase in the Bank Rate, the steady rise in prices would have been retained till the close of the week.

The gilt-edged market was absolutely flat as banks, with a view to improving their liquidity, were inclined to disinvest in gilt-edged securities. Even the LIC was reported to have rejected the offers. With the result, both the medium and long-dated loans were on offer and their prices sagged further from last cell levels. State Loans were devoid of support. 3 per cent 1986 Conversion Loan, after touching a new low of Rs 72.82 from Rs 73.15, improved towards the close to Rs 73.25.

Bank shares were quietly steady with Punjab National changing hands up to Rs 21.25. United Commercial were nominally quoted at Rs 71.25. Despite the firmer trend of raw prices, Jute shares presented a steady

front, thanks to higher advices from the gunny market on reports of substantial business done with overseas buyers. Trading, however, remained restricted in view of the uncertain outlook for the industry. Howrah changed hands at Rs 22.62 to Rs 23.12; Alliance at Rs 118 to Rs 122; Ganges at Rs 10.69 to Rs 11.62; National at Rs 30.69 to Rs 30.81 and New Central at Rs 26.19 to Rs 26.75. Kamarhaty were a steady feature at Rs 174 with Khardah hardening to Rs 162.

Coal shares displayed a firmer tendency in sympathy with the general trend of the market, not to speak of a general feeling that the fixation of a high target in the Third Plan would be followed by incentives on the lines sought by the industry. Bengal were at one time pushed up to Rs 335 from Rs 325 on reports of purchases made by the LIC, to finish the week at Rs 330. Central India had buyers up to Rs 10.19 from Rs 9.81; New Beerboom up to Rs 23.87 from Rs 23.25 and Western Bengal up to Rs 8.19 from Rs 7.69. Burrakur closed at Rs 20 after opening Rs 19.25 and touching a high of Rs 20.31 on speculative buying.

In restricted trading, the Tea section presented a steady front with a few selected shares enjoying sustained support. The main reason was the keen buying interest witnessed in recent auction sales following an indication that the stocks with the traders were not high and that internal consumption was on the increase. It was, therefore, believed that the remaining Duet sales would get a good response and the new season's first export sale, to be held in the second week of May, would get a good start.

Sugar shares were comparatively quiet on lower advices from the commodity market on expectation of an increase in production during the current season. Raza/Buland met with business at Rs 13.12 to Rs 13.25; Carew at Rs 11.50 to Rs 11.75; SKG at Rs 13.44 to Rs 13.75 and Dyer Meakin at Rs 19.50 to Rs 20.06.

Thanks to encouraging advices from the cloth front, Textile shares came in for good inquiry, though higher levels attracted some profit-taking. Jayshree were, at one time taken up to Rs 13.62 from Rs 13.12; Cawnpore up to Rs 7.50 from Rs 7.31; Elgins up to Rs 20.12 from Rs 19.56 and Kesoram up to Rs 25.12 from Rs 23, to finish at Rs 13.25; Rs 7.50; Rs 19.87 and Rs 25.12 respectively. Bowreah were, however, on offer at Rs 155 against Rs 170. New Victoria were enquired up to Rs 1.62 from Rs 1.37.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 22.12, Indian Irons opened higher at Rs 22.35, and advanced further to Rs 22.55 before reacting at the close to Rs 22.52. TEXMACO, in sympathy, moved up to Rs 25.80 from Rs 25.40; G. K. Williams up to Rs 42.62 from Rs 40 and Britannia up to Rs 13.69 from Rs 13.34, to close finally at Rs 25.50; Rs 42.62 and Rs 13.69 respectively. Jessop were keenly sought after up to Rs 28.00, from Rs 24.25 on expectation of a satisfactory dividend; and closed at Rs 25.81 on profit-taking. Burn moved up to Rs 464 from Rs 454 with Indian Standard Wagon well maintained at Rs 94.

Miscellaneous issues came in for selective support and wiped out a major portion of the recent losses, thanks to the emergence of investment support. Orient Paper changed hands at Rs 40.90 to Rs 41.90 (Rs 41.90); Shree Gopal at Rs 23 to Rs 24.00 (Rs 24.00); Indian Cable at Rs 30 to Rs 30.37 (Rs 30.37); Rohtas at Rs 30.56 to Rs 32.69 (Rs 32.44); Dunlop Rubber at Rs 38.75 to Rs 39.25 (Rs 39.25); Indian Copper at Rs 4.42 to Rs 4.75 (Rs 4.75); Indian Aluminium at Rs 25.81 to Rs 26.06 (Rs 25.81); Hindustan Motor at Rs 17.06 to Rs 18.25 (Rs 18.19); Sirpur Paper at Rs 14.69 to Rs 15.75 (Rs 15.62); Indian Oxygen at Rs 33.62 to Rs 35.25 (Rs 35.12); Associated Battery at Rs 35.50 to Rs 37.75 (Rs 37.62); Phillips India at Rs 24.87 to Rs 25.50 (Rs 25.50); India Steamship at Rs 11 to Rs 11.19 (Rs 11.00) and BIC at Rs 7.28 to Rs 7.56 (Rs 7.37). Figures shown within brackets were the week's closing rates.

Bombay

THE Bombay share market staged further improvement during the week, though trading was interrupted by holidays on Monday and Tuesday. The tendency generally remained better with broadening turnover, but, at the bulge, profit-taking emanated on technical as well as end-of-account considerations. The general feeling is that Contango rates might remain slightly higher due to ban of direct "budias" by banks, but that they will not be prohibitive. However, as the bears and the bulls have suffered heavy reverses during the past month, the market trend is likely to remain irregular. The relieving feature is provided by selective investment buying which, more than anything else, has been responsible for the change in the psychology of the market.

Investors in electricity shares have been ruined by the steady erosion in values during the past few years. Even first class scrip, such as the Tata Hydro group, are going abegging. Government are too slow in amending the Electricity Supply Act so as to compensate the shareholders by way of some relief, in the incidence of taxation. It is wondered as to how the Electricity Supply Industry in the private sector can expand in the face of the depressed state of the shares for which the highest and the lowest rates for this year so far are given below:—

	High	Low	31-3-60
Ahmedabad	91.50	84.70	88.00
Andhra	1080.00	975.00	987.50
Tata Hydro	112.50	100.00	102.00
Tata power	1140.00	1000.00	1041.25

Cotton mill shares made mixed showing. Gokak Mills dropped further to Rs 136 due to lower dividend as stated last week. The Directors of the Koinoor Mills have recommended a taxable dividend of Rs 9.50 (net Rs 6.65) for 1959 as against net Rs 10. Bombay Dyeing, spurred to Rs 67.70 from Rs 65.80 on corporate news and utilisation of the automatic looms, Finlay Mills advanced by Rs 15 on considerable increase in profits. Khatau Mills encountered influential buying to rise by Rs 35. Standard Mills, after

rising to Rs 910, reacted to Rs 865 to finish at Rs 884. Svadeshi Mills were steadier.

Tata Steels were slow in movement and lacked bullish fervour. In the engineering section, Voltas, after moving up to Rs 230, reacted upto Rs 225 to close at Rs 228, while Tata Loco met pressure at a small rally. Mahindra and Mahindra recovered to Rs 23.50 to react to Rs 22.75. Premier Construction improved to Rs 315 on talks of capital reconstruction scheme, while Premier Automobile were marked up to Rs 142 before finishing at Rs 140. Greaves Cotton were steady around Rs 136.

Chemical and Dyes shares met with selective buying. Tata Chemical rose to Rs 17.52 to recede to Rs 16.96 to finish at Rs 17.64. Polychem met with buyers at Rs 185. Sugar shares were almost dormant. Maharashtra Sugar Mills Ltd has declared a taxable dividend of Rs 21 for 1958-59. Shipping shares were slightly better, but lacked confidence. Cement shares kept sluggish.

Bombay Burmah fluctuated irregularly to finish quiet at Rs 565. National Rayon was the bright spot and shot up to Rs 465 from Rs 441 to recede to Rs 456 to terminate at Rs 468. Baroda Rayon came in for some investment inquiry following reports that the daily capacity of the plant is to be increased to 7½ tons from 6½ tons. Anil Hardboard were steady around Rs 325 while Standard Batteries were being put through at Rs 138. Tata Oil was quietly steady at Rs 68. Gwalior Rayon shot up to Rs 33 on rumours of being listed in the forward section in the near future. Raymond Woollen were marked up to Rs 100 from Rs 96.

The week's movements in prices of a few representative scrip are as follows:—

	High	Low	Close
	Rs.	Rs.	Rs.

DURGAPUR STEELWORKS

GETTING READY FOR STEELMAKING

A skilled Indian technician makes adjustments to the Temperature Recorder for an Open Hearth Furnace in the Steel Melting Shop at Durgapur Steelworks.

The commissioning of the first Open Hearth Furnaces and the start of steel production at Durgapur will be another step forward in this great Indo-British enterprise.

INVESTOR'S SUPPLEMENT

Boom, Slump and Recovery in March

THE Calcutta Stock Exchange, after enjoying a veritable boom from the beginning of March, witnessed a heavy landslide in values on March 12 due to nervous liquidation following the announcement of the credit control measures. A halt was, however, cried to the steady downward trend in prices noticed till the third week of the month and the sentiment brightened up due to the revival of speculative activity toward the close.

It should be said that the Central Budget gave a new life to the market. Although there was genuine disappointment over the absence of the much-needed relief in respect of corporate taxes and the reduction in the levy on bonus issues, bull operators were inclined to the view that equities would provide a good hedge against any further inflation, not to speak of the fact that they appeared to place more reliance on growth prospects. Again, it was felt that, with the extension of tax exemption to the new industrial undertakings for a period of five years, there would be a boom in new capital issues. With the result, operators came out as aggressive buyers and the craze for buying infected all the sections of the market and the buoyancy persisted during the second week of the month when selected equities recorded new peak levels.

A section of the operators was, however, inclined to the view that, in the absence of any genuine support from investors who were of late becoming more yield-conscious, the steady rise in prices was mainly speculative in character and could not be maintained without leading to a vulnerable position in the market. At this juncture came the announcement of the credit control measures by the Reserve Bank. As the market was largely in the hands of the speculators, the slump in values, following the above announcement, was sudden and sharp due to heavy liquidation by nervous holders. Even the Stock Exchange authorities were compelled to fix up interim clearing rates to enable the operators to avoid further losses despite the fact that the previous settlement was held only on March 8.

Reopening after the Holi festival, the market recorded fresh lower levels due to sustained liquidation. In general, the trend of prices, during the third week of the month, indicated that the panic over the new credit control measures had not fully abated. It was feared that the credit restraints would reduce the supply of funds for investments in shares. Moreover, the strict observance of the margin in practice even in the case of discounting bills by certain banks seemed to have added an element of panic. The threat of the bank

strike spreading and the possible Committee meeting, to be dislocation of trade activities were held on March 25.

Additional depressing factors. Thus, As a matter of fact, sentiment confidence in the market was lack-brightened up during the last week ing, while professional operators of the month when there was a preferred to await further devesudden revival of speculative acti-lopments although they lent sup-vity. The steady recovery in port to a few selected shares in prices, noticed during this period, small lots.

Thanks to the subsequent clari-a corrective after the sharp recession made by the Reserve Bank in prices in the previous two that its directive regulating advan-weeks. When it was learnt that

ces against shares would not apply to the purchase of demand bills covering stock exchange securities to be despatched from one centre to another, there was bear-covering resulting in recovery in prices. Also, the investment counters put up gains on support influenced by the belief that the LIC might step in to take advantage of the prevailing low prices. Attention was therefore, fixed on the LIC Invest-

the settlement passed off quite smoothly and the budla charges were not as high as was feared earlier, there was heavy bear-covering. Again, it was thought that the return of large sums, locked up as a result of over-subscription in respect of some recent issues, should substantially augment the floating funds.

In general, toward the closing stages of the month, the market

gave definite hints of returning sobriety, which was reflected in a substantial volume of replacement buying and the flurry of covering purchases. The main inspiration for the bull operators was derived from the report that the Investment Committee of the LIC, at its meeting held on March 25, had accepted the bids given in respect of Bengal Coal, Titaghar Paper, Jessop and Hindustan Motor preference. It was also believed that the Reserve Bank might relax the orders to help the process of genuine investment in the country. There was, however, a general disposition to book profits at bulges, mainly influenced by the reports of the possibility of the Government taking steps to curb speculation, especially in unofficial trading. But, from the technical point of view, the market appeared to be in a sound position at the end of the month.

The initial buoyancy, the slump in the middle of the month and the subsequent recovery in prices were mainly led by the speculative issues under the lead of Indian Irons. In sympathy, all Engineering issues moved up although profit-taking erased some of the extreme gains at the close.

Jute shares came in for cautious trading in view of the disparity between raw jute and gunny prices.

Coal shares ruled initially quiet following the discouraging speech from the Chairman of the Indian Mining Association. But, selected shares continued to be well supported on the hope that the fixation of a high target in the Third Plan would be followed by incentives on the lines demanded by the industry.

Lower prices obtained at the auctions and the obscure outlook for Common grades had an adverse effect on the Tea section where dealings were few and far between. There was, however, a marked improvement in prices toward the closing days of the month due to the proximity of the dividend announcements by certain companies.

Sugar shares showed a halting trend due to quieter advices from the commodity market on expectation of an increase in production during the current season.

The implications of the Wage Board's recommendations kept down sentiment in the Textile section. There was, however, a steady recovery in prices from the middle of the month, thanks to encouraging advices from the cloth front.

The improved prospects for export against the background of no further load on company taxation and the encouraging corporate news were factors, which induced more attention being paid to Miscellaneous industrials.

(a) After writing back Rs 30,000 being provision for taxes made in previous years not required.
(b) Includes Rs 1,60,000 being "excess provision" for sales tax made in previous years. (c) Includes Rs 61,870 being unclaimed dividends forfeited and Rs 25,465 being paid for the year ended 31-12-54 under Section 25(A).
(d) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (e) Includes additional dividend at 5 5/14 per cent has been paid for the year ended 31-12-54 from provision for taxation.
(f) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (g) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (h) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (i) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (j) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (k) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (l) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (m) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (n) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (o) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (p) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (q) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (r) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (s) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (t) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (u) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (v) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (w) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (x) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (y) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (z) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (aa) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ab) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ac) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ad) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ae) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (af) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ag) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ah) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ai) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (aj) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ak) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (al) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (am) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (an) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ao) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ap) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (aq) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ar) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (as) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (at) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (au) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (av) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (aw) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ax) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (ay) Includes dividend paid at

(a) After writing back Rs. 30,000 being provision for taxes made in previous years not required.
(b) After transferring Rs. 435,000 from General Reserve.
(c) Includes Rs. 1,50,000 being excess provision for sales tax made in previous years. (d) Includes Rs. 61,678 being unclaimed dividends forfeited and Rs. 21,465 being paid for the year ended 31-12-54 under Section 20(A).
(e) Includes dividend paid at 10 per cent in July 1958 from Reserve in respect of years 1954 and 1955. (f) After transferring Rs. 4,18,300 from General Reserve.
(g) After transferring Rs. 10,097 being provision for taxation.
(h) After writing back Rs. 2,00,000 from Bad and Doubtful Debts Reserve.
(i) After transferring Rs. 22,70,942 from General Reserve No. 1.
(j) After writing back Rs. 7,53,894 being excess provision on sale of Fixed Assets.
(k) Includes Rs. 29,031 being profit on sale of Fixed Assets.
(l) After transferring Rs. 1,50,000 from Investment Depreciation Reserve and Rs. 24,846 from Bad and Doubtful Debts Reserve.
(m) After transferring Rs. 1,00,000 from Reserve for works and Ore Mines New Extension.
(n) After transferring Rs. 57,788 from Taxation Equalisation Reserve.
(o) After transferring Rs. 26,802 from Dividend Equalisation Reserve.
(p) After transferring Rs. 381,500 from General Reserve.
(q) After transferring Rs. 22,70,942 from General Reserve No. 1.
(r) After transferring Rs. 48,294 from Dividend Equalisation Reserve.
(s) After transferring Rs. 26,802 from Dividend Equalisation Reserve.
(t) After transferring Rs. 381,500 from General Reserve.
(u) After transferring Rs. 22,70,942 from General Reserve No. 1.
(v) After transferring Rs. 48,294 from Dividend Equalisation Reserve.
(w) After transferring Rs. 26,802 from Dividend Equalisation Reserve.
(x) After transferring Rs. 381,500 from General Reserve.
(y) After transferring Rs. 22,70,942 from General Reserve No. 1.
(z) After transferring Rs. 48,294 from Dividend Equalisation Reserve.

THE CHARTERED BANK

(Incorporated in England by Royal Charter 1853).
(Liability of Stockholders Limited).

Affiliated Institution:—
THE ALLAHABAD BANK LTD.

Head Office:
38, BISHOPSGATE LONDON,
E.C.2

West End Branch, London:
2, Regent Street, London S.W.1
and at

MANCHESTER, LIVERPOOL, NEW
YORK and HAMBURG

Branches of the Bank are established
at most centres of commercial
importance throughout Southern
and South-Eastern Asia and the
Far East.

Branches of The Eastern Bank
Limited, a wholly-owned subsidiary
of The Chartered Bank, are estab-
lished in Iraq, Bahrain, in the
Persian Gulf at Qatar and Sharjah
Lebanon and Hadramaut and in
India, Pakistan, Ceylon, Aden,
Singapore and Malaya.

Calcutta Office:
4, Netaji Subhas Road.

add SUNSHINE to your GREETINGS

Good wishes or Congratulations . . . send them by a
Greetings Telegram.

Greetings telegrams are delivered on a special picto-
rial form in an equally colourful envelope.

There are a number of stock phrases to choose from . . .
covering a variety of occasions, both personal and
social.

The minimum charge for an ordinary greetings tele-
gram is 50 nP. Each additional word costs 7 nP.

DE LUXE SERVICE

For those who prefer a more
personal touch, there is the De
Luxe Telegram.

Phrase the telegram as you
want, but write "De Luxe" in
the column for special instruc-
tions. Your telegram will be
delivered on the special greet-
ings form. It will cost only 12
nP. over the usual charges for
a telegram.

WORLD OF FINANCE

Mystery of Year-End Transactions

ALL the expected complicating factors, as well
as some that come as a surprise, make their
appearance in the returns of the Reserve Bank
for 1 April—the statement that embodies the
fiscal-year-end transactions of the Central Gov-
ernment. The unravelling of mysteries may be-
come somewhat less difficult when the return of
Scheduled Banks for the relevant week is also
available, and hence we shall content ourselves
this week with pointing out the main changes.

Firstly, the Central Government would appear
to have exercised their privilege of tendering
to have exercised their privilege of tendering
rupee coin for Rs 5 crores to the Reserve Bank;
this is indicated in the rise of Rs 4.03 crores in
Rupce Coin, whereas the normal expansion of
currency has caused outflow of rupee coin for
Rs 0.97 crores. Secondly, the net effect of busy
season demand, month early demand and the
special demand arising from the year end transac-
tions of the Central Government has been to
result in an expansion of Rs 19.62 crores in Active
Note Circulation. Cash in the till has thus de-
clined by Rs 15.61 crores. Thirdly, deficit financ-
ing in an amount of around Rs 15 crores has been
resorted to; and with further heavy payments by
the Centre, its balances have nevertheless im-
proved by Rs 10.34 crores; this is because there
is still a large amount in respect of which issued
drafts have not yet been presented for encash-
ment, with Bills Payable rising by another Rs 5.50
crores. The impact of governmental disburse-
ments has already been apparently felt by banks,
since the Reserve Bank's Other Loans and Ad-
vances have shrunk by over Rs 13 crores, half
of this being on account of the State Bank.
Moreover, if the figures of the State Bank are
isolated, Reserve Balances of member banks seem
to have improved by roughly Rs 3 crores—
attesting to a further rise in Scheduled Bank
Deposits in that week. The rise of Rs 15.05
crores in Government Treasury Bills is difficult
to explain, as also is the sizable fall of Rs 8.61
crores in Balances Held Abroad, though this last
may be linked with the increase of Rs 4.51 crores
in Other Deposits.

The State Bank's return for 1 April shows a
small rise of Rs 3.80 crores to Rs 631.24 crores in
small rise of Rs 3.80 crores to Rs 631.24 crores in
Deposits; Cash in hand and with Reserve Bank
has been steeply drawn on, by Rs 17 crores, to
reduce borrowings by Rs 6.75 crores and to in-
crease the investment portfolio by Rs 7.50 crores.
Advances are lower by Rs 2.30 crores, and the
further rise of Rs 9.19 crores in Other Assets
may relate to further impending purchase of
gilts from the Reserve Bank. The return of
Scheduled Banks for 25 March will be analysed
next week.

UCO Bank's Excellent Performance

THE results of the United Commercial Bank
Ltd for 1959 (whose accounts are pub-
lished elsewhere in this issue of Indian
Finance) would be reckoned superlative in any
year, and they are the more to be commended
since such a performance has been notched up
in respect of an accounting period wherein the
generality of experience of Indian Scheduled

Banks has been, to put it mildly, disappoint-
ing. The net profit earned in 1959, that is,
after taxation, is shown to have practically
doubled, if regard is had for the fact that, in
1958, credit was taken in the Profit and Loss
Account for a sum of Rs 5.79 lakhs as profit on
sale of investments. This stellar performance
of United Commercial is due as much to the
control that has been exercised over expendi-
ture as to the expansion in banking business.

The balance-sheet of United Commercial as
at the end of 1959 shows that Deposits and
other accounts have been marked up by
Rs 18.40 crores at Rs 98.68 crores. It is heart-
ening to find that a fair proportion of this rise
in Deposits has been registered under the head
of current accounts, contingency accounts, etc.,
which are higher by Rs 7.51 crores at Rs 32.68
crores. The main increase, however, is under
Fixed Deposits, which have risen by Rs 9.58
crores to Rs 56.11 crores. Savings Bank Depo-
sits have improved by Rs 1.33 crores to Rs 7.99
crores. The bank was able remuneratively
and profitably to utilise such additional re-
sources. The Advances portfolio has been
marked up by Rs 11.09 crores to Rs 56.25
crores. At the same time, the gilt-edged por-
tfolio has been strengthened by Rs 3.61 crores
to Rs 37.23 crores. Nevertheless, owing, it is
to be presumed, to the emergence of busy
season demand for accommodation toward the
end of the year, borrowings figure at Rs 4.60
crores, though this is lower than the 1958
figure by Rs 1.16 crores. In the result, cash
balances, including money at call, have gone
up from Rs 8.39 crores to Rs 10.10 crores.

It is significant that acceptances, endorse-
ments and other obligations of United Commer-
cial are sharply higher by Rs 11.31 crores at
Rs 26.53 crores. For, this may be taken to be
an index of the foreign exchange business,
that, in the case of United Commercial, has
expanded so considerably. Under contingent
liabilities, indeed, we find that forward ex-
change contracts outstanding are placed at
Rs 21.24 crores, as compared to Rs 20.51 crores
in the 1958 accounts.

So, now, to the Profit and Loss Account. Here,
we must remember that the figures for 1959
are not strictly comparable with those for 1958,
consequent upon the Finance Act 1959. For,
in respect of income derived on Government
Securities after 1 April 1959, deduction of tax
at source is at the much higher rate of 45 per
cent. (In the State Bank's accounts, indeed, a
footnote indicated clearly that the figures in
this regard were not comparable). It is this
factor, it may be inferred, because tax deducted
on Government Securities was so high, which
enabled United Commercial to show its balance
of profit for 1959 as net of taxation. However,
by the same token, the bank may have written
back, to the Profit and Loss Account, that
aspect or some part of the surplus of tax de-
ducted at source. In any case, income by inter-
est and discount has risen by nearly 14 per
cent from Rs 3.09 crores to Rs 3.62 crores. The
contribution of commission, exchange and
brokerage to the bank's income has also risen
by Rs 14 lakhs to Rs 1.21 crores. As such,
gross income has increased by more than 15
per cent from Rs 4.24 crores to Rs 4.91 crores.
A tight rein on expenditure is seen in the
moderate rise of Rs 29.72 lakhs to Rs 2.47
crores in interest paid on Deposits. Similarly,
salaries and allowances take up only Rs 13.39
lakhs more at Rs 1.23 crores. The profit that
has been struck, after provision for taxation,
is thus Rs 60.42 lakhs in 1959. This compares
with a balance of profit of Rs 45.38 lakhs in
1958; but, from the latter figure, we have to
deduct, in order that the comparison may be
true, the profit on investments of Rs 5.79 lakhs
and the provision for tax of Rs 9 lakhs, and,
therefore, the comparable profit for 1958 was
really Rs 30.89 lakhs.

The appropriations for 1959 are fully in
consonance with the magnificent results for
the year. The transfer to reserve has been
stepped up from the already massive Rs 14
lakhs of 1958 to nearly double that figure at
Rs 27 lakhs. The Bonus to staff absorbs fully
Rs 3.75 lakhs more—that is, a rise of over 50
per cent—to Rs 11 lakhs. The dividend to be
paid is at the rate of 11 per cent subject to tax,
which means that United Commercial has
stepped up its distribution from 7½ per cent
free of tax to 7.7 per cent net of tax.

Credit for such performance clearly belongs
to the drive and energy, as also the neat
management, that Mr S. T. Sadasivan, the
General Manager, with the apposite assistance
of his able colleagues, has brought to bear on
the bank's working. Particularly deserving of
plaudit is the fact that United Commercial has
progressed so well and so far in the acquisition
of foreign exchange business.

In his speech at the Annual General Meeting
of the United Commercial Bank, Mr G. D.
Birla, the Chairman, has been modest in de-
scribing the results for 1959, in contenting
himself by being gratified that the year was
one of "marked expansion of business and
sharp rise in our profits." It is spectacular
expansion and unprecedented rise that, justifi-
ably, Mr Birla could have spoken of. It is, we
presume, Mr Birla's desire to utilise the
forum provided by the Annual General Meet-
ing of the bank for an assessment of the larger
national picture of the economy which thus
makes him almost belittle the achievements of
the bank.

Indeed, his speeches in earlier years have
always underscored the economic problem of
the year. To cite but one example, Mr Birla
was first to draw attention, some year ago, to
the calamitous and unnecessary, not to say
undesirable, competition that was being waged
by banks for Deposits. This year, it is the
prospects of the Third Plan which intrigue and
arouse comment. The picture that he paints
is one essentially of hope. It may not be too
much to expect, the United Commercial bank's
Chairman said, that "foreign exchange, com-
mensurate with our requirements, will be
forthcoming." Similarly, he points to the ex-
pansionary trend in Governmental revenues as
"the most hopeful development" in respect of
internal resources. The price situation is
somewhat disquieting, and Mr Birla suggests,
consequently, that "Government should en-
courage production in every way, so that rev-
enues may become more buoyant, and so that
additional output can thwart inflation." It is
interesting to find that Mr Birla, by implica-
tion, does not favour bank rate as a weapon,
in Indian circumstances, against inflation. In-
deed, he refers to the findings of the Radcliffe
Committee as to the scope of monetary mea-
sures as a weapon of economic policy. This is
what, in this context, Mr Birla has to say:

"In an expanding economy a restrictive
policy in regard to money supply could be
self-defeating but at the same time the need
to check demand in certain sectors with a
view to holding the price line would indicate
that the solution is directional control rather
than change in the money rate which, while
raising the cost of borrowing by banks from
the Central Banking Authority and bringing
about a break in the Government security
prices, would have no further effect on
supply of money in the face of deficit financ-
ing and Plan expenditure."

In a passing reference to selective credit
control—Mr Birla does not use the word
squeeze—he hopes that "measures of restrictive
credit control would not be such as to deny the
growing needs of developing industries."

Mr Birla's real contribution is the mood of
confidence that, for his part, he is in a position
to profess in respect to Third Plan Prospects.

on this account would have to be deemed reasonable for two reasons, namely, that there has been an increase in the number of personnel in keeping with the increase in the tempo and scale of development and also some increase in the cost of living. What is surpri-

Retrospect and Prospect of Indo-Pakistan Trade

THE trade agreement signed at New Delhi on 21 March constitutes an important event in Indo-Pakistan relations. It is the fifth trade agreement concluded between the two countries since this sub-continent was partitioned in August 1947. The first trade agreement was signed in February 1951; the second in August 1952; the third in September 1955 and the fourth in January 1957.

In spite of geographical contiguity and the complementary nature of the economies, the trade between India and Pakistan has not expanded as rapidly as it should have. The following table shows the trend of balance of trade:

India's Balance of Trade with Pakistan. (In Rs. lakhs)			
Exports	Imports	Balance of Trade	
1952	46.34	29.14	+17.20
1953	7.62	19.41	-11.79
1954	10.09	17.82	-7.73
1955	8.71	25.08	-16.37
1956	8.08	20.91	-12.83
1957	6.77	13.40	-6.63
1958	7.16	6.27	+ 89
1959	4.92	4.17	+ 75

The volume and value of India's trade with Pakistan was the highest in 1948, when India imported goods worth about Rs 100 crores and exported goods valued at over Rs 70 crores. But, in the subsequent years, the trade between the two countries declined owing to various factors. Pakistan's policy of diverting its trade to other countries, the growth of indigenous industries and its shortage of foreign exchange have been largely responsible for the fall in our trade with Pakistan. The US economic aid programme, which has helped Pakistan to import cotton textiles and yarn from many countries like Japan, Hongkong, etc., has also contributed to the fall in our trade.

The main items of goods exported to Pakistan in recent years have been coal, spices, chemicals and drugs, machinery and textiles. Among imports, the major items are raw cotton, fish, etc. A statement is shown at the end of this article giving the chief items of imports and exports in recent years.

There is no doubt that the existing level of trade between the two countries is disappoint-

ing, on the other hand, is that, in spite of much construction activity that has been going on, the Government's contribution (by way of wages and salaries) to the generation of national income has not registered any very impressive absolute increase.

ingly small and that there is vast scope for improvement which will benefit both. It is therefore good to note that the latest agreement seeks to enlarge the trade as much as possible. It is expected that the total trade annually may go up to about Rs 8.20 crores. Although this is not a big amount, it can be said that a good beginning has been made and it should be possible to bring about considerable expansion over a period.

The main features of the trade agreement may now be analysed. Under the first protocol signed between the representatives of the two countries, Pakistan has agreed to raise the value ceiling for its raw cotton exports to India from Rs 1 crore to Rs 1.5 crores and supply jute cuttings to the value of Rs 1 crore a year. India has undertaken to supply Pakistan with iron and steel to the value of Rs 1 crore and raise the value of ceiling for export of cement and bidi leaves from Rs 70 lakhs to Rs 1.5 crores per year.

The second protocol provides for the import of raw jute from Pakistan. The quantities are to be decided under the existing procedures. India has also agreed to supply 30,000 tons of coal a month in addition to 100,000 tons a month now being supplied to both East and West Pakistan under the last trade agreement.

The schedule of items for export from India to Pakistan contains 66 commodities, including the following: mica, dyeing and tanning substances, chemicals, machinery and mill-work all sorts, electric cables and wires, bicycles and spares parts, cinema films (exposed), essential oils, sugar, tea for blending, coffee, spices all sorts, synthetic stones, iron and steel, cement, livestock, sewing machines and spares and typewriters.

The schedule of items for export from Pakistan to India contains 43 commodities. Some of the more important ones are jute cuttings, raw cotton, hides and skins, betel leaves and nuts, livestock including horses, chrome ore, newsprint and paper.

The agreement provides that any adverse balance of trade arising out of the exchange commodities will be settled in sterling. Payments under the protocol are to be made in rupees. The two countries will accord most-favoured-nation treatment to each other.

The signing of the latest Indo-Pakistan trade agreement has been widely welcomed in India, though disappointment is felt about the fact that no understanding could be arrived at on the question of border trade. It is reported that this matter will be discussed shortly between the two countries.

There is no doubt that, if the agreement is implemented in the spirit in which it has been concluded, it is bound to result in closer cooperation and better understanding not only in the commercial field but also in wider spheres. The two countries are now engaged in a programme of intensive development in agriculture and industry and therefore there is bound to be considerable scope for collaboration in many fields. The Government of Pakistan are now trying to attract foreign investment for the following industries:

Heavy engineering; heavy chemicals; production of synthetic distillation of coal and gas; pharmaceuticals; antibiotics; mining, refining and processing of all minerals; manufacture of producer goods and spare parts, etc. The Government of Pakistan have also provided the following safeguards to foreign investors:—

(1) There will be no restriction on remittance of current profits to the country from where the investment originates.

(2) Foreign capital in approved industries established after September 1954 may be repatriated at any time to the extent of original investment. Any appreciation of capital investment ploughed back into approved industrial undertakings may be treated as investment for the purpose of repatriation.

(3) Government have no intention of nationalising industries involving foreign investment. Should circumstances or an emergency necessitate nationalisation, just and fair compensation will be paid in the currency of the country from where the foreign investment originated.

(4) Relief from double taxation will be available for foreign investors from countries with which Pakistan has an agreement on double taxation relief, such as the USA, the UK, West Germany, Japan and India. Similar agreements with other countries are under consideration.

(5) Foreign technicians employed in an industrial undertaking under a contract approved by the Central Government are and will be entitled to income tax relief.

In the circumstances, both India and Pakistan should consider how far it is possible for them to cooperate with each other not only in the matter of trade but also in promoting the economic development of this sub-continent.

Company Law Administration

A PERUSAL of the annual report of the Company Law Administration for the year ended 31 March 1959 should be rewarding to any student of current industrial problems who has viewed with some scepticism the interested assertions that the climate for private enterprise has been, and continues to be, unfavourable. If there has been full or partial compensation, by way of State-created facilities in the infrastructure of the economy, for the heavier incidence of income taxation, there has also been in evidence a more constructive attitude on the part of the Commerce and Industry Ministry toward the licensing of new industrial schemes and the working and administration of The Companies Act 1956. These three factors, besides some others, have undoubtedly been responsible for the buoyant revival in business activity in the last two years. Particularly in the sphere of company law administration, the change for the better had set in during 1958-59. The setback in new company registrations recorded in the first year of the Companies Act was only a "passing phase"; in the very next year "the new Act, by itself, had ceased to be regarded as a deterrent to company formation, following a better understanding of its provisions and wider appreciation of the constructive attitude of the Administration."

The third year of the working of the Companies Act may be described as the year of "revival of market confidence in the prospects of the corporate sector" for two reasons, namely, that the number of new registrations recorded a substantial rise as compared to

1956-57 and that the number of applications for availability of names for new companies proposed to be formed increased nearly four-fold. As regards new registrations, the region-wise trends may be known from the following table:

Region	1956-57	1957-58	1958-59
Eastern (Assam, Bihar, Orissa, West Bengal, Manipur, Tripura)	334	4.0	421
Western (Bombay, Madhya Pradesh)	175	198	254
Northern (Punjab, Rajasthan, Uttar Pradesh, Delhi, Himachal Pradesh)	192	191	211
Southern (Andhra Pradesh, Kerala, Madras, Mysore)	147	152	206
Total	848	961	1095

The region-wise totals, however, conceal the continuing trend of concentration of new companies in four States, namely, West Bengal, Bombay, Madras and Delhi. Statistics relating

to new registrations in these four States alone are given below:

State	1956-57	1957-58	1958-59
(1) West Bengal	301	359	364
(2) Bombay	170	191	240
(3) Madras	91	60	113
(4) Delhi	112	117	130
Total	674	747	847

(5) As per cent of all new registrations in the country as a whole

The industrial pattern of new companies registered since 1956-57 shows that by far the greatest increase has taken place in the sector of processing and manufacturing. It will be seen from the following table of industry wise distribution of new companies that most of the increase (247) in the number of new companies in 1958-59 as compared to 1956-57 has been in the sector of processing and manufacturing. This, again, is a significant trend which shows that greater enterprise has been in evidence in the sector of industrial production as such, as distinct from commerce or transport.

INDUSTRYWISE DISTRIBUTION OF NEW COMPANIES.

2.	Mining and quarrying	31	78.78	17	1.94
3.	Processing and manufacturing	330	88.20	427	68.89
4.	Construction and utilities	17	3.99	37	1.30
5.	Commerce (Trade and Finance)	292	23.56	281	17.15
6.	Transport, Communications and Storage	68	11.34	70	10.21
7.	Services of all kinds	84	2.54	90	2.21
Total		848	210.63	961	102.71

The size pattern of new companies shows that small companies with an authorised capital of under Rs 10 lakhs continue to predominate.

		1956-57				1957-58				1958-59			
		Public	Private	Public	Private	Public	Private	Public	Private	Public	Private	Public	Private
1.	Below Rs 1 lakh	4	167	4	227	3	249	3	249	3	249	3	249
2.	Rs 1 lakh and under Rs 5 lakhs	16	291	15	359	14	428	14	428	14	428	14	428
3.	Rs 5 lakhs and under Rs 10 lakhs	19	211	15	214	12	262	12	262	12	262	12	262
4.	Rs 10 lakhs and under Rs 25 lakhs	11	59	6	60	8	55	8	55	8	55	8	55
5.	Rs 25 lakhs and under Rs 50 lakhs	12	14	5	19	5	19	5	19	5	19	5	19
6.	Rs 50 lakhs and under Rs 100 lakhs	7	9	3	6	7	11	7	11	7	11	7	11
7.	Rs 100 lakhs and above	16	13	17	11	9	13	9	13	9	13	9	13
Total		84	764	65	896	58	1,037	58	1,037	58	1,037	58	1,037
Small companies (under Rs 10 lakhs as per cent of 8)		46.4	87.6	52.3	89.3	50.0	90.5	50.0	90.5	50.0	90.5	50.0	90.5

From the point of view of authorised capital, however the pattern that emerges is different. Here, the break-up of new companies into

Government and non-government companies has also to be taken into account. A consolidated picture in this regard is presented in the following table:

		(Authorised Capital in Rs Crores)			
		1956-57	1957-58	1958-59	
		No. of Companies	Authorised Capital	No. of Companies	Authorised Capital
New Giant Companies (with authorised capital of Rs 1 crore and above):		7	119.0	2	8.0
Government		...	51.5	26	58.0
Others		21	...	16	...
Total		28	170.5	22	239.2
All New Government Companies		12	124.9	18	8.4
All New Non-Government Companies		836	85.6	943	94.3
All New Companies		848	210.7	961	102.7

It may be seen from the above figures that new giant-sized companies (with an authorised capital of Rs 1 crore and above) have accounted for larger part of the aggregate authorised capital of all new companies in each of the three years. The more significant trend, however, is that the aggregate authorised capital of new non-government (private sector) companies has accounted for the larger part of the aggregate authorised capital of all new companies in the two years, 1957-58 and 1958-59. But the position in regard to the paid-up capital of new non-government companies is not known. This, however, is no bar to an understanding of the revival of market con-

fidence in the prospects of the corporate sector in-so-far as it is revealed by the figures of aggregate authorised capital, especially in respect of new giant-sized companies.

Another statistical proof of the revival of market confidence is provided by the increase in the number of applications for availability of names for new companies proposed to be formed from 1,296 in 1956-57 to 4,132 in 1958-59. This is a fairly reliable proof because "applications for new names of companies are indicative of intentions on the part of company promoters to set up new business undertakings." The Company Law Administration is right in drawing the twin conclusion that

there has been a rapid increase in promotional activities in the private sector in recent years and that this confirms the earlier rosy assessment of the long-term effects of the new Companies Act on the climate for investment in this sector. But, of course, the Company Law Administration alone should not claim the entire credit for this turn for the better.

Industrial Court Decisions

By M. SUR

Can a Tribunal Alter a Production Bonus Scheme?

THE Titagur Paper Mills Co Ltd put a production bonus scheme into operation in 1949. The scheme had the prior approval in principle of the trade union and was accepted by an Industrial Tribunal in the same year as a suitable basis for awarding profit bonus for the years 1945-46 and 1946-47. In 1953, the workmen at the mills raised a dispute, demanding profit bonus for the years 1950-51 and 1951-52 and certain changes in the production bonus scheme. The demand for profit bonus was rejected by the Industrial Tribunal on the ground that the workmen had the benefit of the production bonus scheme, and the union appealed. The Labour Appellate Tribunal rejected the claim for 1950-51 on technical grounds, but on the "available surplus" formula of the Full Bench gave one month's bonus for 1951-52 and revised the basis of the production bonus scheme. The company then appealed to the Supreme Court.*

It was argued on behalf of the company that the introduction of a production bonus scheme is a matter for the discretion of the employer and therefore could not be the subject of a dispute. Further, since a production bonus scheme is a function of management, the tribunal should not interfere with the details of the scheme unless convinced that the employer was guilty of mala fides.

The Supreme Court, considering the meaning of production bonus, held that, "in effect, it is an incentive to higher production and is in the name of an incentive wage," and ruled that a dispute about an existing production bonus scheme is within the jurisdiction of the industrial courts because it is a term of employment. The court did not go into the question of whether the introduction of such a scheme could be the subject of a dispute, but held that a tribunal would have the power to interfere with an existing scheme, as it had the power to interfere with any function of management falling within the purview of the law, but that a tribunal would not lightly interfere and must have good reason for altering a production bonus scheme.

The company's scheme had provided for a production bonus of 13 days' basic pay on a minimum production of 30,000 tons and 1 day's basic pay for every 460 tons over the minimum up to 36,000 tons. The award of the Labour Appellate Tribunal had raised the rate to 1½ days' basic for each increase of 460 tons between 30,000 and 36,000 tons, and thereafter to 2 days' basic for each increase of 460 over the 36,000 tons. The Supreme Court held that, since the union had agreed to the rate up to 36,000 tons, there was no justification for the Labour Appellate Tribunal to interfere with this rate. The scheme did not provide for production over 36,000 tons, which apparently was not anticipated at the inauguration of the scheme, but the company had continued to pay at a flat rate of 1 day's

basic for each additional 460 tons, and the workmen had accepted payment on this basis.

The Supreme Court held that production beyond the original target must have meant intensification of effort by labour, since the number of workers was not materially increased, although admittedly there had been some improvement in machinery. For this reason, and because labour costs must have gone down proportionately with increased production, the court favoured a progressive increase in the production bonus rates from 1½ to 2 days' basic wage for different slabs from 36,000 to 60,000 tons.

If this principle is generally applied, it would cut out entirely the application in Indian industry of certain well-known Premium Bonus systems, such as the Halsey and Rowan systems, which are based on a standard time allowance and so arranged that the hourly rate of workers' earnings increases at a lower rate than the increase in output. These systems have been planned to allow for payment of some incentive bonus to supervisors and to those not on direct production, so that they too can benefit from more economical production. They also allow for passing on a share to the consumer by way of price reduction. This is an important point. The worker is also a consumer. Considering the high cost of paper today and its repercussions on the poor student, it is equally arguable that some of the benefit of increased production should be passed on to the consumer.

The Supreme Court also held that, as the nature of production bonus is entirely different from that of profit bonus under the Full Bench Formula, the existence of a production bonus scheme would not rule out a profit bonus. In view of these two rulings, there seems little chance of a reduction in the price of Titagur paper on the market!

Can a Minority Union Terminate an Award?

The Supreme Court's decision in the case of the Associated Cement Companies Ltd* does not help to unravel the tangle that many companies find themselves in as a result of rival unions. Writing some years ago, a former Labour Commissioner of West Bengal stated that "rival unions afford opportunities to management to 'divide and rule'". While this may have been the case at one time, it is certainly not so today. Employers faced with rival unions do not know what line to take, and it is almost certain that whatever action they take will lead to further trouble. The tendency for rival factions and minority unions to create discontent in industry will only be fostered by the Supreme Court's ruling that "logic and fair play would justify the conclusion that it is open to a minority of workmen or a minority union to terminate the award." It is important, therefore, to see how this conclusion was reached.

When a dispute was referred for adjudication by the State of Saurashtra, one party, the Associated Cement Cos., raised an objection against the reference on the ground that the prior award by which the parties had been bound had not been duly terminated under section 19(b) of the Industrial Disputes Act, because the union which had given notice to terminate the award represented only a minority of the workmen bound by it. The majority union had not given notice of termination. When the award had been given, the workmen were represented by a single union, but its registration had subsequently been cancelled and two separate unions had thereafter been registered.

Section 18 of the Act makes an award binding on all persons employed in the establish-

ment or parts of it to which the dispute relates on the date of the dispute, and also on all persons subsequently employed therein. Section 19 makes the binding effect of an award continue after its expiry until two months after notice is given by either party to terminate it. The section says that "any party bound by the award" may terminate it. Literally, this would seem to suggest that even a single employee who is bound by the award can give notice to terminate it, but this was ruled out by the Supreme Court, for, as an individual dispute cannot become an industrial dispute, it would be difficult to hold that "any party bound by the award" could mean an individual workman.

It was argued on behalf of the companies that it would be an anomaly if a minority were allowed to terminate an award when the majority were willing to abide by it, but the Supreme Court considered this unreasonable and held that it would prejudice the interests of employees and hinder the development of trade unionism to insist on a majority rule. "If the majority rule is adopted, very few awards, if any, could be terminated because very few unions would be able to claim a majority of members on their rolls, and in their present stage of organisation in very few cases would a majority of workmen be able to meet, decide and act together otherwise than through their unions." Since an industrial dispute can be raised by a minority of workmen, why, said the court, should it not be open to a minority to terminate an award? It would still be open to the majority of the workmen to come to an agreement with the employer to continue the award and adopt means permissible under the Act to make the agreement effective.

But the Supreme Court has not made a distinction between a minority of workmen and a minority union. That such a distinction should be made is important not only to industry but to the trade union movement. Admittedly, a vast number of unions cannot prove membership of a majority of the workmen in the unit they claim to represent and this has made it necessary to accept that a minority of workmen may raise a dispute. This is clear enough when there is only one union in the unit, but when it comes to rival unions in the same unit, surely, the position is rather different. With rival unions one may command the allegiance of a majority of the workmen, or neither may be able to do so, but in either case it should be possible to establish, with the help of the Registrar of Trade Unions, which is the major union, that is, which has the larger following. Where it is quite clear that one is more representative than the other (leaving aside altogether the degree of representation), surely the ordinary rule of democracy should prevail. We do not expect every MP who is elected to have a clear majority of the total votes in his constituency; we are satisfied if he has a majority over his opponents. There seems no valid reason why this rule should not apply in industry. It would help the management to know where they are, and it would help in the development of strong, responsible unions. At present, it is a real hindrance to the growth of the trade union movement that small, rival unions can challenge the decisions of far more representative unions. They have always been in a position to raise a dispute and have it referred to adjudication. They can now give notice to terminate an award (and possibly an agreement also?). Before we can get out of the present tangle, some recognition must surely be given to the representative aspect of trade union membership.

Restrictions on the Right to Transfer:

There are very few of management's former prerogatives which have been left intact by the

industrial courts in the last ten years. Transfer was one of these, but it has now been assailed by the Supreme Court. Hitherto, industrial courts have usually maintained that it was a function of management to decide on the necessity for transferring an employee from one unit to another within the same company, but they maintained their jurisdiction to interfere if on investigation it was found that there was any element of discrimination against an employee or "victimization" on account of trade union activities involved in the decision to transfer him from one place to another. In the case of the Kundam Sugar Mills*, the Supreme Court was concerned with whether transfer was a condition of service, express or implied, of the respondents to the appeal.

The workmen concerned had been employed in a sugar factory run by a partnership which subsequently purchased another sugar factory and shifted its premises to another place. There was no doubt that the two mills, located in different places, with accounts separately maintained and different service conditions, were two separate entities, although they were under a common management. Certain workmen were dismissed for refusing to obey an order of transfer from the original to the new mill, and the Industrial Tribunal upheld their dismissal. The Labour Appellate Tribunal reversed this decision and reinstated the men on the ground that the employer had no right to transfer the concerned workmen to the new factory. Whilst there was evidence that the service conditions for the transferred workmen were less favourable in the new factory, the Supreme Court was less concerned with this than with the question of whether the transfer could be considered a condition of employment. There was clearly no statement about possible transfer in their terms of employment, but the condition was implied? The Supreme Court held that, since, at the time of their employment, there was no evidence to show that the employer had the intention to purchase sugar factories at other places or to extend his

activities, and the workmen were unaware of any such intention, it would not be right to consider that there was any implied condition of transfer. Therefore, the decision of the appeal court was upheld.

It is important, therefore, that in new appointments managements should make clear their right to transfer if there is any possibility of starting a new concern or extending the company's activities in the future. As regards existing employees, there is little that can be done, for, their terms of employment can only be altered with their express consent. Transfer may, of course, be covered by standing orders, but these also must have the approval of the trade unions.

Rubber Expands

INDIA'S rubber manufacturing industry has made considerable progress in recent years. In regard to many items, it has been possible for the industry to achieve self-sufficiency and in some cases an export market has also been built up. Imports are confined only to certain special items and the actual quantity of imports has been small.

According to official statistics, there are at present 74 units in the organised sector of the industry. These units are engaged in the production of a variety of rubber goods such as tyres of different types, footwear, belts, gloves, hoses, railway fittings, automobile rubber components, surgical goods, etc. It is pointed out that the capacity and production of most of these items are adequate to meet the present requirements of the country.

During 1959, there was an increase in the output of almost all major items of rubber goods as compared to the preceding year. It is significant that the natural and synthetic rubber consumed by the industry during January-September 1959 was about 12 to 13 per

cent higher relative to the consumption during the corresponding period of 1958.

So far as automobile tyres are concerned, the output recorded a sharp increase in 1959 from the level of the previous year. The number of giant automobile tyres produced went up from 732,257 in 1958 to 915,530 in 1959, motor tyres from 235,520 to 267,055 and motor cycle tyres from 37,669 to 50,690. The production of other types of tyres and tubes also increased substantially as will be seen from the table published.

There are at present three units producing automobile tyres and tubes. Their installed capacity is 1,438 million numbers a year. Additional capacity for 900,000 has already been licensed under the Industries (Development and Regulation) Act. The existing capacity, together with the licensed capacity, would be sufficient to meet the demand arising by the end of the Second Five Year Plan. The position in regard to automobile tubes is also more or less the same.

As regards bicycle tyres, the present capacity is 14.61 million a year on a three-shift basis. It is estimated that the demand for bicycle tyres by the end of the Second Plan period would be of the order of 14.72 million a year; and, in order to meet this demand, an additional capacity of 6.19 million a year has been licensed.

The automobile and bicycle industries are making rapid progress. In 1959, the production of automobiles rose from 26,788 in 1958 to 34,259; motor cycles from 2,653 to 3,064; and three wheelers from 683 to 1,380. The output of complete bicycles also increased from 912,594 to 1,067,000. With the growing demand for automobiles and bicycles, the tyre manufacturing industry can look forward to a bright future.

Next to tyres and tubes, the manufacture of footwear is the most important item in this category of goods. In 1959, production of rubber footwear was about 38 million pairs as compared to 36 million pairs in 1958. There

*Civil Appeals Nos. 450, 451 and 514 of 1957.

*Civil Appeal No. 404 of 1958.

are 19 units in this industry with an installed capacity of over 45 million pairs. Additional capacity to the extent of 2.4 million pairs a year is being set up.

Other rubber goods whose production recorded a substantial increase in 1959 were latex foam sponge, water proof fabrics, hoses and dipped rubber goods like toys, balloons, etc.

Although the rubber manufacturing industry has been making steady progress, it has still to depend considerably on imports for its requirements of raw rubber. The gap between availability and requirements is as much as 25,000 tons. The Government of India therefore have recently issued a licence for the manufacture of SBR Rubber for an annual production of 30,000 tons. However, production in the initial stages will be of the order of 20,000 tons of SBR rubber.

What Can Be, But What Is

THE evolution of public enterprise in India under the spur of a new social philosophy is a subject of special interest to Parliament, and two lectures delivered at Madras by Mr A. K. Chanda should stimulate thinking not about objects but about methods of control in the larger public interest. The case for monopoly in civil aviation or life insurance is tacitly conceded, but Government now are in business in a big way, and the statutory corporations enjoy a degree of autonomy that is hard to reconcile with the doctrine of accountability. The Auditor-General in a synoptic survey that gains from its freedom from political bias has presented a picture of what is, and what can be. It is important to recognise that, in banking, shipping and other fields, the Government are now a potent factor and the performance of the chosen instruments has a bearing on the economic growth which Socialists want, whether it be in Australia or India.

The device of Crown Corporations adopted in Canada has not been adopted in India; and, in the UK, the business concerns are run as monopolies that have to face wage claims but are not exposed to the risks incident to running for years at a loss and get grants. While the political climate is unfavourable to further nationalisation, the views of Mr Herbert Morrison have shaped policy in relation to public enterprises, and the control of Parliament is more or less formal. Whether the same doctrine should prevail in India, where conditions are different and the tradition of bureaucracy is still rampant, is an issue to be dealt with by informed judgment. Mr Chanda's own views are not obtrusive, but his dissatisfaction with procedure (different but satisfactory in the case of Government-owned private companies) is not concealed.

It is rather curious that the practice in Sweden, where Socialism is both respectable and popular, has not been given weight in the survey of tasks and achievements. The power monopoly, the railways and the airlines in Sweden have been acclaimed as proof of the triumph of social purpose and public interest. The hydro electric system made a profit and paid interest due over a long period to the State, though profit-making was not the prime object of State control. The tobacco and liquor monopolies are part of the Middle Way described so eloquently by Marquis W. Childs, indicating that well-paid and uncorrupt Government servants free from political interference can show results comparable to any. Social insurance is financed by the Swedish monopolies and the radio has been adapted to the same form of management. If monopolies in coffee and petrol have been avoided,

the Swedish Government have obtained full control over armaments manufacture by a system of official licensing and inspection. In regard to the liquor trade, the claims of Temperance have been admittedly secured by the rationing in force and the excise revenue has risen steadily.

This may not hold lessons for a country that is pledged to total Prohibition, but the point is that larger revenue helps the Government to borrow on occasions and the compromise made with the "Drys" illustrates the Swedish preference for the middle way. The exclusion of Swedish policy and practice does not detract from the value of Mr Chanda's review of what public enterprise should start with and secure. The public sector is very necessary, and there is none who would like strategic industries to pass under private control. Even the USA, by its control of atomic energy, is wedded to a new theory of public enterprise, which the TVA is a case of federal control for largescale development and welfare. Public enterprises use loan capital, but not in the way that Veblen described, to concentrate control among "insiders" to exploit the public, and it is certainly important to bear in mind that the recent stir over TV abuses has forced the USA to think of the cultural impact of a special type of business on the minds and morals of the public, especially the young.

The pattern of control is, however, to be distinguished from the growth of State capitalism, which is deplored by the Swatantra party, which has conveniently forgotten that the subsidised Khadi industry is largely the creation of CR, who also imposed burdens on the mills in order to assist handloom weavers. The value of Government aid to organised industry, under expert advice of course, makes it clear that private enterprise has not launched itself and its financial strength is derived from loans, tax concessions and exemptions. The fact that aluminium and non-ferrous metals are left to the private sector in this country while competition with private plants will probably develop in the steel industry makes it possible to look for the persistence of a mixed economy. But in a mixed economy the Corporation should be the accepted form and a regular review of results in the public interest should be made by audit which, according to officials, is most important for testing operational efficiency. But efficiency largely rests on location and the Auditor-General's warning against political pressures for starting new industries has special value in the circumstances of the coal-mining industry, handicapped by both price control and new obligations for safety and welfare. It is gratifying to find that, in pleading for a new attitude, Mr Chanda too has emphasised the need to make profits and to provide resources for development. Public enterprises must find the means for their own growth and prices charged must show a profit margin. This view, associated with Professor Galbraith of Harvard, is upheld by Mr Chanda, whose plea for flexibility in management will be endorsed by all like his theory that foreign equity capital in State-owned plants will help to limit the strain imposed on foreign exchange earnings.

The main theme however, of the lectures is the concept of State management of industry, and it is curious that the Chartered Companies' work in Rhodesia or Borneo, reconciling distinctive claims, has escaped the notice of Mr Chanda, perhaps because they have passed into history on the other hand, the sale of Government assets to private capitalists in the USA is invested with significance in the resume presented to illustrate the variety of control and experience, though the contrast provided in the past between the Canadian Pacific and the National Railways may, with-

out prejudice, illustrate the point made about effective business management of public enterprises. The predominance of the public sector belongs perhaps to the future, but the State Governments have been told indirectly of the need to remodel business concerns and to bring in outside talent and experience—a point made familiar by Mr A. D. Gorwala in his critical report on public administration in Mysore. The insistence on accountability through Ministers elected to the legislature may be regarded by some as the cardinal point in the recent lectures, but some will hold that the emphasis is on competition between State monopoly and free enterprise, and that the obligations accepted by the latter must be shared by the former.

There is, however, no doubt that the lectures present a point of view, at once critical and sympathetic, and the officials who run new sugar mills, co-operative spinning mills or transport undertakings will benefit from the soundings taken by Mr Chanda whose own experience makes him incline to corporations instead of departmental agency. This is a well-founded preference, inspired perhaps by the departures in denationalisation in Germany and the advent of people's shares in Austria also, so that the initial nationalisation has been modified. Few will say that the UK Labour party's recent adjustment of ultimate aims is inspired by the tempered results of nationalisation, but the Suez Canal Authority, as a new type of public enterprise looking beyond local or national interest, may also deserve study. But Mr Chanda has accepted the pragmatic solution offered by the desire for a mixed economy here, and it is not without significance that restraints on private industry are part of the British economic pattern, influenced by Mr Harold Macmillan's presentation 22 years ago of apt compromise in the Middle Way (Macmillan & Co.).

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

Dynamics of Development

The report of the discussions of the Panel of Economists on the approach to the Third Plan reveals the existence of an unfortunate bias on the part of some economists against the private sector. While the Panel has given its broad approval to the size and pattern of the Plan, it is difficult to appreciate the view attributed to some of its members that the private sector should not be given such a large share of the total investment proposed. According to the tentative proposals, the total private sector investment for the Third Plan has been estimated at Rs 4,000 crores. Considering the record of the private sector during the Second Plan, this figure cannot fairly be described as on the high side.

The economists who want the private sector investments reduced, ignore the needs of balanced development of the national economy. With the growing output of power and basic materials in the public sector, there is need for corresponding development of capacity in the private sector for their utilisation. Have they calculated what it will involve, if State undertakings have to be set up to fabricate all the steel coming out of the steel plants and con-

sume all the electricity from the power projects? And until that is done, the huge investments in steel plants and power projects will not be reflected in rising standards; on the contrary, the locking up of resources in large projects has led to a decline in levels of living. Unless that trend is corrected, the Third Plan may impose too heavy a burden on the democratic framework before its foundations have had time to set.

A large Plan will be feasible only if it provides for a larger volume of investment in the private sector than under the Second Plan. The share of the private sector can be reduced only at the cost of reducing the total outlay to a larger extent. It is rather puzzling that some of the members of the Panel should close their eyes to these elementary aspects of the dynamics of development. The argument that investment in the private sector should be limited to what it can find out of its own resources is even less impressive. When the bulk of the community's investible surplus is mopped up by Government—through taxes, loans, small savings, deficit financing and now Prize Bonds—it is less than honest to suggest that the scale of investment in the private sector should be limited to its own resources. And, after all, financial investment, though important, is not everything. Development of the numerous industries required to fill out the gaps in the national economy requires, in addition to money, investment of talent and enterprise. This will be more readily forthcoming if the scope for private enterprise is not hamstrung on narrow, doctrinaire considerations.

Flexible Steel Plan

IN his inaugural address to the annual conference of All India Manufacturers' Organisation, the Prime Minister has given a clear indication of his preference for a pragmatic approach to the problems of economic development. The field is so vast that, even without rigid demarcations of the areas reserved for the public sector, it is possible for both State and private sectors to make rapid progress without getting in each other's way. While a broad demarcation will help in the economic application of limited resources, the adoption of irredentist attitudes by the Government or the private sector will not make for their optimum utilisation. This has been recognised in the revised Industrial Policy Resolution of 1956 which declared that the private sector may be allowed to establish units in industries reserved for State enterprise in appropriate circumstances, while reiterating that it shall be open to the State to undertake any type of industrial production and to start any industry in the sphere allocated to the private sector, "when the needs of planning so

require, or there are other important reasons for it". With the current emphasis on steel production and machine building, which will continue to dominate the Third Plan as it did the Second, the most significant indication of this flexible approach is the ready acceptance by the Prime Minister of the suggestion for the establishment of small steel plants wherever it was feasible. What China has been able to achieve with small steel plants may not be relevant to Indian conditions. But the Chairman of the AIMO, who made the suggestion, has pointed out how small plants will be advantageous, in view of the shortage of high grade coking coal and the presence of large deposits of low grade coals suitable for use in low shaft furnaces. Government have already sanctioned the establishment of nine small blast furnaces, and two of them have gone into operation. The larger availability of melting scrap that is anticipated highlights the need for expansion of capacity for its utilisation, through the establishment of small steel-making units dispersed all over the country. Last year, Government sanctioned 19 new electric furnaces. Dependence on imports for special varieties of steel will be reduced if the small plants are designed for the manufacture of the special tool and alloy steels. With the growth of the machine building and engineering industries, the demand for these special varieties is bound to increase by leaps and bounds. But as the demand for each variety will be limited to a few thousand tons, it will not be economical to undertake their manufacture in large units. The principal handicap of the small iron and steel plants is the problem of high working cost, as these establishments will not be able to make use of techniques for achieving maximum fuel economy. By concentrating on manufacture of special steels, which sell at comparatively high prices, the small plants will be enabled to bypass this difficulty.

Parkinson's Law in India

A study undertaken by the National Employment Service gives details of the growth of employment in the public sector. During the first three years of the Second Plan, this increase is estimated at 1.14 million which works out to 44.7 per cent of the Plan target of additional employment for the public sector. The total employment potential of the Second Plan was originally estimated at eight million. Subsequently, the estimates of additional employment were scaled down to six million. Even assuming that employment will be generated at an accelerated pace in the remaining two years of the Plan, it is clear that the bulk of the new employment opportunities will have to be created in the private sector if the plan targets are to be reached. The same pattern of distribution of new jobs between

the private and public sectors is likely to continue in the Third Plan period, and it will, therefore, be useful if a survey is undertaken of new employment in the private sector to see how far expectations have been, or are likely to be, realised.

Services account for over half the increase in employment in the public sector undertakings, and the largest increase has occurred in administrative offices and departments. Though it is explained that administrative cadres include professional and technical personnel, the impression may persist that with the expansion of the public sector India experiences Parkinson's Law.

Increase in the number of administrative personnel and office-workers, as compared with the number of workers employed in actual production, is one of the consequences of adoption of modern industrial techniques, irrespective of whether the establishments are in the public or in the private sector. A comparison of distribution of employees among the different categories in representative undertakings run by private enterprise in India and abroad should act as a necessary corrective to the impression that growth of administrative personnel in India has outpaced the growth of the national economy. As at end of March 1959, the total number of persons employed in the public sector undertakings was 6.37 million. This works out to four per cent of the total working population of India. In spite of nationalisation of industries and planned economy, the share of employment in the public sector is still very low compared with Great Britain, where the corresponding figure is 24.3 per cent,

All This and Rum, Too

The three year trade pact with Yugoslavia is certainly derived from friendship, but the balancing of exports against imports, even those obtained on credit, speaks of a desire to lift Indian exports this year, though current regulations in force will apply to the trade. But convertibility of rupees for purchases in Yugoslavia is ensured by the account opened in the Central Banks of both countries. Moreover, commercial banks also will be able to acquire and exchange Yugoslav dinars. Bunkering services for the ships will be available, but coastal trade is reserved. Yugoslavia, according to the schedule annexed, appears as an exporter of chemicals, asbestos, fabricated steel and mineral oil. Surprise will be caused by the entries under raw films, hops and textile machinery. Yugoslavia is ready to sell machine tools as well as non-ferrous metals to India in addition to ships and cranes. India "looks" for a market for sugar, cocoa and pepper, though it is patent that it has no sugar or cocoa to spare for export. India, under the new agreement, emerges as a shipper of rum as well as tea and coffee. A market for ores and pig iron, too, is expected, and coal is one of the items in the schedule, though Polish coal must always be cheaper. Light engineering goods find a place along with sports goods and shark liver oil in the schedule of exports. India seems ready to ship precious stones as well as medicinal herbs.

Letters exchanged promise scientific collaboration to supplement trade. Familiar items like shellac, jute bags and cotton waste are supplemented by the inclusion of laminated jute bags and linoleum in the schedule of 95 items. Whether the export trade in handicrafts will benefit may be doubted, but the schedule is a sign of new horizons opening for India's trade, and one thing is plain. India is ready to sell raw materials like hides and skins in addition to vegetable oils, on the assumption that export quotas will be provided for the latter item. The exchange of capital goods is ensured by the new trade pact and Yugoslavia is apparently eager to follow East Germany and Hungary as a new supplier of machinery to India. The agreement makes no reference to the present official rate of exchange and probably the price under all transactions will be converted into sterling for purposes of calculation. This will suggest that, even without a draft on sterling reserves, it is impossible to work out trade and exchange except by reference to London. The variety of Yugoslav exports will surprise many, but there is no place in the schedule for tobacco, maize or pork

products—the major items in Yugoslavia's trade in the past.

Forward Bullishness

The solemn warning issued to the forward markets recently by Delhi, and not only against kerb dealings, is based presumably on the experience of the cotton trade and the rise in prices of jute manufactures. Advances in prices for oils on speculative support have inspired official misgivings and it is noteworthy that Adoni seems to be preferred for operations by Bombay interests. The bull market in commodities has certainly caused much anxiety and it is evident that market trends abroad have little influence on prices ruling in India. But shortages in evidence, for instance in cotton, are the major factor at present and price control is not so important as the strict limit placed on imports by the tight exchange position. The statistical position of jute is also stronger and the course of prices has consistently favoured those with stocks.

The reversal of the earlier quiet trend since the Budget is the main reason for the tighter control threatened, but it may be assumed that export prospects will continue to inspire bullish fervour in oils and oilseeds. The higher margins have not so far affected sentiment in cotton or oilseeds and the outlook is governed as much by the fear of strained relations with China as the inference that the last Budget spells inflation and the Third Plan will not brake the steady rise in prices. This country is more impressed by the rise in bullion prices than the low level of interest rates. Regulated markets do not limit speculation, it is realised, and if the upward course of prices in pepper is broken by the New York rates and the authorities are able to curb the rise in jaggery by means of the rise in Indian Sugar mills' output in 1959-60, the general setting is not conducive to the removal of speculation because it is certain that domestic demand is going up for cotton and jute alike, and there is no prospect of large imports from Pakistan. Even if the volume of trading is curtailed by intervention the price structure seems to be durable.

Coal Price Rise by Instalments

Another concession to the coal industry has been forced on the Government, and it looks as if the revision of prices contemplated two years ago is coming in instalments. Of course, the representations by mining interests, anxious to explain the prospect of shortage and the slow growth of the public sector's output, have not been

without influence. The Government have come to recognise that wage awards have raised mining costs and the new surcharge on rail freight is a factor in costs as well as prices. The increase in the price of coke may not affect steel producers and the revision of soft coke prices is probably overdue. In any case, what was done to stimulate sugar output has to be adopted in respect of coal and coke also, and the Coal Commissioner has to deal with the claims of the larger segment of output outside the Government's control at present.

It is reassuring to find that points made this year about the position of the coal mining industry have been given some weight by the authorities. The restoration of the export trade with nearby countries is essential, and the Government's own offer to ship coal to Pakistan is an added reason for the restoration of the mines' capacity to produce more coal. The controlled industry's claim for rehabilitation may not be conceded in full, but there is now appreciation of the difficulties that stand in the way of coal mining reaching its target as intended four years ago. The steel plants will require more coal, and washeries alone cannot provide a solution.

The problem of colliery owners was stated by Mr Agarwala lately in moderate terms. It is not conservation alone that is wanted. Extension of mining operations is required and leases should be fully utilised whenever possible. The merger of small companies approved formally has been delayed, though it is plain that labour also stands to gain from the formation of large, efficient undertakings. The small recovery in coal shares is a sign that the future earnings' potential is hopefully appraised and the revision of prices may end sudden local shortages, due however to transport difficulties. The case for a square deal to the oldest industry has been accepted. But this too is a case of better late than never. The postwar benefits to miners have also been given at the expense of the shorn investor who has put his money in an industry exposed to many risks.

Tariff Commission on Sugar Costs

The Tariff Commission, set to work out a rational cost structure for the sugar industry in answer to the clamorous demands for revision of sugar prices by mill interests, have rightly stressed the distortions that would be reflected in a uniform schedule for the entire country. With varying durations of seasons and differing recovery percentages of sugarcane in the different sugarcane growing belts in the country, an all-India schedule of cost of production will,

in the words of the Commission, only result in inflating the all-India cost. For purposes of costing, the Commission have divided the sugar producing states into four regions: (1) Northern, comprising Bihar, UP and Punjab; (2) Bombay State; (3) Madhya Pradesh and Rajasthan; (4) the Southern region, consisting of Andhra Pradesh, Mysore and Madras. The Commission have worked out four schedules to represent the ex-works cost of manufacturing sugar in the four regions exclusive of the cost of sugarcane. The main recommendation regarding the cost structure is that, from year to year, the price for each region should be determined according to duration and recovery with the help of the regional schedules. In the grouping of States for costing, there seems to be some risk of overlooking State-wise differences in production costs. However, considering that it is the cost of sugarcane which accounts for the major part of sugar production cost, and also in view of the fact that sugarcane costs are left out of reckoning in the regional costing, the effect of omitting State-wise costing may be considered to be of minor importance.

Another important recommendation of the Commission concerns the question of rehabilitation allowance. While the industry has made out a case for such special rehabilitation allowance for purposes of modernising machinery, the Commission have considered the claim of the industry indefensible on the ground that the industry, working with low capital costs, has functioned in an inflationary period when prices were high and profits were substantial. In this connection, the Commission say, "It is against the canons of social justice to claim that since they have applied the resources they had for expansion, the consumer, in whose interest control is imposed, should now be called upon to pay the cost of their rehabilitation programme which all the available evidence shows was delayed so long."

The growth of the sugar industry since the grant of protection in 1932 has been truly phenomenal. "Whereas there were only 29 factories in 1930-31, the number in operation had risen to 157 by 1957-58. Progress has been particularly remarkable in the last decade. In the course of this period, sugar production increased by about 100 per cent from slightly more than a million tons to 1.98 million tons, while consumption increased from 1,185,000 tons in 1948-49 to nearly 2,100,000 tons in 1958-59. With the licensing of additional capacity under the Third Plan, to meet the anticipated rise in demand arising from rise in the standard of living, shift from gur and khandasari to crystal sugar and growth of population, production should be headed further upwards.

Complaint or Commonplace

In an address to the Industries Minister of Andhra Pradesh, the Andhra Chamber of Commerce in Madras referred to the need for a financial corporation that would screen and underwrite new issues, offer technical advice, take up shares, and advance loans, if necessary, to promising ventures. It indicated that a new agency, more vigorous and resourceful than the State Financial Corporation, is needed at present. Whether the ICIC should be supplemented by a decentralised agency may be debated, but some banks and insurance companies are thinking of branching out into the field of "mixed" banking, mainly for the use of the larger funds at their disposal. The selection of investments, the nursing of infant concerns, and the placing of shares at some stage can be deemed part of the work of Trust companies on the US pattern, and it is fairly certain that, in a new mood of confidence, the investing public may provide long-term deposits for such new agencies. Whether foreign collaboration is necessary for proceeding with the provision of extra facilities is doubtful, but good work may be done by retired civil servants for whom a second career in business would be opened up easily. The Minister for Industries in his reply to a plea for a more vigorous development of industry in Andhra Pradesh mentioned his desire to reduce power tariffs, water rates and adjust sales tax to the requirements of new industry. The Centre may permit such adjustments without prejudice to the competing concerns, and if sugarcane cess were modified, the sugar industry in Andhra may develop more rapidly than in Madras or Mysore. But the cement industry will not gain, as any relief from excise is out of the question and the recent wage award will press on the cement manufacturers.

The lack of capital in Andhra Pradesh for organising new industry was mentioned openly and it is merely an endorsement of the academic view that joint-stock enterprise has not yet struck root in Andhra, and the record of the Industrial Trust Fund does not encourage outside capital to come in. However, Mr A. C. Subba Reddi hopes that entrepreneurs from other States will be inclined to start new ventures in Andhra Pradesh, where the tanning and leather industry, for instance, is dormant like the glass industry. Of course, the paper and artificial

silk industries have been nursed back into health by transfer to the private sector and the future may be appraised hopeful if a pig iron plant is started in the State. Only limited benefits have so far accrued from the shipyard and the oil refinery and the limited hydel power supply has stood in the way of the growth of engineering industry. That Telangan is better off in respect of industry and ryots in the Circars have not invested in industry are commonplace rather than complaints, and it is evident that the planners in Andhra who wish to start manufacture of electric motors, diesel engines and wire ropes must be able to draw in both capital and expertise from other States, though, in regard to fertilisers, the proposed factories in Madras may find the Andhra market more dependable, owing to the steady expansion of irrigation facilities, and the effective use of molasses may help the cultivation of export crops like tobacco.

"Heart of India"

The inquiry conducted into the economy of Bihar by the National Council of Economic Research dwells on the problems of overpopulation and the differences subsisting between North Bihar and South. The decline of indigo, and latterly of sugar, complicates the economic problem for the North and it is but fair to remember that the sudden decline of the big zamindar and earlier the earthquake of 1934 had aggravated the difficulties. That outside capital has flowed into Bihar, though coal-mining has been for two decades a depressed industry, must be mentioned as also the outlet for Bihar's surplus labour found in both Bengal and Assam. The recent economic survey as compared with Sir John Houlton's account of Bihar (Longmans 1949) may not dwell on the forests or minerals but it must be noted that in Singbhum are found the main resources for heavy industry in India, and Ranchi has been transformed already from a health resort to an industrial centre. The lack of cotton or jute mills cannot be called a handicap when Bihar produces lac as well as mica for export, and if large expensive industrial units preponderate, the gain is really that of organised labour.

That heavy industry, has created towns like Jamshedpur is wholly to the credit of the outside capitalist and it may be added that Kumbhari and other concerns have endowed Bihar with an engineering industry and the Company-managed railways had truly contributed to the growth of coal-mining. The plea for small scale industry is in part derived from the contrast between North and South Bihar, but it may be mentioned that the Sindri plant represents new massive investment by the Centre, and the postwar railway extensions have helped South Bihar

more than any other area. Accelerated growth of small scale industry largely depends on local capital and it must be ascertained whether the response to the challenge will come promptly from the agricultural classes. To urge that Government should do more for rural housing and education and help small industry, when the extractive industries have not come along rapidly, is to miss the point that, for a century, Bihar has depended on Bengal for both capital and enterprise and the difficulties of the former explain to some extent those experienced by the latter. The future cannot be viewed without reference to the past, but there is no reason to think either that industrially Bihar is backward or that land reforms will strengthen the essential agricultural base. The enlargement of opportunities may well come from the opening up of Nepal and the effective use of forest wealth in the south-west as well as the north. Incidentally, the latest survey is but one of a series starting with the inquiries of Buchanan-Hamilton into the life and labour of what is felicitously called the Heart of India by Sir John Houlton.

Aluminium in Mysore?

Mysore's Chief Minister, Mr B. D. Jatti, told the State Assembly recently that the industrial tempo in the State as a whole had increased during the current plan. Industrial production had risen from 40 crores to Rs 60 crores. Employment potential had also increased by about 10,000. A total of Rs 90 crores had been invested in different concerns worked by the Government and, in these, production was worth over Rs 21 crores.

There was a proposal for setting up an aluminium plant in Mysore State, preferably in the Karwar-Gokak region. Mr Ligate of the Indian Aluminium Company had submitted plans on the Central Government's advice, and Mr Jatti stated that this plan seemed to be attractive and that the State Government were considering the proposition.

Mr Jatti said Government themselves were thinking of a paper mill at Ugar in Belgaum district utilising bagasse. A West German proposal to start a paper factory was also another scheme about which a decision would have to be taken soon.

As for the raw material for the proposed aluminium plant, Mr Jatti said that it would not depend upon the Mysore ore only. Kerala, Kolhapur and Saurashtra bauxite would be quite suitable and the ore would be got by sea from these centres.

Will a private party be allowed to generate electric power for the aluminium plant? This seems to be a question agitating the minds of both the Mysore and the Central

Governments. For the proposed aluminium plant for which Mr Ligate had put up proposals, he had also submitted a power generator from the two tributaries of the Kalinadhi river in Mysore. If the financial aspect is thought of and if the Government wished to give the power project to a private concern, there need be no qualms about it even on the basis of sharing the outlay in some proportion so that there might be state control over power production.

Regarding the Kolar Gold fields, which had been taken over by the State some years ago, Mr Jatti stated that it had earned a profit of 61 per cent after paying Rs 19 lakhs royalty. The Government electric factory earned a profit of about 35 per cent and the Mysore Government Soap Factory about 37 per cent.

Mr Jatti said that there was a proposal to set up a cooperative spinning mill in Belgaum district and some cooperative sugar factories at Mogatkanhalli, between Dharwar and Belgaum. The revival of the Dharwar cotton mills with a total spindlage of 15,000 was also thought of. In this Bijapur district, a cooperative spinning mill was likely to be set up soon, and the Government were eager to help this industry with an investment of Rs 10 lakhs or even Rs 12 lakhs in this cooperative venture.

Science and Defence

Mr J. R. D. Tata, President of the Court of the Indian Institute of Science, while recently addressing the General Assembly of the Institute in Bangalore, asked: "have we in fact the potential to sustain even a limited war if one were forced upon us?"

He posed this question while pleading for greater coordination among scientists, engineers and other highly trained personnel in the Defence Administration Services. Uneasiness had been caused by recent events on India's northern borders, and there was anxiety about security. India had decided to remain aloof from power blocs as a matter of basic policy and for good reasons. Therefore, said Mr Tata, India should inevitably depend on its own resources and on the use it could make of them. "What is the state of defence technology and science in our country? Is there adequate coordination between those responsible for defence and those engaged in science and technology? Has sufficient thought been given to correlating scientific activity to defence needs in times of emergency?" Mr Tata asked.

Mr Tata thought that the Bangalore Institute could be utilised in a number of ways in service of the nation. The security of a democratic state, he believed, depended on self-knowledge and on the confidence based on such knowledge that the people had in the pre-

paredness of their country their Government and their military apparatus.

Mr Tata felt that there was far too much secrecy about defence in India, even in regard to things of little importance or in regard to facts too well known to a potential enemy. He did not claim to know about the military resources of country or about the means at the country's command, the size of the armed forces and the range of the weapons, munitions and military stores they could make or were capable of making. In this connection, he felt that scientists, engineers and others highly trained had an important role to play in assisting in the military preparedness of the nation.

In case there should be any serious emergency, Mr Tata asserted, there should be a greater degree of coordination between them and the defence services than there was today.

Next, he pointed out the dearth of design engineers in the country. The different disciplines in the Bangalore Research Institute suited the establishment of design engineers training centre. The project on instruments designing and development would be of great value in this context. The Instruments Committee of the Planning Commission had strongly recommended the setting up of designing and development units, and the joint Committee of the Court and the Council felt that one such unit should be located at the Institute. The provision of an M.E. Degree course in machine design in the Mechanical Engineering Department was also stressed by Mr Tata.

In the Electrical Communication Engineering Department, facilities hitherto utilised for training at the degree level would be gradually made available for turning out engineer scientists who would, after advanced study in mathematics and physics at the M.Sc. level, enter the engineering field and receive the kind of practical and theoretical training that would fit them for research and development work. Mr Tata also wanted the Institute to make a distinct contribution to bridge the gulf separating them from advanced countries in matters of industrial design and in the problems that only trained design engineers could successfully tackle. The Institute should adopt flexibility in regard to promotion and recruitment procedures if only they realised they had to preserve both individuality and encourage initiative.

Stressing the need to increase research, Mr Tata wanted liberal scholarships, already provided, be further stepped up.

Finally, the pace of India's technological advance would depend on its ability to reach the point of economic take-off, and Mr Tata hoped the Institute would, in times ahead contribute splendidly to India's advancement.

FOREIGN NOTES

A Place in Spain

Not atomic weapons but bases abroad are now the issue associated with German rearmament. After the flurry about air fields in Spain for Germany's use and the sharp argument that was provoked, there is a claim by Herr Strauss for the consent of the NATO Council for bases outside its territory. A place in the sun may be an outworn phrase, but Germany's industrial power has led to a reiteration of a plea at Paris for bases. It may be Mr K's visit that has led to a formal claim for a full alliance to permit Germany to use arms for a common purpose. It is evident that Herr Strauss is not deflected by Western suspicion of Spain or the distaste to let Germans enter Spain and not merely to share with the USA in the reorganisation of Spanish defence forces. The current moves for disarmament do not probably impress Germany, which can re-enter the arms traffic by sale of surplus to a country like Spain in return for mineral ores or other Spanish exports. The effectiveness of forces can be raised by training overseas and the USA can scarcely counter the argument in view of its own bases in the Pacific. And Britain, still bargaining for a base in Cyprus, and still in possession of Malta and Gibraltar, can present no convincing argument against the German claim for bases.

Since NATO is built upon military bases from Iceland to Morocco, and the way to repel the German plea is hardly obvious, it is clear that the Summit conference will have another issue connected with Germany's future. The economic integration of Western Europe admittedly strengthens Germany's case, but the Socialist parties will not be impressed by the plea that an integrated supply system is needed. However, the expected loss of economic power by Belgium and French pre-occupations with Algeria may help Germany to press its point of view, and it is not surprising that, in the event of losing face in Berlin, the West German Government is anxious to show results at home from the tie-up with NATO. It is also well to recognise that militarism has economic objectives and the export drive cannot but have wider ambitions based on Germany's past.

ECAFE Survey

The Ecafe Survey for 1959, while drawing attention to the all-round progress in industrial and agricultural production which set up new records, has also emphasised the con-

tinuing imbalance between needs and resources of most of the countries of the region. A review of the foreign trade of the primary exporting countries of the region, covering a period of three decades from 1927 to 1957, shows that the chronic payments difficulties of these countries have not been caused by accidental or short-term factors; projections of trade trends show that the imbalance is likely to continue. Over the period as a whole, it was found that the primary exporting countries of the region fell behind not only the industrial countries, but also the rest of the primary exporting countries both in the volume of exports and in their value. Terms of trade have deteriorated since 1951. On the other hand, programmes of industrialisation on which these countries have embarked, and increased defence commitments, have resulted in larger imports which have grown much faster than the capacity to pay for them with exports. The region as a whole, which was a net exporter of foodgrains three decades ago, has now become a net importer. The implications of the changed pattern of trade disclosed by the review demand the urgent attention of governments and the adoption of trade policies which will reduce their growing dependence on the industrial countries for imports of staple foods and essential raw materials. As the scope for increasing the traditional exports are not encouraging, the countries in this region will be well advised to adopt a programme of regional self-sufficiency, to the maximum possible extent. Such a programme, which co-ordinates the development plans of individual countries, has greater chance of success than unilateral efforts at export promotion. The survey has pointed out that the primary exporting countries of the region may find it necessary to consider the question of promoting intra-regional trade. A proposal for setting up a Free Trade Area, sponsored by four countries—Philippines, Thailand, Malaya and Viet Nam—emerged at the last meeting of the ECAFE at Bangkok.

Consumer Confidence Returns in USA

It is one thing to say that conditions are ripe, in terms of incomes, employment and general business activity, for an upturn in consumer spending in the US but it is quite another thing to say with any reasonable degree of assurance that the buying public will see these conditions in the same favourable light, and will feel sufficiently well-off and confident to be willing to open their purse strings wide enough to assure such an upturn.

And while the current rate of US economic activity is undeniably high and vigorous, there is little doubt that consumers will have to step up their spending above present levels if the optimistic projections about 1960 economic prospects are to be realized.

With this in mind, there is an important message to be read in the results of the latest survey of consumer attitudes and buying intentions, made public last week. The survey was conducted during Janu-

ary and February by the Survey Research Centre of the University of Michigan, and its message is this: Public uncertainty in the wake of last year's lengthy steel shutdown seems to have passed, and consumer confidence in the future has rebounded to near-peak levels.

If consumers act the way this survey suggests—and historically, its results have proved to be remarkably accurate omens of consumer behaviour—economists can put behind them any serious worries about 1960 business trends.

On the question of consumer buying plans, the survey uncovers a 20 per cent rise over a year ago in intentions to purchase automobiles in the next 12 months. An important stimulant seems to be the new compact cars, which appear to be winning favour with the buying public. Since these cars tend to cost less than the standard, full-sized vehicles, the median planned expenditure for automobiles is slightly below last year's.

Plans to buy houses also have picked up considerably during the past few months, after sagging last spring and summer under the impact of rising interest rates for home mortgages.

Of course, as has been pointed out by George Katona, head of the Survey Research Centre, consumer moods are important keys to spending plans. And these moods tend to reflect what are often highly subjective judgments about personal financial prospects and the prospects of the economy in general.

Here again, the survey provides a cheerful note. About 40 per cent of those questioned—the highest count yet on this particular subject—expect to be better off financially a year from now, compared with 33 per cent in the Centre's previous survey last winter.

Consumer confidence soars even higher when it comes to the outlook for national business conditions. Close to 75 per cent of those questioned see good times ahead for the country as a whole in the coming year, compared with 61 per cent last October and November. On the other hand, those who are clearly pessimistic have shrunk to seven per cent from last winter's 13 per cent.

While these results point unmistakably to rises in consumer confidence and outlays, there are a few qualifications that should be taken into account. For one thing, despite the significant upturn in the Centre's indexes of consumer attitudes and buying intentions, these are both a little below the peaks reached in the 1955-56 period.

For another thing, the survey finds that consumers still are wary of rising prices, despite the stability of the past year. And while this awareness of inflationary dangers can be considered a healthy development, it still could act as something of a deterrent to some of the more ambitious spending plans.

Yet even these qualifications have their brighter side, insofar as they indicate that no runaway "boom" in consumer outlays—with its possibly harmful after-effects—is in the making. As the Centre concludes, "consumers' current inclinations to buy promise a positive stimulus to the American economy."

Indian Finance

9 April 1960

Assorted Exports

IT is to the Indian Trade Journal that one must turn to learn what varied exports are shipped at present. The rules for drawback of excise paid by manufacturers lay down that rate of drawback can be varied and exporters will have to give particulars to the Government, about goods used if required. Shipment, before rebate is allowed, is also envisaged but exporters have to put in a claim for drawback. Among goods that qualify for drawback are art silk fabrics, plastic goods, crown corks, steel products including tin containers, and steel wires. Agricultural implements in which steel is used are also now held eligible for export.

The concessions are inspired by the levy of a new duty on steel, but the drawback is variable, ranging from Rs 550 per ton to Rs 52 per ton of steel used in manufacture. A small drawback on chemicals shipped abroad figures in the recent Government notification, and India seems to be exporting glass, glassware, playing cards, carbon paper and blotting paper. The higher excise levied by the latest Budget is offset by the new concessions. There is a drawback on plywood as well as on staple fibre yarn and rackets strung with nylon guts. The exporter of gold jewellery, if authorised by the Reserve Bank, is also eligible for drawback at Rs 15 per tola of gold if it is proved that only imported gold has been used in manufacture. This, of course, is a condition hard to satisfy. Drawbacks are allowed on silver articles up to 50 nP per ounce. This concession applies to cultured pearls also on the same condition. The export of ground and roasted coffee, glycerine, etc., is encouraged by the new rules. As for colours and paints the same relief is available. The export of cigars is encouraged and India is trying to push its plywood chests into new markets. Polo sticks, paper clips, bicycles, dyestuffs, electric fans, tooth paste, umbrella ribs, spark-plugs and diesel engines are also among the exports. Where imported materials are used, the Customs duty paid plus the excise are taken together for calculation of the drawback payable to exporters. Among exports now made possible by local manufacture are air conditioners, typewriters and stainless steel furniture as well as textile machinery. The volume and value of these assorted exports can be learnt only later on but it is now apparent that India can make a lot of things for export and prices charged abroad will be lower be-

cause of the tax relief available to exporters. The cost of these concessions cannot be calculated precisely at present, but it is good to find that aluminium conductors and cables made in India rank among the goods on which excise is refunded, as is only proper.

—And Exploring Markets

India's future well-being as a nation will depend on whether or not we are able to effect a sizable improvement in exports. In view of the heavy burden of foreign loans already contracted and will be contracted during the next few years, it has become imperative that ways and means should be devised of earning sufficient foreign exchange to service loans, to meet the continued large requirements of imports and to make repayment of maturing liabilities. This can be feasible only by considerably enlarging export earnings. The additional income has largely to come from new products, since India's traditional exports are unlikely to increase substantially their contribution due to stiff competition from other countries exporting such products. In this regard, engineering products have already shown great promise. Much of this is to be attributed to the sustained effort put forth by the manufacturers and by the Engineering Export Promotion Council.

A delegation of this Council recently visited countries in South America, the US and the Caribbean Islands with a view to exploring the possibilities of increasing exports of Indian engineering goods. It has now returned convinced that Indian products have a splendid opportunity in all these markets. The Caribbean Islands and the Central American countries can be made to take in a sizable quantity of Indian goods as they import a good deal of consumer goods to meet the needs of the large tourist traffic.

The delegations' findings in the US have made it clear that the fact that a country is far ahead in industrialisation does not necessarily mean that there is not much scope for selling Indian engineering goods there. The idea was exploded when USA began to evince interest in some engineering goods like sewing machines. The delegation has now succeeded in creating a demand for iron and steel-based components manufactured in India for incorporation in final products in US industries. The availability of raw materials and the comparatively lower labour costs in India seem to have opened up new possibilities of Indo-American industrial cooperation for mutual profit. Perhaps, the most valuable result of the delegation is that it has spread the news that India offers a wide range of engineering products of good quality and at competitive prices.

Although we have in recent years been sending a number of

delegations to foreign countries with a view to exploring new outlets for the steadily increasing range of manufactured products, much still remains to be done. The latest EEPC delegation has shown that potential markets have not been aware that, besides traditional commodities like jute and tea, we can also offer finished products like engineering goods. There are still many other countries which have not been adequately explored. This work should properly belong to trade delegations. But there will still remain the task of publicity and sales promotion, as an integral part of modern trade and commerce; and, on these aspects, we have to devote our concerted attention if export promotion programmes are to yield the desired results.

Janata Cars

There is nothing reprehensible in the plan for a People's Car to be made in the public sector. But Janata policies have not made headway, and there is the bad example of the People's car in Germany under Hitler. Of course, the postwar period has made the Volkswagen both popular and universal, giving the shareholders more than their money's worth. But only a different regime has provided redress to the creditors of the State who had subscribed largely for a new automobile.

The decision to exclude the private sector from small car manufacture will raise mixed feelings. There is, however, a promise to liberalise essential imports for the struggling automobile industry, and the Jha Committee's recommendations inspire the proposal to encourage the manufacture of ancillary parts so that concerns started in 1958-59 can count on tariff and other advantages. The price of the small Swadeshi car of the future is put at Rs 6,000 to Rs 6,500, but doubts are expressed already about the price. And the new excise may well raise the price ultimately paid by the consumer. A consequence of this decision may be a rise in the price of small secondhand cars which are latterly becoming more expensive. The larger supply of spares to keep them on the road must be ensured in accordance with demands made by users as well as traders. Even the removal of control on the sale of new cars may appear desirable to many, who feel that the restoration of full competition is necessary for raising both the output and sales of new cars. The entry of the public sector into car manufacture, probably at Bangalore, will certainly lead to new claims for wage increases in an expensive city.

For Cold Comfort

For a new entrant in India's industrial sphere, the record of the refrigeration and air conditioning industry is commendable. Like many modern amenities, the refrigerator and aircooler are also fast becoming items of necessity in-

stead of being viewed as symbols of luxurious living. It is but a natural development that the demand for these should record a steady increase with the improvement in the standard of living of the people. But, as yet, the common man is deriving the benefit of these amenities only indirectly, when he goes to his office or factory or when he visits a picture-house or a restaurant in the big cities. Actual possession of the amenity is still limited to the upper stratum of society. It is, however, increasingly being realised by employers that air conditioned work places increase the efficiency of their staff.

Refrigeration has a wider and perhaps more important function. Here, the emphasis is on its aspect as a means to check wastage and ensure proper preservation. Cold storage has opened up new possibilities in food preservation. Perishables which were going waste previously can now be kept for a considerably long period without their losing any of their nutritive properties or freshness. In the course of his speech at the annual meeting of the Indian Society of Refrigerating Engineers, Mr P. Kutar has pointed out that, even at the present high price, a refrigerator will pay for itself in a year or two. This is largely because it helps cut down waste in the form of excess unusable food.

Refrigeration and air conditioning are becoming inevitable needs with the rapid progress of industrialisation. Mr Kutar has added that recent studies have shown that airconditioned offices increase efficiency of the staff by 30 per cent while absenteeism is reduced. It is also wrong to think that airconditioning is costly, because, unlike ordinary buildings, airconditioned buildings need no high ceiling or electric fans and the cost of maintenance is also comparable. Air conditioning is indeed a great boon for industries which have a large number of precision instruments to maintain, as in ordinary conditions the delicate instruments often can work only with reduced efficiency.

One of the reasons for refrigeration and airconditioning being looked upon by the majority of the people as possessions fit for the wealthy, is their present high cost. If these are available at prices within the purse of the middle class people, there will be a big increase in demand. Therefore, the industry has a great opportunity now in the shape of the drastic import restrictions firmly to establish itself. Furthermore, we are told by Mr G. Ramchandani, President of the Society of Refrigerating Engineers, that the industry has the active support of Government. The initial shock of the import ban has slowly given place to confident endeavour to make the products indigenously. And, in this the industry has achieved signal success in the short space of the past three or four years. Indigeneous production is now to the tune of Rs 2.62 crores and the targets

for the Second Plan for the three categories are: Domestic refrigerators 25,000; Window Airconditioners 25,000; and Water Coolers 3,000. The industry expects to have a much higher target for the Third Five Year Plan, which is as follows: Domestic refrigerators 50,000; Window Airconditioners 50,000; and Water Coolers 20,000. With the rapid expansion of production, prices can be brought down and Mr Ramchandani seems to be confident that attractive prices levels can be attained in a few years. It is also encouraging to note that certain types of steel plates needed by the industry, which are now being imported, will shortly be made available from the Rourkela Steel factory.

As in most other industries, in the refrigeration and airconditioning industry also, there is need for personnel planning. Improvement both in quality and quantity is essential for taking care of the growing needs of the industry and the consumers. It is gratifying therefore to note that the Society is doing its part by providing training facilities. But the task is too big to be carried out by the Society alone. As an adequate number of trained personnel will be in the interests of the industry as well as the consumers, there is need for joint effort from all concerned in assisting the Society to expand training facilities to the required degree.

Paper : Book Profits Fall

Mr G. L. Bangur, Chairman of the West Coast Paper Mills Limited, has raised an important point in his speech at the annual general meeting of the company in Bombay last week. According to him, the fair prices fixed for paper by the Tariff Commission do not ensure that the essential needs of the paper industry are not unduly jeopardised. The present selling prices are not such as to leave "sufficient resources for the expansion of the existing units and which also attract new entrepreneurs in these industries."

Of course, the rapid progress of the industry is of deep interest to Government. For, India is still far from self-sufficient in paper and paper products, and there is now an acute shortage in many of the common varieties of paper. It is primarily with a view to protecting the interests of the consumer that the new paper prices have been formulated. There is therefore no doubt whatsoever that paper production should be stepped up considerably as quickly as possible. The fact that the target for paper production during the Third Five Year Plan is fixed at 900,000 tons (nearly double the Second Plan target) is an indication of the big leeway that has to be made up in paper production in the next five years if a paper famine is to be averted. But mere formulation of plans or the issuance of licenses will not do the trick. Private en-

terprise, to whom the task of meeting the increasing demand is entrusted, should be given sufficient incentives so that it can mobilise the necessary resources. But it has been protesting, ever since Government's acceptance of the recommendations of the Tariff Commission, that the new paper prices will seriously interfere with expansion programme because there will be little left of the profits to be ploughed back into the business.

The Tariff Commission also seem to have ignored the fact that there are many units in the industry which have come into being only in recent years. For instance, the West Coast Paper Mills is a new unit which has started production only since the middle of last year. The new selling prices apply to this company also. It is to be hoped that, as a result of the fresh discussions that the Commission are having with the representatives of the company, all new units will get a fresh deal with regard to the selling prices of their products.

Housing & Economic Growth

A growing body of authoritative opinion supports the view that the surest means of accelerating the pace of economic growth is an imaginative housing programme. The net shortage by the end of 1961 is estimated at 5.9 million houses. Some measures for mobilising the financial, technical and material resources for a housing programme of this magnitude are suggested in a paper prepared by Dr S. D. Punekar. The measures suggested include the establishment of a Housing Finance Corporation in each State to serve as a central financing agency, tax concessions, subsidies, rent regulation, use of modern techniques of economic construction, administrative coordination and provision of essential municipal services such as sanitation, drainage, water supply, roads, etc.

A programme for housing should take into consideration how and where the people who are to live in the houses earn their livelihood. Inadequate attention to this aspect has been responsible for the slow growth of ambitious schemes for development of satellite towns. The improvement of standards of rural housing depends on success of measures to achieve a sizable increase in rural incomes. Programmes of slum clearance in urban areas should be accompanied by planned dispersal of industries. National housing policy should form part of an integrated programme of regional planning including the location of industries.

IISCO's 3rd Rolling Stand

The formal commissioning of the third Rolling Stand in the Rolling Mill of the Indian Iron and Steel Company Limited at Burnpur by Sir Biren Mookerjee heralds the

completion of an important stage in the expansion programme of the Company. Claimed to be the most modern and the biggest of its kind in the country and operated by Indian Engineers, the new mill will engage in the production of beams, broad flanged beams, angles and rails of different varieties. It is reported that the new plant will account for almost double the quantity so far produced by the two mills already in operation and the total output of the IISCO will be to the tune of over 25,000 tons a month.

In the course of the Press conference held after the opening ceremony, Sir Biren Mookerjee highlighted the importance of careful implementation of the stage-by-stage expansion programme for maintaining a steady flow of products. He pointed out that the paucity of essential raw materials for the Iron and Steel Industry, which has already hampered production, will be increasingly felt when more steel works are put into commission. He complained that the use of a poor variety of coal and limestone has not merely resulted in lowering the production capacity but also pushed up the cost of production. In addition to these, the recent enhancement of railway freight rate will also have its toll in impeding the progress of the industry in general.

Tobacco Unhappy in Andhra

Tobacco worth Rs 35 lakhs remains unsold in the Mangalagiri area in the Andhra State, according to Mr N. Ramachandra Reddi, Andhra's Agricultural Minister.

The Indian Leaf Tobacco Development Company bought 3,000,000 lbs at the intervention of the Union Government last January. The National Tobacco Company may lift another million lbs.

Mr Yellamma Reddi, the member who sponsored the "call-attention" motion in the State Assembly, said that Virginia tobacco worth about Rs 1 crore to Rs 1.5 crores was lying with the Mangalagiri growers. Price fluctuations placed the growers in a very difficult situation.

The Minister said that the Indian Leaf Tobacco Development Company and other major buyers had completely stopped buying Mangalagiri tobacco since 1959-60 season as tobacco grown in this area was not acceptable to foreign traders. It was found that this tobacco was unsuitable for cigarette manufacture. Since this tobacco was grown in low-lying areas, the manufacturers were of the view that this leaf proved unsuitable to the purpose. Despite this warning, growers had cultivated this variety extensively in 1,800 acres in 1958-59 and this was more than the area in which tobacco was cultivated in 1957-58.

The State Government had been urging upon the Union Government to take expeditious steps to relieve the distress and it was at their instance that the ILTDC bought 3 million lbs.

(Andhra Pradesh produces 95% of the total production of Virginia tobacco in India. It also accounts for 80% of the export of Virginia tobacco from India.)

Watch Factory

With the signing of the agreement between the Government of India and the Citizen Watch Company of Japan for the installation of a watch factory in India, the manufacture of low-priced quality watches in the country has become a certainty. The proposed watch factory will be located in the vicinity of the Hindustan Machine Tools Limited and will manufacture low and medium priced watches with all the technical perfections of costly ones.

The factory, which is expected to go into production during 1962, will attain full production of 360,000 watches from the sixth year onwards. The indigenous components of the watches will also progressively rise to about 84 per cent from 54 per cent by that time. However, items like main and hair-springs, shock absorbers, and jewels will have to be imported for a considerably long period. The import of plant and other equipments will be financed out of the Yen credit facilities made available by the Japanese Government.

The capital cost of the plant and equipment over the next plan period will be to the tune of over Rs 70 lakhs. The Japanese firm will assist the Union Government in the establishment of the factory, in the preparation of specifications for the plant and the equipment, supply of technical know-how, research and development. Apart from these, the Citizen Watch Company will also train 100 Indian technicians for a period of five years in its watch factories.

Rubber in January

Rubber consumption in India during January 1960 outstripped production, according to Rubber Board statistics. Consumption in January amounted to 3,205 tonnes against output of 2,438 tonnes. Corresponding figures for January 1959 were consumption at 2,866 tonnes against production at 2,324 tonnes. Imports of raw rubber in January 1960, however, declined to 488 tonnes from 671 tonnes in January 1959. Stocks at the end of January 1960 were 10,496 tonnes against 11,716 tonnes at the close of January 1959. Stocks with estates and dealers also declined to 5,770 tonnes from 5,950 tonnes; and stocks with manufacturers went down to 4,726 tonnes from 5,766 tonnes in January last year.

Cashew Prices Firm

Cashew exports from the West Coast ports have again boomed due to the recent Russian purchase of 40,000 cases and with sustained US inquiries for April and nearby shipments.

An export House in Madras told an Indian Finance correspondent that there is a possibility of the Eastern European countries, in combination with Russia, importing 200,000 cases in the coming months.

The United States of America has waited so long apparently for the prices to go down, but with the Communist countries keeping up their fervour for cashew from the West Coast ports, the US also contracted for about 15,000 cases for July-September shipment. There are indications that New York importers would lift about 400,000 cases in the next six months.

Alleppey and Cochin report that price of raw cashew has been high since the foreign inquiries for processed nuts has gone up. East African cashew has risen from Rs 840 to Rs 900 per ton for unprocessed nuts. This year, the import of cashew nut has been higher by 15,000 tons at 75,000 tons. The local price of cashew has also gone up on a parity with the East African nuts.

Pyrites in Bihar

On the recommendations of the Norwegian expert appointed to explore the possibilities for the exploitation of pyrites deposits found in abundant quantities in the Amjor area of Bihar State, the National Industrial Development Corporation has decided to set up a new plant in that locality for the manufacture of sulphur, sulphuric acid and other products from this valuable minerals. The new company—The Pyrites and Chemicals Development Company Limited—which will have an authorised capital of Rs 5 crores, will undertake the mining of large quantities of pyrites ore and then these will be smelted and converted into sulphur. The initial smelting capacity of the new project will be to the tune of 200 to 300 tons a day and this capacity is likely to be expanded later.

It may be recalled that, at present, India imports over 120,000 tons of sulphur every year, and the production of this important material, which is essential to the various chemical industries, will be of immense help to the nation in bringing about a substantial saving of foreign exchange.

Mr K. N. Kaul, the Chairman of the National Mineral Development Corporation, will also function as Chairman of the new company. The Board of Directors includes representatives of some Union Ministries, the chemical industry and labour.

Coal-Washing Plant for HSL

A contract to supply a coal preparation plant at Bhojudih, in West Bengal, has been placed by Hindustan Steel Ltd with Coppee Co (Great Britain) Ltd. The plant, which will cost about Rs 2 crores, consists of a separation plant for the larger sizes, with a cyclone washing machine for the "smalls".

This cyclone-type washery, the British company states, will be the

first of its kind to be installed in India.

About half of the total contract, it is understood, will comprise Indian-made materials and labour. The plant will be in operation in 1962.

The company said: "Indian coal, in general contains a large proportion of intermediate material, and the efficient separation of the dirt from the clean coal is not easy. The cyclone plant to be installed is specially designed for high efficiency separation of 'smalls' such as will be encountered in India."

The firm added: "The production of steel in India depends on the supply of the correct type of coking coal to produce the necessary coke for iron-making. The Indian Government, through Hindustan Steel, has embarked on the provision of a number of coal preparation plants to produce the required type of coal, and a very extensive programme to provide such plants is envisaged in the near future."

An office has been set up by the British firm in Calcutta, and a manager and other staff are shortly leaving Britain to assist in carrying out this contract.

Further Schemes of Drawback

As a measure of export promotion, the Government of India have decided to allow drawback of Customs and Central Excise duty paid on materials used in the manufacture of cork wadding, tea chests, typewriters, mild steel pins and clips, impregnated varnishes and super-synthetic enamels used in the electrical industry and fishnet twine or cord. Changes have been made in the rates of drawback for paper products, potassium citrate and mild steel pipes black or galvanised.

Paper Machinery

The installation of the pulp and paper machinery manufacturing plant, the first of its type in India, at Dalmianagar can be rightly considered as an important stride in the industrialisation of the country. The credit of embarking on this new venture, which is destined to expedite the development of small scale industries, goes to The Rohas Industries Limited, a leading producer of paper and board in India. The new plant, with a capacity of producing 25 units a year, is expected to release its products in the market shortly.

Inaugurating the plant, Mr Manubhai Shah, the Union Minister for Industries, drew pointed attention to the need of developing small scale industries in the country to help solve the problems of poverty and unemployment. Quoting examples of industrially advanced countries like Japan, Germany and the United States of America, the Minister pointed out that, apart from providing employment to the people, the small scale industries can even help the nation in earning a sizeable amount of foreign exchange by exporting their products.

Indo-German Economic Cooperation

Going round Calcutta's Industrial Fair, I found a stall devoted to illustrating West German economic cooperation with India, and was presented with a book entitled "India's Silent Revolution" by J. M. Hunck, published by Verlag Handelsblatt GMBH, Dusseldorf. A beautiful production, it is obviously a tribute to the technical skill of German printing, but it also proved a most readable and interesting study of Indo-German economic co-operation. First published in 1958, it was revised in September 1959, and its avowed aim is to promote a closer exchange of views between the people of India and Germany and to develop trade between the two countries.

Our industrial ties with the Federal Republic of Germany are very close. India is West Germany's biggest customer after the United States. There are more than a thousand Indian students and trainees now in West Germany. German firms have participated in construction work in several river valley projects, in hydraulic and electrical work, in the sugar industry, and milk sterilization plant. German advice and assistance has also been generously given on such problems as harbour installations, water resources, coal mining, exploitation of oil, fertilisers, manufacture of bamboo pulp and so on. Kandla Port is evidence of German economic assistance, and the Madras Institute of Technology was equipped as a present from the Federal Republic on the occasion of Mr Nehru's visit to Germany in 1956, and is being largely staffed in its early years by German teachers and skilled craftsmen. Even in the field of tourism, Germany has shown an increasing interest in India, and the number of Germans who visited India rose from 920 in 1955 to 3,000 in 1958.

It is always useful to see ourselves as others see us, and it is therefore worth while to consider the comments of such a friendly critic as Mr Hunck. First, in the field of trade, he finds a quite "exceptional" disproportion between Indian imports from Germany and Indian exports to Germany. This he finds disquieting and says the remedy lies in the manufacture in India of more goods suitable for export markets: "if necessary at the expense of internal consumption." He quotes the First Secretary (Commerce) of the Indian Embassy at Bonn as saying that "no serious attempt has been made to cultivate the German market." Import facilities for Indian cotton fabrics granted by Germany in special agreements, he says, "were not even utilised."

Referring to the example of Japan, Mr Hunck points out that it is "by

no means impossible steadily to develop what was originally a small market." After Germany adopted the system of global quotas in 1957, he feels Indian export of cotton goods could have been considerably expanded. The Japanese offer competitive goods designed to attract the German market. The attractive patterns of Indian hand-woven fabrics are popular in Germany, but much more could be done to interest the market in manufactured cottons.

A similar comparison with Japanese methods was made recently by an American lady. Indian designs, she said, were very popular in America and manufacturers in the clothing industry there were buying cloth from India and manufacturing ready-made dresses which sell at high prices, although the cost of the cotton fabric is cheap. Japanese manufacturers, however, are making up garments to American specifications and selling them at cheaper rates in the American markets than the local manufacturers. Ready-made dresses, manufactured in India to good designs, would provide India with an excellent export market in the States, I was told.

"Indian prices are not higher than the Japanese, but potential buyers are not nearly well enough acquainted with Indian goods." In October 1955, in a radio talk, it was announced that the Indian Government would arrange a permanent display of raw materials and finished products at Hamburg. "Since then," adds Mr Hunck, "much water has flowed along the river Elbe, but there is still no display."

Naturally, German importers need to be able to inform themselves not only on the quality of Indian goods, but on export regulations and possibilities. In the past, there have only been two or three Indian importers resident in West Germany, and the Indian export trade has had little information on the German market. Fortunately, the Frankfurt Export Promotion Centre is helping, and since this book was written, an Indian Trade Centre has been set up under Mr R. M. Phillips, a former official of the Indian Ministry of Commerce and industry. This provides a permanent exhibition of Indian goods and a "pattern-book library." An Indian Tourist Office has also been established at Frankfurt.

German importers nearly all have the same complaints on the subject of trade with India. They say that goods ordered to sample are frequently not supplied to the same quality and type, quantities of goods are not available to compensate the outlay for publicity, displays, trade shows, etc.; and goods are often not delivered on time. These are shortcomings which could be remedied, and India would benefit thereby, for, it is the Federal Republic's avowed aim to give all possible assistance to young industrial nations.

The same complaints have been levelled against products of small industries. Large-scale Russian and Polish contracts for shoes were made with India, but it was found that the poor quality of the workmanship led to a high rate of rejection; nor were the shoes finished in time. Mr

CALCUTTA BOMBAY MADRAS NEW DELHI

maid of progressive forces. And there is no reason to believe that it will be anything different in India. With the rapid industrialisation of the country, advertising has a busy and useful time ahead of it. Instead of decrying advertising, Mr Nehru would do well to give it all the encouragement it requires, because he can have no better ally in his task of bringing about a rapid improvement in the standard of living of the people. In the words of Sir Winston

Churchill—who is appropriately quoted at the opening page of the Convention Souvenir—advertising helps both consumption and production. There is no doubt that the first Advertising Convention has succeeded in banishing from the public mind some of the basic misconceptions about advertising. The able organisers of the Convention deserve congratulations for establishing a common forum for discussions on all aspects of advertising.

There are no rumours of resignation to make the mild and bitter budget in the UK go down well with the vocal backbenchers in the Tory Party. With Defence spending still high at £1,600 million, the main problem for Mr Amory was getting in more revenue. And, as forecasts had it, indirect taxation was to go up, to curtail free spending and to enlarge savings. The UK budget still drains a lot of the national income, and getting a surplus is harder

even with £328 million of extra income. But it has been done, and the only industry to qualify for relief is the cinema. Not unexpected, owing to the rivalry of audiences, and the continued closure of prominent cinemas that could not keep going on profits from popcorn and icecream.

★

The lift in the tobacco excise may have little to do with study of lung cancer but the object is plain. More significant is the plugging of loopholes. Stockbrokers who go in for glasshouses or greenhouses will get no fiscal relief, since losses from amateur farming cannot be set off against professional income. Compensation for loss of office as directors (a sequel to take-overs) will be liable to tax, though exceptions about gratuities are promised. The Economist had suggested that both should be dealt with. Reduction in death duties relating to gifts is a sop to the capitalists in a way, and relief by way of allowances for dependent relatives is too late a recognition that parents, like young children, are not self-supporting. This may well be adapted to Indian conditions at present. The 2½% increase in the profits tax is, of course, a bear point for the Stock Exchange, already hit by the fall in Kaffirs and the poor form of dollar stocks lately. The immediate reaction in Home Industrials also is forbidding. There is of late worry about the reserves of the sterling area, and the UK economy, too, has its pockets of unemployment. The continued rise in savings, especially small savings, in 1959 is treated as a good sign, and the rise in the Bank rate to 5% does not seem to have hit new investment so far. The credit curbs do not affect industrial expansion, with the Treasury also ready to lend for worthy ventures in backward areas, but the Budget proves that a third victory at the polls has made the Government ready and able to take unpopular decisions, to guide the boom, and to defer cuts on Health services and the like. The Budget proves over again that cleverness is not at present confined to the Socialists, and that Tories are now the least class-conscious of political parties. Maybe, that too is a sign of the times, which India should read quickly. Even the cut in the duty on wines will be taken as a sign of healthy social advance from Back-room beer to sherry, and the object may be more to let in cheap, Spanish and French wines than to push Colonial wines through. But brewing is a very solid industry, and the Inland Revenue has never deflected it from its steady pursuit, by bids and other means, of both property and prosperity. And that, too, may make for confidence in a time of shrunken share values in Britain, where yields are rising to make ordinary shares safer for the average investor.

EAVESDROPPER.

WHY WE ADVERTISE... 7

achieving
higher
standards
of living

Mr. Pestonji Polson, Chairman, Polson Limited

OUR experience, in the Butter & Coffee Industry, has outlined most clearly that Advertising is much more than a sales device; it is a potent educative force in the modern world.

We had two basic objectives: to achieve higher standards of presentation and quality, and to educate the public to want these better standards;—arouse them from their apathetic acceptance of sub-standard, badly-packed and often, spoilt or deteriorated goods.

To achieve our second objective, we advertised—using this great method of mass communication as a beacon to spread enlightenment, arouse interest, create the desire for better goods.

People did learn of new standards through our Advertising.

And the demand thus created for scientifically and hygienically prepared, and well-packaged food-stuffs—in short, for our products—enabled us to turn to mass production, to enlarge our distributive systems and services, to sell at lower prices.

By educating people, Advertising turns them into potential customers for the products that can help them live happier, healthier lives. The demand thus created enables the manufacturer to produce these higher-quality goods more cheaply, distribute them more widely. In showing a better way of life, and in indicating how best it can be served by product, article or living pattern, Advertising plays a vital role.

Good advertising serves you

GATEWAY GOSSIP

The Road or the Railway

MR. S. H. TURNER, Chairman of Hindustan Lever, has weighty reasons for talking at length on transport at the annual meeting of the company held this week in Bombay. Transport costs of Hindustan Lever are maintaining an upward curve and, in recent years, such movement has been greatly accelerated. Last year, they were equal to nearly half the company's profits. Expressed differently, they were considerably more than what the shareholders get by way of dividend. Cost is not the only consideration. Much depends on how quickly the raw materials reach the factory and the finished products go to their destination. The third consideration in transport is the manner in which the finished products and raw materials are moved. This should be suitable both to the company and to the dealers.

These principal criteria have led to two main innovations in Hindustan Lever in the movement of finished products. One is the increased use of road transport and the other is the sizable increase in the number of depots. Nearly fifty per cent of the materials transported now moves through road, whereas some ten years ago, the company was almost entirely reliant on the railways. Road transport has proved a boon to the company since, for its purposes, this mode of transport has been found to be particularly suitable with added advantages which are absent in transport by rail. Transit time has been reduced from 21 days, when use of rail transport was predominant, to 5 days. Quick movement of goods has meant considerable reduction in locked-up capital with consequent larger availability of funds for deployment in other profitable activities. And there are many other advantages, like door to door delivery and prompt settlement of claims. Mr Turner, however, gives the railways their due credit for the improvement lately noticeable in their attitude toward their customers and the service they provide.

How come, then, with the new innovations, transport costs of the company are still mounting? If, in the past decade, companies like Hindustan Lever are trying their best to effect economies in transport, the tax gatherer, too, has been bestowing increased attention on it. Rail freight has gone up by 26 per cent during the past ten years, and every other type of transport is considerably costlier today than it had been some years ago, thanks to the rise in the cost of fuel, in-

creased Customs and Excise duties on vehicles, etc.

But what seems to puzzle Mr Turner is the apparent lack of interest on the part of Government to enabling the people to utilise even existing transport facilities to the maximum extent possible. One often hears fervent pleas for reducing the strain on the railways. But what Government are doing seems to militate against the effective use of roads. Mr Turner refers to the multiplicity of rules that now govern road transport. Inter-State disparity in regulations causes considerable hardship to road transport operators. Government, too, seem to be meting out a stepmotherly treatment to road transport. Nearly 20 per cent of the Second Plan's total outlay has gone to the railways and the planners have justified the large allocation by pointing out that, as matters stood at the beginning of the Second Plan, only the Railways were in a position to take up the responsibility of sizably increasing the transport facilities so that the increased demand that would be generated during the Plan period could be taken care of. Even before the Plan reached its halfway mark, the realisation had dawned upon Government that greater attention to road transport would have made the transport situation much more satisfactory than it had turned out to be.

Since then, road transport seems to have got some concessions and the promise of good treatment in the future. Even this little stimulus has given much encouragement to transport and, in the course of the past two or three years, it has come to offer stiff competition to the Railways. It would appear that road transport operators' success stems from the fact that they have contrived to eliminate some of the blatant defects found in the railway administration. It is common experience that, with their vast expansion, the railways have tended to become more and more autocratic. In marked contrast to the personalised service that road transport offers, the railways are impersonal; and, often, consignees have found it quite a job to get adequate wagon space or a satisfactory reply to their complaints. Even when the railways become all attentive to the needs of the public, road transport will continue to have its attraction. There are certain inherent advantages in road transport which the railways can never hope to equal. That is the reason why, in highly industrialised countries, road transport has developed so much that it often outstrips the railways in the matter of tonnage carried. In recent years, the trend in the UK is toward increased use of road transport for movement of goods. Between 1952 and 1958, road transport has increased its share of the total volume of traffic, while the railways have recorded a decline.

Why did Hindustan Lever get disenchanted with the railway? I

will let Mr Turner do the talking for me:

"In 1950, our normal method of despatch of finished goods was by rail straight to the dealer, and, as far as possible, in full wagonloads. This meant that we tied up a great deal of our own capital, the goods spent an average of 21 days in the wagon, and in addition at the end of 1949 we had Rs 187 lakhs worth of manufactured goods at the factories because we got wagons very irregularly. It was common experience in those days that for several days we got no wagons and then had sixteen on one day. We also had to tie up a good deal of our dealers' capital. The man in a small town who had to take a full wagonload of vanaspati, might well find himself with four or five months' requirements on his hands at once; and for this tying up of our dealers' capital, of course, we had to pay either in bigger discounts or in letting them make larger profits on stocks in their hands whenever we had to raise our prices."

The alternative? The road. Unfortunately, for reasons best known to Authority, road transport has not been given the attention it deserves, and Mr Turner has cited a number of examples to show that road transport continues to be neglected or its needs are being looked into only leisurely. His reference to the flood damage in Gujarat, where both the roads and the railway tract have been damaged, illustrates this point. The railway line was put into commission in about three weeks, but he estimates that the full restoration of the

road to Surat will take one year. In the meantime, road traffic is diverted through the fields, causing much hardship and loss to road transport operators. Nowhere in the country is there adequate realisation of the need for improving roads or for putting up bridges capable of withstanding heavy traffic. Even where important bridges are being constructed, there is apparent a lack of proper assessment of the main purpose for which such main road links are established.

There is no reason why the wholesome principle in vogue in western countries, that the people have a right to choose the type of transport according to their convenience, should not be emulated in India. By giving undue prominence to the railways and neglecting the interests of road transport, movement of goods has been made to lean heavily on the railways. This cannot be deemed a healthy development because, with the sizable development of the country that is in the offing, the demand for transport will increase proportionately heavily. It will be prudent to develop road transport from now on for the simple reason that, after a particular stage in their development, railways may not be able to increase appreciably their carrying capacity. It would appear that there may exist a misgiving with the Government that, if road transport is given the necessary encouragement, it will soon supplant the railways. Such a fear is not worrying even countries where road transport has taken big strides. In those countries, the railways continue to prosper side by side with road transport.

THE UNITED

(INCORPORATED ON 6th JANUARY, 1943)

COMMERCIAL BANK LIMITED

Report of the Directors

The Directors have pleasure in submitting their seventeenth Annual Report together with the Accounts of the Bank for the year ended 31st December, 1959.

The net profit for the year after providing for depreciation charges and including Rs. 82,037,656 brought forward from the previous account amounts to Rs. 61,04,096 = 00.

The Directors have transferred Rs. 27,00,000 to the Reserve Fund and provided Rs. 11,00,000 for Bonus to staff. They now recommend the payment of a Dividend at Rs. 5 = 50 per share, subject to deduction of Rs. 22,00,000, leaving an unappropriated balance of Rs. 1,04,096 to be carried forward.

The Bank's business and profit showed a marked improvement during the year.

The Bank's investments appear in the balance-sheet at below market value.

During the year branches of the Bank were opened at Abohar, Bhalinda, Bhilai, Chandpole Bazar (Jaipur), Chaudigarth, Duplex Street (Pondicherry), Kowloon (Hongkong), Malout, Millerganj (Luchiana), Nakodar, Sambalpur, Serangoon Road (Singapore), Srinagar and Udaipur.

The Directors are thankful to the shareholders and the clients of the Bank for their continued support. They also express their gratitude to the Bank's Advisers and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the Officers and Staff of the Bank during the year.

The Directors retiring by rotation under Article 92 of the Bank's Articles of Association are Mr. G. D. Birla, Mr. M. L. Shah, Mr. M. R. Ruita and Mr. G. D. Kohari, who offer themselves for re-appointment. Pursuant to Section 280(2) of the Companies Act, Mr. G. L. Bangur will also vacate his office at the conclusion of the next Annual General Meeting and he, also, offers himself for re-appointment. Mr. G. D. Birla, Mr. M. L. Shah and Mr. G. L. Bangur have attained the age of 65 years and special notices of Resolutions for their re-appointment have been given in terms of Sections 190 and 281 of the Companies Act, 1956.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

On behalf of the Board,
G. D. BIRLA
Chairman,
29th February, 1960.

BALANCE SHEET AS AT 31st DECEMBER, 1959

CAPITAL AND LIABILITIES	December 31, 1959	December 31, 1958
Rs.	p.	Rs.
1. CAPITAL:		
Authorised Capital: 8,00,000 shares of Rs. 100 each	8,00,00,000	8,00,00,000
Issued and Subscribed Capital: 4,00,000 shares of Rs. 100 each	4,00,00,000	4,00,00,000
Amount Called up: 4,00,000 shares at Rs. 50 per share	2,00,00,000	2,00,00,000
2. RESERVE FUND AND OTHER RESERVES:		
Reserve Fund (including that under Section 17 of the Banking Companies Act)	1,75,00,000	1,45,00,000
3. DEPOSITS AND OTHER ACCOUNTS:		
Fixed Deposits	58,10,58,223	46,54,87,678
Current Bank Deposits	7,89,24,048	5,56,72,864
Advances and Loans	32,67,08,160	25,16,36,973
4. BORROWINGS FROM OTHER BANKING COMPANIES, AGENTS, ETC.		
(i) In India	4,55,75,000	5,20,50,000
(ii) Outside India	4,32,55,180	46,70,855
PARTICULARS:		
(i) Secured by part of Investments per contra	4,57,23,339	6,68,00,039
(ii) Unsecured	2,84,212	8,20,816
5. BILLS PAYABLE	1,37,22,624	1,08,56,368
6. BILLS FOR COLLECTION BEING RECEIVABLE as per contra:		
(i) Payable in India	5,43,23,824	4,21,55,036
(ii) Payable outside India	3,91,76,017	3,73,70,166
7. OTHER LIABILITIES:		
(i) Branch adjustments	2,89,13,252	2,16,34,484
(ii) Unclaimed Dividends, etc.	3,34,387	4,36,635
8. ACCEPTANCES, ENDORSEMENTS AND OTHER OBLIGATIONS per contra	26,53,17,066	15,22,57,163
9. PROFIT AND LOSS:		
Profit as per last balance-sheet	15,62,097	15,49,452
Less Dividend	15,00,000	15,00,000
Add Profit for the year	61,04,096	45,37,666
Less Appropriations made:		
To Reserve Fund	27,00,000	11,00,000
To Bonus to staff	11,00,000	22,00,000
Total	1,45,44,53,154	1,14,15,01,322

10. CONTINGENT LIABILITIES:

(i) On Parly Paid Shares

(ii) Claims against the banking company not acknowledged as debts

(iii) Guarantees given on behalf of customers and Correspondent Banks

(iv) On Foreign Bills Re-discounted all of which have run off by 27-2-60

(v) Forward Exchange Contracts outstanding for the purchase and sale of Bills and Telegraphic Transfers of which upto 27-2-60 Rs. 9,36,49,596 = 61 have been delivered.

(vi) There is a liability for outstanding bills, not certified by the architects, in respect of the Bank's buildings.

(vii) Demands of Rs. 25,75,850 = 29, 05 were made for assessment years 1952-53, 1953-54 and 1954-55 respectively by the Income-tax Officer assessing the Bank in India by adopting a totally new method. The Bank appealed against the assessments disputing the very basis of assessment and contending that there is no liability. The assessments for the years 1952-53 and 1953-54 have been decided in favour of the Bank, but the Department has appealed to the Tribunal. No provision has been made for the relative demands. Accordingly, provision for later years has been made on the basis adopted all along in the past and accepted by the Department.

PROPERTY AND ASSETS	December 31, 1959	December 31, 1958

REPORT OF THE AUDITORS.

TO THE MEMBERS OF THE UNITED COMMERCIAL BANK, LIMITED.

We have audited the attached Balance-sheet of The United Commercial Bank, Limited, as at 31st December, 1959, and the annexed Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Branch returns audited by the Statutory or other Auditors. In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-sections (1) and (2) of Section 211 and Sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-sheet and Profit and Loss Account are not required to be, and are not, drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of the audit have been received from the Branches of the Bank;

(d) the Bank's Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;

(e) in our opinion, and on the basis of the information and explanations given to us, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1959, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

The United Commercial Bank Limited

Purposeful & Profitable Use of Resources

Sharp & Substantial Rise in Banking Profits

Hopeful Development in Government Revenues

Statement of Mr G. D. Birla, the Chairman

Statement of Shri G. D. Birla, Chairman, circulated to the Members at the Seventeenth Ordinary General Meeting held on Wednesday the 6th April, 1960.

Gentlemen,

The accounts of the Bank for the past year and the Directors' Report are before you and it is gratifying to be able to look back on a year of marked expansion of our business and sharp rise in our profits.

DEPOSITS

The deposits at the end of 1959 at Rs. 88.68 crores showed an increase of Rs. 18.40 crores against a rise of Rs. 17.21 crores in 1958. This increase of 19.0 per cent compares with 16.1 per cent by which the deposits of scheduled banks as a whole rose during the same period.

CASH

Cash on hand and with banks and money at call and short notice were Rs. 10.10 crores and represented 10.4 per cent of the deposit liabilities.

UTILISATION OF FUNDS

It was possible to utilise the additional resources profitably instead of keeping the funds idle or at best channelling them into securities. By reason of this, our investments in Government securities rose only by the modest amount of Rs. 4.85 crores whereas, in the previous year, owing to the absence of commercial demand for advances, we were obliged to increase our portfolio of Government Securities by as much as Rs. 15.27 crores. Our advances rose from Rs. 29.89 crores to Rs. 36.57 crores and our bills discounted and purchased from Rs. 15.27 crores to Rs. 19.68 crores. You will thus see that by far the greater portion of our increased resources was utilised in profitable advances and bills and that only a quarter went to augment our holdings of securities.

LIQUIDITY

Our quick assets, viz., cash and free investments, amounting to Rs. 45.10 crores, formed 46.8 per cent of our total deposits. Our liquid assets consisting of cash on

hand and with banks, money at call and short notice, unencumbered investments and bills amounted to Rs. 64.78 crores and represented 67 per cent of our deposit liability. This is a very satisfactory figure and conforms to our high standard of liquidity.

PROFIT & LOSS ACCOUNT

The year's working has resulted in a sharp rise in profits. This is due, in a large measure, to purposeful and profitable utilisation of enlarged resources, rendered possible by the sustained demand for funds from trade and industry and the beneficial effects of the reduction by one-half of one per cent per annum, with effect from 1st September 1958, of the interest rate ceiling on deposits. It is a matter of satisfaction that the inter-bank agreement evolved in October, 1958 is working, on the whole, smoothly and the current year's results will show the full favourable impact of the lowering of the interest ceiling. The profits would have been better still if the increase had been less in the deposits for fixed periods and more in current accounts. But

the shift of funds into term deposits has become an established trend while in respect of current accounts the rise is small, though the velocity of turnover has shown a steady increase. Operating costs, of which salaries are the biggest item, continued to rise but the steady expansion in the volume of business has brought in increased revenue in the form of interest and commission.

The exceptionally good profits have enabled the Board to transfer the substantial sum of Rs. 27 lacs to the Reserve Fund and raise it to Rs. 1.75 crores, which is only Rs. 25 lacs short of the paid-up capital of the Bank. At the same time, it has been possible to increase the rate of dividend to shareholders so as to compensate them for the deduction of tax at source on dividends which has been prescribed by the provisions of the Finance Act, 1960. The Directors have felt glad to increase the bonus payable to the staff so that they could also benefit from the improvement in the working results of the Bank.

NEW HEAD OFFICE BUILDING

At the back cover page of the balance-sheet is a reproduction of the architect's perspective of the multi-storeyed building of the Head Office of the Bank, now under construction in Calcutta, at the intersection of India Exchange Place and Brabourne Road. Much thought has been devoted to the design of the building with a view to afford the customers of the Bank improved facilities for transacting their business in a pleasant functional atmosphere and to provide ample working room for the vastly expanded operating departments of the Bank. When it is completed, we hope it would be a most modern and attractive building of advanced design and a worthy addition to the city's business centre.

INDUSTRIAL GROWTH

The year under review witnessed a vigorous growth in industry and a strident increase in industrial production. Several new industries have been started, the installed capacity of many industries has been increased, expansion schemes have begun to yield results, new plants have commenced production and there has been a fuller utilisation of existing capacity, due to liberal imports of essential raw materials. Industrial output in the first ten months of 1959, for which statistics are available, with the Index Number 149.1, has shown a rise of 7.4 per cent as compared with the rate of increase of 1.7 per cent in 1958 and 3.5 per cent in 1957. Participation of foreign private capital in Indian industry is steadily increasing and, for the first time, direct Rupee loans to industrial units have been granted by the Export Import Bank of Washington out of the PL 480 funds earmarked for this purpose.

MONEY MARKET

Comfortable conditions characterised the money market during 1959 and the seasonal demand during the first four months of the year caused only a moderate pressure. The increase in bank credit during January-April 1959 amounted to Rs. 154.78 crores but, as the deposit resources of the banks rose by Rs. 118.81 crores during the same period, the borrowings from the Reserve Bank of India to make up the difference were relatively small. The average borrowings of the Indian scheduled banks from the Central Banking Authority in those four months were only Rs. 34.26 crores, followed by a steep fall in May and June. In fact, the banks were practically out of debt during the slack season.

A comparison of these figures with those for 1958 is rather instructive. In January-April 1958, the seasonal expansion of credit was Rs. 99.51 crores and the increase in banks' resources was Rs. 144.60 crores. It is common knowledge that the 1958 busy season was characterised by the easiest credit conditions in the recent history of Indian banking. In the

larger expansion of bank credit in January-April 1959, we see the super-imposition of industrial credit on the traditional seasonal movement and the beginning of that robust revival of business confidence and resumption of industrial expansion which has continued unabated upto the present time.

The figures for the whole year are still more revealing and impressive. The scheduled banks' deposits at the end of 1959 at Rs. 1827.11 crores show a rise of Rs. 253.6 crores, inclusive of the accretion of PL 480 funds with the State Bank of India. The expansion of bank credit over the year was Rs. 99.0 crores in which there is no seasonal element, and this may be taken as a measure of the increased requirements of the expanded industrial structure. By contrast, in the year 1958, which was one of industrial stagnation, there was a contraction of bank credit of Rs. 24.40 crores over the 11 months January-November (the 1958-59 busy season started early in December 1958). Deposits rose by Rs. 206.1 crores in the year and investments in Government securities increased by Rs. 203.75 crores. The contrast between 1959 and 1958 is thus complete.

MONEY SUPPLY

Money supply with the public at the end of 1959 was Rs. 2520 crores showing an increase of Rs. 170 crores made up of Rs. 146.7 crores in currency and Rs. 23.3 crores deposit money. Though deposit money with the public at Rs. 767 crores has not changed significantly during the last four years the annual rate of turnover or the velocity of circulation of current account balances has steadily risen and over the past four years has increased by 26.8 per cent in Calcutta and 23.9 per cent for all India. It is interesting to note that in June, 1959, for the first time, in Indian banking history the total deposits of the banks at Rs. 1737 crores exceeded the currency in circulation of Rs. 1714 crores. It will, however, take some considerable time for bank deposits to increase to the level when bank notes in circulation may be regarded as the "small change" or subordinate element of money supply. The basic factors underlying the increase in money supply are bank credit to Government and to the public and the surplus on balance of payment account. The last factor is significant as the country's foreign exchange reserves, inclusive of the balances of the Government of India abroad have risen in 1959 from Rs. 343.92 crores to Rs. 387.54 crores after paying in the additional subscription of Rs. 25 crores to the International Monetary Fund. In view of this decisive improvement in the exchange situation coupled with rising exports and the encouraging prospects of foreign investment, loans and aid it is permissible to hope that exchange will be released freely and that industrial progress will be steadily maintained.

NEW CAPITAL ISSUE

The capital market was very active with the floatation of a number of new companies with substantial capital and increase of capital by many existing companies. On the whole, several issues were oversubscribed and all the entrants to the capital market were able to get their requirements which were in the neighbourhood of Rs. 40 crores. It would thus appear that the finding of Rupee capital is becoming less of a problem to Indian industry.

REFINANCE CORPORATION

The Refinance Corporation for Industry Private Ltd., established for the purpose of enabling banks to assist medium-sized industries with medium-term loans and of which we and other banks are members, has completed two years of existence but has not, unfortunately, made any significant progress in the realisation of its objectives. We, ourselves, have been ready and keen to provide substantial medium-term credit to industry, subject only to eligibility for refinancing, but the demand has been small and availability tardy. Slow availing of industrial credit has also been the experience of the Industrial Credit and Investment Corporation of India Ltd. There is an unavoidable time lag between the time a customer of the bank obtains consent for extending credit and the time when he can actually draw on it because a variety of approvals and licences are required from Government departments which inevitably take time. But, even so, the volume of applications from industrial borrowers awaiting approval of member banks would appear to be small and it is, therefore, necessary to review the basis of the Refinance Corporation's charter and bring about such modifications as may be necessary to popularise its facilities.

Two main obstacles to greater utilisation of these facilities have to be removed. Firstly, the ceiling of Rs. 50 lacs to individual borrowers should be raised and secondly, the definition of a medium-sized industry in terms of maximum assets to Rs. 2½ crores of the company should be modified. It often happens that a company with large assets starts some new industrial unit which, though of medium size, is not eligible for finance because when the assets of the new unit are added to the other existing industrial assets of the company the ceiling is exceeded and the industrial unit becomes ineligible for refinancing at the hands of the lending bank. I hope that these and other considerations are receiving the attention of the Corporation and the Government and that soon a way may be found for channelling into private industry that part of PL 480 funds which has been earmarked by the American Government for extension of term loans to private industry here.

As a result of a number of representations the Government is

gearing up its licensing machinery with a view expeditiously to dispose of applications for starting of new industries and issue of licences in connection therewith. As a first step the Government has exempted from the licensing procedure industries which employ less than 100 workers and which have fixed assets not exceeding Rs. 10 lacs.

THE BUDGET

The Budget for 1960-61, presented by the Finance Minister Mr. Morarji Desai a month ago, bears heartening testimony to a quickening in the nation's economy. This is to be inferred from the buoyant trend in governmental revenues, particularly from excise duty collections. While, no doubt, the reduction in the revenue deficit for 1959-60 is partly due to a lower volume of disbursements, as also to the customary under-estimation of revenue receipts by Indian Finance Ministers, it seems to me that the general improvement, under almost all the main heads of revenue, is clear indication of a dynamic economy at work. It is here that I may draw attention to some element of disappointment in business circles at Mr. Desai's decision to leave unchanged the rate at which companies are to be taxed. Mr. Desai's Budget is almost without qualification a good one, but, surely, he cannot plead insufficiency of data for fixing the corporate tax rate at 45 per cent, the level at which it was decreed, in the budget for 1959-60, that advance payment of tax was to be made. Company results in respect of accounting periods ending after April 1, 1959 have more often than not disclosed an inability on their part to maintain their old effective return to the shareholders. This has been due, in the main, to the higher tax load. Again, the revised estimates for the last year show that realisations from corporation tax and taxes on income in the aggregate are higher by Rs. 5 crores as compared with the Budget estimates. Since it was the stated intention of the Finance Minister to achieve, with his new tax structure, merely the "status quo" in revenues derived from Income-tax and Corporation tax on Companies the evidence already available would suggest the necessity of a cut in this rate; and, if past experience is to be any guide, the actuals for 1959-60 are quite likely to show that receipts from these two heads are even higher than has been envisaged in the revised estimates. There can, otherwise, be little quarrel with Mr. Desai's Budget, and there is reason for particular satisfaction that Budgets nowadays do not, as they till recently used to do, seriously upset the investment climate.

The borrowing programme for the current year has been placed modestly at Rs. 250 crores gross, this including receipts from the year's innovation, the Prize Bonds Scheme. Maturities during the year are of the order of Rs. 110

crores, and the new money sought is thus at Rs. 140 crores, well within the capacity of the gilt-edged market to absorb. In this context, however, I would urge the monetary authorities to plan their borrowing programme with some regard for the needs of the banking system. In 1959, the new loans of the Central Government comprised a ten-year issue and a twenty-year issue. As at the end of 1958, securities held by banks and maturing within 5 years, excluding treasury bills, accounted for only 40.8 per cent of total holdings, as against the corresponding figure of 52.8 per cent at the end of 1957. By the impact of the new loan programme in 1959, this ratio would have dropped, still further at the end of the year. Banking soundness requires that the banking system should not be compelled to have in its portfolio too large a proportion of longer maturities. It is for this reason, I suggest, for the current year, that at least one of the new loan issues should be a short-term one meant particularly for the banking institutions.

INCREASE OF BANK RATE INADVISABLE

While on the subject of gilt-edged, I should like to touch for a moment on the question of interest rates generally. On the eve of the Budget, it was anticipated that a rise in the Bank Rate might be in the offing. I am glad that we have been spared any such rise, for, its outcome might have been to spoil the gilt-edged climate which, over the past three years, has been assiduously improved by the very proper open market operations of the Central Banking Authority. The gilt-edged market has been in fine fettle, and the success of the borrowing programme under the Second Plan must surely be ascribed, in part, to the atmosphere created whereby banks have been eager purchasers of Government securities. Any raising of the Bank Rate at the present juncture would cause a depreciation in gilt-edged values, and this would undoubtedly have a repercussion on future absorption of Government securities.

In this context I would commend to the authorities the findings of the Radcliffe Committee on the working of the British Monetary System in so far as it deals with the scope of monetary measures as a weapon of economic policy. In an expanding economy a restrictive policy in regard to money supply could be self-defeating but at the same time the need to check demand in certain sectors with a view to holding the price line would indicate that the solution is directional control rather than change in the money rate which, while raising the cost of borrowing by banks from the Central Banking Authority and bringing about a break in the Government security prices, would have no further effect on supply of money in the face of deficit financing and Plan expenditure.

CREDIT CONTROL

It would now appear that the Government has decided to follow a policy of selective credit control and the Reserve Bank of India has issued a directive to the banks to increase the margin on advances against shares to 50 per cent and restrict clean facilities to customers. The banks are also required to keep additional cash reserves with the Reserve Bank of India equal to 25 per cent of the increase in the deposits of banks over the figure of 11th March, 1960. Mr. B. R. Bhagat the Union Deputy Minister for Finance, recently reminded the banks of their responsibility for checking the inflationary activity but at the same time urged upon them to see that the growing volume of resources with them are utilised to help the Five-Year Plans. He went to the length of suggesting the granting of long term loans to industries. Let me however, hope that measures of restrictive credit control would not be such as to deny the growing needs of developing industries.

THIRD PLAN

The National Development Council has approved the proposed outlay on different heads of development to the tune of Rs. 7,000 crores in the public sector and Rs. 4,000 crores in the private sector during the Third Five-Year Plan. As the Finance Minister remarked in his Budget speech, this is not the juncture at which we can relax our efforts. Momentum has to be gained, so that India can arrive at the "take-off" stage in the quickest possible time. A Third Plan that is big is therefore inevitable. It also seems certain that the tasks allotted to the private sector will, as a proportion of the total plan, be larger than what it was during the Second Plan. If the private sector is to invest something like Rs. 4,000 crores in the next quinquennium, the magnitude of the demand on the banking system as a consequence can easily be imagined.

But it is important that approach to planning continues to be pragmatic. It is true, the country needs a big plan. But can the country have it? This would obviously depend on whether or not we can raise the necessary resources. Indeed, with foreign exchange reserves run down during the Second Plan so far (though, happily, reserves were added to in the course of the last year) the implementation of the Third Plan would require as a basic pre-requisite the underwriting of the foreign exchange needs. The gap in the foreign exchange resources is estimated at Rs. 2,200 crores. This would need a very considerable amount of foreign assistance. Fortunately, however, prospects are today rather brighter than were hopes at the beginning of the Second Plan. In 1959, two great friends of India, the respective Heads of their States, visited this country. The reception that was accorded to President Eisenhower was unprecedented, and he is said

to have been deeply impressed with the efforts India is making in chalking up progress industrially. The American President has urged the Congress to be more generous in its aid allocation for this country, and the improved Indo-American relations augur well for greater assistance than we have heretofore received. Similarly, Mr. Khrushchev has made it clear that Russia is anxious to help India in the prosecution of the Third Plan, and preparatory agreements about such assistance for the next five-year period have already been negotiated. Other friendly foreign nations have also professed interest in Indian development. So, it may not be too much to expect that foreign exchange, commensurate with our requirements, will be forthcoming.

In regard to internal resources, the most hopeful development is the expansionary trend in Governmental revenues. Deficit financing in 1958-59 turned out to be Rs. 230 crores against Rs. 280 crores in the Revised Estimates for that year; and, in 1959-60, the revised estimate, already shows a drop of roughly Rs. 30 crores as compared with the Budget estimate. Moreover, for 1960-61, reliance on deficit financing has been reduced from the equivalent of Rs. 208 crores to a little over Rs. 150 crores. But, nevertheless, the price situation has been causing a good deal of concern. It has not been established that there is a link between created money and such rise in prices as has obtained in this country. It may be that, in a developing economy, there will always be some areas of shortages and some of surpluses. Firm steps are being taken by the authorities from time to time to arrest the upward trend in prices. These, however, have been effective only in a limited degree. Perhaps, it is the already increased prosperity of the agriculturist which, by enabling him to withhold his stocks from the market for a longer time, has contributed to the higher level of, particularly, foodgrains prices. Be that as it may, we must obviously be chary of undue reliance on deficit financing for the Third Plan. It is therefore that Government should encourage production in every way, so that revenues may become more buoyant, and so that additional output can thwart inflation.

To make the Third Five-Year Plan successful, besides external and internal resources, we need trained personnel to man them in proper manner. Attention should therefore be directed towards creating an army of well-trained personnel, both technical and administrative. I am quite hopeful that this will be done and the Plan will be successfully carried out and the targets achieved.

NOTE: THIS DOES NOT PURPORT TO BE A RECORD OF THE PROCEEDINGS AT THE ANNUAL GENERAL MEETING.

THE TATA IRON AND STEEL COMPANY LIMITED.

NOTICE

Extension of date for submission of coupons and applications in respect of "A" Second Preference shares and new Ordinary shares.

Notice is hereby given that the last date for submission of coupons in respect of the "A" Second Preference shares and the new Ordinary shares in terms of the Company's Circular dated the 12th October 1959 expires on the 31st March 1960. However, for the convenience of the resident shareholders and with a view to enable the non-resident shareholders to comply with the Exchange Control regulations, the Directors have resolved that the Company's bankers be authorised to receive applications on and after the 1st April 1960 upto but not later than the 31st May 1960 in respect of such coupons. Provided that in case of resident shareholders along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) from the 16th day of December 1959 to the date of payment shall be paid to the Company's bankers.

For the convenience of the non-resident shareholders the Directors have also resolved that the last date for receiving applications in respect of "A" Second Preference shares and new Ordinary shares from them which was fixed as 31st March 1960 be extended upto 31st May 1960 provided that along with each such application and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) from the 1st day of April 1960 to the date of payment shall be paid to the Company's bankers.

No application in respect of coupons received from resident shareholders on and after the 16th December 1959 and no application in respect of right "A" Second Preference shares and new Ordinary shares received from non-resident shareholders on and after the 1st April 1960 will be entertained by the Directors unless interest is paid as aforesaid. No such application will be entertained after the 31st May 1960.

Dated at Bombay this 31st day of March, 1960.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the Balance Sheet and Profit and Loss Account set out on pages 6 and 7 which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1959, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

Hindustan Lever Limited

Two Innovations in Goods Movement

Step-Motherly Treatment to Road Transport

Mr S. H. Turner, Chairman, on need for Urgent Remedial Measures

The following is the text of the speech delivered by Mr. S. H. Turner, Chairman of Hindustan Lever Ltd. at the Annual General Meeting of the Company held on 6th April 1960.

It gives me great pleasure to welcome you to this Annual General Meeting of the Company.

I shall take as read the Report and Accounts for the year 1959 which have been with you for sometime. I have also circulated to you my review of their salient features. I shall, therefore, proceed to talk to you about transport which plays a vital role in our business.

We have 11,000 Direct Dealers. Last year we issued 1,35,000 invoices. In other words, each of our dealers bought from us on an average twelve times during last year. Every one of these transactions involves us in a transport movement; many of them involve two, because often we move our goods not direct to the dealer, but first from the factory to a depot, and then from the depot to the dealer.

There are also several thousand tons of materials required for production moving to our six factories located in different regions of India. In 1959, our factories received 85,000 tons of vegetable oils and 60,000 tons of oilseeds—our main raw materials—from various parts of India, over the internal transport system; and of these about 10 per cent of the former and 48 per cent of the latter moved at our risk part or whole of the way and the rest at the risk of the suppliers. Here, again, more than one movement is involved, first to the collection points and then to our factories either directly or through our suppliers.

With so many hundred thousands of movements to consider, we are necessarily deeply interested in everything that goes on in transport. First, our transport costs were, in 1959, equal to nearly half our profits. They added up to considerably more than our proposed dividend; naturally, therefore, it is of the utmost importance to us that they should be as low as possible. Secondly, every ton of oilseed or oil held up at the collection points for want of transport or delayed in transit, every case of SUNLIGHT or tin of DALDA that is sitting in a railway wagon or a truck instead of in a consumer's kitchen, is capital tied up

earning nothing. Of your total current assets, one rupee in every five represents goods in transit or in a depot or factory awaiting despatch. Every rupee we can free by better organization or quicker transit times is a rupee we can use elsewhere to serve the consumer and make you a profit by doing something else. Thirdly, our methods of transport must suit the consignees, be they our factories or dealers. It is no good getting goods to the destination cheaply if they arrive in the middle of the night and the consignee is required to unload straightaway. It is no good getting in oil quickly to our factories if there is considerable leakage as a result nor is it any good getting the finished goods to the dealer quickly if every DALDA tin is dented, and every bar of soap bruised.

In achieving these objectives we use every form of transport available to us, having regard to the nature of the product and its packing, distance, transit time, cost and convenience of consignees. Over the last ten years, the Railways have done a commendable job in improving transport over their network; particularly in regard to the movement of raw materials in bulk and transport of finished products over long distances. However, over the last decade, we have made two main innovations in the movement of our finished products, namely road transport and depots.

In 1950, our normal method of despatch of finished goods was by rail straight to the dealer, and, as far as possible, in full wagon-loads. This meant that we tied up a great deal of our own capital, the goods spent an average of 21 days in the wagon, and in addition at the end of 1949 we had Rs. 187 lakhs worth of manufactured goods at the factories because we got wagons very irregularly. It was common experience in those days that for several days we got no wagons and then had sixteen on one day. We also had to tie up a good deal of our dealers' capital. The man in a small town who had to take a full wagonload of vanaspati, might well find himself with four or five months' requirements on his hands at once; and for this tying up of our dealers' capital, of course, we had to pay either in bigger discounts or in letting them make larger profits on stocks in their hands whenever we had to raise our prices.

Now we have become much more flexible. Last year about 50 per cent of our despatches were made by road; another 2 per cent were made by Quick Transport Service; a service the railways simply did not offer ten years ago. Our average transit time has been reduced from the 21 days of 1950 to 5 days now. At our present rate of sale, that means we are saving perhaps Rs. 1½ crores of scarce capital. Moreover, we have much less damage. Road journeys normally involve no transshipment, whereas rail transport involves transshipment whenever there is a break of gauge; and road journeys are door to door, whereas with rail, even though we have sidings, our dealers do not, so that there is always an extra handling at their railway station. Finally, with road contractors we are usually able, at a price, to get them to accept responsibility for damage; the railways are very chary of accepting responsibility, and their employees are frequently correspondingly careless. When we make a claim on our road carriers, it is settled within days, and usually in full. When we claim on the railways, it takes an average of six months before a decision is obtained and we do not recover more than half our losses. There has been improvement in recent months. I hope though that the railways will improve further now that the Railway Minister has made the most welcome decision to accept carriers' risk for them. Indeed, even before that the railways were improving. As road competition has grown, they have become more attentive to claims, and the Quick Transport Services cause much less damage from heavy shunting than ordinary services.

With costs we have had less good fortune. Changing to the road has saved us money on the short hauls, roughly speaking on all those below 300 miles, which represent about 80 per cent of our despatches from our distribution centres. From our Bombay factory to Poona by road, for instance is Rs. 6.50 per ton of DALDA cheaper than by rail; it is Rs. 3.25 cheaper to take a ton of SUNLIGHT from our Delhi depot to Ludhiana by road than by rail. And we are endlessly looking for economies in packaging. Once upon a time, for instance, all our soap was moved in wood boxes. Now 70 per cent goes in cardboard containers, which are a quarter cheaper. If all this still

had to go in wood boxes, it would cost us an extra Rs. 24 lakhs; you can see what that would do to your dividend.

We have also been helped by our depots. We now have fiftyone where in 1950 we had four. For a cost of some Rs. 22 per ton, including the extra freight the break of journey involves, they give us two very great advantages. First, we can reduce our working capital. If we had to carry enough stocks at our Calcutta factory to be able to despatch to each dealer in our toilet preparations all over India what he wanted in smalls on just those occasions when the railways had smalls booking open, we would fill many more godowns at the factory with hair oil and talcum powder than we at present possess; and we would have still more capital sitting idle in railway wagons as the smalls consignments wended their slow way across the sub-continent. Secondly, we can see to it that our dealers are much more seldom out of stock. Our minimum toilet preparations order is Rs. 200. You can imagine that a dealer in Tirunelveli who had to wait for Rs. 200 worth of preparations to get to him by smalls from Calcutta would be out of stock most of the time; or else he would lock up an immense amount of capital by buying months and months of his requirements at a time; and if he does that, he has to put his margin up, which for the same consumer price, means that our margin has to go down. If he has to add another 5 per cent to the price to make up for the fact that he is turning over his capital once in three months. Instead of once a month, the addition is equal to half our profits, even in a good year like the one just past; it would be equal to much more than half in a bad year.

Our depots are so placed about the country that they can always be served by full wagon or lorry loads, and our customers can then be served from them, usually by road, in the smallest of smalls, and within at most a few days of the receipt of their order. The result is that both we and our dealers can operate with less stock in the pipeline. The minimum pipeline stocks of vanaspati, for example have been cut by some 2000 tons, or nearly a third, over the last three years; this has led to a reduction of Rs. 40 lakhs in the capital invested in packed stocks, spread between ourselves and our

wholesalers and a very large part of it is due to the depots.

Because they permit smaller individual orders moreover, the depots make our whole distribution system more efficient. When we had to send vanaspati in full wagon-loads, we could not have a separate wholesaler in a small town. He would have had to take perhaps a year's stock at a time. So the little towns had to be serviced from nearby, bigger ones, which was always expensive and often inefficient. Now we can often serve these direct from the depot, even though they can only take a few cases at a time, and the number of our vanaspati wholesalers has risen from about 1,500 in 1956 to 1,780 in 1960, with all that means in extra energy and initiative being applied to our business.

But all such savings get swallowed up, though they do not thereby become any less important, by government's ever-increasing use of transport as a means of taxation. Since 1950 rail freights have gone up from 14 per cent to 40 per cent depending upon the product and distance; the cost of diesel oil in Bombay has almost exactly doubled—it was Rs. 1.18, it is now Rs. 2.34; an excise of 40 per cent has been put on tyres; that part of the cost of petrol in Bombay which is tax has gone up two and one third times; the tax (Customs and Excise) on an ordinary Mercedes Benz truck has been increased from Rs. 2070 to Rs. 5070. I may put it in another way; a truck doing 35,000 miles in 1950 paid Rs. 1,500 in taxes of every sort; today it pays over Rs. 2,000 and still more on inter-State movement. Naturally, our bills have gone up with them.

We would mind the extra taxes less if they were spent on the means of transport from which they are taken. We recognize the great improvement which has occurred in the services provided by the railways over the last decade. Wagons are usually freely available, transit times have come down, railway officials of every grade are more helpful than they used to be. But nothing like enough has been done for the roads. Key bridges are still missing, the lack of which reduces the value of hundreds of miles of national highway. The bridge over the Chambal on the Bombay-Agra highway is now ready, but no bridge has even been begun at Dehri-on-Sone on the Calcutta-Delhi highway, or over the three great rivers between Calcutta and Cuttack. Indeed, often essential parts of a through highway have still not been built; thus the 10 crore bridge over the Ganga at Mokameh cannot be used to full advantage because the authorities have still not built the few necessary miles of approach road on either side of the bridge. A bridge is under construction over the Brahmaputra at Pandu in Assam. Our enquiries reveal that in the master plan there is no provision

for a riverghat near the bridge site, with the result that goods coming by water transport from Calcutta will have to proceed beyond Pandu to Gauhati and come back by road to Pandu. Even where the highways have been built they are usually narrow, and often badly surfaced; frequently their bridges are weak and their foundations inadequate. There is only one adequate road in all India, the Grand Trunk Road from Delhi into the Punjab. The result is accidents and low load limits; both are dangerous, both waste capital. Sometimes, indeed, the load limits are lower than even the bad roads make necessary. Thus, Bombay State has an average pay-load carrying limit of 130 maunds, whereas its neighbours with no better roads permit 200; not only are freight in Bombay State unnecessarily higher as a result, but also lorries have to reload when they get across the State border, with much consequent delay, damage and expense.

Not only are the allocations for road improvement too low, but there is no urgency about what is being done. Bridges take years to build. When a road is damaged, it takes months to mend. After the recent Gujerat floods, the railway line to Surat was mended in three weeks. The full restoration of the road will take one year. Traffic is diverted involving extra distance of 60 miles and often through the fields, for months when the repair or improvement concerned could have been carried out in weeks; and every such diversion puts up costs, and uses up scarce foreign exchange, for going through the fields shortens the life of vehicle and tyres, and puts up the consumption of fuel.

Most irksome of all are the involved rules governing road transport. The planners perpetually complain that the country is short of transport, and that the provision of more rail capacity is one of the heaviest of all burdens on India's limited capital—about 20 per cent of the whole second five-year plan is being devoted to the railways. One would have thought, therefore, that they would want to see the maximum use being made of those roads which exist, and the maximum relief being given to the railways by the use of lorries. In other words, one would have expected, if transport were properly planned, that there would be no restrictions placed on road transport beyond those necessarily imposed by the limitations on the availability of trucks. In fact, so deeply are the railways and the road transport authorities rooted in the thinking of the 1930s, that restrictions are infinite, restrictions on the routes that can be plied, on the distances that can be travelled, on carrying goods from one State to another, on loads, on the use of trailers. One would think India had an immense superfluity of transport, and that the loads had to be rationed out to give everybody a living, regardless of cost, instead of transport being always on the

verge of bottleneck and so expensive that every further addition to its costs is a serious matter—one rupee in every twenty of our costs is already transport including handling.

I would not like to close on this sour note. Railways and roads alike have improved enormously over the last ten years; our own transport department has some considerable achievements to its credit; and of late both the Government and the carriers have shown so much responsiveness to new ideas that I am emboldened to make a few suggestions, all of them based on our own experience in this business.

First, we would welcome the introduction by the railways of a container service of the type they have in many foreign countries; this would be particularly useful in India, where they would ease the whole problem of transshipment at points where the gauge changes.

Secondly, we feel the time has come when more attention should be paid to refrigerated transport, both by rail and road. The lack of refrigerated transport at present inhibits particularly the development of the fruit, vegetable, fish and milk industries, all of them admirable ways improving both the income of the villager and the nutrition of the townsman, and all of them dependent for carriage over any distance upon refrigeration. We would be interested too, in insulated wagons for edible oils and for our own vanaspati; these do not require refrigeration but they would keep better if they could at least be insulated.

Thirdly, the municipalities should be prompter in their refund of octroi on re-exports; at present one often has to wait months for such refunds; it takes us six months in town as big as Ahmedabad and Bangalore; sometimes a refund of terminal taxes cannot be bought at all as at Agra and Kanpur; and we have just had to close down an otherwise perfectly suitable depot in Gwalior because the Corporation would not refund the octroi on despatches sent outside the town; we can see no reason why the inhabitants of one town should be allowed to tax the surrounding villagers, or the inhabitants of other towns in this way.

Fourthly, there is scope for improvement in the way vegetable oil is transported by sea. We use country-craft to bring seed and oil from Saurashtra to Bombay; 13,851 metric tons of seed and 4,676 metric tons of oil were transported in this manner in 1959. While the facilities provided by country-craft for movement of bagged material are reasonably adequate except during the monsoon, we cannot say the same about movement of oil. Shipment of oil in drums by country-craft or coastal steamer is an uneconomic method due to the weight of the drums transported and the losses which

occur in transit. The cheapest way of moving oil would be in bulk, but there are no bulk handling facilities in Saurashtra ports nor are they adequate in the other ports. This is a problem which is tied up with the much larger problem of loading large quantities of oil into steamer for the export trade. If India's Third Plan targets for export of oil are to be attained, serious consideration must be given to providing better facilities at the main ports for storage prior to loading and ultimate pumping from the storage tanks into ships bulk tanks.

My final and major suggestion is that the recommendations of the Masani Committee on Road Transport Reorganization, which has been generally endorsed by the Transport Council, should be implemented without further delay. While the problems of co-ordination of different forms of transport are now the subject matter of further consideration by the Neogy Committee, there should be no difficulty in the way of the implementing those recommendations of Masani Committee which do not bear on this subject.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE TITAGHUR PAPER MILLS CO. LIMITED

NOTICE OF INTERIM DIVIDENDS.

The Board of Directors have declared on the 30th March, 1960, the following Interim Dividends in respect of the Company's Financial year ending 31st March, 1960. These Dividends, pursuant to the provisions of the Finance Act, are subject to tax deduction before payment.

On 8% First Cumulative Preference Shares—Rs. 4/00 per share; on 4½% Second Cumulative Preference Shares—Rs. 3/21 nP per share; on Preferred Ordinary Shares—17 nP per share; on 'A' & 'B' Ordinary Shares—Re. 1/20 nP per share.

These Dividends will be paid on or after 25th May, 1960 to those shareholders (or their mandatees) whose names appear in the Company's books on 30th April, 1960, as the Registered holders of the above Shares.

The Share Transfer Registers of the Company will be closed from 11th to 30th April, 1960, both days inclusive.

By Order of the Board.
F. W. HEILGERS & CO.

West Coast Paper Mills Limited

Need for Realistic Price Policy

G. D. Somani's Review

Following are the extracts from the speech delivered by Shri G. D. Somani, M.P. in the absence of the chairman, Shri G. L. Bangur, at the fourth Annual General Meeting of the Company held in Bombay on 30th March, 1960.

Gentlemen,

I have great pleasure in welcoming you to the 4th Annual General meeting of the West Coast Paper Mills Limited. The audited Statement of Accounts for the year ended 30th June 1959 including the Directors Report has been in your hands for some time and I propose to take the same as read with your permission.

Before I proceed with the affairs of the working of your Company, I would like to make some general observations regarding the economic situation in general and the prospects of the Paper Industry in particular.

I am glad that the wide spread apprehensions about serious additional burdens anticipated in the last Budget did not prove true and the Finance Minister has taken a realistic and constructive approach to ensure that no section of the community is hit hard. The Finance Minister's Budget proposals require all the more to be appreciated in the light of the fact that he has had to find additional resources not only for the ever increasing need of the planned programme of development but also for the additional needs of Defence and the burden imposed upon the Government by the recommendations of the Pay Commission.

The target for the Paper Industry under the 3rd Five Year Plan has been fixed at 9 lakh tons per annum. Our per capita consumption of paper is so low at present that the demand is bound to increase progressively and, therefore, this target cannot be regarded as over-ambitious. The fulfilment of this target will depend largely on the realistic policy which the Government should follow in regard to the price structure for this Industry and I would like to take this opportunity of saying a few words about the general policy being followed by the Government in this vital matter.

The question of fixing fair prices for the manufactured goods of certain industries arises due to the short supply and the resultant hardship which may otherwise be caused to the consumers. While the need for ensuring fair prices to the consumers cannot be disputed, the fact must be realised that the ultimate solution for dealing with such shortage lies in adequate increase of production, which alone

will result in the achievement of the objective we have all in view. Our experience of the physical controls and the enforcement of artificial prices has been that the consumers never get the benefit which is intended for them and that these lead to all sorts of malpractices. It is, therefore, very desirable that the Government should follow a long term policy to ensure reasonable prices to such industries which will leave sufficient resources for the expansion of the existing units and which will also attract new entrepreneurs in these industries.

The present method adopted by the Tariff Commission for determination of fair prices is to allow return on Capital not on the basis of the book value or replacement value of the gross block but on the basis of the so-called "capital investment" which consists of the net block plus the net value of the current assets used in the business. Moreover, items like Managing Agency Commission, Bonus to labour, taxation, interest on loans etc. are also included in the gross return for calculating fair prices. It will be appreciated that all these items cannot be logically included in calculating the return on capital. While no doubt the Tariff Commission is a high-powered judicial body consisting of eminent experts and its recommendations deserve fullest possible weight and consideration, my submission however is that the time has come when the Government should, in consultation with the Tariff Commission, lay down certain broad principles for the determination of fair prices which will be conducive to the rapid expansion of the industries whose selling prices have to be regulated in the period of short supply.

The new uniform prices for the Paper Industry enforced from 1st January last have caused a lot of discontentment in the Industry and responsible spokesmen have clearly indicated as to how the future development of the Industry will be adversely affected by these new prices.

So far as we are concerned, I would like to point out that the principle of special prices for new units has been recognised by the Government and the Tariff Commission in regard to other industries and I see no reason why the New Paper Units and those under expansion should be given a different treatment. It is indeed a matter of great concern to us that the Tariff Commission should have recommended a policy of uniform prices even when the new units are springing up in this industry,

which would be hit seriously unless they are treated separately.

I would like to take this opportunity of informing you that soon after the new prices were announced, we made strong representations to the Government drawing their attention as to how a new Unit like ours will be adversely affected.

I am glad to inform you that the Ministry of Commerce & Industry have forwarded our representation to the Tariff Commission and have invited their views. Our representatives have had detailed discussions with the Chairman and Members of the Commission very recently when all aspects of the price structure as affecting our Paper Company were discussed. I am not yet in a position to say as to what exactly will be the recommendations of the Tariff Commission in the light of this, but the incidence of the depreciation and reasonable return on the capital employed, even on the basis of the Commission's own formula, is so heavy in our case that we have reasonable grounds to be hopeful.

As you are aware, the working of the Factory was formally inaugurated by Shri Morarji Desai, Union Finance Minister, on 16th May 1959 and it was only from July onwards that all the departments of the Unit were commissioned into production. The period under review, therefore, saw only trial operation for some time and the production of paper in that period was only 3387 tons. It will, therefore, be appreciated that the results of the working could not have been better.

So far as the production since July is concerned, the various departments have been working normally and have attained normal efficiency. Indeed production since August last year has been keeping well ahead of the rated capacity. The only department which did not achieve the normal efficiency was the Recovery Section which consists of specialised equipment. We were, however, able to obtain the services of an American Expert together with a Technician from our Machinery Manufacturers in the U.K. and I am glad to say that there has since been some progress in the working of this plant and, it is hoped, satisfactory results will be possible in the near future.

Another special feature, which I am glad to mention is about the superior quality of the different varieties of paper being produced by your Company. Looking from the reactions of a number of consuming centres, I can safely say that there has been a wide appreci-

ation of the standard of our qualities which are regarded as superior to others. This clearly indicates that the plant and machinery designed for your Factory are most modern and have given good results both from the point of view of quality and quantity.

Another difficulty which we have continued to suffer, has been about the inadequacy of railway transport facilities. The Railway system from Alnavar to Dandeli is run by the Forest Department of the Mysore Government and the condition of the track and other facilities are far below standard. We have been representing to the Railway Ministry for a long time that the line should be taken over by them and its standard of efficiency should be improved. Recently, the Railway Ministry have agreed at last to take over this Railway Line subject to certain special conditions which they want to impose. The whole matter is now under negotiation between the State Government and various Industries of the State on the one hand and the Railway Ministry on the other and I hope and trust that the Railway Ministry will take a broad view and will not impose any conditions which might adversely affect the development of this area.

The Board is actively considering the expansion of the capacity of the Plant. Various aspects such as finance, raw materials, power and transport are under study and the details thereof are being closely examined by our Technicians. Once these studies are completed, I hope the Board will be able to take final decision in this regard in due course.

I take this opportunity of thanking the members of the staff and labour who have rendered valuable services in bringing about normal production of the new Plant and Machinery.

Note:—This does not purport to be a full report of the proceedings of the meeting.

JARDINE HENDERSON LIMITED.

NOTICE is hereby given that an Interim Dividend at the rate of 2½ per cent, subject to deduction of income-tax and super-tax at the appropriate prescribed rates, will be paid to the Registered Members as on the 6th day of May, 1960, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1960.

The Share Transfer Books of the Preference Shares will be closed from the 22nd April, 1960, to the 6th May, 1960, both days inclusive.

By Order of the Board,

D. FORDWOOD,
Secretary.

4, Clive Row,

31st March, 1960.

A-IMO Annual Session

THAT ideas are never good except in moderation and that even hard criticism could be more persuasively made in the language of restraint were amply illustrated by Mr N. D. Sahukar's presidential address to the 20th Annual Conference, inaugurated here on Sunday last by Prime Minister Nehru, of the All-India Manufacturers' Organisation. Mr Nehru's speech, in return, was a model of what "friendly and constructive criticism" can evoke by way of reciprocal understanding on the part of Authority of the requirements of the private sector. A certain readiness to accept friendly advice and practical suggestions was spontaneously displayed by the Prime Minister who was visibly happy to be on the platform of an organisation drawing most of its membership from the ranks of medium and small businessmen and whose speech on the occasion was even more conciliatory in tone than the one he made at the FICCI Annual Session only the week before. Your correspondent, who gained these general impressions, was thus not disappointed in his expectation that the "pervading temper" of the whole session would not be one of acrimony but would be one of harmony between the two sectors—public and private.

This happy tone for the Conference was set in the welcome address by Sardar Mohan Singh, Chairman of the Reception Committee, an address which was refreshingly practical in its approach and singularly devoid of any reference to the sectoral "conflict." It was pleasing to hear Sardar Mohan Singh describe the part played by a number of small and medium industries in feeding the big industries in both the sectors. For example, in Ludhiana, a good many small industries, recently established, were specialising in the manufacture of certain parts of cycles and sewing machines, thereby giving a great impetus to the development of these industries. The speaker added that the cycle industry, which was formerly importing spare parts worth about Rs 24 per cycle, had been enabled to reduce its requirements of imported parts to just Rs 5 per cycle. In the same way, the manufacture of radio parts was being taken on hand. Sardar Mohan Singh also disclosed that the A-IMO was setting up in Delhi a model industrial colony on a co-operative basis and with a research centre. It was expected that this cooperative colony would enable the small industrialists to achieve better results and that this would lead to the establishment

of similar colonies at other centres. The A-IMO had also plans, he said, to set up industrial information bureaux where any industrialist wishing to put up an industry, big or small, could get correct advice and guidance as to the feasibility of the scheme, extent of Government help, availability of raw materials, selection of sites, etc. And he looked forward to Government's help and co-operation in this regard.

The presidential address of Mr N. D. Sahukar, Chairman of the A-IMO was a model of moderation in ideas as well as in language, though it was mildly critical of some administrative policies and procedures. The rapid growth of industries in all sectors, he said, was being retarded by the circumlocutory processes and procedures that a would-be manufacturer had to wade through. While he admitted that planning did presuppose control, he wondered if controls in their present rigour were now necessary. Mr Sahukar also made a number of telling points regarding tax policies. In his view, if tax evasion had not been on such a large scale as it was, the economy might have probably developed at a faster pace than it had. He suggested in this connection a socio-psychological study of the tax-evader's mind, though he did not indicate how to spot the "tax evaders." If such a study were undertaken and it were found therefrom that tax evasion was indulged in only because of the heavy incidence of taxation, it would be a wise thing, in Mr Sahukar's view, to revise tax policies and levels of taxation in such a manner as to induce even the evader to pay his taxes willingly. While on the subject of taxation, the A-IMO Chairman also urged that, before raising further the incidence of tax on any commodity, Government should thoroughly examine the likely effect that such taxation would have on the price of that commodity.

Among the practical suggestions made by Mr Sahukar for Government's consideration were the following:—(1) Steps to bring out hoarded gold; (2) the linking of wages to productivity; (3) five-fold increase in technical education, the aim being to have one vocational school in every taluka town, one polytechnic in every district and at least one engineering college in every divisional headquarters; (4) steps for making available co-operative banking finance to small and medium industries; (5) a reduction of 1 per cent in the interest rates that medium and small industries have to pay to the various financial institutions; (6) the scheme of hire-purchase of industrial machinery to be extended and liberalised; (7) Government encouragement to the private sector to set up small steel production units by utilising new processes like low-shaft furnace smelting; and (8) streamlining labour legislation so as to ameliorate

the condition of the industrial worker and, at the same time, to protect the honest employer against exploitation by the unscrupulous labour union leader.

The Prime Minister welcomed some of these suggestions. In particular he invited schemes, for Government's consideration, in regard to small-scale steel production. He also promised Government's help and encouragement to the A-IMO's plans for running industrial information bureaux. In regard to technical education, Mr Nehru said that though the success already achieved was very considerable, both general education and technical education were being planned to go ahead faster and faster. As regards the Chairman's suggestion that a socio-psychological study of the tax evader's mind be undertaken, the Prime Minister was not sure how to give effect to it although he welcomed the idea. (Of course, it might not have immediately occurred to him that such a study could be undertaken either by examining confidentially such persons as were known to the income tax authorities to be tax evaders or by examining a random sample of income-tax assesses through the confidential technique of public opinion research). For his part, Mr Nehru suggested to the industrialists that they should organise their own designing sections, the crucial importance of which had not been realised by the railways, for example, till very recently.

Mr Nehru's speech was also highlighted by a reference to the impressions of an eminent foreigner who had recently seen him. That foreigner told him that the people whom he met bemoaned the lot of this country and indulged in self-condemnation and self-deprecation although, in fact he could clearly see that the country was making progress all round. It was indeed strange that what was visible to a foreigner was not visible to some of our own people. Mr Nehru was, therefore, rightly unhappy that some of our own people were "living in the miasma of self-condemnation and self-deprecation", thereby creating "an atmosphere of misery and sorrow" instead of "an atmosphere of hope, strength and self-reliance." This was also true, according to Mr Nehru, of many writers who were writing long articles in newspapers without knowing what was really happening in the country.

The Annual Conference of the A-IMO has passed three major resolutions—one on industrial relations, one on indirect taxation and one on import policy. The first resolution has demanded a uniform labour policy for the whole country with limited rule-making powers to the States, taking into account their special needs; it has called for an industrial truce for at least the Third Plan period, adding that no dispute should be allowed to precipitate into a strike

by workers or a lock-out by the management without a reference being made to their respective central organisation; and it has also pleaded for exemption for new industries for a period of five years from the provisions relating to retrenchment and retrenchment compensation under the Industrial Disputes Act. On the face of it, this is a reasonable and moderate resolution.

The second resolution has expressed the view that there is a cost-price inflation in many industries as a result of the present and ever-increasing incidence of indirect taxation; it has suggested amalgamation of the various levies in such a way that the total incidence does not exceed a certain reasonable percentage of the value of the commodity concerned; and it has, therefore, demanded the appointment of a commission to study the incidence of indirect taxation on manufactured commodities with particular reference to its effect on the total cost of manufacture. In view of the increasing importance of indirect taxes, there is everything to be said in favour of the suggested commission as in the case of the Tyagi Committee on direct taxes administration. Incidentally, the difference between the FICCI's approach to tax policies with its accent on direct taxes and the A-IMO's approach with its accent on indirect taxes is striking.

The third resolution has emphasised the need for conserving foreign exchange by curtailment of imports of finished goods on the basis of progress made by indigenous industries; it has demanded liberalisation of imports and licensing for actual users of industrial raw materials; and it has also suggested that the validity period of all licences should be increased from six months to one year and that barter deals by manufacturers and exporters be allowed to enable them to import permissible essential materials and equipment against additional exports of traditional and non-traditional items.

NOTICE

Owing to the intervention of the Easter Holidays, INDIAN FINANCE for the week ending 16 April 1960 will be released on 18 April 1960.

Debate on State Transport

AS the Madras Legislative Assembly discussed the state of the nationalised motor transport, the State Government found themselves deserted by men of their own ranks. Several Congress members spoke critically of the results of the nationalised State transport, while one of them even pleaded that public interest would be served better by leaving road transport in private hands.

Only those Congressmen who had had the dreadful experience of bus travel in the city service could have been courageous enough to be disloyal to the party on the question of nationalisation of motor transport in the State. One woman Congress member pictured the plight of the city bus passenger when she observed that there was something seriously wrong in the nationalised city transport when a member of the public leaving office tired at 5 PM, could not reach home before 8 o'clock because of lack of space in the city bus. With the agonising delay at the bus stops and the insolence of the conductors, it looks as if a ride in the State bus during peak hours is meet punishment for the citizen for not being able to afford personal transport!

Thrown into disarray because of disloyalty of individual Congressmen, the Government met with unsolicited support from the Communist opposition, for whom private enterprise in any field is anathema. Communist members expressed themselves as being antagonistic to private enterprise running road transport either in the city or outside. The Industries Minister, Mr Venkataraman, was, however, clearly on the defensive against attacks on his Government's policy by men of his own party and sought to parry further criticism by disavowing the earlier intention to increase the bus fares.

Mr Venkataraman admitted that the number of buses with the city transport was not adequate to meet the growing number of travellers in the city. The 453-strong fleet could not all be under commission at the same time. Over a hundred of them would be decommissioned for various reasons daily. A report by an ILO expert has estimated that, every year, there should be addition of 10 per cent to the fleet strength to meet the growing volume of bus traffic in the city. Against this, the State Government are only thinking in terms of strengthening the fleet by one seventh every year.

With a view to pacifying critics, Mr Venkataraman pointed to the economical working of city transport. It was revealed that, out of

the gross profit of Rs 29 lakhs, Rs 16 lakhs went to meet the interest charges. About Rs 70 lakhs went to depreciation fund, which, it was pointed out, was larger than that provided in other cities such as Bombay or Delhi. Mr Venkataraman invoked the authority of the ILO expert in proof of this.

Further, the note circulated on the working of the Madras branch of the transport system discloses that this branch would, during 1959-60, make a profit of Rs 18.79 lakhs. In the Kanyakumari district but transport, nationalised last year, was estimated to disclose a surplus of Rs 3.59 lakhs. The number of passengers carried by the city bus transport was computed at 143,053,415 against 137,462,272 in 1958. The total collections amounted to Rs 1,72,91,252 against Rs 1,63,38,747 in 1953-59.

Mr Venkataraman announced that, next year, the State would take over some long distance routes such as Madras-Salem, Madras-Tiruchi, Madras-Tirunelveli, Madras-Madurai, Madras-Nagercoil and Madras-Coimbatore lines. In the present context of absolute inefficiency of State-operated city service, there could hardly be any sympathy with the Government's decision to take over more lines. Already, the inefficiency of city transport is being used as the ground by anti-nationalists for debunking the principle of state nationalisation of commercial undertakings and services. It is doubtful whether, in the event of Government choosing to implement their decision, they could measure up to the standards of perfection set up by privately operated services. Passenger amenities have been the first casualty in the case of State-owned motor transport. Of this, the city service is a standing illustration. Mr Venkataraman seems to believe that running of long distance traffic is easier and could be done more efficiently than short distance traffic. This at best is a weak argument for extending nationalisation of motor transport. It could, however, be argued that, in the case of long-distance bus transport, there would be a compulsion to improve services so that the competition from railway transport could be effectively met. If the Government could provide the needed passenger amenities and keep up to time schedules in the running of buses, it should even be possible to divert a considerable number of the travelling public from the railways.

FOR the expanded industrial programme in the State of Madras during the Third Plan period, a greater scheme of producing abundant electric energy has been thought of. There is to be an aluminium industry at Mettur. Ootacamund will have a raw film factory. Salem is thought of for an iron factory with the use of Neiveli lignite. There was a report by the State's Techno-Economic

survey conducted by the National Council of Applied Economic Research. This survey made a forecast that the State's power requirements by the end of the Second Plan would be 891,000 k.w. and, by the end of the Third Plan, the power requirements would have gone up to 1,443,000 k.w. The schemes for power are estimated to cost Rs 133.21 crores. The Second Plan outlay for such electricity schemes in the State was of the order of Rs 71.45 crores. The First Plan outlay for the same purpose stood at Rs 30.68 crores only.

The national outlay for power development is Rs 1,230 crores of which the State's share is only Rs 133.32 crores. The foreign exchange component of this capital outlay would be about Rs 43.6 crores. The power projects of the entire country are estimated at Rs 300 crores during the Third Plan.

Power cuts in the Mettur-served area are inevitable for five draught months. With the installation of the first Power House at Kundah, this cut is obviated. Storage in the Kundah and the Pykara basin will be conserved to the extent necessary for utilisation in the summer months during which power cut becomes imperative. This scheme will be developed in two stages, the first of which involves the construction of a power house with an installed capacity of 100 mega watts in two units and utilising 10,000 cusecs. This will get completed during the Third Plan stage. Two more units could be added with the civil engineering works completed ahead of time. The first stage, on completion, will add to the Madras grid an energy potential of 385 million units.

During 1960-61, the last year of the Second Plan, the first stage would have been completed.

At the first stage, which was inaugurated last week at Kundah, only a drop of about 3,647 ft was utilised. A total fall of 5,359 ft is available. The third stage would utilise the balance drop of 1,712 ft and also collect the water of nearby and enroute rivers.

Again, the fall will be developed in two more power stations. A third power station will have an installed capacity of 120,000 k.w. in three units. A fourth power station will have a capacity of 50,000 k.w. in two units. The present Plant No. 1 will have a third unit and Plant No. 2 will have another fifth unit. An auxiliary station of power will utilise the fall between Upper Bhavani and Avalanche reservoirs with an installed capacity of 15,000 k.w. During this stage, the total installed capacity will be 240,000 k.w.

Thus, the Kundah Hydro electric scheme will have an installed capacity of 420,000 k.w. The energy potential of this scheme will be 1,803 million k.w. hours per annum. The whole report is under the consideration of the Central Water and Power Commission and the Planning Commission.

Mr Kamaraj Nadar, Chief Minister, Madras State, allayed the fears expressed in some quarters about Kerala Government's fears of sharing Parambikulam waters with Madras. He was answering some questions at a Madurai Agricultural Conference last week when he said that it was not true that Kerala Government did not want to negotiate with Madras over the Parambikulam waters. He wanted the people to understand the position of the two Governments and assured the Coimbatore audience that negotiations would end successfully.

This project envisages the construction of two power stations. One will be in the Parambikulam valley. This will utilise the stored waters of the river Ninar and surround and above Kerala requirements at the Sholaiyar power plussing waters of the Sholaiyar house.

Another station would be placed at Sarkarapatty utilising the tall race waters of the first power station and regulated flows from the Parambikulam, Tunakadu and Tekkadi rivers. The Sholaiyar power station will have a 70,000 k.w. capacity in two units and the Sarkarapatty will generate 25,000 k.w.

Periyar Second Stage extensions provide for the installation of one more 35,000 k.w. unit at the recently commissioned Periyar Power Station to increase the installed capacity from 105,000 k.w. to 140,000 k.w.

Coal being costly, the cost of thermal power produced by coal is three as costly as hydro power. Neiveli lignite will be utilised to have a station with a capacity of 150,000 k.w. This is not sufficient to meet the Madras demands, and the proposal is to request the Neiveli Lignite Corporation to have the capacity raised to 200,000 k.w. This power will be released in full to the Madras State.

Otherwise, the Government of Madras have requested the Corporation to release adequate lignite so that the State itself could raise a power station for an output equal to 200,000 k.w. for the Madras Grid.

The total installed capacity of hydro-stations in Madras State by the end of 1965-66 will be 929,000 k.w. with an annual energy potential of 4,285 million k.w. The total energy of the Grid will be 7,280 k.w.h. per annum inclusive of the energy available from the thermal stations and the power to be purchased from the Neiveli Lignite Corporation.

Thus, the total capacity of the Madras Grid will be 1,400,000 k.w. This includes 359,000 k.w. to be obtained from the Neiveli Lignite Corporation.

The Third Plan envisages the formation of a 220 k.w. super grid. This will facilitate the effective utilisation of power within the State and also efficient interchange of power between Madras and its neighbouring States. There is also a proposal to interconnect Madras-Mysore, Madras-Andhra and Madras-Kerala.

WORLD OF JUTE

Need for effective remedial measures

THE jute markets continue to maintain a firm trend and with bulls deriving further encouragement from the support the goods market has had during the past two weeks from a number of foreign countries and the Government of India, there does not seem to be any early likelihood of a reaction. It would appear that Authority is still chary, for reasons best known to it, of taking the only possible remedial measure—the import of a sizable quantity of raw jute from Pakistan.

The present high price levels in the jute markets have mainly stemmed from the apprehension of a shortage of raw jute toward the end of the current jute season. It will be useful to study anew the raw jute supply situation during the current jute year. With the announcement of the final mesta forecast, the total 1959-60 jute crop is placed at 5.65 million bales. This, together with the carryover from last season of 2.45 million bales and 509,000 bales of imports from Pakistan, will give a total availability of 8.60 million bales. As against this, total distribution will amount 8.90 million bales comprising mill consumption at 6.60 million bales and domestic consumption at 300,000 bales. As per these estimates, there should be available a quantity equivalent to 1.80 million bales for carryover into the next season. Such a position is not at all unsatisfactory.

What seems to have sparked afresh the speculative fervour is the fast dwindling raw jute arrivals. Out of a total Indian crop of 5.65 million bales, as much as 3.95 million bales have already been received in Calcutta and mill centres by the end of February. The Jute Balers' Association, Calcutta, estimates arrivals of Indian jute during March at 350,000 bales. The total arrivals for the first 9 months of the season will thus amount to 4.3 million bales. Adding to this figure the estimated domestic consumption of 300,000 bales, the Jute Balers' Association puts the total of take of this year's crop at 4.60 million bales. During the remainder of the season, therefore, there will be a little over a million bales only left of the crop to arrive at Calcutta and mill stations.

It is rather strange that, when the total availability is deemed adequate to meet the requirements of mills and leave a moderate quantity to be carried forward into the next season, the mere fact

that, between now and the arrival of the new crop, only a small quantity of the current year's crop will be available, should cause so much concern. It cannot also be contended that indications of the new crop so far have been so discouraging as to engender the apprehension that the arrival of the new crop will be delayed.

But it is a fact that the scarcity idea has gained firm ground in the Indian World of Jute as will be evident from the high levels prevailing for a number of weeks now. The remedy, as I have pointed out earlier, is to import a sizable quantity of raw jute from Pakistan. This will have the desired effect on raw jute prices and consequently on the goods market. One wonders whether the Indian Jute Mills Association has considered the possibility of using its good offices with its members (provided, of course, it is in full agreement with the official crop estimates) to help one another in the matter of raw jute supply and thus cut the ground under the speculators whose main strength seems to come from the anxious purchases of raw jute by some mills during the past few weeks.

The jute goods market ruled firm during the week ended Wednesday. Both the principal sections were active with prices taken to new highs. Hessians met with sustained interest on higher advices from the US market where a buoyant undertone was noticeable following fresh buying interest. Some fresh enquiries were reported in the Calcutta market and Hessian 40"x10 oz Ready was taken to a high of Rs 43.20 from Rs 42.45 to be finally placed at Rs 42.65. The heavy goods section was in the limelight with prices moving up sharply. The market, which was moving up as a result of the incentive provided by the Chinese and Egyptian orders, was given further fillip by the announcement of a sizable Government order this week. The cumulative effect of the orders was reflected in a squeeze in ready goods, the prices of which had gone up steeply during the week. B Twills Ready, which was quoting at Rs 114.80 this time last week, moved up briskly to be placed at a high of Rs 116.75 before closing at Rs 116.20 on Wednesday. The raw jute market also ruled firm with Assam Bottoms quoting at Rs 34.25 against Rs 35.50 this time last week. Around midweek, there were reports that Government had decided to allow the import of a further 200,000 bales of Pakistan cuttings, but the news failed to have much adverse effect on sentiment.

*This delivery started on the 5th April.

Trend of Exports

ACCORDING to the Government of India, Tea exports have shown a decline last year as compared to the previous year. Four causes are mainly responsible for this. First, the United Kingdom had built up large stocks by making heavy imports during 1958. Secondly, the UK, due to its comfortable stock position, was not interested in the end-of-the-season teas available during January/May 1959. Thirdly, heavy purchases were made by internal buyers in the first quarter of 1959. Finally, as a result of maximum exports in 1958 and, particularly during the last quarter of 1958, there was no availability in India of sufficient stocks of quality teas, which was commonly in demand.

With an export of 3.37 million pounds, total exports from Chittagong have, however, increased to 14.01 million pounds from 12.16 million pounds in 1958. Besides exports, tea shipments from this Port to Karachi amounted to 39.62 million pounds as compared to 41.97 million pounds in 1958.

Meanwhile, there is a general feeling that sales in India can be promoted only if the price is low, although world supply and demand appear to have been fairly well balanced. In this connection it is said that the decline in the price of Plain teas, during the past few months, cannot be lightly ignored.

An important factor contributing to the decline in the demand for Plain teas is the prospect of increased African supplies. If that area, along with other producers, increases production as is expected, the Indian industry will face greater competition. It is, therefore, time that steps are taken to improve quality as well as to reduce cost of production.

It is, however, encouraging to note that there is a slight improvement in the prices obtained for Plain teas on the London market during the week under review. It now remains to be seen whether this marks the beginning of an improvement in plain teas, especially when the decline over the past three weeks has been extremely sharp. The size of blenders' stocks is still unknown; but possibly demand may pick up now as prices are low and the seasonal influx of teas into London should have passed its peak.

In the Internal Sale, held in Calcutta this week, offerings were 21,145 packages of Dusts and 668 packages of Leaf grades. The market opened to a strong demand and prices were generally lower. As the sale progressed, a harder tendency was seen. Orthodox teas found ready buyers around last rates with the brighter lines a strong feature. Legg-cut descriptions were irregular, the plainer kinds being sometimes easier. The better liquoring teas were sold readily at slightly enhanced levels.

Medium CTC Dusts were supported at firm and sometimes dearer rates except for the more fibrous kinds which came to a lower market. Powdery types were again sold well, registering slight advances in prices. The best CTC dusts were irregular, but were generally taken up at around last levels. Medium Doors Dust was quoted at Rs 1.88 to Rs 1.94; Medium Assam Dust Rs 1.82 to Rs 1.94; Medium Assam CTC Dust Rs 1.98 to Rs 2.20 and Best Assam CTC Dust Rs 2.40 to Rs 2.75. There was a strong demand for Leaf grades at dearer rates.

In the Cochin market, offerings were 800,000 pounds. The quality from the Nilgiris was about maintained, while that from other districts showed a seasonal decline. High-grown Brokeners were sold at firm rates and sometimes dearer following quality. Good Mediums met with less enquiry than in recent weeks and eased by 5 nP to 10 nP per pound. Medium and Low Medium Brokeners registered a drop of 10 nP to 15 nP with similar Fannings a particularly weak feature. Low-grown and Plainer kinds were irregularly 5 nP lower. Low Medium tea was quoted at Rs 1.90 to Rs 1.95; Medium at Rs 1.95 to Rs 2.10; Good Medium at Rs 2.20 to Rs 2.25 and Quality at Rs 2.85 to Rs 4.85.

Tea shipments from Cochin Port, in February 1960, were higher at 6.31 million pounds as compared to 6.08 million pounds in the corresponding month of last year.

According to trade sources from Indonesia, tea production has shown a downward trend during the past few years. With an outturn of 7.1 million pounds in December, total production of tea in Indonesia last year was placed lower at 96.4 million pounds as against 101.7 million pounds in 1958 and 102.8 million pounds in 1957.

WORLD OF COTTON

Futures Rebound

THE cotton futures market in Bombay, after remaining somewhat easy, staged a rebound on allocation of indigenous cotton to mills as well as somewhat better spot advices. With stale liquidation over, the market responded even to small buying orders. It may, however, be noted that trading has become very thin as there is very little inducement to do business in the forward section as spot prices are almost quoted over ceiling rates in practically all varieties by about Rs 100 per candy. ICC March, after dropping to Rs 754.50, rallied to Rs 778 to be placed at Rs 769.

Still Tighter Control:

The Textile Commissioner, Mr D. S. Joshi, has expressed the view at the Cotton Textiles Advisory Committee meeting held on 4 April that the tight position regarding Indian cotton supply would continue during the next cotton year, judged from the consumption and availability to the mills. The position regarding supply has unfortunately deteriorated. Indeed, the estimates about the size of the crop have had to be revised downward very sharply. When the Cotton Advisory Board met early in November 1959, the commercial crop of Indian cotton was estimated at 4.8 million bales, and availability for the mill industry at 4.5 million bales. The commercial crop estimates have gone down, and, today, even 4 million bales is considered to be a liberal estimate. With export at 200,000 bales and allowing 50,000 bales for Khadi production, the availability of Indian cotton to the mill industry is being placed at scarcely 3.75 million bales.

He has also maintained that, if the system of quota allocation of Indian cotton had not been introduced last

December, the position would have been worse. These measures have not been fully respected. The Standing Committee of the Cotton Advisory Board has conceded that the control measures already introduced must continue in the next season. He has visualised that, if the present tendency of using more Indian cotton by some mills continued more rigorous measures might have to be introduced. He has expressed the view that, for some time, selective requisitioning and distribution may be introduced, but, if necessary, fuller control over distribution will have to be taken. He has, however, reiterated Government's assurance that production would not be allowed to suffer for lack of cotton.

×

Spot Market:

Prices in the spot section, after remaining quiet, have improved by Rs 10 to Rs 20 per candy. Porbunder Co 2, which had gone down to Rs 1100, was marked up to Rs 1125. Vijay, Digvijay and Berar Khandesh are quoting about Rs 90 to Rs 100 "on" over the ceiling levels, while the short staple Wagad is placed at

Rs 125 "on". With a view to avoiding the clutches of law in respect of evading the cotton control order, mills, which are buying their requirements of Indian cotton, are adjusting their positions. Broach Vijay was put through at Rs 1045 to Rs 1055, Bordell at Rs 1030 to Rs 1040, Dabhoi at Rs 1038 to Rs 1048, Kaledia at Rs 1040 and Jambusar at Rs 1045. Broach Digvijay came to business at Rs 1063, Dabhoi Digvijay at Rs 1083, and Masar Road Digvijay at Rs 1090. Amraoti L 147 changed hands at Rs 1025, Gadag Laxmi at Rs 1081, Nagar Co 2 at Rs 1081, and Aurangabad at Rs 940 to Rs 975.

Larger imports from the USA under PL 480 have been planned. An announcement has been made by the Union Minister for Commerce and Industry in Parliament suggesting that Government were proposing to import an additional quantity of 400,000 bales from the US under Public Law 480 and other sources. As arrivals of cotton of 1" staple and below from US will be gathering momentum, trade quarters are inclined to await the impact thereof as this variety of cotton is being imported for the first time after a lapse of some five or six years.

Among African cottons, Jingia was done at Rs 1122 to Rs 1130 CIF for April shipment, while Sudan G 45 was done at Rs 1635 for April/May. Sudan EG 45 at Rs 1700 CIF for June shipment, Busoga at Rs 1245, BP 52 at Rs 1325 and BP (Unug) at Rs 1360 for April/May shipment.

×

Cloth Market:

Moderate activity passed in the cotton piecegoods market, with prices ruling steadier in view of the higher raw cotton prices and the increased emoluments to textile workers. With the increase in manufacturing costs, the competitive position of the Indian cotton textile industry in the overseas markets has suffered to some extent, and the general feeling is that it would be difficult even to repeat the export performance of 1959 during the current year, apart from the need to step up exports further. With the surcharge of 5 per cent on Railway freight having come into force from 1 April, the industry, and particularly those mills in Ahmedabad using coal as fuel for power generation will certainly be hit. Hence, it is very difficult to look for any notable reduction in cloth prices.

×

New York Cotton:

The New York Cotton market ruled slightly better. The American cotton farmers have been in favour of an increase in acreage and have elected to plant 17,502,843 acres as against the original allotment of 16,310,000 acres. The increase is reported to have been provided for by operators of 61,139 farms who had selected to plant choice "B" cotton.

Egyptian cotton exports since the beginning of the season till 16 March 1960 have totalled 660,708 bales as against 511,012 bales during the corresponding period of last year. In the quality-wise break-up of the exports of 660,708 bales, Karnak figures at 113,678 bales, Menoufi at 303,815 bales, Ashmouni at 148,335 bales, Guiza 30 type at 39,395 bales, Dandra at 42,722 bales and others at 12,763 bales.

MARKETS

Pepper Market in a Highly Sensitive State

OF late, Pepper has been an erratic market. The news of the 500-ton purchase of the commodity by China last week pushed up the price on the London market by about 1sh a pound, though part of this upswing was subsequently lost. Stocks in Singapore are now thought to be down to about 700 tons, which can be a dangerously low level. But consumer demand in both Europe and America still remains small. If this continues until the arrival of the Sarawak crop, prices may stay around the current level.

This year, stories are already circulating that not one but two Syndicates of Chinese dealers in Singapore are preparing to corner the white pepper market. These stories may not be true; but any sign of large-scale buying in the coming weeks is bound to have a powerful effect on prices.

As far as the Indian market is concerned, the outlook for the commodity is reported to have undergone a drastic change. It is learnt that New York has bought a moderate quantity, during the last few days, at around 61 cents a pound as against 55 cents quoted only a week ago. The fact that Indian shippers have entered into business with shipment in April/May shows that the market is likely to improve further. Again, there are some enquiries from Egypt and the chances are that fairly good business will be done with this country through the STC.

There is, therefore, a general feeling among Indian trade circles that, if the present trend continues, it is likely that shipments during the current season will far exceed the yearly average. Trade estimates place exports during the first five months of the current season beginning from November last at about 12,000 tons as against an annual export of 13,000 tons.

As a matter of fact, the improved conditions in the export trade are well reflected in the Cochin market, where the ready rate has moved up to Rs 280 from Rs 260 per candy quoted in the previous week. May delivery is quoted at Rs 302.59 per cwt.

×

Rubber

Although it is not known how soon the Tariff Commission's report on Rubber will be out, present

shortage of the commodity is such that, during the current year, India will have to buy from abroad the largest quantity ever imported. Estimate of production for the year is placed at about 30,000 tons; but consumption will be much higher than last year's.

The Rubber Board is reported to have recommended to the Governments of Kerala, Madras and Mysore to make available all suitable lands in their respective States for rubber cultivation and to grant necessary financial assistance for establishing and developing rubber plantations in order to bridge the widening gap between production and consumption of natural rubber in India.

Meanwhile, the Malayan Government have announced that a Committee is to be set up to consider establishing a separate rubber market in Malaya. Traditionally, Malaya, the world's largest producer of rubber has sold in the Singapore market. The new move is being made, as Malaya has now become independent and feels the need for a market of its own with international recognition. It is expected that the Malayan market which is being given strong Government support but will not be run by the Government, will make an attempt to

1958-59 Season:

	Quantity	Rs.
Robusta Cherry PB ...	20,000	153.00 to 153.10
Robusta Cherry Flats ...	64,000	150.20 to 153.80

Grand Total ...	197,955	

Sugar

Thanks to easy supply position and expectation of a marked increase in overall production in the country, Sugar markets are ruling quiet. In the Muzaffarnagar market, prices have declined by Rs 3 to Rs 4 per bag, to be quoted at Rs 109 to Rs 112.

The Government of India have fixed, with immediate effect, the ex-factory price of Rs 38.35 per maund for ISS D-29 grade of sugar, produced by factories in South Bihar. Ex-factory price of other grades will be according to prescribed differentials. The controlled price will apply to all the stocks available with the mills, and also to the sugar produced hereafter. The entire sugar of these factories will now be allotted by the Central Government for sale at the fixed ex-factory price. Sugar produced by the factories in Uttar Pradesh, North Bihar and Punjab

stop price speculation and stabilise prices for the commodity.

×

Coffee

It is a bit early to make any estimate of the next season's Coffee crop, as blossom showers have not been adequate in some areas and, in some others, they have not fallen. But the general condition of the stands is so good as to give hope that, unless the weather upsets everything, the crop will be above 30,000 tons.

According to one estimate, the 1965/66 crop will be about 80,000 tons and, according to another, over 100,000 tons. It will mean all the difference between holding and marketing of 30,000 tons and 50,000 tons in about five years from now, when nobody knows what the market will be like. The Working Group for the Third Plan is going by the lower estimate; but the informed planters hold the view that the small growers have so improved their cultural practices that the effect is going to be felt in the next five to ten years.

The following types and grades of coffee have been released for internal consumption in the Pool sale, held at Kozhikode on 25 March 1960, to wholesalers (quantity in Kilos and prices per unit of 50 kilos or about 112 lbs):—

	Quantity	Rs.
Robusta Cherry PB ...	20,000	153.00 to 153.10
Robusta Cherry Flats ...	64,000	150.20 to 153.80

is already allotted by the Central Government at fixed ex-factory prices.

The Government of India have decided to release 1.85 lakh tons of sugar. There will be no release for free sale from the factories in Uttar Pradesh, North Bihar, South Bihar and Punjab except a small quantity which will be released to each factory for sale to its employees.

Allotments will be made at prices fixed by the Government. The controlled ex-factory price for UP and North Bihar factories is Rs 37.85 per maund and for factories in Punjab and South Bihar Rs 38.35 per maund for ISS D-29 grade with prescribed price differentials for other grades. The fixed f.o.r. destination prices in respect of allotments made to Kanpur and Calcutta will be Rs 38.60 and Rs 39.85 per maund respectively for sugar of ISS D-29 grade.

The Government of India have announced that the price of sugarcane, to be crushed by the vacuum pan factories during the 1960-61 season, should be as follows: (a) A basic minimum price of Rs 1.62 per maund for delivery at the gate of the factory and Rs 1.50 per maund for delivery at the rail centres; and (b) a deferred payment of an amount which may be found due under the formula prescribed by the Government, or under any alternative scheme applied in a State or region by the State Government concerned, with the previous approval of the Central Government, for linking the price of cane with the price of sugar as realised by the factories concerned.

×

Gur

After an early fall, Gur prices have improved slightly on demand from the consuming centres coupled with a fall in arrivals due to the harvesting period. In the Muzaffarnagar market, the rate for the Pansera quality has improved by 37 nP to 50 nP a maund on enquiry from the Punjab and Rajasthan.

In the Hapur market, new season's arrivals have increased; but the quality is damp. The price has eased by Rs 1.50 a maund. Efforts are being made by the Hapur Chamber of Commerce to get sanction for forward trading in sarson.

At a meeting of the representatives of the five recognised Chambers conducting futures trading in gur in North India, held at Meerut toward the end of last week, it was decided to propose to the Forward Markets Commission to grant them permission to start trading in Fagun contract 2017 delivery from 11 April. They have also proposed a meeting with the FMC at Delhi to settle the terms of the new contract.

×

Khandsari

Khandsari prices have eased by about Rs 2 a maund, as demand is slack and stocks are mounting. Stockists are, therefore, keen sellers, while purchasers are hesitant to enter into long commitments on reports of early decontrol of sugar.

In the Muzaffarnagar market, stocks are reported to have increased to 175,000 maunds. Medium quality is quoted at Rs 35 and superior at Rs 37 to Rs 39 a maund.

×

Bullion

Fluctuations on the bullion market in Bombay were confined to a narrow range but as in the past week, the tendency remained somewhat irregular. However, a steady tone was discernible despite the fact that the rank and the file of traders rather hesitant to go in for higher levels. Floating stocks of silver and gold in Bombay mar-

For all products manufactured by us

ket were estimated at 700 bars and 32000 tolas respectively.

The maturing Chaitra silver delivery early decline to Rs 216.25 recovered to Rs 217.06 to be placed at Rs 216.75 while Baisakh delivery was quoted at a discount of Rs 1.19 at Rs 215.56. Jeth delivery came to business at Rs 213.94 and Rs 214.56 to be placed at 214.59. Standard silver was almost quoted at par with Chaitra delivery.

Gold Chaitra delivery recovered to Rs 130.31 from Rs 129.12 to be quoted around Rs 129.69 while Baisakh delivery was placed at a discount of Rs 1.19 at Rs 128.56. Jeth delivery changed hands at Rs 127.62 to Rs 128.19 to quote at Rs 127.62. Standard gold commanded a premium of 0.44 nP over Chaitra delivery. Sovereign was placed at Rs 86.50.

Yarn

As the import policy for the period April to September remained unchanged the general feeling re-

mained somewhat bearish and prices for art silk yarn suffered a further setback. Staple fibre yarn also turned slightly lower. In art silk yarn, Bemberg Cuprassa for April delivery after dropping to Rs 1769 recovered to Rs 1785 to be placed at Rs 1781 while June delivery was quoted at a premium of Rs 30 at Rs 1816. Staple fibre yarn for April delivery changed hands to Rs 680 to Rs 690 to be placed at Rs 686 while June delivery was quoted at a discount of Rs 6. Cotton yarn prices were steady.

Metals

As an import policy for Zinc remained unchanged for the period April to September, prices for this metal hardened further. The Spot was quoted at Rs 140 per cwt. However, the liberalisation of import of copper unwrought and brass scrap has been welcomed by the trade in as much as this would help in bringing down the price. The import quota for copper unwrought has

been raised from 75 to 100 per cent. and for brass scrap to 50 per cent from 33½ per cent while quota for copper scrap remains unchanged at 66 2/3 per cent. It would have been in the fitness of things if the import quota for Zinc which remains at 30 per cent was also raised. Tin quota was also unchanged at 40 per cent. Copper scrap was quoted at Rs 211 per cwt. brass scrap at Rs 176 per cwt. and aluminium scrap at Rs 1.49 per lb. while lead and tin were placed at Rs 75 cwt and Rs 135 cwt respectively.

Oils & Oilseeds

In view of the unusual delay in granting permission to trade in the distant delivery contracts by the Forward Markets Commission, the oilseeds market in Bombay turned distinctly firm during the week under review. Trade quarters are wondering as to why the delay is being caused for the Bombay centre as permission has already been granted for the same for Adoni

and Saurashtra centres. Certain quarters are inclined to believe that as the relations between the FMC and the Board of Directors of the Bombay Oilseeds and Oils Exchange are not so cordial following the attitude taken by some Directors of the Exchange over the dereliction of the duty by the Secretary of the Exchange, the delay has been caused in granting permission. Whatever may be the reasons behind the policy, shorts were hustled to cover their sales in groundnuts due to tight supply position while in Castor also improved export outlook for oil following the Brazilian developments has aided sentiment. Linseed prices have strengthened due to prospects of export business. The FMC's decision on the plea to allow trading in distant delivery contract is awaited.

Castor May delivery advanced to Rs 176 from Rs 173 while castor oil commercial quality has firmed up to Rs 18.44 from Rs 17.56. Groundnuts May delivery has shot up to Rs 215.75 from Rs 209 while April May oil has gone up to Rs 22.44 from Rs 22.00. Linseed May delivery came up to Rs 33.31 from Rs 33 per cent while linseed oil was placed at Rs 16.12. Cottonseeds May delivery advanced to Rs 152 from Rs 149.50.

Exports of HPS Groundnuts in March till 25, came to 2169 tons, Sesame 37 tons, Castor oil 2476 tons, Linseed oil 50 tons, groundnut oil cake meal (extraction) 6279 tons and Linseed oil cake 11528 tons.

New Possibilities for Jute Products

New possibilities for the future of jute products can be seen in some of the latest advances in soft floor coverings, which are composite constructions of jute and man-made fibres. This was pointed out by the retiring chairman, Mr A. S. Kyle, at the annual meeting of the British Jute Trade Federal Council in Dundee, Scotland, on 23 March.

Good marketing plans for jute products were of growing importance, Mr Kyle said. The industry must see to it that "more emphasis is placed on getting more information back from the ultimate user of jute goods as to his special needs and problems. We must increase our efforts to anticipate developments, so that we are not merely abreast of the times but ahead of them."

A total of £11,500,000 had now been spent on the post-war modernization of the Dundee jute industry, Mr Kyle said. Expenditure on re-equipment during 1959 amounted to £477,000. Additional capital commitments entered into by 1 January this year were already greater—at £540,000—than actual expenditure in 1959, he added.

The new chairman of the Federal Council is Mr Gavin H. Ogilvie (of Malcolm Ogilvie & Co.), and the vice-chairman is Mr Nigel W. Campbell (A. & S. Henry & Co).

FOR THE INVESTOR

Mr Desai Negates Tax Relief Hopes

Investment Gossip:

For the past two days the Stock market has been displaying a quietly steady trend. The present mood is generally attributed to the reported observations of Mr Morarji Desai on taxation and the recent RBI directive. The Finance Minister is said to have damped down all hopes of relaxation of tax effort on the part of Government in coming years. Representations are being made for modification or reduction of the rates of taxation on some of the commodities and articles on which levies have either been increased or newly imposed. While referring to these demands, Mr Desai is reported to have reminded his audience that Government are almost committed to a further tax effort to the tune of Rs 1,650 crores during the Third Plan period. The 1960-61 budget is to be taken as preparing the ground for what is to come. It may, however, be noted that the same idea had been postulated by him in his budget speech itself.

Referring to the RBI directive, Mr Desai has made it clear that it has come to stay. This is said to have caused disappointment. But to whom? It would appear that some quarters are expecting a retracing of its steps by the RBI directive atleast in some respects. For it is maintained that besides interfering with genuine investment activities it will be found to be useless as a deterrent measure. Mr Desai's categorical statement leaves no room for any of these lingering hopes about relaxation of the main aspects of the directive.

A more logical explanation of the apparent slackening of the renewed bullish fervour noticeable during the early part of the week is the tendency to await the tangible effect of the credit squeeze which will be known on 11 April. The fact that the meeting of the LIC investment committee is scheduled at Bombay on that very day has further added to this cautious tendency.

In the meantime, there has been much encouraging news. The rise in production recorded last month in the two private sector steel companies and a fresh quota of price increase for coal have put fresh life into the coal and steel sections.

Prime Minister Nehru's declaration that Government want both the public and private sectors to try to beat the other in the race for rapid industrialisation of the country has further strengthened the confidence he had revived in the future of private enterprise some months ago in his reply to the representation made

to him by the President of the Federation of the Indian Chambers of Commerce and Industry. His readiness to consider any feasible scheme to set up a new steel factory in the private sector is another clear indication of Government's sympathetic attitude toward private enterprise.

All this only goes to prove that the outlook for equities is bright. The outlook for unbridled speculation will however continue to be bleak as Government have made it quite unambiguous that they will not hesitate to clamp down further restrictive measures when occasion demands.

ERs

New Issue Notes

At the extraordinary general meeting of Rohtas Industries Limited, to be held on 29 April, a special resolution has been proposed, subject to the consent of the shareholders, to raise the authorised capital of the company from Rs 5 crores to Rs 15 crores by the creation of 75,00,000 Ordinary shares of Rs 10 each ranking pari passu with the existing Ordinary shares and 2,50,000 Preference shares, ranking as regards return of capital pari passu with the existing preference shares, and to be issued on such terms and conditions as regards dividends or otherwise as the directors may determine from time to time. Since the last increase in the authorised capital in 1944, the activities of the company have considerably increased. The directors have in view the issue of further capital for effecting substantial expansion in the capacity of the company's pulp and paper factories.

It is understood that, out of the public offer of 25,000 shares of the Indian Hume Pipe Co., Ltd. by the Premier Construction Co., Ltd., applications received were for about 35,000 shares. The majority applications were for 5 to 10 shares. It is understood that the Life Insurance Corporation applied for 2500 shares and it has been allotted 875 shares. The allotment which was made last week in consultation with the Stock Exchange authorities was on the following lines:—

Shares applied for	Allotment of shares
5	Full
10	Full
15 to 20	10
25 to 30	15
35 to 40	20
50	25
55 to 60	30
80	40
100 to 105	50
150	55
200	70
300	105

Investment Notes:

The benefits of the expansion schemes of TISCO and IISCO are reflected in the production results of the companies in 1959-60. The

following table gives the comparative results (figures in tons):—

TISCO:	1959-60	1958-59
Saleable Steel	1,213,000	885,000
Pig Iron	1,578,400	1,131,000
Steel Ingots	1,532,800	1,148,000

IISCO:

Saleable Steel	660,695	497,551
Pig Iron	1,053,612	959,933
Steel Ingots	827,072	608,205
Despatches	678,512	506,141

The first project to make Baby Food in India is well under way at the Amul Dairy at Anand and is expected to go into production in October this year. The licensed capacity of the plant is 2,500 tons a year.

It is understood that the Ahmedabad Electricity Company Limited is exploring ways of raising additional capital for an expansion programme, either by way of a loan or in the form of a right issue as circumstances may warrant. The company is believed to have agreed upon the installation of additional 30,000 k.w. to meet the serious power shortage in the proposed State of Gujarat. In this respect, an application has been made to the State Electricity Board.

The Premier Construction Company Limited has asked for extension of time from the Central Government for the scheme of conversion of Promoters' shares into Ordinary shares, and also capitalisation of the Reserve by the issue of bonus shares.

It is learnt that Shri Ambika Mills Limited, Ahmedabad, will undertake the manufacture of certain new lines. It is now proposed to widen the objects of the company by altering suitably the provisions of its Memorandum of Association.

ERs

Investment Briefs:

Titagur Paper Mills Company Limited has recommended interim dividends of Rs 1.20 per share on the "A" and "B" Ordinary shares and 17 nP per share on the Preferred Ordinary share for the year ended 31 March, 1960. Both the dividends are subject to tax and payable on or after 25 May. Transfer Books will be closed from 11 April to 30 April.

South Karanpura Coal has declared a final dividend of 5.3 per cent, making a total of 9 per cent, subject to tax, for the year ended 31 August, 1959. This works out to a net dividend of 6.3 per cent as against 7½ per cent, tax-free, for the previous year.

G. K. Williams Limited has proposed a final dividend of Rs 1.60 per share, making a total of Rs 2.40 per share for the year ended 2 January 1960.

MEETINGS AND DIVIDENDS PROPOSED

Calcutta Steam has declared a dividend of Rs 1 per share, subject to tax, for year ended 30 June 1959 as against a tax-free dividend of Re 1 for the previous year.

ERs

Balance-Sheet Briefs:

The National Peroxide Limited (in which Bombay Dyeing has invested Rs 15 lakhs) has reported a net profit of Rs 8.79 lakhs for 1959. The directors have recommended a taxable dividend of Rs 18 per share.

Sir Shadi Lal Sugar Company Limited has been able to recommend a final dividend of Rs 12, making a total of Rs 18 per share (taxable) for last year as against nil in the previous year, thanks to a net profit of Rs 2.85 lakhs against a loss of Rs 2.19 lakhs.

The New India Industries Limited has earned a profit of Rs 9.03 lakhs for 1959 as against Rs 9.29 lakhs. A taxable dividend of Rs 25 (net Rs 17.50) is recommended against Rs 18 paid for the previous year.

The net profit of the Premier Construction Company Limited is slightly lower at Rs 26.38 lakhs for 1959 as against Rs 27.56 lakhs for 1958. The dividend on the Ordinary shares is Rs 18 per share against Rs 12 and on Promoter's shares Rs 5.79303 against Rs 4.34193 per share. The latest dividends are payable subject to tax.

Despite an increase in profits from Rs 31.07 lakhs to Rs 33.29 lakhs, the Maharashtra Sugar Mills Limited has proposed a dividend of Rs 21 (taxable) for the year ended 30 September 1959. This works out to a net dividend of Rs 14.70 against a net distribution of Rs 17 paid for the previous year.

The Ahmedabad Jupiter Spinning, Weaving and Manufacturing Company Limited has shown a higher net profit of Rs 10.23 lakhs as against Rs 6.85 lakhs. The directors have recommended a dividend of Rs 25 plus a Bonus of Rs 3 per share, subject to tax.

The Delhi Safe Deposit Company Limited has made a higher net profit of Rs 42,580 as against Rs 38,504 in 1958. Gross dividends of 12 per cent and 8.57 per cent are recommended on the equity and Preference shares respectively.

The working of the Victoria Mills Limited has resulted in a profit of Rs 4.14 lakhs as against Rs 2.92 lakhs in 1958. The directors have recommended a taxable dividend of Rs 11 on the Ordinary shares. In addition, they have decided, subject to Government sanction, to issue bonus shares in the proportion of one share for every ten ordinary shares held. The company paid a dividend at Rs 20 in the preceding year.

COMPANY REPORTS

Fall in Income, Profit, Dividend of Killicks

Balance-Sheet Reviews:

A DROP in the gross income of Killick Industries Ltd., in the year ended 30 November 1959 from Rs 80.18 lakhs in the preceding 17-month period to Rs 64.13 lakhs has been immediately reflected in a reduction in the net profit. Commission and office allowances from managed companies have declined from Rs 21.75 lakhs to Rs 14.70 lakhs. Similarly, income from trade investments has gone down from Rs 18.55 lakhs to Rs 13.86 lakhs. In the result, the net profit, before providing for Taxation and Depreciation, has declined rather sharply. In the earlier period, the figure of such profit was, including a transfer of Rs 2.50 lakhs from General Reserve and Rs 2 lakhs from Dividend Equalisation Reserve, Rs 35.64 lakhs; in the latest year, the relative figure, after transferring Rs 1.60 lakhs from Dividend Equalisation Reserve, is Rs 22.09 lakhs. Provision for taxation has been more than halved from Rs 18.20 lakhs to Rs 8.90 lakhs. The allocation to Depreciation has also been reduced from Rs 3.35 lakhs to Rs 2.41 lakhs. The transfer to Development Reserve has been pruned to Rs 43,323 from Rs 76,358. The proposed dividend is at 9 per cent subject to tax against 13 per cent free of tax for the earlier period, though the dividend payable is on a somewhat larger capital.

The balance-sheet of Killick Industries as at 30 November 1959 shows an ordinary capital of Rs 1.25 crores, against which the reserve and surplus, excluding the share premium account, are shown at Rs 24.24 lakhs. On the other side of the ledger, the gross of block of Rs 48.23 lakhs has a net value of Rs 31.38 lakhs.

NB: Figures are not strictly comparable, because 1958-59 accounts relate to 12 months' and 1957-58 accounts to 17 months' working.

Excellent Results of Elgin Mills

THE Elgin Mills Company Limited has produced excellent working results for the year ended 30 September 1959, reflecting the valuable contribution made by the company toward the export promotion scheme. Sales have risen to Rs 3.56 crores from Rs 2.98 crores, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 45.23 lakhs against Rs 25.96 lakhs in the previous year.

In respect of allocations, the Depreciation amount is reduced to Rs 4.50 lakhs from Rs 6.75 lakhs, while Taxation provision is raised to Rs 19 lakhs from Rs 11 lakhs and Rehabilitation Reserve to Rs 13 lakhs from Rs 2.50 lakhs. The directors have recommended a taxable dividend of Rs 1.15 per share on the Ordinary and Vendors shares as against a tax-free dividend of 75 pP previously.

The paid-up capital, as on 30 September 1959, is Rs 78.20 lakhs consisting of 4.80 lakh Ordinary shares of Rs 10 each; 1.50 lakh Vendors shares of Rs 10 each; 11,000-8 per cent Cumulative Preference shares of Rs 100 each and 42,000-5 per cent "B" Cumulative Preference shares of Rs 10 each. Reserves and surplus are shown at Rs 1.22 crores. The gross block at Rs 1.75 crores is depreciated by Rs 1.53 crores to show a net block value of Rs 21.57 lakhs.

Mafatlal Fine Raises Ordinary Dividend

Thanks to increased earnings, the Mafatlal Fine Spinning and Manufacturing Company Limited has been able to raise the Ordinary dividend for 1959. A taxable dividend of 29 per cent, now recommended, works out to a net dividend of 20.3 per cent as against 18 per cent paid for 1958.

Sales are higher at Rs 2.45 crores against Rs 2.24 crores, while the net profit works out to Rs 57.45 lakhs against Rs 42.87 lakhs. Apart from providing a sum of Rs 3 lakhs for Dividend Equalisation Reserve, the Depreciation amount is raised to Rs 8.58 lakhs from Rs 8.37 lakhs; Development Rebate Reserve to Rs 3.42 lakhs from Rs 2.62 lakhs; Taxation provision to Rs 19.65 lakhs from Rs 17.21 lakhs and General Reserve to Rs 4 lakhs from Rs 3 lakhs.

The balance-sheet, as at 31 December 1959, shows a paid-up capital of Rs 87 lakhs, divided into 58,000 Ordinary; 14,500-4½ per cent Redeemable Cumulative First Preference and 14,500-4½ per cent Redeemable Cumulative Second Preference shares, all of Rs 100 each. Against this, Capital Reserve is shown at Rs 9.86 lakhs; General Reserve at Rs 1 crore; Dividend Equalisation Reserve at Rs 6 lakhs; Investment Fluctuation Reserve at Rs 8.82 lakhs; Development Rebate Reserve at Rs 12.71 lakhs and Statutory Development Rebate Reserve at Rs 4.53 lakhs. The gross block amounts to Rs 2.18 crores; Depreciation to Rs 1.47 crores and the net block to Rs 71.64 lakhs.

Empire Jute Reduces Dividend

The decline in sales from Rs 1.34 crores to Rs 1.29 crores is reflected in the net profit of the Empire Jute Company Limited for the year ended 31 July 1959. The net profit, after providing for Depreciation and Taxation, is lower at Rs 3.51 lakhs against Rs 3.79 lakhs in the previous year. The Depreciation amount is raised to Rs 4.17 lakhs from Rs 2.92 lakhs and Taxation provision to Rs 2.75 lakhs from Rs 2.60 lakhs.

After transferring a sum of Rs 1.00 from Machinery Renewal Reserve and Rs 1.05 lakhs from Development Rebate Reserve, the directors have set apart Rs 1.31 lakhs (Rs 1.37 lakhs) for Development Rebate Reserve and Rs 1.00 lakh (nil) for General Reserve. A taxable dividend of Rs 1.25 per share is recommended; and this works out to a net dividend of 8.40 per cent against 10 per cent paid previously.

Against a paid-up capital of Rs 34 lakhs, General Reserve is shown at Rs 25.50 lakhs and Development Rebate Reserve at Rs 2.70 lakhs. The gross block of Rs 1.70 crores is depreciated by Rs 70.09 lakhs to show a net block of Rs 37.31 lakhs.

Presidency Jute Reports Increased Profits

Although sales have declined to Rs 1.14 crores from Rs 1.43 crores, the Presidency Jute Mills Company Limited has reported a higher net profit of Rs 5.05 lakhs for the year ended 31 July 1959 as against Rs 3.23 lakhs in the previous year, thanks to the cut in manufacturing and other expenses. The Depreciation amount is raised to Rs 2.57 lakhs from Rs 2.16 lakhs and Taxation provision to Rs 2.55 lakhs from Rs 2.40 lakhs.

After transferring a sum of Rs 96,344 from Development Rebate Reserve and Rs 43,656 from Debenture Redemption Fund, the directors have provided Rs 1.43 lakhs (Rs 1.30 lakhs) for Development Rebate Reserve and Rs 2.00 lakhs (nil) for General Reserve. They have recommended a taxable dividend of 50 p per share as against a tax-free dividend of 37 p per share previously.

The paid-up capital is Rs 25 lakhs divided into 5 lakhs Ordinary shares of Rs 5 each. General Reserve is shown at Rs 7.50 lakhs and Development Rebate Reserve at Rs 2.73 lakhs. The gross block is shown at Rs 99.90 lakhs; total depreciation at Rs 72.62 lakhs and the net block at Rs 27.28 lakhs.

Nellimarla Jute Reduces Net Dividend

Despite a decline in sales from Rs 1.33 crores to Rs 1.16 crores, the Nellimarla Jute Mills Company Limited, in McLeod & Co. group, has reported a slight increase in the net profit, before providing for Depreciation and Taxation, to Rs 11.83 lakhs

for the year ended 31 July 1959 from Rs 11.43 lakhs in the previous year. The Depreciation amount is raised to Rs 3.52 lakhs from Rs 1.56 lakhs, while Taxation provision is reduced to Rs 1.20 lakhs from Rs 4.90 lakhs. After transferring a sum of Rs 9.75 lakhs from Machinery Renewals Reserve and writing back Rs 85,000 from Development Rebate Reserve, the directors have set apart a sum of Rs 9.00 lakhs (Rs 50,000) for General Reserve and Rs 4.13 lakhs (Rs 1.14 lakhs) for Development Rebate Reserve. The directors have recommended a taxable dividend of Rs 1.40 per share and this works out to a net dividend of 9.8 per cent against a tax-free dividend of 10 per cent paid previously.

The gross block of Rs 59.70 lakhs is depreciated by Rs 26.86 lakhs to show a net block value of Rs 32.84 lakhs.

According to the directors' report, modernisation of the Sacking Weft Spinning was completed during August 1959 and the remainder of the mill modernisation on the Warp side should be completed by June 1960.

In our review in these columns in the issue dated 26th March, 1960 (Page 578), we mentioned that the item "Contracts Involved" was shown lower at Rs 3.42 crores against Rs 3.35 crores. The word "lower" should read "higher".

Renewed Buying Fervour

Watch-Dog Writes:

DESPITE profit-taking at bulges, stock markets have continued to rule firm, thanks to a return of full confidence and offerings remaining at a low ebb. Again, the recent shake-out has helped to strengthen the technical position of the market.

On the Calcutta Stock Exchange, selected shares recorded further gains over last levels due to renewed speculative support.

The Bombay Stock Exchange suffered a slight setback due to profit-taking.

Mild buoyancy prevailed where Madras Stock Exchange where Planting issues met with good demand at enhanced levels.

Calcutta, Friday Evening.

The local stock market gave an excellent performance during the week under review when prices forged ahead due to renewed speculative support coupled with short-covering. The main inspiration for the bull operators was derived from the reports of the smooth settlement in the Bombay Stock Exchange, the announcement of the new import policy, the encouraging production figures released by the Indian Iron & Steel Company Limited and the increase in the price of coal.

It was also believed that the return of the funds, which had been blocked in some of the recent issues, should release more liquid sources for further investment in the stock market. There was, however, a general disposition to adopt a cautious attitude in following the rise in prices due to an anxiety to wait until 11 April when the period of one month, allowed for banks to adjust their margins against shares, would expire. The uncompromising attitude of the Finance Minister as regards tax concessions and credit squeeze measures was also a contributory factor. Above all, the approaching holidays for the New Year and Easter induced some hesitancy to extend commitments. The undertone remained, however, steady.

In the absence of further selling pressure, Gilt-edged securities recovered on a broad front although higher levels could not be retained till the close due to profit-taking. 3 per cent 1960 Conversion Loan,

after touching a new low of Rs 72.50 from Rs 73.85, improved steadily to Rs 74.10, to finish the week at Rs 74.

Bank shares were quietly steady with Punjab National changing hands at Rs 20.62 to Rs 20.75 and United Commercial at Rs 71.25 to Rs 71.50.

The Jute section was comparatively neglected although a few selected shares were active for special reasons. Also, there were expectations of a fall in fibre prices against the possibility of an earlier jute crop and the Government's decision to import two lakhs bales of Pakistani Cuttings. Howrah were at one time taken up to Rs 23.25 from Rs 23.12; Ganges up to Rs 12.75 from Rs 12.06; India up to Rs 16.50 from Rs 16.19 and New Central up to Rs 26.56 from Rs 26, to close a shade easier at Rs 22.62; 12.56; Rs 16.37 and Rs 26.37 respectively. Anglo-India were a steady feature at Rs 220 and so also Chamdany at Rs 125.

Coal shares enjoyed a mild boom on reports of the Government decision to increase the price by 81 p per ton in soft coke. Hopes were also held that the Government might be obliged to grant facilities to collieries in the private sector to expand. Bengal changed hands at Rs 335 to Rs 346; East Indian at Rs 29.87 to Rs 30.37; New Beerboom at Rs 24 to Rs 25; Central India at Rs 10.31 to Rs 10.59 and Western Bengal at Rs 7.94 to Rs 8.41. Burrakur, after touching a new high of Rs 21 from Rs 20.44, turned ex-dividend, to be quoted around Rs 20.25 at the close.

Tea shares were not so much supported as other sections, although isolated bright spots were traceable. This was mainly due to the approaching time for the announcement of dividends by some companies. There were also talks that tea stocks with the traders were not high and the internal consumption was in the increase. It was, therefore, believed that the new season might get a good start in the second week of May. Brooke Bond had good support up to Rs 17.75 from Rs 17.50; Bishnauth up to Rs 20.44 from Rs 20; Jayshree up to Rs 17.56 from Rs 17.12 and Tezpor up to Rs 19.25 from Rs 18.25. Huldibari hardened to Rs 27 from Rs 26.62 with Grob ruling quiet at Rs 14.96 against Rs 14.19 on lack of support.

Sugar shares were fairly supported. It was thought that, due to the steady increase in output, the earnings of the companies might improve during the current season. Raza/Buland met with business at Rs 12.97 to Rs 13.15; Cawnpore at Rs 15.25 to Rs 15.75; Ramnagar Cane at Rs 21.56 to Rs 21.62; Dyer Meakin at Rs 20 to Rs 20.50 and SKG at Rs 13.62 to Rs 13.94.

Textile shares came in for selective enquiry following encouraging advices from the cloth front; but higher levels attracted considerable

profit-taking toward the close. Jayshree finished the week at Rs 13.12; Elgins at Rs 20.50; Kesoram at Rs 24.75 and Dunbar at Rs 177 after touching high levels of Rs

done as high as Rs 72 to close at Rs 68. Premier Automobile advanced to Rs 146 from Rs 139 to terminate at Rs 142. Gwalior Rayon was taken up to Rs 34.50 to react to Rs 33.75. Laxmi Starch found buyers at Rs 152. West Coast Paper ruled steady at Rs 169. Sugar shares were steady with

ROHTAS INDUSTRIES LTD., Dalmianagar (Bihar)

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Company will be held on Friday, the 29th April, 1960, at 11.30 a.m. at the Registered Office of the Company at Dalmianagar (Bihar) to consider and if thought fit to pass with or without modification the following resolution, which will be proposed as a Special Resolution:—

(To be proposed as a Special Resolution):

"RESOLVED that the Authorised Capital of the Company be increased from Rupees Five Crores to Rupees Fifteen Crores by creation of (i) 2,50,000 Preference Shares of Rs. 100/- each ranking as regards return of Capital pari passu with the existing Preference Shares and to be issued on such terms and conditions as regards dividends or otherwise as the Directors may determine from time to time and at the time of issue and (ii) 75,00,000 Ordinary Shares of Rs. 10/- each ranking pari passu with the existing Ordinary Shares."

By Order of the Board
for ROHTAS INDUSTRIES
LIMITED,
for SAHU JAIN LIMITED,
A. K. Jain
Managing Director,
Managing Agents.
Calcutta,
4th April, 1960

N.B.:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Explanatory Note:

Since the last increase in the Authorised Capital in 1944, the activities of the Company have considerably increased. The Directors have in view issue of further Capital for effecting substantial expansion in the capacity of the Company's Pulp and Paper factories. It is, therefore, necessary to increase the Authorised Capital. No change in the existing rights of the Preference Shares is proposed. The resolution as mentioned above is, therefore, proposed for the consent of the shareholders.

The Directors of the Company, the Managing Agents or their Directors have no interest in the proposed increase of the Authorised Capital.

Belapur looking up at Rs 331. Rs 326 to react to Rs 325, while Walchandnagar met with buyers at Rs 390 on account of the extension of the sugar machinery making plant. Kesat Sugar met with buyers at Rs 73. Wimco were taken up to Rs 260 from Rs 240 before closing at Rs 252. Bombay Burmah moved between Rs 577 and Rs 564 to terminate at Rs 565. The week's movements in prices of a few representative scrips are as follows:

	High	Low	Close
B. Dyeing	71.30	66.40	69.40
Century	472.00	440.00	461.00

Madras

THERE was selling pressure on all counters today in the Madras Stock Exchange resulting in a weak market and a sliding down of prices of shares and stocks which showed an upward trend last week. This was ascribed to the turning down of the suggestion by Mr. Morarji Desai that there should be no restriction on bank advances by the Reserve Bank of India. Caution marked today's dealings.

Government Securities: 3% Government of India Security 1963 was marked up to Rs 98.00. 1979 Government of India 4% security was sold at Rs 100.20. Madras Government 4% 1971 loan was available at Rs 100.00 and Mysore's 1971 4% loan was marked at Rs 100.10. Kerala's 4% 1971 was unchanged at Rs 99.70. Transactions were reported in Andhra Government's 4% loan 1970 at Rs 101.99. Orissa Loan 4% 1970 was available at Rs 100.75.

In Briefs

Another new issue in the offing is that of Juggilal Kamlatpat Cotton Spinning and Weaving Mills Co. Ltd. It is gathered that Rs 1.01 crores will be sought in all, Rs 62 lakhs in ordinary shares and Rs 39 lakhs in 6½ per cent tax free Preference shares. The new money is to be used for the manufacture of JK Rayon. It is expected that the company will apply for enlistment on both the Calcutta and Bombay Stock Exchanges.

New Beerboom Coal has recommended a final dividend of 95 p.p. making a total of Rs 1.50 per share for the year ended 31 October 1959 as against Re 1 paid previously.

In Bombay, Poison Limited has proposed a taxable dividend of Rs 15 for 1959. This works out to a net dividend of Rs 10.50 as against a dividend of Rs 10 in the previous year.

In Madras, Gokul Rubber has declared a taxable dividend of 9 per cent for 1959 as against a tax-free dividend of 6 per cent for 1958.

Jawahar Mill has proposed a dividend of 15 per cent (taxable) for 1959 as against a tax-free dividend of 15 per cent paid for the previous year.

Peermade Tea has recommended a final dividend of 15 per cent, making a total of 22½ per cent (taxable) for 1959 as against a tax-free dividend of 16½ per cent.

With reference to a news item published in our issue of 2 April 1960, regarding a new fertiliser factory, to be set up in Madras State, we are now informed that the name of the company will be Premier Fertilisers Limited and not Madras Fertilisers Limited, as mentioned.

"All-Weather" Mangalore

Mr. B. D. Jatti, Mysore's Chief Minister, told the State Assembly recently that the Central Government had decided to convert Mangalore port into an "all-weather" port and the Karwar Port in North Kanara district into an "intermediary port." The Minister's statement was based on the "most reliable information" about the decision of the Central Government upon this question. He also stated that the upgrading of the Mangalore Port would cost Rs 11 crores. The State Government would be permitted, he said, to go ahead with the work with an initial expenditure of Rs 1.50 crores. He also informed the House that the Union Government would implement the Karwar scheme at a cost of Rs 1.50 crores.

SPECIFICATION FOR STOVES.

The Indian Standards Institution has published a specification for oil pressure stoves (IS: 1342-1959). The standard specifies the requirements for design, construction, safety and performance of two popular types of oil pressure stoves.

The ISI has also published a specification for steel-yards. This standard is one of a series on commercial weighing instruments being prepared at the instance of the Standing Metric Committee of the Government of India, in connection with the introduction of metric system.

Copies of the standards can be had from the Indian Standards Institution or from its branch offices at Bombay, Calcutta and Madras.

RAIL CONCESSION FOR EXPORT PROMOTION RAILWAY BOARD ANNOUNCEMENT.

To help in the drive to stimulate exports, the Railway Board has approved concessional freight rates for some more commodities from certain stations to specified ports.

These commodities are electric motors, cotton and hair belting, grinding wheels, machine screws, automobile hand tyre inflators, bare copper conductors (ACSR and AAC), plywood tea chests and sheet glass.

The concessional freight, which has already become effective, is given in the form of 50 per cent rebate on normal tariff rates by goods trains.

Concessions have earlier been given in the case of a number of other commodities.

FOREIGN TRADE IN JANUARY

The provisional figures of foreign trade of India by all routes, i.e., sea, air and land, on private and Government accounts during January 1960, according to information available to-date in the Department of Commercial Intelligence and Statistics, Calcutta, are given below:—

Merchandise, excluding over-land trade with Nepal, Tibet, Sikkim and Bhutan: Exports Rs 51.51 crores, re-exports Rs 53 lakhs, imports Rs 62.53 crores. The import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment and of private merchandise under reference to Customs for verification.

Treasure: Exports (including re-exports) of currency notes Rs 31 lakhs, gold nil and current coins (excluding gold coins) negligible. Imports of currency notes Rs 1.01 crores, gold Rs 3 lakhs, current coins (excluding gold coins) negligible.

Balance of Trade: Subject to the limitation in import figures mentioned above, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs 10.52 crores.

A comparative table showing the trade in January, 1960, December, and January, 1959, is given below:—

	(In lakhs of rupees)	Jan. '60	Dec. '59	Jan. '59

WORLD OF FINANCE

Rs 32 crore Expansion in Note Circulation

THE colossal combination of Governments' year-end disbursements, busy season demand for funds, and expenditure connected with the beginning of the month has made its impact fully felt in the returns of the Reserve Bank for the week ended 8 April. Active Note Circulation has jumped up by Rs 32.24 crores to Rs 1896.77 crores. Rupee Coin has gone out into circulation for Rs 1.68 crores. Currency has been expanded for Rs 40 crores against Rupee Securities by transfer from Investments in the Banking Department. The Reserve Bank's cash balances, as a result, have improved by Rs 6.07 crores to Rs 12.40 crores.

The currency expansion is owing considerably to governmental expenditures; the Centre's balances are down by Rs 11.16 crores at Rs 62.33 crores; drafts issued have partly been encashed, since Bills Payable are lower by Rs 16.12 crores at Rs 43.00 crores; State Government expenditures—to prevent presumably, lapses in appropriations—have been extremely heavy, since their Deposits

have shrunk by a steep Rs 29.78 crores to a meagre level of Rs 5.57 crores; and this last is on top of a further rise of Rs 6.43 crores to Rs 34.24 crores in their ways and means borrowings from the Reserve Bank.

There is the wisp of the suggestion that the banking system, during the week ended 8 April, has felt the benefit of governmental disbursements; for, the Other Loans and Advances of the Reserve Bank are very sizably reduced by Rs 31.51 crores at Rs 112.01 crores, and this decline is in the main likely to relate to Scheduled Bank borrowings; though, in the relevant week, the State Bank has not significantly reduced its loans from the central banking institution. On the other hand, the rise of Rs 7.58 crores to Rs 86.50 crores in Reserve Balances of member banks is not in this regard noteworthy, since the State Bank, in the week under review, has enlarged its cash in hand and with Reserve Bank by upwards of Rs 11 crores. Balances Held Abroad are down by Rs 0.93 crores at Rs 24.57 crores, and Investments, by dint of the transfer to the Issue Department, are lower by roughly Rs 40 crores at Rs 208.45 crores.

+

The State Bank, perhaps due to governmental year-end disbursements, reports a rise of Rs 5.96 crores to Rs 637.20 crores in Deposits in its return for 8 April. Busy season demand and the needs of month-early disbursements have, however, caused an expansion of Rs 3.08 crores to Rs 214.00 crores in Advances. With a fall of Rs 4½ crores in Other Assets, the State Bank's cash in hand and with Reserve Bank has risen by Rs 11.22 crores to Rs 31.60 crores.

Fiscal Year-end Transactions

The return of Scheduled Banks for 1 April does not significantly assist in the unravelling of the mysteries connected with the fiscal year-end transactions of the Central Government. As such, such conclusions as we are able to draw in this regard will be limited to inferences made from the figures relating to the Reserve Bank.

In the first place, the deficit, financing incurred by the Central Government during the week ended 1 April should have been of the order of Rs 20 crores. This is indicated in the rise of 15.60 crores to Rs 248.18 crores in investments in the Banking Department of the Reserve Bank, combined with the knowledge that the State Bank figured as a purchaser of gilt-edged for Rs 7½ crores during the week, whereas other Scheduled Banks have disinvested for Rs. 5 crores. Besides the year-end commitments of the Central Government, there is reason to believe that a special transaction was completed during the week under review. Such is the inference to be drawn from the decline of Rs 8.61 crores to Rs 25.50 crores in Balances Held Abroad and the rise of Rs 4.51 crores to Rs 104.62 crores in other Deposits. Moreover, further drafts have been issued in behalf of the Central Government as is evidenced by the further rise of Rs 5.50 crores to Rs 59.12 crores in Bills Payable. In the net result, the Central Government's balances have improved by Rs 10.34 crores to Rs 73.49 crores, after having regard for the fact that the Centre has exercised its option to tender rupee coin for Rs 5 crores

to the Reserve Bank and receive credit thereagainst.

Deposits of State Governments were lower by Rs 7.62 crores at Rs 35.34 crores on top of a rise of Rs 5.46 crores to Rs 27.81 crores in their ways and means borrowings from the Reserve Bank; and this, we may presume, is an index of year-end disbursements made by the State Governments lest appropriations should lapse.

The Reserve Balances of member banks have been marked down by Rs 13.88 crores at Rs 79.02 crores. But, in that week, the State Bank is known to have drawn down its cash in hand and with Reserve Bank by Rs 17 crores. Thus, other Scheduled Banks clearly added to their Reserve Balances. The reason for such rise in the statutory deposits of the other Scheduled Banks can be found from the return of Scheduled Banks for the relevant week, in which a rise of Rs 4.82 crores to Rs 1940.50 crores has been registered in gross Deposits; though a large rise under demand liabilities was largely offset by a fall in time liabilities.

Thus, busy season needs, year-end transactions and month early disbursements have all combined, during the week ended 1 April, to cause an expansion in active note circulation of Rs 19.62 crores to Rs 1864.53 crores. Currency was expanded for Rs 5 crores against rupee coin by the Government tendering rupee coin in this amount. There has been outflow of rupee coin for Rs 0.97 crores, and the Reserve Bank's cash in the till has been drawn down by Rs 15.61 crores to Rs 6.33 crores.

Indian Bank's Results for 1959

IN its balance-sheet as at 31 December 1959, the Indian Bank Limited reports an increase in Deposits and other accounts from Rs 40.93 crores to Rs 43.93 crores; and the rise has taken place mainly under the head of Fixed Deposits, which are higher by Rs 2.17 crores at Rs 16.45 crores. Remunerative use for money has taken the total of Advances sharply up from Rs 23.14 crores to Rs 28.85 crores. There is a rise of Rs 1.39 crores to Rs 13.34 crores in gilt-edged investments. Thus, recourse to borrowing was necessary, the liability being shown at Rs 1.55 crores against nil in the previous balance-sheet. In the end result, cash and balances with other banks are slightly better at Rs 4.87 crores against Rs 4.74 crores, though money at call and short notice stands reduced at Rs 13 lakhs against Rs 1.61 crores.

The gross income of the bank has improved by Rs 36.93 lakhs to Rs 2.67 crores, with almost the whole of this rise being due to an increase of Rs 35½ lakhs in the income by interest and discount. Expenses have not risen proportionately; interest paid absorbs only Rs 9 lakhs more at Rs 1.16 crores, while another element of Rs 9 lakhs rise is shown in respect of salaries and allowances. In the result, the balance of profit is shown higher by Rs 15.54 lakhs at Rs 36.84 lakhs. But this increase is as large as the rise in the provision for tax, which has gone up from Rs 6.50 lakhs to Rs 23 lakhs. Hence, the transfer of Rs 7.30 lakhs to Reserve Fund in the previous year has been skipped, and the transfer to Bank's Buildings Account is lower by Rs 10,000 at Rs 20,000. However, a sum of Rs 1 lakh is transferred to Sinking Fund against nil. The dividend payment for 1959 is at 15 per cent taxable.

The return of the State Bank for the same week showed a small rise of Rs 3.80 crores to Rs 631.24 crores in Deposits. Since the return of Scheduled Banks shows a rise in gross Deposits of Rs 4.82 crores, it is clear that the fiscal year-end disbursements of the Central Government have yet to make their impact felt upon the Deposits of the banking system. This impact may conceivably be reflected in the return of Scheduled Banks for 8 April.

The return of Scheduled Banks for 1 April shows that, besides the improvement in Deposits, and confirmation of the drawing down of Reserve Balances by the State Bank—Cash balances of Scheduled Banks have decreased by Rs 17.24 crores to Rs 172.84 crores—there has been, significantly, a small drop of Rs 0.29 crores to Rs 1126.76 crores in the total of Advances. It may be that, to this limited extent, the year-end payments of Governments have helped constituents to reduce somewhat their overdraft accounts, and such reduction largely offset the busy season expansion in the demand for funds. However, this does not mean that the 1959-60 busy season has ended, and the demand for funds is likely to continue for some 4 weeks more or so. Such a state of affairs has been taken advantage of to reduce indebtedness to the Reserve Bank by Rs 11.14 crores to Rs 68.30 crores though Rs 6.67 crores of this amount relates to the State Bank. For this purpose, Scheduled Banks other than the State Bank were compelled to disinvest for Rs 5 crores.

The Risk of Liberalisation

By Paul Einzig

IT seems certain that, during the next year or two, we shall witness considerable progress toward liberalisation of international trade and finance. The remaining exchange restrictions in Britain and in Western Europe will be greatly reduced, if not removed altogether. Trade barriers are certain to be lowered, partly through regional arrangements such as the European Common Market and the European Free Trade Association, and partly through general reciprocal concessions. This trend toward the free movement of goods and funds is greatly assisted by the growing prosperity amidst which many Governments feel justified in paying the price of liberty both in the form of disadvantages to sectional interests and in the form of increased risks.

The removal or lowering of trade barriers is bound to hit industries which are at present protected by those barriers. It is, however, one of the basic rules of classical economics that the gains of the community through the increased application of international division of labour, under which everything is produced where it can be produced at the lowest cost, heavily outweigh the losses suffered by the victims of the change. An additional powerful argument which was unknown in the days of Adam Smith is that increased international competition tends to reduce or keep down prices. In the face of the world-wide inflationary threat, this argument is indeed very effective. One of the reasons why Professor Hallstein's plan to speed up the integration of the Common Market is opposed by the German Minister of National Economy, Dr Erhard is that, since it involves an increase in West German Tariff, it would reinforce inflationary pressure. A similar argument is responsible for the conversion of the Conservative Government and a large part of the Conservative Party in favour of Free Trade. Even many of those who believe in the advantages of protection feel that they would be more than outweighed by the advantages of the disinflationary effect of increased imports at lower prices.

Support for the free movement of capital follows logically the support for Free Trade. If it is to the general interest that goods should be produced in the country where they can be produced at the lowest cost, that end could be furthered by an increased freedom of the international movements of capital so that the financing of the production of goods in the cheapest country should not be hampered by lack of capital.

These arguments are, of course, virtually unanswerable during a period of prosperity and expansion. It would be a mistake, however, to disregard the other side of the picture. In existing circumstances, the economy of most countries can easily absorb the workers who become unemployed as a result of increased international competition. Indeed, owing to the widespread scarcity of labour, it is an advantage if, in each country, manpower is not wasted on inefficient industries and is made available for the expansion of efficient industries. But it must be borne in mind that, as a result of this process, the economy of each country tends to become increasingly vulnerable.

In any case, a rising standard of living means expanding consumers' choice, and this again means that change in consumer demand is liable to affect particular industries within a community. It may be relatively easy to absorb the effect of such a change in the domestic economy. When it means, however, that the overspecialised export trade of a country is affected to a high degree, the result is a threat to the balance of payments and to exchange stability.

Any such effect on the exchange is liable to be aggravated by a freedom of international transfers of funds, especially if that freedom is extended to cover the nationals of the country concerned. An adverse change in the balance of payments is liable to be accompanied by a heavy outflow of money. It is important to realise the above considerations. Their realisation need not lead to conclusions opposing the liberalisation plan. The right conclusion is that the free countries must be prepared for setbacks liable to arise from liberalisation and must establish close cooperation in order to minimise such setbacks.

Even though the resources of the International Monetary Fund and the International Bank have only just been increased, it is necessary to increase them much more in order to enable them to face increased disequilibria that are liable to arise with the progress of liberalisation. But, in itself, the provision of financial aid would not be sufficient. There must be much closer cooperation between Governments in order to be able to assist effectively a country whose trade becomes affected as a result of the reduction of trade barriers. The countries of the Free World must view each other's economic problems with a much higher degree of understanding. Regional arrangements would help in that direction, but the world, or at any rate the Free World, is economically indivisible. Prosperity of one trading bloc should not be achieved at the cost of inflicting major hardships on other trading areas.

Vigorous Commercial Diplomacy

THE new interest in export of a wide variety of Indian manufactures is partly attributable to the existence of surplus capacity, in many Indian industries. Commercial organisations, aware of the scope for increasing trade in the South East Asian region, have drawn up a programme for progress, though it is realised that India's imports of rice, timber and other raw materials must increase in order to retain a hold on the export trade secured. The sudden thrust of China into South East Asian markets, the difficulties due to import control elsewhere and the reparations offered by Japan are complicating factors at present. But, since last year, when a Burmese trade mission visited India, it is realised that real opportunities co-exist with difficulties and Indian exporters might adopt co-operative action, provided commercial diplomacy is vigorous.

The attention given to the direction of trade at present is not due merely to the recognition that US aid to several countries, including Vietnam, will enable India to sell more goods in future. The reliance on the State Trading Corporation for expanding exports is now modified by the acceptance of the part played by engineering trade missions to many countries since 1958. There is also a persistent surplus of items like tobacco for which a market abroad must be secured and the economic progress made by Malaya and other countries is held to be a good reason for stepping up exports. In countries like Indonesia, prospects may be dim and rivals like Pakistan may have acquired advantages already, but there is no harm in trying to locate importers who will maintain a direct connection with Indian shippers.

Agencies to take care of the needs of export trade are not to be termed superfluous and non-profit-making bodies set up to study markets and build up connections are not without their uses at present. The fact that Pakistan is a rival in textile and other lines deserves special attention and it is to India's immediate advantage to see that jute manufactures are not again priced out of foreign markets by the rise in prices at home owing to the speculation that persists in spite of control of futures trading at present. The lucid and compact analysis presented by the Federation of Indian Chambers of Commerce and Industry in 1959 has been supplemented by an ECAFE study of trade in SE Asia, and it is fairly obvious that Japan is now a vigorous trade rival in Malaya and other countries in respect of textiles and other items.

Though export control belongs to the past, it is clear that, in some countries, exchange control stands in the way, and India does not have tariff advantages as in the past. Economic nationalism has already raised its head in Indonesia, Ceylon and other countries, and Indian exporters must adopt measures to raise quality and to lower prices. Export performance rests also on sales technique and it is necessary to show whenever possible that India Can Make It. Steps taken lately to give drawbacks on goods that are subject to Central excises perhaps are of less importance than the appointment of indenting agents well

posted about prices, delivery terms, etc, and the maintenance of regular shipping services. It will be generally admitted that Japan's shipping lines sustain its export trade, and India must soon do more by way of regular shipping services to neighbouring countries like Burma and Ceylon.

The outlook for engineering exports, including tea machinery and sugar mill parts, may be called promising, because Indian manufacture is derived from arrangements with foreign suppliers and it is quite likely that more rubber or tin can be imported by India from Java if pepper prices are stabilised by agreement. The presence of Indian traders in places like Singapore and Hongkong represents a real advantage and extension of banking services may help to develop trade. The chances of selling salt as well as pig-iron to Japan have been canvassed already; that is dependent more on cheap freight than regular delivery dates.

The fact that India has a favourable balance of trade with Asian countries in contrast to the adverse balance with European countries must not limit endeavours to raise income from exports, and when necessary, some export of capital for local trading or industrial ventures may even be called for so that composite firms may build up both export and import trade. The reinstatement of confidence in the Indian rupee seems to be an indispensable part of the export drive, and that is why the maintenance of price stability at home is now invested with great importance. The advantages held by Japan are due to cheapness, standardisation and novelty of products and, in countries like Thailand or Taiwan, it is Japan that is now seen as the real rival. The higher standard of living in Asian countries might raise export of piecegoods, provided Indian mills follow changes in demand overseas. The chances of selling more leather goods, including footwear, to Asia must be kept in view, and as for export quotas under oilseeds or oilcake the aim always must be to meet demand and the prices quoted must be related to prices abroad in the case of cotton or oilseeds.

The Union Minister has suggested that the value of Indian exports should be raised by Rs 50 crores per annum and it is up to manufacturing industries to attempt the task, especially when industries like tyres and bicycles have steadily expanded and can provide a surplus for export purposes. The early adjustments of sales tax in the case of exports have long figured in non-official representations and the concessions given to co-operative agency must be extended to private exporters also. The Export Councils have already done much to establish quality control in respect of cotton textiles, hides and skins, tobacco, etc, and continuance of the same procedure may be desirable in the case of tea and coffee also so that larger exports may be ensured in the future. There are new opportunities in regard to soap, cosmetics and medicines and brand names will doubtless help India to sell certain lines easily abroad. And Prohibition may even help to sell beer, rum and spirit in countries

like Ceylon, provided an agreed policy on excisable items is evolved.

The need to help Indian firms to tender for foreign contracts will be appreciated in view of the present position of the cement industry in India and the probable steel surplus. Assistance to contracting firms may be offered both in respect of controlled materials like steel and the exchange facilities required for visits abroad by staff. The country's invisible exports may be substantially enhanced by finding employment for Indians in adjacent countries that are starting large scale projects. This is a point that may require special attention in view of what British and American companies are able to do for their countries in sales and service alike.

A Policy for Exports

MR K. B. LALL, Director-General of Foreign Trade, is reported to have said recently that, during the Third Five Year Plan, the Government would give licence to units in the private sector only in case they are able to export their products and earn foreign exchange. Government's anxiety to step up the earnings of foreign exchange is understandable, but it is not clear how far this new policy is going to be helpful. It should be remembered that success in exports depends on numerous factors over which Indian businessmen have little control. Moreover, commodities which could be exported in one year may not be able to find a market in the next year. There are, besides, many other complications which may arise in case Government are to enforce the rule rigidly. It will therefore be better if Government refrain from resorting to coercive measures to stimulate exports. Instead, Government should study sympathetically the various difficulties encountered by the export trade and remove them as far as possible.

It is reported that Government are going to encourage the formation of cooperative organisations among the various industries with a view to increasing exports and that Government would give careful consideration to the representation made by such bodies in the matter of tax relief, freight concessions, etc., for export purposes. Fuller details are not at present available about the actual role of these cooperatives. But it is not clear why Government should wait for these cooperatives to come into existence before action is taken on matters like tax relief, freight reduction and so on. The Chambers of Commerce and trade associations have been making various suggestions from time to time in respect of these questions. The tea industry has been pleading for the past many years that the export duty should be abolished or at least kept in abeyance for a temporary period and that the different levies imposed on tea by the Government of West Bengal and Assam should be reduced or removed. The cotton textile industry has been agitating for reduction in railway freight rates so that mills in the up-country regions may be in a position to export more successfully. The engineering industries have been demanding relief to exporters in respect of

income tax; financial assistance for the preparation of films and advertisements; help in arranging market surveys; reduction in prices of steel, tinplate and pig iron and reduction in shipping freight. Other important industries like manganese ore have also been asking for various types of facilities to increase exports. However, the authorities have not carried out these suggestions. It may not be easy for Government to implement all the suggestions made from trade and industry, but there is no doubt that, if only the authorities had been more alert and prompt in dealing with genuine grievances, and proper coordination had been effected among the various ministries, our export performance would certainly be far more satisfactory than at present.

In any scheme of export promotion, the highest emphasis should be given to the Big Three, namely, tea, jute goods and cotton textiles. These three commodities account for the bulk of our export earnings. But, regrettably, not enough attention has been paid to the difficulties confronting them. In the case of tea, for instance, there was a steep decline of as much as Rs 10 crores in exports in 1959 as compared to 1958; and the decline took place mainly in the early part of 1959. According to the Union Ministry of Commerce and Industry the fall in tea exports in the last year was due to four main causes:

- The UK had built up large stocks by making heavy imports during 1958;
- The UK, because of its comfortable stock position, was not interested in the end of the season teas available during January-May, 1959;
- Heavy purchases made by internal buyers in the first quarter of 1959;
- As a result of maximum exports in 1958 and particularly during the last quarter of 1958, non-availability in India of sufficient stocks of quality teas commonly in demand.

These explanations may look convincing to some extent, but the fact remains that, if only some timely fiscal relief had been given to the industry, it might have been able to record a better performance. As competition from Ceylon and East Africa is becoming keener, it is necessary to see that the tea industry is helped actively to overcome its handicaps.

As regards jute goods, the main problem lies in providing the mills with adequate supplies of raw jute of the right quality. We have practically achieved self-sufficiency in the matter of raw jute so far as quantity is concerned, but attention has now to be concentrated on improving the quality. The modernisation programme should also be expedited as far as possible.

In regard to cotton textiles, it is a matter of regret that the industry has been burdened with an additional wage bill of Rs 14 crores a year at a time when the need to keep prices competitive has become more urgent than before. Hong Kong, Japan and other countries are able to compete successfully mainly because of low labour costs. Therefore, we should see to it that the capacity of our mills to compete in foreign markets does not get affected owing to high costs of production.

As regards the direction of our trade, it should be stressed that greater efforts should be made to develop trade with South East Asia and West Asia. A delegation recently sponsored by the Engineering Export Promotion Council has pointed out that there is considerable scope for increasing exports of engineering goods to USA, Canada and other countries. It is not clear from the press reports whether and to what extent this optimism is justified. There is, however, a danger that, in our zeal to expand exports to the USA and Canada, we may neglect markets nearer home. This should not be allowed to happen.

The American countries are very highly industrialised and we have to satisfy ourselves carefully whether we can really make headway in these markets and whether it is worth while to spend our money and efforts in this direction. If, on the other hand, we concentrate on the nearby regions, the results are bound to be more satisfactory. At present, it is the USA, Japan, the UK and West Germany that supply most of the requirements of the countries of South East Asia and West Asia. Our exports to these countries are negligible. For example, out of Rs 549.51 crores worth of exports in the first eleven months of 1959, the share of Thailand was only Rs 212 lakhs, Burma Rs 1086 lakhs, Ceylon Rs 1998 lakhs, Malaya Rs 419 lakhs, Philippines Rs 95 lakhs. Further details are given in the following table. Therefore, India's export policy should be designed in such a way as to strengthen the export of traditional items, to encourage the export of new commodities and to lay particular stress on the markets situated in West Asia, South East Asia and the Far East.

In this context, mention may here be made of the belief entertained in certain quarters that sugar production in the country may conceivably in the next year exceed indigenous requirements. If that should be so, sugar can well figure as an important export commodity to this area. Of course, it is problematical if, in fact, demand will not rise in proportion to production. In any case, what matters is that, even in regard to sugar, there is the real prospect that we can build up an export market in this area.

Chinese Realpolitik

PARLIAMENT has been made aware of what China expects from India by way of frontier delimitation, now that the Prime Minister has described the Himalayan boundary as a live frontier. From the reply given by the Chinese Government, it is evident that India's claims based on Kashmir's control of Ladakh in the past and in the present and the Anglo-Tibetan convention of 1914 are not conceded by Peking, and whatever India may say in regard to the McMahon line or the principle of following the watershed of the Brahmaputra, there is no inclination on the part of Peking to take for granted that India has inherited in full the rights and authority of the British Government. Caution in dealing with the Dalai Lama, who has found favour with some Opposition parties in India has not made any difference to the Chinese attitude, and it has now been made clear that Communist China relies on the Imperial maps and regards Tibetan independence as a purely temporary

phase which makes no difference to the assertion of Chinese territorial claims.

Since Nepal has agreed to a definition of the boundary along the Himalayas in relation to Tibet, it may be difficult for India to resist the Chinese demand for joint consultations for drawing up a boundary that will prevent border incidents in future. It may be noted that Tibet is repeatedly referred to as a region of China and it is also stated, that the Chinese Government have been using a corridor between Sinkiang and Tibet. The authority of various maps has been invoked in this connection, and one more point made plain is that the tribal areas in the North East were never fully under the control of the Ahom dynasty, and any rights secured by India from the transfer of Assam by Burma to India does not vest in India rights to the triangle when India, Burma and China meet. That China is willing to negotiate and take steps for avoiding clashes, is the main result of the elaborate argument conducted so far in the belief that Russian representations might induce Peking to appreciate the historical relationship between India and Tibet which, by failing in its revolt last year, has created a problem for the Indian authorities. The ethnic differences between the Tibetans governed by their High Priest and the Chinese governed by the Manchu dynasty are ignored by Peking, whose main argument is that, in the last ten years, the position has greatly changed, and the historical geography of British India has no relevance in relation to the present issue. This is certainly a formidable case of Realpolitik, and during the week which the Chinese Premier spends in Delhi, India may have to summon expert assistance from outside to buttress its main theory that what Tibet had done about Ladakh in the past is binding on China at present.

The Impact!

It will not be entirely accurate to regard the current interest in the development of small scale industries as a reaction from the earlier preoccupation with establishment of large scale undertakings. In fact, even before the Second Plan put steel plants in its core, the problems of small scale industries were studied by a Ford Foundation team which reported on the technical aspects of their future development. Since then, a vast organisation for fostering the growth of small industries has been set up, consisting of the Small Scale Industries Board at the apex, the National Small Industries Corporation, Service Institutes and Regional organisations, staffed according to the prevailing pattern of Government establishments. As the organisations have been functioning for some years, it is time to find out what they have actually accomplished.

In the annual report of the Union Ministry of Commerce and Industry, which gives a panoramic view of the growth of Indian industry, the section devoted to small scale industries is the least satisfactory. We learn more of the growth of the establishments than of the results of their work in the shape of new industrial units contributing to additional production. Under the heading, "Impact of the Pro-

gramme," the Ministry's report says: "The programme envisages the preparation of schemes for small scale industries so that they could be undertaken by prospective entrepreneurs all over the country." In all 400 schemes, the report says, are likely to be prepared which will be examined by a panel of technical officers before they are published. That is about all the report has to say about the "impact."

The Second Plan had originally proposed the establishment of 110 industrial estates. Subsequently, this number has been reduced to 97 on a reappraisal of plan resources. By the end of 1959, only 36 industrial estates had been set up and, of these, only 29 were in operation. About five thousand persons have been provided with jobs in the 400 factories working in these estates. The total expenditure so far amounts to Rs 608.10 lakhs, which works out to an investment of more than one lakh per job, without taking into account the investment by the individual units.

It is, of course, possible that facilities already created would provide more jobs without additional investment. Nevertheless, it will be useful to undertake an evaluation of the employment potential of small industries in relation to investment, which is usually put forward as the strongest argument in favour of a programme of fostering small industries.

The work of the small scale industry institutions that have been set up by the Government is promotional in nature, and it is not easy to establish the quantum of their impact. But the very difficulties of evaluation make it imperative that it should be attempted, if only to assure the public that the Small Scale Industries Department develops something in addition to its own establishment.

Sound and Fury

Regional development is a topic on which there has been more talk than action. The reason perhaps may be that, so far, there has been no attempt to come to grips with the problem of evening out the disparities in the economic development of various regions of the country. Location of industry, even under the aegis of the State, is determined by the usual factors that operate under a system of complete free enterprise, namely, nearness of sources of raw materials, markets, availability of water, transport and power. The establishment of an industrial complex in one area leads to further opportunities of development, so that the backward regions remain backward, while all new developments tend to be concentrated in the favoured regions. The establishment of the big steel plants near the sources of ore and fuel have led to the concentration of railway and other ancillary developments in this re-

gion, which has left little for development of railways elsewhere. And there are vociferous complaints that the South is neglected in the matter of sanctioning of new railway lines. But planning has no meaning unless it does something to correct the natural trend toward uneven development. It can be done, but at a cost.

The Lok Sabha recently debated a non-official resolution urging greater attention to the development of backward areas during the Third Plan period. The Planning Minister stated that Government were trying to shift larger resources to the undeveloped areas. He also said that, through its licensing powers, Government were doing their utmost to see that industries were carried to areas which needed greater development. Establishment of industries in regions remote from the established areas is likely, for one reason or another to result in higher costs, both in terms of capital outlay and running expenses. If the idea of attracting new industries to backward areas is to succeed, the cost differential must be kept as low as possible. All the regions that come under this category do not suffer from the same handicap. It will, therefore, be useful to undertake intensive surveys of the different backward regions, to isolate the factors responsible for their present condition, as well as any special advantages which they have that could be profitably exploited if the handicaps are removed.

Small industry development is generally offered as a panacea for the development of backward regions. Those who think in this way are perhaps not aware that, as a matter of fact, small industries have generally developed under the shadow of some big establishment. It was only after the railway workshop and some big engineering workshops and jute mills had been established near about Howrah that small industries started developing in this region. The surest way to foster small industry development in the underdeveloped areas is to locate some large public sector undertaking in these regions. This will enable an appreciation of the cost involved in any programme for dispersal of industries, which, in all fairness, should be borne by the State, as, in that case, the costs can be set off against the social gains resulting from balanced development.

Cambay Commercial

With the finding that Cambay oil is commercially feasible, hopes of attaining self-sufficiency in petroleum products have heightened. In the course of his announcement regarding the exploitability of Cambay oil in the Lok Sabha last week, Mr K. D. Malaviya, Union Minister for Mines and Oil, has further disclosed that a refinery of half a million tons' or one million tons' capacity is pro-

posed to be set up in the region. Government are also hopeful of finding some oil fields in the Lunaj region, adjacent to Cambay. Mr Malaviya thinks that the Assam and the Cambay oil fields between them will be able to take care of more than half the country's requirements of crude oil by the middle of the Third Plan. In the meantime, the search for oil is to continue relentlessly as Government's policy is progressively to expand the area of oil exploration. Recently, the Cauvery basin has been much in the news as a very probable oil bearing region. Madras State will be especially happy to note that seismic study of the basin will soon be undertaken on the receipt of the necessary equipment from abroad. Exploration is continuing in West Bengal and there are other regions in the country waiting to be investigated.

Exploration for oil and the exploitation of oilfields found commercially feasible have gained a new urgency not only because oil is so essential for rapid industrial progress but also because more and more indigenous production of oil will mean a considerable lessening of the strain on our meagre foreign exchange resources. As against the fast growing consumption of petroleum products, production of crude oil in India is only about half a million tons. It is estimated that, by the end of the Third Plan, something like 15 million tons of crude oil will be required. Such requirements are likely to be further sizably increased in the Fourth Plan period when, as a result of the vast development programmes envisaged in the next Plan period, there is bound to be a discernible improvement in the standard of living of the people.

Malik on Malaya

The visit of an Indian Trade Commissioner to Madras led to eager queries about trade opportunities in Malaya and Singapore. Mr Malik pointed out that the adverse balance of trade is largely due to essential imports of rubber and tin, and this country must look beyond the export of traditional items like cloth or condiments. The high standard of living, the sudden withdrawal of China, and the entrepot trade of Singapore still represent real advantages. At the Andhra Chamber, Mr Malik spoke of the steps taken by Textile Export Promotion Council to push exports in a market exposed to Japanese competition. He indicated that plastics can be sold easily and the demand for leather cloth will help India. The sports goods from India are sure of a larger off-take, because of the popularity of both football and badminton in Malaya, if exporters take a hand, and the Malayan market for light engineering goods is still growing. The chances of pushing medicines and instruments are also bright, because Indian doctors in Malaya would help and the manufacturer could claim that what is offered is now equal to British preparations. Registration

of intending exporters is required, but it is also felt that Indian banks can help in the export drive and there is no real need to spend on advertising as the overseas importer must be reached by other means. The advent of Japanese joint ventures to develop the resources of Malaya is a good reason for more energetic salesmanship, and the outlook for Indian goods is rated promising by the Singapore Indian Chamber of Commerce, whose last report is a model publication, objective and concise, besides being informative. There are some tariff concessions also, but India's own import policy regarding betelnuts, sago, etc., may be regarded as a handicap by experts.

Handicapped Madras

The Minister of Industries in Madras endorsed the general view of the trade that iron and steel supplies for the South are both deficient and irregular and uniform prices enforced do not represent a real advantage when the quota is seldom delivered according to schedule. That control is the consequence of shortage and that shortage will persist were commonplaces in the speeches delivered on Sunday at Madras when it was made clear that the development of local small industries was delayed by the failure of Iron and Steel control to meet even limited indents. This certainly gives force to the trade view that, apart from transport difficulties, Madras is distinctly handicapped in the matter of steel supplies and the efficiency of registered stockholders is no solution for the basic

problems of inadequate supplies.

The long-range remedy is seen to be the establishment of a steel plant in the South for using the ore found in Salem by adopting a process using lignite instead of coking coal; but, for the present, the best solution appears to be the setting up of re-rolling mills. There are, however, many units all of which are handicapped by inadequate supplies of raw material and there is certainly not enough scrap to keep new units going. Industrial users are at a disadvantage, and the interposition of State control has created difficulties, according to Mr Cleetus of Tisco, who also wanted a proper adjustment of priorities and the maintenance of normal trade relations. Though the trade has grievances, the continuance of Control is regarded as inevitable, and one suggestion made is that the price of steel should be lowered by Rs 100 per ton in order to encourage consumption of steel, which may be surplus after the opening of the new State-owned plants.

In the annual report of the iron hardware merchants' association, it has been urged that abuses are rare; and, over the last eighteen years, the registered stockholders have been able to ration supplies and, while operating on a modest profit, have served the public well. These claims made by the trade are largely due to the formation of a jointstock venture working carefully with the Control authorities, and even failures in the past to secure adjustments of quota in relation to the growth of local demand has not discouraged the trade from hoping that improved distribution would follow the increase in production. The Industries Minister's services in regard to the inception of new major industrial enterprises and the promise of more in Madras were specifically mentioned at the conference in order to inspire new faith in control as such.

Andhra Beckons

Andhra State's Industries Minister, Mr A. C. Subba Reddi, had not made any pretence about his knowledge of the portfolio with which he has been entrusted. This is in refreshing contrast to most of the Ministers either in States or the Centre. While being entertained at tea in Madras while he was here early this month by the Andhra Chamber of Commerce, he told the well attended meeting of that business body that he welcomed suggestions from the experts as to the manner by which the Andhra State could be well set on the road of true and real industrialisation. He bluntly dismissed the notion that by remaining an agricultural State, Andhra could be on par with other developing states though, he sadly reflected that with the plentiful supply of raw materials like coal, iron, sulphur and other things in Andhra, it had not been given any thought by the Planners of the

Government of India. The worthwhile industries Andhra had, he sadly mused were only the rice and oil mills. Incidentally he mentioned that domestic "quarrels" should have been apparently responsible for the imbalance between Andhra and other States in the matter of industrialisation.

Though the industries portfolio was admitted by him to be entirely new and therefore he was a novice in that subject, his suggestion that the country be divided into zones in accordance with the availability of raw materials should merit some attention. But that division of zones into water tight compartments should not be rigid and should always be subject to alterations as and when new sources are developed and discovered.

Mr Subba Reddi openly welcomed industrialists from other States into Andhra, where he promised sizable concessions to them in affording very cheap electricity, water tax lower sales tax and other taxes levied by the State.

About the present grow more food production Mr Subba Reddi had no pleasant remark for the methods pursued by the States or the Centre. Himself an agriculturist, Mr Subba Reddi said presently it was not possible to improve an agriculture because none knew as to how much of fertilisers our soil required. The paramount need today, he stated, was the establishment of at least a few laboratories for soil testing. A farmer never knew the deficiency of his soil and the agricultural experts were equally ignorant of this fact.

Another complaint of Mr Subba Reddi about Andhra State's lagging behind was that while, in other States big projects were centrally sponsored such big projects in Andhra were State-sponsored absorbing much of the State's resources. He told the Chamber that he would urge the Centre to take over the fabulous Rs 200 crore Nagarjunasagar Project from next year onwards so that the State could direct its own resources for the establishment of other medium and small scale industries.

Early this week Mr Subba Reddi told newsmen in Hyderabad that his State would get the synthetic drugs factory costing Rs 8.5 crores. This is a Russian-aided project. Mr Reddi had been to New Delhi and probably he fought with the authorities for the location of this big project in Hyderabad. Russian assistance would be to the tune of about Rs 2.3 crores. The factory's capacity is understood to be about 900 tons of drugs yearly employing about 1,700 workers.

The Praga Tools Corporation in Andhra would be expanding its capital by another Rs 2 crores in Hyderabad. Mr Reddi is fighting for the setting up of a steel and iron factory in Andhra and six other major industries. Mr Reddi is a good intentioned fighter and his enthusiasm would certainly carry him very far in his ambition to make Andhra a big industrialised State in the country.

Queer Mistake

Complaints that Indian diplomatic representatives do not help exporters much have been met by a complaint that official reports appearing in Government publications are not read by the commercial organisations and the public does not know what is being done for the benefit of commerce and industry. The allegation of Mr Khilnani made at Madras some months ago that most exporters talk, and do not study the changing economic position in foreign markets may well have provoked queries about the value of Indian publications as compared with the the Board of Trade Journal, costing a shilling but worth a guinea. The Indian Trade Journal of 2 April presents a report on Japan from the Indian Embassy which gives the local price of coal as £4,180 per ton. This is patently grotesque (though the appendices give prices in dollars and rupees) and the official failure to distinguish between Yen and Sterling may well put off readers of the report which refers to the increase in imports from the USA, following a rise in Japanese exports to that country.

The more important consideration is that in Japan, the coal industry is under-going rationalisation and the annual production quota is set at 48.3 million tons in order to get more coking coal out. In order to get over the difference between the cost of production (probably £4,628 per ton) and the standard price (£4,180 per ton) the Japanese Government have set up committees to get over the industry's depression. The report makes it clear that Goa is shipping more iron ore to Japan as also Malaya, and Indonesia too has started to export manganese ore to Japan. But the trade in mica is kept up and India is also selling cotton waste as usual. There was little trade in coal with India, but Japan was still buying US coal, which must cost a lot because of the freight to and from the Pacific Ports. It was also buying a lot of American scrap for the steel plants, while India was shipping only small quantities to Hongkong and Australia.

Labour Found Wanting

The idea of labour participation in management has been conceived with a view to bringing about better industrial relations. In India, where a socialistic pattern of society is the ultimate objective of official policy, such ideas perhaps get easier acceptance than

elsewhere in the world. A common mistake is to think that opposition to the idea of letting in labour into its affairs comes from management. With the introduction of joint management councils in some industrial units, it has been proved beyond doubt that labour is by no means very enthusiastic about participation in management. Thus, while management is somewhat lukewarm about taking labour into its confidence in its problems, perhaps due to a mistaken notion of self-interest, labour has been equally guilty of putting its own narrow ends before the advancement of labour as a whole. The main trouble in the labour ranks seems to be inter-union rivalry. Such bickerings leave little time for labour unions to look after the interests of members or to make themselves effective, useful instruments of labour welfare, which they should be. It is not surprising that the much more important responsibility of selecting their representatives to sit on the joint councils has found them grossly wanting.

It was with great expectations that one welcomed the news that a scheme of workers' participation in management has been successfully put into operation at the Hindustan Machine Tools factory. But the satisfaction has been vitiated as the council has practically remained inoperative for the past six months. The breakdown has evidently been the result of differences between management and labour and disputes between one section of labour and another. Although the inactivity of the council is officially described as temporary, one wonders whether conditions conducive to the council's active functioning can be brought about if both sides—labour and management—do not evince much interest in the idea of joint councils. There is no doubt that joint councils will be productive of much good if allowed to function smoothly. It is, therefore, incumbent both on management and labour to leave no stone unturned to make the scheme a success. Management can do much toward helping labour to take abiding interest in the idea. It is also time that labour realised that the initiative rests with it and that inter-union rivalry in the matter of representation is holding up its progress.

Cotton Scarcity

Addressing a meeting of the Cotton Textile Advisory Committee, in Bombay, Mr D. S. Joshi, Textile Commissioner to the Government of India, observed that the tight position regarding Indian cotton supply would continue during the next cotton year. Latest estimates of crop indicate a sharp decline in output at 4 million bales against earlier estimates which put the commercial crop of cotton at 4.8 million bales. The pressure of the reduced supply on prices has

been aggravated by speculative elements drawn from the ranks of management. The spurt that occurred in the prices of yarn and cotton in January was particularly heavy. In the circumstances, there seems very little scope for relaxation of control over the distribution of cotton to the industry. Though Mr Joshi has warned that controls would be lightened further in case present measures continue to be flouted by the industry, the tendency that has been discernible of late for prices to become reasonable should obviate such a step.

The present supply position being unprecedentedly low, with availability for mills estimated at not more than 3.75 million bales, there can be no question of further additions to the export quota. In ruling out scope for such additions to export quotas, Mr Joshi has also stressed the need for economy in consumption of Indian cotton by textile mills. The lack of adequate cooperation from the mills in this matter, alleged by Mr Joshi, would only retard the process of recovery of the industry from its present ills, and ultimately tell upon the export performance in the current year. Already, the export prospects for 1960 have been judged as less encouraging than in 1959. Though at one time it was anticipated that exports during 1960 would be fairly high, reaching the one thousand million yard mark, consequent on the continuance of abnormally high prices for cotton, it is not expected that could be excluded the exports of 1959. Whether the position would change, would inevitably depend on the measure of improvement that could be effected in the internal situation in regard to cotton supply and prices.

NIDC as Research Institute

The National Industrial Development Corporation is more than a lending agency using Government funds, and its report for 1958, appearing this week, may have only historical interest. For, technical missions have come out, projects have been prepared, and the NIDC has new clients and new contacts abroad. The raw film scheme may be in the air, but the synthetic rubber project is in the bag, because Firestone already has taken a hand. Dyestuffs, too, are now to the fore and Bayer of Leverkusen is an associate of the Government. As for aluminium, the expansion scheme is under way, and the capital market has digested the schemes mentioned in the report tentatively. The complaint that rayon pulp manufacture has not made a start yet may not be well-founded, for, 1959 stands out as the rayon year for investors of all degrees and pulp is realised to be more important than yarn. And, as for paper from bagasse or newsprint manufacture at Bodhan by the Nizam Sugar Co, the technical investigation is over.

The part played by the NIDC loans in rehabilitating the jute mill industry is well known, and cotton mills, too, have started to borrow big sums for renewals and replacements. Madras Mills' loan for Rs 75 lakhs marks the beginning of the modernisation programme, and other mills are ready to take loans from the NIDC and repay in instalments. Different from the IFC not only in the volume of fund handled, the NIDC, over which the Union Minister for Commerce and Industry presides, has relied on loans from the Government to supplement its modest capital of Rs 10 lakhs only. Its own fixed assets are few; it owes rent for the offices used, and has not found money for the audit fee or the allowance due to the staff deputed. Its accounts show a strong rise in entertainment charges, bank charges and a hefty rise in the telephone bill for the year. But the salaries item is distinctly lower, while the cost of investigating possibilities is up, because the NIDC is committed to the local manufacture of sulphur as well as optical glass at present and the Government make grants for study of the projects including manufacture of drugs. Maybe, the NIDC is less of a commercial enterprise than an applied research institute at present. But its work can be judged best by reference to the results achieved in the jute industry which has turned the corner, to go by the resumption of payment of dividends by many mills.

The Walchandnagar Landmark

The achievement recorded in an important sphere of national activity was referred to by Mr Manubhai Shah, Union Minister for Industry, while inaugurating the extension works of the sugar machinery plant of the Walchandnagar Industries in Bombay. Manufacture of machinery in the past ten years has made phenomenal progress. The value of indigenous produced industrial machinery in 1952 was only about Rs 10 crores, but the value of such production is now placed at Rs 120 crores. Even so, India's imports of machinery continue to consume a large quantity of foreign exchange. Machinery items have accounted for 30 per cent of India's total imports of Rs 887.4 crores in 1959. It is to be expected, therefore, that, during the Third Plan, production of machinery will receive special attention not only for substantial saving of foreign exchange that can be effected but also because it is essential, for achieving rapid industrialisation in the true sense of the term, that we manufacture a large proportion of the machinery needed indigenously. According to Mr Shah, industrial machinery to the value of about Rs 300 crores per annum will be produced in the country by the end of the Third Plan. In other words, 1966-67, 80 per cent

CALCUTTA TRAMS

of the country's requirements of industrial machinery will be available from indigenous sources.

If, today, India expects confidently to catch up with the Western countries in economic development in the foreseeable future, it is largely because of its programme of planned development. The first two five year plans have helped unleash national effort on an unprecedented scale and the result is apparent now all over the country. But, because of the tremendous leeway that has to be made up, we have reached only the threshold of

industrialisation even after a decade of planned development. The Third Five Year Plan, with its proposed big outlay, is an indication of the task ahead. The next few years will call for further intensification of national effort, but this is unlikely to deter us. For, the work that has already been done has brought confidence in our ability to undertake big programmes for economic development. Industrial production has taken long strides and today it can truthfully be said that we have completed the work of firmly lay-

ing the foundation for a great industrial future. It is, therefore, not merely the national urge for rapid progress but the knowledge that the country is now well poised to take a great leap forward that are guiding our planners.

Liberal Licensing

The Federation of Indian Chambers of Commerce & Industry, in an outline of official procedure relating to the licensing of new industrial undertakings, has made it clear that location, capacity and

the arrangements made with foreign firms for technical or other aid are subject to official scrutiny. The Government notification of 20 March has indicated positively that new ventures employing less than one hundred workers and having fixed assets below Rs 10 lakhs need not take out a licence under the Industries Development and Regulation Act. This means that firms embarking on manufacture of ancillaries need not be much troubled about permits, though royalty agreements would be liable to review. Rules about loans taken or participation of foreign interests in local ventures are explicit. But it is emphasised that demand for foreign exchange exceeds the credits made available to India and the import of capital goods can be arranged only with official sanction. In the case of imported second-hand machinery, a certificate of efficiency and expected working life is called. Those who need capital goods from abroad have to indicate an alternative source, as also whether they can pay cash for getting a licence to import when Government pays on the foreign credit. The administrative division to deal with applications for import of capital goods in future has been set up already and factories requiring generating plant for their factories have to get special sanction from the Central Power Commission.

Far more important is the indication now available about the existing capacity for the manufacture and the inadvisability of starting new ventures. This means a freeze in regard to certain lines of local production using iron and steel as well as non-ferrous metals. Applications for making flashlight batteries, steel files, hurricane lanterns and ferro-manganese, for instance, will hereafter, be rejected, like those for making small electric motors, bicycles and bicycle parts. This obviously means that fuller working of present plant is demanded. Singularly, many protected industries with high costs are told that there is no scope for expansion. And the list of enterprises for which licence will not be issued includes the manufacture of superphosphate as well as soap, myrobalan extract as well as cigarettes and safety matches. The last may be included in order to help the cottage industry. While the prohibition of new ventures for making fireworks and paper is understandable, the ban on starting of new concerns for making many drugs and medicines seems strange at present. The new procedure devised may not be due to Essential Work Orders in operation for conserving scarce, skilled labour but to the fact that, in India, secondary industry is now viewed largely in terms of small scale enterprise suited to the industrial estates started in the country.

Indian Finance

16 April 1960

of Industrial Employers at New Delhi, Mr Lakshmi Pat Singhania, President of the Organisation, spoke of the need for a broad-based wage policy related to economic currents and economic potentials. The aim should obviously be to evolve a structure of wages that would minimise employer-employee frictions that too often break out on the question of fair wages for labour. It is clear that, as pointed out by Mr Singhania, levels of wages for any particular section of the labour force and its improvement could not be viewed in isolation. Due recognition should be given to important economic indicators such as national income, size of population, especially the size of the new entrants in the employment market, the state of the economy and the relationship between wages and productivity. The national wages policy should, if it is to serve its purpose of increasing industrial production, particularly take into account the claims of the working population to a decent standard of living and also the capacity of the industries to bear the burden of the wage level. In a developing economy biased ideologically toward the socialistic pattern of society, there are apparent conflicts between these two considerations. However, it cannot be in the interest of employers to keep wages at a depressed level since this would retard industrial progress by reducing consumer demand. As Mr Singhania put it, "What use is increased production if it cannot be sold because of lack of purchasing power in the hands of consumers?"

It is also essential, if industrial progress is to be sustained, that wages should be kept within limits which would be bearable by industry. A factor which limits scope for wage increases is the shape of mass unemployment and underemployment. The injection of fresh purchasing power by means of wage increases would, in view of the time lag between production and recruitment of labour, only result in inflation and fritter the effects of the wage increase. It is important therefore that wages should be related to productivity. Mr Singhania seems to consider the present wage levels as comparatively higher than those in foreign countries in relation to the per capita national income. The fact that the average yearly earning of the Indian industrial worker in the organised sector was over 400 per cent of the per capita income of the country against the ratios of 190, 150, 116 and 230 for the US, the UK, France and Canada respectively, however, proves nothing about the inflated structure of Indian wages but only points to the existence of a predominant section represented by agricultural labour eking out a submarginal living from depressed agriculture.

Newsprint

In answer to a question put by Dr R. B. Gour, Mr Manubhai

Shah, the Union Minister for Industry, informed Parliament last week that, the Government of India would soon take a final decision about installing a plant in Shankarnagar in Hyderabad for the manufacture of newsprint out of bagasse. The proverbial lack of conventional raw materials for making newsprint has hitherto been standing in the way of embarking upon a scheme for the production of newsprint in the

country. But recent developments in the industrially advanced countries, especially in West Germany, where a type of synthetic paper was invented, acted as an eye opener to those concerned in our country, and arrangements already completed for the despatch of ten tons of bagasse from the Nizam Sugar Factory to West Germany for conducting production scale tests. Another consignment of ten tons of bagasse will also be shipped

to Japan for similar tests. The crystallisation of such a scheme, apart from providing more employment to the people, will help the country to bring about a sizeable cut in the import of newsprint and thereby save a good amount of foreign exchange. But the utilisation of bagasse for the manufacture of newsprint will naturally involve the sugar industry in the search for a substitute fuel.

FRG's Trade Policy

The trading relations of the Eastern European countries are based on an agreement made in 1949 to help Russia even more than Poland or Czechoslovakia. The Communist group, according to an independent view offered by the Hamburg Chamber of Commerce, is not concerned with real economic integration but with helping Russia toward self-sufficiency. The chances of increased trade between West Germany and the seven countries under Communist rule are viewed as decidedly small, and only in case of sheer necessity is Poland or Czechoslovakia willing to buy from Western countries. Their reliance on bilateral trade pacts is partly due to the fact that Western Europe requires only limited quantities of timber, coal and meat and there is no great enthusiasm for importing more from the European Common Market, even to carry out investment programmes.

It has been noted that the engineering industries in Czechoslovakia, Poland and Russia have produced machine tools which are remarkable but do not seem to sell in the leading industrial countries. On the other hand, they have to be sold in Asia and South America in order to earn foreign exchange under special arrangements. At present, West Germany does not expect permanent competition from the Communist bloc, because its own exports to the Eastern bloc have increased, particularly with Poland and Hungary.

While diplomatic relations are decidedly strained by the special encouragement given by Moscow to Eastern Germany commercial relations are improving slowly of late, and West Germany has resumed trade with China as well as Russia. The emergence of an export surplus in West Germany is regarded as necessary for enabling West Germany to repay debt or import capital, but it is also prepared to increase imports from under-developed countries, though deliberate diversion of trade is difficult to reconcile with a liberal German trade policy. These considerations apply to trade with Eastern Europe, but the Hamburg Chamber's report makes an exception in regard to India which is now trying to increase exports of coffee and tea. There is an excise in West Germany on tea, and if it is removed, consumption, there may increase. India's export

drive in regard to textiles has created apprehensions among German manufacturers who feel that the difference in cost structure is an argument for limiting imports from India. The conclusion reached is that, instead of increasing the volume of trade imports, Germany will do well to concentrate on the possibility of long-term capital exports.

Africa Ltd

The old academic conclusion that South Africa was exceptional in attracting foreign capital quickly and other African territories would get little, and only gradually, is vindicated by Mr Eugene Black's judgment that scope for investment is limited. The "wind of change" has evidently affected the climate for investment and recent political developments are not conducive to the rapid flow of foreign capital. The shortage of skilled labour, the weakness of industrial discipline, and the advance of peasant farming with the holding power given by producers' co-operatives and State Boards handling export commodities are real factors to which the UN Economic and Social Council cannot be impervious. The judgment may be harsh about the poverty of human resources and the low level of education—but it is not unfair. In the light of Liberia's record of a century of freedom, it may even be termed just, and there is at least one point on which Mr Black is certain about economic growth and industrial expansion in the East. But Africa has an advantage; there is no population problem to force the pace of development and the Governments are not saddled with debt. The foreign capital is mostly invested by big mining companies, well integrated by finance houses, and the big dividends drawn out in the past may make them superior to any sudden turn of fortune.

The new view of Africa as a continent of limited opportunity may not please Americans, who wish to develop rapidly Ethiopia's resources, but is certainly based on hard facts like the present troubles in Kenya and Uganda, with Asians feeling the hatred of Africans in no uncertain manner. The problem of immigrants may not be acute in Zanzibar, where the Arabs are in the possession of power, but in Tanganyika and other places, the chances for the outside capitalist are abridged by the rise of nationalism. Trade will, of course, continue as before and it may be recalled that Sir Richard Burton, exploring East Africa, found Cutai merchants supplying blue Indian cloth and discovered that, when Europeans held nothing, the bold Indian merchants were the main link with Asia. But it is no use at all recalling history after the Suez episode and the only point to remember is that a great part of Africa has already passed out of the colonial era, and the clash between

Boer and Zulu is one of history's queer revenges for the British conquest of the republic whose forgotten Presidents have given their names to the postwar mining enterprises into which British investors have plunged in the usual gold fever. Anyway, the new view of Africa will probably reduce the European settlers' eagerness to cling to the land and help officials to concentrate on educating the Africans to the urgent responsibility of raising more food crops and keeping less cattle.

US Department Store Sales Up

Two reports issued within the past week—one Department Store and Automobile Sales—go far toward substantiating the view that consumer spending will be an important source of strength for the American economy this year. They also tend to support the widely held opinion that the apparent lag in retail sales in the early part of the year was due more to the idiosyncracies of the calendar and the weather than to any weakness in the consumer sector.

Automotive industry figures show that passenger car sales took a sharp upturn in the latter part of March, to bring total deliveries for the month to 576,000 units—the largest total for any month in nearly a year. Industry officials are attributing the last-March pick-up largely to better weather, coupled with strong sales campaigns by manufacturers and dealers.

Actually, the sales total for March as a whole was 13 per cent higher than in March 1959, not much different from the 12 per cent year-to-year increases racked up during January and February. But the figures show that, during the last third of the month, the industry delivered about 26,000 cars a day, or 29 per cent more than the daily rate during the same period of 1959. This has led industry officials to interpret the late-March upswing as a harbinger of further sales gains with the arrival of more truly spring-like weather in April and May.

Even more revealing, insofar as they reflect the broad range of consumer spending, are last week's figures showing that in the latest reported week—that which ended 2 April—Department store sales spurted 22 per cent over the same week in 1959.

This was the first week in which the US Federal Reserve Board (FRB), which compiles the figures, estimated that department store sales should have been affected favourably by the approach of the Easter Holiday on 17 April—and the 22 per cent rise was well in excess on the gain the Board normally would have expected. Since something less than two-thirds of

the rise can be attributed to the advent of the Easter sales season, according to unofficial FRB reckoning, it follows that the week's gain exceeded normal seasonal expectations by a good margin.

The sales gains, moreover, are not confined to just one week. Despite the inclement weather throughout the country, Department store sales over the past month or so have been noticeably better than might have been expected in view of this year's late Easter. When allowance is made for the shifting Easter date (it was 29 March last year) total sales over the five-week period ended 2 April were in the neighbourhood of five per cent above those of the corresponding 1959 period.

It should be noted that this evaluation seems to contradict the sales figures, published earlier. However, those figures, which showed a distant year-to-year dip in department store sales, were somewhat misleading in that they did not take seasonal factors—notably the shifting Easter date—into account. One reason for this is that the FRB is in process of sharpening its seasonal adjustment formula for department store sales, and hence in the interest of precise measurement has been hesitant about publishing anything beyond the unadjusted figures.

There is another factor which must be taken into account when considering the sale picture and its impact on the national economy. That would be the relationship between sales and inventories. And here again, the data are clearly on the optimistic side.

Total business inventories—including those of manufacturers and wholesalers as well as retailers—have been rising steadily during the past few months. They reached a new high, seasonally adjusted, of \$91,400 million at the end of February, giving rise to uneasiness among some businessmen about possible retrenchment in the months to come.

In a dynamic and expanding economy such as that of the United States, however, inventories cannot be adjudged to be high or low of themselves; this uneasiness would be justified only if the rate of inventory accumulation were significantly higher than the rate of sales. And the figures show that inventories, relative to sales, have registered no increase at all—in fact, are at historically low levels.

The end-of-February inventories were equal to 1.47 month's sales at the February rate of sales. This compares with a ratio of 1.48 a year earlier and 1.71 two years earlier. What is more, this year's inventory-sales ratio has been low for all three major divisions of business—manufacturers, wholesalers and retailers—and thus signals a well-balanced inventory situation for the US economy as a whole.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I find that the familiar Western belief that "prosperity is indivisible" seems to be giving place to its opposite. The new belief that "prosperity is divisible" is based on the experience of unprecedented prosperity in the late 1950's in the advanced industrial countries—a prosperity which, according to Mr Andrew Shonfield in a BBC talk last month, they have sustained by trading more and more among themselves and which is supposed to have exploded the myth that the West depended, for maintaining its own standards of living, on the trade and prosperity of the poorer countries. Assuming, for the nonce, that this is a valid and incontrovertible generalisation (which, of course, it is not), it would appear that there can be no element of enlightened self-interest in any economic aid given by the advanced countries to the under-developed part of the world. If that is so, it looks very much like a gloss over the Western disillusionment on the score of bilateral aid—a disillusionment to which Mr Shonfield himself has given expression:

"The greater part of the billions of dollars expended by the United States on economic aid has gone into a series of holding operations on the periphery of Asia, where a most unpromising collection of governments, either unconcerned with or incapable of conducting an effective plan of economic development, have been precariously propped up. It must have been one of the most luxurious exercises in the history of Western policy, with the United States like a confused sugar-daddy not knowing when it was being blackmailed, cajoled, or loved. The Americans just happen to be the best-publicised case—they have a habit of spelling out their doubts and frustrations at the top of their voices in public—but the more discreet British and French have also been involved in some fairly extravagant operations of the same type round the world."

If, according to Mr Shonfield, the whole trend of Western thinking is turning against the attempt to use economic aid as a weapon in the cold war, it is probably due to the fact that the anti-communist bias of bilateral aid has provoked the Soviet Union to launch its own programmes of aid on a counter-balancing scale at critical points. Where, thus, neither enlightened self-interest nor considerations of political advantage are thought of as a sufficiently strong motivation for a possible expanded programme of developmental aid in the sixties, can "generosity" and "wisdom to be patient in the face

of stupid complaints and unfair accusations from over-sensitive and aggressive people whom we are trying to help", as suggested by Mr Shonfield, be relied upon to do the trick? Human nature being what it is, is there any reason to suppose that these difficult virtues can be easily practised by benefactors who seem to expect, but do not get, gratitude and appreciation from the beneficiaries?

What, then, is the way-out? The most constructive and imaginative answer to date is provided by Mr Paul G. Hoffman in his booklet, "One Hundred Countries—one and one quarter Billion People", recently made available by the UN Information Centre in India. In this booklet, which carries the significant sub-title, "How to speed their economic growth and ours in the 1960's"—significant because it conveys that prosperity is indivisible—Mr Hoffman lays down emphatically that "the objective today must be to help the under-developed countries create self-propelling economies that will yield increasingly high standards of living and sustain internal freedom and political independence from any power, whether it be the US, the USSR, or any other" and that "the best way to avoid the intrusion of political factors into this process of economic building is to rely on multi-national rather than bilateral operations."

This approach logically flows from Mr Hoffman's critical analysis of the lessons of the bilateral aid programmes in the fifties. As many as seven major mistakes are spotlighted in this connection. The greatest mistake hitherto made has been to think of aid as "charity", and this has naturally aroused resentment and hostility among the low-income nations. Secondly, since the flow of development funds to the less developed countries has depended on annual decisions and appropriations in the advanced countries, there has been an element of uncertainty as to its continuance and quantum; this has discouraged the recipient countries from effective development planning for a period of years ahead. The third mistake is that sufficient investments have not been made in basic public improvements in the under-developed countries—the kind of improvements, though not meeting bankable standards, re-

of such multi-national organisations as the UN to accomplish economic development abroad.

Most of these mistakes are not likely to recur if bilateral aid is largely replaced by multi-lateral aid through the UN and its specialised agencies. Mr Hoffman's manifestly correct diagnosis should have logically led him to suggest such a wholesale change from bilateral to multilateral aid. If, instead of suggesting such a course, he has chosen to advocate only a pronounced shift in emphasis from bilateral to multilateral aid, either he might have thought that there must be an element of gradualness in the change or he might have been sceptical about the prospect of full-fledged participation by the Communist bloc countries in multilateral aid programmes. To say this is not to detract from the constructive and imaginative character of what may well be called the Hoffman Plan for multilateral aid.

The elements of this Plan, in broad outline, are as hereunder.

Firstly, by 1962, the pre-investment operations of the UN Special Fund and the UN Expanded Programme of Technical Assistance should be expanded to absorb \$150 million and something more in the following years. Here, the aim must be to train over a million additional persons in the "high talent" or "strategic manpower" category as part of the development plans of the 100 under-developed countries over the next 10 years; one-tenth of this technical manpower may need to come temporarily from advanced countries.

Khira

furniture in steel

—Symbol of this Modern Age

Ask Jacks about it

William Jacks & Co. Ltd.

(Incorporated in England, Liability of Members Limited)

Calcutta Madras New Delhi

Secondly, in the sixties an additional investment averaging \$2 billion a year (besides \$4 billion, being the present annual level of private investment and bilateral and multilateral aid, plus the expected increase, over this level, of \$1 billion per annum) should be channelled to the 100 under-deve-

loped countries. Such additional investment will then come to \$20 billion over the entire 10-year period, half of it being channelled through the International Development Association. Mr Hoffman has not indicated how the other half is to be channelled; he has merely stated that most of the extra \$20

billion will have to be public money, provided by Governments. So, it may be presumed that the other half also will be multilateral assistance channelled through the UN agencies.

Thirdly, the International Development Association, begun on a

modest scale, will have to expand its operations promptly after the first year so that it can make \$1 billion in investment each year. The IDA's investments should be in the "infrastructure", meaning such "underpinnings" as public facilities and hospitals, sanitation and other community services, communication facilities, agricultural extension services, credit facilities and pilot housing, power development, irrigation, transportation and the like which are needed but do not produce identifiable and recoverable revenues. These must be loans of exceptionally long terms, with exceptionally low interest rates; and, in most instances, they should provide for deferred interest and principal payments.

It is estimated that, if an aggregate of \$7 billion a year is invested in the sixties in the 100 under-developed countries, their per capita annual income will increase from the present estimated figure of around \$100 to around \$125 in 1970. Given this rate of economic activity over the ten-year period in the under-developed countries, the total exports of all the developed countries to those areas over that period might be as much as \$320 billion. What better proof is required to show that "prosperity is indivisible" and that "enlightened self-interest" can be a sufficiently strong motivating factor in economic aid given by the richer countries to the more numerous poorer countries? Mr Hoffman has rendered a unique service by proving conclusively that "development aid is in essence trade, just as increased trade is development aid."

If this imaginative approach finds its echo in the disarmament council rooms, what a great change there will be in the entire structure of economic aid to the less developed countries! It is not inconceivable that the resources now made available by the leading Powers in bilateral aid plus such additional resources as may be made available by them in the wake of possible disarmament might go into a single pool for multilateral assistance through the United Nations. Already, the Hoffman Plan has the great merit that, under it, multilateral aid may well account for about 50 per cent of the estimated \$7 billion of annual investment in the under-developed countries in the sixties. The other 50 per cent may be covered by private capital (roughly \$1.8 billion a year) and bilateral aid (roughly \$1.7 billion a year). If wisdom decrees disarmament, the Hoffman Plan has the potentially greater merit that it may transform all bilateral aid into multilateral aid—one of the surest guarantees of world peace. That the poorer countries which are now treated as pawns in the "cold war" game would need to be freed from the tensions of that game is the most clinching argument in favour of multilateral aid. **EAVESDROPPER.**

GATEWAY GOSSIP

Needs of Cotton Textile Industry

MR MANUBHAI SHAH, Union Minister for Industry, observed in Bombay some time ago that the organised sector of the cotton textile industry with its present installed capacity would be able to step up its output to meet any possible increase in demand for cloth in the country. He made the statement in the nature of an assurance to consumers who were then experiencing considerable difficulty in obtaining their requirements of mill-made cloth. It was his contention that even if the shortage was the result of a rise in consumption there was no need to worry because if need be mills could easily increase production, to 6000 million yards and more. The reference to mills' reserve capacity has not been seriously contended at that time and anywhere there has been no occasion for verifying Mr Shah's contention. Thanks to Government's decision to allow more imports of cotton and the timely warning issued by the Indian Cotton Mills Federation to speculators, the desired result of dispelling the scare about shortage of cloth ensued.

Mr Kasturbhai Lalbahai, the outgoing Chairman of the Indian Cotton Mills Federation has told the annual meeting of the Federation held in Bombay this week, that the so-called elasticity of mills is not there in reality. The reserve capacity is in working additional shifts. But it would appear that this is not as simple as it appears. Says Mr Kasturbhai:

"Whatever elasticity we had through the mechanism of the working of additional shifts has been destroyed by the provisions relating to lay-off and retrenchment compensation. One has to think twice before starting additional shifts for fear of the heavy liability that will arise, when due to changed circumstances, it may become necessary to reduce or stop the working of such shifts."

He further points out that because of this disability the industry could do little to counter effectively the scare of cloth shortage that was noticed some time ago.

It is, therefore, clear that Government and the industry are by no means agreed on the question of ability of the organised sector as it is situated at the present juncture, to meet any possible increase in demand. So long as demand does not outstrip production the real test may not come. But will it be prudence to allow a crisis to overtake us. The recent shortage which fortunately proved to be artificial has shown how widespread can be the repercussions of

a scarcity in a basic commodity such as cloth. It has been noticed that recently there has been a perceptible change in the pattern of consumption of cloth. More and more people are taking to fine and superfine cloth than a few years ago. And if anything this tendency will strengthen in coming years. With the steady improvement in the standard of living of the people, consumption of cloth is likely to increase. Now that the Third Plan envisages further big strides in around development of the economy, it is only logical to assume that demand for mill made cloth will record a sizable rise in the course of the next few years. For some reason or other—largely because of the rise in the cost of foodgrains—cloth consumption has not risen as anticipated. The per capita consumption still is not far above than it was, say twenty years ago. But this is no reason to think that in the future also the rate of rise will be as slow. On the contrary plans must be based on the assumption that there will be a marked increase in consumption of mill made cloth.

The question arises how this anticipated rise in demand is to be met. Government seem to believe that, even as it is, the organised sector is capable of taking care of any increase in demand. It is, however, not indicated what would be done if the demand exceeds the additional capacity that can be pressed into service. The industry does not think that the idea of working additional shifts with a view to meeting any increase in demand is feasible. The solution suggested by the ICMF Chairman

is an expansion of the organised sector of the industry. He thinks that during the Third Plan the weaving capacity of mills should be expanded by 25 per cent with a corresponding expansion in the spinning capacity. Though there has been a small increase over the past twenty years in the latter from 10 million spindles to 13½ million spindles, the weaving capacity has remained stagnant over this period at around 2 lakh looms.

It may be recalled that the ICMF has estimated, in a memorandum submitted to the Planning Commission in August last year, that at the end of the Third Five Year Plan the total requirements of cloth will be around 9,600 million yards. The figure has been arrived at on the basis of a per capita consumption of cloth of 20.3 yards and an export target of 800 million yards. The memorandum has suggested the allotment of production between various sectors of the cotton textile industry thus: mill industry 6,300 million yards, handlooms 2,500 million yards, powerloom 500 million yards and other cloth 300 million yards.

It is not improbable that the ICMF estimates may be found to be on the low side. With the keen awareness in the country about the need for stepping up food production, it is quite reasonable to expect that the food problem may not preoccupy the attention of the people in the Third Five Year plan period to the same extent as it does now. Absorption by exports may also show a sizable improvement, and anyway the estimate of 800 million yards seems to be too conservative. There has already been

a marked improvement in exports and during 1959 the total has touched the 800 million yards mark. Prospects for the current year, although somewhat clouded because of the continued shortage of raw cotton, nevertheless seem to be bright. Perhaps it may be difficult to attain the earlier expectation of 1000 million yards but the performance may at least be expected to excel that of the last year.

However, export promotion of cotton textiles should continue to receive sustained attention. As Mr Kasturbhai has noted Government's scheme in this regard has succeeded in stepping up exports sizably last year. But much still remains to be done. In today's highly competitive world cotton textile market, no one who is not able to offer good quality goods at competitive prices will have much chance to stay in business for long. It cannot be said that Indian goods now satisfy both these prime requirements. For Indian goods to stand on a par with competitive goods it is essential that modernisation of the Indian Mills is completed as quickly as practicable.

But it would appear that conditions are by no means conducive to speedy modernisation. Mr Kasturbhai thinks that the process which will involve an annual investment of about Rs 40 crores is daily being rendered harder by the continuously rising cost of production. The recommendations of the Central Wage Board for the cotton textile industry, for instance, may be found to be a severe blow to an industry which is just recovering from three years of depression.

This expert has won the trust of millions in the label 'Sanforized'

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at-random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications before it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed everywhere in the world!

Look for
'SANFORIZED'

FULL SCALE FLAG DISCRIMINATION WORLD RESULTS IN

One way full— (one way empty)

P & O Chairman warns consumers the world over

THE most serious problem facing British shipping today", Sir William Currie told P & O Stockholders at their Annual Meeting, "is that of flag discrimination, in fact I should say not only our own shipping, but also the shipping of other maritime countries. Since the war ended several countries have decided that they should possess a Merchant Navy. To this we can take no exception, and we have in many instances, brought their ships into our Conferences. For one acknowledges the right of a country to utilise its ships in its own trade. Unfortunately one of the concomitants of post-war trade is the menace of State trading. The corollary of this is that those State trading departments discriminate in favour of their own ships to the disadvantage of their shipping colleagues in the trade. The problem thus becomes one for action by our Government—as a Shipping Company, or a Shipping Conference, cannot fight a Government.

The result of flag discrimination, brought to its logical conclusion, is one way traffic—one way full and one way empty—thus increasing the cost to the consumer of his goods, for a ballast voyage must be paid for. The low percentage of retail cost which freight rates represent in competitive conditions clearly demonstrates the soundness of such competition. "One of the most heartening aspects is the increased interest in shipping and recognition of its value to the Nation now being shown by the Press, by the public, and, most important, in the House of Commons.

The Future Outlook

"After the warning to the previous year's report", Sir William continued, "that the 1958 results did not reflect the full force of the depression that has hit the shipping industry, the result for 1959 will have caused no one any surprise. Fluctuations in freight rates are usually slow to be reflected in profits because their effect is greatest on the tramp ships and the

voyage of those ships are often of extended duration. It is for this reason that although there has been a slight up-turn in tramp rates since the close of the financial year, I do not look for any marked improvement in the financial results of voyages at present. It is never easy to forecast shipping profits and I am not going to attempt to do so, for shipping is so international that there are too many facets which affect it. I take consolation in the fact that in few trades are ships not earning their depreciation so that we ought to be assured of a steady if modest inflow of cash which will help towards meeting our shipbuilding commitments. But until there are clear signs of revival, new orders for additional tonnage will be kept down to a minimum. There are still many new ships coming forward, both in this country and

abroad, but little sign that owners are rushing to scrap their older ships. It is difficult to see, therefore, how the present surplus of tonnage, which is at the root of the depression, can come to a speedy end. For let us recognise that it is not shortage of cargoes that is bedevilling the freight

market; fundamentally it is too many ships chasing too little cargo that keeps rates where they are". "The past year had shown a big decrease from 1957-58. It had been one of the most depressing years since the thirties", Sir William stated, "and it would be noticed that, although the depreciation charged amounted to £11½ million, it had not been possible to add any amount to Reserve. The Board felt, however, that Stockholders should receive the same dividend as last year. For the Group finances were sound, thanks to the conservative policy through the past years, and with the Group's diversified interests in types of tonnage, and in geographical disposition, there was a resilience in the Group's undertaking which was most helpful in the 'ups and downs' of shipping.

"It was considered necessary", Sir William went on, "to give the

OLYMPUS

Paper Industry's Dilemma

TO expand or not to expand—that seems to be the dilemma of the large-scale paper industry which, like the sugar industry now, has failed to persuade the Tariff Commission to recommend a more favourable structure of prices for paper and paperboard. Whether the industry will be enabled in some way or other to resolve the dilemma soon and expand fast enough to meet the expected heavy demand for paper in the next five years is not known for certain at the moment. But what is presently known, as far as this correspondent could gather, is that the industry has put forward its case for a fairer deal with greater vigour and persuasiveness. It would appear from the more recent representations made by the industry that its case, prima facie deserving of de novo consideration at the hands of Authority, is perhaps not irretrievably lost.

The starting point of this case is the estimate that the capital requirements of the paper industry for installing an additional capacity of 770,000 tons would amount to Rs 205 crores. This estimate is based on the industry's view that Rs 6 crores is the minimum capital outlay required for a unit with a capacity of 22,500 tons per annum, as against an independent estimate of Rs 4 crores deemed sufficient for a unit of that much capacity. If it is thought that there is an element of inflation in the figure of Rs 6 crores, it may be due to the anxiety of the industry to strengthen its case which is that the prices of paper and paper-

Orient Stockholders in the circular of offer of Deferred Stock an indication of the possible dividend for the current year. Subject to any unforeseen crisis, your Board felt we were justified in indicating a payment of not less than 11% on the Deferred Stock as increased by the new issue of Deferred Stock to Shareholders in the Orient Company, and, so far as this year has gone, I see no reason to amend that figure."

This is an extract from the Chairman's address, copies of which, together with an Annual Report, can be obtained from the Secretary of the Peninsular and Oriental Steam Navigation Company, 122 Leadenhall Street, London, E.C. 3.

Indian Finance

board now in effect as a result of the recommendations of the Tariff Commission are not adequate in the light of the need of the industry to raise a large amount of capital in the next few years. Actually it weakens an otherwise strong case in which exception is rightly taken to the biased selection, by the Tariff Commission, of mills for cost investigation.

The Tariff Commission, it may be recalled here, selected 8 mills out of 18 for cost investigation. The inclusion of Orient Paper Mills, Rohas Industries and Titagur Paper Mills in the Commission's selection, according to the industry's representations, makes it more representative of the bigger and, therefore, the lower-cost units of the industry than of the larger number of smaller units with higher costs of production.

The industry's stand is correct because the eight mills selected for costing included all the three mills with a capacity of over 20,000 tons each and the sample was thus biased against the smaller and more numerous units of the industry. Equally correct is the industry's contention that the Tariff Commission, in arriving at the basic price of white printing paper, should not have taken the weighted average of the "fair ex-works prices" of the seven mills whose costs were available for this type of paper. According to the Commission's Report, the "fair ex-works prices" of white printing paper of the seven mills, in terms of NP per lb., were: 52.88, 61.57, 55.02, 72.54, 58.96, 54.13 and 59.25. A simple average of these seven figures would be 59.19. But the Tariff Commission have taken the weighted average figure of 56.24 NP per lb (rounded off to 57 NP) which is less than the actual cost of all except three out of the seven mills taken into account. It is the industry's contention that a simple average figure of 59.19 NP per lb would have been more realistic and that it would have been in accord with the method followed by the Tariff Board in 1948.

That even this figure of 59.19 NP per lb would not cover the increase in costs in recent years seems to be the industry's contention. It is recalled in this connection that, in 1948, the Tariff Board worked out the ex-works price of white printing paper at 8 annas 3½ pies or 51.82 NP per lb while the Tariff Commission now have fixed the ex-works price at 57 NP, thus assuming an increase of exactly 10 per cent in costs over the last 10 years. Actually, in the case of Titagur Paper Mills—a large and economic unit—whose costs of production were investigated both in 1948 and in 1958, the increase, calculated by the Tariff Commission for 1958, in the unit cost of production (before depreciation) of

16 April 1960

white printing paper represents 35.1 per cent of the 1948 cost worked out by the previous Tariff Board.

It is further contended that the provision for contingencies is wholly inadequate to cover increases in costs which have taken place since the cost investigation by the Tariff Commission. Concern is also expressed at the steadily rising prices which mills are compelled to pay for bamboos—their basic raw material—and at the tendency on the part of State Governments to extort the highest possible return from paper mills for bamboos, regardless of the effect on forests or on prices at which mills must sell their finished products.

As regards depreciation, it is pointed out that the Commission have calculated it on the written-down value of fixed assets at normal income-tax rates for first and second shifts only. The industry's contention in this connection is that depreciation on third shift working should have been included on the ground that paper manufacture is a continuous process in which mills work round the clock. The industry's argument is that, if the Tariff Commission consider that provision for such third shift depreciation should come out of the 12 per cent return on employed capital, it should be realised that the return on capital allowed by the Commission is already inadequate to provide incentives for fresh investment.

On the question of fair return on capital employed, the industry's representations are forthright. The Tariff Commission's report, it is pointed out, assumes that the 12 per cent return permitted on employed capital can provide for a variety of payments like labour bonus, interest on debentures and loans, managing agents' remuneration, directors' remuneration, taxation, reserves including development rebate reserve, interest on working capital and dividends including preference dividends. As against this, the industry's demand is for a return of 25 per cent on capital employed, composed of the following items:

	Per cent
Bonus, gratuity, etc.,	1
Managing Agents' and Directors' remuneration	1
Income and Corporate taxes	10.5
Reserve for expansion	4
Dividends to shareholders and interest on borrowed capital	8.5
Total	25

The industry's contention is that, with the permitted return of 12 per cent on capital employed, there will be a fall in retained profits if dividends are not reduced, and equity capital will not be attracted if dividends are reduced. So, the required expansion in the paper industry, it is contended, will be inevitably retarded if the price structure does not include a higher

return on capital employed. At the same time, it is demanded that a rehabilitation allowance should be included as a factor in the fair selling prices.

The industry's demand for a revised schedule of paper prices is based on what it considers to be the need for an increase in the price of white printing paper. This increase in price is expected to cover the difference between the weighted and simple averages of fair ex-works prices calculated by the Tariff Commission, increase in contingency allowance, rehabilitation allowance and increase in return on capital employed. It is difficult to say if all the four kinds of increases expected by the paper industry are reasonable.

The expected increase in ex-works prices may be justified on the ground that the Commission's cost investigation has been biased against the smaller high-cost units.

It can, of course, be argued that any such increase will produce a windfall for the bigger low-cost units. That cannot be helped if the smaller high-cost units are to be enabled to cover their works costs more fully. Apart from this, there is here the compensating circumstance that the windfall in the case of the bigger low-cost units will produce more bonus for labour, more income-tax revenue to Government, and more retained profits or more dividends, either of which will be conducive to expansion of such units.

The expected increase in contingency allowance also seems to be reasonable if it is true that the State Governments are trying to get excessive returns from the mills for bamboos. It may, however, be argued against this demand for an increase in the contingency allowance that the State Governments could be suitably advised not to increase the rate of

revenue from bamboos in the interests of further development of the paper industry.

The case for rehabilitation allowance in the case of the paper industry would appear to be even weaker than in the case of the still older sugar industry. If the Tariff Commission have rejected the demand for such an allowance on the ground that it has to be met from depreciation provisions made in past years or from assistance from the financing institutions like the National Industrial Development Corporation, there is no reason to believe that the Government will make a departure in the case of the paper industry. Finally, as regards the increase demanded in return on capital employed, this correspondent is unable to figure out the merits of the industry's case in the absence of knowledge of how the Commission has arrived at the figure of 12 per cent.

service with a smile . . .

and it certainly is a pleasure to know that so many wise motorists use Caltex petrol and oils regularly. I can almost 'tell-at-a-glance' when an engine's got the well-cared-for look that regular use of Caltex petrol and oils give it. Sure, it's service with a smile, and a real pleasure to know so many motorists care for their car with Caltex.

THE PENINSULA

Land Ceiling Bill

THE much awaited Land Ceiling Bill in Madras State has after all been introduced in the current session of the State Assembly by the Revenue Minister, Mr M. A. Manickavelu. This is a very commendable bill analogous to the Kerala Agrarian Reforms Bill, but with this difference that the Land Board which would look after the dispersal of the so-called surplus land had not yet been fixed with specific work.

The Bill named the Madras Land Reforms (Fixation of Ceiling on Land) Bill fixes the ceiling on holding at thirty standard acres for a family of not more than five members. Additional five standard acres is provided for every member in excess of five, but in no case shall a family be deemed to hold more than sixty standard acres. In the case of a Trust, the ceiling fixed is 200 standard acres.

The Bill provides that any land in excess of the ceiling shall be acquired by the Government for which payment on specified scales shall be made in bonds, negotiable and transferable, and carrying 5 per cent interest, payable in twenty equated annual instalments.

Compensation shall be determined on the basis of net annual income, the slab ranging from nine times to twelve times, and in terms of amount from Rs 60,000 to Rs 135,000. Inam Lands have special provisions.

Government lands, both Central, State and local and plantations in existence on the date of commencement of the Act have been exempted. Future acquisitions will be controlled.

The Standard acre according to the bill is one acre of wet land assessed at Rs 10 and above per acre, or one and one-sixth acre of wet land assessed to land revenue at Rs 8 per acre or dry land irrigated by lift irrigation from a Government source of irrigation, or two acres of wet land assessed at a rate below Rs 4 per acre or two and half acres of dry land assessed at Rs 1.25 or one and 2/5 acres of inam wet land or irrigated inam dry land or two acres of inam dry land irrigated by lift irrigation from Government sources or three acres of other inam dry land. Thus the definition of 'standard' acre is made much complicated for reckoning the extent of the holding.

The Bill provides certain concessions to women holders. Stridhan land can be owned upto ten standard acres in addition to the ceiling area the family is entitled to hold; that is, the family, in addition to the ceiling permitted by the Bill, could hold another ten standard acres.

The headache for the owner of more than the ceiling specified by the Bill has now commenced in that he has been directed to submit a return containing particulars of his holding to the authorised officer of the Government. No person, of course, shall after the publication of the Act directly or through any other person acquire or possess any land which in the aggregate will exceed the ceiling.

The assessment of the final surplus land available in the State would be published as surplus land required for public purpose. The land together with other things in it would be deemed to have been acquired for a public purpose and vested in the Government free from all encumbrances.

There is then the Land Commissioner, a Land Tribunal and the Land Board. The manner of disposal of such acquired land by Government is not known now, but the Government may make rules providing for the manner in which it shall be disposed of, which would become enforceable after approval by resolution of each House of the State legislature.

The Bill says that in the disposal of the land, the Government would give preference to any person, completely dispossessed of his holding, or whose extent of holding is reduced below the tenants' ceiling by virtue of the provisions of the Act.

A sugar factory, however, is exempted. Though the Bill does not specifically say so, the fact that the Government would consider the recommendation of the Sugar Factory Board is enough to suggest that such sugarcane growing land would get away from the purview of this Bill.

(Already some of the big landholders in this State had converted their paddy-growing lands into sugarcane growing fields with adjacent factories of sugar. Political opposition in the State had been insisting that such converted paddy lands should also get into the ambit of this Bill.)

The compensation payable is according to the broad principles summarised below:

Where the net annual income from land does not exceed Rs 5,000 the compensation payable will be twelve times this amount.

Where the income exceeds Rs 5,000 but not Rs 10,000, the compensation will be eleven times.

Where the income exceeds Rs 10,000 and not Rs 15,000, the compensation will be ten times.

Where it exceeds Rs 15,000 the compensation is only nine times such income.

Compensation for trees, machinery, plant and apparatus in the land acquired would be the value at the date of publication of the acquisition notification.

This is in essence the summary of the complex Bill published in the Madras Gazette and placed in the Table of the Madras Assembly.

Unfortunately in the Statement of Objects and Reasons for the Bill the sponsors of the Bill do not give their own reason for this agrarian reform except to invoke the authority of the Planning Commission.

Here is the brief Statement of Objects and Reasons of the Bill:

"Having regard to the recommendations of the Planning Commission in the Second Five Year Plan for reducing the glaring inequalities in the ownership of agricultural land, the Government have decided to undertake legislation for prescribing the maximum extent of agricultural land that a person may hold. The ceiling, will, except, as otherwise provided in the Bill, apply to all agricultural land held by a person either as owner or as an usufructuary mortgagee or as a tenant or as an intermediary or in one or more of those capacities."

No doubt there has been a sharp reaction among agricultural economists who do not want the present pattern of holding to be disturbed merely to satisfy a doctrinaire principle. The minority of such defenceless people holding land in excess of thirty standard acres have been braving all economic hazards in difficult times to increase production.

Then there is a new problem for the State. Indeed they may not at all be aware of such a problem when once they had set themselves to enforcing this ceiling. It is easy to dispossess when once they set on rolling the Government's ruthless machinery. But how are they going to distribute the acquired lands? Would these be distributed profitably and equitably?

It is unfortunate that such a bill has come at a time when the agriculturists have been bending all energies to maximise production. The bill has completely bound hand and foot all land holders and handed over them on a plate to the merciless bureaucracy. It is again the same bureaucracy quite ignorant of the farming methods which would dictate as to how production of food should be handled.

Even temple lands have not been spared. A legal argument has been raised whether a secular State can have any right to nationalise the lands of religious institutions including temples, and whether this does not militate against the Fundamental Rights.

This Bill has been introduced in the teeth of opposition throughout the State. Many Congressmen did not want this and it is but natural that the oppositionists should describe this as a "bill of sheer expropriation."

The method of compensation payment is described as unfair and arbitrary. Actually the compensation works out to only a half or even less of the market value of the land acquired. Fair compensation has been provided for in the Constitution for possessions acquired by the State. In the compu-

tation of compensation no regard had been paid to social justice.

Passage of this Bill through the two houses of the State will be easy. But before that it may pass through a nominal select committee stage. If this Committee were to be packed with the "yes" men, as it should undoubtedly, then no substantial changes need be expected.

The local Press too have very sharply reacted to the Bill calling it "inequitable, unjust and totally expropriatory."

The Bill contains five clauses imposing restrictions on transfer of land so that scope for evading ceiling shall be minimised. Clause 30, for example, provides that no person shall, after the date of the publication of the proposed Act, either by himself or through any other person, voluntarily acquire or possess, by sale, gift, exchange, lease, usufructuary mortgage, etc., any land, which, together with the land if any already held by him in the State, will exceed in the aggregate the ceiling area. "Transfer" in this clause does not include inheritance and bequest.

Under clause 31, no right, title or interest should accrue in favour of the transferee in any land in excess of the ceiling area by virtue of any transaction made in contravention of Clause 30. The penalty for such contravention is, that the right, title or interest of the transferor in such excess land purported to be transferred by such transaction to the transferee should, on declaration made by the authorised officer, be deemed to have been transferred to the Government with effect from the date of such transfer. Under clause (b) of the proviso to this clause, the liability if any of the transferee for payment of the consideration for such transaction is not affected.

Under clause 32, after the date of the publication of the proposed Act, if any person acquires by inheritance or bequest from any person any land in the State which, together with the land if any already held by him in the State, exceeds in the aggregate the ceiling area, he should within ninety days of such acquisition, furnish to the authorised officer a return containing particulars specified in that clause. If the person concerned furnishes the return or fails to furnish the return or furnishes an incorrect or incomplete return, the provisions of clause 7 and other provisions of this Bill will apply.

Under clause 33, where after the date of the publication of the Bill but before the date of the publication of the proposed Act, any person has transferred any land held by him by way of sale, gift, exchange, surrender etc or has effected a partition of his holding or part thereof, the authorised officer may declare the transfer or partition to be void if he finds that the transfer or the partition as the case may be defeats any of the provisions of the proposed Act. Any document relating to transfer or partition registered during the period mentioned above should operate from the time of its registration only.

16 April 1960

Rice Crop Prospects

RICE is the world's biggest single crop and over 90 per cent of the world total is produced in Asia. India is the biggest producer with a crop, in the 1958-59 season, of 43.7 million tons or about one-third of the world total.

Available reports show that expectations of a satisfactory crop in India are good; but it is not likely that it will be able to enter the export market in any strength for some time to come. The export figure for the whole of 1958 for India is put at only 6,000 tons.

World production of rice this season is expected to exceed last year's record of 132.5 million tons, which was some 9 per cent higher than the output of the 1957-58 season.

Crop reports suggest that, of the main Asian producers, only Ceylon and Formosa will, this season, have a smaller rice crop and the declines are expected to be very small. Ceylon's crop is provisionally estimated at 735,000 tons against 738,000 tons last season, while Formosa's is put at 2.39 million tons against 2.43 million tons.

Meanwhile, conditions in the Hapur Foodgrains market remained generally steady. Wheat prices recorded fractional gains, while the market for Rice ruled quiet, thanks to a comfortable supply position. Gram prices were ruling steady, as crop prospects in the Punjab were not considered to be bright. Although outside buying enquiry was dormant, new Peas prices remained steady due to stockists' support.

Sugar

Thanks to the incentives given to producers, the output of Sugar during the current season has been on the increase, and it is already 300,000 tons higher than what it was by this time last year.

Naturally, conditions in the sugar markets have remained quiet due to the easy supply position. The supply position of cane is also reported to be better. In the Hapur market, the rate is quoted at Rs 115 per bag.

At the meeting held in London last week, the International Sugar Council decided to leave export quotas unchanged at 85 per cent of capacity. At the same time, the Council reasserted its faith in sugar's statistical position and stated that a deficit of sugar seemed likely this year. Estimates of

world demand for the sweet commodity have been raised due to Russia's recent purchase from Cuba, while supplies are now expected to fall slightly.

Cuba is reported to have already sold the full amount previously allocated to it as an exporter for 1960. It is now more concerned with securing agreement to make further sales than to see a rise in sugar prices. In any event, prices seem to increase only when there is no selling by Cuba.

The New York market has since recovered slightly and many traders feel that raw sugar prices should now go higher, possibly above 3.5 cents a pound. But demand has yet to show signs of expansion and some people are still doubtful about the position and have challenged the Council's statistics.

Khandsari

Due to delay in decontrol of sugar, the Khandsari market has

been ruling steady after the announcement of the sugar quota. Demand for the commodity remains brisk from Saurashtra. Besides, the Punjab, Madhya Pradesh and destinations in north Gujarat remain the main buyers for the commodity. Consequently, the price of khandsari has risen by Re 1 a maund, to quote at Rs 37 to Rs 40, according to quality.

Gur

After an early fall, Gur prices have improved in the Hapur market following the revival of buying enquiry. Arrivals have declined to 300 maunds a day, while stocks are estimated around 37,500 maunds. Pansera quality is quoted at Rs 16.12 to Rs 16.37 and Balti at Rs 16.12.

Due to the harvesting period, arrivals of gur and khandsari at Muzaffarnagar, during the past week amounted to only 29,000 maunds, making the total, from the start of the season till to-date,

to 1,449,500 maunds as against 1,377,000 maunds during the corresponding period of last year. Arrivals during the full season last year were 1,537,800 maunds.

Shellac

According to the preliminary forecast issued by the Indian Lac Cess Committee, the total production of Baisakhi crop in 1960, is expected to be 820,000 maunds against 650,000 maunds. The climatic conditions have so far been good this year, and production in all the major lac-producing States is expected to be better than last year.

Production in Bihar is expected to be 393,000 maunds; Madhya Pradesh 250,000 maunds; West Bengal 110,000 maunds; Bombay 40,000 maunds; Uttar Pradesh 16,000 maunds; Orissa 4,600 maunds and other Indian States 7,000 maunds.

Final estimates of the Aghani (Kusmi) lac crop for 1959 are

Khrushchev Points To Need For More Industries

FROM OUR STAFF CORRESPONDENT

Mr. Khrushchev made a special reference in this connexion to the manufacture of refractories, so indispensable for blast and open hearth furnaces. He understood that India possessed abundant raw materials for the purposes, but she still imported them from abroad. The setting up of a refractory industry was, therefore, one of the "urgent tasks" facing India, he said.

Mr. Manubhai Shah, Union Minister for Industry, said today that five refractory factories would be set up "very shortly" in both public and private sectors in India. These factories, he said, would provide in "huge quantities" various types of refractory materials required for building steel plants in the country.

REFRACTORIES IN THE NEWS

The Orissa Cement Ltd., is one of the pioneers in the field and holds the key in this industrial enterprise. With the most up to date equipment, the latest production methods make possible a large output of high grade refractories, to meet the needs of all types of furnaces in the steel, cement, glass and a large number of other industries.

129,000 maunds against the preliminary estimate of 110,000 maunds. The increase has taken place in Bihar and West Bengal.

Meanwhile, conditions in the Calcutta shellac market remained very steady with Pure TN shellac quoting around Rs 80 per maund. Shipments in April to the sixth of the month, were 6,624 packages comprising 5,136 packages of shellac; 1,085 packages of seedlac; 120 packages of buttonlac and 283 packages of other varieties.

Coffee

The India Coffee Board has released for export 900,000 kilograms of coffee out of the 1959-60 crop, consisting of 477,000 kilograms of Plantation A: 201,000 kilograms of

Plantation B: 72,000 kilograms of Plantation Triage and 158,000 kilograms of Arabica Cherry Flat. A quantity of 201,000 kilograms of Robusta Cherry Flat, out of the 1958-59 crop, has also been released for export. The last date for tender is 20 April.

The following types and grades of coffee have been released for internal consumption in the Pool sale held at Coimbatore on 1 April 1960 to the wholesalers (quantity in kilos and prices per unit of 50 kilos or about 112 lbs):—

Plantation:	Quantity	Price Range (Rs)
PB	35,000	225.75 to 237.90
"A"	75,000	206.60 to 220.00
"B"	19,800	198.10 to 203.10
"T"	34,500	187.50 to 192.15

Bangalore Silk

The prices of all varieties of raw silk maintained a steady trend during March. The prices of filature silk from the Government filature ranged between Rs 42.00 and Rs 44.00 per lb. The different grades of charka silk were quoted between

Arabica Cherry:			
PB	10,033	183.95 to 184.20	
Flats	15,253	180.10 to 182.10	
E.P.	4,850	169.80 to 174.20	
Bulk	14,066	169.80 to 174.20	
Robusta Cherry:			
PB	39,752	153.10 to 155.70	
Flats	133,943	149.70 to 154.50	
Cleanings	9,354	153.55 to 154.10	
Bulk	23,877	150.10 to 151.30	
Blacks/Browns/Bits	13,468	131.05 to 135.10	
Total	428,916		

Rs 24.00 and Rs 34.50 per lb, and cottage basin was quoted between Rs 37.00 and Rs 39.00 per lb.

There was a slight improvement in the rates of reeling cocoons from Mugur area, which were quoted Rs 1.25 to Rs 2.25 per lb. There was no change in the prices of Sidlaghatta and Ramagaram cocoons. Foreign race seed cocoons registered a sharp decline to be quoted Rs 3.00 to Rs 12.00 per 1,000 cocoons as compared to Rs 6.00 to Rs 20.00 per 1,000 during the previous month. Mysore ruled at between Rs 4.50 and Rs 8.50.

The West Bengal market for mulberry silk also maintained a steady trend during the month.

The prices of charka raw silk were quoted between Rs 31.50 and Rs 42.50 per lb. There was no

notable transaction in domestic basin silk, presumably due to limited production. However, it could be sold at about Rs 42.00 per lb.

Transactions of reeling cocoons were open for the last 3 days of the month, being sold at Rs 1.75 to Rs 2.25.

The spun silk yarn, popularly known as "matka" yarn, could fetch about Rs 8.50 to Rs 16.50 per lb during the month.

The Kollegal raw silk could fetch between Rs 40.00 and Rs 48.00 per lb. Kanakapura silk was quoted

at about Rs 39.00 per lb toward the close of the week. Kashmir silk also entered the market during the last week of the month at Rs 44.00 per lb. Raw silk from Malda has been conspicuous by its absence for the last 3 months. Katan, produced from imported raw silk, quoted at Rs 56.00 while that produced from Indian raw silk quoted at Rs 44.00 to Rs 47.50.

During March, there has been no notable change in the prices of raw silk and reeling cocoons. However, there was a modest rise

in the price in the case of silk waste. Raw silk prices remained at about Rs 33.00 for Superfine and Rs 30.00 and Rs 24.00 per pound for 1st and 2nd qualities.

Bullion

The bull operators in bullion were able to manipulate backward action charges in the market during the week under review with the result that some large deliveries of gold were expected in the maturing Chaitra delivery. Doubts

were however expressed for the same in certain circles due to large-budda business at Re 1.50 against sellers having taken them. In view of the general bearish feeling, long distant contracts faced selling pressure as there would be very little offtake both in gold and silver after a month or so. The professional bull traders however on the other hand tried to hold their own by exerting their weight in increasing the backwardation rates which attracted margins.

Gold spot delivery which was done at Rs 130 at the commencement of the week was taken up to Rs 132.06 due to delay in the start of the distant contracts as the Forward Markets Commission has not given permission for the same so far. This delay according to trade circles has resulted from the open clash of the FMC with the Oilseeds Exchange over the reported issue of the Secretary's alleged dereliction of duty in not putting the notice in proper time of the margin imposed by the FMC in groundnut oil. The FMC wants that the secretary should be dismissed but some of the Directors are not inclined to take such a precipitate action. The FMC wants also other issues being settled. This has resulted in an open clash and as such the FMC has withheld permission so far to trade in distant contracts. It is to be seen as to when this deadlock will be resolved but the general feeling is that unless the Oilseeds Exchange revises its stand, permission might not be forthcoming. Efforts however, are being made to end the stalemate and as such, the market face some selling pressure at the time.

Silver spot after being done at Rs 215.12 was marked up to Rs 215.75 in sympathy with the maturing Chaitra delivery which was boosted up to Rs 217.06 from Rs 215.12 to expire at Rs 216.50. Baisakh delivery which was done as low as Rs 213.44 improved to Rs 214.94 to react to Rs 214.56 while Jeth delivery moved narrowly between Rs 211.75 and 212.75 to finish at Rs 212.50. This contract became an active one during the week and as such selling pressure was forthcoming in this contract on ideas that in view of the onset of the slack season the bull operators would not be able to manipulate either the market or the backwardation rates. Floating stocks of Gold and Silver in Bombay Market are estimated around 24,000 tolas and 600 bars respectively.

Yarn

After the recent sharp decline, the Art silk yarn market appeared to have steadied up at lower levels while staple fibre yarn was rather dull as most of the power loom factories have still not reconciled to the imposition of excise duty on staple fibre crop. Cotton yarn prices have continued to manifest a firm tone in view of the shortage of indigenous cotton. Bomberg Cuprassa for April delivery advanced to Rs 1804 from Rs 1788 to come back to Rs 1796 while the June delivery was quoted at a premium of Rs 25. Staple fibre yarn for April delivery came to business between Rs 685 and 693 to be placed at Rs 689. The June delivery which at one stage was quoted at a discount of Rs 10 stood at a close at Rs 6 discount.

Metals

In view of the expectations of larger imports following the enhanced import quota the copper prices ruled generally quiet. Scrap copper however ruled steady around Rs 212 while brass scrap

improved to Rs 179 from 176. Zinc however for spot ruled steady around Rs 140 while the April delivery met some selling on expectation of actual arrival of about 1500 tons of goods on account of STC. Lead was dull around Rs 75. Tin was steady around Rs 135 per quarter due to share demand. Aluminium scrap was slightly better at Rs 1.50 per lb.

Oils & Oilseeds

The oilseeds market in Bombay firmed up further on nervous short covering due to delay in the start of the distant contracts as the Forward Markets Commission has not given permission for the same so far. This delay according to trade circles has resulted from the open clash of the FMC with the Oilseeds Exchange over the reported issue of the Secretary's alleged dereliction of duty in not putting the notice in proper time of the margin imposed by the FMC in groundnut oil. The FMC wants that the secretary should be dismissed but some of the Directors are not inclined to take such a precipitate action. The FMC wants also other issues being settled. This has resulted in an open clash and as such the FMC has withheld permission so far to trade in distant contracts. It is to be seen as to when this deadlock will be resolved but the general feeling is that unless the Oilseeds Exchange revises its stand, permission might not be forthcoming. Efforts however, are being made to end the stalemate and as such, the market face some selling pressure at the time.

Groundnuts May delivery advanced to Rs 218 from Rs 215 to react once again to Rs 215 to finish at Rs 216.50. Groundnut oil April, May delivery was done at Rs 22.56 to 22.75 to be placed at Rs 22.69. Government of India have allowed free export of Vanaspathi till 1962.

Castor Seeds May delivery spurred to Rs 177 to drop down sharply to Rs 172.87 to be placed at Rs 173. Castor oil commercial quality slipped off to Rs 18.31 after earlier rally to Rs 18.69. Linseed was relatively firm on export prospects for oil and oil cake. The May delivery after early decline to Rs 33 advanced to Rs 33.56 to finish at Rs 33.37. Linseed oil firmed up to Rs 18.31 from Rs 18 per quarter. Cotton seeds were steadier with May position covering around Rs 154. Nigarseeds were reported at Rs 33 and Kardiseeds Rs 24.25 per cwt. Exports of HPS groundnuts from Bombay during the month of March came to 2169 tons thus making a total of 7772 tons for the first three months of this year. There were no exports of groundnut oil during the past month and as such, the figure stood at 1893 tons. Exports of Castor oil in March accounted for 2477 tons thus making a total of 11,116 tons for the first quarter of the year. Lin-

seed oil exports in March from Bombay were only 50 tons thus aggregating 1896 tons.

The Madras oilseeds market today showed an easier tendency than last week and prices were a bit lower allround. Summer groundnut kernel crop arrivals locally were good at between 800 and 1,000 tons daily, though in southern regulated market centres arrivals continued to be meagre. Compared to spot goods, business was better in forward positions. The market today closed as follows.

Groundnut oil per candy of 500 lbs ex-Madras godown expeller Ready 3 per cent FFA Rs 402-403. April Rs 404-405; May Rs 402-403; June Rs 405 (nominal).

Groundnut kernels per candy of 531 lbs Coromandel Rs 212-213. Castor oil per candy of 500 lbs Tirupattur Rs 320.

Coconut oil per tin Rs 39-38.

Gingelly oil per maund Rs 22. Gingelly seed per bag Rs 76. Groundnut oil cake Rs 25-12 to Rs 26 per Bag of 160 lbs with gunny.

The quotation for the UK was £120 for groundnut oil per ton.

Groundnut cake was quoted at £33-5 per ton for the UK.

Throughout last week, both groundnut and oil markets were firm. This was ascribed to low arrivals at market centres. Vanaspathi factories went in for big deals apprehending a shrinkage of arrivals in the months to come and prices consequently went up as high as Rs 210 per candy of groundnut kernels. Exporters were keeping quiet and no pressure from this quarter was visible. But prices, however, went on increasing with the result that groundnut registered a gain of about Rs 22-23 per ton while oil gained Rs 62-63 per ton during last week's trading.

Groundnut arrivals were readily absorbed locally. Last week-end, the kernel prices went up to Rs 214 but there was a lowering of prices locally when arrivals showed improvement.

Calcutta interests were throughout the main buyers last week of oil in small parcels. Hesitant sellers were not willing to meet with the Calcutta demands. Because of poor arrivals, sellers thought that prices would go up higher than Rs 405 or so. Despite this, good volume of business was put through at this high rate of Rs 405-406.

Ready oil came down to Rs 404 on Monday. Today, it opened at Rs 402 and increased by eight annas and closed at Rs 403.

There was brisk short-covering in forward positions of groundnut oil. Prices improved and went up to Rs 406. But on Monday the price went down to Rs 403-404.

The price was lower by a rupee today for the May contract, though last week's rate was a

couple of rupees higher. It went down to Rs 402 by the beginning of this week. It again registered a small gain at Rs 403 today.

June position had good demand. It was on par with April in almost every transaction from the beginning of this week. It was higher last week, but went down to Rs 404 at the beginning of this week. It closed nominally today at Rs 405.

Upcountry Markets:

Summer crops have begun to arrive in Southern markets. But the volume so far received does not warrant any price sliding. The end of this month may witness sizable quantities in principal centres. Before harvest, one or two showers would facilitate better maturity and digging operations. Held over winter crop naturally commanded good clearance at the rate of Rs 210 per candy at which good absorption was reported by local interests. Both in Hyderabad and Circular markets, the kernel price improved. Guntur also dealt with oil at Rs 405 per candy.

The following are the latest ruling rates of other seeds and oils:

Gingelly Seed:	Per bag
Itarsi, Bhopal, etc. (Kusumba)	75/76
Rajasthan quality	71/-
Anantapur	71/72
Local	76/-
Gingelly Oil:	
On wholesale basis	22/-
On retail basis	22/8

Coconut oil: Cochin Ready Rs 617 April Rs 622; May Rs 627 per candy.

The latest ruling levels in the UK-Continent for some of the important oilseeds, oils and oilcakes are as under:

Groundnuts June/July, £75/- per ton; Castorseed April/May, £62 to 62½ per ton; Nigarseed April/May nominal £55/- per ton; Groundnut oil spot £120/- per ton; Groundnut oil April/May £120/- per ton; Castor oil BSS Bulk, April £126/127 per ton;

Castor oil Commercial April £122/122 per ton; Tobacco seed oil, nominal £123/124 per ton; Coconut oil Straits April £124 per ton; Coconut oil Ceylon £128½ to 129 per ton; Groundnut oil-cake Expeller 54 per cent O and A £33 to £33½ per ton; Groundnut oil (Solvent) 50 per cent O and A £31 to £31½ per ton.

The following prices prevailed in upcountry markets today:

	Kernels per candy of 531 lbs.	G. Nut oil per 500 lbs. candy.
Guntur-Bezawada	213	405
Vridhachalam	208	400
Nandyal	206	397/8
Villupuram	208	400
Cuddappah		
Yerraguntla	205	397/8
Pollachi nominal	210	390
Tanjore	210	398
Tiruvannamalai	205	395
Salem	210	400

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have decided payment of a Final Dividend on the Company's Preference Stock for the year ended 31st March 1960 at the rate of £2.15.11 1/49d per cent less income tax at 1s. 9d. in the pound equal to £1.14.3d per cent. Payment will be made on 16th May 1960 to those stockholders whose names are registered in the Company's Stock Register on 30th April, 1960.

Applications for transfers received in this office before 12 O'clock noon on Saturday the 30th April 1960, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

BY ORDER OF THE BOARD

STAR PERFORMER OF THE WORLD OVER!

BEDFORD

PETROL AND DIESEL

A great year for the British Motor Industry. And right out in front, leading the leaders, is Bedford... more firmly established than ever before as No. 1 British truck the world over. Bedford's success is based on leadership in design, leadership in value-for-money, and leadership in service-after-sales.

- ★ 50,000 Bedford trucks built in 1959. A truck production record never achieved before by any British manufacturer.
- ★ Highest-ever truck sales in 1959. Latest figures for 1959 show that, while British truck production increased overall by 31%, Bedford production increased by 63%!
- ★ 4 in 10 new British trucks are Bedfords. Latest figures for 1959 show that 39.9% of all new trucks built in Britain were Bedfords.
- ★ 30,000 Bedford DIESEL trucks built in 1959. Diesel-engined models accounted for 60% of Bedford's 1959 production record.

Working on 91 Per Cent of Looms

A CASUAL observer cannot be blamed if he goes away with the impression that the Indian jute goods industry is doing very well indeed. No doubt, he is partly correct because, from an overall point of view, the developments of the past few years in the Indian World of Jute have been such as to revive the hope that the Indian jute goods industry can once again reign supreme in world markets. Raw jute self-sufficiency and mills' modernisation programme have solved some of the recurrent problems. Despite moves on the part of erstwhile importing countries to attain self-sufficiency in jute goods and the growing competition from Pakistan, our jute goods have been able to make a satisfactory showing during the past two or three years, thanks largely to the increased economic activity in many a country.

But the industry has not been able to bring about price stability in its products—an essential prerequisite for any lasting expansion of business in overseas markets. In his address to the annual IJMA meeting, the Chairman has pointed out how the unbridled speculation that overtook the jute markets last November has jeopardised the position of jute goods in overseas markets. The position today in the jute markets is much worse. During the past few days, prices have been soaring. The spurt has occurred despite the announcement that the IJMA has decided to unseal 1 per cent of the looms with effect from 1 May, with a proviso that another 1 or 1½ per cent of the looms may be unsealed effective 1 June.

The provocation for the move to step up production of jute goods has been the statistical position as disclosed by stock figures for jute goods as at the end of March 1960. As generally anticipated, total stocks of jute goods at the end of last month have recorded a decline. As against 73,200 tons at the end of February, March-end stocks are placed at 71,900 tons, showing a decline of 1,300 tons. While stocks of hessian have increased by 900 tons to 27,900 tons, and those of other varieties by 300 tons to 14,600 tons, stocks of sacking cloth and bag have declined by 2,500 tons to be placed at 29,400 tons. Thus, stocks are much less than a month's production and, considering the revival of foreign interest both in hessian and sacking,

coupled with the increasing domestic offtake, it is a natural thing to expect the IJMA to advise its members to increase production.

It may be recalled that, ever since 2½ per cent of the looms were unsealed, bringing down the production of sealed looms to 10 per cent in August last, the question of loomage has been coming up for discussion quite frequently. It was the original idea of the IJMA to reseat the 2½ per cent of the looms effective 2 January. But the statistical position of heavy goods continued to be good, and the decision was deferred to February. February came, and the IJMA had to make a further deferment. In April, the position has been found to be such as to call for definite action. The action when it came was not for resealing, but for unsealing, of a further quota of looms in instalments. In today's extraordinary situation in the Indian World of jute, the IJMA decision raises some important questions.

It is said that the IJMA's decision has been taken after obtaining an assurance from Government regarding uninterrupted supply of raw jute. Government are said to have made it clear that, if need be, jute imports from Pakistan would be stepped up. With the raw material supply problem solved, the IJMA has deemed it fit to advise mills to unseal another quota of looms.

The purpose of unsealing of looms is to increase production, thereby indirectly giving an assurance to consumers that there will be enough jute goods to meet their demand. However, it will be more appropriate to describe this as a gesture or a token increase in production. For, the output from the additional one per cent will not make much of a difference to the total availability of goods.

Presumably, the IJMA is not yet convinced that enough supplies can be moved to mill centres if a larger percentage of looms is unsealed. This brings me again to the question of raw jute availability during the current season.

Last week, I have let in the relevant data to show that, on the basis of Government estimates and the IJMA figures pertaining to the carryover from the last season, there should be enough raw jute to meet the requirements of mills and leave a moderate quantity to be carried forward into the next season. Evidently, these figures have ceased to convey any significance to the mills and Government, too. What was considered the speculators' interested propaganda now seems to have become a widely accepted belief. Mills are behaving as though there is going to be an acute shortage of the fibre, unless considerable imports are made from Pakistan. It is rather strange that, even after the Government assurance about further imports, raw jute prices

are showing no signs of coming down. Whether there is a shortage or no—the crop estimates and other authoritative data show that that supplies are adequate—matters in the Indian World of Jute, especially with regard to raw jute, have been so messed up that the only remedy is to import a sizable quantity of raw jute from Pakistan; no mere assurance but an announcement that licences will be issued for a sizable quantity of Pakistani jute preceded by necessary arrangements for expeditious imports from that country.

In the meantime, all concerned should view with concern the present trend in prices in jute markets. No one can deny that the runaway prices of today are bound to cause much harm to exports. If there is no early realisation of the folly of allowing the market to be dominated by speculators, it is incumbent on Government to take such measures as will bring price levels substantially down.

Firm conditions have developed in the jute goods market with the announcement of the March-end stock figures. The decline of 2500 tons in sacking stocks gave fresh impetus to speculative activity and even though the IJMA announcement about unsealing of a further quota of looms came soon after, the bullish fervour continued unabated with the quotation for B Twills early delivery taken to fresh new highs. It would appear that the assurance of Government sanction for the import of an adequate quantity of raw jute from Pakistan and the possibility of further unsealing of looms have not deterred the operators from pushing up B Twills prices to dizzy levels. The spurt in near delivery goods is evidently due to a squeeze and consequent bear-covering. But the fact that the price rise has spread to distant delivery heavy goods and also to hessian cannot be lightly taken in view of the foreign consumers' known dislike of unstable price levels. B Twills April, which was quoting at Rs 116.65 last Friday, closed at Rs 120.15 by close on Tuesday. Hessian 40" x 10 oz April likewise advanced to Rs 43.80 from 42.90. The raw jute market ruled fully steady. The news that raw jute imports from Pakistan would be allowed in adequate quantities failed to have much effect on sentiment. Assam Bottoms April-May delivery gained Re 1 over the week to be placed at Rs 35.50.

Recovery in Prices Predicted

EVERY one concerned with tea-growing is hoping that the distressing decline in Tea prices at the London auctions has now been stopped. This hope is based on the fact that the improvement, evident at the auction last week, has been maintained at this week's sale. As a matter of fact, the official rate for Plain tea has been raised, for the first time in well over a month, even though by only a penny a pound.

Of course, it must be borne in mind that tea from Ceylon, Africa, China, etc., will be coming in all through the summer. One feature of the market this year has been the larger than usual amount coming from China. Another reservation, which ought to be made, is that buyers last week may have been buying tea, simply in order to compensate for not being able to buy over the Easter recess.

Meanwhile, in the Internal Sale held in Calcutta this week, offerings were 23,342 packages of Dusts. There was a good demand; but prices were generally lower. Orthodox teas came to an easier market, closing at up to 6 nP per pound below last levels except for selected bright liquoring lines which were sold at about steady rates. Legg-cut Doars teas followed an easier tendency.

Medium CTC descriptions were sold readily, although they generally registered a slight decline in prices. The brighter types were, however, often firm to dearer. Best CTC dusts met with active support and prices generally followed quality. Following rates were quoted:—Medium Doars Dust, Rs 1.86 to Rs 1.92; Medium Assam Dust Rs 1.80 to Rs 1.90; Medium Assam CTC Dust Rs 1.98 to Rs 2.18; and Best Assam CTC Dust Rs 2.40 to Rs 2.75. Also, 547 packages of Leaf grades were offered. Demand was good and prices were firm to dearer.

Tea stocks in Calcutta warehouses, at the end of last month, were lower at 453,041 chests as against 546,384 chests at the close of March last year. While tea stocks in public warehouses declined sharply from 396,061 chests to 285,929 chests at the end of last month, those in private warehouses rose from 150,323 chests to 167,112 chests.

North-East Indian Tea exports, in March 1960, were lower at 15.22 million pounds as compared to 16.77 million pounds in the corresponding month of 1959. In the first three months of the current year, exports of North-East India tea were, however, higher at 70.12 million pounds as against 66.49 million pounds in the corresponding period of last year.

In the Cochin market, offerings were 250,000 pounds of Dusts. Against a strong general demand, prices were irregularly 5 nP to 10 nP per pound dearer for every sort except for high-grown types which were easier. CTC types were strong.

In the Colombo market, offerings were 5,935,165 pounds. Medium Broken met with considerably better demand and advanced by 5 to 10 cents per pound. Low-grown teas were also fairly firm to dearer. Broken Orange Pekoe Fannings followed the trend of their respective BOPS with the exception of plain liquoring media, which were again easier.

Tea stocks in London, as on 1 April, were 159.28 million pounds as against 159.87 million pounds in the previous week. Total amount to be landed, on the same date, was 10.75 million pounds. Total afloat was 19.00 million pounds including from Calcutta 8.42 million pounds; from Chittagong 152,000 pounds; from Cochin not available; from Ceylon 8.36 million pounds and from other Ports 2.06 million pounds.

The average price realised, at the auction held in London during the week ended 1 April, was 47.98d per pound as against 45.87d in the previous week and 51.47d in the corresponding week of last year.

Two-sided Movements in Futures

THE futures market in Cotton has moved narrowly with a quietly steady tone. Movements were two-sided as upturns lacked follow-up due to apprehensions about selective requisitioning move and further tightening of distribution control which were hinted by the

Textile Advisory Committee. Moreover the operation of the stringent margin over the rate of Rs 770 also made the bulls somewhat cautious. The rate for August contract after early dealings upto Rs 771.50 dropped to Rs 767.50 to rebound to Rs 772.25 to react to Rs 767.50 to finish around Rs 770.

Movements in ICC August during the past six weeks were as follows:

Week Ended	High Rs	Low Rs	Close Rs
March 12	774.25	766.25	771.00
" 19	772.50	757.50	759.50
" 26	762.75	756.25	759.00
April 8	771.75	760.00	770.50
" 13	772.25	767.50	770.00

Spot Market:

In the spot market at Seuri moderate activity prevailed and this was mainly confined to Vijay, Digvijay, Co2 and other staple varieties. The trend of prices continued firm. Among Vijays, Palej was done at Rs 1055 for spot, Samlega at Rs 1051, Itola and Jamsar at Rs 1052 while among Digvijays, Samlega came to business at Rs 1051 to Rs 1065, Amad Rs 1075 for spot Karwar Rs 1067 Miyagaon Rs 1075 Samlega Rs 1070 and Palej Rs 1075. Surat changed hands at Rs 1072. Among Co2 Dhrangdhra was done at Rs 1005, Porbunder Rs 1125 to Rs 1145, Vambori Rs 1081, Nagpur Rs 1060 and Ehrirampur Rs 1306. Khanagaon was crossed at Rs 971. Nargud Laxmi Rs 1015 Baramati Rs 1040, Bagalkot Laxmi Rs 1035, Karampur Rs 875, Madhi Rs 1135, Hubli Laxmi Rs 1040 and Amraoti Rs 1015 to 1051.

Among foreign growths, activity was very much restricted. Sudan P3L was done at Rs 1585, Busoga Rs 1240, BP 52 at Rs 1280 to Rs 1330, Manor Rs 1725 CIF for transport shipment, Sudan XG 5L at Rs 1450 CIF June July shipment Egypt T151 at Rs 1975 for May June shipment, Jinja Rs 1115 CIF April May and Sudan XX at Rs 1750 CIF May shipment. Pakistan cotton was reported at Rs 1045.5

All mills have not yet applied for licences against quota of foreign cotton allotted to them. In order that purchases of foreign cotton be expedited and put to use, the Textile Commissioner has recently circulated to all mills that if they consume more Indian cotton by drawing from their carryover stocks than the quota allotted to them during the season 1959-60, they will receive pro rata reduced allocations of Indian cotton during the first half of 1960-61 season.

Some of the mills are finding it difficult to adjust the positions but willy nilly they have to do it though the quality of the goods will be affected to some extent as production schedules cannot be rigidly observed. The main problem facing the cotton textile industry is maintaining the costs of

operations and this has been referred to by Mr Kasturbhai Lalbhai in his annual address to the Indian Cotton Mills Federation meeting. The jute industry is also facing the same difficult position due to shortage of raw material and absence of favourable rains. As for cotton, the outlook rests on the monsoon and unless it proves congenial for higher output the cotton textile industry cannot be expected to fare well.

Cloth Market:

The cloth market depicted steady condition but business is not as brisk as it should be at this time of the season. In view of the high prices the consuming centres have been of late trying to adopt a hand to mouth policy for purchases. In the Export section the performance is not so satisfactory and it is wondered as to how increased imports apart from PL 480 will be compensated. In the circumstances which have developed of late following the increase in the wages of the workers and materially higher prices of raw cotton cloth prices are not expected to come down as the industry would find it extremely difficult to bring down cloth prices. It is to be seen as to what decisions are arrived at the forthcoming conference of the Chief Ministers in Delhi to hold the general price line.

New York Cotton:

The New York Cotton Market during the past week ruled steadier with July position closing at 32.56 cents as against 32.69 last week. Purchases under 'A' programme for the season so far came to 8,635,725 bales. Total sales during the season from this aggregated 5,896,151 bales with the result that the net stocks stood at 2,739,574 bales. Entries into and repossession from the 1959 loan till April 1 were 331,133 bales and 192,633 bales respectively leaving net loan stocks at 138,500 bales. Total sales of 1958 and earlier crop cotton for unrestricted use have aggregated 3,376,489 bales.

The Sudan Gazira Board has estimated the crop at 31 March of 434,720 bales of 420 lbs. Out of this Lambert is placed at 264,700 bales Domains Sakel 103,500 bales Barsakel 62,700 bales and others 1020 bales.

World cotton export this season are expected to exceed 14.5 million bales. This figure which exceeds the previous season by over 3.5 million bales assumes that there will be some replenishing of stocks in importing countries.

HOUSING FOR INDUSTRIAL WORKERS

The Government of India have amended the Employees' Provident Funds Scheme, 1952, to enable industrial workers to draw non-refundable advances from their deposits in the fund for acquiring

houses under the Subsidised Industrial Housing Scheme or for purchase or construction of houses by them direct.

As regards acquisition of a house under the Subsidised Industrial Housing Scheme, a worker, who is a member of the fund, can draw an advance not exceeding 12 months' basic wages or his own total contribution in the fund, with interest there or his own share of cost of the house, whichever is less.

Where a member wants to purchase or construct a house independently, he will be entitled to an advance not exceeding 12 months' basic wages or his own total contribution, with interest thereon, whichever is less.

The Employees' Provident Funds Scheme, which initially applied to six industries, has now been extended to 41 industries. Till the end of December 1959, 7,182 establishments, employing 26.46 lakhs employees were covered by the scheme. The total accumulations in the fund were about Rs 160 crores excluding the amounts refunded or paid out as loans are given to members for financing insurance policies.

PRODUCTION OF STEEL AT BHILAI

The Bhilai steel works registered production of their first one lakh tons of steel yesterday.

Steel production at Bhilai commenced on October 12, 1959, when the first open hearth furnace for steel making was inaugurated by the Soviet Ambassador in India, Mr I. A. Benediktov. Since then, two more open hearth furnaces have been commissioned, second on December 17, 1959, and the third on March 22, 1960.

Each furnace is capable of producing 500 tons of steel daily. The Bhilai steel works will have six such furnaces for production of one million tons of steel annually. The remaining three furnaces are also under construction and will be completed this year.

Upto now about 55,000 tons of steel billets and slabs have been despatched to re-rolling mills all over India.

HEAVY FOUNDRY FORGE PLANT

The Minister of Industry, Mr Manubhai Shah, disclosed in the Lok Sabha that the Heavy Engineering Corporation had entered into a contract with Technoexport, Prague, on March 30 last for the supply of a complete range of machine tools and equipment for establishing a rolls shop at the Heavy Foundry Forge Plant. The rolls shop would cost Rs 87 lakhs.

Mr Shah, who was replying to a question by Mr Ram Krishan Gupta and three others on the progress made, so far, in the finalisation of the Heavy Foundry Forge Plant, added that the detailed project report of the plant, which had been received on November 21, 1959, was likely to be accepted very shortly.

Confidence Unimpaired

Investment Gossip:

THIS week's irregular trend on the stock markets partly stems from the fact that official business has been severely curtailed due to the intervention of holidays—one of the principal centres, Calcutta, has worked only for two days.

The main reason, for the cautious undertone is of course the RBI directive, the full force of which has begun to make itself felt since early this week. There are whispers that not all constituents have found it possible to conform to the new requirements that banks have perforce to enforce.

Meanwhile, rumour mongers are busy forecasting further stringent credit squeeze measures to come. This has evidently has its origin in the coming meeting of the National Development Council which is expected to devise ways and means toward holding the price line in general. The latest Chinese Note on the border dispute has enabled bears to declare the coming Nehru-Chou En-lai meeting a failure even before it has begun.

Bulls, however have in their favour the slightly conciliatory tone of the Finance Minister toward the insistent demand from many quarters as regards the need for affording relief in some of the recently introduced taxation measures.

It is undeniable that corporate taxation is heavier in India than in any other country. But that has ceased to worry both the entrepreneur and the investor. Both are satisfied that, in the present context of rapid industrialisation in which the private sector is given a large share and in the discharge of its function it is getting Government assistance in numerous ways, the future of private enterprise is no longer in doubt.

It may be interesting to note that according to the figures based on industrial production for the whole year, just released, the index for 1959 is 151.0 as compared with 139.7 for 1958. This rise of 11.3 points in industrial production, is the highest recorded so far. In terms of value of output industrial production in the organised sector in 1959 has recorded a rise of 30 per cent as compared with the first year of the Second Plan.

It is not improbable that investors' attention is diverted toward the new issues that have come in

recent weeks and are in the offing in coming weeks. The very fact that sponsors are continuing to place new issues on the market, some for substantial amounts, is an indication of the abiding confidence of investors in equity capital.

£ Rs

New Issue Notes

THE JK Cotton Spinning & Weaving Mills Company, Limited has proposed to issue equity shares of Rs 10 each for Rs 62 lakhs and 6½ per cent tax-free fixed Cumulative Preference shares of Rs 100 each for Rs 39 lakhs, both at par. The Preference shares are redeemable at the company's option after the expiry of 10 years, but not later than 15 years after the dates of respective allotments. The company has now applied for enlistment on the Calcutta and Bombay Stock Exchanges. It is reported that provisional enlistment has been granted, subject to the condition that the company offers a required percentage of its capital to the public. The present offer is a sequel to this stipulation by the Stock Exchange authorities.

A new company is proposed to be formed for setting up a sugar factory in South India. Kothari & Sons, promoters of the venture, have applied to the Government for a licence for starting the factory of 1,000 tons crushing capacity per day, to be increased later on to 1,500 tons. It is stated that the licence will be issued shortly. It is proposed to situate the factory in the Lalgudi Taluk of Tiruchirappalli district of the Madras State. The capital cost of the above project is estimated to be about Rs 140 lakhs. Equity shares for Rs 40 lakhs are expected to be offered for public subscription and the issue is likely to be underwritten. The company may likely enter the market in June or July next.

A new company, name East Anglia Plastics (India), Limited, has obtained Government sanction for entering the market shortly for Rs 25 lakhs, in the form of 2,50,000 equity shares of Rs 10 each. Out of this, 50,000 equity shares are reserved for issue to the promoters, directors and their friends. Applications for shares must be made for a minimum of one hundred shares or multiples thereof. The amount is payable at Rs 2.50 per share on application; Rs 2.50 on allotment and the balance by two calls of Rs 2.50 each. The first call shall not be made earlier than one year from the date of allotment. The subscription list will open on 27 April and close on 7 May or sooner or later as the directors may decide. The Government of India have given their approval to the company's proposal for the

manufacture of Cellulose Acetate Moulding Powder and PVC compounds in India in collaboration with the East Anglia Plastics Limited of the UK. The factory will be located on the Jessore Road, near Calcutta.

The Jay Shree Tea Gardens Limited has announced that the last date for the receipt of applications for right shares along with the payment of Rs 10, as per its circular issued on 10 March, 1960, to the equity shareholders has been extended upto 30 April, 1960.

£ Rs

Investment Notes:

It is learnt that India Cements Limited has not been given the necessary permission by the Industrial Finance Corporation to distribute the recently-announced interim dividend on the Ordinary shares.

The staple and rayon factory of the South Indian Viscose, at Mettupalayam, is stated to be making rapid progress. The factory is scheduled to go into production early next year.

The shares of the Premier Tyres Limited have been admitted to official deals on the Bombay Stock Exchange.

£ Rs

Investment Briefs:

Tata Mills Limited has recommended a taxable dividend of Rs 2.50 per Ordinary share for 1959 as against a tax-free dividend of Rs 1.50 per share for 1958.

Svadeshi Mills Company, Limited has proposed a gross dividend of Rs 14 per share for 1959. This works out to a net dividend of Rs 9.80 against Rs 10 paid for the previous year.

£ Rs

Balance-Sheet Briefs:

The Century Spinning & Manufacturing Company, Limited has reported encouraging working results for 1959, the gross profit having risen from Rs 133.80 lakhs to Rs 176.37 lakhs. The directors have recommended a final dividend of Rs 20, making a total of Rs 31.50 per share, subject to deduction of tax.

United Motors (India), Limited has earned a profit of Rs 69,269 for 1959 as against Rs 44,125 for 1958. A dividend of Rs 1.40, subject to tax, is recommended.

The working of the Parasea Collieries Limited has resulted in a profit of Rs 2.92 lakhs as against Rs 2.28 lakhs for 1958. A dividend of 5 per cent, tax-free, is proposed.

Savamalai Estates Limited, Madras, has reported a sizable increase in earnings for the year ended 30 November, 1959 to Rs 2.93 lakhs from Rs 1.92 lakhs. The dividend is

raised to 15 per cent (Taxable) from 12½ per cent previously.

The net profit of the Vaikundam Rubber Company, Limited is better at Rs 4.60 lakhs for 1959 as against Rs 4.02 lakhs. The directors have recommended a final dividend of 12½ per cent, making a total of 25 per cent (taxable) against 30 per cent paid for the previous year.

Parry & Company, Limited has shown a net profit of Rs 17.19 lakhs for the year ended 30 September 1959 against Rs 15.01 lakhs. The dividend on the Ordinary shares is passed over.

The East India Distilleries & Sugar Factories Limited has earned a net profit of £872,023 for the year ended 30 September, 1959 as against £838,016 in the previous year. A total dividend of 38-4/7 per cent (including a special dividend of 7-1/7 per cent) has been paid subject to tax, against 20 percent, tax-free, previously.

The Trichinopoly Mills Limited has reported a higher net profit of Rs 3.83 lakhs for 1959 as against Rs 2.05 lakhs for 1958. A dividend of 12½ per cent, subject to tax, is recommended against a tax-free 7½ per cent previously.

BIHARAT COLLIERIES LIMITED.

NOTICE

The fifteenth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Tuesday, the 10th May, 1960, at 11-30 A.M. to transact the following business:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th June, 1959.
- (2) To elect a Director in place of the retiring Director Sri P. L. Sonthalia, who being eligible, offers himself for re-election.
- (3) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will be closed from 2nd May, 1960, to 10th May, 1960 both days inclusive.

By Order of the Board of Directors,
for SAHU JAIN LIMITED

A. K. Jain,
Managing Director
Managing Agents

Dalmianagar,
Date 4th April, 1960.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

COMPANY REPORTS

Indian Aluminium's Splendid Results

Balance-Sheet Reviews:

Splendid results have been announced by the Indian Aluminium Co Ltd for 1959. With Sales, for the second year in succession, showing a rise of around Rs 2 crores, the net profit, before tax and depreciation, has, in the latest year, passed the Rs 2 crore mark. Sales in 1959 rose from Rs 7.43 crores to Rs 9.70 crores. The net profit has bounced up from Rs 1.37 crores to Rs 2.34 crores. The provision for depreciation has been substantially stepped up from Rs 27.95 lakhs to Rs 52.23 lakhs. Tax, on the other hand, receives the smaller provision of Rs 52.28 lakhs against Rs 57.62 lakhs. The transfer to Development Rebate Reserve has risen many fold from Rs 11.10 lakhs to Rs 61.50 lakhs. The magnificent trading performance has enabled Indian Aluminium to raise the ordinary dividend from 7 per cent tax free to 12 per cent subject to tax.

The balance-sheet shows a capital of Rs 4.38 crores, of which Rs 40 lakhs are in 5 per cent Redeemable Preference shares. Moreover, debentures are outstanding to the tune of Rs 3.05 crores, of which Rs 3 crores—issued last year—bear an interest coupon of 6½ per cent, whereas the balance is in the form of 5 per cent debentures. There is a share premium account of Rs 77.05 lakhs, and a Debenture Premium account of Rs 6 lakhs. The Reserve Fund is shown at Rs 15 lakhs, and Other Funds aggregate Rs 1.03 crores. The carry forward is at Rs 33.42 lakhs, an increase of nearly Rs 18 lakhs over the previous year's relevant figure.

The gross block has shown a rise from Rs 9.25 crores to Rs 9.72 crores. On the other hand, the net block has receded in value slightly from Rs 6.76 crores to Rs 6.72 crores. Cash balances, it is interesting to note, add up to Rs 3.91 crores, on top of Rs 40.08 lakhs figuring as Deposits in banks.

According to the Directors' Report, further expansion has been taken in hand, and construction in this respect commenced early in 1960. The remarks in this respect in the Report are hereinbelow extracted:

"With the successful completion of the first stage of the new smelter at Hirakud, the Company has embarked upon its second stage of expansion.

"The capacity of the Hirakud smelter will be doubled from 10,000 tons of ingot per year to 20,000 tons. Alumina and related bauxite facilities will be expanded from 18,000 tons of alumina per year to 54,000 tons. The capacity of the Belur rolling mill will be increased to approximately 16,500 tons of rolled products annually. A new extrusion press of 3,300 tons ram pressure and with an annual capacity of 2,500 tons will be installed alongside the existing press at Alupuram.

"A contract has been signed with the Government of Orissa for the additional electric power required for the ingot expansion at Hirakud. The necessary licences under the Industries (Development and Regulation) Act, 1951, have been obtained from the Government of India. An import licence for most of the equipment that must be obtained abroad has been received and the Company has already

placed a substantial number of orders on foreign suppliers.

"An engineering project department has been established for the execution of the expansion programme. An agreement, which has the approval of the Government of India, has been entered into with the Company's technical consultants, Aluminium Laboratories Limited of Canada, for engineering design and technical services connected with the expansion. It is presently estimated that the capital cost of the expansion will amount to Rs 9.1 crores, of which the foreign exchange component for fixed capital equipment is currently estimated at Rs 4.85 crores. Foreign exchange has been made available to the Company through the Government of India's Export-Import Bank Programme and through a loan from Aluminium Limited of Canada, the terms of which have received the approval of the Government of India. To meet a portion of the rupee funds required, the Company successfully issued in December 1959 Rs 3 crores of 6½ per cent Debenture Stock 1970-75 at 102 per cent."

Director:—Mr. H. Vance Echols.

Year ended Decr.	1959 Rs.	1958 Rs.	1957 Rs.

A sharp rise in sales from Rs 9.06 crores to just below the Rs 10 crore mark at Rs 9.99 crores has enabled the Bombay Dyeing & Manufacturing Co Ltd to turn in a fine profit and dividend performance in 1959. The net profit has risen from Rs 1.03 crores (in-

cluding a transfer of Rs 17 lakhs from Dividend Equalisation) to Rs 1.10 crores (including a transfer of Rs 12.30 lakhs from Equalisation Reserve). The tax provision has risen four fold from Rs 3.50 lakhs to Rs 13.30 lakhs. Depreciation is marked up from Rs 51.43 lakhs to Rs 54.64 lakhs. Development Rebate Reserve absorbs Rs 7.20 lakhs against Rs 20 lakhs, and the ordinary dividend is being paid at 14 per cent subject to tax against 10 per cent tax free.

As against the capital, all in ordinary shares, of Rs 2.51 crores, the Reserve Fund stands at Rs 1.96 crores, and Other Funds total Rs 1.45 crores. The Gross block, which has risen from Rs 9.01 crores to Rs 9.35 crores, has a net value of Rs 4.44 crores.

The Directors' Report contains an interesting analysis of the impact of the new structure of taxation on the company. It is shown that, under the old system, the total tax liability was Rs 19.92 lakhs, including Wealth Tax and Excess Dividends Tax; under the new dispensation, the tax provision has risen effectively by Rs 3.21 lakhs. If the Finance Minister is to be persuaded to agree to a downward revision of the rate of company taxation, every company should, in the manner of Bombay Dyeing, thus present the increase in tax liability.

Cawtex passed dividend for Third Year in Succession

THE Cawnpore Textiles Limited has passed the dividend for the third year in succession despite a net profit of Rs 13.08 lakhs for the year ended 31 December 1959 as against a loss of Rs 8.50 lakhs in the previous year. The Depreciation amount is reduced to Rs 3.21 lakhs from Rs 3.36 lakhs and Rehabilitation Reserve to Rs 22,550 from Rs 1.20 lakhs. The net profit is adjusted against the debit balance of Rs 12.94 lakhs brought forward from 1958, to leave a net debit balance of Rs 3.29 lakhs to be carried forward.

The balance-sheet, as at 31 December 1959, shows a paid-up capital of Rs 30 lakhs against which Capital Reserve is shown at Rs 18.18 lakhs; General Reserve at Rs 6.00 lakhs; Stock and Stores Reserve at Rs 5.00 lakhs and Investment Reserve at Rs 5.00 lakhs.

The gross block at Rs 81.46 lakhs is depreciated by Rs 66.09 lakhs to show a net block value of Rs 15.37 lakhs.

Kohinoor Mills Reduce dividend Despite Higher Profits

The Kohinoor Mills Company Limited has reported an increase in sales and profits for 1959, thanks to the improvement in the conditions of the yarn and sewing thread markets, especially from October onward. Sales have risen to Rs 5.25 crores from Rs 4.90 crores, while the net profit, before providing for Depreciation and Taxation, amounts to Rs 16.02 lakhs against Rs 9.64 lakhs in the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 7.38 lakhs from Rs 5.58 lakhs; Taxation provision to Rs 3.50 lakhs from Rs 2.00 lakhs and Development Rebate Reserve to Rs 1.53 lakhs from Rs 1.32 lakhs. The directors have recommended a taxable dividend of Rs 9.50 per share against a tax-free dividend of Rs 10 paid for 1958.

Against a paid-up capital of Rs 1 crore, General Reserve is shown at Rs 17 lakhs; Dividend Equalisation Reserve at Rs 10 lakhs; Machinery Reserve at Rs 67 lakhs and Development Rebate Reserve at Rs 6.60 lakhs. The gross block amounts to Rs 3.81 crores; total depreciation to Rs 2.96 crores and the net block to Rs 86.23 lakhs.

Shri Ambica Mill Pays Higher Dividend

Shri Ambica Mills Limited, Ahmedabad, has recommended a gross dividend of 45 per cent for 1959. This works out to a net dividend of 31½ per cent as against 30 per cent paid for the previous year. This increase in dividend has been made possible in view of the rise in profits.

Sales have risen to Rs 5.26 crores from Rs 4.73 crores, while the net profit, before providing for Depreciation and Taxation, amounts to Rs 1.09 crores against Rs 1.03 crores in the previous year. The directors have set apart a sum of Rs 14.19 lakhs (Rs 14.65 lakhs) for Depreciation; Rs 48.50 lakhs (Rs 51.00 lakhs) for Taxation; Rs 2.60 lakhs (Rs 6.50 lakhs) for Development Rebate Reserve; Rs 3.74 lakhs (Rs 10 lakhs) for General Reserve and Rs 10 lakhs (nil) for Investment Reserve.

The paid-up capital is shown at Rs 76,35,900 divided into 63,759 Ordinary shares; 5,600-5 per cent Cumulative Preference shares and 7,000-4 per cent Second Cumulative Preference shares, all of Rs 100 each. The gross block of Rs 2.44 crores is depreciated by Rs 1.46 crores to show a net block value of Rs 97.79 lakhs.

Dull Trading: Selective Interest

Watch-Dog Writes:

IN the absence of fresh support, stock markets have remained, generally dull. Trading has been restricted due to reluctance on the part of operators to extend commitments in view of the approaching holidays for the New Year and Easter. The only relieving feature is the buying interest shown in a few selected scrip.

The Calcutta Stock Exchange remained closed from Wednesday. During the period it remained open, most of the transactions were of a squaring-up nature.

On the Bombay Stock Exchange, dealings were featureless for lack of fresh incentives. The only bright spot were National Rayons, which met with hectic buying on expectation of a higher dividend as well as rumours of an increase in capital.

On the Madras Stock Exchange, trading was fairly active. Buying enquiries, while being selective, were well spread.

Calcutta

Calcutta, Friday Evening.

ACTIVITY on the local Stock Exchange was restricted and prices, after opening on a firm note, developed a slightly reactionary tendency toward the close of the week under review, which covered only two working days due to holidays from Wednesday. Apart from a general disposition to lighten their portfolios in view of the approaching holidays, anxiety was shown by the operators with regard to the political situation. In this connection, the uncompromising tone of the latest Chinese note gave rise to a fear that the talks between Mr Nehru and Mr Chou-En-lai, which are due to be held shortly, might turn to be unsuccessful.

There were also other factors which induced some caution in the minds of the operators. There were rumours of the possibility of the Reserve Bank imposing further credit restrictions to check the speculative rise in prices noticed during the past few days. Again, there were reports that the banks might soon have to sell the shareholdings of some of their customers, who had not yet adjusted their advances in line with the Reserve Bank's directive. Nevertheless, the undertone of the market remained fairly satisfactory, thanks to excellent corporate news, the expectation of either right or bonus issues by existing concerns and the imminence of new share issues.

The Gifted market remained dull. Institutional support was lacking due to stringent monetary conditions. There was no interest whatsoever in State Loans. 3 per cent 1966 Conversion Loan moved

between Rs 73½ and Rs 74.25, to finish the week at Rs 74.00.

Bank shares attracted some attention and selected issues recorded modest gains. Punjab National changed hands up to Rs 21 from Rs 20.62, while United Commercial were a steady feature at Rs 67.50.

In the short week's dealings, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to alternate buying and selling. Against the previous week-end closing of Rs 22.88, the scrip opened better at Rs 23.04 and moved up to Rs 23.06 on the feeling that the Government would sanction retention price at such a level as would enable the company to cover the enhanced cost of production without affecting the profit margin so far enjoyed. It was also felt that the company might be in a position to declare the gross dividend at such a level as would enable the shareholders to receive the net dividend of 10 per cent.

Selling pressure, however, at the higher level caused the scrip to slip down at one time to Rs 22.76, to close finally at Rs 22.87. TEXMACO changed hands at Rs 25.50 to Rs 25.90; G. K. Williams at Rs 43.75 to Rs 44.06 and Jessop at Rs 25.37 to Rs 25.81, to finish at Rs 25.70; Rs 43.94 and Rs 25.62 respectively. Braithwaite came in for good demand up to Rs 29.25 from Rs 28.75 and so also Britannia up to Rs 14.50 from Rs 14.19. Kumardhul and Marshalls were narrow markets around Rs 7.19 and Rs 6.19 respectively.

The Jute section continued to record scrippy business and the decision to unseal more looms had no effect on sentiment. This was mainly due to the operators' reluctance to enter into commitments in view of the growing disparity between raw jute and jute goods prices. Again, the announcement of the proposal to unseal a further percentage of the looms led to fears in certain quarters that the mills might be compelled to buy the raw material at the present high levels to meet increased production and consequently their profit margins would be affected to a great extent. Howrah were depressed further to Rs 22.37 from Rs 22.87; Ganges to Rs 11.94 from Rs 12.62; Belvedere to Rs 152 from Rs 158 and New Central to Rs 26.06 from Rs 26.25. National were almost maintained at Rs 30.81.

Coal shares were subjected to some profit-taking at the recent high levels on the feeling that the increase in the prices of coal and soft coke was not sufficient for the industry to meet the rising costs of the industry. Bengal were marked down to Rs 331 from Rs 342; Central to Rs 9.87 from Rs 10.12; South Karanpura to Rs 13.06 from Rs 13.37 and East Indian to Rs 30.19 from Rs 30.37. New Beerbhoom and Western Bengal were, however, well maintained at last levels. Burrakur, after touching a low of Rs 19

WORLD OF FINANCE

Steep Rise in Bank Deposits

THE busy season has not ended, to judge by the return of the Reserve Bank and of the State Bank for 15 April, though there had been indications in the earlier week of a much easier money market condition. The year-end disbursements of governments have had their immediate impact on the banking system, as can be seen from the statutory statement of Scheduled Banks for 8 April. Whether by virtue of special transactions, or as a result of a sudden return of a fair-sized import surplus, Balances Held Abroad have again declined by a not inconsiderable sum. These are the facts that highlight the latest banking figures.

According to the returns of the Reserve Bank for 15 April, Active Note Circulation, in rising by Rs 5.48 crores, has passed the Rs 1900 crore mark to be placed at Rs 1902.24 crores. On the other hand, Rupee Coin has returned from circulation in the fractional amount of Rs 2 lakhs. Currency has been expanded against Rupee Securities for Rs 5 crores by transfer from Investments in the Banking Department. Consequently, the Reserve Bank's cash in the till has fallen slightly by Rs 0.63 crores to Rs 11.78 crores.

In the Banking Department, there is a decline of roughly Rs 5 crores in Investments, and, on the face of it, there does not seem to have been any recourse to deficit financing. But the State Bank is known to have purchased securities for Rs 15 crores, and the Centre's balances have improved by Rs 12.75 crores to Rs 75.08 crores. The inference, therefore, is that created money for Rs 15 crores has been concealed by the fact of sale of securities to the State Bank, and that it is this which has replenished the balances of the Central Government. The Centre's balances have in this wise been buttressed, presumably because some part of drafts issued in connection with the fiscal year-end have yet to be presented for encashment, since Bills Payable, although they have declined by Rs 3.35 crores, are still at the high figure of Rs 39.65 crores. The pressure on State Governments continues to be considerable. The improvement in their Deposits by Rs 0.45 crores to Rs 6.01 crores is as nothing compared to the steep rise of Rs 10.08 crores in their ways and means borrowings from the Reserve Bank. The Reserve Bank's portfolio of Treasury Bills Purchased and Discounted has been marked up sharply by Rs 13.70 crores to Rs 67.24 crores, and State Governments may in this behalf have sought to replenish their balances.

Reserve Balances of member banks have risen by Rs 5.76 crores to Rs 92.35 crores; and, in the relevant week, owing to the purchase of gilt-edged, the State Bank's cash in hand and with Reserve Bank fell by Rs 3.34 crores. Therefore, in the week under review, Reserve Balances of other Scheduled Banks have obviously risen by something like Rs 9 crores. In this regard, it may be noted here that the increase in Reserve Balances of Scheduled Banks in the week ended 8 April does not correspond to the rise in Deposit resources in that week. So, conceivably, the latest

week's rise may relate to the additional deposits made by banks in respect of new accretions in the previous week, though further increase in Deposit resources of Scheduled Banks, in the week ended 15 April is not to be ruled out. Some small rise of Rs 2.98 crores has been registered in the Other Loans and Advances of the Reserve Bank. Finally, as already noted, Balances Held Abroad have declined further by Rs 3.74 crores to Rs 20.83 crores—a level which, unless improvement in the balance of payments position is in the offing, presages at a none too distant date some element of transfer from Foreign Securities in the Issue Department.

The return of the State Bank for 15 April suggests that the continuance of busy season pressure is responsible for both a decline in Deposits and a rise in Advances. At the same time, a rise of considerable dimensions in gilt-edged securities may relate either to replacement purchases (in respect of securities sold during the strike period) or to contra investments in respect of the last tranche of counterpart funds which will be lodged with the State Bank. But the intention to purchase gilt-edged had already been earlier indicated by the high level of Other Assets.

Deposits of the State Bank were run down by Rs 3.76 crores to Rs 633.45 crores. Simultaneously, busy season pressure for funds stands reflected in a rise of Rs 3.85 crores to Rs 217.85 crores in the total of Advances. The gilt-edged portfolio, added to by Rs 15 crores, is now placed at a shade under Rs 370 crores. Other Assets have been sharply liquidated, by roughly Rs 20 crores, to Rs 26.04 crores. While borrowings are more or less unchanged, cash in hand and with Reserve Bank has fallen by Rs 3.34 crores to Rs 28.25 crores, though money at call and short notice has improved by Rs 1.13 crores to Rs 2.47 crores. In the light of the knowledge that future accumulations of Public Law 480 counterpart funds are not likely to be kept with the State Bank, it may be that, for some time at least, the Deposits of the institution will prove stagnant.

The impact of the governmental year-end disbursements is considerably brought out in the return of Scheduled Banks for 8 April, wherein it is to be noted that gross Deposits have risen very sharply by Rs 26.53 crores to Rs 1,967.03 crores, and only Rs 6 crores or so of this was traceable to the State Bank. Governmental expenditures have also moderated the expansion in bank credit, the total of Advances rising only by Rs 3.59 crores to Rs 1,130.35 crores, though, with the State Bank in the relevant week reporting a fall of Rs 2.30 crores under this head, other Scheduled Banks are seen to have experienced a rise of nearly Rs 6 crores in the accommodation they extended. The accretion of such considerable resources has enabled banks to reduce borrowings from the Reserve Bank by as much as a shade under Rs 27 crores to Rs 41.31 crores. Cash balances have also been added to, in being higher by Rs 6.10 crores at Rs 178.94 crores. But, in this regard, it is to be borne in mind that the State Bank had shown a rise of around Rs 11 crores in that week. Hence, other Scheduled Banks somewhat drew down their cash. This is why it is likely that the rise in Reserve Balances of member banks, as shown in the latest returns of the Reserve Bank, may correspond to, in the sense of being linked up with, the increase in the Deposits of the banking system during the week ended 8 April, however, a further rise in Deposits in the week ended 15 April is not to be ruled out.

Punjab National Bank's Performance in 1959

DEPOSITS of the Punjab National Bank Ltd rose in 1959 from a level of Rs 129.20 crores to Rs 141.16 crores; while resources

were in this wise being augmented, their utilisation apparently was profitable only toward the tail-end of the year; this is an inference to be drawn from the fact that, though both Advances and Investments have risen by a level roughly equivalent to the rise in Deposits, the impact of such improvement in earning resources has not, in the profit and loss account, been sizable.

The total of Advances has been expanded from Rs 66.76 crores to Rs 72.51 crores. Gilt-edged investments have also been marked up, by Rs 2.25 crores, to Rs 60.82 crores. The estimated surplus of market value over book value of gilt-edged and trustee securities is of the order of Rs 1.21 crores; and this probably explains an item in the profit and loss account, to which we shall be coming presently. Cash balances, including money at call and short notice, have not changed appreciably, in rising by roughly Rs 32 lakhs to Rs 13.33 crores. The improved resources situation has enabled the bank to reduce borrowings from Rs 6.00 crores in the 1958 accounts to Rs 3.16 crores.

The profit and loss account shows that gross income has risen by a small margin from Rs 7.87 crores to Rs 7.98 crores. Interest and discount have contributed Rs 21 lakhs more at Rs 6.29 crores, while the income by commission, exchange and brokerage is seen to have risen by Rs 5.34 lakhs to Rs 1.08 crores. Credit is taken for Rs 20.43 lakhs as net profit on sale of investments, etc., this figure being somewhat lower than last year's Rs 23.89 lakhs. Expenditure has not been permitted to rise unduly; interest paid absorbs only Rs 4.76 lakhs more at Rs 3.37 crores—a remarkably small rise. On the other hand, the rise in salaries and allowances is a more pronounced one of Rs 17.28 lakhs to Rs 2.82 crores. In the result, after providing Rs 3.50 lakhs for Development Rebate Reserve, the balance of profit is substantially lower at Rs 84.20 lakhs against Rs 1.06 crores.

The transfer to Reserve is unchanged at Rs 17 lakhs, and the Reserve now stands at Rs 1.47 crores against the paid up capital of Rs 1.25 crores. The tax provision—presumably because of the higher rate of tax deducted at source from interest on government securities—is practically halved to Rs 17.50 lakhs from Rs 33.50 lakhs. Bonus to Staff receives Rs 5 lakhs less at Rs 25 lakhs. The amount absorbed by dividend is unchanged at Rs 25 lakhs, but the 20 per cent dividend declared for 1959 is subject to deduction of tax.

Canara Bank Announces Satisfactory Results

IN a year distinguished, if that is the word, by none too satisfactory banking results, Canara Bank's performance in 1959 must be adjudged extremely creditable. Expansion in resources and their remunerative utilisation have together enabled the bank to report a sizable increase in net earnings.

Deposits and other accounts rose from Rs 23.76 crores to Rs 28.93 crores, with the bulk of the rise occurring under the head of Fixed Deposits, which have been marked up by Rs 3.41 crores at Rs 16.01 crores. Accommodation extended to constituents has expanded from Rs 10.93 crores to Rs 15.88 crores. At the same time, the recognition of the value of a strong gilt-edged portfolio is evident in the increase of Rs 1.69 crores in holdings of Government securities. While cash in hand is

somewhat better at Rs 2.45 crores against Rs 2.13 crores, balances with other banks are seen to be substantially lower, in declining from Rs 1.02 crores to Rs 31.82 lakhs. Money at Call and Short Notice has also come down from Rs 96 lakhs to Rs 25 lakhs. However, the most interesting figure in the balance-sheet is a nil figure; this is what borrowings are placed at, and Canara Bank must surely be one of a handful, if that, of banks which were able to avoid recourse to assistance from the central banking institution for the year-end window-dressing.

The profit and loss account shows that gross income has improved by more than 25 per cent to Rs 1.56 crores from Rs 1.22 crores. The income from interest and discount has crossed the Rs 1 crore mark in rising by a little over Rs 28 lakhs to Rs 1.19 crores. Commission, exchange and brokerage have fetched Rs 3.74 lakhs more at Rs 28.16 lakhs. However, expenditure has also risen, though not by the same margin. Interest paid absorbs a sum that, at Rs 80.83 lakhs, is higher by Rs 20.20 lakhs; salaries and allowances account for Rs 6 lakhs odd more at Rs 37.38 lakhs. In the result, the balance of profit is seen to have moved up comfortably by Rs 4.30 lakhs to Rs 18.30 lakhs; a performance that undoubtedly deserves to be praised.

The transfer to reserve is maintained at Rs 5 lakhs, and this raises Reserve Fund and Other Reserves to Rs 50 lakhs, or equivalent to the paid up capital; and this is a feature which may be said to make of the 1959 accounts a landmark in the bank's history. Taxation takes up Rs 4.75 lakhs against Rs 3.91 lakhs. Bonus to staff gets Rs 2.40 lakhs, a rise of Rs 30,000 over the previous year. Shareholders, too, benefit from the bank's increased profits, since dividends (including Rs 70,000 on preference shares) absorb Rs 6.10 lakhs against Rs 3.07 lakhs.

Proposed Changes in New Taxes

A Gazette of India Extraordinary announced certain duty concessions in respect of some commodities liable to Central excise duties. These concessions come into force with effect from 20 April.

Films: The rate of excise duty per metre on exposed cinematograph feature films of a width of 30 mm. or higher will be 10 nP on the first 5 prints, 15 nP on the next 5 prints, 20 nP on the next 15 prints, 25 nP on the next 25 prints and 30 nP on the balance of prints of each picture. Reprints of old releases, that is prints cleared after 12 months immediately following the month of certification by the Central Board of Film Censors, will be assessable at 15 nP per metre if they are of a width, of 30mm. or higher. Proportionate reductions in respect of feature films below 30 mm in width and news reels and shorts have also been made. Educational films, children's films and films not exceeding 9.5 mm in width will be totally exempt from the excise duty.

Cars and Tractors: Agricultural tractors have been exempted from the whole of the excise duty. Motor cars of more than 16 h.p. but not more than 20 h.p. which were formerly assessable at Rs 3,000 per car will, in future, be assessed at Rs 1,000 per car.

Fabrics: The compounded rates of duty on staple fibre fabrics have been substantially reduced. For factories employing not more than

9 powerlooms the rates have been reduced from Rs 24 to Rs 18 for the first shift, from Rs 18 to Rs 16 for the second shift and from Rs 9 to Rs 8 for the third shift. For factories employing more than nine but not more than 24 powerlooms the rates have been reduced from Rs 40 to Rs 25 for the first shift, from Rs 28 to Rs 25 for the second shift and from Rs 18 to Rs 15 for the third shift. For factories employing more than 24 powerlooms suitable adjustments in the lower slabs have also been made. The reduced rates will not be applicable to those who manufacture both staple fibre fabrics and art silk fabrics, other than staple fibre fabrics.

Fents: In respect of cotton fents, the limit has been enhanced from 2 yards to 2½ yards.

Cycle parts: Producers whose output does not exceed 1500 cycle freewheels and/or 1000 cycle rims in any one of the immediately preceding twelve months have been exempted from 50 per cent of the existing excise duty.

Combustion engines: Producers of stationary type of internal combustion engines and electric motors whose output for each of these two commodities does not exceed 300 h.p. in any one of the immediately preceding twelve months will get a duty discount of 20 per cent of the existing excise duty on the first 100 h.p. and 10 per cent of the existing excise duty on the next 100 h.p. cleared in any calendar month.

Aluminium sheets: Aluminium sheets and circles etc manufactured by re-melting old aluminium scrap or scrap obtained from virgin metal etc on which appropriate excise duty has been once paid have been exempted from excise duty in excess of Rs 200 per metric tonne. Also aluminium ingots etc manufactured from such scrap have been exempted from the whole of the excise duty.

Pulp Boards: The ceiling limit for concessional slabs in respect of pulp boards, not otherwise specified, including grey board and mill board has been raised from 3000 tons to 5000 tons and a further slab from 1500 to 3000 tons at 7 nP per lb has been prescribed.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 19 April 1960. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.305 and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.770 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days, Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 25 April 1960. Successful tenderers should make payment on Friday, 29 April 1960. Other conditions are as usual.

During the week ended 15 April 1960 Government of India Treasury Bills for Rs 225,76,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 20 to 23 April 1960 at Rs 99.326 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 13 to 16 April 1960.

Trend in Savings

ESTIMATES relating to saving in India made by the Reserve Bank in its last monthly bulletin deal with the cash held by insurance companies, the LIC and co-operative institutions as well as joint-stock companies. What is described as the household sector does not seem to have an excess of free balances. And, in the case of banks, the Advances seem to exceed the Deposits made in respect of personal and professional accounts, due to the tradition of borrowing for domestic ceremonies and purchase of durable consumer goods. For the first time, an independent estimate of gold held by private agencies is also offered. It is assumed that every year additions to gold stocks take place in spite of a ban on bullion imports and the Indian output is supplemented by smuggled gold. In this connection, the survey states:

About two-thirds of the imports of Indian currency notes from abroad and particularly from the Persian Gulf area are believed to represent the smuggled imports of gold. It may be presumed that curbs on smuggling provided by restrictions on the export of Indian currency have altered the situation since 1958 and the exclusive purchase of Kolar gold by the Reserve Bank at a fixed price make further addition to gold stocks held privately improbable. The course of bullion prices over a year has merely reflected the pressure of conventional demand in the face of attenuated supplies.

The contribution of life insurance to the total volume of saving appears less considerable, for, loans taken by policy holders have to be deducted from the net addition made to the life funds from year to year, but the trend has been undecided and the steep fall in 1957-58 may require an explanation, apart from the increase in policy loans. However, the regular saving made by policyholders who insure their lives is an addition to investible funds and correspond to the additions made to the Provident Funds. In 1957-58, the net addition amounted to Rs 78.18 crores against Rs 29.5 crores in 1950-51, proving that change in the law had raised the yearly contribution from the private sector. How much of private saving goes into new issues may also be inferred from the analysis indicating that over Rs 50 crores a year is raised. Perhaps the volume of saving in this form has risen in recent years, to go by the success of new issues in 1959-60, and the private investor puts up most of the new money as compared with financial institutions.

The most substantial form of private saving is still to be found in the flow of funds into urban housing, and the net rental income is usually invested in new houses, though much financing of construction is undertaken by prospective tenants for big new premises. This type of investment has risen as high as Rs 200 crores per annum and may rise if conditions are favourable. The survey sustains the general impression that investment in small industries remains marginal, but a great change may have taken place since 1958 in view of special consideration shown to small enterprises. The flow of outside capital into agriculture is decidedly poor, and the funds for high farming do not seem to follow official prescription. The agriculturist has no spare cash, and the 4 per cent estimated to be saved does not afford a solid foundation for technical progress. This is the most important conclusion presented now by the analysis, and the conscious direction of new savings for improving agriculture must be the

“India is the largest market for illuminating Kerosine in the world. This product represents 30% of the country's requirements of petroleum, and demand continues to grow steadily. The very large demand for Kerosine cannot be met from the normal product yield of the four local refineries, and has meant that two-thirds of India's requirements of the product have still to be imported.”

Extract from a Burmah-Shell publication

main task of every rural credit agency. Though agriculture is not extractive, the replenishment of fertility requires regular doses of capital, and the whole problem of resources for agriculture must be viewed in a new light hereafter, if intensive cultivation is accepted as the major aim.

British Deposits Rates

By Paul Einzig

WHILE in the United States deposit rates are fixed under Federal Reserve regulations, in Britain in the absence of official regulations to that end, the banks themselves have for many years conformed to a gentlemen's agreement fixing deposit rates 2 per cent below the current Bank Rate. This arrangement prevents British banks as effectively as regulation prevents their American opposite numbers from competing for deposits.

The conclusion of the gentleman's agreement was a reaction from the cutthroat competition that existed before the War when the five biggest banks in an effort to attract deposits paid deposit rates on foreign deposits which were obviously unprofitable if the funds were reinvested in a liquid form. The competitive spirit that existed between them was inspired largely by the late Reginald McKenna, Chairman of the Midland Bank. Sharp competition was not confined to deposit rates. Until the crisis of 1931 the London clearing Banks, in an attempt to attract acceptance business reduced their commission charged on acceptance credits to 1 per cent for three months, which obviously hardly paid for the clerical work involved. The losses, suffered through defaults during the 'thirties must have wiped out with one stroke the profits made over a period of years.

No such competition exists in British banking today. This does not mean that the competitive spirit is absent, only that it is expressed by means other than outbidding each other for deposits or cutting down rates for credit charges. Competition nowadays assumes the form of providing additional services, or expanding over new fields of financial activity or in the foreign exchange market, of being content with a lower margin of profit.

Among the new services the granting of personal loans to private customers is an outstanding instance. These loans are usually entirely unsecured. They were initiated by one of the leading banks and the others had to follow the example to avoid losing customers. The outstanding example for new financial activities is the instalment credit financing. For a long time British banks were reluctant to follow the example of American banks in taking an active hand in this sphere. Once one of them departed from its traditional attitude of neutrality the others soon followed

its example and today all leading banks control subsidies engaged in instalment credit financing.

Competition in the form of cutting profit margins is most prevalent in foreign exchange market. To some extent this has been the inevitable result of the more intelligent interest taken by commercial firms in foreign exchange. The bigger firms usually have several bank accounts and ask for several quotations before deciding to give the order. But profit margins declined also in international interest arbitrage between banks.

On the other hand, the leading banks are impervious to the arguments put forward from many sides in favour of departing from fixed interest rates on deposits. The chairman of Barclays Bank Mr A. W. Tuke, addressing recently the Institute of Bankers, firmly rejected the suggestion that banks should offer special rates for long-term deposits. He said that the banks were often criticised for sticking to the published deposit rates. The critics maintained that it would be worth their while to offer a more competitive rate. Mr Tuke said that it was only since recently that this question has become a real one. Throughout the cheap money period right until recently there had been excessive liquidity with ample funds available for deposits and practically the only outlet for additional deposits would have been investments in Government securities. There would have been little sense, he said, in competing for deposits to invest in gilt-edged loans on which banks were liable to mark a loss when they wanted to sell them.

Moreover, Mr Tuke pointed out that in any case all money the banks received from customers went into one common pool. Whether the money was on current or deposit account made no difference. Even if one bank temporarily got ahead of the others by bidding up the deposit rates it would not increase the total amount of money held by the banking system. The eventual result would have been that the banks as a whole would have been paying higher deposit rates for the same aggregate amount of money.

Mr Tuke's argument is only valid for domestic deposits. An influx of foreign deposits attracted by higher deposit rates, provided that the resulting firmness of sterling, makes it necessary for the Exchange Equalisation Account to operate to prevent a rise above the limit of 2.82 dollars would increase the total volume of monetary resources of the British banking system as a whole, as well as the resources of individual banks offering higher deposit rates. Nevertheless the rule that deposit rates must not exceed the rate of 2 per cent below the Bank Rate is strictly maintained by the clearing banks and also by a number of other financial institutions.

Sophistication in Industrialisation

THERE is an element of irony in the comparative lack of public interest in the fortunes of the Second Plan just at the moment when its fruits are making their appearance. Public consciousness of its initial difficulties was more articulate than its approbation of their eventual overcoming. It was known from the beginning that the Second Plan involved a long period of gestation, and that its tangible benefits would begin to be felt only toward the end of the Plan period. One of the principal tasks of the Second Plan, was to deepen reach and widen range of the industrial base even at the cost of a certain amount of current privation. Over the years, this transformation of the base of the economy has been steadily taking place, and the figures for 1959, just released by the Director of Industrial Statistics, make heartening reading. It will be useful to draw public attention—obsessively rivetted at the moment on the shape of the Third Plan—to some of the implications of these figures.

The general index of industrial production for 1959 was 151.0 (Base 1951). This is an increase of 11.3 points over that for 1958. The rate of increase is the highest recorded so far—the increases for the Second Plan period being 10.2, 4.7 and 2.4 points in 1956, 1957 and 1958 respectively. (The index numbers for these years were: 132.6, 137.3 and 139.7 respectively). Individual industries have, in some cases, recorded spectacular performances both during the Second Plan period in general and in 1959 in particular. As we have repeatedly urged in these columns, the general index gives a rather distorted picture of the industrial performance because of the weight attaching to some of the older industries. Thus, the fortunes or misfortunes of the cotton textile industry (whose weight is 36.1 per cent of the general index) throw awry the total picture. Thus, in 1957 and 1958, the fall in production in this industry (index for cotton cloth for 1956, 1957 and 1958 were 115.2, 109.7 and 101.8 respectively) was undoubtedly responsible for the apparently poor showing in the rate of increase in the general index in those two years. By the same token, the comparatively satisfactory performance of this industry in 1959 had something to do with the better rate of growth revealed. The extent of such "distortion" for the better is difficult to determine precisely, but should undoubtedly be borne in mind, if an error in the opposite direction to the pessimism of 1958 is to be avoided.

But, even after making allowance for the "weight" of textiles, the industrial performance in 1959 has been quite impressive. It has been estimated that, the index of production, after excluding textiles, was 184.4 for 1959, which is 19.7 points or 12 per cent over the similar index for 1958. It is clear, therefore, that the tempo of development is steadily on the increase. In terms of value of output, the increase is equally startling. Excluding the textiles group, the total value of output is put at Rs 1,359.12 crores (at 1957 prices), which is about Rs 150 crores over the value of output in 1958. The increase over the first year of the Second Plan is about 30 per cent. Among

the industries that have done particularly well are industrial machinery, especially diesel engines, machine tools, automobiles, chemicals and finished steel, aluminium, fertilisers, cement, and paper and paper-boards.

The value of machinery output has increased from Rs 30 crores in the first year of the Second Plan to Rs 54 crores. In the case of electrical equipment, the increase between the first and fourth years of the Plan has been about 35 per cent. Automobiles, again, have done very well, the increase being from 32,000 in 1956 to 36,000 in 1959. The bicycle industry nearly reached the millionth mark from 660,000 in 1956. Light engineering industry has also shown a steady rate of development—a fact that has been brought home to the common man by the increasing popularity and easy availability of items like sewing machines and fans. New lines like air conditioners and scientific instruments and typewriters have been started, and are well on their way to stability. Among the miscellaneous section (production in which increased from Rs 488 crores in 1956 to Rs 594 crores in 1959), cement, glass, paper and paper-boards and refractories have shown substantial increase in production. Among basic industries, the most important increase is of course in steel. The new plants are getting into stride, and 1959 saw important land-marks in the histories of Bhilai, Rourkela and Durgapur. Non-ferrous metals have also recorded rises. Coal production, despite considerable difficulties, has gone up from 45 million tons in 1958 to 46.6 million tons in 1959.

These are doubtless impressive figures, and bear eloquent testimony to the gathering momentum of the take-off of India's industrial revolution. It is true, performance has not in all cases matched the expectations of the Second Plan. But two things need to be remembered. First, there are a few items in which performance has outstripped hopes, and significantly these are in comparatively new lines like pharmaceuticals and glass. Secondly, in many industries, the installed capacity is as yet not fully utilised; these may therefore be faulted only technically for not catching up with their tasks quantitatively. But, since the foundations for the future have been well and truly laid, such criticism will be carping.

What the index figures do not always adequately reveal is the qualitative changes that have come over the industrial scene in the last few years. If would be a worth while piece of research to collate, in a compendious form, information about new industrial endeavours that have come into being in the last ten years. Such an inquiry will give impressive evidence of the diversification of the economy that has been steadily going on. In 1959 alone, as many as 31 new items came on the industrial scene. These included items like drilling machines, spoke making machines, Vitamins and glass syringes, and coloured sheet glass. It is not merely the number but the comparative "sophistication" in industrialisation that the items imply that is interesting. The shrinking import range has proved a disguised blessing in that we have been thrown on our own

Indian Finance

Established 1928

23 April 1960

"The Wise Man in his attitude towards the World has neither Predictions nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

resources for items for which, formerly, we fatalistically depended on imports. The system of licensing as an instrument of conscious orientation of the economy has also been of assistance. In this connection, two lists recently drawn up by the Ministry of Commerce and Industry as guidance for licensing in the immediate future makes interesting reading. Licences for fresh capacity will be available for 49 items; requests for fresh capacity will not be entertained for 72 items. Of the 49 items in the first category, 22 are engineering; and, of the 72 in the second category, 32 are again engineering. The range of both the items in which fresh endeavour is to be encouraged (boilers, industrial machinery, small tools, surveying and scientific instruments, construction machinery, knitting and hosiery machinery, sheet glass, laboratory chemicals, laboratory glassware, high tension insulators, fan belts, etc.) and items in which the saturation point has apparently been reached (mostly light fabrications from steel, like wire meshes and nails, air conditioners, etc., and sundry items of chemicals) gives a revealing picture. In some chemicals like caustic soda and soda ash, internal production has increased sufficiently to meet internal demand. In the coming year, more items like potassium chloride and hydrogen peroxide can be taken off the import list.

These qualitative changes in the pattern of our industrial life can be pieced together from a number of sources. But, for a clearer appreciation of what is happening, it is necessary to devise more meaningful statistical measures than are available at the present. We have already referred to the necessity to make the necessary correctives for evaluating the general index of production. The index as at present devised gives only the adjustments for seasonal variations and the break-up. Sometimes, we have additional data about "weights." But, again, nothing like a comprehensive picture of the entire scene is always available. The Reserve Bank Bulletins, and annual reports published by it, are, for instance, arbitrary in their choice of items for inclusion in their tables. Fans and Sewing machines are omitted. Automobiles are apparently "in" and therefore in. Bicycles are out. It is true, minor endeavours that from an infinitesimal part of the whole economic activity of the nation, especially when reckoned in terms of percentage increases, can be misleading. But this increasing importance cannot be ignored. It would be worth the while of the research wing of the Reserve Bank to try to devise a statistical measure that will adequately evaluate the complex changes that are taking place in the industrial scene.

It may also be suggested, at this stage, that it would be desirable to produce a revised index of industrial production, which can suitably take into account the more important at least of the new industries that have come into being in the last decade or so. Such an index may perhaps utilise the occasion offered for reducing the weightage given to the traditional industries, the scope for expansion in the foreseeable future, at any rate, which, for is limited.

Wages and Prices

MR GULZARILAL NANDA'S speech in the Lok Sabha on 11 April in reply to the debate on the demands for grants for his Ministry deserves careful analysis. One important point made by him was that wages were not responsible in any measure for an increase in prices. It is difficult to agree with this view. Wage increase, of course, is not the only factor causing a rise in prices. Other reasons, like inadequate production, excessive money supply and speculation, may also be responsible. But to imply that any amount of upward revision of wages will not have an unfavourable impact on the price level is incorrect. Presently, the cotton textile industry has been burdened with an additional wage bill amounting to Rs 14 crores a year; and the industry has expressed concern that this is likely to make the prices of Indian textiles uncompetitive in foreign markets. Moreover, the Wage Board, in recommending this increase, does not appear to have taken regional factors into account. The Bengal Millowners Association, for instance, has pointed out that mills in West Bengal are quite unable to bear the extra burden and that several units may even be faced with closure. There is little doubt that a wage rise of as much as Rs 14 crores in a single year will inflate the cost of production and increase the price of cloth to the consumer. Mr Nanda pointed out that workers always lost when prices went up. And yet, this factor appears to be seldom taken into consideration when wage boards recommend increases without relevance to productivity or the capacity to pay.

Mr Nanda also observed that workers were not benefiting at the expense of the community. But the statistics compiled by the All India Organisation of Industrial Employers clearly show that the industrial workers are in receipt of wages which are substantially higher than the income earned by the vast majority of the population. For instance, in 1957, the average yearly earnings of an industrial worker amounted to Rs 1,234, whereas the per capita income was Rs 289 a year. In other words, the average yearly earning of a worker in the organised sector was over 400 per cent of the per capita income of the country. As against this, the ratio in industrially advanced countries like the USA, the UK, France and Canada are 190, 150, 116 and 230 respectively. The following table compares the national income of India with that of three other countries as well as the approximate monthly earnings in manufacture. The figures relate to 1956-57:

Country	Income Per capita per annum	Monthly earnings in manufacture
India .. Rs	290.50	Rs 100.00
UK .. "	4,500.00	" 600.00
USA .. "	10,000.00	" 1,530.00
W. Germany ..	2,250.00	" 325.00

It should also be remembered that, in India, apart from money wages, workers also get substantial benefits in the form of subsidised housing, free medical treatment of workers and their families, and subsidised food at canteens run by the management.

In the light of these facts, it cannot be claimed that workers in India have not been given a fair deal. It is, of course, necessary to improve their conditions still further and provide them with a steadily increasing standard of living. But this will be possible only with an improvement in productivity and in the economic conditions of the country. We should also remember that, apart from factory labour, there are also workers of other categories who, too, have a right to obtain better living condi-

tions. The following table shows the number of workers in various categories:

Factories ..	2,914,312
Plantations ..	1,212,351
Mines & Quarries ..	877,561
Railways ..	923,154
Contract Labour employed in railways ..	700,000
Municipal Workers ..	90,465
Public Works ..	2,064,876
Road Transport ..	388,803
Port Workers ..	49,082
Water Transport ..	158,906
Agricultural labour ..	31,000,000
Khadi ..	200,000
Village Industries ..	2,500,000

Total .. 43,079,510

These data are from the last census and, in the subsequent period, the number of workers must have increased considerably. Therefore, while efforts are made to improve the lot of labour, we have to take into account not merely the factory workers but also workers of other categories; and, moreover, the interests of the rest of the population of the country have also to be taken into consideration.

Employment Exchanges, or . . . ?

WHAT precisely is the role of employment exchanges in India? Is it to help the unemployed to secure jobs or is it the intention to convert these exchanges gradually into some kind of Public Service Commission? Recent official thinking would seem to indicate that employment exchanges would no longer confine themselves to their original functions, but would be used to introduce stricter control and greater regimentation over the private sector.

When the Employment Exchanges (Compulsory Notification of Vacancies) Bill was introduced in Parliament last year, Government gave an assurance to the effect that employers would not be compelled to accept the candidates recommended by the employment exchanges. Nevertheless, fears were entertained in some quarters that the Bill was only the thin end of the wedge and that, sooner or later, directly or indirectly, pressure would be brought on employers so as to make it extremely difficult for them to refuse to accept the nominees of the employment exchanges. The draft rules under this Bill, which have now been circulated for eliciting public opinion, would seem to confirm this fear. This is, for instance, what the All India Organisation of Industrial Employers says: "Rule 4 prescribing the procedure for the notification of vacancies and particulars to be submitted gives the impression that employers will be compelled to recruit through employment exchanges only. This view is strengthened when in Form 1 we find a column requiring employers to give reasons for not recruiting through employment exchanges."

If this impression is correct, and if Government are really going to enforce compulsion in the matter of recruitment through employment exchanges, we shall be confronted with a very serious situation. Apart from the fact that employment exchanges are wholly inadequate and ill-equipped to judge the merits of candidates for particular posts, the proposal constitutes a violation of the rights of the employer to make appointments in accordance with the requirements of various posts. Further, it will give rise to nepotism and corruption of a far worse kind than is now prevailing in the country, and it will also lead to regi-

mentation of the economy where practically every citizen will be a Government servant!

We have to consider in this context the agitation now going on in certain States for giving preference in the matter of employment to local citizens. It is one thing for a State Government to lay down that no employer shall deliberately discriminate against the citizens of that State. But it is a different matter when the State attempts by pressure, persuasion or other methods to shut out from employment citizens from other States merely because they are not "children of the soil". The unity of India has indeed no meaning if people cannot move about freely from one State to another in search of jobs. So long as persons have the requisite qualifications for a particular job, it is unfair to shut them out solely on ground of language or on the ground of their not being "local" citizens. And when a State like West Bengal, which is one of the seriously industrialised regions of India, confines only to "local people" in the matter of private employment, it is time that the Central Government woke up and examined the full implications of this move. The Government of West Bengal are reported to have written to various chambers of commerce to advise their members to recruit their candidates only through employment exchanges. In other words, Government want to utilise the employment exchanges for giving jobs only to one section of the population.

India has already paid dearly for encouraging communalism in the past; but, today, we are faced with a more dangerous enemy, namely, provincialism. The linguistic division of States and the introduction of the mother language as the medium of instruction in higher classes are already complicating the problem of unemployment; and the new move to enforce recruitment through employment exchanges will make matters much worse. Whoever else benefits from this proposal, it will certainly not be the unemployed; for, by compelling them to apply only through employment exchanges, it will greatly restrict the opportunities which they now have to apply wherever they like.

The Second Five Year Plan has not succeeded in creating an adequate number of jobs. An official report says as follows:—

"As regards the prospects for the Third Plan, as compared with the backlog of 5.3 million unemployed at the end of the First Plan, there will be a backlog of 7.5 to 8 million to contend with at the end of the Second Plan. The number of new entrants to the labour force between 1961-66 is estimated at about 14.5 million. It is, therefore, evident that to make sizable impact on the unemployment problem, the main aim of the Government should be to try to absorb at least an equivalent of the new entrants to the labour force during the Third Plan. Any increase in the backlog of the unemployment from Plan to Plan is undoubtedly a matter for anxious consideration."

In the light of these facts, it is a great pity that Government are contemplating measures which, far from expanding opportunities for employment, will have the effect of restricting them. Entrepreneurs will naturally hesitate to set up new industries or expand the existing ones if their freedom to employ people is to be severely restricted. It is worth recalling that one of the charges levelled against the Government of Kerala was that they sought to deprive private schools of their right to recruit teachers of their choice. The Communist Government wanted that all appointments to public schools should be made only through Public Service Commissions—a move which creat-

23 April 1960

ed a storm of opposition and ultimately led to its downfall. It is to be hoped that the Government of India will not resort to coercive measures to expand employment. The existing employment exchanges should be strengthened and their usefulness to the unemployed should be enhanced. But there should be no attempt to use them as instruments to secure greater control over the private sector.

Application of Standing Orders

By M. SUR

THERE is a curious difference of opinion about the application of Standing Orders in industry. In a case last year concerning Guest Keen Williams (Private) Ltd. before the Supreme Court,* the employees argued that they would not be bound by a standing order introducing a retirement age when there was no such provision at the time of their engagement. In other words they claimed that the rule about retirement age could not be made retrospective to employees already in service. This argument was accepted by the Supreme Court, although no objection had been raised by the trade union at the time when the standing orders were certified. Commenting on this case in our issue of 16th January, 1960, we pointed out that the effect of this decision would be to have two different retirement ages operating in the same company, one for those engaged before the date of certification of the standing orders, and one for those engaged after that date—a somewhat anomalous situation.

Now the identical argument used by the Guest Keen Williams employees has been used by the employer to refute the employees' case in an appeal before the High Court, Madras by the 'Hindu',** but in this instance the argument was not accepted by the High Court. The employees of the 'Hindu' wanted to change the standing order regarding retirement and their amendment had been agreed by the Certifying Officer. The company argued that the amendment should not have retrospective effect, that is, it should not be applied to those already in service at the time of the amendment, but only to those subsequently appointed.

The High Court of Madras pointed out with some reason that if changes in standing orders could not be made to apply to existing employees, then, for example, if the order relating to the right authority for granting casual leave were changed, the existing employees might claim that they should still apply to the formerly designated authority and that only new employees should apply to the authority under the amended order. Similarly if the order regarding the right of entry were altered, old employees might claim that they could still enter by the old gate even though it had been closed. The results would obviously be chaotic.

It is inevitable that from time to time rules have to be changed or new rules introduced. New rules in fact are constantly being introduced by industrial court decisions. Yet the Supreme Court held that it would not be reasonable or fair to apply a retirement age rule to those who had entered service when there was no such limitation on the length of service. It is true that the Supreme Court were to some extent influenced by the fact that the Guest Keen Williams standing orders were certified before the amendment to the Industrial Employment (Standing Orders) Act, which gave the certifying officer power to consider the reasonableness or otherwise of the proposed standing orders, but even before

the amendment copies of proposed standing orders had to be submitted to the trade unions concerned, and the Guest Keen Williams union had received a copy of the draft and had raised no objection. It could hardly be said, therefore, that the standing orders had been imposed without giving the union an opportunity to comment on them. Moreover retirement at 55 years of age was a common convention. Many other companies, whose standing orders were certified before 1956, must be in a similar position to Guest Keen Williams.

If there is any doubt about the retrospective effect of standing orders, or amendments to standing orders, in the sense of applying them to employees already in service, then the legislature should be asked to make its intention clear by an amendment to the Industrial Employment (Standing Orders) Act. Section 10 of that Act says that applications for modification of standing orders should be treated in the same manner as original applications for certification. It also allows for applications for modification, whether from the employer or the employees, to be raised after six months of the last certification. It seems, therefore, that the intention was to make modification fairly simple and so meet the changing needs of industrial organisations. It should not be possible to have conflicting rulings on the application of modified standing orders to employees already in service.

Ploughing Back—into the Land

THE package plan tried out in Tanjore from 13 April is more than a device to raise farm output. Its object is to apply knowledge to the soil, increase employment on the land and provide a surplus for investing in the land. The land ceiling proposal may enforce intensive cultivation, and the experts' advice regarding better seed, more manure and pest control cannot be disregarded. The Aduthurai research station has already contributed much to better farming in Tanjore, and the higher average yield is not due merely to the success of those who have grown 5,000 to 6,000 lbs. of paddy per acre. The larger demand for fertilisers may demand both the provision of depots and the control of sharp practices in the trade. The help of the Ford Foundation was ensured by the report presented in April last to the Union Food Ministry about the means to raise output by 20 per cent or more, and the start made in Madras appears more important than getting more US grain through loans.

The deficit districts in Madras are now hampered by the rise in paddy prices in Andhra and the transport difficulties. That only makes for greater dependence on the surplus of Tanjore rice and the Madras Government hope for success, not only through multipurpose co-operatives like the few functioning in Tanjore. The local production of fertiliser has to be raised rapidly, but India has no solid mining industry like Australia, where fertiliser production is the offshoot of the big mining companies. Incidentally, Australia produces far more fertiliser for its small population than India, because even pastures receive a dressing. The rise in iron and steel output has led to a larger supply of ammonium sulphate so that rice is now well established in the irrigated area of Australia. The Government fertiliser factories also help to meet seasonal demand and super-phosphate is both abundant and cheap in Australia. The current demand for fertiliser may be met only

by the success of the Neyveli Scheme, where the mining of lignite must be preceded by the mechanical removal of the overburden. The biggest saving on manure may come from the rapid displacement of cowdung by briquettes as a domestic fuel and the effective balancing of inorganic manure by organic manure. There is, however, little doubt that intensive farming will follow the protection of tenants and the flow of rural savings for improvement of agriculture can be predicted as a consequence of the land ceilings. Perhaps, successful experiments on temple lands by new co-operatives may have a local value denied to formal official precept and the package plan commended by the USA, perhaps because of Japan's record, is regarded as the beginning of a new era of consolidation in peasant farming, directed no longer toward mere subsistence but the achievement of a surplus income that will be put immediately into the land. And the high price of bullion, producing a distaste for jewellery, may even lead to the effective use of current income for adding to future income, to give a new, literal meaning to the phrase about ploughing back of profits.

Britain's Loss was Gain for Sterling Area

By W. T. C. KING

THIS time, my monthly letter has to be written just before the introduction of Britain's annual Budget, though it will not be read until afterwards. This awkward timing has, however, one real advantage, at least for overseas readers. The past month has been an eventful one in London, not least for its output of important statistics on trends in the sterling area, in Britain's balance of payments, and in the domestic economy; and it would be impossible to do justice to these new data if this short letter had to explain and discuss the Budget as well.

One of the most significant facts that emerges from the new external statistics is that the recent deterioration in Britain's current balance of payments has been the counterpart of the massive improvement that has taken place in the current payments of the rest of the sterling areas.

The new quarterly series of estimates showed, as expected, that Britain's balance deteriorated further in the fourth quarter of 1959. Instead of the £37,000,000 surplus that was earned on Britain's current payments as a whole in the fourth quarter of 1958, an exceptionally favourable year, there was a deficit of £18,000,000, following a surplus of £48,000,000 in the third quarter. This brought the surplus for the full year 1959 down to £145,000,000, compared with £349,000,000 in 1958. Four-fifth of this decline was attributable to visible payments, on which, in 1958, Britain had achieved a surplus for the first time for many years. Last year that surplus ran off, notably because of the sharp rise in Britain's total imports—from £3,330,000,000 to £3,605,000,000—that accompanied the rapid expansion of production and an increase in stock-building.

Slight Improvement:

In spite of this decline in the overall surplus, Britain further improved, though only slightly, its position vis-a-vis non-sterling areas. Its deficit on current payments outside the sterling area was reduced by £4,000,000 from the low figure of £78,000,000 reached in 1958; that deficit had been £133,000,000 in 1957 and £154,000,000 in 1956. Hence the aggregate deficit of the overseas countries of the sterling

area on their current payments with the United Kingdom declined dramatically, from £427,000,000 to £219,000,000. Of this improvement, roughly £100,000,000 was attributable to an expansion in Britain's purchases from them and £70,000,000 to a decline in their purchases from Britain.

At the same time, the rest of the sterling area is estimated (in the detailed half-yearly White Paper on the balance of payments) to have reduced its deficit on current payments to non-sterling areas even more strikingly—from £445,000,000 to £179,000,000. All these estimates exclude the proceeds of net sales of gold for sterling in London: these sales produced £210,000,000 in 1959, compared with £231,000,000 in 1958 and £226,000,000 in 1957, thus swinging the balance on non-sterling current transactions plus gold into credit last year, in contrast to the big deficits of previous years.

At the same time, the rest of the sterling area countries' net intake of capital from non-sterling areas—after allowing for repayments and subscriptions in gold or dollars to the international institutions—was again very large: it is estimated at £306,000,000, compared with the peak figure of £392,000,000 reached in 1958.

In consequence of this marked strengthening of its position, the rest of the sterling area has replenished its sterling balances. From the relatively low level of £2,519,000,000 to which they had fallen by end-1958, these balances rose by no less than £184,000,000 during 1959, to £2,703,000,000, the highest end-year figure since 1956.

Pressure Reversed:

A new analysis shows that £2,165,000,000 of this sterling represented the holdings of central banks and other official bodies—£1,479,000,000 for the independent territories and £686,000,000 (including £281,000,000 of currency funds) for the Colonies. The sterling balances of non-sterling countries declined by £39,000,000 to £795,000,000 (comprising £325,000,000 of official and £470,000,000 of private funds), but this fall was much more than accounted for by releases from official German balances in London earmarked for debt repayment and arms purchases.

The fact that the weakening of Britain's current surplus is shown to have been confined to transactions within the sterling area seems to bear out the supposition that the pressure on sterling in the exchange markets towards the end of last year and in the early weeks of this year was indeed attributable, not to the current account, but to the pull of high money rates in other centres on mobile international funds.

At all events, this pressure proves to have reversed from the moment of the increase in Bank rate to 5 per cent. towards the end of January—although, as I pointed out at the time, that move was inspired by the signs of strain arising in the domestic economy rather than by the outward trickle of gold.

Sterling has held firm since then, and in March the gold reserves have shown a rise of £21,000,000, after providing for the monthly repayment of £5,000,000 made to the International Monetary Fund, carrying the total of gold and convertible currencies to £993,000,000; in February there had been a rise of £13,000,000, but in January a loss of £18,000,000.

In the White Paper mentioned above the authorities have underlined the availability of other reserves that could rapidly provide foreign exchange: first, the United Kingdom's quota in the International Monetary Fund, which governs drawing rights, was last year increased from 1,300,000,000 dollars to 1,950,000,000 dollars; secondly, the United Kingdom Gov-

ernment owns dollar securities the market value of which, disclosed during the Suez crisis, is stated still to be between 750,000,000 and 1,000,000,000 dollars.

Double Strain:

In the London market, apart from the pre-Budget influences and the repercussions of political developments in the Union of South Africa, one of the main focal points has been upon the aftermath of the important move made in the gilt-edged market towards the end of February, when the Government broker sharply dropped his dealing prices in the face of heavy selling of Government stock by big banks needing to buttress their liquidity ratios. These have been facing the double strait of tax-gathering pressure upon the volume of liquid assets and a steep increase in advances.

The mid-March make-up statements from the clearing banks showed the selling pressure to have been even greater than the market had generally assumed. Investment portfolios declined during the four weeks by £117,000,000, following a drop of £80,000,000 in the preceding period.

Since only a small part of the decline was understood to have resulted from bond maturities, and since most of the indicated sales had apparently taken place before or at the time of the sharp adjustment in the market prices, the justification for that move was very apparent.

The incident has made it clear to the banks and market that, although the authorities will evidently continue their "smoothing" functions in gilt-edged stocks, and thus may be prepared to absorb offerings that are clearly beyond the capacity of the market in the short run, they will not do so without ensuring that prices duly reflect the pressure.

This demonstration that sales of gilt-edged may be expensive for the banks has provided them with an added reason for vigilance towards their advances. It is questionable whether that influence can yet be discerned in published figures, but the mid-March statement did show a notable slackening of the rate of growth in total outstanding advances to the private sector.

Pre-Budget Surprise

Advances made by clearing banks to borrowers other than the state boards rose by an average of £16,000,000 a week, compared with an average of £24,000,000 in the previous period and one of £10,000,000 before that (the nine weeks to January 20, when the seasonal demands had only just begun). In the corresponding make-up period last year, the rise had been the biggest ever recorded—it averaged £27,000,000 a week, compared with £22,500,000 in the preceding period.

Nasser to Mediate?

SOME will remember that differences between Afghanistan and Pakistan were settled by Colonel Anwar Sasdat and the Flag Incident in Karachi was closed by Cairo's mediation. Hence, Colonel Nasser's offer to mediate in the Kashmir dispute cannot be dismissed as useless, especially when FM Ayub Khan is prepared to accept mediation. This will entail withdrawal of the question from the UNO and a fresh inquiry into events will have to be conducted. The Egyptian move may be partly due to the affinity of the Arab countries with Pakistan, but it may also be attributed to a feeling that India can settle the Canal waters question only by a partition of Kashmir on lines indicated tentatively by Sir Owen Dixon.

Indian Finance

The Kashmir Government, of course, will put forward their own view of relations with India since the accession of the State to the Union, but there is now a new problem due to Chinese incursion in Ladakh and the Indian Government cannot ignore the chances of a settlement arranged by a friendly country to the advantage of Pakistan as well as India.

The Karachi conference may well be traced to the belief that Pakistan would be ready to leave the Cento and Seato in return for an assurance that Kashmir is not wholly lost to it, and it would be able to make the Cease-Fire line a permanent boundary. The plea of a Kashmiri MP for the withdrawal of the Kashmir cases from the UN may not be due to Colonel Nasser's offer. While Delhi is reserved, because of current preoccupation which China's territorial claims, it is certain that Pakistan will try to get fresh backing for Egyptian mediation on the score that a friendly country is now ready to help India to settle the dispute. The outcome of the offer depends largely on India's willingness to talk with Ayub Khan in London, and it is not unlikely that Britain may drop a hint about the need for an early accord, now that Nepal is a buffer State eager for independence and maintenance of an understanding with Peking. The Kashmir problem is now linked with the rivers that flow into the Indus and the World Bank, too, may usefully drop a hint in view of the aid promised already to Pakistan for its new canals. The chances of an understanding must not be spoilt by considerations of prestige, because a friendly country is able to appreciate how good relations are hampered. And it is possible that Pakistan may abate its claims for incometax arrears if it is made clear that India has no interest in the Pakistan problem, especially after Zafrulla Khan's judgement on the Nagar Havell issue.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

"9 out of 10 Brooke Bond packets cost LESS THAN 50 nP!"

Really, Bhai Sahib, I had no idea! And do Brooke Bond sell a large number of packets?

You would be surprised! Over 35 million packets of Brooke Bond Tea are sold every week and as I just told you, 95% of these packets cost only 50 nP or less. Remember, too, that Brooke Bond's packet teas are sold from over 5 lakh shops in all parts of the country... millions buy them.

But tell me, Bhai Sahib, what makes Brooke Bond's packet teas so popular?

For one thing, convenience. Brooke Bond's constant endeavour is to provide packet tea for the masses. That is why

they offer such a wide range of packets, some of which cost as little as 3 nP. Then there's the question of confidence. Every time he buys a packet of Brooke Bond Tea, the customer—no matter how modest his means—knows that he will get the quality and the quantity he rightfully expects.

You know, this has been a real eye-opener... I always thought that packet tea is bought only by city folk and well-to-do people.

Don't you believe it! Millions of villagers... the humbler people in towns and cities... are today buying Brooke Bond's packet teas because they know they are getting their money's worth and because they are sure that the tea is fresh and pure.

Brooke Bond India Private Limited

NATIONAL NOTES

12,000,000 Tons

The radical difference between buffer stocks maintained to hold up prices for producers by withdrawing stocks from sale and a buffer stock built up by consumers toward off scarcity may not be readily apparent to those who think of Mr Patil's US mission as one of getting grain on loan. The arrangement with the USA may help the Commodity Credit Corporation to get a larger share of the world trade in wheat to the disadvantage of either Australia or Canada. But the plan to buy 12 million tons of grains in four years may help the US Government to tell the farming community that exports on credit are better always than stocks accumulated for domestic price-supports. The moral effect of a deal to ensure large imports may be far greater than supposed, for, local shortages cannot be exploited by the private trade which is not going to be displaced by the State. The problem of storage may not be acute but the adverse balance in trade with the USA will undoubtedly remain. This may compel India to look for a larger market for mica, shellac and manganese, and the STC may be forced to do some more export promotion for its own sake.

The PL 480 loans will relieve the USA of giving extra aid when nine nations can be induced to

provide credits for India's economic plans. But the USA may incidentally create a bigger market for hessian at home and the proposed rice contract with Burma will also help to raise the demand for jute manufactures. Dealings on a Government-to-Government basis might not lead to increased employment for Indian shipping but a "sharing cargo" clause might be put in to pull Indian shipping out of its new depression.

The earlier interest of Mr Patil in films has been replaced by an eagerness for American grain till the time when Indian food output goes up by 40 per cent in five years. Whether the new PL 480 loans will not bring inflation in their wake may be debated by some, but the new money may be sterilised and dollar imports may even be allowed liberally after 1965. The best feature of any long-term arrangement will be the price fixed. That may have a bearing on Indian prices which for many years, have been out of line with world prices as in the case of cotton and sugar. Large imports may hold Indian prices down and the current study of stabilisation measures will perhaps embrace the consequences of guaranteed food imports for both stocks and prices in India.

Housing Target

The indication given by the Union Minister for Works, Housing & Supply, regarding investment on Housing in the Third Plan is remarkable for its optimism, especially when set against the record of the Second Five Year Plan. This is not to suggest that investment of the order of Rs 1,500 crores mentioned by him will not be required to provide adequate living accommodation to our growing population in rural and urban areas. On the basis that the programme of housing under the Second Plan would be implemented in full, it was estimated by the Planning Commission that the shortage of houses in urban areas in 1961 might be about 5.3 million, about twice what it was in 1951. The question is about the availability of resources and the effective application of the resources that are available so as to maximise the benefit.

It may be mentioned in this context that the provisional allocation of about Rs 120 crores for housing schemes under the auspices of the Ministry was later reduced to Rs 84 crores. Out of this, Rs 56 crores would have been spent by the end of the financial year ending March, 1960 and the balance would be covered by the provision made in the last year of the Plan. And, under the different schemes, except in respect of Low Income Group Housing and Subsidised Industrial Housing by State Governments, not much progress has been made so far. The Ministry's annual report mentions

that not much headway has been made under the Plantation Labour Housing Scheme, while the Village Housing Projects Scheme got off to a rather late start. The Deputy Minister for Works, Housing and Supply, while speaking on the debate on demands for grants for his Ministry, said that the performance of private employers in building houses for their employees had not been satisfactory.

The Second Plan envisaged that one million housing units would be put up by private construction. But the inability of private employers to avail of the facilities provided under the Subsidised Industrial Housing Scheme suggests that the number of houses actually coming up during the Second Plan may be much smaller. In view of the improvement in the availability of steel and cement, the tempo of house construction in the Third Plan may proceed at a faster pace than in the Second. But if the minimum target aimed at is to be reached, it will be necessary to remove the difficulties which deter investors other than Government contractors from putting their money in houses.

Atomic Energy

According to the 1959-60 annual report of the Department of Atomic Energy released last week, India's first atomic power station will be located between Bombay and Ahmedabad. The preliminary work on the station has recorded considerable progress, and arrangements for the supply of plant will be finalised early next year. The original decision of the Department was to install one reactor of 250,000 kw, but, in view of the tremendous operational advantages in generating this capacity with a couple of reactors, the authorities have decided to construct two reactors instead, each possessing a capacity of 150,000 kw.

In order to ensure adequate raw materials for the power station necessary steps have already been taken to open a new uranium mine in Bihar. A uranium processing mill for manufacturing uranium concentrate from the ore is being designed at Trombay and, on completion, will be located near the mine. The need for amending the Atomic Energy Act in order to encourage greater utilisation of radio-isotopes in agriculture, medicine and industry, without endangering the health of the people, was also emphasised by the Department.

The advantages of generating atomic power in the country and utilising it for useful purposes need hardly be emphasised, for, the industrialisation of the country and the raising of the general standard of living of the people to a level comparable to that of the industrially advanced countries of the world is possible only if there is large-scale utilisation of nuclear energy.

UP's Third Plan: only Rs 600 Crores

It may be recalled that the previous note on this subject expressed the doubt that the new item giving the proposed Third Plan outlay for UP as Rs 1,600 crores might have been based on a mistake somewhere. Nevertheless, it was noted that there was a case for an even bigger Plan, having regard to the considerable leeway to be made up both in agriculture and industry. The fact that the State's population is about one-fifth of that of the whole of India also argues strongly for a leap forward in economic development in UP.

From the authoritative indications now available, it would appear that UP's Third Plan may not be as big as represented by an outlay of Rs 1,800 crores. It is to be both practical and within the confines of the principle enunciated by the Planning Commission. This august body seems to have laid down that the States' Third Plan outlay should be about twice their Second Plan. Besides, there is the NDC's overall allocation of Rs 3,650 crores for all the States put together. These guiding factors explain the latest figure of Rs 600 crores. This is not, however, to say that the big pruning has been accomplished. According to Dr Sampurnanand, Chief Minister, the Plan Working Groups estimate total Rs 952.83 crores. It is going to be quite a task to bring the figure down to the realistic level of Rs 600 crores. Even so, it does not appear to be by any means certain that this comparatively smaller figure will gain ready acceptance.

STATES NOTES

Employers on Strike

A strike different in purpose and nature is that undertaken by the motor transport operators in Bombay. Not the workers, but the employers have stopped work owing to the Government's non-compliance with demands for tax relief and relaxation of rules. The State Government's appeal to operators has fallen flat, because the expected reduction in the duty on tyres and diesel oil has not followed the notice and implementation of the strike. That operators in all States sympathise with the Bombay lorry-owners is obvious, and inter-State transport has been suspended to prove that all operators are convinced of the essential justice of their demands. The lay-off of vehicles, rather than employees, in this strike may work great hardship to trade and industry, but private carriers are not touched by the strike and the alternative forms of transport remain available.

The partial nationalisation of road transport may not be the proximate cause of the dispute which is concerned really with the protection of earnings for the haulage industry. The continuance of the strike is necessarily a sign that all sections are agreed on the need to revise the excise duties imposed by the Centre, and it is clear that the Chief Minister of Bombay can do nothing to help a settlement. The failure of the move to end the strike is an indication that the road transport industry claims relief as of right and is also prepared to suffer losses in the interval. The strike proves that capital, though associated with lock-outs, is capable of defending itself, and the example will not be lost on industries worried by wage awards at present, if the essential adjustments in relation to capacity to pay are not made for instance, in the cotton mill industry in Madras and West Bengal. The unusual strike is taking place in a slack season, but inconvenience to the public and to producers of perishables must be substantial. The use of Army vehicles in Bombay in the emergency may be justified, but it will naturally raise issues as to the validity of the civil power calling in outside assistance for its own use.

Naga News

The Prime Minister, during his latest visit to Assam has sought the opinion of the Naga leaders as well as the State Governor and the adviser on tribal affairs. The out-

come in relation to the Nagas claim for autonomy in a separate region, will be awaited eagerly, though it is plain that India's future relations with China have a bearing on frontier policy. The Kohima Convention three years ago formulated demands and the end of the rebellion justified the belief that a solution was in sight owing to the split among the tribes. But a final settlement has been delayed. The setting up of a new Army Command makes the North East Frontier region suited to the creation of a non-Regulation province, but it is perhaps necessary to deal at the same time with Manipur and Tripura. Local opinion cannot be ignored, and the Assam ministry will have to be consulted before decisions on the reorganisation of Assam are reached at Delhi. The end of border trouble with East Pakistan might help the Centre to instruct the State Government. Friction between the tribal people and the Plains people may not be a permanent problem, but the Nagas' political aspirations will remain. Indirect rule and the opening up of the hills for civilisation are not treated as long-range remedies, though the Naga convention must accept the essential rule that a border region cannot be released from the control of the Centre at this time and the autonomy given to tribal regions in Burma cannot be copied at present. The financial implications may be more serious than supposed; if an autonomous area is created, it will require a subvention for long and must in consequence follow Central directions for long. The ethnic divisions among the Nagas may call for special councils not only to prevent tribal feuds but to prevent the entry of outsiders. However, the Nagas cannot be kept in a reservation like the Red Indians in Canada or the USA, and the administration of the Excluded Areas must be attuned to the new requirements of defence, in case there are change in the NEFA territory after the talks with the Chinese Premier. The situation of Bhutan and Sikkim as protected princely States is different from that of the Naga Hills, though the withdrawal of the old claim for a separate State is bound to make a difference. It is clear that, even if the Nagas have no outside support, the trend of events has strengthened their case to some extent, and the Home Ministry will have to deal not only with the pending transfer of Berubari but with the aborigines' claim to continue their way of life, till they can get out of it. The exclusion of foreign missionaries or arms aid cannot alter the political issue since the Nagas are not asking for uplift but for self-Government on their own lines.

Thermal Station for UP

The Central Water and Power Commission has accorded sanction for the installation of a thermal power station with a generating capacity of about 450 mega watts

near Singrauli in UP State. This was disclosed, by Dr Sampurnanand, the Chief Minister of the State, in the Legislative Assembly last week in the course of his speech on the progress of preparations made by the State for the implementation of the Third Five Year Plan.

The preliminary studies conducted in the State reveal that the requirements of power at the close of the next Plan in the State will be to the tune of about 1,200 megawatts. As stated by the Chief Minister, a provision has been made in the recent agreement reached by the Government of India with the Soviet Union for supplying the State with five generating sets of 50 mega-watts each for the completion of the new thermal station. The team of Russian scientists will reach the State within a few weeks to conduct the preliminary survey.

WORLD OF BUSINESS

Shipping in the Doldrums

Mr G. L. Mehta has understandably expressed deep concern at the report that the Third Plan allocation for shipping will be no more than Rs 55 crores. He has pertinently observed by implication that if the report were correct the loud exhortations that one hears from people in Authority regarding the urgent need for expanding national shipping are empty words. There is the possibility that common people will go away with the impression that, while Government have shown themselves very keen, it is the shipping interests that are lukewarm about expansion.

The National Shipping Board of which Mr Mehta is the Chairman, has recommended a target of 1,422 million gross tons to be attained by the end of the Third Plan. This modest target—it is generally contended that a minimum target of 2 million gross tons should be stipulated—has been set having regard to the stringent foreign exchange position and the resources position generally. The outlay necessary for this target has been estimated at Rs 104 crores.

The reported cutting down of the outlay to Rs 55 crores, says Mr Mehta, will almost certainly result in severely slowing down the progress of Indian shipping during the next five years. Mr Mehta's contention that, under the proposed dispensation, the total net addition during the Third Plan period may not be even as much as that during the current Plan period is evidently based on the fact that replacements in the next few years will be heavy. Such

gloomy prospects are particularly unfortunate at the present juncture, because the pace of expansion during the past few years has engendered the hope that, if the present momentum is maintained for some more years, the strength of Indian shipping will be sizably augmented. The net addition, it is expected, will reach the 100,000 GRT mark by the end of the current Plan period. In Mr Mehta's view, an annual addition of 100,000 GRT should be the minimum aimed at during the Third Plan. This objective cannot certainly be achieved with the reported size of the allocation for shipping.

Ministers and others in authority are quite eloquent about the need for saving foreign exchange by around endeavour. It is strange, therefore, that the large drain of foreign exchange in the shape of freight paid to foreign shipping has not struck the protagonists of conservation of this precious resource as a matter for fruitful investigation. It would appear that more than Rs 100 crores are annually paid out as freight. Maybe, it will not be practicable to save all this amount, but it should certainly be possible to save a goodly portion of it. Under international conventions, a country's indigenous shipping has a right of participating in its foreign trade to the extent of 50 per cent. How can this be achieved without having adequate tonnage of our own? It cannot be maintained that, in view of the country's financial position, large sums cannot be set apart for shipping. For, a ship will pay itself in about six years. Another important argument in favour of a programme for a sizable increase now in the national shipping tonnage is that conditions in the world shipping market at present are particularly favourable for the buyer.

Leather Target Exceeded

That the Indian Leather Industry was able to surpass the export target of foot-wear during the Second Five Year Plan is, on all counts, no mean achievement. Revealing this fact in his inaugural address at the first meeting of the Development Council for Leather, Leather Goods and Pickle Industries held at New Delhi, Mr Manubhai Shah, the Union Minister for Industries, stated that, during the first eleven months of 1959, India exported over 2.27 million pairs of foot-wear valued at Rs 2.17 crores.

Mr Shah also divulged the information that the production of foot-wear in the country during the next Five Year Plan will be increased by 153 million pairs in contrast to the 102 million pairs targets fixed for the present plan. A similar enhancement in the export target is also being contemplated, and it is expected that the figure will be around 5 million pairs.

The progress made by the leather industry in the country during

the Second Five Year Plan is quite remarkable. Even greater achievements can be obtained during the next Plan period if more attention is paid to effect a substantial improvement in the quality of its products and introduce salutary modifications in styles and patterns so as to cater to the needs of markets all over the world. The manufacture of machinery and other materials required by the industry in the country itself, which at present we import at the cost of Rs 4 to 5 crores a year, will be of immense help to the nation in cutting down imports and in saving a good amount of foreign exchange.

Paint's Picture

Mr R. G. Goel, the President of the All India Paint Manufacturers Association, was merely voicing the general grievances of the paint manufacturers of the country, when he listed the numerous difficulties the industry has to confront to-day at the meeting of the Association held in Bombay. The major impediments that retard the progress of the industry are, as pointed out by the President, its extreme dependence on foreign countries for raw materials, dearth of technically qualified hands, inadequate facilities for research and training. Yet, it is gratifying to note that, in spite of these obstacles, the industry has been able to record considerable progress during the last few years.

But, in order to meet the growing demands for paints during the next Plan, the industry will have to step up production so that it could reach the target of 150,000 tons by the end of the Third Plan. Mr Manubhai Shah, the Union Minister for Industries, in his inaugural address, called upon the manufacturers to devote more attention to the manufacture of "indigenous fabrication" to meet the requirements of the industry. Besides, as suggested by Mr Goel, the manufacturers can utilise the national laboratories for conducting research till they are able to maintain their own research centres. A decision by Government to install a factory to manufacture raw materials will also be of immense benefit to the industry.

FOREIGN NOTES

de Gaulle to Canada

The visit to be made to Canada by General de Gaulle may confirm the earlier estimate of Canada as an international power by the late Andre Siegfried. It will be more than a sentimental journey to revive memories of Frontenac and Montcalm, for, there is French Canada whose ideals and traditions are not far removed from those of the General-President. The progress of Canada in the postwar period surpasses that of Europe, and Montreal, with a French university, is the centre of Quebec in which the Church is a power in politics and the minority constitutes a majority that declines to be Americanised. The hydel power of Quebec has long spelt industrial growth to a great degree and the St Lawrence has provided access both to Europe and to the Great Lakes.

Canada's sustained growth has been due to the influx of capital, making the US investor eager to plunge on shares listed in Toronto. The strength of the Canadian dollar has been independent of the import surplus and US steel companies have eagerly tapped the iron and copper resources to the north. The sudden development of nickel production in Mountola is like the growth of aluminium output in British Columbia—part of the economic transformation that is leading to a drive to the north-west for tungsten and molybdenum. Despite hints of recession in places in 1958, confirmed by the poor results of the Railways the economic record for 1959 is impressive, and General de Gaulle might see how economic growth has led to a steady rise in labour's share of the national income, bringing new benefits like pensions and vacations with pay. The Canadian worker hopes also for parity with US

Indian Finance

wages and the European visitor may see how labour has steadily marched on without a socialist party to back its claims. The economic achievement of Canada under the Conservative party is as impressive as under the long-lived Liberal regime, and the Prairies are now virtually independent features of the Canadian economy (described by the Toronto Finan-

cial Post last month in a special number). There may be less significant to a visiting European statesman than the rise of a nationalism that is thinking of democracy and peace. A visit to Canada by de Gaulle may help not only to restore faith in co-existence but to impress on Europe that North America has only moved on farther away from the Colonial past.

US Family Incomes

The April issue of the US Commerce Department's monthly survey of current business contains a most interesting article, one showing the continuation of those family income trends which have been among the outstanding economic and social characteristics of the postwar period.

These would be not merely the steady rise in the incomes of American families, but also the pronounced "upgrading" of those incomes—the rise of growing numbers of family units from lower to higher income levels.

These trends were particularly noteworthy in 1959, a year of strong economic expansion. As the article points out, family income increased four per cent in 1959 to \$6,520. This was the steepest year-to-year rise since 1956.

What is more, when figured in constant dollars—after allowance for price changes—1959's rise in "real" average family income was still a full three per cent. This was considerably better than the 1.75 per cent average increase per annum in real family income over the entire postwar period, attesting to the soundness as well as the evident prosperity of the 1959 economy.

The family average, of course, is quite a bit higher than the \$4,750 average annual wage and salary earnings per employee in 1959. This is largely because many families have more than one working member. In addition, the family figures also reflect income from sources other than wages and salaries—such as dividends, rents, interests and Government's social security payments.

The fact that American family incomes have been rising is not especially remarkable in itself; this after all, is a fact has long been known and recognized. It is in the realm of income distribution that the Commerce Department's study takes on a particular significance—and this significance is heightened when the distribution shifts are assessed on a long-term rather than a year to year basis.

The study estimates that the "model"—the most frequent or usual—family income came to \$4,600 for 1959. It also estimates that the "median" income (the level at which half the Nation's

families earn more and half less) was \$5,300.

It is not surprising, then, to find that, in 1959, more families—nearly one quarter of all the 55.6 million families—were in the \$4,000—\$6,000-a-year income range than in any other. In all, about 35 per cent of the family units fell below that range, while 42 per cent were above it.

This represents a remarkable upgrading compared, say, with the early postwar year of 1947—also a prosperous one; here is the way the comparative figures shape up:

Annual Family Income	1947* Percent	1959† Percent
Under \$2,000	25	14
\$2,000—\$3,999	38	21
\$4,000—\$5,999	20	23
\$6,000—\$7,999	9	18
\$8,000—\$9,999	3	10
\$10,000—\$14,999	3	9
\$15,000 and over	2	5

*Total of 44.7 million families.
†Total of 55.6 million families.

This clearly is a remarkable rise up the income ladder, even though the figures show 14 per cent of all family units still earning less than \$2,000 a year in 1959. Commerce Department officials caution, however, against automatically consigning all, or even most, of these to the category of "poor" or "underprivileged".

For one thing, more than half of this lowest income group is made up not of families in the usual sense, but of unattached individuals who, for statistical purposes, are listed as "families", and their needs, obviously are less than those of "regular" families.

Secondly, included in this lowest-income group are many young people, just starting to work, whose beginning incomes naturally would tend to fall well below the average.

Thirdly, in the case of retired persons in this group, the income total does not include money received from annuities or drawn from savings set aside for retirement years.

Finally, the incomes of farm members of this group tend to be understated, since the value of their "in kind" earnings—for instance, the food they grow for their own consumption—is figured not at the usual retail prices, but on the basis of the lower wholesale prices.

23 April 1960

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THAT the Golden Jubilee of the founding of the Union Of South Africa should have been heralded by last month's blood bath is altogether fitting. It is as though a primitive anthropomorphism invested the Union with the attributes of a tribal God clamouring for human sacrifice. And since this was a special occasion he should be propitiated with more than usually gory fare. Indeed, Apartheid, with its elaborate taboos, has in its theoretical make-up the makings of a primitive religion. To the frenzied fanatics, Langra and Sharpeville must have provided in their orgiastic extravagance a religious thrill besides which some of the most primitive practices of the so called dark continent must have been dull as a Sunday School treat. The zooming sabre jets that swooped down and the mowing Saracen armoured cars—the Boycott move in Great Britain may at least take the humane form of refusing to supply South Africa with these monsters—that sent women and children screaming in panic are adjuncts that are not available to cannibals. To us in India, the events as also the immediate reasons therefor have a double poignancy. They stir memories not all of them related but all of which strangely combine in a total emotion very near despair. Langra reenacted in its essentials Jallianwalabagh. The curiously staccato style of the agency report communicates the impact of successive horrors on the spectator: "Blood ran in the streets and women screamed and wailed as police opened fire with rifles and sten (sub-machine) guns... After the firing, one policeman described the scene as being 'like Delville Wood (a World War 1 battle) all over again'. A newspaper photographer 'took pictures of more bloodshed than I have ever before seen in South Africa.'"

The immediate provocation for the events, too, recall the similar treatment that was meted out to Indians in South Africa in the first decade of this century and which provided Gandhiji the occasions for his first experiments in Satyagraha. Indeed, Gandhiji kept on intruding during my reflections on these events, sometimes even irrelevantly. For instance, when I read about the attempt on Dr Verwoerd's life. I was relieved when I found that the misguided man was a white. My mind went back to a January evening in 1948 when, amidst all the despair, my mind was comforted by the fact that Gandhiji's assassin was a Hindu.

It is only too true, as the authorities in Capetown claim with some indignation, that the indig-

nity of carrying permits for non-Europeans is not new. During Gandhiji's stay in South Africa, every non-European in Transvaal—which is, perhaps, even today the most barbarous among the units of the Union—had to carry a permit to be abroad after 9 p.m. (As a special case, Gandhiji did not have to carry a permit, but a letter from the State Attorney—who was a barrister of the same inn as Gandhiji—authorising him to move about without police interference). In fact, Gandhiji's most important triumph before he came to India was connected with the requirement of registrations with a full set of finger prints—formerly asked of only convicted prisoners. In 1902, the Transvaal Government gave Indians immigration certificates (with the right thumb impression of the applicant). It was clearly understood that this was the last occasion they would be submitted to this humiliation. But, in 1906, when Gandhiji returned to Johannesburg after serving as a stretcher bearer in the "Zulu Rebellion", the Government came out with an ordinance which required both men and women (formerly the women were left alone) to register again, this time with a full set of finger prints. Gandhiji naturally took up the cause and, despite a lot of protest, the State Legislative Council passed the measure. Since, at the time, the assent of the Crown was needed for "differential legislation", Gandhiji went to England and organised a campaign as a result of which Royal assent was withheld. Meantime, Transvaal ceased to be a colony, and almost the first use to which the Government put their new found power was to reenact the old ordinance. Royal assent could not now be refused with propriety, and the historic satyagraha started. After Gandhiji and others were arrested and as the movement gathered momentum, General Smuts, then Minister of Interior, came to an agreement with Gandhiji by which voluntary registration should be agreed to on condition that the "Black Act" of 1907 should be repealed. Gandhiji was nearly murdered by an infuriated pathan for this characteristic act of compromise, but he honoured his commitment of voluntary registration only to find to his horror that, when the time came, the Government would not repeal the act. "It was then that

Gandhiji resumed his Satyagraha and, at a public meeting in Johannesburg, all the voluntary certificates were consigned to flames.

I have recalled this episode for several reasons. First, the present movement in South Africa has obvious points of comparison with the one that Gandhiji launched. The comparison extends even to the particular indignity. (Of course, the present requirement that the Africans should carry a passbook, which is really a massive document with details of his antecedents and movements and the inevitable finger prints, and produce it whenever required is far more stringent. But what is depressing is the final issue of the two movements. The really tragic part of the present happenings is that there does not seem to be even a ray of hope that the conflict can be resolved. The most important reason for this impasse, is of course, the barbarous philosophy implied in the policy of Apartheid. Even when they talk in mollifying, if not conciliatory terms—as Mr Paul Sauer, the Minister for Lands in the South African Cabinet, did the other day at the Union's 50th Anniversary celebrations—they give no indication of realising how utterly immoral and unreal the basic principles of Apartheid are. Their double isolation—from the sullen

majority whom they will confine spatially and spiritually, and from enlightened world conscience—makes them perversely cling to the very thing that thus isolated them. They are uneasily aware of the consequences, both spiritual and, what is even more immediately important, economic: Thus, Mr Sauer spoke of the need to create "a new spirit to restore overseas faith in South Africa." But he still thinks that the African's most priceless possession is his passbook. (So it would be, if it were of the more conventional kind, to the acquisition of which the South African Government put an almost unbelievable number of obstacles). As the economic pressure, because of the prolonged strike and unwilling possibility of boycott and sanctions, makes itself felt, avowal of faith in Apartheid is more muted. It would be uncharitable to say that Mr Sauer is, Bottom-like, capable of roaring like a lion one moment and as a sucking dove the next, and the reason for the latter pitch is the massive protest of the whole world at the barbarities perpetrated at Sharpeville. But how can Mr Sauer fail to see that there really is no solution for the problem on the basis of Apartheid? Admittedly, the answer to the question (which Mr Sauer is perfectly entitled to ask): "What other basis?" is not easy to find. Some of the experiments that are currently going on in the rest of Africa may offer some clues. But, as The Spectator said, chiding The Times,—(which, with characteristic obtuseness, scolded the Labour opposition for "the smugness, thick as the fat on a turtle) under Apartheid, law and order

cannot be maintained, for, the laws are "so insensate that they drive people to desperation and violence—so vile, that the Africans have every reason for breaking them."

The truth is,—and this is where the comparison with the early years of the century comes in—neither the Government nor the people in South Africa have the leadership of the requisite calibre. What the whites lack is a leader of the stature of Smuts and what the Africans need is a leader of Gandhiji's stamp. It was not only the idealism but the political will-ness of the two leaders that have lessons for the present. Though

the time has long since gone and mutual hatred far too firmly entrenched for such devices to succeed, is it not barely possible to try to achieve the kind of compromise Gandhiji devised in 1908? Of course, there was a subsequent breach of faith, but that a particular meeting of minds took place at a particular point of time was instrumental in the final solution of the problem. The most horrible thing at the moment is that there is absolutely no meeting of minds between the two peoples in the Union. Is it barely possible to read in the speech of Mr Sauer the vague stirrings of an uneasy conscience? It is difficult to say. Certainly, the South African Gov-

ernment could hardly be in doubt about what the rest of the world is thinking about it. Nor can South Africa seal itself in a world of its own in sullen isolation. In converting the Union into a vast prison-house for eleven million Africans, they are imprisoning themselves as three million gaol warders. Dr Verwoerd harbours the illusion that this can be done, and that one can be happy doing it. He is reported to have said, "The riots can in no way be described as reactions against the Government's Apartheid policy. The disturbances are a periodic phenomenon and nothing to do with poverty and low wages." I am not concerned, at the moment,

with the correctness of this analysis. What appals me is the smugness and moral insensitivity of a man who can accept violence and brutality on the scale that was witnessed last month as a normal incident of a nation's life. Herein lies the hopelessness of the situation in South Africa. And hope? I for one cannot locate it at the moment.

The "report" of the "three wise men", in the form of their letter to Mr Eugene Black, has been released, and there is little in it that is unexpected or which should occasion surprise. While fuller comment is being deferred to the next week, I might here get off my reactions to one particular inference drawn from that report. The Bankers' Mission, which is another term by which this team of experts has been called, has apparently recommended that the Third Plan stands in need of being pruned—even before its formulation is complete. This, at least, is the interpretation placed upon the suggestion that there is room for cutting out schemes of marginal priority; and similar is the connotation, seemingly, of the stress laid on the need for a "flexible" approach to the Third Plan. But I don't see that either of these two suggestions is in fact any admonition to this country that it should not plan big. And, in any case, the attitude of both Government and planners has steadfastly been one in which, without reluctance or ceremony, changes dictated by new situations or developments arising in the course of the plan period have been expeditiously agreed to and implemented. So, this recommendation is tantamount to trying to convert the already converted: the necessity of a flexible approach is recognised in the Second Plan itself. As for the hint that marginal schemes may be suitably deferred, here, too, we find an analogous situation in the Second Plan, wherein, at around its mid-point, a revision divided the endeavours into two parts, of which one represented schemes in the periphery of the Plan and outside its core, whose implementation we decided to keep in abeyance. But, just as it is likely that, when the achievements of the Second Plan are measured and assessed, it will be found that some non-core schemes have been put through, it is necessary, when the Third Plan is drawn up, that targets and objectives are so fixed as will allow for the possibility of resources conceivably improving in a measure that we cannot at the present time anticipate. No, I don't believe that the three wise men have urged the scuttling of large-scale planning; all they have done is to pinpoint the desirability of the recognition, even before the Third Plan is drafted, of the likelihood that there will be some projects of a relatively non-essential nature whose completion may have to be carried over into the Fourth Plan.

GATEWAY GOSSIP

Indian Railways

Railway Week has just been celebrated all over the country with due enthusiasm. The Gateway city has a special place in the history of Indian Railways, for, their first train made its debut from Bombay 107 years ago. During this long period of their existence, the Indian Railways have gone a long way from their original track of a few miles and a handful of engines and wagons.

It will, however, be appropriate to say that the Railways came into their own only after the attainment of political independence. They are now a well-knit unit, combining all the advantages of the integration of several segments functioning largely independently in a vast country. But for them, India's planned development would have been much delayed. Although the different railways had been primarily run not with a view essentially to serving the people, they had nevertheless given us a durable framework round which expanded transport facilities can be built. Planned development very largely depends on the availability of adequate transport facilities. The important role of transport has forcefully been brought home to us during the current plan period. Rightly or wrongly, our planners provided a goodly portion of the allocation under transport to the Railways.

It has been pointed out that the reason for the decision to allot the task of shouldering the responsibility of carrying the major portion of the nation's goods to the railways is that, in the circumstances, only they would be capable of expanding sizably with due expedition. The planners have every reason to congratulate themselves over their decision to give the Railways a big task. This of course does not mean that the transport policy as a whole is flawless. The investment on the railways during the past four or five years has amounted to well over Rs 1,000 crores; that is, about one-fourth of the entire Second Plan outlay has gone to the railways. The Union Railway Minister revealed in his speech, while presenting the Railway Budget for 1960-61, that up to 31 March 1960, plan expenditure would amount to Rs 372 crores against the plan target of Rs 1,121.50 crores. However, he expressed the hope that the balance of the amount would be fully expended during the last year of the plan as he anticipated a quickening of tempo in the Railways' development activities. The Railways have today a network of nearly 35,000 miles with a complement of workers as numerous as 1.15 million. In the course of the first four years of the current plan, much headway has been made in a

number of directions. To mention two of the important achievements: 700 miles of track have been doubled; an additional about 600 miles of new lines have been opened, with another 600 miles under construction. Although there has been a small setback in the tonnage carried during the past two years or so, the position is fast improving, and Mr Jagjivan Ram was so hopeful of a sizable improvement in the current year, that is, the last year of the current plan period, that he anticipated the fulfilment of the target of 162 million tons to be carried by the end of the Second Plan period.

The Railways' performance should not be measured only by the yardstick of the tonnage carried or other similar norms. Its aspect as perhaps the biggest nationalised industry is equally important. Apart from the large number of people to whom it provides employment directly and indirectly, and its vital role in the development of the economy of the country, it is an industry which sustains other industries both big and small. The emphasis on self-sufficiency in their development plans has already yielded handsome dividends. Production of locomotives, wagons and coaches has gone up by leaps and bounds, and today the railways have attained complete self-sufficiency in some and near self-sufficiency in the rest. It is a tribute to our planners and the railway administration that some India-made locomotives will be finding their way into foreign markets. Besides the railways' own factories for the manufacture of locomotives, wagons and coaches and other railway equipment and stores, the expansion programme of the railways has given a great fillip to many an indigenous industrial enterprise in the private sector.

The Railways' place in the national life is not merely confined to commercial and industrial aspects. They are the life line of the nation and but for them the administration would have found its work extremely difficult. Because of their extensive network, it has been possible for the Central Government to tackle the food problem without serious mishap. If Indians now know each other better and are in a position to understand and appreciate the customs and manners in the various regions which lie widely separated, much of the credit goes to the railways. May be, travel conditions have not shown any marked improvement as far as the common man and woman are concerned but it is undeniable that, because of the increased facilities for long distance travel, more and more people are undertaking tours to distant parts of the country, thereby contributing to the strengthening of the bonds of unity.

With the sizable improvement of their capacity and the attainment of self sufficiency in many of the items needed by them, the railways are well poised to undertake even bigger tasks in the future.

From indications already available, it is estimated that the railways would be called upon to carry as much as 235 million tons during the Third Plan period. This will mean an increase of 61 per cent in the load on the assumption that the Second Plan target of 162 million tons is achieved as expected.

The Railways, however, would do well to give their earnest attention toward rectifying some of the glaring shortcomings in their administration. It is not enough to proclaim loudly that the Railways are the peoples' own. The railway users must be made to feel that, when they entrust either themselves or their goods to them, the railways treat them in such a manner that further opportunities for going by rail or sending goods will be looked forward to with eager expectation.

THE PENINSULA

"Package Plan"

AGAINST the background of the Madras State Bill, introduced in the current Legislative Assembly and fixing the ceiling on agricultural land holding at thirty standard acres per family of five members, thus injecting an uncertain future for landholders in the State generally and particularly in Tanjore district, the "Package Plan" was introduced in the most fertile deltaic district of Tanjore by the Chief Minister, Mr K. Kamaraj, at Aduthurai. Madras State is the first to be experimented upon with this plan of intensive cultivation, though six other States will have introduced this plan in one district each.

This five-year experiment, sponsored by the Ford Foundation, will cost Rs 8.42 crores of which Madras State will get Rs 3.4 crores. In the course of the next five years, and well within the period of the experiment, it is expected to raise food output by 20 per cent; and, during the first year of this experiment, the Madras Food Minister, Mr M. Bhaktavatsalam, hopes to raise food output by 4 million tons.

The "Package Plan" is nothing extraordinary. It lays particular emphasis on the coordinated operation of scientific agriculture through trained methods of application of desired quantity of fertiliser, use of good seeds, pesticide to prevent damage of crop by insects and so on. The Tanjore peasant is well known for his intelligent farming operation, though he might not be called perseverent like his compatriot in the rain-fed districts like Ramana-
nathapuram or parts of Madurai or even Coimbatore. He has co-operated with the Government, out of enlightened self-interest perhaps, to increase production by

40 per cent during recent years when he accepted the National Extension Service and the crore of rupees it fetched. He has, however, been a stranger to the application of chemical manures or fertilizers, because he is still ignorant as to how much his soil would require that fertilizer for raising production. For this purpose, the necessity for a soil testing laboratory was never greater than now. That, too, has been opened at Tanjore along with the inauguration of this "Package Plan." The American Consul General, Mr W. Simons, officially opened the Laboratory.

Food production in the State of Madras stood at 3.8 million tons before the First Plan; at the end of the First Plan, it rose to 4.4 million tons, and at the end of the Second Plan it is expected to be 5.3 million tons.

Though Madras was deficit toward the end of the First Plan period, it achieved a small surplus of about 100,000 tons last year. At the end of the Second Plan, the surplus is expected to increase to 300,000 tons. But there is a big "if", that is, that only if seasonal conditions prove favourable could this small surplus be anticipated; otherwise, there would be a deficit of about 500,000 tons. It is therefore imperative that Madras should not only wipe off this deficit by producing more and allow also for a two per cent increase in consumption.

Mr Bhaktavatsalam, at the inaugural function, on Tamil New Year's Day, of the Plan at Aduthurai said that most of the cultivable lands in Madras State had already been put into cultivation. The future line of development should be mainly in the direction of increasing acre-yield in the existing areas.

It is known that Madras produced a higher average of 1,325 lbs of rice per acre and this was above the All-India average of 1,000 lbs; even then, it is low compared to the Japanese average (3,684 lbs per acre) or to Australia, which produced 5,291 lbs per acre. What may have impelled the Agriculture Minister to be optimistic about the State being able to raise yields is the result of a series of crop competitions at which an average yield of 4,100 lbs of paddy per acre or 2,733 lbs of rice was produced. In Tanjore, the Minister stated, the highest yield was 8,730 lbs of paddy or 5,820 lbs of rice.

The salient features of this "Package Plan" are: The scheme is introduced in a district with maximum irrigation facilities and minimum natural hazards, will meet the full credit requirements of the farmers based on production plans of individual farmers to be prepared by a trained staff. This will be checked later on by expert supervision. The requirements of pesticides, fertilizers, agricultural implements and improved seeds stains would also be met in full. Cooperative societies would be developed and credit and supplies

Heavy-duty, full floating hypoid rear axle
• Heavy-duty front axle with roller thrust bearings
• More trips per gallon

165" wheelbase truck chassis for goods transport

DODGE DIESELS

• Full depth frame of increased stock thickness
• Heavy-duty wrap round front springs
• Five-speed gear box
• More seating accommodation

BOMBAY

CONTACT YOUR
NEAREST DEALER

would be channelised through them. The Societies themselves would undertake marketing at market rates and thus credits advanced would be collected through the sales proceeds. The cost of the implementation, as has been noted in the beginning of this article, will be borne by the Ford Foundation (Rs 8.42 crores).

With the Package Plan, Mr Bhaktavatsalam hoped that production in the district would increase by 40,000 tons in the first year, and, with gradual increase in each year, would reach 160,000 tons in the fifth and final year of the Plan. From 5 per cent in the first year, the rate of increase would go up to 20 per cent in the final year.

Mr Bhaktavatsalam stated carefully that this Plan will demonstrate the four-fold objectives of the most effective ways of expanding national food production by co-operative efforts between the Centre, the State, the district, the block, the village and the individual cultivators; that is: to increase the income of the cultivator and his family; to increase the economic resources and potential of the villagers and to provide an adequate agricultural base for more rapid economic development and social betterment.

OLYMPUS

STC's Report for 1958-59

THE third annual report of the State Trading Corporation has just been issued here. It refers to the substantial growth in the trading activities of the Corporation, the direct turnover in its foreign trade rising from Rs 28.6 crores in 1957-58 to Rs 36.0 crores in 1958-59. Of the total value in the latter year, exports accounted for Rs 22.4 crores and imports for Rs 13.6 crores. The bulk of this trade has been with the countries with whom bilateral trade arrangements were in force; imports from these countries in 1958-59, taking the value of licences issued, were Rs 13.8 crores while exports to them were Rs 14.5 crores. Quantity figures in the table at the end show that exports of iron ore, tobacco, gunnies and woollen fabrics registered increases during the year while, on the import side, non-ferrous metals, caustic soda and muriate of potash had similarly registered increases. Notable items figuring for the first time in the export list were shellac and raw jute while new items on the import list were newsprint, insulators for Government projects and sodium sulphate.

It is noteworthy that, in value terms, exports of iron ore alone were Rs 12.3 crores during the year under review, accounting for more than 50 per cent of the Corporation's export trade. It is again

noteworthy that the iron ore exports of the year included 2.7 lakh tons of lower grade ores which were not previously shipped on any significant scale. The report records with satisfaction that bulk supplies of iron ore by a large organisation like the STC with ability to conform to shipping schedules and quality specifications have enabled India to become a dependable source of supply to Japan, Czechoslovakia, Hungary, East Germany, Yugoslavia, Poland and Rumania. It is stated that exports of iron ore can be further stepped up if the ancillary railway and port capacities are built up in order to augment the export potential. As for procurement of iron ore by the STC, it has been done, to the maximum possible extent, from mine-owner cooperatives and associations of traders.

Manganese ore exports by the Corporation during the year, however, showed a decline in the tune of 0.66 lakh tons from the previous year's figure of 4.48 lakh tons. With the implementation of the Wheat-Manganese Barter Deal with the US Commodity Credit Corporation in the current year, it is expected that by the end of March, 1961 India will have supplied under that deal alone 1,12,000 tons of ferro and over 1,50,000 tons of manganese ore for conversion in Japan, Europe and the USA into ferro for supply to the CCC's stockpile. The report also hopes that the recent joint marketing arrangements which the STC (which has only 50 per cent of the exportable quota of manganese ore on its hands) has developed with leading mine-owners and exporters will give the required strength to Indian manganese ore in competing in world markets, when buying starts on a substantial scale in the course of the current year.

That criticism of the STC's trading activities has lost much of its force, could be inferred not only from the trend of concerted action on the part of exporters and the Corporation in the case of manganese ore exports but also from the trend of cooperation in the matter of salt and handloom cloth exports. The handling of salt exports by the STC, on the recommendation of the exporters themselves, has recently led to a bulk deal with Japan. In the case of handloom cloth exports, particularly to the United States, the organisational arrangements involve bringing together leading producers and assisting them in contracting with overseas buyers and by supplying them with dyestuffs, designs and other facilities.

On the import side, the Corporation has handled during the year under review a wider variety of industrial raw materials as will be seen from the table at the end. The STC has also been able to service the essential requirements in some important sectors of the economy. These include X-ray films for hospitals, raw films for the cinema industry, tractors for agriculture, printing machinery, news-

print and machine tools. The value of import contracts thus serviced by the Corporation during the year has amounted to Rs 4.2 crores.

In regulating the distribution of some imported scarce commodities the interest of the consumers, it is claimed, has been kept in view. The sale of caustic soda, soda ash and muriate of potash has continued to be organised through established distributing agencies and associations of established importers; arrangements have been made for the sale of copper and other non-ferrous metals against certified requirements; the distribution and sale of nitrate of soda has been supervised in an effort to assess its utility in stimulating agricultural production or specialised crops; and the benefits of advantageous procurement have been passed on to the consumer as in the case of soda ash where the price was reduced in February 1959. It is by no means clear how such beneficial "intruding" activities of the Corporation in the internal distribution of some scarce imported raw materials can be justifiably criticised. Perhaps the FICCI's criticism of the STC for its "intrusion" into internal trade has no reference to the aforesaid activities.

One wonders if the FICCI's criticism, on the other hand, has reference to the Corporation's handling, in cooperation with the cement industry, of distribution, sales and exports of cement. The

Corporation's cement agency (for which its commission is 1 per cent of the gross turnover for all its functions) has brought for it a revenue of Rs 35.3 lakhs in 1958-59. If this constitutes an eyesore to the normal distribution agencies, it should be less of an eyesore now for the simple reason that the rate of commission has been brought down from 1 per cent of gross turnover in 1957-58 to 1 per cent in 1958-59. While, theoretically speaking, the FICCI may be reasonable in its demand that the STC should not "intrude" into internal distribution and trade, it does not seem to have built up a cogent practical case therefor.

The Corporation's accounts for the year under review show that the gross receipts including the gross profit (Rs 3.33 crores) on trading activities, agency fees, service charges and interest on call deposits and excluding cement agency surplus amount (Rs 2.59 crores which is held on behalf of the Government of India) have come to Rs 3.69 crores. After meeting expenses on establishment, contingencies, etc., a sum of Rs 2.53 crores is available for taxes and other appropriations, of which Rs 1.48 crores is for taxation and Rs 1.28 crores (net) for appropriation to dividend reserve, building fund (office), building fund (staff), insurance fund, price fluctuations fund, trade development fund, staff benefits and fertiliser canalisation suspense.

Particulars of Trading Activities of the Corporation in 1957-58 and 1958-59.

DEMAG **INDMAC**

That is what is meant by the appointment of INDMAG Private Ltd. as sole representatives in India for DEMAG, well-known for their mechanical equipment for the mining industry, blast furnaces, steelworks, rolling mill plants and foundries, electro-metallurgical and electro-chemical plants, cranes and loading installations.

a promise

of industrial fulfilment

of every description for harbours, shops and storeyards, electric hoist blocks, reciprocating, turbo-axial-flow, and rotary sliding-vane compressors, pneumatic tools, diesel engines, excavators, high-capacity gas producers, sintered iron, structural steelworks, steel bridges, steel structures for hydel-irrigation schemes, and drilling rigs.

INDMAC offer you complete engineering services under the direct supervision of engineers trained by DEMAG.

The Directors have pleasure in submitting to the shareholders the Fifty-fourth Annual Report for the year 1933. After making the necessary provisions a sum of Rs. 13,67,472.71 is available for distribution. The Directors recommend the following appropriations:

DIRECTORS' FIFTY-FOURTH ANNUAL REPORT.

To Provision for Income-tax	4,75,000
To Preference Dividend	70,000
To Dividend on Equity Shares at 15 per cent.	5,40,000
To Bonus to Staff	2,40,000

Myrsore State are making satisfactory progress. To meet the credit needs of middle class people, we have, during the year introduced certain schemes like loans to purchase cycles, loans for medical graduates to set up practices, educational loans and loans to students going abroad. These have been introduced on an experimental basis at some of our branches and after finding further experience we propose to extend the schemes at all branches also.

I beg to report that I have audited the above Balance Sheet of the Canara Bank Limited as at 31st December, 1959, and also the annexed Profit and Loss Account of the Bank for the year ended that date with the Books of Account and Certified Returns from the branches and that I have visited some major branches of the Bank during the year and have examined the Books of Account and Cash and Securities as at the time of my visit and report that:

- I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of the audit.
- Such information and explanations have been found to be satisfactory.
- Transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank.
- The Returns received from the branches have been found adequate for this purpose of my audit.
- The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of Account and the Returns.
- In my opinion and to the best of my information and according to the explanations given to me the said Accounts give the information required by the Companies Act, 1956, and the Banking Companies Act, 1949, in the manner so required and the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1959, and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st December, 1959.
- In my opinion, proper Books of Account as required by law have been kept by the Bank so far as appears from my examination of those books.

MARKETS

Moderate Rise in Sugar Prices

ALTHOUGH the supply position is comfortable, Sugar prices have again looked up by about Rs 10 per bag at many centres, mainly due to a revival of demand for meeting the current hot weather and marriage season's requirements. In the Kanpur market, rates have gone up to Rs 129 a bag as against Rs 120 quoted a week ago. Superior qualities are priced better still. While allottees of the Government are refusing to lift their quotas, it appears strange that the free market prices are showing an abrupt rise. At their present level, the prevailing rates are higher than the peaks attained by the open market last year when the Government thought it necessary to clamp full-fledged control on mill sugar prices.

The aggregate production till date has almost reached the target set by the Government for this season. At least 50 per cent of the mills are still working. In the South, however, the crushing season has been unusually short this year. While in the previous years, excepting a unit or two, most of the factories remained functioning till March and April, this year 40 to 50 per cent mills had ceased crushing. In consequence, the production in the Deccan mills will be almost the same as it was last year, while it will exceed the previous year's record in the North.

Naturally, the possibility of a bumper sugar production this season has induced the export agency of the Indian Sugar Mills Association to ask for an export quota of 50,000 tons. The production is expected to go up to 2,400,000 tons and the season may end with a carry-over of 450,000 tons. Although production is coming to an end at many centres, units in Uttar Pradesh and the Punjab are still reported to be working.

Gur

The Hapur Gur market remains depressed as the demand at higher prices is slack. Arrivals average 200 maunds daily, while stocks are estimated around 33,000 maunds. Gur Pansera quality is quoted at Rs 15.50 to Rs 15.75 and Baitl at Rs 16.12 a maund.

Khandsari

Khandsari prices have registered modest gains during the week on revival of demand from the South and Saurashtra. Receding hopes

of decontrol of sugar were also a contributory factor. Production in small quantities is still continued at some centres and the rates are moving between Rs 38 and Rs 42 per pound, according to quality.

Foodgrains

Barring Wheat whose price declined fractionally due to the arrivals of new grain in the market, prices of coarse grains and pulses showed an upward trend. New grains are expected in the market soon; because the harvesting and winnowings operations are almost complete.

The Rice section remained quiet due to easy supply position. Grain prices recorded gains of about 50 nP a maund on continued firmer advices from the Punjab due to poor crop prospects. The markets for Maize and Bajra remained depressed in the absence of demand.

Coffee

At the fifth Coffee auction held at Mangalore, the Coffee Board exposed for sale the following varieties:—Plantation "A" 882 tonnes; Plantation "B" 294 tonnes; Plantation Triage 174 tonnes; Arabica Cherry Flats 144 tonnes. Robusta Cherry Flats 200 tonnes. All quantities, except the two hundred tonnes of Robusta Cherry Flats, were sold. The range of prices was: Plantation "A" Rs 236.65 to Rs 249.85; Plantation "B" Rs 228.65 to Rs 237.30; Plantation Triage Rs 190.20 to Rs 193.30 and Arabica Cherry Flats Rs 197 to Rs 198 (all prices per cwt).

Unofficial forecasts of the Uganda Robusta coffee crop now put it at a probable 100,000 tons, showing a substantial increase over last year's crop. This means that there will be great difficulties in disposing of it unless demand and prices pick up from the present levels. With large quantities of coffee from Brazil also likely to be pressing on the market this year, the clear-cut outlook is for weaker prices as time goes on.

Pepper

Despite the unwillingness of US buyers to support Malabar Pepper at the prevailing prices, the terminal markets have continued to maintain a firmer tendency. In the Cochin market, the rate has gradually risen to Rs 1,700 a candy from Rs 1,618.75 quoted at the beginning of the month. The firmness is attributed to improved domestic demand and reports of some business with the Communist countries at enhanced levels. Moreover, arrivals have, of late, been on the low side.

Trade estimates that in the first five months of the season to March-end exports of Malabar pepper have totalled about 12,000 tons against a normal annual export of 13,000 tons, have encouraged thoughts that it should be possible to obtain more attractive prices for

the remaining part of the export surplus from out of the new crop.

There are also other factors which have encouraged the export houses to view the near-term outlook for the commodity with optimism. Arrivals of Sarawak pepper are, it is reported, likely to be delayed. It is, therefore, likely that the growers in Sarawak may not press their sales during the harvesting season as in the past. News of the coming crop from Indonesia are also disquieting. Again, there is no news with regard to the size of the Muntok and Lampong pepper. It is, however, believed that the crop is likely to be much smaller than that of last year.

As Sarawak will be producing more white pepper, the supply of black pepper to the USA and other destinations will be in the hands of India and Indonesia. If the crop in Indonesia turns out to be poor, it will be no wonder if Malabar pepper touch still higher prices sometime during autumn.

Cashew

A crisis seems to be brewing in Kerala's Cashew processing industry on the question of workers' minimum wage revision. The report of the minimum wages committee is presently under the State Government's consideration. The manufacturers hold the view that some of the recommendations in this report are impracticable and detrimental to the industry. They say that, if the cost of production is allowed to go up again by enforcing higher minimum wages, the owners of the Kerala factories will be compelled to minimise their activities in Kerala and migrate to other States.

Rubber

According to the figures released by the Rubber Board, production of rubber has shown a sharp decline to 1,155 tonnes in February from 2,438 tonnes in the previous month; consumption to 3,178 tonnes from 3,205 tonnes and stocks with the estates and dealers to 4,440 tonnes from 5,770 tonnes. Stocks with the manufacturers are, however, higher at 5,143 tonnes against 4,726 tonnes. The quantity of rubber imported during February was: Group No. 2,361.656 tonnes; Group No. 3 202.184 tonnes; Group No. 5 101.600 tonnes and Group No. 6 445.008 tonnes. Total 1110.448 tonnes.

The following is the full summary (figures in tonnes):—

Opening stock on 1st February, 1960	10,495.503
Production in Feby. 1,154.581	
Imports in Feby. 1,110.448	2,265.029
Consumption	12,760.532
Stocks with the estates, dealers and manufacturers as on 29th February, 1960	9,583.013
Stock of Synthetic rubber	1,805.557
Total Stock	11,388.570

Chairman

C. P. Doraikannu
General Manager

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

No subscriptions are invited on the basis of this announcement. Intending subscribers should obtain from the Registered Office or any one of the Bankers or Brokers referred to hereunder, copies of the PROSPECTUS and the Forms of Application.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

Two separate licences have been obtained from the Central Government for the establishment of new industrial under-taking for the manufacture of Viscose Rayon Filament Yarn and Sulphuric Acid & Carbon-bisulphide. Copies of such licences are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting these licences the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of the Prospectus, having attached to it the documents required by Section 60 of the Companies Act, 1956, has been delivered for registration to the Registrar of Companies, Uttar Pradesh.

Applications have been made to the Calcutta and Bombay Stock Exchanges for permission to deal in and for official quotations of shares of the Company.

Subscription List will open at the commencement of Banking hours on Monday, the 25th April, 1960 and will close at the close of the Banking hours on Saturday, the 30th April, 1960 unless closed earlier at the discretion of the Directors but not before Thursday, the 28th April, 1960.

Juggilal Kamlatpat Cotton Spinning & Weaving Mills Co., Ltd.

OBJECTS

The Company was incorporated on the 24th October, 1924, with the objects mentioned in its Memorandum of Association and in particular with a view to take over as a going concern the business of Juggilal Kamlatpat Cotton Spinning & Weaving Mills.

PRESENT BUSINESS.

The Company has been carrying on the business of manufacturing Cloth and Yarn. The popular sorts being dhoties, sarees, sheetings, shirtings, coatings, satins, mulls, drills, gavadins, multi-colour and style prints, mercerised calicos, canvas, lohis, raised cotton, blankets, tapestry and flannel etc. The Company has recently established a new Rayon Factory which produces Rayon filament yarn, Sulphuric Acid and Carbon-bisulphate.

NEW PROJECT.

Considering the great scope for expansion of the Rayon Industry in India the Company, under licences issued by the Government of India, under the Industries (Development and Regulation) Act, 1951, has established a new Rayon Plant with a capacity of 5 tons of Viscose Rayon Yarn per day along with a Sulphuric Acid Plant and a Carbon-bisulphate Plant with a capacity of 25 tons and 5 tons per day respectively.

The Company has also applied to the Government of India for licences to expand the capacity of the Rayon Plant from 5 tons to 10 tons and to install a Super Phosphate Plant.

LOCATION.

The new factory is located at JAYKAYPURI (Jajmau), Kanpur, in the State of Uttar Pradesh.

RAW MATERIALS.

The Government of India granted to the Company from time to time the necessary licences to import caustic soda, sulphur and pulp which constitute the basic raw materials for the manufacture of rayon yarn.

It is reported that rayon-grade caustic soda is being indigenously produced now and attempts are being made to get supplies from these sources. The Central Government have also licensed a few schemes for the manufacture of rayon-grade pulp and it is expected that in course of time pulp will also be available in the country itself.

LAND.

Besides the land on which the existing Cotton Textile Mill of the Company is situated, it has acquired from the Development Board, Kanpur about 100 acres of land for constructing the new factory. The work of construction of buildings has been already completed.

WATER SUPPLY.

The Company has made its own arrangements for pumping water from the River Ganges which flows very near the site of the factory. A complete plant for water treatment and softening has been installed in the factory.

ELECTRICITY.

The supply of power is being derived from the Kanpur Electricity Supply Administration, Kanpur, which is owned by the Government of Uttar Pradesh.

TRANSPORT FACILITIES.

The new factory is located in Kanpur which is a big Railway Junction of important Broad and Metre Gauge lines. The Grand Trunk Road passes through the city. In short, the place enjoys all facilities of rail and road transport.

PLANT AND MACHINERY.

The plant and machinery required for the new project has been imported from West Germany, France, Switzerland, U.S.A. and Japan under licences issued by the Government of India at a total C.I.F. Value of Rs. 1,03,34,210/-. The work of erection of the plant and machinery is complete and the plants are in operation.

GUARANTEE FOR DEFERRED PAYMENTS.

The Company got from the Machinery Suppliers facility of deferred payments to the extent of Rs. 1,40,00,000/-. These payments have been guaranteed by the State Bank of India, Kanpur against the security of plant and machinery of the new Rayon Factory.

CAPITAL OUTLAY AND FINANCIAL REQUIREMENTS.

The Capital requirements for the new undertaking are estimated as under:

(1) Land and Buildings	Rs. 45,00,000
(2) Plant and Machinery, including freight, insurance, duty, etc.	Rs. 2,35,00,000
(3) Erection Expenses	Rs. 14,50,000
(4) Interest Charges	Rs. 15,00,000
(5) Working Capital	Rs. 25,00,000
(6) Miscellaneous Expenses including brokerage and other expenses on issue of shares	Rs. 10,50,000
Total	Rs. 3,45,00,000

SOURCE OF FUNDS.

(1) Loan obtained from the Government of Uttar Pradesh (secured by mortgage of lands and buildings and hypothecation of plant and machinery of the Company excluding plant & machinery of the new Rayon Factory)	Rs. 90,00,000
(2) Deferred payment facilities from suppliers of machinery (guaranteed by the State Bank of India on the security of plant and machinery of the new Rayon Factory)	Rs. 1,40,00,000
(3) New Issue of Capital	Rs. 1,01,00,000
(4) Other sources	Rs. 14,00,000
Total	Rs. 3,45,00,000

PROSPECTS.

The demand for Rayon Yarn in India is progressively increasing and is far in excess of the few existing rayon plants in the country. According to the estimate of Planning Commission regarding the consumption of rayon yarn in India and target of indigenous production fixed by them there is a big gap between the figures of consumption and production of rayon yarn in the country. There is, therefore, considerable scope for new enterprise and for expansion of the existing rayon plants.

ERECTION COMPLETED AND PRODUCTION STARTED.

The work of erection of plants and machinery of the new Rayon Factory has been completed within a record period of about six months. The factory has started giving full production and the production has been placed on and is well received in the market and is considered to be one of the best rayon yarns produced in India.

PROFITS AND DIVIDENDS.

Notwithstanding the difficulties faced by the Indian Cotton Textile Industry, the existing Cotton Spinning and Weaving Plant of the Company is already giving satisfactory profits. Looking to the attractive working results shown and handsome dividends being paid by the existing Rayon Factories in the country, the Directors are of the opinion that the Company's textile mill with its finishing and printing plant and the most modern new rayon plant which are working fully should yield sufficient profit to enable the Company not only to meet its financial commitments including the fixed dividends payable to the holders of Preference Shares but also pay reasonable dividend to the holders of Equity Shares.

In the interest of the prospective subscribers the Directors have come forward with this offer only after the Company's new Rayon Plant has been erected and has started giving full production so that the subscribers may not have to wait for long to reap the fruits of their investments.

The dividends paid by the Company in respect of the last five years are shown in the Auditor's Report annexed hereto. The following dividends were paid to the members in respect of the previous six years preceding the period covered by the Auditor's Report:—

Years.	Dividends Distributed. On Equity Shares.	On Pref. Shares.
1948	23 %	4½ %
1949	12 %	4½ %
1950	15½ %	4½ %
1951	25 %	4½ %
1952	8½ %	4½ %
1953	3 %	4½ %

FINANCIAL INFORMATION.

The following summary is taken from the Report by the Company's Auditors attached to the Prospectus.

Year ended 31st Dec.	Sales Rs.	Profit before Depreciation and Taxation Rs.	Net Profit after Depreciation and Taxation Rs.
1954	1,80,65,451	22,45,180	10,76,850
1955	1,72,21,923	26,03,629	12,84,926
1956	1,96,49,933	25,97,896	10,40,059
1957	2,09,33,338	14,11,687	4,45,366
1958	2,17,26,302	7,38,908	1,44,678
1959 (provisional)	2,90,55,273	17,45,880	6,45,880

Assets and Liabilities	As at 31st December 1958	As at 31st December 1959 (provisional)
Fixed assets (at original cost less depreciation) capital expenditure and investments at cost	1,92,46,906	3,94,88,925
Current Assets	2,14,56,051	1,70,14,405
Total Assets	4,07,02,957	5,74,03,330
Less Liabilities	3,02,47,127	4,69,52,192
Net Assets	1,04,55,830	1,04,51,138

DIVIDENDS ON PAID-UP CAPITAL

Dividends paid by the Company in respect of the five years ended 31st December, 1958, were as follows:

Year ended	4½% Pref.	6% Pref.	Rate of dividend Equity
1954	4½ %		...
1955	4½ %		...
1956	4½ %		6 %
1957	4½ %	6 %	14 %
1958	4½ %	6 %	6 %
1959 (provisional)	4½ %	6 %	9 %

MINIMUM SUBSCRIPTION

The Directors do not consider it necessary to fix any minimum amount of subscription.

UNDERWRITING

	Equity Shares
1. Messrs. G. M. PYNE, Allahabad Bank Buildings, 14, India Exchange Place, Calcutta.	Jointly Rs. 15,00,000
2. Messrs. P. R. SUBRAMANYAM, 70A, Stock Exchange, Apollo Street, Bombay.	
3. Messrs. MACONOCHE & CO., Mercantile Buildings, First Line Beach, Madras.	
4. Messrs. SANGANERIA PATODIA & CO., 7, Lyons Range, Calcutta.	Rs. 10,00,000
5. Messrs. MURARKA BROTHERS, 7, Lyons Range, Calcutta.	Rs. 10,00,000
6. Messrs. NAVBHARAT VANIJYA LTD., 7, Council House Street, Calcutta.	Rs. 27,00,000
Total	Rs. 62,00,000

UNDERWRITING COMMISSION

Underwriting Commission at the rate of 1 1/2% of the nominal value of the Equity Shares is payable to the Underwriters.

BROKERAGE

Brokerage will be paid by the Company to members of the recognised Stock Exchanges and to Banks at the following rates on the nominal value of the shares allotted in respect of applications bearing their stamps.

ON PREFERENCE SHARES ... @ 1 per cent (Rupee one per share of Rs. 100)
ON EQUITY SHARES ... @ 2 per cent (20 NP. per share of Rs. 10)

Brokerage on the same basis will be paid to the Underwriters in respect of applications made by them and in respect of applications bearing their respective stamps and in such cases no brokerage will be payable to any other party.

EXPENSES OF THE ISSUE

The expenses of the issue including brokerage and underwriting commission will not exceed Rs. 5,00,000 and are payable by the Company.

INSPECTION OF DOCUMENTS

Originals and/or copies of the Memorandum and Articles of Association of the Company, Balance Sheets and Profits and Loss Accounts, Auditors' Report appended to the Prospectus, Consent Order of the Controller of Capital Issues, Licences issued by the Government of India for establishing a new undertaking and contracts and other Agreements referred to in the Prospectus can be inspected at any time during office hours at the Registered Office of the Company for a period of fourteen days from the date of publication of the Prospectus or until the subscription list closes, whichever is earlier.

APPLICATION FOR AND ALLOTMENT OF SHARES

Application for Equity Shares must be in lots of 50 shares or multiples thereof and for Preference Shares in lots of 5 shares or multiples thereof.

Metals

Once again a sharp rise in prices of Zinc characterised trading on the non-ferrous metals market. This was mainly due to scarcity of stocks as well as to some speculative activities. Trade quarters are inclined to feel that the Importers' quota should be raised to about 50 per cent and this would help ease the supply position to some extent. However, in the near future about 1,300 tons of Zinc on State Trading Corporation account are due to arrive. Spot zinc shot up to Rs 150. April delivery rose upto Rs 147 while May delivery was quoted at Rs 144.

Copper has remained somewhat dull with fine bars quoting at Rs 229 and scrap at Rs 220. There was very little change to note in Lead and Zinc which continued to be pegged around Rs 75 and Rs 134.50 respectively. Aluminium scrap was placed at Rs 1.52 per lb.

Production in different sections of the non-ferrous metals industry has shown a rise during the year 1959. The output of virgin aluminium last year totalled 17,077 tons, that of virgin copper 7,539 tons, virgin lead 3,894 tons and virgin antimony 613 tons. Improvement in indigenous production has helped to bring down the total import bill for different non-ferrous metal to Rs 37.77 crores in 1959 as against Rs 42.78 crores in 1957. Mr A. C. Dutta President of the Indian Non-Ferrous Metals Manufacturers Association has visualised that by 1966, consumption of Aluminium in the country will rise to 1 lakh tons, copper 150,000 tons, lead 60,000 tons, and Zinc 180,000 tons.

Yarn

After keeping quiet at the outset, the yarn market has depicted moderate improvement. Trade circles are awaiting as to whether the Finance Minister will reduce the Excise duty levied on Staple Fibre cloth in view of the likely revision of some of his taxation proposals. There are reports that Government want about

15 per cent of the Art Silk yarn production to be diverted to manufacture of cloth for export at cost price or slightly above the cost price. A meeting of Rayon Yarn Manufacturers has been convened for finalising the move in New Delhi on 21 April. As this industry is mainly depending for its raw materials on imports, it is the desire of the Government that they should help in earning foreign Exchange. Cupressa Bomberg for April advanced to Rs 1,830 from Rs 1,788 before being finally placed at Rs 1,826 while June delivery was quoted at a premium of Rs 32. Staple fibre yarn for April improved upto Rs 710 from Rs 688 to quote at Rs 708 while June delivery was quoted at a discount of Rs 6.

Bullion

The bull operators on the bullion market in Bombay continued to manipulate the backwardation charges with a view to lighten their commitments but in this process, they were forced to pay heavy margin both in gold and silver on their outstanding long positions. General sentiment in silver for Jeth delivery remained somewhat easy due to the fact that there would be very little offtake of the actual after six weeks. However, at lower levels the silver market not only cried a half due to renewed firmness of cotton and other commodities but rebounded. Gold section, however, ruled quietly steady. Traders are inclined to avail the outcome of the Delhi talks on Sino-China order dispute. In the Chaitra delivery which expired some ten days back, delivery of bars of silver was tendered through the clearing house while there was no delivery of gold at all.

Silver Jeth after early rally of Rs 212.44 dropped down to Rs 211.37 to recover to Rs 213.75 to be placed at Rs 213.50. Balsakh delivery which was quoted at a premium of Rs 3.75 was finally reported at Rs 217.50. The premium of spot over Balsakh was placed at Rs 2.25. Gold Balsakh delivery changed hands at Rs 128.75

Applications should be made on the prescribed forms accompanying the Prospectus and delivered before the date of closing of the subscription list. The application forms together with a remittance for the full amount payable should be sent to the Registered Office of the Company at Kamla Tower, Kanpur or to the Branches of the Company's Bankers Indicated herein. Out station drafts or cheques must be made payable to "JUGGILAL KANLAPAT COTTON SPO. & WVO. MILLS CO., LTD.,—Share Application A/C." and for the protection of the applicants should be crossed "Account Payee only".

A separate cheque or draft must accompany each application.

STATE BANK OF INDIA

KANPUR, BOMBAY, CALCUTTA, MADRAS, DELHI, NEW DELHI, AHMEDABAD, BANGALORE, INDORE, NAOPUR AND PATNA.

THE CENTRAL BANK OF INDIA LTD.

KANPUR, BOMBAY, CALCUTTA, AHMEDABAD, DELHI & MADRAS.

THE HINDUSTAN COMMERCIAL BANK LTD.

KANPUR, CALCUTTA, BOMBAY, AHMEDABAD, AMRITSAR, JAIPUR, DELHI & NEW DELHI.

Copies of the Prospectus and Application Forms may be obtained from the Company's Registered Office and the Bankers and Brokers named herein.

Allotment will be notified by despatch of an Allotment Letter. The Directors reserve the full and uncontrolled right of accepting or rejecting any application in full or in part without assigning any reason. Where no allotment is made the amount remitted with the application will be returned in full; and where a partial allotment is made the unutilised balance will be returned within sixty days of the receipt thereof by the Company.

The shares when issued will be subject to the terms of the Prospectus and to the Memorandum and Articles of Association of the Company.

The Share Certificates will be available for issue in exchange for Letters of Allotment within six months of allotment.

to Rs 129.69 to terminate at Rs 129.62 while Jeth delivery was quoted at a discount of Rs 2. Spot gold was quoted at a premium of Rs 2.87 over Balsakh at Rs 132.50.

Oils & Oilseeds

On the Oilseeds market in Bombay, groundnut prices have climbed to a new high level following the unusual delay in sanctioning new hedge contracts. The FMC and some of the directors of the oilseeds Exchange came to a clash over certain issue. Representations were made to New Delhi and efforts are now being made to meet with the view point of the FMC and the various panels are being reorganised with a view to give more representation to the genuine trade. Anyway this unfortunate episode gave a boost to groundnuts which are already in short supply and the shorts were forced to cover their sales in the advancing markets. Groundnut May delivery rose to Rs 220.75 from Rs 216 before being placed at Rs 220. The ceiling price fixed is Rs 225. Groundnut oil April-May advanced to Rs 23.37 from Rs 22.75 per quarter. Castor seeds May delivery after early rise to Rs 175.25 from Rs 172.50 reacted to Rs 172.87 to be quoted at Rs 175.25. Cotton seeds were firmly maintained at Rs 158. Linseed prices have forged ahead to Rs 33.94 from Rs 33.31 on export prospects and higher advices from UK. At the moment, there is no possibility of export business in groundnut oil.

Groundnuts

Persistent Calcutta demand for groundnut oil and good absorption had enabled groundnut oil price to go up in the Madras Oils and Seeds Exchange. Local arrivals too are not very much and in the wake of better Bombay forward quotations groundnut oil prices remain on the upward trend. The position of groundnut kernels, however, is not comparable to oil, and the price per candy remained comparatively lower. Summer crop arrivals have also acted

as a check of rising kernels prices though oil contents in this variety is lower. Overseas groundnut oil price had shown a decline while Burma at present is out of the picture none quoting for shipment for this destination.

Today's prices at the exchange were as follows:

Groundnut oil per candy of 500 lbs. expeller Ready 3% F.F.A. Rs 404; April 404/8; May Rs 405; June Rs 408.

Groundnut kernels per candy of 531 lbs: Coromandel Rs 207/208. Summer crop Rs 200/202. Castor oil per candy of 500 lbs: Tirupattur Rs 320.

Coconut oil per tin Rs 39/8. (Due to Kundah strike by electricity workers the expellers may be idle and with anticipated shortage of stock due to this strike the price trend seems to be upward since sellers are hesitant to part with this price).

Groundnut cake per bag of 160 lbs. ex-gunny Rs 25/14 to Rs 26.

Groundnut cake UK price per ton £33 1/4; Groundnut oil per ton UK price £119/120. Burma unquoted.

With many intervening holidays last week, there was not much trading and the general tone turned out to be slightly easier towards the close of the week. But with the week beginning, the demand proved to be sizeable this week and offering was only slightly more than the demand. This should reflect higher prices of oil as indeed it did today in the exchange, influenced by another factor of Bombay prices for forward transactions being pushed up.

Disparity in internal price levels as well as in overseas rates and difficulties encountered with combining any business even with the export incentive scheme, no export account was reportable. Both last week and this, Calcutta Vanaspathi interests were the main buyers. Groundnut oil recorded a decline of Rs 27/28 per ton over last week's closing while groundnut lost Rs 10 or so per ton this week.

23 April 1960

WORLD OF JUTE

Prices Touch New High

PRICES in the jute markets have again moved up by a substantial margin during the past week. This is not surprising because recent developments are strongly in favour of the bulls. In the first place, despite indications of larger imports, sellers in the raw jute market continue to be reserved. Presumably, it is believed that there can be many a slip between the issuance of import licenses and the actual receipt of raw jute from Pakistan. And, in any case, supplies from that country may take considerable time to come. Reports about the new Indian crop are also not very encouraging, what with the continuance of dry weather in some growing areas and insufficient rain in others. If, by any chance, arrivals of the new crop are delayed, holders of raw jute can choose their own time to dispose of their stocks. In the meantime, a strong goods market is sustaining the present high price levels in the raw material.

Besides a fully steady raw jute section, the bulls in jute goods have a number of other indications to go by. Stocks of jute goods with the industry are none too plentiful, and the IJMA decision regarding unsealing of further looms cannot make much of a difference to the availability of goods even if one or one and a half per cent of looms are unsealed from June. And more and more foreign buyers are coming out with enquiries. The release of the figures pertaining to burlap consumption in the US during March has further contributed toward strengthening the bullish fervour.

US burlap consumption in March 1960 amounted to 80.6 million yards, compared with 75.0 million yards in February and 72.7 million yards in March 1959. Stocks at the end of March amounted to 276.2 million yards and comprised 133.7 million yards spot and 137.5 million yards afloat. At the end of the previous month, stocks were 251.4 million yards. Stocks at the end of the corresponding month of last year stood at 279.1 million yards.

Toward the close of the week ended Wednesday, however, sentiment both in the raw jute and goods markets was somewhat quiet, presumably due to the apprehension that stringent measures may be taken by authority to stem the tide of speculation.

It is undeniable that the present firmness in manufactures is sus-

tained to some extent by the revival of foreign interest coupled with the rising trend of internal consumption. With the steady increase in the Indian production of food-grains, sugar and commodities like cement, internal consumption will continue to make increasing demand on supplies of gunnies. As for foreign demand both China and Russia are increasing their offtake. With burlap consumption maintaining a high level, the US has perforce to step up its purchases in India. It is, however, wrong to assume that this country will consent to buy Indian hessian at any price at all times. The support that is forthcoming at the present high levels from the US perhaps steps from the realisation that supplies may be scarce for some time to come, what with the inability of the Indian mills to increase substantially their output in view of the tight raw jute supply position. But India would be committing a grave blunder if it thinks that American consumers will continue to pay high prices for their requirements of burlap. A continuance of high price levels in hessian will be an open invitation to American consumers to lean heavily toward substitute packaging materials, and, when this happens, it is not going to be easy for India to woo them back to the use of burlap.

During the early part of the week under review, conditions in the jute goods market have been firm with prices daily scaling new highs. The news of a rise of more than 5 million yards in burlap consumption during March as compared with the previous month and the continued interest evinced in hessian by the US and Russia imparted added enthusiasm to the bulls. Hessian 40"x10 oz April was taken up to Rs 45.85 by close on Wednesday. The rise in heavy goods was much more spectacular, with B Twills' April touching a high of Rs 129.40 on Monday. In the past two days, however, B Twills have turned somewhat quiet to be placed at Rs 128.30 by close on Wednesday. The reaction is due to profit-taking at the higher levels coupled with mills' selling in the forward positions. That the interest in heavy goods is largely confined to near positions is illustrated by the fact that, while B Twills April on Wednesday was placed at Rs 128.30, the October-December delivery position was quoted at Rs 118.15.

The somewhat quiet trend noticeable for the past two days is attributed to the apprehension that the East India Jute and Hessian Exchange may decide to increase the special margin with a view to containing speculation.

The IJHE announced on Thursday imposition of another special margin slab as follows: Hessian cloth per 100 yards: Rs 8 if closing price is Rs 46 or above; Sacking Bags B Twills per 100 bags: Rs 18 if closing price is Rs 124 or above;

Raw jute per maund Rs 10 if closing price is Rs 34 or above.

The raw jute market reported only small mill activity, but this did not deter sellers from maintaining a reserved attitude. Assam Bottoms was quoted at Rs 37 a maund, showing a rise of three points over the week.

Price Trends:

Hessian:	As on April 18	High	As on April 20

WORLD OF TEA

Future Prospects

Mr Michael Connock, a leading British commodity expert in London, states that, if the consumption in India and the other producing countries can only expand at present when prices are low, there is not much prospect for significant growth in the Tea industry until per capita income in these countries can be raised to a much higher level.

But this, in his view, may be useful to producers in that any future surplus, even though it may momentarily depress prices, will be mopped up, as more tea is drunk in the producing areas and will not act as a drag on the market for years on end.

This state of affairs, coupled with a reasonable return being obtained by producers of fine quality teas in what appears to be a reasonably secure market, gives an impression of a position for tea producers which Mr Connock says, is at first sight "not unenviable".

In the case of Ceylon gardens, Mr Connock points to the heavy export taxes which have cut into

profits as well as the severe income-tax regulations which have made it difficult to keep top level managerial staff. In this connection, he points out the recurrent talk of nationalisation in Ceylon as a discouragement to re-planting and new investment, which have, in turn, resulted in the Ceylon industry expanding at a lower rate than might otherwise have been.

He adds that this investment has been responsible for the growth of much of the East African industry. But here there is now the risk that, by the time the bushes have matured, Governments with policies hostile to business may be in power. Mr Connock concludes by saying that "the rate of increase in production, achieved since the war, will not be maintained; but there is one consolation for existing producers who will have little new competition to fear. They will be able to sell to the existing markets without a feeling being forced by the threat of a surplus to cast about for new ones".

Meanwhile, in the Internal Sale held in Calcutta this week, offerings consisted of 23,855 packages of Dusts and 994 packages of Leaf grades. There was a good general demand. Orthodox grainy descriptions met with fair enquiry, but sold at irregularly easier rates. The smaller and brighter liquoring lines, however, found ready buyers at firm and sometimes dearer rates. Legg-cut Doors Dusts were sold well, the more powdery kinds inclining easier.

Medium CTC teas came to a strong market and generally advanced in price according to quality, with the more powdery dusts again the salient feature. The best CTC descriptions were taken up at enhanced levels. Following were the rates (per pound): Medium Doors Dust Rs 1.84 to Rs 1.92; Medium Assam Dust Rs 1.80 to Rs 1.90; Medium Assam CTC Dust Rs 2.02 to Rs 2.24 and Best CTC Assam Dust Rs 2.45 to Rs 2.80.

In the Colombo market, offerings were 6,610, 728 pounds. Quality showed an overall improvement. There was strong general demand and all offerings were readily taken up. Nuwara Eliya teas met with good demand at firm to dearer rates. Among high-grown teas, BOP's were irregularly dearer following quality. Best liquoring descriptions advanced by 10 to 25 cents per pound. Among medium-grown teas, Medium Broken were, on average, 5 to 10 cents per pound dearer. Commons and "teas for price" met with considerably better demand and were dearer by 10 to 15 cents. A few selected liquoring Dusts met with keen competition at considerably dearer rates. All others were fully firm to dearer.

In the Cochin market, a total quantity of 900,000 pounds was offered. Quality from all districts showed a seasonal decline, which was particularly marked in respect of high-grown teas. There

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

This announcement is not an invitation to subscribe for shares but is issued for the purpose of giving information concerning the Company. The Prospectus dated 8th April, 1960, has been delivered to the Registrar of Companies, West Bengal for registration as required under Section 60 of the Companies Act, 1956. Copies thereof can be had from the Registered Office of the Company or from the Bankers and Brokers named below.

Application has been made with the Calcutta Stock Exchange for permission to deal in shares now being offered and in due course for official quotations.

EAST ANGLIA PLASTICS (INDIA) LIMITED

(Incorporated as a Public Company under the Companies Act, 1956).

ISSUE OF 2,50,000 Equity (Ordinary Shares of Rs. 10/- each at par. Payable with Application Rs. 2.50 nP.

on allotment Rs. 2.50 nP. on calls Rs. 5/-.

THE FIRST CALL SHALL NOT BE MADE EARLIER THAN ONE YEAR FROM THE DATE OF ALLOTMENT.

The Subscription List will open at the commencement of banking hours on 27th April, 1960, and will close at the close of banking hours on 7th May, 1960 or sooner or later as the Directors may decide, but in no case the list will close before the midday of 5th May, 1960.

DIRECTORS:

1. Mr. Lionel Hall Moore, Industrialist, 52, Brook Street, London W.1, Managing Director, East Anglia Plastics Ltd.
2. Mr. Ranadeb Chaudhuri, Barrister-at-Law, 34, Ballygunge Circular Road, Calcutta-19, Director of:—National Sugar Mills Ltd., Amrita Bazar Patrika Private Ltd., The Hilla Tea Estates Ltd., etc.
3. Dr. Shrirang Padmanabhi, Adakur, Company Director, 46A, Pedder Road, Bombay-26, Director of:—Monsanto Chemicals of India Private Ltd., Alta Laboratories Private Ltd., etc.
4. Mr. Harendra Nath Sen Gupta, Company Director, 17, Lake Road, Calcutta-29, Directors of:—Plastics (India) Private Ltd., Housing Estates Private Ltd., etc.
5. Mr. Sanjit Sen Gupta, Merchant, 20, Aswini Dutta Road, Calcutta-29, Director of:—The Hilla Tea Estates Ltd.

OBJECTS.

The Company was incorporated in the month of April, 1956 with the objects mentioned in the Memorandum of Association, a copy of which is annexed hereto and forms part of this Prospectus and, in particular, the main objects are:—To carry on the business of manufacturing of and dealing in Plastic Moulding Powders and compounds, Cellulose Acetate flakes and Polyvinyl Chloride polymers, and all such articles and things which can or may be conveniently manufactured from such moulding powders, compounds, flakes and polymers and all other articles or things and machineries which can or may be conveniently used for the manufacture of or in connection with all such articles and things as aforesaid.

APPRECIATION.

At the present time Plastics are considered important in the national economy of all the progressive countries of the world. With the increasing growth of heavy industries in India the plastic industry has now many new opportunities in producing industrial components and accessories as well as for consumer goods required in every home for daily use. Its applications as inexpensive basic industrial and constructional material, as also in fancy goods trade, are on the increase.

At present per capita consumption of plastics in India is only 0.08 lbs. as against 22 lbs. in U.S.A., 18 lbs. in Germany, 11 lbs. in U.K. and 6 lbs. in Japan. It is expected that the per capita consumption in India will increase in line with the general economic improvement and will be at least trebled by 1960. The target of consumption in the third five-year plan is expected to be of the order of 12,32,00,000 lbs. to 13,44,00,000 lbs. per year.

Till recently India had not manufactured any plastic moulding powders or compounds, and her demand for these was being met by imports from the U.S.A., U.K., Germany, France and Italy. The demand for moulding powders on the basis of present import and the requirements of the Plastic Product Industries will for many years to come be more than can be met by the internal capacity for manufacture of these powders. Cellulose Acetate Moulding Powders are not still manufactured in

SHARE CAPITAL.	
AUTHORISED	Rs. 30,00,000
	divided into 30,000 7½ per cent Tax-free Cumulative Preference Shares of Rs. 100/- each.
	Rs. 70,00,000
	divided into 7,00,000 Equity (Ordinary) Shares of Rs. 10/- each.
	Rs. 1,00,00,000
ISSUED:	Rs. 25,00,000
	divided into 2,50,000 Equity (Ordinary) Shares of Rs. 10/- each.
	Rs. 25,00,000

Of the above issue, 50,000 Equity Shares of Rs. 10/- each are reserved for issue to the Promoters, Directors and their friends and associates at par.

LOAN CAPITAL.

The Company has created no Mortgages Debentures or other Loan Capital.

FINANCIAL REQUIREMENTS.

The Financial Requirements of the Company are comprised of:—

FIRST PHASE	
1. Cost of land, cost of factory, office buildings, etc. ...	Rs. 3,50,000
2. Cost of plant and machinery, import duty, transport to site, erection and other implementative expenses and also other local purchases for plant and machinery and fabrication costs	Rs. 6,00,000
3. Working Capital ...	Rs. 7,50,000
4. Preliminary expenses including brokerage and other Share Issue expenses ...	Rs. 1,50,000
	Rs. 18,50,000
SECOND PHASE	
1. Expenses for Addition to Factory ...	Rs. 1,00,000
2. Additional cost of plant and machinery ...	Rs. 3,00,000
3. Working Capital ...	Rs. 2,50,000
	Rs. 6,50,000

MINIMUM SUBSCRIPTION.

The minimum amount which in the opinion of the Directors must be raised by the issue of shares in order to provide the sums required to be provided as per Paragraph 5 of Schedule II of the Companies Act, 1956, upon which the Directors will proceed to allot shares offered by this Prospectus is ONE LAKH TEN THOUSAND Equity Shares of the nominal value of Rs. 11,00,000/- being only a part amount of this issue, out of which Rs. 3,50,000/- shall be set aside for land, factory and office buildings, etc. and Rs. 6,00,000/- will be expended for the purchase and erection, etc. of the plant and machinery and Rs. 1,50,000/- shall be for the preliminary expenses including commission and brokerage and expenses of this issue.

India. As a 'plastic' material, Cellulose Acetate has extended use particularly when good impact, strength, toughness and colourability are required in the end products.

The East Anglia Plastics (India), Limited is the first Company to have received sanction from the Government of India to manufacture Cellulose Acetate Moulding Powders and P.V.C. Compounds in collaboration with a foreign firm.

The uses of Cellulose Acetate Moulding Powders and P.V.C. Compounds, both industrial and domestic, are numerous. The Electrical industry uses them for switch plates, coil forms, connection terminals, small instrument housings, refrigerator and hardware handles and lamp-sheds; Radio makers use them for midge cabinets and for knobs and push buttons; Package users have been aided by the decorative and useful low-cost packages moulded from Cellulose Acetate in the beautiful colours available, the Plywood industry uses them as a bonding material; and the Paint and Varnish industries use them extensively. From Cellulose Acetate are made kitchen utensils, toys, flash-light cases including the lens, bracelets, necklaces, hair ornaments, compacts, zip fasteners, goggles, telephones, oil cans, tool handles, pistol and cycle grips, etc.

P.V.C. being resistant to oils, alkalis and acids is extensively used for manu-

facture of gaskets, rigid pipes, flexible hoses and plating tank protective coating. Being a non-conductor it is used largely as an insulation material for electrical cables, wires and flexible Artificial leather and leather cloth are extensively manufactured from P.V.C. Imports into India of Cellulose Plastics Moulding Compounds and Polyvinyl Chloride Moulding Compounds from U.K. alone during the year 1959 were over 22,40,000 lbs.

Current demands in India for Cellulose Acetate Moulding Powders and P.V.C. Compounds and their anticipated requirements in the immediate future are expected to be between 1,12,00,000 lbs. and 1,34,40,000 lbs.

EXPECTED PROFITS.

The Annual Capacity of the factory in the first phase working in two shifts, is approximately 29,12,000 lbs. of Moulding Powders. According to the estimation of the collaboration company, Messrs. East Anglia Plastics Ltd., of U.K., the profit margin on similar production in U.K., after allowing for the cost of raw materials, processing costs including cost of labour etc., and overheads and packing costs, is approximately £18,534, which is equivalent to about Rs. 6,50,000. In the second phase, the Company proposes to increase production and also to undertake manufacture of end products.

On the above basis and considering the prevailing prices for Moulding Powders in India, the Directors are of the opinion that reasonable profits will be earned by the Company in the first twelve months following the installation of the machinery and equipments and from the commencement of production of Cellulose Acetate Moulding Powders and P.V.C. Compounds and, in the absence of any unforeseeable circumstances, the Company should be in a position to pay reasonable dividends.

TECHNICAL ADVISERS AND COLLABORATORS.

The Promoters have been successful in securing the collaboration of East Anglia Plastics Limited, of 32, Brook Street, London, W.1, as Technical Advisers. The Company is a reputable, old and established manufacturer of these Compounds in the United Kingdom and has long experience of manufacturing Cellulose Acetate Moulding Powders.

The collaborating Company is an associate of Messrs. Monsanto Chemical Company, U.S.A. and Messrs. Monsanto Chemicals Limited, Monsanto House, 10-18, Victoria Street, London. Subject to the provisions of section 255(1) of the Act, during such time as East Anglia Plastics Ltd. shall be the consultants and technical advisers of the Company under the agreement referred to in Article 3 of the agreement adopted in place of or in continuation of the said agreement, East Anglia Plastics Ltd. shall have the right from time to time to nominate two persons to be Directors of the Company and at any time to remove any such Director and appoint another person to be a Director in his place and to fill any vacancy otherwise occurring in the office of such Director.

East Anglia Plastics Limited of U.K. will make available to the Company their 'know-how' concerning the production of plastic compounds. They will give all possible assistance in the setting up of the factory and will supervise the manufacture in India.

Indian Technical Personnel will be trained in the U.K. factories of East Anglia Plastics Limited. East Anglia Plastics Limited have been appointed Technical Advisers to the Company for a period of 10 years.

ROYALTY.

A Royalty at the rate of 3 per cent only on the sale proceeds of Cellulose Acetate Moulding Powders and P.V.C. Compounds manufactured by the Company will be paid to the Company's foreign collaborators, Messrs. East Anglia Plastics Ltd., of 32, Brook Street, London, W.1, in accordance with the sanction received from the Ministry of Commerce & Industry, Government of India, and no other ex-gratia or any payment otherwise will be made to the said foreign collaborators for their technical know-how.

SELLING ARRANGEMENT.

The Company will have the benefit of the association of the Selling Agents, Messrs. Monsanto Chemicals of India Private Ltd., a well-known business house of India, who have wide experience as a marketing organisation and of which the parent company are

23 April 1960

MONSANTO CHEMICAL COMPANY, U.S.A., MONSANTO CHEMICALS LIMITED, LONDON.

Monsanto Chemicals of India Private Limited have been marketing as Sole Distributors in India fine and heavy chemicals and raw materials for the Plastic Industry.

The Company is entering into necessary agreement with them, appointing them as Sole Distributors and Sole Selling Agents of the company for India, Pakistan, Burma & Ceylon.

LOCATION OF THE FACTORY.

After a careful and long survey a suitable site on Jessore Road, near Calcutta, measuring approximately 1,44,000 sq. ft. of land with partly completed structures and floors covering 8,000 sq. ft. approximately with adequate facilities for supply of electricity and water has been selected by the Company for the factory.

TAX BENEFITS.

The Company will be entitled to the special benefits under the Indian Income Tax Act with respect to Development Rebate. The Company will also enjoy the benefit of Section 15C of the Indian Income Tax Act, whereby the profits upto 6% on the employed Capital will be exempted from tax for the first five years of operation.

TECHNICAL ADVISERS & COLLABORATORS.

Messrs. East Anglia Plastics Limited, 32, Brook Street, London, W.1.

BANKERS

1. State Bank of India, 1, 2 & 3, Strand Road, Calcutta-1.
2. Lloyds Bank Ltd., 41, Chowringhee Road, Calcutta-16.

PROSPECTUS & APPLICATION FORMS.

Copies of the Prospectus on the terms of which alone Applications will be considered, and Application Forms may be obtained from the Registered Office of the Company or from the Company's Bankers at their Head Office or existing Branch Offices at Calcutta, Ahmedabad, Allahabad, Amritsar, Banar, Bangalore, Bombay, Calcutta, Delhi, Dibrugarh, Hyderabad, Indore, Jaipur, Gwalior, Lucknow, Madras, Madurai, Kanpur, Patna, Rajkot, Surat, Tirunelveli, Varanasi.

was less demand than in recent weeks for high-grown teas and the majority was sold at rates which were upto 60 nP per pound below valuations. Similar Fannings were often difficult to sell.

Good medium and medium descriptions were generally 10 nP to 15 nP lower. Low Mediums, however, received better support and were absorbed readily at a drop of 5 nP to 10 nP. Low-grown and Plainest sorts received fair support at about firm rates. Whole Leaf grades were firm with Orange Pekoes a strong feature. Low Medium was quoted at Rs. 1.80 to Rs. 1.85; Medium at Rs. 1.85 to Rs. 2.00; Good Medium at Rs. 2.10 to Rs. 2.40 and Quality at Rs. 2.60 to Rs. 4.40.

In London auction, only a smaller quantity of 53,336 packages was offered. Demand, in the aggregate, was fairly good and prices for the most part recorded no significant change. Among the North Indian teas, coloury liquoring kinds and the best qualities were irregularly dearer, with particular attention being paid to autumnal types from Assam.

All well-made and coloury African invoices showed small increases. Of the Ceylon offerings, the plainer high-grown descriptions, especially Uvas, were often 1d per pound lower. The price range for plain teas was unchanged; but was dearer for quality, sorts.

Tea stocks in London, as on 8 April, were 158.18 million pounds as against 159.28 million pounds in the previous week. Total afloat was 15.66 million pounds including from Calcutta 7.12 million pounds; from Chitagon 152,000 pounds; from Ceylon 848,540 pounds; from Ceylon 5.66 million pounds and from other Ports 1.89 million pounds.

Reappraisal of Cotton Supply Position

THE cotton futures market in Bombay gained fresh strength during the week under review. The acute scarcity of the indigenous cotton supply continued to aid the bullish sentiment with the result that the ICC August contract touched new high level. However, as during the non-delivery period, the effective ceiling rate being Rs 790 and not Rs 820, traders who were still bullishly disposed were inclined to book profit at higher levels. The August contract rose to as high as

Rs 736.50 before reacting to Rs 781 to be placed at Rs 782.

The gravity of the cotton supply position during the current season can better be realised from the successive reduction in the crop estimate to as low as 37.50 lakh bales as against earlier ideas of 50 lakh bales. Though the Textile Commissioner has directed the mills to use more and more of foreign cotton, it is generally the impression in trade circles that the mills prefer indigenous cotton in relation to foreign quotas and as such consumption of Indian Cotton might not show any serious drop. Actual arrivals of foreign cotton during the season might not exceed 7 lakh bales despite large import allocation issued so far and expectation of further releases during the rest of the season.

Reappraisal of Supply:

The carry over of Indian cotton at the end of the season i.e., on 31 April, 1960 is estimated around 8.24 lakh bales and of foreign cotton at 2.78 lakh bales i.e., in all 11.06 lakh bales as against 20.27 lakh bales last year comprising 18.47 lakh bales of Indian cotton and 1.60 lakh bales of foreign cotton. With crop estimate of 37.50 lakh bales and imports of 7.25 lakh bales, the total supply position during the current season is placed around 64.82 lakh bales. With consumption of 51.11 lakh bales comprising 45.04 lakh bales of Indian cotton and 6.07 lakh bales of foreign cotton, estimated village consumption of 65,000 bales and exports of 2 lakh bales, the total supply would be 47.69 lakh bales leaving a carry over of 828,000 bales of Indian and 2.78 lakh bales of foreign cotton. This will leave an overall carry over of 11.06 lakh bales on 31 August 1960 as against 20.07 lakh bales comprising 18.47 lakh bales of Indian and 1.60 lakh bales of foreign cotton.

SPOT COTTON.

In the spot market at Sewri, more than indigenous cotton, the bulk of the business was reported in foreign growths due to fresh allocation. The price loss for domestic cotton continued to remain firm. As the marketing season of the staple cotton will be coming to a close after a month or so, mills were no doubt inclined to complete their purchases against the unutilised portions of their quotas.

Dabhol were done at Rs 1,083 to Rs 1,081, subject to survey, Digvijay at Rs 1,120, Limbdi at Rs 930, Porbander Co at Rs 1,125, Mandurbar Surti at Rs 1,045, Verawal Co2 old at Rs 1,115 and Palej Broach at Rs 1,111. Akot L 147 changed hands at Rs 980, Purna G6 at Rs 980, Telhara at Rs 975, Antoli Digvijay at Rs 1,110 and Nagar CO2 at Rs 1,061. Karnataka Laxmi was put through at Rs 965, Ellichpur CO2 Rs 1,045 for spot railway receipt, Mudhol Joydhar at Rs 1,000, Ganganagar at Rs 825 and 850, Digros at Rs 980 and Amravati L 147 at Rs 1,030. In the Kalyan line, business was done at rates varying from Rs 910 to 935.

Among foreign varieties prices of Sudan were reported firm due to limited offerings while Africans ruled quiet. Fairly good business passed in American cotton American

Middling 15/16" came into business at Rs 955 for May-June, 31/32" at Rs 985 while 1" Middling for May-June changed hands at Rs 1,065. Sudan G 3 L for April-May came into business at Rs 1,575 and G 2 L at Rs 1,680 to Rs 1,685.

CLOTH MARKET.

In the cotton piecegoods market moderate business passed during the past week but lacked drive. Prices of cloth of lower medium counts ruled firm due to scarcity of indigenous cotton, while the tendency for fine and superfine goods were a shade quiet. Demand from up-country was rather slack. The stringency in money market has no doubt affected the offtake to some extent while the continuation of the strike by the road operators has also proved deterrent in the clearance of goods.

Production of mills made cloth during the first quarter of this year has increased slightly to 1231 million yards as against 1228 million yards last year for the corresponding period while output of yarn has decreased to for 23 million lbs. as against 429 million lbs.

Cloth stocks with the mills as on 31 March 1960 have increased by 26,000 bales to 286,000 bales out of which unsold cloth accounts for a rise of 16,000 bales at 156,000 bales while cloth sold but not delivered has increased by 10,000 bales to 130,000 bales.

NEW YORK COTTON.

Prices on the New York Cotton market have continued to move narrowly with July position finishing at 32.55 cents per lb. In view of the Government's intervention in the spot business as well as in exports, the market has lost much of its usual liveliness with the result that speculative activity has dwindled considerably. Trade quarters sometime back had urged the US Government to take off its hands from cotton business, but so far no tangible result has been achieved. The result is that the professional operators evince very little interest in the day-to-day movement of the market.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED

PREFERENCE SHARE DIVIDENDS

In view of the proposals contained in the Finance Bill 1960 relating to the basis of deduction of tax at source from dividends on Preference Shares, the announcement regarding the payment of dividend on the Preference Shares of the Company for the period 1.10.1959 to 31.3.1960 will be deferred until after the enactment of the Finance Act 1960.

By Order of the Board
THE ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED.

F. G. LAMONT,
Director.

13th April, 1960.

The Dunlop Rubber Co. (India) Ltd.

Mr. John Luckham's Review

The 34th Annual General Meeting of The Dunlop Rubber Co. (India) Ltd., was held in Calcutta on 19th April, 1960. Mr John Luckham, Managing Director, said:—

Gentlemen,

The Directors' Report and Accounts have been in your hands for sometime, and with your permission I will take them as read.

I would like to draw attention to the Special Resolution which will come before you today to appoint Mr. P. B. Sen Gupta to the Board. Mr. Sen Gupta has had long and varied experience with the Company which makes him fully qualified to take up this new appointment, and I am confident that the Board's recommendation will have your full support.

THE YEAR'S TRADING:

Our new factory at Ambattur, Madras, was officially opened on the 12th February, 1959. Production has developed satisfactorily and full production will be attained very shortly.

In spite of the additional output from Ambattur it was not possible to meet the demand for all our products. Road transport continued to expand, with a resultant higher demand from the Replacement market and, in addition, we had larger commitments to meet from the vehicle manufacturers, both car as well as commercial vehicles.

The new Gold Seal car tyre which was introduced during the year was very well received by motorists, and in the commercial vehicle range increased supplies of Highway tyres were made available. This pattern is proving very popular.

Bicycle manufacturers also stepped up their production, and a number of new Small Scale units were licensed by Government during the year. We have been able to meet their tyre requirements in full, though our rim production was insufficient to cater for all of their needs. Increased supplies of cycle tyres were also made available for the Replacement market, and I am happy to state that in addition we were able to commence playing our part in Government's export drive, by shipping sizable quantities of cycle tyres to markets in South East Asia.

Our production of Industrial Rubber products was fully sold and, during the year, we completed our Vee Belt expansion. The proposed expansion of Conveyor Belting, referred to in my speech last year, was approved by Government, and the equipment now on order to take care of this should

be installed before the end of 1960. We expect this increased capacity will be fully utilised.

Sales of Dunlopillo were slightly higher than in the previous year, and here also we were unable to meet the demand in full. Apart from its popularity as a household article, Dunlopillo is very largely used in the automobile industry, not only for its natural comfort but also because of its economic advantages. The rapid expansion of the vehicle industry is certain to increase the demand for Dunlopillo, and your Directors have this point in mind.

RAW MATERIALS:

The raw material supply position was generally satisfactory except during a period of two months when there was a strike at our main suppliers of textiles in India and we had to organise, at short notice, alternative supplies from abroad. Fortunately, the imported textiles arrived in time and we were able to maintain full production.

Our consumption of rubber in 1959 increased to 17,291 tons as against 15,926 tons in 1958. The All-India consumption of rubber in 1959 touched a new record at 43,000 tons as against 38,000 tons in 1958. The production of raw rubber in India in 1959 showed no improvement being 23,398 tons as against 24,327 tons in 1958.

Prices of imported raw rubber and cotton textiles increased in the second half of 1959. Whilst this had a small effect on our 1959 costs, the impact on 1960 costs is already a major factor. This not only affects your Company but the whole tyre industry which has had to absorb every rising cost which has taken place over the last four years. The matter is receiving our very close attention at the present time.

FORWARD OUTLOOK:

I have already said that our existing capacities are fully utilised and it is evident that general industrial expansion will continue throughout the Third Five Year Plan. As in the past, your Company intends to play its part and preliminary steps have been taken to obtain Government's approval. You will appreciate that any substantial expansion will require considerable foreign exchange for plant and machinery, and negotiations for this are in progress.

You will have seen press reports to the effect that The Goodyear Tyre & Rubber Co. of India Private Ltd. will be setting up their own factory near Delhi. Ever since our Sahaganj factory was started your Company has manufactured for Goodyear under an

agreement, and the requisite notice has been received terminating this long-standing arrangement with effect from the end of 1961. This association with Goodyear has always worked very smoothly for the mutual benefit of both parties, and we wish them success with their new venture. In our forward plans we have taken account of the fact that the capacity now utilised for Goodyear will become available for increased Dunlop production, and no difficulty is anticipated in marketing this extra Dunlop output.

PROFIT & LOSS ACCOUNT:

The profit for the year before taxation but after providing for depreciation and interest was Rs. 1,92,80,084, compared with Rs. 1,70,56,227 for 1958. As a percentage of sales the profit amounts to 7.45%, as against 7.66% for the previous year.

The provision for taxation of Rs. 74,75,551 is substantially less than the provision for 1958, namely Rs. 88,13,414, reflecting the changed structure of Company taxation consequent upon the Budget proposals for 1960.

Depreciation has substantially increased, mainly because of the establishment of the new factory at Ambattur. There has also been a sharp rise in the quantum of excise duty arising from the enhancement of excise duty rates effected by the 1959 Finance Budget, together with the fact that our sales increased during the year.

A sum of Rs. 17,00,000 has been transferred to Development Rebate Reserve and a sum of Rs. 30,00,000 is appropriated to General Reserve. The total Reserves and Surplus have been increased by approximately Rs. 49,00,000.

The Directors are recommending an ordinary dividend for 1959 at the rate of 21.5%, subject to tax, which is approximately the same as the rate of 16½% free of tax declared for 1958.

BALANCE SHEET:

The net increase in Fixed Assets during the year amounted to approximately Rs. 37,00,000, mainly in plant and machinery. Stock Inventories remained practically the same as in the previous year despite higher output and sales, principally because the continuing demand for the Company's products resulted in a further decrease in finished goods stocks.

Sundry Debtors were noticeably lower than the previous year despite the greater volume of sales.

On the liabilities side, I have already mentioned the increase in Reserves and Surplus. One minor adjustment has been made here in that it was thought expedient to

merge the Dividend Equalisation Reserve with the General Reserve.

You will have seen that your Directors are recommending that the authorised capital be increased by Rs. 2,50,00,000 and that this be done by creating 25,00,000 shares of Rs. 10 each, which shall for the time being remain unclassified. It is felt that an expansion in the authorised capital is necessary taking a forward view of the Company's future requirements and that the creation of unclassified shares will allow the maximum flexibility in the capital structure.

EMPLOYEE RELATIONS:

Last year I told you that our labour relations at Sahaganj had been somewhat strained, and I regret that the improvement which we had hoped for did not in fact take place. The main problem stems from inter-union rivalry making it impossible for management to negotiate terms acceptable to labour as a whole. Production was hampered in varying degrees by go-slow tactics throughout 1959, and early in 1960 an illegal partial strike took place. I am glad to say that normal production has been restored and every endeavour is still being made by management to resolve these labour problems.

Throughout all these difficulties a very large section of the employees continued to give staunch service and to them I am sure you would like to join the Directors in extending their sincere thanks and appreciation.

NOTE:— THIS DOES NOT PURPORT TO BE A RECORD OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETING.

THE CHAMPDANY JUTE CO., LIMITED.

Notice is hereby given that an Interim Dividend of 4% for the year ended 31st March, 1960 has been declared payable on 27th May, 1960; the dividend is subject to deduction of tax under the Indian Income Tax Act, 1922. Dividend Warrants will be issued to the registered shareholders whose names appear in the Register on the latter date or to their mandatees.

The Share Register of the Company will be closed from 9th to 27th May, 1960, both days inclusive.

By Order of the Board,
JAMES FINLAY & CO.,
LIMITED,
Managing Agents.
2, Netaji Subhas Road,
Calcutta, 19th April, 1960.

FOR THE INVESTOR

Sustained Interest

Investment Gossip:

THE behaviour of the stock markets during the past few weeks clearly reveals that gone are the days of pessimism. There is now available plenty of money for any venture, old or new, which has a fair promise of showing a good working either immediately or a few years hence.

The sustained interest in equities is due to a number of factors which are now at work all at once. There is first a plethora of funds as a result of hefty deficit financing. Growth prospects are another powerful attraction. What with the assistance and encouragement given by Government, new enterprises are springing up in quick succession. The period of waiting for new ventures is also likely to be cut down to the minimum because expeditious commissions is one of the main aims of the industrial policy. Perhaps the main influence in the investment situation today is the revived confidence that private enterprise has a long and profitable future despite talks of a speedy establishment of socialism or the need for the levelling of inequalities in income.

The spectacular success of some of the new issues whose first stock exchange markings are more than double their issue price is no doubt exerting a powerful influence on prospective investors. Quite a few should have reaped a good harvest from their new issue investment. The continued good response to new issues shows that investors' preference is still in this direction.

As noted last week, industrial production last year has recorded a sizable uptrend over the previous year. The current year being the last year of the Second Plan will witness a further accentuation of the trend. Many new industries that have been begun either toward the end of the first Plan or early during the current Plan period will be coming to fruition soon. And the next Plan period will take industrialisation a sizable way ahead.

It is but natural for investors, therefore, to buy growth shares now lest they miss a good chance.

There has also been some good news for the operators. The Finance Minister has announced some tax concessions though it is idle to expect that he can win the approbation of one and all. The supposedly stringent condition pertaining to 'Banks' advance against shares has not done much dam-

age. However, gloomy prophets forecast of a failure of the Chou-En-lai—Nehru talks and more credit curbs to come are contributing to a cautious undertone.

£RS

New Issue Notes

The Britannia Engineering Company Limited has proposed to issue one lakh new Ordinary shares of Rs 10 each, at par, in the proportion of one new share for every four shares held to those shareholders whose names are registered as on 10 May. These new shares will rank, in all respects, pari passu with the existing shares except that they will not participate in any dividend declared for any period ending on or before 31 December, 1959.

Balrampur Sugar Company Limited has announced that the last date for the receipt OF APPLICATIONS relating to the issue of right ordinary shares has been extended to 30 April.

The Union Carbide India Limited has proposed to issue 800,000 right shares of Rs 10 each, at a premium of Rs 2.50 per share, in the proportion of two new shares for every five held. The proceeds will be utilised to finance new undertakings and to repay partly the foreign credits established in 1957 and 1958.

It is learnt that Duncan Brothers and Company Limited, in association with Phillips Petroleum Company of the USA, will promote a new company called Phillips Carbon Black Limited, which will manufacture carbon black in India from indigenous resources. This new company has decided to issue 1,249,989 Ordinary shares of Rs 10 each, at par. Of this, the promoters will take up 749,990 ordinary shares and the remainder will be offered for public subscription. The plant will be set up at Durgapur in West Bengal and is expected to begin production in early 1962.

In Bombay, Premier Tyres Limited has announced that the letters of allotment for equity and preference shares have been posted and that the letters of "regret" are being despatched to the unsuccessful applicants.

A new paper mill and machinery-manufacturing plant is being set up in Bombay. A company, under the name and style of Paper Mill Plant and Machinery Manufacturers Limited, has been formed with an authorised capital of Rs 1 crore. It has secured technical collaboration with Messrs James Bertram & Son Limited of Edinburgh, who are well-known manufacturers of paper and board making plant and machinery. The factory will be situated at Jogheswari, near Bombay. The company does not propose to come to the market for financing the project immediately. It may, however, offer shares to the public when it embarks upon the second stage of expansion.

A new paper mill, known as Seshasayee Paper & Boards Limited, has been formed. It will have an issued capital of Rs 3.50 crores, consisting of Rs 3.25 crores in ordinary and Rs 25 lakhs in preference shares. The Export-Import Bank will provide Rs 2 crores and the

ICIC Rs 50 lakhs. The entire preference capital will be taken up by the LIC. Out of the ordinary capital of Rs 3.25 crores, the Madras Industrial Investment Corporation will take up Rs 1 crore. The foreign participants in the project (Parsons and Whitmore) will take up Rs 75 lakhs. The directors and their friends are expected to take up Rs 25 lakhs and an equal sum by the LIC. The remaining portion of the issue—Rs 1 crore worth of equity shares—will be completely underwritten. The company has received sanction for the issue from the Controller of Capital Issues.

Mysore Cements Limited has offered, for public subscription, 4.40 lakh equity shares of Rs 10 each at par. A sum of Rs 5 per share is payable on application and the balance on call or calls to be made, by the directors, not earlier than four months after allotment. The subscription list will open on 21 April and close on 30 April or earlier, but not before 28 April, at the discretion of the directors. The company will establish a cement plant, operating dry process, with an initial capacity of 100,000 tons. The company has entered into an agreement with Kaiser Engineers Overseas Corporation of the USA for engineering assistance in the design, construction and start-up of the plant. The entire issue of equity shares, offered to the public, has been underwritten.

£RS

Investment Notes:

The control of the Bengal Paper Mill will be transferred, with effect from 28 April 1960, to the Board of Directors. In this connection, it would be recalled that the managing agency was relinquished by Balmer Lawrie & Company Limited on 14 January 1957. But, with effect from 15 January 1957, they were appointed as Secretaries and Treasurers by the directors to carry on day-to-day affairs of the company.

The shares of Rallis India have been keenly sought after during the past few days and the rate is now quoted around Rs 127 against Rs 105 quoted a week ago. This persistent demand for the shares is mainly due to an optimistic view of the future outlook for the company, which is making striking progress in all directions.

The Hindustan Aluminium Corporation Limited is understood to have obtained a licence for the fabrication of aluminium products to the tune of 15,000 tons a year.

COMPANY REPORTS

Shree Niwas Cotton Earns Higher Profits

Balance-Sheet Reviews:

Thanks to a substantial rise in sales from Rs 3.09 crores to Rs 3.55 crores, the Shree Niwas Cotton Mills Limited has reported a higher net profit, after providing for Depreciation and Taxation, of Rs 17.94 lakhs for 1959 as against Rs 9.31 lakhs in the previous year. Apart from providing a sum of Rs 8.00 lakhs for Taxation, the Depreciation amount is raised to Rs 10.51 lakhs from Rs 8.33 lakhs.

After transferring a sum of Rs 2.50 lakhs from General Reserve, the directors have provided Rs 8.00 lakhs (Rs 4.65 lakhs) for Development Rebate Reserve. No provision is made for Renewal and Replacement Reserve against Rs 5.00 lakhs previously. A gross dividend of 15 per cent is recommended. This works out to a net dividend of 10.5 per cent against a tax-free dividend 10 per cent paid for 1958.

The balance-sheet, as at 31 December 1959, shows a paid-up capital of Rs 84.80 lakhs divided into 80,000 Ordinary shares and 4,800-4 per cent Redeemable Cumulative Preference shares, both of Rs 100 each. Against this, General Reserve is shown at Rs 28 lakhs; Investment Reserve at Rs 1.88 lakhs; Dividend Equalisation Reserve Rs 4.00 lakhs; Renewal and Replacement Reserve Rs 5.60 lakhs and Development Rebate Reserve Rs 12.65 lakhs. The gross block at Rs 1.74 crores is depreciated by Rs 73.41 lakhs to show a net block value of Rs 1.01 crores.

New additions to the various sections of Plant and Machinery to the extent of about Rs 33 lakhs were made during the year under review and further orders to the extent of Rs 45 lakhs are still pending. The renovation of the entire Spinning Department will be completed very shortly. Negotiations are also being made for the installation of a Sanforizing Plant in the Finishing Department.

A big programme of modernisation of Shree Madhusudan Mills Limited—the subsidiary company—has also made progress and 24,952 new spindles have already been installed in replacement of the old Ring Frames. A further programme of 12,676 spindles is also under implementation. It is expected that the company will be able to consolidate and strengthen its resources during the current year.

Trichinopoly Mills Pay More

The Trichinopoly Mills Limited has been able to recommend a higher dividend of 12 1/2 per cent for 1959 as against 7 1/2 per cent paid for the previous year, thanks to a rise in profits. Sales have risen to Rs 34.56 lakhs from Rs 28.98 lakhs, while the net profit, before providing for Depreciation and Taxation, works out to Rs 3.82 lakhs as against Rs 2.62 lakhs in the previous year.

In respect of allocations, the Depreciation amount is reduced to Rs 71,043 from Rs 79,212, while Taxation provision is increased to Rs 1.47 lakhs from Rs 90,000. As the balance after appropriation to the above funds is small, the directors have transferred Rs 11,000 from Dividend Equalisation Reserve to recommend the dividend mentioned earlier.

The paid-up capital is Rs 13,98,730 against which reserve and surplus amount to Rs 8.64 lakhs. The gross block is shown at Rs 20.42 lakhs; total depreciation at Rs 15.00 lakhs and the net block at Rs 5.41 lakhs.

Hindusthan Building Passes Dividend

A substantial decrease in earnings is reflected in the passing of the dividend by the Hindusthan Building Society Limited for the year 31 July 1959. The dividend declared for the previous year was 4 per cent.

Profit on sales of land and shares is lower at Rs 97,029 against Rs 2.88 lakhs, while the net profit works out to 92,423 against Rs 2.91 lakhs. The directors have set apart a sum of Rs 473 (Rs 323) for Depreciation and Rs 40,000 (nil) for General Reserve. The carry-forward is higher at Rs 7,928 against Rs 1,233 brought in from 1957-58.

The subscribed capital is shown at Rs 25 lakhs divided into 1.50 lakh Ordinary shares of Rs 10 each and 10,000-4 per cent tax-free Cumulative Preference shares of Rs 100 each. Reserves and surplus amount to Rs 51,579.

STOCK EXCHANGES

Bullish Tempo Continues

Watch-Dog Writes:

REOPENING after the Easter holidays, stock markets have continued to depict a bullish tempo, thanks to the tax concessions announced by the Finance Minister. The expectation of an early increase in steel retention prices is another contributory factor. With the sustained recovery in prices from the recent low levels, there has also been fresh investment buying. There is, however, a general disposition to book profits at bulges, as operators have preferred to await the outcome of the Nehru-Chou talks on the border dispute. Equities on the Calcutta Stock Exchange encountered fresh support with prices showing a sharp recovery from the pre-holiday levels.

On the Bombay Stock Exchange, price movements were rather erratic on alternate buying and selling. There was practically little change in the general pattern of trading on the Madras Stock Exchange.

Calcutta

ACTIVE conditions were witnessed on the local Stock Exchange last week when selected shares made further headway in expanded turnover. The main inspiration for the bull operators was derived from the announcement of the tax concessions, the imminent increase in steel retention prices and the encouraging news from the industrial front. As a matter of fact, the scramble for shares with growth potentialities continued with buyers remaining unsatisfied. Again, with the sustained recovery in prices, there was also fresh buying by investors.

Rumours were still current that the Reserve Bank might tighten the credit restrictions as the market continued to maintain a bullish tendency. Some anxiety was also shown with regard to the outcome of the present Indo-Chinese negotiations on the border issue. These factors were reflected in stray liquidation at higher levels, although selective buying continued to mould the pattern of trading.

Conditions in the Gilt-edged market remained quiet with business on a reduced scale. Institutional support was lacking, due largely to stringent monetary conditions. Demand from other sources was also negligible. After opening at Rs 74.50, 3 per cent 1986 Conversion Loan moved down at one time to

Rs 73.25, to improve toward the close to Rs 73.50.

Interest in Bank shares was at a low ebb though the undertone was steady. Punjab National changed hands at Rs -20-81 to Rs 21, while United Commercial remained unchanged at Rs 67.50.

Jute shares continued to lack buying interest although a few selected ones showed some improvement in sympathy with the general trend of the market. Turnover, however, remained restricted due to a general fear that the mills might be compelled to buy the raw material at still higher prices to carry out the IJMA's decision of following shares, Birlas being taken month and consequently the profit margin would be greatly reduced. Dealings were prominent in the following shares, Birlas being taken up to Rs 29.75 from Rs 29; Ganges up to Rs 12.12 from Rs 11.75; Howrah up to Rs 23.50 from Rs 22.75; Megna up to Rs 12.50 from Rs 12 and New Central up to Rs 27.12 from Rs 26.56. The closing rates were slightly lower than these levels due to profit-taking. Among higher-priced shares, Alliance improved to Rs 120 from Rs 118; Bally to Rs 240 from Rs 228 and Champdany to Rs 121 from Rs 118.

There was a revival of activity in the Coal section on expectation of an increase in demand for the commodity due to a great stride in industrial production. Central India were enquired up to Rs 12.50 from a low of Rs 9.94; Western Bengal up to Rs 8.44 from Rs 7.62 and East Indian up to Rs 30.37 from Rs 30.19. Bengal were a steady feature at Rs 332, while Burrakur fluctuated irregularly between Rs 19.81 and Rs 20.37, to finish the week at Rs 19.81.

Although dealings in the Tea section were few and far between, prices maintained a steadier tendency due to a general feeling that the industry had done better in the 1959-60 season. It was also believed that the new season would start well in view of the fact that the North Indian crop might be delayed by current drought conditions in the producing areas. Shares, especially of the Assam and Doorga gardens came in for good demand at enhanced levels on the hope of getting satisfactory dividends for last year. Bishnauth changed hands at Rs 20.75 to Rs 21.31; Dhunseri at Rs 17.75 to Rs 18; Grob at Rs 13.81 to Rs 14.12; Hasimara at Rs 23.37 to Rs 23.75; Jayshree at Rs 17 to Rs 18 and Tezpur at Rs 18.31 to Rs 18.62.

Sugar shares continued to fare well with prices recording a further rise due to sustained support. It was felt that the steady rise in production during the current season might improve the earnings of various companies. Raza-Buland were marked up to Rs 13.19 from Rs 13.00; Belsund up to Rs 14.25 from Rs 13.31; Carew up to Rs 12.06 from Rs 11.87; Cawnpore up to Rs 16.37 from Rs 15.25 and Dyer Meakin up to Rs 21.37 from Rs 20.19. Champaran and SKG were

almost maintained around last levels.

Textile scrip presented a firm front. Jayshree had buyers at Rs 13.25 to Rs 13.81; Cawnpore at Rs 7.50 to Rs 7.81; Elgins at Rs 20 to Rs 21.56 and Kesoram at Rs 25.87 to Rs 26.87. New Victoria remained unchanged at Rs 1.56. In Bangur group, Bowreah met with business up to Rs 170 from Rs 159 and Dunbar up to Rs 185 from Rs 175.

In the week's dealings, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to heavy buying due to the hope that the Government would soon sanction the retention price at such a level which would enable the company to cover the enhanced cost of production without affecting the profit margin so far enjoyed. Except for a sharp setback on Wednesday to Rs 23.15 from the initial level of Rs 23.50 due to settlement considerations, Indian Irons were gradually pushed up to Rs 23.91, to finish the week at Rs 23.73. TEXMACO were done up to Rs 26.30 from Rs 25.75 and Jessop up to Rs 26.25 from Rs 25.62, to close finally at Rs 25.90 and Rs 25.37 respectively. G. K. Williams were wanted up to Rs 44.25 from Rs 43.87 with only few sellers in evidence. Britannia Engineering were sought after up to Rs 14.75 from Rs 14.25 following the company's proposal to issue new ordinary shares at par. Kumardhubi and Marshall were nearly maintained at Rs 7.00 and Rs 6.09 respectively.

Of all the sections, the Miscellaneous was the most active and provided several bright spots, thanks to growth prospects. The following table shows the extent of the rise in the prices of a few selected shares:—

	Pre-holiday Closing Rs.	Week's High Rs.	Week's Closing Rs.
Orient Paper	43.00	44.30	43.70

Balance-Sheet Briefs:

In the Jardine Henderson Jute group, the Kamathatty Company Limited has shown a net profit, after providing for Depreciation but before Taxation, of Rs 28.33 lakhs for 1959 as against Rs 22.90 lakhs in the previous year. The directors have recommended a final dividend of 15 per cent, making a total of 20 per cent (taxable) against 5 per cent for 1958.

In the same managing agency group, the Kankarrah Company Limited has also reported a higher

profit of Rs 18.33 lakhs against Rs 10.15 lakhs. The dividend on the Ordinary shares is passed as in the previous few years.

Bharat Collieries Limited has incurred a loss of Rs 1.65 lakhs for the year ended 30 June 1959 against a net profit of Rs 5.31 lakhs. The dividend is passed against 6 per cent.

The net profit of the Union Carbide India Limited has increased from Rs 82.85 lakhs to Rs 1.36 crores for 1959. A taxable dividend of 18 per cent (including interim of 7 1/2 per cent) has been proposed. The dividend was 14 per cent, free of tax, in the preceding year.

The working of the Sulekha Works Limited has resulted in a higher profit of Rs 1.65 lakhs for 1958 as against Rs 1.26 lakhs for 1957. The directors have recommended a tax-free dividend of 10 per cent on the Ordinary shares.

In Bombay, Tata Mills Limited has earned a profit of Rs 20.72 lakhs for 1959 as against only Rs 2.20 lakhs in 1958. A taxable dividend of Rs 2.50 per share is proposed against Rs 1.50 previously.

The increase in the net earnings of the Svadeshi Mills Limited is even more pronounced at Rs 41.71 lakhs against Rs 27.69 lakhs. A dividend of Rs 14 per share, subject to tax, is recommended against Rs 10 tax-free.

The net profit of the National Rayon Corporation Limited is substantially higher at Rs 69.86 lakhs for 1959 as against Rs 43.35 lakhs in 1958. A taxable dividend of Rs 22 per share is recommended. This works out to a net dividend of Rs 15.40 per share against Rs 14 paid for the previous year.

Gokak Mills Limited has earned a profit of only Rs 3.24 lakhs against Rs 10.56 lakhs. The directors have transferred a sum of Rs 10.98 lakhs from Reserves to pay a dividend of Rs 6.00 per share, subject to deduction of tax.

The net profit of the Travancore Rayons Limited has risen sharply to Rs 107.47 lakhs from Rs 89.39 lakhs in 1958. A taxable dividend of 20 per cent is recommended against a tax-free dividend of 12 1/2 per cent.

Anglo-French Textiles Limited has earned a higher profit of Rs 13.95 lakhs against Rs 5.11 lakhs. A dividend of Rs 11 per share, free of French-Indian income-tax, is recommended against Rs 6.00 in the previous year.

Thirumbadi Rubber Company Limited has reported a profit of Rs 3.03 lakhs for the year ended 30 September 1959 against Rs 3.51 lakhs in the preceding year. A taxable dividend of 7 per cent is proposed.

Gokul Rubber & Tea Plantations Limited has earned a profit of Rs 68,464 for 1959 against Rs 59,114 previously. A dividend of 9 per cent (taxable) is recommended against a tax-free dividend of 6 per cent.

DURGAPUR STEELWORKS

GETTING READY FOR STEELMAKING

A skilled Indian technician makes adjustments to the Temperature Recorder for an Open Hearth Furnace in the Steel Melting Shop at Durgapur Steelworks.

The commissioning of the first Open Hearth Furnaces and the start of steel production at Durgapur will be another step forward in this great indo-British enterprise.

Bank of Baroda Travellers Cheques

safe, convenient, easy to carry

When you convert your money into Bank of Baroda Travellers Cheques...it is as safe as in the bank! Only you...by counter-signing...can cash your travellers cheques. And you can buy Bank of Baroda Travellers Cheques at any of our 87 offices...cash them at any office of the Bank of Baroda or the State Bank of India. Write in for our free booklet for complete information. And, when you make your next trip out of town...

Don't carry cash...
carry Bank of Baroda Travellers Cheques!

WORLD OF FINANCE

Reserve Bank, Banks and Price Behaviour

MR H. V. R. IENGAR, the Governor of the Reserve Bank, has been in Calcutta during the week, and there will naturally be conjecture as to the reasons which impelled a visit to the eastern capital at the present time. It is, we suggest, to be presumed that the provocation for the visit lies in the form and substance that has been taken by the 1959-60 busy season. For, each busy season of the Second Plan period has been throwing up its own special problems, and the one now ending has in this regard been no exception; and, each time, timely remedial measures have been taken by the monetary authorities. Thus, when the general anticipation, at the time, was that the 1956-57 busy season would prove so rigorous as seriously to strain the banking system, the Reserve Bank came forward with liberalised lines of credit to Scheduled Banks under the usance bills scheme. In 1957-58, surprisingly, the busy season seemed almost to be absent, and the Reserve Bank emerged as a supplier of securities to the banking system. In the next busy season, on the other hand, there was a resurgence of stringent conditions, and the expansion in bank Advances touched a new peak; whereupon a directive for the observance of general restraint in the matter of granting new Advances was issued by the central banking authority. Meantime, as and when necessary, the Reserve Bank's arsenal of weapons of selective monetary control was drawn upon. It is in such a background that the 1959-60 busy season assumes a special significance; and it is in such a light that an attempt is made here to interpret the Reserve Bank Governor's trip to Calcutta. We may first consider what the last busy season has been like.

Though, strictly speaking, the 1959-60 busy season has one more week to go, in the light of the decline which the Reserve Bank returns for the week ended 22 April report in Active Note Circulation of the order of Rs 12 crores, as also in view of the lack of changes of a busy season character in the return of the State Bank for the same week, the current busy season could, for all practical purposes, be deemed to have ended. The banking returns in the coming weeks should, therefore, be expected to reveal slack season attributes.

The 1959-60 busy season has turned out to be as busy and active as we had expected it to be. On the eve of the busy season, we had observed in these columns that the busy season would throw up a demand for funds for something approaching Rs 200 crores. It is now known that, between 30 October 1959 and 15 April 1960, the expansion in the advances of the banking system has been of the order of Rs 190 crores. (In the week ended 30 October 1959, dival demand caused a rise of Rs 13 crores in Bank Advances.) While the busy season demand for funds arises principally from the need for financing seasonal agricultural operations, the 1959-60 busy season demand for banking credit derived in no

small measure from the pronounced resumption of the upward trend in industrial production. It is noteworthy that the general index of industrial production for 1959 was 151.0 (Base 1951) against 132.6, 137.3 and 139.7 for 1956, 1957 and 1958 respectively. That the improvement in industrial production should impinge upon the banking system in the form of increased demand for funds was in the circumstances inevitable. However, the continuance of the Reserve Bank control on bank Advances against foodgrains was a factor that helped the diversion of bank credit along productive channels without jeopardising the general price level.

In retrospect, the 1959-60 busy season appears to have been tided over by the banking system without excessive strain being experienced in meeting the demand for funds. What helped the banking system in thus conquering the strains thrown up by the busy season just ending was the expansion in bank Deposits, which rose by nearly Rs 110 crores. The banking system has evidently benefited considerably from the increased tempo of Government disbursements in the fourth year of the Second Plan.

Now, on the threshold of the 1960 slack season, it is necessary to consider the probable nature of the 1960-61 busy season and of the means that would be available to the banking system to meet its demands. In the normal circumstances, it would be premature to embark on such a study of a busy season that lies six months ahead. However, developments have taken place in the banking sphere which make the circumstances that marked the 1959-60 busy season not quite relevant for consideration of the resources that would be available to banks during the 1960-61 busy season. For one thing, the demand for bank finance in the 1960-61 busy season is, in the light of the present and projected upward trend in industrial production, bound to be considerably larger than in the season that is just ending. The production of steel particularly, which holds the key for increase in general industrial production, is poised for a big increase. Further, with the Third Plan's emphasis on self-sufficiency in foodgrains, demand for credit for agricultural operations could also be expected to rise. It is, therefore, reasonable to assume that demand for bank credit during the 1960-61 busy season would be rather more substantial than was the case during the 1959-60 busy season. How far the banking system would be able to measure up to the enlarged demand for funds would depend in no small degree on the decline in Advances that may occur in the coming slack season. It was a favourable factor in the financing of the 1959-60 busy season that it started with a low Advances-Deposits ratio. The recurrence of a similar decline in Advances would lighten the burden on the banking system during the 1960-61 busy season. This, however, is a contingency that cannot be counted upon to occur in the circumstances that obtain today. With industrial production headed steadily upward, an important source of demand for bank credit would remain and pose problems of finding resources. While, therefore, in line with slack season conditions, Advances should show some decline, we do not expect the decline to correspond to the expansion that took place in the 1959-60 busy season.

The principal means of financing the 1960-61 busy season would therefore be found in the accretion to Deposits from which the banks might benefit as a result of Governmental disbursements. Even in respect of the use of such Deposits, the banks, by virtue of the

restraint recently imposed by the Reserve Bank on bank Advances and particularly the statutory locking up of 25 per cent of all new Deposits accruing after 11 March, have been disallowed full freedom. Consequently the banks are sure to be faced with a situation during the 1960-61 busy season in which the problem of resources for meeting the busy season pressure would become more difficult than it had ever been before.

It is in this light that we consider it necessary that the Reserve Bank should address itself to the question of bank resources that would be available during the 1960-61 busy season and devise appropriate measures that would put the banking system in possession of the resources if and when they fall short of requirements.

Undoubtedly, but not entirely reasonably or justifiably, the Reserve Bank feels taken aback by the magnitude of the expansion in bank Advances. It is equally clear that the central banking authority considers, with rather more reason, that bank Advances have at least in part contributed to trends in prices, especially in the Stock Exchanges. These are the two reasons underlying the monetary measures, which we termed credit control and restraint rather than credit squeeze, that were announced early in March. Apparently, and this is pure conjecture on our part, the expansion in Advances that has since taken place has impelled the central banking institution to think in terms of further monetary measures that may now be taken. Certainly, as happened in each of the last two years, the banking system will be called upon, during the currency of the 1960 slack season, to achieve a contraction in Advances that is slightly larger than the Rs 100 crores that had on the previous two occasions been the target. But, this time, the motive, both implicit and explicit, will not be desirability in such wise of freeing resources with the banking system, so that the financing of the next busy season would not present a too serious problem; it will presumably be frankly admitted that the price trends necessitate recourse to various measures of selective monetary control; and, in the background, not too distant, may lie the warning that, if these measures are not efficacious, India may have to accept the "recommendation" of the Bankers' Mission that an increase in interest rates—a raising of the bank Rate—would be necessary.

It is obvious that the Indian monetary authorities are not at all anxious to bring about an increase in the structure of interest rates; our views in this regard do not need to be repeated here, so often have they been reiterated in the past. Suffice it to say that we consider it would be calamitous to increase the borrowing rate of Government. But the problem of prices is unfortunately persisting, and while India can legitimately claim to have had greater success in keeping them in check, such relative stability does not appear to be enough. Clearly, the call for action insinuated by the Three Wise Men needs to be heeded.

Before we discuss the shape and form that further measures of selective monetary control may take, it would be helpful if certain basic facts about price behaviour in India are understood. First of all, with the expenditure on the plan in both the private and public sectors, no range or complexity of purely monetary devices can possibly succeed fully in holding the price line: the fiscal policy is "developmental"—and therefore inflationary as well. Secondly, some element of rise in foodgrains prices may be no more nor no less than the objective of planning, namely, raising the standard of living at the grass roots level.

If the farmer is better off, such that he can and does withhold stocks, is that inflation? What is at fault, in agriculture, is the distribution system; a complex of food policies which aids and abets the feeling of scarcity even in a bumper crop year. It is almost true to say that an index of the success of planning lies in a small rise in foodgrains prices, if this should occur despite a rise in foodgrains crops that is more than proportionate to the increase in the population. Of course, the line has to be drawn somewhere; but, for that, studies need to be made of "fair" prices for agricultural products, and this assessment would need to provide for the number of people who depend on such production. But, by and large, is a "controlled" rise in prices—with the reservation that it must have a stop at some level to be determined—such a bad thing? After all, it increases basic purchasing power, and this serves as stimulus for the development and expansion of consumer goods industries. This brings us to the third point. A bumper agricultural year, with perhaps a small decline in prices in this sphere, will nevertheless result in pushing up prices in other sectors of the economy. Sugar and cotton textiles are two instances where the enlarged earnings of the agriculturist will cause an expansion in the demand for them. The fourth and final point is that, in a developing economy, there are always "soft" spots in the economy, at the same time as there are areas of shortages. That is to say, prices may decline in the one and rise in the other—simultaneously and paradoxically in point of time. As from the end of 1956, for example, and until but recently, cotton textiles were depressed; sugar and raw jute are both commodities that, but a year or two ago, we had a surplus of for export. Cement has passed cyclically from shortage to surplus, and back now in keen demand.

Does the foregoing imply that we, for our part, suggest that we should be fatalistic about prices, because anyway we cannot do much about them? Far from any such belief, we hold the view that the general and overall control of the price line can be accomplished by a variety of measures, of which the most important, it is almost too trite to say, is the fostering of additional production. But the key to an effective grip over the monetary situation lies in a proper understanding of why prices behave as they do in India.

Thus, Reserve Bank policy has paramountly to be based on ensuring that finance is not denied for productive purposes. Indeed, Mr Iengar has been repeatedly asserting that such was the objective of the Reserve Bank: the provision of finance for production, the denial of finance for speculative use. What, in the circumstances, could the Reserve Bank do?

Firstly, there must be the continuing call for general "restraint" on the part of the banks. "Slack" accommodation given by banks, in order to increase their earnings, needs to be discouraged.

Secondly, the target for contraction in Advances during the 1960 slack season should be set at around Rs 125 crores.

Thirdly, the additional statutory deposit requirement needs to be in effect throughout the slack season.

Fourthly, the feasibility of discouraging Scheduled Banks from borrowing from the Reserve Bank by means of an increase in the central banking institution's lending rate, during a busy season, should be examined; and since such higher cost of central banking credit would be confined to the currency of a busy season, with a return to lower levels

during slack season, any tinkering with the bank rate as such could be avoided.

Fifthly, the statutory deposit requirement will not necessarily adversely affect the Government's borrowing programme. After all, with the call for a reduction in Advances, banks will correspondingly be provided with surplus resources, which they will need to invest in Government securities. Also, if expansion in the Deposits of the banking system does not slow down—and there is no reason why it should—an amount equivalent to 75 per cent of new Deposits would also be available for—would be compelled to seek sanctuary in—giltedged.

Lastly, if and when busy season pressures start exerting a strain upon the banking system, the Reserve Bank may in part release the statutory deposits appertaining to resources which gathered with banks after 11 March 1960.

In these various ways, as also by means of suitable directives at appropriate times in respect of selected commodities, both the magnitude and purpose-wise utilisation of bank Advances can be controlled. And since, meantime, the Reserve Bank will not have deterred banking finance for productive purposes, industrial output, too, will rise sustainedly.

To put it in a nutshell, Reserve Bank policy should be framed on the view that, in the final analysis, the only answer to inflation is more production.

Catalyst of Development

WHILE it is understood that the United States has the largest share in the external assistance so far made available to India for its economic development, it has been difficult to make the statistics come alive before the Indian public. The nature of the US assistance which is spread out over a number of projects whose benefit cannot be readily evaluated in familiar economic terms, and the numerous agencies through which the aid is disbursed, add to the difficulty of appreciating either its total magnitude or effective contribution to the development of the country. In drawing up a balance sheet, while the debits in the form of loans add up to a formidable total, the corresponding credits in the form of productive assets are not easily identified. That is the main reason why Soviet assistance in building a steel plant has made a more powerful impact on the popular imagination than US assistance which is at least four times as great. Should it always remain so?

During his recent visit to Calcutta, Mr C. Tyler Wood, Minister for Economic Affairs of the US Embassy, has presented in his speech at the Rotary Club, as well as at his press conference, a comprehensive view of United States Economic and Technical assistance programmes in India which, as of March 26, add up to Rs 963.4 crores. The value of agricultural commodities committed by the United States Government to the Indian Government under PL 480 agreement amounts to Rs 438.5 crores or nearly half the total.

Apart from its size, aid under PL 480 agreement has features which make it a uniquely powerful instrument of economic development in the Indian context. These should be brought home to the public, the businessmen and, we may add, the administrators, even at the cost of tiresome repetition, for there are surprising areas of ignorance

regarding the vast development potential represented by PL 480 assistance.

Under this programme India is able to buy badly needed agricultural commodities—foodgrains and cotton—for payment in Indian rupees. The substantial saving in foreign exchange is the most obvious advantage at the receiving end. At the other end it enables the United States to utilise its embarrassing agricultural surplus for constructive purposes, not only without incurring additional expense, but also effecting substantial saving in warehousing charges. This reciprocal benefit gives the programme its dynamic character.

The rupee funds received in payment of wheat which the United States accumulates in India constitutes a reservoir of continuing development assistance. Out of the total, a sum of about Rs 70 crores has been reserved for US Government uses; another Rs 40 crores is available for loans to joint Indo-US ventures, through the Export Import Bank under the Cooley Amendment. Though it is more than a year since this amendment was passed by the US Congress, it is only very recently that Indian businessmen have become aware of its existence or significance. When it is more widely known, both in India and in the USA, it should give a powerful impetus to American private investment in Indian industry.

But the largest part of the counterpart funds is loaned to the Government of India for development activities and it is by timely utilisation of these funds in creating assets of permanent value that American assistance can act as the catalyst of India's economic progress. Other things besides steel plants are urgently required to strengthen the national economy. For instance power; or, warehouses for storing agricultural products; and their need will be more keenly felt if the Union Food Minister succeeds in his mission to the United States. A beginning has already been made in this direction. But in addition to silos at the main ports, we would suggest a programme for construction of a chain of warehouses for storage of foodgrains and other agricultural products in the community project blocks spread throughout the country. No programme for increased agricultural production and stabilisation of prices can be effectively implemented without adequate warehousing facilities in the countryside. The programme for construction of warehouses should be supplemented by a programme for construction of roads linking up the warehouses with the villages in the area. The two together will be able to make a substantial reduction on the backlog of unemployment which is the bugbear of planners in our country.

United Bank Does Well

AT first glance, it would appear that the United Bank of India Ltd has but slightly improved upon its performance in 1958; but the study of the profit and loss account needs to be made carefully, since there is an element of net earnings for the year which is by way of being "concealed." The 1959 balance-sheet shows that Deposits have risen by more than Rs 4 crores to Rs 47.68 crores. Fixed Deposits Rs 14.77 crores against Rs 11.71 crores, and Savings Bank Deposits show an increase from Rs 15.08 crores to Rs 16.26 crores. Apparently, the relatively lower rate of expansion in Advances was particularly experienced by United Bank, whose portfolio in this regard is almost stagnant at Rs 27½ crores. Thus it is that the rise in Deposits is almost wholly taken up by an augmentation of giltedged holdings, which have risen from Rs 11.69 crores to Rs 14.85

crores. In the end result, cash in hand and with Reserve Bank has declined by Rs 33 lakhs to Rs 4.36 crores, while money at call and short notice has risen from Rs 25 lakhs to Rs 55 lakhs. Borrowings, it may be added, are shown lower at Rs 1 crore against Rs 1.42 crores.

The profit and loss account discloses an increase in the gross income from Rs 2.19 crores to Rs 2.47 crores, almost the whole of this being on account of a rise in the income from interest and discount, an item which has been marked higher by Rs 27 lakhs odd at Rs 1.98 crores. On the other side of the ledger, interest paid has risen moderately by Rs 10 lakhs to Rs 72.48 lakhs. Salaries and allowances have absorbed Rs 17 lakhs more at Rs 1.24 crores; but here is where the first careful note has to be made. The last year's figure in this regard did not include bonus to staff, whereas the 1959 figure includes Rs 5.46 lakhs on this account. Thus, the strictly comparable figures would be Rs 1.08 crores for 1958 and Rs 1.19 crores for 1959.

Automatically, adjustments have to be made in respect of balance of profit which, net of taxation, is seen to have risen from Rs 14.15 lakhs to Rs 14.29 lakhs. For, from the 1958 profit, a sum of Rs 2.83 lakhs was appropriated for bonus to staff, whereas the 1959 profit is net of such provision. This means that the comparable figures of profit for the two years, after tax and bonus to staff, are Rs 11.32 lakhs and Rs 14.29 lakhs; and this level of profit in 1959 has been arrived at after practically doubling the bonus to staff. In effect, therefore, the balance of profit of United Bank, after tax but before payment of bonus to staff, has increased in 1959 by Rs 5.60 lakhs.

As we have seen, the tax provision is not shown in the accounts. Since the published profit is net of tax. And the bonus to staff absorbs Rs 5.46 lakhs against Rs 2.83 lakhs. The transfer to Reserve is slightly lower at Rs 2.90 lakhs against Rs 3.45 lakhs. The dividend has been stepped up to 4.30 per cent free of tax; and this implies a nominally higher distribution to shareholders.

In the course of his speech at the annual general meeting, Dr N. N. Law, the Chairman, has referred to some factors that have come to affect the growth of banking in the country. These relate to the operating costs and the way in which they have risen without any relation to productivity per bank worker. On the one hand, between 1950 and 1958, the ratio of operating expenses to Deposits has, according to Dr Law, risen for Indian Scheduled Banks from 2.97 per cent to 4.24 per cent; and, meantime, against the rise of 43 per cent in operating expenses, the ratio of operating earnings has improved only by 29 per cent.

As Dr Law has observed, the causes for the increase in operating expenses lie in the high cost of deposits and rise in establishment expenses. Though an inter-bank agreement was arrived at in October 1958 to check the uncontrolled rise in the rate of interest paid on deposits, the accretion of a larger volume of Deposits under time liabilities has largely nullified the effectiveness of the agreement. In the background of such higher operating costs, Dr Law examines the propriety of the new Reserve Bank directive which requires the Scheduled Banks to keep 25 per cent of any increase in Deposits accruing after 11 March 1960 with the Reserve Bank. On the ground that the impact of bank credit on the price level at the present time is insignificant, Dr Law considers the measure as superfluous. Whether or not the banking system would be adversely affected by the new measure would depend upon the way in which it is used by the Reserve Bank. A flexible use of the new weapon with the new Deposits being made

available to Banks to finance the busy season, should enable proper control of the price level without adversely affecting the progress of banking along healthy lines.

End of Busy Season in Sight

INDICATIONS that the busy season is truly drawing to a close are discernible in the returns of the Reserve Bank for the week ended 22 April 1960. There is a fair-sized decline of Rs 12.25 crores in Active Note Circulation which is fully reflected in an increase of Rs 13 crores in the cash balances of the Reserve Bank. Rupee Coin has returned from circulation for an amount of Rs 0.84 crores. Foreign securities and Rupee Securities in the Issue Department are unchanged at Rs 163.09 crores and Rs 1506.65 crores respectively.

Though it is the third week of April, the impact of the Centre's year-end disbursements appears far from having ended and the Centre's Deposits have gone down sharply by Rs 23 crores from Rs 75.08 crores to Rs 51.82 crores. In this connection, it is noteworthy that Bills payable in the Banking Department have declined by Rs 14.06 crores. Evidently, drafts issued by the Centre in connection with the year-end transactions have been presented for encashment. The decline of Rs 26 crores in Government Treasury Bills indicates an item in respect of which the Centre had a heavy commitment. It is to be recalled that this item registered a sharp increase of about Rs 13.70 crores in the last week consequent on the State Governments trying to replenish their resources for meeting their year-end payments. The decline this week under this head suggests that some part of the bills have matured and that the steep decline in the deposits of the Centre has a relation to the maturing of these Bills. It would appear from the slight decline in investments which have gone down from Rs 203.39 crores to Rs 202.81 crores that the Centre did not have recourse to deficit financing for meeting its commitments in connection with maturing Bills or for honouring drafts presented. However, it is evident from the returns of the State Bank for the week ended 22 April 1960 that the State Bank has, invested in Government securities for about Rs 5 crores.

After the heavy disbursements incurred last week, which presumably entailed disposal of Government Treasury Bills, the State Governments report fairly affluent conditions in their balances with the Reserve Bank, which have gone up by Rs 8.6 crores from Rs 6.01 crores to Rs 14.61 crores. However, this improvement has taken place after they have increased their ways and means borrowings by Rs 6.15 crores, which have gone up from Rs 44.32 crores to Rs 50.47 crores. There is a net gain of Rs 2 crores which indicates some receipt from the Central Government.

The impact of the Government's year-end disbursements on the banking system is brought out in the decline in the Reserve Bank's other loans and Advances which have gone down by Rs 13.40 crores to Rs 101.59 crores. That part at least of this fall relates to the borrowings of other scheduled banks is borne out by the fact that the Reserve Bank's advances against usance bills have gone down by Rs 5 crores from Rs 13.61 crores to Rs 8.07 crores. However, the reserve balances of other scheduled banks with the Reserve Bank have been drawn down for about Rs 5 crores. While member bank reserves with the Reserve Bank show an increase of Rs 5.36 crores, considering that the State Bank reports an increase in its cash and balance with the Reserve

Bank to the tune of Rs 10 crores, the other scheduled banks must have experienced a decline of Rs 5 crores. Finally, the decline that had been noted in Balances Held Abroad for the past few weeks has been halted, and the latest week's return reports an increase from Rs 20.83 crores to Rs 21.31 crores.

The State Bank's return for the week ended 22 April 1960 reflects more clearly the relaxation of the busy season pressure upon the Banking system. While Deposits are practically unchanged at about Rs 634 crores, Advances have declined by nearly Rs 1 crore in being placed at Rs 216.45 crores. There is a sharp decline in Other Assets to the tune of Rs 11 crores, and consequently the State Bank's cash in hand and with the Reserve Bank has gone up by Rs 10 crores to Rs 38.41 crores. Money at Call and Short Notice, however, has declined from Rs 2.17 crores to Rs 1.4 crores. Finally, as already pointed out, the State Bank has added to its investments by about Rs 5 crores, total investments as at the week ended 22 April being placed at Rs 385.82 crores against Rs 380.71 crores in the previous week.

The return of Scheduled Banks for 15 April 1960 shows that the end of the busy season is in sight. Firstly, the total of Advances has shown a decline, in falling by Rs 2.65 crores to Rs 1127.70 crores. Secondly, cash balances have improved by Rs 6.14 crores to Rs 185.08 crores. Thirdly, the giltedged portfolio has been added to by Rs 14.66 crores to Rs 732.19 crores. On the other hand, Deposits have fallen by Rs 3.33 crores to Rs 1963.70 crores, whereas borrowings from the Reserve Bank have been marked up by nearly Rs 3 crores from Rs 41.31 crores to Rs 45.24 crores.

While a number of the changes indicated above have mainly been influenced by changes in State Bank figures, it is important to recognise that an early end of the 1959-60 busy season was very likely for two reasons. Firstly, the substantial governmental disbursements in the end of March have served to reduce busy season strain. Secondly, the Reserve Bank's measures of credit restraint, in causing a decline in Advances, will also seem to bring about an abrupt end to the busy season.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 26 April 1960. Total amount offered was Rs 2,75,00,000. Tenders at Rs 99.310 were accepted in full and those at Rs 99.305 were allotted approximately 80 per cent. Lower tenders rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.770 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 2 May 1960. Successful tenderers should make payment on Friday, 6 May 1960. Other conditions are as usual.

During the week ended 22 April 1960 Government of India Treasury Bills for Rs 142,96,25,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 27 to 30 April 1960 at Rs 99.326 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 20 to 23 April 1960.

London and New York Interest Rates

By Paul Einzig

THROUGHOUT March and April, interest rates in London have been steady to firm. On the other hand, in New York they fluctuated rather irregularly. In particular the Treasury Bill rates which kept above 4½ per cent in London, fluctuated within very wide limits in New York. For several weeks they had a declining trend that puzzled the experts on both sides of the Atlantic. The most reasonable explanation seems to be the new "fashion" among Wall Street investment advisors to advise their clients to keep one-third of their capital in a liquid form, until it becomes visible which way the cat will jump. They anticipate a decline in equities but have not sufficiently the courage of their convictions to advise their clients to realise their total holdings. So they advise them to keep some of their money in Treasury Bills, so that they could switch it back into equities at a moment's notice when the prospects appear to become brighter.

This new fashion must have been primarily responsible for the outside demand for US Treasury Bills towards the end of March and the beginning of April. The indifferent response to the US Treasury issues was the main cause for the reversal of Treasury Bill rates. Now that the American investing public has acquired a taste for Treasury Bills their rates are liable to continue to fluctuate irregularly, according to how the spirit happens to move this new class of holders or potential holders.

As a result of the ups and downs of US Treasury Bill rates the interest differential between London and New York fluctuated rather widely in March and April. In spite of this the premium on forward dollars remained relatively steady. Although it widened with the decline of US Treasury Bill rates, it did not widen to an extent that corresponded to the change in the Treasury Bill rate parity between London and New York. It became highly profitable for arbitrageurs to transfer funds from New York to London, with the exchange risk covered. This was done to some extent and was mainly responsible for the influx of gold resulting from Exchange Equalisation Account operations to prevent an unwanted rise in spot sterling.

But the fact that the premium on forward dollars did not rise to a point at which such arbitrage would cease to be profitable showed that such operations were not on a sufficiently large scale to restore equilibrium between the forward sterling-dollar rate and its interest

parity. The discrepancy was narrowed down in April as a result of the rise in US Treasury Bill rates. This change again left the forward premium virtually unchanged, presumably because it was already abnormally low before the rise in Treasury Bill rates.

The explanation of the failure of the forward dollar to respond to the changes in its interest parities is partly that the new holders of such Bills have not acquired the habit of buying British Treasury Bills. Their object is to keep their funds liquid while earning a fair yield on them. Although that end could be attained by buying British Treasury Bills and covering the forward exchange, this is a too involved operation for inexperienced non-banking investors.

Another reason for the persistence of the discrepancy is that US Treasury Bills are not at present the favourite form of employment of arbitrage funds transferred to New York. Much better yields can be obtained from holding fine commercial paper or dollar deposits with London banks. The latter are prepared to pay over 4½ per cent on three months' dollar deposits, which is about the same as the yield on British Treasury Bills. So whenever there is a decline in US Treasury Bill rates there is a tendency for arbitrage funds in New York to be switched not into British Treasury Bills but into US fine commercial paper or into dollar deposits with London banks. In either case no new forward exchange transaction need arise, so that there is no reason why the change should affect the forward dollar rate.

In other words there is no really abnormal discrepancy between forward dollars and its interest parities, provided that we allow for the change in the practice of arbitrageurs in investing their funds in New York. When reckoning interest parities it is necessary to base them on the most popular form of investment of arbitrage funds. Until comparatively recently US Treasury Bills were the most popular form of investment for arbitrageurs. Today this is no longer the case. So interest parities have to be based on the yield on short-term investments which are at present the most popular—fine commercial paper and dollar deposits in London.

Such changes are apt to be overlooked by those responsible for the management of monetary policies. They are not followed nearly closely enough by the financial Press either in London or in New York. Yet they are liable to assume considerable importance in determining the international flow of gold and the trend of short-term interest rates in all centres concerned. They must be taken into consideration by anyone who takes an intelligent interest in exchanges.

The Three Wise Men

ON such a well rehearsed subject as Indian planning, it is hardly likely that there can be much room left for breathtakingly new ideas. It is not surprising, therefore, that the report of the Bankers' Mission that recently toured India and Pakistan at the World Bank's instance should be traversing much familiar ground. Moreover, the very nature of its task, with no particular terms of reference and with a short time at its disposal, made it impossible for its conclusion to be anything more than merely impressionistic and, as the report puts it, "qualitative rather than quantitative." But, familiar though the conclusions of the Mission are, the report is valuable as independent confirmation of the bases of much of our thinking.

In the first place, the Bankers' Mission recognises the compulsions behind planning, on which all except certain persons in the periphery of the Swatantra party are agreed. Briefly, scarce capital resources in relation to the needs of the population, low levels of earning, saving and investment, with chronic foreign exchange inadequacy provide the *raison d'être* of planning. Behind this lies, as the Mission has also recognised, the political compulsions of the self-consciousness of the masses who are shrilly asking for the minimum amenities of life.

Once the necessity of planning is conceded, then the question resolves itself into examining in detail the plans themselves. Here, again, the range for manoeuvre in action (and consequently in discussion) is extremely narrow. And, as for Indian planning, there is a considerable amount of data to go by, for, the plans already executed—the Second Plan in particular—have taught us the hard way some of the lessons to be learnt. Among these is the need for flexibility, to which there is a passing reference in the Report. The Mission records that it was informed "by the officials in India, (that they were working out a detailed phasing of the plan designed to allow the necessary room for manoeuvre; and that they were thinking in terms of different variants which may be adopted to meet different circumstances; and that in terms of allocation of foreign exchange, they are trying to form a view about relative priorities which will allow a hard core of essential industrial projects to go ahead, even if others have to be held back." Considering that this approach was indicated by the Government itself—not to mention the fact that it has indeed been put into operation during the Second Plan—the attempt in certain quarters to interpret the Mission's suggestion in this regard as a warning against a disposition to overenthusiastic planning in this country is plainly disingenuous. These people confuse, often deliberately, the question of flexibility in actual execution with the alleged overambitious nature of the plan itself. On this question of the size of the Plan, the Mission's answer is categorical: "The targets set by the plan in terms of increasing per capita income and laying the foundations for self-sustaining growth are in themselves relatively modest." This being the position, to read the Mission's incidental comment on the need for dropping, if and when necessary, some of the marginal projects as an abjuration

of the size of the plan itself is plainly unwarranted.

The general observations of the Mission on the other aspects of the Third Plan are equally familiar and equally valid. First, there is a considerable element of guesswork in the estimate of return on particular investments under the plan. This stems from the uncertainties in the assumptions behind particular capital-output, ratios, not to mention factors like monsoons, over which human control is negligible. Secondly, the Plan would call for heroic self-denial on the part of the people to make possible the necessary quantum of savings. This requirement, inescapable as it is, has political implications that, for a democracy, pose crucial challenges. As far as India is concerned, it is a matter of congratulation that these challenges have so far been met with determination and maturity. Also makes administrative demands which, again, are being met with considerable success in this country. Thirdly, the Plan calls for sufficiently large increase in external assistance. On this subject—which was the primary preoccupation of the Mission—it has made some important recommendations. In the first place, it recognises fully and squarely the economic and moral arguments in favour of such assistance. On the shape that such assistance should take, it rightly rules out the Marshall Plan approach, which implied that the duration of assistance could be limited to a short period enabling the recipient country to reach a particular point of development. The needs of countries like India will have to be considered on a much larger range. It also sees the need for devising modes of assistance that do not involve difficulties of short-term servicing like commercial loans. In this connection, it indicates that the scope of the usefulness of the International Development Association is limited and that much of this assistance will have to be on Government-to-Government basis. But there is need for co-ordination among the policies of prospective donors, if such aid is to be efficiently husbanded.

One particular problem that the Mission recognises, without making any specific recommendation, needs notice. It considers that it is "natural" that countries like India, which plan conscientiously, "should wish to have some kind of assurance about the foreign aid that will be forthcoming over the periods of the plans." But it also recognises that such assurances can hardly be given by the "aid-giving" countries, since they have to obtain annual appropriations from their respective Parliaments. Though the climate for foreign aid has improved enormously in the last few years, and responsible opinion all over the world is firmly committed to responsibilities in this regard, it is Utopian to expect blanket appropriations for several years in advance. But, short of such absolute commitments, there is much that friendly countries can do, as indeed they are doing.

Two other aspects of the Mission's conclusions are worth commenting upon. One is its impression of the priorities under the Indian plan and their practical manifestations. The Mission appears to have its reservations in

accepting Indian professions of over-riding concern for agriculture. It appears to have the feeling that regional and departmental clamour often distort this order of priority. This is an impression that is not wholly unfounded. The over-riding importance that is attached to agriculture certainly needs to be more practically demonstrated than is the case at the moment.

The other point made by the Mission is unfortunately one with which we are unable to agree. It is the tentative suggestion that there is scope for making use of interest rates for mopping up excessive monetary liquidity in the country. For reasons which we have often canvassed in detail in these columns, we consider this particular remedy as worse than the disease.

The Auditor-General

THE proposal to define the powers of the Auditor-General of India under Article 148 is a sequel to misplaced criticism. It is surprising that, on a point like this, the opinion of the profession of Chartered Accountants has not been obtained and that laymen should have commented freely. The obligations of the Auditor-General to the President of India and the charge made on the Consolidated Fund cannot be touched even by the insistence on a new procedure meant to insulate spending Ministries from criticism. It is obvious that earlier scandals had made the Defence Ministry both sensitive and vulnerable and the fact that the Auditor-General is bound by an oath of office has not been given due weight. While his salary, pension and allowances cannot be touched by Parliament, the precise specification of duties may limit the power to warn and advise, especially when public expenditure is getting out of hand. The power to legislate is certainly in the Constitution, but it may be desirable to leave such matters to convention, especially when Article 149 prescribes the continuance of powers and duties obtaining before the promulgation of the new Constitution. The Hoare Act laid down the procedure of appointment and prescribed the performance of duties. The Joint Select Committee in its report of 1934 had suggested Central Audit, though the Provinces at some time could take over, audit also, provided it was made independent of the Executive. The Joint Select Committee followed the Simon Commission in describing the functions and powers of the Auditor-General.

The fact that parliamentary control over expenditure is vague and loose is the main reason for the special status of the Auditor-General, and the changes made in 1955 to give greater freedom to the Ministries was regarded as not quite sound by the orthodox standards. However, there is in Parliament a feeling that the Ministry has been exposed to unwarranted criticism and the Finance Minister has apparently swung round to the view that stringent criticism will put the Defence Ministry in a weak position at a time when it should be made to appear both strong and popular.

Stock Market in First Quarter

THE stock market in Calcutta has given a satisfactory performance during the first quarter of the year. Except for a heavy landslide in values due to nervous liquidation noticed in the middle of March following the announcement of the credit control measures, almost all popular shares showed remarkable resilience and even tried to establish new peak levels on sustained demand from investors, as will be clear from the following price trends of a few selected shares in each counter:

	30th Dec. 1959 Rs.	31st Mar. 1960 Rs.	Percentage Increase or Decrease

It cannot be denied that the buoyancy of share prices in 1959 created conditions favourable to the investors who, at the beginning of this year, looked to the future with the confidence that their shareholdings would continue to be profitable, both in regard to dividend income and appreciation of capital values. As a matter of fact, they seemed to be less concerned with yields than with prospects of capital appreciation. It looked as if they were prepared to forego income for considerable periods in the conviction that they would be fully compensated in the future by the rise in the value of their holdings.

Thus, the extraordinary activity of the new issues market was the most outstanding feature of trading during the period under review. Investors responded eagerly to new flotations, whether in the form of right issues by existing

Indian Finance

concerns or by the newly-formed companies. The table given below shows that, in almost every case, the new issues were heavily over-subscribed:

Company	Type of Issue	Issue Price	Details of Issue
1. Hindustan Aluminium Corporation	Offered to public	Ord. Rs 10 Pref. Rs 100	Authorised capital Rs 20 crores. Proposed to issue Rs 8.35 crores—Rs 5.85 in ordinary and Rs 2.50 crores in preference shares. Public issue Rs 2.15 crores in ordinary and Rs 2.50 crores in preference shares. Total applications received were nearly 29 lakhs against 21.56 lakh shares to be allotted to the public.
2. West Bengal Financial Corporation	Offered to public	Rs 100	Bonds are issued for Rs 50 lakhs, carrying interest at 4½ per cent, redeemable at par on 1 March, 1972.
3. Jayshree Tea Gardens Ltd.	Tea Rights Ordinary	Rs 10 at par.	Offered in the ratio of one for every five shares held.
4. Dyer Meakin Breweries Ltd.	Rights Ordinary	Rs 5 at Rs 2 premium	Issued 1,62,066 shares in the ratio of two for every five shares held.
5. Associated Battery Makers (Eastern) Ltd.	Offered to public	Rs 10 at a premium of Rs 5	Issued Rs 80 lakhs worth of shares. The subscription list was closed on 22 January. Oversubscribed by about fifteen times.
6. India Safe Deposit Vault Co., Ltd.	Offered to public	Rs 100 Ord.	Out of proposed issue of 5,000 shares, only 2,300 shares offered to public; Rs 25 payable on application; Rs 25 on allotment and the balance of Rs 50 in calls, each call not exceeding one-fourth of the nominal value.
7. Vellore Electric Corp. Ltd.	Rights Ordinary	Rs 10 at par.	Authorised capital raised from Rs 6 lakhs to Rs 10 lakhs by the issue of 40,000 equity shares in the ratio of one for one held.
8. Victoria Mills Ltd.	Rights Ordinary	Rs 100 at par.	Capital increased from Rs 24 lakhs to Rs 40 lakhs by the issue of 16,000 Ordinary shares.
9. Radio & Electricals Manufacturing Co., Ltd.	Rights Ordinary	Rs 10 at par.	Issued 1,25,000 equity shares in the ratio of one for two shares held. Payable by Rs 5 on application and balance on allotment.
10. Attikhan (Bill-giri) Ltd.	Offered to public	Rs 2 Ord. Rs 10 Pref.	Total capital raised Rs 6 lakhs in two lakhs equity shares of Rs 2 each and 20,000-9 per cent Redeemable preference shares of Rs 10 each. Offered to the public one lakh equity shares and 10,000 preference shares.
11. Emerald Valley Estates Ltd.	Rights Ordinary	Rs 5 at par.	Issued 30,000 equity shares in the ratio of one for every two shares held.
12. Ravalgaon Sugar Farm Ltd.	Rights Ordinary	Rs 50 Ord. Rs 100 Pref.	Authorised capital raised from Rs 50 lakhs to Rs 1.04 crores by the creation of 48,000 ordinary shares and 30,000 preference shares. Issued only 20,000 ordinary shares to the ordinary and deferred shareholders.
13. Laxmi Starch Factory Ltd.	Rights Ordinary	Rs 100 at par.	Issued 22,000 ordinary shares and 10,000 unclassified shares, both of Rs 100 each.
14. Andhra Sugars Ltd.	Rights Preference	Rs 100 at par.	Issued 30,000-6½ per cent Cumulative Preference shares, pro rata to the holders of preference shares.
15. Premier Construction Co., Ltd.	Rights Ordinary	Rs 100 at a Premium of Rs 50	Sold 25,000 ordinary shares of the Indian Hume Pipe Company Limited. Applications were received for about 35,000 shares.

So great was the response to the new issues that many of the shares went to a substantial premium soon after they were issued. The result of such an activity in the new issues market was, that the imbalance between supply and demand had, to some extent, been corrected, while the shortage of floating scrip had become acute as more and more funds entered the market in search of first class investments. These are reflections of the rising tempo of industrial expansion in the country and of the confidence of businessmen and industrialists as well as investors in the outlook for private enterprise.

Coming back to the original theme, investors did not seem to be very much worried over the Central Budget from the beginning of the year on the thought that the largest proportion of any fresh revenue would have to come from indirect taxes, as direct taxes were well beyond the point where incentive to work and expand activities was affected. Again, they had the impression that the low yields, now

obtained, would be compensated by the scope afforded for modest appreciation over a period in the growth of stocks. There was, however, a general feeling amongst certain operators that there should be new taxation, both for planning and defence. Thus, in January, trading was generally restricted and the trend of prices remained undecided.

The market started February rather shakily and many operators applied pressure, indicating the usual pre-budgetary nervousness. The spate of new issues, which had already been made and which were yet to be offered, also contributed, to some extent, to the downward trend in values. Also, the investing public preferred to subscribe for such new concerns as were coming into existence, as they felt that the return on their investments, in equity shares of the existing concerns at the prevailing level of prices was not attractively remunerative. It was, however, noteworthy that there was no sign of aggressive selling in any of the counters. This appeared to be due to

30 April 1960

hopes that the Finance Minister might not do anything to undermine the confidence of investors, especially when the country is about to embark on a gigantic Third Plan. It was also felt that, while the State Budgets had been harmless, no radical measures would be proposed. Again, it was believed that the continued large-scale expenditure would accentuate inflationary pressures, which might provide a good hedge against inflation.

As a matter of fact, there was a flair-up in equity prices following the announcement of the Budget proposals. Although there was genuine disappointment over the absence of much-needed relief in corporate taxes, bull operators were inclined to the view that, with the extension of tax exemption to the new industrial undertakings for a further period of five years, there would be a boom in new capital issues. Naturally, operators came out as aggressive buyers and the craze for buying infected almost all the sections of the market.

After enjoying a veritable boom till the first week of March, the market witnessed a steady decline in values due to various factors. A section of the operators was inclined to the view that, in the absence of genuine support from investors, the steady rise in prices was mainly speculative in character and could not be maintained without leading to a vulnerable position in the market. This view was based on three possible developments in the coming weeks.

First, operators feared that credit restrictions might be tightened in order to curb speculative activity in stock markets. Secondly, they thought that, in case of a failure of negotiations with China, there might be a possibility of a Supplementary Budget being presented in Parliament to step up defence expenditure. Lastly, the continued strike by the State Bank of India employees induced some fears that the banking facilities would be disrupted and there would be difficulties in clearing cheques.

As the market was thus largely in the hands of speculators, the slump in values, in the third week of March following the announcement of the credit control measures by the Reserve Bank, was sudden and sharp due to heavy liquidation by nervous holders. Moreover, the strict observance of the margin in practice even in the case of discounting bills by certain banks seemed to have added an element of panic. Even the Stock Exchange authorities were compelled to fix up interim clearing rates to enable the operators to avoid further losses despite the fact that the previous settlement was held only on 9 March.

Thanks to the subsequent clarification made by the Reserve Bank, that its directive regulating advances against shares would not apply to the purchase of demand bills covering stock exchange securities to be despatched from one centre to another, induced some bear-covering at the lower levels, resulting in a steady recovery in prices. Also, the investment counters put up slight gains on support. Influenced by the belief that the LIC might step in to take advantage of the prevailing low prices. As a matter of fact, the market gave definite hints of returning sobriety toward the end of the quarter and these were reflected in a substantial volume of replacement buying and the flurry of covering purchases. The main inspiration for the bull operators was derived from the report that the Investment Committee of the LIC, at its meeting held on 25 March, had accepted the bids given in respect of some active shares. There was also a general feeling that the return of large funds, locked up as a result of over-subscription in respect of some recent issues, should augment the floating funds.

In the dealings during the quarterly period under review, price movements were mostly

influenced by the speculative activity in Indian Irons which, in turn, were subjected to wide fluctuations on alternate bouts of buying and selling. Other Engineering issues moved in sympathy.

The only section, which was practically neglected throughout the quarter, was Jute. Despite the strong statistical position of the industry and the firmness of jute goods prices, operators were inclined to restrict their commitments on the feeling that the profit margins of the mills might be squeezed in view of the disproportionate rise in fibre prices.

Coal shares responded well to selective enquiries on expectation of a rise in demand for the commodity in view of the new steel units coming into operation and the reports of rising consumption. Hopes were also entertained that the fixation of a high target in the Third Plan would be followed by incentives on the lines demanded by the industry.

Tea shares were rather susceptible to the fluctuations of rates at the auctions held in Calcutta and London, resulting in only a scrappy business being recorded. The obscure outlook for Common tea also induced some caution in the minds of the operators. A few shares, however, showed a smart recovery from the low levels touched early in the period. Apart from the approaching time for the announcement of dividends by various companies, there were talks that the tea stocks with the trade were not high and the internal consumption was on the increase. It was, therefore, believed that the first export sale for the new season, to be held in the second week of May, might get a good start.

Sugar shares came in for good demand at enhanced levels in the wake of investors expecting increased production during the current season.

In the Textiles section, price movements were rather halting in view of the reluctance on the part of operators to extend commitments. It was feared that, on top of costlier raw material supplies, an unexpected increase in wage costs would cut seriously into the profit margins of various mills.

Generally speaking, Miscellaneous issues received constant attention throughout the period, thanks to sustained investment support for the blue chips due to growth prospects and the release of encouraging corporate news.

Report on Family Planning

THE DHANVANTHI RAMA RAU Committee Report on Family Planning, which would need to be made available in printed form to the wider public, is a document of more than ordinary importance. The cautious and balanced character of its recommendations, like that of the Nijalingappa Committee's proposals regarding co-operative farming, renders it far less controversial than it might have been easily otherwise. It is commendable for more than one reason. In the first place, it belies a certain vague fear that the sanctity of the 'family' would be in jeopardy under a population control programme, even as the Nijalingappa Committee Report has belied the fear expressed in some circles that there would be danger to the 'farm' under a co-operative farming programme. So long as the golden principle of 'voluntariness' is honestly emphasised and sincerely adhered to—experience to date in the country in the sphere of co-operative farming as in that of family planning suggests that this principle may not be lightly discarded—there will be no danger to any of the three F's, namely, farm, family and freedom, as far as one can look ahead.

The second reason is that it has amply justified the hope expressed, for example, in the editorial columns of this paper of 24th October, 1959 to the effect that "it may also be that the Committee will ultimately recommend a cautious, balanced and generally acceptable programme of population control in the peculiarly complicated social and political milieu of this country." The hope is justified in the sense that the Committee has firmly set its face against such drastic and dangerous remedies as legalisation of abortion and mass sterilisation by compulsion, however 'serious' the demographic situation may be. Where the Committee itself "appreciates that no definite view can be expressed regarding the optimum population for India, as it depends upon the consideration of innumerable variables whose precise magnitude cannot be predicted with any accuracy", it has wisely confined itself to setting the goal as one of reduction of the present birth rate of 40 per 1,000 by 50 per cent by the year 1986 and it has equally wisely refrained from defining a theoretical "ideal" size for the family. In the result, a flexible and practical programme of family planning has emerged from the labours of the Committee—a programme that may well lead to the voluntary adoption of regular family planning practices by large sections of the population throughout the country. That men in power can be wisely guided by talented people discharging their public duties honestly and conscientiously is borne out by some pragmatic arguments advanced by the Committee for or against the various alternative methods of population control.

For example, in rejecting the suggestion that abortion be legalised as in Japan where, according to the Committee, it "has assisted considerably in bringing down the birth rate within a short period," it is argued that a resort to that method of population control

Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of India's industrial development, our products and prompt technical service ensure the most modern means and methods of metal fabrication. Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories, we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

INDIAN OXYGEN LTD

would lead to very undesirable results. This argument is based on another aspect of Japanese experience which has shown that, in many cases, the same woman who had one legal abortion on grounds of health or economic stringency resorted to it several times in the same year. The Committee has, therefore, recommended that the "ethical, rational and scientific basis" of the whole family planning movement in India—a basis "where medical knowledge has been utilised to prevent conception and not to interfere with an established pregnancy"—should continue unimpaired. Even if the ethical objections could be brushed aside, there is the convincing practical argument that "the organisation of medical services for legalised abortion would present a most difficult situation in view of the paucity of qualified medical practitioners and the necessary medical services in the rural areas." Although, thus, the Committee has wisely rejected the suggestion that induced abortions be legally permitted, it has not indicated how the incidence of illegal abortions—a practice which according to its report, is widely prevalent in India—can be reduced. Perhaps, the implication here is that with the implementation of the proposed programme for a wider use of dependable contraceptive methods and for voluntary sterilisation, there will be fewer and fewer illegal abortions.

Secondly, while expressing the view "that sterilisation under certain safeguards is a necessary and valid measure in India until such time as contraceptive methods are universally in practice among married couples", the Committee has firmly rejected the suggestion that this be done by compulsion. Compulsory sterilisation, according to the Committee, might lead to abuses and is not desirable; greater success would be achieved by voluntary and regulatory measures. While this recommendation is even wiser than the one regarding abortion, it is somewhat difficult to understand why the Committee has not even tried to establish that there are no biological and psychological complications in male or female sterilisation. The Committee's belief that voluntary sterilisation is likely to become more popular if the requisite surgical facilities are more widely available, seems to be partly based on the fact that the number of sterilisation operations actually carried out has increased from about 8,000 in 1956 to around 19,000 in 1959. This increase is not so very impressive in absolute terms as to suggest that with the provision of more surgical facilities, sterilisation will necessarily become sufficiently popular to have any significant impact on the population situation in the foreseeable future unless it is established convincingly that some popular doubts and fears in this regard are wrong. Those who have already sterilised themselves constitute a sufficiently numerous 'universe' from which a random sample can be conveniently drawn and investigated thoroughly to find out if there are any biological and psychological effects of an adverse character. That such a study is necessary if sterilisation is to be encouraged or discouraged, need not be over-emphasised. The Committee's recommendation that facilities for sterilisation be made available free of charge at hospitals and other medical institutions undertaking surgical work, is alone not sufficient to give an impetus to this voluntary movement, assuming that it is really harmless.

Anyway the Committee itself seems to have some mental reservations about the desirability as well as the feasibility of sterilisation where it is thought of as a temporary method to be popularised "until such time as contraceptive methods are universally in practice among married couples". It thus happens that the Committee has recommended that information and assistance on contraceptive methods should

be very widely disseminated so that all married couples can adopt the habit of planning their families according to their choice. These methods, however, are not as yet cheap enough for the masses where they involve clinical help and guidance. A "non-clinic approach" is therefore recommended for the rural areas where the simpler, though less efficacious, methods could be more widely disseminated. "The wider coverage acquired by the simpler methods could help to overcome their lesser effectiveness, as far as the probable slowing down and lowering of the birth rate is concerned. The point about the handling of simpler methods in the absence of doctors is important because, if family planning services are to be circumscribed by the availability of doctors, the extension of the programme will be gravely retarded."

The Committee's recommendation that there should be one main family planning centre in each Primary Health Centre with five sub-centres, so that the main centre could cover a population of 16,000 and each of the sub-centres a population of 10,000, is certainly realistic if family planning advice and supplies of the simpler methods are to be given more extensively in the rural areas. A provision of Rs 100 crores in the Third Plan for these and other services and for supplies of contraceptives, as suggested by the Committee, would appear to be reasonable. Since contraceptives are to be given free only to the low-income groups and classes, the proposed outlay of Rs 10 crores on this account alone is certainly necessary. It is to be hoped that the Planning Commission will keep this provision intact in its final formulation of the Third Plan. If it can be ascertained that the Hindus in general have no religious objections to contraception—it may be that they do not have any for the reason that their traditional method of family planning through judicious spacing of children is not quite possible in modern conditions of living—that seems to be the safest method, deserving of wider application, in preference to sterilisation even of the voluntary kind. Even here, the biological and psychological effects of contraception would need to be concurrently studied if family planning is to proceed on sound and scientific lines.

Prices and the Plan

(Contributed)

THE problem of rising prices continues to cause concern. The wholesale price index (with the year ended March 1953 as 100) stood at 119.7 during the week ended April 9—the latest period for which statistics are available—which was higher by 6.5 per cent compared to a year ago. Since the commencement of the Second Five Year Plan, the price level is estimated to have gone up by about 20 per cent. The Finance Minister has often pointed out that in a developing economy a rise in prices is inevitable. This may perhaps be correct to some extent. But that does not certainly warrant any complacency about the price situation. The concept of planning will become unpopular in the country if the level of prices shows a steadily increasing trend, causing severe hardship to large sections of the population. Unless, therefore, serious efforts are made to halt the rise in prices and check the inflationary tendencies, it will be difficult to make the people enthusiastic about the Plan and enlist their cooperation for its successful implementation.

The causes for the higher price level are generally well known. According to Mr B. Rama Rao, former Governor of the Reserve Bank, two of the most important factors which have contributed to the inflationary pressure are the failure of the rate of production, especially of foodgrains, to keep pace

with the alarming growth in population and the deficit financing and other Government policies which have tended to increase the supply of money with the people. Mr Rama Rao therefore emphasized, in his speech at the Madras University last week, for giving the maximum encouragement to production.

It will be thus seen that at a time when the money supply with the public has shown a big increase—it was higher by Rs 170 crores at the end of 1959 than a year ago—the supply of food and cloth, the items which are most important from the point of view of fighting inflationary tendencies, has failed to show an appreciable improvement.

On the question of deficit financing, Mr Rama Rao said that resort to this device was not necessarily an evil so long as some caution was exercised. As a matter of fact, deficit financing in 1960-61 is expected to be only about Rs 150 crores as compared to Rs 230 crores in 1958-59. For the Third Five Year Plan deficit financing is estimated at Rs 550 crores as compared to about Rs 1150 crores to Rs 1200 crores in the Second Plan. Mr Rama Rao appears to have expressed satisfaction at the level of deficit financing proposed during the next phase of planning. But the question is whether our planners will be really in a position to keep it at the level of Rs 550 crores. It should be noted that according to present estimates, additional taxation to the extent of about Rs 1600 crores is envisaged. In the Second Plan, additional taxation raised during the five year period is estimated at around Rs 1000 crores and it is doubtful whether it will be possible to raise another Rs 1600 crores between 1961-65 without creating serious disincentives and other undesirable consequences. If there is a shortfall in tax receipts, then obviously resort to deficit financing will have to be much more than what is envisaged at present.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

Equal Pay for Equal Work

The Estimates Committee's directive to Government on equal pay for equal work, for men and women, calls to mind a vital reservation. When the Government of India decided to ratify, the Convention in October 1958, attention was drawn to the fact that the ILO had clarified that the ratification did not create an absolute obligation to implement the principle of equal remuneration regardless of existing conditions. A Government which had ratified the Convention was expected to ensure the application of the principle only in so far as it had control over methods for determining rates of remuneration as, for instance, in the case of public services and occupations and industries in respect of which Government is required to fix wages. In other cases, its obligation was restricted to promoting the principle through appropriate means. The reservation was necessary in view of the unsatisfactory trends in the employment of women in this country which had been noticed, particularly in recent years.

The decline in the number of women in employment over the fifty years since 1911, to which attention was drawn by a survey conducted by the Government Labour Bureau, may be open to

various explanations. Changes regarding ideas of prestige and social status may be one of the contributory causes, for census enumerators have reported a decided preference among rural families to return their women as "total dependents." But there is also evidence that labour legislation, which has obliged employers to grant maternity leave and other assistances, is responsible for the steep fall in the number of women in industrial establishments. The rationalisation of the jute industry in Calcutta has resulted in more women losing their jobs than men.

The Estimates Committee has taken a realistic view in suggesting that, while carrying out the obligation under the Convention, care should be taken to see that such measures did not lead to the reduction or elimination of women workers from industries where they were traditionally employed. Employment exchange statistics suggest that unemployment among women who seek work is in certain sectors as acute as among men. It will be poor consolation to the women who are shut out of jobs to be told that their plight is the result of the principle of equality for men and women.

While relaxation of the principle of equal pay for equal work as regards women workers may be permissible in existing conditions, there is room for doubt whether the principle could be stretched to cover the case of what are described as "unorthodox schemes" to create employment, reported to be under study by the working groups of the Planning Commission and, especially, the programme for creation of community assets by putting unemployed rural manpower to work at wages below the market rates.

Indian Rupee in Nepal

The news that Nepal will retain the Indian rupee along with the local rupee has only brought out the important position held by trade from this country for Nepal's economy. The last official report showing that 163 Nepal rupees are equal to Rs 100 (Indian) made it clear that the local currency had depreciated, also that bullion prices had gone up there also in sympathy with the rise in the Indian bullion markets. Nepal depends on supply of sugar and salt from India; in the case of sugar, North Bihar is the obvious source of supply but Nepali firms did not have funds to take up stocks allotted and sugar sold at Rs 49 per maund in Biratnagar in winter, described as a secure region economically. The fall in wheat prices helped Nepal but other foodstuffs were dearer. That is why a trade pact with India was sought by a visiting mission this year and the fact that Nepal can export jute has latterly been given some weight. Analysis of imports in November via Raxaul suggests that import duties are light and there is a good market

for vegetable oils as well as tea. The requirements of tobacco including cigarettes seem smaller than supposed, but India is selling cement and tyres to Nepal and there seems to be a useful trade in iron and steel manufactures already. The export of rice from Nepal may be temporary but one can look for larger exports of hides and skins to India. In future curiously the export of timber from Nepal seems small but the trade may be seasonal in nature. The export of tea from Nepal is mentioned but this may be due perhaps to re-export of tea drawn from Dehra Dun. It is evident that till minerals supplement timber the means to pay for imports may be very limited and this too may render foreign aid more important than generally presumed. (The start made in export of indigenous herbs and drugs may be termed hopeful and Nepal may find the export trade in potatoes a prop.)

Defence Contracts

Barely had the echoes of the Jeep case died down when the investigation into another Defence contract has been recommended. This may hold no particular moral but it suggests that the Defence Ministry's business practice requires a special study before improvement and its contracts must be vetted by a legal expert. The practice of Whitehall where every department keeps a trained lawyer apart from the Solicitor to the Treasury could well be copied with advantage in India. This is not the only conclusion provided by the postmortem on contracts and contracts.

The withdrawal of the Jeep case in London led to a brief debate in which the Prime Minister was forced to intervene. It came close on the heels of the argument over the audit report relating to the Defence Ministry, leaving in the public mind an impression that prompt comment, maybe, adverse in some cases has its own value.

The withdrawal of the case in London on legal advice may tempt some to ask why advice on filing the case has been departed from. The Government's original claim and the private firm's failure are now treated as trifles that cannot be remedied by the law. Mr H. M. Patel's removal from public employment presented necessarily a handicap. And to say the Queen's Bench is a foreign court in which a Minister cannot depose as a witness sounds strange when the Minister is a qualified barrister like the PM who may be able to score a legal victory and prove that the Inns of court do very well by their students. Compounding a civil case is easy but it could have been done by the solicitors far earlier and much expenditure on the action could have been avoided.

The point why the Jeeps were got from an obscure private firm in London instead of by a contract with the US manufacturer through the India Supply Mission is one of

the difficult issues raised. While the old saying about crying over spilt milk will recur readily, there is force in the argument that the dummy firm has scored a victory and the India Government missed the chances to consult its technical experts before entering into a contract.

New Names For Old

Madras Industries Minister Mr Venkataraman took the State Assembly into confidence regarding a proposal to start a factory to produce highly concentrated 'protein food.' Equipment worth 25,000 dollars would be turned over to one of the oil expelling concerns in Madras who would, in return, hand over 7½ tons of the product, not the oil but the "protein food", daily to the Government for distribution to school children. In former days this substance was known as groundnut oil cake and was used as manure or as cattle-feed. Any proposal to feed school children on groundnut oil cake will find the parents up in arms. The Food Technological Institute which has publicised the nutritional merits of the product, could not get very far with its "de-oiled groundnut". Mr R. Venkataraman has been wise to give it an entirely new name. 'Protein food' is bland and neutral having no associations with the plebian groundnut, so that a knowledgeable member of the Assembly got it mixed up with the proposal to start a baby food factory in the Nilgiris. A rose by any other name may smell as sweet, but there are quite a few who think that the Cooley Amendment to U.S. PL 480 will be more widely known in India if it could be called by some other name.

STATES NOTES

Town on Top

The Madras Land Reforms (Fixation of Ceiling on Land) Bill had to run the gauntlet of the demand for fixing a corresponding ceiling on urban incomes. The deep-seated psychological urges behind the demand cannot be disposed of by the argument that property in land, which is a natural good, is different in many respects from other forms of property and that, while restriction on the area of agricultural land a person may own is justified by the demographic situation, that is to say the size of the agricultural population in relation to land resources, a ceiling on urban incomes would stifle the growth of the national economy. For the proposal revives in an acute form the traditional rivalry of town and country, which goes back to the days of Aesop, with scales loaded heavily against the latter. The country mouse in an up-to-date version of the fable will not have the heart to contest the tall claims of his cousin from the city.

The argument that ceiling on land is not the same as ceiling on rural incomes and that no limit has been set to the latter lacks conviction. According to the proposals of the Planning Commission which have served as the model for State legislation, the ceiling was fixed on the basis of annual income. The scope for augmenting the income by subsidiary occupations, or by improved methods of cultivation, is strictly limited. The only way in which an ambitious and enterprising individual in rural areas can get out of the orbit of comparative indigence will be by giving up agriculture for industry. The diversion of talent from agriculture to other pursuits, which the Prime Minister recently deplored, may be aggravated. While reduction of the population dependent on agriculture is one of the objectives of planning, to achieve it at the cost of keeping agriculture a depressed industry will have other undesirable consequences which will be hardly helpful to any programme to increase agricultural output.

To think that only the big landowners who are likely to be dispossessed of their surplus acres are disgruntled at the measure will be a serious mistake. The small peasants, and even the few landless labourers who are likely to be benefited, see in it the end of their aspirations. Everyone except the city-bred hot gospellers of land-reform know that the dearest ambition of the peasant is one day to become the master of broad acres. That hope may never be fulfilled,

but gives meaning to his life and saves it from becoming a ceaseless endeavour to draw "nectar in a sieve." The reform may add a few cents to his holding but shuts the door on hope. The Swatantra Party has good reason to be thankful for the Land Reform Bill.

Delhi's Master Plan

Delhi has prepared a Master Plan with a total outlay of Rs 145.30 crores to be included in the Third Five Year Plan. Of the various schemes that will be implemented, those relating to public utilities slum clearance and squatters' rehousing occupy the pride of the place. The schemes will entail an expenditure of Rs 39.27 crores. Next in the order falls the programme of private housing for which a sum of Rs 23 crores has been earmarked. This amount will also include the price of the land to be acquired and loans to be granted to the low and middle-income groups. The Government housing programme, comprising development of community facilities like schools, hospitals, community centres, police stations, post offices and parks, will cost about Rs 16.25 crores.

The scheme of improving sewerage will carry an amount of Rs 4.02 crores while a sum of Rs 1 crore has been set apart for the modernisation of drainage and the adoption of adequate precautionary measures to control floods. The programme for improving transport facilities will be executed at the cost of about Rs 7 crores.

Minerals in Rajasthan

The report of the Estimates Committee of the Rajasthan Vidhan Sabha on Mines and Geological Department submitted to the House recently makes disappointing reading. The activities of the department, as pointed out by the Committee, were conducted in a lethargic manner and it was responsible for the "negligible progress" made in the field of mineral development during the last 11 years. Whatever may be the reasons for this slow progress, it is indeed disheartening to mention that the fuller exploitation of the mineral wealth, on which the prosperity of the State depends, did not receive the attention it deserved. Yet it is quite encouraging to note that the Estimates Committee has brought forth a set of recommendations for expediting the expanding activities of the department for the speedy and fuller exploitation of the State's mineral wealth.

Of the recommendations made by the Committee, the most important that require careful attention are those aimed at removing the bottlenecks that retard the expansion and activation of the survey work and mineral exploitation. The paramount necessity of replacing the existing geographical division by a better system under

which one mining engineer will be in charge of a particular mineral was emphasised by the Committee. The Committee also suggested the formation of ten divisions instead of the present six division and six sub-divisions for proper administrative control. Apart from all these, the adoption of modern technological innovations in mining methods, instead of following the antiquated methods, will also be of immense benefit to the State.

NEFA's Third Plan

The high priority given to road development in NEFA's Third Plan which envisages an outlay of Rs 75 million indicates the main requirement in this region. Communication is a prime necessity and although considerable headway has been made in this direction during the first two Plan periods, much still remains to be done. During the Second Plan, road development has made rapid progress with the result that the target has been exceeded. It is expected that by the end of the current Plan period, there will be 1775 miles of roads constructed in the area. Already the divisional headquarters have been connected with each other by road and during the Third Plan period these will be connected with subdivisional headquarters.

Agriculture also is to get increased attention and self-sufficiency in food is the aim. Once adequate road linking the various parts are constructed and food self-sufficiency is attained, other development programmes will become easier of implementation. Now that the NEFA has come under the purview of the Border Development Committee, other needs of the region may be expected to get simultaneous attention along with the programmes included in its Third Plan.

Madras Institute of Technology

The work of Madras Institute of Technology in imparting higher post-graduate training in engineering subjects is gradually getting recognition of the authorities. The Institute started eight years ago is now in dire need of large resources to extend its training and research activities.

Delivering the Eighth Convocation Address of the Institute last week, Mr C. Subramaniam, State Finance Minister, referred to the dearth of technically qualified men all over the country. Though the State possesses twenty-one polytechnics, the Minister disclosed that there was still shortage of diploma holders. In the Public Works Department itself there were about 200 vacancies for engineering hands. There was lack of men with post-graduate training all over the country. All these bear eloquent testimony to the

fact that industrial development in India is making rapid strides. The Minister was not happy that in engineering studies, India was copying the advanced countries. Copying them might be alright provided there was also original research. Unless our scientific workers also contributed toward the discovery of new scientific principles, they could not claim to have done something for the technological advancement of the country.

Indo-German Trade

The pick-up in Indian exports to Germany in 1959 may belie the fears developed after the inception of the European Common Market. Nevertheless, India's excess of imports conditions the general attitude and the proposal for a joint commission, enabling German importers to get their quotas from approved Indian shippers, is regarded as a hopeful beginning for the essential expansion of trade. The fall in groundnut oil exports was maintained in a recent memorandum presented by the Andhra Chamber of Commerce to a visiting official and it has been noted that exports of sacking have gone down in recent years though hessian shipments are maintained. It is assumed that a drive to sell more coffee will be attended with swift success though Germany's close trade ties with Brazil may limit unofficial optimism.

The Andhra Chamber expressed the view that iron ore also could be shipped to Germany. But the European Coal and Steel Community is an accomplished fact and Germany has long been accustomed to buy ore from Spain. The continuance of India's large imports of German machinery is one reason for the plea; the other is the need for new markets, offering hard currency for Indian exports. The chances of a trade pact to expand Indo-German trade have been mentioned lately and Herr Krupp's visit this year has stimulated thinking. So also the deputation of two German experts to advise on improvement of tobacco cultivation in Andhra Pradesh. The liberalisation of imports by adjustment of quotas or tariffs in recent years is held up by officials as a favourable factor and the recovery of industrial production, despite a surplus of coal last year, is now taken as a reason for hoping that Germany will become a buyer of pepper, cashew and coir goods on a large scale. The Protectionist phase in Germany has apparently ended and the need for larger supplies of raw materials from underdeveloped countries is widely recognised though German agriculture will claim a degree of extended feather-bedding like British agriculture. The chances of more manganese being bought from India rest on the impending separation of the Congo from Belgium as also the export of German capital for new industrial ventures in India.

WORLD OF BUSINESS

Hire Purchase

THE Law Commission has prepared a draft Bill for separating the law relating to the hire purchase from the Sale of Goods Act. The draft on which opinions are invited is based on the English Act of 1938. It may be recalled that Miss Ellen Wilkinson in the thirties was made aware of abuses and sponsored a Bill for effectively protecting unwary customers from traders who had sold household goods on the instalment system and the postwar amendments (extending the law to other goods and raising value) have carried out further the main object of saving the purchaser who has paid many instalments from seizure of goods or forfeiture of money paid. It has been suggested that a purchaser should be able to purchase goods outright even while the agreement is in force and the full deduction of the amount previously paid should be allowed. In the case of premature repayment, a hirer should be shown special consideration to the extent of a rebate. This may not be exactly to the taste of finance companies or credit corporations, but the protection of the buyer who usually pays a stiff rate of interest on goods taken appears necessary. The prohibition of assignment of title in respect of goods taken on hire purchase should not be absolute if the finance company is able to get its dues on time. In respect of goods sold on an instalment basis a clear title should be given and liability should be limited to only the sum due on account. The fact that electric fans, radios, etc are now widely sold on hire purchase makes legal safeguards in the public interest necessary and the Bill specifies that actions under hire purchase should be launched only in District Courts because hire purchase is familiar only to people living in large towns.

The future of hire purchase may not depend only on the entry of banks into the field of consumer credit, and large-scale sale of durable goods may be possible only, if price is payable on instalments by middle class customers. India is not likely to have sales of clothing on an instalment basis though it is not unfamiliar at present. The obligation to specify the cash price, as against the total due under instalments due after the initial cash down payment is, of course, a major safeguard but proper entries of all recoveries on the hire agreement may be demanded by the situation. Proper care of the goods taken on hire is, of course, a condition applied in the

case of motor vehicles bought on hire but the lien of an unpaid seller has to be defined precisely under H. P. agreements. The Law Commission's careful efforts will certainly be welcomed by the public frequently told of bargains in regard to motor cycles, radios, etc bought on the instalment basis though needy buyers of machinery who cannot get long-term loans are also apt to go in for hire purchase through a credit agency. No automobile manufacturer in India has perhaps ventured into this field though General Motors has its famous Acceptance plan for continuing credit sales through its distributors at home.

Screw Industry

Shortage of raw materials continue to be the main handicap of the Indian screw industry. According to Mr D. V. Virmani, Chairman of the Screw Manufacturers' Association, the only source of indigenous supply of steel wire has been found to be unable to meet the entire demand. As import is strictly regulated, the screw industry has perforce to depend largely on the indigenous source which, it is pointed out, is not able to meet even 50 per cent of the requirements. It would, however, appear that the tight supply position may not last long as the expansion programme for the stepping up of steel wire production is nearing completion. The output of Indian Steel and Wire Products, the principal supplier of steel wire to the screw industry, is expected to increase sizably by the middle of next year. By about that time, steel billets in sufficient quantities will also be available from the public sector steel plants. Besides the difficulty in obtaining adequate supplies of steel wire, the industry is having other worries like irregular supply of wire nails and box strapping which are also in short supply. Here again the import restrictions seem to have placed the smaller producers at the mercy of the open market which invariably extracts a high premium. The remedy suggested is to allot quotas to the producers to get their requirements from indigenous sources or to issue import licences. Units in the Punjab are having the additional disadvantage of shortage of power supply. These units are now getting power for only 35 hours per week as against 96 hours previously. Mr Virmani has entered a plea to the Punjab State Government to give priority to the Screw industry in the matter of power supply.

Export prospects for the industry seem to be promising as some recent Indian trade delegations have noted that wood screws of Indian manufacture stand a good chance in neighbouring countries. But success will depend, as in most of our exports, on the industry's ability to maintain a high quality and competitive prices as well-known manufacturers are already in these

markets offering attractive terms to buyers.

There is need for maximising exports because the industry's production has already outstripped domestic consumption. Mr Virmani estimates the indigenous production of wood screws at around 11 million gross. Production of the 21 units registered with the Development Wing amounted to 7.8 million gross in 1957 6.8 million gross in 1958 and 8.1 million gross in the first eleven months of 1959. Domestic consumption is about 8 million gross. It may not be necessary, therefore, to increase the installed capacity of the industry for some time to come but as noted above it has other important problems to solve.

World Shipping in 1959

Ship-building statistics for 1959 put India at the bottom of the list while the USA leads. But India has no laid-up tonnage whereas Britain had nearly a million tons lying idle. The fall in new tonnage launched last year was due to the deterioration in world shipping, as evidenced by the fall in freights. The Lloyd's statistics do not cover China or Russia at present. The provision of large merchant fleet by Liberia and Panama is due to the flag of convenience tactics, not to their share of world trade. It may be, however, noted that Norway, like Greece, is dependent on income from her shipping. An industrially advanced country like Canada has a smaller fleet than backward Spain, but shipping is not without its paradoxes as before. The large additions to UK tanker fleet were in part due to the oil companies' building programme and the entry of liner companies also into the field.

No surprise will be occasioned by the revival of the German mercantile marine based on the activity of heavy industries. But the leading contribution in 1959 to new world tonnage was again made by Japan which had benefited from US orders previously. A point to note is that the USA has a large fleet on the Great Lakes but a part of the US merchant navy is still held in reserve. Only 16.4 per cent of existing world tonnage is described as over 20 years old and the laid-up tonnage may be largely overage. The entry of Yugoslavia as a builder of new ships, like Holland or Poland, may be due to special circumstances but she is hardly a rival to Italy which is building ships for export to the UK like Sweden which has a permanent customer in Norway. The rebuilt yards of Burmeister and Wain have long made Denmark a builder of ships on foreign account but it appears as if France has no export business worth the name. Among oil producers Venezuela is a regular buyer but the biggest buyer of tankers was Liberia which patronised impartially Germany, Japan and Sweden last year. The addition to India's total tonnage

was over 81,000 tons but her fleet with .75 million tons is below that of Brazil or Argentina.

The statistics give no indication of what Indonesia has gained from the Confiscation of Dutch shipping in the East Indies. One point made plain is that the leading maritime countries buy new ships abroad and this may be not without value when arguing about the urgent need to enlarge India's merchant navy by providing more funds. It may be noted that Pakistan too has made on the seas a start and her fleet of 26 ocean-going ships maintains links between Karachi and Chittagong. Pakistan expects to buy a tanker and has added three coasters for the Ceylon-Gulf route. The addition of 1,00,000 tons to the fleet in 1959 proves that the martial law regime did not lag behind others in development of maritime transport and her entry into overseas routes also calls for notice.

Bio-fertiliser Plants

The Government of India's decision to set up, bio-gas and bio-fertiliser producing plants in collaboration with the Chemolimpex, the Foreign Trade Company for Chemical products of Hungary, will be welcome news to the agriculturists in India. According to the agreement recently entered into, the Chemolimpex will provide the technical data and designs in addition to the technical know-how for the implementation of the scheme.

In the initial stage, two plants will be installed on an experimental basis, one in Kanpur and the other in Delhi. The former plant will utilise bagasse as raw material while the latter will avail itself of the cowdung and other agricultural wastes for the manufacture of fertiliser.

Plough Factory for Andhra

The Andhra Pradesh Government have finalised a scheme for the installation of a factory to produce mechanised ploughs in collaboration with a Netherland firm which has offered financial assistance to the tune of Rs 50 lakhs. Sixty per cent of the components required for the agriculturists will be produced in that State. The factory is expected to manufacture more than 1,500 tillers a month within five years. The sanction of the Government of India for the implementation of the proposed scheme is awaited.

Rayon Factory for Kashmir

The Government of Kashmir have decided to set up a worsted yarn factory in Srinagar in collaboration with the Japanese Government at an estimated cost of Rs 20 lakhs. Under the new agreement Japan will furnish all technical assistance to Kashmir and the team of engineers is expected to arrive in the State in July. The factory will possess a capacity of 600 lbs of worsted yarn a day.

FOREIGN NOTES

Re-election in Ceylon

The transient and embarrassed Ministry of Mr Senanayake fell over the weekend owing to a rejected Address. Dissolution and a general election are decreed in Ceylon and the only good feature is that conventions have been followed. The party strife will continue, though the Governor-General is there to run the administration. The Federal Party based on Jaffna will perhaps persist in its demand for regional autonomy and the party that reaches an understanding with it soon may have a far better chance of forming a new ministry after the next election.

The political future is unsettled but Ceylon will probably benefit by officials working as a caretaker regime and the Budget can be certified by the Governor-General who is not a foreigner to invite loud criticism for using his powers. The UNP may build up strength and the Reds may suffer a rout again. That is not without an advantage to the other parties and a lively summer campaign may be forecast. The tourist trade may not suffer, but it is certain that the Indian problem will be used to whip up Sinhalese voters' passions. The minority problem is at the back of the stalemate and India will have to wait till it ends. Delhi cannot make overtures or offer its terms about Liberalising citizenship regulations, and that is one reason why the UNP's return to office is awaited with only moderate optimism at present. The labour problem may not become acute for Indian workers must wait for a solution of the citizenship question, and the guess may be hazarded that the problem will be made easier by waiting and watching. The voters have certainly a greater responsibility after the UNP experiment following the MEP experiment. But the position suggests to some that the old Donoughmore constitution could be tried again and the minorities made to feel secure. However, that is not easy to revive and the Island's taste of adult suffrage may render the committee system useless. The experience of Ceylon is different from that of Burma or Malaya because the Army in Burma has retreated to barracks and the Malayan regime rests on the preservation of an elective monarchy. The two stable elements—the Army and the Sultanate—are absent in Ceylon, and there is no desire, as in Malaya today, for a composite nationality ensuring equality for the diverse racial elements. The linguistic zeal distorts political alignments.

Eclipse of Rhee

Dr Syngman Rhee who appeared to be a durable dictator has been forced to renounce his power and accept a Cabinet system. Not for him the powers of General de Gaulle but the status of a constitutional head of State like the President of Eire. The disturbances which broke over the land of morning calm have not been without value. The USA realised that the re-election was contrived by force or fraud and a rare-military force had made of Dr Rhee a potentate, not a patriot. The US envoy in Korea saw that Rhee had gone out of hand and restraint of the client-State was called for. The Korean Assembly's protest made the USA realise that control of Rhee's republic is vital not just because he has quarrelled with Japan.

The ROK must not be allowed to rock the boat and the truce of 1953 must be maintained and the old territorial division of Korea upheld. The restraints imposed on Rhee will help the US State Department to move towards the Summit without any awkward query from the Far East and the supporters of Rhee have been largely told that liberation was a US achievement and the USA is now in the former position of Japan in regard to Korea. This is not at all unexpected and may help to abolish soon the Rhee line, help Japanese fishing interests and even re-open Korean contract with China via Japan. The sudden eclipse of Rhee at home, most admired for his influence in Washington, is not traceable to the decline and fall of US power in the Far East. It may even help indirectly the cause of India in relation to China and dispel doubts about the course and consequences of US Policy in the Far East. The American alliance is seen by Koreans to be more important than Dr Rhee's leadership, at home at present and the forces of democracy at home are able to hold back the dictator. The USA is no longer committed to blind backing of Dr Rhee and sees that he has done little for a lot of US money spent on Korea over ten years. The USA sees perhaps that, like Peron, Dr Rhee too has shot his bolt and his claim to support for addition to American ways or his old anti-colonial prejudice is the obstacle to bringing Korea in line with the mutual security system based on a new treaty with Japan.

April 23

The way to get 23 April into the National Calendar has been lately discovered and St Andrew's Day with its Caledonian dinner has its counterpart in St George's day. That George is still on gold coins still getting dearer and as a Capadocian accepted in Europe has long acquired sanctity is widely known but the use of a flag may upset true Conservatives especially when the Red Ensign is adopted, and a

careless comparison with the Red Cross may follow. However, 23 April is not only St George's day meant for letting George do it. It is also Shakespeare's day and the English-speaking world has a great interest in Shakespeare. That the Day was a big one for Stratford-on-Avon was natural and the Commonwealth representatives assisted in the local demonstration of pride. If Shakespeare wrote up St Crispin's day only later generations set store by St. George who now is made Shakespeare's favourite saint. The Band is big business, as shown by editions of assorted sizes and has been termed a dollar export since Henry V (on film) conquered New York as easily as Paris and Hamlet too decided to be on the screen for ever. The Folios may have gone across the Atlantic but the tourists still stream into Warwickshire and the legend is a cult easier because there are no descendants of the poet even as in the case of George Washington—the only man who has truly become a monument. What would Christopher sly say—Perhaps "Let the World slide" towards Stratford and "ask for a pot of small ale". One thing more. St George's day makes an end of Bacon's claims Shakespeare has carried the day.

Commonwealth Trade

The first report from the 20th Triennial Congress of the Federation of Commonwealth Chambers of Commerce, held recently in Canberra, Australia, deals with the need to promote expansion of intra-Commonwealth trade. The report, from the federation's committee on industry and commerce, states that the Congress:

Recognizes the desirability of industrial development and economic growth of underdeveloped Commonwealth countries, and warmly supports the policy of expansion of intra-Commonwealth trade.

Recognizes that it is reasonable for such countries to protect their new industries, particularly in the early stages of development.

Acknowledges that such countries must sell their primary and secondary products in order to develop economically, and recommends that other Commonwealth countries examine ways and means of buying from them in ever greater quantity and variety than at present.

Recognizes the existence of balance-of-payments problems and that these may persist for some time, thus necessitating the retention of exchange controls and currency restrictions—even among Commonwealth countries using sterling for the conduct of external trade—but the Congress believes that removal of currency restrictions and full convertibility are the most desirable objectives, full convertibility being an early necessary step.

The report states that these steps envisage the development of existing, and the establishment of new, industries under tariff and other protective measures, but the Congress

is aware that this might mean traditional suppliers finding themselves confronted by diminishing markets or barriers to trade expansion.

The Congress therefore suggests that there is a case for all Commonwealth countries to re-examine their industrial protective machinery, at stated intervals to see whether unnecessary artificial barriers to an expanding Commonwealth economy are being created, and whether some existing secondary industries, or any contemplated, are truly economic to the country concerned and the Commonwealth as a whole.

No Soft Lender

A very high rate of new development lending, increase in the Bank's capital as well as increased contributions from member countries, moves toward establishment of the International Development Association and expansion of technical assistance work are among the highlights of the World Bank's operations surveyed in Mr Eugene Black's address to the last session of the U.N. Economic and Social Council. Among the new developments is the growth of the Bank's lending in Africa. Since April, 1959, the Bank has made nine loans totalling over \$260 million in this region to which it has turned its attention comparatively late. The Bank's total lending has been running at the same high rate as in the previous two years, when new lending was over \$700 million. New loan commitments in the first three quarters of the current fiscal year amounted to \$560 million.

Growth of the Bank's lending resources has kept pace with the continued heavy demand for development finance from member countries. The increase in the Bank's authorised capital, most of which remains at call with member countries, constituted a "massive reinforcement of the Bank's borrowing power in the investment markets of the World". The Bank President has pointed out that the market for the Bank's bonds is widening and is not now confined mostly to the USA as was the case in the immediate post-war years. More than half of the Bank's funded debt is now held by investors outside the United States. This has been accompanied by the growth of private investment in development financing, a process which has been actively encouraged by the Bank. In fiscal 1958-59, the Bank participated in five joint operations with private investors in the United States market which raised a total amount of \$250 million, the Bank's own contribution being \$100 million.

The growing external indebtedness of the countries in the throes of development draws attention to the useful role that the IDA can play in extending assistance to these countries without aggravating the burden on their balance of payments. Dealing with the criticism, much of it unkind, which has greeted IDA even before its birth, (the IDA is expected to come into existence sometime before the end of this year) Mr Black has reaffirmed that, while the IDA will make soft loans in the sense that they will not bear heavily on the borrower's balance of payments, it will not be a soft lender.

MR CHOU EN-LAI has come and gone, and we are not very far from where we were before. This, of course, accords very much with expectations, though considerable misgivings were expressed by opposition parties at the time the idea of the Chinese Prime Minister's visit was mooted. There was no reason at all to feel that Mr Nehru would give anything away, but, from what we can piece out of the actual course of talks, it would appear that the Chinese had different notions of what they expected out of the meeting. The distinction between "talks" and "negotiations" that seemed to come as somewhat hair-splitting was not so excessively thin-spin. After all, for the Chinese came with some idea of "pulling off a deal." Roughly speaking, the idea was to make India yield up the large area in Ladakh in exchange for the Chinese accepting the McMahon line in the East. It was hardly likely that India should accept this kind of simplification of the whole question to the level of what Mr Nehru called a "barter."

I must say that I cannot withhold some admiration for the bland way in which Mr Chou En-lai ignored the Himalayan (in more senses than one) in favour of such over-simplification. His press conference was something of a tour de force in this respect. (Incidentally, there was something intriguing about Mr Chou's reported anxiety to meet the press even before the talks came to an end. Even at the press conference, Mr Chou, it would appear, was most "forthcoming" and it was only the correspondents' desire to catch up with their copy and their sleep that put an end to it). But, in the light of Mr Chou's particular amplification of the joint communiqué, it is clear what he wanted out of the press conference. Throughout his talk to the press, he went about as though certain things that happened in the last two years were of no particular significance for the discussion of the border dispute. The way he made it appear was that the current talks were some kind of leisurely discussion on a long-standing problem, vexatious no doubt, but with no real urgency from the point of view of cordial relations among the two peoples. In fact, he set it in the background of his iterated "millennial friendship" between the two countries. He seemed to imply that there should be no difficulty in settling this dispute with India in the same way in which he settled the dispute with Burma and Nepal. (Of course, as regards the latter, the fat is already in the fire, what with Chinese claims to the Everest). But the basic fact which Mr Chou ignored was that

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

the whole situation has been precipitated by—not to put too fine a point on it—Chinese aggression in Indian soil in the last two years. When a correspondent drew his attention to this aspect of the matter, Mr Chou said—apparently naively, but really not so naively—that Mr Nehru never said anything about "aggression" in his talks, and any such suggestion would be "unfriendly." Tackled later at his press conference, Mr Nehru was fairly blunt about it: "If we think, and if we told them that they have come on our territory, what does that mean? Obviously, it means they have committed aggression."

Obviously, Mr Nehru could not get himself bogged in a discussion about the technicalities of "aggression" with Mr Chou. But, in discussion the "adjustments" of the western frontier, the question of recent Chinese occupation of the area that we consider ours would obviously arise. And all that Mr Chou says in respect of this is that the area in which they now are is Chinese territory. The Aksai Chin area, which we claim as ours and into which we say the Chinese have moved in the last eighteen months, has been, according to them, in actual or "constructive" possession of the Chinese for the last two hundred years. In this connection, the Chinese make use of certain statements of Mr Nehru torn from the context. Mr Nehru once said that these remote regions are uninhabited and that "not a blade of grass grows there" or something to that effect. This is seized upon to show that the Indians had never been in control of the area. It is, I suppose, the same logic that makes the Chinese claim the Everest as theirs.

But it is in expounding the six "points" (which the Indian Government could not accept) that Mr Chou was at his blandest best. Their formulation, some elementary and others more involved, are admirably sutra-like, and apparently cover the entire gamut of the dispute. But there are crucial equivocations in them, and only those who carefully scrutinise them will spot them. Read as a whole, however, it would appear to a non-involved public (for whose consumption, no doubt, they were intended) as eminently reasonable and even elementary. And when Mr Chou informs the world that

the Government of India do not accept these (without, however, saying why) it will naturally assume that India is being obdurate. Let us look at these principles:

1. There exist disputes with regard to the boundaries between the two sides.
2. There exists between the two countries a line of actual control up to which each side exercises administrative jurisdiction.
3. In determining the boundary between the two countries, certain geographical principles, such as watersheds, river valleys and mountain passes should be equally applicable to all sectors of the boundary.
4. A settlement of the boundary question between the two countries should take account of the national feelings of the two people towards the Himalayas and the Karakoram mountains.
5. Pending settlement of the boundary question between the two countries through discussions, both sides should keep to the line of actual control and should not put forward territorial claims as pre-conditions, but individual adjustments may be made.
6. In order to ensure tranquillity on the border so as to facilitate the discussions, both sides should continue to refrain from patrolling along all sectors of the boundary.

CALCUTTA MADRAS NEW DELHI

nothing has happened in the last two years that is inconsistent with an earlier position. Taking that view, they are able to invoke the fifth point, and say, fantastic as it may sound, that it is the Indians who are making territorial claims on the Chinese. It comes to this, then: Not only is each expression in the "points" loaded with equivocation; the crucial question of who is the owner of the areas now occupied by the Chinese in Ladakh is not to be discussed at all. Since the "line of actual control" is so heavily in China's favour at the moment, it has nothing to lose in not coming to any agreement at all. (Any one who has any experience of "negotiating" with the Chinese knows what a weariness of the flesh it can be. Our own experience over Bara Hothi is an eloquent example). And here is the crucial trap: since we cannot bring up the question at all, the status quo will continue indefinitely, giving time to China to consolidate its

position. This suspicion is strengthened by the sixth condition to the effect that patrolling should be withdrawn. In other words, we should leave the Chinese alone to carry on their work of digging themselves in the territory over which they have "actual control."

The blunt truth seems to be something like this: China is and probably has always been interested only in occupying portions of Ladakh for reasons that are fairly obvious. But the claim for areas in the Eastern and Central regions has been deliberately put up, with every intention from the beginning of eventually giving it up; and, in return for this great "sacrifice", ask India to yield what China has always wanted. This pattern of behaviour gains plausibility from a number of related facts. First, the series of agreements with Nepal and Burma on the basis of the MacMahon line were not only in-

tended to demonstrate to the world the comparative tractability of the Chinese in other contexts and thus underlining Indian "obduracy"; it was also intended as a partial bait to India. It is significant that though, chronologically, aggression in Ladakh was earlier, it was comparatively quiet. (The Government of India's unfortunate silence over the fact undoubtedly aggravated matters). The first well-publicised aggression was in Nefu. The consequence was that Indian opinion was aroused over the violation of the MacMahon line, with the result that we were fairly worked up about the Line. The Chinese knew that they never had even a semblance of a case over it, and they are now ostentatiously giving it up, but as a price for the thing they really wanted. It is not without significance that the Indian Communist party also went through the motions of heart-searching, and eventually agreed, with every motion

of patriotic fervour, that the MacMahon line was inviolable. It was, however, significantly temporising over Ladakh. (Even Dange and his friends, who came out openly in favour of the MacMahon line, seemingly precipitating a party crisis, were ostentatiously uncertain about our claims in Ladakh).

Coupled with this is the fact that the long-standing dispute with Burma was suddenly resolved on the basis of the MacMahon line—a concession that China apparently was not formerly willing to make. Then came the agreement with Nepal, though this latter seems to be coming out at the seams. Both added up to a considerable propaganda advantage, since India could be black-mailed with the threat of seeming to the rest of the world as the unreasonable party. (In view of our known thin-skinned reaction to world opinion, this calculation is entirely without basis).

In the event, however, India has shown that it is not willing to fall into all this elaborate trap. The communique shows that there really was no common ground. And Mr Nehru did insist on keeping each particular sector apart and investigate the claims. Indeed, he was willing to examine the factual material regarding the claims over Ladakh. It is the Chinese (whose calculations were entirely different) who were not "ready" with their facts. Incidentally, for people who are in actual control of area, their unreadiness to discuss their "legal title" to such de facto control is surely significant. Mr Nehru, therefore, agreed to let the Chinese produce their facts and have them examined by the officials. But the basic differences are very much there, and it looks as though we must learn to live with our border problems for a very long time to come. A depressing conclusion, but one that has been evident ever since the Chinese started their adventures along the Himalayas.

American enterprise was at work in the city last week. You received an invitation to see a film produced by Fortune magazine about The Big Change in World Markets; and once you went there, to the USIS auditorium, you saw a select few businessmen gathered, also wondering like you what it was all about. The picture started: war-ravaged Europe was shown to transform itself. The underdeveloped countries are not left out; modern methods in agriculture and rapid industrialisation change the landscape of India or Latin America. Ah, yes, at the end of it you get the notion that The First National City Bank of New York appears to be trying to get the message across: "Trade"; and as you leave you thank Mr E. R. Cutting for a very pleasant evening.

GATEWAY GOSSIP

Two New States

WITH the inauguration of Gujarat and Maharashtra on 1 May, the number of States in the Indian Union will be increased to fifteen. The birth of the two new States may be expected to mark the final chapter in States reorganisation. Although Parliament had arrived at the decision some three years ago that for various important reasons, the region comprising the Bombay State should be a bilingual State, the dispensation was not liked by quite a large number of people. It became clear to close observers of the scene that emotional integration essential for the successful functioning of the bilingual State would not be achieved. A large section of the people were for unilingual States and their demand was insistent and in recent months had been backed by popular support. The Congress leaders had ultimately to bow to popular opinion and once the decision to bifurcate was taken, its implementation proved to be easy. Financial arrangements between the two new States did not present any insuperable difficulty as both parties were quite accommodative.

Even as these notes are written, the five-day celebrations to usher in the new States have begun. People in both the regions are naturally happy that at long last their long-cherished wish has been fulfilled. It is not as though they are unaware of the handicaps that both the States will have by electing to separate, especially after three fruitful years of joint working in the bilingual State. But there has all along been a feeling under the surface that unilingual division will be more satisfying and will be more conducive to sustained effort.

It would, however, appear that emotional integration will continue to demand some attention in both the States. The demand for a separate Vidarbha State indicates the task ahead in this direction for the Maharashtra States. Gujarat may also have its own share of this problem if only in a lesser measure.

In other directions too both the States have heavy work awaiting them, in common with the rest of the country. Perhaps, Gujarat may find the going harder than Maharashtra in the initial stages as it is financially rather weak. Dr Jivraj Mehta, the prospective Chief Minister, has pointed out that large financial resources for development projects may not be forthcoming if the State is left to itself. Substantial Central assistance has to fill the gap and the Planning Commission will no doubt take note of Gujarat's requirements.

In course of time the State by itself will become strong enough to find adequate resources for its future plans. There are considerable natural resources waiting to be tapped, and what is more, there is the people's determination to make Gujarat strong in every respect. There will be no worry about attracting entrepreneurs to establish new industries as Gujarati businessmen will be only too ready to contribute to economic development of their own State. The businessmen of Gujarat have already drawn up schemes for the rapid industrialisation of the region. The fact that Cambay oil has been found to be commercially exploitable has opened up new avenues. Although the oil refinery will be truly national, its location in Gujarat will certainly help accelerate the economic development of the region.

Mr Y. B. Chavan, Chief Minister of Maharashtra, has indicated what a separate Maharashtra State can and should do. On his part he has promised a clear and efficient administration and his record as Chief Minister of bilingual Bombay will be remembered. Rehabilitation of the peasantry will naturally claim the new State Government's main attention. For as much as 64 per cent of the State's population are peasants and the sown area is also largest in whole of the country. Oilseeds and cotton are the two important cash crops but in foodgrain production the State is yet to attain self-sufficiency. The problem of providing increased irrigation facilities has to be given a high priority as only about 5 per cent of the gross cropped area at present receives irrigation facilities. Apart from making agriculture efficient, the State Government have to initiate measures to improve the lot of the tiller of the soil.

On the industrial front, there are already a sizable number of units in varied fields. Cotton textiles engineering, chemicals, paper boards and vegetable oil are some of the more important industries. Of course the textile industry is occupying a predominant place but other industries are also becoming increasingly prominent. Even so, the State will have to put forward sustained effort toward developing the industrial base of the economy. The fact that the State abounds in natural resources adds to the people's interest. Though as yet the region lacks adequate electric power, the commissioning of Koyna from October 1961 will sizably augment the power supply. A number of important industries, big, medium and small based on the power supply from Koyna are planned. An aluminium plant and a newsprint factory have been proposed in the Koyna region. Rich deposits of iron ore, manganese, and bauxite have been found in Vidarbha and these may open up new vistas for industrialisation in the State.

OLYMPUS

India's Trade with West Europe

THE Union Ministry of Commerce and Industry has just released here the report of the Indian Government Trade Delegation which, under the leadership of Mr K. B. Lall, ICS, visited West European countries in September-October last year. The report is mildly optimistic on the score of a possible expansion in India's exports to the six European Common Market countries in particular. This optimism stems, in part, from the Delegation's appraisal of the trend of growth in industrial activity and levels of personal consumption in Western Europe—a trend which, it is expected, will increase the demand for the kind of raw materials which are exported or can be exported by India. It is also partly based on the "assurance" of the European Economic Commission at Brussels that the need of a developing country like India for a relatively larger expansion of trade would receive their careful attention while shaping the tariff and quota policies of the member states of the common Market. It may be that this optimism will be found justified if the present proposal of the Common Market to reduce its external tariff by 20 per cent by way of concession to third parties comes to be implemented in July next. But there is no certainty, as of today, on that score. Even if there is any such certainty, it is also equally possible that this country may not fare any better than other competing countries like Ceylon, Indonesia, Brazil, Turkey, etc., on the West European market. But, at the same time, it is conceivable that all exporting countries including India might be in a position to increase their exports to the Common Market countries.

In recent years, however, India's exports of some commodities to what are now the Common Market countries (West Germany, France, Italy, Belgium, Netherlands and Luxembourg) have either remained static or declined. The comparative picture of exports by India and other competing countries to the said six European countries is presented in a 20-page statistical appendix to the Lall Delegation's report. When these statistics are read along with the Delegation's appraisals of the prospects in respect of the major export commodities, it would appear that India's export performance in the years ahead may well be better in some lines than that of other exporting countries.

To take tea and coffee first. The Common Market countries have been importing tea from three

principal sources—Ceylon, Indonesia and India. The export contributions of these three countries have been as under:

(In \$ Million)				
Exporting Country	1956	1957	1958 Jan-June	1959
Ceylon	7	6	n.a.	n.a.
Indonesia	10	10	n.a.	n.a.
India	7	6	4.8	2.4

The above figures show that India's exports of tea to the said six European countries have been declining in recent years. The Lall Delegation believes that three significant factors, namely, rising standards of consumption, a growing tendency to discourage the use of alcohol and the campaigns under way to popularise the use of milk, open out better possibilities for tea. As tea has yet to find its due place in West European homes and the advantages of its use as a safe stimulant in industrial establishments are not yet widely recognised, the Delegation's advice is that the Tea Board and tea exporters must pay special attention to what can be a potentially larger market for Indian tea.

As for coffee, the Common Market countries have been importing that commodity from three principal sources—Brazil, Belgian Congo and India. The export contributions of these three countries have been as under:

(In \$ Million)				
Exporting Country	1956	1957	1958 Jan-June	1959
Brazil	163	141	n.a.	n.a.
Belgian Congo	15	20	n.a.	n.a.
India	5	12	8.6	2.2

It is noteworthy that Western Europe takes nearly 80 per cent of India's overseas sales of coffee. But what India exports to Western Europe accounts for only 2 per cent of the total coffee imports into that region. According to the Lall Delegation, Indian Arabica coffee enjoys a high reputation and is used as a quality blend; the only serious obstacle to larger imports is the small size of Indian exportable surplus. The Delegation's conclusion is that if Indian production can be expanded and Indian sellers can develop an enduring relationship with West European blenders, there is greater scope for an increase in the export earnings from coffee.

To take iron and manganese ores next. As far as iron ore is concerned, its exports from India to Western Europe have been on a limited scale so far. But, in the opinion of the Lall Delegation, the development of new mining areas, transportation, and port facilities on our West, coupled with mutually satisfactory transportation arrangements, should help West European steel industry to draw a portion of its iron ore requirements from India. The Delegation has gathered the impression that in the context of the steel industry's large plans for expansion, Italy and West Germany in particular will be interested in cooperating with

Indian authorities in developing the ore bearing areas in South-West India as a source of supply of iron ore for their expanding requirements which cannot be met fully from their traditional sources of supply. Although the high quality of Indian iron ore is well known, the long haul landed costs are likely to be somewhat higher than those of supplies from near sources like Norway, Sweden and North Africa. But here the Delegation's hope is that it will not be too difficult to find a mutually satisfactory solution of the price problem.

As for manganese ore, there has been some decline in India's share of French and German imports of manganese ore because of preference shown towards imports from some other sources, particularly the USSR. It is disquieting that India's exports of manganese ore to the six Common Market countries have been valued at just Rs 1.1 crores in the first half of 1959 as against Rs 4.1 crores in the whole of 1958 and Rs 5.2 crores in the whole of 1957. The Lall Delegation's expectation is that an improvement in the off-take of Indian manganese ore will follow the development of closer contacts by Indian suppliers with industrial organisations in Western Europe.

Next in importance is the export of vegetable oils and fats. India's exports of these commodities to the six common market countries have declined, in value terms, from \$28 million in 1955 to \$2 million in 1957. The Lall Delegation believes, however, that Western Europe can provide an expanding market for Indian groundnut oil, for example, which is known for its quality, provided Indian production can be expanded and prices are competitive in relation to those quoted by suppliers in Africa and Brazil.

As for tanned hides and skins, the Common Market countries have been importing from two principal sources—UK and India. The export contributions of these two countries have been as under:—

		(In \$ Million)			
Exporting Country	1956	1957	1958 Jan-June	1959	
U.K.	11	13	n.a.	n.a.	
India	10	12	7.9	4.8	

According to the Lall Delegation, some of the West European countries are yet to appreciate the value of East India tanned goat skins, sheep skins and East India tanned kips. It is the Delegation's belief that since manufacturers of synthetics have not so far been able to furnish an adequate substitute for leather, the demand for tanned and finished hides and skins from India is bound to increase. This will be so because tanners and finishers in India are in a position to work on fresh skins in comparison with tanners and finishers in other countries who have to work on dry salted skins. Since, thus, finished leather of a high quality can be more cheaply produced in India, it should be possible to meet

the exacting requirements of end-users and build an expanding market in Western Europe.

Imports of Indian tobacco into Western Europe have always been relatively small. In recent years they have been around \$1 million in value terms, as compared to the imports of around \$70 million, \$35 million and \$20 million respectively from the United States, Greece and Turkey. But the Lall Delegation believes that there is scope for greater export of Indian tobacco to West Europe if sufficient attention is paid to convince the manufacturers there of the neutral qualities of Indian Virginia tobacco in the preparation of their blends.

As for exports of Indian jute fabrics, the six Common Market countries have absorbed in 1958 just Rs 2.5 crores' worth. Although the Common market countries have well-established jute industries which have been protected against competition from India and Pakistan by a combination of rigid quotas and high duties, the Lall Delegation's finding is that the advantages to the West European economy, which are likely to flow from freer availability of jute manufactures are being gradually recognised. The Delegation has also succeeded, to some extent, in convincing trade and industry in West Europe that larger exports of jute fabrics and products from the Indian sub-continent will prove mutually beneficial if quota restrictions and import duties are reduced. But, according to the Delegation, neither import duties nor quota restrictions need stand in the way of imports of jute fabrics for purposes of re-export.

The Lall Delegation has also indicated the possibilities for greater Indian exports to West Europe of some other commodities like pepper, some varieties of cotton textiles, handloom fabrics, handicrafts, coir mats and matings, carpets and floor coverings, cashewnuts, preserved fruits, molasses and power alcohol. The export prospects of these commodities would seem to be rather limited. But many a mickle makes a muckle. Even so, these commodities too may well contribute to an expansion in India's export trade with West Europe if the trade arrangements concluded by the Delegation lead to the expected progressive relaxation of import restrictions and to the establishment of joint trade commissions. If Indian exports to the Common Market countries do not substantially increase from the present annual level of around Rs 50 crores, it will be increasingly difficult to finance India's trade deficit of Rs 150-175 crores with those countries. The Lall Delegation has given the appropriate finding that Western Europe can retain its place as a supplier of goods to India only if there is a substantial increase both in the special financing facilities available from that area and in exports to it.

Handloom Industry

THERE was an interesting discussion in the Madras State Legislative Assembly last week about the position of the handloom vis-a-vis mill industry. It was refreshing to be told by the Industries Minister Mr R. Venkataraman, in a realistic fashion that the demand for a cent per cent reservation of dhoties and saris production for the handloom would "spell ruin of their handloom."

The Minister was replying to the debate on the demand for grants under "Co-operation". He was frank enough to avow that the handloom weavers' problem could not be solved by reserving production of dhoties and saris for their sector. Mr. Venkataraman recalled that when a resolution on those lines was adopted by the Madras State Assembly and forwarded to Parliament for its consideration, he had himself opposed this suggestion in the Lok Sabha since he felt it would not work to the benefit of the handloom weavers.

The object of such reservation would be to lose the Bombay and Bengal Market, Mr Venkataraman warned, as these are accustomed to borderless dhoties (sent from South-eastern districts of Madras) or saris. Such production by the handloom as contemplated by the reservation cry would then have to be consumed only by the South. He warned that mere political agitation would not solve this problem.

Mr Venkataraman has evidently come to realise the pitfalls facing the workers led by outside and professional agitators and has begun to adopt measures in the industrial field to see that workers understood their own obligations to their employers.

As an instance of his prompt and worthy measure to make workers realise their duty, he, as Transport Minister, ordered for bodies for the State Transport vehicles outside the Government-owned factory at Chrompet. There was a criticism as to why the Government running such a bus-body building unit should go outside this sphere to have their requirements scarcely realising the fact that the labourers in this Chrompet factory had adopted a go-slow policy. When the Minister preferred those bodies to be built outside the factory, the workers, realising their responsibility and reportedly gave up their go-slow tactics. It may be temporary or permanent. But the salutary effect of the Minister's methods on the mind of the workers was a worthy result of the welcome measure adopted by him.

Likewise, the handloom weavers in the State of Madras had been taking shelter under the protection given by the State. They have been crying for all kinds of privileges. Not the least has been the export of the handloom "Bleeding Madras", the kind of fabric fancied by America

and imported by them in large quantities. But when some of the exporters indulged in exporting sub-standard "Bleeding Madras", the American Consumers' resistance had begun to tell upon the Madras production which has begun to accumulate.

Among the 50,000 handloom weavers solely producing this American fancied check-pattern lungis converted into dress fabrics by the American consumers, competition became stiff with consequent high wages. Greed, rather than reputation, took possession of the shippers and today the cloth not saleable in the American market for which this stuff was intended has to be converted into ready-made garments for local consumption. A function was fixed at a Copley house in the city for inauguration of the sale of these ready-made garments and at this function Mr Venkataraman was reminded that 15,00,000 yards of this exportable stuff had accumulated waiting to be disposed of while 50,000 weavers were in distress.

According to the Madras Government, the Handloom Export Organisation was unable to persuade the American consumers because of substandard fabrics and high prices. The drop in demand was, therefore, steep in America. A crisis soon overtook this hectic competition in passing off substandard cloth to the discriminating consumers in the Western Hemisphere. The conclusion reached by the Madras Government should bring home a lesson to the exporters of such fabric, that this hasty ugly competition underlines the "imperative need for nursing the foreign market and the consistent maintenance of quality exported".

The Government of Madras had suggested to the Export Promotion Organisation of handloom that concessions granted to exporters under the export promotion scheme should be restricted to those getting their fabrics "quality-marked". This should bring private exporters under some intrinsic discipline. It is unfortunate that while the demand for Indian handlooms has been established in the markets of South and West Africa, Middle East and South East Asian countries, and while an external marketing scheme is being implemented by the All-India Fabrics Marketing Co-operative Society, there should have been such complaints of sub-standard cloth export.

In this connection the Madras Government had told the State's handloom weavers that it had transferred control of the ancient Madras Textile Institute to the Government of India. This would result in the reorganisation of the Institute with the introduction of a research section for new designs for sari border and shirtings. Even otherwise the State has allotted Rs 8.86 lakhs for the current year for the improvement of techniques in the handloom industry.

The handloom cess borne by the mill-industry falls for the large benefit for this State. While the 1958-59 cess share of this State was Rs 92 lakhs, the share for 1960-61 has been fixed at Rs 103.38 lakhs. Madras Government themselves had provided Rs 140.22 lakhs and Rs 129.40 lakhs in 1958-59 and 1960-61 budgets respectively for handloom industry development.

Overseas Interest Dries Up

PRICES in the jute markets have sizably declined over the past few days. The easier tendency is largely due to the heavy margins imposed by the East India Jute and Hessian Exchange in a bid to curb unbridled speculation. Just prior to the imposition of the margin, there have been fairly heavy selling by mills especially in the forward positions and profit-taking at the higher levels. The cumulative effect of all these factors has been a steep fall in prices all along the list. Meanwhile, there have also been indications that the foreign buyer has become less keen than a few days ago to place his orders at the high levels.

The events of the past few weeks have, however, clearly shown that there is increasing demand for jute goods in overseas markets. Last year it had been noted that hessian was gaining in popularity in its principal markets and especially in the US. During the past few months, hessian has made further headway, as will be evident from the trend of burlap consumption. According to Mr William A. Nugent, the IJMA representative in North America, the "outlook for Indian jute goods is very encouraging in the current year". He attributes the increase in burlap consumption in US to the improvement in economic conditions in that country, general sales promotion efforts and the increasing awareness among consumers that the use of burlap in packaging is economic.

The position with regard to heavy goods is not so very encouraging. The IJMA Chairman had expressed concern at the decline in off-take noticeable during 1959 by sacking's principal markets. It is true that sacking has done well during the past six or seven months. But this improvement seems to be largely due to the increased interest shown by China. In its principal market, Australia, sacking has recorded a decline in 1959 and indications are that this trend still continues with Pakistan steadily increasing its lead in that region. In the important markets in Africa, also this category of goods from India is yielding ground to competitors. It is unlikely that these markets will think of increasing their interest in Indian sacking at the present high prices.

The prospects of maximising exports of sacking to Australia, Africa and other markets, do not

seem to be encouraging in the present context of the uncertain raw jute situation also. Large imports may not at all alter the price pattern sizably because Pakistani jute may not prove to be less costly than Indian jute. As a matter of fact Pakistani jute prices have already gone up considerably. It is also doubtful if mills will be able to step up their output further than what has been already decided. An additional one per cent of the looms is due to be commissioned from 1 May thereby bringing the percentage of looms still remaining sealed to 9. It is quite likely that the IJMA will be decided to reopen another 1½ per cent of the looms from 1 June. The percentage of sealed looms will then further be reduced to 7½. Although the statistical position of jute goods and the trend of foreign off-take seem to call for the unsealing of a much larger percentage of the looms, it will be too risky to vote for a sudden big increase in production without making sure that adequate raw jute will be available.

It would appear that the industry's anxious days will not be over even with the receipt of large quantities of jute from Pakistan. Reports from jute growing areas are very discouraging indeed. Sowing operations are said to have been suspended in some northern districts of West Bengal due to lack of rain; and in some other regions, where there have been early sowings, the crop is withering. It is now generally believed that if the hot weather continues for some days more, the new crop may be definitely delayed. If rainfall in the growing areas turns out to be inadequate and very late, the size of the new crop and the time of its arrival will become matters that will please the speculators.

The jute goods market ruled quiet during the past week in the absence of foreign interest. The heavy margin imposed in the forward market effectively curbed speculative activity and holders were keen to unload at every rise. Reports from important foreign markets indicated that consumers were perturbed over the steep rise in prices in the primary market and were unlikely to extend their commitments beyond their immediate requirements. It was believed that overseas buyers might decide to keep out of the Indian market if price stability was not ensured. The apprehension that Authority might take drastic measures to rid the markets of excessive speculation also seem to be influencing the sentiment. However, with indications of a delay in the arrival of the new Indian jute crop, a quietly steady trend was noticeable toward the close of Tuesday. B Twills April steadily declined to Rs 123.15 while Hessian 40"x10oz April declined to Rs 44.25. Although mills did not evince much interest, the raw jute market ruled quietly steady. Assam Bottoms April May Delivery was

placed at close on Tuesday at Rs 36 per maund.

Suggestions to Boost Exports

THE position of Indian tea has, of late, become vulnerable in world market under the impact of stiff competition from other producing countries. If India is to meet successfully this competition and continue to maintain her position in the world market, Indian tea is to be made competitive in price. This depends on adequate relief being granted to the industry.

The Chairman of the Indian Tea Planters' Association has expressed the view that boosting of Indian tea exports can never be achieved unless the Government set up a strong Tea Export Promotion Council with wide financial powers to promote Indian tea in its traditional and potential markets abroad.

He has suggested certain measures to step up exports; and these include the immediate starting of a country-wide campaign in the UK through suitable agency for popularising Indian tea, abolition forthwith of the export duty on tea and realisation of the cess on production of tea instead of export. This will, no doubt, mean a large increase in promotion costs. He adds that, if, after exhausting the accumulated funds, it becomes necessary to raise the rate of cess to finance effective methods of propaganda, the industry will rise to the occasion and face the additional burden.

Referring to Common tea, which forms 60 per cent of India's tea

production, the Chairman of the Association has stated that the marketability with profit is the problem. Unless the difficulties of Common tea are eliminated, the fixation of production and exportable targets for India will be farcical.

Although the statistical evidence appears to indicate that the new season 1960-61 may begin well considering that the North Indian crop may be delayed by current drought conditions in many producing areas, the balance between the supply and demand can be easily disturbed; because the production of an agricultural product depends greatly on climatic conditions. Any excess in production may, there, have a depressing effect. This can be done if attention is concentrated on quality.

Meanwhile, in the Internal Sale held in Calcutta this week, offerings consisted of 22,614 packages of Dusts. There was a strong active demand with prices generally registering an advance. Orthodox types were well supported, selling at dearer rates. Leg-cut Doars followed the upward trend of the market, the smaller and brighter liquoring types being a strong feature.

Medium CTC descriptions met with active enquiry and were fully firm to 6 nP per pound dearer. The best CTC teas were taken up at around last rates. Following rates were quoted: Medium Doars Dust Rs 1.90 to Rs 2.02; Medium Assam Dust Rs 1.88 to Rs 2.00; Medium Assam CTC Dust Rs 2.10 to Rs 2.28 and Best Assam CTC Dust Rs 2.50 to Rs 2.85. A total of 674 packages of Leaf grades was offered. There was a very strong general demand for these types.

The Ceylon tea industry has got off to a good start this year with an outturn of 35.1 million pounds in January as compared to 33.8 million pounds in the corresponding month of last year. In January 1958, Ceylon produced 28.8 million pounds.

The Pakistan Government have announced an increase of As 4 per pound in the excise duty on tea, i.e. from As 6 to As 10, with immediate effect. The excise duty has been enhanced at a time when superior quality tea has been withdrawn from the market for export purposes and other qualities are being sold at prices 10 to 12 per cent more than the price last year.

Pakistan is expected to produce 57.5 million pounds of tea this year and the internal consumption is expected to be about 40 million pounds, leaving an exportable surplus of 17 million pounds. The target of 20 million pounds for export, set last year, had to be cut by 3 million pounds due to a sudden rise in the local market.

After the Easter recess, the London auction opened on a fairly steady note. Although some non-descript types met with irregular competition, demand generally was sustained at rates prevailing before the holidays.

UNITED BANK OF INDIA LIMITED

Regd. Office: UNITED BANK BUILDINGS, 4, CLIVE GHAT STREET, CALCUTTA-1.

Annual Report of the Directors for the year ended 31st December, 1959.

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1959 and Profit & Loss Account for the year ended 31st December, 1959 together with the Auditors' Report thereon.

The profit for the year after making provision for taxation and including the balance of Rs. 1,81,542-49 brought forward from the previous year's account amounts to Rs. 16,10,381-82. Out of this amount the following appropriations have been made:

To Reserve Fund under Section 17 of the Banking Companies Act ... Rs. 2,90,000-00

Leaving an available balance of ... Rs. 13,20,381-82

Out of the above the Directors recommend the payment of a Dividend to the shareholders @ 4.30 per cent per annum, subject to deduction of tax at the prescribed rates in accordance with the provisions of the Income Tax Act, absorbing ... Rs. 11,38,817-00

To be carried forward to next year's account ... Rs. 1,81,542-49

The Bank's business during the year made satisfactory progress. During the year under report four Branches were opened in the State of West Bengal at Naihati, Barrackpore, Dum Dum and Kharagpur.

Sri M. J. Vaidya, Sri B. N. Chaturvedi and Sri K. O. Das, Directors, retire under Article 117 of the Articles of Association of the Company read with Section 256 of the Companies Act, 1956 and being eligible offer themselves for re-election.

During the year Sri S. Gupta, at the invitation of the Board of Directors joined the Board. Under provisions of Section 260 of the Companies Act, 1956 and Articles 123 of the Articles of Association of the Company, he will hold office up to the date of the Annual General Meeting and being eligible offers himself for election.

Dr. S. B. Dutt, who was elected a Director at the last Annual General Meeting held on the 4th May, 1959 has since attained the age of 65 years and hence his continuance as a Director will require the approval of the shareholders in the General Meeting in accordance with the provisions of Section 261 of the Companies Act, 1956.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

N. N. LAW ... Chairman.

UNITED BANK OF INDIA LIMITED, BALANCE SHEET—(Contd.)

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1959 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- We have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- The transactions of the bank which have come to our notice, have been within the powers of the Bank;
- In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;
- The Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns;
- In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1959, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Dated, Calcutta,
The 4th March, 1960

RAY & RAY,
Chartered Accountants.

Schedule of particulars required under the Banking Companies Act, 1949, attached to and forming part of the Balance Sheet as at 31st December, 1959.

United Bank of India Limited

Another Year of Progress

Satisfactory & Encouraging Results Achieved

Dr. N. N. Law, the Chairman on Operating Costs

Addressing the share-holders, at the Tenth Annual General Meeting of the Bank, held on the 25th April, 1960, Dr. N. N. Law said:

"The economy of the country is entering an important and crucial phase. In this the last year of the Second Plan, preparations are afoot for launching the Third Plan which, it is hoped, will mark the achievement of the self-generating stage in India's economic development. In this context, I take your leave to make a few observations bearing upon the banking system generally, before I proceed to present your Bank's balance sheet for your consideration.

The Trend in Banking:

"Despite the strains and stresses that banking in India has had to contend with during the 1950s, its contribution to the developmental effort of the Nation has not been insignificant. There has been a marked growth in deposits as well as in advances; more areas have been provided with banking facilities; banking habit has been further stimulated; finance for foreign trade, in addition to the

growing demand for inland trade and industry, has been provided; and Government borrowings have been supported.

Operating Expenses:

The growth of the banking system has, however, been inhibited by the rising operating expenses, a factor which has cut into the already thin margin of bank profits. Between 1950 and 1958, the ratio of operating expenses to deposits has, in the case of Indian scheduled banks, gone up from 2.97% to 4.24%. This means a rise of about 43% as against a rise of 29% in the ratio of operating earnings from 3.84% to 4.96%.

Operating expenses comprise mainly (a) cost of deposits and (b) establishment charges, over neither of which has the banking system been left with any appreciable measure of effective control. Firstly, in regard to the cost of deposits, while it is true that the upward trend in the rate of interest on deposits was checked by an inter-bank agreement in 1958, it cannot be said that the average cost of deposits has since been

appreciably brought down in-as-much-as in recent years the pattern of deposits, with a preponderance of time deposits has remained unchanged; in 1959 time deposits constituted 60% of the total deposits of Scheduled Banks as against 33% in 1950.

Secondly, in regard to Establishment charges, these are mounting from year to year and have for some time been quite outside the control of the banks. While there has been, in recent years, appreciable increase in the overall remuneration of bank workers, it can by no means be said that there has been a corresponding improvement in their productivity. I appreciate the difficulties experienced by all workers and fixed-income groups, during a period of rising prices. But in a fast developing economy, it is the lot of all citizens to bear such hardships. Unless there is a determined effort to increase productivity and unless an increase in remuneration is linked to a corresponding increase in output, the circle of wage rise and cost inflation would continue unbroken. I would, therefore,

appeal to all workers and particularly to the bank employees, to appreciate the situation and extend their wholehearted co-operation in an endeavour to improve the standard and norm of production.

While on the subject of operating expenses, I want to sound a note of warning against the dangers of a situation, in which, to meet the growing expenses, banks are reluctantly forced to seek increased earnings by a quick rise in their Advances. Expansion of bank credit, when occasioned by development efforts, may be a necessary feature in the process of economic growth, but it becomes a different matter when a rise in advances is sought for the purpose of meeting the disproportionate increase in the banks' operating costs. An enquiry into the manner in which, and the extent to which, the rising operating expenses have so far been absorbed, and whether the process has not adversely affected the banking system and the sound growth of the national economy, would prove to be a very useful study.

30 April 1960

Operating Earnings:

The imbalance between rising operating costs and comparatively less elastic operating earnings, has acquired the dimensions of an international problem. It is instructive to note that despite significantly high service charges of the American banks, the Vice President of the American Bankers' Association has, in a recent address, thought it fit to emphasise the necessity of educating the banks' customers with a view to further passing on the incidence to them. The banks in India are now faced with a similar problem of improving their earnings without much altering their pattern of assets.

Besides meeting the rising costs, the banking system must have a better pattern of earnings to be able to provide better and newer services. Owing to the inter-play of various forces, domestic and international, it has become necessary for the banks to organise and increasingly develop departments which earn no profit for them, such as Economic research, methods and systems research, cost analysis study of specific industries etc. Faster expansion of branches would also require ability to bear losses on the new branches. Again, adoption of new techniques of advances, to meet the requirements of the economic development efforts, needs to be backed by a better built-in cushion.

Monetary Policy:

Having discussed some of the aspects of the trend in Indian banking, I now turn to an important monetary measure recently introduced in this country.

Any step, which is expected to restrain inflation, the most crippling force in an economy, would be welcome even when it is taken in anticipation. While introducing such a measure, however, it is necessary to ensure a proper spread of its incidence over the different segments of the economically active people. Complexity arises when, for reasons of inability or expedience, the attack cannot be directed at the source or the sense of equity cannot be allowed to prevail.

It is in this context that the directive, issued in early March this year, by the Central Banking authority, has to be judged. Banks are now required to maintain with the Reserve Bank, as cash deposit, 25% of any increase in deposits accruing after 11 March, 1960, in addition to the requirement of the usual statutory deposits at 2% of the Time and 5% of the Demand liabilities. Although such measures were adopted before in other countries of the world, when occasion arose, the present directive is the first of its kind in imposing quantitative restriction on the use of bank resources in this country.

The purpose for which this step has been taken, is, according to the statement in the press, to meet

the situation arising out of substantial liquidity in the banking system, expansion of money supply and bank credit and their impact on the price level. With regard to liquidity of banks, early in March this year, the Advances-Deposits ratio of all scheduled banks including the State Bank of India was 56.66%. If the figure for the State Bank (31.01%) is isolated, the ratio of other scheduled banks would stand at over 69% about the date when the directive came into effect. If the amount of about Rs. 300 crores of the P.L.480 counter-part funds lying with the State Bank in deposit, (and which is stated to have been entirely invested in Government Securities) is isolated from its total deposits of about Rs. 614 crores, the advances ratio of that bank to the net figure, will be of the order of 60%. If this figure is taken with the figure of other scheduled banks, the overall ratio of all scheduled banks would be around 67.4%.

As for bank credit, expansion may be allowed as far as the productive requirements of the economy would warrant. In a fast developing economy there is need and scope for flexibility of approach in this regard. The impact of bank credit on the price level, at the present time, is at best insignificant. A major contributor to a cost inflationary trend is the impact of a disproportionate rise in wages. It is our view that wage rise, as it is taking place today, is completely dissociated from the realities obtaining in the life of the masses as a whole. In such a situation, I wonder how far the effect of such non-monetary causes can be neutralised by monetary measures, particularly when the latter cover only a small portion of the total economic activity of the country, —the bulk remaining outside the channels comprising the organised money market. On the other hand, a substantial expansion of the banking system can be an important corrective, and this, we think, needs real encouragement.

Future will answer whether or not the step taken has been much ahead of its time and whether the context in this country was or was not the same as those in which such steps were taken in some other countries. It must, however, be admitted that, if any monetary measure is at all indicated, it is more welcome in its present form than in the form of other conventional restraints. If this measure will succeed in keeping the prices under control, and holding the value of the Rupee, and not aggravate the situation by hampering production, the step will have been justified and the banking system will have no complaints.

Bank's Progress:

I now draw your kind attention to the Bank's Accounts for the past year, which have been in your hands for some time. The

results depict yet another year of progress. Deposits have gone up from Rs. 43.54 crores in 1958 to Rs. 47.68 crores. There has been a slight decrease in advances by Rs. 12.2 lakhs to Rs. 27.51 crores. More foreign exchange business was transacted during the year as compared to the previous year. Against the background of general economic growth, the eastern part of the country suffered considerably during the year under review, from flood and excessive rain. Having a large number of offices in this affected area, your bank could not but feel the repercussion. Judged in this context, therefore, the progress achieved has been both satisfactory and encouraging.

I feel happy to be able to report better operating results than in the previous year. The profit for the year under review has been arrived at after payment of bonus to the staff, an item which figured in the previous year as an allocation from the profit. Although your Directors are now able to recommend dividend at a gross rate of 4.30%, on account of the Finance Act, 1959, the net rate at 3.01% remains almost the same as before. At the recommended rate, payment of dividend will absorb Rs. 11.39 lakhs as against Rs. 7.83 lakhs in the previous year. It may be relevant to mention here that, the new pattern of Income tax has further dug into the effective profits after taxes in the hands of the banks and the shareholders. As a result, there has been a noticeable decline in the value of bank shares with a few exceptions.

New Branches:

During the year under review, we opened four new branches at Barrackpore, Naihati, Kharagpur and Dum Dum. The new branches, along with the others, are making satisfactory progress. More branches will be opened during the current year and preparations for this purpose are in hand.

Finance to Small-scale Industry:

Welcoming the move taken by the Reserve Bank to introduce a scheme of guarantee to cover a portion of the losses that may be suffered by commercial banks in financing the small-scale industrial units, Dr. N. N. Law observed:

"However, in-as-much-as inadequacy of risk capital continues to be a major problem in financing the small business, the idea of establishing an Issue House to assist new floatations and offer facilities for sale and purchase of non-marketable equities, may also be considered at the same time."

He declared that the Bank, which has already been financing small & medium industrial and business units in large numbers, has now decided to organise a separate section at its Head office to handle the small business loans with special attention. "This", he observed, "will enable us to better understand the problems of small scale industries and to see how far

the Bank may further augment its financial assistance to them."

Pakistan:

Referring to the activities of the Bank's branches in Eastern Pakistan, he said, "In recent years the efforts at economic development in Pakistan have been receiving further momentum. The Government have rightly emphasised the priority of development of agriculture, and of small and medium industries based on agricultural produce. It is to be hoped that, efforts in this direction will draw wholehearted support from the people and entice them to inspired activity. Your Bank, through its branches in that country, will not fail to make its utmost contribution, in its humble way toward such developmental efforts."

With regard to developments in the field of banking, in Pakistan, Dr. Law referred to the report of the Credit Enquiry Commission, appointed by the Government of Pakistan in February, 1959, with Mr. Abdul Qadir, Governor, State Bank of Pakistan, as Chairman, and observed: "It will be out of place to discuss the Report here, but it is worth noting that, the Commission has made a detailed study of the problems and has advanced suggestions which merit careful consideration. One of its recommendations is that the subsidy arrangements with the National Bank of Pakistan, for opening new branches, be extended by the State Bank of Pakistan to other Pakistani commercial banks. This is a very useful suggestion and we think that such a measure, if adopted here, would be welcome also in this country."

In this connection, reiterating the need for appointment of a Banking Expansion Commission in this country, Dr. Law said that such a Commission could serve the useful purpose of making a close examination of the entire banking system and suggesting ways and means for further improvement and expansion on proper lines.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

THE BENGAL FLOUR MILLS CO. LIMITED.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 32½ per cent for the year ended 31st December 1959.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. Manson
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.
22nd April, 1960.

Killick Industries Limited

Expansion Plans Under Study

Chairman Mr A. N. Haksar's Review

The following is the speech delivered by the Chairman, Mr. A. N. Haksar, at the Twelfth Ordinary General Meeting of the Killick Industries Limited, held in Bombay on 21st April 1960:—

We are meeting on the eve of an historic event, namely, the bifurcation of the present bi-lingual State of Bombay, and the emergence of the new Maharashtra and Gujarat States. We offer our felicitations and dedicated service to the two new States coming into being from 1st May, 1960.

The results of the Company for the year under review, although not fully satisfactory, are considerably better than we had reason to hope, having regard to the operating conditions faced by the different units coming under the banner of the House of Killick. The Managed Companies and other enterprises with which your Company is closely associated have had, in turn, their own specific problems, and these problems have been highlighted, in brief, in the Report. You may, however, wish me to elaborate some of these problems industry-wise.

The progress of the group of Mills comprising the Kohinoor Mills Co. Ltd., has always been the primary concern of the Board, of your Company and special attention was given during the year under review to grapple with the many problems faced by the Mills. In an endeavour to bring them back to their old glory, I sincerely hope that the Mill Company has now turned the corner. The Mills' modernisation programme is well under way, and before the end of the current year, I trust the situation will have been stabilised so as to enable us to look forward with hope to operating results fully comparable with similar units in the Indian Cotton Textile Industry.

The Electricity Companies of Ahmedabad, Surat and Bombay Suburban under your Company's Agency continue to grow. With power planning in the country having set a target of doubling up of capacity in five years, these Electric Supply undertakings are, in common with other units in the industry, faced with even higher expansion programme during the coming years. The basic problem facing the Electric Supply industry today is the need for more and more development capital, the raising of which has been made more difficult by falling share values. The difficulties faced by this industry are under review by the Authorities and there are hopes that a measure of relief will be forthcoming before the end of the current year.

The Shivrajpur Syndicate Ltd. under your Company's Agency is in good form in relation to its capacity to mine and deliver to the export market the targetted Man-

ganese Ore. This Company's operating results in recent years have been circumscribed by the entry of the State Trading Corporation in the Manganese Ore trade. The problems inherent in the participation of the S. T. C. in the export of Manganese Ore will continue to cause a certain amount of uncertainty with which the Manganese Export trade will, it seems, have to reconcile itself. The Manganese Export trade must also have to contend with the vagaries of export demands which underline the need for freedom of action on the part of exporters to enter into forward commitments. The year under review was a very bad one for Manganese. Prices ruled much lower than the previous year and offtake was much smaller because of the American Steel strike.

It can be hoped that the Hingir-Rampur Coal Co. Ltd., which has had more than its share of troubles in the recent years, is on the onward march again. Production is steadily increasing and the Company is now showing regular profits.

The Steel Files Factory at Chandivli, while showing an improvement in its working as compared with the previous year, has not unfortunately shaken off the teething troubles referred to in the Chairman's speech on this occasion last year. Vigorous steps are being taken to reach the maximum productive capacity and to this end we have recently secured from the U.K. the services of a Works Manager with many years' experience in the Steel Files Industry. Efforts are also being made to obtain trained personnel for the various processes which comprise the making of the steel files, while orders have been placed for additional plant to alleviate bottlenecks which have arisen in our production. I am hopeful that within a few months we shall have this Factory geared to full production.

As indicated in the Report, the affairs of the two Subsidiary Companies, Killick Nixon & Co. Private Ltd., and Stanco Industries Private Ltd., are not yet satisfactory and, echoing the remarks in the Report, I can only repeat that earnest endeavours are now being made to rehabilitate these branches of your business. I hope next year will show a marked improvement.

Following the enactment of the Companies Act 1956, the Managing Agency Agreements with the three Electricity Companies, namely, Ahmedabad, Surat and Bombay Suburban, came up for renewal during the year and approval has been accorded for the

renewal of these Agreements by the Government of India. The new Agreements, effective from 1st April 1960, have, in conformity with the proclaimed policy of Government, been renewed for a period of five years.

The Managing Agency Agreement with the Hingir-Rampur Coal Co. Ltd., has also been renewed for a period of five years from 1st July 1960. The remuneration applicable in the case of this Agreement is in line with the graded scale of commission recently announced by the Government of India.

With the Managing Agency Agreements with the Kohinoor Mills Co. Ltd., and the Shivrajpur Syndicate Ltd., having been renewed from 15th January 1957, and 1st December 1957, respectively, i.e., after the enactment of the Companies Act, 1956, they operate for a period of 10 years from that date and consequently these Agreements will come up for renewal only in 1967.

The Managing Agency Agreement with the Central Provinces Railways Co. Ltd., has also been renewed for a period of 10 years from 15th January 1957.

During the closing stages of the First Five Year Plan and the early stages of the Second Five Year Plan, your Company's operations were marked by vigorous expansion programmes, the activities being either on its own account or related to the development of the managed Companies. There has also been a measure of joint enterprise in the expansion of the Associated Cement Companies including the participation in the A.V.B. project, and the planning and execution of the Snowcem project.

In what direction is your Company poised for expansion? Plans now under investigation are mainly intended to add new lines of business mostly involving investment in the Company's industrial estate at Chandivli. A large measure of responsibility also vests in your Company in relation to expansion in the Managed Companies. For instance, the Electricity Companies, which are highly capital intensive, would continue to impose greater obligations on your Company. The new Gujarat with its abundance of entrepreneurial talents and capital resources will call for more and more electric power and this call offers a challenge to the Ahmedabad and Surat Electricity Companies under your Agency for greater efforts. The past record of the House of Killick, which has pioneered power deve-

lopment in Gujarat, is an assurance of your Company's readiness to be of greater service to the new State. The tempo of power demand in the Bombay Suburban area would call for greater investment by Bombay Suburban Electric Supply Ltd., which in turn would add to your Company's responsibility to raise further finance. Perhaps most of you are not aware of the fact that the Suburban Company now has 80,000 consumers connected and several thousands more awaiting connection.

And finally, but by no means of lesser importance, is the development of the Trading side of your Subsidiary, Killick Nixon & Co. Private Ltd. We have obtained several new Agencies which are already doing well and others are being negotiated. We have received Industrial Licences for the manufacture of Vibrators and certain other light engineering equipments and are now in the process of putting up a workshop for the manufacture of these items. Killick Nixon & Co. Private Ltd., has also entered the field of export of Piecegoods, and the performance in the last six months has been very good and I hope will continue to be so.

In any expanding institution the need for capital to sustain development is an evergrowing one. For a large part of development finance in the recent years the Company has relied on Bank accommodation and this source is now being threatened to be limited by the recent credit control measures instituted by the Reserve Bank. While there can be no doubt that under an inflationary situation such as at present there should be guarded expansion of credit and stricter control over speculation, there can be no two opinions that Industrial Houses such as yours should have free access to credit so that genuine industrial development is not jeopardised. It is an accepted truism that a certain amount of inflation is inevitable in any economy poised for expansion, and in this context the fiscal planners should not lose their nerve over a reasonable rise in price levels in the crucial stage of the country's economic development. Your Company's difficulties have been forcefully placed before the authorities concerned, and we can only hope that the credit squeeze now in being will exempt appropriate cases.

The Accounts call for no specific comments but I shall only be too pleased to answer any queries which may be raised by shareholders.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to shareholders.

The Indian Bank Limited

Need For Survey of Monetary System

Dr. Rajah Sir M. A. Muthiah Chettiar's Review

Speech delivered by Dr. Rajah Sir M. A. Muthiah Chettiar of Chettinad, Kt., B.A., D. Litt., M.L.A., Chairman of the fifty-third Annual General Meeting of the Bank held at Madras, on Wednesday the 20th of April 1960.

Gentlemen,

I am grateful to you for the honour you have done me by once again electing me as Chairman of an Annual General Meeting.

The Directors' Report and the Balance Sheet of the Bank as on 31st December, 1959 and the Profit & Loss Account of the Bank for the year 1959 have been circulated to all the shareholders and have been in your hands for some time and I trust that I have your permission to take them as read.

Before commenting on the figures in the statements before you, I should like to make a few observations on the general economic conditions in the country. A marked increase in India's agricultural and industrial production an improvement in the foreign exchange position, a reduction in budgetary deficits and a continued upward movement in price levels were the chief characteristics of the year 1959. The index of agricultural production rose by about 17 points, while that of industrial production recorded an increase of 11 points. Favourable seasonal conditions were mainly responsible for the improvement in agricultural production but looking to the alarmingly rapid growth of our population, it is obvious that unless production increases vastly, economic progress in the country is bound to be retarded. An intensive drive to accelerate agricultural production to make the country self-sufficient is essential for sustained progress. In the sphere of industrial production, the output of capital and intermediate goods has greatly increased, while the iron and steel and other heavy industries recorded considerable improvement; greater progress in the consumer goods industries is still necessary.

Despite improvement in production, the general price level continued its upward movement. In a backward economy like ours, the maintenance of price stability is of utmost importance. Fiscal and monetary policies should therefore be co-ordinated with a view to ensure that further inflation does not set in.

We are now nearing the end of the Second Five Year Plan. At one time there were apprehensions that the Second Plan could not be carried out according to schedule, but, happily, with the increased

assistance from friendly countries, satisfactory progress has been made. The Third Five Year Plan is to be an even more ambitious programme and will need foreign exchange of great magnitude for its completion. It is hoped that assistance of this magnitude will be forthcoming; especially as there is an increasing awareness in more developed countries of the need to help under-developed economies. Various visiting teams of experts in different fields of activity who have investigated the progress of the country have reported very favourably and the International Economic Mission headed by Sir Oliver Franks have also in their report favourably commented on the progress made by the country during the two Plan periods and have recommended further foreign aid. The visits to India of the Chief Executives of two great countries of the world and their satisfaction with what they have seen for themselves reinforce the hope that assistance to India will come in generous measure.

The Government of India have in recent times been showing increasing awareness on the need to export more to earn much needed foreign exchange. They have adopted various measures with this laudable object in view but the one thing that will have a visible effect in this direction is by giving encouragement to the manufacturers and exporters to visit foreign countries to study at first-hand the needs of those people and adopt such measures as will promote more exports. We have to sell what other countries require and not what we have in surplus. I would, therefore, appeal to the Government to give due encouragement to manufacturers and exporters and also to other Trade Delegations to visit foreign countries to study at first hand the taste of those people, their customs and manners and to know the extent and nature of competition experienced by Indian commodities in those markets.

I must congratulate the Hon'ble Finance Minister, Government of India, for his masterly review of the economic situation prevailing in the country and for introducing a realistic budget for the year. His proposal to broad-base the taxation structure instead of imposing additional burdens on the same section of society has come as a welcome relief. With ambitious development plans on hand with a view to raise the standard of living, no Finance Minister can be free from the temptation of introducing new taxation measures. The Hon'ble

Shri Morarji Desai, having made a critical study of the economic situation prevailing in the country, has introduced indirect taxes so that the effect of them will not be felt by any one section of the community alone. I am not at all unmindful of the hardships caused to the middle income and lower income groups of people and the strain that these new imports will cause to them but the merit of these proposals lies in the fact that the industrial and other economic activities will be maintained and accelerated in the years to come and the results of such economic activity will percolate to the other sections of the society in due course.

You are all aware that some time back there was an expectation that the Bank Rate would be increased to offset inflationary tendencies. I am glad that such a step has not been taken. I have no doubt that if the Bank Rate had been increased, the prices of Government securities would have reacted sharply. Apart from the reduction in value of the large holdings all Banks have of such securities, it would have seriously prejudiced the chances of success of the borrowing programmes of the Central and State Governments. As I stated earlier, we are embarking on a very ambitious Third Five Year Plan and its success depends as much on our being able to raise sufficient resources internally as on our being able to secure foreign exchange. We know how satisfactorily the borrowing programmes of the Governments were fulfilled in 1959. We are also aware that recently large capital floatations have been oversubscribed. All this would not have been possible with a higher Bank Rate.

I would now like to make a reference to the question of credit controls by the Central Banking Institution of the country. The Reserve Bank of India imposed the first of their selective credit controls a few years back in respect of advances by banks against foodgrains as it was felt that the increasing price levels of foodgrains were due to speculative hoarding helped by bank financing. A similar control was imposed in 1959 in respect of groundnuts. It is said that but for these controls, prices would have gone to very high levels. It must be admitted, however, that the control of advances by commercial banks alone, leaving private financiers and co-operative Banking outside the scope of the directive, could only have a very limited beneficial effect.

Very recently, the Reserve Bank of India issued a directive to Banks prescribing a minimum margin of 50% on all advances against equity shares. It is no doubt necessary that speculative and inflationary activities should be curbed. At the same time, I feel that such control may also curb genuine investment activities and militate against the successful floatation of industrial concerns and the expansion of existing units. I would therefore suggest that the Reserve Bank of India may be pleased to exempt from the operation of their directive, advance made by Banks against shares registered in the names of the borrowers themselves or the banks making the advances. It is only the genuine investor who gets the shares transferred to his name or that of his bank. I am, however, personally of opinion that such selective control to curb the price level in the Stock Exchange alone will not by itself serve the purpose as the forces that are at play outside the Stock Exchanges are likely to negate this effect to a large extent.

Simultaneously with the above directive, the Reserve Bank of India have issued another directive freezing 25% of the increase in deposits after 11th March 1960. It is too early to assess the effect of this measure. No doubt the Reserve Bank of India has agreed to pay interest equivalent to the average interest paid by each bank on total deposits. This, however, is not satisfactory enough as the present trend is for an increase in time deposits. This selective control therefore will increase the cost to banks on deposits.

There is also a need for the appointment of a committee of experts for making a survey of the monetary system prevailing in the country and to report how far our programmes of development are related to the maintenance of a reasonable price level. I am glad that the National Development Council is seized of this problem and has appointed a Committee to enquire into the impact of development activities on the price levels prevailing in the country.

Turning now to the Balance Sheet of the Bank as on 31st December 1959, I would first draw your attention to the fact that the paid up capital of the Bank is now Rs. 83 lakhs including a small amount of Rs. 1,010/- being unpaid calls. This figure has been reached by the issue during 1959 of fully paid bonus shares of the value of Rs. 16.60 lakhs.

The total of the Balance Sheet figures has registered an increase of Rs. 6.71 crores over the 1958 figures. Our deposits have increased by about Rs. 3 crores, of which the increase in fixed deposits is over Rs. 2.17 crores.

During the year 1959, we were able to utilise our funds more effectively than in the previous year and as on 31st December, 1959, the total of our advances reached the figure of Rs. 28.85 crores, which is an improvement of Rs. 5.70 crores over last year.

With the increase in our deposits, we have also increased our investment in authorised securities of the Central and State Governments by nearly Rs. 1.39 crores. to Rs. 13.84 crores. In this connection, I would draw your attention to the fact that the difference between the market value and the cost price of our holdings is only Rs. 3.10 lakhs and even this small difference will disappear in 1961. All the securities held by the bank are termin-

able securities repayable at par mostly short dated, and are held in maturities on different dates, in accordance with the usual banking practice.

The Profit & Loss account of the Bank for the year shows that the gross income of the Bank has increased by Rs. 36.93 lakhs to Rs. 2.67 crores. The increase has been almost wholly accounted for by interest and discount. The net profit of the bank has, however, increased only by Rs. 15.53 lakhs. Interest paid on deposits and borrowings has been higher by Rs. 8.72 lakhs and establishment charges have increased by Rs. 9.12 lakhs. The increased interest paid has been necessitated by larger deposits, the bulk of them being fixed deposits. The increase in establishment charges is accounted for by the annual increments payable to the members of the staff and the higher dearness allowances that had to be paid to them on account of the increased average cost of living index.

I hope that you will agree that the results of the working of the Bank for the year 1959 have been satisfactory.

I would now like to say a few words about the appropriations recommended by the Directors. The interim dividend and bonus already paid and a similar dividend and bonus now recommended together add up 15%. Under the present law, the Bank is bound to pay such dividend after deduction of income-tax payable thereon. The Directors are aware that the net dividend that will be received by the shareholders will be less than that has been paid to them in the last few years.

Shri D. P. Parthasarathy Ayyar, who had been in the service of the Bank for 32 years and was our Secretary for the last three years, availed himself of leave at the end of 1959 and retired from the service of the Bank on the 5th February this year. I would like to place on record the valuable services rendered by him to the

Bank during his long tenure of office.

The Directors have appointed Shri G. S. Sundaram, a retired Officer of the State Bank of India as the Secretary of the Bank and he has entered upon his duties very recently. On behalf of all of you, I welcome him and hope that the Bank will show increased progress in all directions during his term of office.

Before I close, I must express our appreciation of the sincere and hard work put in by all members of the staff of the Bank during the year.

I have also great pleasure in expressing our gratitude to the members of the Local Advisory Boards for their valuable advice and guidance.

(NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.)

30 April 1960

Record Coffee Crop Expected

ACCORDING to the Coffee Board, all planting districts except parts of Hassan and North Coorg are reported to have had satisfactory blossom showers in general and the present expectations are that the next season's crop will exceed 50,000 tonnes with a possibility of touching 55,000 tonnes. In 1958-59, 46,500 tonnes were picked and this is the highest so far picked in India.

The receipts of the 1959-60 crop into the Pool, up to 31 March 1960, amounted to 37,743 tonnes, consisting of 24,154 tonnes of Plantation; 4,714 tonnes of Arabica Cherry and 8,875 tonnes of Robusta. The corresponding receipts, up to the end of March last year, were 37,189 tonnes consisting of 17,593 tonnes of Plantation; 6,335 tonnes of Arabica Cherry and 14,261 tonnes of Robusta variety. More than 60 per cent of coffee under Plantation has already been cured, while the curing of the other varieties is briskly progressing.

The value of coffee exported from India, during the eleven months ended November 1959, has been worked out as Rs 578 lakhs for a total of 13,184 tons of coffee, the largest share of which belongs to Europe, as will be seen from the following figures:

	Tons	(Rs in Lakhs)
Europe	12,247	541.0
Asia	770	80.5
USA	104	3.5
Oceania	63	3.0
Total	13,184	578.0

While the countries constituting Western Europe imported 54 per cent of the total imports of Indian coffee into Europe during the above period, the largest single buying country was USSR with an offtake of 2,798 tons valued at Rs 129 lakhs, followed closely by East Germany, which imported 2,573 tons valued at Rs 118 lakhs.

Pepper

Buoyant conditions have continued to prevail in Pepper markets. In the Cochin market, trading was very lively following a sudden spurt in the overseas demand. The volume of business was fairly large. Ready rate was quoted around Rs 327.50 per cwt.

The all India final estimate of Black pepper for 1959-60 puts the current year's area and production at 232,000 acres and 25,500 tons against the partially-revised estimate of 230,100 acres and 25,500

tons respectively for 1958-59. The increase in acreage is due to the increase in area in the Kerala State. There has, however, been a slight decrease in acreage in the Mysore State.

Exports of black and white pepper from Singapore amount to 29,102 tons last year as against 26,932 tons in the preceding year, showing an increase of 2,170 tons. Exports of black pepper alone amounted to 19,229 tons against 18,131 tons. The rise in the export has been due to increased offtake by the USA, which was the largest importer of black pepper, having absorbed 11,235 tons during the year under review as against 8,855 tons in the previous year.

Exports of white pepper alone amounted to 9,873 tons against 8,801 tons, showing an increase of 1,702 tons. UK was the largest buyer of white pepper, having purchased 4,244 tons against 2,680 tons in 1958.

On the London market, however, conditions remained quiet and prices displayed a slightly easier tendency. With the new crop supplies now very close, it looks as if an upswing in the market of the sort seen last January will not occur again in the immediate future. At the end of last week, the rate was almost back to its lowest level this year.

Ginger

The all-India final estimate of dry Ginger for 1959-60 puts the current year's area and production at 37,000 acres and 13,400 tons respectively. As compared with the partially revised estimate of 35,700 acres and 12,300 tons for 1958-59, the estimates for 1959-60 show an increase of 1,300 acres in area and 1,100 tons in production. The increase in area is accounted for mainly by the Kerala and Bombay States and is attributed to favourable weather conditions. The increase in production is shared mainly by Kerala and Madhya Pradesh.

Sugar

According to the Indian Sugar Mills Association, sugar production has shown a rise to 442,000 tons in March from 366,000 tons in the corresponding month of last season. This brings the total production for the season 1959-60 (up to the end of March) to 2,054,000 tons as against 1,697,000 tons in the corresponding period of last season.

The offtake of sugar from factories, during the month of March, was 151,000 tons against 171,000 tons in the corresponding month of last year. Total despatches, up to 31 March 1960 amount to 779,300 tons as against 862,000 tons in the corresponding period of last season. The closing stock with the factories, as on 31st March 1960, was 1,418,000 tons against 1,168,000 tons on the corresponding date of last year.

Meanwhile, conditions in the sugar markets remain steady, thanks to demand due to marriage season. In the Muzaffarnagar market, prices have improved by Rs 2 to Rs 5 per bag, to quote at Rs 118 in spite of the easy supply position.

Khandsari

Better demand from the consuming areas coupled with the marriage season requirements accounted for gains of about Rs 2 per maund in Khandsari prices during the week. The inferior quality is quoted at Rs 29 to Rs 33 per maund and superior dry quality at Rs 35 to Rs 41, according to quality.

Production in some centres has come to a close; but stocks with the industry are reported to be fairly heavy. The Uttar Pradesh Government have announced that no new taxes will be imposed on the khandsari industry.

Gur

Lack of demand is reflected in the price of Gur. In the Hapur market, Pansera quality is quoted slightly easier at Rs 15.00 per maund and Balti quality at Rs 16. Daily arrivals average 200 maunds, while stocks have dwindled by 1,000 maunds to 32,000 maunds.

Shellac

The Calcutta Shellac market continues to rule steady with Pure TN shellac quoting around Rs 78 per maund. The remarkable steadiness in prices during the past many weeks is attributed to a regular flow of foreign enquiries and shipments running at a satisfactory level. In March, they amounted to 35,663 packages.

During the current month, up to 20 April, shipments are slightly lower at 24,171 packages against 26,559 packages in the corresponding period of March. Out of these, shellac comprise 16,031 packages (14,050); seedlac 7,350 packages (10,819); buttonlac 245 packages (290) and other varieties 525 packages (1,600). Figures shown within brackets were the shipments for the corresponding period of March.

Present indications point to a good demand from overseas countries. Russia and China are reported to have bought substantial quantities, which are to be delivered in April and May. The trade thinks that the requirements can be met without difficulty as the Bysakhri crop is making satisfactory progress.

Metals

The non-ferrous metal market ruled steadier with further rise in Zinc for which spot rate moved up to Rs 152 while May delivery was placed at a discount of Rs 7. Copper wire bars has gone up to Rs 232 from Rs 229 while scrap was quoted at Rs 210. Brass scrap has improved to Rs 179 after early decline to Rs 176. Lead was pegged around Rs 74 and Tin at Rs 135. Aluminium scrap was dull at Rs 1.52 per lb.

Bullion

Bullion prices have hit new high levels altogether on heavy depletion in floating stocks following the excellent seasonal offtake. The breakdown of the talk on Sino-Indian border dispute had also a bullish effect on the market. Shots were induced to cover their sales in the advancing markets while the bull operators tightened their grip by further accumulating lines. Even the small buying orders had an exaggerated effect on the market. Stocks of Silver in the Bombay market have dwindled to about 200 tons, while in Gold floating stocks were estimated around 16,000 tolas. As offtake is expected to remain fairly good for the next two or three weeks and as prices have soared, the Board of Bombay Bullion Association has decided to levy stringent margin and extend the delivery dates subject to the sanction of the Bombay Government.

Oils & Oilseeds

In view of the prolonged delay in getting permission for trading in distant delivery contracts, the Bombay Oilseeds market was in a subdued mood and prices fluctuated irregularly. In view of the shortage in actual groundnut, the undertone in this section was fairly firm but castor-seeds turned quiet due to lack of fresh export business. Cottonseeds were fairly maintained while linseed after early sharp rise reacted. Tenders in May deliveries will commence from 1 May but hopes are held that by 29 April the FMC might grant permission to trade in August and September contracts as most of the outstanding issues are likely to be thrashed out by the time.

Hides and Skins

Prices of tanned cow hides remained unchanged due to poor arrivals. Lower grades were transacted for shipment to United Kingdom. The price negotiated was half a penny per lb higher. Local demand for inferior fiths had been high and so quoted better. As regards rates for shipment, buyers were reluctant to pay the sellers demand which they thought high. There was high demand for tanned buffalo skin and prices naturally went up by 3d. per lb. Neither U.S.A. nor United Kingdom was keen to follow up the high price. U.K. was disinterested in tanned cow-calf skins. Even local prices had to recede between 3 to 6 nP. per lb. In top premium marks, prices declined by two penny per lb.

Tanned sheepskins sold during the week numbered 51,000 leaving 46,000 sheep skins afloat. Goatskins were down by 2,000 pieces leaving 5,000 pieces in the bazar. The prices of common quality went down by about 12 nP. Clearance was slack due to lack of demand from abroad. Also in the export trade, negotiations were next to nothing though prices of goatskins, sheepskins and primes and semi-primes had advanced.

WORLD OF COTTON

Irregular Fluctuations in Cotton

The cotton futures market in Bombay during the past week has fluctuated irregularly within narrow range. Business was very much restricted as the professional operators preferred to keep on side lines. The acute scarcity of indigenous supply is deterring sellers while the fact that the maturity of the August contract is far off and as such the effective rate during the non-delivery period is Rs 790 has restrained buyers. Thus there has been a tendency of late for the turnover to contract. ICC August after early set back to Rs 779.75 advanced to Rs 784 to react to Rs 779.50 to be placed at Rs 780. The futures market has lost its attraction for the present and it is wondered as to when the market can come to its own. Much will depend on the course of the monsoon.

SPOT COTTON.

Trading in the Sewri spot market was sluggish. Needy mills, however, were covering their requirements of the available lots of the long and short staple varieties. Prices were somewhat quiet. Among foreign varieties, mills were persistent buyers of lower varieties of American cotton while in other growths business was very much restricted.

Among indigenous growths, Nagar CO 2 was done at Rs 955, Porbandar CO 2 at Rs 1120, Akot-L 147 at Rs 1040, Netranj at Rs 1130, Khandwa-L 147 at Rs 1060, Malkapur L 147 at

Rs 1015, Hubli Laxmi at Rs 1060, Gadag Laxmi at Rs 1041, Annegiri Laxmi at Rs 1060 and Kalyan at Rs 915 to Rs 935. In imported varieties, American 1/16" Muddling for May/June came to business at Rs 965, Bushoga at Rs 1250, Pakistan NT at Rs 950, Sudan G 55 at Rs 1665, Sudan XG 3L at Rs 1628, Sudan XG 5L at Rs 1540, Jinga at Rs 1145, Budama at Rs 1190 and BPS2 at Rs 1295 to Rs 1300.

COTTON CONSUMPTION.

Cotton consumption during the first half of the current cotton season 1959-60 that is from September to February has increased to 25,93,378 bales as against 25,74,559 bales in the corresponding period of last season. Out of this, Indian cotton has accounted for 23,45,411 bales and foreign 247,967 bales as against 23,49,907 bales and 224,752 bales respectively. The monthly average consumption of Indian cotton has amounted to 390,900 bales as against 391,630 bales and foreign 41,330 bales as against 37,460 bales.

The actual monthly consumption figures of Indian and foreign cotton are as follows:—

	(In bales of 392 lbs each)	
	Indian	Foreign
1959:		
September	396,354	42,154
October	395,050	39,728
November	383,961	37,028
December	408,137	40,848
1960:		
January	392,734	42,826
February	369,175	45,383

From the above table it is evident that the trend of Indian cotton consumption has been somewhat lower while consumption of foreign cotton shows an upward trend. This tendency is likely to be accelerated in the next few months.

IMPORT LICENSES.

The quantity of foreign cotton licensed for import into India amounts to 701,720 bales while the actual arrivals for the seven months

of the current season have amounted to 326,402 bales. The actual break-up being as under.

	Quantity licensed.	Actual arrivals*
U.S.A.	273,147	42,998
Egyptian	162,731	136,633
Sudan	67,114	58,193
East African	101,537	52,873
Others	97,191	35,705
Total	701,720	326,402

*Arrivals include quantity license in the previous season.

SUDAN COTTON.

The Ambassador of the Republic of Sudan in India has expressed the view that India should take more of Sudan cotton. He stated that Sudan was importing Indian cotton textiles on a large scale but regretted lack of reciprocity on the part of the Government of India. The bulk of Sudanese export to India consisted of long stapled cotton. The output of indigenous cotton in India was far below the requirements of the industry but the Government never showed any disposition to import Sudan cotton to fill up the gap. Sudanese trade deficit with India has assumed gigantic dimensions in recent years and no country could afford to leave it as such, he added.

COTTON PIECEGOODS.

The cotton piecegoods market was quietly steady with restricted offtake but the price basis especially for coarse cloth remained very firm as mills were not anxious sellers in view of the high cost of the indigenous raw material. It looks almost certain with the increase in cost of production the price pattern of cotton piecegoods will remain generally high. As such, the export performance has remained more or less unsatisfactory. Pakistan is reported to be making inroads in our traditional markets for Aden and it is

generally felt that unless our mills compete with the export incentive schemes, India may lose some of the markets.

NEW YORK COTTON.

The New York Cotton market has firmed up with July advancing to 32.84 cents a lb. The market was helped by the strength and activity of the cotton grey goods. The new crop October delivery was quoted at a discount of 2 cents. The Commodity Credit Corporation purchases and sales under Choice "A" programme for the season so far worked out to 8,641,458 bales and 5,953.05 bales respectively, leaving net stock at 2,788,413 bales. Entries into and reposessions from the 1959 loan for the season came to 332,013 bales and 210,077 bales respectively, leaving net loan stock at 121,936 bales.

CEILING PRICES FOR HARD COKE

The Government of India have introduced ceiling prices for hard coke and also relaxed the control over the distribution of this variety of coke.

This has been done following the examination of recommendations in regard to the price structure of hard coke made by the Coal Price Revision Committee in its supplementary report in December, 1959. The main report on collieries in Bengal-Bihar and the outlying coalfields of Madhya Pradesh, Bombay and Orissa was submitted in December, 1958.

The Committee in its supplementary report had come to the conclusion that, during the next few years, the production of hard coke would be more than the actual demand for it, that there would, in fact, even be a surplus, and that, if the demand were to grow further, the situation could be met by the establishment of additional production capacity. It had accordingly recommended the discontinuance of control over the distribution and prices of hard coke.

Need for Caution

Investment Gossip:

STOCK markets have ruled erratic during the past week although the undertone continues to be steady. The inconclusive parleys between Mr Nehru and the Chinese Prime Minister in New Delhi has had little adverse effect on sentiment. It would appear that because such an outcome had been generally anticipated, operators seemed to have actually derived some encouragement to extend their commitments. Around about midweek there has been a bold bid by bulls to bolster up prices but this attempt has been only temporarily successful. Since Thursday, there is a subdued tendency and this is attributed to renewed apprehensions about fresh credit curbs. Bank chairman after bank chairman has been speaking during the past few weeks on the inefficacy and inappropriateness of the type of credit curb measures initiated by the RBI recently. It has also been pointed out that any rise in the bank rate would seriously interfere with capital formation.

However, it is significant that periodical rumours about further curbs should be in circulation in the market places. Presumably, there are quite a few among stock market operators who think that any further rise in share prices will be untenable even from the point of view of growth prospects. Any early tax relief is unlikely in view of the massive Third Plan looming large in the horizon. In the present context of rising equity prices it will also be profitable to assess from time to time prospects under the present corporate tax level.

Meanwhile, Mr Nehru's speech on the occasion of the opening of the National Defence College shows that defence will continue to claim increased attention. The latest reference to India of the Chinese Premier does not also seem to be quite helpful. The fact that the joint communiqué on talks between the two premiers says that "every effort should be made by the parties to avoid friction and clashes in the border areas", however, may encourage the hope that the border dispute may not take any untoward turn atleast in the immediate future. It may, therefore, be permissible to take the view that the Finance Minister may not come to the people asking for additional funds for defence before the next Central Budget. But operators would do well to take into their calculation such a contingency.

New Issue Notes

The National Iron & Steel Company, Limited has announced the details of its Rs 25 lakhs Debenture issue. The Debentures carry interest at 7 per cent per annum. They are repayable in eight equal instalments, beginning from 31 December, 1961. The issue is offered at par. It is expected that, within a period of one and a half-years, the company's steel foundry expansion will be completed and that the target of production will be reached.

A new Fertilizer factory with an annual capacity of 40,000 tons of superphosphate is being set up in the private sector of the Madras State. The factory will be situated at Cuddalore. A new company, Premier Fertilizers Limited has been registered with an authorised capital of Rs 1 crore. The issued capital is Rs 50 lakhs, divided into five lakhs equity shares of Rs 10 each. Trial runs of the factory are to be undertaken by the end of 1961 and production is likely to start in January 1962.

The Jeypore Sugar Company, Limited has proposed to issue 54,081 equity shares of Rs 10 each, at par, in the proportion of one new share for every five shares held, to those shareholders whose names are registered as on 14 May, 1960. Last date for the receipt of applications together with payment is 25 June, 1960. This issue is subject to the sanction of the Industrial Financial Corporation of India.

The Devon Tea and Produce Company, Limited has proposed to issue 22,500 equity shares of Rs 10 each, at par, to the existing shareholders in the ratio of one for two shares held. The last date for the receipt of applications with full remittance is 30 June, 1960.

Western India Plywoods Limited has extended the time for the submission of coupons from 31 March to 30 June, 1960 in respect of its recent proposal to issue 4,500 equity shares of Rs 100 each, at a premium of Rs 25 per share.

A new company, known as Gujarat Steel Tube Limited, will be formed shortly to undertake the manufacture of steel galvanized pipes. The promoters of the project have already obtained the necessary licence. The factory will be located in the vicinity of Ahmedabad. The capacity of the plant will be 24,000 tons per year. Negotiations are being conducted for securing foreign collaboration. The plant is expected to go into production by the middle of 1962.

The authorised capital of the above company will be Rs 3 crores in the form of equity shares of Rs 100 each. The issued capital will be Rs 1 crore. Out of this, shares worth Rs 50 lakhs will be taken up by the promoters, directors and their friends. The balance of Rs 50 lakhs will be offered for public subscription. The issue will be made in July next.

ERs

Investment Notes:

The Cochin Malabar Estates Limited has harvested 9.78 lakh kilograms of rubber till the end of February 1960 as against 8.95 lakh

kilograms in the corresponding period of the preceding year. The crop estimate for the 1959-60 season is placed at 9.82 lakh kilograms of rubber.

Further details with regard to T. Stanes & Company, Limited have been received. Besides the holding by this company in the United Nilgiri Tea and States Amalgamated, the subsidiary company, the United Coffee Supply Company, is also holding 15,616 shares in the United Nilgiri Tea and 25,865 shares in States Amalgamated which investments stand in their books at cost at Rs 39,148 and Rs 2.59 lakhs respectively. Stanes was incorporated as a Public Company in 1910, converted into a Private Company in 1938 and reconverted into a Public Company in March 1956.

The Indian paper industry has made big strides in recent years. As against the second Plan targets for capacity and production of 4,50,000 tons and 3,50,000 tons respectively, production in 1959 is estimated at 2,90,000 tons. The target for capacity has already been achieved and it is confidently expected that the target of production also will be fully reached by 1960-61. Official estimates put the demand for paper during the Third Five Year Plan at 7,00,000 tons and capacity at 9,00,000 tons. It is, however, generally believed that the demand will be much larger.

Investment Briefs:

Cheviot Jute has declared a final dividend of Rs 8, making a total of Rs 12.50 per share, taxable, for the year ended 30 November 1959 as against a tax-free dividend of Rs 5.00 paid for the previous year.

Orient Jute has proposed a final dividend of Rs 7.50, making a total of Rs 12.00 per share, taxable, for the year ended 30 November 1959 as against a tax-free dividend of Rs 2.50 paid previously.

Mim Tea has recommended a dividend of Rs 10 for 1959 against nil in 1958.

Murphukuti Tea has maintained the dividends at Rs 2.00 per share on the Ordinary shares and Rs 2.50 per share on the Preferred Ordinary shares, for 1959. The present divi-

dends are subject to deduction of tax.

The Thiruvapur Syndicate Limited has recommended a gross dividend of Rs 5 per share for the year ended 30 November, 1959. A proportionate dividend has been proposed in respect of the new issue. The net dividend works out to Rs 3.50 per share as against Rs 8 paid for the preceding year.

The Indore Malwa United Mills Limited has proposed a gross dividend of Rs 7 (net Rs 4.90) for 1959 against Rs 5. The dividend will be paid out of the General Reserve.

Alcock Ashdown Company Limited has declared a gross dividend of Rs 17 (net Rs 11.90) against a tax-free dividend of Rs 12.50 paid for 1958.

Tropical Plantations have proposed a taxable dividend of 8 per cent against a tax-free dividend of 6 per cent.

ERs

Balance-Sheet Briefs:

The Atul Products Limited has reported a gross profit of Rs 110.70 lakhs for 1959 as against Rs 57.32 lakhs in the previous year. A gross dividend of 12 per cent is recommended. This works out to a net dividend of 8.4 per cent against 10 per cent.

The Anil Starch Products Limited has registered a rise in gross profit from Rs 17.34 lakhs to Rs 33.58 lakhs. The directors have recommended a total distribution of Rs 28 (including a bonus of Rs 8), subject to tax. This works out to a net dividend of Rs 19.60 against Rs 20 (including a bonus of Rs 10) paid for the preceding year.

The working of the Peermade Tea Company Limited has resulted in a higher profit of Rs 5.83 lakhs for 1959 as against Rs 1.10 lakhs for 1958. The directors have recommended a final dividend of 15 per cent, making a total of 22½ per cent, subject to tax. This works out to a net dividend of 15.75 per cent against 16.25 per cent for 1958.

The net profit of the Jawahar Mills Limited is considerably higher at Rs 14.10 lakhs against Rs 7.44 lakhs. The directors have recommended a dividend of 15 per cent, subject to tax, on the increased capital. The distribution on the old capital was 15 per cent without deduction of tax.

Indian Paper Makers Association

Second Plan Target for Capacity Achieved

Tariff Commission on Paper Prices

Mr Zutshi Urges Upward Revision

In his address to the Annual General Meeting of the Indian Paper Makers Association held on Thursday, 28th April, 1960, Mr. Zutshi, the Chairman, stated:—

"1959 has been an eventful year for the Paper Industry. When the results of the year are fully known, it is quite likely that production will have exceeded 2,90,000 tons once again proving the soundness of the policy in general followed by the Paper Companies.

The Second Plan targets for capacity and production were 4,50,000 tons and 3,50,000 tons respectively and taking into consideration schemes under production and schemes covered by import licences a capacity of 5,30,000 tons has been achieved so far. The production of 2,90,000 tons by the Mills during 1959 is an achievement of great merit and shows the efforts the Industry has been making to reach the targets of production laid down for the Second Five Year Plan. Having obtained a production of 2,90,000 tons in 1959, there is no reason why the Industry should not fully achieve the target of 3,50,000 tons in 1960-61. Thus the target for capacity for the Second Five Year Plan has already been achieved and it is certain that the Paper Industry will have fully reached by 1960-61 the target of production set for it by the Second Five Year Plan. All this has become possible because of the policy of ploughing back its resources for the modernisation and expansion of its plants generally followed by the Industry. The Industry has thus fully demonstrated its ability and willingness to work in the national interest.

The major event of the year was the acceptance by the Government of India of the Tariff Commission's recommendations on Paper Prices. There has also been some unfair comment against the Industry from interested quarters. I have no doubt that most of this criticism is based on ignorance of facts.

Over a period of 10 to 11 years, while the Paper Industry trebled its production, the paper prices were increased by only 16.7% for the civilian market and by about only 10% for Government supplies as against an increase in cost of production of over 35%. This is a record of which any industry can be proud. It is indeed a pity that instead of receiving some appreciation for working in the national interest both in the matter of increasing production and keeping the prices under check the Indus-

try should have been subjected to criticism and the prices of paper should have been slashed.

The Tariff Commission has allowed a return of only 12% on the Employed Capital to provide for the financial requirements of the Paper Companies towards dividends, interest on working capital, reserves, taxation, managing agents and Directors' remuneration, interest on debentures and loans and bonus to labour. The Industry has, through its joint memorandum submitted by this Association and the Indian Paper Mills Association, shown how a return of 25% on Capital employed was the minimum required to meet the aforesaid liabilities. It is a matter of regret that the Tariff Commission should have rejected this demand without advancing any justification and should have fixed the return on Employed Capital in an arbitrary manner. I would like respectfully to submit that the return of 12% allowed by the Tariff Commission on Employed Capital is far too inadequate to cover the aforesaid liabilities.

The Paper Industry in its Memorandum to the Tariff Commission had submitted evidence to prove that the present day cost of machinery was more than four times the cost in the pre-war years. The need for providing funds over and above the Normal Depreciation accumulations for rehabilitation of plant has been confirmed by the Supreme Court in their various judgments on Bonus. Last year the National Council of Applied Economic Research, a body set up by Government, examined the adequacy or otherwise of the depreciation allowed under the existing law and came to the conclusion that Industry did need additional funds to rehabilitate plant. I am, therefore, convinced that justice has not been done by the Tariff Commission in not admitting the reasonable claim of the Paper Industry for a suitable rehabilitation allowance.

Between now and the end of the Third Five Year Plan the Industry has more than to double its output. This will involve the investment of huge sums of money in the purchase and installation of additional plant, machinery and equipment and if the Industry has to fulfil the targets set for it for the Third Five Year Plan the prices must be increased.

I welcome the Government's decision to import 25,000 tons of Writing and Printing Papers to meet the gap between the actual

demand and the indigenous production. The logical conclusion of this policy would be to encourage Indian Mills to manufacture quality papers. I do sincerely hope that those Mills, which as a result of experiments conducted over long periods have succeeded in producing quality papers as distinct from their normal varieties, will be encouraged to continue production of such speciality papers.

I welcome the formation of the Development Council for the Paper, Pulp and Allied Industries with representatives of the Industry, the Government, the Forest Department and the Trade as its members. The Council has been assigned important functions and I have no doubt it will provide a close link between the industry and the Government.

India has set for itself an ambitious programme of industrialisation under the Third Five Year Plan. Early this year the Planning Commission invited representatives of the Paper Industry and discussed with them the fixation of targets of capacity and production of paper for the Third Five Year Plan. Literacy is spreading in India. Consumption of paper by the Government is on the increase and the population of the country is going up from year to year. There is, therefore, no manner of doubt that the demand for paper during the Third Five Year Plan will be substantial. The Hon'ble Minister for Industry in his inaugural address to the Development Council estimated the demand at 7,00,000 tons and capacity at 9,00,000 tons. In actual practice the demand is likely to be more. In the next six years the Industry will, therefore, be required to produce nearly three times its present production and will mainly depend on internal resources for doing so. It is, therefore, all the more necessary that the Government give their most favourable and urgent consideration to the request of the Industry for an upward revision of paper prices with immediate effect.

Bamboo has been the primary raw material for paper making in this country and I cannot help but mention that the attitude of some of the State Governments in refusing long term leases of their bamboo and grass forests at reasonable royalties to the Paper Industry is far from being helpful. I take this opportunity of requesting the Central Government to issue clear directives to the State

Governments to follow the policy as recommended by the Tariff Commission.

During the year the Industry continued to receive demands from the trade unions for increases in wages. The Paper Industry pays decent wages to its workers and it is time that the Trade Union Leaders started directing the energies of their followers to constructive channels for enlarging productivity, for increase in production is the best insurance for higher emoluments."

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the FIFTY-SECOND ANNUAL GENERAL MEETING of the Members will be held at the Registered Office of the Company at Gillander House, Netaji Subhas Road, Calcutta, on Thursday, the 26th May, 1960, at 10 a.m. to transact the following business:—

- (1) To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1959.
- (2) To sanction the declaration of a dividend.
- (3) To elect a Director in place of H. H. Maharaja Sir P. C. B. Deo of Mayurbhanj, who retire by rotation and, being eligible, offers himself for reappointment.
- (4) To appoint Auditors for the year ending 31st December, 1960 and to fix their remuneration.

NOTICE is further given that the Ordinary Register of Members will be closed from the 9th May, 1960, to 26th May, 1960, both days inclusive.

By Order of the Board

STEEL BROTHERS AND COMPANY LIMITED
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta.
12th April, 1960.

N.B. A member entitled to attend and vote at the above mentioned Meeting may appoint a proxy who need not be a member to attend and, on a poll, to vote on his behalf."

STOCK EXCHANGES

Steady: Profit-Taking at Bulges

Watch-Dog Writes:

WITH uncertainty about the Nehru-Chou parleys over stock markets tried to make further headway with selected scrips moving up gradually on steady support during the week under review. Toward the close, however, prices displayed a slightly reactionary tendency due to profit-taking at higher levels. This was mainly due to the fact that operators were anxious with regard to the political developments.

Despite restricted trading, the Calcutta Stock Exchange provided a few firm features on special considerations.

The Bombay Stock Exchange finished the week on a quiet note, reflecting lack of fresh incentive and scattered selling on settlement considerations.

Activity on the Madras Stock Exchange was moderate with prices showing a disposition to be fractionally lower except in a few selected shares.

Calcutta

Calcutta, Friday Evening.

THE failure of the Nehru-Chou talks did not seem to have affected the local stock market during the week under report. As it has been anticipated that the talks would not be successful, operators did not attach much significance to the latest developments. As a matter of fact, there was a brisk revival of selective buying and prices made an immediate response in every section of the market. Even a number of new issues, already announced or in the offing failed to have any effect on the general level of prices. The only adverse factor was the political uncertainty which, at times, cast its shadow on the market and induced scattered liquidation at higher levels.

The Gilt-edged market continued to remain dull with business on a reduced scale. Small enquiry was noticed for Loans maturing from 1961 to 1964; but other loans received scant support. Long-dated issues were on offer at the quoted rates. 3 per cent 1986 Conversion Loan opened lower at Rs 73.20 and, after improving at one time to Rs 73.75, receded at the close to Rs 73.50.

In sympathy, Bank shares were also quiet with Punjab National being offered at Rs 19 against Rs 21 and United Commercial at Rs 65.50 against Rs 67.50.

Trading in the Jute section continued to be cautious in view of the disparity still existing between the prices of raw jute and those of manufactured goods. Howrah were on

offer at Rs 23 to Rs 23.31; National at Rs 30.25; Megna at Rs 12 to Rs 12.12 and Birlas at Rs 28.75 to Rs 29.00. New Central, after being marked upto Rs 27.12 from Rs 26.19, receded at the close to Rs 26.69 on lack of follow-up support. Among higher-priced shares, Kamarhatty were nearly maintained at Rs 171 following increased dividend for last year, while Kanknarrah were on offer at Rs 101 against Rs 112 following the dividend being passed again.

Despite profit-taking at higher levels, Coal shares maintained a steadier tendency on indications of an increase in the demand for the commodity in view of the great stride in industrial expansion. An outstanding feature were Karanpura Collieries which were in demand upto Rs 190 from Rs 163 on reports of good working. Central India, after touching a high of Rs 12.50 from Rs 12 on rumours of a right issue, finished at Rs 12.44 on profit-taking. East Indian changed hands at Rs 30.87 to Rs 31.12; New Beerbhoom at Rs 23.81 to Rs 24.06 and Western Bengal at Rs 8.06 to Rs 8.41. Burrakur fluctuated rather irregularly between Rs 19.60 and Rs 20 on alternate buying and selling to close finally at Rs 19.75.

In the Tea section, dealings were few and far between; but prices maintained a steadier tendency due to a general feeling that the industry had done better in the 1959-60 season. It was also thought that the new season would start well in view of the fact that the North Indian crop might be delayed by the current drought conditions in the producing areas. Shares of the Assam and Dooars gardens were in good demand on expectation of satisfactory dividends. Brooke Bond changed hands at Rs 17.25 to Rs 17.50; Grob at Rs 13.70 to Rs 14; Hasimara at Rs 23.50 to Rs 23.75; Jayshree at Rs 17.75 to Rs 18.12 and Tezpora at Rs 18.56 to Rs 18.81.

Sugar shares continued to present a firm front due to sustained support on the feeling that the steady rise in production might improve the earnings of various companies. Raza-Buland had buyers at Rs 13.12 to Rs 13.37; Balramore at Rs 3.36 to Rs 4.12; Carew at Rs 11.75 to Rs 12.00; Darbhanga at Rs 18.87 to Rs 19 and Ramnugger at Rs 24 to Rs 24.19. SKG were rather quiet at Rs 13.75 against Rs 13.87 on lack of fresh enquiry.

Textile scrips, too, enjoyed good support due to diversification of activities, especially in the field of rayon production. Jayshree were at one time wanted upto Rs 13.81 from Rs 13.56 and Kesoram upto Rs 27.87 from Rs 26.69. Elgins, hardened further to Rs 22 from Rs 21.50 with Cawnpore having support upto Rs 7.94 from Rs 7.69.

In the week's dealings, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to heavy buying till the middle of the week on expectation of an early rise in the retention price. Against the previous week-end closing of Rs 23.68, Indian Irons opened higher at Rs 23.74 and advanced further to Rs 24.03 before reacting at the close

to Rs 23.81 on profit-taking. In sympathy, TEXMACO were taken upto Rs 26.85 from Rs 26.15 and G. K. Williams upto Rs 44.25 from Rs 44, to finish at Rs 26.80 and Rs 43.50 respectively. The recent demand for Jessop seemed to have been satisfied and the scrip suffered a setback from Rs 24.87 from Rs 25.69 to close better at Rs 25.00. Britannia continued to enjoy good support, having buyers at Rs 14.31 to Rs 14.69 and so also Braithwaite at Rs 29.25 to Rs 29.81. Marshalls and Kumardhubi remained quiet at Rs 5.94 and Rs 6.37 against Rs 6.06 and Rs 7.00 respectively.

Of all the sections, the Miscellaneous was the most active and provided several firm features although profit-taking erased some of the extreme gains at the close, as will be clear from the following price trends of a few selected shares:

	Week's High	Week's Low	Week's Closing
Orient Paper	43.90	43.60	43.70
Shree Gopal	26.37	26.69	26.68
Sirpur	17.00	16.75	16.87
Titagur	40.62	40.44	40.50
Rohtas	34.87	33.75	34.31
Dunlop	43.80	42.25	43.37
H. Motors	19.87	18.12	19.75

Bombay

IRREGULAR movements prevailed in the Bombay Stock Exchange during the week under review. The market after early firmness reacted to recover, but, once again on Thursday met pressure on apprehensions that more stringent monetary measures might be devised by the Reserve Bank to discourage the bullish activity on the stock markets. It is difficult to say how far these rumours are true, but certain sections prefer to trade cautiously. Moreover end of accounts considerations, also weighed upon the market which met with scattered liquidations with a view to reduce the long commitments. Hectic activity which was in evidence in the new issues has somewhat slackened and there is urge on behalf of some of the investors to cash their profits while the going is good. The market tendency is reactionary. However, if no fresh measures are coming forth the market will rebound.

The Gilt-edged market was quiet with 3 per cent Conversion Loan at Rs 73.70. Bank shares have ruled weak with price touching new low levels. New India Assurance was sluggish; Electric supply shares were mostly dormant and a shade lower.

In the automotive section, Hindustan Motors met with hectic buying and rose to Rs 19.48 from Rs 18.36. Premier Automobiles after rising to Rs 155 reacted to Rs 152. Tata Loco turned easier at Rs 216.50 after early business at Rs 219.50. Scindia Steam after rallying to Rs 15.40 receded to Rs 15.08 while Great Eastern were done at Rs 17.36.

The engineering section was fairly firm with Voltas rising upto Rs 230 from Rs 222. Larsen and Toubro were firmly maintained at Rs 35.10. Premier Construction rose upto Rs 324, but terminated at Rs 320 on reports that the management of the Company is not anxious to issue bonus shares after the concession of promoters shares, and hence the contemplated scheme may not still fructify in the near future. Mukand Iron were steadier.

Tata Steel ordinary after reacting to Rs 155.25 rallied to Rs 150.25 to drop down to Rs 155.50.

Cotton mill shares were subdued after some steadiness. Bombay Dying suffered a sharp drop to Rs 67.80 following reports that the management did not contemplate issue of new capital to rally to Rs 68.60 but finished at Rs 68.20. Standard Mills shot up to Rs 1057 from Rs 940 to react to Rs 1045. Century Mills advanced to Rs 471 to recede to Rs 465. Kohinoor Mills after advancing to Rs 335 dropped to Rs 327.

Tata Chemicals shot up to Rs 18.28 from Rs 17.32 to decline to Rs 17.90. Bombay Burma receded to Rs 567 from Rs 573. National Rayon after moving up to Rs 488 dropped down to Rs 481. Sherrillpur dropped down to Rs 78 following the announcement of a gross dividend of Rs 5 on increased Capital but steadied upto Rs 81 on technical grounds.

The week's movements in prices of a few representative scrips are as follows:

	Week's High	Week's Low	Week's Closing
B. Dyeing	69.00	67.80	68.30
Century	470.50	462.60	468.50

Madras

Madras (Thursday): Coffee and rubber shares proved strong while teas were easier. Industrial counter as usual was popular while textile shares were a strong feature. A good volume of business was reported.

Government Securities: Government of Kerala 4½% 1970 Loan was better on the buying section with the quotation at 100.97. 4½% 1964 Madras Loan was quoted at Rs 100.35 and 4% 1968 Andhra Loan remained at Rs 100.10. Madras Government 1963 4% Loan was quoted at Rs 100.41 and 4% 1971 Madras Loan was available at Rs 100.00. Mysore Government's 4½% 1970 was quoted at Rs 102.00 while Kerala's 1971 4% was bought at Rs 99.65. Orissa Government's 1968 4% was quoted at Rs 100.25.

Banks: Indian Bank (Rs 100 paid share) ex-dividend remained at Rs 176 and the Rs 80 paid share was marked at Rs 148.80 ex-dividend.

COMPANY REPORTS

Kamarhatty Pays Higher Dividend

Balance-Sheet Reviews:

THE Kamarhatty Company Limited has produced excellent working results for the year ended 31 December 1959. Despite a slight decline in sales from Rs 3.90 crores to Rs 3.77 crores, the net profit, before providing for Depreciation and Taxation, is substantially higher at Rs 37.10 lakhs against Rs 33.93 lakhs for the previous year. Apart from providing a sum of Rs 5.50 lakhs for Taxation; Rs 1.36 lakhs for Debenture Redemption Reserve; Rs 4.50 lakhs for Machinery Renewal Reserve; and Rs 4.50 lakhs for General Reserve, the Depreciation amount is reduced to Rs 8.77 lakhs from Rs 10.21 lakhs and Development Reserve to Rs 3,683 from Rs 20,203. The directors have recommended a final dividend of 15 per cent, making a total 20 per cent for the year. This works out to a net dividend of 14 per cent against a tax-free dividend of 5 per cent paid for 1958.

Against a paid-up capital of Rs 59.20 lakhs, General Reserve is shown at Rs 16.50 lakhs; Development Rebate Reserve at Rs 23,886; Labour Superannuation and Welfare Reserve at Rs 1.75 lakhs; Machinery Renewal Reserve at Rs 9.00 lakhs and Debenture Redemption Reserve at Rs 1.36 lakhs. The gross block at Rs 1.98 crores is depreciated by Rs 1.33 crores to show a net block value of Rs 65.08 lakhs.

Kanknarrah Passes Again

THE Kanknarrah Company Limited has again passed the dividend for 1959. Sales are lower at Rs 3.27 crores against Rs 3.49 crores, while the net profit is higher at Rs 26.01 lakhs against Rs 18.91 lakhs in the previous year. In respect of allocations, the Depreciation amount is reduced to Rs 7.69 lakhs from Rs 3.75 lakhs, while Development Rebate Reserve is raised to Rs 23,038 from Rs 10,466. The balance profit of Rs 18.10 lakhs is adjusted against the previous debit balance of Rs 31.78 lakhs, leaving a net debit balance of Rs 13.69 lakhs to be carried forward to next year.

The paid-up capital is Rs 68,22,700 divided into 30,000 Ordinary shares; 24,000 "B" Ordinary shares; 10,000-6 per cent Cumulative Preference shares and 4,227-6 per cent Redeemable Cumulative Preference shares, all of Rs 100 each. Against this, reserves and surplus amount to Rs 9.09 lakhs. The gross block stands at Rs 1.76 crores; total depreciation at 1.13 crores and the net block at Rs 63.58 lakhs.

The directors have, in their report, state that, while the results of the current year's working to date are not unsatisfactory, the prospects for the remainder of the year are much less promising. In these circumstances and having regard to the necessity to finance the modernisation programme, they are unable to give any firm indication regarding the likelihood of resumption of dividends on the equity capital.

Budge-Budge Jute Earns Higher Profits

THE Budge-Budge Jute Mills Company Limited has reported a higher profit, after providing for Depreciation and Taxation, of Rs 10.33 lakhs for the year ended 31st October 1959 as against only Rs 2.74 lakhs in the previous year, although sales are slightly lower at Rs 1.70 crores against Rs 1.71 crores.

Apart from providing a sum of Rs 3.25 lakhs for General Reserve, Taxation provision is raised to Rs 2.65 lakhs from Rs 12,200 and Development Rebate Reserve to Rs 48,845 from Rs 924. The Depreciation amount is reduced to Rs 2.30 lakhs from Rs 2.47 lakhs. A final dividend of 10 per cent, making a total of 15 per cent is recommended. This is subject to deduction of tax against a tax-free dividend of 5 per cent paid for the previous year.

The directors state that, ratification of the special resolution passed at the meeting held on 25 November 1959, approving the alterations of the rights attaching to preference shares, has not yet been received from the requisite number of both ordinary and preference shareholders. The Board have accordingly transferred Rs 27,000 to Contingencies Reserve, to be applied to the payment of a further dividend of Rs 3.00 per share to the preference shareholders in the event of the resolution, referred to above, being ratified by May, 1960.

The paid-up capital is Rs 45 lakhs divided into 30,000 Ordinary shares and 9,000-7 per cent Cumulative Preference shares, both of Rs 100 each. Against this, General Reserve is shown at Rs 15.21 lakhs; Dividend Equalisation Reserve at Rs 4.89 lakhs; Superannuation Reserve at Rs 1.44 lakhs; Investment Realisation Reserve at Rs 1.06 lakhs and Development Rebate Reserve at Rs 49,769. The gross block at Rs 1.20 crores is depreciated by Rs 72.85 lakhs to show a net block value of Rs 46.96 lakhs.

South Karanpura Coal Reduces Net Dividend

THANKS to a rise in sales from Rs 34.43 lakhs to Rs 38.25 lakhs, the South Karanpura Coal Company Limited has reported a net profit, after providing for Depreciation and Taxation, of Rs 2.22 lakhs for the year ended 31 August 1959 against Rs 2.01 lakhs in the previous year.

After providing a sum of Rs 50,000 for General Reserve, the Depreciation amount is raised to Rs 1.38 lakhs from Rs 1.20 lakhs. Statutory Development Rebate Reserve is reduced to Rs 8,800 from Rs 33,700. No provisions are, however, made for Wealth Tax, Development Rebate Reserve and Development Reserve against Rs 16,000, Rs 5,500 and Rs 25,000 respectively set apart in the previous year. The directors have recommended a final dividend of 5.3 per cent, making a total of 9 per cent, subject to tax. This works out to a net dividend of 6.3 per cent against 7½ per cent paid previously.

Raisings are lower at 186,916 tons against 193,010 tons, while despatches have risen to 199,856 tons from 182,200 tons. The work of re-opening No. 1 Pit to work the Argada Seam was started during this period and it is expected that raisings from this area will start from mid-1960.

Against a paid-up capital of Rs 17.50 lakhs, reserves and surplus are shown at Rs 8.67 lakhs. The gross block amounts to 41.83 lakhs; total depreciation to 19.54 lakhs and the net block to 22.29 lakhs.

Virudhunagar Pays More

THE working of the Virudhunagar Textile Mills Limited has resulted in a net profit of Rs 6.47 lakhs for 1959 as against Rs 5.93 lakhs for the previous year. The directors have provided Rs 1.25 lakhs (Rs 1.37 lakhs) for Depreciation and Rs 3,114 (Rs 28,887) for Development Rebate. A taxable dividend of 10 per cent is recommended. This works out to a net dividend of 7 per cent against a tax-free dividend of 6 per cent paid for the preceding year.

Against a paid-up capital of Rs 17.60 lakhs (including Rs 2.93 lakhs being forfeited shares), reserves and surplus are shown at Rs 3.99 lakhs. The gross block of Rs 24.96 lakhs is depreciated by Rs 13.65 lakhs to show a net block value of Rs 11.31 lakhs.

The Central Government have approved the re-appointment of the present managing agents for a period not exceeding five years from 15 August 1960 with a minimum remuneration of Rs 20,000 in the event of absence or inadequacy of profits.

Lower Profits by Industrial Investment Trust

THE reduced income from dividends and interest is reflected in the working results of the Industrial Investment Trust Limited for the year ended 31 December 1959. The net profit works out to only Rs 5.72 lakhs as against Rs 6.40 lakhs in the preceding year. A sum of Rs 315 (Rs 350) is set apart for Depreciation; Rs 1.04 lakhs (Rs 9,128) for Taxation; Rs 1,122 (Rs 3,826) for Wealth Tax and Rs 678 (Rs 8,647) for Capital Reserve. A gross dividend of Rs 6 is recommended and this works out to a net dividend of Rs 4.20 per share against a tax-free dividend of Rs 6.00 paid for 1959.

Against a paid-up capital of Rs 99,99,250, Capital Reserve is shown at Rs 16.32 lakhs; Investment Reserve at Rs 3.50 lakhs and Dividend Equalisation Fund at Rs 40,000.

The approximate valuation of the company's investments at market rates, as at 31 December 1959, or in the case of unquoted investments at the book value, is higher than the total book value by 17.89 per cent.

Svadeshi Mills Reduce Net Dividend

THE Svadeshi Mills Company Limited has earned a net profit of Rs 41.61 lakhs as against Rs 27.69 lakhs in the previous year, sales being higher at Rs 3.49 crores against Rs 3.14 crores. A sum of Rs 15.32 lakhs (Rs 14.96 lakhs) is provided for Depreciation; Rs 2.75 lakhs (Rs 4.75 lakhs) for Development Reserve; Rs 10.50 lakhs (Rs 1.25 lakhs) for Taxation and nil (Rs 6.73 lakhs) for General Reserve No. 2. After transferring a sum of Rs 1.75 lakhs, the directors have recommended a dividend of Rs 14 per share, subject to tax. The net dividend works out to Rs 9.8 per share against Rs 10.00 paid for 1958.

Against a paid-up capital of Rs 1.15 crores, General Reserve No. 1 is shown at Rs 21.61 lakhs; General Reserve No. 2 at Rs 67.66 lakhs; Development Reserve at Rs 7.50 lakhs and Capital Reserve at Rs 17,104. The gross block amounts to Rs 3.16 crores; total depreciation to Rs 1.75 crores and the net block to Rs 1.42 crores.

Renovation of the buildings, plant and machinery of the mills is making satisfactory progress. The bulk of this expenditure is being met from the company's internal resources.

How to get the most out of your Bank

Do not regard your bank merely as a convenience for depositing and withdrawing money. There are extra services available to you.

When you have a current account with State Bank, you can ask that commercial bills and pay or pension bills be collected and credited to your account; you can also instruct the Bank to pay periodically on your behalf house rent, school fees, club subscriptions, insurance premia, etc. and thus save yourself a lot of bother.

A savings bank account enables you to earn interest. It permits the facility of withdrawal once a week; at some offices the system of withdrawal by cheque is already in force.

For full particulars of these and many other facilities State Bank provides, please consult or write to the nearest office.

The State Bank with its background of years of sound banking traditions is waiting to solve your problems. Why not have them solved for you?

INVESTOR'S SUPPLEMENT

PRICE movements on the Calcutta Stock Exchange were erratic on alternate buying and selling during the month of April. Attention was mostly confined to the Textile, Coal, Engineering and Miscellaneous sections where selected scrips touched new peak levels on sustained support. The reactionary trend in prices, noticed toward the close of the month, was influenced by a feeling amongst certain operators that several shares quoting at the ruling levels were not justified, either by yield considerations or by growth prospects.

At the beginning of the month, sentiment remained cheerful and the trend of prices suggested that the technical position of the market had improved considerably and the bull operators were inclined to be more hopeful, especially with the smooth passing of settlements both on the Calcutta and Bombay Stock Exchanges.

There were also other factors which added sentiment. First, the news of the substantial increase in production of the Indian Iron & Steel Company Limited gave rise to a feeling that the company's earnings might increase steadily. Secondly, it was felt that the new import policy would enable the industries to have an uninterrupted flow of the essential raw materials throughout the year. Thirdly, there was a belief that, as stock prices had already been lifted up to substantially higher levels, there would be no need on the part of banks to resort to distressed selling on the 11 April — the data given by the Reserve Bank — to make adjustments of their customers' accounts. There was, however, a general disposition to be cautious in following the rise in prices. Apart from profit-taking induced by the uncompromising attitude of the Finance Minister as regards tax concessions and credit squeeze measures, a number of approaching holidays for the New Year and Easter caused some hesitancy to extend commitments.

Moreover, operators seemed to show an anxiety with regard to the outcome of the talks between Mr. Nehru and Mr. Chou En-lai. Above all, there were reports that the banks might soon have to sell the shareholdings of some of their customers, who had not adjusted their advances in line with the Reserve Bank's attitude. With the result, the upward trend in prices, noticed during the first week, was halted in the middle of the month. Nevertheless, the scramble for shares with growth potentialities contained with buyers remaining unsatisfied.

The market, however, made a promising start in the third week with prices showing a recovery from the low levels touched before the Easter holidays. This was mainly due to the revival of activity on the part of bull operators who thought that, although the tax concessions were not much, the helpful attitude shown by the Finance Minister toward the question of dividend pay-

Erratic Price Movements in April

ment had removed the qualms and doubts which have, of late, risen in the minds of the holders of the Preference shareholders.

Again, the earlier fears, that banks might sell the holding of some of their customers in order to adjust their advances, did not materialise. There were also expectations of an early increase in steel retention prices, while news from the industrial front was encouraging. The report of the World Bank-sponsored international economic mission en-

parleys over, prices of the speculative issues made an impressive rise, lack of fresh support coupled with stray liquidation forced prices to ease gradually.

This reactionary trend was influenced by a fear that, if further credit curbs were introduced by the Reserve Bank, prices might fall more sharply than they did in the middle of March. Doubts were also expressed in certain quarters whether the shareholders would benefit to any

couraged the hope that India's economic development would be helped by adequate foreign financial assistance. Operators, therefore, took a bullish view of the situation and pushed up rates. With the sustained and sharp recovery in prices, there was also fresh investment buying, resulting in a scramble for shares with growth prospects.

During the last week of the month, the market disclosed no Special feature. Although the going of the market looked well and, with the uncertainty about the Nehru-Chou

substantial extent if there were to be an increase in the retention price of steel, although it would definitely help the industry to bear the higher costs. Also, it was known that the bulls had been retaining the upper hand in the market. It was, therefore, thought that there was the danger that, if for any reason, a slackening ensued, prices might crumble helplessly. It was mainly this view which induced some operators cautious in their dealings, resulting in a slight setback in prices at the end of the month.

In the month's dealings, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to alternate buying and selling. The initial firmness was influenced by the hope that the Government would sanction the retention price at such a level as would enable the company to cover the enhanced cost of production without affecting the profit margin so far enjoyed. It was also believed that the company should be in a comfortable position to declare the gross dividend at such a level as would enable the shareholders to receive the net dividend of 10 per cent. But, the subsequent setback in the scrip was due to a feeling, entertained by some operators, that the shareholders would not benefit materially by the increase in retention prices and the dividends might remain pegged at the present rates until the loans taken by the company were paid.

Jute shares remained generally depressed. The announcement of the decision by the IJMA to unseal further looms had no effect on sentiment and led to fears that the mills might be compelled to buy the raw material at still higher prices and consequently the profit margins would be greatly reduced. Even the firmer tendency of jute goods prices had no effect on sentiment.

The announcement of the increase in the prices of coal and soft coke was reflected in the substantial headway made by Coal share in the first week of the month. There was, however, a good deal of profit-taking at the higher levels on the feeling that the increase, announced by the Government, might not be sufficient to meet the rising costs of the industry. But, an encouraging feature was the fact that selected scrips maintained a steadier tendency on the hope of an increase in demand for the commodity in view of the great stride in industrial production.

In the Tea section, dealings were few and far between; prices maintained a steadier tendency due to a general feeling that the industry had closed better in the 1959-60 season. It was also thought that the new season would start well in view of the fact that the North Indian Crop might be delayed by current drought condition in the producing areas. Shares of the Assam and Dooars gardens were in good demand on expectation of satisfactory dividends for last year.

Sugar shares presented a firm front all the thought that the steady rise in production would result in increased earnings for the companies.

Textile scrips, too, enjoyed good support due to diversification of activities, especially in the field of rayon production.

Thanks to the encouraging corporate news, the scarcity of offerings and the proposal by certain companies to increase the capital for expansion programme, the Miscellaneous section found support on a wide front. Higher levels attracted some profit-taking.

(a) After transferring Rs 6,26,601 from Depreciation, Renewal and Extension Fund and Rs 80,000 from Reserve Fund.
 (b) After transferring Rs 45,153 from General Reserve; Rs 35,000 from Machinery Replacement Reserve and Rs 6,008 from provision for taxes.
 (c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.
 (d) After transferring Rs 50,000 from General Reserve.
 (e) After transferring Rs 120,000 from Reserve Fund Rs 268,000 from Reserve for Taxation and Rs 23,883 from excess provision not required.
 (f) After transferring Rs 730,179 from Reserve for Taxation and Rs 299,043 from General Reserve.
 (g) After transferring Rs 2,656,522 from General Reserve.
 (h) After writing back Rs 380,718 being excess depreciation provided in 1958.
 (i) After transferring Rs 319,687 from General Reserve.
 (j) After transferring Rs 842,193 from General Reserve.
 (k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess depreciation.
 (m) After transferring Rs 3,03,281 from General Reserve.
 (n) After transferring Rs 120,000 from Dividend Reserve.
 (o) After transferring Rs 2,975,000 from General Reserve and Rs 1,000,000 from Dividend Equalisation Reserve.
 (p) After transferring Rs 5,27,512 from General Reserve.
 (q) After transferring Rs 400,000 from General Reserve.
 (r) After transferring Rs 2,50,000 from Income-tax Reserve and Rs 3,70,712 from Raw Materials Fluctuation Reserve.
 (s) After transferring Rs 3,22,599 from General Reserve and Rs 75,000 from Depreciation Reserve.
 (t) After transferring Rs 9,50,000 from General Reserve.
 (u) After transferring Rs 200,000 from General Reserve.
 (v) After transferring Rs 100,000 from General Reserve.

(w) After transferring Rs 670,000 from General Reserve and Rs 76,805 from Excess Provision for taxation.
 (x) After transferring Rs 1,814,832 from General Reserve and Rs 592,584 from Dividend Equalisation Reserve.
 (y) After transferring Rs 255,000 from General Reserve.
 (z) After transferring Rs 625,000 from General Reserve.
 (a1) Includes Rs 608,325 being amount drawn from extra excess provision made for depreciation on plant and machinery for the year ended 31-3-53.
 (a2) After transferring Rs 9,00,000 from Reserve for taxation.
 (a3) After transferring Rs 351,429 from General Reserve.
 (a4) After transferring Rs 350,000 from General Reserve and Rs 165,000 from Machinery Rehabilitation Reserve.
 (a5) After transferring Rs 4 lakhs from Reserve for fall in price.
 (a6) After transferring Rs 100,048 from General Reserve.
 (a7) After transferring Rs 255,000 from General Reserve.
 (a20) After transferring Rs 772,517 from General Reserve and Rs 78,483 from Development Retire Reserve.

(a) After writing back Rs 60,000 from provision for Taxation.

(c) After transferring Rs 65,000 from General Reserve.

(d) After writing back Rs 375,257 from Depreciation Reserve.

(e) After transferring Rs 125,000 from Reserve.

(f) After transferring Rs 50,000 from Building and Machinery Reserve.

(g) After transferring Rs 60,000 from Revenue Reserve.

(h) After transferring Rs 35,000 from Revenue Reserve; Rs 72,597 from Depreciation Reserve and Rs 48,794 from Building and Machinery Reserve.

(i) After transferring Rs 25,000 from Revenue Reserve; Rs 121,000 from Building and Machinery Reserve and Rs 15,000 from Hall Reserve.

(j) After transferring Rs 77,795 from Building and Machinery Reserve.

(l) After transferring Rs 65,000 from Revenue Reserve; Rs 96,181 from Depreciation Reserve and Rs 23,383 from Building and Machinery Reserve.

(m) The Indian Estates of The Patrakola Tea Co. Ltd were transferred to this company at book value as on 1-12-1954.

(n) After transferring Rs 30,000 from Revenue Reserve; Rs 71,688 from Building and Machinery Reserve; Rs 27,445 from Replanting Reserve and Rs 10,000 from provision for taxation.

(p) After transferring Rs 68,450 from General Reserve and Rs 60,000 from Tax provision.

(q) After transferring Rs 40,000 from Building and Machinery Reserve.

(r) After transferring Rs 50,000 from Revenue Reserve and Rs 45,000 from Building and Machinery Reserve.

(s) After transferring Rs 79,539 from Depreciation Reserve and Rs 5,000 from Development Reserve.

(u) After transferring Rs 151,220 from Depreciation Reserve; Rs 60,000 from Replanting Reserve; Rs 25,000 from Development Reserve and Rs 20,000 from General Reserve.

(v) After transferring Rs 55,223 from Building and Machinery Reserve and Rs 18,000 from provision for taxation.

(w) After transferring Rs 145,000 from Revenue Reserve and Rs 5,000 from Development Reserve.

(x) After transferring Rs 30,000 from General Reserve and Rs 60,000 from provision for taxation including Rs 88,623 being dividends forfeited.

(y) After transferring Rs 298,782 from Building and Machinery Reserve and Rs 175,000 from Revenue Reserve.

(z) After transferring Rs 110,000 from Revenue Reserve.

7 May 1960

†Cardamom (in lbs.).

(a) After transferring Rs 82,000 from Dividend Equalisation Fund.

(b) After transferring Rs 64,521 from General Reserve.

(c) After writing back Rs 138,000 being excess

provision for taxation.

(d) After writing back Rs 80,000 being excess provision in previous years.

(e) Includes Rs 60,322 being surplus provision and Refund of Income-tax written back.

(f) After transferring Rs 50,000 from General Reserve.

TABLE 10

Reserve.

(1) After transferring Rs 75,000 from Dividend Equalisation Reserve

Equalisation Reserve.
(1) After transferring Rs 80,000 from Dividend

(j) After transferring Rs 80,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 60,000 from General Reserve

and Rs 35,000 from Dividend Equalisation Fund

(1) After transferring Rs 55,570 from General Reserve

(m) After transferring Rs 50,000 from General Reserve.

Reserve. (n) After transferring 20,000 from General

(H) After transferring Rs 188,172 from General Reserve.

WORLD OF FINANCE

Implications of 50% Additional Deposits

WITH the Reserve Bank's directive calling upon banks to maintain 50 per cent of accruing Deposits with the central banking institution as additional deposit, a farcical situation has developed in Indian banking—but it is also a situation that is full of menace and danger. This is not to suggest that the Reserve Bank action was misguided; on the contrary, it was the least that could be done, in order that the much more serious step of a raising of bank rate could be avoided. But the impact of the new directive on the banking situation is, we repeat, replete with all the attributes of a tragic-comedy. The dramatic personae are the Reserve Bank, the Scheduled Banks and the shareholder; incidental to the action in the drama are the international financial experts and bank depositors. Let us see how the new directive touches upon each one of these "characters" in the play.

First of all, the Reserve Bank. Exercised as the central banking institution is by the trend in prices, and by fear of what excessive liquidity with the banking system might do to the economy, the Reserve Bank is, we presume, being advised on every side—erroneously, in our view—that a raising of bank rate is inevitable and imperative. It is the international experts who, leaning on their experience in other, industrial economies, suggest the use of the bank rate weapon; unfortunately, they do not realise, as the Reserve Bank does, that the lessons learnt from "western" experience have but limited applicability to Indian conditions. But action must be taken by the Reserve Bank, and even though it is a controversial matter whether banking finance has any considerable influence on price trends, it has been decided that 50 per cent of new Deposits must be lodged with the Reserve Bank; and, on such additional deposits with Reserve Bank, "average" interest is to be paid.

This brings us to the fate in store for the banks. The fact is, that, the bulk of new Deposits are in the form of the higher-costing Time Liabilities. On Time Deposits, the interest paid by a banking institution is of the order of 3½ per cent; thus, Rs. 1 lakh "costs" a bank Rs. 3,500 per annum. Against this, Rs. 50,000 will have to be lodged with the Reserve Bank, and this amount will presumably earn an "average" interest of 2 per cent, or Rs. 1,000. After such statutory deposit, the resources of the bank will have been enlarged by Rs. 50,000, the cost of which will be Rs. 2,500. In effect, this means that, on Time Deposits, a bank pays 5 per cent! Similar calculations will prove that, in the case of Savings money, though the interest payable on such Deposits is 2½ per cent, the effective rate increases to 3 per cent. Even in the chaotic days of the Deposits war, in 1956 and 1957, few banks had to pay 5 per cent for the money they sought to attract!

Thus, the profits of banks are being further pruned by such effective higher cost of money. Enter, here, the poor shareholder, who, as a result of banking performance in 1959, has

already suffered a considerable depreciation in the worth of his holdings, with rare exceptions. In relation to the considerable expansion in Deposits, banks are under-capitalised; but, in the prevailing circumstances, can the investor be expected to support new rights issues by banks?

We come, lastly, to the depositor, who it is who has built up the banking system. He has been having a luxurious and prosperous four years, during which the banks have been wooing him with all the ardour they have been capable of mustering. The circumstances of the day suggest that, unfortunately for him, he has had his day. If the economy is to thrive, he cannot expect to continue to receive high rates of interest on Deposits.

For, this is exactly what must inevitably happen. In the face of world advice to raise bank rate, the effect of the Reserve Bank's action will be to depress the banking interest rates. True, on the other side, Advance rates charged by banks can be increased; but any concerted action by the banks in this behalf will immediately give rise to cries of "cartel!" So, the easier thing—the correct thing—is to reduce rates payable on Deposits.

And this is as it should be. For, while there has been a discernible pattern of interest rates in this country, the inter-relation between one set and another has been chaotic. It was patently absurd that, until September 1959, the maximum deposit rate was on a par with bank rate; it should surely have been distinctly lower. We suggest that the maximum rate of interest payable on Deposits needs peremptorily to be brought down by the banks to 2½ per cent. We may add that such action must be taken by the banks on the eve of the slack season, and not at the end of it. If the shock tactics of the Reserve Bank should succeed in galvanizing the banks into action on correct and proper lines, balance and poise will have been restored to the Indian banking situation. After that, we fancy, the Reserve Bank will be better able to guide the banking system in ensuring that bank finance is most advantageously made available for augmenting production—which, as we noted last week, is the only answer in the final analysis to the problem of rising prices.

Paradoxical as it may seem, if bank rate rise is to be avoided, deposit rates must be brought down.

Further indications of the end of the busy season are available in the returns of the Reserve Bank for 29 April, in which a contraction of Rs. 6.41 crores to Rs. 1883.59 crores in Active Note Circulation has been reported. However, Rupee Coin has moved out into circulation for the fractional amount of Rs. 4 lakhs. In the result, the Reserve Bank's cash in the till has improved by Rs. 6.19 crores to Rs. 30.96 crores. There is also, in the latest returns, evidence of inter-governmental transactions on a very considerable scale, with State Governments benefiting.

For meeting the liability to the State Governments, the Centre is seen to have had recourse to deficit financing in an amount of roughly Rs. 35 crores. This figure is suggested by the rise of Rs. 30 crores in Investments, and, on top of this, it has to be borne in mind that, in the relevant week, the State Bank bought securities for Rs. 4 crores. Balances of State Governments have shot up by Rs. 30.67 crores to Rs. 45.28 crores, and their ways and means borrowings from the Reserve Bank have been marked down by Rs. 2.25 crores to Rs. 48.22 crores. The Central Government's Deposits have, in result, moved down slightly from Rs. 51.82 crores to Rs. 50.58 crores.

The Reserve Balances of member banks are practically unchanged at Rs. 97.64 crores, but,

in that same week, for purchase of gilt-edged, the State Bank drew down its cash in hand and with Reserve Bank by roughly Rs. 3 crores. So, it appears possible that other Scheduled Banks may, in the week ended 29 April, have experienced some element of rise in Deposit resources thereby compelling an increase of Rs. 3 crores in their Reserve Balances. The Reserve Bank's Other Loans and Advances have, somewhat strangely, moved sharply up from Rs. 101.59 crores to Rs. 114.53 crores. This may mean that Scheduled Banks, in increasing their balances with the Reserve Bank, have found it necessary, while meeting the climactic expansion in the demand for Advances in the current busy season, to seek the assistance of the Reserve Bank. Lastly, Balances Held Abroad are again lower by Rs. 3.74 crores.

There is little that is noteworthy in the return of the State Bank for 29 April. Deposits have moved down from Rs. 633.86 crores to Rs. 628.64 crores. The gilt-edged portfolio has been augmented by Rs. 4.73 crores to Rs. 379.84 crores. The total of Advances has risen slightly by Rs. 1.25 crores to Rs. 217.69 crores. With Other Assets lower by Rs. 4.83 crores, the State Bank's cash in hand and with Reserve Bank stands reduced by Rs. 3.13 crores at Rs. 35.27 crores.

The return of Scheduled Banks for 22 April has disclosed a smart rise of Rs. 10.88 crores to Rs. 1974.58 crores in gross Deposits; and, at this rate, the Rs. 2000 crore mark should be pierced well before the end of May. This rise has occurred, it may be noted, almost wholly in respect of Scheduled Banks other than the State Bank. A slackening in busy season pressure is suggested by the fall of Rs. 2.80 crores to Rs. 1124.90 crores in the total of Advances. Scheduled Banks have taken the opportunity thus offered by accruing and freed resources to reduce borrowings from the Reserve Bank by Rs. 12.90 crores to Rs. 32.34 crores. Cash balances are seen to be lower by Rs. 2.01 crores at Rs. 183.07 crores, despite the fact that, in the relevant week, the State Bank increased its cash in hand, and with Reserve Bank by roughly Rs. 10 crores. The inference may be that, in respect of accrued Deposits during the week, the Scheduled Banks' additional statutory deposit with the Reserve Bank will be incorporated only in the week ended 29 April. Gilt-edged holdings have been marked up by Rs. 4.78 crores—wholly in respect of the State Bank, which increased its portfolio by about Rs. 6 crores.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 3 May 1960. Total amount offered was Rs. 2,82,00,000. Tenders at Rs. 99.325 were accepted in full and those at Rs. 99.310 were allotted approximately 69 per cent. Lower tenders rejected. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.745 per cent per annum.

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 9 May 1960. Successful tenderers should make payment on Friday, 13 May 1960. Other conditions are as usual.

During the week ended 29 April 1960 Government of India Treasury Bills for Rs. 124,57,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 4 to 7 May 1960 at Rs. 99.326 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from the 27th to 30th April 1960 amounted to Rs. 2,01,00,000.

Credit Restrictions in Britain

By Paul Einzig

THE increase in the Bank rate and the withdrawal of official support from the Gilt-edged market to discourage the liquidation of the banks' investment is now followed by the reintroduction of the war-time system of special deposits, under which the banks are compelled to surrender a percentage of their resources. The announcement of this latest measure, together with the reintroduction of restrictions on hire-purchase terms, was in accordance with expectations. It has been made necessary by the non-stop expansion of bank advances, culminating in a hundred million pound increase in April. In order to be able to expand credit, the banks have liquidated a very large proportion of their Gilt-edged investment. So in addition to financing an inflationary expansion of production and consumption, and an inflationary increase in wages, the banks have greatly aggravated the difficulties of the Gilt-edged market.

The increase of the Bank rate was not sufficient to check the increase of the advances, nor was the fall in the Gilt-edged market sufficient to discourage the banks from realising their holdings. It seems that we are confronted by an institutional change, aiming at a permanent increase in the proportion of advances to total bank assets, and a permanent reduction of the proportion of Gilt-edged investments. The banks, like most other investors, are growing obviously tired of keeping their assets in Government loans. Even though their capital losses through the downward trend in the Gilt-edged market could be kept down by a policy of holding mostly short-dated loans and holding them till maturity, during recent years banks felt impelled to realise their investments all too often at a loss. The expanding trend of advances made it necessary for them to sell instead of holding till maturity.

It seems probable that, so long as the demand for advances continues at a high rate, the banks will never switch back into the Gilt-edged market. They are doubtless glad to have freed themselves of the burden of heavy Gilt-edged holdings. It was during the pre-war depression that banks have largely assumed the role of investment trusts specialising in Government loans, owing to the relative scarcity of opportunity of employing their resources in advances to customers. Now they can revert to their old role of financing trade instead of financing the Government.

The question is, will the present measures prove to be less ineffective than the previous disinflationary measures? The commandeering

of one per cent of the bank deposits is not unduly drastic. The banks are in a position to make good the reduction of their liquid resources by selling more investments between now and June 15 when they have to pay in the special deposits. But it seems doubtful whether they will dare to continue to defy the official policy. The Government has now clearly shown that it is quite prepared to wield the big stick if necessary. Even though it is wielded at present with moderation, once the system is adopted there is no reason why the extent of its application should not be increased in accordance with requirements.

The banks are only too well aware that, should they seek to "neutralise" this latest move, the authorities are in a position to double or treble the percentage of special deposits, till a stage is reached at which the banks are no longer able to realise investments without taking heavy capital losses. So the chances are that they will heed the warning and will check the expansion of their advances.

But the official warning is not directed solely to the banks. It is also meant to warn the trade unions that the authorities are not prepared to finance indefinitely the unwarranted increase of wages, and that the employers might no longer be in a position to concede such increases in the certain expectation that amidst the atmosphere of expansion they would be able to pass them on to the consumer in the form of higher prices.

The immediate reaction to the announcement of the new measures was favourable to sterling. The foreign exchange market has interpreted them as an indication that the Government is determined to resist inflation even at the cost of gross interference with the freedom of banking and a return to what almost amounts to physical controls. It is indeed a matter of prestige for the Chancellor of the Exchequer to prevent a resumption of the rise in the cost of living index. After it has remained stable for nearly two years it has become the symbol of the Tory disinflationary policy. It is a great pity that those concerned have not to take advantage of this "breathing space" in post-war inflation to inaugurate an era of declining prices resulting from increased efficiency in industry and agriculture.

If only trade unions had exercised self-restraint their members could have benefited by lower prices instead of higher wages. Employers, too might have done their share towards the desired goal by cutting prices instead of increasing dividends. Above all, the Government itself might have contributed towards its declared policy of lowering prices by cutting down public spending, or at any rate preventing its further rise. None of this has been done, and it remains to be seen whether there will be another opportunity in our time.

The Two New States

FIRST of May saw the birth of the two new States of Maharashtra and Gujarat amidst much rejoicing and a sense of fulfilment among the people of the erstwhile State of Bombay. The moment of gratulation has not been entirely golden, since Vidarba is protesting in an incendiary fashion. Over the years, we have become somewhat enured to spectacles of violence in such contexts and there is some danger of a general coarsening of the national sensibility. It is little comfort that the riots this time are, in a sense, anti-lingual: Linguism, as a force that disrupts national unity, is, certainly a formidable factor in our national life and in a sense, the creation of the two new States is a surrender to the principle of linguism. But that would not make the pyromaniacs of Nagpur respectable citizens. For, their protest too stems from narrowness, though of a different sort and is, therefore, as much a corroder of unified national consciousness. It is to be hoped that responsible leaders of Vidarba like the much respected octogenarian Mr Aney will exert their influence to bring the people of Vidarba to a more reasonable frame of mind.

Vidarba's sullenness apart, the two States come into being amidst much general goodwill. The history of the consummation of the remarkably tenacious will of the people of the region has much that is best forgotten. The riots in Bombay and Ahmedabad were among the ugliest episodes in national life. From the beginning, it was clear that laudable as the idea of a bi-lingual Bombay was, it really had not chance of ultimate survival. In many ways, this is a great pity. But the principle of linguistic States was too firmly entrenched in the minds of people for its legitimacy to be questioned at the late stage it was. Even the States Reorganisation Commission conceded it, if not in principle, at least tacitly by the nature of its actual recommendations. With the exception of Bombay (where, however, they recommended the creation of a separate Vidarba, in partial concession to Marathi sentiment), its recommendations followed broadly the linguistic pattern. Since the SRC itself was somewhat wobbly over the issue, subsequent developments have made it impossible for anyone to argue the case for a bilingual Bombay with any degree of conviction. Mr Nehru's passionate desire, now reluctantly subordinated to local wishes, to have Bombay as a nursery of multi-lingual integration of national feeling was never popular with the people concerned. The whole series of compromises culminating in the dramatic acceptance of bi-lingual Bombay in Parliament (is preferable to the separation of the Bombay city both from Gujarat and Maharashtra) were obviously unsatisfactory efforts to accommodate irreconcilable attitudes. There was something synthetic in the enthusiasm with which all parties in Parliament greeted the idea and the speed with which the compromise formula was put through showed that considerations other than the merits of the idea weighed with the legislators. Neither the excellent record of the Bombay Government since nor the sustained zeal of Mr Nehru for the experiment

could really save the idea. The last general election proved how deeply committed to the idea of a linguistic State Maharashtra sentiment was. And once the Mahagujarat Samity gave up its claim to Bombay city, it was evident that the linguistic division of Bombay State could not be resisted for long. Finally political realism triumphed over political idealism and the two States have now come into being.

Now that the States have come into being nostalgic head-shakes would be inopportune. Indeed, in the actual process of separation of the two States, there is much to take heart from. It was evident from the beginning that Gujarat would start with a deficit; one of the arguments that weighed with the SRC in recommending a bi-lingual Bombay was this. Gujarat will also have to spend large sums of money for equipping itself with a Capital. There was also the ticklish question of how far the surrender of Bombay city—as the Gujaratis viewed it—should be 'compensated', especially when it could be argued, with some plausibility, that it was Gujarati enterprise that made Bombay what it was. Indeed, at one stage, it looked as though the whole idea of separation would come to brief over these minor disputes. But, with the good offices of the Centre, which provided the services of Mr M. V. Rangachari to devise the principles on which the financial implications of the separation should be governed, the problems were amicably settled. Not a little of the credit for the successful bringing to fruition of the wishes of the two people should go to Mr Chavan, in whom India has a young leader of great promise.

The new States have started with the goodwill of the whole nation all of which they will need in their initial tasks. This is particularly true of Maharashtra. Vidarba's hurt and resentment have to be assuaged with understanding and even generosity. There are many practical ways in which this can be done—sustained interest in its economy and the full utilisation of Nagpur for official purposes. After all, Vidarba is a test case for the linguistic enthusiasts who claim that a common mother tongue can unite what other considerations divide.

With the creation of the two new States, the country is entitled to hope that the territorial readjustments of the States inter-se have come to an end. There are, of course, minor readjustments on which feelings are apparently still strong. (In the case of Maharashtra itself, there is its border with Mysore on which there is some squabble.) These will no doubt be settled amicably in course of time. But the important thing to remember is that convenient political alibis, (at no time very respectable, but now less so,) are no longer available for shirking the essential tasks of nation-building.

The possibilities of Maharashtra may seem unlimited in view of current talk about aluminium in Kolhapur and the abundance of Koyna power in the future. But it will be agreed that rayon manufacture is likely to

develop more rapidly in Gujarat in the future and the old weaving industry of Surat is going to get a new lease of life. The growth of sugar mills in the Deccan and the emergence of Srirampur and Sangli as trade centres may suggest that irrigation has made the Deccan equal to Konkan and life and labour in Bombay is not so drab as pictured by Dr. Mann in the past. The truck-farming that has developed in Nasik is a sign that small holdings can yield more for capital and labour carefully applied than large estates. The opportunities for successful paper manufacture also may be greater in Maharashtra at present and the lack of timber in Gujarat may be compared with the deficiencies of Madras and Andhra Pradesh which are poorly placed as compared with Kerala which has now begun to make hard-board in addition to plywood. The total absence of plantation products in both States cannot be regarded as a handicap since Maharashtra has minerals that support an export trade and Gujarat is banking on oil to come up soon with Soviet aid, financial and technical.

There are perhaps more pockets of prosperity in Maharashtra but Gujarat has a commercial and industrial tradition that is known from Aden to Zanzibar. The enterprise of Cutch and the vigour of Broach belong to both modern and ancient history, and Maharashtra has no trading community to compare with the Bhatiyas. In spite of all the clamour against caste, the last item cannot be overlooked when discussing both material and moral resources. If Maharashtra sets store by the daring of Sivaji and the power he built up, it is the heritage of Somnath that keeps alive the spirit of Gujarat. Both are States less exposed to alien influences than Bengal or Assam, but, yet more conscious of the present than the past. That may have its own value in business life and it may be claimed that for the strenuous life of competitive business none is better equipped than the Gujarati who carries his native money sense wherever he goes, so that Gujaratis, even like Sindhis, make good under unpromising conditions.

Mr G. D. Birla on the Phoney War

IN a remarkably forthright expose of the phoney character of the war between the Government (or the public sector) and the private sector in India, Mr G. D. Birla is reported to have told an American business audience this week that "the climate for investment in India is excellent." As the climate for foreign private investment and the climate for domestic private investment are not two different things, what Mr Birla said in New York could not have been meant merely for foreign consumption. It must be said to his credit that some at least of the things he said there were in fact said by him within this country in recent months, albeit at times by remote implication. And so, in all truth, what he said in the United States should have been meant equally for domestic (Indian) consump-

tion. As such, his speech is to be acclaimed as a keynote thesis for the benefit of some doubting sections of the Indian business community and of those private-sector publicists who are "more loyalist than the King."

The telling points in Mr Birla's thesis are easily told. The pivotal argument is that "new floatations are easily subscribed to and very often they are quoted at a premium" and that "in the case of many recent floatations, the equity share has been quoted at 20, sometimes 30 or even 50 per cent premium within a month." A related argument is that "the Indian money market is very cheap and the margin of profit very good," for, according to Mr Birla, "a new project could earn something like 25 per cent." Although out of this 25 per cent the investor has to provide for depreciation and income-tax, it is still "a very good margin of profit," in Mr Birla's opinion. That is not all, for, according to his handsome and ungrudging acknowledgement, "the Government have given great encouragement to new businessmen through an income-tax rate development rebate and high depreciation allowances. For all practical purposes, there is tax holiday for the first five years for a new venture and salaries of foreign technicians are exempted from income-tax for the first three years. Products manufactured in India have a protected market and Government and semi-Government institutions advance money through equities, preference stocks and loans." No wonder, therefore, that the Indian industrial economy is rapidly expanding and various projects—big, small and medium-sized—are being put up. This happy state of affairs, according to Mr Birla, is the result of Government's "entirely pragmatic" approach toward the respective roles of public and private sectors.

Coming as it does from one of the foremost leaders of Indian business opinion, this is no mean testimony. If anything, it is such as to provoke the Communists to take it as an expose of the "hollow" character of Indian Socialism although Mr Nehru, its prime architect, has never implied anything more than the harmonious development of a mixed economy within a broad "socialistic pattern". That the "socialistic pattern" is not the same thing as a "socialist society" is obvious to not a few discerning observers of the Indian economic scene, but it is not so very obvious to a small section of political and business opinion in the country. Mr Birla's testimony has thus come not a day too soon. If he gives this forthright lead to business opinion within the country on his return, he will have cleared the air and, deprived, to the good of the Congress, the socialistic propaganda of its demagogic (and frightening) overtones.

But it is by no means certain that he will do it, for, the kind of frankness that appeals to an American may not be equally well appreciated in some circles in this country. That, however, should be no bar to his giving the requisite lead to the business community even as he honestly told the All-India Businessmen's Convention in January last that the present Government represented "the best leadership available in the country." Whatever he may or may not do on his return, at least some of his frank utterances in the United States would need to be more widely known here and now. One of these is that there are no serious labour troubles in India; this is confirmed by his personal experience in his own concerns employing, in all, a hundred thousands and workers. Another is that he has no suitable reply to the question: "How do you explain quick expansion of companies and premiums on shares if the tax base is so bad as you have sometimes spoken?" Yet another is that there is close collaboration between the

Government and businessmen although it is not admitted by either side.

If, for purely indigenous reasons, Mr Birla continues to adopt an approach of "tight-rope walking" within India, it may not be too much to expect that his own newspapers—dailies and weeklies in both English and Hindi—would be advised to reflect his authentic voice, and not to speak in different voices, thereby confusing the public, wittingly or unwittingly. By virtue of his long association with Mahatma Gandhi and, through him, with the Congress, Mr G. D. Birla owes it to the country not only to give a sound lead to business opinion but also to put a stop, where it lies in his power, to the relentless campaign of personal denigration of some of the foremost leaders of the Government to which he has pledged all-out support. Where, according to Mr Birla's own understanding of the situation, economic problems are being pragmatically (and wisely) solved at the political level, political criticism would need to be raised to a more dignified level for that reason alone.

Commodities in First Quarter

COMMODITY prices showed a mixed trend during the first quarter of the year. With the exception of certain non-ferrous metals and oilseeds, and foodgrains, prices of all other commodities developed a distinctly firmer tendency. In particular, spices, shellac, bullion, raw jute, jute goods and groundnut staged an impressive rally, as the figures given below will testify:

	Dec. 31 1959 Rs	Mar. 31 1960 Rs	Percentage Increase or Decrease
Spices:			
Alleppey—Pepper	1,350	1,650	+ 22.2
Bombay—Pepper	195	210	+ 7.7
New York—Pepper	54cts.	58½cts	+ 8.3
Bombay—Ginger	56	64	+ 14.3
Bombay—Cinnamon	600	655	+ 9.2
Bombay—Cloves	975	800	+ 2.5
Calcutta Shellac:			
Pure TN variety	74	78	+ 5.4
Bombay—Bullion:			
Gold	125.84	130.44	+ 2.7
Silver	211.50	216.87	+ 2.5
Sovereign	81.12	86.37	+ 6.4
Bombay—Oilseeds:			
Groundnut	39.25	42.87	+ 9.2
Linseed	34.25	31.94	— 6.7
Castor	33.75	33.75	Nil
Kardl	24.00	23.75	— 0.9
Niger	31.00	32.75	+ 0.8
Bombay—Oils:			
Groundnut	20.87	22.19	+ 11.1
Linseed	16.44	16.06	— 2.4

Bombay—Cotton:			
ICC Jharilla March	763.25	750.00	-1.7

*Rates were not quoted with effect from the 19th February. The rate, quoted on the 18th February, was Rs 141.

The rise in the prices of spices, especially of Pepper, was more pronounced. The peak price realised, since the beginning of the season, was Rs 2.150 per candy as against Rs 1.350 quoted toward the end of last year. The unusual leap in prices was due to continuous buying by the USA even at steadily rising prices. As a matter of fact, buyers in the USA offered at one time as much as 84 cents a pound as against only 54 cents in December last year on fears of an overall shortage of the commodity during the current year. Chances of buying by Russian and other East European countries were also considered to be bright in view of the larger rupee account facilities between them and India. Above all, inland demand was improving in view of the unreasonably high price prevailing for chillies—the rival of pepper in the Indian market. Toward the end of the quarter, however, there was a slight setback in prices, reflecting the uncertain outlook for the commodity.

Shellac prices showed a steady upward trend from the beginning of the year on the feeling that Britain would enter the market for large-scale purchases in view of her declining stocks following the exceptional demand from the gramophone records industry. Another reason was, that more consumers were tending to buy direct from India instead of through the London market. Above all, the steps, taken by the Indian Lac Exporters' Association, and the fixing of a minimum export price brought forth a stability in export prices, thereby helping India to earn substantial foreign exchange.

Except for a slight reactionary tendency noticed in the third week of March on apprehensions that the Reserve Bank might announce credit squeeze measures against advances on precious metals, bullion prices displayed a steady upward trend from the beginning of the year. Despite the imposition of higher margins, the market was practically in the grip of a few professional operators who were not slow to exploit the somewhat restricted supply position.

With regard to Oils and Oilseeds, the tendency of prices especially for Groundnut remained upward during the major part of the period under review on reports of insufficient arrivals and the consequent heavy purchases made by the vanaspathi manufacturers at successively higher levels. Conditions akin to a boom were witnessed toward the end of January following the fixation of ceiling levels for

seed and oil by the Board of the Bombay Oilseeds Exchange.

From mid-February, sentiment was rather subdued in the absence of any fresh export business materialising, as Indian prices were considered to be out of parity with buyers' ideas in overseas markets. Moreover, reports about the move on behalf of the Bombay Municipality for the imposition of an octroi duty on vegetable oils and oilseeds produced an uneasy feeling among trade circles, as such an octroi duty would have an unfavourable effect on the crushing industry in Bombay. Thanks to the announcement of the export quota of 20,000 tons of HPS groundnut till the end of June, the market staged a sharp recovery toward the end of the quarter.

Comparatively speaking, trading in the castorseed and linseed sections was restricted. In the case of the former, operators lost some confidence in the outlook for exports of castor oil on fears of severe competition from Brazil. The Linseed section was practically devoid of interest, as shippers were worried about the continued silence of Australia in linseed oil, while business with the UK and Continent continued to be difficult.

Price movements in jute goods were mostly influenced by the speculative activity in the futures market. Despite the imposition of high rates of margins, speculators remained very active in pushing up rates gradually from the beginning of the year in view of the strong statistical position, which was strengthened further by a sharp fall in stocks at the end of last year. Overseas buyers, however, did not show any buying interest at the rising levels as they felt that their stocks would be sufficient enough to carry them, at least for the next three months on the basis of their consumption. With the result, the market developed a reactionary tendency from the third week of January. In fact, the trend of prices was rather irregular till the middle of March, being influenced by some adverse factors. First, the easier trend in raw jute prices in Pakistan with the end of ceiling on jute acreage and fears of intense competition from that country had an adverse effect on sentiment. Secondly, rumours of the diversion of some of the Burmese orders to Pakistan induced some setting pressure. Finally, it was feared that, in view of the poor demand from overseas buyers, the stocks with the mills might show an increase.

Thanks to reports of further business done with China, the market took a definite turn from mid-March. Although a controversy was going on among the operators with regard to the size of the stocks at the end of March, speculators were still busy in their dealings on the view that stocks might show a decline and that the market might even be confronted with the problem of low stocks if China continued to buy on the same scale as she did last year. There were also rumours of Egypt's proposal to place orders for the purchase of jute goods worth Rs 1 crore. "Shorts" were naturally compelled to cover their sales in near-delivery goods at advancing prices. The rise in prices was, however, more pronounced in sackings than in hessians. This was mainly due to the activity of the bulls who pushed up the rates of the former category on the consideration that stocks were too low as compared with a year ago. Concern was, however, expressed with regard to the increase in hessian stocks, especially when the USA, despite the end of the steel strike, was sitting out of the market. But, prices of hessians moved up slightly in sympathy with sackings.

The Raw Jute section, after ruling quiet till the middle of February, displayed a firmer tendency during the remaining part of the quarter under review. From the beginning of

the year, mills had not been showing much interest and made only small purchases to meet their immediate requirements on the belief that prices might develop a downward trend in view of the heavy arrivals and the accumulation of stocks at Cossipore. The better relation between India and Pakistan also gave rise to a feeling that there would be an adequate supply of the raw material during the current season. Although sellers were prepared to accommodate the mills in respect of prices and payment, hardly any business was possible.

Prices, however, took a sudden reversal of trend in mid-February of reports of poor imports into most agencies. Also, mills came out as buyers at the ruling rates and made substantial purchases. This tended to give bullish ideas to sellers who turned reserved. Their ideas were strengthened by the reports about the low stock position of some of the mills and the subsequent rumours of a possible shortage of supplies due to the inadequacy of rainfall. The steady rise in the prices of manufactured goods had also a sympathetic effect on the raw jute section.

Despite a steady rise in production, Sugar prices improved steadily from Rs 113 per bag at the beginning of the year following the Government decision not to decontrol the commodity. Normally, the steady rise in production as well as in stocks should have been reflected in the price trends of the market. Unfortunately, this was not so and prices continued to stand at a high level, quoting Rs 124 per bag in the middle of February. This was mainly due to the fact that, although production was running higher, supplies of cane to the factories was declining. Fears were, therefore, expressed that the sugar season would end earlier, as no steps had yet been taken to stop diversion of cane to the khandisari units. From the beginning of March, however, prices developed a steady decline due to better supply position, as was evident from the figures released by the Indian Sugar Mills Association. Total production, during the current season till the end of March, was higher at 20.54 lakh tons as against 16.77 lakh tons in corresponding period of the previous season, while stocks, at the end of March, were estimated at as much as 14.19 lakh tons against 11.68 lakh tons on the corresponding date of last year.

Prices of Foodgrains, after ruling firm till the end of February, displayed a reactionary tendency during the last month of the quarter following slack demand and the beginning of the new crop arrivals. The announcement of the Government decision to build up, within eighteen months, a Buffer Pool of nearly 5 million tons to meet deficit and control prices, was also a contributory factor.

Price movements in the Cotton market were irregular. Except for a short period in January when sentiment was affected by the pronounced weakness of the cotton piecegoods section, the tendency of prices remained upward till the middle of March. Despite the series of measures taken by the authorities to check the rising trend and ensure adequate supply of cotton to the industry at the ceiling level and the liberalisation of their policy, sentiment remained bullish in view of the dearth of good quality cotton and the strong statistical position. Fears were also expressed that the supply position would be tight at the fag-end of the season following the downward revised estimate for the 1959/60 season. As a matter of fact, ICC Jharilla March contract pierced the ceiling level of Rs 790 and touched Rs 815 toward the end of February. However, acute stringency in the money market along with talks of more imports of foreign cotton and the resultant drop in the prices of long-

staple indigenous varieties led to a somewhat apathetic attitude. Moreover, reports of financial difficulties of a few business firms in outside markets threw a damper on the market, resulting in a steady setback in prices toward the end of March.

In the Non-Ferrous Metal market, conditions remained generally dull with prices displaying an easier tendency. Hopes, that the import quotas of the scheduled industries might be raised for the six months (April to September), induced a quiet feeling. In this connection, it may be added that, early in January, the price of Zinc touched a high of Rs 160 following the delay in the receipt of Russian zinc under rupee payment and the supplies imported by the manufacturers having dwindled considerably. Subsequently, the price was marked down gradually to Rs 131 on the 18th February. Following this slump, business almost came to a standstill in this metal from that date.

There was a significant development in the Tea market. Despite the fact that the demand for the commodity was maintained throughout the period on talks of expansion of the industry in the Third Plan, prices showed a softer trend. The improvement in the stock position enabled the UK buyers to sit back and watch the price trends. Although visible supplies were not over-abundant so as to weigh on the market, there was a slow weakening of the market. One reason was the reluctance of the packers to hold large stocks in view of the large volume of financing required for the purpose.

But, a significant development, during the period under review, was the widening of the price gap between plain and quality teas. While the plainest sorts tended to be cheaper, some of the better teas showed more price stability. The drop in plain teas was due to the unwillingness of buyers to take extra quantities on to their books and to the possibility of a surplus of supply over demand during the 1959-60 season if consumption within the producing countries fell below that of the previous season. There was, however, a general belief that the North-East Indian crop of the current season would be sold earlier in spite of the softer trend in prices, especially of Common teas. This might probably be the reason that the general demand was well maintained.

Voluntary Arbitration

By M. SUR

BY the Code of Discipline in Industry both managements and trade unions have in principle agreed through their national bodies "to settle all future differences, disputes and grievances by mutual negotiation, conciliation and voluntary arbitration." Following this up, the tripartite Standing Labour Committee, meeting in March, recommended some modification of the approach to industrial relations in the Third Plan, with a view to encouraging greater recourse to voluntary arbitration to settle disputes.

We have had compulsory arbitration in the form of industrial adjudication machinery for some years now, but voluntary arbitration is a comparatively new idea in India, and there seems to be rather confused thinking about it. For instance the press report on the Standing Labour Committee meeting stated that at present an agreement reached through voluntary arbitration was not binding on workers who did not belong to the trade union which entered into the agreement with its employers, and therefore some legislative amendment should be introduced to give decisions reached through voluntary arbitration binding

force. But voluntary arbitration is not a form of agreement. It is a judgment. Arbitrator means a judge or one appointed by two parties to settle a dispute. Arbitration is the settlement of a dispute by an arbiter, and the modern legal term for an arbiter is arbitrator.

The idea of arbitration, or calling in a third party to settle an argument is almost as old as settled society. There is the classic instance in Greek mythology of the shepherd, Paris, who was called upon to arbitrate on the rival claims to beauty of the three goddesses, Juno, Pallas Athene and Venus. In the modern world we have applied the principle in international affairs through the Court of Arbitration at the Hague, set up long before the First World War. It was in the news recently as a result of its decision in the dispute between India and Portugal over the right of passage of troops through Indian territory. It is, in fact, a thoroughly civilised way of resolving a dispute, but it depends upon the two parties being sufficiently responsible to agree mutually to submit their case to a third party, and to agree to abide by the decision. It is not possible without a belief in the true impartiality of the third party, and therefore requires a high degree of confidence. Once you reach the position where disputes are by mutual agreement submitted to voluntary arbitration, it should not be necessary to talk of making the arbitrator's decision binding.

One cannot avoid the feeling that all parties, and particularly the trade unions, when talking of voluntary arbitration are mainly thinking of an alternative to the system of adjudication, which is discredited in the eyes of the workers. At the recent INTUC Conference, Mr G. Ramanujam, the President, complained that "the delay experienced in the settling of disputes is still the main cause of labour's legitimate discontent." He therefore gave his full support to the idea of voluntary arbitration, wanted it to be applied in the public sector as well as the private sector, and even suggested that the Government should 'blacklist' employers and unions who did not accept it. To 'force' people to do something 'voluntarily', to say the least, smacks of authoritarian regimes. It is reminiscent of the position of the Japanese Factory Inspector who before the war was explaining to the head of a voluntary welfare organisation in the UK that in Japan they ran a similar welfare movement through the Factory Inspectorate. Asked how a voluntary organisation could function through official channels, he explained naively that as Welfare Officer he tried to persuade factory owners to introduce improvements in working conditions or welfare measures, but if this approach did not prove successful, as Factory Inspector he could enforce the improvements by order!

The virtue of voluntary arbitration is that two disputing parties mutually agree to call in a third party to settle their differences. If they do not agree to accept his decision as binding, then there is no point at all in calling him in. Obviously what is wanted is not a change of machinery, but a change of heart. Voluntary arbitration is a civilised, rational approach of two parties anxious to secure impartial justice. It cannot be the approach when one party is out to grab as much as it can and the other to retain what it has got.

When a trade union submits a long charter of demands, it is anxious to see how much it can win for its members. It is likely to achieve more by judicious bargaining than by the fact-finding approach of an arbitrator. If it is not possible through negotiation and conciliation to settle even some of these demands, then it is not likely that sufficiently confidence has been engendered to lead the parties to agree to voluntary arbitration. There is no

course left in such a case but for Government to refer the case to compulsory arbitration. But if all the items in the charter have been settled by negotiation except one on which views are diametrically opposed, or if there is an individual case concerning the right or wrong of the action taken, then it may very well be possible for the parties mutually to agree to voluntary arbitration. It would seem, therefore, that voluntary arbitration has a more limited scope than compulsory arbitration. This is borne out by the experience of voluntary arbitration in the United States.

The American Arbitration Law of 1920 gave legal validity to arbitration as a method of settling trade disputes, and the American Arbitration Association grew up a little later in order to draw up panels of arbitrators. The system began to be applied to labour disputes in 1937, although there had been occasional cases referred to arbitration before that date. Arbitration was held to be a judicial process, and the Association deliberately excluded mediation and conciliation from the arbitrator's duties, holding that he could not at one moment be a mediator or conciliator and the next moment a judge. Arbitration was held to be the last resort, when all other processes had been tried and failed. Compromise was also excluded, for it was argued that compromises did not necessarily embody justice; they might settle an issue partially, whereas justice was intended to dispose of it finally.

In the vast majority of collective bargaining agreements in the United States voluntary arbitration is now laid down as the final step in the procedure for settlement of grievances. In fact a standard arbitration clause drawn up by the Association is usually incorporated in the contract, along with a pledge not to strike during arbitration proceedings. In some cases a permanent arbitrator is designated, but usually arbitrators are selected when required from the Association's panel. The parties may agree on a single arbitrator, or each may make his own choice and the two arbitrators so chosen will select a third to form a board of arbitration.

Arbitration in the States is in most cases concerned with the interpretation of some point in a contract, or the application of the contract provisions, but the original idea has been extended to cases involving individual employees which cannot be settled by reference to the agreement, but involve the general principles of equity. When a case of discharge or disciplinary action has gone through all the stages of the grievance procedure according to the contract and no settlement is reached, that, too, may be referred to an arbitrator, and in some cases a clear-cut issue such as a wage increase or pension plan may also be the subject of arbitration, but no arbitrator is asked to give a decision on a long series of demands. Arbitration is always a final process, not a substitution for negotiation. This was also the idea of the framers of the Code of Discipline in Industry.

The idea of voluntary arbitration was a Gandhian concept which found expression in the famous Ahmedabad textile agreement in 1920. The later Ahmedabad agreement of 1955 also stipulates that all future disputes which cannot be settled by negotiation should be referred to a mutually selected arbitrator. But elsewhere the idea has only been adopted in one or two company agreements. It appears in the Bata agreements, and was adopted by Tatas in relation to any disagreement on the fixation of the standard working force. The writer only knows of one case, that of the Aluminium Industries in Kerala, where a permanent arbitrator has been mutually designated by company and unions.

Indian Finance

There are two difficulties in the way of rapid extension of voluntary arbitration in India. First there is a lack of available men with sufficiently wide experience of the problems of labour relations, who can command the confidence of both parties in industry. Government is endeavouring with the help of employers' and workers' associations to draw up an agreed panel of names, and we shall have to wait to see what success they have. Secondly, as in everything else, the problem of rival unions confuses the issue. If one union agrees to go to arbitration, what is to happen if another rival union objects or refuses to accept the arbitrator's decision? The Standing Labour Committee has suggested giving these decisions the same status and force as tribunal awards. State laws in America mostly give arbitrator's decisions legal standing, but there is the difference that in America only one union at any time can be recognised as the representative bargaining agent, and therefore enforcement of arbitral awards is not very difficult. In India we have the sad experience that banning strikes in certain circumstances does not prevent illegal strikes occurring frequently. To make an arbitration award binding on all employees whether they belong to the union concerned or not, is no guarantee that rival unions will not go on strike against the award. We are driven back again to the question of the right approach. Where the law of the jungle prevails there civilised forms of settlement cannot be applied. Unless the parties to a dispute are responsible, have a sufficient backing and are able to keep their members in line, voluntary arbitration will not be effective. It needs moral force rather than legal sanction behind it, otherwise the arbitrator will merely become in the eyes of the workers another kind of industrial tribunal.

FOREIGN NOTES

US Economic Developments

Many of the cars may be smaller this year, but the market most assuredly is bigger. This about sums up current automotive trends in the United States. And the proceedings at the nine-day International Automobile show, which closed at the famed Coliseum Exhibition Hall here last week, certainly support this conclusion.

The show, a major automotive event for the past four years, the year registered its greatest participation of exhibition, its largest public attendance and its most columnous on-the-spot sales.

In all, more than 300 automobile models were on display, some 275 of them from 76 car makers in nine foreign countries—England, Germany, France, Italy, Sweden, the Netherlands, Japan, Czechoslovakia and the Soviet Union. And for the first time since the show was first staged back in 1957, all six of the U.S. manufacturers also were represented. Nearly 300,000 visitors were counted, and sales at the show soared to well over the record \$40 million-mark of last year.

All of this seems to render groundless any fears that the imported car market in the United States might decline severely with the advent of the new, smaller American cars—the so-called "compacts"—introduced in quantity this year. While the new American compacts obviously made a strong impression on the public at the automobile show, interest in the imported foreign makes evidently continued unabated.

These impressions are borne out by statistics. Last year, the American public spent more than \$16,000 million for cars and parts, of which a full \$1,000 million went for imported vehicles. Only 10 years ago, the foreign car was something of a rarity in the United States, with total sales of little more than 16,000 automobiles accounting for only a negligible part of the vast U.S. market. But last year, some 605,000 foreign-made cars found buyers in the United States, to account for a remarkable 10 per cent of the market.

This year, with the American market expected to absorb more than 6.5 million cars—some experts still insist the final figure will be closer to 7 million—there is reason to believe that both domestic and foreign makers will be able to expand their sales in the United States.

American compacts already are accounting for about 30 per cent of U.S. automobile production, far above the original estimates. And a study just completed for one of the major U.S. manufacturers estimates that within a few years compact

cars will be accounting for 42 per cent of new U.S. car sales and for 21 per cent of all cars on American roads.

There is no question but that these smaller cars—offering the kind of economy and urban driving convenience found in many imported cars but in few standard-sized American models—are providing stiff competition to the imports. Nevertheless, during the first two months of this year, U.S. imports of foreign automobiles increased significantly over the same period of last year—112,000 units valued at \$124 million as against 99,000 units valued at \$113 million. And the number and variety of foreign makes and models now being placed on the American market indicate that foreign manufacturers are responding aggressively and confidently to the new challenge of the American compact.

As a matter of fact, there is reason to believe that the smaller American cars will be offering as much competition—and perhaps more—to their larger U.S.-made brethren as they will to the foreign imports. So far this year, total sales of Detroit's famous product are running better than 10 per cent ahead of last year, and a good part of this gain obviously has been accounted for by the new compacts. Interestingly enough, however, the chief sufferers seem to have been not the imports, which have been more than holding their own, but the standard-sized medium-priced American lines, which took 35 per cent of the US market in 1955 and now are down to less than 29 per cent.

None of this should be interpreted as assuring a rising US market for every make or model of foreign automobile. The competition will be keen, not only with American cars but also with other foreign cars, and the attrition may be great.

But foreign cars have made their mark on the American scene, and those that offer sound value to American consumers and appeal to American tastes should continue to find a profitable reception in the open and expanding automotive market of the United States.

Indo-Ceylon Trade

It is only from the report of the India Mercantile Chamber of Ceylon that one can appraise the position held by India in the island's trade. It is known that India's takings of spices and arecanuts have fallen though her imports of copra and rubber have been maintained. If Pakistan is a steady customer for coconut oil like India, there is no doubt that the main outlets for Ceylon's major exports are still outside Asia. But imports from India of animals, eggs, fish and grains have always been substantial. India does not, or cannot export, sugar but she sells sugarcandy as well as chillies. The trade in coal has been kept up but the intake of vegetable oils has apparently fallen, maybe owing to the rise in prices in India. A beginning in the export of pharmaceuticals and cosmetics has been

noted and India now is shipping insecticides.

Contrary to general impressions India does not enjoy a major share of the Ceylon market in respect of tyres or plywood but India supplies the paper needed for the Ceylon cigarette factory. In regard to cotton yarn, India's share is large but the piecegoods trade is shared by many countries at present. In the case of cement, India is a long way behind other trade rivals but she is the main supplier of iron safes and brass utensils. A point to bear in mind is that Ceylon too was handicapped by an import surplus, as attested by a fall in her foreign balances but 1959 witnessed a measure of recovery due to higher exports of tea, rubber and coconut products. The rise in exports of coir fibre means that India has to contend against Ceylon in European markets. It is surprising that India does not yet buy from Ceylon such cocoa as is needed for the manufacture of beverages. It may be added that the UK is the main buyer of Ceylonese exports followed by the USA, and India not being able to supply rice, wheat flour or sugar cannot hope to acquire a larger share in Ceylon's imports in the future.

But she can hope to keep up trade in potatoes and onions and can hope to sell more rayon piecegoods. But Ceylon too is growing more tobacco and has reduced her imports. The island's machinery imports may hold little importance and the preference given in the issue of licences to Ceylonese corresponds to the practice in Burma. This may affect the course or composition of trade. And Ceylon has a co-operative wholesale to handle imported foodstuffs and import by country craft from India is made difficult. Far more serious is the protectionist policy relating to handloom goods cutting at the supply of lungis from Madras by local traders. Figures suggest that Ceylon is apparently making electric bulbs also and seeks to curb imports.

Skin Deep

Beauty culture has led to the rapid rise of the cosmetics industry, a potent force in US advertising. A scientific Congress considered last year the impact of cosmetics on industry and science. In India too the industry is fairly old but the major units are obviously the affiliates of giant foreign firms though one Indian firm, Patanwala has celebrated its golden jubilee and Indian soap makers have demonstrated their power to make good supplies reduced by import restrictions. While raw materials for perfumery, from musk and sandal to turmeric and chalk, are available in India the industry has been hit by difficulties in getting machinery and local consumer resistance has not been fully overcome by advertising. The only public concern whose progress can be assessed is

that of Lakme, a subsidiary of Tata Oil Mills, and its income has been certainly going up. It is noteworthy that care of the complexion accounts for the emergence of many skin foods including waxes. But the maintenance of standards and assay of products offered for sale are yet to come. The oil-bath has not been displaced by the shampoo and beauty parlours except as annexes to deluxe hotels have not become common in spite of a rising standard of living.

In the USA cosmetics are a widespread and thriving industry and Elizabeth Arden is not only a racehorse owner but a business leader who invites the President's wife for a house-party. In Indian cosmetics are still to make the grade because the chemical industry at present is concerned with producing heavy materials like soda ash, not with study of vegetable fats from which cosmetic manufacturers can draw supplies. There is, however, no surprise that Unilever (through Hindustan Lever) is interested in cosmetics and its share of the Indian market is preserved by the efficiency of marketing and research though it is clear that soap backed by brand names, must always take precedence over special preparations and drug-makers too will retain a hold on the market because of their hold on retail outlets like chemists' shops in big towns. If film studios prefer specialities imported from the USA, the average buyer is price-conscious and what is made in India, according to formula has a big lead over the imported items.

Up in the Air

The combination of Italian, German and other airlines serving the East is a sign that cooperation in the air is at last starting. The rise of Alitalia after the Italian aviation industry was destroyed totally by war was not due merely to State subsidies but to its pre-war success and experience. Air traffic grew after the war and the amalgamation of the major lines in 1957 under State control was a prelude to vigorous development. This year Alitalia has set its sights higher and put in DC. 8 into the operating fleet. The Alitalia service across the Atlantic has termini in New York and Buenos Aires and Alitalia has opened air services to South Africa as well as the Middle East. Both Bombay and Karachi are served by a line touching at Teheran. Ranked twelfth among the world airlines in 1958 Alitalia in 1960 means to link up Rome with Montreal also. Collaboration with Air France, Lufthansa and Sabena may be a result of the European common market, but the drawing card for Alitalia in 1960 will be the Olympic games when all roads naturally will lead to Rome. The president of the Italian airline which now employs over 4000 persons is an ex-Ambassador who is at present chairman of the Trieste Port Trust also.

Indian Finance

7 May 1960

STATES NOTES

UP Cotton Mills' Problems

Mr Purushotam Das Singhania has entered a plea for a special treatment to the UP cotton textile mills in the matter of implementing the recommendations of the Cotton Textile Wage Board. Delivering the Presidential address of the Merchants Chamber of UP, he has pointed out that the Wage Board have overstepped their terms of reference. The Committee on Fair Wages has stipulated that fair wages should be correlated to fair work load and although the Board were expected to follow this wholesome criterion, their recommendations were based on other considerations as well. Mr Singhania pertinently recalls that Mr Lal Bahadur Shastri himself has admitted that the award will adversely affect many mills. The contention that the industry should not raise any objection because the award has been endorsed by the representatives of the industry on the Board cannot also stand close scrutiny. The Indian Cotton Mills Federation which represents the industry as a whole has declared in unambiguous terms its opposition to the award. The ICMF has opined that the additional financial burden will prove disastrous to many of the marginal mills and will bring great hardship to others. The implementation of the recommendations in full will also seriously jeopardise the modernisation programme of the industry.

The textile industry in UP is severely handicapped because of its large margin of surplus workers. And Mr Singhania is of the opinion that the full and immediate implementation of the recommendations will bring about another serious financial crisis for the industry. The additional burden can be justified only when the wage increases are preceded by rationalisation. As far as the UP mills are concerned, rationalisation will also be a difficult problem because of the surplus labour already employed. The way-out suggested by Mr Singhania is that the mills should be permitted to work seven days a week and in cases where the mills are already running three shifts, working should be increased from the present 22½ hours to 23½ hours.

Good Chit for Chits

The Madras Bill to regulate chit funds is introduced with a brief note about protection for subscribers to chit funds. It is necessary that in view of regulations in force

in Kerala the chit funds in Madras also should be supervised. The rules in the draft bill call for registration the making of an agreement among subscribers to a chit or kuri and the taking of security from the Foreman or organiser who can take a commission. Audited accounts have to be submitted by registered funds and receipts for subscriptions have to be furnished regularly, so that even a defaulting subscriber will not lose any sum which is due. The subscriber who draws a prize has to pay all instalments in full. The procedure for refunds is also outlined and banking companies operating chit funds have to maintain regular records. All licensed chit funds have to pay fees for inspection and audit. The statutory safeguards may not hit the mutual aid societies that promote regular saving by the middle class in the South but may lead to a concentration of business in the better funds.

"Package Plan" for Aligarh

The "Package Plan" for food production sponsored by the Ford Foundation is to be introduced in the Aligarh district of UP. This is part of a programme for intensive cultivation of food crops planned to be implemented on an experimental basis in one district each in five States. The cost of the entire programme is estimated at Rs 8.42 crores. The central idea of the scheme would appear to be the ensuring of maximum food production largely independent of weather conditions in the areas concerned. It may be recalled that already Madras has taken the lead by introducing the plan in the Tanjore district. Speaking about the salient features of the Package plan to be introduced in Aligarh district, Mr Mohanlal Gautam, UP's Minister for Agriculture and Cooperation, pointed out the other day in Aligarh that the new food production drive in the district would combine all the requirements essential for rapid expansion of production. Adequate farm credit based on production potential would be made readily available to the cultivators through the agency of a large number of service cooperatives. Perhaps the most important feature of the programme is the provision for ensuring assured prices for the tiller of the soil and Mr Gautam indicated that price agreements would be for a period of two years. Apart from the assurance about an equitable return, every aspect of agriculture will receive concerted attention and all assistance needed by the enterprising farmer will be available to him at his door, as it were, for a five year period and the

The pilot project will be worked for a five year period and the State Government will set up a machinery to assess the success of the programme at frequent inter-

vals. The results from season to season will be studied with a view to removing the impediments in the way and there will be an assessment of the results over the five year period at the end.

There is every reason to hope that the pilot project will achieve its objective of a sizable increase in food production in the area in which it is implemented because no effort is going to be spared and as adequate finance will be available, the main impediment will have been removed. Even so, it is to be clearly borne in mind that the success of the programme in the final analysis depends upon the sustained and enthusiastic effort that is put forth by the farmers themselves. Mr Gautam did well, therefore, to appeal to the cultivators for their wholehearted support to the project. For, without the farmers taking an abiding interest in the new drive, the Minister's dream of turning the Aligarh district into one of the biggest granaries of wheat may remain unfulfilled despite the huge outlay envisaged in the package deal for the district.

Irresponsible Criticism

Although the main reason for the comparative slow progress of the development programmes under the first two Five Year Plans is well-known, it is strange to find some people in Kerala trying to make it appear that if anybody is to blame for the present state of affairs, it is the Central Government. What is stranger still is that among these are some ministers of the State Government. Speaking in New Delhi last week Mr A. Velappan, Kerala's Minister of Health and Electricity, had said that there was a feeling among the State's people that the Centre was not giving Kerala the attention it deserved especially in the fields of industry and agriculture. It is evident that Mr Velappan is also of an identical view but because presumably he does not wish to embarrass the Centre, he has chosen to put the statement in the mouth of the abstract public. Speaking almost simultaneously in Trivandrum, Governor Ramakrishna Rao has also dealt with Kerala's present predicament. He has made an appeal to the Centre that Kerala must be given special consideration while finalising its Third Five Year Plan. The Governor has pointed out that the two most important and urgent problems that are confronting the State are unemployment and agriculture production. He has also admitted that there is need for revising the draft of the Third Plan prepared earlier. But he has deprecated the tendency to blame the Central Government for the State's shortcomings. In his view the proper thing to do will be to prepare concrete plans and then press for their acceptance. Perhaps it may be difficult to stop all and sundry from blaming the Central Government for all the ills of the

States but one has a right to expect responsible Ministers not to join such irresponsible groups.

Master Plan for Saurashtra

THE industrial advancement of Kutch and Saurashtra is well in sight, for, the Government have prepared a master plan for accelerating the pace of industrialisation of those regions. The plan, it may be noted, presents an exhaustive picture of the possibilities on which the developmental schemes will be implemented. No plan calculated for stepping up the industrialisation of a particular region can attain the desired end unless it accords paramount importance to a proper decentralisation of industries. It is easily discernible from a close study of the draft that this particular idea runs through the whole texture of the master plan.

Toward this end, the Government contemplate the installation of numerous factories in different areas instead of following the antique practice of clustering them in a particular locality. The plan suggests the setting up of a cotton yarn mill in Junagadh district with 12,000 spindles at the cost of about Rs 50 lakhs. It also contains provision for locating five cotton surgical plants which, according to the estimate, will entail an expenditure of Rs 30 lakhs in total.

One of the most important recommendations incorporated in the master plan is the setting up of a factory at Jamnagar for manufacturing carpets out of wool. It may be conveniently recalled that the annual production of raw wool in Kutch and Saurashtra runs to more than 2.5 million pounds of which more than 90 per cent is exported.

The Government have also suggested the construction of six solvent extraction factories in Saurashtra. Other suggestions include the installation of cotton seed oil plants in Rajkot, Veraval, Bhavnagar and Gandhidham at an estimated cost of Rs 25 lakhs for each plant. Besides, the building up of a chain of cold storages and food canning centres in Saurashtra is also included in the plan. One can reasonably anticipate that with the materialisation of this idea the greater will be the scope for fetching good export market for the different varieties of fruits produced in those areas.

MP: Mineral-Oriented

The Madhya Pradesh Government have proposed an outlay of Rs 20 crores for the industrial development of the State in the course of the Third Plan. The industrial plan has been drawn up having regard to the economic backwardness of the State and the potentialities that exist for stepping up industrial growth, particularly on the side of mineral production. The minerals, of which there are indications of rich unexploited deposits in the State, are manganese, corundum, bauxite and copper. This would warrant the contemplated setting up of a Mining Corporation. Implementation of the Third Plan proposals for exploiting

the mineral resources of the State would be preceded by a mineral survey for which a provision of Rs 80 lakhs has been included in the industrial plan.

There is discernible disappointment among official circles in the State at the decision of the Government of India to double the capacity of the Bhilal Steel Plant consequent on which the MP Government have lost their case for locating in the State a fifth steel plant after Bokaro. The State is credited with having large iron ore bearing areas, though the extent of the deposits and the quality of the ore remain yet to be correctly assessed. High priority has necessarily to be given to such a survey before any scheme for setting up of steel plants is finalised.

Existence of bauxite ores indicate the possibilities for setting up an aluminium plant in the State. When the Rihand project in the Uttar Pradesh is drawing upon the supplies from the Amarkantak region in the MP, there is reason to believe in the feasibility of another aluminium plant for MP which would make use of the ore left after meeting the demand from UP's Rihand project. Such a scheme, which will be taken up by the Hindustan Aluminium Corporation, is already in the hatching stage and is expected to be finalised after the Centre's sanction has been received. The Third Plan industrialisation, which would be mineral oriented, should benefit the State by way of large additional employment.

Co-operative Transport

While the idea of co-operative farming is meeting with stout opposition from a large section of the Indian public, it is interesting that the Madhya Pradesh Government should decide to extend the co-operative idea even beyond joint farming to cover the transport sector. Reports coming from the State indicate that the State Government have decided to experiment with a scheme for organising transport cooperatives in the State.

Toward implementing the scheme, there is guarantee of Governmental assistance to the tune of Rs 1 lakh by way of share capital. Another sum of Rs 2.6 lakhs would be available as loan for purchase of vehicles, construction of workshops, garages, etc., which is repayable in 15 years. Moreover, monopoly preference according to the needs of these societies, has also been promised.

With such large-scale assistance from the Government, the success of the transport cooperatives should be a matter for automatic assumption. Pitted against such heavy subsidisation of co-operative transport, private enterprise in the field should naturally be at a disadvantage. There will be a fear that the success of the transport cooperatives could be used as an argument for forbidding private enterprise a place in the transport sector. What the ultimate aim of the Government in introducing the transport cooperatives is, is not clear. An unambiguous statement regarding the Government's transport policy would therefore be welcomed by private operators.

WORLD OF BUSINESS

Tobacco Surplus

India will have a larger tobacco surplus for export in view of the fall in UK imports of tobacco in 1959 as compared with 1958. An official report mentions the larger intake of Rhodesian tobacco and the UK manufacturer's agreement to buy 270 million lbs in three years because of its better quality and suitable colour. The trade view is that Indian tobacco is dearer than other varieties and more South Rhodesian tobacco is finding its way into Britain. Cork-tipped and filter cigarettes mean less consumption and Rhodesian growers are trying to follow the changes in UK demand. It has been suggested that the fall in UK takings of Indian tobacco from Rs 12.4 crores to Rs 10.8 crores will persist and exporters will have to be watching the market carefully. It is known that the UK is the largest market for both flue cured and sun cured tobacco shipped from India and the European demand is small. The share of Pakistan, Ceylon and Malaya in the trade is small and only Aden goes in for tobacco to be made with snuff. India's exports of tobacco manufacture are decidedly small, as compared with her export trade in unmanufactured tobacco and the European common market may try to buy more from the USA or Central African Federation where production rose as in Turkey. The chances of selling more to the UAR are small at present and India's trade exports to Ceylon may be the only stable item in exports of manufactured tobacco, for it is known that cigarettes made in Hong Kong from imported tobacco command a good market in Malaya already. The 1959 figures relating to tobacco exports show that Virginia flue cured amounted to over 66 million lbs valued over Rs 11.7 crores and the UK alone took over Rs 8.44 crores worth of Indian tobacco. The export of hookah tobacco mainly to Ceylon was negligible and the foreign demand for sun-cured tobacco was small though the UK took the largest part of 335,400 lbs shipped in 1959. The outlook for tobacco, as may be gauged from the last bulletin of the EPC is shaken by the rise in Australian output and the trend of consumption is affected by the argument over causes of lung cancer, though in Holland excepting tobacco consumption in 1959 was rising.

Mica Industry

Reports emanating from the district of Hazaribagh on the mica industry are indeed distress-

ing. It was only very recently that the industry survived the shock of a continued strike. The mica merchants heaved a sigh of relief when the news of the stoppage of the strike reached them, for the strike threatened the very existence of many of them, only to find themselves placed in the position of a convalescing patient who had an attack of typhoid. The loss to the industry because of the strike was over Rs 1 crore while the Government sustained a loss of few lakhs of rupees. A number of petty dealers in mica has already gone to dogs and the position of the remaining ones is neither too happy. The middle class shippers and exporters sustained heavy losses and they too are now facing severe financial crisis. The payment of mica bills are still lying pending. A large majority of the shippers has already lost their foreign business in toto due to the reluctance on the part of the foreign buyers to extend the time of delivery of mica cases to suit the shippers. Letters of credit belonging to several exports have also lapsed.

However, rays of hope have already begun to appear in the dark and gloomy horizon. The factories and godowns of mica which remained closed were reopened but that failed to retrieve the usual liveliness of the markets. The sales and purchases of mica which was practically stopped have now resumed. A considerate treatment from allied organisations and a favourable attitude from the Government can alone help the industry to tide over the present crisis.

Brass-ware Industry

The future of the brass-ware industry of Moradabad district appears to be bright, for the All-India Handicrafts Board of the Central Ministry of Commerce and Industry has already started deliberations for the expansion of this famous industry. For a speedy realisation of this aim, the Board has decided to include this scheme in the State's Third Five Year Plan. Mr D. N. Saraf, the Director of Handicrafts, New Delhi, has already conducted an on the spot study for gathering relevant information about the industry in general and the numerous problems facing the industry in particular. The Board's endeavour to enlist the co-ordinated efforts of the Indian Handicrafts Development Corporation and the Directorate of the State for the successful implementation of the scheme is indeed praiseworthy. With this end in view, Mr Saraf has made visits to Lucknow and Kanpur and held discussions on the details of the scheme with the Director of industries and the Secretary of the Department of industries of the State.

The decisions adopted in those meetings are indeed numerous, but the most important is the one relating to the setting up of a hous-

ing-cum-industrial estate in the outskirts of the district during the next Plan period. This centre will be run on a co-operative basis. The Board has also decided to seek the assistance of the Indian Handicrafts Corporation to render adequate aid to the industry in regard to credit, raw materials, quality control, designs and above all the technical know-how for the speedy development of the industry. It can be naturally expected that the scheme, apart from stepping up the industry, will provide more employment to the people and pave the way for the general uplift of the area.

Chandrapura Thermal Plant

The United States has agreed to grant a loan of Rs 34.8 crores to the Government of India, partly in Indian rupees and partly in dollars to finance the installation of the 250,000 kw thermal electric power plant near Chandrapura in the Damodar Valley. Divulging the information, Mr C. Tyler Wood, the Minister for Economic Affairs in the US Embassy in New Delhi, stated that the Chandrapura power plant will be the largest Indo-American economic project to be financed exclusively with the US funds.

The project will, according to the report, be the biggest source of electric energy in India. The work of the project is expected to be completed by the end of March 1963. It is expected that with the completion of the project the acute shortage of power in the area will be lessened to a great extent.

Mr Wood also added that the foreign exchange for the project will partly be met from a 30 million dollar loan from the Development Loan Fund while the remaining amount will be met by a loan of the sales proceeds of agricultural commodities supplied to India by the United States under PL 480. The DFL loan will carry an interest of 3.5 per cent and is repayable within 20 years. India need only repay the loan in rupee. Besides, the loan has got another advantage, for, more than fifty per cent of the loan can be utilised for calling global tenders.

Madras State Cooperative Bank

The report of the Madras State Co-operative Bank for the year ended June 1959 was issued late in February and the figures therein are of some interest because of the increase in the paid-up capital as well as the rise in borrowings. The demand for funds compelled the State Co-operative Bank to increase its loans, but realisations of earlier loans and interest due were satisfactory. The Bank's net profit of over Rs 7 lakhs was reduced by transfer of 1/3rd to Reserve Fund and the dividend at 9 per cent on preference shares and the dividend at 5 per cent on ordinary shares was fully covered by disposable profits. It may be

7 May 1960

added that in spite of the dividend being only 5 per cent, the bonus to establishment was fixed at 3 months' pay. The Bank's progress in the past year was made possible by the contribution of additional capital by the State Government. In order to increase the borrowing power of the bank, the authorised capital was increased to Rs 3 crores and Co-operative Central Banks are allowed to hold shares up to Rs 25 lakhs. Under this arrangement, the paid-up capital has risen from 91.5 lakhs to Rs 133.88 lakhs. During the year, deposits did not increase but borrowings from the Reserve Bank increased in order to meet the demand for loans from marketing societies and weavers societies.

A liberal lending policy has been adopted because of the new policy regarding agricultural credit and official assistance to weavers' co-operatives. The Government has been asked to give a guarantee in respect of losses incurred on advances and it has been also suggested that from the funds secured from the cess on mill cloth, the Government should provide what may be called a reserve for bad debts. The State Handloom Weavers' Co-operative Society borrowed Rs 57 lakhs and repaid Rs 41 lakhs and the rate of interest charged was only 4½ per cent. Since procurement operations will no longer figure in the State Co-operative Bank's programme, short-term financing will be replaced by medium-term financing and the Reserve Bank has given already Rs 1 crore for the purpose in addition to short-term credit to the extent of over Rs 6 crores. The Apex Bank has been able to build up a reserve fund of over Rs 30.35 lakhs, most of which is now invested in Government Securities and Land Mortgage Debentures. It may be added that the Bank maintains an income-tax reserve of over Rs 9.43 lakhs and retains the reserve funds of Central Banks and Societies as part of its own working capital. But its own indebtedness to Government, the Reserve Bank, and the State Co-operative Banks has made loans exceeding Rs 15 crores and the net profit for 1958-59 was reduced by the interest paid on deposits, both private and institutional. It is not easy to compare the results of the Coop. Bank with those achieved by commercial banks but it may be noted that interest on Government securities at 9.05 lakhs permits the payment of usual dividends because interest earned on loans and advances are below the interest paid on deposits and borrowings.

KLM Royal Dutch Airlines

KLM Royal Airlines needs no introduction to the international air travelling public. It will be no exaggeration to say that it had set the standard for courtesy, comfort and other conveniences that travellers have now come to expect

of air travel. In 1959 KLM completed its 40 years of its service and also achieved new targets in two important aspects. For the first time in its history, KLM's traffic revenue crossed the 500 million guilders mark. Other revenue amounted to 36.7 million guilders. Operating expenses were 467.2 million guilders, while the depreciation on flight equipment and other fixed assets amounted to 68.8 million guilders. The cost incurred in 1959 in connection with the preparation of the Electra and DC-8 aircraft were charged to the Profit and Loss account, the amount involved being 8.9 million guilders.

In the number of passengers carried, 1959 has been a record year, with the figure at 1,104,000 and this is the first time that the total has exceeded one million. Foreign traffic also recorded an increase to 68.7 million pounds from 57.4 million pounds in 1958. The aggregate distance flown by the KLM's fleet, which on 31 December 1959 comprised 92 aircraft, was over 48 million miles. That KLM now exercises landing rights in 74 countries in spite of air policy problems that a rise from year to year is a measure of its global character.

Electric Exports

The UK is producing more and more electrical machinery, equipment and appliances and export in 1959 of this branch of industry was valued at £215.8 million. Exports again reached a record as electric engineering had become a major export industry. India bought more than in 1958 with Australia second and exports to the USA rose sharply. Trade with Europe fell away despite rise in Germany's purchases but exports to Russia were up. Contracts were secured in the USA and Canada and electronic computers are being sold to the USA too. Nuclear power plants even being made in the UK for supply to Italy and Japan. The increase in production of domestic electric appliances is a sign of the home market coming along very well, in spite of hire purchase restrictions. Cables and wires are not so prominent as generating sets and refrigerator exports actually fell in 1959.

Integration in the electric manufacturing industry is continuing and big firms like Reyrolle and Parsons are coming under outside control, because it is now felt that one big unit will do well in the export field and competition with Italy or Germany must entail combination. The value added to materials by manufacture is high so that more imports spill more production and profits, and it is claimed that over 10 per cent of UK exports is provided by the electrical and allied manufactures, though under-developed countries have embarked already on local manufacture of motors and switchgear in addition to cables

and conductors. But the real rivals to the UK are Germany and Japan whose own exports kept rising last year.

Chemical Plant for Bombay

Nichimen Jitsugyo, a noted Japanese firm has applied to the Finance Ministry of the Government of India, for issuing the necessary sanction for the setting up of Indo-Nippon Chemical Company Ltd., in India, a joint enterprise using Japanese assets in India. The Nichimens will be the second project of its kind in India, the first being the Osho company which installed a wire company in the country last year. The plant, will be located in Bombay and will, when completed, produce about 120 tons of chemicals a month.

Watch Company

The decision of the Sun Dial Watch Manufacturing Company (P) Limited, Calcutta, to undertake the manufacture of alarm and non-alarm time pieces will be an important landmark in the industrialisation of the country. Considering the evergrowing demand for time pieces and the vast employment potential landmark in the industrialisation of the country. According to preliminary studies conducted, the approximate demand for time-pieces in India will be well over 80 lakhs a year. And the new venture of the Sun Dial Watch Company, who can be rightly termed as pioneers in the field, will, in the long run, yield rich dividends. The exact location of the factory is under negotiations with the Rehabilitation Industries Corporation Limited, Calcutta. Negotiations are already under way with a West German firm for producing West German type of time-pieces. The Company propose to switch on to the manufacture of watches at a later stage.

Cameras

The formation of another link in the chain of Indo-Japanese collaboration is in the offing, for, it is reported that the Government of India are considering the possibility of setting up a factory for the manufacture of quality cameras in the country. Negotiations between the Government of India and the Nippon Kogaku Company of Japan for the installation of the plant have already reached the final stage and the drafting of a detailed blue-print to that effect is expected shortly. It is reliably learnt that the new factory will be located in Calcutta and, with the aid of the Japanese firm, the National Instruments Factory will undertake the production of low-priced quality cameras. In spite of the low price, which will, as is reported, in no case exceed Rs 250, the cameras will possess all the technical perfections of their costly counterparts.

Flattering Portrait

BOOKS on high finance, both accurate and readable, are still rare. Hence the special importance of Mr Martin Mayer's Wall Street (John Lane 21 sh. net). This is in many ways an unusual book, for it was commissioned by Esquire and the US edition was out in 1955. For the updated English edition presented to the public in 1959 there is a lively preface pointing out the differences between the London and New York markets where the investment banker is often the underwriter, vetting new issues for being taken up by the public. The financial world is getting constantly larger; the mutual funds are a market force already. And colleges and non-profit making bodies absorb equities with gusto and Standard Oil (as incorporated in diverse States) is a favourite of college Presidents whose main job is to touch alumni and gather funds; the faculty looks after the minds and morals of students. Mr. Keith Funston noted that the big demand is from small investors at present and a lot of women hold shares and use proxies as the "Solid Gold Cadillac" told movie-goers.

A point to remember now is that the statutory control, apart from self-discipline due to tradition bites fairly deep into the US stock market. Insiders have to tell all and if they play tricks, a subpoena goes out quickly enough. In London self-government is yet the keynote and advertising is taboo whereas in the USA the big brokerage houses announce their value line surveys in order to get at new clients who want to secure safety plus income.

The acute and amusing portrait of advertising offered by Mr Mayer in MADISON Avenue proved the unerring judgment and exceptional skill of an author who carefully dug for his facts and reached firm, positive conclusions. The same technique marks out Wall Street which is no longer opposed to Main Street. It is no surprise that the Wall Street Journal is about the only national newspaper in the USA because the atmosphere of Wall Street affects all sorts and conditions of men and a heavy close or shrank volume in the leaders is usually more important news than a Presidential pronouncement. Wall Streeters today are perhaps of a different breed from B. M. Baruch whose own story dealt with the Street in another era of the magnificent Morgan and the goahead Guggenheims. For this age of anxiety, the guide is not the books about the changed capitalism but a stimulating study about a famous locality in which big banks jostle brokers and the City churches give informal approval to the goings on in the

name of Mammon. The predominance of New York as a financial centre is sustained by Wall Street and bill discounting in the USA means mainly short-term lending for stock market operations, as Prof. Sayers noted acutely in his account of banking.

The names on the big board are now supplemented by a long list of over-the-counter securities like bank shares. But Wall Street deals in the latter too. There is something like a sales tax levied by the State and New York revenues owe much to the rising activity. The legal profession is just an adjunct to Wall Street and Corporation lawyers have sprung up faster than bond salesmen as that fine film about the Young Philadelphians proved conclusively to many. The writing of market circulars and the writing up of records are established as a lucrative branch of journalism and the public relations side has developed rapidly. Wall Street is always a strenuous place, but the corner of Apollo Street meeting Dalal Street may offer a close and familiar parallel nearer home. There is also an India House, an exclusive club for top people in the shipping and financial worlds, but the Wall Streeter does not relax even when eating. This is the world that Mr. Mayer sees acutely, one far different from that of the late George Apley, carefully supervising a family fortune in well-bred Borton.

The masculine predominance in a country that has been called a matriarchy by Geoffrey Gorer who left the Lepchas to look over modern Americans and one of the reasons may be the capacity to keep secrets that spell money. Another may be the exercise of judgment in difficult situations while the adherence to the spoken word as equivalent to a written contract is the hall-mark of men in the big money but always taking a chance and backing independent judgment.

The education of men living and working in Wall Street is never at an end: the self-made men keep on with their self-education. There may be a recognisable point of resemblance with India and smart operators at present and there may be much for all investors in a saying quoted with approval. Certainly generally is illusion; repose is not the destiny of man. This is reflected also in the low salaries of the staff. Most Wall Streeters are self-employed, living on commissions and disguised commissions, represented by the annual bonus. Trade unionism is virtually out in the Street: that is because in New York bankmen can become and do become local banklords, to adopt current cant. Moreover, the opportunity to get and use tips is a major attraction for employees in the financial district which attracts all—free, white and over twentyone. A lot of hard study marks out the Wall Streeter today and on the publicity side Wall Street is inclined always to be quiet. Not for its magnates the lush or clamorous copy or the cheese-cake of popular prints. A regular statement of condition is loaded with figures and investment

rating does not depend on the peddling of influence.

It is obviously impossible to sum up a book originally written for Esquire or even to give elegant extracts. One must go to the book to get its facts and feel. But financial procedure from floatation to listing today is much the same here as in Wall Street. The passion for movement grips everybody and the search for higher income is as common as the current craze for appreciation. The commodities that Wall Street handles are titles to a share in the national income and the growth of the US economy has led to wider diffusion of property on an unprecedented scale. That is why bonds move far more slowly than common stocks (equities to use our new-found local jargon). To the Street finance is a game as it is to many in Lyons Range and the ups normally cancel out the downs and there is really no game of beggar my neighbour.

The main interest of the book lies in its closeness to bracing reality. The average broker in India cannot but benefit from taking a good peep at Wall Street through a book that is wise and witty and wholly informative and objective in all ways. It certainly makes it clear that in the single business of investment the customer is not always right; The broker always knows better. Mr. Mayer shares that view. The intense specialisation developed by the Street with the rising volume of business is perhaps without parallel in India, but there are brokers' to put through orders for others and seldom jobbing on their own account. They don't make news even at the best of times. One point that claims special notice here, now and always, is Mr. Mayer's positive and pleasing conclusion. The Stock Exchange may foster gambling, support speculation. "But it is incredibly self-denyingly, almost absolutely honest is a dictum that deserves to be remembered after the sorry business of the LIC's transactions in the Calcutta market. Mr. Mayer's clean bill of health for Wall Street is not the least of the merits of a book that breaks down prejudice and shows that Wall Street, like the London Stock Exchange has its ethics and those who lose money are either stupid or too greedy.

★ Why Foreigners Invest in India

India: Mixed Enterprise and Western Business—by Daniel L. Spencer, Associate Professor of Economics, Southern Illinois University, Published by Martinus Nijhoff, The Hague, pages 252, Price Guilders 15.75.

"India provides the greatest investment opportunity of our time", declared Mr Eisenhower in his historic speech in Delhi in last December. Since the American President's visit to India, foreign investors particularly from the USA have been showing an increasing interest in this country's economic progress. It is now being realised that because of political stability and the generally realistic policies

pursued by Government, India offers a favourable field for foreign investment. The Second Five Year Plan at one time seemed to encounter serious difficulties because of shortage of foreign exchange. But the generous assistance that we have received from various countries has helped us to overcome this handicap and it is now possible to implement the Plan successfully. Moreover, the prospects of securing further assistance from abroad in the coming years have emboldened us to plan on a vastly bigger scale for the next five years.

Of the several types of foreign assistance such as loans, grants and equity capital, the last one is obviously the most suitable for our country. How then are we to attract foreign investment? What are the motives which influence investors abroad to divert their savings into India? These are some of the questions which Prof. Daniel Spencer has discussed in an interesting study published recently entitled, "India—Mixed Enterprise and Western Business".

Prof. Spencer recognises three types of investment interests. In the first place, there is the small investor who looks for dividends and capital growth but has no interest in the control of the company. Secondly, there are the large financial investors such as banks, insurance companies and investment trusts. In the third category there is the large investor of the corporate type who makes direct investments with the establishment of a branch or a controlled company.

The investor of the first category, according to the author, is interested exclusively in return on his investment commensurate with his level of risk. He has little concern with the control of the company. The second category of investors is also very concerned with returns but because of its size may be involved somewhat in control. The third category, namely, the entrepreneurial investor is also interested in profits but other motives are very important. Prof. Spencer points out, basing his data on a survey made by the American Vice-Counsel in Bombay, that maximisation of home production via shipments to outlets overseas rather than maximisation of profit from the overseas subsidiary is a major motive of American firms investing abroad. Prestige consideration and the desire to be known even in remote areas are also important factors. Strategic considerations are mentioned as the real impetus in the Bombay Oil Refinery Project. Another important motive for investment in India on the part of American concerns is the increasing difficulty of exporting his product to India under the existing import control regulations. "If the concern cannot export to India, the next best thing is to manufacture in India."

The author describes in detail several types of enterprises in India. He refers to three types: (a) mixed enterprise which is de-

finied as inter-sector combinations of two or more components exclusively consisting of domestic elements; (b) Composite enterprise which is the inter-sector combination of two or more components at least one of which is foreign; and (c) Joint enterprise which refers to intra-sector combinations within the public sector or the private sector; and these combinations may involve foreign and domestic interests but must be in only one sector. Mixed enterprise involving only domestic private interest has made considerable progress. There is however a considerable diversity in proportions of representation. Often the share of the State has been smaller than the private—10 per cent Government capital against 90 per cent private is a frequent ratio of equity participation in the States. On the Central level the proportions generally are 90 per cent Government and 10 per cent private. The author considers composite enterprise as "perhaps the most novel form which has yet appeared on the Indian development scene." These undertakings refer to foreign and mixed enterprises, that is, combinations of public and private capital, one party of which originates abroad. Examples are the Telephone Factory at Bangalore, the Hindustan Machine Tool Factory and the Railway Coach Factory. Examples of joint enterprises are Atul Ltd and the Standard-Vacuum Bombay Project.

Professor Spencer discusses in detail the various advantages and disadvantages arising to the participants from the different types of enterprises. Of particular interest in this context is the following passage: "For foreign interests, it is particularly advantageous to get or maintain a toe-hold in the Indian market. Maintenance of a high volume of sales and profits in the home market may depend, in large measure, on joint such foreign outlets; for even if foreign profits are low or non-existent, the incremental foreign production may lower unit costs to a point where production for the home market is very profitable. This reasoning also leads to the relative unimportance of the rate of return on foreign investment for large entrepreneurial interest. A big concern may be more interested in a number of considerations other than the marginal efficiency of the particular capital investment.... Such reasoning, however, must be qualified by long and short run consideration. Astute private interests may forego short-term profit advantages but over a sufficiently long pull, their total operations must yield a reasonable profit."

The author's analysis of the various issues dealt with in this book is scholarly and he has given copious statistics regarding the trend of dividends, profits and other aspects of the India's economy. However, some of his conclusions do not appear to be well founded. For example,

Indian Finance

7 May 1960

EVERY now and then, we read of people who profess themselves baffled by the idea of the Commonwealth. Leader writers glibly catalogue all the familiar facts about it: of there being no rules, and no obligations inter se; of its having monarchies, dictatorships and republics as its members; of their members having long-standing quarrels between them; and when the premiers of member countries meet in solemn conclave, there being no agenda, no decisions and no resolutions. And yet, they hint that all this adds up to something important which cannot easily be explained. I rather suspect that this 'mystique-mongering' is partly inspired. On the other hand, there are hostile critics, who, on the same facts, consider the whole thing an expensive farce. This too is wide off the mark, though in an age of increasing bureaucratization of human effort, some tangible forms of cooperation among the member nations would impress more people. The fact is, the idea of the Commonwealth is survival from an earlier age, though the virtues of the idea have their uses in this hurried age. To put it simply, the Commonwealth is more a club than, say, a board of directors and when premiers meet, it is more like the senior common room at Oxford than like a Board meeting. In many ways, it is a typical British product, though as constituted today, the Anglo-saxon element is in a minority. (But then, as Shaw once said, the British Sovereign is officially the defender of a faith that most of her subjects do not profess.) The highest compliment that Dr Johnson could pay to another man was that "he was clubbable". (He said it of Boswell.) Dickens thought the House of Commons the 'best club in London'. From the Athenaeum to the Drones, the clubs have chosen to be governed more by conventions and that vague British substitute for conscience—Gentlemanliness (with or without class overtones). And the attraction of the idea of the Club lies precisely in its satisfying at once the needs of exclusiveness and gregariousness. Once you are member, it is difficult to get rid of you, except for very grave reasons. This explains the puzzle over the continued membership of South Africa. Though the Union Government threatens from time to time to leave the commonwealth and though we also hear angry demands to 'expel' it, the fateful stop is never taken. In many ways, Apartheid is profoundly repugnant to the instinct that provides the commonality to the Commonwealth. And yet, there is considerable humming and hawing about the subject being discussed at all: of course, it was clear from the beginning that the question could hardly be evaded so soon after Langra and

Sharpeville. Those who imagined that such a discussion would break up the conference at once did not reckon with the resilience of the conventions of the commonwealth discussions; nor did they appreciate the specific virtues of the much maligned British vice of Hypocrisy. One would rather not have the subject of the family scapegrace brought up at the family council, but once it is, it is discussed without reservation.

★
Apartheid indeed was uppermost in the minds of the premiers who gathered in London this week, though subjects disarmament and the coming summit talks could hardly be shirked. There can be no doubt that as practised (and what is worse, as professed, for human nature willingly makes allowances for a divergence between profession and practice,) by the South African Whites, Apartheid is not only deeply repugnant to the decencies of human relationship, but runs counter to the basic community of ideas that gives the Commonwealth its strength. It should be said to the infinite credit of Mr Macmillan that he did not mince matters when he last visited the Union. He chose the occasion of his address to the Union Parliament to tell South Africa and the rest of the world that he considered Apartheid as the great Negation. On the eve of the Commonwealth conference, Dr Hertzog, the South African Minister of Posts and Telegraphs, came out with an outburst against this very speech. He accused Mr Macmillan of having abused South African Hospitality and called his speech a 'message of death'. There is hardly any reasoning possible with this kind of attitude. But Dr Louw who has 'acquiesced' in the discussion of the subject at the Premiers' conference could hardly have any doubts left that such imperviousness is making South Africa the laughing stock of the whole world. It is unlikely that anything dramatic may emerge on the subject at the end of it all, but Dr Louw can hardly draw any comfort from that.

★
I suppose it is unlikely that anything new is likely to be said on disarmament prospects, East-West relations and summitry. But Mr Nehru is sure to have given a new dimension to the thinking at the conference by indicating the implications of the most recent

emergence of this new factor, has its fresh sources of worry for the world, though it has its compensations. For instance, with Russia in a more reasonable frame of mind, the chances of a detente, if not a settlement in Europe are distinctly bright. In the world context, this is certainly welcome. But, the new aggressiveness of the Chinese, brings in its wake problems not only to India—to whom they have certainly greater proximity and immediacy—but to the Commonwealth and the whole world. The fruitlessness of the recent Nehru-Chou parleys during which Mr Nehru confessed to a feeling not unlike, being pitted against a stonewall, underscores the fact that this is a problem with long term implications for world peace.

★
Of special interest to India is the opportunity of a meeting between Mr Nehru and President Ayub Khan. The Canal water talks, which have got stuck over certain technical details, arising out of Pakistan's new demands are likely to figure in these discussions. It is widely believed that this meeting may help resolve these difficulties. The problem of Kashmir is also likely to come up for discussion; but, depressing as it is to say it, it is hardly likely that anything dramatic will emerge at the end of it all. There can be no doubt that in the last two years, and especially since Ayub Khan has taken over the administration in Pakistan, there has been a marked reduction in the hostility to India in this country. With no personal and political axes to grind unlike the politicians whom he made a clean sweep of, the Pakistani President has shown himself

mix and move at speed

averse to manufactured enmity with India. Indeed, there are complaints that Indian response to friendly gestures from Pakistan has been needlessly frigid. This is arguable, and in any event, problems like Kashmir don't get settled by reciprocity in formal handshakes or platitudinous goodwill. One may concede the sincerity in Pakistani urgency in drawing India's attention to the potential common danger from the North and yet not see one's way to acquiesce in the idea of a common defence. And on Kashmir, it is not unlikely that Ayub Khan may be willing, as has sometimes been hinted, to consider solutions not based on plebiscite. If firmer indications in this regard become available to Mr. Nehru, he is sure to lend a sympathetic ear to other ideas. There was a time when Mr. Nehru was tentatively willing to consider the idea of partition based on present reality. How far this solution would be acceptable now is debatable.

ble. But in view of the more recent developments in the North, it would be worth while to consider whether solution along these, or other acceptable lines should not be attempted.

★

The agreement that has been signed as between America and India during the course of last week is nothing if not fantastic. A food ship every day, excluding Sundays, over a five-year period is what it tantamounts to. I must confess that Mr. Patil's reiterated assertions in this behalf, before he left for the USA appeared even to me to be something more than optimistic; but, then, I should have realised that India's Food Minister is a man with a remarkable zest for activity; and he has never lightly expressed an opinion. There is hardly any doubt that to him belongs the credit for the initiative and drive that have helped to

have the agreement signed, sealed and delivered so expeditiously. There is, of course, even greater credit reflected on America, and on Mr. Eisenhower in particular. It has been obvious that the solicitude of that great country for the success of India's desperate bid to fight time in its industrialisation programmes came suddenly to be augmented when the US President visited India last year. But I wonder whether there was anywhere the hope that the assistance that would be forthcoming would be so unstinting and unreluctant. Here is happy augury for the Third Plan; even before it has formally started, it has received brilliant impetus and inspiration. The many sided significance of this agreement should now be clear and unambiguous. First of all, the "reliance" on the monsoons has been minimised by the fact that buffer stocks are assured; secondly, it should be an easier job for the Government to police price trends

in the foodgrains sector; this, in turn, should go some way to help keep the general index of prices stable; thirdly, the US Government have been enabled to move their embarrassingly large stocks of surplus commodities; in the bargain, the heavy storage charges in this behalf being incurred by that Government will be reduced; fourthly, the counterpart funds in substantial measure are to be made available to the Indian Government, as to a moiety in the form of loans and as to half by way of grants, for development purposes; thus, the task of mobilisation of internal resources has also been rendered an easier one for India; and last of all, a specific percentage of the counterpart funds is to be set aside, in terms of the Cooley Amendment, for encouraging industry in India in which American investment in this country is emphatically fostered.

★

Not that there is no fly in the ointment. While the agreement covers the shipment of wheat and rice both in respect of filling the gap in internal production and in respect of the building up of buffer stocks, the real problem is going to be the distributional system within the country, which will ensure that "deficit" areas will not be allowed to experience the kind of hectic movements in prices that is so disruptive. I believe that a net-work of silos and warehouses all over the country. I commend the suggestion, for serious consideration by both the Indian and American Governments, that Cooley Amendment Funds, or part thereof, should be utilised for this purpose. In this context, I may mention that there are three directions in which these funds may be put to use. Two of them are well enough known—assistance to American industry in India and loans to enterprises where there is Indo-American cooperation. The third comprises any endeavour which will contribute to the export of US surplus commodities;—and, surely, a chain of storage units will precisely help to enlarge US export of wheat and rice.

★

I think it is safe to presume that this newly-concluded agreement may be said to presage an improved climate in foreign assistance. While, undoubtedly, we cannot tell now whether all the foreign assistance that will be needed for the Third Plan will in fact be forthcoming, it may be inferred from the American generosity that reasonable needs will be reasonably attempted by foreign friendly countries to be met, so that the great Indian experiment in planning and industrialisation may have a better chance of success.

★

A final word: it looks as if, during the Third Plan, thanks to the recently signed agreement, a ship a day will keep inflation away.

Rural Credit

THE All India Rural Credit Survey 1951-52 which was published in 1954 may be said to constitute an important landmark in the rehabilitation of the rural population in India. The Committee of Direction of the Survey, it may be recalled, investigated over nearly 1,30,000 families resident in 500 villages and the various types of credit agencies in 75 selected districts spread all over the country. One of the main findings of the Survey is that the agriculturists were at the mercy of the money-lender and the trader who between them supplied nearly 70 per cent of the credit requirements of the rural population. The result was the continued weakness of the peasantry with its consequent impact on agricultural production. The Survey has found that both the Government and the Cooperative institutions between themselves accounted for as little as 6.4 per cent of the credit needs of the rural population. In its recommendations, the Rural Credit Survey Committee has pointed out that village rehabilitation in India can and will have to be achieved largely through the instrument of cooperation. It is therefore necessary to create conditions conducive to the vigorous growth of cooperative credit in the villages. One of the important recommendations of the Committee is its advocacy of State participation in fostering and sustaining the cooperative movement. The establishment of the State Bank and the National Cooperative Development and Warehousing Board with its State auxiliaries are the result of Government's acceptance of some of the important recommendations of the Committee.

Since the Committee submitted its report, many significant developments have taken place in the rural credit sector. The emphasis in the reorganisation is on the creation of conditions in which co-operation may properly function. The Committee prescribed an integrated system of rural credit based on the three fundamental principles of State partnership at different levels, full coordination between credit and other economic activities, especially marketing and processing and administration through adequately trained and efficient personnel, responsive to the needs of the rural population. With a view to carrying out successfully the policies and programmes of the integrated scheme, the Committee recommended an annual review of all the main features of the credit situation in the rural sector. In pursuance of this recommendation the Reserve Bank of India organised the first Rural

Credit Follow-up Survey during the year 1957-58 in eleven districts selected from ten States in the country. These eleven districts were (1) West Godavari (Andhra Pradesh), (2) Gaya (Bihar), (3) Broach (Bombay), (4) East Kharspur (Bihar), (5) Mandasaur (Madhya Pradesh), (6) Coimbatore (Madras), (7) Dharwar (Mysore), (8) Ferozepur (Punjab), (9) Bikaner (Rajasthan), (10) Etawah (Uttar Pradesh) and (11) Nadia (West Bengal). The period of reference for the enquiry was the year ended 30 April 1957.

One conclusion that can be readily drawn from the findings of the Follow-up Survey is that reorganisation measures have yet to make their full impact on rural credit. Borrowings are still being applied largely to family expenditure as the survey finds that 40 per cent or more is absorbed by this item. Cooperative credit is not available in adequate measure to those who need it most. The small and medium cultivators suffer from the age-old handicaps largely because of ignorance and to some considerable extent to the lack of interest on the part of those who are expected to help them reap the benefit of cooperation. It is significant to note that the development of cooperatives, though uneven among the selected districts, is impressive in districts where concerted efforts have been taken to introduce the pilot projects of Integrated Rural Credit Scheme. According to the Survey some of the factors responsible for the uneven growth of cooperatives are (1) differences in cooperative credit structure obtaining before the initiation of the Second Five-year Plan, (2) varying degrees of effort put into reorganisation of the cooperative credit structure, (3) differences in patterns of land ownership and nature and scope of land reforms legislation and progress in its implementation, (4) variations in type of agricultural economy, (5) differences in regard to administrative and procedural arrangements regarding audit, supervision and inspection, (6) role played by central cooperative banks, (7) variations in the loan policy adopted by central cooperative banks, (8) uneven development of marketing cooperatives and (9) inadequacy in regard to the performance of primary credit societies.

The cultivating community has been found by the Survey to be generally disinterested in financial investments like purchase of shares of cooperative societies or addition to deposits in cooperative societies. It is significant to note that the medium and small cultivator, especially those in low-monetized subsistence type economies, who need assistance most continue to stagger under heavy loads of loans and interest. For the survey points out that the private credit agencies continued to supply during 1956-57 a major portion of credit availed of by cultivators.

One should not, however, hastily conclude that the rural rehabilitation measures recommended by the Rural Credit Survey Committee and accepted by Government have failed to produce the expected results. That the measures if properly applied sizably aid the cultivator to improve his lot is proved by the better performance of co-operatives in districts where the integrated credit system has been systematically introduced. Some of the findings of the survey, however, indicate the need for further reforms and modifications. The evidence collected by the Survey seems to point to the superiority of multi-village societies with resources adequate enough to allow the employment of a paid secretary. Small village societies with inadequate resources have been found to be practically useless. A one-village unlimited liability type society, the Survey finds, generally is unable to organise itself into a business concern because of party factions and also due to its inability to employ a full-time secretary.

The importance of large scale societies which can employ full-time trained secretaries is also stressed by the exploitation of the defects of the movement for their own profit by the vested interests and the consequent weakness of the cooperative movement. The loan policies of Central banks play an active role, for the Survey has found that in many districts the central banks are not in a position or could not play their part well. The finding that cooperatives are better developed in areas where peasant proprietorship is more prevalent would appear to indicate that with the progress of land reform cooperation will also forge ahead.

Education in Madras

THE legislative business transacted by the current session of the Madras Legislature represents a mixed fare. While the Budget presented in March Second week, reflected great advance being made by the State under the impact of development schemes initiated and implemented by the Government, in the later stages, the two houses became enveloped in the flames of controversy over two important legislative measures brought in by the Government namely the Land ceilings Bill and the Bill envisaging the replacement of English by Tamil as the medium of instruction for degree courses in Arts. Though the controversy is far from having ended, a temporary respite from the heated atmosphere was provided by the discussion that followed the Government's demand for grants under the head of education. This was a subject that hardly yielded a point to the opposition to run down the Government or to belittle its record. Further, by circulating a note which details the steps the Government had taken for expanding education, the Government saw to it that a favourable reception was accorded to its policy.

The note bears impressive testimony to the steady advance being made by the Government in extending educational facilities for all. The expansion has been par-

on the label
and your clothes will never
shrink out of fit!

This once-smart private secretary will soon be joining the typists' pool. Her appearance is no longer an asset. Not that she doesn't wear the right clothes. She has taste in colour and design, but her chic summer cottons look like hand-me-downs after the first wash. Maybe someone should warn her to look for the label 'Sanforized' on all cotton fabrics and ready-made cotton-garments.

Look for the label 'Sanforized' on every yard of cotton material and your clothes will never shrink out of fit.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements. For information: 'Sanforized' Service, 95, Marine Drive, Bombay-2. ticularly remarkable at the lower levels of education. The number of primary schools in the State has increased from 23,844 in 1957-58 to 25,047 in 1958-59 and further to 26,105 in 1959-60. Enrolment has simultaneously improved in being higher at 31.57 lakhs at the end of March 1959 against 28.82 lakhs in 1957-58. The note underlines the fact that today, there are hardly a few villages with a population of 300 and above without a school within a radius of one mile. As is revealed in the report such expansion was facilitated by the initiation of the school improvement scheme, the provision of mid-day meals, provision of Central assistance and implementation of the Central scheme for relief of educated unemployed.

Such progress notwithstanding, the number of children still out of schools is large and the provision of primary education to them is, in the light of the country's commitment to the introduction of universal compulsory and free primary

education by the end of the Third Plan, a problem of urgent importance. The note mentions in this connection that a beginning in the introduction of compulsory and free primary education in respect of the age group of 6-7 would be made in 1960-61 in one third of the area of the State. The implementation of the scheme would involve the use of compulsion for enrolment of children of the age group 6-7 with a further obligation to keep them in the schools till the age of 11.

The report takes note of the demands for men and money that the introduction of universal compulsory and free primary education will involve. As means for meeting the anticipated shortage of trained teachers, it mentions the need for opening more sections in existing training schools. The conversion of all the fee-levying elementary schools into non-fee levying institutions under penalty of withdrawal of Government grant, was an important step that

Government took toward implementation of the scheme. That out of 1,011 fee levying schools, all but 39 opted to become non-fee levying from 1959-60 speaks volumes for the sense of cooperation evinced by school managements in implementing a scheme that has immense social benefit and significance.

The report also makes it clear that the Government have not slurred over the importance of progress in secondary education thought it is admitted that the emphasis in this sphere was more on qualitative improvement than on quantitative expansion. The improvement schemes included diversification of course of study involving the introduction of science, core subjects, crafts etc as new subjects. Improvement of teaching facilities is also claimed to have received attention. In respect of quantitative expansion, the number of secondary schools increased from 1,109 in 1957-58 to 1,125 in 1958-59.

In respect of university education, the report mentions that at the end of 1959-60 there were 56 Arts Colleges with enrolment in the 1 year classes of the three year Degree course at 7,098. The introduction of the five-year integrated Engineering course in the Engineering Colleges of the State marked an important development for the improvement of technical education.

With such progress, there was little room for the opposition members for attacking the Government on the score of any lack of concern for educational advancement. The record is on any manner of reckoning outstanding and impressive. What little criticism was voiced in the Assembly related to minor details of implementation and policy. Further, with Mr C. Subramaniam, Minister for Education, showing a remarkable readiness to be receptive to new suggestions the Government seemed to carry the entire legislature with them in the matter of their educational policy.

The State Congress Government that have never before been known to put a wrong foot in matters of education in third long tenure of more than 10 years, have, however, fumbled in their handling of the question relating to the medium of instruction in the University. Rather prematurely and in unwarranted haste, the Government have announced their decision to switch over to Tamil medium for Degree courses in Arts. The transition will be preceded by experiments with pilot courses in selected colleges. While the original impression in the public mind of the Government's attitude to this issue was that the latter will not precipitate the change without adequate preparation, later pronouncements of the Education Minister have given genuine cause for concern that the Government are in no mood to listen to learned advice but will go their own way on the strength of the legislative support they could muster. Such an attitude of the Government have worried educationalists in the State who see in the policy of the Government the inevitable prelude to a fall in educational standards. No less a person than Dr A. Lakshmanaswami Mudaliar, the Vice-Chancellor of the Madras University and the Leader of the Opposition in the State Legislative Council has fallen apart from the Education Minister on this question. With the Education Minister maintaining that the decision to introduce Tamil medium has the consent of the University while this is being denied by Dr Mudaliar the latter considers himself to have been wronged. Whether the Government's decision has taken away from the autonomy of the two Universities in the South is a question that raises many ticklish points regarding the status of the University vis-a-vis the Government. However, Dr Mudaliar sees in the Government order the Democles' sword hanging over University's autonomy.

Prospects of Raw Jute Supply

THE present spiralling of prices in the jute markets is now seen as inevitable. One should not go by the statements made by Ministers even at the latest Lok Sabha session as they were based on information received some months back. The position seems to have radically changed now. The majority of marketmen have tacitly accepted the view that the current year's crop is inadequate. Authority who has shown itself to be very much concerned about the rise in prices from time to time since last December, in a fresh bid to curb speculation, has recently announced the sanction for further raw jute imports. The news has, however, failed to bring about the desired result mainly because it is doubted whether Pakistani jute will become available in sufficient quantities and at equitable prices.

Raw jute prices in Pakistan have already been pushed up on indications of a shortage of the fibre in that country. The fresh bout of price rise noticeable this week seems to have, however, stemmed primarily from apprehensions about the new jute crop both in India and Pakistan. The latest Indian jute crop report shows that sowing as well as preparation of land remain suspended in many areas due to paucity of rain. In Pakistan too the position seems to be no better. As a matter of fact the crop report from some areas is very bad indeed. As the standing crop is said to have been already damaged to a considerable extent it is feared that even if the weather improves hereafter there is bound to be a shortage of good quality jute.

So weather appears to have taken a leading role in the world of jute as it had done many a time in the past. As adverse weather conditions at this time of the year will have similar effects on the jute crop in both India and Pakistan, imports cannot be taken as a reliable factor in calculations regarding raw jute supply.

Meanwhile, prices have reached giddy heights as bulls are in a strong position what with the scarcity of raw jute and an anticipated decline in April-end stocks. The sizable buying in the early parts of last month would have left its impress on the statistical position and the April-end stocks, figures for which will be available in a few days may be confidently expected to show a further decline.

The unsealing of one per cent of the looms from 1 May will not alter the position materially as the addition to production will be about 1000 tons only. It is now doubted if the IJMA will be able to undertake any further unsealing, not even the unsealing of one or one and a half per cent of the looms planned from 1 June. We may be at the threshold of a fairly long period of scarcity of jute goods. Now that raw jute inadequacy is taken as a reality with prospects for the next crop in both Pakistan and India none too encouraging high goods prices seem inevitable. That all jute goods manufacturers will be obliged to put up their prices is poor consolation for an industry which is largely dependent on exports. Unlike other commodities jute goods are to wage a ceaseless war against substitute packaging materials and bulk handling.

Prices in the jute goods market have moved up considerably during the past week ended Wednesday. The main incentive was derived from the raw jute market where sentiment was buoyed up by paucity of ready supplies and indications of adverse weather conditions in most jute growing areas. It is generally expected that April end stocks of goods would disclose a further decline and any increase in production is discounted in view of the tight raw jute supply position. B Twills Ready closed on Wednesday at Rs 129.96 after having done still higher earlier in the week. The slightly easier tendency at close is due to profit-taking by bulls and reports of rainfall in some growing areas. Overseas enquiries however continued small throughout the week. Hessian 40" x 10 oz closed steady at Rs 47.40.

In the raw jute section, mill interest was seen both in the old and new crop but sellers continued to be reserved. Assam Bottoms old crop steadily moved to close at Rs 40.50.

1960-61 Season Appears Favourable

The coming season (1960-61) appears more favourable to producers than for some years past, particularly as the early crop in North India seems likely to be delayed by drought conditions in many areas. As the coming season will begin with virtually no carry-over, buyers may have to pay higher prices for the commodity.

Auctions for internal consumption are still on and a few more sales are to be held before the commencement of offerings of the next season's tea. During this period, there will be a running down of stocks. This has led to a feeling of optimism about the opening of the 1960-61 season, as it is thought that buyers will be eager to replenish the stocks when the new season's sales open in June. How far this optimism is justified, it is difficult to say.

Last year's experience showed that such expectations did not materialise. This does not necessarily mean that the present expectations may not materialise this year also. As stocks in London are now much lower than in 1959, they are likely to dwindle further in view of the long interval between the two marketing seasons this year.

Production and consumption, however, remain finely balanced and any large increase in the North Indian crop as the season progresses must tend to have a depressing effect on the market, although an increase of the order of 20 to 30 million pounds can readily be absorbed. For, with the rising population and purchasing power, the internal demand for tea should continue to increase by 10.15 million pounds per year over the next few years. An even greater rate of increase in the internal consumption is expected, provided all goes well with the expansion of the economy during the Third Five-Year Plan.

In the Internal Sale held, in Calcutta this week, offerings were 23,149 packages. There was a strong and active demand at generally dearer rates. Orthodox exportable descriptions were sold well and advanced by up to 8 nP per pound with selected lines sometimes more. Legg-cut Dooars Dusts were keenly competed for and generally inclined dearer by 6 nP to 10 nP with emphasis on the smaller and more powdery lines. Medium CTC descriptions met with ready support, selling at firm and occasionally dearer rates. The best CTC dusts generally followed a lower tendency. Following rates were quoted (per pound):—Medium Dooars Dust Rs 1.98 to Rs 2.10; Medium Assam Dust Rs 1.94 to Rs 2.08; Medium Assam CTC Dust Rs 2.14 to Rs 2.31 and Best CTC Assam Dust Rs 2.45 to Rs 2.80. Also, 369 packages of Leaf grades were offered for internal consumption. Demand was strong and prices were generally dearer.

In the Cochin market, 4,075,000 pounds of Leaf tea were offered for export. Demand for all teas was noticed only at considerably lower rates. Plain and Low Medium teas were 5 to 10 nP per pound easier.

while Medium and Good Medium teas were about 25 nP lower. High-grown Broken teas had no demand, while similar Fannings grades were quoted much lower. Whole L3a teas, however, were fully firm.

In the Colombo market, offerings were 7,744.46 pounds. Quality generally showed little change. Best Dimbula Broken met with strong demand with prices advancing by 20 to 40 cents a pound. Prices were irregular otherwise with a dearer tendency noted except for stalky light liquoring descriptions. Medium BOPs were sold at 5 to 10 cents above last week's closing rates, while low-grown teas again met with good demand at generally steady rates.

Production of tea, in Ceylon, during February, dropped to 31.5 million pounds from 33.5 million pounds in the corresponding month of last year. Total production, for the first two months of the current year, amounts to 66.6 million pounds as against 67.3 million pounds in the corresponding period of last year.

In London auction, offerings were 66,613 packages. Prices in many instances recorded irregular gains of 1d to 3d per pound and the better qualities frequently fetched several pence per pound above valuations. The plainest and thin liquoring sorts, however, showed an easier tendency. The price-spread between the top and bottom grades has widened, now being 3sh 1d to 7sh 6d per pound as compared with 3sh 1d to 6sh 10d previously.

The only qualification, mentioned by London brokers, was that interest seemed to be largely concentrated on the better types. This was often accompanied by a tendency to neglect the plainer sorts, though this certainly was not the case at the recent auctions. The brokers state that the market will continue to be tested over the next few weeks by sizable offerings; but, at this stage, the outlook seems set fair.

Cotton Futures Sluggish

TRADING in the cotton futures market in Bombay during the past week was rather sluggish due to lack of fresh incentives. However, the announcement of an import quota of 2 lakh bales of cotton stapling 1.1/16" to be imported from any area including the USA brought about a modest set back at the close. The decision of the Government of India to grant import licenses was the direct result of the acute scarcity of indigenous supply and the clamour of mill owners for adequate supply of cotton. This announcement sobered sentiment in the cotton futures

market and ICC August Contract reacted bearishly. But towards the close the market recovered from low level.

Government have decided to permit import of a quantity of 2,00,000 bales of 1-1/16" stapling and above from any area. Out of the above quantity, 1,50,000 bales will be distributed to actual user mills and the Textile Commissioner will issue allotment letters to them on the basis of information already furnished by them. On the strength of these allotments letters, licences to import will be issued by the office of the Joint Chief Controller of Imports and Exports, Bombay, on application along with the money receipt from the Indian Cotton Mill Federation or the Southern India Millowners' Association for the payment of the specified premium which will be shown in the quota letters. Import licences issued under this scheme will be valid for shipment from a broad only from 1 July 1960 to 30 September 1960.

Mills having a basic consumption in the staple group of 1-3/16" and above will be allotted foreign cotton of 1/3/16" and above in staple while mills having basic consumption to the staple group of 1-1/16" and above will be allotted foreign cotton of 1-1/16" and above, but below 1-3/16" in staple.

Mills which have received a quota of cottons stapling 1-3/16" and above may apply for licence of an equal number of bales of 1-1/16" and above but below 1-3/16" cottons if so desired. In that event, they will be required to pay the premium which is payable on the category of 1-1/16" and above but below 1-3/16" cottons.

Mills applying for licence to import cottons of 1-3/16" and above in staple will pay a premium at Rs 160 per bale of 400 lbs. each while mills applying for licence to import 1-1/16" and above but below 1-3/16" cottons will pay it at Rs 120 per bale of 400 lbs. each.

SPOT COTTON:

Activities in the Sewri spot market continued to be restricted as many of the mills had exhausted their quotas. Following the recent announcement of more imports, the prices of foreign growths hardened further and mills were found to be active buyers. Among foreign varieties good business was transacted in USA and Pakistan cottons below 1". Sudan and East African came in for some enquiry while Egyptians were almost neglected.

COTTON PIECEGOODS:

Conditions in the cotton piecegoods market remained quietly steady last week. The offtake for cotton piecegoods was almost on the low side in spite of the inquiries for a number of varieties. The stringency in the money market continued to cast its shadow on the market and it resulted in the restricted offtake by local and up-country dealers. But forward business on the other hand was done on a fair scale especially in flannels and coatings. No material change in the price of fine goods was reported while the superfine goods changed hands at slightly lower rates.

Firmness in Copper Prices

THE price of Copper has been ruling very firm during the past many weeks in line with the international trend. In the Bombay market, the rate is quoted around Rs 210 per cwt. On the London Metal Exchange, the rate has risen to the highest level of £279 from £271 per ton quoted a week ago, due to short-covering induced by the threat of a strike at two mines in Chile, which belong to Anaconda—the big American producers. The Unions at these mines have voted to come out on strike on May 1 unless their demand for a 60 per cent wage increase to meet rise in the Chilean cost of living is granted. The company has offered a 35 per cent rise.

Monthly production from these two mines is only around 6,000 tons. But, what alarms dealers is, that the Unions have invited workers at Anaconda's other Chilean mines to join them. If their bid is successful, monthly production will fall by nearly 30,000 tons. The threat of strikes in Chile looks like crippling

the other major source of supply for European markets and prices have reacted in consequence. But, the statistical position of the metal shows that the metal is basically in surplus. If the strike should be averted, a return to a gradual decline in prices toward the £250 level is expected.

1959-60 Season:		Qty.	Price Range.

Robusta Cherry Flats	...	54,440	163 to 166.75
Robusta Cherry Bl/Br	...	2,000	137.50 to 137.75
Total	...	100,170	

Rubber

A higher Rubber crop is expected this year. Current sales are, however, restricted by the expectation of a new price announcement following the Tariff Commission's report. Some manufacturers complain of "under-the-counter" sales at a premium and others of non-availability of rubber.

World price of rubber is in the region of Rs 130 per 100 pounds, the landed price of which will be nearer Rs 190 as against the Indian home price of Rs 156 inclusive of cess.

Camphor

The recent upward trend in Camphor has gathered fresh momentum with the price rising by more than Rs 2 per pound, to establish a new high level of Rs 21.50. The sharp rise is a sequel to better upcountry demand in the face of negligible supplies. The suspension of supplies by the State Trading Corporation is also stated to have accelerated the

the other major source of supply for European markets and prices have reacted in consequence. But, the statistical position of the metal shows that the metal is basically in surplus. If the strike should be averted, a return to a gradual decline in prices toward the £250 level is expected.

Among other metals, Lead is quoted around Rs 74 per cwt and Tin at Rs 135 per quarter. Meanwhile, the Government of India's scheme for linking up importers of copper and zinc with scheduled industries is expected to be announced. Although the "linking up" scheme has been welcomed by both the trade and industry, the delay in the official announcement has caused serious concern to small actual users. Many of them are unable to procure goods in the open market; because of the spurt in prices during the past two weeks. Zinc has shot up by Rs 15 to Rs 150 per cwt.

Coffee

The Coffee Board has released 795,000 kilograms of coffee for export out of the 1959-60 crop. The quota consists of 306,000 kilograms of Plantation A; 177,000 kilograms of Plantation B; 168,000 kilograms of Plantation Triage; 114,000 kilograms of Arabica Cherry Flats and 30,000 kilogram of Robusta Parchment Flats.

The following types and grades of coffee have been released for internal consumption in the Pool sale held at Vijayawada (quantity in kilos and prices per unit of 50 kilos or about 112 lbs):—

1959-60 Season:		Qty.	Price Range.
Plantation PB	...	9,700	235.10 to 242.50
Plantation B	...	9,940	206.40 to 215.85
Plantation Triage	...	9,990	193.60 to 200.70
Arabica Cherry PB	...	4,950	189.30 to 191.30
Arabica Cherry Flats	...	4,000	181
1958-59 Season:			
Robusta Cherry PB	...	5,150	165.75
Robusta Cherry Flats	...	54,440	163 to 166.75
Robusta Cherry Bl/Br	...	2,000	137.50 to 137.75
Total	...	100,170	

advance in prices. In Madras, the price is placed around Rs 22 per lb. Thanks to a total ban on imports, the domestic prices have risen to a level which is nearly six times as high as the landed cost of the material.

Sugar

Despite a comfortable supply position, Sugar prices in the Muzaffarnagar market, have advanced by about Re 1 per bag to quote Rs 119 in response to seasonal demand. Practically, all the factories have stopped crushing operations for the season; but mills in the Moradabad division are reported to be still getting adequate cane supplies. Since the stocks of sugar, allotted for the months of January, February and March, are lying unsold, the local sugar dealers have refused to take delivery of quotas for April and May.

The world sugar market, in New York, has remained slack. Prices have made a half-hearted recovery

over the past few days from 3 to 3.5 cents a pound; but conditions still remain very slack. If, as the International Sugar Council says, raw sugar will be in deficit this year, the world market has yet to be affected.

Khandsari

In the Hapur market, Khandsari prices have registered further gains during the week due to good local demand and revival of support from Saurashtra, the Punjab and Rajasthan and better loading facilities. Superior quality is quoted at Rs 40 to Rs 41.50 per maund.

Gur

Gur prices are ruling steady. In the Hapur market, the rate for Pansera quality, is quoted at Rs 15.75 to Rs 16 per maund. Arrivals are reported to have declined to a daily average of 200 maunds. Stocks are estimated around 32,000 maunds as against 92,000 maunds in the corresponding period of last year.

Pongratins

The Hapur Foodgrains market remains quiet. The falling trend in wheat prices, however, seems to have been halted as "rabi" grain arrivals have been poor.

World wheat production continues to be in excess of effective demand as is reflected in the large and increasing stocks. The International Wheat Council, in its report, states that wheat consumption is static or declining in the highly developed countries and increasing in the less-developed countries. The Council further adds that the combined effects of these trends are expected to result in some increase in total world wheat consumption in the long term.

Efforts are reportedly being made by a section of the business community in the Punjab to persuade the authorities to permit resumption of forward trading in Guar. There is, however, no reason to believe that the representations will succeed. The authorities are only too well aware that, in the past, forward trading in Guar had been used as a cover for forward trading in Gram, which was banned.

Cashew

The French Government have included Cashew kernels in the liberalised items of their imports. The Cashew and Pepper Export Promotion Council has advised cashew traders in India to take advantage of the new relaxation in the French import schedule and make every effort to increase exports of cashew kernels to France substantially.

Oils & Oilseeds

THE Madras groundnut and oil market weakened on Wednesday further following larger arrivals of summer crop not only into Madras proper but also to important clearing centres in South and North Arcot districts. Whereas local arrivals daily were in the neighbourhood of 110 to 120 tons, in the southern markets they reached between 300 to 400 tons. Offtake too was not quite

large with hesitancy on the part of buyers. Forward positions too weakened. The market closed as follows today in the local Seeds Oils Exchange:

Groundnut oil per candy of 160 lbs ex-Madras godown expeller Ready 3 per cent f.f.a. Rs 387/388; May Rs 388 (business done); June Rs 389 (business done).

(There was no export quotation since Burma is still uninterested and shipping could not be done yet).

Groundnut kernels per candy of 531 lbs: Peanut Summer crop Rs 190; Coromandel variety Rs 200; Castor-oil per candy of 500 lbs Tirupattur Rs 320; Coconut oil per tin Rs 39 to Rs 39.75; Gingelly oil per maund Rs 22.00; Gingelly seeds per bag of 2 maunds Rs 76/77 (Paucity of arrivals); Groundnut cake expeller per bag of 160 lbs ex-gunny Rs 26.50; and Groundnut oil quotation of UK was £122 per ton and groundnut cake expeller variety per ton £34.

Burma oil was normally quoted at Rs 1,750 per ton.

Both groundnut oil and kernels prices took a move downward from middle of last week due to sizeable arrivals of summer crop into the market. This trend is now rather unusual in Madras, while firm conditions prevail in Bombay in all positions. Buying support came only from Calcutta vanaspathi interests. Factories within the State too lent some support. Since offerings were well above offtake, there was an easier trend. This could not be avoided in the circumstances. No activity in the market was perceived in regard to export of groundnut oil. Oil recorded thus a decline of about Rs 16/18 per ton while groundnut lost about Rs 20/25 per ton over last week's closing levels.

Arrivals of groundnut kernels in the local market continued to be steady in mostly summer peanut crops. Coromandel crop too was received but in small quantities. From Andhra's Kalahasti side good quality crop was received, and this was absorbed at the rate of Rs 203 to Rs 204 per candy, but the decline came quickly half way through last week, when transactions were made around a pucca parity of Rs 199/200 per candy. On Monday, the price of Coromandel was Rs 199, but on Tuesday, it closed higher at Rs 200. The same rate continued on Wednesday also. Likewise peanut too declined to Rs 189 by middle of last week, but it went up by a rupee on Monday and closed at the same at Rs 190 on Wednesday.

Small-scale power driven crushing units met fully with the local bazar interests. These were able to underquote the expeller variety. The rates thus quoted by them were far below the compounded levy advantage. Thus one would see plainly that enforcement, despite the extension of compounded levy system to bigger crushing units also, is not working satisfactorily. Also this leads one to the conclusion that the power driven crushers are actually working 96 hours weekly having declared that they had worked only for half of the time. Actually, therefore, some of these units were offering oil at Rs 375 or Rs 374, Rs 16 lower per candy, than the expeller factories under the compounded levy system.

But for the Calcutta and local vanaspathi interests support, the expeller factories would have been left with huge unsaleable stocks in the face of such price cutting competition from the local crushing units.

Early last week spot goods were offered at Rs 400 to Rs 402 per candy but in the middle of last week, the price came down to Rs 399 per candy. Further decline became noticeable while the week wore out and Monday's closing rate for spot was Rs 393. Tuesday it closed at Rs 390/391. On Wednesday it opened at Rs 387 and continuing at the same rate business was reported at Rs 387 and Rs 388. South Arcot mills offered last week 200 to 250 candies at Rs 396 around Madras parity.

Activities continued from last week in forward positions to be very limited. A small improvement noted in the middle of last week tapered off, as no major operator was in a mood to take risks as future seems to be uncertain.

In May transactions, small quantities were put through at Rs 391 last week. Last Monday it came down to Rs 388. On Wednesday it was done at the same rate per candy. Possibly anticipated summer crop arrivals to be more by the middle of this month continuing upto June first fortnight, caused buyers to keep off. June position too was not in the limelight. While on Tuesday it was quoted at Rs 393 per candy on Wednesday it closed at Rs 389.

In the weeks to come, it is likely there will be sizeable recession for all positions in Groundnut Oil.

Upcountry Markets: Summer crop arrivals were fairly steady and good in the region of 300 to 400 tons daily in southern markets—at Tirukollur, Villipura, Vridhachalam, Tiruvannamalai, but Panruti and Cuddalore, according to reports, had only small receipts. Sellers offered kernels at Rs 200/204 on pucca basis. In groundnut oil crushing factories were unloading small quantities by way of profit-taking. Sellers of groundnut continue to be very firm. Since Madras price of kernels was lower, some deals were put through on behalf of some of the mills in the southern areas. Madras price being lower than the southern market rates, operators there have become cautious against quoting higher than Madras on Wednesday.

Other Seeds and Oils: There is shortage in arrivals of gingelly seed and due to this the Chanda/Worora price has gone up considerably. Local market is therefore depending upon small arrivals locally. Latest prices:

Gingelly Seed: Chanda/Warora Rs 81/82 per bag; Rajasthan Rs 75/76 per bag; Local varieties Rs 76/77 per bag.

Coconut Oil: Alleppey: Ready Rs 657.50; May Rs 639.00; June Rs 669—all sellers.

The following prices are ruling in foreign markets for some of the important oils and oilseeds:

Groundnuts June-July '74/75 100 ton; Castorseed May £64 per ton; Nigarseed nominal £56 per ton; Groundnut oil spot £122 per ton; Castoroll BSS Bulk May £128 per ton; Castoroll Commercial £124/10 per ton; Coconut oil Straits Bulk £117/117½ per ton; Coconut oil Cey-

lon £120/120½ per ton; Tobacco seed £1 nominal in drums £124 per ton; Groundnut oil cake (Expeller) £34 per ton; Groundnut oil cake (deolled) £31/15 per ton.

Burma Groundnut Oil: Rs 1,750 per ton nominal

The following prices were quoted for groundnut oil and seeds in the southern markets:—

	Kernels per G. Nut oil	
	531 lbs candy.	600 lbs candy.
Guntur-Bezawada	Rs. 216	Rs. 405
Vridhachalam	204	394
Nandyal	204	397.50
Villipuram	202	392
Cuddappab-		
Yerragantla	203	397.50
Pollachi nominal	210	400
Tanjore	205	395
Tiruvannamalai	260	390
Salem	210	400

Pepper: Garbled Pepper closed today at Cochin as follows: Ready Rs 307.50 per cwt; May Rs 317.50; July Rs 337.50.

Un garbled pepper was quoted at Rs 1,750 per candy of 700 lbs.

Hides and Skins

Prices were firm in tanned cow hides which were received in good numbers in the market. UK had increased its offtake in the fifths of all weights. Premium marks of 5/5½ lb average were sold at 83d, 73d and 63d respectively for run, fourths and fifths. Fifths alone in many cases were transacted at 64d. UK wants 10/12 lb average, but market is unable to supply this variety that is difficult to obtain. Local demand on inferior fifths are large and therefore prices remains firm. Locally prices for 10/12 lb average continues at 41d.

In local buffalo hides demand, increase had—registered a higher price for this by another 6 nP per lb. UK inquiries for tanned cow calf are only for premium marks. Market quality tanned goods have declined in prices.

Goatskins tanned variety sold this week amounted to 10,000 pieces, and tanned sheep skins bought numbered 47,000 pieces. In the bazar left overs were 4,000 goat skins and 35,000 sheepskins. Both the varieties of market quality had come down between 12 to 18 nP per lb. Present prices continue and United Kingdom feels them higher while Continental prices offered for these enable market maintain present price levels.

The following prices were quoted for raw skins, the previous week's prices being given in brackets:—

Bangalore raw goat skin Rs 590/630 (Rs 605/650); White Wool sheep Rs 630/660 (Rs 600/650); Black Wool sheep Rs 460/500 (Rs 450/490); Bezawada raw goat skins Rs 575/585 (Rs 590/595); He sheep Rs 600/610 (Rs 590/595); She sheep Rs 500/510 (Rs 490/495).

The prices of tanned skins per lb were: Cow Prime 5/5½ lb Rs 3 to Rs 3-4; 6/6 lb Rs 2-1 to Rs 3-8/8½ lb Rs 2-5 to Rs 2-6; 10/12 lb Rs 1-15 to Rs 2-0; Buffalo 12/13 lb Rs 1-7 to Rs 1-10; Cow Calf 1½/2 lb Rs 4-10 to Rs 5; Buff Calf 1½/2 lb Rs 3 to Rs 3-4; Goat Prime 8/9 lbs Rs 9-2 to Rs 9-6; 5½/6 lb Rs 10-4 to Rs 10-8; Sheep ordinary 6/7 lb Rs 8-8 to Rs 8-12; Sheep Prime 6/7 lb Rs 10-10 to Rs 12.

NOTE.—This document does not purport to be a report of the proceedings of the General Meeting.

12, Mission Row,
Calcutta-1.
Dated, 6th May, 1960.

The Buckingham & Carnatic Company Limited

Cotton Shortage & Textile Wage Board Award: Two Severe Shocks

Mr. E. J. M. Leigh on Problems of Industry

Presiding at the Thirtieth Annual General Meeting of the Shareholders held at the Company's Office, 7 Armenian Street, Madras on Friday the 29th April 1960, Mr. E. J. M. Leigh said:—

GENTLEMEN,

It gives me great pleasure to welcome you to this Annual General Meeting of the Company, and with your permission I shall take as read the Report and Accounts for the year 1959 which have been in your hands for the requisite time.

It was not until well into the second half of 1959 that confidence in the future began to return to the Textile Industry and Trade. With lower exports in the earlier months more cloth was available for internal sale at a time when abnormally high food prices had restricted the spending power available for other necessities such as clothing.

There had also been a marked change in demand in favour of finer varieties requiring imported cotton, that could not be met on account of severely curtailed imports which forced Mills, at great inconvenience in many cases, to alter their production planning and spin coarser irrespective of buyers' preferences. The inordinate delay on behalf of Government in issuing import quotas even on the restricted scale, cost the Industry and the country many crores of rupees as by the time purchases could be made, foreign cotton prices had advanced sharply. However the most serious consequences of this delay were perhaps to be felt later on as by the end of the Indian cotton season, with higher consumption and a drop in the 1958/59 crop, the carry over had been reduced to 18.5 lakh bales, 2.37 lakh bales or 11% less than at the end of the previous season. I shall refer to the critical cotton supply position again later in my speech.

Returning to my opening remarks, it was from about August that confidence began to revive, encouraged by a marked broadening in export demand, reflecting a general expansion in world trade, and a tendency for prices to harden. India's ability to take advantage of this welcome development was assisted by the apparent, but no doubt temporary, reduction of activity on behalf of Red China, a severe set back to the Japanese Textile Industry through heavy typhoon damage and Government's Export Incentive Schemes, the value of which must not be underrated.

Stocks with Mills began to fall and it was not long before cloth dealers throughout India saw the writing on the wall and began to re-stock the empty distributive pipe line. For nearly 2 years they had adopted a hand to mouth purchase policy, their confidence having been shattered by the frequent and substantial changes in Excise duty rates since September 1956.

Is it too much to hope that as Excise duty rates have now remained virtually the same since July 1958, Government have at last realised that heavy handed attempts to correct fluctuations in market prices and production trends by artificial measures, however temporary, lead to chaotic conditions and loss of confidence both at home and abroad?

As shipments increased and clearances for home consumption got under way stocks with Mills fell precipitately and the reduction in closing stocks to the lowest figure for many years eased heavy financial burdens and released urgently required funds for the purchase of machinery, stores and raw materials. By the year end the trade was once more performing its proper function of holding stocks, which the Mills had been obliged to carry and finance for so long.

While this was all most encouraging and there was even talk of India's exports in 1960 reaching the target of 1000 million yards, dark clouds were building up on the horizon.

The Textile Industry, accustomed to shocks as it is, received its first warning of serious trouble ahead in November, when the current season's commercial crop of Indian cotton was estimated at the low figure of 45 lakh bales against the previous season's crop of 48.75 lakh bales and with consumption up by 4.13% to 46.16 lakh bales. But worse was to come and even the latest commercial crop figure of 37½ lakh bales is now considered to be a liberal estimate! Cotton prices reached and pierced the ceilings long ago and the Industry is faced with a very real crisis, though Government has issued repeated assurances that the short-fall will be made up by greatly increased imports, much of which will be of short staple American varieties. But it is vital that there should be no further delay in issuing quotas for the entire quantity so that bulk supplies can arrive in this country at the earliest possible moment. It is, I believe, only with the physical availability of adequate supplies that the hope

lies of controlling Indian cotton prices within the ceilings.

Even if all Mills, which can, use much more long staple foreign cotton and the rest of the short-fall is covered by imports of the lower grades, the high cost factor remains and the most acute shortage is in those types of Indian cottons on which the bulk of this country's cloth exports are based.

It is disastrous that this should have happened at a time when India had an opportunity of consolidating export gains and approaching the target. It now looks as if the most strenuous efforts will have to be made if even last year's figure of about 790 million yards is to be achieved in 1960.

Another severe shock was occasioned by the recent publication of the recommendations of the Textile Wage Board over which so many difficulties of interpretation have arisen. Despite the fact that the essence of the report is that it must be taken as a whole, Labour Unions throughout the country are demanding the immediate implementation of those parts favourable to the workers and threatening country wide strike action. The Industry is not in a position to accept unrealistic additional financial burdens and it will indeed be a tragedy if the Mill Industry as a whole, employers and employees, receive a severe set back as the result of the emergence of this unhappily worded document.

In what can only be described as a developing national emergency, the Cotton Textile Industry being of such vital importance to this country both for the clothing of its peoples and as a substantial earner for foreign exchange, it passes my comprehension that the Union Government is reluctant to obtain for the benefit of all an authenticated interpretation of the Wage Board's recommendations by calling together all its past members for this specific purpose.

It is within my personal knowledge that certain past members of the Wage Board do not agree with the interpretations of some of its findings as held by the Workers' representatives. In the circumstances can it be anything else but a figment of fantasy to describe the report as 'unanimous' when the actual sense and wording is in undoubted dispute.

If the appointment of the Wage Board is to achieve its objects, which presumably include a fair deal for all concerned, including the consumer, with peace and progress in the industry, it is essential

that negotiations between all employers and workers should proceed on the basis of the same agreed and clear cut formula.

Without this there can be no hope of reaching uniformity in separate and various agreements which may be negotiated, possibly after a long period of strife. This would merely sow the seeds of future trouble with serious repercussions on other Industries.

I now deal more particularly with domestic affairs. As you know, your Company is now a subsidiary of Binny & Co. (Madras) Ltd. and you are also aware that the Directors of your Company and of Binny & Co. (Madras) Ltd. have agreed mutually to the final termination of the Managing Agency with effect from 1st January, 1961.

The Directors of both companies are firmly of the opinion that in the changed circumstances of today this would be in the best interests of all concerned, though the decision was reached with great regret in view of our close association and the valuable services rendered by the Managing Agents for so many years.

In General Meeting in January this year you gave your approval to an application being made to Government for the renewal of the Managing Agency Agreement on the same terms for 4½ months to cover the period between the expiry of the present Agreement on 15th August, 1960 by operation of Law, and the end of the year. This application was submitted in good time and Government's decision is expected shortly.

I am sure you will all agree with me that it is of vital importance to your Company that there should be no departure from those most successful policies under which the Buckingham and Carnatic Mills have expanded and prospered in the past and in order to ensure continuity it is proposed that four of the present Directors of Binny & Co. (Madras) Limited, all of whom have had long experience in the management and business of your Company should then become Managing Directors of the Buckingham & Carnatic Co. Ltd.

A similar policy will be followed by your associate company, the Bangalore Woollen, Cotton & Silk Mills Co. Ltd., and arrangements will shortly be made by the Boards of the two Mill Companies with regard to the appointment of Managing Directors. It is proposed

7 May, 1960

that the cost of their emoluments will be shared in appropriate proportions as shall be mutually agreed.

You will have seen from the Directors' Report that sales during the year were a record at over Rs. 10½ crores and finished stocks fell to under Rs. 40 lakhs, representing only 2 weeks' production. A steady demand continues for your Company's range of products to which we hope to add some interesting new varieties during the current year. With adequate supplies of long staple foreign cotton, it will also be possible to meet, to a greater extent than last year, the demand for some of your Company's specialities such as 'Hanava'.

Despite every effort and extensive market research it was not possible to improve on an export figure of Rs. 1.81 crores but shipments during the first three months of the current year have been at the rate of Rs. 2.0 crores per annum which is encouraging. It is to be hoped that substantially increased costs of manufacture will not restrict further progress.

Your Company continues to supply the Defence Services' requirements of olive green drill and cellular shirting, though the prices obtainable showed a very poor return over the year.

The Company's showroom in Bombay has now been redecorated and air-conditioned to the great convenience of customers. These showrooms in various centres have proved of considerable advertising value and have provided a very useful and informative direct contact with the public.

It will be seen from Schedule 3 attached to the accounts which gives details of our fixed capital expenditure that additions thereto during the year amounted to approximately Rs. 53 lacs. Whilst the modernisation and renovation of the Company's buildings and plant is a continuous and never ending process, the main rehabilitation programme decided upon shortly after the war is nearing completion. The second new Weaving Shed is in production with a complement of 730 looms, the new Stores building and the extension of the Yarn Dyeing and Finishing buildings are well advanced and should be ready for occupation later in the year.

I am glad to inform you that after negotiations lasting nearly three years we received, towards the end of last year, licences for the import of new machinery valued at Rs. 40 lacs under United Kingdom and West Germany Credit Schemes. This sum is being utilized mainly for dyeing and finishing equipment, to replace obsolete plant and provide additional capacity to meet our ever increasing needs.

We have recently entered into contracts for the construction of

an additional 198 dwelling houses for our work people at a cost of approximately Rs. 9 lacs.

Labour/management relations have on the whole been satisfactory although during the year there was unfortunately a crop of lightning sectional strikes over the most trivial issues and frequently without the support of the recognised Union. We are hopeful that a better understanding has now been reached which should reduce the incidence of such indiscipline.

I have already referred to the crisis following the publication of the Textile Wage Board's recommendations. Discussions between the Government of Madras and representatives of labour and management are now taking place and whilst these are proceeding, it would be inappropriate for me to express my personal views on the detailed implications as they might affect your Company. I must, however, warn shareholders that higher wage rates must inevitably affect the profit earning capacity of any industry adversely unless accompanied by greater productivity, the acceptance of appropriate but fair workloads and essential rationalisation.

Your Company has been adversely affected to the extent of Rs. 1,13,600 by the changes made during the year in Corporate taxation and in order to maintain net dividends of 7½% and 10% on the Preference and Ordinary shares respectively you will see that we have had to deduct and pay to Government Rs. 8,33,375 from the gross dividends. This additional tax payment has been off-set to the extent of Rs. 7,19,775 by the savings resulting from the reduction in the rate of tax from 51.5% to 45%, and the abolition of both the Wealth Tax on Companies and of the Excess Dividend Tax.

As you know, we are a Section 23-A Company, but the penal provisions of that section will not apply as the total distribution on shareholders' account is more than 50% of the assessable income less the tax thereon.

Balance Sheet figures show only minor changes when compared with the previous year and items affecting the trading results have, I think, been adequately covered in the Directors' Report and require no further comment from me.

I am sure you will wish to join me in recording our appreciation of the valuable services rendered by my Co-Directors, the Mill Manager, his staff and all employees and, of course, the Managing Agents, whose combined efforts in a difficult year have achieved the results you see before you and which I consider can be regarded as satisfactory.

NOTE—This document does not purport to be a report of the proceedings of the General Meeting.

BURN AND COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the members of the Company will be held at the Company's Registered Office, 12 Mission Row, Calcutta on Thursday the 2nd day of June, 1960 at 11 a.m. to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an ordinary resolution:

That Martin Burn Limited be and they are hereby re-appointed as the Managing Agents of the Company for a period of ten years as on and from the 15th day of August 1960, on the terms and conditions embodied in the draft of an Agreement to be entered into between the Company of the one part and Martin Burn Limited of the other part, a copy of which was laid on the table and signed by the Chairman of this Meeting for the purposes of identification and that the Directors of the Company be and they are hereby authorised to execute under the Company's Seal in manner provided for in Article 155 of the Company's Articles of Association the Agreement setting forth the terms and conditions of the re-appointment of the Managing Agents.

By Order of the Board,
MARTIN BURN LIMITED
A. G. GIDLEY
Secretary
Managing Agents.
12, Mission Row,
Calcutta.
Dated, 5th May 1960.

Note: (i) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(ii) An Explanatory Statement is annexed to the convening Notice issued to the members of the Company.

THE AMALGAMATED ELECTRICITY CO. LTD.

Transfer Books of the company will be closed from 14th to 21st May 1960, both days inclusive, in connection with Ad-interim dividend for the part of the year ending 31st March 1960, payable on or after 23rd May, 1960.

By Order of the Board,
For N. C. JAVERI & CO.
N. C. JAVERI
Partner
Mg. Agents.
Bombay, 30th April, 1960.

THE INDIAN IRON & STEEL COMPANY LIMITED

Notice is hereby given that the Register of Members and Share Transfer Books for Preference Shares in the Company will be closed from the 17th May to the 21st May, 1960 both days inclusive for purpose of payment of the Preference dividend for the half-year ended 31st March 1960, on or after the 1st June, 1960.

For The Indian Iron & Steel Co. Ltd
MARTIN BURN LIMITED,
F. G. Liversedge,
Managing Director,
Managing Agents.
12, Mission Row,
Calcutta-1.
Dated, 6th May, 1960.

THE INDIAN STANDARD WAGON COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the members of the Company will be held at the Company's Registered Office, 12 Mission Row, Calcutta on Thursday the 2nd day of June 1960 at 11-15 a.m. to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an ordinary resolution:

That Martin Burn Limited be and they are hereby re-appointed as the Managing Agents of the Company for a period of ten years as on and from the 15th day of August 1960, on the terms and conditions embodied in the draft of an Agreement to be entered into between the Company of the one part and Martin Burn Limited of the other part, a copy of which was laid on the table and signed by the Chairman of this Meeting for the purposes of identification and that the Directors of the Company be and they are hereby authorised to execute under the Company's Seal in manner provided for in Article 155 of the Company's Articles of Association the Agreement setting forth the terms and conditions of the re-appointment of the Managing Agents.

By Order of the Board,
MARTIN BURN LIMITED
A. G. GIDLEY
Secretary
Managing Agents.
12, Mission Row,
Calcutta.
Dated, 5th May 1960.

Note: (i) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(ii) An Explanatory Statement is annexed to the convening Notice issued to the members of the Company.

Indian Aluminium Company, Limited

Chairman reviews developments in the Aluminium Industry

The following is the text of the speech delivered by the Chairman, Mr K. C. Mahindra, at the 22nd Annual General Meeting at Calcutta, on Wednesday, the 27th April, 1960.

I have pleasure in according you special welcome to our 22nd Annual Meeting, for 1959 has been a year of good profits and a prelude of better times to come.

The Directors' report submitted to you along with the audited accounts for the year 1959 gives a factual background to the year's operations. Production and Sales

reached new high levels. Initial operations at the Company's new smelter at Hirakud were satisfactory. The Company's Technical Consultants, Aluminium Laboratories Limited of Canada, rendered great assistance towards the start-up of the new smelter. It is a matter of satisfaction to all of us that the Plant is being operated entirely by Indian personnel, which is good testimony to the progress we have made in training a cadre of sound technical personnel within the Company.

It has been reported that the draft of the Third Five Year Plan establishes a target for production within the country of 82,000 tons of aluminium per annum and that the annual requirements of aluminium may be of the order of 100,000 tons. The Industry has come a long way in the last decade, at the beginning of which aluminium was primarily used for manufacture of domestic utensils. Today it is an established metal and is being used in many engineering industries, ranging from road transport to building. Our Company can justifiably claim that it has contributed substantially to the development of the aluminium industry in India. Aluminium still remains in our country an industry of high adventure. Your Company knows only too well how arduous and venturesome has been the climb and how complex the local technical problems connected with its installations and growth. In acknowledgement of this spirit I welcome the two new entrants in the field of production. As pioneers

in the establishment of aluminium as an industrial metal within the country, your Company is resolved to play its part in the further development of the industry and has therefore embarked upon the second phase of an integrated expansion of its production facilities, and construction has already commenced.

It is proposed to double the Hirakud Smelter to 20,000 tons, to increase Belur production capacity and install an additional extrusion press at Alupuram. These projects are expected to be completed by 1962-63. On completion your Company will be a substantial producer of aluminium with integrated facilities. It is a matter of pride and satisfaction to all of us that the tempo of expansion which commenced in 1953 is being maintained. We propose to go on expanding so that within the next decade we shall be a Company of substantial size. But we must remember that the price factor plays an important part in the development of demand for any product. More so in India, where great stress is laid on the initial cost as opposed to long-term economies. Aluminium costs 30 to 40% more in India than in other developed countries. Further, the price differential between aluminium and other competing materials is far more unfavourable in India than elsewhere. If aluminium is to establish itself, especially in the next few years, when the supply of steel is expected to increase, it is essential that prices are brought down. This can only be done by having larger plants capable of producing 50,000 tons and over per annum. It has been estimated, for example, that unit costs of production of a 50,000-ton smelter may be lower by 15% than those of a 20,000-ton plant. By having larger size plants, operating costs will be correspondingly reduced and this will ensure that aluminium holds its ground in competition with other metals. For this reason it is essential for us to keep on expanding until such time as we have reached the optimum economic output levels at each one of our plants, so that with increased operational economies, prices may be reduced and thus ensure that demand will receive a stimulus.

As we turn into the 'Sixties', a decade of progress and expansion lies behind us—a decade during which the Company showed a twenty percent growth a year in ingot production and established supremacy as a leader in a difficult and complex industry. This growth is unparalleled and far exceeds the 6% rate of growth which would characterise a dynamic economy. It is no doubt true that our fabri-

cation facilities have grown only 4½ times as against a 6½ times increase in production of the primary metal. But this is no fault of the Company's management; Government regulations and priority considerations have not permitted a similar development in the semi-fabrication field. And yet, to sustain a demand for the virgin metal over a long term, the fabricators must grow apace, if not beyond the supply of ingots at any period of time. To continuously develop new applications and new channels for the use of aluminium products there must develop in the country varied types and kinds of fabricated materials. Looking at the decade ahead, we are engaged in increasing our metal production as well as our rolling and extrusion facilities by another 70% over our present turnouts. This will be achieved by middle of the Third Plan period. We will not cry halt because inherently expansion is in the bloodstream of the Company. Further, the Management firmly believe that economic efficiency as judged by costs which would be comparable to costs, say, in Europe can only be achieved by increasing suitably the sizes of both smelter and rolling units. The impost of excise duty in the recent Budget does not however encourage optimism about the growth of the market and I would earnestly beseech Government to examine afresh the long-term implications of the excise policy in its bearing and impact on the volume of future demand for aluminium products in the country. The stimulants of demand, as Mr. Nathaniel V. Davis the President of Aluminium Limited, our Canadian associates, recently stated, are "new aluminium technologies, determined efforts in sales development and research and improved price relationship of aluminium with other metals". Production cannot maintain its rate of growth if consumption lags behind. Disregard of this criterion, it has been truly said, had its nemesis in the marked decline in the production of those very industries which at the beginning of the second Five Year Plan were firmly set on the path to rapid expansion—textiles, cement, transport are significant examples.

Another forward step has been taken by the management in organising an engineering project division within the Company. This is the beginning for a regular design section which would complement the assistance we receive from the design and research facilities of our Canadian associates, and which in course of time will develop enough technological facilities to work out designs and techniques most suitable for ope-

rating materials and conditions in India.

I referred earlier in my address to the impact of new excise taxation on demand. I do not feel curious any more that the immediate fiscal policy of the Government should appear to be in conflict with the long-term planned objectives of the economy, for it has happened so frequently of late in diverse fields. A strengthening of the industrial base was the avowed theme of the Second Plan; strengthening means not merely increased production of basic materials both new and old, but a growing encouragement of the uses of the materials so produced. Application of resources, however limited, toward industrial growth implies growing diversion of savings toward investment in industries. Savings must increase; increasingly these should be applied toward generating new industry and promoting development of old ones. This concept of planning, admirable and praiseworthy in objectives has, however, been vicariously undermined by fiscal needs and petty conflicts between the various organs of Government. What you promote with one hand, you cut down and emasculate with the other. Road transport—for instance—has been the pet whipping boy of practically all the States in the Union in search of more revenue and now Railways have joined in curbing the upstart competitor which in their imagination threatens the rail monopoly and fresh excise duties have been levied on all forms of motor driven vehicles. In our industry protective tariffs have helped as a shield for growth. The price situation remained comparatively free from control and was regulated more or less by interplay of supply and demand. Market growth really generated the need for additional production of the metal. New schemes have been encouraged on the basis of anticipated growth in market demand rather than on the strength of the economics of a specific venture. And now heavy excise has been imposed which will obviously lead to the diminishing of demand and thereby make this capital-intensive industry more unattractive. These contradictions in policy of the various Ministries of the Government and between immediate needs and final desires lead one to think if there is not something wrong somewhere in the administration of our planned efforts and whether time has not arrived to re-examine the void between policy and execution and repair the lack of coordination between the planning and the executive wings of the Government.

I do not disagree with the "theory of the big push"—for, there are better than even chances of getting somewhere if the country tried to do too much rather than too little. There should therefore be a welcome for the more ambitious target rather than be critical about "unrealistic" goals. But while inciting a revolution of rising expectations one should be extremely careful that it does not end in becoming a whirlpool of increasing frustrations. Government everywhere is part of industry and planning is an acceptable feature even in free enterprise economies. There can be no quarrel on this score. But Government is essentially the source of prevention measures which when well directed and co-ordinated lead to avoid waste of valuable resources but when we witness contrariness in the various impositions and regulations we encounter the first phase of practical difficulties. The Planning Commission encourages growth along certain lines but fiscal needs refuse to take note of the effect of tax and such like impositions on demand and therefore on ultimate targets for achievement. Planning should be perspective in the sense that all points of the compass remain within view; over a measurably realistic period of time; that advances in the sectors of production and distribution be simultaneous so that one reinforces the other; that there remain a growing stimulus for further and further improvements in each field of economy. Planning is a most complicated and complex exercise and I can find no better example and precedent than the manner in which the American industry was geared during war time to produce the necessary materials for the struggle. Briefly, policy decisions were first made "by balancing the requirements for selected high-priority objectives with the available amounts of strategic or scarce resources. Next, the details of the plan were worked out through applications of standard ratios based on past experience. Final adjustments were left to informal trial and error procedures of the actual month by month operations". The important difference from conditions current today in India was that demands were specific both in categories and quantum and accordingly where a gap in production point was noticed the surplus of capacity, manpower and finance was directed toward creating the supply in the shortest time possible. Applying the formula to the present state of our economic planning one finds no doubt a peremptory urge to move on rapidly, a compulsion to build a solid industrial base but there is a singular aversion to analyse the factual data involved and shape, alter and mould the programme as we go along. We seem to get lost in concepts of linear programming, in the so-called method of Balances, in input-output ratios. One cannot but view with alarm the applica-

tion of such theoretical doctrines when simple structural relationships between supply and demand are ignored and obiter dicta are issued nonchalantly and without mutual consultation from desks which adorn the planning or the executive enclave respectively. Aluminium production should step up to 100,000 tons by 1966; ergo, more units should be licensed to achieve this goal. It is ignored that demand for primary metal has increased from 23,000 tons to 35,000 tons over the last 5 years because of sales effort to increase applications, because of intense educational campaign to popularise the use of aluminium and because of relative stability in the price level. When the Finance Minister decided to impose an excise levy which would increase prices by as much as 10% at one stroke, he did not, I am sure, consult the planning wing. Would the planners now revise their objectives in the light of possible shrinkage of demand because of pressure of excise duties on prices? I fear not, and that is where the lacunae in our thinking of the future became wide and disparate. It is naturally not my purpose here to draw the lines for the next Plan, but I enter a plea for recognition of the facts of supply and demand and for a more rational approach to the problems of growth of individual industries. If I am critical, it is not for the purpose of imposing judgement; it is to request discipline and rationalisation in the conditions of judgement.

The financial picture as presented in the Directors' report is promising. Profit for the year, before providing for income tax and development rebate reserve, was higher at Rs. 1.94 crores. After providing for Corporate tax of Rs. 55 lacs and setting aside as development rebate reserve, which is a statutory appropriation under the Finance Act 1958, a sum of Rs. 61½ lacs, net surplus for the year is Rs. 79.83 lacs. Because of the statutory provisions regarding development rebate reserve the amount of money available for distribution to shareholders is not large.

This may appear disappointing in the year of our Hirakud development, for the immediate return to the shareholders is necessarily small but it is to be recognised that the allocation to the Development Rebate fund is a plough-back of profits into the business of the Company. Such appropriations of earnings retained in the Company are an essential element in a capital-intensive industry like aluminium and more so when the Company is engaged in a forward looking programme of expansion.

It has been possible for the Directors to recommend payment of a higher rate of dividend on equity shares—the highest so far in the history of the Company. I appreciate that the net receipts in

the hands of the shareholder is less because of the new base of tax policy and abolition of the system of grossing up of the dividend. But here neither you nor the Board have any say if Government chooses to tax the shareholders further and take away a substantial portion of their income. The Company has passed on to the shareholders most of the "savings" on corporate taxation effected under the new scheme.

To Mr. Vance Echols and his able associates in the Company I convey our congratulations and

thanks for the splendid results achieved during the year and I am sure the shareholders will join me in wishing them further success in the endeavours to come. Equally meritorious has been the effort of our work force at all the six operating points in the country. I am confident your trust is in good hands and the coming years hold an encouraging promise.

NOTE: THIS DOES NOT PURPORT TO BE A RECORD OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETING.

THE NEW SAMANBAGH TEA COMPANY LIMITED

NOTICE is hereby given that the Fifty-seventh Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Tuesday the 31st May, 1960 at 3-15 P.M. for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1959.
- (2) To declare a dividend on the Preference Shares.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their remuneration.
- (5) To consider and if deemed fit to pass the following Resolution as a special Resolution:—

"That it is hereby approved that Clause (2) of the contract entered into between the Company and the Managing Agents, Messrs. Shaw Wallace & Co. Ltd. in terms of special Resolution No. 7 passed by the Shareholders in the General Meeting of the Company held on 18th April 1958 and contained in letters dated 1st and 2nd May 1958, exchanged between the Company and Messrs. Shaw Wallace & Co. Ltd. respectively, whereby the Company was "inter alia" authorised to borrow money at interest from Messrs. Shaw Wallace & Co. Ltd., the Managing Agents, to the extent of Rs 5 lacs at any particular time, and which was varied in terms of special Resolution No. 5 passed by the Shareholders in the General Meeting of the Company held on 23rd July 1959 to increase the limit to Rupees 8 lacs be varied to read as follows such variation to come into force from 1st January 1960 and that such contract varied in conformity with this resolution shall be valid for a minimum period of 5 years

from 1st March 1958 unless previously terminated by either party giving to the other one months notice in writing."

Clause (2) "Money lent by Shaw Wallace & Co. Ltd. to the Company which shall not at any time exceed Rs 10 lacs in the aggregate may be repaid by the Company without Notice and shall be repaid within three days of demand".

The Transfer Register will be closed from the 23rd May, 1960 to 31st May, 1960, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY,
LIMITED
Managing Agent.

Calcutta,
Dated 2nd May, 1960.

EXPLANATORY STATEMENT.

Resolution No. 5.
The above Resolution has been necessitated due to the fact that the Company's funds could not be transferred from Pakistan to India and the Managing Agents are having to advance money to the Company to meet the expenses in India. The existing limit of advances by the Managing Agents is Rupees 8 lacs but the present advances by the Managing Agents aggregate to approximately Rs 7,24,000 and these advances by the Managing Agents will continue to increase till such time as the Company is able to receive sanction from State Bank of Pakistan to transfer its funds to India. In order therefore to regularise the recurring future advances by the Managing Agents to the Company the above Resolution is necessary.

The Bengal Coal Company, Limited

Review of Year's Activities by Mr N. Stenhouse

The following statement has been issued to the shareholders of the Bengal Coal Company, Limited by Mr. N. Stenhouse, Chairman of the Company.

I have pleasure in reporting to the members of The Bengal Coal Co., Ltd. on the operations of their Company during the year ended 31st October, 1959.

The Year's Trading: Although the income from sales of coal is Rs. 10 lacs higher at Rs. 6,36,00,000 compared with the previous year, there is a decrease of Rs. 11 lacs in the profit on the year's trading. However, after bringing into account credits amounting to nearly Rs. 12 lacs in respect of previous periods, the profit for the year is only slightly less than for the year ended 31st October, 1958.

After providing for taxation and increasing the amount transferred to Reserves by approximately Rs. 5,70,000, it has been possible for the Board to maintain the net amount of dividend by recommending a final dividend of Rs. 15 per share less tax on the Ordinary Shares, making Rs. 25 per share less tax for the year.

It will be noticed that there has been an increase of Rs. 5 lacs in "Salaries and Wages", the total expenditure under this heading now amounting to Rs. 3,11,00,000, or about 52% of the net income from sales of coal, as compared with some 38% in 1947. The increase of Rs. 16 lacs under "Colliery Expenses" reflects the introduction of further measures directed towards safety and improved methods of mining.

Production: Raisings during the year have shown a slight fall of some 25,000 tons to a level of 2,835,400 tons. This has been due mainly to the closure of two of the Company's collieries, where available coal has been worked out; and a further reason has been the decline in output from Chanch colliery, where we are installing a sandstowing ropeway plant which should result in an increased level of output within the next two years. Production at Chinakuri 1 and 2 pits colliery is now back to the level existing before the disaster which occurred in February, 1958, in spite of considerable difficulties in mining operations which have been experienced during the past months. Although there was a drop in the Company's raisings during the year under review, I am glad to report that for the first five months of the current year, output has been at a very satisfactory level.

The Industry as a whole have been most disappointed at the coal price increases announced during the past nine months which, it

is felt, are entirely inadequate, bearing in mind that there must be a realistic element in the price structure for rehabilitation and for ploughing back for new development, particularly for working the difficult and low lying seams which produce the quality coal of which the country is so greatly in need. We appreciate the introduction of a cess to assist deep, gassy and difficult mines. This could be particularly welcome to this Company whose policy over the past years has been to work the difficult seams yielding high grade coal. Indeed, 64% of this Company's output is obtained from gassy seams and, as I mentioned at last year's Annual General Meeting, the Company is operating the only three collieries in India whose shafts are sunk to a depth of over 1,400 ft. The Government scheme for the grant of a subsidy to deep, gassy and difficult mines, which has just been announced, is however, disappointing and appears to include conditions and restrictions which may well nullify its purpose. The details of the scheme are being carefully studied by the Industry and many aspects of it undoubtedly need clarification.

As those who are connected with the Coal Industry are fully aware, this Company is second to none with regard to the provision of any measure which can increase the safe working in mines. Nevertheless, however advanced may be the safety precautions in collieries, mining continues to be a hazardous operation throughout the world as is evidenced by the most tragic disasters which have recently occurred in South Africa, East Germany and Scotland.

We welcomed the increased level of stowing assistance, although during the year we still had to bear a difference of about Rs. 9 lacs between the total cost of stowing and the assistance which we received from the Coal Board. It is of interest to note that the quantity of sand stowed at your collieries during the year was no less than 760,000 tons, and this will increase shortly to a level of over one million tons per annum.

Labour and Welfare: Labour relations have not been marred during the year by any untoward incidents. Progress continues to be made in the construction of workers' houses at the Company's collieries, and the many hundreds of new quarters constructed under the scheme of the Coal Mines Housing Board are indeed impressive. We are also continuing with our schemes for an improved water supply at the collieries, and these projects are greatly appreciated by our employees. New quarters and additional water supply are but two of the measures being taken to

improve the living conditions of the workers over and above compliance with the statutory obligations for the provision of pithead baths, canteens and canteens. The Company runs nine schools for the children of employees, and also five Co-operative Societies, which were initially sponsored and financed by the Company but which have become self-supporting and are being increasingly utilised by our employees. We are proud of our large Sanctoria Hospital, as also of the medical amenities, including the smaller hospitals and dispensaries maintained at colliery level. We do not grudge in any way the high cost of providing such facilities for our employees since it is a great comfort to all those working in our mines to know that they and their families will receive the best possible attention in times of illness or accident.

Railways: The improvement in wagon allotments was maintained during the year, although in recent weeks the very disappointing offerings have resulted in considerable accumulation of stocks at many collieries. The fact that this has mainly affected the mines in the Dhanbad area and that the Company's collieries, most of which are situated in the Raniganj field, have not fared too badly, is small consolation to the Industry as a whole. I cannot stress too strongly the necessity for maintaining a satisfactory level of wagon offerings throughout the year so that excessive stocks accumulated during the Railways' peak traffic months in December/May do not result in a restriction on the level of raisings, as is the case at many collieries today. It is satisfactory to learn that, with the completion of a number of their capital works on main lines, the Railways will now be able to give rather more attention to the installation of, and extensions to, sidings at collieries. Many of those collieries, whose sidings were constructed some years ago, have now increased their output, and it is only by enlarging the sidings that the increased output can be adequately handled. This work merits the highest possible priority.

Exports: Two years ago my predecessor stressed the necessity for a virile and sustained policy for increasing the level of Indian coal exports. As recently as the middle of last year an increase in coal export targets was announced which would have involved entering new markets in addition to those countries to which India had been shipping coal for many years. Accordingly it was with considerable surprise that advice was received early this year that export of coal, other than to Pakistan, could no longer be permitted, even

to the traditional markets of Ceylon and Burma. This advice came at a time when the 1960 contracts for these two large buyers were being finalised and, in view of India's inability to meet their requirements, they had no alternative but to place orders with South Africa. The country has therefore lost two markets which have been providing foreign exchange for many years and it is undoubtedly going to be extremely difficult to recapture this business. No one can deny that there is a coal shortage in this country, but I cannot help feeling that the quantity of about half a million tons annually taken by Burma and Ceylon could have been available, particularly since the consequential loss in foreign exchange may continue not only during the present shortage of coal but also for some time thereafter.

Third Five-year Plan: Much has been written and said during recent weeks on the necessity for planning now to meet the greatly increased requirements of coal which must be available by 1965. The Industry is still awaiting Government's decision in this connection on the offers put forward by the private sector.

During the long history of this Company extending over 117 years, a steady succession of new collieries have been sunk and developed; and as collieries have neared exhaustion, plans have been made well ahead to develop new mines which have gradually come into production to replace exhausting units. In a wasting asset such as coal, this process must be continuous, and it is for this reason that we have had our reserve properties available for opening out as and when the country requires the coal. At the start of the Second Plan we put forward our proposals to sink pits, but these applications were not approved in view of Government's decision that the working of new areas must be in the public sector. When production at the present time is insufficient to meet the Nation's demands and when coal exports have had to be curtailed, it is sad to reflect that, had we been given permission to sink when we applied early in 1956, the new mines would by now have been in full production and contributing to the industrial expansion of the country.

It is the declared policy of Government that the public sector of the Coal Industry should expand; and we naturally accept this policy whilst realising that the rate of expansion must be dependent mainly on the technical and managerial know-how available. If the public sector, however, is unable to meet the full demand, then the

private sector should most certainly be permitted to contribute substantially towards the additional requirements. A decision on this whole vital matter must be made forthwith since the deep developments, whether they take place in the public or private sector, must be initiated immediately if they are to play any useful part by the end of the Third Plan.

Staff: At the end of March, this year, Mr. R. P. Rosser retired from the position of Chief Mining Engineer after serving the Company for 29 years, the last 9 of which were as Chief Mining Engineer. There can have been few persons in charge of the operations at the Company's collieries throughout the long period of the Company's existence who have had a more trying and exacting time than Mr. Rosser. During his period of office, the large new collieries have come into production and there has been progressive mechanisation and an increase in the overall output of the Company's pits. We extend to Mr. Rosser our grateful thanks and our best wishes for a happy retirement. To succeed him, Mr. F. G. Massmann, who has been acting as Deputy Chief Mining Engineer for the past 9 years and in whom the Board has the fullest confidence, has been appointed as Chief Mining Engineer.

The Company is indeed fortunate in having available, for the coalfields organisation, senior staff of high calibre. It is upon them as also upon all employees at all levels that the success of the Company so greatly depends. We are grateful to all the Company's employees for the work they have done and are doing and we can look forward to the future with confidence.

THE INDIAN IRON & STEEL COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the members of the Company will be held at the Company's Registered Office, 12 Mission Row, Calcutta, at 3 p.m. on Friday the 3rd day of June 1960, to consider and if thought fit to pass with or without modification the following resolutions, the first of which will be proposed as an Ordinary Resolution and the second as a Special Resolution.

Ordinary Resolution:

1. That Martin Burn Limited be and they are hereby re-appointed as the Managing Agents of the Company for a period of ten years with immediate effect from the expiration on the 15th day of August 1960 of the Agreement dated the 8th day of July 1948 and made between the Company of the one part and Martin Burn Limited of the other part in pursuance of Section 330 of the Companies Act, 1956 and upon the terms and conditions contained in an Agreement proposed to be entered into bet-

ween the Company of the one part and Martin Burn Limited of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification and that the Directors of the Company be and they are hereby authorised to execute such Agreement under the Company's common seal.

Special Resolution:

2. That the Articles of Association of the Company be altered in manner following:—

(i) Article 50 shall be deleted and the following substituted therefor:—

"50. The Company may, after giving not less than seven days previous notice by advertisement in a newspaper circulating in Calcutta, close the Register of Members or the Register of Debenture-holders, as the case may be, for any period or periods not exceeding in the aggregate forty-five days in each year but not exceeding thirty days at a time."

(ii) Article 113 shall be deleted and the following substituted therefor:—

"113. Unless otherwise determined by the Company in General Meeting each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending Meetings of the Directors a fee of Rs. 100/- for each Meeting attended by him. Each Director shall also be entitled to receive a share of a commission (to be divided among the Directors in such manner as the Directors may determine and in default of such determination equally) of one per cent of the net profits of the Company computed in the manner referred to in sub-section (1) of Section 198 of the Companies Act 1956 in any financial year. The commission payable to the Directors shall be payable for a period of five years up to and including the financial year ending on the 31st March 1961, but this provision may be renewed or reviewed from time to time in accordance with the provisions of any statutory enactment from time to time in force and applicable thereto. For the financial year ending on the 31st March 1961, the net profits as aforesaid shall be deemed to accrue on a day to day basis and the commission attributable on such basis to the period from the 16th August 1960 to the 31st March 1961 shall be sub-

ject to a limitation at the rate of Rs. 2,50,000/- per annum which limitation unless otherwise determined by the Company in General Meeting shall continue to apply in respect of any period for which the provision for payment of commission as aforesaid may be renewed. The Directors may allow and pay to any Director who for the time being is resident out of the place at which any Meeting of the Directors may be held and who shall come to the place for the purpose of attending such Meeting such sum as the Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the Meeting in addition to his remuneration as above specified."

(iii) Articles 128, 129, 130, 131, 132, 133, 134, 135, 136 and 138 shall be deleted and for Article 128 the following shall be substituted:—"128. Subject to the approval of the Central Government, Martin Burn Limited shall be the Managing Agents of the Company upon such terms and conditions as may from time to time be agreed upon between the Company and the Managing Agents and embodied in an Agreement in writing between the parties."

By Order of the Board,
MARTIN BURN LIMITED
A. G. GIDLEY
Secretary
Managing Agents.

12, Mission Row,
Calcutta.
Dated, 5th May 1960.

Note (i) A member entitled to attend and vote at this meeting is entitled to appoint a Proxy to attend and vote on a poll instead of himself and a Proxy need not be a member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to members of the Company.

THE BENGAL FLOUR MILLS CO. LIMITED.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the one hundred and twenty-sixth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, the 27th May, 1960, at noon, to consider the Accounts of the Company for the year ended 31st December, 1959, and to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution, which will be proposed as an Ordinary Resolution, of which special notice dated 22nd April, 1960 as required by Section 281 of the Companies Act, 1956, has been received:—

"That pursuant to the provisions of Section 281 of the Companies Act, 1956, it is hereby declared that the age limit imposed by Section 280 of that Act shall not apply to Mr. S. C. Law, a Director of the Company, who has attained the age of 67 years, and who retires in rotation and being eligible offers himself for re-appointment, and that the said Mr. S. C. Law be and is hereby re-appointed a Director of the Company."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 13th May, 1960 to 27th May 1960, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
D. MANSON
Secretary,
Managing Agents.
21, Netaji Subhas Road,
Calcutta, 25th April, 1960.

NOTE: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

RAJNAGAR TEA COMPANY, LIMITED.

NOTICE is hereby given that the Sixty-seventh Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday, the 26th May, 1960, at 3 P.M. for the following purposes:—

(i) To receive and adopt the Directors' Reports and the Audited Accounts for the year ended 31st December, 1959.

(ii) To elect a Director.

(iii) To appoint Auditors and to fix their remuneration.

The Transfer Register will be closed from the 18th May, 1960 to 26th May, 1960, both days inclusive. N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY
LTD.
Managing Agents.
Calcutta, 29th April, 1960.

FOR THE INVESTOR

Fresh Curb: But Boom Continues

Investment Gossip:

BOOM conditions have prevailed on the stock market this week. Although interest has been centred on the new entrants, selected groups have participated in the upsurge with the more speculative in the lead. Most of the activity seems to be speculative in character as genuine investment is naturally chary of extending commitments in a rapidly rising market.

It is significant that firmness of equity prices has occurred against the background of continual apprehension about further credit squeeze measures. Wednesday's announcement of the tightening of control on bank deposits has had only a temporary unsettling effect, presumably due to the thinking that the latest RBI move will not seriously interfere with the flow of funds into the stockmarket.

It would appear that an impression is gaining ground that the credit squeeze measures that have been taken and are likely to be taken will be largely ineffective as far as the stock market is concerned. The working of the 11 March directive credit control measures which are in operation for nearly two months now have not proved to be too stifling. The latest directive to commercial banks to deposit with the Reserve Bank 50 per cent of deposits (the 11 March directive had already increased the ratio to 25 per cent) after 6 May is not worrying operators over much as it is not expected that funds seeking outlet in the stock market will diminish to any appreciable extent as a result of the increased ratio. The fact that the measures initiated from 11 March have not been able to curb the bullish fervour in the stock market seems to lend support to the thesis that bank credit alone is not sustaining the stock exchange.

Rumours about a rise in Bank Rate have been in the air now and then during the current week; also. After Wednesday's RBI announcement, the apprehensions in this regard have somewhat lessened. It is also thought that an increase in Bank Rate now will adversely affect Government's borrowing programme.

In the meantime, bulls seem to feel that they are in an impregnable position. It is also argued that growth prospects and hopes of capital appreciation are the main driving forces in the market today.

Even so the present boom does not seem to have been firmly based as some of the price advances have gone far beyond the most optimistic estimate of growth and other prospects. The hectic rise is sure to attract the attention of Authority and it is not unlikely that more stringent measure than have been taken hitherto are on the anvil.

£RS

Marginal Relief

Investment Special:

Credit restrictions have not only compelled stock exchanges to ask for relief as regards bills in transit through banks but to impose margins on outstanding business to prevent overtrading. The inconvenience caused by the rule that within three months from March 15 brokers too should submit to margins is not apparent but representations have been made in Madras about maintenance of usual financial facilities for the stock market. Clients have to be paid promptly when shares sold are delivered and money has to be obtained from purchasers after delivery. Since Rs one lakh has to be found every day, a minimum margin of Rs 3 to 4 lakhs has to be furnished. There is inevitably delay in getting money due through the clearing house and the clearing bankers are insisting on a margin of 50 per cent for giving delivery or taking delivery without reference to sums due to him. Regular normal business is hampered by the withdrawal of former facilities.

Since discounting facilities for documentary bills have been restored, it is felt that other facilities too should be retained, because money is realised in a few days. Under normal circumstances, documents are not kept for over a week by brokers and the banks can ask for margins, only if documents are not taken out for delivery to clients. The Board of the Reserve Bank has been addressed in this connection and it has been

pointed out that only if the banks keep up facilities can small brokers thrive. There is no desire to help clients to derive undue advantages but if margins are insisted on, rich brokers who can lay out their own funds, for paying margins to banks will be assisted to attract business and concentrate of investment business would follow. One hopes that the credit restrictions are not calculated to promote oligopoly. There is a risk that the clearing house by asking for margin for the interval between giving and taking delivery of shares will encourage direct dealings between brokers without recourse to the clearing. This will not only retard the growth of stock market activity but check forward dealings, widen fluctuations in prices, and will limit knowledge of the technical position now made possible by clearing house figures. There is enough legal protection for clients but brokers would like to have some protection for which they pay. The fact that City brokers still lean on outside brokers in district towns for business and must maintain normal connections without imposing conditions deserves emphasis, as also the fact that the number of brokers in Madras is still very small.

£RS

New Issue Notes

The Chairman of the East India Distilleries and Sugar Factories Limited has disclosed more details about the proposed erection of a compound fertilizer factory near Madras at a cost of about £3 million. It is proposed to find the whole of this sum from outside sources. The company has plans to raise approximately a quarter of the total requirements by a fresh issue of ordinary shares with a modest premium. The balance is to be covered by medium-term loans, partly in India and partly in the UK to cover the foreign exchange requirements.

£RS

Investment Notes:

Gwalior Rayons have firmed upto Rs 43 from Rs 38.50 quoted a week

ago. It would be recalled that the Government of India had granted an import licence to this company for the establishment of a Rayon Grade Pulp Plant of 100 tons per day capacity in the Kerala State. It is now learnt that the company, on the Government's approval, has now decided to place orders for a plant of 150 tons capacity and the machinery will start arriving after a year or so. Meanwhile, work has been started in right earnest at the site. It is expected that the plant will be ready for operation by the middle of 1962.

Albion Plywoods Limited, so far managed by a Board or Directors, has decided to appoint, subject to Government sanction, Sahu Jain Limited as managing agents for 10 years. The directors have also proposed to convert the existing 5,000—5½ per cent tax-free Redeemable Preference shares of Rs 100 each into Ordinary shares and further subdivide the converted ordinary shares into denominations of Rs 10 each. This conversion will increase the number of Ordinary shares from 50,000 to one lakh.

According to the figures released by the Indian Iron & Steel Company, Limited, production has shown an all-round decline in April as compared to March, mainly due to one blast furnace being off for relining. Production of Pig Iron has declined to 90,876 tons from 98,640 tons; Saleable Steel to 44,751 tons from 75,812 tons and despatches to 33,126 tons from 82,852.

The shares of the Automobile Products of India and the Hindustan Aluminium Corporation have been listed on the Bombay Stock Exchange with effect from 28 April, 1960.

It is learnt that Khandelwar Ferro-Alloys Limited has received industrial licence from the Government of India for undertaking the manufacture of steel tubes. The factory will have a capacity of about 5,000 tons per year and the project is estimated to cost over Rs 1 crore. The plant will be located in the existing factory site at Kanhan, near Nagpur. Meanwhile, the erection of the factory for the production of ferro-manganese is nearing completion. The first furnace with a capacity of 15,000 tons, is expected to go into production in July next.

The subscription list of East Anglia Plastics (India) Ltd closed on 5th May. It is learnt that the issue has been heavily oversubscribed.

£RS

Investment Briefs:

Dharamsi Morarji Chemical Company, Limited has paid a taxable dividend of Rs 10 per share for 1959. This works out to a net dividend of Rs 7 against Rs 6 paid for the preceding year.

The Mogul Line Limited has paid a dividend of Rs 7.50, less tax. This works out to a net dividend of Rs 5.25 per share against Rs 5.00 paid for 1958.

Thamarapally Rubber has recommended a taxable dividend of 30 per cent as against a tax-free dividend of 30 per cent for 1958.

Buckingham & Carnatic

Investment Special:

EXCELLENT results for 1959 have been published by the two textile mills under the managing agency of Binny & Co (Madras) Ltd. They bear testimony to the consistently superior performance of the two companies whose shares are held to be, by investors all over India, the bluest of blue-chips. We may examine here the particular figures for the latest year as well as the balance-sheet position of the two companies as on 31 December 1959.

The Buckingham & Carnatic Co Ltd reports sales as having crossed the Rs 10 crore mark in rising by Rs 69 lakhs to Rs 10.57 crores. Moreover, the amount fetched by interest and miscellaneous income has gone up from Rs 12.83 lakhs to Rs 15.98 lakhs. As a consequence, the net profit has shown a smart increase from Rs 86.74 lakhs (which included a transfer of Rs 9 lakhs from Reserve for Taxation) in 1958 to Rs 1.09 crores (which includes Rs 1 lakh being provision made in previous years and written back as no longer needed); these are figures before providing for tax and depreciation.

The provision for tax has been raised from Rs 20.50 lakhs to Rs 25.75 lakhs, while the allocation for depreciation has also gone up from Rs 35.22 lakhs to Rs 38.51 lakhs. There is a transfer of Rs 1.81 lakhs to General Reserve against nil in the previous accounts. The transfer to Development Rebate Reserve is, again, slightly higher at Rs 9.58 lakhs against Rs 8.67 lakhs, and Other Funds receive Rs 5 lakhs as compared with Rs 3 lakhs from 1958 profit. Finally, full "compensation" is given to shareholders in respect of the lost privilege of "grossing up" of dividends: the ordinary dividend is maintained at 10 per cent, provision being separately made for the element of tax which would, under the new corporate system of taxation, be required to be deducted at source. The provision for tax on dividends amounts to Rs 8.33 lakhs.

The capital of the company is composed as to Rs 1.78 crores in ordinary shares and Rs 21.30 lakhs in 7½ per cent preference shares. Moreover, debentures are outstanding for Rs 65.31 lakhs. Against this, the Reserve Fund is placed at Rs 76.50 lakhs, and Other Funds add up to the considerable figure of Rs 2.18 crores. On the other side of the ledger, the gross block has shown a rise from Rs 7.64 crores to Rs 8.06 crores, but, with the year's allocation for depreciation, the net value of fixed assets has risen but slightly from Rs 3.13 crores to Rs 3.27 crores. Finally, the carry forward is shown at Rs 2.31 lakhs against Rs 1.83 lakhs brought in.

Bangalore Woollen Cotton, & Silk

Sales of the Bangalore Woollen, Cotton & Silk Mills Co Ltd did not change materially in 1959, when they were fractionally marked down from Rs 5.54 crores to Rs 5.52 crores. Interest and miscellaneous incomes fetched Rs 1.21 lakhs against Rs 1.55 lakhs. The net profit, before tax and depreciation, has, however, fallen slightly from Rs 64.48 lakhs to Rs 62.61 lakhs. The tax liability of the company stands somewhat reduced at Rs 26.50 lakhs as compared with Rs 29.50 lakhs in 1958. But, then, in the latest year, provision has besides been made for deduction of tax at source on dividends; the distribution in the hands of the shareholder, after such physical deduction, being unchanged at the rate of 10 per cent on the equity capital. Depreciation also absorbs the slightly smaller amount of Rs 14.78 lakhs versus Rs 14.89 lakhs in 1958. The amount set aside for Development Rebate Reserve has been stepped up from Rs 1.50 lakhs to Rs 1.75 lakhs. The transfer to Reserve has been cut from Rs 6 lakhs to Rs 2 lakhs. Lastly, the amount carried forward is a shade lower at Rs 2.69 lakhs as compared with Rs 2.98 lakhs brought in from the previous year's accounts.

The ordinary capital of the company amounts to Rs 1.215 crores, whereas the preference capital, with an interest coupon of 6 per cent, is shown at Rs 6 lakhs. The Reserve Fund is placed at Rs 35 lakhs, and Other Funds total Rs 1.24 crores.

On the other side of the balance-sheet, the gross block has risen from Rs 3.70 crores to Rs 3.80 crores. The book value of the fixed

assets of the company, by dint of depreciation provided over the years, is low at Rs 73.43 lakhs as against Rs 7.65 lakhs in the previous accounts. The cash balances alone of the company—including deposits with banks—are of the order of Rs 73 lakhs.

Buckingham Carnatic's preminent position as exporter is indicated in the Directors' Report, wherein it is pointed out that, of the record sales of Rs 10.57 crores, "exports accounted for Rs 1.81 crores despite a serious setback in sales to Ceylon on account of severe import licence restrictions imposed early in the year." An implied tribute to governmental policy suggested by the statement that "substantial benefits have been secured under the various Export Incentive Schemes, particularly in respect of import licences for essential raw materials and plant, which will be of considerable value to your company in the ensuing years." Again, the Directors' Report adds that the new system of taxation "did not materially affect the liability to tax of your company and its shareholders on the year's profits."

Thus, sterling results by rupee companies.

COMPANY REPORTS

Excellent Results of TRAYONS

Balance-Sheet Reviews:

THE Travancore Rayons Limited has produced excellent working results for the year ended 31 December 1959, thanks to production which went on smoothly without being deterred in any way by lack of raw materials. Also, the production of both yarn and Cellulose Film continued to receive adequate consumer acceptance and ready sales. Sales have risen to Rs 3.39 crores from Rs 3.28 crores.

The net profit, after providing for Depreciation but before Taxation, is substantially higher at Rs 62.06 lakhs as against Rs 46.20 lakhs in the previous year. Apart from providing a sum of Rs 37.75 lakhs for Taxation, the Depreciation amount is raised to Rs 40.36 lakhs from Rs 37.39 lakhs and Gratuity Reserve to Rs 1.50 lakhs from Rs 1.00 lakh. A dividend of 20 per cent, taxable, is recommended on the Ordinary shares. This works out to a net dividend of 14 per cent against 12½ per cent paid previously.

The balance-sheet, as at 31 December 1959, shows a paid-up capital of Rs 1.50 crores and 4 per cent First Mortgage Debentures at Rs 16.50 lakhs. Against these, Development Rebate Reserve stands at Rs 10.85 lakhs and General Reserve at Rs 60 lakhs. The gross block at Rs 4.48 crores is depreciated by Rs 2.70 crores to show a net block value of Rs 1.78 crores.

According to the directors' report, the production of both the Plain and Moisture-proof Film is being maintained at the normal level. The production of Rayon registered a small advance of about 5 per cent over that of 1958.

Among the expansion schemes, the Sulphuric Acid Plant, with an installed capacity of 50 tons a day, has already been commissioned on 8 November 1959. The quality of production is satisfactory. The erection of the third Cellulose Film Plant, of 5 tons capacity a day, is under way and it is expected to be commissioned by July this year.

The company's application to the Government of India for licence to make rayon grade pulp from cotton linters has been sanctioned and details are being worked out to finalise this project. An application has also been made for production of an additional 1,800 tons of Viscose Filament Rayon a year and for a Cellulose Film machine of like capacity.

Indian Wood Products Reduce Net Dividend

The reduction made in the prices of cutch due to competition from new factories in India, lesser exports to Africa and Europe as a result of greater activity by Far Eastern producers and reduced demand from the fishing industry—all these factors are reflected in the working results of the Indian Wood Products Company Limited for the year ended 30 September 1959.

Sales have declined to Rs 43.76 lakhs from Rs 49.59 lakhs, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 5.31 lakhs against Rs 5.35 lakhs in the previous year. The directors have provided Rs 1.14 lakhs (Rs 93,491) for Depreciation; Rs 5.13 lakhs (Rs 8.75 lakhs) for Taxation and Rs 20,890 (Rs 7,325) for Development Rebate Reserve. They have recommended a final dividend of 15 per cent, making a total of 25 per cent, taxable, for the year. This works out to a net dividend of 17.5 per cent against 25 per cent previously.

Against a paid-up capital of Rs 20 lakhs, reserves and surplus are shown at Rs 22.11 lakhs. The gross block amounts to Rs 22.62 lakhs; total depreciation to Rs 17.83 lakhs and the net block to Rs 4.78 lakhs.

BIC Again Passes Ordinary Dividend

The British India Corporation has passed the Ordinary dividend for the third year in succession. The last dividend paid was 2 per cent for the year ended 31 December 1956. The directors have, however, paid the dividends on the Preference shares for the three years ended 1959, subject to deduction of tax.

Trading results for the year have shown a satisfactory improvement. (The accounts reveal a net profit, after providing for Depreciation and Taxation, of Rs 54.35 lakhs as against a net loss of Rs 19.28 lakhs incurred in the previous year.

In respect of allocations, the Depreciation amount is reduced to Rs 6.89 lakhs from Rs 11.77 lakhs and Development Rebate Reserve to Rs 47,911 from Rs 5.92 lakhs. A sum of Rs 11.00 lakhs (nil) is set apart for Development Rebate Reserve and Rs 12.05 lakhs (nil) for Obsolescence provision against Stores and Spare Parts; Rs 1.35 lakhs (nil) for Capital Reserve and Rs 1.00 lakh (nil) for Rehabilitation Reserve.

The directors considered that it would be desirable to sell the Cawnpore Cotton Mills branch to the Elgin Mills Company Limited, which was found to be suitably equipped for and desirous of running the concern as an adjunct itself. They were also influenced by the consideration that the mill will remain within the group and the Corporation, as the holding company of the Elgin Mills, will share the benefits of expanded working of the latter company.

An offer was consequently made to the Elgin Mills to sell that unit to the said company for Rs 35 lakhs. The shareholders of the Elgin Mills have accepted that offer. A sum of Rs 5 lakhs, as the first instalment toward the price, has been received and possession has since been handed over to the Elgin Mills Company Limited. It is expected that the mill go into production shortly.

Better Working Results by Cawnpore Sugar

The Cawnpore Sugar Works Limited has shown better working results for the year ended 31 October, 1959 in view of the improved quality of sugarcane available to the factories. The results, would have been much better but for the reduction in the quantity of cane crushed for the reduction in the quantity of cane crushed at the Marhowrah factory. The following are the quantities (in maunds) crushed by each factory:—Marhowrah 2,458,381; Gauri 2,610,426; Padrauna 3,228,729 and Kathkuiyan 2,291,761.

Sales of sugar, molasses, etc., have risen to Rs 3.96 crores from Rs 3.61 crores, while the net profit amounts to Rs 7.85 lakhs against a net loss of Rs 14.04 lakhs incurred in the previous year. The directors have provided a sum of Rs 6.30 lakhs (Rs 6.50 lakhs) for Depreciation; Rs 1.03 lakhs (Rs 25,000) for Development Rebate Reserve and Rs 1.44 lakhs (nil) for Capital Reserve. The balance profit is adjusted against the debit balance of Rs 22.24 lakhs brought forward from the previous year, leaving a net debit balance of Rs 16.86 lakhs to be carried forward.

The company has not paid any dividend for the last three years. The last dividend was 7½ per cent paid for the year ended 31 October, 1956. The gross block of Rs 174.60 lakhs is depreciated by Rs 104.13 lakhs to show a net block value of Rs 70.47 lakhs.

With the exception of Marhowrah factory, the cane crush during the 1959-60 season at the company's factories will, on the whole, be slightly more than last year. With extensive overhaul and rehabilitation work undertaken at Padrauna and Kathkuiyan factories during the year, it is expected that these factories will show profits on 1959-60 season's working. To meet the increased demand for industrial alcohol and to reduce the production cost, it has been decided to expand the capacity from 5 to 6.5 lakh L.P. gallons a year and the expansion work is expected to be completed shortly.

Peermade Tea Reports Higher Profits

Thanks to better prices realised for teas and the increase in the crop, the Peermade Tea Company has reported a substantial rise in the net profit, after providing for Depreciation and Taxation, of Rs 6.34 lakhs for 1959 as against Rs 1.48 lakhs in the previous year.

Apart from providing Rs 75,000 for Dividend Equalisation Reserve; Rs 80,958 for Capital Reserve and Rs 1.00 lakh for General Reserve, the Depreciation amount is raised to Rs 1.42 lakhs from Rs 1.33 lakhs; Taxation provision to Rs 5.45 lakhs from Rs 2.20 lakhs and Development Rebate Reserve to Rs 1,725 from Rs 306. The directors have recommended a final dividend of 15 per cent, making a total of 22½ per cent for the year. This works out to a net dividend of 15.25 per cent against 16.25 per cent paid for 1958.

The capital consists of Rs 18.50 lakhs, divided into 1.70 lakh Ordinary shares of Rs 10 each and 1,500—6 per cent tax-free Cumulative Preference shares of Rs 100 each. Against this, Capital Reserve is shown at Rs 6.25 lakhs; General Reserve at Rs 1.00 lakh; Dividend Equalisation Reserve at Rs 3.15 lakhs and Development Rebate Reserve at Rs 2,031. The gross block amounts to Rs 41.25 lakhs; total depreciation to Rs 14.47 lakhs and the net block to Rs 26.78 lakhs.

Crop harvested was 2,293,335 pounds, which is 293,335 pounds above estimate. In brief, the year under review established a fresh crop record exceeding the last record crop in 1957 by 38,395 pounds. Prospects for 1960 appear favourable provided the present market prices are maintained.
