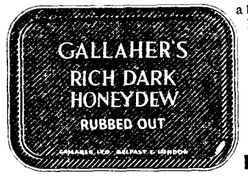
With the Right divided, the Left divided and the Centre a shambles, the only certainty is that nobody is likely to have an absolute majority. The confidence of the UNP has been somewhat shaken during the past weeks by the success of Mr Gunawardena's dynamic, anti-capitalist, anti-Catholic campaign. He has entered into an alliance with the same militant Buddhist groups that brought Mr Bandaranaike victory in 1956, and his speeches in the rural areas have aroused latent anti-Catholic feelings among the Sinhalese Buddhists. Mr Dudley Senanayake's major platform is order and stability and his party will no doubt gain from the conservative reaction to the recent turbulence.

As the weeks pass, the battle may limit itself to a fight between these two parties. But even this may not produce a clear victory. The chances are that Ceylon will elect a highly fragmented parliament marked by tenuous coalitions and unprincipled alliances. The people have still not lost faith in the parliamentary system. But if their faith is badly ruptured by the results of the elections and its political consequences, the Ceylonese intelligentsia, which now gets an almost perverse thrill in shouting "coup, coup" may soon find that the people will not heed them when they next shout and the wolf is really at the door.

Africans in Congress—II

BY OUR SPECIAL CORRESPONDENT

THE Guinea-Ghana group, working together with the Moroccans, presented the All-African People's conference (held at Tunis from January 25th to 31st) with its leading theme: the danger of neo-colonialism. According to M. Diallo, of Guinea, the secretary-general, Mr Kojo Botsio, the minister of economic affairs of Ghana, and M. Ben Seddiq, the trade union leader from Morocco, the imperialists, having left the independent African states ceremonially by the front door, were trying by "devilish colonialist tricks" to creep in again by the back. Three such tricks were enumerated: economic aid, "balkanisation" and affiliation of African institutions to international organisations.



All this may seem tiresome to those who wish Africans well. But it is a pity just the same that absorption in the news from Algeria at the time prevented any proper analysis in the press of these signals of sensitivity from Tunis. The extreme view on economic aid was put by M. Ben Seddiq, who, starting from the proposition that Europe had so pillaged Africa in the past that there was no need to show gratitude for European conscience money in the future, argued that the givers must have no influence whatever over the distribution of their gifts and loans, which should be handled exclusively by a pan-African bank. This crude argument leaves altogether out of account aid from the United States—a country which can hardly be said to owe Africa anything—and forgets that

there must be some limit to the amount of abuse that foreign taxpayers, however guilty their consciences about past colonialism, are prepared to take. The conference in its final resolution in favour of an African investment bank had more sense than to insist that the bank should have a monopoly in channelling foreign funds. Nevertheless, the sentiments expressed in Tunis suggest that the psychology of aid-giving to Africa needs careful thought. The concentration of gifts and loans by metropolitan countries on their own former colonies may not be the best policy, despite the domestic political attractiveness of putting British aid, for example, on a Commonwealth footing.

The positive side of economic pan-Africanism is the possibility of preventing each new African state from demanding its own steel mill and becoming dependent on foreign aid to support projects that do not make economic sense in continental terms. Furthermore, there is an extremely healthy determination to concentrate on self-help, even though this is carried beyond practical limits by nationalist spokesmen from dependent territories like Uganda and Nyasaland who have not yet had the responsibility of office. Guinea's extraordinary prestige at Tunis, where it appeared to be very much the senior partner of the Guinea-Ghana tandem, was not due only to its ideological pull, which was indeed consciously resisted by the eastern and central African delegates. It primarily rested on President Sekou Touré's example of how a small, poor country, starting with almost nothing and disdaining large "neo-colonialist" payments, could pull itself up by its boot-straps.

It was a little difficult to feel the same patience with the line about balkanisation. A colonial power has surely done its duty by Africa if it recognises an existing territory's independence; it is up to the Africans to change boundaries and federate if they wish. Mr Kojo Botsio's huffing and puffing about the wicked imperialists' establishment of "mock states" were doubtless not unconnected with the sharp rebuffs which Mr Sylvanus Olympio and M. Houphouet-Boigny have administered to Dr Nkrumah's calm proposition to unite tribes by swallowing their territories. Even Mr Amino Kano, the otherwise level-headed Nigerian government Chief Whip, showed himself sufficiently a northerner (and therefore presumably annoyed about the Cameroons referendum) to claim that instead of dividing and ruling within colonies the implacable imperialists were now hard at it playing the same trick between states. He gave as an example the asking of questions by the British press as to whether the Sardauna of Sokoto would enjoy serving under Dr Nkrumah in a west African federation.

THE final neo-colonialist charge of subjection by affiliation to international organisations crystallised the conflict between Dr Nkrumah and Mr Mboya, which was none the less real at Tunis because of the absence of the two principals. Mr Mboya believes that African trade unions should be free to affiliate, as his does, to the International Confederation of Free Trade Unions; Dr Nkrumah wants the new pan-African trade union movement which is to be launched in Casablanca in May to outlaw such affiliations among its members. There was an underground campaign of disparagement of Mr Mboya at the conference for being too moderate in his demands, too interested in making a hit with the imperialist press, which had built him up beyond his real significance, and too ready to sell out to the Americans. At one stage, the Kenyans were so worried by this campaign that they sent desperate cables to London urging him to make a dramatic last minute appearance to confound his enemies. But in committee the Pafmeca (Pan African Freedom Movement of East and Central Africa) caucus of eastern and central African delegates, who worked extremely closely together, won its point. The Casablanca conference will meet without advance commitments on the subject of affiliations.

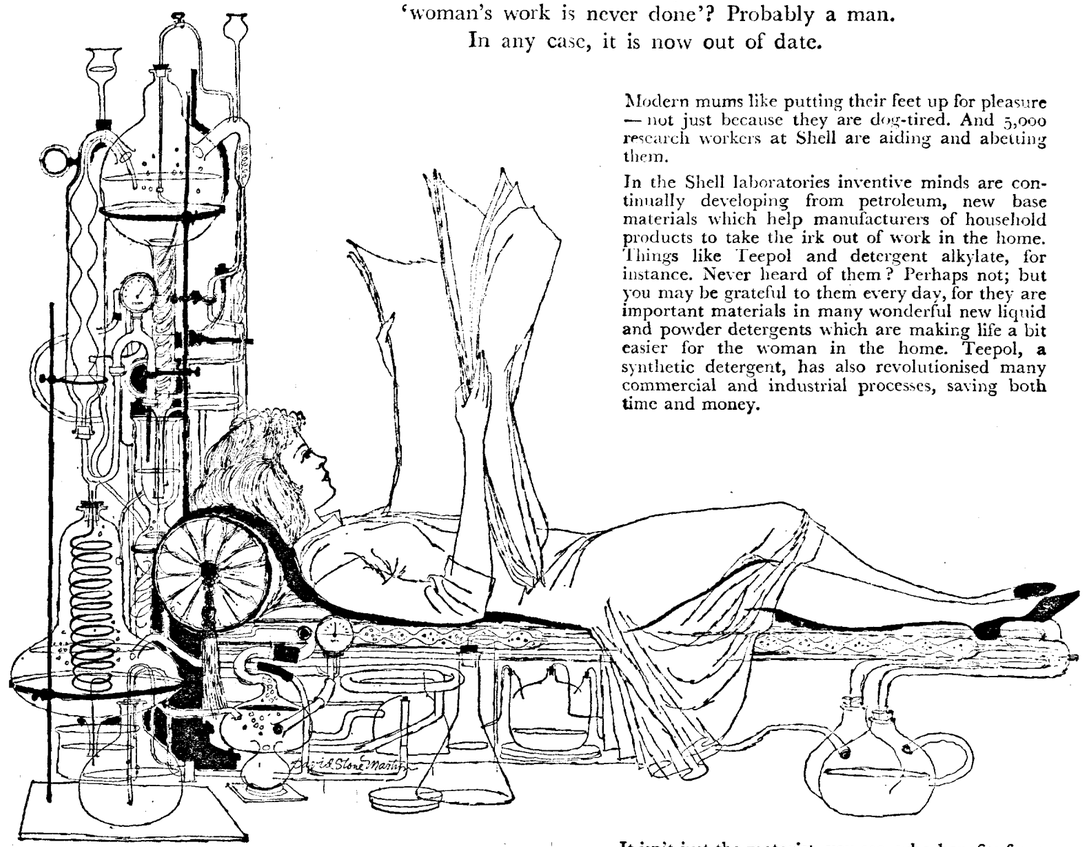
It was a weakness of the conference that the French Community states were unrepresented except by dissident factions who heaped dead cats on the governing parties as well as on the French imperialists at inordinate, and repetitive, length. But with these and one or two other exceptions the delegates were thinking of themselves as representatives of their own countries. Their plans for regional federations, as the stepping stones to continental union, may not work. But they have the self-confidence to take it for granted that in the almost immediate future the decisions will be theirs, and not the white man's, to make.

(Concluded. The first article appeared on February 6th.)

Italian Industry Looks Up

FROM OUR CORRESPONDENT IN ROME

THE president's report to the annual assembly of the Confederation of Industries is unusually euphoric this year. According to Dr de Micheli and his staff, whose findings and meditations fill two thick volumes, industrial output increased by an average of 10 per cent in 1959. Even textiles improved and the chemical industry kept up its forward thrust. Exports rose above, and imports crept back to, their pre-recession (1958) level. If the present favourable trends of the world market persist, 1960 should be a record year for Italian industry.



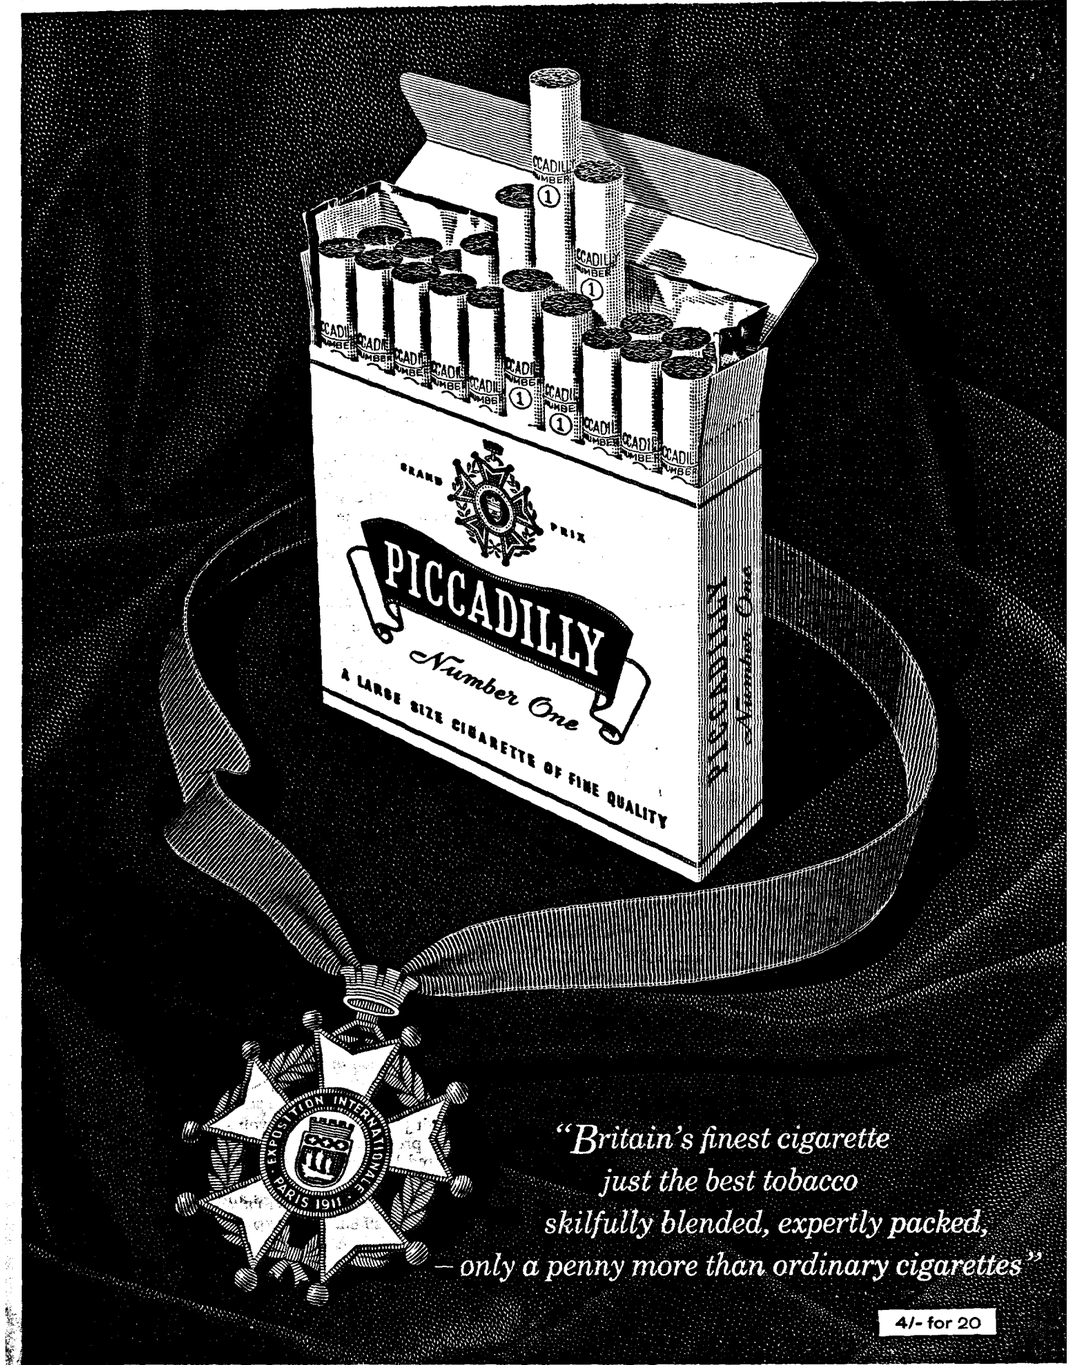
Dr de Micheli foresees expansion in almost every sector, from a yearly average increase of 5 to 7 per cent in the metal and engineering industries, to 13 per cent for the chemical industry, where investments, particularly in the petro-chemical sector, are expected to rise at the rate of 20 to 35 per cent a year during the next three years. Textiles should maintain progress; the man-made fibres are expected to increase by 10 per cent and the output of man-made fabrics should increase by 25 per cent next year.

Private investments, says the report, have reached a level of 790 billion lire a year (£474 million) and industry is at last employing more labour than agriculture; 38 as against 33 per cent of the working population. Quoting a sample inquiry by the Institute of Statistics, Dr de Micheli hazarded the suggestion that 1959 may be considered a "historic year," as the turning point in the battle to eliminate chronic unemployment. In the south, the dynamic of improvement is satisfactory, though it will be a matter of generations before the difficulties of the environment can be overcome. Dr de Micheli points out that owing to the heavy investment programmes now going forward in large-scale industry these will not be able to expand much further afield; it is therefore up to the "spirit of initiative" of the small and medium entrepreneurs of southern Italy to set up new concerns to give work to the unemployed.

This picture of an industrial El Dorado is marred a little by fears that the government, after a period of "relative tranquillity," is ceding to pressures from the left. Its anti-trust bill and its project to control the production of nuclear power, mild as they appear, are considered signs of unwarranted distrust in the business world. The confederation also thinks that the recent law to enforce national labour contracts is contrary to the spirit of the constitution, which intended such matters to be fought out by the contending parties without interference from Parliament. The separation of the state-owned IRI industries from the confederation is another matter for concern. There are also the usual complaints about taxes and the burden of welfare upon employers, but the most heart-felt lament concerns the programmes of heavy investment in state industry. The reference is to the ENI and IRI plans for the development of the south. The IRI project for a steel plant at Taranto and the ambitious plans of Signor Mattei (of ENI) to develop a petroleum chemical industry on his oilfield at Gela in Sicily have been ferociously opposed at the political level by the Right.

Invention is the necessity of mother

We wonder who first coined the phrase
'woman's work is never done'? Probably a man.
In any case, it is now out of date.



Modern mums like putting their feet up for pleasure — not just because they are dog-tired. And 5,000 research workers at Shell are aiding and abetting them.

In the Shell laboratories inventive minds are continually developing from petroleum, new base materials which help manufacturers of household products to take the irk out of work in the home. Things like Teepol and detergent alkylate, for instance. Never heard of them? Perhaps not; but you may be grateful to them every day, for they are important materials in many wonderful new liquid and powder detergents which are making life a bit easier for the woman in the home. Teepol, a synthetic detergent, has also revolutionised many commercial and industrial processes, saving both time and money.

It isn't just the motorist, you see, who benefits from Shell products. Everyone, directly or indirectly, is affected by the constant probing and prompting of Shell Research whose chief end-product, we like to think, is people's happiness and welfare.

YOU CAN BE SURE OF SHELL

THE BUSINESS WORLD

Nationalisation by Halves

THIS week has provided the fascinating spectacle of a Minister partially nationalising one industry and partially de-nationalising another. In the first acid test of the wisdom of having the same Minister responsible both for air transport and for the aircraft industry, Mr Sandys has announced a substantial element of government investment in the newly concentrated aircraft industry, and has simultaneously taken steps to reduce the dominance of public ownership in air transport. Mr Sandys may in fact find that he will have to give a great deal more information about his plans on both fronts than he seemed prepared to do this week. The Civil Aviation (Licensing) Bill published on Tuesday is not a policy-forming document; it merely introduces some order into an unworkable legal framework for licensing air services and leaves the Minister free to be as nice or as beastly to the independent airlines as his conscience dictates. He does not at this stage have to put his cards on the table though he may be hard pressed to do so when the bill comes to be debated.

When he confirmed the Government's intention to give the aircraft industry financial help towards developing new civil aircraft, and even towards building for stock aircraft for which no orders existed, the first obvious question was: "How much?" When Mr Sandys was responsible for the aircraft industry as Minister of Supply in the early fifties, such a nasty question would have been unthinkable. But the wind of change blows in this country too. The public knows that aircraft like the Comet and the Britannia have cost it to develop, in round figures, £20 million apiece, little of which will ever be recovered; it now demands to know in advance what the subsidies to the aircraft industry are likely to cost and how much risk the industry itself is ready to bear.

It may be difficult to give a specific answer. The Government is subsidising civil aircraft development now only because it has the industry on its conscience. The cut in military aircraft and the switch to missiles have reduced the aircraft industry's turnover to a point where its factories are half-empty and it has no margin of earnings for financing new development. Since it was the change in Government policy rather than the industry's own shortcomings that brought about this state of affairs, the Government has relented sufficiently to help the industry with funds for development which it could not find wholly for itself. In time, it is hoped that the industry will have built up a business in civil aircraft sufficiently large to enable it to stand on its own feet; until then, some of its ventures will have to be publicly underwritten.

Not all projects will need the same degree of help. The engine industry, for example, has bigger sales and higher earnings than the aircraft manufacturers and is under much less financial pressure. Projects for small aircraft can often be financed independently. But larger civil aircraft, like the two medium-range jets under development by the de Havilland-Hawker Siddeley group on the one hand and the Bristol, English Electric, Vickers-Armstrongs group on the other hand are straining the merged companies' resources to a point where they are both looking to the Government to meet up to half the cost. (There ought to be a chance of rationalisation between the two claims if the Government had courage enough to seize it.) If the Government were to decide that a supersonic aircraft should be built in this country—though one must hope that any such decision will be postponed at least until the mergers have shown their effect—the taxpayer will have to provide not 50 per cent but the lion's share of the cost.

Mr Sandys could have made it clearer that this financial help is hedged round by many more provisions than in the past. The Government in future will underwrite half the estimated cost of a project, and no more. If the estimate is exceeded, the company must bear the extra cost itself. A ceiling is put on the size of the Government contribution, whether it is towards development cost, or towards tooling costs, or towards initiating a production run before firm orders have been signed. And the Government expects early repayment when sales are made.

But will the aircraft industry take a limitation of this kind seriously? When an airliner estimated to cost £14 million runs into teething troubles which bring its ultimate development cost nearer to £20 million, will the builder really believe that the Ministry of Aviation will dig in its toes when its quota of £7 million is exhausted? Will the Government refuse to advance another penny when the company pleads that it will be forced to abandon the project? If conditions are going to be really tough (against all past experience), Mr Sandys should make it clear beyond doubt at the very start, for there are already signs that this ebullient and technically versatile industry regards its troubles as at an end and expects its cornucopia to flow freely again.

The most significant feature of this policy for the aircraft

industry is that the industry is at risk as well as the Government—and potentially at much greater risk. But among airlines the question is already being asked whether it also means a return to the old division of responsibility which, they believe, was at the root of their postwar troubles. The air corporations fought hard for the right to place orders direct with the aircraft makers, rather than through the Ministry of Supply, because they wanted the final say on technical matters. If the new Ministry of Aviation is going to finance the development of civil aircraft, will it expect to have a say in what is built and how it is designed? And will its views on what is right technically inevitably coincide with what the airlines think is right commercially?

THE two nationalised corporations deserve the sop of a Government subsidy towards the cost of putting new aircraft types into service, if only because they may take a severe buffeting when Mr Sandys's new licensing bill comes into effect. This merely lays down a new procedure for licensing air services. It begins by repealing the statutory monopoly that the two corporations have over the routes that they now operate. It then gives licences to all airlines, corporations or independents (of a duration not specified but unlikely to be for longer than ten to fifteen years) to operate their present routes. Having cleared the ground in this way, it provides that any British airline, whether a nationalised corporation or a privately owned independent, that wants to start a new service must argue its case before a new Air Transport Licensing Board. It is not inconceivable, therefore, that the independent airlines will one day fly in open competition on the same routes as the nationalised corporations—not inconceivable but perhaps a little unlikely.

In considering applications, the board is told to take into account first, the ability of the airline to provide the kind of service it proposes; the ambition of some of the smaller independent airlines is inclined occasionally to outreach their resources. Then, it has to take account of the amount of capacity already on the route, how much traffic the new service would divert from existing British operators, and whether the latter have already incurred heavy capital commitments, for example, in the form of new aircraft ordered for the contested route. On the face of it, this looks much like the procedure now used when an independent airline applies for permission to run a new service—with the only difference that the corporations will have to go through the same drill. But this is not necessarily so. Two small words could make all the difference to the pattern of air transport in Britain. They are that the board "shall consider" all these aspects of a new service, and the amount of new competition that will confront the established operator (usually one or other nationalised corporation). But, having considered them, it is perfectly entitled to discard them. The board is not obliged to turn down any new service that causes a "material diversion of traffic" from an established operator, as the present licensing authority, the Air Transport Advisory Committee, is obliged to do. Under the new bill this is merely one of several factors to be weighed. The bill therefore gives the new board considerable liberty of action if it chooses to use it. Its functions are purely commercial; questions of safety are dealt with by a separate directorate, whose certificate is needed before a service can be operated. But it is also clear that the bill, as it stands, does not oblige the board to consider new applications liberally and the way it treats them is bound to depend on the kind of directive it gets from the Minister. A special difficulty is raised by the fact that while British European Airways is showing extremely good results, with a net profit of £2 millions in twelve months, British Overseas Airways Corporation is in no state to face competition from aggressive independent airlines flying cut-price services. Moreover, the corporation has just laboriously negotiated pooling agreements with Air India and Qantas in order to provide itself a little more freedom of manœuvre on routes to the East. If independent airlines are licensed to fly on these routes by the new board, all those delicately balanced positions will be worthless.

Mr Sandys seems to have taken to heart criticisms made by the Select Committee on Nationalised Industries about the powers that his predecessor, the Minister of Transport, exercised over the airlines without express legal, or Parliamentary sanction. In the new bill, he takes powers to approve fares, both domestic and international, and to veto decisions of the board where they affect international services. There are good reasons for this second power if not for the first. The right to fly into a foreign country has to be negotiated between governments, and has become a matter of unedifying horse trading. His experience of such negotiations in the four months he has been Minister of Aviation has convinced Mr Sandys that the untimely licensing of a small independent British airline could jeopardise negotiations at a critical point, and that he must have power to order the board to withhold a licence when, as the bill puts it "in the opinion of the Minister, it would be inexpedient."

ALTHOUGH the bill should be on the statute book and the new board formed by Whitsun, these reservations suggest that it is not likely to lead to immediate drastic changes, except possibly in domestic services. But it may mean that the two corporations, instead of brushing aside the independent airlines, will in future have to buy them off. In Africa, for example, where there has been mounting friction between independent airlines, which pioneered cut-price flights, and BOAC, which now wants to reduce its standard fares, the corporation and the two independent airlines, Hunting and Airwork, may now sink their differences and work out a pooling agreement along the contested routes. This is not competition, but it gives the independent airlines the prospect of more business and an increase in turnover to start putting their operations on a sound commercial footing.

One aspect of Mr Sandys's marathon performance this week appears to have passed unnoticed. At a time when such Government critics as Mr Thorneycroft are asking, after the railway debacle, for Ministers to be made responsible for nationalised industries, the Minister of Aviation has in fact come remarkably close to exercising just that form of responsibility over the industries in his charge: the aircraft industry which, if not formally nationalised, is to absorb a big and growing element of Government investment; and the nationalised air corporations over whose day to day workings he already exercises a fair measure of direct control. Whether this is the right way will be shown by the results of the two-fold policy for the aircraft industry and the airlines that he has expounded this week.

End of the German Miracle?

BY OUR SPECIAL CORRESPONDENT

SOME high-placed people in Germany today shrug off the *Wirtschaftswunder*, and the ordinary man may by now have grown used to the physical transformation. But to the economist not the least part of the marvel has been in the years after the initial recovery, as the German economy has demonstrated its continuing capacity to grow at an exceptional pace, and yet to keep prices almost stable. By 1950 west Germany's national product in real terms was reckoned to be back to the prewar level. By 1959 it had nearly doubled, having risen at a cumulative annual rate of over 7 per cent; west German prices meanwhile rose by an average of 1 per cent. No one expects this rate of expansion to continue; the practical and immediate question is whether even the more modest expansion expected in the 'sixties is attainable without a departure from the cherished price stability.

The west German economy in recent months, for the first time since the war, has reached the point of brimfull employment. In some measure this must mark a turning point. A number of the special economic influences in the country's growth have disappeared, and while important (and largely non-economic) special influences remain, the economy is increasingly facing the same kind of problems of prosperity that Britain and other western countries have lived with for years. Germany's response to these influences will affect other countries directly through its impact on Germany's large current surplus and its new exports of capital; and it is bound to be watched especially closely as a test whether a free economy can grow without inflation.

The visitor to Germany returning after a year quickly notices the change in economic atmosphere. The small talk of economic experience is not what one has been used to. Thus German workers no longer work as they did; builders in particular turn up just when they choose; labour discipline has disintegrated; and employers are poaching labour from each other. . . . Full employment, it seems, has an influence of its own on working habits, overriding national characteristics. The inflow of manpower from east Germany, which for years provided a reserve of additional labour, has fallen considerably, and the fall in the birth rate at the end of the war is now reducing the number of new entrants to industry. Unemployment dropped to 187,000 in the autumn, less than 1 per cent of the labour force. This drastic tightening in the labour market removes one of the main former bases of growth in output, and at the same time it strengthens the workers' bargaining power to secure increases in incomes.

Attention has therefore been focused on the coming wage negotiations, and all concerned are paying much attention to a memorandum issued by the central bank at the request of Dr Adenauer. This careful and detailed analysis of the scope for wage increases in 1960 provides a remarkable example of how a central bank can make its influence felt over wide sections of the community; it has been accepted by the trade unions as an impartial appraisal. The Bundesbank maintains its prime objective of holding prices steady. In the past year, it points out, the cost of living has risen by 4 per cent; and while this is attributable mainly to increases in food prices resulting from a bad harvest, the bank is worried about the pressure of excessive demand. Its restrictive steps in credit policy taken last autumn have not, it notes, secured due support from the Government's fiscal policy. Indirectly, however, an impact has been made. By weakening Germany's delicate (and bank-dominated) market in fixed-interest securities, tight money has forced the finance minister to cut down his original programme of loan financing, and he is now considering tax increases and a curb on public spending.

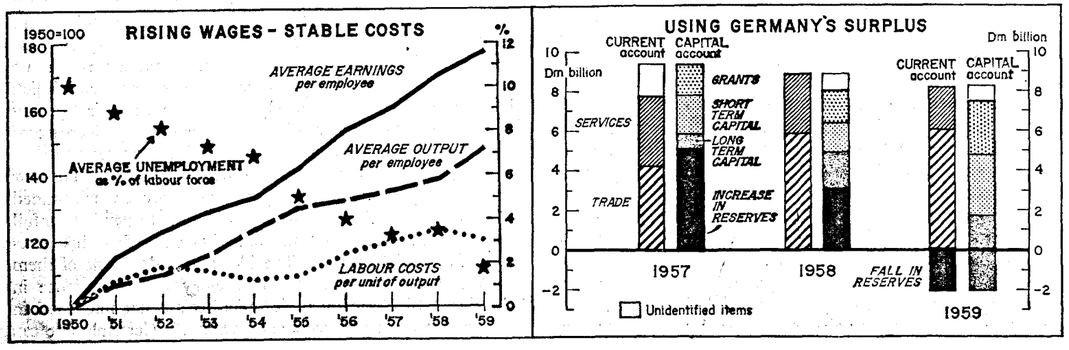
Dr Karl Blessing
President of the Bundesbank

THE Bundesbank recognises the case for wage increases in principle—this is what gladdens the unions—and it argues that the scope for such increases could be enlarged if industrialists took opportunities to cut prices (they are reprimanded for failing to do so in 1958-59) and if the Government allowed more cheap imports of agricultural products. But failing such action, and counting on an increase in the labour force of only 1 per cent and a rise in total national product of 4-5 per cent in 1960, it implies that the rise in average productivity of 3-4 per cent will be the effective limit to "price-neutral" increases in wages. The central bank states that it will be necessary "in any case" to cut away excessive demand, which would pose a threat to price stability whatever happened to wage contracts. But it gives warning that an undue rise in negotiated wage rates would force it to intensify credit restrictions to the point where they produced the requisite change in market conditions—and that in these conditions investment, and employment, would fall. Thus neatly and unexceptionably, the German central bank puts the case for wage restraint without allowing anyone to think that it is handing over control.

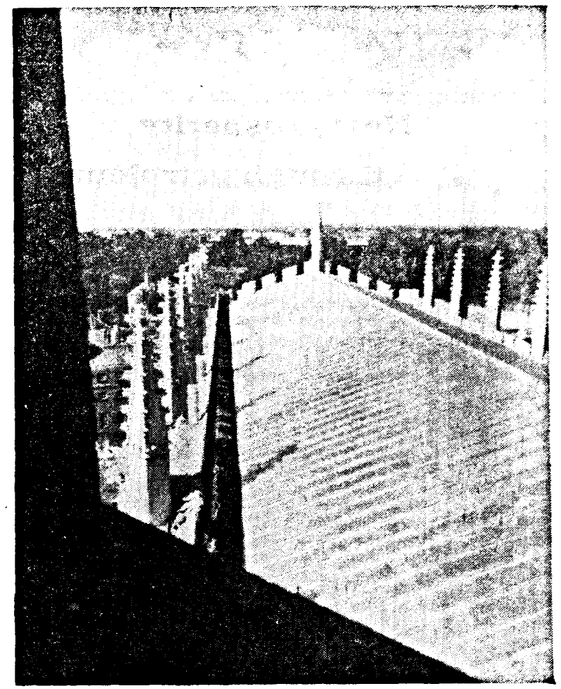
Opinions differ about the outcome. By no means all bankers and industrialists are pessimistic. A surprising number of them pay tribute to the unions' past restraint and opine, privately, that it is time that wage earners got a bigger slice of the cake. Profit margins, as the Bundesbank points out, have generally been raised in the past year as capacity has been more fully worked. Some big firms might this year be able to absorb wage increases of as much as 8 per cent (which is what the unions may really be after with their opening demands of 12-15 per cent); but a general wage increase of this scale would surely provoke some price increases.

Fears of a round of inflationary wage increases are not new in Germany, and in past years they proved unfounded when it came to the crunch. What is new to-day is brimfull employment. German trade unionists deny that this gives cause for special anxiety. The idea that it does, one of them said, is based on a misleading analogy with experience in Britain: "In Germany trade unionists are not interested in claims that will upset economic stability." Certainly one can

see special influences. There is the delicate political situation, the constant awareness of the proximity and danger of *der Osten* which makes west Germany even today something of a country on trial: there has been no national strike since the war for fundamentally the same reason that there was no national strike in Britain during the war. Secondly, memory of the hyper-inflations after 1918 and 1945 remains alive, exerting a psychological impact of at least the same force as British memories of unemployment between the wars. And, thirdly, the resulting restraint in trade union bargaining has developed a logic of its own over the years. Wage earners see that their policy has paid off; and while west Germany today can reasonably be represented as a rich man's paradise, the public standing of the unions seems high.



Yet, whatever the special circumstances, full employment does surely change the balance of bargaining power; and the economic observer from outside finds it difficult to believe that this will not make its mark. If German unions sensibly decline to exploit their power to raise money wages by more than the economy can afford, might they, say, drive for more progressive social and fiscal policies?

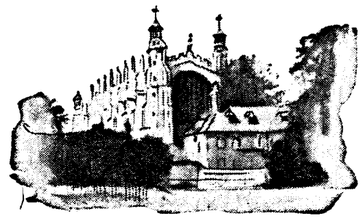


By whatever means, consumption seems likely in coming years to receive a larger share of the German national product. That could lead to some reduction in Germany's massive surplus in overseas trade and current payments (which in each of the past three years has been around DM8 billion, or £650-£700 million). Imports have risen steeply, especially of manufactured goods, and Germans have been spending much more on foreign travel; but so far these influences have been offset by a big fall in import prices and a strong rise in exports, as well as by the incorporation of the Saar in 1959. Despite the strength of export orders, it would not be surprising to see some fall in the current surplus this year.

There may also be a matching fall in exports of capital. In 1959 Germany achieved what many of its critics had declared to be impossible: its current surplus was more than offset by its outgoings on capital account, and its reserves fell. Special influences that cannot be expected to recur accounted for perhaps one-third of the capital outflow, and now German interest rates are again rising. There is certainly little scope for issues of foreign loans on the German market while it finds difficulty in absorbing a German government loan yielding 6.36 per cent. And the German banks no longer have the same incentive to hold liquid funds abroad. But capital exports as a whole may not be too badly hit by tighter money.

The Bundesbank has taken specific steps to discourage an influx of short-term funds; it manipulates the forward exchange rate to give German banks exchange cover abroad at no cost, and it has imposed a penal reserve requirement on foreign deposits in Germany. In the first weeks of 1960 money has been flowing out of Germany again. In the long-term market private money has been flowing abroad mainly through purchases of foreign securities, of DM1.4 billion in 1960. The burst of German buying—almost half of it on stock exchanges in other countries of the common market—was associated partly with an outcrop of new unit trusts. These may not succeed in maintaining their initial momentum, but Germans as a whole are undoubtedly becoming more interested in share buying; and since the markets in shares of German companies are narrow and dividend yields are low, foreign shares are likely to continue in demand. At the same time, direct investment by private firms may be encouraged by the new official guarantee scheme (comparable to export credit insurance). And the German authorities seem conscious of the need to increase the flow of official capital to the developing countries, though they are under constant pressure from German industry to tie this to purchases of German goods.

It is premature therefore to raise the cry that Germany is once again upsetting the world's financial applecart by an over-strict domestic policy. Frankfurt today is as sensitive to its international responsibilities as any financial centre. In fact its present domestic policies are not subject to the same criticisms as similar policies were a few years ago—in the first place Germany is not today draining off reserves from the rest of the world, and in the second the German economy today is demonstrably in need of restraint. The economists at OEEC may regret that the whole burden has fallen on monetary policy; so does Herr Blessing. But too much should not be made of the difference in external impact of tight money and deflationary fiscal measures; and it is odd at this stage to "regret" such measures because the current surplus is very large. Three years ago there seemed no other solution for that surplus than upvaluation of the mark. Now Germany has shown that at least for one year it can produce the requisite offset in exports of capital, which is much more desirable for the world than adjustment of the current balance. The best chance of maintaining that capital outflow is to continue to keep the economy free of inflation.

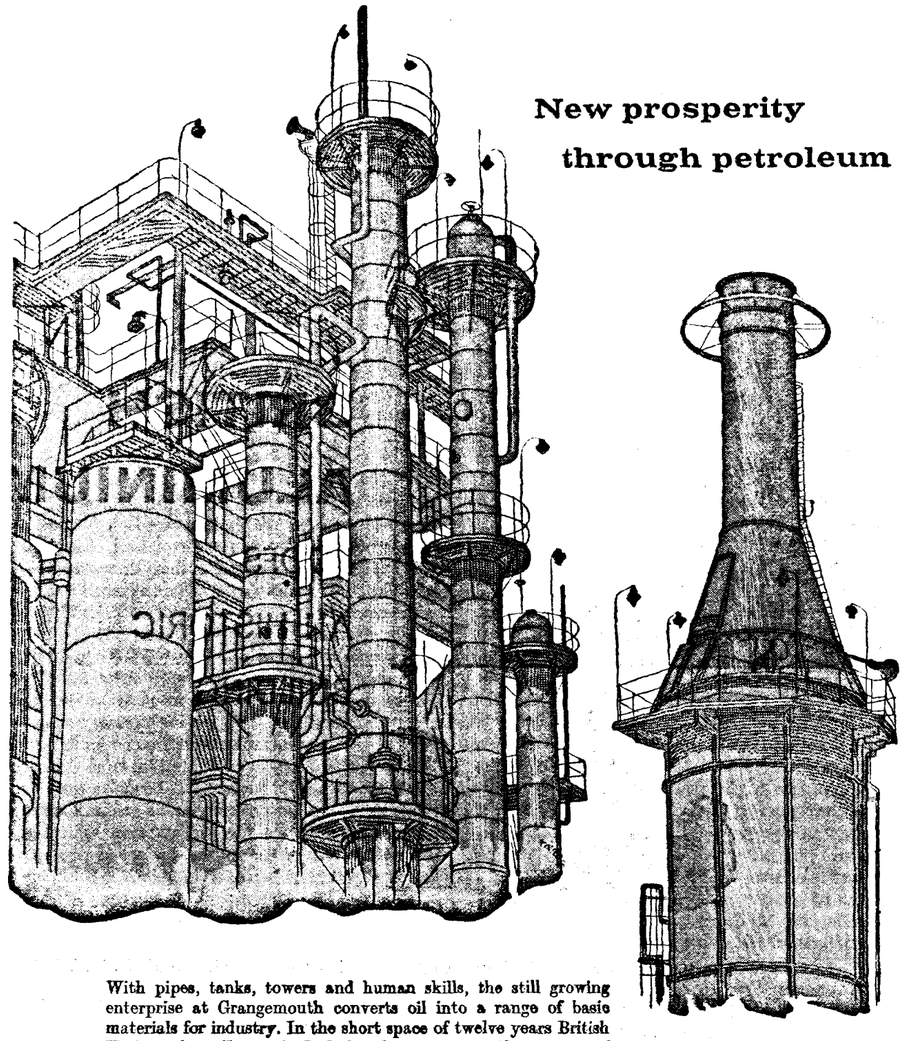


BRITISH ALUMINIUM

ROOFS

AN HISTORIC

BUILDING



The 15th-century Chapel of Eton College has been completely reroofed with BA Super Purity (99.99%) aluminium. Preformed aluminium channels replace the customary wooden batten rolls, and the roof contains no timber whatsoever. Super Purity aluminium was chosen because of its long life, light weight and ease of working by traditional methods. Furthermore, its texture after weathering will be entirely in keeping with the appearance of this ancient building.

BUSINESS NOTES

THE BUDGET

A New Shock

WITHIN one week Whitehall has dealt out two major blows against price stability, and the chance of continuing economic expansion without major disruptions, to which the Chancellor has given such importance, has unmistakably faded. Following the last-minute surrender to the railwaymen, the Government on Wednesday published the vote on account showing an estimated rise in total supply expenditure in the coming budget year of £341 million, or 7½ per cent, above the budgeted total for 1959-60. That is the biggest increase since the post-Korean budget of 1951; Mr Thorneycroft and his team resigned in 1958 over £189 million.

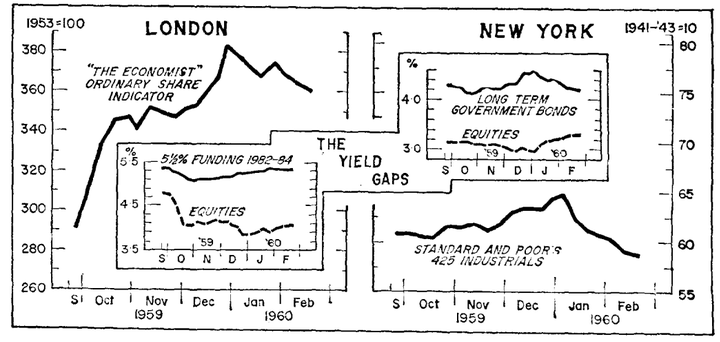
SHAPE OF THE BUDGET

(£ million)

	Budget estimate, 1959–60	Estimate, 1960–61	Expected change
Defence expenditure*	1,533	1,618	+ 85
Admiralty	*371*	*398*	*+ 27*
War Office	*431*	*477*	*+ 46*
Air Ministry	*491*	*527*	*+ 37*
Ministry of Supply	*191*	—	+ 7
Ministry of Aviation	—	*199*	
Ministry of Defence	*17*	*17*	—
Civil expenditure	2,962*	3,218	+256
Total supply services	4,495	4,836	+341
Consolidated fund	728	n.a.	n.a.
Total ordinary expend.	5,223	n.a.	n.a.

* Defence expenditures are given net of receipts from Germany and after addition of votes hitherto included in civil estimates. To give a true comparison, the total defence estimate for 1959–60 is here written up by £31 million (no adjustment is possible on the individual votes), and last year's civil estimate is written down by the same amount.

One quarter of the increase is accounted for by defence expenditure, up £85 million after adjustment for German aid and accounting changes; the wider policy questions are discussed in a leading article. Education and grants to local authorities will be up by some £66 million above the original estimates for the current year (as distinct from the official basis of comparison with original estimates plus supplementaries, which is not comparing like with like); the "teachers' tenner" granted by the Burnham award is the main influence, and the Treasury assumes that no comparable award will be granted this year or next. The health service takes £46 million more than budgeted for last April; moreover, this estimate excludes the effects of the Pilkington commission's proposals for doctors' pay, which would cost £20 million a year plus another £20 million of retrospective payments. The National Assistance Board needs another £42 million (a rise of 30 per cent); scales were raised in the autumn, and the cost appears to have been under-estimated because the increases have encouraged more people to draw. The estimate for roads is up from £108 million to £121 million, and the Board of Trade's new schemes to rationalise the cotton industry and divert the location of the motor industry involve additional estimates of £19 million. The proposed loans to steel companies (eventually reaching a figure of £120 million) will be in the below-line estimates. These, together with the estimate for the consolidated fund (which is likely to be up as a result of the rise in short-term interest rates) will be announced only in the Budget speech.



TREASURY ministers point out that it is only reasonable that public services should rise in line with private spending. That may well be so (even if this year's increases will involve a rise in proportion to national income); but if responsible ministers want to pursue worthy causes they must make provision for them. They might have chosen to give the taxpayer less than £360 million last April; or they might now choose to take some of those reliefs away by increasing taxes this April. After the lapses of the past week, "no change" on Budget day may not be enough. The economic fact is that there is no room for a net injection of new demand from the budget in the coming year. No one should be deluded by the fact that the budget surplus in the current fiscal year will certainly be much larger than was estimated; that performance is due largely to the very buoyancy of the economy. Whatever this year's surplus turns out to be, next year's ought to be larger, before allowing for inflationary buoyancy.

IN THE MARKETS

Touching Faith

THE London stock markets have so far shown a remarkable faith that the authorities mean business. That seems the only rationale of this week's price movements; and similar confidence is evident in the foreign exchange markets, where sterling has been in demand from the Continent and New York and the Exchange Account has been able to take back some of the gold lost before the increase in Bank rate. The downward drift in equity prices last week was universally attributed to the threat of the rail strike; yet when that threat was removed, equity prices, after a halfhearted rally, fell more heavily than before. In the week to Wednesday, *The Economist* share indicator fell by 4.3 points to 360.3, about 6 per cent below its end-1959 peak. At the same time, gilt-edged have been generally firm, except on Wednesday when selling by the banks was again noticeable. They made slight gains on Thursday, as did some equities which were influenced by the rally on Wall Street. Even so, the industrial market was patchy. This is a notable performance in a week in which the threat of wage inflation has loomed large; the markets evidently feel that whatever inflation may appear the authorities will put down, possibly with damaging effects on production and profits.

The reversal of the scissors movement between gilt-edged and equities is one that many people felt was due after the election upsurge; and the movement is still modest compared with that in Wall Street, where

equity prices have fallen faster (to around 10 per cent below the new year peak) and prices of Government bonds have at last turned upward. The early weakness in common stocks on Wall Street naturally had repercussions in London. On Wednesday selling from the Cape and the Continent, induced primarily by a fear that Wall Street itself might sell, brought Kaffir prices down sharply, and leading OFS mines such as Western Holdings and Free State Geduld, on which handsome capital profits were to be taken, lost heavily. Sales have not been substantial and so far very few have actually come from Wall Street.

Another dampening influence in Throgmorton Street has been the renewed disquiet about the boom in equity shares expressed last Friday by the Governor of the Bank of England—though Mr Cobbold referred to the "great problem" of "too much money chasing too few first-class shares," and refused to commit himself on whether the present yield basis is justified. The governor said it was difficult to detect any falling off in the growth of consumer expenditure; the Board of Trade however has ventured the forecast that hire purchase, owing to the growing weight of repayments, will be a factor tending to restrict demand this year. Mr Cobbold expects the trend of bank advances to continue upwards if only because of commitments already made, but he sees signs of, and would welcome, some flattening of the pace of increase. He made it clear that the primary reason for last month's increase in Bank rate was domestic ("I would rather see some resort to use of reserves than a slavish following of interest rate movements made by other countries for their own reasons"); in the last month or two there have been signs that Britain's economy may be coming to "the verge of overstrain." Mr Cobbold said too: "We shall . . . not hesitate to take further restraining measures if they seem necessary." They seem distinctly more necessary now than when he spoke.

Adding to the Supply

ONE source of new first-class shares is the rights issue, and it happened that the day after Mr Cobbold had made his speech two such issues were announced. The issue by Tube Investments, raising £21 million, is one of the biggest ever made by an industrial company. Like the issue made by TI in 1955 it is on bonus terms. Ordinary shareholders are offered one new £1 share at 25s. each for every share they hold. The interim dividend on the present capital will be 7½ per cent and the final on the doubled capital will not be less than 8½ per cent. The new shares are thus being offered on a dividend of not less than 12½ per cent. The first reaction in the stock market was to mark the existing shares up from 124s. 9d. to 130s. 6d. The jobbers seem to have been unduly hopeful. After investors had had second thoughts, the price came down to 118s. Second thoughts were necessary, for the weight of the issue is heavy. It is designed, moreover, to finance additional capacity in the tube, steel and electrical divisions, further investments overseas and extra working capital and it will not take care of the capital needs of the aluminium division. This division will raise its own new money and plans for it to do so are now under consideration.

With the old shares at 118s. the rights are worth 46s. 6d. and the yield on an ex-rights price of 71s. 6d. is 3.5 per cent. This compares with the pre-issue yield of 3.1 per cent offered on the 1958-59 dividend of 20 per cent. To sell the rights therefore is to lose the bonus element. Understandably, the issue is not being underwritten and any shares not taken up will be sold by Helbert Wagg and J. Henry Schroder for the benefit of shareholders entitled to them.

The rights issue by Phœnix Assurance, too, is not being underwritten. It is much smaller and more orthodox than TI's. About £5 million will be raised by a one-for-four offer of 1,039,762 new 5s. shares at £5 each. On the eve of this offer the old shares stood at 131s. 10½d. putting a value of 6s. 4½d. on the rights. But when dealings began in the shares ex-rights the price came down to 120s. On the assumption of a full year's dividend of 100 per cent, the yield at that price is about 4.2 per cent.

RAILWAYS

Counting the Cost

THE Transport Commission made, it stated in its re-appraisal of the railway modernisation programme last June, "some provision for an improvement in pay as the number of staff falls." With a better paid but smaller staff it thus counted on the total railway wage bill rising only slightly between 1957 and 1963—by which time, the commission was still hoping, British Railways would be earning a working surplus of between £18 million and £68 million a year before meeting their share of the commission's capital charges (a share that by then, however, will have reached at least £65 million a year).

The increases in railwaymen's pay now in train have quite clearly knocked this doubtful calculation into a cocked hat. Railway manpower has certainly been falling: numbers are already down by nearly a tenth since 1957, which is more than the commission bargained for. But last week's interim wage increase of five per cent (costing £19 million in a full year) and the final settlement to come after the Guillebaud report appears are together likely to add at least £40 million to the commission's total annual wage bill. Nearly all of this will fall upon the railways: London Transport's share will be just over £1 million.

There cannot be much hope of recouping more than a small part of this substantial addition to the railways' working expenses, already more than £500 million a year, from higher freight and passenger charges. The railways have few "monopoly" traffics now, even in freight transport which brings in 70 per cent of their total revenue. An increase in coal freights would only hasten the decline in that traffic, still the railways' biggest. Higher charges for minerals traffic, mainly materials for the steel industry, would encourage a bigger switch to road transport. And in "general" merchandise the commission is already finding it necessary to cut charges in order to maintain its total receipts. An increase in passenger fares is more possible, particularly as the main and branch line stopping services and the suburban services around large cities are earning far less than they cost. But even on the passenger side the possibility of getting much extra net revenue is not large.

The upshot then can only be a bigger deficit, which the government will be called upon to meet sooner or later. This year's loss on the railways will be huge by any measure. Including all interest charges, the railways lost £106 million in 1958. Last year's deficit cannot have been smaller. But the railways are not alone in benefiting from the new fashion in public assistance for major industries, viable or otherwise. Railways, cotton, motors, steel—the list is growing. The Treasury loan of £70 million to Richard Thomas and Baldwins to help finance the £110 million strip mill at Newport is one prime example. The public offer of this still nationalised company, which may not be long delayed, is likely to be a raging success: the need for government money, to the order of £70 million or more (additional funds are to come from the Iron and Steel Holding and Realisation Agency) becomes harder to see.

TAXING FRINGE BENEFITS

New or Secondhand?

AS more and more of an employee's true remuneration is expressed in a form other than money the conclusion of the Royal Commission on Taxation that the provision of untaxable benefits in kind is capable of becoming an abuse of the tax system becomes self-evident. The case of *Wilkins v. Rogerson* which the Revenue lost in the Chancery Division this week is an example—by no means extreme—of what can be done and is increasingly being done. Mr Rogerson's employers made arrangements for him, and other employees, to obtain a suit of clothes from Montague Burton Limited who sent the bill to the employers. Here was a benefit but it was not convertible into cash to the full extent of the cost of the new suit—£14. The only convertible benefit that could be taxed was found by Mr Justice Danckwerts (following the Special Commissioners) to be the amount for which Mr Rogerson could have sold the secondhand suit—even though it might have been unworn—namely £5.

MONOPOLIES COMMISSION

Useful Facts About Fertilisers

THE work of the Monopolies Commission is by nature both slow and of uncertain effectiveness. The Restrictive Practices Act of 1956 (which set up the Restrictive Practices Court and gave it jurisdiction over collective agreements) limited the commission to dealing chiefly with "single-firm monopolies"—defined to apply when one firm or group controls more than one-third of the output of a product. The court is backed by the force of a law which places the burden of proof on the defendant; by contrast, the commission's recommendations by themselves have no statutory backing at all. Despite these drawbacks, the commission makes known a great many facts—most of which would never be obtainable in any other way—about industries and firms little subject to competitive pressure, and this has done a good deal to amend their ways.

The commission's report on the supply of chemical fertilisers (HMSO, 10s. 6d.), published this week, contains copious facts but draws no really surprising conclusions. The more important of its two recommendations appears already to have been anticipated by the company concerned. The original reference to the commission was made in October 1955, and the report was completed last July; it deals principally with the industry's operations between July 1953 and June 1957, though in some cases later figures have been added. An unstated part of the industry's output is the subject of four restrictive trade agreements, which the commission was precluded from bringing into its account, since these agreements are now in the province of the Registrar of Restrictive Practices. Another part—the production of ground rock phosphates, the value of which totalled some £400,000 in 1957-58—was not considered in detail because no single firm controlled one-third of that market.

The rest of the industry's output, which in total was worth about £100 million last year, falls into five categories: nitrogenous fertilisers, potash, superphosphates, basic slag and compound fertilisers (mixtures of nitrogen, phosphorus and potash). Three of these five groups, as the table shows, are dominated by either Imperial Chemical Industries or Fisons. In the case of potash a single firm, Potash Ltd., controls four-fifths of the market. And in the fifth group, basic slag, Fisons and British Basic Slag account for three-fourths of total output.

OUTPUT OF FERTILISERS, 1957–58

	'000 tons	£mn.
Nitrogenous Fertilisers		
Total supplies	1,232	23·5
Supplied by ICI	915	17·2
Per cent of total	74·3	73·4
Potash		
Total supplies	600	9·4
Supplied by Potash, Ltd.	459	7·5
Per cent of total	76·5	79·8
Superphosphates		
Total supplies	282	4·6
Supplied by Fisons	121	2·3
Per cent of total	43·0	50·2
Basic Slag		
Total supplies	759	5·3
Supplied by Fisons	305	2·2
Per cent of total	40·2	41·5
Supplied by Brit. Basic Slag	284	1·8
Per cent of total	37·4	33·5
Compound Fertilisers		
Total supplies	2,367	57·7
Supplied by Fisons	1,018	25·1
Per cent of total	43·0	43·4

The British fertiliser industry has a long record of monopoly and restrictionism, including participation in the European nitrogen cartel in the 1930's; in addition it receives considerable tariff protection (though import quotas were ended in December 1958). Demand has been rising in recent years, and is likely to go on rising—aided by the substantial subsidies towards the cost of fertiliser purchases given to farmers under various Agriculture Acts.

Much of the report is taken up by arguments—not all of them fruitful—over the companies' accounting practices and pricing methods. ICI's method of asset revaluation is rejected, as is Fisons' use of "historical cost of fixed assets less depreciation", in favour of straight historical cost so as to compare the companies' profits with those of industry generally and with each other. The comparative figures obtained are, in part, as follows:

PROFITS ON CAPITAL

(per cent)	1953–54	1954–55	1955–56	1956–57
All manufacturing inds.	16·9	17·3	16·9	16·0
Chemical and Paints (excluding ICI)	12·5	12·0	12·5	15·0
Fisons	23·0	23·0	29·3	21·6
ICI	13·6	8·9	17·3	17·5

(ICI submitted to voluntary price control during 1953-54 and 1954-55; its figure for 1956-57 is approximate.)

From these calculations the commission concludes that neither ICI's "monopoly" nor anything done by the company operates or may be expected to act against the public interest. It holds that Fisons' monopoly, as such, does not operate against the public interest; but states that the company's level of prices for superphosphates and compounds, which produced the high profits in the years covered by the table, did operate against the public interest. While the commission does not believe that Fisons deliberately acted against the public interest it recommends that the company should adjust its pricing policy to yield a lower level of profit in the future.

The case of Potash Ltd. is more difficult. The company is an importing organisation believed to be owned by French and German potash producers (though this—and a great deal of information about the company's operations—could not be secured). The commission reports that "there are no things done by Potash Ltd. which operate or may be expected to operate against the public interest, but the fact that the company is part of an international organisation designed to eliminate competition operates against the public interest". The commission, with a reservation from one member, states that everything possible should be done to stimulate competition in potash from other foreign sources, such as Canada, the United States, Israel and Russia. It adds that the Government should consult with ICI, Fisons and other large buyers of potash in an effort to make better use of the companies' "aggregate buying power".

THE commission—Professor G. C. Allen dissenting—approves of the uniform delivered pricing system now used in England and Wales; Professor Allen sensibly condemns this hidden subsidy to farmers in remote areas, and favours ex-works pricing instead.

ICI is understandably pleased with the commission's findings. Commenting on the report at a press conference this week, Sir Clavering Fison accepted completely the commission's criticisms of Fisons' past pricing policies, but added that since 1957, the last year covered by the report, the company had modified its pricing policy, and reduced its profits accordingly. In the past the company had aimed at a return of 20 per cent on capital employed. This level has since been lowered "because of competition," Sir Clavering claimed; it is also a fact that raw material costs fell by ten per cent in 1957-59. In June 1958 prices of all fertilisers sold by the company were reduced, by 13s.-18s. for compounds and by 10s.-25s. for superphosphates. Last June the prices of compounds were cut by a further 15s.-20s. but the price of superphosphates was not changed.

This brought the company's profits on fertiliser production down from 21.6 per cent in 1956-57 to 19 per cent in 1957-58, and to 17.5 per cent in 1958-59. (It should be added that a similar calculation for the "all manufacturing industries" group during these two recession years would show that profits probably fell by 1-2 per cent in 1957-58, and may have fallen even further in 1958-59.) Part of the fall in Fisons' profits may be due to lower sales in 1958-59. In addition capital employed by the firm rose, owing to the completion last year of a £4½ million project including an ammonia plant at Stanford-le-Hope; this plant is not yet operating at full capacity.

Fisons had argued to the commission that it was necessary to retain substantial profits between 1945 and 1957 in order to attract outside capital. The commission, in rejecting this argument for overpricing, noted that a substantial part of Fisons' new investment in recent years has been in areas other than fertiliser production. However it was financed, this investment has paid off: though profits from fertiliser manufacture fell last year, profits from other activities rose sufficiently for the dividend to be raised from 9 to 10 per cent.

Continued from page 740

The decision will not cause surprise, for it has long been recognised that employees (other than directors and the £2,000 a year plus class covered by the 1948 legislation on the taxation of "inconvertible" benefits), may receive many forms of untaxable emoluments—cars, holidays, children's schooling, free coal, groceries, clothes, and many other amenities. The one proviso is that the employer is not discharging a pecuniary liability which the employee has himself undertaken—in other words the supplier must contract with the employer, and not with the employee. What is surprising is that the Revenue should have brought a case which they clearly had so little chance of winning. The conclusion can only be that Somerset House decided to bring this as a test case to demonstrate the weakness of their position. They have played poker with a poor hand for too long. The cards are now with the Chancellor and he can hardly ignore them; the possibilities for the exploitation of arrangements for paying remuneration in a non-taxable form are exposed for all to see. It will not be easy to draft legislation to stop it nor when the legislation exists, to police it effectively. But the effort will have to be made.

BIDS AND DEALS

Rejection and Negotiation

THREE important moves in take-overs and mergers were made this week:

1. In a circular to the 3,600 ordinary shareholders Mr Geoffrey Eley, the chairman of British Drug Houses, recommends that Fisons' offer of one of its ordinary shares plus 5s. in cash for every two ordinary shares in BDH should not be accepted. Mr Eley said that he was informed only two days before the public announcement that such a bid was being made. He claims that BDH is expanding rapidly; two successful wholesale chemist businesses in the West Country have been recently acquired, sales of the wholesale department are expected to rise by at least 30 per cent this year and the first stage of a £750,000 expansion programme for the laboratory chemical side of the business has been completed. Gross profits for the year to December 31, 1959, are expected to amount to not less than £600,000 (against £551,000) and it is intended to double the ordinary dividend from 12 per cent to 24 per cent. A 50 per cent scrip issue is also proposed. Shareholders will no doubt welcome this news, but at the same time they may ask why a more generous policy was not pursued in the past. On this news BDH ordinary rose only 6d. to 29s., which compares with a price of 23s. 3d. before the Fisons offer, which with its shares standing at 49s. 3d. is now worth 27s. 1½d.
2. Negotiations are taking place with a view to a merger between Charles Roberts and the Birmingham Railway Carriage and Wagon Company. Only last week the directors of Birmingham Railway Carriage denied that a take-over bid had been made or was expected but they said that they were trying to find a suitable means of diversifying the group's activities or of improving its prospects in other ways. If the merger goes through the total assets of the group would be about £10 million. Both companies make railway wagons and both have been affected by the cut back in British Railways wagon replacement programme. Birmingham Railway Carriage also makes locomotives, and Charles Roberts has a rapidly expanding hire purchase interest. Charles Roberts 5s. shares stand at 16s. 9d. to put a value of about £5 million on the equity. Birmingham Railway Carriage £1 shares stand at 43s. (having risen by 13s. in the last three weeks), which puts a value of over £2 million on its issued ordinary capital.
3. A merger has been arranged between two Yorkshire breweries, Hammonds United, Hope and Anchor and John Jeffrey of Edinburgh. The new group will be called Northern Breweries and Hammonds' shareholders will be offered eight shares in the new company for every five 5s. shares they hold. Hope and Anchor shareholders will receive four shares for each £1 share and Jeffrey shareholders will receive eight shares for each of their £1 shares. After the merger Hammonds' shareholders will hold 67.9 per cent of the ordinary capital, Hope and Anchor shareholders 25.8 per cent and John Jeffrey shareholders 6.3 per cent. For the full year to September 30, 1961, a dividend of not less than 10 per cent will be paid by Northern Breweries. Canadian Breweries Limited has substantial interests in Hope and Anchor and John Jeffrey and both its chairman and president will be on the board of Northern Breweries.

GAS

Ambitions Afresh

SIX years ago, the Gas Council estimated that between 1953 and 1960 Britain's demand for gas would rise by 16 per cent, to 2,924 million therms a year; in the first six years of that seven-year period sales rose in fact only to 2,605 million therms, or just over 3 per cent, having touched a peak in 1956 and fallen ever since. The industry had intended to rely partly on buying gas from coke ovens and oil refineries to meet the extra demand that it expected, but also to invest some £346 million during the seven-year period, to modernise and increase its gas-making capacity. In the first six years of the seven-year period it did in fact spend about £310 million of that planned investment, but increased its capacity much less than it had intended, presumably by taking out obsolete plant and continuing the integration of local gas grids faster than it had expected to be able to.

In a new seven-year plan published this week, "Gas Looks Ahead," the council hopes "conservatively" that it can arrest the decline in sales and, by 1965-66, raise them to 2,839 million therms, which is rather less than it had hoped at an earlier stage to be selling by now. It does not think this will need any addition to its gas-making capacity; but it does feel that to achieve this in a highly competitive fuel market the industry will need to invest £352 million between 1958-59 and 1965-66 in modernising plant and extending mains for the more intensive use of the more efficient works. Technically, its plans include a further switch to oil, which by 1965-66 should provide the primary fuel for about 14 per cent of its capacity. The council recognises that there is little more progress to be made with gas-making processes based on the carbonisation of coal, and intends to switch towards processes involving the total gasification of coal and of oil. It says little directly in this plan about its hopes for importing natural gas, though these are in no way diminished; so far, apparently, no formal proposals have gone to the Minister of Power.

Of the £366 million that it intended to invest in fixed and working capital under its earlier programme, the gas industry expected to provide some £151 million from internal resources, and to borrow £274 million, while repaying £59 million of earlier loans; it appears in the first six of those seven years to have borrowed about £227 million out of £350 million while repaying £38 million, which is rather better than the proportion of net borrowing that it expected. Of the next £370 million, it proposes to borrow from the Minister £168 million while repaying £54 million of earlier loans, providing nearly 70 per cent of its net requirements of fixed and working capital by self-financing. Against the record of hopes and actual achievement, the gas industry's new look ahead may appear optimistic, as compared, for example, with the downward revision of the Coal Board's estimates of future demand. But its plans also suggest that more technical effort is now being exerted in this industry—and with greater confidence—than in coal.

OVERSEAS TRADE

Exports a Record

IT was a pretty safe bet that British exports would set a new record in January, and so they have. Provisional returns show that exports rose sharply by £20 million to £316.3 million fob, which was £10 million above the previous peak in October and £16 million above the monthly average for the last quarter of 1959.

UNITED KINGDOM TRADE
(Recorded values: £ million per month)

	Exports f.o.b.	Imports c.i.f.	Re-exports f.o.b.
1959	277·1	332·5	10·9
1959—1st quarter ..	263·4	313·6	11·1
2nd quarter ..	281·8	327·8	10·7
3rd quarter ..	263·2	327·9	9·9
4th quarter ..	300·2	360·7	11·7
August.....	255·5	305·2	9·3
September ...	246·5	330·1	11·2
October	306·0	360·2	14·6
November ...	298·3	356·9	9·5
December ...	296·6	371·9	10·7
1960—January	316·3	367·3	12·0

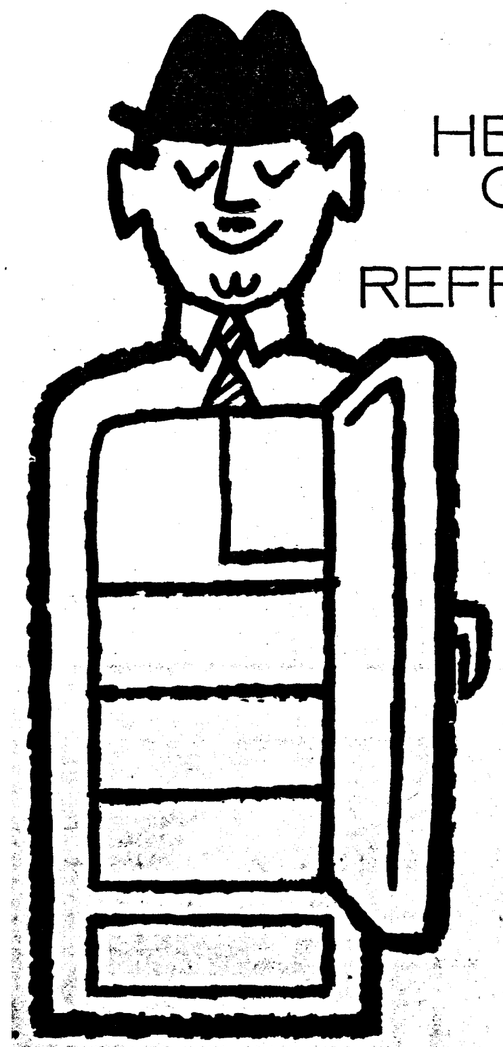
Imports remained high: they fell by only £4½ million to £367.3 million cif, and were £6½ million above the average for the fourth quarter. The Board of Trade estimates

• SALES CONVENTIONS • COMPANY MEETINGS • TRADE CONFERENCES • DINNERS • FILM SHOWS • TRADE MISSIONS • EXHIBITIONS • DEMONSTRATIONS • TELEVISION • ADVERTISING PRESS & PUBLICITY FUNCTIONS • SOCIETIES • INTERNATIONAL CONFERENCES • LUNCHEONS • COCKTAILS • PARTIES • BANQUETS • REUNIONS •

"Congratulations on your company's very successful year!"

"Thanks, it really was quite outstanding. We included private trade shows at the Connaught Rooms in our sales drive and the results far exceeded our expectations. In addition, I and my co-directors held a series of receptions there which resulted in a lot of new business and saved us all—especially the sales side—a great deal of time and effort.

In the Princes Restaurant here we can have one of the best lunches in London and they can show us the rooms afterwards. You won't find a better place for your show."



The Connaught Rooms were the first to install permanent closed circuit television and a simultaneous multi-lingual translation system. Other facilities include film projection and tape recorders. There are twenty-six rooms available. The finest food and wine are served with an excellence which comes from years of experience

SHOULD GET IN TOUCH WITH LORIVAL

(THEY'RE **LIVELY** LADS AT **LORIVAL**)

It's a fact – they're lively lads at Lorival ! They're the picked men of the plastics world. Let them help you in production planning, scheduling, lowering production costs and boosting production. You'll get first-class work from Lorival – high finish, true colours, precise accuracy of all repetition parts. So call in Lorival and their lively lads. It's good business for you !

LORIVAL PLASTICS

that after eliminating normal seasonal variation, exports in the three months November to January were 4 per cent higher than in the three months August to October, and 7 per cent above the average for the whole of last year. Imports, on the same reckoning, were 8 per cent higher in the last three months than the August-October average, and 10 per cent above the average for the whole of 1959. With re-exports at £12 million in January, the apparent deficit dropped sharply by £25½ million to £39 million ; this was nearly £10 million below the average monthly deficit for the fourth quarter, and £5½ million below the average for the whole of 1959. The new year has certainly opened more promisingly than the old one closed.

Recovery in the Sterling Area

By the third quarter of last year, exports from overseas sterling countries had largely recovered from the 1957-58 recession. The value of their exports in that quarter was £998 million, which was 16 per cent higher than in the same quarter of 1958, and the total for the six months April to September, at £1,996 million, was slightly higher than in the same months of 1957. In its latest summary of sterling area trade, the Board of Trade says that preliminary figures suggest that a further marked rise in exports occurred in the fourth quarter.

TRADE OF OVERSEAS STERLING COUNTRIES

Quarterly averages : £ million

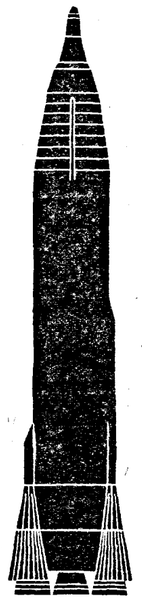
3rd qtr.	493	505	154	157	998



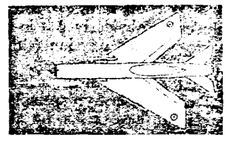
* Includes re-exports ; excludes Middle East Oil.

As in Britain, the rise is mainly attributable to bigger shipments to the non-sterling world. Between the first nine months of 1958 and of 1959 overseas sterling exports rose by ten per cent, with shipments to non-sterling countries rising by 16 per cent, and shipments to the dollar area alone rising by nearly one-quarter. Most commodities contributed to the improvement, the main exceptions being raw cotton and jute, tea and fruit. Exports of rubber, at £253 million, were £76½ million higher than in the first nine months of 1958 ; exports of copper, at £97 million, showed a rise of £28 million and exports of meat were £27½ million higher at £139 million. Wool, the largest single item, was only £20 million higher at £289 million ; while the quantity exported rose sharply, the average price was lower than in 1958.

Imports into overseas sterling countries

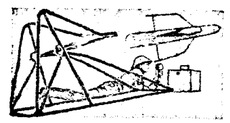
Missiles and their Uses

Missiles now in service or about to come into service in the West can be divided into six broad categories according to their uses. Neither their mechanical parts nor their electronic guidance systems are completely reliable, but provided the rocket flies straight and true, there is no form of defence against it.



Biggest and most lethal are the intercontinental ballistic missiles, the Air Force controlled ICBMs carrying H-bomb warheads over distances of 1,700 (US built *Thor* now used by the RAF) to 5,000 (*Atlas,* coming into service in the US) and even 8,000 miles (Russian prototypes recently fired this distance). Average price, £1 million upwards. Britain's contribution, *Blue Streak,* will be test fired this year, ready for service in 1963 unless cancelled because of its estimated £600 million development cost. Range is 2,500 miles. Development : underground launching for protection against surprise attack (*Atlas, Blue Streak*) ; longer range (US *Titan*) ; solid fuel for easier storage and quicker launching (US *Minuteman*).

The Army uses smaller ballistic rockets against tactical targets. These fly either 100 to 200 miles (US *Redstone* and *Pershing*) or much shorter distances of 75 miles (US *Corporal* used in Britain) to 50 miles (British-built *Blue Water* now under development). Nuclear warheads.



Anti-aircraft missiles used by all services. Range from 20 to, in rare cases, 200 miles. Warhead, conventional or nuclear. Two British (RAF *Bloodhound,* Army *Thunderbird*) types. Developments : attempts to attack ICBM warhead so far abortive.

Airborne missiles are mainly short-range (4-5 miles) weapons fired from fighter aircraft against attacking bombers. Guided during flight by the fighter's radar, accompanied in more deadly types by infra-red devices attracted by heat of enemy aircraft. Warhead : conventional explosive. (British *Firestreak,* US *Sidewinder*) Developments : longer range. Also under development, a new type of small ballistic missile carried by bombers against enemy cities (British-built *Blue Steel*). Considerable discussion whether this development should not be pursued in place of land-based rockets like *Blue Streak* since parent bomber is less vulnerable to surprise attack. Present range, some hundred miles, but might reach 1,500. Warhead : H-bomb.

Ship mounted missiles now in use are all of the anti-aircraft type : launching is complicated by the vessel's pitching movement. British built *Sea Slug* requires specially designed ships, four of which are under construction. Warheads : conventional or nuclear. Developments : extremely small (five miles range) missiles such as British *Seacat* which replace ship's guns. Also under development, extremely large 1,500 mile range ballistic missiles with H-bomb warheads launched underwater from nuclear submarine, but present difficulties are 700 mile range and high cost (£50 million) of submarine-missile combination.

Infantry beginning to use small portable rocket, range 2 miles, as anti-tank weapon. Missile is guided by signals transmitted along telephone wire paid out during flight. Pioneered by French (*SS* 10 series), now being adopted by US Army. Warhead conventional explosive, power limited by weight one man can carry. Developments : heavy (i.e. not carried by infantry) version with bigger warhead (Australian designed *Malkara,* French *SS* 12).

have been lagging behind the recovery in exports, just as they lagged behind the decline in exports during the recession. Total imports in the third quarter, at £1,173 million, were 4½ per cent higher than in the same quarter of 1958, and the total for the six months April to September, at £2,368 million, was three per cent higher than in the same months of 1958—but still seven per cent lower than in the same months of 1957, before they were shorn by the recession.

CITY TRAFFIC

Are Cars hors Concours?

MR CHRISTOPHER BRUNNER, one of the more distinguished of Britain's road propagandists has already criticised the Pink Zone for London traffic. This week he inveighed further against the "serious illusion" in some quarters...

> that it is possible more or less to maintain the present physical environment of our cities, without any major changes, by some system of rationing the number of cars which may enter the centre and so dodging the issue, at least for a decade or two.

And rationing, to Mr Brunner, includes "rationing by the purse through parking meters or garage fees."

Such an approach, he considers, would be completely futile. Either cities must be altered so that cars can be used in them or, if cars either cannot be or may not be used in cities, people will live, work and spend their money elsewhere than in cities. "As the stage is approached when everybody owns private transport, is it conceivable that any government will be able to refuse to make the changes in the physical environment of life which are needed if that transport is to be used?" Mr Brunner does not trust commercial values properly to reflect the full value of private transport to the city: "In a prosperous area it will always be more profitable to build for uses other than for accommodating cars"; so subsidies for parking garages from local or national authorities "may be expedient." The ordinary criteria of the price system, it seems, are too workaday to apply to the private car, which is "a symbol of social advance and of ambitions achieved, in all of which there are ingredients of striving and of spiritual endeavour which make humanity what it is."

Such rotund rhetoric has its use, as distinct from its purpose. It illustrates the dangerous polarisation of argument into which discussion of road and traffic policies is liable to lapse; it is as easy for those who question road development regardless of cost to fall into phrasing that implies sheer restrictionism as it is for Mr Brunner to give the impression that his sole desire is a civilisation for motor cars to drive in. In fact, when he gets down to cases, a degree of reasonableness becomes apparent: "some restrictions on the use of vehicles in towns are unavoidable"; "I do not wish to be misconstrued as advocating 'Los Angeles type' of cities"; traffic engineering can help city traffic, though in his view not enough. There may, moreover, be wider implications of Mr Brunner's view that private motor transport must in some way be exempt from the ordinary criteria of market economics; have we not heard something of the same, this week and last, about public transport, on the rails and in the air?

MANPOWER

170,000 More Workers Found

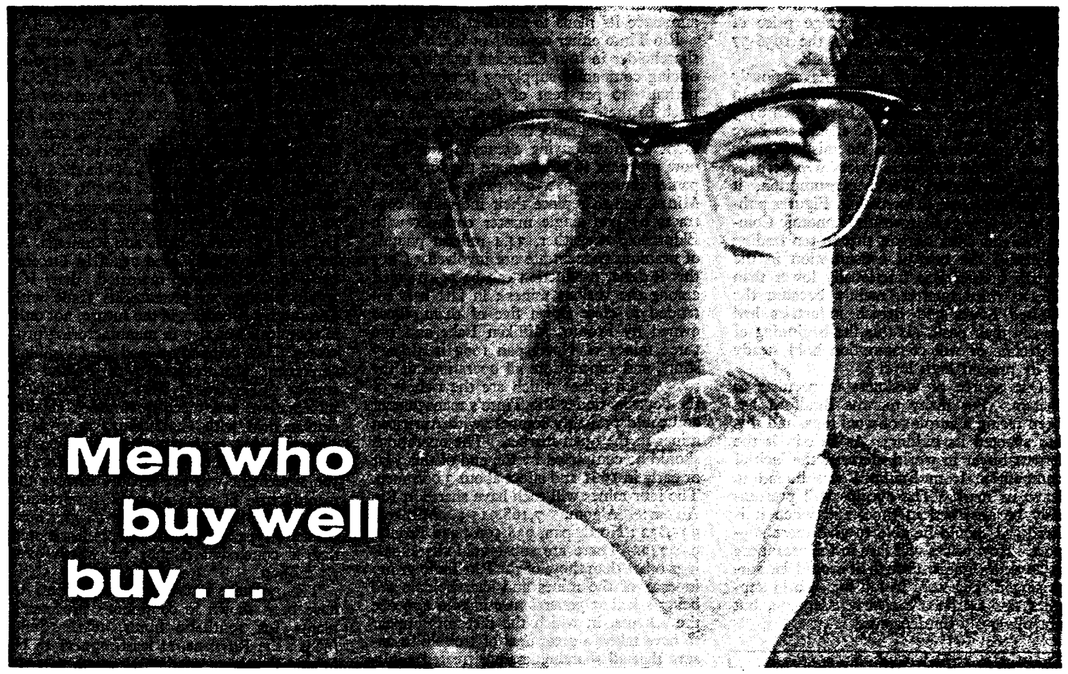
THE Ministry of Labour has now completed the annual overhaul of its manpower statistics—and discovered 170,000 more people in jobs than it had realised. This is the result of the annual count of insurance cards last May; it is only for that month in each year that an attempt is made to account directly for everybody at work. Monthly figures are derived from changes in employment returned by a large sample of firms, a sample whose reliability is obviously put in question by the extent of this revision (although it was even larger two years ago).

From the middle of 1958 up to the end of last year, employment is now believed to have risen by about 282,000 (instead of 106,000 as previously thought): this means that more (instead of fewer) people were at work than at the start of the recession in September, 1957. Most of the revision is in the number of people in professions and services; manufacturing employment has been revised upwards by less than one per cent. For the economy as a whole, output per person rose rather less last year than had been assumed—probably by some 3½ per cent. But even now any such calculation is tentative since the more recent estimates of manpower are subject to further revision when the next count of insurance cards is taken in May.

CHEMICALS

New Plants for Fawley and Severnside

ONLY a few months ago it appeared that investment in new chemical plant would level off or decline during 1960 and fall off sharply in 1961. The two new projects announced this week by Esso Chemicals and Imperial Chemical Industries may signal a reversal of this trend; while it does not appear that either project was actually planned for an earlier date and then postponed, both have been under consideration for some time. ICI has announced that it will begin development this spring of the thousand-acre site it owns three miles north of Avonmouth, in South Gloucestershire. The first stage will include plants for making 35,000 tons a year of ethylene oxide, ethylene glycol and associated products, and including the initial site development will cost about £5 million. The plants are expected to be on stream in two years' time.



The Severnside works will receive about 40,000 tons of ethylene from Esso Chemicals' Fawley plant, through a 70-mile pipeline which Esso intends to build between the two plants. Planning permission is now being sought for the pipeline, which would cost about £800,000 and take about a year to complete. In addition Esso have announced that they will invest another £5½ million at Fawley, adding a new steam cracker and ancillary plant which will double output of ethylene, now 40,000 tons a year. Construction is expected to start soon and to be completed in about a year's time. Esso has had blueprints for expanding its petrochemical production (but not its oil refining) at Fawley since production was begun there just over a year ago; presumably it waited until a customer was found for the additional output before going ahead with the present project.

The new plants, when completed, will further underline the imbalance of Britain's primary petrochemical supplies. Ethylene capacity is now about 300,000 tons a year, and is scheduled to rise by about 220,000 tons a year within the next two years, including Esso's additional output. ICI is expanding ethylene production at Wilton from 110,000 to 140,000 tons a year; most of this goes into polythene and into "Terylene." Esso's new plant will also double its present annual output of 40,000 tons of butadiene: most of this chemical is now piped to International Synthetic Rubber's plant at Hythe, where it forms the principal component of GR-S synthetic rubber. ISR has recently announced that it is raising its output of GR-S from 75,000 to 90,000 tons a year. Finally, Esso's new plant will produce about 75,000 tons of propylene, of which there are already overabundant supplies and few uses.

WOOL MARKET

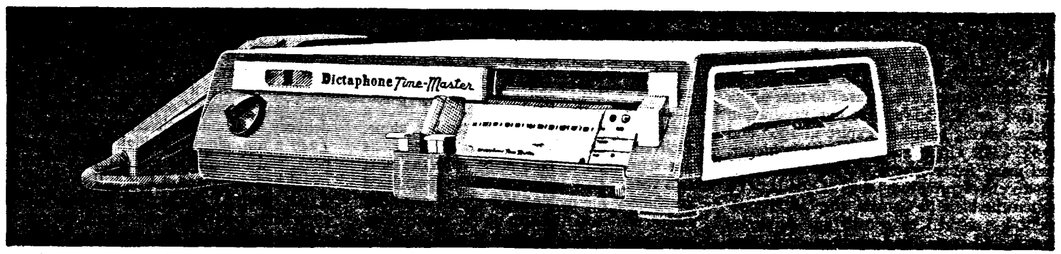
Bradford Restrained

RAW wool is one example of the fact that primary producers are not sharing fully in the growing prosperity of their customers in the West. The example is especially unfortunate for the sterling area, because its largest single export is wool. Australia's wool cheque, it is true, has risen sharply this season, and mainly because of higher prices. In the first seven months of the season it sold 850 million lb, 12 per cent more than in the same period of the 1958-59 season, and its receipts rose by 44 per cent to £A212 million, the average price rising by over one quarter to 60d. a lb. The growers, however, will no doubt stress that

DICTAPHONE TIME-MASTER

Men who value quality and service are the men who buy Dictaphone Time-Master, because the Time-Master is the quality dictating machine. The Time-Master isn't a gadget to be played with for a few months and then discarded. It's a precision instrument designed to save time for a man whose time is valuable.

Dictating with Time-Master is as easy and pleasant as normal dictation to a secretary, but it is much more convenient and time saving. No matter where your secretary may be, you simply speak, and immediately your thoughts are on *permanent* record. Time-Master has these unique advantages because only Time-Master has the DICTABELT record.



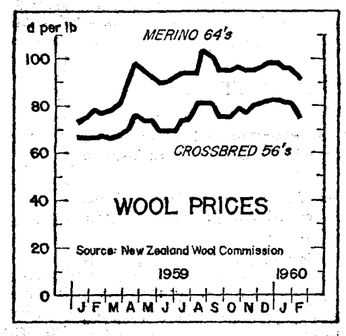
Especially designed for dictation and twenty years ahead of other recording media, the Dictabelt is exclusive to Time-Master.

Permanent recording on the Dictabelt makes accidental erasure impossible; gives crystal clarity; makes the true economy of one-use handling.

Visible recording gives instant place finding, prevents confusion, saves time.

Easiest to handle. You can fit a Dictabelt on the machine in two seconds, dictate, then have it transcribed; you can also post or file a Dictabelt like a letter.

Dictaphone TIME-MASTER has been accepted for the Design Index of the Council of Industrial Design.



Dictaphone Company Limited, 17-19 Stratford Place, London W.1. Phone HYDe Park 9461. Branches throughout the British Isles.
The words DICTAPHONE, TIME-MASTER and DICTABELT are registered trade marks.

the recovery in their earnings has been limited, pointing to the average price of 80d. a lb that they enjoyed in the 1956-57 season, before the recession struck.

Now growers must be asking anxiously whether that limited recovery will hold. In the last three weeks prices have fallen by 5 to 7½ per cent. Bouts of steadiness have intervened, but there is no mistaking the trend. Some easing in prices was perhaps to be expected. World consumption, it seems, is no longer increasing. Figures published by the Comonwealth Economic Committee this week suggest that in ten leading countries the rate of consumption in the fourth quarter was fractionally lower than in the third quarter, mainly because the United States and British industries had passed their peak. Is this the beginning of a decline or will consumption hold steady at its present high level?

One source of weakness is peculiar to Britain. For many months Bradford has been facing a surplus of wool tops, and this has affected its bidding. As Britain is the largest buyer in world markets, the lack of competition from Bradford was bound to leave its mark. The surplus will presumably be absorbed in time, and when it is Bradford should be able to give more support. How prices will fare in the meantime is anyone's guess, though it would be surprising if they were to fall far. World supplies this season are clearly adequate, but not obviously burdensome.

URANIUM

Rio Tinto Rationalises

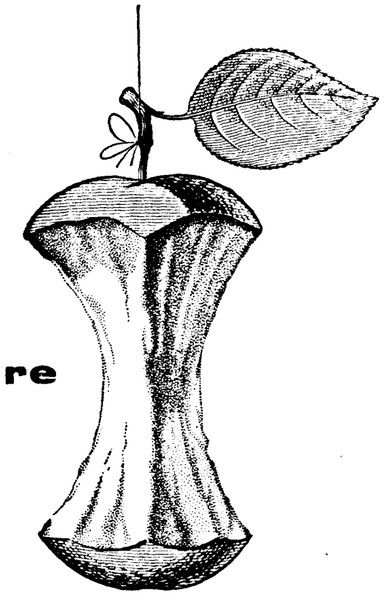
THE Canadian uranium industry received a sharp blow last autumn when the American government refused to take up its options on Canada's uranium production when existing contracts expire in 1962 and 1963. The United States is now a bigger, and many Americans would say a cheaper, producer of uranium than Canada. To soften the blow to Canada, the US government has agreed to spread out deliveries that would normally have been completed by 1962 and 1963, for another three or four years to 1966. This gives the Canadian mines a breathing space during which to re-organise and Rio Tinto is the first to announce its plans to contract output.

Rio Tinto either controls or is the largest shareholder in four Canadian uranium producing companies supplying between them perhaps 40 per cent of Canada's output. Each of these companies has separate contracts with Eldorado, the Canadian government uranium buying agency. Rio Tinto now proposes to amalgamate the four companies into one new company, Rio Algom Mines, and to replace their individual contracts by one single master contract with Eldorado; altogether, 34.4 million pounds of uranium concentrate are involved. Once this is done, production can be re-arranged among the various mines; in fact it is intended to close down five of them, those owned by Pronto, Milliken Lake and the three mines of Northspan (one is already shut), and concentrate all operations at the two Algom mines which are the richest of the deposits under Rio Tinto's management and could probably compete with American mines in the open market. The operations should be completed by the end of this year or early in 1961 and affect about 3,000 men. The four mines will each have shares in Rio Algom: Algom, 7,168,915; Milliken, 935,872; Northspan, 938,596; and Pronto, 948,749. There are substantial shareholdings other than those of the Rio Tinto group in each of the mines and shareholders are being asked at general meetings to approve the scheme, in which the directors appear to have taken a great deal of trouble to ensure that all shareholders are treated equitably. The final result will be that Rio Tinto Mining Company (RTMC) will have a net beneficial interest in Rio Algom of 37.57 per cent of its issued capital. Directly or indirectly, the parent, Rio Tinto of London, holds 54.04 per cent of the issued capital of RTMC. Its stake in Canadian uranium is not altered, but as production is to be concentrated at the more productive mines, total profits from this source may rise. The flow of earnings and hence of dividends will however be spread out over a longer period of time.

ENGINEERING EXPORTS

Eastern Approaches

BRITISH manufacturers of industrial plant and equipment have considerably increased their trade with Russia and other eastern European countries in recent months: of a total of perhaps £50 million worth of contracts in 1959 to supply plant, machinery and processing "know-how" to countries in the Soviet bloc, well over a quarter were booked in December alone. Deliveries under most of these contracts are scheduled to take place over the next two years: they will range from specialised machinery for making newsprint, synthetic fibres, fish meal and lace up to the complete tyre manufacturing plant being built at Dniepropetrovsk by a consortium headed by Dunlop—shortly scheduled to be completed, at a cost of £15 million—three synthetic fibre plants to be supplied by a subsidiary of Courtaulds, costing £15 million, and two complete sugar beet factories, costing £8 million, being supplied by Vickers and Bookers.



To date almost all of this business has been with Russia: recently, however, Mr S. P. Chambers, chairman-designate of Imperial Chemical Industries, revealed on returning from Warsaw that he had discussed plans there for ICI to supply the technique of manufacturing polythene to a consortium representing Poland, East Germany, Czechoslovakia and Rumania. As early as last March—and again in December—Mr Chambers indicated that ICI would attempt to increase its trade with Communist countries in the future, not only in chemicals but also in manufacturing processes. The company signed an £8 million agreement last autumn with Poland to supply "Terylene" fibre and technical information, and recently closed a smaller similar deal with Czechoslovakia. It is expected that representatives of the consortium will visit London in the near future: the agreement will presumably involve the manufacture of conventional high-pressure polythene rather than the new Ziegler low-pressure type and Mr Chambers has hinted that if concluded it may be worth over £1 million.

The greatest interest to date seems to have been shown in continuous processing plants for synthetic fibres, textiles and foods; the Russians, at least, appear to be buying development time as much as anything else, since their supply of engineering talent, great as it is, is no doubt overstrained by the efforts they are making to advance on all industrial fronts at once. How long this will continue to be the case is another question. They want the most up-to-date plants available, and some of their purchases—the acrylic and cellulose acetate plants bought from Courtaulds, for example—have been of remarkable size in relation to their apparent present demand.

COPPER MARKET

Towards a Surplus?

STRIKES in United States copper mines and smelters are over at last, as near as makes no matter. They lasted far longer than anyone expected—for six months at some plants—and resulted in the loss of roughly 320,000 tons of mine output. To the relief of other producers the world surplus melted away in the American west, to be followed by a shortage that will not quickly disappear. Copper for three months delivery in London closed on Thursday at £249 a ton, almost as high as last week's peak, and though the premium for prompt metal had narrowed it was still as much as £20 a ton. As the United States industry gets back into top gear world output of refined copper will once more be running ahead of consumption, though the effect on the market will be cushioned for a time as the pipelines are refilled. But this cushion

Get to the core of your advertising problems

How many Advertisers there must be, with appropriations of up to £30,000, who know they are not really getting the return that they should! Are you one?

What to do? You must be expertly advised by the *right* Advertising Agency.

To you, RIGHT means the readiness to see and meet *your* needs first . . .

To employ your £10,000, £20,000 or £30,000 with a high sense of responsibility; to prosper *with you* rather than before you.

You need a medium sized Agency which provides constant, penetrating and personal service—the Agency in which you are an important account.

Gordon & Gotch Advertising may well be your right choice. We have carefully set ourselves out to grasp the problems of the smaller Advertiser; and have often built a small manufacturer into a national success.

We start by asking the complete confidence of the Advertiser. We like to be accepted as part of their Sales Organisation. From then on, our clients receive a very personal service and each account is under the day to day supervision of a Director. We employ all the advertising arts in their logical sequence—market research, marketing, merchandising, public and press relations—all are seen as individual parts which we relate into a programme to achieve results.

We are now ready to give this service to one or two additional Advertisers. If your Promotion is a problem, and you would like us to get our teeth into it, the Managing Director will be pleased to hear from you.

GORDON & GOTCH Advertising Limited

who

makes the elegant refrigerator?

The Pressed Steel Company. They make the Prestcold Packaway, a practical, versatile refrigerator that was named as a Design of the Year, and won the first-ever Duke of Edinburgh's Prize for Elegant Design.

PS represents Pressed Steel. There's something representing the Pressed Steel Company (it may be car bodies, railway wagons, refrigerators or pressings) in every country in the world.

Among the good things of life...

Price 5/11d the ounce

...in a world of change is the rare pleasure of enjoying a well-loved tobacco. Now, as yesterday, a quiet excitement hovers in the remembered fragrance of Balkan Sobranie. For Balkan Sobranie is a wise tobacco—a rich and satisfying tobacco—a subtle blend of matured Virginia and rarest Yenidje leaf.

Balkan Sobranie
SMOKING MIXTURE

does not look all that firm. Even in the United States consumers as a whole are not desperately short, and their buying policy will no doubt be influenced by a feeling that time is on their side. So it is—barring further strikes.

The apparent surplus is estimated in the British Metal Corporation's annual review. It considers that United States consumption this year may well rise by over 100,000 long tons or more to regain, if not exceed, the level of 1.16 million tons in 1955 and 1956; with a further rise to be expected elsewhere, it puts world consumption at about 3.8 million tons, which would be 250,000 tons above its estimate for 1959. But world capacity in 1960, including for the first time the big new Toquepala mine in Peru, is reckoned at about 4.1 million tons, suggesting that producers "may again be contemplating some measures of voluntary curtailment of output before the year is out."

THE JASPER CASE

New Witnesses

In further hearings of the charges against Mr Jasper, Mr Grunwald and Mr Murray at the City of London Court, Mr Maxwell Joseph, the former managing director of Lintang Investments, said on Thursday of last week that Mr Grunwald had suggested that they should make a joint offer for R. E. Jones (which owned the Piccadilly and other hotels). Their joint bid, however, was not successful and Mr Joseph eventually acquired the company for Lintang at 38s. 6d. per share. When Mr Grunwald acquired Lintang, R. E. Jones was included in the sale. The cost of the R. E. Jones take-over was £3 million, of which Lloyds Bank was prepared to advance £1¼ million.

Mr S. Berger, who was connected with a number of the companies in the Jasper group, said that Mr Grunwald asked him to apply to Barclays Bank for a £1 million overdraft for the purchase of Lintang shares. The bank agreed to lend £500,000 to Kadorum, one of his companies, which subsequently acquired 650,000 Lintang shares. He denied that he was interested in the Ely Brewery deal and that the £600,000 he had tried to borrow from the Co-operative Building Society was to lend to Mr Grunwald to finance this transaction.

On Monday Mr Woolf Brueckmann, a partner in H. Jasper and Company, said that he had been "furious" with Mr Grunwald not only for arranging the Lintang deal without consulting the partners of H. Jasper but also on the grounds that "he had overpaid Mr Maxwell Joseph by a considerable sum."

Another witness who gave evidence both on Monday and Wednesday was Dr Solomon Schonfield, a Rabbi, who has known Mr Grunwald for twenty years. He told how he had arranged the Grunwalds' trip to Israel. Mr Grunwald told him it was "necessary for him to be out of the country for a short while in connection with a business difficulty that had arisen." Dr Schonfield said that Mr Grunwald asked him to go to Cannes to see Mr Murray in connection with a short-term loan of £2 million. It was not clear whether the money was from Lloyds Bank or Mr Joseph. Mr Grunwald could not settle it and felt that Mr Murray could and should. Dr Schonfield said that Mr Murray said to him: "This is serious or terrible" (he did not remember which). "I must get back to London by the first plane. Why didn't the fellow stay and clear it up himself."

The hearing was resumed on Friday.

RAW SUGAR

Russia in the Market

Sugar has made a remarkably small response to the big purchases by Russia. A fortnight ago, when the Cuban spot price was 2.90 cents a lb, the International Sugar Council cut the apparent surplus for 1960 to only about 220,000 tons, and that figure looked generous at the time. Since then Russia has bought 345,000 tons from Cuba for February-May shipment at 2.78 cents a lb, and as part of a long-term agreement is buying another 425,000 tons, making, with an earlier contract, a total of one million tons this year. The long-term agreement provides for further purchases of one million tons in each of the next four years, with Russia paying 20 per cent in cash, and bartering goods for the other four-fifths.

Thanks to Russia, the surplus of sugar has been turned into an apparent deficit of 550,000 tons. Yet the spot price has rallied by less than two-tenths of a cent, and forward quotations throughout 1960 are still below the floor of 3.25 cents fixed under the international sugar agreement. Buyers and sellers have their own good reasons for ignoring the statistics. The council will not let any demand go unsatisfied; export quotas will be raised. Many private holders of Cuban sugar would rather sell now than hold off for a better price, and in view of their risks in Cuba they can hardly be blamed for that.

DOMESTIC APPLIANCES

Following a Boom

The domestic appliance industry enjoyed a boom year in 1959, and it is now wondering if it can expect 1960 to be even better. Last year refrigerator output rose 90 per cent on 1958, while the rate of production of washing machines and vacuum cleaners was 50 and 32 per cent higher in the first nine months than in all 1958. Sales may have risen more slowly: stocks, especially retailers', are higher now than a year ago. Part of this increase is preparation for the buying season, which is concentrated on the spring and summer; but part is unintentional, a result of over-ordering which naturally followed the shortage of supplies in the six months after the end of hire purchase restrictions in October, 1958. Retailers lack the space to carry heavy stocks, so one result is an outbreak of cut-price selling of refrigerators.

This is one factor that could depress output in 1960. Sales of appliances by the Electricity Area Boards in the last two months of 1959 were lower than a year before. The last two months of 1958, however, were exceptionally good: sales rose at a time when they would normally fall. So the industry considers that the market is returning to its normal seasonal pattern of sales. But this in turn means that the strength of demand will not become clear until after the budget. The industry feels that in general it should do as well as it did last year, if government policy remains the same. Demand for individual appliances is even more difficult to forecast. For washing machines and vacuum cleaners little change is expected. Refrigerator makers expect that sales will be a little higher, but they are unable to calculate the influence of last summer's weather upon demand. A cold summer might mean lower sales this year. But with refrigerators in only 15 per cent of British homes long-term prospects are for expansion. Competition for sales of all appliances will be far more intense, with most companies increasing their capacity.

British appliance makers may have to export more to keep their increasing capacity employed, but this will not be easy with export prices 20-30 per cent above those of other European makers. Sir Leslie Gamage told a conference on exports of domestic appliances last week that the industry should keep price cutting for export markets—in other words, it should dump. He went on to describe the influx of new firms into the industry in the past year as "poaching," which suggests that such increased competition is just what some firms in the industry need.

TELEPHONE LINKS

Across the Pacific

The second stage of the round-the-world Commonwealth telephone link has just been approved by the four governments concerned, Britain, Canada, Australia and New Zealand, after studying the technical report on the feasibility of this project prepared for them last autumn. To lay such a cable across 8,000 nautical miles, and at depths of as much as four miles at some points, will be one of the biggest feats of telephone engineering yet undertaken: it

was not at all certain at the outset that it could be done. By comparison, the laying of the first stage in the link, between Scotland and Newfoundland, is child's play. Cable for this trans-Atlantic stage is being manufactured now and should be laid in 1961. The trans-Pacific cable, estimated to cost £26 million (of which Britain is providing £8.3 million) will probably not be laid until 1964 and the link will be completed in a series of relatively short hops during the five years after. Its total cost is expected to be more than £80 million. How this is shared among the Commonwealth countries that the cable will link is a matter for hard bargaining as each stage is approved, but Britain is already committed to spending £16 million on these two first and most important stages, across the Atlantic and the Pacific.

JUGOSLAV BONDS

A Provisional Settlement

THE terms of last week's bilateral debt settlement between Jugoslavia and the Council of Foreign Bondholders are identical to the terms offered by the Jugoslav Government to American holders of its dollar issues. That was all that could have been expected, as one of the conditions demanded by the American bondholders last year was that better terms should not be offered subsequently to other creditors, and British bondholders have certainly secured a better deal than their French counterparts (who hold between 60 and 70 per cent of Jugoslavia's foreign debt) did in 1958.

The two loans concerned in the settlement are the Montenegro 5 per cent sterling loan, 1909, and the Jugoslav 5 per cent sterling Funding Bonds, 1936. Partial service on these bonds is to be resumed during the period 1960-64 and the first payment will be made at the rate of one per cent per annum on July 1st this year. Payments will subsequently rise by one-quarter of one per cent annually to a payment of 2 per cent on July 1, 1964. Holders of these bonds have received no interest since 1940 or 1941, and Jugoslavia has agreed to pay them one-half of one per cent per annum in addition to current interest payments, until the arrears are fully paid off. The capital amounts outstanding on these loans are small: about £150,000 on the Montenegro loan and about £10,000 on the 5 per cent Jugoslav Sterling Funding bonds. The Council of Foreign Bondholders emphasises that this settlement is only temporary and that it is hoped to reach a permanent settlement in the five year period covered by the agreement. In the meanwhile, the Council is still negotiating for a settlement to cover the two remaining Jugoslav loans: the 4 per cent Serbia Bonds and the Jugoslav 5 per cent Funding Bonds, which together involve about £40,000.

SHORTER NOTES

Partly by mortgage and partly by sale and lease-back, Prudential Assurance is to provide nearly £7 million in new finance to Central and District Properties. This company has estates in Central London, Liverpool and Brighton and is developing properties in Manchester. The new money will be used to repay bank overdrafts and to cover building commitments but it will still leave available "considerable funds for new developments and acquisitions."

*

Dracone Operations has been formed by associates of Hambros Bank, including H. Clarkson, the ship brokers, to promote the commercial use of the Dracone flexible barge developed originally with finance from the National Research Development Corporation. Barges with a 35-ton carrying capacity are being offered now at £4,225; 100-ton and 320-ton models will later become available at £6,720 and £17,400 respectively. The craft will also be available for hire. They will be made by P. B. Cow and the Frankenstein-Beaufort organisation.

*

Sales of gramophone records shot up in December to a total of nearly £2 million, a fifth higher than at Christmas a year ago, but total sales for the year still show the effects of the slump from which the industry did not really recover until the autumn. The value of those sales, at £13.6 million, was 2 per cent lower than in 1958. The year also marked the slow extinction of the 78 rpm shellac record, it accounted for only 12 per cent of the 67 million records pressed during the year and a bare 261,000 were produced in December, a tenth of the output twelve months before.

*

Having already acquired 78.8 per cent of the ordinary and 84.7 per cent of the 5½ per cent redeemable preference capital of de Havilland Holdings, Hawker Siddeley has made an offer through Philip Hill Higginson Erlangers for the £800,000 3½ per cent preference stock at 15s. 6d. per unit.

*

The Provincial Building Society, the sixth largest in this country, left the Building Societies Association two years ago. Its reasons for withdrawing have never been made known publicly. Now, after talks between its directors and the Council of the association, it has accepted a "cordial invitation" to resume membership.

*

Community Unit Trust ("Cupids") is now going ahead with its fourth block offer which was postponed because of the railway dispute. The offer of 16 million units at 3s. 2½d. a unit (to yield 3.2 per cent) closes next Thursday or as soon as the daily offered price varies from the price of the present offer by more than 2 per cent.

*

The response to the Domestic Unit Fund's offer of 5 million units at 4s. 5¼d. was described by the managers as "disappointing." They consider that the threat of a rail strike was the main reason why only 6,194 applications for 2,261,760 units —an average application of about £82— were made.

*

Shareholders of Bass Ratcliff and Gretton are to be offered the 1,966,769 new ordinary units (which represent Worthington's share of the two-for-one scrip issue) at a price of 22s. 6d. a share. On Wednesday at an extraordinary meeting to approve the new capital plans Sir James Grigg, the chairman forecast a total ordinary dividend of 20 per cent on the larger capital compared with the equivalent of 19⅙ per cent in 1958-59.

*

Spain has been granted a further credit of $25 million from the European Fund, which is controlled by OEEC. The fund has already provided credits of $75 million, of which only a third have been drawn. An expert mission sent to Spain by OEEC has reported favourably on the stabilisation programme.

*

World shipping laid up at the beginning of February amounted to 5,913,546 tons, or 6 per cent of the world fleet. This was a million tons less than at the beginning of December, 1959, when laid up tonnage represented 7 per cent of the total, and 1,435,000 tons less than at the beginning of 1959. The rate of scrapping doubled in 1959, to 2.9 million tons. The rise in tramp shipping freight rates, now about 10 per cent higher than a year ago, has encouraged some owners to bring ships back into commission.

COMPANY MEETINGS

THE LANCASHIRE STEEL CORPORATION LIMITED

SIR JOHN JAMES' REVIEW

RECORD PRODUCTION AND EARNINGS IN 1959

PROPOSED £9 MILLION EXPANION SCHEME

The thirtieth annual general meeting of The Lancashire Steel Corporation Limited was held on February 11th at the Masonic Hall, Winmarleigh Street, Warrington.

In the absence of Sir John James, the Chairman, The Earl of Crawford, KT, GBE, Vice-Chairman, presided and read the Chairman's Review, as follows:

Ladies and Gentlemen, I have great pleasure in presenting to you the Directors' Report and Accounts for the year ended October 3, 1959, and, in moving their adoption, of reviewing the year's working and the present position and prospects of your Company and the Steel Industry.

REVIEW OF PROFITS

I am glad to be able to report a considerable increase of just over £700,000 in the Manufacturing and Trading Profit for the year compared with that of the preceding year. In view of circumstances to which I shall refer in greater detail later in this address, I regard this as not only most satisfactory, but as a very notable achievement. The profit, after deducting Depreciation and Reserve for Replacement of Fixed Assets of £1,275,000 in total, is approximately £3,480,000, and is, I believe, a record in the history of the Company to date. I emphasise "to date" as I have every hope that it will not long remain a record.

Income from Trade Investments again shows a sharp increase compared with the preceding year—on this occasion of just over £200,000. As I intimated last year, this income is derived from one of our Associated Companies whose Dividend policy it has been possible to liberalise as a result of the cancellation of Distributed Profits Tax, and whilst I cannot indicate that Dividends from this source will always continue at the present level, I have no doubt they will continue to be a valuable source of income.

The total income before Taxation amounted to £3,873,000, from which it is necessary to provide £1,950,000 for Taxation, leaving a net income of £1,923,000.

Out of this balance the Dividends on the 5¾ per cent Redeemable Cumulative Preference Shares and the special Interim Dividend of 2 per cent declared at the same time as the Final Dividend for last year have been paid, and out of the balance the Directors declared an Interim Dividend of 5 per cent on the original Ordinary Share Capital of £4,500,000, and now recommend a Final Dividend of 6 per cent on the Capital as increased to £9 million by the issue of 4,500,000 new Ordinary Shares as a free Scrip Issue on September 24th last.

The effect of this Interim and Final Dividend is that an effective rate of 8½ per cent has been paid or recommended for the year just ended on the present Ordinary Capital of £9 million.

After providing for these Dividends there is a balance of £1,245,000 and the Directors have allocated the sum of £1,200,000 to General Reserve, leaving the balance of £45,000 to increase the carry-forward, which now stands at £940,000.

CONSOLIDATED BALANCE SHEET

In the Consolidated Balance Sheet you will note that the Capital reflects the issue of £4,500,000 new Ordinary Shares in September last, to which I have referred, and now in total stands at £13½ million. This sum does not, of course, represent the true value of the Corporation as there are, in addition, Capital and Revenue Reserves amounting to some £8,500,000, bringing the net book vale of the Corporation's Assets to over £22 millon.

Despite the capitalisation of £4.50.000 of General Reserve by the issue of Scrip Ordinary Shares to that amount, the Reserves in total only show a reduction of some £1,700.000 and still amount to over £8½ million. The reasons for this comparatively slight diminution are the receipt of a Special Dividend, free of Income Tax, of £1 million declared by the Asociated Company I have referred to, from the profits of several prior years, the transfer from Profit and Loss Account of £1,200,000, the release of £200,000 of provisions for Taxation rendered unnecessary by the reduction in the standard rate of Income Tax, and the allocation of £350,000 to Reserve for Replacement of Fixed Assets.

Once again the Consolidated Balance Sheet shows a very strong financial position, Current Assets exceeding Liabilities by over £7½ million. This is actually an increase of over £1 million compared with the excess a year ago, despite the fact that Capital Expenditure during the year amounted to over £2 million.

The surplus will be of the greatest assstance in enabling us to meet the further Development Programme to which I shall refer later.

Outstanding contracts for Capital Expenditure at the date of the Accounts amounted only to £865,000. This shows some reduction compared with the position a year ago and marks the virtual completion of the recent Development Programme. It is clear that we shall be able to meet these liabilities without difficulty.

THE YEAR'S TRADING

The most notable feature of the year just concluded was the extraordinary difference in the demand for our products, particularly small sections, rods and wire. In the early months, that is to say, from October, 1958, to May, 1959, the demand was extremely meagre; in fact, it was a constant worry and preoccupation to obtain enough orders to make up reasonable rolling tonnages for the Mills each week—indeed, some were working on short time. About May, 1959, however, the demand, particularly for rods and wire, suddenly revived, and from then onwards has continued and increased to such a degree that in spite of working our Rod Mills to their utmost capacity we cannot meet the demand made upon us by our customers and our own Subsidiary Companies. Whilst this is a very welcome change, nevertheless we wish we were in a position to supply more of their requirements.

The rod and wire trade has always been subject to a certain amount of sudden swings in demand, but in all my years of experience I have never known quite such a sudden and complete reversal which applies, not only to this Company but to the country as a whole; indeed, the shortage appears to be world-wide as it is impossible to supplement the supplies available in this country by purchases from abroad, either at a reasonable price or with reasonable dates of delivery.

In view of this position your Directors have decided to install with the utmost possible speed a new Rod and Bar Mill at the Irlam Works. Planning approval has been obtained and it is hoped that the Mill will be in production in the Spring or early Summer of next year. If it is it will go some way towards alleviating the present shortage of rods in this country and in satisfying our customers' demands.

Production from our Steel Works during 1959, although curtailed in the early part of the year due to the shortage of demand, finally finished at the highest yearly tonnage we have yet achieved, whilst the final quarter's tonnage was at an even higher annual rate.

REVIEW OF PAST DEVELOPMENT

Our 1953-58 Development Scheme is now virtually complete. Included in this, it will be remembered, was the complete rebuilding of our original coke oven battery together with the building of an additional battery. As a result we now have sufficient coking capacity to meet all our future needs for the production of basic iron, provided sufficient coal of the right quality is available.

Our wharf installation at the Irlam Works, a photograph of which is included in the Accounts, is working very satisfactorily, and ore ships of 12,000 tons, the largest capacity which can be accommodated in the Manchester Ship Canal, are regularly unloaded at the rate of 500/550 tons an hour.

The second large-capacity blast furnace is completed and will shortly be brought into production.

In the past we have always had to rely on ingots purchased from outside sources to work our Rolling Mills to capacity. This position has now changed with the installation of two of the three open hearth furnaces included in the 1953-58 scheme.

The new Blooming Mill has proved a great success, and when our Continuous Billet Mill, a photograph of which is also included in the Accounts, comes into production, as it will very shortly, our 32 in. Reversing Mill will be released for the production of light-heavy sections and joists, a trade in which we have taken little part in the last few years due to the

very heavy demand for billets for our Rod and Light Section Mills.

At the Warrington Works the Rod and Bar Mill cooling bed is in an advanced stage of construction, but we have not pressed its completion as the demand for rods in coil is so high that we cannot, without seriously affecting our wiredrawing customers, produce bars in straight lengths at the present time. It is expected, however, for reasons which I shall shortly mention, that this position will be rectified during the next two years.

An interesting development at Rylands Brothers has been the installation during the year of a new Nail Packaging Plant using cartons, which have completely superseded bags. A photograph of the new Plant also appears in the Accounts; it is now working satisfactorily, and this method of packing is much appreciated by our customers, particularly in the export trade.

DEVELOPMENTS ABROAD

Our interests abroad are mainly concentrated in Rhodesia and they fall into two parts—our investment in The Rhodesian Iron and Steel Company Limited and our own Subsidiary Company, Lancashire Steel (Rhodesia) (Private) Limited.

Demand for the products of The Rhodesian Iron and Steel Company is still low, although it has recovered somewhat from the severe recession to which I referred a year ago. Considerable progress has been made with the re-equipment of the Works and it is expected that the new units will commence to come into production in the Autumn of this year and the whole programme will be completed within about nine months thereafter. We are sure that this Company will prove a most important factor in the Federation's development.

Our own Subsidiary Company, Lancashire Steel (Rhodesia) (Private) Limited, has suffered considerably during the year from the world shortage of rods and has at times been quite unable to obtain the supply required. It is, however, expected that this will be rectified when RISCO steel is available and the Rod Mill which we are at present installing at the Works of our Subsidiary Company comes into production in twelve months' time. We believe that then we shall be able to supply the major part of the Federation's requirements of wire and many wire products, and may also, in view of the extremely competitive prices, find markets abroad.

After the most careful consideration of the proposal to install a Wiredrawing Plant in New Zealand, to which I referred last year, it has been decided that such a project would not be in our best interest.

FUTURE DEVELOPMENT

With the completion of our second Development Programme we are now ready to embark upon our 1960/65 Development Scheme, under which it is our intention, subject to planning approval, to increase our ingot production to some 800,000/900,000 tons per year.

In planning this increase we have regarded it as essential to base it upon a high use of hot metal, as scrap is bound to be in short supply as a result of the general planned increase in the country's steel production during the next five years. Therefore, it is proposed to install at Irlam further Ore Preparation Plant, including a Sinter Plant, to proceed with the building of a third large-capacity blast furnace and ancillary Plant and to replace any of the old equipment still in use at the existing furnaces. These developments should provide sufficient hot metal for the projected increase in ingot production.

To give us the required increase in ingot production we intend to build immediately the third open hearth furnace outstanding from the 1953-8 Scheme, and we hope to obtain approval for the installation of the electric furnace mentioned in my speech last year. At the same time we are actively examining the many new processes of steel manufacture, particularly the use of oxygen, which are designed to increase output.

As I have already mentioned, a new Rod and Bar Mill is to be installed at Irlam, and the increased steel production will ensure that steel is available, not only for this Mill but also for the production of light-heavy sections, joists and bars, to all of which I have referred.

With the completion of these developments the site of the Irlam Works will be utilised to its fullest extent. From now on, therefore, our efforts at this Works must be concentrated in modernising wherever it is necessary and in increasing our efficiency, as I am convinced that only so shall we reduce costs to the lowest possible level and thus be able to compete in the world markets of today where so many countries, which in the past have relied on the United Kingdom for their steel supplies, are now installing their own Steel Works, and, in many cases, with the advantage of cheaper labour and raw materials than are available in this country.

At the Warrington Works, the 1960-65 Scheme provides for the modernisation of the three other Bar Mills during the course of the next three years. As a result we shall be able to take advantage of variations in demand between all the light rolled products which we produce.

Whilst having due regard to the claims of the independent wiredrawing firms, the considerable increase in capacity of our Rod Mills will enable us to raise the finished wire capacity of our Subsidiary Companies, Rylands Brothers and Whitecross, so that they will be in a position to take advantage of the ever-increasing demand for finished wire in its many and varied forms, and new machines will be installed as necessary to take advantage of the increased rod supplies. In particular, we are sharing in the development of pre-stressed concrete wire which it appears will be in ever-increasing demand for bridges and concrete structures of all kinds.

We estimate that the 1960-65 Development Programme which I have outlined above will involve an expenditure of some £9 million, and we confidently expect that it will raise the output and standard of efficiency at all our Works to the very highest level.

NATIONALISATION

In past years I, in common with the Chairmen of other Steel Companies, have expressed opposition to the principle of nationalisation. I need now merely say that the electorate in the recent Election decisively rejected this proposal, and I hope that the peril of nationalisation, under which the Steel Industry has suffered so long, has now been removed for all time.

STAFF

I must pay my own and the Directors' tributes to the efforts of all employees in the Group. As I have said, trading conditions were most difficult in the early part of last year, but the way in which we were able to meet the sudden increase in demand, and the results now before you, are in large measure a tribute to the efforts of all concerned.

CONCLUSION

In conclusion, the success of our efforts for the past year is before you and I have every confidence that the future programme I have outlined will be equally successful. Our financial position is strong enough to enable us to complete this programme from our own resources or with only some small assistance from our Bankers. We are ambitious for the future of our Company and firmly believe that what others can do we can do at least as well.

The Report and Accounts were adopted.

CASTLEFIELD (KLANG) RUBBER ESTATE

MR ADDINSELL'S STATEMENT

The Annual General Meeting of Castlefield (Klang) Rubber Estate, Limited, was held on February 12th in London. Mr Jack Addinsell, the chairman, presided.

The following is taken from his circulated statement:

The Company has had another good year with much improved results. Yields from the areas of our prewar and postwar modern rubber, and from old seedling areas under stimulated tapping methods, exceeded expectations and the total crop of 2,920,000 lb was over 16 per cent better than that harvested in the previous financial year.

Net proceeds do not reflect, except to the extent of about 2d. per lb, the recent substantial increase in rubber prices, but we received a total of £271,943 on the larger crop, or some £60,000 more than in the previous year. Production costs, on the other hand, remained virtually unchanged. Duty and cess rose proportionately with the increase in prices, but other expense and overheads showed no material change. A noticeable item of income from other sources was the replanting grants received totalling £12,156, compared with £3,197 during the previous year.

The profit before tax, £108,254, shows a satisfactory increase over that for 1957-58 and is incidentally almost identical with that earned in 1956-57. Tax requires £19,422 (Malayan Company tax is now 40 per cent). An interim dividend of 10 per cent was paid in July last and your Directors now propose a final dividend of 25 per cent, making 35 per cent for the year. The dividends amount to £42,875 net and the balance to be carried forward to the current financial year is £20,246.

The comparatively high prices we have been obtaining in the current year give promise of satisfactory results for the period ending June, 1960. The Company still has a heavy programme of rejuvenation before it, mainly at Bukit Berut estate, but we can expect continuous improvement in crops as the proportion of modern high yielding rubber in tapping increases. In fact, the Company has started to reap the benefits of its vigorous replanting and new planting policy.

The report was adopted.

Year of success sets stage for great new expansion

Extracts from the statement by Mr. G. C. R. Eley, C.B.E., Chairman, RICHARD THOMAS & BALDWINS LTD., given at the Annual General Meeting, Thursday, February 11th, 1960.

Profits up over 25%
Development programme accelerated
New £110,000,000 plant at work by 1962

This is my first report as Chairman of this Company and I would like to commence by paying to its Management, Staff and Workpeople an immediate tribute. In a year of considerable physical difficulties, they have enabled us to achieve an increase in profits of over 25%.

Such a result could only have been achieved by the exercise of determination, ingenuity and wholehearted teamwork. We are fortunate in that we have as Managing Director, Mr. H. F. Spencer, a man of energy, imagination and infectious human qualities; and that he is backed by a body of able and skilled enthusiasts. They are lucky to have the great opportunities for achievement and for hard and exciting work that lie ahead of them in the future. I count myself lucky to be of their company.

Mr. G. C. R. Eley, C.B.E., Chairman, Richard Thomas & Baldwins Ltd. "Great opportunities for achievement lie ahead."

FUTURE PROFITS

During the year we spent on capital works over £9½m., mostly on developments at Ebbw Vale, Redbourn, Panteg, our Midland Works and on a new Press Shop in West Wales.

Many of the more difficult additions and modernisations at Ebbw Vale and at other Sections have now been carried out. They should yield us benefits in the current year when we anticipate that our profits, in the absence of circumstances outside our control, should make another substantial advance. In subsequent years, while we are working on our big new development programme, profits should be further supplemented by earnings from other new plant that will be coming into operation, but interest and depreciation charges will be growing at the same time.

FURTHER OUTLOOK

In 1960 we shall be introducing at Ebbw Vale the L. D. oxygen top-blown steel process, while at Redbourn we are installing a Rotor Furnace for pre-refining. Both these developments will be the first of their kind in the United Kingdom. The new Spencer Works at Llanwern, near Newport, will incorporate the most modern plant and most up-to-date processes including the L. D. oxygen top-blown process of steelmaking. The Company is now the sole licensee for that process in the United Kingdom and in the Commonwealth, excluding Canada and India.

In many other directions also we are experimenting in the forefront of modern practice. For example, we are considering the installation at our Panteg Works of a large scale experimental plant to pursue the continuous casting of wide slabs in low carbon steel for sheets and tinplate and the production of stainless steel slabs. By the time that we are ready for the further development of our Newport site, we hope that continuous casting may have been sufficiently developed to enable it to play an integral part in the steelmaking process there.

DEVELOPMENT SCHEMES

During the year the Board approved schemes at our Ebbw Vale works for the erection of an additional Electrolytic Tinning Line, the installation of the L. D. process, additional Soaking Pits and an Acid Recovery Plant, totalling in all £7,688,000. Previous schemes at Ebbw Vale had included increasing steel production, repowering the continuous Hot Strip Mill, replacing the 5-Stand Mill and converting the 3-Stand Sheet Mill to a 4-Stand. The new Electrolytic Tinning Line will be of the latest design and suitable for differential tinplate coatings.

A scheme for the erection of a continuous Billet Mill at our Redbourn Works at a cost of £8,703,000 was also sanctioned. In addition, work at Redbourn was continued on last year's schemes for the opening up of a new orefield, enlarging iron production, building a Sinter Plant and installing the Rotor steelmaking process.

Work also went forward satisfactorily at our Panteg Works on schemes for improving the production of stainless steel, including the installation of a Sendzimir Cold Reduction Mill, a new Planishing Mill and new ancillary equipment; while in the Midlands work was completed on a modern plant for the integrated and continuous processing of ultra-low-loss grain-oriented electrical quality sheet and strip.

NEW INTEGRATED PLANT

Considerable though these developments are—and of importance for the future growth of the Company—pride of place must be given to the great new integrated Hot Strip and Cold Reduction Mills which we are installing at Llanwern, near Newport. Named the Spencer Works, in honour of our Managing Director, this Mill was initially planned to produce 1,673,000 ingot tons and to cost approximately £100,000,000. The Ministry of Power agreed to loan us up to a maximum of £60,000,000 for this development.

Since the end of the financial year, we have received the approval of the Iron and Steel Board to increase this scheme so as to achieve an output of 1,400,000 ingot tons and the estimated total cost has risen to about £110,000,000. We have also agreed to accelerate construction of the Spencer Works so that they can come into production by April, 1962, twelve months earlier than originally intended. The Ministry of Power has agreed to increase its loan to the Company to a maximum of £70,000,000 to help in taking care of these new developments.

The Spencer Works is being built on a green field site which will permit of great subsequent expansion. The first stage itself can readily be expanded to produce at least 3,000,000 ingot tons per annum and includes Coke Ovens, Blast Furnaces, L. D. Steel Plant, a Slabbing Mill, a Continuous Hot Strip Mill and a 4-stand Cold Reduction Mill. The Plant and its layout will make it amongst the most up-to-date integrated strip mills in the world.

At this stage I would like particularly to acknowledge the work done by our General Manager of Engineering, his staff and all those throughout the Company who have been engaged on our many development projects.

An agreement has been entered into with The Steel Company of Wales Ltd. to hire-roll for it in the new hot strip mill, when it is in operation, about 400,000 tons of strip per annum. This agreement will run for 5 years and will leave ample capacity to take care of our own planned production and of the next stage of our development.

EXPENDITURE AND FINANCE

During the last five years the Company has spent over £33,000,000 on modernisation and new development. Yet throughout that period, until quite lately, it has been a lender, not a borrower, of money. It will, of course, need to borrow substantially to finance its latest programme, but we estimate that its borrowings should be relatively temporary in character.

TRAINING AND RESEARCH

The Company has been in the forefront in the application of new education and training techniques.

We are, indeed, researchers in the widest sense of the term. We examine new steels, new processes, new products new materials and new equipment. We maintain Research and Productivity Engineering Units. We have an active Economic and Market Research organisation. This is a Company, in fact, with a restless and forward-looking outlook, inquiring but not credulous, tough but humane.

The Steel Company of Wales Limited

RICHARD THOMAS & BALDWINS LTD., 47, PARK STREET, LONDON, W.1

JUTE INDUSTRIES LIMITED

IMPROVED RESULTS

INCREASED DEMAND FROM FLOOR-COVERING INDUSTRIES

SIR WILLIAM G. N. WALKER'S STATEMENT

The thirty-ninth annual general meeting of Jute Industries Limited was held on February 15th, at Meadow Place Buildings, Dundee, Sir William G. N. Walker (chairman and joint managing director) presiding.

The Secretary (Mr W. A. Jeffray, CA) read the notice convening the meeting and the report of the auditors.

Addressing the meeting, the Chairman said: With your permission I will take the accounts and the report of the directors as read. (Agreed.)

A preliminary statement by the Chairman circulated with the Accounts read as follows:

As before, I intend to make an up-to-date statement on general lines at the Annual General Meeting.

Last year I told you that, but for uncertainty as to certain imponderables, I could not fail to be optimistic. In the year under review, these imponderables did not affect us adversely and after meeting all expenditure including depreciation, the trading surplus of the group showed an increase of £362,199; after tax the group profit at £422,592 has increased by £272,716. The improvement resulted from more favourable trading conditions and better net results from subsidiary companies.

Representations have been made to the Board of Trade by Indian interests pressing for a reduction in the "mark-up" imposed by the Jute Control on imported standard goods: until we know the Board of Trade's reactions to these representations, it would be imprudent of me to make any forecast as to the level of profits that may be earned over the current financial year—as things stand today order books are well-filled and activity at present levels is likely to be maintained for several months.

Year after year, I have commented on the damage that Pakistan can do to herself and her customers by limitation of crops. The recent marked advance in Pakistan raw jute price levels gives us cause for anxiety, and stock losses may well be incurred on a falling market.

The spinning and weaving sections of our business continue to be very active due to increasing demands from the floor-covering industries at home and overseas, to whom go approximately sixty per cent of our total sales. The soft floor-covering industries in particular are large consumers of our specialised products and are benefiting from the demands created by a rising standard of living throughout the world.

For soft floor-coverings, in addition to the continuing demand for jute supplies in yarn form there is also an ever-increasing demand for high quality jute cloth. We are being hard pressed from home and abroad to satisfy these requirements and have already spent, or are committed to spend, close on £1 million on weaving development.

Apart from expansion which has and is taking place in our existing works, we have acquired, since the end of the financial year, the old-established weaving firm of D. & R. Duke Limited, Brechin, in whose premises and with whose skilled assistance we intend to install and operate a block of specialised equipment. The other new subsidiary company, John Frew (Belfast) Limited, has been acquired to strengthen our sales organisation in the Northern Ireland area.

At the meeting the Chairman said:

"Since my preliminary statement accompanying the Accounts was written, the Board of Trade announced that the mark-up on certain jute goods imported by the Jute Control would be reduced from 30 per cent to 20 per cent with effect from January 15th. Since the previous reduction in mark-up in July 1957 your company has taken steps to make itself less dependent on the manufacture of standard goods, and as a result the Government's recent action will only affect the profitability of between 5 and 10 per cent of the company's total production; the reduction that will take place in our production of standard goods should, under present economic conditions, be more than offset by expansion on speciality products. It is not only from the home trade that demand for these products is good. Our export business has increased, and during 1959 we exported goods manufactured by the group to the value of nearly £1,500,000.

RAW JUTE

Unfortunately my warnings at this time last year have proved correct, and, because of a threatened shortage of raw jute supplies both in Pakistan and India, we saw a rise in price from the end of October 1959 to mid-January 1960 of from 10 per cent to 15 per cent in the cost of our raw material. This, much though we regret it, has meant higher yarn and cloth prices for many of our customers.

It would appear that the authorities in Pakistan have realised the dangers of restricting their crop, and I was glad to read the announcement of their Commerce Minister on January 25, 1960, that jute growers in Pakistan in the coming season would no longer require to obtain licences in order to sow their crop except in the border areas where smuggling to India used to be prevalent. I feel sure that in the long run an adequate supply of raw jute for the world markets will be to the benefit of both Pakistan and ourselves, and, I would hope, lead to a period of more stable prices.

At the request of the Industry here, a delegation is arriving from Pakistan at the beginning of next month. The members of this delegation, in their capacity as members of the Pakistan Jute Enquiry Commission, have since the middle of last year been examining the raw jute industry in Pakistan, and will in due course be reporting their findings to the Central Government. It is our hope that there will be no major interference with the present methods of marketing raw jute overseas. Our future lies to a very marked extent in speciality business, and under the present system we have been able to buy the types and qualities of jute we need for these requirements.

MANAGEMENT

Your Board have again had the utmost co-operation from a loyal and hard-working management team. To them and all employees, whose joint efforts are largely responsible for

the much improved results, we offer our most sincere thanks.

Uncertainty as to the future still exists, but it is hoped that the over-all level of activity that we have at present reached will be maintained for some time to come, and that our results for the current year should not be unsatisfactory."

MILLS & ROCKLEYS LIMITED

(Outdoor advertising in more than 200 towns throughout the Midlands, South West, East and North East England)

GROWING IMPORTANCE OF POSTER ADVERTISING

The thirty-first annual general meeting of Mills & Rockleys Limited, will be held on March 14, 1960, in Coventry.

The following is an extract from the statement by the Chairman, Mr George T. Mills:

The Group profit, after tax, is £83,064 after providing in full for a small loss in one of the subsidiary companies, and after writing back £6,500 for tax over-provided in the previous year. Your Directors propose a transfer of £25,000 to General Reserve as last year.

In view of the higher amount of profit after tax available this year the Directors also propose to raise the Ordinary dividend from 1s. 3d. to 1s. 4½d. per share. This will leave the carry forward at £49,369 compared with £42,693 a year ago.

Although the volume of sales in the early part of 1959 was somewhat lower than in the corresponding period in 1958, there has been a subsequent improvement, and we are expecting sales for the present year to be higher than those for 1959. With the improvement in the national economy, both large and small advertisers are increasing their appropriations to the mutual benefit of themselves and ourselves.

I mentioned a year ago that users of commercial television were beginning to realise that poster advertising does a vital job in an advertising campaign, and this realisation is growing to your company's advantage. Advertising is necessary both indoors and outdoors, and the essential part that poster advertising can play in clinching the sale of goods advertised indoors, on television or other media, is becoming increasingly accepted. There are, of course, a large number of advertisers with products which do not appear on our panels, and it is to these potential customers that we are directing our sales drive.

Our recently built factory for screen printing at Coventry is beginning to function well, although we are still experiencing some teething troubles. The demand for our high quality printed circuits has increased greatly, and we are therefore taking the necessary steps to increase our production facilities.

Our associate company in South Africa continues to operate at a profit, and past losses are being recouped at a steady rate. This company is gradually expanding the amount of advertising space and operating area in the Union.

We have had some changes on our Board during the year. I greatly regret that Miss C. L. Champion died early in 1959. My son, John Mills, has been appointed a Managing Director of the parent company and Mr George S. Campbell, Managing Director of Franco Signs Limited, has joined the Board.

J. SAMUEL WHITE AND COMPANY

(Shipbuilders and Engineers)

CURRENT TRENDS AND PROSPECTS

The sixty-second ordinary general meeting of J. Samuel White and Company Limited was held on February 17th in London, Sir James A. Milne, CBE (Chairman and Managing Director), presiding.

The following is an extract from the Chairman's Address circulated with the report and accounts for the year ended September 30, 1959:

Since the end of the financial year the only order received is that in respect of seven 27 ft. open motor boats for the Admiralty. Work in hand is, therefore, little changed from that in the Directors' Report, and unless new orders are received in the very near future, it will be difficult to keep the Works fully employed for the next two years. The last large order for new ship construction was received in January, 1958. Naturally every effort is being made to obtain further work. Inquiries are very scarce and are being widely circulated to many shipbuilders in the United Kingdom and abroad. Competition is, therefore, most keen.

Somerton Works have had a very successful year. Their products now include evaporator plates, bottle coolers, frozen food display cabinets, automatic ice-cream making and dispensing machines and sub-contract work making stainless steel cabinets including assembly into a popular chicken roasting machine.

The Island Transport Company Limited suffered a loss of £4,312 and this was made good by a subvention payment from the Parent Company. The loss was due entirely to the need to renew the propelling machinery in one of the cargo carrying vessels, the cost being included as a charge against revenue.

Wm. Weatherhead & Sons (1954) Limited have maintained the steady progress of the past two years with a slight increase in the profit which has been retained in the business. Current orders are sufficient to keep the present labour force employed for the next nine months.

Our rope-making subsidiary, Henry Bannister & Company Limited, were able to reduce their trading losses by increasing turnover and as a result of economies effected. A subvention payment was, however, made to them to eliminate the loss of £353. Research into the development of man-made fibre rope has reached an advanced stage and the Board feel confident that a product can eventually be produced at a competitive price.

Regarding the Consolidated Profit and Loss Account, the trading surplus of £350,177 compares with £263,112 for the previous year and the Consolidated Profit after taxation is £180,521 compared with £118,962 for last year.

Your Board have recommended a final dividend on the Ordinary Shares of 17½ per cent, making a total of 22½ per cent as opposed to 20 per cent in the previous year. When we made this recommendation known to the Stock Exchange, we specifically emphasised that we could not anticipate such a high level of profit for the year ending September 30, 1960. The statement then made still holds good. It is a little too early for me to be more factual in this respect.

The report and accounts were unanimously adopted.

TEACHER (DISTILLERS) LIMITED

SATISFACTORY INCREASE IN PROFITS

The Eleventh Annual General Meeting of Teacher (Distillers) Limited was held on February 16th in Glasgow.

Mr R. M. Teacher (the Chairman), presided and, in the course of his speech, said:

The Profit for the year at £867,817 shows a satisfactory increase of £123,523 on last year's figure of £744,294. The increase is due to the continued improvement in sales of our Brand. The net Profit to be dealt with at £178,133, is an increase on last year of £65,625. The Directors feel that, in view of the results of the past year, they are justified in recommending that the Final Dividend on the Ordinary Shares be increased to 7½ per cent, making 12½ per cent for the year on the new Capital.

The trading year under review has been very satisfactory, and the demand for HIGHLAND CREAM continues in all our established markets. The ever-increasing popularity of Scotch Whisky can now be more readily seen in the markets where improving prosperity is taking place, and where legislative factors do not restrict the sales. This particularly applies to the United States where exports have steadily risen year by year. The easing of the import restrictions in Australia was immediately apparent. The increased quotas to France at the beginning of the year, too, reflect the demand, and it is a welcome announcement that, for this year, quotas to that country will be abolished. One can only hope that this example may be followed in other markets before the popularity of our important native product is too seriously affected as could well be the case in New Zealand which imposed the restrictions last year. The position in Canada as to sales is much as in the previous year. In order to have more direct contact with this important market, in January last year we acquired an interest in an import firm with whom we have had connections for many years in Montreal. We have also considerably extended our activities in the Far East.

While our sales of HIGHLAND CREAM in the Home trade continue a satisfactory upward trend, it had become apparent in the Industry that demand and supply had so nearly reached equality that freedom of supply would have no major effect on demand. We, therefore, in the middle of the year, in line with others, intimated this fact to our customers. Though it is perhaps early enough to gauge the results of this freedom, there is no doubt that this position has been created in our Industry by two main factors, namely, the penal taxation of the spirit duty of £10 10s. 10d. per proof gallon, or close on 200 per cent borne by our Industry, and the competition from hire purchase which has so benefited through relief in purchase tax. With the very small decrease in exports, and the suppression of the consumption of our native product at home, this could well in a very short time cause considerable unemployment in the Industry.

In spite of the factors already referred to, and along with the increased tempo of competition, your Board have the greatest confidence in the overall prospects for your Company in the coming year.

The report and accounts were adopted.

THE NATIONAL BANK LIMITED

ANOTHER YEAR OF VERY GOOD PROGRESS AND EXPANSION

LORD PAKENHAM'S ADDRESS TO THE SHAREHOLDERS

In his speech at the 125th Annual General Meeting held at 13 Old Broad Street, on Thursday, February 11, 1960, The Lord Pakenham, PC, JP, Chairman, announced that the Bank had enjoyed another year of very good progress and expansion. He commented on the various items in the Balance Sheet and drew special attention to the increase in Current, Deposit and other Accounts to a new peak figure of over £100 million and to the Advances which were higher at £43,900,000 by £6,300,000.

Lord Pakenham said that in England the Bank had continued its programme of expansion by opening a Branch at Reading and mentioned that the old premises at Oxford Street had been replaced by a larger and more modern office at Cavendish Square. He also announced that the Bank hoped to have a new building for its Notting Hill Gate Branch in 1960. As regards Ireland, Lord Pakenham reported the modernisation of several existing premises throughout the country, and announced plans for an almost complete reconstruction of the Bank's principal office in Ireland at College Green, Dublin.

Turning to the Profit & Loss Account, Lord Pakenham drew attention to the increase in the profit from £268,757 to £366,126 and said that, after increasing by £10,000 the allocation to Contingencies Reserve, it was possible to increase the dividend by 2 per cent.

ECONOMIC BACKGROUND—IRELAND AND BRITAIN

The Chairman continued by drawing a comparison between Banking and other Economic trends in Ireland and Britain. He referred specially to the Radcliffe Committee Report (he was one of the first to recommend an enquiry of this type) and quoted from the Report regarding long term investment abroad. He said the whole future of the world might well depend on the extent to which the richer countries such as Britain were able and willing to assist the development of the poorer countries. As far as Britain was concerned he thought this function could only be performed if a much higher surplus on Current Account were achieved than that which would be necessary if we were concerned with our future alone. "The question 'How much is the City worth to the City?' has long since been superseded by the question 'How much is the City worth to Britain?' and increasingly by the still wider issue 'How much is the City worth to the World?' The sun has set on military and financial imperialism, but for those of us who believe with all our hearts in a new era of partnership between 'advanced' and 'under-developed' countries, the tasks, challenges and opportunities awaiting the City of London loom ever larger. I am hopeful that it is by this test that the City of London will be well content to be judged."

The Bank's advances to farmers in Ireland showed a particularly large expansion, said Lord Pakenham, and he referred to the full part played by the Bank in participating in the credit schemes sponsored by the various farmers'

organisations and the provision of its own schemes for special purposes.

BANKING AS A PROFESSION

"The 60s would seem likely to offer to the Banks unrivalled opportunities for expansion, but the problem of future staffing lies at the heart of everything. The position now is very different from what it used to be. The work to be done in Banks is more interesting than ever and calls today for a new kind of initiative as well as the solid character long expected in bank men and women. Whilst banking is not a career well suited to egoists, there must be the inducement that a well educated and enterprising man or woman will receive a differential reward according to his or her merits and qualifications. There is no reason why every bank man should not aspire to the very highest positions and the example of my distinguished predecessor, Mr Michael Cooke, proves that anyone joining the Bank might carry the Chairman's baton in his knapsack. Banking today has become a highly serious, complicated and expert business and once this fact is recognised and effect given thereto, banking—a profession of acknowledged status—will never run short of recruits of the highest quality. We on the Board tender our sincere and grateful thanks to all members of the Staff, who are a devoted body of men and women."

HUDSON'S BAY OIL AND GAS COMPANY LIMITED

Hudson's Bay Oil and Gas Company Limited and its subsidiaries had net operating income of $2,821,000 or sixteen cents per share for 1959. Net operating income for 1958 was $1,316,000 or seven cents per share. The improvement in earnings resulted primarily from increased natural gas sales and reduced dry hole costs. Special credits, primarily from sales of properties, raised total net income for 1959 to $3,764,000. Hudson's Bay Oil and Gas Company's net crude oil production averaged 21,144 barrels daily in 1959—an increase of 1,045 barrels daily or 5.2 per cent over 1958. Sales of natural gas for 1959 averaged 47.9 million cubic feet daily compared with 14.4 million cubic feet daily for the prior year. G. T. Pearson, President, said the company's natural gas sales will more than double during the next few years if pending export permits are approved and natural gas pipe lines are built to large US market outlets. During 1959 Hudson's Bay Oil and Gas participated in eleven discoveries and one field extension. The exploration programme was highlighted by a significant extension to the Virginia Hills oilfield in North Central Alberta, an encouraging crude oil discovery in the Milligan Creek region of North Eastern British Columbia, and acquisition of large undeveloped acreage holdings in the northwest territories. Early in 1960 an exploratory well drilled near Fort Nelson in North Eastern British Columbia encountered 359 feet of gasbearing reef. This is the thickest producing reef section found in the area to date.

BIRD & CO. (AFRICA), LIMITED

IMPORTANT NEW ACQUISITION

SIR CHARLES PONSONBY ON PROMOTING NEW INVESTMENT AND DEVELOPMENT

The forty-second Annual General Meeting of Bird & Co. (Africa), Limited will be held on March 14th at Tanga, Tanganyika. In his circulated statement Sir Charles Ponsonby, Bart, TD, DL, paid tribute to the late chairman, Sir Eldred Hitchcock, CBE, and said:

As shareholders know, Sisal Estates Limited and Bird & Co. (Africa), Limited have progressed over the last twenty years, and the gradual growth in output and strength was achieved by the late Chairman with the help of an experienced and loyal team in the plantation and in the office.

Sir Eldred's last enterprise for the Company was in arranging for the acquisition of the whole share capital of Consolidated Sisal Estates of East Africa Limited.

Since the end of the year under review, Consolidated Sisal has been put into liquidation and the estates transferred to your Company.

The rise in the sisal market since the date of purchase has given added emphasis to the fact that these properties were acquired on a favourable basis, and I am sure that the acquisition of these estates, which were taken over in excellent order, will substantially benefit your interests.

RESULTS FOR THE YEAR TO JUNE 30th 1959

Notwithstanding somewhat disappointing weather conditions during a part of the financial year, the sisal production of all grades (including tow) was 16,042 tons, excluding Consolidated Sisal, against 16,800 tons the previous year.

Production of made tea for 1958-59 totalled 195,084 lbs—just short of the estimate.

The net profit was £200,051 (1957-58—£200,681). No provision is necessary for taxation in respect of this figure for the period to June 30, 1959 (1957-58—£1,000).

Fixed Assets.—While the book value of assets are given in the Accounts they can be described as follows:

Sisal.—Including the three properties of Consolidated Sisal, the plantations spread over 50 miles from Tanga inland, and of the total area of 35,347 hectares, there are 15,900 of mature and 7,401 hectares of immature sisal, with an estimated output for 1959-60 of 22,000 tons. This estimate depends largely of course on weather conditions for the rest of the year and the maintenance of good labour relations. Development of a large area of virgin land acquired with the Consolidated properties is on hand.

Tea.—At Kwamkoro the factory was in operation during 1958-59. At June 30, 1959, there were 404 acres of mature tea at Kwamkoro and 1,143 acres immature. During 1959-60 a crop of 325,000 lbs of made tea is estimated but results so far justify our belief that this figure can be exceeded. Further capital expenditure will be required over the next few years to bring the estates to their full capacity.

FUTURE PROFITS

In my circular letter of October 30th it was stated that indications at that time were that the group profit for the year ending June 30, 1960 from the estimated production of 22,000 tons of sisal and 325,000 lbs of tea, after providing for depreciation and after charging Debenture and other interest, but before providing for taxation, would be in the region of £290,000. It is still early to estimate the year's results with any accuracy, but at the time of writing it is reasonable to expect that this figure should be reached. It is also difficult to assess what provision for taxation will be required but it should not be more at this level of profit than the £23,000 referred to in my circular letter of October 30th; unless unforeseen circumstances intervene, it can be expected, therefore, that a net group profit of £267,000 can be considered as a minimum.

THE FUTURE

In his speech to the Legislative Council on October 20, 1959, His Excellency the Governor of Tanganyika referred to the sisal industry as "our most important single industry and our largest single source of revenue," but the future of the industry and of this Company does depend on the prosperity and stability of the country. I am Chairman of the Tanganyika Association, formed two years ago by leading investors outside the Territory to promote new investment and development and to keep watch on existing investment. I and other members have had frank talks with some of those who will play a leading part in the government in the future. They are, I think, fully aware of the value of the huge investment put into the Territory by the Sisal Industry and of the revenue it earns for the Territory. They appreciate the importance of creating and maintaining confidence in the stability of the Administration if that investment is to be kept and expanded. They also realise what happened to the great Dutch sisal estates in Indonesia through this point of view not being appreciated: not only did the estates cease to exist but all the revenue was lost to the country, with disastrous results. The leaders in Tanganyika realise that, although owners may change and managers may come and go, the Companies and Co-operatives which control sisal, coffee and cotton growing must remain as a vital part of the economic life blood of the country. Indeed without them the country would not be self-supporting and the opportunities of raising standards and improving the social services which the new leaders so ardently and so laudably desire, would be lost.

Given good management and friendly co-operation with the Government and the Trade Unions, and assuming freedom from economic blizzards from outside, over which Tanganyika has no control, I see no reason to be nervous of the future for those who are engaged in agriculture in all its forms in the country.

Shareholders will be interested to hear that since the Chairman's Statement was printed, negotiations have been taking place for the sale, on favourable terms, of Bombuera Estate. Bombuera is one of the three estates formerly owned by Consolidated Sisal but is some way distant from the other two properties. If this transaction is completed, further particulars will be given at the Annual General Meeting.

COMPANY AFFAIRS

What is Arusha Worth?

Late in 1957, Mr Lindsay Carstairs put a private concern called Britannia Engineering into the shell of a public company called Arusha. Arusha Industries, as it was renamed, then made a series of takeover bids. Now it is a loosely knit group of iron, steel and engineering companies, and the question puzzling its shareholders is how quickly it can consolidate.

Vigilant Investments and Webley and Scott were acquired by the issue of Arusha shares. Three Star (Luton) was acquired in a cash-cum-share bid. Barrow Hæmatite, Darwen and Mostyn and Sheffield Steel were acquired for cash. These cash bids cost Arusha nearly £3.2 million and were bridged by bank loans. Contributions towards their permanent financing included a debenture issue of £400,000 by Barrow Hæmatite, a rights issue by Arusha bringing in nearly £740,000 and the existing cash resources of the group. These sources reduced the bank loan to £1.1 million on September 30th last. Arusha also owed £200,000 to ISHRA on behalf of Darwen and Mostyn, repayable by the end of next September. In addition, another (and quite different) £1.1 million was outstanding on bank overdraft, of which £600,000 was taken over with Webley and Scott. These loans are doubtless secured by shares or other assets.

Effective consolidation will require more permanent financial arrangements than these. But another rights issue by Arusha would certainly depress the market value of the ordinary shares further. The balance sheet cannot be called strong. The fixed assets of the group are entered at written down values at £3.1 million; this includes the benefit of about £500,000 arising from a revaluation of the assets of Darwen and Mostyn. There are cash resources of over £700,000, but current liabilities of £4.4 million and provisions of nearly £300,000 exceed current assets of £4.2 million. An item of £64,000 appears against development expenditure which is subject to the qualification in the auditors' report that it is "dependent upon the sales development of certain products, the earning power of which has yet to be demonstrated." It is understood that since the end of November some firm orders have been received for these products. Finally, over £900,000 appears as "goodwill arising on consolidation."

In effect that sum represents the excess of the bid prices over the book value of the assets taken over. It has not been set against the share premium account of £2.1 million, which arose out of the rights issue and issues of shares (at prices close to then ruling market values) in satisfaction of bids. The sale of freeholds and leasing back would produce current finance but involve a new charge on future income. Revaluation of assets might raise the tangible break up value of the shares, which at end-September was about 10s. net, excluding about 7s. 3d. a share relating to goodwill and development. But that would have no effect on earnings and the vital question is what return is being earned on the cost of the assets. Strenuous efforts seem to be made to strengthen the administration and management of the groups and to promote central buying. Such policies take time to have an effect and time is what the Arusha directors need for consolidation.

Meanwhile can a firm value be placed on the shares? This is matter for the banks as well as investors. Mr Carstairs has said that profits in the year to September 30th next will be considerably in excess of the £400,000 before tax earned for broken periods in the fifteen months to end-September, 1959. The gross profit before tax, after notionally charging about £300,000 for depreciation, loan interest and administrative charges, would appear to have been running at £600,000 per annum. But one still has to wait until next September for the actual profits earned and the charges against them. When the rights issue was made last April, Mr Carstairs forecast a dividend of 7½ per cent for 1959-60. Now a six for four scrip issue is proposed and the dividend is to be considerably in excess of 20 per cent on the enlarged capital. The equivalent to the promised 7½ per cent would be 30 per cent, which would certainly be considerably in excess of 20 per cent. But all this is in the field of conjecture and it is not surprising that the shares have been marked down from 40s. to 33s. 9d.

English Electric

Last year's balance sheet of the English Electric group revealed an increase in bank overdrafts from £8¾ million to £20½ million. The subsequent £6 million debenture issue and the rights issue in January, 1959, which brought in about £4½ million have clearly eased the strain. This is perhaps why the directors have raised the ordinary dividend from the equivalent of 9½ per cent to 10 per cent on the capital as increased by the rights and scrip issues in the face of a decline in trading profits from £7,017,638 to £6,734,725. Another possible reason is that, thanks to a lower tax charge of £2,575,466 (against £2,919,414) net earnings have risen slightly from £3,017,258 to £3,125,870.

The fall in the group's earnings in the year to end-September is partly attributable to the decline in Marconi's Wireless Telegraph's trading profits from £1,028,519 to £900,715. This reflects the further narrowing of profit margins in increasingly competitive markets. Television studio equipment made by this company enjoys wide sales throughout the world and demand from the emergent countries has shown a marked increase; but competition from Western Germany is now intense and in the vast South American market United States manufacturers continue to have a strong hold.

English Electric was insulated to some extent from the general recession in the capital goods trades by the fact that the Government and the British Transport Commission are two of its biggest customers. British Railways has placed substantial orders for all five types of diesel locomotives made by English Electric and is using a good deal of the group's electrical equipment in the modernisation programme. This must to some extent have offset the effects of the slowing-down in the Government's atomic power programme which is making it difficult for the industry to recoup its development costs. The aviation section has been kept fairly busy building Canberra bombers, the Lightning fighter and the anti-aircraft missile, Thunderbird. A new artillery missile, Blue Water, is also being developed for the army and the small TRS 2 bomber for the RAF. The group's aircraft section is to be merged with Bristol and Vickers Aeroplane and in the resultant holding company English Electric will have a 40 per cent interest; it is not likely that this new grouping will have much effect on current contracts and developments for a few months. The 10 per cent ordinary dividend is covered 1.65 times by earnings and at 47s. 9d. the £1 shares yield 4.2 per cent.

British-American Tobacco

Following the bigger dividend from Imperial Tobacco, the market pushed the price of "Bats" shares up to 72s. 6d. in anticipation of similar good tidings. Optimism was justified, for the directors of British-American Tobacco have set the final dividend at 11d., tax free. This raises the total tax free payment from 1s. 9d. (including a "profits tax" interim of 2d.) to 2s. per 10s. unit for the year to September 30th last. Moreover, the first interim dividend for 1959-60 has been raised from 6d. to 7d., tax free.

In preparing the 1958-59 accounts overseas currency items have been converted at exchange rates ruling at September 30th instead of at average rates as in the past. The comparative figures for 1957-58 have also been put on this basis so the preliminary statement shows that gross profits have risen by about 3½ per cent, from £53,958,591 to £55,894,156. The charge

for British taxation is again lower (£1,981,280 down at £4,382,345) but overseas tax has risen again (£604,661 up at £21,361,890). Minority interests have taken £564,224 more at £2,964,078. The final result is that consolidated net profits have risen by nearly 11 per cent, from £24,537,883 to £27,185,843. Certainly, this fulfils the hope expressed by the chairman a year ago that net profits would show a moderate increase. The policy of BAT has been to promote the local manufacture of cigarettes and tobaccos and to rely less on direct exports from this country. It looks as if higher incomes in the primary producing countries (reflecting higher commodity prices) are stimulating its sales. The 10s. units now stand at 70s. 9d. and yield 4.6 per cent on the increased dividend (covered 2.8 times by earnings). The higher interim dividend seems to point to a further increase in the total distribution this year.

John Holt

In the past public interest in John Holt and Company (Liverpool) has been confined to the preference shares, but investors will soon have the opportunity to buy some of the ordinary shares of this long-established firm of West African and general merchants. The directors are seeking a quotation for the ordinary shares on the Liverpool stock exchange. This will improve the marketability of the shares and remove certain tax restrictions which are hampering expansion. The ordinary shares are owned by the Holt family and consist of £900,000 in £1 "A" shares and £225,000 in 5s. "B" shares. These shares are all to be converted into 5s. shares and a one for three scrip issue will be made. Shareholders are being asked to pool the shares resulting from the scrip issue. Shares from this pool will then be placed at a price to produce not less than 11s. per share after all costs. The ordinary capital will then consist of 6 million 5s. shares, of which the Holt family will hold about 75 per cent.

The report of John Holt shows a sharp rise in trading profits from £456,210 to £1,648,000 in the year to August 31st last. In addition the newly acquired OTC status has resulted in a saving of about £200,000 in tax. Thus a net trading loss of £21,923 has been turned into a net profit of £922,868. Apart from the tax saving this remarkable recovery stems from the clearance of high stocks carried over from the previous year, lower interest charges and an improvement in profit margins. With freight rates still low, the company's shipping subsidiary, Guinea Gulf Line, did not participate to any large extent in this recovery but its results were materially better than anticipated. The ordinary dividend has been doubled from 10 per cent (including a profits tax interim of 7 per cent) to 20 per cent. This payment is covered about 6½ times. The tax saving as an OTC will not be quite so big in future years and the carry over in stocks to the current year has been substantially smaller. Another sharp advance in profits does not therefore appear at all likely but it should still be easily within the company's capacity to maintain the dividend at 20 per cent on the increased capital. If the dividend is scaled down to 15 per cent after the scrip issue the 5s. shares offer a yield of 6¾ per cent at 11s. The yield on a 20 per cent dividend would be 9 per cent. Even on minimal assumptions, the yield appears to allow for political uncertainties and for the big swings in earnings which inevitably occur in a business of this nature. This is one of the issues from a family controlled concern which looks certain of a good response.

British Oxygen

The growth in demand, both actual and potential, from the steel makers for tonnage oxygen has prompted the directors of British Oxygen to step up the group's capital development programme from £24 million to £28 million. The preliminary profit figures showed that the 14 per cent rise in trading profits in the year ended September 30, 1959, from £11.3 million to £12.9 million was mainly attributable to the success of the group's overseas interests and to the high level of activity of the engineering divisions at home and overseas. The British industrial gas division suffered from the effects of the recession in the capital goods trades but now the extra £4 million to be spent on expansion is to be used mainly to more than double the production of tonnage oxygen. This is one indication that the directors are confident that the fortunes of this important sector of British Oxygen (in terms of total assets it constitutes half of the group) have now turned the corner. But there are still some clouds on the horizon. Mr J. S. Hutchinson, the chairman, says that in the past four years sales of liquid oxygen have shown little increase. Demand for tonnage oxygen, on the other hand, is expanding rapidly but fierce competition in this field has reduced profit margins considerably so that higher costs cannot be so easily absorbed. Cautiously, therefore, Mr Hutchinson, thinks that any growth in profits of the gas division is likely to be moderate in the current financial year, although he indicates that earnings from chemicals and the engineering division should show some improvement.

The full accounts suggest that British Oxygen will not need to raise more money from the market to meet the cost of its capital programme, for last year the cash flow was £6,700,000 and liquid assets at end-September amounted to over £6 million. The interim ordinary dividend is to be raised from 4 per cent to 6 per cent in order to equalise the final and interim payments: but the rise in the £1 shares from 84s. 3d. to 87s. 3d. (to yield 3.2 per cent) since the publication of the full report suggests that investors are hoping for something better than the 1958-59 payment of 14 per cent.

London Stock Exchange

FIRST DEALINGS:	Feb. 8	Feb. 22	Mar. 7
LAST DEALINGS:	Feb. 19	Mar. 4	Mar. 18
ACCOUNT DAY:	Mar. 1	Mar. 15	Mar. 29

Although markets were remarkably firm before the railway settlement—thanks mainly to the optimistic FBI survey and the continued flow of good company news—there was no decisive response once the outcome of the dispute was known; on Monday the week-end warning about the level of equity share prices by the Governor of the Bank of England dampened enthusiasm. On Wednesday markets were depressed, following the continued fall on Wall Street which brought share prices there down to the lowest levels since April last year. Following a rally on Wall Street, however, some prices moved a little higher on Thursday. Except on Wednesday gilt-edged stocks were firm, especially medium-dated issues, but the rise in the US Treasury bill rate put most prices back on that day. In undated stocks 3½ per cent War Loan fell ⅛ to 64 16/16; medium-dated stocks benefited from some institutional buying and 4½ per cent British Electricity 1974-79 closed unchanged over the week to Wednesday at 89½ after touching 89¾. Short-dated stocks were firm with 4½ per cent Conversion 1964 gaining 1/16 to 99¼. Home Corporation loans tended to lose ground.

Over the week to the close on Wednesday *The Economist* ordinary share indicator fell 4.3 points to 360.3. Wednesday saw falls all along the line in the industrial market and not surprisingly, the shares to take the worst knocks were American favourites such as EMI, which fell 3s. to 46s. 3d., and Philips Lamp, which fell 4s. 10½d. to 137s. 9d. Steel shares were also weak: Steel of Wales lost 2s. 3d. to 47s., United Steel closed 2s. 6d. down at 78s. 6d. and John Summers fell by 9d. to 72s. Heavy engineering shares lost ground with Vickers by 4½d. to 34s. 4½d., Guest Keen by 9d. to 87s. and William Doxford by 2s. to 111s. British Oxygen was strong and rose 3s. 6d. to 87s. 6d. following the full report. Heavy selling from the Continent put Unilever NV down 15s. 10½d. at 162s. 6d. and, in sympathy, Unilever Ltd. fell 6s. 6d. to 129s. Textile shares remained firm: English Sewing Cotton closed unchanged at 50s. 3d. and Patons and Baldwins rose 3s. to 67s. Aircraft shares were fairly active with Fairey rising 6d. to 33s. 6d., and Hawker Siddeley 1½d. to 32s. 1½d.; but Handley Page fell back 9d. to 13s. 1½d.

Oil shares drifted lower in line with Wall Street: Burmah lost 1s. 6d. to 47s. 9d., Shell dropped 5s. 9d. to 143s. 9d. and BP closed 1s. 9d. lower at 53s. 6d. Selling from the Cape and the Continent gave the gold share market on Wednesday its worst setback for months and over the week to Wednesday's close Free State Geduld closed 16s. lower at 163s. 9d. Kaffir prices hardened a little on Thursday.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended February 13, 1960, there was an "above-line" surplus (after allowing for sinking funds) of £139,318,000 compared with a surplus of £168,316,000 in the previous week, and a surplus of £162,241,000 in the corresponding period of last year. There was a net expenditure "below-line" of £10,002,000 leaving a total cumulative deficit to date of £338,270,000 compared with £224,579,000 in 1958–59.

THE MONEY MARKET

The London Treasury bill rate at last Friday's tender rose only fractionally, to £4 10s. 11.3d. In contrast to the previous two weeks all the £250 million bills offered were allotted and the discount market, which kept its concerted bid at £98 17s. 3d., had its allotment increased from 28 per cent to 37 per cent. At this week's tender £260 million of bills were offered against maturities of £280 million.

Treasury bill rates in the United States have turned sharply upward, following the easing of the past few weeks; the average rate for three months bills rose from 3.563 per cent to 4.045 per cent, and for six months bills from 4.094 per cent to 4.294 per cent. Dealers appear to have overestimated the demand for bills the previous week and they therefore cut their bids sharply at this week's tender.

The improvement in credit conditions in London at the end of last week has been more than maintained this week following the repayment of Exchequer bonds on Monday, when the authorities sold back a very large amount of bills. On other days some balances remained unlent. Business in bills has improved slowly; two months' maturities have changed hands at 4⅛ per cent.

CAMPBELL DISCOUNT COMPANY LIMITED

INDUSTRIAL BANKERS

Paid up Capital **£544,000**
Assets exceed **£3,000,000**

Directors: J. B. Campbell, J. W. W. Huntrods
P. H. Russell Smith, A.C.A., P. J. Cannon, G. Keighley

Campbell Discount Co. Ltd. announce that they are able safely and profitably to employ a growing volume of money in satisfying the increasing demand for the Company's services. They, therefore, invite substantial deposits on the terms indicated below. The Company's banking business is conducted in conformity with the strictest canons of banking liquidity, and the proportion of liquid assets to deposits is maintained at 10 per cent, or 30 per cent of funds at less than one month's maturity, whichever is the greater. The Company is one of the most substantial independent industrial banking houses in the United Kingdom, and is conducting a diversified business over an area stretching from Newcastle-on-Tyne to the south coast.

Funds may be deposited on the following terms:
Money at 1 month's call, 5% per annum, maximum £10,000
Money at 3 months' call, 5½% per annum, maximum £50,000
Money at 6 months' call, 6% per annum, maximum £100,000

You are invited to write to The Manager, Banking Dept., Campbell Discount Co. Ltd., who will be pleased to send you an Audited Balance Sheet and booklet No. NC12 explaining our mode of operation.

The other day we wanted some top level advice from the bank — something rather beyond the scope of the ordinary branch. I must say having our branch linked with a district head office saved a lot of time, and the people up there were familiar with the special problems in this area. So we got what we wanted and beat our competitors to it . . .

The Royal Exchange Assurance has for nearly two and a half centuries provided policies for every form of insurance requirement for the home or business life.

Head Office at The Royal Exchange, London, E.C.3

Branches and Agencies throughout the United Kingdom and Overseas

A boiler is designed to supply pure steam at a given pressure and temperature. But if the water used for the purpose contains an excessive amount of undissolved solids, harmful gases or salts, serious trouble may develop, and everything be up with the boiler. The results—delayed production, extra costs and loss of profits could be disastrous.

Vulcan know

The prevention of scale formation and corrosion in a steam raising plant depends upon the correct treatment of the water. And the expert who knows all about that—as about so many other things—is the Vulcan Engineer Surveyor.

Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection *and* protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

Vulcan are specialists

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery, with reports of accidents and safety hints. Write to Dept. 17.

THE VULCAN BOILER & GENERAL INSURANCE CO. LTD.

67 KING STREET, MANCHESTER 2

YOU

MR. POLICYHOLDER

have a stake in British industry

You worry much less since you took out your life assurance policy. As far as you can, you've seen to it that your family is protected. It's good to know that you're managing to put some money by regularly—and that there'll be a nice bit of capital waiting for you when you retire.

But have you ever thought what happens to the money you put into Life Assurance? It doesn't stay locked in a vault. It is invested and helps to provide finance for all kinds of British industries. This means that everyone who holds a policy has a stake in many businesses and is contributing to Britain's industrial expansion. What's more, on with-profit policies 90 per cent or more of the profits are returned to policyholders in the form of bonuses.

Through LIFE ASSURANCE

a better life for you and for everyone

Issued by The Life Offices' Association, London, and Associated Scottish Life Offices, Edinburgh

APPOINTMENTS

COMMONWEALTH OF AUSTRALIA

DEPARTMENT OF THE TREASURY
STATISTICIAN'S BRANCH, CANBERRA

VACANCY: **RESEARCH OFFICER GRADE I** (several positions).

SALARY: £A1,290 — £A1,620 p.a.

DUTIES: Investigational work concerned with the development of statistical series compiled by the Bureau of Census and Statistics. These cover the whole range of Australian official economic and social statistics and include those relating to National Income and Balance of Payments. Depending on interest and suitability, successful applicants may be employed directly in a particular aspect of this work, or in the associated fields of sampling design and planning and of electronic machine programming.

QUALIFICATIONS: Appropriate University degree with major study in economics and/or statistics and experience in economic or statistical work.

VACANCY: ASSISTANT RESEARCH OFFICER (several positions).

SALARY: £A960 — £A1,290 p.a.

DUTIES: Assist in the compilation and analysis of the economic statistical series currently being developed in the Bureau of Census and Statistics.

QUALIFICATIONS: Appropriate University degree with major study in economics or statistics. Students expecting to graduate this year may apply.

GENERAL: Successful applicants will be required to pass a medical examination as to physical fitness for permanent appointment to the Commonwealth Public Service, and will be required to contribute to the Commonwealth Superannuation Scheme.

Successful appointees will be granted a passage to Australia under the Assisted Passage Migration Agreement between the United Kingdom and Australian Commonwealth Governments.

Assistance will also be given in the provision of accommodation.

APPLICATIONS: *Applications should be made on forms obtainable from the Public Service Board Representative, Australia House, Strand, London, W.C.2, and forwarded to this office as soon as possible but not later than March 10, 1960.*

INTERNATIONAL BANK requires Abstractor with reading knowledge of Spanish, German and French, in this order of importance, and experience in translating and abstracting economic and financial material. Free luncheon facilities on premises, pay according to experience, generous leave system, holiday arrangements respected.—Write, giving full details of age, experience, etc., Box 1285.

AUSTRALIA

MANAGER required for Melbourne company specialising in the administration of pension and superannuation funds. Position involves the negotiation of superannuation schemes and the control of office organisation administering them. Position would suit official in pension department of Life Assurance company or bank official specialising in trustee work. This is an important appointment carrying a substantial salary and with excellent prospects. Applications, giving full details of education and career to date, should be marked "Private and Confidential" and addressed to:

Mr. C. S. Alder,
J. H. MINET & CO. LTD.,
31-34 Fenchurch Street,
London, E.C.3.

THE UNIVERSITY OF MANCHESTER

RESEARCH FELLOWSHIP IN ECONOMIC STATISTICS

Applications are invited for the above Fellowship, tenable for one year with a possible extension to two years. The Fellowship is of a value within the range £1,100-£1,400 per annum, together with approved expenses involved in the research. Regulations governing the award of the Fellowship and application forms may be obtained from the Registrar, the University, Manchester, 13, to whom all applications should be sent not later than March 15, 1960.

YOUNG GRADUATE (male) for responsible and interesting work on the Statistics of packaging industry and Company's sales forecasts.—Write GIS 2, Personnel Services Division, Metal Box Co. Ltd., 37 Baker Street, W.1.

AUSTRALIAN NATIONAL UNIVERSITY
CANBERRA

RESEARCH SCHOOL OF PACIFIC STUDIES

Applications are invited for appointment to a RESEARCH FELLOWSHIP and a SENIOR RESEARCH FELLOWSHIP in the DEPARTMENT OF ECONOMICS of the Research School of Pacific Studies.

The Department is a new one to be devoted to the study of under-developed areas; it will offer scope for theoretical work in the economics of development and otherwise the building up of systematic empirical knowledge of the Pacific and South East Asia. Studies in current problems of economic growth and of Australia's economic relations with the region are contemplated. A particular field of study of several Departments of the School is the development of New Guinea.

The salary ranges for Senior Research Fellows and Research Fellows are £A2,272-£A2,752 and £A1,437-£A2,152 respectively. Appointment is for three years, with possible extension to a maximum of five years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid, and assistance with housing is provided.

Further details are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London, on March 31, 1960.

THE ECONOMIST INTELLIGENCE UNIT LIMITED

invites applications for posts on the research staff of its Overseas, Industries and Marketing Departments. Candidates should have a first or upper second-class degree preferably, but not necessarily, in Economics; at least two years' experience of industry, commerce or finance; and a good knowledge of at least one foreign language.—Please send full particulars, including age, experience, qualifications and present salary, to "Research," The Economist Intelligence Unit, 22 Ryder Street, St. James's, London, S.W.1.

TRAINING OFFICER (TRAINING WITHIN INDUSTRY), MINISTRY OF LABOUR. Pensionable post for man or woman at least 31 on 1.1.60, with practical experience of supervision and management (preferably including some experience as Education and Training Officer). Applicants must have completed a T.W.I. (Institute) course of training as T.W.I. Trainer and have had wide experience in presentation of training programmes. Men's salary scale (nationally £A1,290-£A1,620). Promotion prospects. Write Civil Service Commission, Burlington Gardens, London, W.1, for application form, quoting 5017/60. Closing date March 17, 1960.

LAPORTE INDUSTRIES LIMITED

COMMERCIAL INFORMATION OFFICER

LAPORTE INDUSTRIES LIMITED has a vacancy at its Head Office in London for a female graduate in economics or commerce to initiate an information service on commercial and economic matters with special reference to the Chemical Industry.

Duties of the post will include obtaining information from commercial journals and other sources, the classification and filing of such information, its dissemination within the organisation and the maintenance of statistics on the Chemical Industry.

Applicants, who should be aged from 20-28, should have a reading knowledge of French and German.

The company operates a 35-hour week, there is a pension scheme and lunch-on vouchers are provided.

Replies, giving details of age, qualifications and experience and quoting ref. LH/E17/H, should be addressed to The Group Personnel Manager, LAPORTE INDUSTRIES LIMITED, Hanover House, 14 Hanover Square, London, W.1.

INDUSTRIAL MARKET RESEARCH

The enquiring mind needs variety, independence, and constructive assignments. We are a small, but internationally well-connected, industrial market research agency in the West End offering just this. Our expansion is your opportunity if you can prove to us that you have good commercial experience and a critical scientific approach. Age 25-35, probably graduate, willing to travel. Salary by negotiation. Please write to us in complete confidence, at Box 1283.

FINANCIAL JOURNALIST, actual or potential, with sound grasp of company analysis, wanted in City office of national monthly newspaper.—Write Box 1285.

THE UNIVERSITY OF HULL
DEPARTMENT OF ECONOMICS AND COMMERCE

Applications are invited for a Lectureship in Accounting and an Assistant Lectureship in Government.

Salary Scale: Lecturer £900-£1,650; Assistant Lecturer £750-£1,500 per annum, with F.S.S.U. and children's allowances.

Further particulars may be obtained from the undersigned to whom applications (five copies) should be sent not later than March 16, 1960.

W. D. CRAIG,
Registrar.

The Economist, 22 Ryder Street, SW1

FORD

EXPANSION CREATES OPPORTUNITIES FOR ACCOUNTANTS

SENIOR COST ESTIMATOR. Age 24-30: Qualified Accountant with knowledge of vehicles (also junior positions—intermediate standard). The cost estimating system provides cost-targets for new models against which design engineers work, and a control over costs during development. Material, labour and tooling estimates are compiled by production engineers and are translated into financial terms by teams of senior and other cost estimators. The work is of particular interest to accountant car enthusiasts. Reference CCE.

COST AND BUDGET ANALYST. Age 22-27: Intermediate degree or professional qualification. This is an ideal opening for young men studying for a cost and works qualification. The vacancies are in the decentralised Controllers' offices at Dagenham and will provide a valuable insight into manufacturing operations. Reference CBA.

COST ACCOUNTANT. Age 25-30: Qualified Accountant with industrial experience. The vacancy is in the Central Staff Cost Accounting Department and provides an opportunity for a young man with sound training and practical experience to make a contribution to the further development of a modern integrated accounting system. The ability to understand a complex industrial organisation and to express ideas and instructions clearly in writing are essential. Reference CCA.

Please address applications to Mr. H. C. Crawford, Training and Recruitment Department, Ford Motor Company Limited, Dagenham, Essex, quoting appropriate reference on the envelope.

CHIEF ORGANISATION AND METHODS OFFICER

We are co-ordinating organisational investigations into a separate Organisation and Methods Group at our Main Works in the Midlands and we require a departmental head to control its activities.

Experience in organisation and methods is essential and preference will be given to applicants in the 30-45 age group.

Salary level will depend on qualifications, experience and ability and we are prepared to pay up to £1,500 per annum for the right man.

Applications giving full details should be sent to the Personnel Manager, Ericsson Telephones Limited, Beeston, Nottingham, quoting reference OM/.

ECONOMISTS

The Prudential Assurance Company Ltd. has vacancies in its Economic Intelligence Department. This department is concerned with the application of economic analysis to the Company's operations in Britain and the Commonwealth, and especially with investment problems. The work would be congenial to recently graduated economists of either sex with a good degree, wishing to make full use of their economics training. Students who are taking a degree this summer will also be considered.

Good initial remuneration is offered, and there are prospects of considerable further advancement. Applicants should be aged 25 or less and should send details of age, qualifications and career to the Staff Controller, Prudential Assurance Company Ltd., 142 Holborn Bars, London, E.C.1.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE

Applications are invited for the post of ASSISTANT LECTURER or LECTURER in ECONOMICS, with special interests in MATHEMATICAL ECONOMICS or ECONOMIC STATISTICS, commencing, if possible, on October 1, 1960. The appointment will be made at an appropriate point within the present salary scales: Assistant Lecturer, £700-£850; Lecturer, £900—£1,350—£1,650, plus F.S.S.U. benefits and Children's Allowances.—Further particulars may be obtained from the Registrar, University College, Cathays Park, Cardiff, to whom six copies of applications should be sent not later than March 19, 1960.

UNIVERSITY OF MELBOURNE

LECTURER IN THE ECONOMIC HISTORY OF ASIAN COUNTRIES

Applications are invited for the above-mentioned position. The appointee will be expected to commence duty as soon as possible after June 1, 1960.

The salary will be arranged according to qualifications within the range of £A1,500 to £2,100 per annum. Superannuation similar to F.S.S.U. in Great Britain will be provided.

Conditions of Appointment may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close on April 29, 1960.

CENTRAL ELECTRICITY GENERATING BOARD

SOUTH EASTERN DIVISION

VACANCY NO. 7A/60 (ECON.)

SENIOR ASSISTANT (EDUCATION AND TRAINING) IN THE PERSONNEL DEPARTMENT, DIVISIONAL HEADQUARTERS, KINGSTON.

The successful applicant will be responsible to the Divisional Education and Training Officer for the organisation of all the administrative work of the Education and Training Department, including the operation of training schemes for managerial, technical, administrative, clerical and manual grades. He will also be responsible for making known opportunities for careers in the Electricity Supply Industry, the preparation of publicity material, giving careers talks and maintaining contacts with Technical Colleges, Schools, the Youth Employment Service, etc. An adequate staff to assist with these functions already exists.

Salary within range of £927 to £1,000 per annum, including London Allowance. Superannuation and sick pay schemes in operation.

Applications, giving age, experience, qualifications, etc., and quoting vacancy number, should be sent to Personnel Officer, Central Electricity House, Lower Ham Road, Kingston, Surrey. Closing date February 29, 1960.

W. H. DUNKLEY
Divisional Controller.

NORTHERN POLYTECHNIC

HOLLOWAY, LONDON, N.7

The Governing Body invites applications for appointment as PRINCIPAL of the Northern Polytechnic. Candidates should possess high academic qualifications and appropriate educational and administrative experience. Salary scale—£2,800 rising by annual increments of £100 to £3,100 per annum, plus London Allowance. In determining the commencing salary, increments, subject to the maximum of the scale, might be given to a suitable candidate.

The Northern Polytechnic is a major Regional Technical College. To meet current needs and to provide for future development, a large site adjacent to the Polytechnic is now being acquired for a substantial extension.

Form of application, together with full particulars, will be forwarded on request, and should be returned to me, duly completed, not later than March 31, 1960.

R. H. CURRELL, F.C.A.,
Clerk.

GROUP of Investment Trust Companies requires LADY ASSISTANT. Duties would include Investment Research and Analysis of Company Accounts.—Write Box TE.792, c/o 191 Gresham House, E.C.2.

SYSTEMS STUDY

British European Airways O and M Branch provides an advisory service to management throughout the Corporation. There are two vacancies in the Systems Study Section, which is responsible for the solution of a wide range of problems in organisation and office systems, for the design of forms and for the choice of office equipment.

Ref.: 105. The Senior post (salary range £1,160-£1,650) is for a man under 40 with a university degree, or a professional qualification in accounting or engineering, and at least three years' experience of O and M work in commerce or industry. He must have a good knowledge of business methods, a real enthusiasm for improving efficiency and the ability to present his arguments concisely and persuasively both orally and in reports.

Ref.: 106. The Junior post (salary range £860-£1,120) would suit a younger person of less experience in business and possibly none in O and M work, but with potential for development beyond present achievement. For those applicants without a degree, there must be evidence of studies likely to lead to a professional qualification.

Applications, quoting reference shown, to Personnel Officer, Head Office, BEA, Bealine House, Ruislip, Middlesex.

UNIVERSITY COLLEGE, IBADAN, NIGERIA

Applications are invited for two posts, one in (a) ECONOMICS to commence October, 1960, and the other in (b) SOCIOLOGY to commence as soon as possible. Grading according to qualifications and experience:

Senior Lecturer: £1,700 x £75 — £1,925 p.a.
Lecturer (Grade D: £1,400 x £50 — £1,650 p.a.
Lecturer (Grade ID: £1,000 x £50 — £1,300 p.a.
Assistant Lecturer: £800 x £50 — £900 p.a.
(Salary scales under review.)

Candidates with special interest in (a) Money and Banking, and in (b) Sociological Theory preferred.

Passages paid for appointee, wife and up to five children under 11 years, on appointment, annual overseas leave, and termination. Children's, car and outfit allowances. F.S.S.U. Part-furnished accommodation at rent not exceeding 7.7 per cent of salary. Detailed applications (six copies), naming three referees, by March 16, 1960, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

THE REPUBLIC OF THE SUDAN

The Ministry of Education invites applications for appointment as mistresses in Secondary Schools in the Sudan in particular for the teaching of ENGLISH up to "O" level or the equivalent. Vacancies also exist for mistresses to teach MATHEMATICS, SCIENCE, HISTORY, GEOGRAPHY AND DOMESTIC SCIENCE up to a similar level.

QUALIFICATIONS AND AGE:
A University Degree in Arts or Science or equivalent qualifications in Domestic Science is essential. Teaching experience, a Certificate in Education, and willingness to assist with games, physical training, music and other school activities, will be an advantage. Age limits 23 to 45.

TERMS OF SERVICE:
Appointment will be on Short Term Contract (with bonus) for a period of up to five years. Salary ranges from £S.860 to £S.1,340 (£S.1=£1 0s. 6d.) with bonus payable at end of contract. Starting rate will be determined according to age, qualifications and experience. An outfit allowance of £S.50 is payable when the contract is signed. Cost of Living Allowance which is reviewed every two months is also payable. Annual home leave accrues at the rate of one day per month with free passage. Further particulars and forms of application may be obtained from the Embassy of the Republic of the Sudan, Appointments Section, Cleveland Row, St. James's, London, S.W.1, quoting reference 4/1026.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE

Applications are invited for the post of ASSISTANT LECTURER or LECTURER in INDUSTRIAL PSYCHOLOGY in the Department of Industrial Relations. Six copies of applications should be sent not later than March 19, 1960, to the Registrar, University College, Cathays Park, Cardiff, from whom further particulars may be obtained.

MACHINERY BUYER FOR PIRELLI LIMITED, LONDON

Pirelli Limited wish to appoint a MACHINERY BUYER for their Central Buying organisation in London. Among a wide range of purchasing responsibilities the Department buys machinery for the Company's factories at Burton-on-Trent and for the Pirelli organisation overseas.

Applications are invited from men who meet the following specification:
(a) University graduate (not necessarily in Engineering), age 26-35.
(b) Commercial background plus a distinct familiarity with machinery.

A knowledge of buying for an industrial organisation would obviously be an additional advantage.

For a man of real ability this is a first-class career opportunity with an expanding and progressive Company. Salary and conditions of service should prove attractive and will be discussed with candidates selected for interview.

Candidates who have the qualifications mentioned above should send brief details of age, education, career so far and present salary to the Personnel Manager, Pirelli House, 343-345 Euston Road, London, N.W.1.

RATE FIXER required by a medium sized manufacturing Company near City centre. It is essential that applicants have had at least five years' practical experience in connection with hand and power press and Capstan Lathe operations, assembly work and spot welding. This is a staff appointment carrying a salary of £800 to £1,000 p.a.—Reply, giving age and details of previous and present employment, to Box 1294.

Secretary for Engineering
Company in Edinburgh.
Must be C.A. or A.C.I.S.
Age about 28 to 35.
Apply Box No. 1287

STATISTICIAN is required at the Medical Research Council Climate and Working Efficiency Unit, Oxford. Candidates should have Honours Degree in Statistics or in Mathematics with Diploma in Statistics, and be interested in the field of Physiology. The post is suitable for newly qualified graduates.—Apply to the Secretary, M.R.C. Unit, Department of Human Anatomy, South Parks Road, Oxford.

DEPUTY WORKS LABOUR MANAGER

required by the United Kingdom Atomic Energy Authority, Production Group, Spen Hill Works, Nr. Leeds, Yorkshire, to undertake labour management on an 11 acre chemical works, including recruitment of industrial labour, wage negotiations, trade union negotiations, joint consultation and interpretation of the Authority's labour policy.

In addition to a wide experience in all aspects of personnel work in the chemical or engineering industries, applicants should be able to give talks on labour policy and practice and have experience in the supervision and training of labour department personnel. They should also possess a university degree, or equivalent, in Economics or one of the Social Sciences.

Salary between £1,350 and £1,600 per annum, according to qualifications and experience.

Staff Pension Scheme. Contributory Superannuation.

Send postcard for application form, quoting reference SP.24/100, to Works Secretary, at above address.

Closing Date: March 7, 1960.

UNIVERSITY COLLEGE OF GHANA

Applications are invited for (a) Senior Research Fellowship or (b) Research Fellowship or (c) Junior Research Fellowship in Department of Economics. Salary scales: (a) £1,750 x £75—£2,150 per annum; (b) £1,000 x £50—£1,350 x £75—£1,800; (c) £850 per annum; (a) £1,800; (b) £1,000; (c) £900 per annum. Duty post according to qualifications and experience. F.S.S.U. Quick and family allowances. Passages for appointee and family on appointment, leave and retirement or termination. Part-furnished accommodation at charge not exceeding 5% per cent of salary.

Detailed applications, with names of three referees, by March 24, 1960, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

Write to the Managing Director, Remploy, Ltd., 25-28 Buckingham Gate, S.W.1, or telephone VICtoria 0021 (12 lines).

WANTED, to borrow, for Examination purposes, student's lecture notes on Economics, etc., suitable for B.Sc. Econ. degree. State terms.—Box 1280.

SAVILE ROW CLOTHES.—We specialise in, and have in our showrooms, a wide selection of the finest hand made Lounge and country clothes for the discriminating gentleman. Dinner and Sports Suits. Dress clothes. Overcoats. Hunting and Riding Kit are purchased direct from leading Savile Row tailors—Huntsman, Sanders, etc. Our prices range from 10 Gns. Alterations carried out. Banker's orders and orders by post accepted.—REGENT DRESS COMPANY, 14 Dover Street, 2nd floor (lift), Piccadilly, W.1. HYD 7850. Established 1922. Open 9 a.m.-5 p.m.; Saturdays, 1 p.m.

BIM-POLYTECHNIC EXECUTIVE PROGRAMME

April 25-May 20, 1960 — October 31-November 25, 1960
January 30-February 24, 1961 — April 24-May 19, 1961
October 30-November 24 1961

These full time residential courses for managers are now entering their third year. Their aim is to help increase the effectiveness of executives. Particular attention is paid to the problems of decision making in changing conditions.

Full details from The Director, Executive Programme, The Polytechnic, Department of Management Studies, 194 Albany Street, London, N.W.1.

TRAVEL

CONTINENTAL HOLIDAYS NOT MASS PRODUCED

Because we specialise in a personal service for discerning executives and professional people, we are able to arrange for you those holidays at the right price for those who seek individual arrangements and not mass tours.

Brochure from:

BUSINESS AND HOLIDAY TRAVEL LIMITED

THE COAST OF 1001 ISLANDS

A week in Opatija and a week in Dubrovnik, by motor-coach, cost cruise down the Dalmatian coast between ports, visit to Yugoslavia has been discussed for some time, but for the first time this year. A choice of dates in April.

THE HEART OF YUGOSLAVIA

Combine a week's stay at Dubrovnik with a visit by motor-coach to the fascinating cities of Sarajevo, Mostar, Split and Zagreb. Sunday day flights to Yugoslavia from £19 19s. Return fare. Extra days planned 15 day holiday. From £9 9s.

ROMANTIC ROVINJ

Rovinj, beloved of Yugoslav artists, is included in our programme this year. Come and explore its picturesque streets or just take your time away in the sunshine. Sunday day flights for this fortnight's holiday from £9 9s.

SORRENTO

Sorrento is set on the tip of a peninsula [illegible] the whole of the Bay of Naples. Accommodation in [illegible] hotels and travel by air from £42 10s.

MENTON

Probably the best known coastline in Europe, the French Riviera offers a choice of the large and fashionable and the small and picturesque. Menton falls into the second category. Fifteen days by air from £9 gns.

Write, call or phone for illustrated brochure.

EDUCATION

SUCCESSFUL TUITION FOR THE B.SC.(ECON.) DEGREE

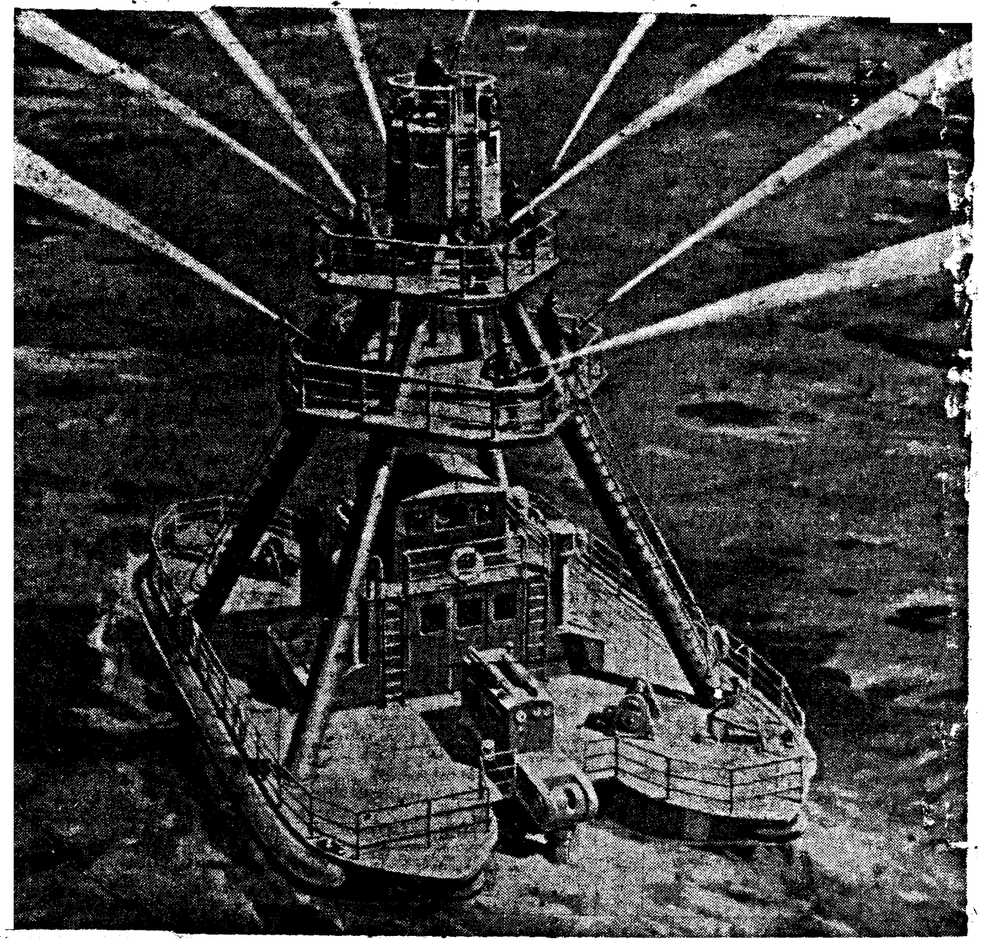
Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the final examinations of London Univ. B.Sc.(Econ.) (Hons.) (pt. time) is included in one fee £25. Also Gen. B.Sc.(Econ.) exams Prelim.59. Tuition also for G.C.E., Law, Statistical, other exams. Prospectus (stating exam.) free from T. W. Shaw, Hitcher C.B.E., LL.B., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

11+ AND PUBLIC SCHOOLS COMMON ENTRANCE

Write for details of postal courses stating date of examination to the Registrar.

MERCER CORRESPONDENCE COLLEGE
(Dept. W.E.)
37-39a OXFORD STREET, LONDON, W.1.

SECRETARIAL TRAINING (1960-1961) for graduates and others. Write Organising Secretary, Dennis Hall, Hatfield Polytechnic, Hatfield, Herts.



EXPERT POSTAL TUITION

for Examinations, University, Law, Accountancy, Costing, Secretarial, Civil Service, Banking, Insurance, Economics, Local Government, Languages, etc. Also Private Study Courses. Moderate fees. Payments by instalments arranged. Write for free prospectus and/or advice, stating your requirements, to the Secretary (Dept. 22), METROPOLITAN COLLEGE, ST. ALBANS or call at 60 Oxford Victoria Street, London, E.C.4.

Registered as a Newspaper. Authorised as Second Class Mail, Post Office Dept., Ottawa. Printed in England by St. Clements Press, Ltd., London, E.C.4. Published by The Economist Newspaper Ltd., at 22 Ryder Street, London, S.W.1. Telephone: Whitehall 1234. Postage on this issue: U.K. 6d., Overseas 6d.

PROTECTING THE PROTECTOR...

This unique fire-fighting float was designed by the world-famous BP Tanker Company Limited. It will patrol and protect Swansea Harbour against fire hazards. For underwater protection of the float, C-Sentry zinc alloy anodes were chosen because of the remarkable success which has been achieved by this material in the field of cathodic protection.
They have low initial and replacement costs and make good electrical contact with the structure protected.
Advice on protection schemes is readily available.

Is Matrix Inversion your problem?

THE STANTEC-ZEBRA
COMPUTING SERVICE CENTRE

offers facilities for the solution of this and other mathematical problems

AN EXTENSIVE LIBRARY OF SUB-ROUTINES IS AVAILABLE FOR SOLVING:

SIMULTANEOUS LINEAR EQUATIONS
SIMULTANEOUS ORDINARY DIFFERENTIAL EQUATIONS
PROBLEMS IN MATRIX ALGEBRA
MATHEMATICAL FUNCTIONS INCLUDING TABULATIONS

All calculations are done in full decimal floating point. There are no scaling problems and numbers up to 10^{9999} can be printed out.

Solution of 15 x 15 Simultaneous Linear Equations would cost about £3 in 9 decimal digit floating point or about £5 in 16 decimal digit floating point. Special rates are available for educational establishments.

THE ONLY INTERNAL MIXER

The Shaw Intermix is the most versatile internal mixer of rubber, plastics, and allied materials. A high horse-powered drive with high pressure head, gives fast efficient mixing and permits high temperature reclamation of waste rubber.

WITH ALL THESE ADVANTAGES

- ★ Rotors mounted on roller bearings.
- ★ Interlocking rotors for maximum mixing efficiency.
- ★ Bi-metal construction of rotors for strength and wear.
- ★ Effective control of temperature.
- ★ Cooling/heating chambers inside rotor nogs.
- ★ Easily renewable wear plates.

International NU-SWIFT News

No. 3

HAVE YOU MET THESE PEOPLE?

43. SAS, SCANDINAVIAN AIRLINES SYSTEM, justly renowned for service and efficiency, and 'First over the Pole' recently opened their new LONDON headquarters in fashionable Conduit Street. Nu-Swift protects the whole building, from which reservations all over the world can be made in a few minutes, before long further to be accelerated by the installation of electronic equipment.

44. Sir HUGH CASSON, famous British architect and exponent of MODERN DESIGN, is one of the many professional men whose premises are protected by Nu-Swift.

45. Rendez-vous of the cosmopolitan smart set, the famous Palace Hotel, ST. MORITZ, Switzerland, near the Cresta Run, is now protected by Nu-Swift. So are many of the vessels of the rich GREEK SHIPOWNERS who make the Palace Hotel their winter headquarters.

46. Norwegian WHALE CATCHING SHIPS each year set out from SANDEFJORD, Norway, destined for hazardous adventures in ANTARCTICA. Six or nine months later they return after incredible hardship, but often with the pockets of the crew lined with gold. Most whalers and floating whale factories are equipped with reliable Nu-Swift.

47. In lovely GREENLAND, no longer merely the home of eskimos and a colony but part of the Kingdom of Denmark, with output from cryolite mines becoming of increasing economic importance, trading posts of the ROYAL GREENLAND TRADING CORPORATION have been equipped with Nu-Swift.

48. The HOME OFFICE FORENSIC LABORATORY at PRESTON, LANCS., ENGLAND, famous for its fact-searching work in many murder trials has been equipped with Nu-Swift.

HAVE YOU BEEN TO THESE PLACES?

49. Now also available with instructions in ARABIC, Nu-Swift extinguishers can be specified in this and any of 13 OTHER LANGUAGES at no extra charge.

50. PUNCH, the famous weekly, in recent years brightened by a face-lift, is now also, to prevent possible interruption in publication, protected by Nu-Swift. So are the giant presses in the three cities of publication of the DAILY EXPRESS, printed simultaneously every day in 4,000,000 copies, in LONDON, MANCHESTER and GLASGOW.

51. In GUATEMALA, prosperous Central American State, all the BANKS, except one, are protected by reliable Nu-Swift.

52. In the unhappy event of another global war, many CIVIL DEFENCE EXPERTS believe that the self-contained Nu-Swift Universal (Royal Navy) 2-gallon Water/CO_2 extinguishers will be of great value in dealing with the many small fires likely to flare up at some distance from a THERMO-NUCLEAR EXPLOSION at a time when public water supplies will probably be interrupted.

53. Where only a century ago, native warriors, with unexampled ferocity, fought the white man in ZULULAND, local farmers are now forming themselves into Nu-Swift fire fighting groups of five to pool their Nu-Swift fire posts and jointly combat attacks of the equally ferocious Fire Fiend. Twenty-nine such groups have so far been organised; they have proved themselves of great value in combating dangerous SUGAR CANE FIRES.

54. Through the failure of old soda acid extinguishers, CLOVER MEATS Ltd., WATERFORD, Republic of IRELAND, a firm which does a large export business, lost a contract worth £80,000. In consequence, 69 soda acid extinguishers were scrapped and instead reliable Nu-Swift were installed to the tune of £1,500.

55. The private railway coach of President KEKKONEN, the first citizen of democratic FINLAND, is now protected by effective, and reliable Nu-Swift Dry Powder Extinguisher, Model 1604.

56. 'Guinness is good for you,' says the famous slogan of the GUINNESS BREWERY, in Dublin, a national institution in the REPUBLIC OF IRELAND. It is now protected by Nu-Swift, and that, of course, is good for GUINNESS!

57. Founded in 1843, the NATIONAL METSOVIAN POLYTECHNIC SCHOOL in ATHENS, GREECE, the largest and most important scientific institution in South Eastern Europe and the Middle East has, after exhaustive investigation, decided to standardise on Nu-Swift extinguishers. Initial order was obtained in the teeth of keen, local, German, American and Italian competition.

58. To ensure rapid, reliable and efficient operation at sub-zero temperatures, THE PORT OF HELSINKI AUTHORITY, FINLAND, has installed Nu-Swift Dry Powder Extinguishers for the protection of all its buildings and cranes.

59. The works of GIESEN & WOLFF, LTD., NORTHAMPTON ENGLAND, greeting card manufacturers, were recently destroyed in a 36-hour fire, fought by 80 firemen with the aid of 15 appliances. A second fire was caused in the roof of another factory nearby but was kept under control with extinguishers. Said Mr. Wood, the manager: "I would like to PRAISE THE NU-SWIFT SERVICING SCHEME. The extinguishers used by us were not of your make but your servicing kept them IN PERFECT ORDER—they saved our second factory. You can expect a large order when our new factory is built."

DEFENCE BONDS

pay 5% with 3% tax-free bonus after 7 years

Defence Bonds are a safe and extremely profitable way of saving. As well as the attractive interest of 5% per annum, the Bonds are repayable after 7 years at the rate of £103 for each £100 invested—and this 3% Bonus is U.K. income tax free. The bonds may, of course, be encashed before maturity. The interest, payable half yearly, is not exempt from tax, but tax is not deducted at source. You can have up to £2000 of these Bonds exclusive of holdings of earlier issues. Bonds inherited from a deceased holder or acquired by conversion of earlier issues can be held in addition. *On sale in £5 units. Buy all you can afford.*

IN SEVEN YEARS

5% Defence Bonds yield the equivalent of

£5.12.6

per cent (gross), per annum if you pay tax at the present standard rate of 7/9.

Full information on Defence Bonds from your stockbroker, banker or other professional adviser, and from your local Savings Committee, Savings Centre, Post Office or Trustee Savings Bank.

Issued by the National Savings Committee, London SW7

who

made 4,600,000 car body units?

The Pressed Steel Company. Body unit number one came off the line in 1926. It was the first production all-steel car body made in Britain.

PS is for Pressed Steel, and the Pressed Steel Company are all for getting on with the job fast.

QUALITY PRODUCTS AT MODEST PRICES

JAPANESE SEWING MACHINE

Since 1953, more than 10 million sewing machines of various brands and types, including all of the latest Japanese models, have been sold all over the world. They have been welcomed into foreign homes because they are designed right, built and priced right for any budget.
Japanese inventive genius and mass production techniques insure top quality and dependable performance. Many of the features are exclusive—unobtainable in machines manufactured in other countries. Every machine is thoroughly tested and inspected—it must pass strict controls before export. Of Japan's current annual 2,500,000 production, 2,000,000 are exported.

JAPAN SEWING MACHINE EXPORTERS' ASSOCIATION
Odakyu-Ginza Building, No. 7, 4-chome, Ginza-higashi, Chuo-ku, Tokyo, Japan.

who

took the steel pressing industry where it was needed?

The Pressed Steel Company. Since 1947 they have, in close co-operation with H.M. Government, established new factories at Linwood, Swindon and Swansea. Results: for the areas—some seven thousand very welcome jobs; for Pressed Steel—a remarkable lift in production.

who

makes railway coaching stock in Scotland?

The Pressed Steel Company. In 1956 they reintroduced the building of railway coaching stock to Scotland. The idea worked so well they've already made 1,000 units for British Railways.

PS means Pressed Steel, and the Pressed Steel Company means business, expanding business.

AN IMPORTANT DEVELOPMENT IN EUROPEAN TRAVEL

Two Great Airlines link networks

From 1st April, BEA and OLYMPIC are linking their networks of services across Europe. This will bring you the advantage of a greater number of flights, particularly on the important trunk route through Paris, Rome and Athens to the Eastern Mediterranean, In addition, services connecting the intermediate stops and main European centres will be more conveniently scheduled. 1st Class and Tourist services are available on all these routes. Full details of connections and fares are available from your Travel Agent or any BEA or OLYMPIC office.

Who Pays the Porter?

HE who pays the porter calls the tune. We have been waiting this week, no longer for Guillebaud, but for the Government to say how the committee's findings on railway pay will be put into effect—and paid for. On Thursday, the Prime Minister gave just a glimpse of the Government's still jejune thinking. "Fair and reasonable wages" should be paid to railwaymen. But how? Mr Macmillan pointed to three requirements: that the railways have to be freed from restrictions and obligations which limit their earnings and "prevent them from making the best use of their resources"; that (and a special planning board is to be set up to work this out) the railway regions should become "fully self-accounting and responsible for their own affairs"—and assets; and that, meanwhile, "financial arrangements" are needed to carry the railways until the reorganisation, whatever it may prove to be, pays off.

What all this may mean for the future has to be seen. At once, a bill has to be met. There has never been any likelihood since the Government promised 5 per cent on account a month ago, in order to stop the strike of the National Union of Railwaymen, that it could say No now to Guillebaud. To do so would court a much worse strike than the one that so daunted it then. The question now is whether the three railway unions will not ask for something more or something different; and all the signs are that (in back-dated pay or in still higher rates for particular grades of work) they certainly will. It is hard to see where the Government can now find a sticking point; but some sticking point there must surely be, even if it were to cost a strike after all.

The trouble is that the Guillebaud report itself is really a gigantic red herring, with much too little to do with the realities of railway economics. The Government has already committed itself, in fact, in order to avoid a strike, to a set of proposals which are disturbingly often quite beside the point. What matters to those who have to run the railways (against a national background of practically full employment) is what wages they have to pay to get and keep the workers the railways must have; fundamentally, a grade is underpaid if it is impossible to recruit sufficient men to fill all the posts in that grade which it is profitable for the railways to put on offer. It is overwhelmingly a question of "differentials"—that is, of incentives—not only between different jobs but also between different parts of the country, with as good pay as possible for good work: it is not, and in both common and financial sense cannot be, simply a question of the comparative status of all railwaymen. Yet this is precisely how the industrious Guillebaud statisticians set about their task: as essentially a social question, not an economic question at all. The bizarre idea that fair wages could be worked out by a committee in this way (so saving those responsible from making their own decisions) was not theirs. They did very dutifully all they could do in the time they had. But the committee was the wrong body on the wrong assignment.

So, inevitably, some of the results, by the test of the railways' (or the railwaymen's) real requirements, are very odd indeed. The figures simply do not fit the facts of railway life. Thus, nearly all the "comparable industries" cited in the report (the committee found it very difficult, anyhow, to pick out ones that were comparable) are urban ones; yet the distinguishing feature of the railways is that they are one of the very few industries in Britain in which the writ of a single employer runs not only in the big booming cities, but right down into

the remotest rural areas as well. Everybody knows that wage rates which attract staff to spare to some Cornish station will not attract sufficient staff in Birmingham; yet rates in both places are now to go up equally. Very likely, instead of merely doubling the London allowance, the committee, if it had followed the market, would have at least quadrupled it, with similar allowances for other big cities; but it would have left some rural railwaymen at or near the rates they get now.

To take another crucial example: when independent contractors' gangs have been employed to repair the permanent way, they have got much higher wages than the railways' regular staff on the same job either get now or will get if the Guillebaud recommendations are accepted. These independent gangs have often got twice the regular railwaymen's wages because they have tended to finish the job in half the time. Yet the slower tempo of work too often embedded now in the permanent railwayman's tradition is a factor of which the report takes no cognizance. It is precisely this slower tempo that lies in the core of any explanation of why railway wage rates are low. When recommending, rightly, a special increase for shunters, the committee notices that in traffic and goods yards their work, unlike that of some other railwaymen, is continuous. But it does not examine whether, where other railwaymen's work is not continuous, there is not sometimes good reason to suppose that it is because their grades are overstaffed.

This is not to deny that many railwaymen are underpaid—or that there will never be good railways without good pay and conditions. But it is to assert that very few of them are likely to be underpaid to the exact extent suggested by this committee. Some of them may even now be being offered less than, by the logical test of the market, they should be offered. But others, when they get what Guillebaud suggests, will quite frankly be swinging the lead on whoever it is that is going to pay the bill; and, inevitably, this will nourish continued overstaffing in some of the grades where employment needs to be sharply reduced to get a railway system of "a size and pattern suited to modern conditions and prospects."

The truth is that railway economics are far too serious a matter to be left to statisticians. Will the politicians now, in fact, do any better? It is not just a question of footing the new wage bill while the railways themselves are bankrupt, or even of them devising the means of getting them out of Carey Street: this is the cart before the horse anyhow. It is not just a matter of grasping the quite simple, but fundamental, proposition that the only railway system which can pay the wages that railwaymen "ought to have" is a system which users will want to use and will pay properly for using. There are also all the grave implications for the economy of this new gimmick of comparative fair wage-fixing, with the prospect of an endless belt of Guillebauds for everybody (and the busmen next).

The new Tories, however, no longer believe in inflation. They are like the old Turks who, it used to be said, were always taken by surprise by the coming of winter. In the press and political speeches they are rampageously pressing the Chancellor of the Exchequer, with his Budget only three weeks away, to go easy with taxpayers and borrowers, whatever the likely balance in the coming year between the nation's total demands and its available resources. Better risk nine surgical stitches in an apoplectic economy at a later crisis operation, they are really shouting, than take a stitch in time now to check inflation and keep the vigorous growth going—which is the nation's (and, incidentally, the railways') greatest need. Do they really grasp what the Prime Minister ought to mean when he says that, though "the life and trade of the nation require a railway system, it must not be allowed to become an intolerable burden on the national economy"? It has, of course, already become such a burden.

The Tsar and the General

Mr Khrushchev is going on reconnaissance in France

MR KHRUSHCHEV travels to Paris to open the summit season on Tuesday. By his journey he fulfils the third capital condition that General de Gaulle, on November 10th, placed on his own attendance at a summit conference. The other two have already been satisfied, after a fashion. The détente between East and West has not been noticeably improved since November, but, such as it is, it persists; and Mr Khrushchev has done his share (if no more) in supporting it. The western leaders obediently met at General de Gaulle's behest in December: Mr Macmillan's visit to Rambouillet this weekend and General de Gaulle's own journey to Washington on April 22nd will continue the allied consultations. These and other voyages (including Dr Adenauer's stopover in Washington on Tuesday) may technically satisfy the general's further requirement that the western leaders should see each other again in the early spring. All in all, the summit on May 16th will be one of the most publicly prepared of modern conferences. The general's insistence first made this exercise unavoidable: his own ideas on nuclear weapons, disarmament and Germany's future have since made it necessary as well. What the preparations will ultimately produce is another matter.

Mr Khrushchev is not going to Paris simply to be obliging. He, too, has his preparations to make for May, and the France of General de Gaulle can hardly fail to figure in them. Soviet policy did not forget the general even in his years of retreat at Colombey. The Soviet ambassador, Mr Vinogradov, dutifully paid court to Cincinnatus, a diplomatic reinsurance that his Anglo-American colleagues did not copy. The subsequent signs of presidential respect for Mr Vinogradov were remarked in Paris; both he and the general may have had a common interest last autumn in securing Mr Khrushchev's agreement to visit France. The actual invitation crowned months of hard work by Mr Vinogradov in which a Franco-Russian rapprochement had become steadily more apparent.

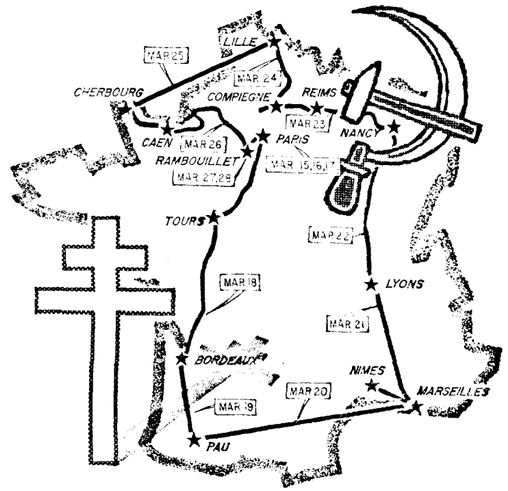
General de Gaulle returned to power in 1958 against communist opposition at home and warnings from Moscow of the fascist menace. When he showed no immediate hankering after ties with Moscow, Anglo-Saxon anxiety sensibly diminished. His success in the September referendum first seems to have decided the Soviet authorities to alter course; and M. Thorez, not for the first, or last, time, thereupon followed suit. The general's ideas on reconstructing Nato, sent to Washington and London in the same month, suggested future divisions. But still Moscow was distrustful and the early signs of the Paris-Bonn axis increased that distrust.

Then, on March 25th last year, the general put himself in a new light by indicating to his press conference that he regarded the Oder-Neisse line as the proper eastern frontier of a reunited Germany. This was followed by heightened Soviet interest in the independent line the general had been pursuing toward Nato. Mr Khrushchev had already earned marks for good behaviour in Paris by refusing to support the efforts of his Chinese allies to intervene in the Algerian conflict. When, on September 16th, General de Gaulle offered the Algerians eventual self-determination, Mr Khrushchev even grew discreetly enthusiastic about the French mission in North Africa. He told the Supreme Soviet that the general's offer

> may play an important part in the settlement of the Algerian question. It will play this part if it does not remain a mere decision but is supported by realistic steps.

It was hopefully construed in Paris that Mr Khrushchev, for one, even approved of a future Franco-Algerian association, for he had added:

> It is known that historically formed close bonds exist between Algeria and France.



BY this time General de Gaulle's invitation had arrived (it reached Moscow on October 22nd). Mr Khrushchev has since done nothing to jeopardise his friendly reception at the Elysée. Although Soviet propaganda beamed to Africa has consistently represented the French bomb tests at Reggane as a crime against the African peoples, Mr Khrushchev himself took a remarkably equable line. He regretted the explosion, he said in Delhi, but

> I believe France and the people of France and General de Gaulle also want a détente and relaxation of international tensions.

Despite the more critical stance adopted by *L'Humanité* since the insurrection in Algiers in January—a stance that has curiously seemed to voice the party's doubts of Mr Khrushchev's wisdom in visiting the Fifth Republic—Soviet policy continues to recognise the general as the one Frenchman with whom it wants to do business. Now that Mr. Khrushchev is arriving, *L'Humanité* is beating the big drum again without, naturally enough, showing any knowledge of what Mr Khrushchev's business really is; it is too far-fetched, even for the comrades, to revert to the old alliance of 1892 and 1935.

Mr Khrushchev probably has no illusions about General de Gaulle's interest in the Dual Alliance. In fact, for Mr Khrushchev, it may be better to have General de Gaulle as a dissident inside Nato than a nationalist outside it. The tactics that Mr. Khrushchev follows in Paris may give some indication of what he wants to get out of the summit. For there to be a Berlin settlement, and (as the article on the next page emphasises) for the first steps towards disarmament to be taken at Geneva, a unified western position is essential; if Mr Khrushchev were to encourage the general unduly in his independent stand, the outcome might not be entirely to his own advantage. But if Mr Khrushchev merely sees the summit, and President Eisenhower's visit in June, as a step towards a major confrontation after the United States elections in November, he may not be averse to sapping the western front still further.

If any western influence is to remain in North Africa, Soviet policy would undoubtedly prefer it to be French, not American. Mr Khrushchev has no reason to want the Algerian war to drive France out of Africa at this stage. His refusal to recognise the Algerian rebel government (as the Chinese have done), or to send arms to it, is likely to continue. As long as the war persists the French army is out of Europe; this, after all, is a more substantial advantage to the Soviet Union than having the French army back in France, even if it is then withdrawn from Nato. Franco-Russian understanding on Algeria is already in tacit existence; but whether, as the

French authorities still seem to hope, it will be cemented by a quick Khrushchev visit to Hassi Messaoud just now is very dubious. Mr Khrushchev has to play up to African opinion, and any new pronouncement by the Algerian rebels (particularly on the breakdown of the latest truce talks with Paris) must influence his words and deeds as General de Gaulle's guest.

Mr Khrushchev may believe that Nato is withering on the branch anyway. His concern is with the Paris-Bonn axis, which is to him an unnatural alliance underpinning Dr Adenauer's German policy. He said on August 5th, when he announced his visit to the United States:

> The marriage between Paris and Bonn is not a love match, and since this is so it will break up.

It is difficult to see what inducements he could give General de Gaulle to secure such a reversal in French policy, and it is likely to be on this rock that the frail barque of Franco-Russian understanding will come to grief in the next fortnight. Mr Khrushchev has asked to visit Verdun and Douaumont; this indicates a train of thought that may still strike some chords. But General de Gaulle's vision of Europe (and he may be flattered to autograph a copy of *Le Salut* for his guest) depends

on the integration of at least western Germany in the French sphere. Even if he is readier than most other European statesmen to recognise that Russia, too, belongs to Europe, he is not likely to be dissuaded from his new ambition. His idea of a continent on which west and east Europeans can co-exist requires the political liberation of the eastern European satellites whose fate at Teheran, Yalta and Potsdam he has constantly quoted as evidence of what happens when France is not consulted at the summit.

The spectres and delusions of earlier Franco-Russian relationships will accompany Mr Khrushchev within the portals of the Elysée. History itself is hoarse with warnings at his advent. But a subtle man may achieve a good deal in France in the next fortnight, not in raising the political prospects of M. Thorez, but in securing what may be the half-hopeful ear of the general. Stalin was not such a man when General de Gaulle went to Moscow. Mr Khrushchev may still consider the attempt worth his while.

Disunited Disarmers

A public airing of the very real differences of interest that block the road to disarmament is not disastrous but timely

IT is only natural that, as next week's disarmament talks at Geneva draw nearer, the western governments should seek to give the impression that their differences on the subject are being narrowed down. It is equally natural for the public to wonder how deep this new-found unity goes. Quite apart from the question whether this week's brief encounter of the western disarmament specialists in Paris can be expected to close the rifts that a longer discussion in Washington had left wide open, United States Senators have just been competing in lamentation over the continuing untogetherness of the various parts of the American government concerned with disarmament. When told that at any rate the Americans, the British, the Canadians and the Italians are broadly agreed on a plan to present to Russia, the cautious citizen may well ask: how many Americans ?

But the point should be grasped that there is nothing catastrophic about this more or less public airing of differences. Indeed, since the differences exist, they are better aired—at this moment, particularly, for a reason that is in itself encouraging. If the Geneva talks with the Russians were plainly doomed to be no more than another fruitless propaganda battle, the western governments would of course be wise to concentrate on keeping their ranks closed, for in those circumstances the important thing would be their public posture. But, for once, it cannot be said that the talks are doomed. They offer the first opportunity of serious negotiation on disarmament for more than thirty months: thirty months during which impatience with the arms race has mounted in step with the mounting bill for it, while the nuclear powers have become increasingly alive to the perils both of their own relationships and of the advance of the "near-nuclear club."

One cannot be altogether sure how far the Soviet government shares the western sensitivity to these forces. It affects to feel no great urgency. The two-year hiatus in disarmament negotiations has been caused, primarily, by the Russian withdrawal from the United Nations sub-committee in 1957, and the subsequent Russian refusal to talk except on a "parity" basis: a point that has now been conceded—Czechs, Poles, Bulgars and Rumanians are to swell the Soviet voice at Geneva next week. The three-power talks on nuclear tests, which opened in Geneva in October, 1958, and which from next week on will have to surrender some of their positions in the Palais des Nations to the new ten-power conference, were slowed down by the wearisome need to gouge the Russians, inch by inch, out of initial positions of a grotesque rigidity. Mr Khrushchev's eye-catching appeal for total disarmament at the last UN assembly was itself accompanied by ingeniously obstructive qualifications, so well hidden in the fine print that even some Soviet diplomats seem unaware of them.

But it is surely safe to assume that Mr Khrushchev himself cannot now be blind to the costs and risks of the evolving situation. Timely reminders are plentiful: France's Sahara test; the German-Spanish affair and its revelation of the possibility of west German evasion of the limits accepted under the 1954 Paris agreements; even this week's "Chinese bomb" scare, which, however ill-founded, serves to emphasise the undoubted fact that China and perhaps a dozen other nations, too, may already be classed as "near-nuclear" powers.

BECAUSE the participants in the new Geneva talks have such evident incentives to create a disarmament system, public postures are not the only thing for them to worry about. On the contrary, outward unity is now less important than a searching analysis of the real differences that block the road to disarmament. The well-publicised French dissent from the position generally adopted by the four other western governments may serve a necessary purpose if it forces the Geneva conference to get down to bedrock.

France's position is distinct in two main respects. France is the only one of the powers concerned that is actually involved in fighting a war with conventional weapons; hence its resistance to the lowering of ceilings on armed manpower. It alone has got to the stage of having developed a nuclear weapon while lacking either a stockpile of such weapons or a means of delivering it at long range; hence its insistence that any ban on tests of nuclear arms, or cut-off of their production, must be directly linked to the surrender and destruction of stockpiles, since to have one without the other would leave the present nuclear club intact in its privileged position, while France would barely have a toe across the threshold. Hence, too, France's emphasis on the international control of means of delivery.

These are logical arguments to which the other Geneva participants must find answers that they can give, not only to France, but also to other near-nuclear and non-nuclear states. Frenchmen who see their national position as being close to Russia's, in that both stress total nuclear disarmament, and play with the idea of acting as arbiter at Geneva, are being less logical. In reality the French and Russian positions, as known at present, are poles apart. The French would give nuclear disarmament top priority; the Russians, according to their programme presented at the UN assembly, would postpone it to the last stage of all, not even cutting off nuclear production until conventional forces had been totally abolished. Mr Khrushchev clearly wants to get his badly needed manpower out of uniform; President de Gaulle wants to be able to keep his under arms, in Algeria. Mr Khrushchev, having the best rockets, asks hopefully for an agreement which, at a crucial stage, would leave nothing but rockets in the world; France, having none, wants them promptly abandoned so that other powers would be cut down to size.

Any reconciliation of these two opposed positions must bring the disputants nearer to the general concept of balance at all stages in the elimination of nuclear and conventional armaments. This is the concept that underlies the British proposals presented to the UN assembly in September and the main western position of today. And it is fairly safe to assume that if Russia were to move towards the idea of balance France alone could hardly hold out against an agreement. Is this such an inconceivable prospect? Already there have been one or two forecasts that if Mr Khrushchev really wants progress on disarmament, he may have to abandon the classical Soviet tactic of trying to divide the western powers, and seek instead to help them to agree among themselves. Perhaps the moment has arrived.

The House's Servants

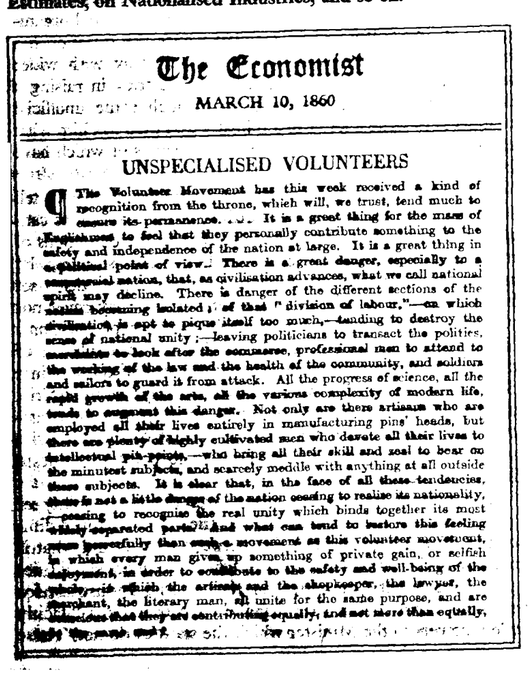
A brief account of the clerks who man "the Table" in the House of Commons and of those who work even less conspicuously behind the scenes.

LAST month's exchanges between Mr Gaitskell, Mr Butler and the Chair about the duties of the Table (i.e. the House of Commons' own expert Secretariat) threw a momentary beam of light on Parliament's own servants. They also produced the first authentic *bon mot* of Sir Harry Hylton-Foster's Speakership: "I think the principle is roughly that a refusal by a Minister to answer a question counts as an answer." It is this kind of conundrum that has regularly to be interpreted in a dispassionate frame of mind by the four clerks of the Table Office, which is itself one of five branches into which the Clerk's department is divided.

The ultimate authority on matters of parliamentary procedure is, of course, the Speaker. But, especially when he is new to the office, as he now is, he leans heavily on the lifelong experience of the Clerk, at present Sir Edward Fellowes, seated with his two senior deputies, the Clerk Assistant and the Second Clerk Assistant, at the massive, tome-covered table which stretches from the foot of the Speaker's dais. Twenty-eight other senior and junior clerks operate within their five offices, between which they are regularly rotated. Their skill is made available not only to the Speaker but to all members of the House equally in the field of procedure.

The Table Office houses the four clerks who receive members' draft motions and questions, check whether they are in order, and, if they are not, try to be helpful in making them so. If the Table Office and the member cannot agree, the decision on whether or not disputed wording can appear on the order paper is made by the Second Clerk Assistant; but a persistent member can resort to an appeal to the Speaker.

The main argument usually arises over questions. The overriding consideration is that there must be governmental responsibility for the subject-matter of the question; further, an answer must not already have been given to it in the same session or refused. There is, therefore, as the Speaker was wryly pointing out last week, a little-suspected paradox: while question time is always cited as the one great remaining opportunity for the legislature to put the Government on the spot, it turns out on closer inspection that even this is accomplished only by Ministers' grace and favour. If the Minister will not answer, as occasionally happens, there is no way of making him do so; and his refusal will be used as a precedent for disallowing similar questions in the future. However, in political reality, the House would be unlikely to tolerate arbitrary refusals to answer.



The clerks' operating principle is to rescue as many questions as possible for the order paper. It is for example out of order to ask the Foreign Secretary bluntly his opinion about events in a foreign country, over which he has no direct control. But he can be asked what "representation" he has made on an aspect of the news which affects British interests directly, and what steps have been taken within an international organisation of which Britain is a member; once the question has been allowed the member will try to get away with wider matters in the supplementary. A favourite trick in raising a domestic matter that has come up through some unofficial channel is to write a letter to a minister and then ask him what action he proposes to take on the case, "details of which have been sent to him."

But, while a clerk can impart these wrinkles, he has to tell some members firmly that the wording of their questions cannot be rescued. In doing so he is guided by the definitions of ministerial responsibility established by the statutes, by answers given in the same session, and by the precedents set by past answers or refusals to answer. These may cover not merely a specific aspect but a whole category of questions. Thus, there may well be a danger that an accumulation of precedents may progressively narrow the area of questioning. Sometimes the system works the other way: a ministerial answer, perhaps an unwary one, will open up new interrogatory possibilities and a clerk, as the servant of the otherwise unaided backbencher, will not hesitate to point this out to interested members.

The present friction has arisen over the admissibility of questions about the nationalised industries. It has proved difficult to draw a hard and fast line between what is and what is not day-to-day administration into which members should not pry. The Select Committee on Nationalised Industries, for example, reported last year that the air corporations "tacitly allow powers to the Minister which the statutes do not. These

unofficial powers comprise a formidable collection." The clerks' rulings are bound to be an uneasy amalgam of the statutes and what ministers have said in the past. Although the clerks may enlist the department's assistance in establishing ministerial responsibility the final decision must be their own. Their task will not be made any easier by the vagueness of Mr Butler's latest statement that Ministers may be questioned about their "general policy" towards the nationalised industries. How can the greater freedom which members will suppose they have been promised come to be tested unless the clerks get much more specific guidance on what hitherto invalid questions to allow on the order paper? Understandably the Opposition has suggested that questions which a Minister is likely to refuse should pass the Table so that he can be made to face the music when he gets up to refuse them. But this could lead to an appalling waste of time.

OUTSIDE the Table Office, Sir Edward Fellowes's department consists of the Public Bill Office, which supplies the clerks to the standing committees and is responsible for advising on intricate points of procedure that arise during the consideration of public bills and for seeing bills physically on their way through and out of the House; the Journal Office, which handles the Daily Votes and Proceedings and other technical compilations; the Private Bill office, which supplies the staff, including the Examiner, to handle the complicated processes by which private legislation qualifies for consideration and is then considered (as described in *The Economist* of October 24, 1959); and the Committee Office, which staffs the Committee of Public Accounts and the Select Committees on Estimates, on Nationalised Industries, and so on.

The Economist

MARCH 10, 1860

UNSPECIALISED VOLUNTEERS

The Volunteer Movement has this week received a kind of recognition from the throne, which will, we trust, tend much to ensure its permanence. . . . It is a great thing for the mass of Englishmen to feel that they personally contribute something to the safety and independence of the nation at large. It is a great thing in a political point of view. There is a great danger, especially to a commercial nation, that, as civilisation advances, what we call national spirit may decline. There is danger of the different sections of the public becoming isolated . . . of that "division of labour,"—an which civilisation is apt to pique itself too much,—tending to destroy the sense of national unity;—leaving politicians to transact the politics, merchants to look after the commerce, professional men to attend to the working of the law and the health of the community, and soldiers and sailors to guard it from attack. All the progress of science, all the rapid growth of the arts, all the various complexity of modern life, tends to augment this danger. Not only are there artisans who are employed all their lives entirely in manufacturing pins' heads, but there are plenty of highly cultivated men who devote all their lives to intellectual pin-points,—who bring all their skill and zeal to bear on the minutest subjects, and scarcely meddle with anything at all outside these subjects. It is clear that, in the face of all these tendencies, there is not a little danger of the nation ceasing to realise its nationality, . . . ceasing to recognise the real unity which binds together its most widely separated parts. And what can tend to restore this feeling more powerfully than such a movement as this volunteer movement, in which every man gives up something of private gain, or selfish enjoyment, in order to contribute to the safety and well-being of the whole; . . . in which the artisan and the shopkeeper, the lawyer, the merchant, the literary man, all unite for the same purpose, and are conscious that they are contributing equally, and not more than equally, . . . the same end? . . .

While the Committee of Public Accounts has the guidance on substantive matters of the Comptroller and Auditor General and his large staff, the clerks supply the chairmen of the Select Committees on Estimates and Nationalised Industries with their only assistance. It is the clerk who, on the direction of the chairman, prepares the outline of the inquiry, makes a thorough study of the subject including all published material, keeps in regular contact with the liaison officer appointed by the Treasury and the departments, lines up witnesses and draws up the first draft of the chairman's report.

During the proceedings of the Select Committee on House of Commons Accommodation in 1954 Mr Albu complained at the frequent rotation of the clerks to Estimates' sub-committees and their consequent lack of expertise in the investigation of government departments. This provoked a somewhat tart rejoinder from the then Principal Clerk of Committees to the effect that clerks were primarily procedural experts, although beyond that they would give what assistance they could within their lay competence. Some members, particularly Sir Toby Low, have continued to agitate for more expert assistance, especially in the recently instituted Select Committee for the Nationalised Industries. But in a special report last year this Select Committee rejected with horror the idea of having its own Comptroller and Auditor General for fear of creating "a great machine" that would conduct "a grand inquisition" into the nationalised industries. It wobbled badly in its last paragraph, giving little positive guidance to the House to help it decide whether to employ any extra staff assistance and, if so, from what source. The main case against such expert advice is that it might lead to the production of a bureaucratic report, making as little sense to the members it is supposed to enlighten as do the Minister's own departmental briefs. Nevertheless there remains a powerful case for the discreet use of the expert; he could help lay out the plan of campaign and brief the committee's members on the most probing questions to ask.

HOW does one become a clerk? By three stages: a first or second class degree at a university; a satisfactory interview with Sir Edward Fellowes; and a high place in the civil service examination. The Civil Service Commissioners reserve the right to give a board to a likely candidate who has missed the screening interview. The key appointment, which is that of Second Clerk Assistant, is made by the Speaker on the Clerk's advice. Barring accidents it is customary to move at the Table to Clerk Assistant and to Clerk. A new clerk has only one chance in five of getting an eventual foothold on that golden ladder. But he has a very reasonable prospect of ending up as the Principal Clerk in charge of one of the five Offices.

Clerks are not servants of the executive but of Parliament—although their pay is now tied to that of the administrative grade of the civil service. They display an interesting variety of outside talent—one translates Polish poetry, another writes detective stories, a third has published a well-received life of Lord Randolph Churchill, and several have brought out popular or more technical works on procedure. Taken together they display a remarkable spirit of zealous and totally non-partisan dedication to the service and smooth working of the House of Commons.

NOTES OF THE WEEK

FRANCE

Bridges to Mend

MR MACMILLAN'S arrival in Paris three days before Mr Khrushchev is purely coincidental, or so it is said in London. Most of General de Gaulle's time in London on the state visit next month will inevitably (but why *inevitably*?) be taken up with pomp and circumstance. Conversations in Downing Street were being squeezed out of the programme (and would the general have been altogether at his ease, anyway, in the room where he and Sir Winston had their set-tos nearly twenty years ago?). This weekend is the only convenient time for the serious side of the Franco-British get-together, and, as it happens, the idea of a quiet day and a half's talk at Rambouillet looks highly opportune. Mr Macmillan may not be averse to passing on his experience of General de Gaulle's next house guest, although the general himself, who has recalled with much equanimity how he faced up to Stalin, may have fewer qualms than most about a *tête-à-tête* with Mr Khrushchev. It is conceivable, too, that mutual impressions of Africa may provide table-talk at least.

Mr Macmillan seems to want the weekend to be as informal as possible: by the look of things, nobody from the Foreign Office is going to put a foot inside Rambouillet if he can help it. The central advantage of this exercise is that Franco-British problems can be mulled over at leisure, something that has not been possible since General de Gaulle returned to power. The forty-minute meetings at the western summit in Paris in December were not the most effective means of putting western policy into some sort of order before the major confrontation with Mr Khrushchev in May. The Rambouillet weekend could do more to jolly things along than the foreign ministers' meeting in Washington in mid-April.

No set agenda is likely this weekend, but it is certain that General de Gaulle will want to talk about the nuclear club (which he will take up again in Washington), and Mr Macmillan will want to see what can be made of the general's ideas on Nato, disarmament and the future of west Berlin. Some Franco-British bridges can still be mended in time for the summit. To repair them is more urgent, if not more important, than giving the go-ahead to the Channel tunnel.

Algerian Kalends

ONCE again, different forms of French are being spoken on the opposite shores of the Mediterranean. For months General de Gaulle had been assuring the French public that the prospect of peace in Algeria had some reality to it. Last week, during a tour of French military posts in Algeria (apparently he did not set foot in Algiers itself), he told the officers exactly the opposite. From the reports of the one authorised correspondent who was with him, he repeatedly told them that they had a long task ahead and that the essential thing was to obtain victory by the force of arms. Heated argument has followed in Paris about whether his statements are in keeping, in spirit or letter, with his own statement last September offering Algeria self-determination; but this is beside the point. The important fact is that the Moslem insurgents are now given only one choice: to surrender, or to fight. General de Gaulle told his officers that either the rebels must give up their arms (a prospect he thought most unlikely), or the army would hunt them and take their arms away. He made no mention of negotiation.

The switch of emphasis is more than can be decently explained away by the Algerian air, or by the substitution of a military for a civilian audience. Secret negotiations with the FLN (the Moslem rebels) had apparently been going on in Rabat, but it is believed in Paris that the prospect of any negotiated settlement was actually precluded by pledges given by General de Gaulle to his own fighting men. History may take a very different view of the January episode of the barricades in Algiers from the contemporary version, so flattering to General de Gaulle. A few disobedient officers have been removed from their jobs, and MM. Lagaillarde and de Sérigny are in jail. But the army may well have obtained, as the price of obedience, the assurance that the FLN would be offered little better than unconditional surrender.

WHATEVER its reasons, the change of tune is abrupt and striking. To dispel the bad impression, the French authorities issued on Monday a restatement of official policy for Algeria. In this new version, the Algerians will still be offered three choices in the distant referendum. But General de Gaulle has made it clear that the full integration of Algeria into France (which he now deprecates as "direct domination practised since the conquest") is not possible, while a "detestable" vote for independence would lead inexorably to the partition of the country. His own preference goes to the intermediate solution of home rule, "an Algerian Algeria linked with France." The army would have preferred *Algérie française*, but it will swallow the new formula for the time being, provided that it is allowed to get on with the war.

GERMANY AND GUINEA

Bonn's Diplomatic Cross

ONCE more the Bonn government has been impaled on the painful logic of its own doctrine that it cannot maintain diplomatic relations with states that recognise the government in east Berlin. In October, 1957, it felt obliged to break off relations with Yugoslavia when Marshal Tito sent an ambassador to east Germany, a gesture that got him no thanks or satisfaction there. Now, according to an east German report, the young African republic of Guinea has done the same. To deter a whole series of African and Asian countries, of which Ghana might well be the first, from following suit, Bonn faces having to withdraw its new ambassador from Conakry—provided, that is, the east German reports are true.

Doubt was cast over them on Monday when the west German ambassador in Conakry reported home that the president of Guinea, M. Sekou Touré, had told him that the whole incident was news to him. If the east German government has in fact tried to push Guinea further than it is prepared to go, or if Bonn's anger has in fact caused M. Sekou Touré to think again, the federal government may not after all feel compelled to withdraw its ambassador. But the first reports from east Berlin were pretty circumstantial and were accompanied by television pictures of the new ambassador supposedly presenting his credentials to President Pieck. It can hardly be that nothing has been going on.

A break with Guinea would cause much less heart-searching in Bonn than the break with Yugoslavia did. The federal government evidently got a shock from the news from east Berlin. The red carpet was laid down for M. Sekou Touré when he visited Bonn three months ago, and he was offered aid—well-intentioned gestures made despite the risk of displeasure in Paris. Now Guinea has both accused west Germany of complicity in France's atomic bomb, and offended against the Hallstein doctrine. There is some disposition in Bonn now to write Guinea off as communist and cut it off without a penny.

To the outside observer these reactions seem somewhat extreme. M. Sekou Touré is not tied by the treaty obligations of the western powers; he does not have to be a communist to find it convenient, and indeed reasonable, to have relations with east Berlin. All the same, it is true that com-

munist states—like east Germany and Czechoslovakia—have been quick to establish economic and political footholds in Guinea. The drawback of a west German decision to break with Conakry is that it would not hinder communist penetration in Africa, but would help it.

LABOUR'S CONSTITUTION

After the Glossy, the Gloss

THERE is every reason to believe that Mr Crosland let the authentic cat out of the bag when he said on *Panorama* that Mr Gaitskell's New Testament revealing what the Labour party really means to say might be added to rather than substituted for the Webbs' Old Testament about "common ownership," of all, for all, by all. It evidently came as a surprise to Mr Gaitskell that quite so many of his colleagues, who had caught socialism as a religion in their youth, regarded tampering with the forty-year-old covenant as that sort of progress which was anathematised by Pio Nono in the *Syllabus*. Among the political members of the National Executive, even Mr James Callaghan, whose stout-heartedness against any whiff of anti-Gaitskell intrigue almost carried him into drumming Messrs Driberg and Crossman out of the party in a speech at Oxford, has told his leader that new words there may be but the old Commandments must stay.

The strong reaction of some powerful union leaders against signs of disloyalty to Mr Gaitskell might have tempted him to stick to his original path by holding out the prospect of a one or two vote majority on the executive for scrapping Clause 4 of the party constitution. But he must have seen that this would have entangled him in an endless row that would have permanently damaged his authority in parliamentary debate. Hence the word is that clause 4, undefiled, will be "entombed" or "embalmed" within the sarcophagus of Mr Gaitskell's prose. At next Wednesday's special session of the National Executive, oddly timed for the very eve of the psychologically vital by-election in ultra-marginal Brighouse and Spenborough, this operation will be attempted. Of course, even if it succeeds, the patient may die. Most of the press will inevitably interpret the survival of the Webbs' words as a climb-down for Mr Gaitskell and certain public relations firms will already have alerted their specialists in textual criticism.

DEFENCE

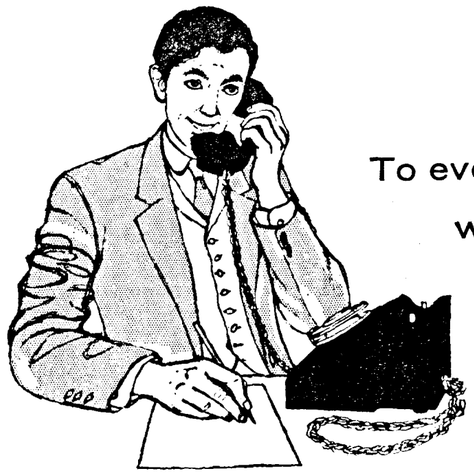
Much Groping

THE defence debate last week, evidently exhausted members of parliament, and the service ministers had a scandalously easy time in the debates on the estimates. In the air debate, Mr Driberg effectively queried the efficacy and reliability of the missile warning system (at Fylingdales or anywhere else), inadvertently giving impetus to the growing movement to stick to aircraft for the mounting of Britain's deterrent; the debate added to the growing signs that not only are the V-bombers to be kept going as long as possible to carry families of stand-off bombs, but that a new dual-purpose aircraft, able either to carry troops or to circle around with a Sky Bolt nuclear missile at the ready, is seriously contemplated. Nobody asked how, or how soon, the accuracy of such missiles could be achieved, just as nobody asked, when Mr Ward said that, "at worst," the missile warning time would be four, though more likely fifteen, minutes, what was the purpose of "the defence of the deterrent," by Bloodhound rockets or Lightning fighters. What is clear is that the men in blue intend to stay in the air.

The only effective comment on all this came from Admiral Hughes-Hallett, in one of the few worthwhile contributions to the naval debate; his point was that ships or submarines are better (and more accurately navigable) launching platforms for nuclear missiles, since a four-minute alert will not imperil their retaliatory capacity. Admiral Hughes-Hallett put up a thoughtful case for a cheap, stripped-down navy, concentrating its resources to provide more ships for police actions and to mount the deterrent. He rightly pressed the importance of sea-air missiles for the destroyers.

Mr Wigg was again at the top of his form in mathematically predicting too small an army from current recruiting trends (and Mr Soames implicitly agreed) but nobody has begun to talk of the remedy—selective service. The disquieting feeling emerges from these debates that the type of war outside Europe in which British conventional forces can intervene is conveniently getting smaller to suit the fewer men and shrinking bases available. But will the allies in Seato and Cento be reassured by the thought that the reinforcements they can expect at need, though quickly available, may be of little more than token size?

Norstad's Commandos



THE question of the uses of the small, highly mobile forces that everyone is calling for has been raised in a different context with General Norstad's announcement on March 2nd that he was organising a Nato airborne force. This is to consist of three battalions, contributed by France, Britain and the United States respectively (as the standing group powers), to be kept in a high condition of readiness to be flown to any threatened spot within the Nato area. Since the German front is fairly closely patrolled, the most likely places for the use of the new force are presumably thought of as places on Nato's periphery—in Greece, Turkey or Scandinavia—unless Berlin itself is thought of as a possible place for reinforcement. Clearly, the three battalions of "Gale force" could not do much, unless the incident were minor. The real value of the force would be to put, immediately a clash occurred, elements of the entire alliance into the front line. Thus it is a device to ensure that an aggression against one is visibly an aggression against all—a desirable purpose in the present condition of Nato's morale. In due course it would be a good thing to do some exercises on that basis (a three-power version of, say, the current British airborne exercise to Libya). The plan is not, of course, new: but presumably greater supplies of aircraft and air-transportable equipment have made it practicable. The force also has obvious relevance to the way in which, if "escalation" (use of tactical atomic weapons when and if conventional defence cracks) should ever be forced on Saceur, Nato might bring its nuclear tactical weapons (many of which are now air-transportable) to bear.

UNITED ARAB REPUBLIC

Slowly Spinning

ALTHOUGH long pauses separate each move, President Nasser has never quite dropped the idea that it would be agreeable to graft some of the appurtenances of parliamentary democracy on to his regime. Last week, rounding off a successful tour of his Syrian region with a mass rally in Damascus, he allowed a quick glimpse of constitutional experiment. He announced that some time soon the National Union (the non-party popular front organisation that was introduced into Egypt three years ago, but has done singularly little since) would hold a series of congresses; first Syria, then Egypt, then the two together. Finally, and to clinch the union, President Nasser is to select the members of a single National Assembly that will represent both the Syrian and Egyptian regions. His Syrian audience, sensing the eclipse of Damascus as even a local forum, may not have been entirely cheered up by the promise that National Union members will have the right to argue and "even to oppose until convinced."

The formation of the United Arab Republic in February, 1958, put an abrupt end to Syrian politics and also to the rather timid experiments that were then being carried out in Cairo. The new constitution specified an assembly, but in terms so confused that even Egyptian lawyers quail at the thought of interpretation. The first sign of movement on this front was last summer, when both regions elected village committees of the National Union; these committees were then supposed to elect provincial councils, which in turn were to elect a general congress. But this pyramid has been slow in building. President Nasser puts the blame for delay on the Syrian "opportunists and individualists"—

People who can buy Player's No. 3 – by the hundred

Player's No. 3 are top-class, but very *unpompous* about it all. (Rather like the people who smoke them.)
These discreetly expensive cigarettes—they are 4/4 for 20—in their plain white and brown packets, put on no airs for the very adequate reason that they do *deserve* to be smoked. Their tobacco is quite excellent.

meaning, no doubt, the Ba'athists, now (temporarily, at least) out of the way.

The idea of weaving, from the outer edge inward, a spider's web of committees reaching to Cairo at the centre could be attractive and even useful. It is an experiment roughly similar to that being tried out by General Ayub Khan in Pakistan; it has the advantage of keeping the government in touch with the villages, and deserves serious attention from other under-developed countries feeling their way towards individual forms of representative government. The trouble in the UAR is that little gets done, and even less is understood by the people concerned. Thus the villages, called upon to vote, voted for the same families who have always been dominant, and the web breaks off long before it reaches the centre.

ARABS AND ISRAEL

Keeping up with the Migs

MR BEN-GURION'S private visit to the United States this week is being translated by the Arab press as an arms-shopping mission. Cairo has protested lustily, and on Monday ten Arab ambassadors called on Mr Christian Herter to express their concern. The top notes will be hit, no doubt, when Mr Eisenhower receives the Israeli prime minister. But whatever Mr Ben-Gurion brings back from the United States in the way of understandings or oral agreements, he is unlikely either to ask for American weapons, or to get them. The United States has always fought shy of military aid to Israel and only a few weeks ago Mr Eisenhower reiterated his view that the Israelis were doing well enough already with the arms they were getting from France and Britain. Washington's caution has not, in the past, done it much good in an Arab world that prefers to count the dollars that come to Israel for other purposes; all the same, a reversal of policy at this stage would certainly cause a commotion.

In any case, Israel's trouble is not in finding a country willing to sell it modern weapons but in finding the cash to buy them with. The United Arab Republic has forged ahead with aircraft and tanks bought from the Soviet block on much easier terms than France, in all friendliness, can offer Israel. The Israelis have been forced to the calculation that Egyptian equipment is always a step more modern than their own. They console themselves with the thought that competent soldiers count for more than the machines they use. But as spanking up-to-the-minute equipment flows into the UAR —and into Iraq—the Israelis are finding it hard not to lose ground further; meanwhile, their lead in competence may be growing shorter.

When Mr Selwyn Lloyd brought up the tripartite declaration in the House of Commons last month, he made a particular point of the clause governing the balanced supply of arms into the Middle East. This may foreshadow a decision to supply Israel with more military hardware. After a long freeze-up in arms deliveries, the ice was broken in 1958, when Britain sold Israel two submarines. Since then there have been no sales. But until such time as the Soviet Union can be brought into the tripartite policy and so slow down an alarming arms race, it is probably in the interest of a peaceful Middle East to see that Israel does not fall too far behind.

TRADE UNIONS

Busmen's Ban

ALTHOUGH the railwaymen now hold the centre of the labour stage, several other groups of workers are protesting vigorously on the side-lines. Not unexpectedly, chief among these are the London busmen. The busmen's grievances go back much further than the London Transport Executive's refusal two months ago to grant them a wage increase of £1 a week; nor are they a left-over from the unsuccessful strike in 1958. The busmen's militancy is rather a thing of two decades and more; in 1932 and again in 1937 a busmen's rank and file movement was already to be found challenging the formidable leadership of Ernest Bevin in the Transport and General Workers Union. The busmen and the dockers have always been the most troublesome of the T & GW's many trade groups, a tradition which, in the busmen's case, has not been softened by the decline of their earnings relatively to those of so many other workers since the war.

The present bargaining position on the buses has been complicated by the appearance, since the rejection of the busmen's claim, of the Guillebaud report. Underground motormen (mostly members of the NUR) have already had their wages increased by the interim 5 per cent, and expect more to follow. Busdrivers' wages have traditionally been linked to those of motormen (both are in any case employees of London Transport) and the inference that the busmen draw is that the Guillebaud award should be stretched to cover their case too. But at this point equity and economics meet head on. If the Guillebaud award is to do the railwaymen any lasting good, it must not be applied to the wages of all other workers; once it has seeped through from railwaymen to busmen (via London Transport) or from railwaymen to engineers (via the railway workshops), the railwaymen fall behind again. This is the issue behind the busmen's ban on overtime.

GHANA

President Nkrumah

THE scheme for Ghana's republican constitution has been drawn up with skill, and every propriety observed in announcing it. All the same, it crystallises round a basic principle: that the Head of State and chief executive should be the same man, whose powers should include all, perhaps more than all, those wielded by an American president and a British prime minister put together—nearly as many as General de Gaulle has. The checks and balances of the American written constitution (the Montesquieu-derived division of executive, legislative and judicial powers) are omitted. The Ghanaian parliament's powers will be like the British, "unlimited" in a unitary state: but the president, as automatically the chosen leader of the majority party, will clearly be the master of parliament. As chairman of the cabinet, commander-in-chief, fount of honours, appointer of the judiciary, controller of civil service promotion, and residuary legatee of the Crown's power to veto legislation, he will be power personified. The first president will be elected as part of the constitution by plebiscite to assume these powers. No one doubts that he will be the Rt. Hon. Dr Kwame Nkrumah, PC.

There is an orderly arrangement for the succession. The president will hold office for five years, and will be elected or re-elected by popular vote; in choosing the majority party, the electorate will almost automatically endorse that party's choice of president. If in the course of his term the president loses his parliamentary majority (in which case parliament might exercise its vestigial prerogative of refusing to pass a money bill, leaving him without supply) he will dissolve it, and resubmit himself and his party to the popular ballot. Thus there is provision for an opposition that could in theory win enough votes to nominate the president and take over government. Whether this could happen in practice will be much discussed but not, at least for some time, put to the test. If the Ghana Republic is tailored to fit the African personality, then what Africans crave and trust is a boss in name and reality, little fettered by Anglo-American designed political restraints.

Republican Ghana proposes, so far, to stay in the Commonwealth; this could mean that two heads of state who are also chief executives (Ghana and Pakistan) might come to Commonwealth prime ministers' meetings; or they might send delegates, in either event modifying that arrangement. The constitution also provides for Ghana to unite with other African states; the new set-up will make amalgamation in some form easier with the French African succession states, dominated by single parties, than with the British—so long as these obstinately follow the Westminster road.

BRITISH GUIANA

Opening Bids

THREE points of view were expressed by the Guianese delegates at the opening of the British Guiana constitutional conference this week in Lancaster House: but they add up to one main point—the 1953

crisis and the alleged plot to turn British Guiana into a communist toehold in Latin America must be forgotten, and the colony must now move to a timetable for independence. Mr Jagan, speaking for the People's Progressive Party, wants a new constitution giving immediate full self-government with a single chamber elected on adult franchise. He is willing to concede something like the powers exercised in Singapore by the British government, at least for a period—though he will expect fairly massive financial aid if he does—and he is pledged to campaign for the accession of British Guiana to the Federation of the West Indies when the federation composes its internal quarrels and moves to full dominion status.

But there are voices both to the right and left of Dr Jagan. Mr Burnham, who represents today the feelings of the negro larger half of the population, wants a good many more safeguards—a bicameral parliament, and a period, if short, of reserved powers for the Governor. Above all, he thinks his community best served by proportional representation; he broke away from the multiracial front presented by the PPP in 1953. There has also lately arisen the Guiana Independence Movement, whose views were stated uncompromisingly by Mr Jai Narine Singh: they call British Guiana to follow the Burmese and Sudanese examples and cut all links, instantly, with the Crown and Commonwealth. Mr Singh points to the near-independence achieved by Dutch Guiana, and aspires to a federation of all the Guianas which shall far outshine the West Indies (he would regard a link with them as a millstone round Guiana's neck).

There can be little doubt that self-government well beyond the model of the constitution that was suspended in 1953 will have to be conceded. The dangers of one-party Communist rule in the Latin American enclave have, in the changed world strategic situation, diminished; Guiana's need for foreign money has grown. Though small, it is not too small to stand on its own, though it will be a petty state if it does; the wisest settlement will leave the door open to affiliation to a wider Caribbean entity. Hopes of this have been dimmed by West Indian disunity, parochialism and inept leadership.

CUBA

Wild Marksmanship

SEÑOR FIDEL CASTRO has uttered wild charges before; his broad insinuation that the United States engineered the explosion in Havana harbour caps the lot. A French freighter carrying ammunition from Antwerp blew up on March 4th, killing the dockers who were unloading it, members of the crew and passers-by. The next day, Señor Castro declared that the "sabotage" was the work of those "who do not wish us to receive arms" and went on to describe American efforts to prevent the Belgians selling munitions to Cuba.

The Cuban accusation, which drew a stunned protest from the State Department, is a cruelly unfair extension of resentment against American attempts to enforce an arms embargo (somewhat belatedly, Washington has announced that military aid for the Dominican Republic as well as for Cuba is to cease this year). The Cuban inclination to blame all explosions on the Americans is, of course, strengthened by the failure of Washington to prevent private aircraft taking off from Florida to drop incendiary bombs on Cuban sugar fields and other targets. One suspicion of sabotage leads easily to another.

The State Department has made considerable efforts to keep American policy towards Cuba on the rails, while for his part, Señor Castro had lately grown a shade milder in his tone. The two governments were trying to arrange a meeting to thrash out their differences, but had reached a deadlock because of Washington's reasonable refusal to commit itself in advance over the Cuban sugar quota. The new bitterness has wrecked any hope of early discussion. But in looking for a solution, the United States has the incentive of knowing that the quarrel is not insulated from the rest of Latin America; whether or not Señor Castro is worthy, to many Latin Americans he has become a champion.

POLAND

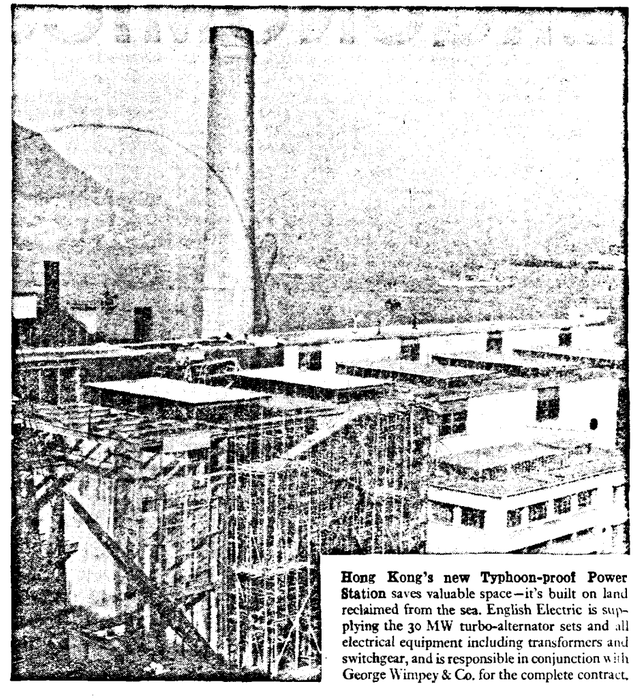
The Tighter Belt

ONCE more conditions in Polish industry are not entirely untroubled. Mr Gomulka, in a speech made on March 2nd and published last week by *Trybuna Ludu*, admitted that the total wage fund this year will not exceed last year's, in spite of the expectation of a substantial increase in output. To carry out this squeeze it has been necessary to reduce piece rates and make other changes in norms of production. As a result of these measures, introduced in the fourth quarter of last year, many workers brought home smaller packets in December and January than in previous months—particularly in some branches of engineering and in the chemical and optical industries.

The tightening of the belt is the direct consequence of wages policy decisions taken last October. Indirectly, it is the outcome of the way in which wages were allowed to get out of hand in the optimistic mood following Mr Gomulka's return to power in 1956. The supply of consumer goods did not keep pace. Inflationary pressure reached its peak with the meat shortage following last summer's drought. Decisions were then taken to increase certain prices, to tighten the discipline of wages, and to bring rewards into closer relation with productivity.

Mr Gomulka's speech cannot have been easy to make. He did praise the "understanding of the working class as a whole," but he admitted that there were discontented people in every factory. There are reports of unrest and sporadic strikes in various parts of the country, including Poznan. It was at Poznan, it will be recalled, that a cut in wages in 1956 provoked first a strike, then a riot, and in the end a national upheaval which changed the regime and brought Mr Gomulka to power. The political situation does not look so explosive now, but both the government and the workers have a hard year of adjustment before them.

THE NOISE BILL



Uproar and Brass

IT is possible to sympathise with the objects of Mr Speir's private Noise Abatement Bill, which received quite a welcome in the House of Commons at its second reading last Friday, while remaining very sceptical about its direct usefulness. The Bill amends the Public Health Act of 1936 so as to make "excessive or unreasonable or unnecessary noise which is prejudicial to health or a nuisance or an annoyance" a statutory nuisance under that Act, susceptible to the existing local authority procedure for abating nuisances. The catalogue of racket enumerated by successive MPs—from jet aircraft, through motorcycles, steam hammers, cement mixers, pneumatic drills, burglar alarms and itinerant loud-speakers, to the rattling of milk bottles—forms a twentieth-century counterpart to Smollett's stomach-turning list of eighteenth-century stenches. The stenches have been tamed, though at the often heavy expense of the stench-producers; it is arguable that, even at the cost of some corresponding expense and inconvenience, the uproar-producers should be tamed in turn—though when whistling enters the argument, it is clear that crankery is really creeping in.

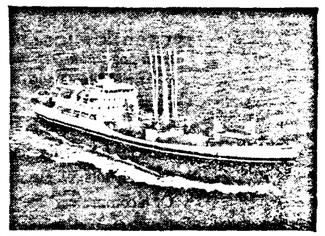
But legislation is useless and often harmful without enforcement: and there is not much reason to suppose that young males in the courting season who sabotage the silencers of their motor-cycles to draw feminine interest will be more effectively prosecuted under the amended Public Health Act of 1936 than under the notoriously dead-letter regulations that already make ineffective silencers an offence. The kind of industrial racket that results from the conviction that where there's uproar there's brass may seem a promising field; a factory must stay put and answer for its noise as for its smoke. A few prosecutions, in cases where the noise is proved irrelevant to the brass, might make for pleasanter neighbourhoods—and the same holds good for people who leave burglar alarms ringing through an entire weekend. The Bill does not, however, touch the noisiest people of all, the airlines. Behind the protection of the Air Navigation Act of 1947 and the Civil Aviation Act of 1949, they have the public at their mercy.

Limited scope and enforcement difficulties will therefore circumscribe the bill's

MORE POWER

Hong Kong's new Typhoon-proof Power Station saves valuable space—it's built on land reclaimed from the sea. English Electric is supplying the 30 MW turbo-alternator sets and all electrical equipment including transformers and switchgear, and is responsible in conjunction with George Wimpey & Co. for the complete contract.

to 4 million jostling elbows



A tiny island which has always welcomed every refugee—from early traders fleeing the pirates to Dr. Sun Yat-sen—Hong Kong now finds itself overwhelmed by its swollen population.

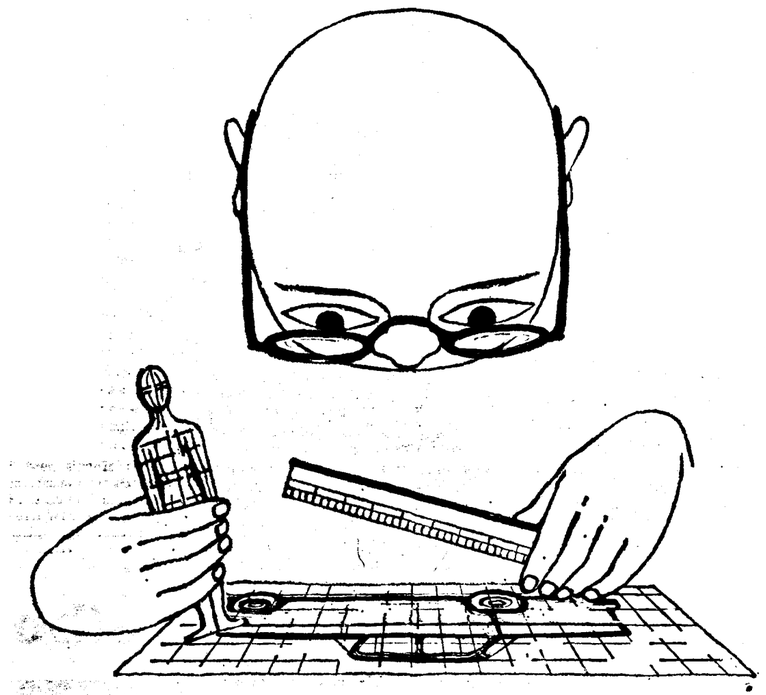
New housing to shelter them, new factories to give them a living—these are the main problems of Hong Kong today. And for all these developments *electric power* is one of the first essentials.

Hong Kong's big new power station, built for the Hong Kong Electric Supply Company by English Electric under a comprehensive contract in conjunction with George Wimpey & Co., is now helping to provide this extra power. From its English Electric turbo-alternators, electricity now leaps to serve Hong Kong's two million inhabitants.

All over the world The English Electric Company is bringing the clean vigour of *electric energy to countries* which need it desperately. At home, too, English Electric is contributing to the many improvements which have brought us prosperity: in *producing* electricity from water, coal, oil, the atom; in *distributing* it all over the country; and in *using* it more efficiently—in railway modernization and domestic equipment, to take two examples.

English Electric's experience and resources are today helping to bring the whole world prosperity through power.

MV 'Bulimba,' first of a series of new vessels built by Harland & Wolff for the British India Steam Navigation Company, is equipped with English Electric auxiliary diesel generating plant, switchgear and motors.



POWER IS THE BUSINESS OF

ENGLISH ELECTRIC

...BRINGING YOU BETTER LIVING

THE ENGLISH ELECTRIC COMPANY LTD., MARCONI HOUSE, STRAND, LONDON, W.C.2

ERGONOMICS*

ERGONOMICS: *the science of designing objects with particular reference to the needs and physical characteristics of their users:* 'human engineering'.

If we were crazy enough, we could design a vehicle for radio-activated Martians. (Remote control, lots of fascinating features, no buyers.) Or a commuters' special for bed-bound suburbanites. (One that starts itself, brews coffee and sounds off at 7.30 sharp would probably do the trick.)

Instead, we spend most of our waking hours trying to make cars which have more and more of the features sensible people want.

To us, that's ERGONOMICS. And ergonomics, in anybody's language, means a better deal for the customer. It means performance with safety, comfort with economy, quality with down-to-earth prices.

It means all-round vision for the driver, and easy parking. (So much better this-parkonomics?—than an extra set of wheels for moving sideways.) It means a top-gear engine and an all-synchro box. Big things like a low C. of G. and stop-at-a-touch brakes. Little things like two-speed wipers, map-reading light beam, key locks on both sides.

A boffin's word, ERGONOMICS, but it sums up thoughtful engineering . . . a philosophy of design . . . and a science that is important to *you.*

A surprising amount of it goes into Vauxhall cars, which is why so much pleasure comes out of them. If you'd like to know more, you've only to ask. Your Vauxhall dealer will be delighted to provide the Q.E.D.

EVERYONE DRIVES BETTER IN A

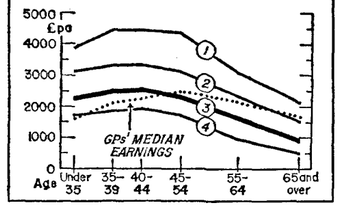
VAUXHALL

VICTOR · VELOX · CRESTA

effect, and may result in singling out minor groups of noise-producers, who will resent the unfairness. But the very fact that the bill has been well received suggests that a growing proportion of the public is finding modern noise reaching the limits of the bearable. The public must, however, realise that greater quiet may have to be heavily paid for in the reduction of such other conveniences as speed, cheap goods and services.

DENTISTS' EARNINGS

Filling their Time



Is there any substance in the dentists' grumbles about the Pilkington commission's refusal to grant them an immediate increase in fees? The report showed, on the basis of its survey for 1955-56, that until they were about forty years old dentists in general practice could earn more, in most cases substantially more, than members of any other profession surveyed by the commission. But from the age of about 45-50 dentists' earnings fell off quite sharply, so that their total career earnings over the age-span 30-65 were only £79,000 —the same as those of general medical practitioners, but less than those of consultants, actuaries, barristers, English solicitors and graduates in industry. The commission recommended that from 1960 dentists' career earnings should be £96,000; but it did not recommend any increase in fees for items of treatment because since 1957, when the commission was appointed, dentists' earnings have increased markedly. The British Dental Association claimed that the higher earnings were mainly the result of longer working hours, but the commission, from its own investigations, found that the number of hours worked was not significantly higher than in 1952-53. There are now fewer dentists, but they have carried out more courses of treatment, and therefore earned more, mainly as a result of improvements in technique and tools.

THE SPREAD OF DENTISTS' EARNINGS, 1955-56

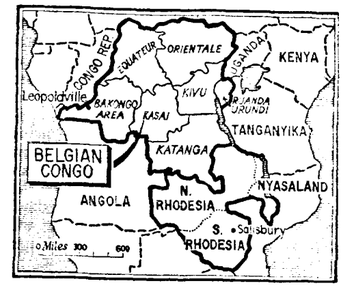
The graphs (1) to (4) show the incomes of dentists at different ages such that:

(1) 10% of dentists earn more and 90% less
(2) 25% " " " " 75% "
(3) *50% " " " " 50% "
(4) 75% " " " " 25% "

* Median.

This conclusion led the commission to interesting, if complicated, proposals for fixing dentists' health service fees in the future. The average dentist, working from 2,050 to 2,200 hours a year—which means roughly 2,000 at the chair—should be paid fees that would bring his earnings from the general dental service to £2,500 net (roughly what he is earning now); his private practice earnings (included in the earnings shown in the chart) would be additional. These fees would be fixed by a dental rates study group, which would be continually ascertaining both the average number of hours worked and the average time taken for each dental operation. If the proposed "review body," with the task of advising the Government on doctors' and dentists' pay, were to suggest an increase in the average earnings of dentists for a specified working year, the study group, on the basis of its up-to-date list of timings and ascertainment of hours, would propose new fees that would bring the new remuneration into effect. Thus, dentists' earnings would not, as now, be linked to the number of treatments carried out but to the number of hours worked.

The dentists can perhaps legitimately cavil at the length of the average working hours envisaged by the commission—a 40-hour week at the mouth and a fortnight's holiday without pay—but they should reflect that their proposed average earnings would still be higher than the £2,425 proposed for doctors in general practice.



CENTRAL AFRICA

More Secession Talk

Sir Roy Welensky's casual reference to the desire of certain people in the Katanga province of the Belgian Congo to federate that province with Rhodesia and Nyasaland after Congolese independence has provoked a Belgian diplomatic protest and a parliamentary growl from Brussels, but it has not excited the Belgian public. The idea is very old hat. For some months Southern Rhodesians have talked in Salisbury bars about extracting the Katanga from the wreck of the Belgian Congo. But only the few white copper workers in the Katanga would want to join the Central African Federation as it is today; and they are powerless. The Katanga Africans, who may have no love for Leopoldville, would join with Northern Rhodesia only if it were cut away from Southern Rhodesia and became an independent state.

But the Belgian public's lack of interest in a canard that would, if the boot had been on the other foot (as yet it may be), have aroused the *Daily Express* to a high pitch of British indignation, helps to explain why the Belgian government has been able so quickly to cut its losses in the Congo. Once the royal family had decided that "the inheritance" was lost, it remained only to patch up an arrangement with the Africans that would leave the business men reasonably happy. Whether this will produce a viable African-run Congo remains to be seen; for at the other end of the territory plots are evidently being pressed on to hive off a separate Bakongo state. But in either event Congolese nationalism will continue to heat up the Federation cauldron.

There, Sir Roy Welensky has been busy dealing with his own white and black secessionists. With Sir Edgar Whitehead's

threats, he has, after a stunned silence, hurriedly agreed, on the ground that *if* African nationalism took over the two northern protectorates, Southern Rhodesia would have to secede, *therefore* this could not be allowed to happen, and so the Federation will go on much as now. On the same ground, he has fought shoulder to shoulder with Sir Robert Armitage, Governor of Nyasaland, against the release of Dr Banda to start the constitutional ball rolling in Nyasaland when the Monckton commission arrives there. He is probably telling Mr Macmillan that if Dr Banda comes out, red riot follows and back come the Rhodesian troops. Lord Home has returned mumchance. This has put Mr Macmillan and Mr Macleod in a cleft stick for the moment. But the proceedings of the investigation into the demonstration that attended Mr Macmillan's own visit to Blantyre may incline him to risk Dr Banda's release.

CONTEMPT OF COURT

Liberal Reform

The Government's Administration of Justice Bill, laid before the House of Lords on Tuesday, has allayed the fears aroused that it would water down the provisions of Lord Shawcross's Contempt of Court Bill, which it supersedes. In fact it goes a good deal further. A general right of appeal in all cases of criminal contempt is given to the defendant, with an ultimate appeal to the House of Lords. The prosecu-

Appointments, Business and Personal notices and other Classified Advertisements pages 1049, 1062-3

tor may also appeal from the refusal of an application for committal or attachment.

Civil contempt will no longer be committed by publication of information relating to proceedings before a court sitting in private, unless they fall within certain specified categories. Even in these excepted cases publication of the order made by the court will not be contempt unless it has been expressly prohibited. An entirely new defence of innocent dissemination is provided for those accused of contempt by publishing or distributing matter calculated to interfere with the course of justice in proceedings which are pending or imminent. The publisher must show that—having taken all reasonable care—he did not know and had no reason to suspect that proceedings were pending, or in the case of the distributor, that the publication contained prejudicial matter. A shortcoming of the Bill is that it lays down no maximum penalties for contempt.

A further important change is the transfer of leave to appeal to the House of Lords in all criminal cases from the Attorney General to the courts themselves. Leave may be given by either the House of Lords or the Court of Criminal Appeal. A point of law "of general public importance" must be involved, a change from the "exceptional public importance" of the 1907 Act.

In *habeas corpus* proceedings an appeal will be provided against an order for release, as well as against the refusal of such an order, except where the order has been made by a single judge in a criminal proceeding. Thus in criminal cases either side will be able to appeal from the decision of a divisional court. Only a divisional court will be able to refuse an application for release in criminal proceedings. The Bill includes a number of other reforms, and is a complicated document, but there is no doubt of its liberalising effect, and it should be given a warm welcome.

TV AND POLITICS

Trials of Politicians

WHILE most politicians were breathing again with relief that the cameras were not to intrude into their chamber, catching them at their off moments, a group headed by Mr George Brown and Mr Gordon Walker has gone over to the attack against one of the ways in which public issues are presented in the studio. All that need be said now about Mr Macmillan's decision not to proceed further with the question of televising Parliament is that it is a pity that the whole, admittedly difficult, matter could not have been treated less casually. The BBC was perfectly willing to try experiments on a closed circuit, so that MPs could see for themselves whether the camera's (and hence the electorate's) presence would put them too much off their stride, and whether any fair system of editing was feasible.

But the exclusion of the mass public from Westminster makes the substitutes devised by the BBC and ITV the more significant and worthy of critical scrutiny. Increasingly these programmes are themselves making political news which has to be carried by the next day's newspapers. The gist of the Labour MPs' complaint in *The Times* is that Mr Foulkes of the ETU and others have been subjected to unfair "trial by television," amounting to McCarthyism, by members of the new inquisitorial profession of TV interviewer. In the ensuing controversy the inquisitors have argued that television reporting is on a par with journalism, that the charge of McCarthyism is absurd because the late Senator had the right to subpœna his victims whereas theirs go voluntarily to the studio, and that Mr Foulkes at any rate was asked honest though tough questions of a kind he must have been answering for months.

All this is true—and Mr Foulkes's case was perhaps a bad one to have picked on. But there is need for vigilance. People may sometimes discount press reports, but will never believe that a man has been misrepresented when they have seen him "with their own eyes," as he was speaking. Yet television film can easily be edited, and the rigid limitations of time (in contrast to the usual press interview) often make it impracticable for the victim to expose an unspoken premise in his interrogator's loaded question. There is a heavy responsibility on interviewers and producers.

INDONESIA

The Guide Alone

IT really is no surprise that President Sukarno has suspended the Indonesian parliament. Once he had decreed a return to the "guided democracy" constitution of 1945 and assumed near-dictatorial powers, it was unlikely that he would tolerate much longer the presence of legislators elected in 1955. To send the deputies packing within days of Mr Khrushchev's departure from Indonesia was probably no more than bad public relations; the two events are doubtless unconnected. A likely explanation of the timing lies in the fact that the 1960 budget was before parliament, which was expected to reject it.

The most striking item in the budget is the estimated revenue of 44 billion rupiahs; as this figure exceeds last year's revenue by nearly 16 billion rupiahs, there are grounds for regarding it as optimistic. If expectations were fulfilled, this year's deficit would be only 1.9 billion rupiahs, but even the prime minister, Dr Djuanda, has admitted that it will in fact be much more. Last year's actual deficit was somewhere between 12 billion and 20 billion, according to which official figures one uses.

The suspension of parliament leaves President Sukarno freer than ever, on paper, to go on governing his republic the way he thinks fit. He will not, at all events, be hampered by an elected body until the partly elected People's Congress is created under the 1945 constitution, at a date that remains unannounced. It would be rash, however, to attempt to predict the final constitutional pattern in this country of scattered islands. A few weeks ago, the various anti-Sukarno groups in Indonesia proclaimed a "Union of Indonesian States," which postulates a federal structure, as opposed to the unitary state of 1945.

OXFORD ELECTION

Vote Early and Vote Often

MR MACMILLAN has won again. By the relatively narrow majority of 279 votes in a total poll of 3,673, the Prime Minister was elected last Saturday to be the next Chancellor of Oxford. Both the canvassing and voting in this election were sufficiently packed with incident to make the political observer regret once again the passing of the University seats. Each side scoured the country for the concentrated blobs of its supporters. The Franksites did well in the provincial universities and the Macmillanites in those Tory strongholds, the Church and the City. Large meals for visitors were laid on by the interested colleges, while quiet bargaining of lectures in exchange for votes looks like involving a few of the more committed dons in some extensive touring later in the year. But this is all within the rules and both sides were agreed in the end that this had been a fair, if hectic, fight.

The pattern of voting was as expected. University opinion favoured Sir Oliver and, after the first day, he had secured a substantial lead. But on Saturday the queues of non-academic MAs first began to, and finally did, tip the scales. The uncertain clapping that greeted the announcement of the result in Latin swelled to a cheer when it was followed by an English translation. The traditionalists had won.

...ANOTHER ENGINEERING ADVANCE
FROM BRISTOL SIDDELEY

Bristol Siddeley Engines Limited produce Maybach* rail traction diesel engines. Covering a power range from 400 to 2,000 hp, these diesels are amazingly reliable and have shown that they can achieve major overhaul lives of 12,000 to 16,000 hours!

The *proven* basic design features of the whole range (straight 4 to 16-cylinder V) are the same, and each unit can be turbo-charged, or turbo-charged and intercooled. The range operates between 1,200 and 1,600 rpm and *combines the best performance and design qualities of high, medium and low-speed diesel engines:* light weight and compactness, excellent thermal efficiency and extremely long life.

Advanced design features. The pistons are pressure-oil cooled. This gives very efficient heat dissipation and reduces liner and gas ring wear to a minimum. The roller bearing, disc-webbed crankshaft is exceptionally rigid within its tunnel housing, and in practice withdrawal is not normally necessary before 12,000 hours running. So low is big end bearing wear that in some cases the protective lead flash has been found to be intact when examined after 15,000 hours running!

Since the cylinder bore and stroke, and the majority of components, are identical in all models, spares stocks are considerably reduced. Servicing also has been greatly simplified because much thought has been given to accessibility and the removal of components. And the engines are suitable for both hydraulic and electric transmission.

World-wide application. Maybach rail traction diesel engines are in service all over the world and have built up an unsurpassed record for reliable and economic operation. Bristol Siddeley Maybach engines power the new diesel hydraulic locomotives of British Railways Western Region and an additional order for a large number has just been placed.

AMERICAN SURVEY

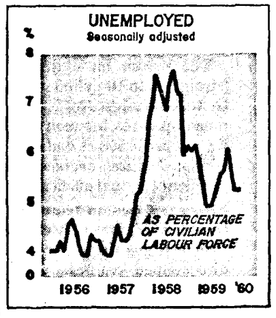
AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Prosperity in Perspective

WASHINGTON, DC

In the first two months of 1960 the American economy has provided a perfect demonstration of what an advantage it is to have the country's financial and political capitals in two different places. In New York, dominated by Wall Street and the Stock Exchange, the available evidence has given rise to nervousness, even to gloom in some quarters. Washington, on the other hand, has been positively pleased by the very same events—and in the past Washington, with its somewhat broader view, has been correct more often.

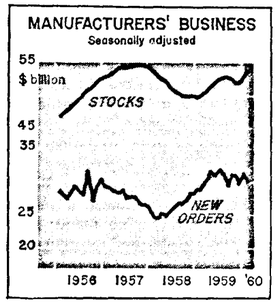
For the first time in the postwar period conditions, financial and otherwise, are now right for a fair trial to be given to the idea that, if the government applies a policy of restraint in good time and with sufficient vigour, three things can be accomplished at once; prices can be kept stable, the expansive phase of the business cycle can be lengthened and by means of both these achievements, the long-run rate of economic growth can be accelerated. American officials—especially the economic authorities in the present Administration—have never accepted the idea that there is a conflict between policies for encouraging growth and policies for keeping prices stable. Nothing in the American experience of 1955-57 or the British experience of 1956-58 has persuaded them that restraint during periods of expansion retards growth, except in the very short run and then helpfully.



As they look about them now, the authorities are satisfied by what they see. Prices are steady up and down the line, from commodity markets to retail shops. The worst speculative excesses of the stock market are being liquidated—to the great pain of Wall Street. Both private individuals and institutions are buying bonds again and interest rates have come down a little. The budget is in good shape, with an excellent prospect of a healthy surplus, regardless of anything that Congress is likely to do. There is evidence that wages rose noticeably less last year than the average for the postwar period as a whole, or even the average of the last decade, and, as long as prices are under control, there is a good chance of containing the rise in the future.

True, there remains a disconcertingly high level of unemployment, but in their innermost hearts the men responsible for government policy are not displeased by this so long as the situation is getting better rather than worse—as it is. As in Britain, so in the United States, a level of unemployment higher than has been typical for the past 15 years is probably needed if prices are to be kept stable. The liquidity of banks has been reduced to a point where restraint can be exercised more effectively through monetary means than was possible earlier. In short, nearly all the conditions appear propitious for what the Administration has always talked about—"sustainable" prosperity. In practical terms this would mean that the expansive phase of the present business cycle would continue for longer than the thirty months or so which have been typical of the postwar period—that is, it would go on well into, and perhaps through, 1961. There are men in government economic offices who believe that precisely this is likely to happen.

Their hope rests chiefly on the assumption that the absence of inflation and the presence of ample capacity throughout the economy will restrain the excessive building up of stocks, which is at the heart of every recession. The same conditions may work, as well, to keep capital spending in bounds without keeping it from growing. There will presumably be less incentive to "build the plant now even if we don't need it because it will cost 10 per cent more later"—the sort of thing that creates pleasant-seeming booms in capital goods which soon give way to slumps, as they did in 1957-58.

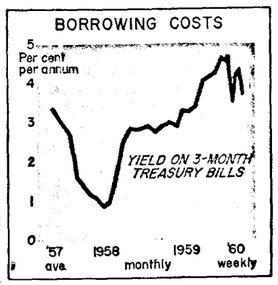


Is all this theoretical? In practice, will not demand actually be deflated, through credit restraint and the lack of inflation, to the point where a recession could begin before 1960 is out? This is what spokesmen for the trade unions are saying will happen. No doubt some of those who spend their time watching the ticker tape on the stock market also believe this. Certainly there is a broad body of opinion in the United States which feels that there must be some inflation if there is to be prosperity. But nothing that has happened yet proves that the government men are wrong, and there are signs that they are probably right.

Leaving aside the very large decline in share prices—8 to 10 per cent, depending on the average used—there have been several other bits of evidence that the economy is not maintaining the exuberance which was forecast earlier. The shortage of steel resulting from the strike appears to have been overcome much sooner than was expected, with the consequence that there has already been a small decline in steel operations and that a more noticeable drop is expected in the next few weeks. Until the last ten days of February, which were excellent, sales of automobiles had been disappointing, though they have been well ahead of last year; as a result there were scattered declines in output (though the "compact" cars, already responsible for 25 per cent of total production, continue to sell and to be produced faster than ever). The number of new houses started, already below the earlier peaks by the end of 1959, fell slightly more in January. Retail sales have not shown boom strength. And finally, the value of new orders placed with manufacturers in January fell by $1 million, partly because of special post-strike developments in the steel and automobile industries. Needless to say, no matter how much all of this may have confirmed the worst fears of Wall Street, it has

caused little distress in Washington. It is, of course, accepted there that the first half of the year will not be as booming as was once expected but, since this means mainly that there will be less accumulation of stocks, the change is regarded as all to the good.

For the rest of the year much seems to depend on housing and fixed investment by businessmen. The next survey of their plans for capital spending is being awaited with unusual eagerness; it is likely to be encouraging and to show a somewhat greater increase over last year than had been indicated earlier, in spite of the alleged impact of the decline in the stock market on business confidence. If there is any validity in the theory that credit conditions should be eased by the expected surplus in the Budget, building will not suffer nearly as much this year from "tight money" as had once been thought, and already some of the more pessimistic projections for housing starts are being revised upwards. If all goes well, housing and capital investment should provide in the second half of the year the stimulus that accumulation of business stocks is providing in the first half, with the influence of government expenditures remaining roughly neutral throughout 1960.



This is to forecast a rather gentle rise in activity, but still a rise. This forecast is wholly compatible with a prospect of corporate profits and practically everything else breaking all past records—but by lesser margins than was once prophesied. Hence it is also compatible with the falling off in the stock market. The highly reassuring orderliness with which Wall Street has taken its beating is evidence that there is little panic in New York. In Washington there is quite the opposite—quiet confidence.

View from the Fed

A correspondent in New York discusses the central bank's approach to the economic situation described above.

MARCH normally sees the beginning of an upsurge in the demands of corporations for credit—to meet tax payments and to carry business stocks—and therefore a tightening of the money market. But this year Wall Street is convinced that the Federal Reserve Board plans soon to relax the controls on the supply of money which it has maintained fairly steadily since mid-1958; this conviction has been reflected in a jump in the prices of Treasury securities and a drop in their yields. The money managers have given no definite signs that a change is coming, but anonymous officials of the central bank, abandoning their traditional reticence, have observed that the threat of inflation has faded substantially and that forecasts of a big rise in business activity appear to have been exaggerated. This week the chairman actually admitted publicly that the demand for credit had not been quite as strong as had been expected.

The easing of credit which Wall Street is anticipating may not be what the Federal Reserve has in mind. For while the monetary authorities are indicating that they are no longer concerned about a runaway boom, they are by no means expecting a recession. This suggests that, while they see no need to continue to tighten credit, their moves toward relaxation will be very moderate and cautious until the economic outlook is clearer. Thus it is doubtful whether any overt move towards ease—such as a decline in the discount rate—is under consideration. At the most the Fed will probably supply the banks with whatever reserves are necessary to meet demands for credit until the date in March when taxes fall due; after that, if business activity is sluggish, the Fed will refrain from sopping up the extra reserves.

This would mean some expansion in the supply of money but would not necessarily bring a significant reduction in interest rates. However, to banks and mortgage institutions which have been severely pinched for well over a year any relief is welcome. There would be some additional funds for the hard pressed housing industry and state and local government spending would be stimulated. Business outlays on new plant and equipment are not likely to be influenced much by monetary policy, since most companies will be generating funds internally; yet any easing would help here as well. In fact the Federal Reserve seems able to relax a bit now because it was so vigilant earlier. Wall Street may be premature in hoping for a substantial change in credit policy, but its suspicion that a shift is under way seems well founded.

Kennedy Melts the Ice

NEW HAMPSHIRE

In spite of another fall of snow on Monday night, the voters of northerly New Hampshire turned out in large numbers on Tuesday for the opening round of the 1960 election. Theirs was the first of the primary elections which give party members in sixteen states a chance to influence the choice of presidential candidates. At the end of the day the hand clutching the banner marked "Excelsior!" was clearly that of Senator Kennedy, the Democrat from neighbouring Massachusetts. Mr Kennedy found that 43,000 people in New Hampshire want him to be the Democratic nominee. There were fewer than 7,000 votes for his only official competitor, a Chicago man who makes ball-point pens and wants to abolish the income tax for most people; none of the Senator's serious rivals thought it wise to challenge him in New Hampshire. Senator Kennedy got twice as many votes as Senator Kefauver was given in New Hampshire in 1956.

In the Republican half of the poll Vice President Nixon—unopposed save for any names which voters cared to write in on the ballot—also did well; he got 65,000 votes, more than President Eisenhower received four years ago. But Senator Kennedy's success is shown best by comparing this year's results with those of 1952, the last time so many people turned out to vote in the New Hampshire primary. In this heavily Republican state—one of the only three in the country that have resisted the Democratic tide which has been running since 1956 and have refused to elect a Democrat as either Governor or member of Congress—the Senator proved popular enough to raise the Democrats' share of the poll from 27 to 41 per cent. This is not necessarily an omen of what will happen later this year. If Mr Kennedy is not exactly a local boy at least he is the neighbour's lad; and New Hampshire contains a good many Roman Catholics, both French Canadians who have come in from the north and Massachusetts Irish who have come in from the south, for whom his religion may have been the deciding factor.

At the eleventh hour, the Governor of the state—a right-wing Republican who was supposed to be organising Mr Nixon's campaign—accused Senator Kennedy of being "soft on communism" and found himself being contradicted by his own candidate as well

as by Mr Kennedy. The incident almost certainly gained votes for the Senator. It also shows how difficult it is going to be for the Vice President to satisfy both the right-wingers in his own party and the liberal-minded independents whose support he needs if he is to be elected—a difficulty which is being exploited by Senator Kennedy. Perhaps the first fruit of Mr Nixon's need to be all things to all men is detectable in the latest Gallup Poll; this shows that the Vice President has lost the lead over every Democrat which he has enjoyed since last summer and is now running exactly neck-and-neck with Mr Kennedy.

Latin Test

For the third time in seven months, President Eisenhower has arrived back in Washington with the cheers of millions still ringing in his ears. On his nine-day trip to Brazil, Argentina, Chile and Uruguay the President seems, indeed, to have done a great deal to renew the Good Neighbour policy inaugurated by Roosevelt, which had been allowed to slip into such disrepair that the Vice President was stoned two years ago in South America. Mr Eisenhower concentrated on themes that his hosts wanted to hear: on the importance of the Latin American countries to the United States; on its interest in their economic development and its determination to do all it can to help; on the strict policy of the United States not to interfere in internal matters and its dislike of all dictators, whether of the right or left. Tactfully, Mr Eisenhower let it be known that he was consulting his hosts to obtain their views before he meets Mr Khrushchev at the summit. But the most important change of emphasis was that where Mr Dulles used to talk of the need to fight communism, the President spoke of the fight against poverty.

The home-truths were left to Mr Dillon, the Under Secretary of State, to deliver at a meeting in Puerto Rico of the Caribbean Assembly, an offshoot of the American Assembly which Mr Eisenhower helped to establish when he was President of Columbia University. After adding up all the different forms of government aid to Latin America, to a total of $3.5 billion in the past decade, Mr Dillon went on to defend stoutly the part played by private capital in developing Latin American resources and increasing wealth. He concluded with a frank reminder to the Latin Americans of all the things which they can do for themselves to ease the way for economic growth, such as revising their inequitable tax systems, paring their unproductive bureaucracies, improving education, encouraging business and fighting inflation.

Mr Eisenhower was careful not to promise any specific increase in economic aid, and indeed none is likely in the ten months of his term of office which remain, for the foreign aid programme has already been sent to Congress. There is some fear, however, that all the good will and warmth which Mr Eisenhower has aroused may turn to bitterness if his successor does not provide more help, both in capital for development and in lower trade barriers for Latin American goods. But for Mr Eisenhower the immediate problem is how to apply the good neighbourly principles which he has been expounding to one of America's nearest and most provoking neighbours, Cuba. The patience which the United States has shown to Dr Castro paid good dividends on the President's trip and until last week it seemed likely to bring about a reconciliation between the two countries. But the Administration may find it difficult to restrain Congress from cutting Cuba's sugar quota now that Dr Castro has accused the United States of being implicated in the explosion of a munitions ship.

Filibuster Still Untamed?

The vote in the Senate to limit debate—and thus to dam the flow of southern speeches which is holding up consideration of a civil rights Bill for Negroes—is to take place while *The Economist* is in the press. But if the northern liberals fail, as it seems virtually certain that they will, to secure the two-thirds majority of Senators present and voting which is necessary to stem the longest filibuster in history, this does not mean that the South's brilliant rearguard action has won the battle against a civil rights Bill this year. More than two-thirds of the Senators are prepared to silence the South, and force a Bill through, if only they can agree on how far it should go. But the civil rights forces are split. The zealots, a coalition of 20 or so Republicans and Democrats from the industrialised northern states where the Negro vote is large, want something more drastic than the Administration's Bill, sponsored by Senator Dirksen; they petitioned for a vote to shut off debate, even though they knew it was unlikely to succeed, because in an election year they must have at least one chance to put their devotion to Negro rights on the record.

On the other hand, moderate Democrats from the border and western states and some conservative rural Republicans are reluctant to vote for closure until they know what kind of a Bill is likely to be adopted. Once debate has been limited, a simple majority vote is enough to pass any provision, no matter how obnoxious to the South. The moderates are prepared to strengthen Negro voting rights but they are not willing to ram down the South's throat the other provisions of the Dirksen Bill which deal with racial segregation in the schools. Finally there is a group of Republicans who support the Administration's Bill, but are prepared, if necessary, to moderate some of its sections. Sixteen Senators from these groups, voting with the eighteen Southerners, are enough to defeat any motion to limit debate.

Senator Johnson, the majority leader, opposed the motion for closure, in the firm belief that a civil rights Bill acceptable to two-thirds of the Senate must be worked out first, behind the scenes. As a Southerner himself he must hope that if this is accomplished it will not be necessary to rub southern noses in the dust by actually voting for closure. The rules of the House, which began debate this week on its own civil rights measure, do not permit a filibuster, and it is likely to pass a Bill next week. If this concentrates on voting rights, and does not offend the moderates, it may sail through a Senate thankful to end its ordeal of sleepless nights.

Non-shooting Stars

Film actors are such faithful trade unionists that there is no danger of them trying to break the strike, the first ever called by the Screen Actors Guild, which has halted all shooting of pictures by the seven leading American film companies. Although denied the thrill of seeing their favourite stars on the picket line, fans will still find them on the screen, until next autumn, at least. For the strike had been in preparation for some time and the companies had speeded up production in order to collect a backlog of new pictures. One important firm, the Universal-International Pictures Company, which had few finished films in reserve, has settled with the guild and is now shooting hard. So have some of the independent producers, many of whom—Mr Frank Sinatra, for example—are film actors themselves; this group, of increasing importance in the industry, produced 152 pictures in 1959, including some of the most successful, while only 37 came from the big companies last year.

These independent productions are often shot in studios rented from the big companies; they are distributed by United Artists, which went out of the production end of the business long ago and has found the change very profitable. Some of the other big companies will be encouraged to follow this example if the strike continues for any length of time, as it is expected to do. Now that so many pictures fail to show a profit, it is being argued that to make money film companies should leave artistic matters to the independents and should concentrate on the business side of the industry, financing pictures and selling or leasing studios and other

SHERATON HOTELS

A FAMILY OF 54 FAMOUS HOTELS

TELEVISION AND AIR-CONDITIONING in most guest rooms

Comfort and hospitality — these are two important reasons why Sheraton Hotels have become the first choice of International visitors, as well as Americans. Wherever you travel across the United States, in Canada or Hawaii, you're sure of the same wonderful welcome in all 40 cities where you see the name "Sheraton."

Here are other advantages offered by Sheraton Hotels: Reservations held if ships or planes are delayed • Bilingual departments • Sheraton's Family plan: *No room charge for children under 14 in room with adults* • Facilities for banquets, business meetings and conventions.

FOR RESERVATIONS at any Sheraton Hotel, see your travel agent or write: Albert de Leon, International Director, Sheraton Hotels, Sheraton-Atlantic Hotel, New York, N. Y., U.S.A. Cable Address: Sheratotel.

To receive free information about Sheraton Hotels, just fill out the handy coupon below.

Marshalling the facts

Another BEA plane taxies onto the apron, guided skilfully into place by the marshal's signals. Behind every arrival, every take-off, lies a mass of facts and figures – traffic statistics, passenger and cargo revenue, inter-airline accounting, and other vital information to be collated and analysed.

To speed the marshalling of the facts required for efficient airline management, BEA has ordered an EMIDEC 1100 computer, E.M.I.'s advanced electronic data processing system. This will ensure that vital information will be made available in a fraction of the normal time.

Thus BEA's ground organisation keeps pace with the ever-growing needs of the jet age.

E.M.I. Electronics Ltd. has unrivalled experience and resources in the electronics field. Its products now enable management to have fuller control than ever before.

EMIDEC computers have already been selected by many major organisations including the following:

AIR MINISTRY · BARCLAYS · BOOTS · RAOC
GLAXO · ICI (PLASTICS DIVISION) · KODAK
BMC · SAINSBURY'S · MINISTRY OF LABOUR
MINISTRY OF PENSIONS

We shall be pleased to send you illustrated literature on our EMIDEC 1100 and EMIDEC 2400 computers, and ancillary equipment.

assets. Of these assets probably the most valuable are old films—and these are what the strike is about.

So far, no arrangements have been fixed for showing on television the 2,500 films made since 1948 and such a development would certainly be opposed by the cinema owners; but it is estimated that it would earn the companies at least $300,000,000 and sooner or later something of the sort seems sure to be done. And when it is, the script writers, who went on strike in January, and the film actors, who have now joined them, insist that they must both have a share in the profits. The settlement with Universal gives the actors about 3½ per cent and the writers just over 1 per cent of any income from televising post-1948 films and provides for a contribution by the company of 5 per cent of each actor's pay to a pension and welfare fund. The other companies refuse to consider such a solution, contending that it amounts to paying a second time for work already done; they also fear—and the stage hands are now justifying this fear—that other unions will demand a share in television earnings. The strikers reply that to show cinema films on television screens would endanger their livelihood, but that they are ready to settle for a promise that no post-1948 films will be sold or leased to television companies.

Wisconsin's Badgered State

FROM A CORRESPONDENT IN MADISON

THIS is the season when presidential candidates beat their way over the icy roads of Wisconsin to hale mechanics from the grease pit, to shake hands with *schafskopf* players in the back rooms of taverns, and to greet factory workers at 5 o'clock in the morning when they arrive for the first shift. On April 5th voters in the Democratic presidential primary will decide whether Senator Kennedy, of far-off Massachusetts, or Senator Humphrey, from neighbouring Minnesota, is to be the favourite of the Badger State's delegation at the Democratic national convention. These two will spend most of the time before the election campaigning in Wisconsin. Vice President Nixon, who is unopposed on the Republican ballot, need make few appearances.

Next month voters in Wisconsin's primary election will be able to choose between delegates pledged to support Mr Nixon, the unopposed Republican presidential candidate, and those pledged to one or other of two Democratic candidates. The method of determining how Wisconsin will cast its 31 votes at the Democratic convention was changed recently in spite of protests from Senator Kennedy. Each of the ten congressional districts on the map will elect five delegates, who will cast 2½ votes between them at the convention instead of 2, as in the past, while only 5 convention votes, instead of the expected 10, will go to the candidate who wins a majority of the Democratic votes throughout the state. One convention vote is divided between two party officials; one supports Senator Kennedy and one supports Senator Humphrey. Thus the candidate who is most popular with the voters will not necessarily win a majority of the votes which the state will cast at the convention.

It has become fashionable to say that only a handful of convention votes are at stake (31 out of the 761 which a candidate needs to be successful), that the outcome has little effect on the national convention, and that in the past no winner of the Wisconsin primary has ever been elected President. Few have even won the nomination. It is being argued that the primary is unrepresentative, that voting is sure to be light, that the real issues are not debated there, that money determines the result, and that the kind of campaigning which is needed to win is exhausting and demeaning. Yet no other event before the actual convention is likely to be as decisive.

A solid victory for Mr Kennedy would bring him tangible, as well as psychological, benefits; party leaders in six other states with large delegations are reported to be ready to support him if he can win in Wisconsin. If Mr Kennedy also shows that he can carry Protestant districts as well as those which share his Roman Catholicism, the effect could be overwhelming. Mr Humphrey, on the other hand, must win if he is to be regarded as a serious presidential contender. One of his handicaps in the Wisconsin primary is the widespread impression that he has no real chance of being nominated. There have been five professional polls of opinion in Wisconsin so far, as well as dozens of less scientific samplings. Where the results have been revealed, these tests have shown Mr Kennedy to be the favourite.

There are no serious ideological conflicts between the two Democrats. Both are liberal, although Mr Humphrey is considered slightly more so. But as a Senator from nearby Minnesota Mr Humphrey's votes in the Senate have been more in line with the sectional and economic interests of Wisconsin than those of Mr Kennedy. Senator Humphrey's supporters are trying to rally farmers by recalling that in 1956 Senator Kennedy voted against rigid price supports for wheat and that on an earlier occasion he also voted against an increased appropriation for rural electrification. Mr Kennedy, a shrewd tactician, heads off such criticism by recalling these errors with remorse and points out that in more recent votes he has supported the farmers' interests.

Other factors are likely to be more important than such fine points: religious attitudes, the influence of trade union leaders, the question of the Republican vote, and the personalities of the candidates. Mr Kennedy's Roman Catholicism is thought to be, on balance, an asset; the state is one of the most Catholic in the country. But most of the trade union leaders are backing Senator Humphrey. The election may turn on whether a factory worker on Milwaukee's south side, for example, votes on April 5th as a member of St Stanislaus's Roman Catholic church or as a member of the automobile workers' union. The Democratic organisation in Wisconsin is split, with slightly more of its leaders rallying to Mr Humphrey. But the Governor, Mr Nelson, has remained neutral in an effort to keep the party organisation united.

WISCONSIN'S primary laws are unique; it is the only state, among the 16 that conduct presidential primaries, which permits people to vote in the primary of either party. A voter is handed the ballots of both parties, marks one and throws the other away, and no one knows which he has chosen. Since most voters in Wisconsin regard themselves as political independents, even if they vote Republican regularly, many of them choose whichever party primary offers a contest. This means the Republican voters may determine the Democratic winner next month; if they do, he will be Mr Kennedy, whom they regard as the more moderate candidate of the two. On the other hand, many Democrats who remain devoted to Mr Stevenson are likely to vote for Senator Humphrey, on the theory that Senator Kennedy's drive for the nomination must be stopped if Mr Stevenson is to have a chance of being considered.

When issues are relatively unimportant personalities come to the fore. Here Senator Kennedy has the best of it. Tall, assured, poised, with a flashing smile that breaks through his accustomed gravity, he is a handsome and appealing figure. He inspires confidence and his personal wealth is no handicap. But under his charm

there lie a toughness and a ruthless determination that have earned him the half-critical name "Jack the Knife" among reporters. Many Democrats, however, regard these as desirable qualities in a man who may have to compete with the tough, ruthless Mr Nixon.

Mr Humphrey is a warmer person. His ideas pour out; he clings to each audience as though it were his last on earth and he must tell all before he goes. He is capable of arousing a crowd, particularly a partisan one, as Mr Kennedy is not, but his very exuberance leaves a misleading impression of instability. Those who know Senator Humphrey well admire him intensely, but his public appearances are unconvincing. Moreover, the Senator from Massachusetts is a celebrity, while the Senator from Minnesota seems to be a politician. Recent experience indicates that American voters prefer celebrities as political leaders.

The *Milwaukee Journal*, the state's largest newspaper, has likened the contest to a football game between "the Kennedys and the Minnesotas." Energetic Kennedy brothers, sisters, cousins and in-laws are everywhere. Mr Humphrey's wife campaigns as doggedly and effectively, but most of his work is done by the dozens of Minnesotan Democrats who pour in over the border each week. Mechanically, the Kennedy organisation functions better.

Newspapers Strike Back

FROM A CORRESPONDENT IN OREGON

THE strike against Portland's two daily newspapers began, like a growing number of disputes between management and trade unions, over working rules and the use of labour-saving machinery. What makes it unique in the history of modern American journalism is that the two publications, the *Oregonian* and the *Oregon Journal*, have continued to appear, as a combined newspaper, every day since the strike began on November 10th. Unfortunately this has caused tensions which have erupted in acts of violence more characteristic of the ugly strikes in the nineteen-thirties than of those in the prosperous nineteen-sixties.

When the 54 members of the Portland branch of the International Union of Stereotypers broke off negotiations with the publishers of the newspapers and put pickets around the two plants, all the other employees who were trade unionists—printers, machinists, engravers, lorry-drivers, warehousemen, paper-handlers and journalists, about 900 in all—chose to respect the picket lines. Nevertheless the two papers decided to try to continue publication with the aid of supervisory and non-union workers. After the first day or two they had the help of craftsmen lent by publishers in other states or recruited through nationwide advertisements.

The strikers, finding that they were unable to keep the newspapers from appearing, concentrated on trying to persuade readers to cancel their subscriptions for the duration of the strike. (Direct subscriptions are much more important in the United States than they are in Great Britain.) Readers are offered, as an alternative, a weekly tabloid newspaper published under union auspices and the promise of a daily one, also sponsored by the trade unions, to appear sometime in the future. The unions claim that their campaign has cost the newspapers about 160,000 customers, out of daily circulations which stood, before the strike, at 242,035 for the *Oregonian* and 188,677 for the *Journal*—a reduction of about a third. Spokesmen for the publishers say that the cancellations amount to less than half of this. Audited figures will not be available until next month.

The three issues which precipitated the strike had nothing directly to do with wages and hours (the stereotypers were being paid $3.61 an hour for a 35-hour week); they were the result of the managements' attempt to change working conditions in the stereotype department. The publishers sought to end what they considered the unjustified payment of overtime rates to substitute workers; to free the foreman from being compelled to join the union; and to modify the rule in the union contract which specifies that a stereotype plate-casting machine must be operated by four men. The *Oregonian* proposed to buy one made in Germany which is said to require only one operator and, in fact, it will be installed about April 1st.

THE Stereotypers' Union refused to give ground on any of these points, but the original issues were soon obscured by new controversies. As the newspapers brought in craftsmen from other parts of the country the unions protested against "imported strike-breakers" and union publications also charged that the strike was "incited" by the owner of the *Oregonian*, Mr Newhouse of New York, who owns other newspapers and magazines, in order to gain control of the *Oregon Journal*. Both the managements have denied this and recently they announced that they plan to return to separate independent daily publication about April 1st.

Violence has been intermittent. Pickets and non-striking employees have come to blows several times and five men were arrested for defying the order against mass picketing issued by the Mayor. On the night of January 31st a series of dynamite blasts wrecked ten newspaper lorries; fortunately no one was injured. Of the five men arrested for this crime, one is Mr Levi McDonald, a member of the negotiating committee of the Stereotypers' Union. The other four said that he had paid them $100 each to blow up the lorries. Mr McDonald denies steadfastly the accusations against him.

The two parties to the dispute appear to be farther apart than they were on the day the strike began. About 40 of the 900 employees who left their jobs have returned; most of them are members of the American Newspaper Guild, the journalists' organisation. They have been re-employed without prejudice. But the publishers have notified the members of one union, the web pressmen, that they are regarded no longer as employees of the papers and the managements insist that they will not agree to any settlement which gives members of the unions precedence over workers hired since the strike began. Nor will they consider requiring such workers to join a union to keep their jobs. The leaders of the unions have made it clear that these conditions are unacceptable and the prospect is that the strike may never be settled formally.

Meanwhile the publishers are trying to eliminate the "feather-bedding" or make-work practices which are traditional in the contracts between newspapers and trade unions. This would enable the newspapers to operate more efficiently with smaller staffs. Already a thing of the past in the composing room is the setting of so-called "bogus type" which simply duplicates electro-plated advertising copy and is destroyed automatically once it has served its purpose of protecting the jobs of members of the trade unions.

Laying McCarthy's Ghost

FROM A SPECIAL CORRESPONDENT

AN era of national hysteria over the threat of communism at home appears to be passing into history in Hollywood, in the colleges, and for workers employed by private firms which do secret work for the government. Recently the President took a hesitant step toward providing certain safeguards—the right to confront an accuser and to cross-examine him—for such workers, who must be cleared for security before they are given access to defence secrets. Last June the Supreme Court, in the Greene case, invalidated the existing industrial security regulations of the Defence Department, holding that, in the absence of legislation or a directive from the President, the department lacked the authority to omit the traditional safeguards. The House of Representatives, prodded by Mr Walter, the indefatigable head of the Un-American Activities Committee, hastily passed a Bill to restore the old system, but this is expected to die in the Senate now that the President has acted.

The Executive Order issued last month distinguishes between intelligence agents, whose identity is still to be protected, and casual informants, such as neighbours, fellow-employees and landladies, who must be made available for cross-examination except when there is "good and sufficient" cause to keep them hidden. The order provides that, when an applicant for clearance is not permitted to cross-examine someone who has given information against him, the application can be denied only after the head of the department concerned has reviewed the case personally. It also requires that adverse decisions contain written findings on each of the allegations against the applicant. The order affects not only the Defence Department but also other departments whose contracts with private industry involve defence secrets.

The issue is perhaps the most difficult in the entire field of personnel security. Government officials charged with responsibility for the protection of official secrets insist that they must have absolute authority to determine who may share those secrets. Yet so many firms are engaged on defence contracts that millions of people require security clearances to keep their jobs. Such firms prefer to have all or substantially all of their employees "cleared" for secret work, so that if some one is needed unexpectedly to do a job, the project will not be delayed for months while he waits for clearance. In the last five years some 3,500,000 persons in private industry have received clearances under the programme. Of this number, some 300 a year become "cases," in the sense that they are referred to the central screening board in the Department of Defence, with a recommendation by the military department concerned that the clearance be denied or withdrawn. In 1958 fewer than 100 applicants were denied clearance after hearings, or withdrew their applications after receiving statements of the charges against them.

THE provision in the new Executive Order for exceptional cases, which permits heads of departments (in effect, officers of Cabinet level) to deny or revoke clearances without affording a hearing and without stating their reasons, is causing less concern among Washington lawyers than the risk that department heads (or their representatives) may abuse their power to excuse witnesses for "good and sufficient" cause. Pressure to apply this exception may be exerted by the investigating agencies, and particularly by the Federal Bureau of Investigation, which has been extremely vocal about the importance of concealing the identity of all its informants, both professional and casual.

Even assuming that confrontation will be the rule from now on in proceedings involving industrial security, it is doubtful whether this will affect the result in any significant number of instances. There have been dramatic incidents in which the unmasking of confidential informants by extraordinary diligence or luck has avoided gross miscarriages of justice, not infrequently revealing that the informant was misunderstood or misquoted by the investigator who took down the information. But substantial disputes about the facts are rare. The problem is more usually one of deciding whether admitted activities or associations in the past make the individual a security risk today. For example, the defendant in the Greene case admitted that his former wife had had suspect associations, but he had been divorced from her for some ten years. Similarly, in the Oppenheimer case, the question was whether, on the admitted facts, Dr Oppenheimer could be trusted with atomic secrets.

The chief significance of the Executive Order is that it reflects a somewhat more balanced outlook on internal security on the part of the Administration. But it is ironical that new safeguards for individual rights have been imposed on a programme which has been administered with more political sophistication and more solicitude for these rights than the other federal security programmes—those for civilian employees of the government, for military personnel, and for American employees of international organisations. These programmes continue to operate under regulations promulgated during the McCarthy era, although the way these rules are applied may be softened by the change in the general climate of opinion. Such screening is now confined almost entirely to entrants into the federal service; those already in it have been thoroughly combed over by two Administrations.

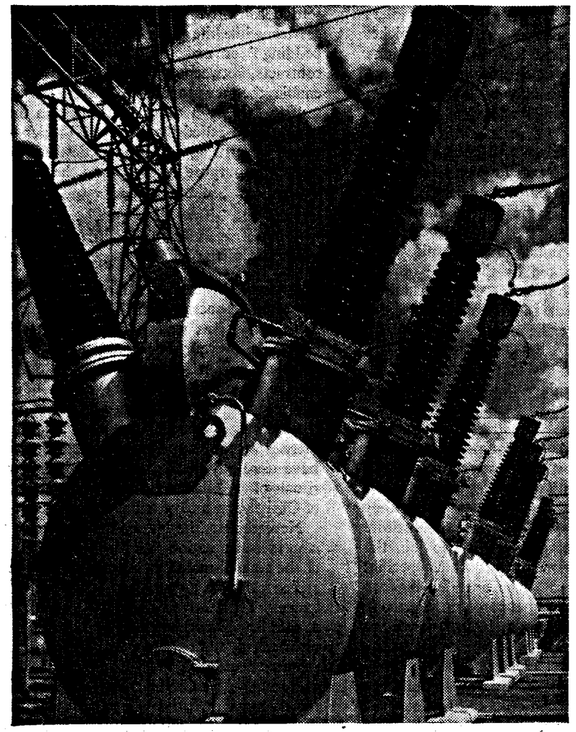
Prickly Issue

FROM A CORRESPONDENT IN COLORADO

IS peyote a harmful narcotic drug or an essential element of a religious sacrament? The Supreme Court may have to settle this question, as well as a legal dispute over whether an Indian nation can prevent the use of peyote. It comes from a dwarf cactus in the south-west and, when eaten, produces "technicolour visions" and hallucinatory reveries. But it seems to have no lasting effects, is not habit-forming and is not classified as a harmful narcotic under American laws or regulations. As far as is known, there is no problem of addiction. Mexican and American Indians have used peyote for years and it has an honoured place in the rituals of the Native American Church, whose creed is a compound of Christianity and of tribal tradition.

Nevertheless, the Navajo tribal council, which governs America's largest Indian nation, has forbidden the use of peyote, and an agent of the council raided a suspected house, seized the supply of peyote and arrested its owner, who was fined $100 under the tribal ordinance. The Native American Church appealed against this action to the New Mexican and federal courts, claiming that the ordinance violated its rights under the First Amendment, which protects religious freedom.

Recently the Circuit Court of Appeals in Denver upheld the tribal council. It did not pass directly upon the issue of freedom of religion, but found simply that the council, "as something more than a state," has the unquestioned right to regulate the affairs of its own people. The Native American Church is to ask the Supreme Court to rule on the case.



SHORTER NOTES

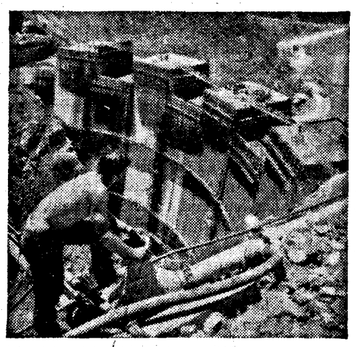
The resignation of Mr Otto Nelson from the chairmanship of the commission set up by the Republican Legislature of New York State to report on the Democratic government of New York City was hailed as a victory by the Democrats who had been criticised in the commission's first and admittedly somewhat hurried, report. But Mr Nelson, a man of integrity and ability, was largely the victim of political rivalries between city and state; the commission, after being reorganised, will go on with its work. That it is needed has been tacitly admitted by the Mayor. Mr Wagner, who is now speeding up the long-postponed task of revising the city charter so that the proposals can be presented to the voters next November.

* * *

The last narrow gauge—3 feet 8 inches—railway in Colorado is being sold to a private trust which will operate it daily during the summer as a monument to the railway pioneers. Narrow lines, like this 45-mile track between Durango and Silverton, were once popular because they could be constructed along mountain ledges. But recently the railway has been losing money.

AUSTRALIA/country, continent . . . a world of opportunity

A skyline of circuit breakers symbolises the rapid growth in Australia's power supply. Below: Construction work on one of the huge concrete dams in the £A400 million Snowy Mountain Hydro-Electric Scheme.



NEW POWER BEHIND AUSTRALIA

Diverting the flow of four rivers through 3,000 square miles of alpine country, researching atomic power and solar energy, building new power stations on black coal fields, turning a brown coal field of 22,000 million tons into one of the world's major fuel and power production centres—this is the scale on which Australia is developing her power resources.

This year 750,000 kW will have been added to Australia's installed generating capacity, bringing the total to 5,350 megawatts. Of seven hydro-power projects now in hand, one—the Snowy Scheme—is among the greatest engineering feats ever undertaken by man. With a capacity of some three million kW, it will generate electricity in 11 power stations, while feeding irrigation water to open up new farmland equal to the whole of Dorset in area.

Much of the special equipment needed is being made in Australia, and some (like the Hifar Atomic Reactor at Lucas Heights) is being built for Australia in other countries. Those overseas companies already located in Australia are confident of the potential of this vigorous developing nation. Australia welcomes them and welcomes their contribution to the continuing growth and stability of the Australian economy.

Representatives of the Australian Governments in the United Kingdom will be glad to provide information about trade, investment and immigration. Further information can be obtained at Australia House, and at the Offices of the Agents General for the Australian States.

THE WORLD OVERSEAS

Torero in Search of a Plaza

FROM OUR BONN CORRESPONDENT

HERR FRANZ-JOSEF STRAUSS, the Federal Republic's expansive defence minister, must be tired of seeing himself figuring in the cartoons as a Spanish bullfighter getting the worst of it. But he was in amiable fettle when he met foreign correspondents in Bonn this week to answer, and sometimes parry, their questions. With the air of Sir Galahad—because his heart was pure—Herr Strauss let it be known that he intended to explain in detail to the Nato defence ministers assembling in Paris at the end of the month exactly what sort of bases and training areas the Bundeswehr requires abroad, how many, how big, and why. He would not, he rubbed in, do anything so unseemly as to stipulate where the bases and training areas should be. That would be for Nato to decide. And, as everybody knew, or ought to know by now, the Bundeswehr was Nato's most obedient servant.

The supply bases alone are no small matter. It is agreed among Nato planners that it is proper for the Bundeswehr to hold stocks for ninety days. In view of the fact that the distance from the Thuringian salient to the Rhine is only 100 miles, it is agreed further that it would be provident to hold enough for thirty days east of the Rhine, and to store the remaining sixty days' supplies

MANOEUVRES ON THE SOUTH COL

Guide Ike: "Take it easy, boys, they're only training"
E. M. Lang in the *Süddeutsche Zeitung*

west of it. Since the Bundeswehr's total requirements in war are calculated at 30,000 tons daily, storage space is wanted somewhere west of the Rhine for 1,800,000 tons of material of one sort or another, much of it bulky. The thesis is that it cannot be found in the confined and difficult terrain between the west bank and the frontier.

Of the three west German army corps now at Nato's disposal, that in the north could, in theory if not in practice, have its rear echelons in Holland and Belgium. The two in the centre and the south could, again in theory, maintain depots in France. Negotiations to obtain such depots have dragged on for over a year, largely inconclusively. Herr Strauss has not publicly disclosed why so little has been accomplished. There is good reason for supposing that on one side the French have been trying to drive too hard a bargain; that on the other the Germans have become chary of making commitments on French soil since they have seen United States aircraft and nuclear equipment edged off it. Whatever the causes of the delay, Herr Strauss feels that his responsibilities leave him no choice but to press for a quick solution to the problem.

Naturally the Salisbury Plains and Canwells needed abroad by the still expanding Bundeswehr take up much more space, on Herr Strauss's dream map of western Europe, than the supply bases. The requirements are genuine. According to a recent Nato appreciation, the Bundeswehr has only forty per cent of the training areas it needs. As Herr Strauss put it to foreign correspondents this week, the total area available to the Bundeswehr is only a quarter of that at the disposal of the east German People's Army.

With hand on heart, Herr Strauss declares that he would prefer to see the Bundeswehr's needs satisfied by bases and training areas operated under some kind of Nato control. There is no reason to disbelieve him. The British army's training areas in Germany are now all available for use by the forces of other Nato countries, the allotments of training time being made strictly in accordance with the varying national strengths. Most of the American training areas in Germany are similarly organised, and the French are beginning to follow suit. Some of the training areas that straddle the western frontier are occupied on the one side by German forces and on the other by French, Belgian, or Dutch. Herr Strauss, by his own account, would be content with arrangements of this kind if they could be made on a sufficient scale. But he does not intend to wait for ever. Several senior Nato officers are of the opinion that there would be much less likelihood of the German armed forces ever "going it alone" if they were dependent to a large extent on collectively controlled bases abroad. Herr Strauss is willing. Could some such arrangement be devised, if necessary, in Spain?

A Reluctant Friendship

FROM OUR ATHENS CORRESPONDENT

AN unusually blunt warning was addressed by a Greek official spokesman to Herr Strauss a few days before his arrival in Athens:—

> In the most improbable event that Mr Strauss raised the issue [of German military facilities in Greece], the Greek government would most definitely refuse to discuss it for a number of reasons, mostly of a psychological nature.

Herr Strauss is paying an official visit to Greece from March 10th to 16th—time enough to ponder the significance of this statement, perhaps while inspecting the Greek munitions factory where some £5 million worth of rifle ammunition and bazookas are being manufactured for the Bundeswehr. Herr Strauss may very well not have intended to broach the subject of military storage or training facilities in Greece; however, the Greek warning not to do so may be regarded as a symptom—the first sign of an official Greek reaction to the manner in which Germany wields its economic influence in this country.

This influence has grown since 1952 as steadily as, for the first few years of that period, Greek tobacco exports to Germany grew. West Germany today tops the list both as a client for Greek products and as a supplier of the Greek market. Tobacco has been the key to German economic penetration in Greece. The capacity to absorb large quantities of this product, which cannot easily find new markets and which accounts for more than a third of the value of Greek exports, gave the Germans powerful political strings to pull. Bonn did not hesitate to pull these strings to obtain quick political returns. German war criminals were released from Greek prisons, and the prosecution of 840 Nazis wanted for war crimes was suspended, for the sake of better trade with Germany. Despite these Greek gestures, tobacco sales to Germany declined from 25,000 tons in 1957, to 16,000 tons in 1959. When the Greek deputy premier visited Bonn in January he drew attention delicately to this disparity. The Germans, however, rejoined that Greece was not buying much coal from Germany either—a harsh argument to use to a country that buys Polish coal in exchange, again, for Greek tobacco.

In their approach to Greece, the Germans have not displayed much psychological insight, but have applied without refinement the same tactics that may have succeeded in other under-developed countries with no wartime experience of German occupation. The Greeks seem to resent the fact that the Germans chose to forget the war sooner than they do themselves.

GREECE'S difficulty in obtaining foreign loans while still in default on prewar debts afforded the Germans another opportunity to expand their economic predominance in this country. German credits and advice went to build an oil refinery and to exploit Greek mineral wealth. More loans and credits, up to 600 million marks, were made available to Greece late in 1958. The absence of rational advance planning caused these funds to remain largely unused until here, too, the Germans obliged by supplying technical assistance; German consultants are preparing blueprints for twelve projects of the Greek five-year plan. Orders were also promised to Greek firms for 650,000 uniforms for the German army.

Greece's thirst for foreign capital encouraged the Germans to demand special treatment for their firms wishing to invest in Greece. Protracted negotiations are in progress in Bonn for a treaty of establishment to facilitate the influx of private German capital into Greece. However, the terms proposed seemed to Greek officials and financial interests to be so onerous and exacting that they reacted vehemently. One of the German demands was that German firms should enjoy equal freedom with Greeks to establish businesses, while their German personnel should be exempt from the restrictions and controls to which aliens working in Greece are customarily subject. Greek businessmen fear that imported—and cheaper—German capital, together with German technical skill, equipment and organisation, will gradually bring the whole of Greek industry under some form of German control; and that the process will be accelerated by Greece's prospective link with the European common market.

Whatever the Greek reactions, however, the Germans are well aware how dependent the Greek economy is on collaboration, and in their view economic interest will ultimately prevail over what they regard as obsolete national susceptibilities. West Germany is the preponderant weight in the common market of the Six, whose members absorbed over two-fifths of all Greek exports in 1958—compared with only 13 per cent purchased by the members of the European Free Trade Association. Greece cannot afford to remain outside the large economic communities now forming in Europe, however reluctant the Six may be to give the required long-term guarantees for the country's agricultural exports. Outside the sheepfold, the Communist wolf is lurking with enticing proposals and, attached to them, political strings of another nature.

France's Angry Farmers

FROM OUR PARIS CORRESPONDENT

FARMERS, dispersed and individualistic, are less given to collective action than industrial workers. The fact that more than 300,000 farmers have taken part in protest meetings held throughout France in the past two months is a measure of their discontent. The bloody clash with the police at Amiens last month was a reminder that the absence of parliamentary safety-valves means fewer safeguards against explosions. Threatened with direct action by the peasants, the government has been compelled to take a second look at its agricultural policy, and earlier this week it even seemed uncertain whether it could prevent the recall of parliament.

Peasant unrest is now particularly acute because current worries about prices and revenue have been superimposed on a structural crisis—the contracting share of agriculture in an expanding industrial economy. To protect themselves the farmers obtained in 1957 an automatic sliding scale linking farm prices to the industrial price level. But this system was abolished in December, 1958, in the general offensive against *indexation*, the inflationary method of automatic price and wage increases. The farmers complain that, as a result, farm prices are at least five per cent lower than they would have been. In addition, they have been hit by this summer's drought. Their union argues that the financial recovery of France has been achieved at the expense of its farming community. "Peasants, too, are fully fledged Frenchmen"—an allusion to the theoretical equality of Algerian Moslems—was a poster to be seen at all recent meetings.

The roots of the trouble lie deeper. It is well known that the industrial revolution in France did not culminate in the nineteenth century in a reduction of the agricultural population comparable to that in England. A tariff wall and internal protection slowed the process down. Even now over a fifth of the French population derives its income from farming (the figure was 9.6 million, or about 23 per cent, at the last census in 1954). It is less well known that the migration has continued; it has been slowed down but not arrested. Between 1921 and 1954 the number of people employed in agriculture went down by 30 per cent; the movement was continuous, apart from a natural break during the war years. During the last decade the decline in agricultural population has averaged about 85,000, or 1.5 per cent, a year.

Such shifts complicate the assessment of changes in living conditions in the countryside. The farmers' union claims that in the last ten years, despite an increase in agricultural output of 25 per cent, the total net income of farming has scarcely risen (by about 4 per cent). Taking into account the contraction of the farming population, income per head must have risen by about one-fifth. Despite difficulties of calculation, however, the fact remains that the average standard of living in the countryside is much lower than in the towns and that the gap has widened in the last decade.

It is idle to stick to averages and to take the farming community as a whole. The 1954 census revealed that out of 5.1 million people engaged in agriculture 1.2 million were farm labourers and 2.1 million worked on the family farm. There remained 1.9 million people who declared themselves as self-employed, but only 410,000 out of them run their farms with hired labour. The owners of the large, modern estates in Normandy and the Nord cannot be equated with the smallholders of Brittany or the peasants eking out their living on the poor mountain slopes.

Emphasis on common interests explains the strength and scale of the current movement of protest. A relative fall in farm prices, which might precipitate the exodus of marginal peasants so far surviving on the subsistence level, would also decrease the Ricardian rent of more privileged producers. Furthermore, medium farmers,

Soviet Population, 1959

THE census of January 15, 1959, may well provide a mine of information on Soviet society. Preliminary results, published last May, revealed that at the beginning of 1959 the Soviet Union had 208.8 million inhabitants. There were only 94 million men compared with 114.8 million women, but the whole of the difference was accounted for by the age-groups over 31; this reflects the terrible losses Russia must have suffered during the second world war. At the start of last year, 52 per cent of the Soviet people were still living in the countryside, but—with an urban population of 100 million—the balance was nearly reached (the growth of Soviet towns was described on page 1169 of *The Economist* of June 27, 1959). The Soviet central statistical office has now published new data derived from the census—about nationalities, education and the age structure of the population.

Nationalities: Not only is Russia the dominant republic, but Russians have also spread throughout the Soviet Union. The "conquest of virgin lands" has speeded up this process and Russians now outnumber Kazakhs in the Kazakh republic; they are an important minority in most other republics as well.

Provision was made in the census forms for both nationality and mother tongue. The two did not necessarily coincide. 114.6 million people declared themselves as Russian, but 124.6 million gave Russian as their language. On the other hand, 2,268,000 people claimed Jewish nationality, though only a fifth of them gave Yiddish as their language. The total figure for Jews is yet another illustration of the Jewish disaster of the nineteen-forties. There were some 3,500,000 Jews in the Soviet Union before the war. The number was greatly increased by the occupation of parts of Poland, Rumania and the Baltic states as well as the influx of refugees. The survivors are nearly evenly divided between Russia, the Ukraine and Byelorussia.

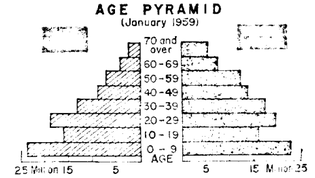
Education: The spread of learning is the great pride of the Soviet regime. It is claimed that in 1959, in the age groups 9 to 49, the percentage of illiterates was only 1.5, compared with nearly half in 1926 and close to three-quarters in the Tsarist census of 1897. The Russia of illiterate peasants is dead.

By 1959 there were apparently in the Soviet Union 3.8 million graduates; 1.7 million people with unfinished university education; 7.9 million with "specialised secondary education" (emerging from technical schools, teachers' training colleges and so on); 9.9 million people with matriculation and 35.4 who had been to school for seven years or more (but did not complete the ten years necessary for matriculation).



The number of graduates had thus risen from 1.2 million in 1939 to 3.8 million at the beginning of last year, and the number of others with at least seven years' education from 14.7 million to 54.9 million. At the census date 2.2 million were studying in higher educational establishments and 1.9 million in technical or training colleges. This spread of education provides a key to Russia's evolution since Stalin's death.

Women have caught up with men, but the countryside is still lagging behind the towns. Out of a thousand town dwellers, 32 are graduates; in rural areas there are less than six out of a thousand. The corresponding figures of people with secondary education (between 7 and 10 years) are respectively 344 and 188. But the gap between town and country is also narrowing.

Structure: In 1959 there were in the Soviet Union 52.3 million women aged 32 or more, compared with only 31.3 million men in the same age group. Among the younger people the balance was almost even, with 62.7 million males and 62.5 million females The discrepancy in the older generation must be essentially a consequence of the war, and it will continue to have its impact on the labour force. But the population is once again increasing rapidly. It is claimed that the mortality rate was reduced from 17 a thousand before the war to 7.2 a thousand in 1959 (and to 11.8 a thousand for children under five). The pyramid of ages is thus, temporarily, getting heavier at both ends. The average life expectation has risen to 68 years, and there are 25.5 million people over the normal retirement age. The number of children is also growing fast. The Soviet annual marriage rate is apparently a world record (12 a thousand inhabitants, compared with 8.3 in the United States and 7.6 in the United Kingdom). Mr Khrushchev revealed to the Supreme Soviet that the Soviet population increased by 3,660,000 during 1959. At the beginning of this year it must, therefore, have amounted to 212.5 million. If the present annual rate of growth (1.75 per cent) is maintained, the population of the Soviet Union should top the 250 million mark by 1970.

AGE PYRAMID
(January 1959)

151 million Soviet citizens, or nearly ¾ of the population, were born after the October 1917 revolution.

particularly young ones, have in recent years invested heavily in machinery and equipment in order to resist the pressure of concentration ; they are now in debt, badly hit by price movements and among the loudest spokesmen of peasant discontent.

The farmers' united front has made its impact. The government has thought fit to make concessions. To please Breton farmers—though not OEEC partners—it has decided to exclude onions and poultry from recent measures of trade liberalisation. It has endorsed the farmers' union plan for the improvement of the meat market (the high cost of distribution, in general, is an important additional strain on farming). What was more important, the government agreed in principle to take into account the cost of labour and agricultural equipment in the annual fixing of farm prices. But ministers were divided on the extent to which cost factors should automatically determine the change in prices and how much should be left at the government's discretion. The minister of agriculture, perturbed by peasant unrest, and the minister of finance, worried by the impact of higher food prices on wages and the general stability of the franc, were naturally at odds on this subject.

The compromise reached within the government last week did not go far enough to satisfy the farmers' union. Its leaders, conscious of the peasants' electoral pull, asked the deputies to sign a petition for the recall of parliament for a special session devoted to agriculture. According to the constitution a special session can be convened if demanded by more than half the deputies (that is to say, if the petition is backed by 277 signatures). But M. Debré warned the peasant leaders that even if the prescribed number were reached President de Gaulle, who must sign the decree, would refuse to do so. Parliament, which in any case can do very little, thus discovers yet another limit to its action. Some deputies apparently still have illusions about the part they can play in the Fifth Republic.

Whatever the outcome of this latest skirmish between General de Gaulle and the powerless deputies, the modernisation process—with its shift to meat and dairy farming—will continue. Migration from country to town will also go on, at a slower or faster pace. It would, therefore, seem rational to invest money in technical schools in the countryside so that young peasants coming to town would not be reduced to unskilled jobs. Such long-term problems, however, are neglected in the heat of battle. But the farmers' exceptionally tough stand has already proved one point: that social problems will not vanish because of the reduction of the parliamentary platform for their expression. Peasants, like small craftsmen or traders, who feel the squeeze of concentration will try to resist. For all the change in its institutions, France cannot escape the social and political consequences of its continuing industrial revolution.

Kenyan Party Games

FROM OUR CORRESPONDENT IN EAST AFRICA

AFTER the first impact of the returning delegates from the London conference, Kenya is still in political confusion. But pointers to possible new lines of political action and groupings can be discerned. African political reactions are generally elated at the clear statement of Kenya's objectives: "a democratic march to independence" and "victory" at the London conference are the phrases used. But many voices are still raised to cry: "Not fast enough."

Differences of opinion, or emphasis, in the ranks of the African leaders may now become visible splits as local influences begin to take increasing effect, and as the overriding need for African unity at the London talks disappears. Thus Mr Oginga Odinga, at meetings in Kisumu (the Luo centre), has been hitting indirectly at Mr. Tom Mboya and "personality politics." Mr Muliro is looking round at the possibility of resurrecting the Kenya National party, which divided him from Messrs Mboya, Kiano and Odinga, and examining, in the new situation, the chances of compromise and co-operation with the New Kenya party led by Mr Michael Blundell. But now that he is back on his home ground Mr Mboya is growing politically stronger, notwithstanding the skilled use made in his absence by his bitter personal opponent in Nairobi, Mr Argwings-Kodhek, of the slogan "Africa for the Africans." Mr Mboya's crowds are enthusiastic ; he had 10,000 to hear him in the Central Province and 25,000 at Nairobi.

Mr Mboya is representing the new constitution as the proper means for speeding up the pace of the march towards undiluted democracy and, through experience of responsible government, to actual independence. (He made no secret of this view before he left London.) He has now increased the support for himself by announcing his complete willingness to accept Jomo Kenyatta as the first African prime minister of Kenya. He is about to embark on a campaign in other areas which will test the strength of the movement behind him ; if this proves great enough, it may cause Mr Muliro and his followers to think again.

THE returning leaders of the New Kenya party are unpopular with the European community, but Mr Blundell himself has strengthened his prestige with Africans of the Muliro group. Mr Khamisi, for example, paid tribute to Mr Blundell at a meeting at Mombasa, and Africans applauded. At that meeting, Mr Ngala, who led the African delegation in London, spoke forthrightly on education and land, two points on which the New Kenya party demanded entrenched racial rights. Still, there are signs that Mr Blundell built up an understanding with some of the African-elected members in London, and if his party backs him in trying to meet the African members' requests half-way, he could now emerge as a co-operator with the African leaders of the future. Thus he may yet play a large part in shaping Kenya in the next few years—with some further sacrifice, temporarily, of European support ; but he might thus serve real European interests well in the longer term.

Mr Ibrahim Nathoo, the unofficial Moslem leader who broke away from the New Kenya group in London for a short time in order to make his outright statement in favour of conceding an African majority without elaborate safeguards, seems to have reasonable support for his stand among Moslems and Indians, but the New Kenya group is still sore. Some of the party would like to force his resignation. If they succeed, it will be a blunder that will make African leaders suspicious.

The United party, led by Group-Captain Briggs, which claims to represent the Europeans and repudiated the results of the London conference, probably has the majority following among Europeans at the moment. Nevertheless, there is a liberal white minority which may prove strong. At a meeting at Thika 250 Europeans passed a resolution supporting the New Kenya group with a majority of 63 votes to none, mainly as the result of a speech by Mr C. W. P. Harries, who attended the London conference as a substitute for Sir Charles Markham. Mr Harries was previously thought to be well to the right of Mr Blundell's ideas, but joined the New Kenya group in London after being brought "to face the reality" of British colonial policy.

The resignation of Sir Ferdinand Cavendish-Bentinck, speaker of the Legislative Council, in protest at the outcome of the London conference may give the United party a fresh fillip. "C.B." has decided not to join the United party, but he will be the rallying point of the Briggsites all the same. He is respected as an honest, sincere and astute fighter and his name would carry great weight with the Europeans, though it is certainly most unlikely to command support among the non-Europeans. If the United party is unable to force through its policy of getting the European-elected members of the New Kenya group to resign and submit their record at London to the white electorate in the

All clear in Ceylon

Ceylon delights the eye with its shoreline fringe of dreamily-waving coconut palms—palms that are more than decorative. These slender graceful trees provide food and drink, coir fibre, copra, acetic acid, oils, timber and thatch for building. But they are also the target for rhinoceros beetles (*Oryctes rhinoceros*), winged pests which, from refuse-dump breeding grounds, fly into the plantations and there bore into the crowns of the palms, attacking the young leaf shoots and growing points. Other organisms may enter into the bore holes and cause still further damage. Keeping the plantation areas clear of decaying vegetable matter helps—but is not enough. An effective pesticide is also needed—one able to kill the beetle weeks after application. Dieldrin has proved ideal. Applied to the crown of the tree as a dilute emulsion it runs down and collects in the leaf axils, there protecting the palm's most vulnerable part from its flying marauders. For the coconut growers of Ceylon, dieldrin has sounded the "all clear".

THE WORLD'S LARGEST AIRLINE

A copy of our new leaflet in full colour "Air France Jet Holidays" will be sent on request. Write Dept. E.2, Air France, 158 New Bond Street, London, W.1, or your travel agent will supply. Ask, too, for details of the "Fly now, pay later" Air France Credit Scheme.

A MAN IS KNOWN BY THE COMPANY HE KEEPS

A host is known
by the brandy he serves

To serve your guests an indifferent brandy is more insult than compliment. The correct thing to serve after meals is a cognac of liqueur quality. This is why the perfect host gladly pays that little bit more for a really fine liqueur brandy like Remy Martin. A genuine Fine Champagne V.S.O.P. Cognac. A brandy defined by French law as *Fine Champagne* because it is made exclusively from grapes grown in the two finest districts of Cognac. And it is reassuring to remember that Remy Martin make *nothing* less good.

PRIDE OF COGNAC

REMY MARTIN

near future, Sir Ferdinand may plan to capture the racial primaries for reserved seats at the 1961 elections. He would thereby make sure that European representation in the legislature would be made up of right-wingers.

Thus the conditions of the primary elections may determine whether the Europeans who can co-operate with the Africans are present to play a part in the legislature and in the council of ministers. Those conditions have not yet been made clear. Safeguards that European children can continue to be educated in exclusively white schools, and the maintenance of farm land values, are the two chief European worries.

The African-elected members seem prepared to send three of their number into the Governor's present ministerial council. The question is, which three? (Mr Mboya is said to have been offered the Labour portfolio.) Rivals for the future leadership do not wish to handicap themselves by serving in a government where they would suffer the dual disadvantage of being in a minority, yet having to accept collective responsibility.

The next few weeks may, therefore, be critical in Kenya, especially for the Europeans. If, by a resolute stand, Mr Blundell wins, even with fewer white followers, the chances of co-operation with the Africans will greatly improve, and by 1961 the habit of inter-racial collaboration could even be established. If this does not happen, the European community may find itself more and more isolated as the fight within its ranks inevitably prompts statements that make co-operation with other races difficult, if not impossible, for some time to come. But if the Europeans come to realise that safeguards eventually rest on the good will of the majority—and that means meeting African wishes to a great extent—then, after a short interregnum of struggle on constitutional lines, Kenya may be on the road to political peace on the racial issue.

Norwegians Think Again

FROM OUR SPECIAL CORRESPONDENT

A NORWEGIAN minister, asked in the spring of 1958 what he would do if the talks on a European free trade area broke down, is said to have replied: "Go to the Commonwealth conference at Montreal." Though it was a joke, it does rub home one of the basic principles of Norwegian policy. Norway has large economic interests in the Six as well as the Seven. Some 14 per cent of Norwegian exports went to west Germany in 1958 and another 13 per cent to the rest of the Six. But Norway's interests in the Seven are even larger, with 19 per cent of exports going to Britain and 18 per cent to the other partners. And war memories and innumerable other traditional ties between the two seafaring nations mean that in politics and sentiment Norway looks to Britain.

Norway's affinities with the Seven, however, do not mean that it has followed the same reluctant attitude to Europe as Britain in the post-war years. In the early years of the Organisation for European Economic Co-operation, Norway backed the idea of a co-ordinated investment plan for Europe—an idea which got nowhere because of British opposition. Together with Sweden and the Benelux countries it pressed for tariff cuts in OEEC at a time when the work of the Spaak committee was still in embryo, and the Six had not set out on their own. That project, too, met a British rejection. Today Norway would still like, ideally, to see the nations of western Europe trade freely and co-operate together in the framework of a developed and strengthened OEEC, but not an OEEC that does nothing at all.

Norway also regards the agreement of the Seven as no more than a starting-point which must lead on to concerted action in a great many fields, a view not shared by all the other members. In both the Paris negotiations for a big free trade area and the Stockholm talks on the little one the Norwegians pressed, for example, for strong rules against private cartel agreements, as in the treaty of Rome. But in both talks the move was blocked by the British, Swedes and Swiss. All three were presumably unwilling to take this political commitment; the Swiss unashamedly hold that cartels are a good thing.

CARTELS are not the only field in which the Norwegians want to see the framework of the convention filled out with the flesh and blood of common action. They feel more should be done in agriculture and in fishing, and they recognise that in the long run there must be a gradual harmonisation of economic and taxation policies. They would like the group to have a strong secretariat to devise and create policy. In substance, if not in words, that conception is not so very far removed from the role of the European Commission in the community of Six.

Norway, it seems clear, will not offer resistance if the Seven have to move nearer to the conception of the Six in pursuit of an agreement with them. To achieve that agreement Norway is ready to harmonise tariffs as well as accept more integration. One thing a small country like Norway does like about the free trade association is that, in those of its arrangements where majority voting applies, each country has one vote; whereas in the common market the voting is weighted to take some account of the size of member states. But in general the Norwegians are well aware that the organisation of the free trade association, as it stands, does not go far enough. Since the Paris talks broke down there has, indeed, been something of a reappraisal of policy in Oslo. It is recognised that Britain and its friends made a mistake in failing to take the Six seriously and go in with them from the start; it is appreciated that a European solution now may require a greater political commitment by the Seven than they have yet been prepared to accept.

Norway is not without its special predilections and difficulties. Thus, no Norwegian government would find it easy to cut tariffs on a most-favoured-nation basis without any reciprocal concessions from America, so long as the United States continues to subsidise its shipping as it does today. This home of full employment, which has had a rather poor record in trade liberalisation in the post-war years, may have some difficulty in adjusting itself to free trade from any quarter.

But the difficulties do not seem fundamental. Norway, after all, shared with most of continental Europe the experience of German occupation and the realisation which it brought of the weakness of the small nation on its own. The Norwegians do not have quite the ingrained nationalist streak of the Swedes or British. Economically, their textile and engineering industries may well do better when exposed to competition than some Jeremiahs fear. When the plans for a Nordic customs union were put forward, great alarm was expressed for these industries; but it may have been prompted less by economic analyses than by the suspicion Norwegians have had of Sweden ever since they gained their independence in 1905. In the free trade association, where there is no fear of Swedish dominance, the economic fears have been quietly put aside.

Having extracted substantial concessions from the British for its fishing industry, the Norwegian government is now disposed to be receptive to suggestions for co-operation between the British and Norwegian industries—provided that the British government or industry puts the suggestions up. British trawlers have in the past been prevented from landing fish in Norway by Norwegian landing laws and by the laws on the right of establishment. Today the Norwegian government, anxious to make use of unused freezing capacity in northern Norway, would be willing to look at those laws afresh. Pressure from Norwegian coastal fishermen, and the past history of torn nets and disputes over inshore waters which

have made both sides bitter at times, might make it rather difficult for the Norwegian government to take an initiative itself. But a Norwegian minister told your correspondent that the government would give a friendly reception to proposals that could lead to British trawlers landing their catches in Norway for freezing.

Obviously, it would be easier to develop such a partnership once agreement had been reached on the vexed issue of fishing limits. On the whole the Norwegians are not daunted by the British statement, made after the Stockholm convention was signed, reserving the right to raise the fish issue again if fishing limits change. They will still go to the Geneva conference on the law of the sea next week supporting the Canadian proposal for twelve-mile fishing limits.

More broadly, the British have found the Seven plain sailing so long as the main problem was merely to draft a treaty. A look at Britain's most loyal friend in the group suggests that diplomatic skill may well be put to bigger tests when the time comes to give the association flesh and blood, and to prove that Britain is both sincere and flexible in its search for agreement with the Six.

Mr Menzies Warns the Wantons

FROM OUR CORRESPONDENT IN CANBERRA

IT is hard on the new leader of the Labour opposition in the Federal Parliament, Mr Arthur Calwell, that the government should steal his clothes by announcing its intention to consider legislation against monopolies and restrictive practices. He can hardly oppose that. But otherwise the Australian scene now presents the curious spectacle of the Labour party echoing the manufacturers' complaints about the freeing of imports while a government devoted to free enterprise, but determined to fight inflation, is firm with its natural supporters, the industrialists. In this connection the prime minister, Mr Menzies, last week used his best forensic powers, and the occasion of an international conference on management, to put people right about the Australian economic situation—with particular messages for certain people.

One message was addressed to the nation at large—a homily on the evils of inflation. That may sound startlingly unoriginal, but it almost has news value in Australia, where there is a tacit conspiracy to pretend that inflation does not matter in this protected economy, where almost everyone does quite well out of it. Even the economists, or most of them, rationalise the general satisfaction by pronouncing inflation inseparable from growth. This time ministers seem to have needed no persuading, and were no doubt relieved that nothing more unpopular was intended than a further reduction of the banks' liquidity by the central bank, a vow to avoid budget deficits after this year's, and the removal of nearly all import restrictions. The public in general has yet to care.

A second message was directed at the arbitration commission, which, by two recent judgments, prepared such a very fine soup in which to dunk the economy. The 28 per cent rise in the margin for skill, which it awarded in November to the metal trades, has spread to other occupations just as rapidly as the pessimists (see *The Economist* of December 26, 1959) had feared. And now this same commission is in operation again, hearing an application from the Australian Council of Trade Unions for yet another increase in the basic wage, this time of 22s. a week, and the restoration of automatic cost-of-living adjustments.

The government hastily briefed counsel to state its case before the commission. But the prime minister went further. He said that Australia for everybody's sake needed a period of quiet on the wages front so that recent wage increases of £A165 million a year could be digested, a statement which, so far, the unions have taken calmly. Those who, weary of the stoppages that occur when collective bargainers fail to strike a bargain, yearn for wage-fixing by some all-wise court, should consider the oddities of the working of the arbitration commission in Australia, with its consequence that the government's policy may stand or fall by the lawyer's skill in mastering that brief and his eloquence in arguing it.

To abolish or drastically modify the system, however, would not be politically possible in Australia ; and Mr Menzies, while remarking ruefully that the government's anti-inflationary powers were severely restricted by the court's independence, averred that this independence was "a very good thing." He contented himself with merely telling the court how it should decide.

Another message was to those in industry, both employers and employed, whom he urged to avert, by greater efficiency, the impact of wage rises on costs. British readers, after years of experience, will have no faith in production by exhortation. But for some of the manufacturers there is a greater spur to efficiency than exhortation. There is the competition of newly freed imports. This fills them with indignation lest they should have to bear the whole brunt of the wage increases out of profits, and they are already talking of new applications to the Tariff Board. The board, another independent or practically independent body, could thwart the government's purpose in freeing imports if it listened too sympathetically to the manufacturers' tales of woe. But in any case it is only a fairly small part of Australian manufacturing that is threatened by competing imports ; and those industries, such as textiles, that would be killed stone dead by unlimited Japanese imports are still protected by licences and quotas and voluntary limitation by the Japanese.

As the prime minister said: "We are not dealing with a crisis but we are called upon to take sensible steps to prevent one from arising." In the twelve months ending in June there will certainly be no crisis. Imports will roughly balance exports at around £A930 million and the deficit on invisible items will almost certainly be covered by the capital inflow from overseas. (This has been a record year for Australian borrowing.) In the following couple of years the reserves will be drawn down. But they can stand it. They are now about £A540 million and to this can be added £A150 million, which is Australia's present quota with the International Monetary Fund. Meanwhile the extra imports could have a wholesome deflationary effect. But will Australia use the breathing space to let other countries' costs catch up ?

If the tariff board is undiscriminatingly kind, if manufacturers on the one hand and unions on the other are relentless in pursuit of temporary gains, if industrial tribunals are swayed by short-term indices of prosperity and muddled by pleas about national productivity and justice—then Australia will face the future gravely handicapped. If, meanwhile, the long run of good seasons had diminished, and if export returns lagged far behind the import needs of a growing population—then, as the Australians would say, that *would* be a crisis, my word.

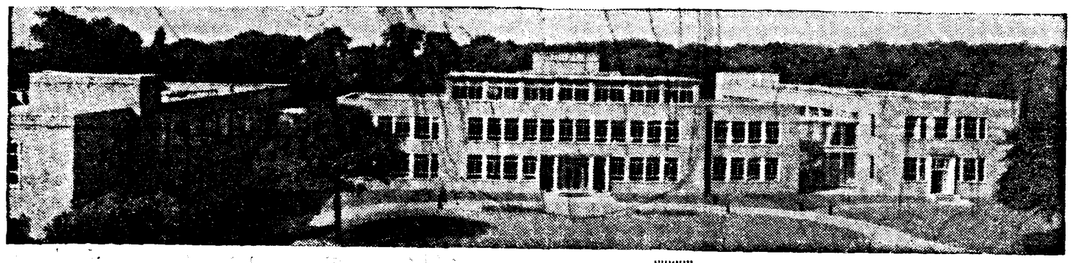
All clean in the kitchen

Even more important than the coconut icing on tongue-tempting cakes is the cleanliness of the kitchens in which they are made. For this a powerful, effective detergent is needed—Teepol, for example, one of the world's most widely used trade and industrial cleaning agents. A very versatile performer wherever water is used, Teepol's surface-active, wetting and dispersing properties make it a part of the industrial process in industries as diverse as paints, rubber, leather, furs, textiles, engineering and mining.



Extremely economical in use, Teepol is immediately soluble—in hard water as well as soft—and is effective even in low concentrations. If large-scale cleaning is among your responsibilities, if you need surface-active agents for industrial processes, look to Teepol—and to Nonidet, another Shell-made detergent. And—for *making* detergents—Dobane detergent alkylate, a chemical intermediate used in many of the well-known domestic powders and liquids. Shell manufacture chemicals for every industrial use; chemicals that have a part in virtually every manufacture . . . everywhere.

Shell Detergents

*US knows about steel

Strange as it sounds, it's true. US is United Steel, makers of the largest variety of steels and steel products in Britain.

And US does more than *make* steel. At the Swinden Laboratories United Steel maintains one of the finest research organisations in the steel industry. Here, with a staff of 250, pioneering investigations are carried out in many fields, from the mineralogy and beneficiation of ironstone to the physical metallurgy of power plant steels to operate at 1250°F. Work which has justly earned the company an international reputation for iron and steel research.

Each individual company in the group can call upon the resources of this central laboratory — and each company has its own research department, working in conjunction with Swinden Laboratories.

That's how United Steel companies are working to anticipate future needs — as much at home with the electron microscope as the special purpose steels it helps to develop.

LETTERS

Horticulture

SIR—I hope it was not my fault that the last time I visited the monkey house the gorilla, with considerable dignity, vomited forth his previous meal.

I was reminded of this by your comment on my views on the Horticulture Bill. The alleged purpose of the bill is to improve the quality and market presentation of British produce—not, please note, the quantity, not all of which even now can find a market. Already, in the main producing areas, glass-house acreage has fallen by over 400 in five years. The bill won't stop that trend—and may intensify it unless some seasonal quantitative restriction is imposed upon tomato imports from Holland.

With your comments about spreading the aid—if we have to give it at all—too thinly, and the shortage of trained National Agricultural Advisory Services staff I entirely agree, and said as much on second and third readings of the bill. I hope, however, you will agree with me that to pump in aid from the public purse, whilst doing nothing to rectify what caused the lack of capital in the industry, is, if not the economics of a lunatic asylum, at least extraordinarily lacking in a sense of public accountability.

I hope, too, you will one day distinguish between "inveterate protectionism" and "preferential discrimination." The greatest sin of the General Agreement on Tariffs and Trade is its failure to recognise changes in the Commonwealth since the Ottawa agreements of 1932, which it perpetuates. I hope you will not accuse me of wishing the *status quo* to continue.—Yours faithfully, H. LEGGE BOURKE

House of Commons

The Co-operatives

SIR—With reference to your note on nationalisation and co-operatives, it is most unfortunate that retail co-operatives should have such a close alliance with a political party whose socialist principles include the nationalisation of the very activity for which the co-operatives are endeavouring to cater. It is regrettable that the publicity which this alliance receives influences less well-informed people against being co-operators in societies which are not so affiliated.

The co-operative movement as a whole is also suffering from the disadvantage inherent in its present trading practices, which give its members freedom to co-operate or not at will on a daily basis. This means in practice that co-operative societies cannot take advantage of the power that comes from co-operation because their members (customers), having little or no loyalty, buy from their society in accordance with normal shopping habits and impulses.

In agriculture there is beginning to be an appreciation that once a person has taken the voluntary decision to co-operate for a particular purpose, he must, for a definite period at any rate, continue to co-operate to the exclusion of other methods of trading. —Yours faithfully, ANGRUM EVANS

London, SW1

★

SIR—I feel your article has not adequately informed its readers in this country of the very clear division between its consumer and producer-owned branches. Moreover, your reference to the "frowsty stagnation of the Co-operative movement" can scarcely be considered encouraging to those of us engaged in promoting agricultural co-operation in England—or indeed true when it is realised that its turnover now stands at six times its postwar figure.

Agricultural co-operation has been as ready as its rivals to command and pay for first-class managerial ability and, in addition, has been recognised by all parties as having no political affiliations whatsoever. —Yours faithfully, J. A. E. MORLEY

Agricultural Central Co-operative Association, London, SW1

Oxford's Election

SIR—Your special correspondent's report from Oxford provides two interesting examples of the methods of present day journalism which would have done credit to the late Dr Goebbels.

First, he makes much of the unhappy precedent that the only Prime Minister in office to have been installed as Chancellor of Oxford was Lord North. Why, we may ask, this emphasis on installation? Why not election which is after all the subject of the moment? The answer may surprise the uninformed reader (though not your correspondent). It is that Lord North was not by eighty years the last Prime Minister in office to be *elected* Chancellor—that was Lord Derby in 1852. But by limiting the precedents to the dates of installation Lord Derby's case can conveniently be suppressed.

Secondly, your correspondent confidently reports the presence at university gatherings in the last two weeks of "exhausted Christ Church clergymen." Again, we may ask, what gatherings, which clergy and what is the significance of their alleged presence in Oxford? The statement is so silly that it defies rational analysis. But if it is intended to suggest that the 80-odd persons in Christ Church livings will be dragooned to the vote, then as a theory it suffers from one significant fault—the great majority of them are not qualified to do so.

It is, then, plain that as the truth has not suited your correspondent's arguments he has preferred either to suppress it or else to invent what Dr Goebells called "poetic truth" to replace it.—Yours faithfully,

Christ Church, Oxford C. H. STUART

The French

SIR—I was very disappointed in your article "Gallocentricity and Nationalism." It is misleading and malicious and serves no useful purpose. It does not illustrate conditions as they are in France and your correspondent is obviously biased and bitter.

It would be very easy to write a similar story about practically any country, including yours, and I wonder how your writer would feel, if he read an article in a French paper of your standing dealing with conditions in this country in a similarly unfair way.

Such an article would start by picking out certain newspaper stories, radio and TV announcements, public speeches and commercial advertisements and then proceed to create a contrast by pointing to the various areas where this country appears to be behind many other western countries, such as: railways, roads, airports (London North), comfort in houses (lack of heating), class and language differences, labour disputes, hospital service, money, weight and measurement systems, the British "Sunday," public house restrictions, British food, etc., etc.

There is certainly a vast difference in customs and spirit between France and Great Britain, but these are much more fairly and amusingly described in the "Major Thompson" books and I would recommend that your correspondent read these books and try to recover his sense of humour and British ideas of fair play. I am neither French nor British, but I have had a lot to do with both countries and admire them both—though, perhaps, for different reasons.—Yours faithfully,

Long Ditton, Surrey. A. MORR

★

SIR—Your correspondent in south-west France seems to have set out to be beastly to the French merely because they have national pride. Of course they indulge in these little boastful quirks, and perhaps the greatest and saddest of them is the national illusion that they are a military race. It may be some kind of a reaction to the Anglo-Saxon world's idea that they are only comic Froggies.

But do not let us get the picture out of focus. All nations indulge in this kind of morale boosting, and the British are guilty of it more than most. Probably our own worst sin is our boasting *ad nauseam* about our modesty, but we also just as often claim

the original inspiration of innovations introduced from overseas several years after they have become common currency there.

I remember how in boys' adventure stories when I was young the brave Englishman always fought, back to the wall, against hordes of dirty Dagoes. It came as an eye-opener to find that in Spanish literature the brave Spaniard fights nobly, back to the wall, against the beastly Gringoes.

Didn't someone say something about casting out the mote in one's own eye . . .? —Yours faithfully,

New Barnet REGINALD E. DUNSTAN

Women in the Church

SIR—Your note on "No Priestesses" may be a little misleading in so far as it refers to the Methodist Church. The Wesleyan Conference which you mention ceased to exist as such in 1932, when it was merged into the Methodist Church, thus participating in a union with the Primitive and United Methodist Churches. Women are not ordained into the Methodist ministry, though a committee is now examining the issue and will report in due course. Methodists have women lay preachers and there are deaconesses, but so far their entry into the full ministry has not been possible.—Yours faithfully, THOMAS GOODALL

Methodist Church Press,
London, EC1

★

SIR—If you concede that engineering has a higher status than that of a mere occupation you must surely add mining engineering to the two English professions closed to women, to which you refer in the article on priestesses in your recent issue.

The Mines and Quarries Act, 1954, says baldly: "No female shall be employed below ground at a mine." This might be regarded as leaving the females on top, but we can be sure that this measure, originally represented as one of the great humanitarian advances of the last century, will soon be recognised as a typical reactionary piece of masculine entrenchment—should we even say, "apartheid."

Nevertheless, as there is yet little pressure from females wishing to hide their lights under this particular bushel while there remain promising fields of display to conquer, I venture to predict that the mining engineer will still be found doing a man's job, confidently holding the last ditch, long after the priests and stockbrokers have been submerged.—Yours faithfully,

London, EC2 G. J. MORTIMER

Fair Wages for Inflation?

SIR—Is it the railwaymen who are on national assistance? Or is it we, who use the railways at fares which, high as they seem, are apparently insufficient to pay decent wages?

Your test of when a grade of worker is underpaid seems to me inhuman—the kind of political economy on which Ruskin poured his scorn in "Unto This Last." The logic of it would be not merely to refuse increases but actually to keep on reducing wages till the point is reached at which the workers *are* unobtainable.

Rigid application of your principle would mean that nobody ever stayed in a job for longer than was necessary to find a better-paid one; and that anyone who for any reason could not or did not want to move to some other work could be forced down to barest subsistence-standard or below.

Is this really what you want, and in an industry for which we all have some direct responsibility? Are we such slaves of a financial machine that there is no other way of avoiding inflation than this?—Yours faithfully, REG. A. SMITH

Albury Heath, Surrey

The All Blacks

SIR—I cannot agree with your report on January 16th that a majority of New Zealanders were uninformed of, or so surprised at, the New Zealand Rugby Union's decision against the inclusion of Maoris in the All Black team to tour South Africa. The precedents of the 1919 Army team and of the 1928 and 1949 All Black teams, all of which toured South Africa and from whose ranks Maoris were excluded, was known to the majority of the population. It was hardly to be expected that in view of the greater tensions now existing in the Union that the New Zealand Rugby Union would add flame and petrol to the situation.

Ironically, in the year in which the greatest fuss over their exclusion is being made, there are no Maori players with any claim to selection on grounds of ability. The crop has never been poorer. Half a dozen Maori players, no more, would have been among the 75 chosen for the pre-tour trials. Perhaps one would have been finally selected for the tour. The New Zealand Rugby Union might have adopted the machiavellian policy of making no official pronouncement on the Maoris and leaving them in the hands of the national selectors. Rightly, of course, the Union made its decision known as clearly and quickly as possible, and as a result it has gained considerable prestige.

The Maori people are not unanimous on the issue. The chairman of the Maori Rugby Advisory Board, Mr Ralph Love, has agreed with the Rugby Union decision. Other Maori leaders have publicly deplored the involvement of their race in a controversy of this kind. It should not pass unmentioned that all-Maori teams have toured the Pacific Islands and Australia. The latter country was visited by an all-Maori team in 1958, and Tonga and Fiji will be toured this year. These tours give Maori players of lesser ability than their white fellows opportunities that the white player of the same standing will never have.—Yours faithfully, P. B. DALY

New Plymouth, New Zealand

El Salvador

SIR—In your Note on pages 701-3 of your issue of February 20, 1960, I regret that there is a mistake in the fourth line from the end.

Unfortunately the new Pacific port of Acajutla in El Salvador is being built by a German firm. I am, however, happy to say that the designs were reported upon and the construction is being supervised by this firm.—Yours faithfully,

London, EC2 ANDREW HENDERSON

BOOKS

War in the Desert

History of the Second World War:
The Mediterranean and Middle East, Vol. III
By Major-General I. S. O. Playfair and others.
Her Majesty's Stationery Office. 501 pages. 50s.

Auchinleck
By John Connell.
Cassell. 999 pages. 35s.

To write history whilst the majority of those who guided its course are still living is a notoriously delicate task, but General Playfair and his group of experts, who compiled the third volume of the official history of the war in the Mediterranean and Middle East, have faced it with courage. Praise has been accorded and blame apportioned, while the detailed account of air, sea and land operations from the formation of the 8th Army until Rommel was halted at El Alamein has been made into a readable book.

There are some faults of emphasis, and although it is entirely natural that this history should be largely concerned with the course of the fighting in the Western Desert and the efforts of the Royal Navy to relieve Malta and keep the Mediterranean open, it has not perhaps sufficiently emphasised another responsibility of GHQ, MEF—the northern front. It was the three hundred mile frontier between his command and Turkey that was a constant nagging anxiety to General Auchinleck—as he was then—whose personality dominates the official history as it naturally does John Connell's biography. General Auchinleck was warned by General Dill, then CIGS, that though the Turks "were more inclined to accept British advice since Wavell's victories," there was always a danger that the Germans would invade Turkey, as they had done the Balkan states. The Turks had virtually no defence forces, and the British Government had planned to send them help if they were invaded.

General Auchinleck, even while fighting most vital battles in the Western Desert, was always worried about the threat to his flank from a German attack through Anatolia and the Caucasus with armies made available when the Russian front crumbled, as—his intelligence services repeatedly warned him—crumble it would. It is perhaps inevitable that in an official history our Russian allies are in other respects dealt with tenderly. In the all too short account of the Persia and Iraq Command, given in Appendix 6, it is stated that it was fortunate that the Russians continued to resist the German attacks and it was not therefore necessary to send a British force to the Russian zone in the north of Persia "because the Russians were not at all helpful." That is a masterly understatement.

But that threat did not develop, and it is in its account of the ebb and flow of battle across the desert between September 1941 and September 1942, from the Crusader operation and the advance to the borders of Tripolitania to the withdrawal to Alamein, that the official history is mainly, and fascinatingly, concerned. It is particularly interesting to read the Auchinleck biography—immensely and unnecessarily long though it is—along with the official history, for both cover the same ground: it is a tribute to the biographer and the historians that their facts accord so well. But to the almost clinically stated facts of the history Mr Connell has added the flesh and blood of what he rightly describes as "a critical but not impartial biography"—with the emphasis definitely on partiality.

Field-Marshal Sir Claude Auchinleck was one of the great but unlucky figures of the second world war. Although after the war he played an important part in India, particularly at the time of partition, it is on his part in the Western Desert campaign that his fame, and the controversy which has surrounded him, rest. The British forces in the Middle East had won striking victories and suffered sad reverses under Wavell—another badly under-estimated general—when "the Auk" was sent to take command. Right from the beginning he came under fire from Winston Churchill who, determined on a victory in the one real fighting front of the time, bombarded him with signals, telegrams and letters ordering him to attack. General Auchinleck resisted for a time but eventually attacked, against his better judgment, with inferior forces who were insufficiently trained in desert fighting. Despite that, he did drive Rommel, and his Afrika Korps and his Italian divisions, out of Cyrenaica. But he paid the price. For, with the thin British force stretched to its uttermost and operating at the end of impossibly long lines of communication—and badly commanded at that—Rommel struck back and sent the Allied armies pell-mell to the Egyptian frontier, to the Mersa Matruh line, and finally to El Alamein; the Tobruk fortress, to which Churchill gave exaggerated political, military and psychological importance, was lost in the process. That he had inflicted such heavy losses on the Afrika Korps that, by the time the Alam el Halfa and Alamein battles had been fought, Rommel was in no condition to advance further, and that the task of Auchinleck's successor in driving him out of north Africa once the British counter-attack was staged had been enormously facilitated, has rarely been fully appreciated.

General Auchinleck, Mr Connell's book shows up clearly, was a poor judge of men. How otherwise could he have insisted, as he did, on giving the desert command to General Cunningham? How could he, once Cunningham had failed, maintain General Neil Ritchie at the head of the 8th Army when he had so obviously and disastrously failed to carry out his orders? It was only General Auchinleck's action in flying up to the desert and taking over the operational command himself that saved the 8th Army: had he done so earlier, many months, many lives and a vast amount of equipment might have been saved.

One can, however, only admire Field-Marshal Auchinleck's reticence, his flat refusal to be drawn into controversy: he did his job and that is that.

A Lesson Forgotten?

The Communist Subversion of Czechoslovakia 1938-1948
By Josef Korbel.
Princeton University Press. London: *Oxford University Press.* 270 pages. 32s. 6d.

MR KORBEL'S sub-title is "The Failure of Co-existence." His main purpose is to tell, by way of warning, how the Czechoslovak communists progressed to power, from fumbling steps after the first world war, through confident strides after the second, to the final romp home in 1948. It is a narrative, Mr Korbel sadly remarks, of "dreary and seemingly inexorable events." Mostly it is; yet it has its moments of excitement and its occasional glimpses of nobility. Mr Korbel was at one time Czechoslovakia's representative at the United Nations. He has assembled his facts with scholarly care, and presents them effectively.

Mr Korbel was in Prague in January, 1948. He had a long talk with President Benes on January 12th, some six weeks before the communist-packed action committees began to take over in towns and villages throughout the country. "Don't be worried," the President said. "The danger of a communist *Putsch* has passed."

It is tempting to look for scapegoats: the ailing Benes, the compromising bourgeois politicians and civil servants. But many were to blame. Mr Korbel does not spare Czechoslovakia's traditional western allies. "For twenty years, since its birth," he writes,

> the Czechoslovak Republic had adhered faithfully to the ideals of democracy, to the League of Nations, to the alliance with France, and to her friendship with Great Britain. These were her convictions, her tradition, her way of life. Then, in September 1938 at Munich, all this was destroyed by the hands of her allies and friends. The Czechoslovak people have never recovered from the blow. A wound was opened that would never heal, a wound that was to be a willing host to communist infection.

By their conduct in Czechoslovakia, the communists dispelled any remaining doubts about the lengths to which they were ready to go to attain their ends, or about the unscrupulousness with which they would exploit the institutions of free men. Consequently it was not difficult, in May 1948, to rally the resources of the free world to save beleaguered Berlin. But Mr Korbel seems to fear that the lesson of Czechoslovakia may now have been forgotten.

Getting to the Top

British Industrialists: *Steel and Hosiery, 1850-1950*

By Charlotte Erickson.

Cambridge University Press. 297 pages. 40s.

THE "rags to riches" tradition has made American historians very conscious of the importance of studying the social origins of their business men, but not until now has there been any systematic approach to this question in Britain. In this book Mrs Erickson discusses the backgrounds of industrialists in steel and hosiery—their social position, business experience, education, age and so on. The steel investigation confirms one's worst fears, for the pattern that emerges is one of extraordinary rigidity and narrowness. Up to 1925 90 per cent of the industry's leaders came from the top social class, yet fewer than 10 per cent had any scientific training and the figure is only a little higher now. In the last thirty-five years the monopoly of the well-born has been seriously undermined; possibly depression caused some dynastic heirs to spurn the industry, while the public company has certainly given better opportunities to the sons of clerical and manual workers. Curiously enough, however, despite the sweeping changes since 1902, the proportion of steel industrialists educated in public schools has risen steadily and still only one in three has a degree.

In hosiery the structure is socially far less rigid, although family firms remain much more important and promotion to the top is more frequently achieved from within particular firms. Technical training for management up to recent times has been as poor as in steel, but few have followed steel's public school/Oxbridge pattern or enjoyed the same social prestige through marriage. None of this should cause much surprise, for the industries are so different in every way—they were in fact chosen partly for that reason—but it would be useful to have a comparison of industries more similar from a technical and financial point of view.

The most fascinating part of the book for historians concerns the major periods of innovation in the two industries, and it is certainly disheartening to find that, even during periods of marked technical change, humble men have had little opportunity of reaching the top in steel though they did rather better in hosiery. Mrs Erickson certainly has a flair for finding information on the basis of slender clues and a rare ability to present statistics clearly. Only here and there does the analysis seem a little slack. She does not make sufficient distinction between experience in large and small steel firms, and it is a pity that the book is almost allowed to peter out, for a work of its nature cries out for the threads to be drawn together at the end.

Even so, it is a bold and welcome effort, and it is to be hoped that someone will make use of similar methods to discover if the leaders of the shipping industry are really as fossilised as PEP would have us believe.

Constructively Argumentative Uproar

The Allocation of Economic Resources: *Essays in honor of Bernard Francis Haley*

By Moses Abramovitz and others.

Stanford University Press. London: *Oxford University Press.* 244 pages. 40s.

COLLECTIONS of essays in honour of distinguished teachers and academic leaders by those who gratefully acknowledge their influence sometimes reflect the recognisable characteristics of a school of thought; a concern with a particular set of topics, mastery of a particular set of jointly designed or modified intellectual tools, a particular social attitude. They may, however, while exhibiting none of these uniformities, embody something more general; a standard of rigour or of expository elegance, a disposition to question accepted concepts, a humane or a mathematical slant, or something no more specific than a peculiar liveliness of mind.

"The Allocation of Economic Resources" is about as little unitary as possible. Its subject matter is practically conterminous with that of economics itself. Topics range from "The Welfare Interpretation of Secular Trends in National Income and Product" (Dr Moses Abramovitz) through "The Theory of Tax Incidence Applied to the Gains of Labour Unions" (Dr George W. Hilton) to "The Scope and Limits of Futures Trading" (Professor H. S. Houthakker). Every kind of approach from the mathematical to the near-popular is represented. Political attitudes range from the sternly Marxist (Dr Paul A. Baran, whose "Reflections on Underconsumption" are at once an acrobatic exercise recommended to all connoisseurs of triple-think and a genuinely illuminating comment on affluence) to the neutralism generally associated with right-wing views (Dr E. S. Shaw, demonstrating the incapacity of monetary management to manage).

All these papers have, however, a highest common factor which, for all its positive nature, it is easiest to describe negatively. Their authors are not interested in mere refinement or embroidery, in intellectually amusing special cases, in either virtuosity or beaver-like industry for their own sakes. However abstract their method, these essays have a brass-tacks quality about them; however minutely particularised their theme, it is always related to, or illuminates, something fundamental—and that something has been, each time, thought through afresh. "Professor Haley's skills"—so one contributor begins—"in inciting his seminars to constructively argumentative uproar are the envy of colleagues." Reading this *Festschrift*, one can well believe it.

The Village

English Rural Life

By H. E. Bracey.

Routledge. 286 pages. 30s.

THIS is a strictly unsentimental account of village activities, organisations and institutions. Dr Bracey, a member of the staff of Bristol University, is professionally engaged in the study of rural problems. He has, however, taken great pains to obtain firsthand evidence of the practical nature of country life, by personal observation and experience, and by submitting his manuscript to a large number of informed people. The result is a factual, balanced survey of such various but pertinent subjects as farm employment, crafts and non-agricultural occupations, the drift from the land, local government, planning, statutory and voluntary services, education, the arts, religious institutions—in fact, every influence of importance affecting the nature and substance of rural life today.

The book is not difficult to read, though some may be put off by the title. The individual sections are relatively short and the historical background is fairly summarised. The author has some extremely interesting comments to make about labour nowadays, notably about its mobility and about the commuter. He makes the point that, within limits, country people can and do travel daily to work in a town, but still retain their attachment to the village and all it stands for—in contrast to most commuters, whose home is primarily a dormitory.

Perhaps Dr Bracey tries too hard to avoid the charge of sentimentality. Indeed to write sentimentally about the countryside is to do it a great disservice, for ultimately rural life, and all that goes with it, will stand or fall on economic grounds. Unless there is enough remunerative work on farms, in workshops, small factories and similar places, in the countryside proper, the framework of rural society will collapse. Without work within a reasonable distance of a man's home, no one is going to stay, and the drift will become a gallop. Yet it would be wrong to overlook entirely the *mystique* of country life, unacknowledged though it may be by most people. It is compounded of tradition, a sense of nature, and above all the need for intimacy, as expressed in the small unit—the village, the hamlet, and ultimately the family itself.

Bradshaw for Diplomacy

Disengagement

By Eugène Hinterhoff.

Stevens, Atlantic Books. 457 pages. 45s.

"DISENGAGEMENT" is a word that has haunted the despatches of diplomatic correspondents for over a decade. It has been proposed by many different people—Walter Lippmann and Hugh Gaitskell, Senator Knowland and Nikita Khrushchev—at different times for different reasons. The idea of withdrawing Nato forces from the German Federal Republic in return for a withdrawal of Soviet forces from East Germany, Poland, Czechoslovakia, and perhaps the other satellites, and of creating a block of uncommitted states in the centre of Europe, has been conceived as a form of disarmament, as a means of lowering east-west tension, or more commonly as a means of achieving the unification of Germany.

Captain Hinterhoff's compendious book is an examination of all these proposals. It is a valuable correlation of a very large bibliography, and not the least useful part of it for the historian and the scholar is the remarkable 28-page appendix, in which he lists every proposal of this kind that has been made since 1946. It would be a mistake, however, to assume that it is an impartial assessment of the case for and against disengagement, for the author is a passionate advocate of the idea, and the contemporary student of Europe can legitimately complain that he has stacked the piles of cards in favour of it. A number of trivial writers on the subject are given more than their due weight, while analyses of the political problems to which disengagement would give rise—as contained, for instance, in Mr Michael Howard's book of the same title—are only cursorily mentioned.

Despite the industry that has gone into this book, it does not make great headway towards overcoming the fundamental objections to disengagement, any more than to present Sir Brian Robertson with a copy of Bradshaw would enable him to make British Railways run at a profit. One objection is the irrelevancy, from the military point of view, of any troop withdrawal in Central Europe to a strategic equation that will become increasingly dependent on missile bases outside that area, at sea, in Eastern Russia or in Western Europe. The other and more profound difficulty lies in the unwillingness of both the Soviet Union and the western powers to exchange the interlocking position of today, unsatisfactory though it is, for one that would separate them by a belt of neutral countries, including a re-united Germany, that have a long and unhappy record of instability as fully sovereign states. Captain Hinterhoff is a former Polish officer, who has served his country with gallantry: he clearly thinks that a free and autonomous Poland is worth a price that the other European powers should be prepared to pay. One can admire his tenacity without accepting all his arguments or sharing his optimism.

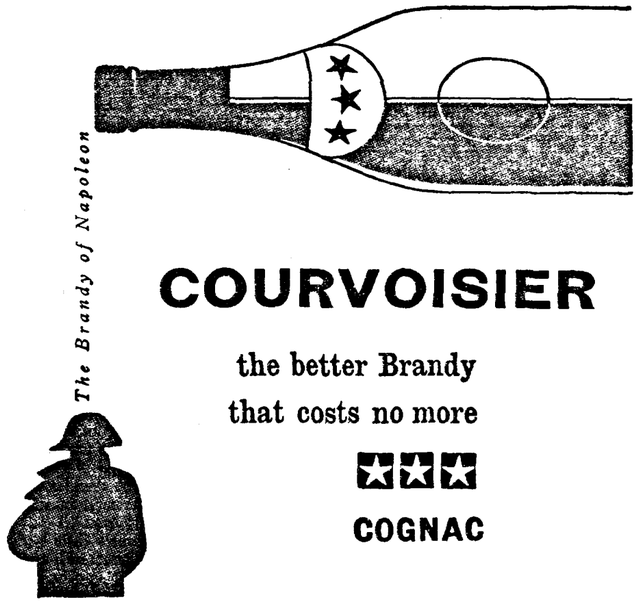
Far Eastern Crisis

Documents on British Foreign Policy, 1919-1939: *Second Series, Vol. VIII: Chinese Questions, 1929-31*

Edited by Rohan Butler and J. P. T. Bury. *Her Majesty's Stationery Office.* 1,120 pages. 80s.

THIS latest volume of documents deals with Chinese questions in the years 1929, 1930 and 1931. These questions fall into two categories. The first are those involved in the Anglo-Chinese negotiations for the surrender by Great Britain of the leased territory of Weihaiwei and of British extra-territorial rights in China. They had a long and complex history, which is admirably summarised in the first document in the book: a twenty-six page Foreign Office memorandum on British policy in China, written in January, 1930. Negotiation was further complicated by the chaos that reigned in China and by the instability of the National Government of the Republic of China; and it stopped altogether when the Japanese occupation of Mukden in September, 1931, inaugurated the Far Eastern crisis.

The second set of questions concerns the origins of this crisis and its development up to the decision of the Council of the League of Nations in December, 1931, to appoint a commission of inquiry. This crisis, too, had a long and complex previous history and a good deal of valuable light is thrown on this by the two appendices: a long despatch of July, 1930, on the Sino-Russian dispute over the Chinese Eastern Railway and a memorandum of October, 1931, on the development of the Manchurian problem since 1894. The situation in Manchuria and Korea between June and December, 1931, is dealt with in great detail in the last 400 pages of the book. There are no startling revelations concerning developments in Manchuria, Korea or China proper during these years, but the volume constitutes the fullest account of them that has yet appeared in print and is a valuable addition to information on British foreign policy between the two wars.



The Watchful Goddess

Government, Law and Courts in the Soviet Union and Eastern Europe: *Vols. 1 and 2*

Edited by V. Gsovski and K. Grzybowski. *Stevens.* 2114 pages. £8 8s.

JUSTICE in a communist state is no blind goddess: she has to keep her eyes wide open, and she tends to be busier than her colleagues elsewhere. A variety of tasks have been added to her provenance; of these, the protection of the state is the most important. This view was neatly summed up by Professor Malitsky, in his commentary on the Soviet civil code. The capitalist law, he says,

places the individual at the centre of the

world . . . the proletarian state sets the limits not to itself but to its citizens. A collective body called the state, rather than the individual citizen, is at the centre of the proletarian law.

Hegel would have applauded such a statement. It was written in 1927, before Stalin began to drive the individual into a still tighter corner; it has not been revised. The second task of communist justice is the protection of the "proletarian society." Class discrimination in the administration of justice was going strong until the middle thirties in the Soviet Union, and it is still frequently employed in eastern Europe; it mellows as the new class replaces the old ones.

These two volumes describe an involved process that began in Russia in 1918 and in eastern Europe in 1944: the displacement of the old legal systems, most of them rooted in Roman law and containing strong admixtures of the Napoleonic code, by the law-giving of the one-party states. The editors have collected studies by men who had practised law in the countries dealt with in these volumes; they have produced a unique and detailed work of reference. On the whole, the contributions are at their best when dealing with the criminal code and its application; at their weakest as a comparative study of law. The reader needs more frequent cross-references, incorporated into the text; there is also a certain lack of historical perspective and comparison in the studies that should have contained them. In the index, for instance, there are only two references to Roman law; and although a section deals with the continuity of law in these territories, it does so only in the strictly legal sense, without attempting to compare the present situation with the conditions obtaining before the communist revolutions. Nevertheless, the editors were faced with a formidable task: they should be congratulated for collating such useful information.

A New Approach to Industrial Democracy

By H. A. CLEGG

At the turn of the century, theories of industrial democracy—i.e. the doctrine that workers should run their own industrial undertakings, or at least share in the management of them—inspired sections of the Labour Movement in many countries. This essay reviews these ideas, the attempt to put them into practice after 1918, and the experiments since 1945. 18s. 6d. net

The Journal of Industrial Economics

Vol. XIII, No. 1, is a special number discussing American antitrust cases and British restrictive practices legislation.
Contents include:
Arthur H. Kahn: Discriminatory Pricing as a Barrier to Entry: the Spark Plug Litigation.
Almarin Phillips: A Critique of United States Experience with Price-Fixing Agreements and the *Per Se* Rule.
Alister Sutherland: The Restrictive Practices Court and Cotton Spinning. 13s. 6d.

The Future of the Sterling Area

Vol 21, No. 3, of *the Bulletin of the Oxford University Institute of Statistics* is a special issue in which economists not only in this country but also in many other member countries consider the problem as it appears to them. 10s. 6d.

BASIL BLACKWELL

Coastal Command

Birds and Fishes

By Philip Joubert de la Ferté.
Hutchinson. 224 pages. 25s.

A HISTORY of the origin, growth, tribulations and ultimate triumphs of Coastal Command of the Royal Air Force should make a fascinating story; and Sir Philip Joubert, its Commander-in-Chief during two critical periods, should be well qualified to produce it. Unfortunately he does not seem to have been at all clear about what sort of book he was setting out to write, and the result is something of a hotchpotch of autobiography, anecdotes and historical narrative. Moreover the whole book is so highly subjective that the reader very quickly becomes sceptical regarding the validity of the author's judgments. To give one example: near the beginning he takes a hefty swipe at the attitude of Jellicoe and the senior officers of the Grand Fleet towards the early RN Air Service, and seeks to prove his point by declaring that the seaplane carrier *Campania* "was forgotten" when the fleet sailed on the night before the battle of Jutland. No doubt there was excessive conservatism about aviation in some (though by no means all) high naval circles at that time; but the fairy tale about the *Campania* was dispelled nearly forty years ago when Sir Julian Corbett printed ("Naval Operations," Vol. III) extracts from her log giving the times when she received her orders to prepare for sea. Sir Philip is, of course, entitled to his opinion that by handing back the Fleet Air Arm to the Navy in 1937 "a breach was made in the unity of the Royal Air Force"; but a less biased view would surely have taken due account of what the reconstituted Fleet Air Arm accomplished a few years later.

The author several times declares his mistrust of figures and statistics; but he does not seem to have studied those, compiled after very careful research into British and German records, covering the U-boat campaigns, and many that he himself quotes are undoubtedly wide of the mark. For instance, no one U-boat sinking can be definitely attributed to air attacks in the 1914-18 war; the number of U-boats at sea on the declaration of war in 1939 was not 8 but 39; and shore-based aircraft did not sink half the total of 99 enemies which he claims for Coastal Command in the period May, 1941-November, 1942.

Sir Philip throws little new light on a point of particular interest regarding which he must be fully informed—namely, the failure to send out relief air patrols on the night of the break up-Channel by the German Brest Squadron in 1942—a matter on which the Bucknill committee criticised Coastal Command; and he is oddly resentful of his own relief as Commander-in-Chief in 1943. And in connection with the latter what, one may ask, does he mean by saying that "it was interesting for him [Sir John Slessor, his successor] to see the war from the point of view of an operational command"? Sir John Slessor came from No. 5 Group of Bomber Command, which he had led brilliantly since May, 1941; and Sir Philip's statement leaves behind it a whiff of innuendo which, even if unintentional, is surely regrettable.

Any Reason Why?

Crimean Blunder

By Peter Gibbs.
Muller. 297 pages. 25s.

THE sub-title of this book is "The Story of War with Russia a hundred years ago." The reader does not therefore expect any new revelation from it. He expects readability and he gets it, and he may even welcome Mr Gibbs's astringent tone. He also expects a reasonably complete narrative of the war. Kinglake's eight volumes on the invasion of the Crimea ended with the death of Lord Raglan. Mr Gibbs's text runs for 290 pages. Of these, 282 pages take the reader up to the death of Lord Raglan. In the remaining eight are crowded the battle of Tchernaya, the French success at the Malakoff, the British failure at the Redan, the fall of Sebastopol and the Treaty of Paris. Are these events any less interesting than the Alma, Inkerman and Balaclava? Is there any reason why, apart from the obvious one of a lack of adequate source books at Mr Gibbs's elbow, the narrative should be so suddenly compressed?

NOW PUBLISHED—
TACK!

***NEW MONTHLY MAGAZINE FOR SALES EXECUTIVES**
(on sale by subscription only)

TACK

is not just another magazine. It brings every department of the world-wide Tack Organisation to your aid—providing a complete, comprehensive training and sales-management service. Tack embraces everything from new marketing methods and techniques to all the functions and problems of sales management today.

TACK

is an essential business adjunct with new ideas, surveys and case histories: it will regularly publish the unique surveys of the Tack Market Research Department. Whatever your product or service, Tack will help you to increase sales and lower costs.

Post this subscription coupon NOW, to be sure of obtaining ALL the invaluable sales information contained in TACK.

TO: THE TACK ORGANISATION, DEPT. T.P., LONGMOORE ST., LONDON, S.W.1. Tel: VICtoria 5001
Please send me the first 12 issues of TACK, and invoice for 60/- with the first issue.

BRITISH TRAWLERS WITHDRAW FROM THE WATERS OFF ICELAND

AT 24.00 HOURS on the night of Monday, March 14th, the vessels of the British Trawlers' Federation will withdraw from the fishing grounds around Iceland for the period of the Geneva Law-of-the-Sea Conference. On the 1st September, 1958, Iceland unilaterally extended her fishery limits to twelve miles. H.M. Government did not recognise this action and stood firm on its declaration that " It would be our duty to prevent any unlawful attempt to interfere with British fishing vessels on the high seas ". Since then British trawlers have been fishing off Iceland under protection provided by the Royal Navy.

This decision to withdraw has been made by the British Trawlers' Federation as a gesture of goodwill, while the whole problem of international fishery limits is under consideration at the forthcoming Law-of-the-Sea Conference, which opens in Geneva on March 17th.

The Federation has taken this decision in the full knowledge of the sacrifices involved, as the period of the Conference coincides with the prolific spring fishing season in the waters around Iceland, and there are no known alternative areas from which supplies can be replaced in either quality or quantity.

Nevertheless, the Federation believes this decision, which is part of its policy of pursuing every reasonable means of achieving a fair, negotiated settlement, is one which must meet with universal approval.

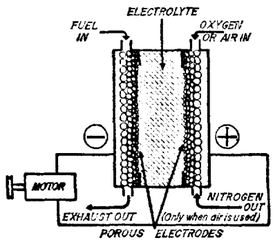
THE STORAGE OF ELECTRICITY—II

Accumulators or Fuel Cells?

ELECTRIC power cannot be stored in large amounts, and is not easily produced cheaply in small quantities. Any generating system has to produce power for as many consumers as choose to flick their switches on at any time: a reliable cheap power supply requires enough large-scale equipment to be kept in being to meet the maximum demand that consumers may ever impose. An efficient means of storing electricity, or a device that could produce it economically in small quantities on call, would bring electricity into use in many applications—particularly transport—which it cannot serve today: it would have the further advantage that the reserve capacity which a generating system needs to hold could be cut down. These two problems have consumed vast amounts of painstaking research in the century since electricity entered on the scene, but neither seems close to solution.

Electrical storage today is confined to the two basic types of conventional battery: primary "dry" cells, in which the active chemical material is gradually used up and must be replaced or the cell discarded, and secondary cells, also known as accumulators, which can be recharged by applying an external current to them. Neither is particularly efficient, or can store much power economically. Dry batteries have been improved in power-weight ratio, but offer little room for further progress. The most important changes in lead-acid accumulators have been in design of the lead electrodes. Many attempts have been made to substitute a lighter metal for lead; magnesium and copper electroplated with a thin layer of lead have been tried but without success. Considerable reduction of space and weight has been achieved by replacing the grid-type positive electrodes formerly used with a series of tubes containing the active material in paste form (as shown in the photograph); the latest designs of traction battery use woven "Terylene" gauntlets in place of ebonite tubes, and claim savings of a third in space over previous types. Most negative electrodes are still of the grid type; but at least one design also uses negative tubular electrodes and by arranging the two tubes one inside the other has achieved further savings in weight. While the major battery companies are well aware of this principle, none is yet experimenting with it. Polyvinyl chloride has replaced wood for insulation, and various plastics have been used in place of metal or hard rubber for cases. But the durability required in traction batteries, which are expected to last up to five years, makes it difficult to save much weight here.

Tubular positive electrodes (left); grid-type negative electrodes (right); separators and case of lead-acid battery.



Virtually the only present alternative to lead-acid batteries is the alkaline-electrolyte type, using electrodes of nickel and cadmium, nickel and iron or silver and zinc. Alkaline batteries have been in limited use since the beginning of this century; they have become much more efficient through the development within the last twenty years of sintered-plate electrodes. Nickel-cadmium cells have been developed primarily in Europe, while nickel-iron systems have received more attention in the United States.

NICKEL batteries in general offer little if any advantage over lead-acid ones in terms of capacity for given weight and size. Their engine starting capacity—the ability to provide large amounts of current for short periods—is as good as that of lead-acid cells, and they can be recharged more quickly. Their principal advantage is a long service life, and consequently low annual depreciation: nickel-cadmium batteries have given over 20 years' service in some stationary installations (though the best lead-acid accumulators claim to do as well). In addition their maintenance is much simpler; they can be sealed, eliminating refilling and the risk of spilling. Against this they now cost between two and three times as much as a comparable lead-acid battery, and sintered-plate types cost even more—as much as ten times the cost of lead-acid in some cases.

Nickel-iron batteries are slightly lighter than nickel-cadmium ones, and also somewhat cheaper; they cost more to maintain, however, and are not suitable for delayed use

after charging, owing to their higher internal resistance. The third type of alkaline accumulator, which uses silver and zinc for electrodes, has a much higher capacity—about six times that of a lead battery—for a given size and weight. It is even more expensive than nickel-cadmium, however, and since its service life is very limited so is its use. While alkaline accumulators now offer improved performance in certain fields, therefore, they are not feasible replacements either economically or technically for lead-acid accumulators at present. And even if their cost can be lowered by developments in design and production, their storage capacity for a given size and weight is still quite low. Conventional accumulators, of whatever kind, still fall well short of providing an economically portable form of power. The problem of rapid recharging is even farther from being solved.

Transport and mobile uses offer the biggest potential field for new power storage devices ; but a really large and efficient battery could certainly be used in stationary employment. The demand for electricity fluctuates widely—daily, weekly, and seasonally. Considerable reserve generating capacity is therefore needed to deal with peak loads: British generating

HOW A FUEL CELL WORKS: chemical fuel and oxygen or air are introduced into the cell through porous electrodes; the reaction between them causes current to flow in an external circuit.

capacity was used last year for no more than 48.2 per cent of its maximum capacity, on the average. The problem of load factor will be heightened by the high capital costs of nuclear power. If large and efficient power storage could be introduced into the public supply system, it could be charged during off-peak hours and drawn on during peak hours ; the system load factor could thus be improved—to perhaps 80-85 per cent—and the capital cost of electricity correspondingly reduced.

The Generating Board holds little hope of obtaining batteries efficient enough for this purpose: its experiments in this direction are for "pumped storage" which is well established in several countries with large hydro-electric resources. The Board is now building a 300 mW experimental station at Blaenau Ffestiniog in North Wales ; but the economics of this system in a country with few favourable sites for hydro-electricity are none too encouraging.

Various forms of direct generation of electricity from primary fuels have been the subject of experiment over the years. These aim either at generating power from fuel without interposing the vast kettle-plus-turbine of a power station or, alternatively, at using electricity to bring about a chemical change—e.g., producing hydrogen by electrolysis of water —that can later be reversed to deliver the electricity efficiently and cheaply. Many forms are being studied ; but the most widely publicised of these—and so far probably the most advanced—is the fuel cell, which can boast a lineage of unsuccessful ancestors leading back at least a hundred years, and a distant kinship with both the modern dry cell battery and the primary cell first developed by Volta in 1800. In a fuel cell the reaction is not reversible: chemical fuels are fed into the cell and the resulting reaction, which generates electric current, changes the substances so that they must be replaced. The theoretical efficiency of fuel cells is very high—in the range of 80-85 per cent, compared with limits inherent in all heat engines.

Two different kinds of fuel cell are now being developed in Britain. The first (fully described in *The Economist* of August 22, 1959) was invented by Mr F. T. Bacon, who has been working at Cambridge under a contract from the National Research Development Corporation ; it was publicly —and somewhat prematurely—shown last year in the hope of securing commercial sponsorship for the project when the NRDC contract runs out at the end of this year. The Bacon cell combines hydrogen and oxygen, working at a pressure of 400-600 lb per square inch and a temperature of 200 degrees centigrade ; up to 5 kilowatts of power —enough to drive a fork-lift truck—have been obtained from a 40 cell pack. Hydrogen and oxygen are supplied from external tanks ; these gases could be produced from water by electrolysis using off-peak electric power which it would be thus possible to "store." Mr Bacon believes that his cell would be ideally suited to use in transport, though it could be either portable or stationary.

A second British cell is also being sponsored by NRDC, along with Shell Research and the Ministry of Fuel and Power ; work is being carried out at the Ministry's research laboratories at the Sondes Place Research Institute in Surrey. It differs from the Bacon cell in that it is designed to operate—at about atmospheric pressure and temperatures of 500-700 degrees centigrade—on carbon monoxide or on virtually any liquid or gaseous hydrocarbon instead of on hydrogen produced externally and introduced into the cell as a gas. The overall efficiency of this device appears to be slightly lower than that of the Bacon cell, but it offers a greater possibility of "direct generation" of power from oil. Other cells have been designed to use coal.

It is known that the Russians have done considerable work on fuel cells, though little is known of the results. In the United States perhaps as many as twenty companies are now spending large sums on fuel cell research, among them Lockheed Aircraft, Shell, Esso, Ford Motor, Chrysler, Allis-Chalmers, General Electric, Dow Chemical, and National Carbon. Allis-Chalmers recently demonstrated a fuel cell capable of powering a farm tractor, and one or two motor manufacturers have wistfully designed cars specially for this form of power, which produces no noise and no exhaust except carbon dioxide and water. But apart from Shell Research and—to a much smaller degree—Exide, it is believed that there is now little commercial interest in fuel cells in Britain. The main commercial support for the Bacon cell, which if still far from being an economic proposition is still probably the most technologically advanced project in Britain, has come from an American company, Universal Winding Co.—which is also interested in the Sondes Place research and is backed by a contract from the United States government.

Some Fiscal Reforms ▸ *A TORY TRACT*

A CORRESPONDENT has passed to The Economist *the result of his musings on a question voiced here after the election: "What sort of Tory men, what kind of Tory measures, are going to guide the country's political and economic life in the next four years?" He sees important ways of furthering the Prime Minister's concept of "one nation" by giving attention to some matters of fiscal privilege and amending one source of fiscal inequity. He sees, too, in the personal qualities of the Lord Chancellor and the Chancellor of the Exchequer, the acumen and courage that reform in these fields will demand. To anyone whose conception of fiscal justice is to do away with surtax or, at the other extreme, to contrive a shilling off the standard rate by disallowing all business expenses, our correspondent's discussion may seem a little remote. But most people know about what Mr Harold Wilson has called "the golden handshake"; more ought to know about the* Gourley *case; and before long some of the tax privileges under "top hat" pensions will be attracting a lot of public attention. If all this sounds dangerously subversive of good Tory thinking, it should be known that our correspondent is an unmitigated Conservative and enjoys a professional reputation in the field of taxation. And like many other observers, he sees the more reason why the Chancellor should seize all good occasions for fiscal reform on April 4th if, as is now supposed, he will have little enough scope for being generous towards the taxpayer.*

COMPENSATION FOR LOSS OF OFFICE

I TAKE as my starting point (says our correspondent) some observations by Mr E. H. C. Leather, MP in the House of Commons on October 28th last year:

> There is a fair case for compensation for anyone who loses his job, whether he is an officer or other rank in the services, a coal miner, or a company director. If, because of some reorganisation, a man loses his job, he is entitled to compensation, but nobody is entitled to the ridiculous amounts of compensation that have been paid on occasion in recent years. They are an abuse of the principle and we all know it.

Mr Leather then went on to declare that this abuse could be put right by a clause in the Finance Bill. It is, indeed, far more difficult than that, although his statement seems to me more realistic than the conclusions of the report of the Royal Commission on the Taxation of Profits and Income (paras 242-246). Both the Royal Commission and Mr Leather recognise that a principle is involved in these payments ; but the Royal Commission's despairing solution (in politer language) was: "This has become a 'racket' ; let us recommend that such compensation be taxed as income."

The problem has become most prominent in connection with take-over bids. It is arranged that X should go, to make room for the more acceptable Y. In law X is entitled to say: "If I am to go and lose this office, I shall want compensation." Sections 191-194 of the Companies Act deal with this matter strictly from the point of company law in relation to disclosure and shareholders' approval. So far as X is concerned, he can claim, with all the authority of decided cases, that the negotiated sum he gets as compensation (if suitably documented) is a capital receipt, not liable to tax in his hands. If the shareholders decide that X should be paid, say, £100,000 for loss of office, it is doubtful indeed whether, on the decided cases, the Inland Revenue could successfully seek to have that receipt in his hands scaled down to some lower figure. It matters not that X held the office for a few years only (or even one year) or that his emoluments were, say, no more than £10,000 a year ; it makes no difference in law if X had no fixed security of tenure and even if his appalling loss was mitigated within a week by an appointment to some other office.

There are, I think, good legal reasons for reform that lead to a solution different from the Royal Commission's simple and defeatist answer. Compensation for loss of office is a matter of Schedule E as it affects the recipient, and of Schedule D as it affects the payer. In legal principle, it is a capital receipt, irrespective of its size, in mitigation of the loss of a capital asset (to wit, an office which is a source from which income flows and which income is taxed). The only qualifications of importance on the principle of non-taxability of these sums are two: first, there must be a genuine "deprivation" for which compensation is paid ; secondly, any such compensation that has been pre-determined under a contract of service is treated as taxable income.

On the side of the payer (that is, the shareholders) a very odd position seems to have arisen, no doubt regarded by the Inland Revenue as totally unjust—that is, a sum free of tax "at both ends." It is not easy to put this in non-technical terms (as Lord Reid remarked in the House of Lords at the end of 1958, "Income tax is a highly technical subject"). The Revenue have found it difficult to object to the deduction of compensation from the company's profits on the "capital" ground because of the reasoning and decision in the thirty-year old case of *B. W. Noble Ltd. v Mitchell*. But in the case of take-over bids they have found comfort in *Bassett Enterprise Ltd. v Petty* where, on somewhat special facts, it was decided that sums paid by way of compensation fell to be disallowed because they were "part of the share purchase transaction." The Revenue could not object in law, however, that a payment is not deductible on the ground that they thought it unreasonable in amount, and their attempts to do this on occasion have been answered in plain terms by Lord Wright, in *Craddock v Zevo Finance Co. Ltd.*:

> If the Revenue are to have power to exercise a general supervisory jurisdiction under Schedule D on the reasonableness of contracts or transactions, they must be invested with that power by legislation.

Short of such special powers, the Revenue now have to square their old stand-by of *Bassett Enterprise v Petty* with a group of cases decided by the Appeal Court in Scotland three years ago arising out of payments in respect of the termination of services of managing directors by reason of a take-over bid by the House of Fraser Ltd. (*CIR v Patrick Thomson Ltd.*) It was there held on the authority of two House of Lords cases that the relevant consideration was whether the sum was expended in the interests of the company's trade, and not whether it was necessarily in the interests of any particular shareholders for the time being.

If, as it therefore appears on the present case law, the Revenue cannot effectively intervene either in the size of these payments or of their tax free quality to both payer and receiver, what reforms in the law are desirable to meet the demands of realism and social justice? It should, I think, continue to be recognised that true compensation for loss of office (or employment) involving depriva-

tion is a capital receipt for the loss of a source of income. The next question is what would be a realistic view of the value of the loser's tenure of office or employment; this is not strictly determined by the unexpired term of any contract of service, for in the best regulated companies such contracts were largely unknown before the 1947 legislation on "top hat" pensions and any existing contract might on the facts have been extended. But in the light of the vast sums that have been paid free of tax it is not unreasonable to demand that any replacement of the lost source of income within, say, the following twelve months should be taken into account in assessing the capital loss that the deprived office-holder has truly suffered. Some provision that took these two factors into account so as to import reasonableness at the recipient's end would, I believe, go a long way to meet the demand for reform in this field.

As for the paying company's end, whether or not the recent Scottish cases be as important as I suggest above, there is no justification for seeking to alter by legislation the general settled principles of law. I conclude, therefore, that payment of compensation for loss of office should continue to be allowed to take its chance, so far as schedule D is concerned—subject perhaps to the proviso, after the remarks of Lord Wright, that it should not be deductible beyond an amount calculated in accordance with the criteria I have indicated for its treatment in the hands of the receiver. Any such proviso should be most carefully scrutinised and treated as a special exception to Lord Wright's general rule.

It seems to me, however, that no clear cut reform in this field is possible until the doubts created by the *Gourley* case have been resolved. To these I now turn.

THE GOURLEY CASE

THE case of *British Transport Commission v Gourley* (1956 A.C., 185) was decided in the House of Lords on December 8, 1955. Mr Gourley was the senior partner in a firm of civil engineers. His source of income was a Schedule D source, namely his profits under his partnership deed. In 1951, he was gravely injured in the Harrow railway disaster, although he made a remarkable recovery. In 1952, a variation was made in his partnership agreement by which his earnings were much reduced; but his income was still large, and in his action against the British Transport Commission damages were assessed on the basis that it would probably continue so for several years.

The action was tried in March, 1954, and £37,720 was awarded in respect of loss of earnings, actual and prospective, on the basis that the Judge had no regard to the fact that, had Mr Gourley earned that sum, he would have had to pay income tax and surtax. The Judge made an alternative assessment of £6,695, representing the sum he would have awarded if he had taken that hypothetical tax liability into account. The Commission appealed unsuccessfully to the Court of Appeal, and thence to the House of Lords, who decided by six voices to one that the correct figure was £6,695, i.e. taking the tax liability into account.

Counsel on both sides agreed that Mr Gourley would incur no tax liability on the £37,720 or the alternative award of £6,695. Counsel for the Commission argued:

> It is clear that payments of this sort are not subject to tax. That has been laid down in cases of compensation for loss of office.

Their Lordships noted (and acted upon) the agreement between counsel that no tax liability would attach to the damages; but they gave no reasons, and it is possible to doubt whether the argument of counsel for the Commission based on compensation for loss of office (which as we have seen is a capital receipt in compensation for the total loss of a Schedule E source of income) is right, although the result may be the same. Mr Gourley's Schedule D source of income arose from his partnership deed, and that source continued, though diminished in value. If the right approach was through decided tax cases, consideration might have been given to such Schedule D cases as *Short Brothers Ltd. v CIR*, where the compensation for loss of profits was treated as a taxable receipt from a continuing source, or the contrasting case of *Van den Berghs Ltd. v Clark*, where the receipt was held to be capital, on the ground that the substratum of the source had gone. In the *Gourley* case, the tax position of a sum received as damages rested on agreement or assumption between counsel on both sides. Nor was the 1947 precedent in *Riches v Westminster Bank Ltd.* followed when counsel for the Board of Inland Revenue was invited to attend at the House of Lords hearing, and did attend and state the Revenue's position.

IN view of the repercussions of the *Gourley* case, one may suggest that the assumption resting on the agreement between counsel was rightly made, on the ground that lump sum damages for personal injuries are not the subject-matter of taxation liability. But the essential point is that the *Gourley* case was concerned with the correct basis on which to reckon damages. As Lord Goddard remarked:

> The question is whether taxation is or is not too remote to be taken into account.

Lord Jowitt and Lord Reid speak of loss of earnings, actual and prospective. Lord Goddard deals with the question under the heads of special damage (up to the date of trial) and general damage. Under the first head (special damage), he refers to loss of earnings. Under the second (general damage), he speaks of earning capacity. Lord Keith, who dissented, said:

> But if an award of damages for loss of earnings is not subject to tax, to deduct tax before assessing damages seems to me singularly like exercising taxing powers in an indirect way.

The majority of six disagreed about the scope of the decision. Lord Jowitt said:

> There may well be a difference between actions for personal injuries and actions for wrongful dismissal in regard to the obligation of the plaintiff to pay tax on the amount of damages received, and cases on the one topic may therefore be a dangerous guide to follow on the other.

Lord Goddard, on the other hand, said:

> In this opinion, I am dealing solely with damages in personal injury and wrongful dismissal cases.

Lord Radcliffe and Lord Somervell agreed with Lord Goddard.

The *Gourley* case has been considered and usually applied in over half a dozen reported cases since, including cases of wrongful dismissal, trespass, salvage awards and proof in a liquidation for loss of pension rights. The decision has caused disquiet and marked differences of opinion. In the House of Lords on January 29, 1959, the Lord Chancellor declared that he did not favour changing the law, but he promised to consider any new matter in the ensuing six or twelve months, and that it would be constantly considered in his Department.

THE Royal Commission, in reaching their recommendation to treat compensation for loss of office as taxable income, made a significant distinction in paragraph 246:

> Though on a larger scale, it is comparable with a payment in lieu of notice, a receipt which should certainly be regarded as taxable, it seems to us much more comparable with that kind of payment than with a payment that is intended as compensation for a person's permanent loss or impairment of earning power.

The debate in the House of Lords referred to the Reports of the English Law Reform Committee and the Scottish Law Reform Committee. (The heading of the English committee's report (Cmd. 501) is "Effect of Tax Liability on Damages"; the motion of Lord Douglas of Barloch in the House of Lords calling for the

"repeal" of *Gourley* is headed "Damages for Loss of Earning Capacity"). The Report of the English Committee reveals that the Institute of Chartered Accountants of Scotland, the Society of Solicitors in the Supreme Court of Scotland and the General Council of the Scottish Trades Union Congress all favoured a change in the law.

The interest of Trade Unions is clear, since as matters stand *Gourley* must hang over them in any workman's claim involving loss of earnings, or even loss of earning capacity. To them, as to the recipient of damages for loss of office or employment, it must seem a somewhat fine distinction to be told that the sum in respect of loss of earnings, or loss of earning capacity, is not being taxed but merely abated by the estimated amount of speculative taxation.

The English Law Reform Committee was hopelessly divided. Three members wanted *Gourley* "repealed," on the ground that damages should represent compensation for loss of earning capacity and thus be treated as capital. Three others agreed that *Gourley* should be "repealed," but added that damages should be taxable in the plaintiff's hands. The other nine members, along with the first three, were vehemently against taxing capital. The nine recommended that the decision should stand, as did the Scottish committee, but both committees recommended that it should be kept under review.

SHORTLY, it now appears that if a claim for wrongful dismissal, or personal injuries, is settled without recourse to the Courts, the claimant receives his compensation as capital, or as a non-taxable sum, accepted as such by the Revenue; but if the claim goes to Court, the very fact of the non-taxable character of the damages, as between the claimant and the Revenue, justifies—indeed calls for—a reduction in the amount awarded by taking taxation into account.

It would be generally more comprehensible if *Gourley* were "repealed" and that any sum viewed as giving rise to a tax liability be dealt with, if need be, by tax legislation. To the extent that damages are awarded for the loss or major impairment of a capital asset, their diminution by reference to tax means that the claimant suffers in plain fact a tax on capital, however that arises in law. (It also means that a defendant will frequently be relieved of paying a sizeable part of the damages commensurate with the civil wrong he has done.) If the tax law relating to compensation for loss of office is to be altered, it would seem to be a necessary first step to "repeal" *Gourley*, or at least to limit its operation, for example by restricting its application to loss of earnings, under the heading of special damage.

There is one last alarming thought. The result of applying the *Gourley* decision does not bind the Revenue, unless it attends and agrees to be bound as in *Riches v Westminster Bank Ltd.* There remains the possibility in any other case that its underlying assumptions about the tax position may be wrong. Certainly in default of such agreement the Inland Revenue is not bound by the result and may not accept it.

PENSIONS AND THE MIDDLE CLASSES

"TOP HAT" pension schemes, which have blossomed under Socialist anti-avoidance legislation and Revenue approval, create a position of privilege for one section of the nation. As D-Day under the National Insurance Act draws nearer (April, 1961), many employed called upon to pay the new rates of contribution may complain bitterly that they are not in a position to contract-out or be contracted-out. They will naturally be scrutinising the position of those more fortunate in their retirement arrangements. It is here that the development of "top hat" pension schemes may come in for some criticism. These have grown to great dimensions under what, ironically enough, began as Socialist legislation against tax avoidance, which started as Sections 19 to 23 of the Finance Act, 1947, and now form Chapter II of Part XVII of the Income Tax Act, 1952. The retirement provisions for directors and employees require the approval of the Board of Inland Revenue, on conditions set out in Section 388. The only really serious obstacle to the creation of the most lavish pension provisions has been paragraph (f) of that sub-section, which treats "controlling-directors" of companies as pariahs. Another condition of approval, in paragraph (d), is that the aggregate value of the benefits should be reasonably comparable to the aggregate value of the benefits usually afforded by statutory superannuation schemes. The arrangements for Civil Service pensions allow for the payment of part of the retirement benefit in the form of non-taxable lump sums. So it has become the practice to approve very large pensions (except for pariahs) where the ratio in relation to remuneration is observed and years of service support it, and also to provide for a right to commute 25 per cent in cash, tax free.

When the report of the Tucker Committee on the Taxation of Provisions of Retirement was published in 1954 (Cmd. 9063), it appeared from paragraph 161 that Civil Servants could then get as much as £8,000 free of tax (although in the majority of cases it was much less); with the substantial rise in the emoluments of senior Civil Servants, the top figure is now presumably much greater than £8,000. It cannot, however, be anywhere near £40,000, which is the tax-free lump sum in a "top hat" scheme mentioned in the same paragraph. The Tucker Committee thought this was altogether too much of a good thing, and the Royal Commission took an even more drastic view. In paragraph 73 of their report, the Royal Commission proposed a £10,000 maximum for existing schemes (which if implemented would provoke an outcry about retrospective legislation and not without some justification, since these schemes have obtained Revenue approval) and £2,000 for new entrants. This proposal should be read with paragraph 252, which provides for the alleviation of a spreading basis.

As for the treatment of controlling directors like pariahs, this was put right to a limited extent by Mr Macmillan, as Chancellor of the Exchequer, under Part III of the Finance Act, 1956, which introduced retirement benefits for the self-employed (and non-pensionable directors were included). But these provisions exclude any kind of commutation and (unlike the provisions for "top hat" schemes) are rigidly limited in the amount of premium allowed as a deduction for tax. Also, the premium has to be provided by the "beneficiary" himself.

MR STOKES once said the professional middle class was the backbone of the nation, and that, so far as he knew, it was not the policy of the Labour Party to exterminate it. Yet the erosion in the standard of living of the older middle class since the war is shown by the gross earned incomes required today by a married man with two children under 12 to equal, after deduction of tax, the purchasing power of gross earned incomes in 1938 of £2,000 and £3,000; they are about £8,950 and £20,750 respectively. Professional post-1938 incomes have not begun to close that gap and never can. But the "organisation men" in their top hats have gone a long way, with Socialist help, to close it for themselves. And for their part, the wage earners have been assiduous in their wage claims to counteract, until the last year or two, the falling value of the pound, and they have also received very large remissions in personal taxation. If Mr Macmillan's "one nation" no longer contains "classes" it still contains "grades" in the field of taxation. There are opportunities here for reform that the Chancellor of the Exchequer ought to welcome all the more since the government's financial policy has left him with so little scope for an open-handed Budget in April. There can be reform even if there has to be little in the way of remission.

BUSINESS NOTES

IN THE MARKETS

Ten per Cent Down

EQUITY prices in London have now fallen on average by the 10 per cent since the beginning of the year that some people thought at the time would be the limit of the predictable reaction to the long market upsurge. The question now is whether the institutions that have been holding off the equity market in the hope of lower prices will step in and buy or whether they will wait in expectation of say a further 5 per cent drop before or immediately after the budget. Few investment managers have lost their underlying faith in equities, and some of them are still confident that the *Financial Times* ordinary index, down from its peak of 343 to 308 (it recovered by 1.8 on Thursday), will be over 350 in the summer. Certainly the fall in equities is still very modest after the doubling in prices since the beginning of 1958; the indices are still above their levels in early December, so that it is only the gains marked up in the speculative Christmas boomlet that have been lost.

The market is under two clouds. The first of these is Wall Street, where the fall in prices is looking more serious. In 1959 London could afford to ignore Wall Street, and some observers can be heard arguing that it should ignore it now. But there are significant differences. Last year British equities had important historical and political reasons for bounding upward alone. By the beginning of this year they had caught up. That itself was added reason for looking across the Atlantic again. And now everyone recognises that Britain's economy has troubles of its own.

The markets were late to wake up to the inflationary implications of the Government's handling of the rail dispute but they are now universally nervous—less of the effects of inflation than of government action to put it down. In these circumstances a firm budget might possibly encourage the markets, if they read that as ruling out the need for more disruptive measures. Nothing was more effective in administering a check to market buoyancy than the authorities' action in the gilt-edged market two weeks ago, when bank selling was allowed to depress gilt-edged prices by one point. Since then, equity prices have dropped steadily while gilt-edged have been quiet. This conjuncture is precisely in line with official policy of restraint. It is to be hoped that the lesson will be remembered the next time the Bank of England feels the market is getting out of hand.

Reappraisal on Wall Street

Our correspondent cables:

EQUITY prices on Wall Street fell for seven successive trading sessions before rallying by 8 points on Wednesday. At Tuesday's close the Dow Jones industrials average dropped below the 600 mark to its lowest point in over twelve months. In addition the Dow railroad average penetrated its previous low point of last November—which according to the devotees of the Dow theory "confirmed" the similar trend in the industrials average and signalled an official bear market. The long established Dow theory has few followers today, partly because railway stocks are now relatively unimportant. But enough people believe in the psychological influence of the theory for it to be held responsible for this week's decline.

Institutional investors with a new respect for yields are continuing to put the larger part of their new funds into fixed income securities. They have bought equities sparingly and selectively, concentrating on the shares of telephone companies and public utilities and on some electronics issues. But automobile shares sagged when it was learned that some manufacturers planned to lay off workers—even though output of cars in the first quarter of the year is likely to be second only to the record 1955 figure. Similarly, although the steel mills are operating at over 90 per cent of capacity and running up handsome profits, the fear that future production will suffer has led to widespread selling of steel shares.

The 13 per cent decline in equity prices since the beginning of the year cannot now be dismissed as a mere technical correction. The stock market has certainly reflected general disappointment—or rather surprise—that the economy is not straining hard at the leash. Much significance is now being attached to the tentative reappraisal being made by the Federal Reserve (discussed on page 985); in these circumstances the prospect of a budget surplus looks deflationary. But while there are pessimists around who have already renamed this decade the sinking sixties, opinion on Wall Street remains fairly confident that the market will regain its balance, if not its old peaks.

STEEL

Close to Capacity

WITH output in February exceeding a rate equivalent to 25 million ingot tons a year for the first time in history, Britain's steel industry is now operating at about 95-98 per cent of furnace capacity; allowing for lower output in months affected by holidays, the steelmakers are now fully confident of producing slightly over 24 million tons during 1960. Finishing capacity in the industry remains rather less evenly loaded. Plants that produce railway goods and steel used in coalmining are still short of orders, and so are the forges. Demand from the shipbuilders and from the oil industry remains depressed, too: even so, there has been a marked increase in general demand for plates, and the section mills are also busy again.

STEEL CONSUMPTION AND STOCKS
(Quarterly: '000 tons)

	Consumption Actual	Consumption Seasonally corrected	Per cent change from previous year	Consumers' stocks (end of quarter)
1957—				
I	3,492	3,370	− 2·9	3,980
II	3,427	3,330	− 3·2	4,000
III	3,153	3,470	+ 3·6	4,000
IV	3,554	3,460	+ 4·8	4,120
Total	13,626			
1958—				
I	3,524	3,400	+ 0·9	4,220
II	3,395	3,300	− 0·9	4,130
III	2,924	3,220	− 7·2	3,880
IV	3,080	3,000	−13·3	3,570
Total	12,923			
1959—				
I	3,123	3,010	−11·5	3,410
II	3,375	3,280	− 0·6	3,240
III (p)	2,974	3,270	+ 1·6	3,124
IV (p)	3,456	3,360	+12·0	3,118
Total	12,928			

Although steel consumption, according to the estimates of the Iron and Steel Board, was 12 per cent up by the end of the year over consumption twelve months before, it now seems that a substantial proportion of the extra steel being bought is going into the rebuilding of stocks. The board now reckons that stocks held by private industrial consumers rose in the fourth quarter of the year, though this was offset by a continued reduction in the stocks held by nationalised industries and other public organisations. Recent months have offered a reminder of the relative importance in total steel consumption, as well as in stocks, of this public sector. During the last half of 1959 production in most private "metal-using" industries was probably 5-10 per cent higher than during the previous peak of 1957. Yet total steel consumption, according to the board's estimates, was nearly 5 per cent lower. With the railways and mines buying much less than usual, that is to say, the pattern of industrial output, in the industry's own jargon, had become markedly less "steel-intensive."

STERLING

Funds to London

STERLING has been very firm this week. It rose to $2.80½-⅝ on Wednesday, and would have appreciated more sharply against dollars and Continental currencies had it not been for some offtake of exchange by the Exchange Equalisation Account. The market has been unusually active. There has been a considerable two-way demand for sterling and foreign currencies. Commercial demand for sterling is now running at a high seasonal level mainly on account of payments for sterling area raw materials. On the other hand, the recent level of imports into the United Kingdom has been steadily expanding and a corresponding increase in the commercial demand for dollars and other foreign currencies has been noted in the market. The seasonal demand for sterling is still being somewhat delayed and extended as a result of the tendency of foreign bankers and merchants to finance part of their immediate needs through sterling acceptance and cash credits. As these mature greater difficulty is being experienced in getting them renewed but the total amount of these foreign credits outstanding is still appreciably above normal.

An additional support for sterling in the market this week has come from an inflow of short term foreign money. This movement follows the sharp decline by half a point in the United States Treasury bill rate. Part of the money that has come to London is being left here without forward cover though some of it is the result of carefully calculated and covered interest arbitrage. At current Treasury bill rates, 4.46 per cent can be earned in London and 3.62 in New York, giving London an advantage of 0.84 per cent. With the three months' dollar at a 20 cents premium on sterling, this still leaves a net advantage (allowing for this cost as a percentage of the spot rate on an annual basis) of 0.55 per cent in favour of London. The fact that the premium on forward dollars remains below its interest parity is an indication of confidence that sterling will strengthen further. Some German banking funds have been withdrawn from New York and redeposited in London without forward cover on the view that seasonal factors are almost certain to carry the sterling-dollar rate above its present level over the next three months.

OIL HEATERS

Establishing the Danger

THIS week's official report on the scientific investigation into the fire risk of oil heaters seems to justify fully the description of "alarming" that was given to it in *The Economist* of January 23rd. The published report is concerned exclusively with the effect of draughts on radiant oil heaters, 3 million of which have been sold compared with perhaps 9 million of the safer convector type of oil heater; but it also refers specifically to "other dangers . . . outside the scope of this report." The fire research station of the Department of Scientific and Industrial Research had noticed an increase in fires caused by oil heaters long before the tragedy at Ware last November made the safety of these heaters a matter of urgent public concern. The number of these fires had risen from 1,202 in 1956 to 4,464 in 1958; about 23 per cent appeared to be due either to overheating or flaring of the appliance. These figures seem to question the manufacturers' aggrieved complaint that the DSIR's tests were overharsh and the conditions under which they were carried out unrealistic. Radiant oil heaters do overheat, their flames do flare beyond their guards, and the fire records prove it. The only question is: Why? The DSIR was already preparing to find out when the Ware tragedy occurred and five children died within minutes.

The DSIR tested 34 of the 35 radiant heaters on the market (the last was eliminated because its fuel tank stood upright below the burner, instead of upside down beside it, and was therefore perfectly safe. As was explained in an earlier issue of *The Economist* it is the closeness of the burner to an inverted fuel tank that presents the source of danger). When the 34 heaters under test were put in a draught, 32 of them burst into flames in seconds. The wind used to get these results was equivalent to 3.3 miles an hour, slower than most people walk. The industry says that this is unrealistic. But the DSIR built an experimental room, comparable to the ground floor of a council house, and showed that in a high wind an open back or front door or window could create the sort of draught that cooled the radiant top of the heater, blew the flame downwards on to the trough of heated paraffin that was feeding it, and upset the pressure inside an already hot fuel tank so that it forced its way through the valves spreading rapidly burning paraffin all round the floor. The whole sequence takes less than a minute and can produce an inferno within 90 seconds.

What is to be Done?

IT is only the fact that really high winds are relatively infrequent that has protected most of the 3 million owners of radiant heaters from this kind of danger—which has been described not only in the DSIR's report, but in an equally careful test carried out by the British Standards Institution's Consumer Advisory Council and has long been suspected by the oil companies. Of the 22 heaters tested by the BSI (not all of the drip-feed type), 19 caught fire in a draught equivalent to 4 miles an hour. The DSIR said that radiant heaters could quite easily be made draught-proof from the outset, and the BSI found that one manufacturer, Tallent, had already gone to the trouble of doing this. But what is going to happen to the rest of the industry, to the large number of radiant heaters on retailers' shelves (sales dropped sharply after the Ware fire) and to the 3 million heaters in use?

Nothing can be done about those already in homes; they cannot be modified to make them safe and householders will have to use them with the utmost care. The Home Secretary has hinted that he is prepared to take action about those heaters which had not been sold; no decision about the future of heaters now in the shops was taken at the first of what is likely to be a long series

of meetings between government departments and the industry, which was held on Thursday afternoon, but there was agreement to test all new designs along lines laid down by DSIR. The British Standards Institution has been considering the revision of the now-obsolete standard for paraffin heaters (of all kinds) for several months; progress has been slow and had come almost to a standstill waiting for the DSIR's verdict. Its new standard should cover precautions against draught, as agreed at this week's meeting, and also the likelihood of overheating, overturning and fumes. Corrosion caused by the paraffin's water content is a potential danger but one that needs more research; this is likely to be the DSIR's next job.

Under normal circumstances, manufacturers are free to use or reject BSI standards as they wish. The BSI has already announced that it intends to extend its Kite Mark scheme to oil heaters once the new safety standard has been agreed—probably in May. This means that heaters licensed to use this mark would be submitted to BSI for test, and periodic check tests would be carried out on heaters bought over the counter at random. But most people have the impression that in spite of the undertaking given by the industry to use the BSI standard the Home Secretary will introduce or accept a Bill to ban the sale of any heaters not conforming to it.

BANK ADVANCES

Where They Went

The detailed classification of bank advances in the three months to mid-February shows that the rise was going on at almost exactly the same rate and in almost the same directions as a year before. Advances of all banks in Britain rose by £241 million in the quarter, to £3,243 million, compared with an increase of £245 million in the quarter ending February, 1959. The personal and professional group took a further £57 million, and at £638 million its total advances were very nearly double their level two years before. The main industrial groups took another £103 million (almost exactly the same increase as a year before).

BRITISH BANKERS' ASSOCIATION
Changes in Advances
(£ million)

	Nov., '58 to Feb., '59	Nov., '59 to Feb., '60	Feb. '59 to Feb., '60
Personal & professional	+ 53	+ 57	+201
Hire purchase.....	+ 19	+ 12	+ 67
Retail trade.....	+ 34	+ 36	+103
Industry & other trade	+102	+103	+301
"Other financial"....	+ 23	+ 36	+ 96
Total.....	+245	+241	+776

The expansion in advances to hire purchase companies has at last begun to slacken, with an increase of £12 million to £126 million—but that is nearly five times as large as the figure eighteen months before. Bank money has also been financing hire purchase through retail trade; with another increase of £36 million, to £338 million, advances to this group too now stand at double the level two years before. Hire purchase may be the first to feel the pinch of the tighter liquidity pressures that are now restraining the bankers. Another candidate for scrutiny perhaps will be the amorphous "other financial" group, which is 50 per cent up on the year at £300 million. Besides the big finance corporations such as FCI and ICFC this group includes property companies and other financial concerns that in the past two years have carried a good deal of their not always unspeculative expansion in the past two years on bank money.

BRITISH DRUG HOUSES

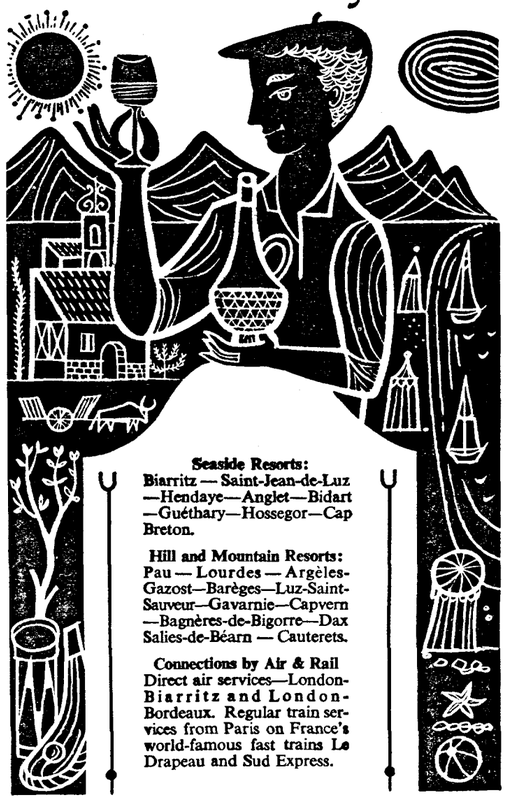
Overstepping the Mark

On February 27th, a letter from Dr Eleanor Mears appeared in *The Lancet* describing three hormone drugs to be used in small-scale clinical trials to see if they would prevent conception. Dr Mears concluded with a cautionary sentence: "It seems at present that they are not what we are all looking for: something much simpler, much less expensive and preferably with a chemical, and not a hormonal action, would be preferable. . . ." The pills being tested as contraceptives have all been evolved from drugs used to correct hormone disturbances of one kind or another and one made by British Drug Houses is used (in very different doses) for the treatment of certain illnesses. BDH had in its laboratory, however, a development of this preparation which the company expected to prove much more effective in preventing conception than the one mentioned by Dr Mears, and the scientific director of BDH wrote to *The Lancet* to point out this fact.

There is nothing here that offends against the principle that makers of drugs should not make claims for products until they have clinical proof of their efficacy. But British Drug Houses proceeded last week to hold a press conference to announce its new preparation and has sent a copy of a press statement to every shareholder. All this was connected with the take-over bid made by Fisons (which was withdrawn on Wednesday this week). Shareholders, who cannot be expected to be as well versed in the niceties of medical investigations as the readers of *The Lancet*, were given this information to encourage them to repel the boarders. It will not be their fault if they assume that their company has a revolutionary, and presumably highly profitable, new product about to go on the market.

How much can BDH in fact claim for its new pill? The Family Planning Association, whose medical secretary is Dr Mears, is organising a small trial in Birmingham using a hormone pill that has had four years' controlled trials in the United States; the Association would need a great deal more information about the BDH drug, which the company will not be in a position to give it for at least three months, before deciding whether to include a limited number of trials of BDH pills. And until clinical trials have been held, no one can say whether a new drug will succeed or not. It could be fifteen months before the answer is known. This fact is well appreciated by doctors, and the lay public should not be encouraged to think otherwise. These are considerations that should have been kept quite apart from the company's ownership.

BIDS AND DEALS



Two Passes

For the second time in recent months both Electric and Musical Industries and Fisons have had to admit defeat in take-over battles. EMI withdrew its offer for Henry Simon (Holdings) on the news that agreement had been reached for a complete merger between Henry Simon and Simon-Carves. The terms of the merger will not be known until the 1959 results of both companies are announced at the end of this month but shareholders are promised a more liberal dividend policy. Fisons claims that a substantial number of acceptances were received for its offer for British Drug Houses, but not enough to give it control. The fact that Fisons did not consider it worth extending its offer suggests that acceptances fell short of 50 per cent. On Thursday BDH fell by 9d. to 25s. 9d., while Fisons rose by 1s. 4½d. to 48s. 7½d.

But the stream of take-over and merger proposals has by no means dried up, and existing proposals are being embellished by favourable new forecasts from various bidders of future profits and dividends.

1. Watney Mann, in making its offer for Phipps Northampton Brewery, disclosed a substantial increase in profits for the first five months of its trading year and said that additional profits from the rent of the Stag site will be realised sooner than expected. The ordinary dividend is to be raised from the equivalent of 15 per cent to not less than 17 per cent. Watney is offering 107 £1 shares for every 100 Phipps £1 shares and 110 5¼ per cent preference shares for 100 Phipps 5½ per cent preference. Watney £1 shares now stand at 75s. 9d. to make the offer worth about 81s., in line with the current price of Phipps, which shows a rise of 8s. 9d. since the news of a possible merger was first announced.
2. Smiths Potato Crisps forecasts a dividend for the current year of 50 per cent against the equivalent of 34 per cent. This forecast was made in connection with the acquisition of Tudor Food products for approximately £1 million. The deal involves the issue to the controlling shareholder in Tudor Food of 259,351 Smiths 5s. shares, of which he will retain 30,000 and place the remainder with institutional

investors. Smiths is optimistic about the future of its new acquisition—which also makes potato crisps—and expects Tudor's 1959 output to be quadrupled when a new factory is opened shortly.

3. Hovis-McDougall intends to raise its ordinary dividend from 20 per cent to the equivalent of 22 per cent following a 100 per cent scrip issue. An offer has been made of 240 5s. shares for every 100 5s. shares in E. Marriage and Son, flour millers, and 11 5½ per cent preference (raised from 5 per cent) for every 10 Marriage preference. The equity in E. Marriage is privately held.

4. The terms of a proposed merger between Charles Roberts and Birmingham Railway Carriage and Wagon have been announced. The plan is to form a holding company which would offer three 5s. shares for each Birmingham £1 share and one 5s. share for each 5s. share in Charles Roberts. The Birmingham Railway directors are to make no recommendations on the terms until an up-to-date valuation of assets has been made. Charles Roberts 5s. shares are currently quoted at 15s. and Birmingham Railway £1 shares at 41s. 6d.

HIRE PURCHASE

To Market for £12 Million

SHARES in hire purchase finance houses, not surprisingly, have been especially vulnerable to the new uncertainties in the equity market. They face not only the possibility of a reimposition of official controls but the probability of a tightening of sources of finance. As the banks become less forthcoming, the finance houses may have to make more demands on the market. United Dominions Trust is apparently anxious to lose no time in doing so. It intends, subject to favourable market opportunities, to make a rights issue to raise £12 million. Shareholders will be offered one new £1 share at 120s. for every two shares held at March 7th. At the beginning of the year the market price of UDT shares was 210s., but by Wednesday a combination of general influences and leaks about the new issue had brought the price down to 160s.; on Thursday, after the news had been officially confirmed, they closed at 157s. 6d., at which the rights are worth 12s. 6d. The new shares will not participate in the final dividend for the year to June 30th. The Barclays group will take up its full allotment, at a cost of £3 million. The issue will raise UDT's resources in ordinary capital and reserves from £11½ million to £23½ million; its loans and hire purchase advances in mid-1959 stood at about £100 million.

HIRE PURCHASE DEBT

Household goods shops and finance houses
Monthly averages or calendar months

	Growth of HP debt	New credit extended	Repayments
	£ million		
1959—1st half	25	77	52
3rd quarter .	25	78	53
4th quarter .	24	80	56
1960—January	16	74	58*

* All estimates are tentative and this figure is particularly tentative.

Total hire purchase credit has expanded a good deal since then, but the growth in net outstandings is now being curtailed by the mounting volume of repayments. The effect of this is shown in a new division of new credit and repayments made on a tentative basis by the Board of Trade.

MOTORS

Non-Europeans at Geneva

Geneva

SWITZERLAND, as a market for cars, serves the foreign manufacturer as a small-scale "test market"—with a fastidious clientele, no domestic industry to favour, complete freedom from import quotas, low tariffs, and the full wind of international competition blowing. It is for this reason that the Geneva *Salon de l'Automobile* is the most international of all motor shows. It displays lorries, utility vehicles and motor cycles as well as the passenger cars; eleven countries are represented this year with 80 different passenger models on show. Britain leads with 24 different models, followed by the United States with 18, Germany with 15, Italy and France with 8 and 6 models respectively; there are also four from the Soviet Union.

Swiss motorists bought 70,000 cars last year, 10,000 more than in 1958. Half of the total came from Germany, though the German share of this market is declining: Volkswagen continue to supply just under half the German models. The second largest supplier is France with 17,000 cars; Italy sold 6,700 and Britain 5,900 cars. Of the 10,000 extra cars sold in 1959, Germany had only 3,000; 5,000 came from France, and Great Britain did well, selling 1,000 more than in 1958. Half of this increase was scored by the British Motor Corporation, which with its Farina-style models introduced last year has at last managed to appeal to the Continental taste in design.

Standard-Triumph, too, has realised that design and service facilities are needed here to back a sales effort. The company had made little impression on the Swiss market until it introduced its Triumph Herald with a flourish last September: the results have been encouraging, with a 2½-times increase in sales. Standard-Triumph was one of the few companies with a new model to show at the Geneva *Salon;* most European makers are marking time, displaying fewer models on smaller stands and concentrating on cars that have proved their popularity.

Stronger efforts are being made by the two non-European groups, the American and the Russians, who are both introducing new products for the first time to the European market. Detroit sold only 2,000 cars to the Swiss market last year, 500 less than the year before, but hopes to stop this decline by the introduction of its compact cars. These may compete with the Opel Kapitän, the big Mercedes, the larger European Ford models and the big Vauxhall; but the publicity for the compact car is a free gift to the European manufacturers who already make smaller cars. The American models are still large by European standards and the European buyer has a different interpretation of the concept "compact." The Valiant, Falcon and Corvair cars have only just been introduced here and no experience as to their sales appeal has yet been made. As for the Russian exhibits—four different types of passenger cars—few visitors seem so far to be penetrating beyond the curtain of curiosity.

The Price of Fresh Air

THE Triumph Herald convertible that was introduced at the Geneva Show this week adds to the few open bodies now available to the British motorist. This soft-top version costs £766 (including £216 purchase tax) against £730 for the hard-top coupe. This addition to the price is much less than a convertible body adds to the price of a Hillman Minx or a Ford Consul, presumably because the chassis construction used in the Herald obviates the strengthening of the body that is necessary when a folding head is fitted to a chassisless, integrally constructed car. With the Herald the difference in cost is simply that of producing and fitting a metal-framed fabric cover as against the fixed hard-top pressing. Standard-Triumph is, however, charging the customer something for his fresh air; motorists cannot forget that in the Morris Minor one gets the alternative for nothing. But the availability of the Herald as a convertible (and Standard-Triumph might also think of a roll-back sunshine roof for the saloon, which looks particularly well suited to one) may help to consolidate the position of this model as a small car that is different enough from its competitors to possess some snob appeal.

COMMON MARKET

List G Tariffs

COMMON external tariffs for most items on List G of the Rome Treaty were settled by the European Economic Community last week. These tariffs had to be negotiated for items that largely comprise materials bought by individual members from countries outside the community. As their dependence on outside supplies varies, the desire for protection varies among the members. In lead and zinc, for example, there is a clash between the high protection mining and smelting industries of France and Italy, and the low tariff industries of Belgium and Germany (with Holland having no mine production at all). Recognising the conflict of interest, the treaty also provides for the introduction of

. . . tariff quotas at a reduced rate of duty or duty free, where a change in sources of

supply or a shortage of supplies within the community is of such a nature as to entail harmful consequences for the processing industries of the member state concerned. Such quotas may not exceed the limits beyond which the transfer of activities to the detriment of other member states is to be feared.

Though full details have not yet been published, it is clear that this facility has been widely used.

On lead and zinc a specific duty of 0.6 (US) cents a lb (£4 16s. a ton) has been negotiated, but Holland can import 40,000 tons of lead and 10,000 tons of zinc a year (virtually all of its requirements) duty-free; Belgium will import a fifth of its requirements of lead duty-free, and Germany a fifth of its requirements of both metals. There are no duties on concentrates, of which the community imports about half of its supplies. Italy managed to contract out of the common external tariff for six years while it grapples with the problem of its hard core of high-cost mines. On aluminium there is to be an *ad valorem* duty of 10 per cent, but apparently Germany and Belgium can import their requirements duty-free, and the duty of 6 per cent on pulp for papermaking seems to apply only to France. Negotiations on tariffs for petroleum products, in which the French interest is paramount, were shelved. Exporters of lead, zinc and aluminium to the community are unlikely to suffer much from the present arrangement, which is tantamount to a free trade area. And if the proposals for speeding up the common market are accepted, the external tariff will take effect on July 1st, but the duties just fixed will be cut by a fifth. In the long run, the extent of tariff discrimination on these metals will depend on the wider negotiations in Gatt, which in turn will be influenced by the success of the French drive to consolidate the metal industries.

BUILDING SOCIETIES

Warning on Rates

HARD on the heels of the impressive figures of the Halifax Building Society comes a warning from Mr C. J. Dunham, president of the Co-operative Building Society, that mortgage rates might have to be raised this year—though he does not expect an early change. Thus begins what this month's *Building Societies Gazette* refers to as the pantomime or comic opera called "Interest Rates" which will certainly run until well after the budget. Building societies are still arguing about last summer's decision by the Association to cut its recommended rates, to 5½ per cent on mortgages and to 3¼ per cent tax paid on investment shares. About 88 per cent of the members have adopted the recommended mortgage rate but only 55 per cent have cut their investment rate. Thus it is estimated that about 140 member societies are still paying at least 3¼ per cent on their shares, some at the expense of sharing their margin for reserves.

Of those societies that followed the Association's recommendations, the Co-operative Permanent has not been alone in suffering a considerable drop in the inflow of money. Faced with the need to show reserve ratios of at least 2½ per cent by the end of this year in order to qualify for trustee status and Government loans for

Selling to East Germans

Leipzig.

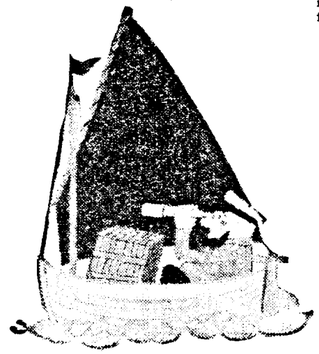
VISITORS to Leipzig's spring trade fair, a thousand-year-old European institution that with the tacit consent of East and West has survived upheaval and social revolution, are always tempted to invest it with political significance. Last year the sudden arrival of Mr Khrushchev, immediately after Mr Macmillan had visited Moscow, lent it a note of drama: this year there has been some pre-Summit buoyancy of mood.

For British exhibitors, however, the significance of 1960's Fair was that it marked a year's practical working of the trading arrangements concluded in 1959 between the East German *Kammer für Aussenhandel* (Chamber of Foreign Trade) and the Federation of British Industries. Physically this was reflected in a larger participation by British exhibitors, with a British pavilion for once in keeping with the country's industrial importance. Commercially, it has been generally agreed that this first year's agreement, though necessarily empirical in conception, has worked reasonably well. This trading arrangement is a formula that skates round delicate questions of recognition in order to achieve a tentative pattern of Anglo-East German trade: it provides for £3 million of trade in each direction. (This is apart from any special purchases which can be made outside the 1960 arrangements, such as East German purchases of semi-processed materials, or sales of potash to the UK which reached about £1¼ on open general licence last year). The East German *Kammer für Aussenhandel* has opened a trading office in London; the prospect of new harbour installations at Rostock may ease deliveries, also. But the lessons of the Leipzig Fair make it necessary to qualify the possible optimism of would-be exporters.

Britain's chances of selling in East Germany are in the first place somewhat overshadowed by the preponderance of West German competition. In spite of political bitterness, West Germans regard Eastern Germany as an extension of their home market, and West Germany's exports there reach about £70 million a year. There is a constant technical favouring of the West German product, not only on grounds of sentiment, but, as in all East European countries, because of technical familiarity. Political and currency factors in the East, however, may lead the East German state buying agencies deliberately to lessen this West German trading preponderance, in our favour.

BUSINESS secured at Leipzig by British firms appeared to be reasonably satisfactory. But the growing industrial strength of the Soviet Bloc countries, assisted increasingly by Comecon rationalisation, was evident not only in the growing volume of inter-bloc trade (Poland booked large orders for steelworks plants and chemical equipment from Eastern Germany under a new trade agreement), but in the clear tendency of East German purchasing to become more selective.

Thus the firms benefiting at Leipzig are either those supplying materials in short supply, such as rolled products (GKN, Richard Thomas and Baldwin and other steel firms did good business) or those supplying complete plants (Humphreys and Glasgow) or highly specialised equipment beyond the present capacity of branches of local manufacture (for example, English Electric, Taylor Hobson and Peco Machinery). Consumer goods presented a much less hopeful picture (although Rootes are believed to have secured a good order).



UK TRADE WITH EASTERN GERMANY

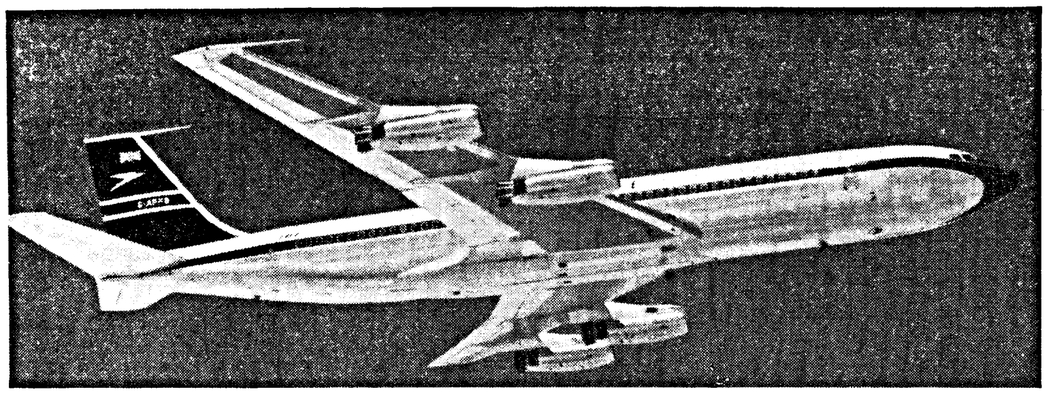
(£ million)

	UK imports from Eastern Germany	UK exports to Eastern Germany	UK re-exports to Eastern Germany
1955	2·5	0·7	0·3
1956	2·4	1·0	0·5
1957	2·8	1·4	1·4
1958	3·4	2·3	0·4
1959	4·6	3·5	0·7

Selling in Eastern Germany is a long and trying process; old hands among UK exhibitors at Leipzig, some of whom are now seeing their years of patient attendance rewarded in some part in this year's fair, would be the first to warn potential exhibitors against any venture into the market that was purely opportunist and did not envisage a year or so of assiduous preparation. To the specialised producer, with confidence that his product can meet all comers, Leipzig offers an opportunity of meeting not only potential purchasers behind the Iron Curtain, but also the potential operators of the actual machines or equipment. He would be well advised, however, not to expect vast orders on his first sally into the market. As in all East European markets, he must learn to adapt his marketing to "the Plan."

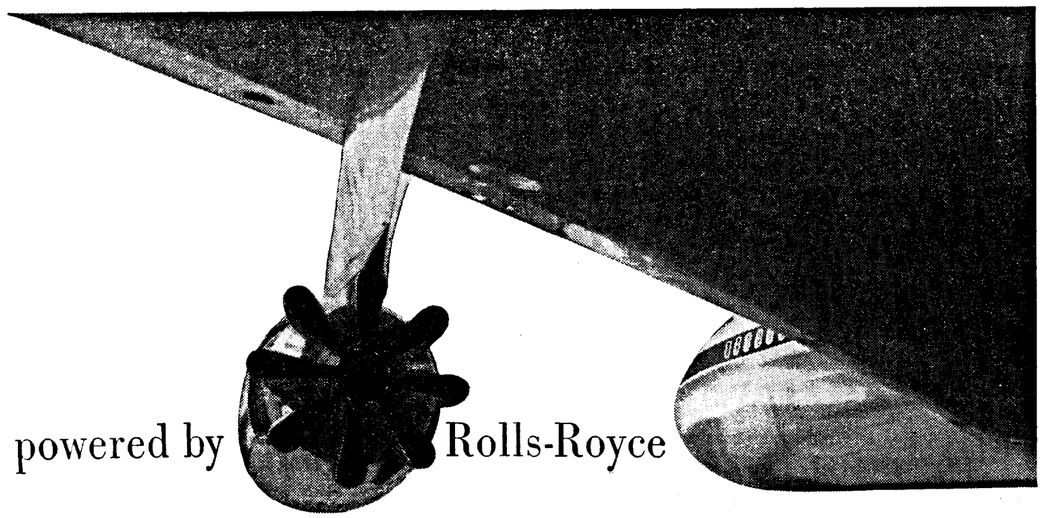
SMALL EXPORTERS In the first three years of his ECGD policy, a manufacturer of insecticides built up one market from £200 to £5,500, raised his total export turnover from £2,500 to £15,000.

LARGE EXPORTERS In ten years of exporting under ECGD cover, a famous firm of tool makers raised its annual export turnover from £35,000 to £589,000.



Going up! In today's fiercely competitive export markets, business done under the security of ECGD cover is increasing. Total shipments of ECGD policy-holders increased by over 20% during 1959—at a time when uninsured exports rose by only 1%. With payments guaranteed, ECGD exporters are in the position to grant competitive credit terms and are filling their books with fresh orders. They're the men most likely to succeed. *Have a talk with your ECGD man.*

EXPORT AND EXPAND THROUGH E·C·G·D



ECGD is a Government Department set up to help exporters. Its services are fully explained in the booklet 'Payment Secured'. Write for a free copy.

B.O.A.C.'s new 707 Intercontinental...

...powered by Rolls-Royce

...world's fastest, longest-range jetliner

B·O·A·C

BRITISH OVERSEAS AIRWAYS CORPORATION

Soon now, British Overseas Airways Corporation will begin flying over-ocean routes with Boeing 707 Intercontinental jetliners. These luxurious new airliners are powered by world-famous Rolls-Royce Conway engines.

With a range of more than 5,000 miles, BOAC's Intercontinentals can fly from London to New York, non-stop at 600-mile-an-hour speeds, making the trip in under seven and a half hours. The Intercontinental's roomy cabin is quiet and the most spacious aloft. You'll find travel aboard these superb airliners exhilarating—yet serene and wonderfully comfortable. There's no vibration, no travel fatigue. You arrive at your destination rested and refreshed, after a trip made doubly memorable by the friendly hospitality and superlative service of BOAC, one of the world's great airlines. For flight-times and schedules, see your travel agent, or BOAC.

BOEING 707 Intercontinental

older houses, some societies have been forced to tighten or even ration their mortgage advances. The first quarter's figures will reveal how far the increase in Bank rate has further diminished the flow of money into the societies; by April also the budget will be known. It is clear however that the demand for mortgages still far exceeds demand at present rates and that unless the Association's rates are raised more borrowers will turn to mushroom societies.

ATOMIC ENERGY

Broken Engagement

THE merger arranged between Atomic Power Constructions and the General Electric-Simon Carves atomic energy group will not now take place and the number of major atomic design teams in the country reverts from three back to four—with a host of resultant complications. Atomic Power Constructions was formed in December, 1956, two years after the four pioneer atomic design groups had come into being. Its founders were Crompton Parkinson, International Combustion (Holdings), Richardsons Westgarth, Fairey Aviation and an atomic civil engineering group formed by Trollope and Colls in partnership with Holland and Hannen and Cubitts. The new company was a victim of the decision to slow down the rate of nuclear power construction, the CEGB invited no tenders for new nuclear power stations between mid-1957, when English Electric started work on the Hinkley Point power station, and last summer when APC was awarded the contract to build the Trawsfynnyd nuclear power station. A few months later it was announced that the group had decided to merge with the consortium headed by GEC.

Negotiations have not gone smoothly and they broke down finally last week. GEC has complained that the company found itself having to deal separately with each of the five member companies of APC, and not with a single group; APC has referred to the difficulty of dealing with a company like GEC whose interests extend well beyond the building of nuclear power stations. The main stumbling block could well have been failure to agree on how to divide research, for GEC, with a big and expensive atomic energy research division which it is finding hard to keep usefully employed, considers itself the senior partner and expected the lion's share of the research.

OVERSEAS TRADE FAIRS

Sales—and Prestige

AN engagement to speak to the Incorporated Advertising Managers Association last week was an appropriate occasion for Mr F. J. Erroll, the Minister of State, to give an extensive account of the Board of Trade's slowly evolving policy on overseas trade fairs and the manner in which it is prepared to lend them support. Apart from collecting and publishing information, the Board is also still prepared to provide some financial backing "in ways that will encourage private enterprise to spend its money to the best advantage." This is reasonable enough, but as Mr Erroll was careful to add: "Fairs are things on which—unless one is careful—it is very easy to spend a lot of money to very little advantage."

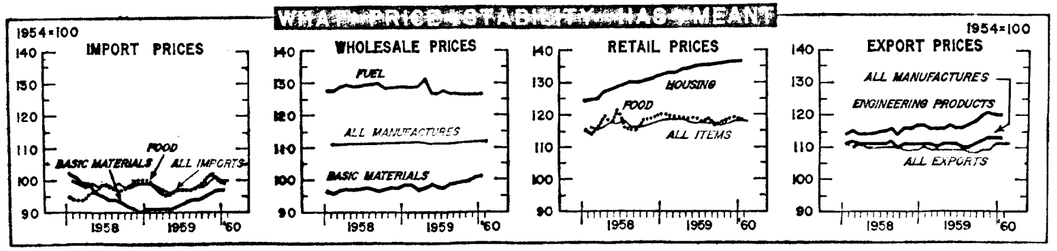
The Minister of State spelled out in some detail the way in which this statement of broad principle will apply to the four types of trade fairs the Board is, in general, willing to back:

1. At the all-British fair the Government "can best show something that would not otherwise get shown so as to heighten interest . . . and attract visitors." Thus at Lisbon and Helsinki it put on a comprehensive display of consumer goods and it intends to emphasise British scientific invention and research at New York in June.

2. The specialised trade fairs, devoted to one or a group of industries, are where most real business is done. Since their emphasis is on goods rather than on display, they are fairly cheap to participate in. If a trade association comes forward with at least a dozen members willing to take part in one of these fairs for the first time, the Government will rent space and put up stands.

3. Outside Europe and north America, fairs organised on national lines—the easiest way for organisers of new fairs to try to get started—are likely to grow in number. Where it is worthwhile having a British pavilion at all, the Government will foot part of the bill, manage it, and try to ensure a high standard.

4. Prestige exhibits raise the vexing question of how far industrial prestige helps to sell goods. The Government will heavily restrict the number of prestige stands that it erects, but when it decides on one it is prepared to spend enough to make sure it is worth while.



The Board of Trade appears to have arrived finally at a fairly sensible policy, and it has also been finding a surer touch when it does occasionally go in for the prestigious. But in terms of tangible return for effort made the specialised trade fairs are still the best propositions. It is arguable whether the national pavilions and prestige stands that the Government does take on absorb too much of the £170,000 or so a year it devotes to overseas fairs. A single national pavilion, properly done, can easily cost a third of that annual outlay.

TIN MARKET

Prices Too Steady?

TIN prices remain in a narrow range. World consumption is buoyant—whatever may happen in the United States later this year—and supplies are closely controlled. Consumers are happy because the manager of the international buffer stock can keep prices steady at a level that no one could call high. This month the manager appears to have sold metal to prevent tin rising to £800 a ton, the level at which the "benevolent neutrality" of the United States towards the tin scheme becomes strained. Producers as a whole are still prepared to forgo a higher price for the sake of stability, but many dealers and merchants are not happy. They argue that with the market kept in such a narrow range their job is scarcely worth the candle.

At its meeting in London this week the tin council decided to raise export quotas in the second quarter by 1,500 tons to 37,500 tons, though it expects actual exports to be only about 35,300 tons. It has acted under the provisions of paragraph eight of article VII of the agreement, which allows quotas to be increased when the council believes that any producing country is unlikely to fulfil its quota. The council does not identify the laggard, but it presumably has in mind Bolivia, whose industry is in decline. Export quotas in the current quarter were sharply increased, but the quantity of

Bolivian metal available to consumers has not increased, mainly no doubt because of Bolivia's deliveries to the United States stockpile, and the council's action indicates that no improvement is expected in the second quarter. Malaya in particular can take full advantage of the further increase in quotas; it is not certain that Indonesia can. The council also announced that the Italian government is to sell 2,500 tons of tin over a period, starting in August. Tin prices showed little change after the meeting, cash metal closing on Thursday at £786 a ton.

BUILDING

Another Record Quarter

CONSTRUCTIONAL work by contractors reached a new record level in the last quarter of last year, and a high output appears to have been maintained so far this year. The value of output of work carried out by contractors in the fourth quarter totalled £509 million: though only £2 million more than the total for the previous three months, this is still a record for any quarter to date. The total value of work done during 1959 has been provisionally estimated by the Ministry of Works at £1,976 million. Because the basis of compiling these figures was changed at the beginning of last year, no direct comparison is possible with 1958; the Ministry estimates, however, that after allowing for the change in accounting methods and for changes in prices, output in 1959 was about six per cent higher than it had been in 1958. The annual rise in output for the building industry has only exceeded this once since the end of the war—between 1952 and 1953, when a seven per cent increase was achieved.

Of the total of £390 million of new work in the fourth quarter, the public sector accounted for £176 million; private housebuilding showed the largest rise, from £84 million in the third quarter to £88 million in the last quarter. Private industrial building fell by £2 million, to £69 million. A total of 249,381 permanent houses was completed in England and Wales during 1959, against 241,525 in 1958; private builders accounted for about 59 per cent of these, compared with 51 per cent in the preceding year.

New orders obtained by contractors in the fourth quarter totalled £420 million, against £371 million in the preceding three months; housing accounted for £171 million, private industrial orders for £68 million. Building activity still appears to be running at a high level, and in some places there may now be slight shortages of building labour.

RUSSIAN PATENTS

Worth Trying?

ANY would-be patentee of inventions in Russia receives a guide to practice and to the treatment he may meet in a report on "Soviet Patent and Trade Mark Law" prepared by the Patent Office delegation that visited Moscow last December and published by the Stationery Office this week. Patents as we know them are a rarity in Russia. An inventor can obtain a certificate of authorship, or an "attestation" for an improvement to existing technology, which is classified as a "rationalisation proposal." Even scientists who establish new objective laws, properties or phenomena of the material world can get a diploma to certify their discovery; and all three entitle their holder to rewards from the state in proportion to the value that it sets upon the invention or discovery. A Russian can take out a patent if he wishes; but if he does, he loses the right to a reward, has to pay fees, no longer gets the first 10,000 roubles of payment for any certificate of authorship tax-free, and has in effect to negotiate with the state for royalties. Not surprisingly, virtually no patents are taken out by Russians; foreigners account for the 100 or so a year that are still granted.

A Russian patent is superficially similar to one abroad; but the patentee can negotiate for its use and his royalties only with state concerns. He obtains the right to prevent others using the invention in Russia without a licence from him, and to stop others importing goods covered by the patent. But the government has the power to issue a compulsory licence, and to fix the royalties to be paid under it. Remedies for infringement seem to exist more in theory than in practice: there is a body of lawyers who can act for foreign clients, and infringement actions can be brought in the civil courts, but none has in fact ever been heard. The cost of maintaining a patent rises progressively through its life, totalling £1,550 over its 15 years of validity; so most foreign patentees, unless they plan to sell their patented product in Russia, are likely to see little value in the exercise, even though the Patent Office report suggests that they have nothing to lose but their fees.

Those who wish to see what Russian patents are like can now obtain in addition to the existing translation services, a translation of the Russian journal of patents and certificates of authorship—corresponding to the British Patent Abstracts—which is published by Pergamon Press at a subscription of £50 a year. The first issue contains the official report of an epic battle by an inventor named E. S. Roskin for a certificate of authorship on a method of producing a polyacrylonitrile fibre, which has been finally rejected, after a five-year struggle, on the grounds that it had first been developed abroad. This may tell more about the working of the patent system than much study of the law itself could do.

OVERSEAS BANKS

"Infantile Competition"

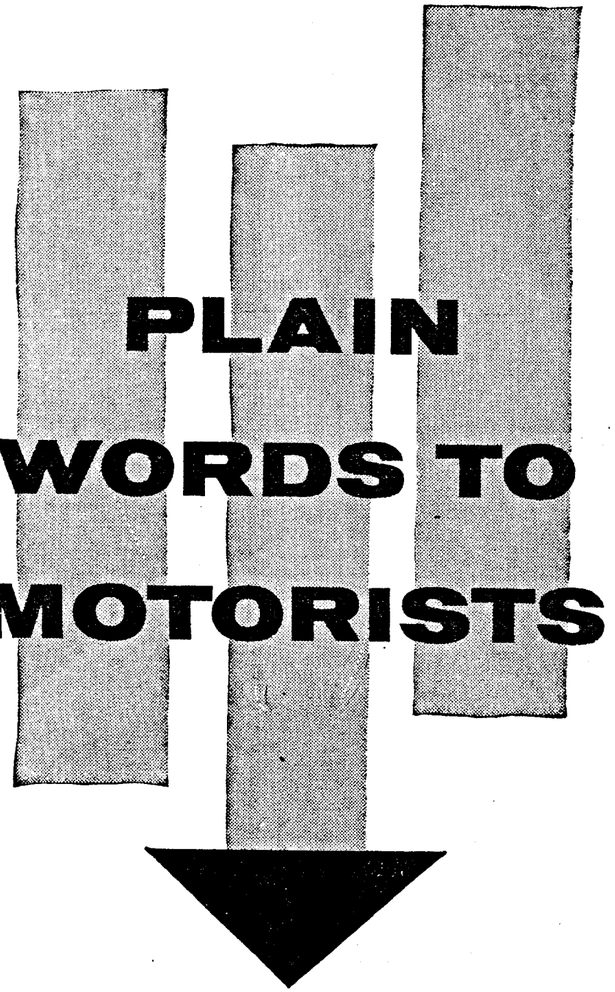
THE chairmen of three leading overseas banks whose statements have recently been published—the Bank of London and South America, the Chartered Bank and National and Grindlays—devote much space to discussing aid to under-developed countries. Sir George Bolton, chairman of the Bank of London and South America, again contributes an individual emphasis. He is sensibly sceptical of the "infantile competition" between the west and Russia to provide capital to "certain countries supposed to be politically important." More debatably, he still sees grounds to fear world deflation—though at the same time he expects a continued world-wide capital shortage. In his long and informative general survey, Sir George reports favourably on the measures against inflation taken by Argentina and Chile—Brazil is still a sorry exception.

The assets of the Bank of London and South America have jumped from £158 million to £205 million. The increase in business has not all stemmed from its traditional spheres; while in terms of earnings Argentina remains the most important area, it is now followed by London and Europe, then the United States, with Brazil in fourth place. A considerable expansion in the business of the London branch is reflected in the increase in short-term deposits with banks and financial institutions, from £22 million to £50 million. In sharp contrast to the experience of domestic banks, advances rose by only £2 million to £22 million, while holdings in gilt-edged rose from £19 million to £27 million.

Sir George reports that the Bank of London and Montreal is now firmly established and that its branches, serving the Caribbean area, have been increased from 13 to 21. Earnings from branches transferred to the new bank were excluded from the accounts of the Bank of London and South America for the first time in 1959, but nonetheless disclosed profits rose from £649,150 to £747,452. The dividend is kept at 10 per cent, but this year the interim as well as the final dividend was paid on the capital as increased by the rights issue made in November, 1958. On this dividend the £1 ordinary shares at 44s. 9d. yield 4½ per cent.

Deposits at the Chartered Bank rose by £27 million to £286 million, largely in the form of fixed deposits. Advances rose by 21¾ per cent, from £106 million to £129 million. Disclosed profits were slightly higher at £1,014,696 compared with £993,590; the dividend is again held at 15 per cent to yield 5.2 per cent at the current price of 58s. 3d. for the £1 stock units.

National and Grindlays Bank has often been rumoured as a likely take-over prospect (and again denied on Thursday). Total deposits rose in 1959 by £10.8 million to £153 million while advances rose by £11 million to £81 million. Disclosed profits were £404,708 (against £371,707) and the dividend of 12½ per cent is equivalent to the 15 per cent paid on the smaller capital for 1958. During the year the bank acquired interests in hire purchase companies in East Africa and in Ceylon, where it now has a 15 per cent interest in a sub-



The man behind an international star

Dr. FRITZ KÖNECKE leads Germany's famous Daimler-Benz A.G., whose star symbol shines in 136 countries.
Under his direction, cars, trucks, municipal vehicles, buses, vans constantly pour out of plants in Germany, Argentina, Brazil, Australia and India; come off assembly lines in Mexico, Belgium, South Africa, Ireland. These products must be sold—the Daimler-Benz star must be kept bright in the commercial skies of the world. To ensure this, Dr. KÖNECKE advertises his company internationally —where his export programme is served best—in TIME, The Weekly Newsmagazine.
TIME, The Weekly Newsmagazine, Berliner Allee 61, Düsseldorf.

FIVE SEPARATE WEEKLY EDITIONS PROMOTING SALES IN MARKETS AROUND THE GLOBE

TIME

GERMAN AUTOMOTIVE PRODUCTS... SOLD AROUND THE WORLD... *advertised in* TIME

Motorists expect to be free to choose the quality and brand of the products they require. Over the years, by exercising this right, motorists have shown their overwhelming preference for the brands of lubricating oil manufactured by the independent oil companies.

This right of free choice is now being restricted by the major petrol companies. Tenants of many filling stations are forbidden to stock and sell oils made by the "independents". At other filling stations an attempt is being made to enforce a ban on the sale of "independent" oils on the forecourt and from the equipment in the service bay.

To protect your right to freedom of choice, you should always order the make of oil you require by name. This insistence will support British motor traders in the fight against monopoly.

Issued by the **MOTOR ACCESSORIES MANUFACTURERS ASSOCIATION LTD.** whose principal object is:—*"To promote, by exchange of information and by concerted action, the unrestricted sale and display of accessories, tyres, batteries, oils and other products distributed by Members of the Association to the motor and allied trades".*

94 GLOUCESTER PLACE · LONDON · W.1.

sidiary of Mercantile Credit. The chairman is moderately optimistic about the prospects for the current year. At 42s. 6d. the 15s. shares yield nearly 4½ per cent—somewhat below the return offered on the shares of similar banks.

WHEAT MARKET

Soft Wheats Soften

STABILITY is not something that the world wheat market hankers after: it has it. The International Wheat Agreement provides the framework, but not the stability that nowadays prevails between its floor and ceiling prices. The price-fixing policies of government agencies in the main exporting countries see to that. Total supplies this season remain excessive, but the distribution of the surplus has changed slightly. The United States, Australia and France have more wheat for sale, but Canada and Argentina have less. The crops harvested in Australia and Argentina have proved bigger than expected, though not as big as last season's. World exports may be nearly as large as in 1958-59, when 1,260 million bushels were sold abroad, the second highest on record. Though European demand has declined because of good harvests last year, some Latin America countries and others need more wheat this year. The decline in American sales to traditional markets is now expected to be offset by bigger sales of wheat on concessional terms to under-developed countries, and the official forecast of American exports has now been raised to 440 million bushels, which would be as high as last year.

This season, as last, changes in shipment prices have been small. The second grade of Northern Manitoba wheat, at £27 10s. a ton cif UK, is about 10s. dearer than a year ago, and American hard winter wheat is a little cheaper at £26 a ton. But prices of soft wheat have recently been depressed by cheap offerings from the United States. American "garlicky" wheat has dropped by £1 to about £22 a ton, and 2 red winter (the same wheat but without the garlic) is over £1 lower at about £22 5s. a ton. Both grades are much cheaper than the soft wheats offered by Argentina and Australia, the other major suppliers, and also undercut the prices asked by smaller suppliers like East Germany and Russia.

SHIPBUILDING

Feeling the Pinch

BRITAIN'S shipbuilders now have a total order book of just over four million gross tons; at their present rate of output, this should provide an average of between two and three years' work. But the average conceals some wide variations, and it has been known for some time that many firms were accepting any work they could get, on unprofitable terms or even at a loss, simply to keep their yards employed. Now one shipyard has admitted this: the Sunderland firm of Barton and Sons announced last week that it has booked contracts for two ships, in the face of intense competition, at prices so low that they will probably be built at a loss. One of the contracts is for a 9,000 ton cargo liner, the other for a 12,600 ton closed shelter deck cargo motor ship. In addition, the firm revealed that three other ships have been brought forward on its order book as a result of cancellations.

It is likely that this situation is being felt to some degree by shipbuilders in other countries as well; despite the fact that there are now nearly six million tons of shipping laid up throughout the world, total shipbuilding capacity continues to increase, and it has been estimated that there is now enough capacity to replace the world's merchant fleet completely in ten to twelve years—roughly half its estimated life. The problem of over-capacity has been increased for many firms by the recent trend to larger ships, particularly tankers; some yards have had to undertake substantial modifications in order to build bigger vessels, and either

Storm in a Coffee Cup

ABOUT eighty new brands of instant coffee have appeared during the past fifteen months, many of them since October. They have arrived because the companies that dominate the market—Nestlé and A. Bird & Sons (Maxwell House) have sold not wisely but too well. Nestlé built up the taste for instant coffee after the war: retailers were given a higher-than-average margin, with a profit of up to 9d. on every 3s. 6d. tin. The tins contain 2 oz. of "soluble solids of pure coffee"—not simply coffee ground down very fine, but coffee percolated and then evaporated to leave a fine powder. It would on the face of it represent coffee at about 28s. per lb.; but makers claim that it takes three pounds of coffee beans to make a pound of instant coffee. Bird (which is a subsidiary of General Foods of America) started buying its way in with special offers of Maxwell House about five years ago, and this widened effective margins even further.

With a regular price known to every customer, an easily identifiable, fast-selling, nationally known product and good margins, instant coffee was a natural choice for the early price cutters. The price dropped by degrees to 3s., against Nestlé's resistance, which crumbled following the general weakening of price maintenance and Maxwell House's willingness to have its coffee sold at any price. Instant coffee became the nation's most celebrated loss leader: the price fell to cost and below in some stores. Competition kept it there and retailers found themselves in a trap. They were doing a wonderful business for Nestlé and Maxwell House, without any profit to themselves.

Retailers are escaping by marketing their own private brands of instant coffee, which can be sold for a few pennies above 2s. a tin (one private brand is sold at 1s. 11d.), with a profit to the retailer. Nestlé and Maxwell House cut their recommended prices, and effective prices fell with them: 2s. 6d. is a frequent tag. Chain stores and multiples rely on the prestige of their own names for new labels (Sainsbury's is one); other retailers have invented new names, although the supply must be running out.

Nestlé still refuses to pack coffee for other people's private labels, but Maxwell House packs for Woolworths and Littlewoods (among others); Lyons, which introduced its own proprietary brand last October, decided to pack for the Spar and Unigro voluntary chains, and undercut itself with a junior brand called Horniman. Much private-label coffee comes from the Sol Café Manufacturing Company which puts into tins in Derbyshire what it produces in New York—a process made possible when restrictions on the importation of coffee powder from America were lifted last June. Another American, Tenco, deals through its German subsidiary, Ibenco, which packs in Hampshire. Small quantities come from Israeli firms (one is associated with Sol Café) and other West German companies.

In spite of the proliferation of new brands, Nestlé retains about 70 per cent of the market for instant coffee, in which most of the growth in coffee sales has taken place. About £40 million worth of coffee was sold in Britain in 1959, 62 per cent of it instant, 13 per cent of it ground or as beans, and the rest in liquid essence form. The whole market is growing, but the liquid essences are losing ground within it. (Tea and cocoa sales per head were slightly lower last year than in 1958, but the companies blame it on the hot summer.) About a quarter of the instant coffee market is held by Maxwell House, and all the other brands share the five or six per cent that is left.

Nestlé is sure that brand loyalty will keep their sales growing: they see private labels hitting their competitors and liquid essences first. All companies are looking at prices, for the price of the raw coffee most used in instants fell by about a third in 1959, and there is talk in the trade that Nestlé and Maxwell House are making the customers pay for the rapidly growing advertising budgets designed to keep them.

cancellation or completion of one of these accounts for a bigger part of the firm's order book than the smaller types built a few years ago.

This competition has naturally had its effect on prices, and it is no longer possible to include "escalator clauses" in contracts to provide for possible future increases in labour or material costs. In addition to the unwelcome burden of providing for this contingency, shipbuilders are also being faced with a demand that competitive tendering, which was the normal practice before the war, should replace the present negotiated-price contracts. It was announced in Parliament this week that the Admiralty would in future return to competitive tendering for warships; in making the announcement, Mr Orr-Ewing added rather gratuitously that the Admiralty was "confident that the shipbuilders will respond to the challenge that this healthy competition will provide."

WOOL AND WOOL TEXTILES

The Market Rallies

Wool prices have rallied. Crossbred wools are now about five per cent dearer than three weeks ago; merinos have not gained quite as much, though they continued to edge higher this week while crossbreds held steady. The rally seems to be mainly attributable to a sharp bout of buying in Bradford. In the last week of February prices of tops in Bradford were so cheap that spinners (and their customers) decided to buy heavily, and some topmakers sold about one month's output in three days. Topmakers, in turn, covered their sales by purchases of raw wool, and though they may have obtained less wool than they wanted, their bidding helped to strengthen prices in Commonwealth markets. Another encouraging item is that the decline in activity in the British wool industry was checked in January, when the rate of consumption of raw wool was about three per cent higher than in December.

British exporters of wool fabrics to the United States have one crumb of comfort for the virtual closing of that market for the rest of this year. The report of the US Tariff Commission on the protection of the wool textile industry has been sent to the President, and is understood to find that no increase in the existing tariff is justified. Hence there is no obstacle in the way of re-negotiating the wool tariff quota, whereby imports of wool fabrics at the 25 per cent *ad valorem* duty are restricted to an amount equal to five per cent of domestic production, currently 13½ million lb a year, imports in excess of this quantity paying the penal duty of 45 per cent. The news from Washington came shortly after this year's quota had been filled. The exporting "season" to the United States has shortened progressively since the quota was introduced late in 1956; in 1957 the quota was filled on July 25th, in the following year on July 2nd and last year on May 19th. For the British industry, whose business is in fabrics for the spring and autumn seasons, this form of protection is utterly disruptive, and all the more maddening because it works to the advantage of Japan and Italy, which sell non-seasonal lines. The British industry is now pressing for an early start to the negotiations, and raising alarm lest they should not be completed before the end of the year.

THE JASPER CASE

An Alleged Forgery

At a further hearing of the charges against Mr Jasper, Mr Grunwald and Mr Murray at the City of London Court on Friday of last week, Mr Alfred Double, a joint manager of Lloyds Bank City Office, gave evidence of loans made to Mr Grunwald. He said that on August 18th last, Mr Grunwald requested the loan of £1 million in connection with the Lintang acquisition for which Mr Grunwald said that 88 per cent acceptances had been received. Mr Grunwald offered as security 1½ million Lintang shares, one million shares in Reliable Property and 100,000 shares in Palmerston Investments. Mr Double said that his bank agreed to lend £500,000 against half the securities offered, and on August 27th Mr Grunwald was given a draft for that amount. Next day, following a visit from Mr Tobin, solicitor to Mr Maxwell Joseph, the bank agreed to lend a further £250,000 to Mr Grunwald against Mr Tobin's guarantee and a further one million Lintang shares deposited by Mr Grunwald. Five days later arrangements were made for this loan to be taken over by Mr Tobin and Mr Joseph.

On August 31st, Mr Double said, Mr Grunwald again visited the bank and asked for another £500,000. He brought with him a letter that appeared to be signed by Mr Murray of the State Building Society. Mr John Mathew, the prosecuting counsel, said that the letter stated that the society would be prepared to lend on February 1st £1¾ million on the securities of all properties belonging to R. E. Jones Ltd. The letter set out 11 properties, all hotels, and enclosed the society's balance sheet, showing assets of £10.5 million and mentioning that assets were then £16 million and rapidly growing. Mr Grunwald was told that the bank could not agree to lend him any further money. In reply to Mr Michael Havers, for Mr Murray, Mr Double said that the letter had no reference number on it and appeared to be signed by Mr Murray. Mr Havers said: "It will be my evidence at a later stage that this letter is a forgery." When Mr Double later produced the original letter together with a copy of his reply, he said that the reply made it clear that he was referring to the letter handed to him by Mr Grunwald and he had no reason to think that the reply had not been delivered. He had not received any denial or acknowledgment of any kind. He said: "I was not looking for any acknowledgment. My letter was an acknowledgment."

The hearing will be continued on Wednesday.

SHORTER NOTES

Situations Vacant: The largest tanker ever to enter the Thames, the 65,000-ton *Olympic Challenger* owned by Mr Aristotle Onassis, recently left Tilbury and is now stated to be en route to the Mediterranean, at half-speed, "awaiting orders." The tanker last week discharged a part-cargo of 45,000 tons of crude oil at Thames Haven, for Shell; it has now no guaranteed employment in view, and may have to be laid up. Completed last June, it was unemployed until January; its sister ship, the *Olympic Champion*, is at present laid up at Kiel.

★

British Petroleum has signed an agreement to supply a company in the Japanese Ishibashi group with liquified petroleum gases from Kuwait, beginning in 1961; this will involve the construction of a liquefaction plant in Kuwait and possibly the building of a large LPG tanker specially for this contract. These gases—propane and butane—can be transported liquid in pressure tanks more simply than the methane which the Gas Council and other interests are now experimentally transporting in refrigerated tankers, but the Middle East producers would be equally glad to sell methane once the technique and economics of shipping it are established: Aramco has been offering natural gas since last year to anyone who is prepared to come, buy, and take it away.

★

Trading profits of Relay Exchanges, the radio relay and television rental firm, rose by 43 per cent last year from £2,317,155 to £3,330,704 and net earnings rose by £677,325 to £1,068,701. The directors forecast a final ordinary dividend of 10 per cent on the larger capital as increased by last year's rights issue and 50 per cent scrip issue.

SAVE AND PROSPER WITH CROSBY UNIT TRUST

Why it is better to Save and Prosper than just to save.

It is only by investing in profitable and growing companies that you can be sure of sharing directly in the prosperity of Britain, the Commonwealth and the U.S.A.

The questions remain—how can the modest investor spread his money over a wide range of companies? Can he spare the time to watch over his investment portfolio? Can he afford expert advice? How can he buy and sell with the greatest ease?

How a Unit Trust helps you Save and Prosper.

A unit trust provides the perfect answer. In a unit trust large numbers of investors pool their resources in a trust fund which is used to buy securities. Each investor's contribution to the fund is represented by a proportionate number of units. Suppose for example, that these investors bought a million units of 10/- each. Some members might only have bought 10 units, costing them £5 in all. But the combined total of the whole fund would be £500,000. The managers of the trust then invest this £500,000 in the shares of a wide range of companies, which they keep under continual review.

Now if the value of the shares bought goes up, so does the value of each unit. For example, if the value of the whole fund rose 50% from £500,000 to £750,000, the value of each 10/- unit would rise 50% to 15/-. And at any time you can buy new units, or sell back those you already hold. The fund is valued daily and the buying and selling prices of units are calculated according to Board of Trade rules.

As an additional security all the shares owned by the fund are held on behalf of unitholders by a trustee, usually a bank, which collects and distributes to unitholders the income earned by the investments in the fund in direct proportion to each unitholding.

But *DON'T FORGET* that shares can fall as well as rise. So when you invest choose a *proved management* and a strong portfolio of shares.

Crosby Unit Trust. Its management and policy

It will be obvious that the skill and experience of the management of a unit trust are all-important. The Crosby Unit Trust enjoys exceptional advantages in this respect. Founded by the well-known investment banking firm of Robert Fleming, it has now merged with the Save-and-Prosper Group of Unit Trusts, the largest in the U.K., with total invested funds of over £75 million. The directors of the management company (Crosby Trust Management Ltd.) are:

Sir John Benn, Bt. (Chairman)
Sir Arthur fforde
J. G. S. Hobson, O.B.E., Q.C., M.P.
The Hon. H. N. Money-Coutts, A.C.A.
Lewis G. Whyte, F.F.A.
Lord Wyfold.

The trustees are Barclays Bank Limited.

The policy of the Trust is to invest in strong, sound companies whose dividends, being in general well covered by earnings, are likely to increase more than average in times of prosperity and would be well protected during any recession. Investments are spread over nearly a hundred sound, growing companies in Great Britain, the Commonwealth, and the U.S.A.

Crosby Unit Trust. Its record of growth and income.

Crosby Unit Trust was founded in mid-December 1958. By mid-December 1959 its units had appreciated 42%, and of the British companies held by the trust, 67% increased their dividends.

It's easy to Save and Prosper with Crosby Unit Trust.

There is nothing complicated about buying Crosby units. You can buy as few as ten, or as many as you wish, without any difficulty. Simply fill in the coupon below. And not even this minimum applies to the new Crosby Save-and-Prosper Plan. If you can make regular savings of as little as £1 a month, you can purchase Crosby units this easy way without any fuss. Send for particulars today on the coupon below, and get off to a good start by buying your first Crosby units at the same time.

Crosby Unit Trust is a member of the Save-and-Prosper Group, the largest group of unit trusts in the United Kingdom, and is managed by Crosby Trust Management Limited, a member of the Association of Unit Trust Managers. Trustees of the Crosby Unit Trust: Barclays Bank Limited.

TO CROSBY TRUST MANAGEMENT LIMITED 30 CORNHILL, LONDON, E.C.3.

Please send me without any obligation details of the Crosby Unit Trust and its Save-and-Prosper Plan for investing regular savings.

COMPANY MEETINGS

THE CHARTERED BANK

CONTINUED EXPANSION OF BUSINESS

ACCOUNTS REVEAL HIGH DEGREE OF LIQUIDITY

LARGER PROFITS DESPITE INCREASING COSTS

IMPORTANCE OF RAISING ASIAN LIVING STANDARDS

MR V. A. GRANTHAM'S STATEMENT

The One Hundred and Sixth Annual General Meeting of The Chartered Bank will be held on March 30th at 38 Bishopsgate, London, EC2.

The following is an extract from the statement by the Chairman, Mr V. A. Grantham, which has been circulated with the report and accounts for the year 1959:

THE BANK'S BALANCE SHEET

The accounts indicate the continued expansion of the Bank's business and reveal a high degree of liquidity. The total of our own balance sheet at £270,390,101 is the highest we have ever recorded being £27,271,915 up on last year's figure which was itself a record.

Our Consolidated Balance Sheet shows a total of £317,021,709, which is £31,591,207 up on that of last year.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

The net profits for the year at £1,014,696 are higher by £21,106 than last year, in spite of continually increasing working costs in all parts of the world, and may be considered very satisfactory.

We paid an interim dividend in September last of 7½ per cent, less income tax, absorbing £229,688 and it is now proposed that out of the balance available a final dividend of 7½ per cent, less income tax, be paid, costing £229,687. We have repeated the allocations made last year of £250,000 to Bank Premises and Furniture and £125,000 and £20,000 respectively to the Pension Fund and Widows' and Orphans' Fund. £150,000 has been transferred to Reserves for Contingencies and the increased balance carried forward is £491,994.

THE IRANO BRITISH BANK

Our joint venture in Iran has now completed its first working year and I am pleased to report that good and steady progress has been made, and this is reflected in the figures of the first balance sheet. These good results have been achieved mainly through the industry and application of the staff, both European and Persian, and it is particularly gratifying to find a feeling of loyalty amongst the bank's national employees and the promise that many of them will, with more training, be able to fill key positions in the expanding organisation.

This expansion so far has led, in addition to the head office in Tehran and the original branch in Khorramshahr, to the opening of a bazaar branch in Tehran and a branch at Abadan. A further branch is shortly to be opened at Ahwaz. All this has been achieved in the face of a general shortage of local funds, increasing competition from new banks and perhaps a less helpful officialdom than we were led to expect.

Outwardly, at least, the country gives an impression of stability although the Bank Melli is having to take steps to conserve foreign exchange. Without being critical of the present arrangements, I believe that it would facilitate trade and be in the country's interests were the Bank Melli to deal freely in foreign exchange, both ready and forward, with the commercial banks at special rates in a manner similar to the operations of central banks in other countries.

The great need is, of course, for exports in addition to oil.

OVERSEA SURVEY

As a bank primarily engaged in financing oversea trade, we were vitally interested in the findings of the Radcliffe Committee, for in 1957 when it was appointed, there was widespread anxiety that internal inflation might jeopardise the hard won progress which had been made in rehabilitating and modernising British industry and there was considerable doubt, both at home and abroad, whether it would prove possible to maintain sufficient confidence in sterling to assure its status as a major international medium of exchange.

In the light of the steps taken by the government in the interim to deal effectively with both those problems it is interesting to note that the report, which was published in August, gives tacit approval to the working of the monetary system and I hope we shall hear no more from the politicians and economists who would restrict the use of sterling in international trade. The Chartered, and all other British banks trading overseas, welcome the continuance of conditions which allow us to handle worldwide trade and to contribute thereby to the United Kingdom's invisible earnings.

Last year I mentioned the European Economic Community and the fears that existed in Asian countries that any addition to the six countries of EEC might mean surrounding Europe with tariff barriers. There was, in fact, no such addition but in any case fears were, to some extent, allayed by figures produced at the recent meeting of GATT in Tokyo showing increased trade between the EEC area, and in particular the undeveloped countries. This helps to confirm my own views that an integrated free trade area for the whole of Europe must ultimately result in an expansion of the trade of the Asian countries in which this Bank has branches, and I trust that Her Majesty's ministers and officials will, in the not too distant future, see a successful outcome to the patient and difficult negotiations in which they have played such a prominent part.

CYPRUS

Cyprus commences its independent career with a very substantial trade deficit and, although the government finances have recently benefited from the cessation of the emergency and from the increased yield of import duties, it is clear that the new state will be in need of assistance from abroad for some years to come. The British government has already indicated that it will be giving financial support and this, with expenditure in respect of British forces based on the island, will continue to be a material factor in sustaining employment and trade.

LEBANON

By the end of 1959 the Lebanon seemed to have recovered almost completely from the disturbances of 1958. Present indications are that the country, given tranquillity, should have a good future.

IRAQ

There were signs during 1959 of a gradual return to more normal business conditions. This was helped by a rise in oil exports, which totalled thirty-nine million tons. This was unfortunately offset to some extent by poor harvests and it was necessary for the government to prohibit the export of barley and to arrange for the import of fairly large quantities of wheat.

Import policy was liberalised in the second half of the year, but the resultant improvement in business conditions was offset by the steep rise in overhead charges. The country is still in a state of transition and it is too early yet to say how the new pattern of trade relations will work out. It is clear, however, that, given peaceful conditions, the country will go forward with its development schemes and will for many years be a buyer of both capital and consumer goods.

PERSIAN GULF

New "Gulf rupee" currency notes were brought into circulation during the year by arrangement between the government of India and the Rulers. The great increase in the commercial importance of the area during the past twenty years has made the continued use of ordinary Indian rupee notes as customary tender an embarrassment to the Exchange Control authorities in India. The distinctive "Gulf" notes preserve the link with India but ensure that control can be maintained.

Bahrain. Bahrain is still dependent for its development on its oil revenue which shows little change. Business has continued satisfactorily, but with three banks in competition and a fourth likely to open soon there is a temptation for merchants to over-trade and the bazaar to become over-stocked.

Doha. Doha has had another uneventful year, with development continuing. Oil royalties are buoyant and off-shore drilling has been resumed.

Sharjah. Business has shown some signs of improvement. Various development projects are in hand at the neighbouring port of Dubai.

HADHRAMAUT

Mukalla. Business shows a distinct improvement but is still on a very small scale. So far no oil has been found in the area though prospecting continues.

ADEN

Following the first elections under the new constitution last January a measure of self-government has been introduced into Aden Colony and it appears to be working effectively.

The fall in the year's trade figures from those for 1958 can be attributed to strikes in the oil bunkering establishments, which were particularly serious for a port dependent upon an entrepot trade. In the Western Protectorate the cotton producers had a poor year, but there is confidence that the crop for the coming season will be better and, meanwhile, irrigation facilities are being extended to expand substantially the area under cultivation. Politically, more stability was given to the Western Protectorate by the formation last February of a federation of six states.

INDIA

Thanks to generous assistance from abroad the shortage of foreign exchange which threatened to retard India's development last year was overcome, and it appears that most of the production targets will be reached in the second five-year-plan which is approaching its final year. India is now at the stage when it should begin to reap the benefit of the vast expenditure which has been made under the two five-year plans although there has been criticism, much of it well founded, of the various priorities under the plans and also of the methods by which they have been financed. This criticism, however, should not be allowed to obscure or minimise the very real progress which has been made in many sectors of the national economy. The completion of the three new steel plants and the expansion of the two existing ones should assist in the further development of the many lighter industries in the private sector, which have been established during the last few years and are now going into full production. In order to finance this development on a national scale it has been necessary to resort to the potentially inflationary expedient of deficit financing, and it says much for the manner in which the Indian authorities handled the country's internal finances that there has been no major inflation. In fact, the price level has risen less in recent years than in many highly industrialised countries with stronger economies than India's.

In the banking field the expansion in deposits, to which I referred last year, has continued and the liquidity of the banking system has increased. There would seem little point, therefore, in the prevalent practice of quoting high deposit rates in order to attract funds for which profitable employment is lacking. It was reassuring to have an official government statement in the Lok Sabha that the Planning Commission had come to the conclusion that the nationalisation of banks was not a desirable step.

PAKISTAN

A year ago it seemed that the situation in Pakistan was rather more hopeful than for some years past and in the event the country has made satisfactory progress during 1959. In recent years governmental instability and lack of leadership have cost Pakistan dear, and for this reason the population has responded well to the military regime which at present controls its affairs. Stern measures were required to eradicate the corruption and inefficiency which had previously been such a feature of the country's adminstration and it is to the credit of the present regime that, although it has dictatorial powers, it has used them with moderation and with justice.

More settled conditions have been reflected in a noticeable improvement in Pakistan's trading and payments position and the augmented foreign exchange holdings have permitted a more liberal import programme, which will be of benefit to the country's new manufacturing industries.

It is encouraging that the government has effected an improvement in the agricultural sector of the economy in the relatively short time since it assumed power and, once again, Pakistan's prospects for the coming year appear reasonably favourable, particularly if the improved relations with India lead to a settlement of some of the outstanding disputes between the two countries.

CEYLON

Politically the past year in Ceylon has been a difficult one. The assassination of the Prime Minister, Mr S. W. R. D. Bandaranaike, brought to a head the instability which has been apparent for so long and the difficulties experienced by his successor in holding the government together led to the dissolution of parliament in December. A general election is due to take place in March and, unless the country obtains a government with a working majority sufficient to cope successfully with the many problems which have accumulated and require resolute action, the future outlook is poor indeed.

In the economic field a basic trouble has been the labour disputes, which have been allowed to develop and continue to the extent of jeopardising the country's production and trade and the living standards of the population. In the circumstances it is satisfactory to be able to note the extent to which the producing and mercantile communities, by adopting a "business as usual" policy, have been able to maintain the trade of Ceylon despite the handicap of strikes and political unrest and to raise tea production once again to a record level.

BURMA

Under the able leadership of General Ne Win, the "caretaker government" which has been in office for just over a year, has brought about a steady and appreciable improvement in conditions in Burma. The drive by the government against terrorists has been singularly successful and law and order in all but a few outlying and isolated areas has now been restored.

The attainment of greater internal stability has, notwithstanding the restrictive effects of excessive state interference in commerce, resulted in improved trading conditions. A direct outcome was that exports have increased in value although a secondary factor contributing to this was an example of a more liberal policy, that by which the State Agricultural Marketing Board helped to expand rice shipments to oversea markets. Quite rightly, the government regards it of the greatest importance to expand agricultural production but the emphasis has been on more intensive cultivation of the rice crop and improved facilities for milling and storage rather than on extending the acreage under tillage.

SINGAPORE

The first elections under Singapore's new constitution were held last May and the new government, which was voted into office by an overwhelming majority, has acted soundly and responsibly. Great care has been taken to avoid any official action which might have effects prejudicial to trade and industry, and in particular to the island state's traditional entrepot business. The government clearly recognises that the living standards of the expanding population can only be assured and improved if the national income grows at the same rate and conditions in Singapore remain attractive to capital and enterprise from abroad. By the imposition of strict economies the gap between revenue and expenditure has been bridged and the current financial position of the state appears sound.

Singapore's prosperity is likely to be based for a very long time to come on trade and it is, therefore, satisfactory that last year trade turnover increased. This was largely because of the high prices of rubber and tin and the increased export quotas of the latter commodity.

FEDERATION OF MALAYA

Under the wise leadership of Tengku Abdul Rahman the Federation of Malaya has had an encouraging start as an independent state and, now that the Alliance Party has secured a decisive majority in the general elections held last August, the country should again be assured of stable government for the next few years. One of the most satisfactory features of the period since independence has been the virtual ending of the emergency. Most of the country has now been declared "white," and the population can go about its business unhindered by security restrictions.

Last year was a favourable one for oversea trade and the improvement in business conditions in the United States was an important factor in stimulating demand for the Federation's staple commodities, rubber and tin. This led to a substantial increase in the total value of exports and, with imports remaining at much the same level as in 1958, a larger trade surplus is in prospect. An interesting development since the close of the year is that, as the result of a recent meeting of the Currency Board in Kuala Lumpur, it has been decided that the common currency, i.e., the Malayan dollar, is to continue in the Malayan and Borneo territories and remain linked to sterling at the 2s. 4d. parity. However, the Board is now to be permitted to invest up to about twenty-five per cent of its assets in locally issued securities instead of wholly in sterling securities as at present.

NORTH BORNEO

Once again North Borneo's trade turnover last year reached record levels and the modest surplus achieved in 1958 was substantially exceeded. The country should undoubtedly have a great future provided its inhabitants of differing races live and work in harmony with one

another and avoid the errors which have contributed to the misunderstandings that have arisen in nearby territories in South East Asia.

BRUNEI

Economically the territory still depends almost entirely on the oilfield although production has begun to fall off. It is estimated, however, that oil reserves will be adequate for at least twenty years and there is always a possibility that further fields will be discovered off-shore. In the circumstances it would seem worthwhile to encourage the development of a more broadly based economy. The sound financial position of Brunei State enabled the authorisation of a further loan of M$100 million to the Federation of Malaya.

SARAWAK

While there were hopes a year ago that 1959 would prove a more prosperous period for Sarawak than the previous year, there was little expectation that it would turn out to be the best trading year since the Korean war boom. The high prices ruling in international markets for the territory's principal exports, namely rubber, pepper and timber, plus the record illipe nut crop exported early in the year, substantially raised the aggregate trade turnover. As a result, notwithstanding an increase in imports and disregarding the oil transit trade, Sarawak has for the first time for four years enjoyed a favourable balance of trade.

INDONESIA

Sympathy must be felt for Indonesia, where galloping inflation dominates everything including politics. The daily depreciation of the internal value of the rupiah is the outcome of progressive deficit budgeting, aggravated by heavy expenditure on the armed forces for security measures, and it seems that, without a drastic change of policy, little can be done to halt government expenditure and the consequent rise in the note circulation.

After the President's Cabinet was formed in July ministers made commendable attempts to economise in such things as the use of transport, the collection of monies owing to government and action to revitalise and prune government departments and embassies abroad. For one reason or another these efforts were nullified, but the biggest setback came when the drastic measures taken in August to reform the currency failed.

On the other hand, it is encouraging that although the monetary situation is deteriorating the external trading position shows improvement. This is due partly to severe restrictions of imports but also to exports having been substantially higher in value than in 1958. Potentially the richest country in South East Asia, there can be little doubt that economic recovery would be swift if effective steps were taken to curb inflation, especially now that the principal export commodities are fetching good prices in the world market.

THAILAND

Thailand continues to enjoy the benefits of a stable regime.

Again last year the country had an adverse balance of trade but, in spite of this, the exchange reserves have actually increased thanks to the extent of American aid. The authorities are naturally concerned at the trade deficit and it is to be hoped that their exhortations to curb the import of luxury goods will have the desired effect. The alternative would be to impose import restrictions and it would be particularly unfortunate if this were to prove necessary, for Thailand's return to a free economy a few years ago was not only almost unique in Asia, but also a particularly courageous experiment which has, so far, abundantly justified itself.

VIETNAM

The firm rule of the government of President Ngo Dinh Diem, despite sporadic incidents, continues to provide the country with the law and order necessary if the damage of the long years of war is to be repaired and the national economy rehabilitated. The economic task which confronts the country is indeed formidable, for Vietnam is still dependent on American aid for approximately seventy per cent of its imports. The obvious remedy for this situation is to increase sales abroad of the country's staple exports; this has become more than ever necessary now that the United States, in view of its own balance of payment difficulties has indicated that a reduction in aid is to be made during the coming year.

CAMBODIA

The latest figures available indicate that the trade deficit last year was substantially lower than in 1958, mainly by reason of a contraction in imports. Export figures rose as a result of increased rubber production and a higher level of prices for this commodity. Rice shipments on the other hand have been lower.

Cambodia, apart from the cost of maintaining its armed forces, which is financed by American aid, is in the happy position of being able to pay for its own imports. The government is well aware, however, of the need to stimulate the development of agriculture, which is and will remain the mainstay of the national economy. Efforts have also been made to encourage the establishment of light industries and in this field foreign investment can play a useful part.

THE PHILIPPINES

The stabilisation programme which, as I mentioned last year, had been approved by the Monetary Board on the initiative of Governor Cuaderno of the Central Bank, has been instrumental in effecting an improvement in the economic situation of the Philippines during the past year. The disinflationary measures introduced early in the year were later supplemented by the controversial foreign exchange margin tax, which came into effect in July and has brought about a significant contraction in imports. For the first time since the war the country has enjoyed a favourable balance of trade and there has been an increase in the international reserve. The oversea trade surplus owes much to the industrial recovery in the United States, which stimulated demand for Philippine primary products, and to the high prices in international markets obtainable for copra and coconut products.

HONG KONG

Very little complaint, if any, has been heard from any section of Hong Kong's industry about business conditions in 1959 and some of the major industries are at present enjoying boom conditions. During the year the value of total exports showed a ten per cent. rise, nearly all of which is accounted for by increased shipments to the United States, and it was particularly fortunate that the restriction of textile exports to the United Kingdom has been more than counterbalanced by expanding markets elsewhere. Despite this general picture of prosperity it cannot be said that 1960 opens too propitiously for the Colony, for the increasing tendency for countries to apply trading restrictions against Hong Kong's products is disconcerting, especially as Hong Kong is now heavily dependent upon the marketing of its manufactured goods to sustain its economy and avoid large scale unemployment. Private building continued apace last year both in Hong Kong and Kowloon and there are still no signs of a slackening of activity in this direction. Even to the frequent visitor the rapidity with which the skyline changes is a thing to be wondered at, and perhaps nothing has done this more effectively than the completion of our own eighteen storeyed building, which is universally acclaimed as both imposing and attractive. Our next venture in this line is to be a new branch in Kowloon, which we expect to open towards the end of 1960.

CHINA

It is unfortunate that prospects for an increase of trade with the United Kingdom recently suffered a setback when the British government, in the process of administrative adjustments in its foreign trade policy, unfortunately conveyed the impression that it was increasing restrictions on Sino-British trade instead of relaxing them. It is to be hoped that the consequence will not be reduced sales of British goods to China, which would penalise those sections of British trade and industry whose enterprise in the last few years has gained a footing in the China market.

Our Shanghai office continues to do useful business, particularly in connection with the financing of China's export trade.

JAPAN

The steady recovery in the Japanese economy which had begun in 1958, and to which I referred in my last report, continued throughout the early months of the year and led to a new phase of industrial expansion. The results so far have been very satisfactory and exports have reached a record level, largely by increased shipments to the American market. As was to be expected with an expanding demand for industrial raw materials, imports have also risen, but the record rice crop which was harvested last year in spite of the damage done by disastrous typhoons holds out the possibility of Japan attaining self-sufficiency in this essential foodstuff within a few years, thus effecting a significant saving in foreign exchange.

With the trade deficit at its lowest since the war Japan's external reserves have increased steadily over the year, despite the fact that war reparations are being paid to four countries. It is evident that Japan is now reaping the benefit of the extensive modernisation and development of the country's industries which have been put in hand in recent years and as a result of which Japanese products embodying the latest advances in industrial technique, including automation and electronics, are competing successfully in markets throughout the world.

NEW YORK

In the banking field the most noticeable feature during the latter part of the year has been the rise in short-term interest rates; a rise accentuated by congressional reluctance to raise the legal limit on interest rates relating to government borrowing for periods exceeding five years. On the initiative of the New York Clearing House Association efforts are being made to revise the state banking law to permit, with certain safeguards, foreign banks in New York state to accept local deposits. A draft bill to this effect is to be considered by the state legislature early in 1960. We appreciate having had an opportunity of putting forward, in common with the other British banks concerned, our views on the proposed legislation and we will continue to follow closely the progress of the bill.

HAMBURG

Thanks largely to a stable government 1959 was for Western Germany another prosperous year and the economic activities were such that the authorities finally felt constrained to raise interest rates to check over-expansion. Possibly the only danger to continued prosperity is the inflationary pressure arising from the growing strength of the trade union movement and its demands on industry.

Our Hamburg agency continues to function as an active link between our branches in the East and trade and industry in West Germany. In co-operation with The Eastern Bank and The Irano British Bank our agency is gaining an increasing share of the financing of German trade with the Middle East.

WEST END, LONDON

Last autumn our branch in the West End of London was transferred to more modern and conveniently situated premises at 2, Regent Street. The design and décor of the new office have been commended in the technical press and a coloured illustration of a section of the public space appears in this report.

CONCLUSION

The importance of raising Asian living standards is now generally accepted and the highly industrialised nations have recognised that they have a responsibility for assisting in the process. This assistance will, for the most part, be in some form of aid, either direct from country to country or through one of the international funds. Those exporting the capital or making the grants, and the United Kingdom is one of the countries likely to be increasingly involved, will want to be sure that their contributions are genuinely devoted to the development of the receiving country and the benefit of its people. The tremendous national pride of the young countries will not allow them to accept aid with terms attached and yet, as some of these countries are run today, aid will not put them on their feet and give them viable economies.

The problem then is to find a formula which gives to these countries, with their consent, a control-free administration which would eliminate opportunities for bribery and corruption and a unit of currency having the same internal and external value, thus eliminating the rewards of smuggling and the other forms of currency evasion which run down the country's external assets—possibly in far greater sums than the aid received.

It is not uncommon these days for leaders of new nations to state that democracy does not work with them, but what is not said is that their inexperienced politicians and civil servants often find it beyond their powers to run restricted and controlled economies. Cannot, therefore, those advisers of the World Bank and the International Monetary Fund, and those negotiating direct loans with these countries, advocate with more persuasiveness the freeing of rates of exchange, the concentration of trade in private hands, with the elimination of that increasing economic menace, state trading, and the ceasing of discrimination against the nationals and the trading of those highly-taxed countries whose peoples are bearing the cost of the aid?

MO OCH DOMSJÖ AKTIEBOLAG

Örnsköldsvik, Sweden

NEW CAPACITY ADDED TO THE CELLULOSE AND CHEMICAL DIVISIONS

For a financial year generally characterised by weakening demand and declining prices for cellulose and other forest products the management of Mo och Domsjö AB was able to report a substantial increase in the output of nearly all the company's divisions. This is the substance of the report issued to the stockholders at the Annual General Meeting held in Stockholm on January 12th. An extract of the annual report is given as follows:

PRODUCTION

The company operates a number of plants in northern Sweden turning out wood pulp, paper, board, sawn timber, and chemicals. Pulp is still the largest item, but the chemical side of the business is increasing every year and the output exceeded 100,000 tons during the financial year, as shown by the following figures:

	1958/59 tons	1957/58 tons	1954 tons
Wood pulp....	353,000	342,000	237,000
Paper.....	16,000	16,000	9,000
Wall board....	50,000	63,000	39,000
Chemicals.....	102,000	98,000	67,000

The decline in the output of board was due to a fire in a board mill, the present capacity of which is 65,000 tons. The capacity of the pulp mills has been expanded substantially in recent years. New facilities have been added to the two sulphite mills whereby their combined capacity has been raised to 175,000 tons. Work in progress will give the sulphate mill at Husum a potential output of 250,000 tons in 1960. The mill is the largest pulp mill in Sweden. Technological improvements in pulp processing now permit the use of pine and deciduous trees for the production of sulphite as well as sulphate pulps, whereby the raw material supply position of the company has been greatly improved.

The chemical division is principally engaged in the production of chlorine and alkali for use in pulp processing and of organic chemicals. The organic side using alcohol as a base for synthesising has prospered satisfactorily, and the sale of glycol, butanol, octanol, industrial solvents, and synthetic detergents now exceeds in value the combined trade in sawn timber, wallboard and paper. The chemical division will be further expanded in the early sixties.

RESEARCH

The company's long term policy of subjecting the output to further processing in order thereby to raise the value of the end products, in addition to recovering valuable by-products, requires considerable investments in research. The company now maintains a research and development laboratory with some 100 employees, in addition to the plant laboratories. It is expected that the laboratory capacity will be further expanded within the next few years.

INVESTMENTS

During the last five years the company has invested Kr 160 million, of which Kr 47 million in the last financial year. This year a similar amount is foreseen. Aside from plant investments aimed at rationalising, the Domsjö sulphite mill and the octanol facilities will be considerably expanded during the year.

The power developments at Harrsele and Fällforsen, which have been in progress since 1952 and in which the company has a 47 per cent share, were completed last year. The company took delivery of 405 MWh from the new hydroelectric plant, in addition to 84 MWh by its own hydroelectric power plants and back pressure turbines.

TIMBER HOLDINGS

The productive timber tracts wholly owned by the company constitute 376,000 hectares. According to a recently approved forest conservation plan, the annual cut will normally amount to 20 million cu. ft., equivalent to 70 per cent of the annual growth. Last year the company's mills processed 75 million cu. ft., inclusive outside deliveries amounting to 55 million cu. ft. Forest maintenance now requires about Kr 4 million per annum.

PERSONNEL

The average number of industrial workers employed during the financial year was 3,440; technical and clerical staff numbered 927. The average number of full-time forest workers was 2,100.

MARKET

During the first half of the financial year the timber market was depressed, but an improvement accompanied by stabilised prices set in during the second half and the entire output was placed.

The pulp market, however, continued to suffer from world-wide conditions of oversupply. The Scandinavian producers agreed to reduce the output of all qualities save bleached sulphate. However, despite the generally depressed market, the company succeeded in increasing its sale of pulps.

The chemical end of the business enjoyed satisfactory sales, although competition from petrochemical producers abroad drove down prices on the domestic market.

CAPITAL AND RESULTS

During the financial year the share capital was increased from Kr 66 million to Kr 110 million through a stock issue. Two subsidiary timber companies were merged into the parent company.

Total trading income amounted to Kr 358.1 million (Kr 364.7 million) and the net profit to Kr 9 million (Kr 9.0 million), which together with Kr 15.6 million carried forward from the previous year made Kr 24.6 million available for distribution.

On the recommendation of the Board, Kr 1.5 million was transferred to the Debt Regulation Fund and Kr 14.3 million was carried forward. The balance, or Kr 8.8 million, was distributed as an 8 per cent dividend to the shareholders.

The report and accounts were adopted.

NATIONAL AND GRINDLAYS BANK LIMITED

IMPROVED RESULT DUE TO MORE FAVOURABLE CONDITIONS

MR J. K. MICHIE'S MODERATE OPTIMISM ABOUT THE FUTURE

The Annual General Meeting of National and Grindlays Bank Limited will be held on April 5th at the Bank's premises, 24 Bishopsgate, London, E.C.

The following is the statement by the chairman, Mr J. K. Michie, which has been circulated with the report and accounts for the year ended December 31, 1959:

Since the last Annual General Meeting the capital structure of the company has been altered by paying up out of reserves 2s. 6d. per share and by making the 4,562,500 shares outstanding fully paid at 15s. per share. The results in figures appear in the balance sheet. As was expected and intended this step has made our shares more popular with the investing public and at December 31st last we had 4,158 shareholders against 3,699 a year earlier. We welcome this more widely spread interest in the Bank, a trend which still continues.

BOARD AND EXECUTIVES

In June last the Right Honourable Lord Twining, GCMG, MBE, joined the Board. It is his intention to spend part of each year in East Africa and his wide knowledge of these territories will be of great assistance to our Management there as well as to the Board. His appointment falls to be confirmed at the Annual General Meeting and I confidently recommend him to you.

As you will have seen in the report of the Directors Mr Lely is not seeking re-election to the Board. He joined us in 1942 and I can truthfully say we could not have had an abler member or one more wishful to further the interests of the Bank. We shall miss his wide experience, his ability and his tactful personality and I am very sorry to see him go.

Mr William Kerr retired from the position of chief executive of the Bank on December 31st after over forty years' distinguished service culminating in three years as General Manager. He carries with him our sincere good wishes.

In his place Mr G. T. Gillespie has been appointed General Manager and in turn Mr H. D. Cayley succeeds him as Deputy General Manager. They have the full confidence of the Board

This year the total of our Balance Sheet at £163,035,588 shows an increase of £11,544,109 and our net profit of £404,708 is £33,001 higher than for 1958: but here I must point out that the profit figure is still considerably under that for the year 1957 and in consequence as I forecast last year, and as was confirmed by the Board when our capital alterations were announced in April last, we have not found it possible to increase the amount distributed to the shareholders. Two interim dividends each of 6¼ per cent have been declared making 12½ per cent for the year—the equivalent of the payment of 15 per cent per annum on the previous capital.

Although competition in all our territories has increased rather than diminished, in certain of them—London, India and Pakistan—conditions for banking as a whole became somewhat more favourable—or less difficult—as the year progressed, hence the improvement we have been able to show.

It is foolish to object to or become upset by the entry of newcomers in the field or of new types of competition for deposits although sometimes the efforts made to attract business—and I presume to justify themselves to themselves—are hard to bear. In such circumstances our only consolation—if indeed it is one—is that many besides ourselves are affected. What we must continue to rely upon is the quality of the service we offer and the elasticity and initiative we show in meeting new developments and changing conditions. Success depends largely on our staff and in this respect we are fortunate.

BANK'S SERVICES

One of the services we now offer is the management of personal investments. This activity initiated a few years ago operates from the Trustee Department, 13 St James's Square, London, S.W.1, and can be contacted through the Head Office or any branch of the Bank. With the steady widening of interest in the investment of savings through Stock Exchanges it is opportune to draw the attention of our shareholders and customers to this development of our business.

Our other ancillary services, our Trustee and Travel Departments now based entirely on 13 St James's Square and our Income Tax Department which functions both at 54 Parliament Street and at St James's Square, all made progress last year and as they become more widely known I am sure their development will continue. A Trustee Department is also available at our main branch in Nairobi, Kenya.

At the last Annual General Meeting I was asked if we had any capital interest in Hire Purchase. I am now able to report that we last year invested £50,000 in acquiring 20 per cent of the capital of the Credit Finance Corporation Ltd., a company registered in Nairobi and which operates in Kenya and Uganda. Conditions in 1959 were not particularly propitious but the company by eschewing speculative risks is doing a satisfactory business and we shall receive a dividend during this financial year.

We have also recently bought a small interest amounting to slightly less than 15 per cent of the capital of the Mercantile Credit Ltd., Colombo. The company has an issued capital of Rs. 1,500,000 and Lombard Banking Ltd. holds a somewhat similar share. The secretaries are our friends Vavasseur Trading Co. Ltd. and the company is making good progress.

Other possibilities of the same nature are under examination but at the moment I am unable to say more than that.

NATIONAL AND GRINDLAYS FINANCE AND DEVELOPMENT CORPORATION LIMITED

The net profit of the Corporation last year was £14,355 and a dividend of £10,000 has been declared.

In July, 1959, the Corporation declared a dividend of £50,000 ex previously accumulated profit and the balance now carried forward is £18,122.

INDIA

The picture of easing financial tension which I described a year ago has been more than justified by events since then, one reflection of this being a rise of Rs. 23 crores in her external reserves. Encouraging progress has been made in developing both industry and agriculture while traditional major exports of tea and jute manufacturers have found good markets at higher prices. Just as important, her cotton milling industry, like Lancashire's, has recovered from the doldrums of a year ago and is now pretty fully employed for both internal and external markets. In the export trade, however, Indian mills have to meet keen competition from Japan and China. The showpiece of India's industrial growth is the three new steel plants which it is expected will come into full production some time in 1961. It must also not be overlooked that both The Tata Iron and Steel Co. Ltd. and the Indian Iron and Steel Company Ltd. have undertaken large expansions to their plants and the total eventual output is estimated at 6 million tons of steel ingots against present needs of 3½ million. How exactly the extra capacity is to be absorbed in the time available is not yet clear.

So far as agriculture is concerned no rate of expansion can be too rapid to meet the needs of the growing population, particularly if a higher standard of living is to be achieved.

Coming to our own business the published results of indigenous banks clearly show that banking conditions were by no means easy in 1959 and this applied particularly in the earlier part of the year when call money in Calcutta fetched as high as 4½ per cent, a rate bordering on the unprofitable. During the second half of the year money became more plentiful and cheaper although the end-of-the-year demand brought the rate up to 3½ per cent and temporarily even higher. Banking advances were at a higher level than in December, 1958, but constituted a smaller percentage of total deposits which had grown considerably. Stock Exchanges and the capital market both reflect greater confidence than they have done for some years. The Reserve Bank rate remained at 4 per cent throughout the year.

To their wellwishers one of the most encouraging features of the year has been the getting together of the Governments of India and Pakistan over mutually outstanding problems. Certain border demarcations have recently been agreed and others are being discussed; the division of the head waters of the six rivers seems with the assistance of the World Bank in a fair way to being resolved while the most important subject of pre-partition debts is now being tackled. These steps are a tribute to the good sense and good will of both countries and no actions could contribute more to their mutual benefit and to the re-development of the natural flow of trade between them.

DEVELOPMENT PLANS

The progress and scope of the development plans of India and Pakistan are exciting the special interest of the World Bank and under its aegis a three-man mission of international bankers consisting of Sir Oliver Franks, Chairman of Lloyds Bank, Mr Allan Sproul, formerly Governor of the Federal Reserve Bank of New York, and Dr Hermann Abs, head of the Deutsche Bank, Frankfurt, is now in the East to study not only the problem of these two countries but how best donors and receivers of development loans can co-operate in sharing the burden and in making the best use of the money. It is well known for instance that this country is losing business and receiving countries are in some instances paying much higher capital costs for plant and machinery because the UK are unwilling or unable to grant sufficiently long-term credit. I suggest this is a question which should exercise the minds of the Export Credit Guarantee Department.

Apropos the subject of aid Mr Khrushchev has just paid a visit to India during which he signed an agreement providing India with a loan of £134 million to finance expansion in a number of industrial projects. He followed this up—and this is my only excuse for mentioning the matter—by imputing to countries other than the USSR ulterior motives when giving aid to India and others for their development plans.

It is somewhat difficult to follow the distinction Mr Khrushchev draws but we can safely leave receiving countries to put his remarks in proper perspective.

But would it not be infinitely preferable if instead of questioning the motives of others Mr Khrushchev would be willing that the USSR joined hands with the World Bank and contributed to the general pool on the basis of her claimed status as a world economic power. It would then be possible to redispose of world resources without economic or political strings being either attached or imputed. It would also be a positive move towards world peace through economics—or if you like "enlightened self interest" on a grand scale.

PAKISTAN

Under President Field Marshal Ayub's dynamic direction the face of Pakistan has been radically changed for the better since he succeeded to the Presidency in October, 1958. Taxes have been paid, labour relations have improved and confidence has been restored; and the results, a greatly improved balance of payments situation and a general upsurge of activity in all fields including the most important one of food production where at last incentives are being offered to the cultivator and security to the consumer.

What the President is aiming at is what he describes as "basic democracy"; he intends to start at village level—as indeed our own and America's democracies began—and his plans for a new constitution doubtless will be built on that foundation. However much we admire—as we rightly do—our own democracy and its development, it is becoming obvious that every new national field is not necessarily ready for the transplanting of the fully grown tree. It is also sound silviculture to transplant at a very early stage of growth.

With the increase in external reserves it has been possible to liberalise imports and this again acts as an incentive to the consuming public. Industrial development is steadily progressing and the second Five-Year Plan (1960-65) will accelerate this.

Inter alia the stated aims of the plan are:

- to increase the national income by 20 per cent,
- to increase the production of food grains by at least 20 per cent,
- to increase large-scale industrial production by 50 per cent, and
- to increase the *per capita* income of the people by 10 per cent.

The State Bank rate has remained at 4 per cent since mid-January, 1959.

The removal of the Federal Capital from Karachi to the rarer atmosphere of Rawalpindi is now under way.

CEYLON

Politics not to mention labour troubles continued to bedevil this otherwise fortunate island throughout 1959 and a crisis was reached, which in a sense still continues, when the late Premier Mr Bandaranaike was murdered in September last. The present situation may be described as an uneasily balanced truce pending the holding of an election. When held it is hoped the air will be cleared and concomitantly the way to a firm economic policy. As it is, despite good prices for tea and rubber Ceylon's external reserves have fallen steadily and in the twelve months ending December 31st last had dropped by Rs 193.7 million to Rs 689.6 million.

A rise of ½ per cent in the Central Bank rate to 3 per cent announced on December 17th was a fleeting gesture as it was rescinded on Christmas Day. Other countries other methods; but one cannot but think that a restriction of imports and a higher Bank rate will yet be inevitable parts of a firmer economic policy.

Ceylon has just entered into a new Rubber-Rice agreement with China which covers 160,000 tons of rice and 17,000 tons of rubber.

BURMA

After a period of sixteen months during which General Ne Win had acted as Prime Minister at the head of a semi-army administration, a general election was held on February 6th which has resulted in a sweeping victory for the "clean" AFPFL party headed by U Nu over "the rest" including the "stable" section of the AFPFL. It is now to be hoped that with such a mandate the Prime Minister will continue the cleansing operations initiated by General Ne Win, also the greater attractions offered to the cultivator. Last year exports of rice and rice products rose to a postwar high of 1,800,000 tons, and the new crop surplus for export is expected to top 2 million tons though prices may be a shade lower. Nevertheless these figures are a reflection of the progress that can be expected from a peasantry which gets encouragement and physical security. It is expected that over 60 per cent of the crop will be exported under Government to Government contracts.

A very recent decree issued by the outgoing Government will, if not reversed, gravely affect the businesses of many foreign firms and individuals in Burma including our own. It is to the effect that no imports of goods under agency agreements will be allowed after June 1st unless to Nationals of Burma. The exact implications and how the proposal is to be or can be implemented are now being awaited, but the effects obviously could be both widespread and harsh.

During last year Burma's foreign exchange reserves rose from £37 million to over £44 million and remittances of profits, etc., have been somewhat easier to obtain. The policy of restricting overdrafts to foreign controlled firms and companies has continued.

EAST AFRICA

The general picture of the three principal territories has recently been dominated by constitutional questions.

In Tanganyika agreement on a new Constitution has been reached. A conference held in London on the future form of Government in Kenya has just ended, and the issue of a White Paper by Her Majesty's Government on the conclusions reached is imminent. Following on the Wild Report the Governor of Uganda has outlined the British Government's proposals for constitutional advance and the reactions to these are awaited. Until these various and varying situations are resolved and stabilised it is inevitable that there will be uncertainty and reactions of an economic nature. For instance neither the Government of Kenya nor the Corporation of Nairobi has yet been able to raise the long hoped for loans in the London market and monetary conditions have been tight throughout the area.

KENYA

Despite the fall in other qualities of coffee Kenya's high-grade Arabica strain has up till now held its price and a crop of nearly 24,000 tons is expected to be marketed. Production of tea continues to expand and increasing quantities are being offered at the Nairobi auctions including growths from neighbouring territories. Grain crops were fairly satisfactory; pyrethrum is being more widely grown as a useful cash crop.

With the bringing into production of the factory at Athi river near Nairobi the immediate cement requirements of the East African territories are fully catered for.

UGANDA

The general trade of the Protectorate was considerably upset last year by the boycott of Indian-owned shops and stores in Buganda and later by tax riots in the Northern Province of Bukedi. The 1958/59 cotton crop at 400,000 bales did not quite come up to expectations although prices for export have been better. The crop now being marketed is expected to yield 335,000 bales while the yield of the 1959/60 coffee crop is expected to be maintained at around 80,000 tons. World prices for the Robusta grade produced have been falling steeply and are now around £150 per ton as against £210 per ton a year ago.

There is, of course, a guaranteed price to the growers but that means a drain on the reserve fund which is not a bottomless pocket.

TANGANYIKA

Tanganyika has been fortunate in that two of her staple crops, cotton and sisal, have done exceptionally well. Her cotton farmers in the Lake Province belied expectations by producing another record yield of over 180,000 bales, a

remarkable achievement considering that in 1951 the production was only 41,000 bales.

Sisal prices have climbed steadily and as I write top grades are quoted at £103 compared with £79 a year ago.

Coffee, her third main cash crop, has naturally shared the general experience of lower prices in so far as her production of Robusta grade is concerned.

ZANZIBAR

A much increased demand for cloves from the USA has in some degree come to the aid of the Clove Growers' Association, the exports to that market having exceeded the aggregate of the previous three years. Indonesia, however, continues to be the main outlet and is not a very reliable one. In consequence there has been little improvement in the heavily overstocked position. Other exports of coconut and copra have been fairly well maintained.

ADEN

A strike of oil bunkering employees at the end of the year interfered somewhat with the trade of the port which otherwise was fairly well maintained although its entrepot trade in coffee, etc., has naturally declined in value. The cotton crop grown in the Abyan and Lahej States is expected to yield 35,000 bales in 1960.

In October last we opened a sub-branch of the Bank at Khormaksar to serve the Royal Air Force units stationed there. This makes our fourth branch in the area.

A new capital of the Six Federated States is shortly to be established at Alittihad, twelve miles from Aden.

SOMALILAND PROTECTORATE

Good rains resulted in an appreciable increase in the export of livestock in the last quarter of the year.

Two oil drilling parties are in the territory, but oil or gas in commercial quantities has yet to be struck.

FEDERATION OF RHODESIA AND NYASALAND

The continued rise in copper prices, an increased tonnage and a record return from the 1959 tobacco crop have radically altered the economic scene and a favourable trade balance of well over £40 million is expected. Import restrictions have been lifted except on a few classes of dollar goods and there have been relaxations in the regulations governing hire purchase of industrial mining and agricultural machinery and certain domestic articles.

The Kariba power scheme is now well under way. A certain amount of power will be available this year and full production next year. The benefits to its economic supply area will be very great and should help materially in the development of industry in the Rhodesias.

The Bank rate remained at 4½ per cent throughout the year.

As you know, a Royal Commission under the Chairmanship of Lord Monckton has been appointed to make recommendations regarding the future of the Federation, a review of which falls to be made in 1961. The Commission will begin its hearings in the near future and its findings will be awaited with great interest.

GENERAL

The improvement in the financial affairs and status of this country which was well under way a year ago has continued and it cannot be gainsaid that the result of the Election last October gave a distinct fillip to this welcome progress. None the less we have recently been reminded by the raising of the Bank rate from 4 per cent to 5 per cent that expansion still requires the rein of financial control and that inflation is continuously lying in wait for the over-optimistic. Dearer money conditions in other countries, notably the USA, Canada and Germany, contributed to the arguments for a higher Bank rate.

In these circumstances it is hardly to be expected that the Budget will be a "soft" one although we can, I hope, look for some alleviation of our tax burdens.

About our own prospects for 1960 I am moderately optimistic. We have made an encouraging start, and in so far as our fortunes are in our own control there is no reason why we should not continue on the same plane of progress.

I have already referred to the quality of our staff to whom I wish to extend our thanks for most excellent work in a difficult period. From Directors and members of the General Management who have made comprehensive tours of our branches during the past twelve months I have had excellent reports of the morale and ability of our overseas staff, and needless to say the same is due to be said of the staff in Head Office and our branches in London.

LINGGI PLANTATIONS, LIMITED

SIR JOHN HAY'S STATEMENT

The sixty-fourth Annual General Meeting of Linggi Plantations, Limited will be held on Wednesday, March 30th, at 19 Fenchurch Street, London EC3.

The following is the statement by the Chairman, Sir John Hay, which has been circulated to Stockholders:

The substantially increased profits disclosed in the accounts now presented are due to an unusual combination of favourable factors. Our rubber crop exceeded our estimate and reached nearly 10½ million lb., a record in the long history of the company, and was harvested at a lesser cost, a notable achievement. At the higher level of prices prevailing throughout the greater part of the last financial year, the proceeds of this harvest exceeded the figure for last year by over £280,000. The first beneficiaries of our improved fortunes are the taxing authorities. Malayan export tax and cesses show a net increase for the year of £86,000, whilst income and profits tax are higher by £55,000. The net charges under these headings total £338,000 which represents 53 per cent of our trading profit.

Mindful of the need to provide adequately for the improvement of our estates, we have transferred from the remaining profit to replanting provision the sum of £75,000. I am hopeful that in future years our normal yearly charge will come near to meeting our requirements and that it will not be necessary to make again such a liberal transfer. After such provision, however, we are able to recommend an increased dividend at the rate of 6d. per 2s. share, free of tax, and to carry forward a larger sum.

Many years have elapsed since I made my first visit to the company's estates and their frequency has increased in the postwar years. The intimate knowledge I have gained of our properties in their varying stages of development and growth has proved invaluable to me in my direction of your company, whilst the constant renewal of personal contact with those who manage and administer the company's estates in the East has contributed to the development of a mutual understanding and confidence which could hardly be otherwise attained. My last visit was made little more than a month ago and I noted with satisfaction the progress that was being made in replanting, an operation that must continue even in a company such as this which has passed the stage of dependence on inferior seedling rubber. Our biggest operation in replanting now occurs on Sembrong estate, which was originally planted in the late 1920s. It was our first large-scale endeavour in the planting of selected stock and was for many years our highest producer. Here we propose not only to replace with more modern stock but also to extend. We have been successful in acquiring on reasonable terms 1,100 acres of adjoining jungle land. Our programme provides for planting this up over the next two years. As one of the oldest plantation enterprises, we are naturally numbered amongst the pioneers in replanting. On the occasion of my visit my attention was again drawn to an area on Rantau division which carries its third generation of trees, coming into tapping this year. Although this area has been under cultivation for over half a century the present stand of trees are well grown and give promise of high yields. The average output for the whole of our properties in tapping was over 1,000 lb. per acre. This policy of renewal and improvement is not limited to planting. Renewal and improvement in housing and equipment goes steadily on in accordance with a carefully devised programme. We have reaped considerable benefit from our latex installations, built in recent years. The demand for rubber in this form continues. In the short time that we have been engaged in the processing of this special form of natural rubber we have gained a high reputation for stability in quality and last year the group of which this company is a member achieved the distinction of being the biggest exporter from Malaya of concentrated latex.

TEA

In an interim statement issued under the date of January 18th we informed stockholders that after my examination of such tea planting as had been done on Mantin Estate I was forced to the conclusion that the prospects of success were not such as to justify further expenditure on this project. Although rubber of vigorous and strong stature had been successfully grown on Mantin, it became evident after persistent trial that the soil was not of the physical texture to sustain in healthy growth, in a variable climate subject to unseasonable droughts, an intensively

planted culture such as tea. Our experience in this matter demonstrates the risks inherent in pioneering in a new product in a strange environment. Such expenditure as has been incurred on this item has been written off and there are no further liabilities to be accounted for. The intention is to revert to rubber and much of the expenditure preparatory to planting already incurred will serve to that purpose.

OIL PALMS

Happily, our much larger interest in our other alternative crop is proving highly profitable. In Oil Palms of Malaya, Limited, with an issued capital of £1 million, we hold 466,666 shares of £1 each. A summary of that company's accounts is included in our report. It will be observed that that company's profits show a significant increase over the preceding year and that a dividend at the rate of 20 per cent is recommended This very satisfactory return on our investment may well be improved upon as the latest plantings of high yielding stock reach an advanced stage in production over the next few years.

THE OUTLOOK

That the demand for natural rubber should continue at a level sufficient to absorb all production, at a time when ample supplies of the synthetic substitute are available at a lower and more stable price, is significant and encouraging. We believe that demand over 1960 will continue at a high level and that releases from UK and USA stockpiles at the present moderate rate will serve only to replenish trade stocks which have fallen below what might well be regarded as the normal in relation to current consumption. It is difficult to know what significance should be attached to the Russian declaration of intent to liquidate stock. It would not be surprising if the true intent is merely to release some of the stock to Satellite countries for the requirements for which the original purchases were made.

STAFF

I should not conclude this statement without an acknowledgement of the services of the officers engaged in the management and administration of our estates and of all those who assist and work under them.

CABLE AND WIRELESS (HOLDING)

(Investment Trust Company)

ANOTHER YEAR OF PROGRESS

The thirty-first annual general meeting of Cable and Wireless (Holding) Limited was held on March 4th in London.

Sir Edward Wilshaw, KCMG, DL, JP, LLD, FCIS (the Governor), presided and, in the course of his speech, said:

I am able to report yet another satisfactory year in the Company's history.

Our earnings have increased by about £105,000 and the market value of our securities is twenty-two million pounds more than their book value.

Last year I gave you a full resumé of our achievements as an investment trust company during the decade then ended. I think you will agree that the accounts show very clearly that our rate of progress has been more than maintained in the first year of the second decade. Our gross income is £138,009 greater at £1,868,868, and our expenses slightly less than last year. Provision has been made for the payment of a total dividend of sixpence for each 5s. unit of stock.

Last year I was able to tell you that if you had purchased £100 stock in 1950 at a cost of £96 and had paid a further £35 in order to take up, from time to time, the additional shares to which that original holding entitled you (a total investment of £131) you would have possessed stock then worth no less than £392. Now I am able to point out that, without further cost, your investment of £131 in the Company is worth, in the market, £655, which is an appreciation of 400 per cent. We are now proposing to issue to you further free shares on a basis of one free share for each five units you already hold and to give you an opportunity to buy for 10s., shares in the proportion of one new share for each eight units held which at the time of preparing this speech were calculated to be worth about 17s.

ENCOURAGING THE SMALL INVESTOR

During the past year we have seen a stupendous upsurge of interest on the part of the small investor to seek suitable securities in which to place his savings. As you know, we in this Company have done much to encourage this class of investor by paying our dividends quarterly and providing for our Stock to be transferable in units of 5s.

It will be generally agreed that it is to the advantage of the country that encouragement should be given to savings and particularly to investment by the small investor. It is disappointing that, so far, the Banks have not made arrangements to sell recognised stocks over the counter, and, rightly or wrongly, there are constant references to the fact that stockbrokers wish to discourage the small investor because the business is not remunerative. It must not be overlooked that the small investor today may be the large investor of tomorrow, and it would be a pity if large companies were forced to sell their own stock direct to the public, and particularly to the small investor, with consequent ultimate loss to the bankers and stockbrokers. The report was adopted and at the subsequent extraordinary general meeting the capitalisation proposals were sanctioned.

CO-OPERATIVE PERMANENT BUILDING SOCIETY

The Annual General Meeting of the Co-operative Permanent Building Society was held on March 5th in London. In the course of his speech, Mr C. J. Dunham, the president, said:

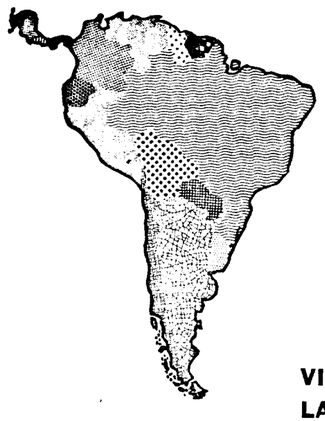
The year 1959 was notable for a record amount of money advanced on mortgage by building societies. The total amount loaned on mortgage by all societies amounted to well over £500 million.

The year, too, was notable for a reduction in building society interest rates after a whole decade of rising rates in which the mortgage rate had risen from 4 per cent to 6 per cent, and the share rate from 2½ per cent to 3½ per cent (income tax paid). I think it is now accepted that it is more realistic to expect the lending rate to vary between 5 per cent and 6 per cent.

The increased flow of money in the early months of 1959 enabled the Building Societies Association to recommend to its members in May last that rates be reduced, and we reduced our lending rate by ½ per cent and our share and deposit rates by ¼ per cent. We do not contemplate an early variation of rates.

The accounts show another year of good progress. The shareholders' and depositors' balances increased by £13 million to a total of £209 million.

Mortgage advances at £33 million were at a record level. The balance outstanding on mortgage increased from £168 million to £182 million. The total of the general reserve and the balance carried forward was £6,418,000—a net increase on the year of £755,000.



Cash and investment holdings at the end of the year amounted to £35,164,000 (a liquidity equal to 15.9 per cent of total assets), of which £9,225,000 was held in cash and Treasury Bills.

Of our total lending of £33,384,000 during the year more than £29 million was advanced to owner-occupiers. Of this sum over £3 million was advanced under the House Purchase and Housing Act, of which sum the Government have reimbursed the Society up to December 31, 1959, to the extent of £2,750,000. The Society continues to make advances under this scheme.

The demand for dwellings shows no sign of abatement. Yet there are certain misgivings which spring from the present position. There is the acute scarcity of land available for building in the places where buyers want to live, and the cost per plot is undoubtedly driving up house prices. Although actual building costs have remained stable over the past year or 18 months, the prices of newly built houses have risen, according to the Society's index, by some 6 per cent in 1959. This we attribute in the main to the cost of land. The scarcity of land is also leading to intensive redevelopment on the sites of older houses in the inner suburbs. It is in this direction that a good deal of future development in our large cities will trend, but this kind of development is being done piecemeal and not always in the most satisfactory way.

It is in these inner areas, too, that there may well be scope for building to let by private developers. Advocates though we may be of house purchase, building societies must recognise that not every family chooses to buy when there is a free choice between buying and renting.

The report and accounts were adopted.

"CAPACITY TO IMPORT"

VITAL FACTOR IN LATIN AMERICAN GROWTH

Sir George Bolton's views

Last year I referred to the increasing importance of the maintenance of the international flow of capital, and it is now becoming widely recognised as the most immediate and difficult problem in the political and financial field.

Before the first world war, European countries and particularly the United Kingdom, were the principal suppliers of development capital to Latin America; in the inter-war years this role was taken over by the U.S.A. In the first few years after the second world war, there was a large scale repatriation of British and other capital from Latin America, while U.S. investment grew rapidly. More recently, Latin America has once more become a net importer of long-term capital from Europe, though, with the exception of petroleum investments in Venezuela, the movement has not reached significant proportions. An important development has been the co-operation in 1959 for the first time of British and European banks in the provision of a stabilisation credit to the Argentine.

It is impossible to avoid the conclusion that most Latin American countries will make little progress in raising incomes per head over the next decade without substantial amounts of both private direct investment and official loan capital. The most critical factor in Latin American growth is still the capacity to import; this in the first decade after the war was augmented by the expenditure of wartime accumulations of foreign exchange, favourable terms of trade since vanished, and also by the inflow of capital. Since prospects do not appear favourable for the increase of export income, the maintenance of economic growth depends on attracting foreign capital, both in the form of money and industrial plant.

The industrialised countries' capacity to generate capital has increased, but the world-wide demand for capital is rising even more rapidly. Governments everywhere are committed to maintenance of high levels of employment and the improvement of standards of living while the world population is growing at an explosive rate.

Although Governments can encourage the flow of private capital to certain areas and themselves supplement it by official loans and through their contributions to international agencies, it is on their own ability to attract private capital that the underdeveloped countries must principally rely for a large part of their requirements. Private investors will be guided chiefly by the normal commercial considerations of risk and return on capital, and in this connection it is impossible to overstress the importance of the measures that are now being taken in a number of Latin American countries, to remove controls and to eradicate inflation, thereby encouraging the optimum use of domestic resources.

These are extracts from the review by the Chairman of the Bank of London & South America Limited, Sir George Bolton, K.C.M.G., for the year ended December 31, 1959.

The full text of the review and a copy of the Directors' Report and Statement of Accounts can be obtained from the Secretary, Section D,

40-66, QUEEN VICTORIA STREET, LONDON, E.C.4.

BANK OF LONDON & SOUTH AMERICA LIMITED

BRITANNIC ASSURANCE COMPANY LIMITED

RECORD NEW BUSINESS FIGURES

£3,446,000 FOR POLICYHOLDERS' BONUSES

MR FREDK. A. POWELL'S STATEMENT

The ninety-fourth annual general meeting of the Britannic Assurance Company Limited will be held on April 1, 1960. The following statement by the chairman, Mr Fredk. A. Powell, FCA, has been circulated with the accounts.

The most significant feature of 1959 was the big improvement in the market values of our stock exchange securities, particularly in our substantial holdings of ordinary stocks and shares. Two years ago we had to provide against heavy depreciation and wrote off no less than £1,850,000 and made transfers to our investment reserve funds of £1,250,000, these provisions being far in excess of our usual transfers. This year we make no transfers to investment reserve funds, but this does not indicate a change from our long-standing policy of building up our investment reserve funds as the life assurance funds increase. We feel, however, that the favourable movement in prices since 1957 has resulted in the investment reserve funds of £9,125,000, plus the large margin between book and market values, becoming more than adequate in relation to our present funds.

GENERAL PROGRESS

The company made good progress in 1959 and record new business figures were again written in both life branches. The company's total income increased by £1,263,000 and amounted for the first time to over £20 million. Premium income in the life branches rose by £681,000 to £14,571,000. Gross interest income at £6,273,000 increased by £594,000. Policies in force in the life branches assured, with bonuses, over £256 million at annual premiums of over £14,900,000. The company's total funds held as security for policyholders amounted to £120,504,000, an increase of over £7,900,000 in the year.

ORDINARY BRANCH

The new business in 1959 was again at a record level, the new sums assured being £11,373,000 compared with £10,155,000 in 1958. New annual premiums for life assurance and deferred annuities amounted to £543,000 and single premiums and annuity consideration amounted to £110,000. The total premium income rose by £240,000 to £4,756,000. Our business consists almost entirely of individual contracts, as distinct from group schemes, and is transacted directly with the public through our full-time agents and officials. The business is of a thrift character, providing a safe means of saving to the individual with protection for dependants in the event of premature death.

Gross interest rose by £221,000 to £2,353,000 and showed a gross yield of £5 18s. 4d. per cent —a rise of 4s. in the year. The net yield was £4 5s. 6d. per cent. Deaths, maturities and surrenders were all less than in 1958 and expenses at 12.94 per cent were only slightly higher despite the extra new business. The funds increased during the year by £2,898,000 to £41,987,000.

INDUSTRIAL BRANCH

Results in this branch were again satisfactory. Sums assured under new policies amounted to £16,385,000—an increase of £732,000. Premium income increased by £440,000 to £9,814,000 and the funds by £4,975,000 to £67,936,000. Gross interest rose by £368,000 to £3,870,000 and showed a gross yield of £6 1s. 2d. per cent—a rise of 4s. in the year. The net rate of interest was £5 15s. 0d. per cent. There was a small increase in death claims of £34,000 to £1,800,000, while maturity claims at £2,831,000 were down by £377,000. The expense rate was virtually unchanged at 27.99 per cent.

During 1959 new premiums under endowment tables were over 91 per cent of the total new premiums. Much of this money would not be saved at all but for regular calls by our agents at the policyholders' homes. The average weekly or monthly premium paid by the individual policyholder is so small that it could not be invested effectively, but when aggregated with the amounts regularly paid by millions of other policyholders large sums become available for profitable investment in a variety of securities, including industrial securities. In this way policyholders share in the growing prosperity of industry, the effect of which is seen in the considerably larger bonuses declared for 1959.

VALUATION OF LIABILITIES

No changes have been made in the valuation bases this year. In the Ordinary Branch the surplus disclosed, inclusive of £455,761 brought forward from 1958 was £2,000,405. Out of this surplus £1,326,381 has been allocated to policyholders. A reversionary bonus of 46s. per £100 sum assured under with-profits policies has been declared, against a rate of 44s. a year ago. On with-profits deferred annuities, including approved retirement annuities, a bonus of 40s. per cent on the amount of the annuity payable at retirement has been declared, against one of 35s. per cent for 1958.

In the Industrial Branch the surplus disclosed, inclusive of £1,651,245 brought forward from 1958 was £4,523,910. Out of this surplus £2,100,000 has been allocated to Britannic policyholders. A reversionary bonus has been declared at the rate of 38s. per £100 sum assured on premium-paying policies on which premiums have been paid for at least one year. This rate represents a substantial rise on the rate of 30s. declared for similar policies a year ago. In addition, special bonuses have been declared on policies issued earlier than 1919 at the rate of 20s. per £100 sum assured for each year of duration at the policy anniversary in 1919. The development in our bonus scheme since 1947 has been remarkable, as every premium-paying policy now in force on which at least a year's premiums have been paid, will now have shared in profits for each year of its duration.

INVESTMENTS

During 1959 the beneficial influence of the abolition of the credit squeeze became increasingly apparent in a quickening tempo of activity in trade and industry. This favourable trend was reinforced by a reduction in the burden of taxation and by the resolution of some at least of the political and economic uncertainties which previously prevailed. There was in fact a very real revival of confidence, justifying the expectation of continuing and increasing prosperity.

In these circumstances the main emphasis in our investment operations has been placed on ordinary shares which have increased during the year by £5,066,000 to £25,466,000. We continue to favour investment in equities as a long-term policy, but we feel that caution is now needed in view of the high price levels reached by many shares which may, in some cases, overestimate the future growth of profits and dividends.

The other main changes in our assets, as shown in the balance sheet, consist of increases of £1,329,000 in mortgages, £1,074,000 in municipal and county securities and £1,668,000 in debenture stocks, and a decrease of £1,075,000 in British Government and British Government guaranteed securities.

HOUSE PURCHASE SCHEME

During the year we made 1,842 advances to owner-occupiers, for a total amount of £2,963,000. After allowing for repayments the loans outstanding increased by £1,329,000. Since we commenced to operate our scheme in 1907 we have advanced nearly £43 million to our policyholders for the purpose of purchasing their homes, of which £23 million is still outstanding.

FIRE & ACCIDENT BRANCH

We have again received much help from the British General Insurance Company, with whom the whole of our fire and accident business is reinsured. It is always a pleasure to work with them and we thank them most sincerely for looking after this branch of our business so well.

The premium income shows a modest increase of £21,000 at £1,120,000, and the gross profit rose from £27,976 to £37,828. Our claims experience in the motor-car and motor-cycle section, in common with that of other insurers was again unsatisfactory, notwithstanding the higher rates of premium which were introduced in July, 1957.

NEW CHIEF OFFICE

For many years the directors have had under consideration the building of a new chief office. The present building has served us well for 55 years. It has been a happy home but as so often is the case the family has outgrown the home. The possibility of rebuilding on the present site has been ruled out because of the replanning of the Birmingham city centre, and the directors have seen many advantages in establishing a new chief office on part of our recreation grounds at Moor Green, Moseley—some three miles from the city centre. Work on the site commenced in June last. The building is due to be completed in December, 1961, and is progressing well.

STAFF

Once again it is my privilege to express your thanks to the staff for an excellent year's work. The good name of the Britannic is very largely in their hands and the fact that it stands so high

is a tribute to them. I am happy to say that the spirit of mutual respect and understanding between management and staff which has always been a feature of this company, and one which we value greatly, was fully maintained.

We are increasing the transfer to the staff pension fund by £15,000 to £290,000, which I know will have your full support.

BRITISH INDUSTRIAL PLASTICS

FINANCE FOR EXPANSION

The annual general meeting of British Industrial Plastics Limited was held on March 10th in London.

The following is an extract from the circulated statement of the Chairman, Mr C. H. Glassey:

For the Company's year ended September 30, 1959, the Net Profit of the Group, after depreciation but before taxation, amounted to £802,916, an increase of £104,302 over the comparable figure for the previous year of £698,614. This profit figure is again a record in the history of the Group.

During the year the total capital expenditure of the Group amounted to approximately £588,000, as compared with a figure of £492,000 in the previous year. It is satisfactory that, despite this large expenditure, the aggregate Bank balances of the Group have only been reduced by some £45,000.

At an Extraordinary General Meeting Resolutions will be proposed to increase the authorised capital of the Company from £1,500,000 to £4 million, and for a part of the Company's reserves to be capitalised and applied in paying up in full 14,768,123 Ordinary Shares of 2s. each of the Company. These Shares will be distributed, credited as fully paid, in the proportion of one new Ordinary Share for every Ordinary Share held.

Except as mentioned above, it is not at present the intention of your Directors to issue any of the increased authorised capital. However, the expansion of the Group's activities, and the Group's policy of using the most modern and advanced types of plant and machinery available, will necessitate considerable capital expenditure in the future.

Your Directors have under review a number of projects, and should these be adopted, and when the plans for their implementation are complete, it may be necessary to issue additional capital.

OVERSEAS INTERESTS

SOUTH AFRICA.—British Industrial Plastics, SA (Pty) Limited's factory for the manufacture of resins for the South African Paint Industry, referred to last year, has just been completed and operations started.

Considerable interest in this venture has been expressed by the Paint Industry there, and your Directors are confident that products produced will be well received in an expanding market.

HOLLAND.—The negotiations with the prominent Dutch concern, Algemene Kunstzijde Unie NV, referred to last year, were duly completed.

Owing, however, to uncertainties in respect of the economics of this project, arising in turn from uncertainties as to the future political and economic structure of Western Europe as a whole, it was mutually agreed that the proposal for a joint venture should be put in suspense.

GERMANY.—The Chairman's Statement last year advised our intention to establish a small wholly owned subsidiary Company in Western Germany for the assembly, sale and servicing of the products manufactured by BIP Engineering Limited and BIP Tools Limited.

This has now been put into effect, and this new subsidiary under title BIPEL Maschinen, GmbH. was formed just before the International Plastics Exhibition was held in Dusseldorf in October last, when products representative of all the Group's activities were displayed.

This new Company should prove to be well sited to serve potential customers in Common Market countries.

PROGRESS REVIEW

During the first six months of the past Financial Year turnover was lagging a little behind comparable figures for the preceding year, and with some reduction in profit margins the overall results were not encouraging. In the latter half of the year the situation changed completely and this resulted in such increased demand for our products, both chemical and engineering as has taxed our manufacturing resources to the limit. This phase is continuing in the current year.

Based on quality, price and technical service, there is an expanding export market for all products of the Group, which will supplement the increasing demand on the home market.

THE STERLING TRUST, LIMITED

INCREASED GROSS REVENUE

The forty-third annual general meeting of The Sterling Trust, Limited, was held on March 8th, in London, Mr M. F. Berry (the chairman) presiding.

The following is an extract from his circulated statement:

The results for the year 1959 reflect for the first time a full year's income on the fresh ordinary capital issued in July, 1958. Partly owing to the use of this fresh capital, and partly owing to various increases of dividend on our investments, the total gross income of the company has risen from £495,447 to £555,482. This gives a figure earned on the ordinary capital of 23.79 per cent, the corresponding figure for 1958 being 20.95 per cent. Your Board have decided to recommend for the year 1959 a total dividend of 17½ per cent which represents a distribution of approximately 80 per cent of the total net reventue.

Once again the valuation of the investment funds of the company has shown a very substantial increase, the appreciation at December 31, 1959, being 141 per cent against a figure of 85½ per cent a year earlier. This appreciation is significant as reflecting the confidence of investors that dividends will be increased on many ordinary shares, thereby raising the dividend yield from a very low figure to a more normal basis, and it is much to be hoped that these dividend increases will materialise.

The report was adopted.

THE SCOTTISH PROVIDENT INSTITUTION

MUTUAL LIFE ASSURANCE

REVIEW BY THE CHAIRMAN, LORD CLYDESMUIR, MBE, TD, DL

RECORD NEW BUSINESS

In moving the adoption of the Report and Accounts at the one hundred and twenty-second Annual General Meeting held in Edinburgh on March 8, 1960, Lord Clydesmuir referred to the unfailing regularity with which record new business figures had been reported for many years and to the fact that the year 1959 was no exception. Net new sums assured under ordinary policies amounted to over £11¼ million and to over £15¾ million including new sums assured under group life and pension business. Net new annual premiums at over £778,000 had increased by 12½ per cent over the previous year, and single premiums, including consideration for annuities, exceeded £1½ million compared with under £½ million in 1958. Total premium income was nearly £5 million. Total interest income, which had risen by almost 13 per cent in the year, represented yields of £6 10s. per cent gross or £5 2s. 6d. after deduction of income tax, but the difficulty of maintaining these yields on growing funds would be appreciated and their continuance should not be taken for granted.

FUNDS DOUBLED IN TEN YEARS

Claims by death were unusually small in 1959 and the increase in other items of outgo had only kept pace with the growing business; the Total Funds, now over £53 million, had practically doubled in the past ten years. Moreover, the amount by which the market values of the assets exceeded the figures at which they appeared in the Balance Sheet was larger than ever before. The Directors had the securities comprising the assets under constant review and policyholders could rest assured that the money was safely and profitably invested.

Inflation, said Lord Clydesmuir, was the principal danger to our modern economic system, but it was to the credit of all classes of society that the danger was becoming better understood. Its prevention lay in more saving and less spending; and life assurance, the best and surest way of saving, benefited the nation by helping to curb inflation just as surely as it benefited the policyholder.

SAVE AS YOU EARN

In an endeavour to make the benefits of ordinary life assurance more widely known among weekly wage earners, a "Save as you earn" plan had been devised under which premiums can be deducted weekly from employees' wages and the total remitted to us monthly in one sum by the employer. A wide variety of types of contract is available: in one instance an employer is contributing sums dependent on the Company's profits. This combination of profit sharing with a scheme of saving and life assurance cover had received widespread approval, and the Institution would be glad to give full details to any employer contemplating a provident scheme.

The Report and Accounts were adopted.

HOOVER LIMITED

TURNOVER 50 PER CENT HIGHER

The Annual General Meeting of Hoover Limited will be held on March 30th at Perivale. Mr S. Roberts, the managing director, is to preside.

The following is an extract from the "Annual Review":

The year which has just ended has been favoured with an economic climate better than we have experienced for some time.

The inflationary pressure which cast such a threatening shadow over the economy for so many years had, by the middle of 1958, been subdued and the Government was able to introduce policy measures which freed the economy from a number of restraining influences and allowed it to expand without the fear that adverse consequences would immediately follow.

Thus the favourable economic outlook, supported by the absence of official controls on spending, has encouraged a high level of personal expenditure, particularly on durable goods.

These conditions at home, coupled with the more favourable economic trends abroad which have enabled us to expand our export trade, have resulted in an unprecedented year, with turnover 50 per cent higher than in 1958 and profits at £11,135,225, the highest in the Company's history.

VOLUME AND PROFIT STRUCTURE

Although our turnover was up by 50 per cent, profit showed a much greater proportional increase and vividly illustrates the importance of volume in the profit structure.

As in all industrial companies, a large proportion of manufacturing costs are incurred irrespective of the volume of output, and it is this relative inflexibility which has such a major effect on profits when demand is harshly curtailed by Government controls.

The frequent changes in controls and restrictions which the Government has imposed upon the purchase of domestic appliances since the war, have resulted in widely varying production levels, periods of peak production being followed by sharp declines, so that the benefits which could have been derived from continuous large scale production have never been fully realised.

The rapid and sustained expansion of demand for domestic products which followed the removal of credit restrictions, created conditions in 1959 which enabled all the advantages of continuous high volume production to be attained.

This continuous high volume production has enabled us to make considerable price reductions in many of our models on the home market and thus support the Chancellor's appeal to industry to lower prices. But, more important still, it has provided us with the opportunity to lower our prices in the highly competitive markets abroad, permitting us to exploit these areas to better advantage. Our export business has, in consequence, shown a material increase on the previous year.

It is probable that the upsurge in sales resulting from the removal of hire purchase controls at the end of 1958, would have slowed down had not the Government seen the need for further expansionist measures.

Once the Budget proposals had been announced, the hesitation which had begun to develop in retail sales was swept aside and sales have since been maintained at a high level.

The favourable conditions for selling domestic appliances in 1959 was not the only factor creating this most successful year in our history. It is very significant that we achieved an increased share of this very competitive market.

The new Junior Cleaner, introduced in the autumn of last year, has created a unique place for itself in the market and sales have attained a very high level.

We launched a new Major Cleaner, Model 652, in April last. We believe this is the finest all-round Cleaner we have ever produced, from both design and functional standpoints, and sales have been well up to our optimistic forecasts.

In October a redesigned Constellation Cleaner, with many added refinements, was introduced to the market and, at the same time, a substantial reduction was made in the price. The combination of high quality and low price has had a very favourable effect on sales.

During the autumn we made considerable price reductions in both our Hand and Power Wringer Washing Machines, which have stimulated even greater sales for both these products.

We have thus continued our policy of constantly improving the design and styling of our products, in the certain belief that this, coupled with the price reductions we have made on many of our products, will ensure an even greater share of the available market.

The general recovery of trade overseas is reflected in the increased business we have obtained this year and our total export turnover is up by 18 per cent.

It is worthy of note that trade with the dollar countries has recovered from the down-trend evident in 1958, and earnings in this field increased to $3,062,450 compared with $2,216,236 last year.

With a network of subsidiaries and distributors established in many countries throughout the world, we are in a position to take full advantage of improving conditions as they occur. With this in mind, we intend to strengthen our links overseas still further.

DIVIDENDS AND SCRIP ISSUE

Your Board recommends a final dividend of 80 per cent less tax on each Ordinary and "A" Ordinary Share, making a total of 90 per cent for the year.

The increased profits have enabled your Board to propose this higher dividend without deviating from the policy of ploughing back substantial profits each year.

At the Extraordinary General Meeting convened to follow the Annual General Meeting, it is proposed to capitalise £2,450,000 of the unappropriated balance on the Profit and Loss Account and to issue 9,800,000 "A" Ordinary Shares to the Ordinary and "A" Ordinary shareholders on a one-for-one basis.

The year just ended has witnessed a tremendous increase in demand for domestic appliances in the home market. The reasons for this are exceptional, and we do not believe that the rate at which sales have climbed in 1959 will be repeated in 1960.

Competition is becoming more intense in both our home and export markets and in the home market imports from overseas have increased at a significant rate and have added their weight to the pressure of home competition. All this can only mean keener prices and lower profit margins. Nevertheless, we look forward to another satisfactory year although not at the same level as 1959.

GHANA MAIN REEF

MR C. J. BURNS'S STATEMENT

The Twenty-sixth Annual General Meeting of Ghana Main Reef Limited, was held on March 7th, at The Chartered Insurance Institute, London, E.C. Mr C. J. Burns, Chairman, presiding.

The following is an extract from his circulated statement for the year ended June 30, 1959:

The confidence expressed in my last review has been justified by the year's results. No further dividend for the year under review can be recommended, since an interim dividend of 7½ per cent and a bonus of 2½ per cent have already been distributed. For the current year your Board have declared an interim dividend of 7½ per cent, less income tax, payable on March 11th, 1960.

Two main factors highlight the operations for the year. The installation of a single-drum hoist capable of hoisting waste rock through the sinking compartment in Tuappim Internal Shaft from No. 20 Level to No. 8 Level, was nearly completed, and should be in operation very shortly. The persistent pattern of the main ore shoots has convinced your Board that an exploration programme to depth to prospect the fissured areas between and beyond the known ore shoots is absolutely necessary. Already promising values are being found, giving great encouragement for the future of this phase of development. We have every hope that the mine grade will be increased once the developments at depth have reached a stage which will allow the hoisting of the richer grade ore from the deep levels of the Tuappim section.

CHAIRMAN'S ADDITIONAL REMARKS

In the course of his speech to stockholders, the chairman said that in the Tuappim section the summary of the payable developments exposed to date during the current financial year amounted to 520 feet averaging 9.4 dwts over 57.3 inches on Nos. 17, 18 and 19 Levels. This is most encouraging and would prove not only a satisfactory addition to ore reserves but a sound indication that the reef was persisting to depth. Before the end of the year it was confidently expected to expose part of the 20 Level. In the Main Shaft section the summary of payable development for the same period amounts to 165 feet averaging 11.1 dwts over 43.9 inches on Nos. 13, 18 and 21 Levels. The No. 18 Level drive north and No. 19 drive north and south would be fully exposed before the end of the financial year.

The chairman reiterated his confidence in the future of Ghana and dwelt upon the need for immediate development of opportunities for suitably trained Ghanaians to enter the mining industry.

Mr C. W. Tachie-Menson, CBE, an eminent Ghanaian, had accepted a seat on the Board, and it was hoped he would join them in a few months.

The report was adopted.

FALCON MINES

MR F. L. WIGLEY'S STATEMENT

The fiftieth annual general meeting of Falcon Mines Limited will be held on March 31st in Bulawayo.

The following is an extract from the Statement of the Chairman Mr F. L. Wigley, circulated with the report and accounts for the year ended September 30, 1959:

The reasons which prompted your Board's decision to increase the Issued Capital by a further 181,561 shares of 5s. each are fully stated in the Circular to Members dated February 4, 1960, and I need only add that it will be an advantage to have funds available for accelerating an exploratory development programme as initial results may justify.

The Net Profit for the year was £151,236. The sum of £75,929 has been appropriated for expenditure on Fixed Assets and Mine Stores. After providing for Dividends Nos. 11 and 12 totalling 10½d. per share (17½ per cent), which absorbed £79,433, and bringing to account an over-provision for taxation in previous years of £971, there remained a balance unappropriated of £9,446 compared with £12,601 brought forward from last year.

At the Dalny Mine, I am pleased to report that the fresh series of metallurgical tests referred to in my Review last year resulted in a most satisfactory improvement in gold extraction. Total residues for the year averaged 0.72 dwts per ton but the average for the last six months of the year was only 0.59 dwts and there has been a further reduction during the current year.

Working costs were reduced by 6d. per ton milled compared with the previous year in spite of a substantial increase in development expenditure. The proposal to raise the electricity tariff by 15 per cent was successfully opposed by the Southern Rhodesia Mining Industry and a revision to an increase of 5 per cent, pending a further investigation into the whole tariff structure, was obtained. The higher charges came into effect in February, 1960.

The estimated ore reserve at September 30, 1959, was 672,000 tons valued at 4.90 dwts per ton over a width of 107 inches.

On the Pixy section a shaft was sunk to a depth of 380 feet and a level (No. 4) was established. A crosscut from the shaft intersected the reef in the vicinity of the No. 2 borehole mentioned in last year's Review and driving had exposed 105 feet of payable reef by the end of the year. Since the close of the year work on this level has continued to yield encouraging results and, in addition, the drive of the Pixy reef commenced from the Dalny 7 level crosscut has intersected values at this lower horizon in the shaft area. Work is now in hand to effect a holing between this level and 5 level to which the Pixy shaft was sunk during January and February, 1960.

At the western end of the strike, the dewatering and reclamation of old shafts in the Arlandzer area has reached the stage where development in fresh rock below the oxide zone worked in former years can commence.

The Tribute Agreement over the M'tuga Copper Claims was extended to August 31, 1960. Royalties totalling £13,276 were received from the Tributors during the year.

SAXONE, LILLEY & SKINNER (HOLDINGS)

RECORD HOME AND EXPORT SALES

LEEDS PROJECT COMPLETED

BENEFITS OF WIDESPREAD REPRESENTATION

MR J. S. ABBOTT'S CONFIDENCE IN FUTURE PROSPECTS

The Annual General Meeting of Saxone, Lilley & Skinner (Holdings) Limited will be held on March 31st at Kilmarnock.

The following is the review by Mr J. S. Abbott, the Chairman, which has been circulated with the report and accounts:

Before proceeding with this review of your Company's past year's trading, I would refer to the great loss your Board sustained by the sudden death last November of Mr Thomas Lilley. Mr Lilley had been Chairman of the Company since the formation of our present group of Saxone, Lilley & Skinner (Holdings) Ltd. in January, 1957. On all sides tribute has already been paid to his great ability and charming personality. His wise counsel and the benefit of his long experience in the industry will be sadly missed by us all.

Your Board has honoured me by inviting me to succeed Mr Thomas Lilley as Chairman and I am very glad to tell shareholders that Mr James Lilley has been appointed Deputy Chairman.

PROFITS AND APPROPRIATIONS

Last year was a good year for most shoe manufacturers and retailers and your Company was no exception. Home and export sales again reached record figures and profits before tax have increased by £166,551. It has always been the policy of your Board to maintain as high a rate of turnover of stock as possible by depreciating slow moving stock as soon as the need to do so arises. The continuation of this policy has enabled us again to begin the year with clean stocks conservatively valued.

Profits, after tax, show an improvement of £120,714 and provisions for tax no longer required of over £59,000 have been added to the profits available for appropriations. These over-provisions arise largely because of a reduction in the rate of income tax which became effective in April, 1959 after the accounts had been distributed to shareholders.

Two other items in the profit and loss account call for comment. When our South African subsidiary was sold in 1958 it was agreed that the purchase price would be payable over 10 years, free of interest. During 1959 we arranged to discount the 10 instalments for an immediate payment and this discount, together with one or two minor adjustments in connection with the disposal of the Australian subsidiary, accounts for the provision for the realisation of these overseas investments of £35,147.

On more than one occasion we have stressed the importance to our business of ensuring that our shop interiors are well equipped and comfortable and our shop fronts modern and attractive. The cost of doing so is high and we have, therefore, thought it advisable to add a further £70,000 to the provisions for renewals and rebuilding.

After adding £250,000 to the general reserve, your Directors recommend a final dividend of 8 per cent on the Ordinary Stock, as increased by the one for one bonus issue to which I refer later. When that issue was announced we said that we expected to be in a position to pay a final dividend at the rate of 8 per cent, which is equivalent to an increase of 1 per cent on the old stock. The profits for the year have fully justified this increase. It is worth noting that the cover for the Ordinary Dividend has increased steadily since the amalgamation of Saxone, Lilley & Skinner and Benefit Footwear in 1957 and the increased dividend this year is approximately twice covered.

GROUP'S NEW WAREHOUSE

Perhaps the most interesting development during the year was the completion and occupation at Leeds of new headquarters for Benefit and Cable Shoes and a new central warehouse for the Group. This project has been mentioned in former Statements, and I hope stockholders will find interesting the booklet describing these new buildings which accompanies the accounts. The Group now has two warehouses, at Leeds and London, and the closely integrated system of warehousing and distribution, based on these warehouses, should benefit customer and Company alike.

The author of the booklet mentions the aptitude shown by the staff at Leeds in learning and practising the procedures applicable to a fully mechanised warehouse. The whole operation of moving stock and staff to Leeds has imposed a considerable strain on many departments of the business, and it is a tribute to them that the transfer has been carried out with so little dislocation of service to the retail shops. Indeed, the goodwill and enthusiasm shown by the staff and employees in all companies have been a great encouragement to us in carrying out further plans for co-ordinating the work of the various departments of the business. These plans include more centralised buying, further development of the Lilley & Skinner Sales Company, which was formed last year, and which has made a successful start in 1959, and a comprehensive programme of shopfitting to continually improve the high standard of comfort and service which we offer our customers.

OUTSTANDING OXFORD STREET STORE

Stockholders were told last year of the modernising of Lilley & Skinner's Oxford Street store and of the almost immediate increase in sales which the alterations brought about. I am happy to say that this high level of sales has been maintained and that this outstanding store achieved record sales in 1959.

The balance sheet includes for the first time under the heading of Loan Capital the loan of £2 million secured by a mortgage on certain of the Group's properties. The proceeds of this mortgage were used mainly to pay for the cost of the new Leeds warehouse and offices and to replace temporary borrowings. Fixed assets, also, show an increase of almost £350,000 after depreciation, while net current assets have increased by £1,912,000.

CAPITAL CHANGES

As a preliminary to raising this loan, all the Group's properties were transferred to the Parent Company where that had not already been done. Apart from the fact that some of these properties secure the loan it is a considerable administrative convenience to have all the properties owned or leased by one company.

Another step taken during the year to streamline the administration of the Group was the acquisition of all the Benefit Preference capital held by outside shareholders. Benefit Footwear, which is one of the three principal trading companies in the Group, is now, therefore, a direct and wholly owned subsidiary of Saxone, Lilley & Skinner (Holdings) Limited. This acquisition has, of course, had the effect of increasing the issued Preference capital and the cost of shares in subsidiary companies has increased by a like amount.

Finally, the authorised share capital has been increased by £2 million and the issued Ordinary stock been doubled by the one for one bonus issue announced in November.

The sharp expansion in industrial investment which followed the dropping of controls and the lowering of interest rates in 1958, and which grew in momentum throughout 1959, continues still and we share in the prosperity which stems from it. But ours in not primarily an industry which influences the economy and we are to some extent dependent on the fortunes of the basic industries. On the other hand, we are well represented in most of the towns and areas where these industries flourish and your Directors are very conscious of the importance of maintaining this position. I believe that there will be no slackening of the national prosperity in 1960 and no lessening of our share in it.

BTR INDUSTRIES LIMITED

GROUP'S STRONGER COMPETITIVE POSITION

The thirty-sixth annual general meeting of BTR Industries Limited will be held on March 29th in London.

The following is an extract from the circulated statement of the Chairman, Sir Graham Hayman:

The results of the past financial year are disappointing. The adverse trend indicated in my Statement last year and at the subsequent Annual General Meeting, continued well into the second half of the year now under review and, in the event, the difficulties proved greater than anticipated.

Since the beginning of the present financial year, however, we have received an increasing number of inquiries from the capital equipment industries, and our forward position has been strengthened by orders received. I must, however, stress the point that so far business from these sources still lacks real momentum.

In the conditions of business it was impossible to maintain our overall profit position, although improved methods of manufacture to some extent cushioned the effect of low selling prices. Since the end of the financial year under review, however, there has been some improvement in our trading results and the outlook is more favourable.

Our acquisition of Microcell Limited and its associated companies, Glass Yarns and Deeside Fabrics Limited, and Artrite Resins Limited, has provided some set-off to the decline in the profits of the company.

THE YEAR'S RESULTS

The Group trading profit at £1,014,348 compares with £1,003,052 for the previous year. Depreciation is higher, the appropriate figures for the Microcell Group of Companies having been included and the full annual charges arising from the Group's heavy capital expenditure now brought into account. Interest on investments is substantially lower, our investments having been progressively realised during the past two years, first to finance the capital programme of the company, and also to provide part of the funds for the development of the recently acquired subsidiary companies. Profit for the year, before taxation, accordingly amounts to £579,135 against £749,394 last year. The amount required for taxation is £250,182.

With regard to dividend, the trading outlook is improving and in all the circumstances your Directors recommend a final payment of 10 per cent, which, with the interim of 2½ per cent, makes a total distribution of 12½ per cent for the year.

I am glad to report that, in spite of the further decline in selling prices, we substantially maintained the turnover of the company, and, after including that of subsidiary companies, total sales were increased by approximately 5 per cent.

The reorganisation of our activities under Divisions commenced towards the end of 1958, and became progressively operative during 1959. Changes of this character inevitably take time to complete to avoid disturbance of normal routine. Consequently, it was not until the latter part of 1959 that the benefits began to be felt.

The chairman then reviewed in detail the Group's divisional activities under the headings of Belting, Hose, General Mechanicals, Linings and Coverings, Footwear, Aero Products and the Microcell Group and concluded: With regard to future prospects, despite the serious set-back on our profit, it can be said that the immediate results of our heavy reconstruction and expansion programme have placed the Group in a stronger position to meet the competitive conditions which must be expected in future. If present trade trends continue, there should be improved earnings from our traditional or established activities, and some of the newer developments may be expected to contribute usefully to the Group profit. The immediate outlook is not without its difficulties, but there are good grounds for confidence in the Group's future.

THE UNIVERSAL ASBESTOS MANUFACTURING COMPANY

HIGHLY SATISFACTORY RESULT

The 23rd Annual General Meeting of The Universal Asbestos Manufacturing Company Limited will be held on March 31st in London.

The following is an extract from the circulated statement by the chairman, Mr Frank W. R. Douglas:

The financial results for the year have reflected the very high rate of building activity experienced throughout. As I reported to you a year ago, orders at that time were being received at a rate which exceeded our then manufacturing capacity. In consequence of the increased demand for our products a financial result has been achieved which I think you will regard as highly satisfactory, the profit subject only to tax, having increased to £533,265, which compares with £335,237 for the previous year.

IMPROVED DESIGNS

Whilst a large part of our increased turnover arises from the higher overall level of constructional work in this country, it would be ungrateful not to refer to the considerable advance which our technical staff have made in improved designs of asbestos products.

The technical developments have been supported by a carefully devised advertising programme, and by the dissemination of information concerning, not only asbestos cement, but our other products through the UAM Group Advisory Service.

Chancery Installations Limited is a new wholly-owned subsidiary company purchased towards the end of our financial year. We acquired this as we were of opinion that it filled a gap in our otherwise comprehensive insulation service.

The Directors recommend a final dividend on the Ordinary Shares of 1s. 1½d. per share which makes a total distribution for the year of 1s. 6d. per share less Income Tax as compared with 1s. per share in respect of the previous year.

THE CURRENT YEAR

I am happy to say that at present business conditions remain good, even showing an improvement, as compared with those of last year. The whole turnover of the Group has grown, and profits, so far, are higher than that of the corresponding period of last financial year.

Fundamentally, given good management which I believe we have, the prosperity and progress of our Company must be largely dependent on industrial construction, the amount of which is in itself entirely dependent on the general state of trade and the degree of confidence in the business world.

At the present time with a wise and resourceful Government, who seem determined to encourage efficient industry, and hence prosperity, while at the same time having the courage to take whatever steps may be necessary to prevent uncontrolled inflation, some small degree of optimism may be justified. I am, therefore, expecting this time next year to produce a financial result no less satisfactory than the one which I have had the pleasure of presenting to you now.

TEMPERANCE PERMANENT BUILDING SOCIETY

SIR CYRIL BLACK'S REVIEW OF 1959

The one hundred and sixth Annual Meeting of the Temperance Permanent Building Society was held on Friday, March 4th, at the Caxton Hall, London.

Sir Cyril Black, JP, MP, Chairman of the Society, in the course of his speech, said:

Following a period of several years during which the emphasis was in the main upon consolidation there has been, in the more favourable conditions prevailing in 1959, a notable increase in our activities. The Accounts, while revealing that the strong financial position has been fully maintained, indicate that further records have been achieved. The amount standing to the credit of Shareholders and Depositors at the end of the year amounted to the record sum of £41,473,000 an increase of over £4 million. Mortgage advances amounted to £8,113,000. The total amount invested by Shareholders and Depositors was £9,215,000, while the total assets increased by £4,228,000 to £44,421,000. Reserves now stand at £2,382,000, representing 5.74 per cent of aggregate share and deposit capital. Cash and Trustee Securities held at the end of the year amount to £8,042,000, equivalent to 18.1 per cent of total assets.

TRUSTEE STATUS

The year was notable by reason of the granting of Trustee Status to our deposits. The Society had no difficulty in so qualifying, as in all respects our position is greatly superior to the minimum statutory requirements.

RESERVE STRENGTH

The General Reserve Account has now reached the very impressive total of £2,335,000. It has always been considered of the highest importance to maintain a strong reserve position, and our ratio of about 5¼ per cent is considerably in excess of the average of leading Building Societies. The Directors are firmly resolved to promote the further progress of the Society but they will never do so at the cost of weakening our impregnable position. Security is more important than size, and for the sake of the achievement of big figures they will never depart from their long-established rules of prudent finance.

CURRENT SITUATION

During the past year there has been widespread criticism regarding certain activities of a small minority of Building Societies. It is clear that the Government intends in the near future to introduce legislation designed to meet some of these criticisms. No well-managed Building Society such as the Temperance Permanent will do other than welcome any reasonable legislation to secure this objective.

I am convinced that investors would be well advised to investigate carefully invitations to make Building Society investments at rates of interest in excess of those offered by the leading Societies. The current rates recommended by the Building Societies Association, to which the Temperance Permanent loyally adheres, are 3½ per cent on shares and 3 per cent on deposits, income tax paid in each case.

Serious criticism has been levelled against some Societies on the ground that they have been investing a substantial proportion of their funds in mortgages on large blocks of investment properties. It cannot be too strongly emphasised that this is not normal Building Society business. The task of Building Societies is to facilitate home-ownership and the great bulk of their funds ought to be utilised to this end. The Directors have continued this policy of almost entirely confining advances to houses acquired for owner-occupation, no less than 97½ per cent having been advanced on the security of such properties.

Given a continuation of existing conditions, we anticipate that 1960 will be another year of satisfactory progress for our Society. More and more families in the improved economic conditions of the day are keenly anxious to purchase their own homes. It is for us to help them to the utmost to achieve this most worthy object and in so doing I have no doubt that we shall be rendering a vitally important national service.

The Report and Statement of Accounts were adopted.

STEEP ROCK IRON MINES LIMITED

THE COMPANY'S ANNUAL GENERAL MEETING WAS HELD IN CANADA ON MARCH 11.

For 1959, Steep Rock Iron Mines Limited reports net profits after all charges of $9,049,000, equivalent to $1.12 per share.

The Company owns the Steep Rock range with a group of mines both directly-operated and leased. The range is on the Canadian side of Lake Superior. Chairman of the Steep Rock board is Cyrus Eaton, Canadian-born Cleveland industrialist.

Shipments of high grade iron ore totalled 2,746,849 tons, second highest in the company's history and materially more than double the 1958 figure.

Operating profits, according to the annual report, were $12,102,000 before charges and depreciation. After applying $1,700,000 to bond retirement in 1959 and providing a further $1,700,000 for 1960 bond retirement, working capital stood at $10,385,000 on December 31st last, up $6,364,000 from year-end 1958.

Expenditures on the continuing expansion programme were $2,907,000 compared with $8,200,000 in the year preceding. A total of $2,723,000 is the estimated cost of the 1960 programme.

The president, Mr M. S. Fotheringham, in his statement with the Report and Accounts, says of one of the additional iron ore properties which Steep Rock has recently acquired that "the property appears capable of annual production of three million tons of pellets" and adds that important royalty income could be realised for the company "without the necessity of making any large capital expenditures."

Quoting industry sources as predicting 1960 steel production in the United States of 130 million tons, President Fotheringham says that demand for high grade iron ore is again on the upswing. Annual ore consumption is expected to pass the 160 million tons mark by 1965 and to be nearing 200 million tons by 1975. The Steep Rock range, he points out, with deposits which go to great depth and an estimated potential of 300 million tons per thousand feet of depth, is well prepared to meet growing demand.

Royalty income from the Caland Mine will commence this year when this property, leased to Inland Steel's wholly-owned Canadian subsidiary, goes into production. Starting with indicated output of 750,000 tons in 1960, Caland's shipments are expected to increase progressively to 3 million tons annually. In 1961, it is also reported, the third of Steep Rock's own open pit mines will begin shipping.

Mr Fotheringham states that Steep Rock's research programme has been emphasising product and market development. Direct-shipping ores can now be classified by size to customer specifications.

LEICESTER PERMANENT BUILDING SOCIETY

ASSETS NOW EXCEED £60,330,000

ANOTHER YEAR OF GOOD PROGRESS

The Annual General Meeting of the Leicester Permanent Building Society was held on March 9th in Leicester.

Mr A. D. Carmichael, CBE (Chairman), presided and, in the course of his speech, said:

The total assets of the Society are £60,333,245 and show an increase of £9,380,211 on 1958. Mortgage advances reached the all time record figure of £15,476,670 representing 9,902 individual loans.

This growth in assets exceeds any previous annual increase and to a large extent is the fulfilment of a deliberate policy launched nearly a decade ago. In 1951 we decided to expand our activities on a national scale and to open offices in many of the leading cities and towns of the country. This development proceeded steadily and we have now 29 well situated and well established Branch Offices.

TRUSTEE STATUS AND LIQUIDITY

Deposits in the Society have been granted Trustee Status, both our Reserves and Liquid Funds greatly exceeding the requirements of the Act. After providing for the market depreciation of Government Securities, Reserves stand at £3,326,521 and Liquid Funds at £6,952,722.

We would, however, like to see a stricter definition of Liquid Funds. In our opinion it should be cash or assets immediately convertible into cash.

We believe that Dated Government Stocks which can be sold freely and immediately in the open market provide real Liquidity. We regard loans to Local Authorities for a fixed period of years as a sound investment but not necessarily very liquid.

We see no merit in building up an unduly large percentage of so-called liquid assets when the money can be more properly employed in loans to owner-occupiers which after all is the main function of a Building Society.

BANK RATE AND INTEREST RATES

In the early part of 1959, when interest rates showed a downward trend, we were one of the

first Building Societies to announce a reduction to 5½ per cent in the rates charged on new mortgages to owner-occupiers and we have granted interest rebates as from July 1st, 1959, to existing owner-occupiers who were then paying more than 5½ per cent.

We have retained our Paid-up Share rate at 3½ per cent to enable us to meet more adequately the heavy demand for mortgages, and the results of the year amply justify our decision.

In January, 1960, the Bank Rate was raised again but so far this move does not appear to have affected long term rates. Compared with the rates charged by other lending institutions, the present lending rate of 5½ per cent is moderate, especially for the facilities offered by a Building Society.

In this small island it is necessary that the best possible use of land should be made. There are encouraging signs that better use is being made of existing built-up areas and out of date houses are being replaced by maisonettes and flats. The Society does from time to time grant loans to owner-occupiers buying this type of property.

The first two months of 1960 have maintained the excellent trend of 1959 and we look forward to another year of good progress.

The Report and Accounts were adopted.

MTD (MANGULA) LIMITED

(Incorporated in Southern Rhodesia)

A SATISFACTORY YEAR

PLANNED RATE OF PRODUCTION ATTAINED

COMMANDER H. F. P. GRENFELL ON NEAR AND LONG TERM PROSPECTS

The thirteenth Annual General Meeting of stockholders of MTD (Mangula) Limited was held on March 9th in Salisbury, Southern Rhodesia.

Commander H. F. P. Grenfell, DSC, RN (Ret'd) (the Chairman), presided and, in the course of his speech, said:

The most important feature of the year was the installation of the second Aerofall Mill unit, as this enabled us to raise production to our planned rate of 3,000 short tons of ore per day.

The new mill was commissioned in April, but full production was not reached until July, so that the accounts before you only include the last three months of the year at the higher output. Nevertheless the net profit for the year was £394,224, as compared with £3,740 the year before. Out of this a maiden dividend of 5 per cent—£225,000—was declared in November. I think you will agree that this was a satisfactory result for the second year's operations.

At September 30, 1959, there was still a large sum outstanding on Loan Account with the Parent Company, and your Directors decided to raise funds to discharge this indebtedness by offering to Members the 2 million shares held in reserve at 9s. 6d. per share in the proportion of one new share for every nine stock units held. The offer was subscribed to the extent of 99.31 per cent.

As a result, the Parent Company's loan has now been entirely repaid, and a saving in interest charges of nearly £70,000 a year has been achieved.

THE YEAR'S OPERATIONS

Turning now to the Report by the Consulting Engineers—a summary of which is given with the Accounts—you will see that the tonnage milled was 736,400 short tons of ore, and that 16,384 short tons of concentrates containing 7,486 long tons of copper were produced.

With the higher output, operating costs fell from 27s. 8d. to 25s. 3d. per short ton of ore treated, and now that full production has been reached, a further substantial reduction can be expected.

Credit is due to Mr Wilson and all his staff and employees for these results. A measure of their efficiency is indicated by the fact that productivity per employee was nearly double that of last year.

ORE RESERVES

You will no doubt have noted that after allowing for the year's production, the total of ore reserves, which covers the Molly Section only, shows a reduction of some 500,000 tons as compared with last year. We have deliberately made this reduction as a precautionary measure pending further clarification by development, of certain ore zones where diamond drilling has shown the general structure to be particularly complicated.

As we progress the geological picture will become clearer and we shall be able to determine with much greater accuracy the position and shape of the ore bodies and hence the extent of the ore reserves.

For example it now looks as if we may have to modify our original conception of a series of tabular ore bodies in favour of an elongated layer of ore of irregular thickness and shape, with the possibility of a second layer lying below the main layer and following its contours.

Recent drilling results on the lower levels where we have made a number of entirely new intersections of ore, the best of which assayed 2.49 per cent copper over a width of 53 feet, support this theory of a second and hitherto unknown layer.

However, the picture is still far from clear, and although I am optimistic as to the results of further exploration on the lower levels, I am sure it is wise to await these results before coming to any definite conclusions.

Development is also continuing in the Norah area. In the vicinity of the Brian Shaft some 230,000 tons of sulphide ore of better than average grade have already been proved, and production on a small scale is planned concurrently with further exploration.

Last year I mentioned the likelihood of discovering further ore bodies of a similar nature to the north of the Brian Shaft. It now appears that there is a possibility of at least 1 million tons of ore of economic grade in this area, and the Harry Shaft is being sunk for the purpose of carrying out further development and underground drilling.

In addition to this work we are busy reclaiming one of the old shafts at the Silverside workings, 13½ miles to the south-east of the Molly section, with a view to a re-examination of this prospect, and are also actively engaged in geochemical and geophysical exploration of various other parts of the property.

Mangula has now been officially gazetted as a township and once the roads are tarred, work on which will begin as soon as the rains are over, I believe it will develop into a model settlement where people can live and work under the happiest conditions.

THE OUTLOOK

As to the future, I am no crystal gazer, but I cannot help feeling that the near term prospects for our industry are reasonably good. The prolonged strikes of the past year have surely reduced supplies in the pipelines to a low level which it will take some time to restore to normal. Business in the United States has resumed its upward trend and the demand for copper should grow with it.

It is true that at present there is an excess of productive capacity, but it seems to me that this is only a temporary state of affairs, and that in the long run, nothing can stop the consumption of copper rising with the demands of an increasing world population whose standard of living is improving year by year.

For these reasons, I take an optimistic view of the long term prospects of the copper industry and therefore of your Company's future, while I have little doubt—barring unforeseen circumstances—that our results for the current year will be a good deal better than those presented to you today.

The report and accounts were adopted.

APPOINTMENTS

CENTRAL OFFICE OF INFORMATION requires an INFORMATION OFFICER, responsible to prepare memoranda and to answer enquiries on the economic affairs of the United Kingdom and other Commonwealth countries and those world economic affairs which affect the Commonwealth. Essential qualifications are an ability to marshal facts from source material and to present results clearly and concisely in written form. A sound background of basic economic reading—preferably at a University—and interest in current affairs are desirable. Salary £1,150 to £1,450 (men) £1,126 to £1,306 (women). Write, giving age, full details of experience and qualifications, to Manager (P.E.), Establishment Division, Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, E.C.4.

For further appointments and other classified advertisements see pages 1062 and 1063

THE UNIVERSITY OF MANCHESTER

EXTRA-MURAL DEPARTMENT

Applications are invited for the post of STAFF TUTOR for South-Western Derbyshire with the salary and status of either Lecturer or Assistant Lecturer in the University. Applicants should hold a good Honours degree in one of the following subjects: History, Geography, Social Studies, Philosophy, Politics. Salary scales per annum: Lecturer, £900 to £1,650; Assistant Lecturer, £700 to £850. Membership of F.S.S.U. and Children's Allowances Scheme. Initial salary and status according to qualifications and experience. Applications should be out not later than April 2, 1960, to the Registrar, The University, Manchester 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF SYDNEY

Applications are invited for the following positions in the Faculty of Economics:

(1) SENIOR LECTURESHIP IN COMMERCIAL AND INDUSTRIAL LAW;

(2) LECTURESHIP IN ACCOUNTING.

The salary for a Senior Lecturer is within the range £A3,200 x £A80 — £A3,600 per annum; for a Lecturer within the range £A1,500 x £A90 — £A2,100 per annum. In each case cost of living adjustments will be allowed. The salary is subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the selected applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on April 22, 1960.

COMPANY AFFAIRS

P & O

PERHAPS the most significant point in P & O's full accounts is that the unchanged 11 per cent dividend was covered only by reason of favourable tax treatment. Trading profits in 1958-59 fell sharply, from £10.1 million to £4.6 million, and this included a surplus of £318,000 on the sale of Government securities (which shows that it can be done). The cost of the total dividend distribution amounted to £2,671,000; but the group's net profit of £2.9 million (against £6.6 million) benefited from investment allowances of £1.3 million. Presumably the group's substantial cash flow of £11.2 million helped the directors to feel justified in maintaining the 1958-59 dividend.

Freight rates are now about 10-15 per cent above the lowest levels of 1958-59; but as Sir William Currie, the chairman, pointed out this week, the recovery is not very firmly based; it is attributable largely to an unexpected increase in grain cargoes following Europe's dry summer. The small improvement in freights has been checked by laid-up shipping coming out of surplus; and as the rate of scrapping falls short of the rate of the new ships coming into operation the surplus of shipping capacity continues to grow.

Although the outlook for freight rates is uncertain, it seems likely that P & O's operating surplus in 1959-60 will show some improvement. Five new tankers are now in service and four more are due in September, all chartered at profitable rates; indeed P & O's entire tanker fleet of 14 ships has been chartered at profitable rates for at least the next five years.

At a press conference this week Sir Donald Anderson denied recent rumours about a merger between P & O and Cunard. But he did reveal that P & O had approached Cunard in 1946-47 to discover whether some form of co-operation on the North Atlantic run could be arranged. After discussions the idea was dropped, but P & O again approached Cunard last year when it became known that Cunard was seeking Government help in financing the replacement of the two "Queens." Cunard rejected P & O's proposals on the ground that a ship suitable for the North Atlantic run could not be suitable for other trades. Following the full report P & O deferred fell 6d. to 44s. 6d. to yield 5 per cent on the forecast 11 per cent dividend.

Asquith Machine Tool

REVIVAL in the machine tool trades continues to be patchy. Following a fairly optimistic report from Alfred Herbert the annual report and accounts of the Asquith Machine Tool Corporation make gloomy reading. The chairman, Mr Robert W. Asquith, says that with practically six months of the current financial year now over, the picture is still not encouraging. Most of the orders received last year were for heavy and special machines, on which profit margins tend to be relatively slender, and there appears to be no revival yet in the demand for the standard-type machines made by the group. Even the group's subsidiary, Drummond Bros, which supplies the car makers, failed to benefit from the motor boom and its output in 1958-59 fell below the previous year's level. And for the first time the United States subsidiary, Associated Machine Tool Corporation, made a loss.

Earnings in 1958-59 fell by some 31 per cent from £815,105 to £563,475. Mr Asquith attributes this not only to the slack demand at home but also to the virtual closure of some of the group's traditional export markets like India. At the same time development costs have been unexpectedly high, partly as a result of the increased orders for special machines, and the contribution to earnings from the newly acquired subsidiary, Kitchen and Wade, was disappointing. In the light of last year's trading experience and the apparent lack of any evidence of a turn for the better, the directors' decision not to pay an ordinary interim dividend for the current year is not surprising. The balance sheet for end-September reveals some strain. Liquid balances fell short of the bank overdraft by £161,143 and capital commitments have increased from £487,000 to £732,000. The 5s. shares have slipped from a peak of 21s. earlier this year to 14s.

Hoover: Morphy-Richards

MR H. W. HOOVER'S statement with the full accounts of Hoover aims to put last year's trading results into proper perspective. In 1959 Hoover's trading profits almost doubled, from £5.8 million to £11.1 million, turnover increased by 50 per cent and the ordinary dividend is to be raised from 60 per cent to 90 per cent; a 100 per cent scrip issue is also proposed. But Mr Hoover is not expecting another record year in 1960. Sales can hardly go on increasing at the same rate; if they showed signs of doing so the authorities this year might take positive steps to check them.

Even so, it would be unrealistic to paint a black picture. In a year when the home market was becoming increasingly competitive, Hoover was able to increase its share of the total market. It supplied no less than 80 per cent of all the washing machines exported from Britain and its trade with dollar countries showed a marked increase. Competition in foreign markets is now as intense as at home and the group has so far held its own with big price-cuts in some of its main products; the emphasis this year will probably be on new designs, sales promotion, and investment to reduce production costs. All this involves the expenditure of large sums, says Mr Hoover; it also points to the necessity of retaining a large proportion of profits. For the long term, the directors are confident not only that the home market is far from exhausted but also that many world markets are virtually untapped. The increased ordinary dividend is covered four times by earnings and the 5s. shares at 105s. yield 4.4 per cent.

The interim report of Morphy-Richards for the six months to December 31, 1959, also reflects boom conditions: turnover reached £6.5 million, an increase of about 25 per cent over the same period in 1958, and pre-tax profits rose by 39 per cent to £650,000. The improvement in profit margins is attributed by the chairman, Mr F. P. Bishop, to expansion, diversification and economies in production. Like Mr Hoover, Mr Bishop sounds a note of caution about future prospects. Sales continue to go well, but there are too many uncertainties for Mr Bishop to give any forecast of the final results. The ordinary interim dividend is to be raised from the equivalent of 5 per cent to 8 per cent on the capital as increased by the proposed 100 per cent scrip issue.

Department Store Profits

IN a year of excellent results from both chain stores and department stores the increase in the profits of the Army and Navy Stores is outstanding. In the year to January 31st the trading profits of this Victoria Street store and its various provincial subsidiaries soared by 38 per cent, from £281,026 to £387,617. After tax of £178,080 (against £139,291) net profits were £65,767 higher at £209,537. Shareholders participate fully in this increase, for the ordinary dividend is raised from 11¼ per cent to 15 per cent. The group has certainly taken full advantage of the boom conditions in retail trading; and the conversion of the Artillery Mansions Hotel to offices and service flatlets has in turn resulted in an increase in profits. The 10s. shares were marked up by 1s. 6d. on the news, but this gain has not been held; at 32s. 6d. the shares yield 4¼ per cent.

Its near neighbour, Frederick Gorringe of Buckingham Palace Road reports a much smaller increase in profits, from £54,021 to £57,645. A lower tax charge of £25,546 (against £28,882) leaves net profits 28 per cent higher at £32,099. The directors have raised the ordinary dividend from 10 per cent, which has been paid in the last two years, to the former level of 12½ per cent. Unchanged at 70s. 9d. the £1 ordinary shares yield only 3½ per cent on the increased dividend. Both this company and the Army and Navy Stores have been the subject of takeover rumours; an abortive bid was made last July for Gorringe participating preference shares, which have equal voting rights with the ordinary shares.

Amalgamated Cotton Mills

SHAREHOLDERS in Amalgamated Cotton Mills Trust can surely expect some increase in dividend in the current year. The chairman, Mr W. Pickles, says that he is confident of higher earnings for 1959-60 and for this reason, the directors, "ever aware of the claims of equity holders" have proposed a 100 per cent scrip issue. Trading profits for the year to September 27th last amounted to £548,352, a rise of £90,000; but £173,417 was contributed by British Van Heusen, representing nine months' trading since the take over. The group's results cover six or seven months of the worst period of the recession in the cotton industry; Mr Pickles reports a considerable improvement recently both in sales and in profit margins.

Under the Government redundancy scheme the company has registered 573,600 looms for scrapping; compensation together with the proceeds from the sale of the closed down mills should at least cover the balance sheet net asset value of £209,076. This should strengthen further the company's cash resources, which at the end of September, 1959, totalled £1,106,477. Since then however the search for diversification has brought the acquisition of Anchor Investment, a hire purchase finance company, and Ingham and Tipping, millers and manufacturers of animal foods. Shareholders however have been given no indication either of the sums involved in these transactions or of the trading records of these companies, which are simply described as "valuable additions to the earning capacity of the group." The market responded to the chairman's confident tone and the 5s. shares were marked up by 1s. to 23s. 3d. to yield just under 5½ per cent on the maintained 25 per cent dividend.

BTR

BRITISH TYRE AND RUBBER makes heavy rubber products for the heavy industries and is closely dependent on their prosperity. The steady decline in the group's earnings over the past four years reflects the recession in the capital goods trades and in the coal industry; even now, as Sir Graham Hayman, the chairman of BTR points out, signs of revival in some quarters are slow to show themselves. But, since the end of the financial year there has been an increasing number of enquiries from some of the group's customers and some increase in orders received. Whether this means the corner has been turned remains to be seen.

Although the group's turnover in 1958-59 went up by about 5 per cent, trading profits fell from £749,394 to £579,135; evidently profit margins have suffered considerably from the further decline in selling prices. Sir Graham says that the fall in earnings was to some extent cushioned by the inclusion of nine months' earnings of the group's new subsidiary Microcell and its two associated companies, which were acquired early in 1959 as part of the directors' diversification policies. Last June the directors halved the ordinary interim dividend from 5 per cent to 2½ per cent but the final distribution has been maintained; the total ordinary dividend of 12½ per cent is just covered by earnings and the yield of 5 per cent on the 5s. units at 12s. 3d. suggests that some investors are confident that the 1959-60 dividend will be restored to 15 per cent.

Wagon Finance

IN the hire purchase boom of 1959 the 13 per cent rise in the gross profits of Wagon Finance (from £533,948 to £602,758) was rightly judged as disappointing. It may not be accidental that Wagon Finance is one of the few quoted finance companies not directly associated with a clearing bank. The balance sheet now shows an increase over the year in hire purchase business, net of unearned finance charges, from £5,885,840 to £6,982,970. Unearned finance charges have risen by 39 per cent from £820,517 to £1,142,608 and this should ensure a further increase in profits over the next two years as these charges are collected. Mr C. W. Cooper follows the lead of the chairmen of other hire purchase finance companies in deploring the present trend of low initial deposits and very long repayment periods particularly for second hand cars. Mr Cooper infers that he would not object to the return of some hire purchase controls and says it is the board's intention to maintain a selective policy in its business. It would appear unlikely from the chairman's remarks that Wagon Finance has suffered to any extent from recent car frauds. Since the results were first known the £1 shares have fallen sharply from 127s. 6d. to 90s. and on the dividend of 21¼ per cent they yield 4¾ per cent—notably higher than yields on shares of other finance companies.

De Beers Consolidated Mines

THE record diamond sales for 1959 announced by De Beers in January led to a strong demand for the 5s. shares, which rose to 200s. The 1959 results are well up to expectations for net profits have jumped from £9,654,255 to £12,423,351 after a tax charge of £1,550,000, which has more than doubled from £690,000. Last September the interim dividend was increased from 80 per cent to 100 per cent and the final dividend is now stepped up from 120 per cent to 150 per cent, raising the year's total from 200 per cent to 250 per cent. Even this increase did not satisfy the optimists and the 5s. shares fell by 6s. 3d. to 173s. 9d. to yield just over 6 per cent on the increased dividend. The shares are a favourite with American investors and they have suffered a sharp fall in recent weeks under the influence of Wall Street.

London Stock Exchange

FIRST DEALINGS:	Feb. 22	Mar. 7	Mar. 21
LAST DEALINGS:	Mar. 4	Mar. 18	April 1
ACCOUNT DAY:	Mar. 15	Mar. 29	April 12

ALL sections of the equity market lost further ground throughout the week to Wednesday. Selling was not heavy but the persistent trickle of small sales unmatched by any appreciable buying induced jobbers to mark down prices fairly heavily. Uncertainty caused by the authorities' recent actions in the gilt-edged market, gloomy prognostication about the April budget and the continued setback on Wall Street, where prices on Tuesday reached their lowest levels for over a year, all made for quiet and cautious trading. Business steadily contracted and the number of bargains marked on Wednesday was 13,292.

Gilt-edged stocks had a dull but relatively steady week with no appreciable bank selling reported; there was a fair amount of two-way business and jobbers reported that some substantial switching operations took place, both from equities and among the Funds. Over the week to the close on Wednesday 3½ per cent War Loan improved by ⅛ to 62⅛. The shorts benefited from switching operations, particularly on Wednesday, and typically, 4½ per cent Conversion 1964 put on ⅜ to 98⅝ on the week. Medium and long-dated stocks at first showed some improvement but by Wednesday showed little change on the week. Home Corporation loans tended to drift lower, 5½ per cent LCC 1977-81 closing ½ a point down at 100. The main feature in foreign bonds was the steady decline in Greek issues.

In the industrial market, Tuesday's relapse on Wall Street had its effect on Wednesday, when the *Financial Times* index of ordinary shares fell 5.1 points to 306.1; over the week *The Economist* indicator fell by 11.3 points to 342.9. Steel shares fell away, with United Steel showing one of the biggest falls of 3s. 9d. to 75s. on the week; Steel of Wales lost 2s. to 43s. and John Summers 9d. to 70s. Heavy engineering shares also lost ground: Davy-United dropped 3s. 6d. to 107s. 6d., Guest Keen 6d. to 86s. and C. A. Parsons 3s. to 46s. Some of the biggest falls were again suffered by American favourites: EMI lost 3d. to 49s. 9d., Philips Lamp 1s. 7½d. to 146s. 6d., and Unilever 5s. to 133s. 6d.; but the NV shares put on 3d. to 169s. Fisons came in for some heavy buying before it was known that their bid for British Drug Houses had failed, and gained 6d. to 49s. 9d. ICI was down 1s. 3½d. to 59s. 3d. on the week. Hire purchase shares took some of the worst knocks, with UDT down 1⅞ points to 8 and Mercantile Credit 4s. 9d. to 21s. 7½d. Machine tool shares were weak following the full report from Asquith, whose shares fell back 2s. 3d. to 50s.; Alfred Herbert fell in sympathy 2s. 3d. to 50s.

Oil shares drifted lower in conjunction with Wall Street, Shell falling 3s. 6d. to 141s., Burmah 1s. to 45s. and BP the same amount to 53s.

THE MONEY MARKET

THE discount market changed its bid for the first time in six weeks at last Friday's Treasury bill tender—raising it by 1d. to £98 17s. 4d. It tendered at £98 17s. 3d. for the 92-day bills arising from the incidence of Whit Monday and received a full allotment at that rate. The average rate of discount fell about 4d. to £4 10s. 9.34d. and the syndicate received a total allotment of 59 per cent compared with 55 per cent the week before. Total applications rose sharply by £81 million to £483 million for the £290 million bills that were offered and allotted.

Last week's further rise in United States Treasury bill rates has been sharply reversed; the rate on three months bills fell from 4.278 per cent to 3.641 per cent and that on six months bills from 4.458 per cent to 4.024 per cent.

Money was very short in Lombard Street in the week to Wednesday and on each day the authorities gave assistance, in varying amounts. On Thursday of last week and again on Wednesday one or two houses were forced to borrow a very small amount at Bank rate. The rate for overnight money rarely fell below 4 per cent and the ruling rate throughout the week was 4⅜ per cent.

The heating elements of bakers' steam tube ovens are generally solid drawn steel tubes. The combination of over-heating and high pressure is likely to cause violent and dangerous explosions but, should the tube have hidden flaws, explosions may occur without over-heating. Such a disaster could be tragic, but must certainly entail loss of time, output and profits.

Vulcan know

Overheating is one of many factors to cause explosions in ovens. The expert who knows them all, and just where to look for potential faults and danger spots—and not only in ovens—is the Vulcan Engineer Surveyor.

Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection *and* protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why Insurance brokers know that safety first is Vulcan first.

Vulcan are specialists

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to Dept. 17.

MSL *have been retained to advise on the appointment of a*

GROUP ADVERTISING EXECUTIVE

for a medium size postwar London advertising agency with a billing of over £2 million, and handling a number of well known consumer accounts over half of which are leaders in their field. The Group Executive will be responsible to a director for the successful handling of all accounts allocated to his group. Candidates should be between 30-37 and must have worked on consumer accounts either as a senior account executive in a London agency or in a comparable position on the client side. They must have a thorough knowledge of the tools of their trade and possess marked ability either for the critical analysis of marketing problems or in the appraisal of creative work. Salary will depend on experience but will probably be in the £2,000 — £2,500 range. In addition, an annual bonus is paid which takes into account individual performance and there is a contributory pension scheme. Please send brief details in confidence, quoting reference S.2282, to P. J. H. Fryer. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED, 17, Stratton Street, London, W.1

ECONOMIC RESEARCH

BRITISH NYLON SPINNERS LIMITED

invite applications from graduates with a good Honours Degree for a senior appointment in the Economic and Market Research Unit at their London Office. Activities of the Unit are interesting and varied covering a wide range of markets and products. The particular concern of the successful applicant will be events and developments in international trade of importance to the Company's interests. They include the trend to regional free trade groupings notably the formation of the E.F.T.A., activities of the G.A.T.T. and trade policies of a number of countries with particular reference to tariffs and quotas. Duties involve close contact with trade associations, Government departments and other industrial organisations.

Preference will be given to candidates aged 25-35 who have at least two years' appropriate experience.

Applications should be made in writing quoting reference C/42 to the Personnel Manager,

British Nylon Spinners Limited, Pontypool, Mon.

AEI

ASSOCIATED ELECTRICAL INDUSTRIES (MANCHESTER) LIMITED

MARKETING AND PLANNING ASSISTANT

Associated Electrical Industries (Manchester) Limited require an assistant in a section dealing with marketing and planning of electrical products in the Heating and Welding field.

Applicants would be preferred who have had some experience in marketing and promotional activities since leaving University. They should be capable of producing well written reports and show initiative in the selection and interpretation of statistical data covering a large range of subjects. A degree in Economics or Engineering, preferably of honours standard, is essential. Age range 25-35.

Please apply for application form quoting reference V.14 to:—

PERSONNEL MANAGER,
ASSOCIATED ELECTRICAL INDUSTRIES (MANCHESTER), LTD.,
TRAFFORD PARK,
MANCHESTER, 17.

MALE UNIVERSITY GRADUATE IN ECONOMICS, aged under 25, required in London for the Investments Department of a leading Life Assurance Company.—Reply giving full particulars to Box 1296.

UNIVERSITY OF CAMBRIDGE

UNIVERSITY ASSISTANT LECTURESHIPS IN THE FACULTY OF ECONOMICS AND POLITICS

The Appointments Committee of the Faculty of Economics and Politics invite applications for one or more University Assistant Lectureships in the Faculty. Applications are invited from persons qualified to teach either economics or modern economic history and development. It is hoped that the persons appointed will enter upon the duties of their offices on October 1, 1960. The appointments will be subject to the Statutes and Ordinances of the University.

The pensionable stipend of a University Assistant Lecturer is £900 a year, rising by annual increments of £50 to £1,000 a year.

Further particulars may be obtained from the Secretary of the Appointments Committee of the Faculty of Economics and Politics, The Marshall Library, Downing Street, Cambridge, to whom applications should be sent so as to reach him not later than April 16, 1960. Four copies of each application should be sent and if so desired, one or more copies of any published work or unpublished writings. Testimonials are not required, but a candidate should give the names of two persons to whom reference can be made.

GENTLEMAN required, experienced in Company Registration work by the Transfer Office of a City Company. Aged 25/35. Five-day working week; luncheon vouchers; pension scheme. Excellent working conditions.—Box 1295.

For other appointments see page 1049

UNIVERSITY OF DURHAM

KING'S COLLEGE,
NEWCASTLE UPON TYNE.

The Council of King's College invite applications for the post of CLERK ACCOUNTANT INVESTIGATIONAL OFFICER in the DEPARTMENT OF AGRICULTURAL ECONOMICS.

The commencing salary will be at an appropriate point on the scale £900 x £50 — £1,000 per annum, and the post ranks for superannuation under F.S.S.U.

Candidates should be able to undertake economic investigations on farms and complete preliminary analysis of economic data. Knowledge of Accountancy and a degree or diploma in Agriculture or Economics may be advantageous.

Applications, which should include the names and addresses of three persons to whom reference may be made, should be submitted not later than April 9, 1960, to the Registrar of King's College, from whom further particulars may be obtained.

ASSOCIATION OF BRITISH CHAMBERS OF COMMERCE has a vacancy for research secretary of committee which should appeal to a graduate in economics or law of a studious nature with some practical experience of business. Age in the thirties. Starting salary in region of £1,250 with prospects according to qualifications. Joint contributory pension fund.—Write Secretary, 68 Queen Street, E.C.4, for further details and application form.

GOVERNMENT OF WESTERN NIGERIA

VACANCY FOR COMMISSIONER OF INLAND REVENUE (SUPERNUMERARY)

Applications are invited from suitably qualified candidates of Nigerian origin for appointment or transfer to the supernumerary post of Commissioner of Inland Revenue.

SALARY.—Group 6: £2,220.

QUALIFICATIONS.—Candidates must be Nigerians and must be persons of the highest integrity possessing drive, energy, tact and initiative. They must also possess one or more of the following:

(a) a University degree;
(b) a Legal Qualification;
(c) a good accounting qualification;
(d) considerable administrative ability and experience in responsible office.

Experience of tax administration will be an advantage, but the essential qualifications are high integrity, a forceful personality and outstanding organising ability.

DUTIES.—The holder of the office will be required to understudy the Commissioner of Inland Revenue, Western Region.

CONDITION OF SERVICE.—A person selected from within the service will be appointed substantively. If at any time within a period of three years he has satisfactorily demonstrated his ability to undertake the duties of the duty post to which he has been appointed, he will, subject to vacancy, be absorbed into the permanent establishment in competition with the other serving officers eligible for consideration for promotion to such post in accordance with the established service procedures.

A person selected from outside the service will be on probation for a period which may be as long as three years but may be shorter, depending upon the officer's performance. The post is pensionable.

Applications should be completed in triplicate on the prescribed form obtainable from the Office of the Commissioner for the Western Region of Nigeria, 178-202 Great Portland Street, London, W.1, and submitted through the Official Secretary (Recruitment Branch), to reach him by March 15, 1960.

MARKETING AND RESEARCH EXECUTIVE

A leading West End Advertising Agency is looking for a man of round about 30, who has good academic qualifications (preferably a degree in Economics or Commerce with Statistics) and who has had some experience in Market Research to work with the Head of that Department.

Please send your application to Box No. 1294.

Market Research

QUAKER OATS LTD.

wish to make a new appointment in the Commercial Research Department at their office in Southall, Middlesex.

Duties consist of planning and analysing consumer investigations relating to existing and prospective products together with desk research.

This position in a small department offers scope for improving the research methods used by the Company and carries responsibility for the marketing assessment of field and desk research data.

Applicants should be men up to the age of 35 with an adequate background of statistical theory, preferably with a degree including statistics for the intermediate A.I.S. or R.S.S. certificate. Experience of Market Research is also necessary.

Please write to:

THE PERSONNEL MANAGER (MR.50),
QUAKER OATS LTD.,
BRIDGE ROAD, SOUTHALL, MIDDX.

NIGERIAN COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY

Applications are invited for a LECTURESHIP in GOVERNMENT and ADMINISTRATION at Ibadan Branch.

Qualifications: Hons. degree in the field of **Social Studies**, preferably in Sociology; interest in study of administrative behaviour and organisation in which lecturing will be required.

Contract Salary Scale: £752 — £1,668 p.a. plus inducement addition £180 — £300 p.a. for overseas appointees and gratuity at £25 or £37 10s. for each completed 3 months' service. Entry point according to qualifications and experience. Salary quoted includes an interim addition to basic salary recently approved pending salary revision.

Partly furnished houses at one-twelfth basic salary rental. Tours 10-18 months, but leave normally taken in long vacation. Free 1st Class passages. Children's U.K. maintenance grant up to £150 p.a. and passages assistance.

Applications (8 copies) giving age, qualifications, experience and names of 3 referees should be sent to the Council for Overseas Colleges, 12 Lincoln's Inn Fields, London, W.C.2, by March 31, 1960.

PA

PERSONNEL ADMINISTRATION LIMITED
MANAGEMENT CONSULTANTS

Our Appointments Division has been asked to advise on the following post:—

VALUE ANALYSIS MANAGER — LONDON

Our clients, a nationally known firm manufacturing and marketing branded food products, are leaders in the introduction of new management techniques. They wish to appoint a Value Analysis Manager to examine in detail the constituent elements of cost in their products, and to suggest improvements in consumer value or reduction in these costs through the detailed questioning of all the factors of supply, manufacture, marketing and distribution that have contributed to it. This new slant demands a graduate or professional man who can use costing data and techniques and understands materials and manufacturing processes. Imagination and analytical ability are essential together with the drive and managerial capacity to pioneer a new technique; experience in this or a similar field would be an added recommendation. Salary will be in keeping with the importance attached to this senior appointment and there are excellent prospects of further progress within the company. (Ref. 2368/E.)

The identity of candidates will not be revealed to our clients without their prior permission.

For the convenience of clients and candidates we have Regional offices in ***Glasgow, Manchester, Bristol*** *and* ***Birmingham*** *but, in the first instance, applicants should forward brief details, quoting the reference number, to:*

PERSONNEL ADMINISTRATION LIMITED
APPOINTMENTS DIVISION
2, ALBERT GATE, LONDON, S.W.1.

STATISTICIAN

RECKITT & SONS LTD. wish to appoint an Assistant to the Head of the Statistical Department. The services of this Department are very widely sought within the business, on both technical and commercial matters—in market research and commercial investigations, in laboratory experimental design, and in production quality control. Emphasis is laid on the development of new research methods. The Department has good routine computing facilities, including access to an electronic computer, and there is a good technical library.

The Assistant appointed will be expected to accept responsibility for one field of the Department's activity, but will be expected also to take an active interest in all other work of the Department. For this reason a working knowledge of pharmacological and medical applications of statistics or experience of market research of a non-routine character is essential.

This post should appeal to anyone who wishes to broaden their statistical experience, by providing an opportunity for those previously concerned with laboratory experimentation to apply their experience to commercial applications, or vice versa.

Applications from graduates with formal qualifications in statistics should be addressed to the **Personnel Director, Reckitt & Sons Ltd., P.O. Box 78, Hull Yorkshire.** If you would like to know more about this post, before making a formal application, please write to the Personnel Director, who will be pleased to supply you with a more extensive statement.

Salary will be commensurate with the qualifications and experience of applicants and enquiries will be treated in confidence.

THE BRITISH ELECTRICAL AND ALLIED MANUFACTURERS' ASSOCIATION

SECRETARY—OVERSEAS DIVISION

This senior position in the Association has become vacant and offers an exceptional opportunity for a man of the right outlook and experience.

Electrical manufacture is one of Britain's leading export industries and the Overseas Division of the British Electrical and Allied Manufacturers' Association has the responsibility for backing the export efforts of the industry through commercial intelligence, liaison with Government Departments and contact with trade markets. The Secretary of the Overseas Division will have responsibility for all this work under the Head of the Division and will be required to exercise initiative and take responsibility.

Candidates should preferably be between 30-50 years and have experience of overseas trading and knowledge of international affairs. Languages and an engineering background will be an advantage. The post, which is pensionable, carries the normal salary range of £2,250 to £2,750; the commencing salary will depend on qualifications and experience.

Applications, which will be treated in the strictest confidence, should be addressed to the Secretary of the Association, at 36, Kingsway, London, W.C.2, and should arrive not later than the 21st March.

ENGLISH LADY, experienced in Spanish, German and French shorthand-typing, required by Spanish Chamber of Commerce. Full-time appointment.—Box 1293.

Applications are invited for the post of Information Officer/Librarian with

THE WALLACE ATTWOOD COMPANY,
Management Consultants

Candidates should have a good academic background, including Librarianship, and be well acquainted with commercial information service work.

Letters of application, detailing age, education, experience, should be sent to

PERSONNEL OFFICER,
THE WALLACE ATTWOOD COMPANY
WEST HALKIN HOUSE,
WEST HALKIN STREET,
LONDON, S.W.1.

THE UNIVERSITY OF MANCHESTER

HALLSWORTH RESEARCH FELLOWSHIPS

Applications are invited for the above Research Fellowships for advanced work in the field of Political Economy (including Public Administration). The value of the Fellowships will normally be within the range of £900-£1,800 per annum, according to experience and qualifications. Regulations governing the award of the Fellowships may be obtained from the Registrar, the University, Manchester, 13, to whom applications should be sent not later than March 21, 1960.

APPOINTMENTS REQUIRED

FREE-LANCE Econ. Journalist (age 30), awaiting confirmation of app. in internat. org., seeks temp. part- or full-time app. in organisation interested in implications of CM and EFTA. Extensive knowledge of European integration and background econ. research, numerous articles on aspects of European integration.—Box G.C.—Morris, 10 Wyndham Place, W.1.

EUROPEAN INTEGRATION ADVISER, Major U.K. Group, completed studies, free for similar or related work, e.g. consultant. Inc. Econ. Cambridge science degree; 19 years Government Trade Service. Age 45.—Box 1292.

UCON
hydrolubes
help
protect
against
fire

In a large steel mill recently, molten slag was accidentally dumped on a steel plate floor which covered copper hydraulic lines connected to furnace control equipment. The hot slag pierced the steel flooring and melted the hydraulic lines. About 20 gallons of UCON Hydrolubes sprayed out before the pumps could be turned off. Yet, no fire resulted. A serious fire that could have caused extensive property damage and serious personal injury was prevented by using UCON Hydrolubes, the fire resistant fluid. UCON Hydrolubes also provide wear and corrosion resistance equal to petroleum oil.

UCON Hydrolubes are available in a range of viscosities to meet the requirements of various types of equipment such as: die-casting machines, ingot manipulators, furnace controls, electric welders and presses. Conversion of your present hydraulic equipment can be done quickly and inexpensively.

Ask for our FREE booklet IE-3 and learn why UCON Hydrolubes are the economical answer to fire-resistance in hydraulic fluids. Write to UNION CARBIDE INTERNATIONAL COMPANY, Division of Union Carbide Corporation, 30 East 42nd Street, New York 17, New York, U.S.A. Cable Address: UNICARBIDE, N. Y.

TAKE A LONG CLOSE LOOK AT BEA

The European air network that does world-wide business

BEA specializes in serving Europe. But it earns its revenue from all over the world, by carrying businessmen and tourists all over Europe.

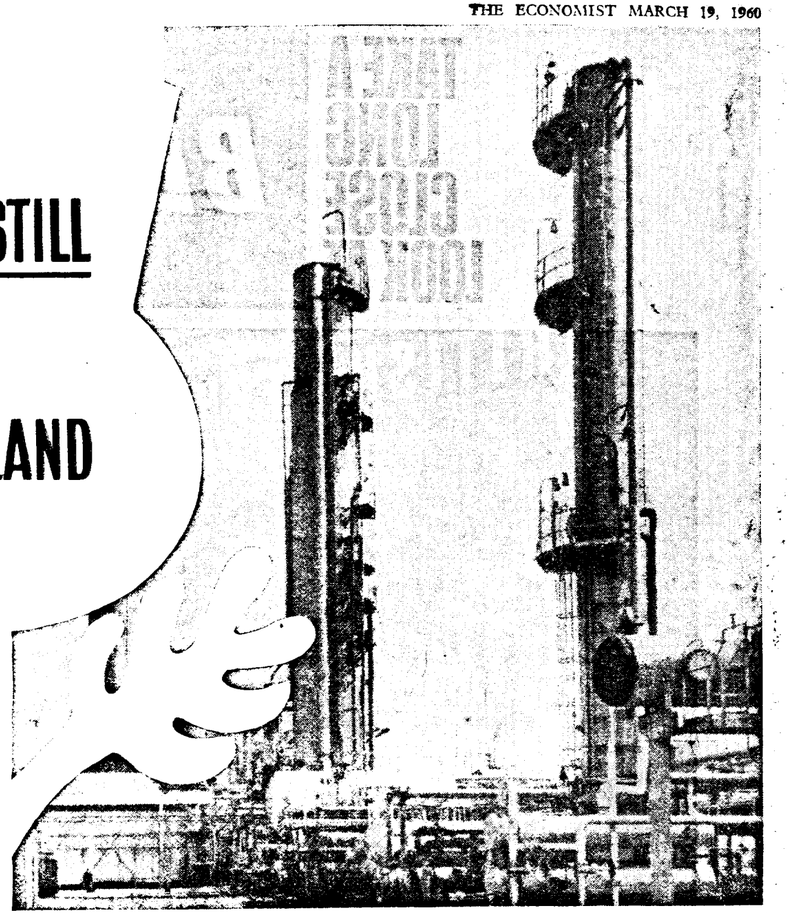
No economist, surveying the general pattern of life in Europe, can ignore the contribution made by BEA to that pattern as it stands today. Many countries owe the rapid growth in their important tourist industries to the existence of BEA services to holiday resorts, and to BEA's cheaper fare policy.

This alone has encouraged the movement of huge sums of money between different countries. To many thousands of Europeans, BEA makes a valuable contribution not only to their air travel, but also to the very economy of their country. BEA is also an important earner of currencies from other continents, especially from North America.

In short, measured in terms of passengers, BEA is truly a great international airline. Its passengers come from every continent, every country, in the world.

Why do so many people, speaking so many languages, and coming from so many places, choose BEA? The answer is on the BEA route map, in the BEA time-table. No other airline operates as many services to as many European destinations. That's why, when you need to travel in Europe your first thought is always BEA.

4 short points to remember when you fly BEA



- *BEA's comprehensive air service in Europe earns foreign currency for Britain.*
- *At any given moment, more people, from all six continents, are flying on BEA in Europe than by any other airline.*
- *In the all-important trans-atlantic market, BEA has earned 6,000,000 dollars in 1959.*
- *In four years BEA has more than doubled its earnings from sources outside Europe.*

As a business man you can appreciate both the complexity of the task and the value of the achievement. So, when you fly—FLY BEA

BEA

The airline that's made big business of air travel in Europe

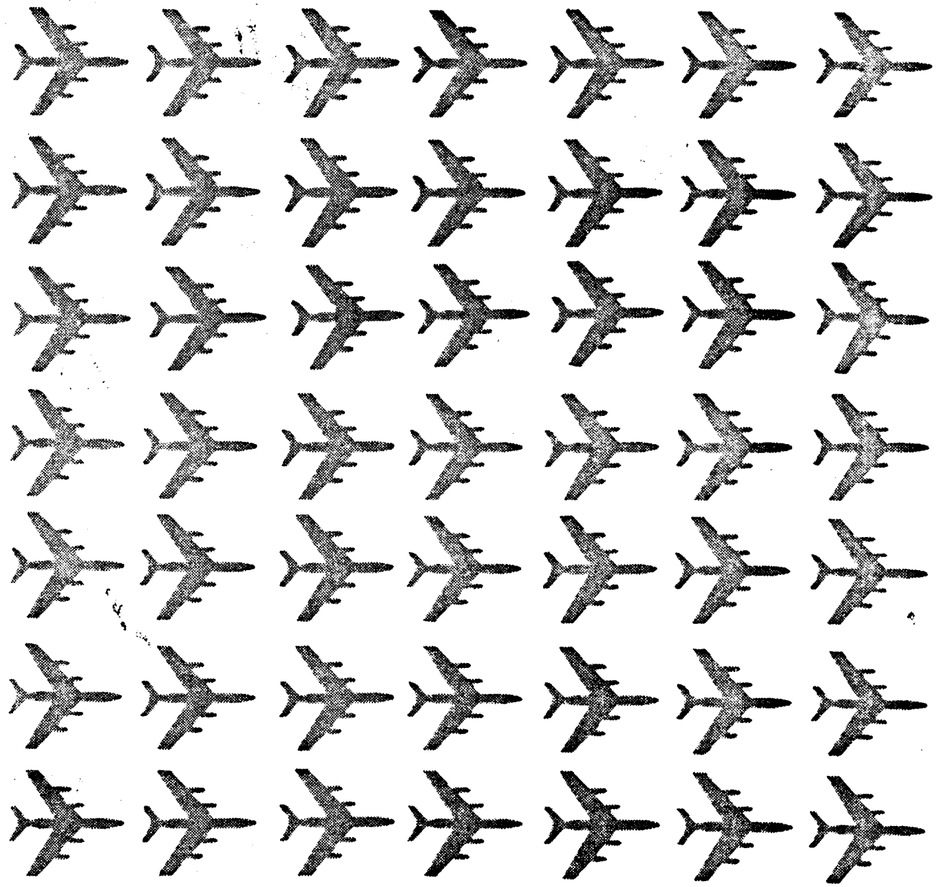
NEW STILL IN SCOTLAND

for...

BP

by...

KELLOGG



Scotland is traditionally the home of stills, but this one outdoes them all: over 35,000 barrels a day! Admittedly, they're barrels of crude oil; but crude oil is the first step in the production of petroleum, and that is just as important as the products of the other stills that Scotland is so proud of.

This particular giant is part of the expansion and modernisation programme of the Grangemouth refinery, and has been designed, engineered and constructed for the British Petroleum Company's Refinery at Grangemouth entirely by Kellogg International Corporation. This is but one example—the vast installations at Kwinana in Australia are another—of K.I.C's ability to serve the chemical refining and processing industries. Our engineers will welcome the opportunity to explain to you how K.I.C. co-ordinates and controls the innumerable tasks and expenditures associated with building a new plant.

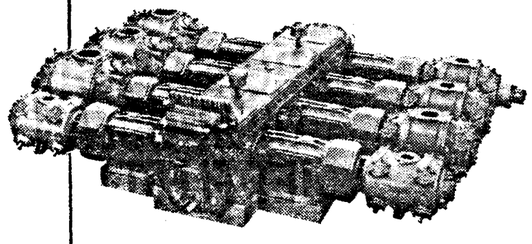
NOW...TWO GREAT NAMES



on one complete line of centrifugal and reciprocating compressors

This nameplate stands for teamwork between the U.K. and the U.S.A. It identifies each precision-made product in the complete line of Clark centrifugal and reciprocating compressors with motor and gas engine drives, manufactured in Glasgow by G. & J. Weir Ltd. These heavy-duty units, designed and engineered in the United States by Clark Bros. Co., are built with traditional British craftsmanship and are available for purchase in sterling. All parts of WEIR-CLARK compressors are identical and fully interchangeable with comparable Clark equipment built in the United States and under license in France and Italy. For complete performance and application data, write to:

CLARK BROS. CO. DIVISION, *Dresser (Great Britain) Ltd.*
197 KNIGHTSBRIDGE, LONDON S.W.7

WEIR-CLARK multi-stage, horizontally-split centrifugal compressors are extensively used in the refining and chemical process industries. These world-famed compressors are built in seven case sizes having from two to ten impellers each. Capacities of 2,000 to more than 150,000 cfm.

WEIR-CLARK motor-driven compressors are available in two, four, six and eight cylinder sizes. These units utilize the balanced/opposed design principle for vibrationless operation. They are widely used throughout the refining industry and as industrial air compressors in general industry.

Efficient Transport Means Prosperity

From the coracles of prehistoric times to the jet airliners of to-day, fast efficient transport has been the key to the progress of civilization. But with each major improvement, the associated problems of operating each form of transport have grown in complexity, and now demand as much attention as the improvement of the land, sea or air vehicles themselves. In the case of aviation, more airlines, faster aircraft, bigger airports - all combine to compel those in charge of air traffic to cry out for modern, fast data processing equipment. SATCO automatic air traffic control is a practical solution to their problems.

Satco

comprises the ground equipment to predict, coordinate, check and display the movement of air traffic en route and in terminal areas. It provides an extremely rapid method of calculating flight paths, for assessing potential conflicts and for coordination between Area Control Centres. Special features are included for military / civil coordination and for the control of jet-powered traffic.

The system has been ordered by The Netherlands Government and the first phase is now on operational test.

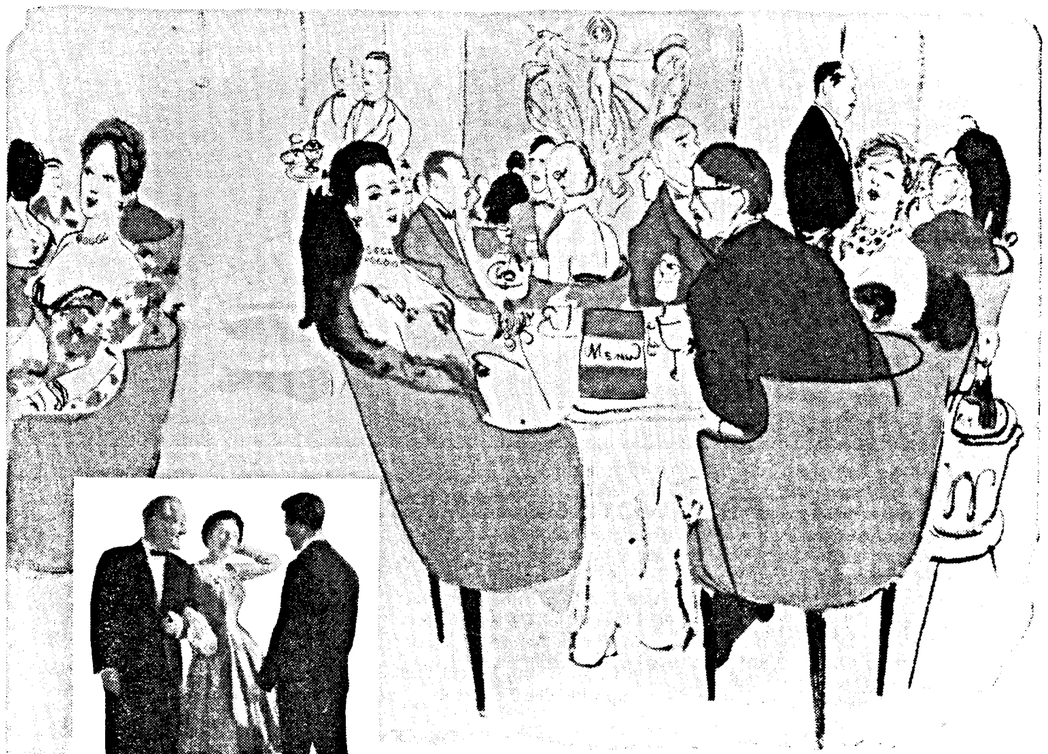
WORLD'S SMARTEST RESORT, WORLD'S FASTEST SHIP

Sail with a gay Who's Who on s.s. "United States"

To America in five days! From the moment that deep ship's whistle fills the air, your trip on the UNITED STATES is an unforgettable experience.

You enjoy Meyer Davis dance bands . . . gourmet meals . . . pre-release films . . . cinema horse-racing . . . a heated swimming pool.



Your fare includes acres of deck space . . . luxurious air-conditioned accommodation . . . liberal luggage allowance . . . plus 5 days of the world's most palatial resort life thrown in! There is no finer food and service anywhere than on this great ship and her charming running-mate the AMERICA.

It's sparkling, gay, lively—but no two guests get the same impression of the Captain's Dinner. This is how Tom Keogh, the well-known illustrator and stage designer, sees it.

By Presidential proclamation, 1960 is a special "Visit America Year." Your voyage can be a glorious holiday for your family too. With the lifting of restrictions on currency for travel you can get virtually unlimited dollars for expenses on board and in the United States and Canada. The luxurious Cabin and Tourist classes can meet any budget problem. And you can pay all fares to your destination and return in sterling. Also, when the low Thrift Season fares are in operation there is an additional reduction of 10% on Round Trip fares during the same period.

Consult your Travel Agent about inclusive tours based on our "in-America-when-you-step-aboard" sailings.

Since restrictions on currency for travel have been lifted, more and more wives go with their husbands on business trips to America.

VOLUME CXCIX - NUMBER 6082

After the Theology

"This is what the Church is said to want, not party men, but sensible, temperate, sober, well-judging persons to guide it through the channel of no-meaning, between the Scylla and Charybdis of Aye and No."

Newman: *History of My Religious Opinions from 1839 to 1841.*

NEITHER Mr Gaitskell's original intention to abolish Clause Four of Labour's constitution, nor Wednesday's "compromise" agreement to retain it while explaining that it does not mean what it says, will affect the policy of any next Labour government by a tittle. But the latest act of tragi-comedy is bound to heighten discussion about whether there will ever be another Labour government at all. An increasing number of experienced political observers, at home and even more abroad, are now inclined to assume (or hope?) that the skids are under British socialism for our time. It is said that the two million or so middle of the road voters who decide British elections now immutably recognise that Labour's policies are many years out of date; that class loyalty to Labour is dying; that the party is regarded by the public as a body of ferocious (if sometimes thwarted) nationalisers; that its internal quarrels and contradictions are gradually making it impossible for its leaders to hope to work out coherent policies; and (though by all experience this would seem very unlikely) that the party may soon begin to break up into separate pieces. In a week when Labour leaders have admittedly shown their lemming-like capacity for political suicide in the vividest relief, it is worth examining these propositions to see how far they bear any relation to facts.

The first three of them almost certainly exaggerate Labour's plight. Only two years ago this week, when the Torrington by-election was in progress, it was the Tories who were in the mire; if a general election had been held at that time, a Labour government would have been returned with a majority of probably over 150 in the House. The policies proffered by the Labour party today are not noticeably more old-fashioned or irrelevant than those of the Labour government that would have been elected then; the main thing that has happened in the meanwhile is that the Tories have grown more popular as the economy has turned from recession to boom. Again, class loyalty to Labour is by the nature of growth a diminishing asset, but its death from natural causes is more likely to be lingering than speedy; the residual feeling that the "party stands for the workers" means that Labour would require heavier blows to knock it permanently out of its position as second party in the state than the Liberals did in the twenties and thirties. The prevalence in the public mind of the bogy of wholesale nationalisation has been overestimated by both Mr Gaitskell and the Institute of Directors; the public knew long before Mr Gaitskell's Clause Four speeches honestly began to explain it to them that his party are not wholesale nationalisers but hypocrites.

It is the other two disabilities of the Labour party that are much more worrying. They do hold out some threat of a process of self-strangulation that could saddle the country with a long period of weak and divided opposition during a generation of Tory rule. The first of these dangers is that the habit of compromise and internally diplomatic doubletalk is becoming so ingrained in the Labour movement that it may soon no longer provide a forum in which able and intelligent men can see any real hope of working out new and relevant ideas. Labour politics are becoming the art of impossible verbal contortionism.

Mr Gaitskell's experience with his own new testament, which he started to write as a brave and thoughtful challenge for a new world, is the present case in point.

Eleven of the twelve points that he originally submitted to the executive on Wednesday were expressions of high flown sentiments with which almost everybody could agree, chiefly because most of them have no relevance to possible state action ; nobody is going to vote against " the brotherhood of man," but no government decree is going to bring it about either. Even the parts of these eleven points that do pretend to affect future state policy would be accepted by most people, though the advantage of writing them into a party constitution is obscure. But the immediate attention of the country is inevitably being concentrated on the twelfth point—on the new testament's wording about nationalisation. As the clause has finally been amended by the executive, Mr Gaitskell has been constrained to say that he:

> is convinced that all these social and economic objectives can be achieved only through the extension of common ownership substantial enough to give the community power over the commanding heights of the economy, including State-owned industries and firms, Producer and Consumer Co-operation, Municipal Ownership, and public participation in private concerns. In recognising that both public and private enterprise have a place in the economy, [Labour] believes that further extensions of common ownership should be decided from time to time in the light of these objectives. . . .

If Mr Gaitskell really believed enthusiastically that a " substantial " dose of all these dog-biscuity doctrines was the only way to achieve his social and economic objectives, there would be room for interesting debate with him. But everybody knows that he does not believe this ; he believes wearily that proclaiming them is the only way of appeasing his militants. And this must raise the question of how long this intelligent man, and the intelligent coterie around him, can bear to put up with the intellectual indignities of their present position—however pleased he may temporarily feel that he achieved a " compromise " on Wednesday.

THE second main danger before the Labour party is that men may be increasingly driven away from it because they feel as great a derision for its bitter battle of personalities as they do for the vacuum in its policies. In a sense, of course, a real split in the party now might be its quickest and healthiest way back to power. If Mr Foot, Mr Mikardo and the other genuine fundamentalists were in fact to hive themselves off into a separate organisation, they would get as tiny a vote from the British public in election fights against official Labour candidates as Mr Zilliacus and his supporters did when they were hived off as " independent socialists " in 1950. But the last few months have shown that Mr Gaitskell's senior colleagues will not help him to draw a clear and commonsense line of policy that would deliberately compel a small band of fundamentalist zealots to trim themselves off unheeded in this way ; instead they have nearly all been angling their speeches (as on Wednesday they angled their votes) to attract as much approval as possible from the zealots, while not quite obliging Mr Gaitskell himself to resign. The reason is that the Labour High Command, having been starved of governmental responsibility for nine years, has ceased to be an executive body that is at all interested in putting any particular policy into effect ; it has become much more like some mediæval royal court, in which a small band of favourites, a rather larger band of potential rebels, and a clique of trade union barons are largely intent upon a personal struggle for power, while publicly protesting that they are doing no such thing.

Is this struggle bound to go on, until the party has torn itself to pieces ? There is one thing that could very quickly stop it. The source of Mr Gaitskell's control over his party and most of its policy during the last Parliament was that he was regarded as a prospective source of patronage ; he was believed to be a probable future Prime Minister, who would one day have ministerial offices to hand out. The main source of his difficulties today is that he is no longer really regarded in this light, because many of his immediate lieutenants have caught from the professional commentators the disease of excess pessimism about their prospects. The first by-elections of this Parliament were taking place on Thursday, and the results will be known by the time this issue of *The Economist* is in readers' hands ; as we write it is impossible to forecast whether the divisions in the party will have much effect upon the voting, but it is easy to guess the effect that the voting will have on the divisions in the party. If the tide of public opinion proves to have turned mysteriously back to Labour, because satisfaction with the Tories has fallen off, then most of the present factionalism and inspired anti-Gaitskellism in the Labour party will magically disappear. But if the tide of opinion is still running the other way, if Brighouse has gone securely Tory and if the Liberal alternative to Labour has made striking headway at West Harrow, then the process of demoralisation in and about the Labour party is very likely indeed to acquire a new and dangerous momentum of its own.

NOBODY can tell what would happen then. The real trouble with Labour today is not the obstinately anachronistic principles of some of its minor zealots, but the spineless expediency—the words are not harsh enough—of some of its leading men. They have now willingly made their leader and their party a laughing stock rather than risk losing any of their personal intra-party prestige or risk facing a row at their annual union conferences. Of course, it is part of Labour's credo that men can be changed. One day, any true socialist must believe, the present Labour High Command might suddenly and magically become a community " recognising that . . . anarchy and the struggle for power . . . must lead to universal destruction," determined that everybody's " effort, skill and creative energy be contributed to the common good," rejecting " selfish, acquisitive canons," standing for a society " with natural, friendly relations between the individuals who compose it, uninhibited by . . . false values," resolved to " resist all forms of collective intolerance and prejudice," " subordinating all concentration of power to the interests of the community as a whole."

These are all ideals that Mr Gaitskell, in his original draft of a new constitution, said that he sought to see suffused throughout a Labour Britain. This winter's sad story of intrigue and blocked reform suggests that he had better concentrate on seeing them suffused through Labour's national executive room instead.

Calling on Mr Kishi

East and West are bidding for Japanese favours

THE trip to Tokyo is beginning to bulk large in the diplomatic brochures. Dr Adenauer is arriving on Friday: President Eisenhower will call on his way back from Moscow in June. (Is it conceivable that Mr Macmillan has never thought of booking his ticket ?) When Mr Khrushchev was in South East Asia last month he had Japanese policy very much on his mind, launching a diatribe before the Indonesian parliament (one of the last appearances that hapless body had to make) against the revised Japanese-American security treaty:

> Can it be that the ruling circles of Japan . . . seriously think that the peoples have forgotten the aggressive actions of the Japanese militarists who but recently tried to enslave the peoples of East Asia ?

Two Soviet memoranda to Mr Kishi's government, on January 27th and February 24th, have made the same accusation that the treaty has offensive aims.

But what Mr Khrushchev did not trouble to tell his Indonesian audience was that, while he spoke, Mr Zorin and the Soviet trade delegation in Tokyo were comfortably putting the finishing touches to a three-year agreement, the largest the Soviet Union has reached with the Japanese ruling circles. Under the agreement, which was formally signed on March 2nd, Japan will export to the Soviet Union some $210 million worth of steel products, equipment for the chemical industry, mining installations and other goods, mostly destined for industrial plant in Siberia. In return, Japan will import crude oil, lumber and industrial raw materials to the same value from the Soviet Union. This Soviet double-play was meant to touch Japanese opinion on its two most sensitive and exposed nerves: while Mr Khrushchev urged on the growing agitation against ratifying the security treaty, Mr Zorin drew before Japanese eyes the prospect of ever-expanding markets on the Asian mainland. Mr Kishi had to break off his efforts to get a foothold in the Chinese market in 1958. Now the Soviet bid is going up.

IF the Japanese needed any reassurance of their visible return to the international set, the anxiety of the United States to have them included in the nine-nation Development Assistance Group, which has just finished its first meeting in Washington, should be flattering enough. The United States has bowed to the Japanese desire to restrict the military implications of the security treaty to a minimum. But the Americans plainly foresee that Japan, the one major non-communist industrial power in Asia (whose rate of economic growth is something Peking's statisticians never mention), can play an essential part in future economic assistance programmes.

The Japanese are already members of the Colombo plan. They provide capital and equipment to Indonesia, Burma, Vietnam and the Philippines through reparations agreements. They have now produced their own scheme to underwrite trade between the rice-surplus and deficit countries of South East Asia. They have also been evolving technical aid plans for the Middle East. Peking, stung by evidence of growing Japanese investment in Malaya and Singapore, has been complaining bitterly of economic aggression ; one of Mr Khrushchev's purposes in Jakarta seems to have been to try to block the Japanese advance there. What Washington may have in mind now is the general co-ordination of aid projects by an Asian regional organisation which, if given a suitable framework, would allow the Japanese to extend their interests without arousing old fears that they would eventually boss the show.

Dr Adenauer is not the man to draw false comparisons on his arrival, and he will be at pains to deny the communist insinuations of a Bonn-Tokyo axis ; yet certain of Mr Kishi's trials and worries are not unfamiliar to him. Mr Kishi does not have a reunification problem (although Sakhalin, the Kuriles and Okinawa are territories to be redeemed) ; he has no worries about African or any other recognition. But the Japanese, although to many of them General MacArthur's airy vision of an Asian Switzerland was not unattractive, have learned now that they are too important for either East or West to leave them out of the world balance. Mr Kishi has deliberately tied his country, and his own career, to the American alliance. He has drawn down communist attacks for steadily building up the Japanese armed forces (even though they are behind schedule). He is constantly aware of the economic temptations that communist policy is putting in the way of both the Japanese left-wing parties and the industrialists and nationalists. And he knows perfectly well that breaking down the strong and continuing reservations felt in the West about having Japan as an equal partner at all will be a slow process. It is a hard row to hoe.

It will become harder still in the next few weeks as the security treaty comes up for ratification in the Japanese Diet. (Its progress in the United States Senate, where it was introduced on March 10th, has been held up to see whether the Diet debate compels revisions.) The noise of opposition is deafening. Peking fired its first big gun on November 19, 1958, when the talks on the security treaty were just beginning. The Chinese foreign minister, Marshal Chen Yi, advised the Japanese to get rid of American military bases and to join in " a collective Pacific security pact " ; if this were done he saw no harm in Japan having forces for self-defence. Peking has since invited a steady stream of visitors, ranging from a multitude of left-wing and trade union delegations to two considerable figures in the Liberal-Democratic party who are personally opposed to Mr Kishi: the former prime minister, Mr Ishibashi, and a former education minister, Mr Matsamura. The Chinese did not get much change out of either of these gentlemen, although the statements after they had left were enthusiastically written up.

Since last autumn Peking has been able to rejoice in the heady agitation inside Japan against the security treaty, drummed up by such bodies as the All-Japan Liaison Council Against Military Bases, the Japanese National Peace Committee and the Japan Council for Prohibiting Atomic and Hydrogen Bombs. These efforts have produced mass demonstrations and the collection of millions of signatures protesting

against Mr Kishi's policy. Among the Japanese political parties the Socialists are openly supporting the campaign against ratification, and they advocate the restoration of diplomatic relations with Peking. Some of their fears of the treaty are said to be over the likelihood of an

> influx of American capital and the dumping of American commodities in Japan at the expense of the Japanese economy.

Mr Ishibashi, who has kept in touch with the Sohyo trade union leaders, has now come out for settling relations with the Soviet Union and China after the security treaty has been approved; he favours an invitation to the Chinese to visit Tokyo later this year. Mr Matsamura has issued a solemn warning that, if the security treaty is "rammed through" the Diet at present, it will make the improvement of Sino-Japanese relations impossible.

To all this Mr Kishi has replied that he stands by the treaty, and by his policy of wait-and-see toward the Chinese. His strength is in the knowledge that in last year's Diet elections the support for the government was, to a considerable extent, a demonstration of the electorate's wish to retain the American link, however unsentimental his countrymen may be about it. The American market is Japan's greatest prop and stay; without it the economy must be severely damaged, whatever Moscow and Peking could offer. The odds are on Mr Kishi and ratification, but it will be an unrelenting fight.

If the western countries feel the need to have Japan as a partner, as they do, there are some steps that they must consider to give that partnership full meaning to the Japanese. At present the United States allows the Japanese most-favoured-nation treatment under Gatt, although gentlemen's agreements keep American imports of the most sensitive products within bounds. But Britain and most west European countries—west Germany is an exception—refuse the Japanese most-favoured-nation treatment; and they have been reluctant to include Japan in the Development Assistance Group for fear that the Japanese might then demand their rights under Gatt. Yet, just as British opinion has now to face up to its responsibilities in accepting west Germany as an ally, sooner rather than later it must recognise what it ought properly to do for the Japanese. One issue that the new aid group must tackle early on is a common programme for lifting trade restrictions on the products of young and developing industrial countries. There is a strong self-interest in this for the West; and there is a strong self-interest, too, in getting on terms with the Japanese as an ally in the development and aid competition among the under-developed countries of Asia.

The Anxious Ally

Our special correspondent, revisiting west Germany, reports on the anxieties and sense of isolation which are troubling German opinion

WHEN Dr Adenauer went to Washington this week, he had the support of a virtually unanimous German opinion on one subject—Berlin. All sections of west German opinion share his view that Mr Khrushchev's threat to west Berlin was in part a test of strength, and many share his fear that the West may make concessions that could put west Berlin on the slippery slope that leads to absorption in east Germany. A recent article in *Die Welt*, a newspaper not noted for its support of Dr Adenauer, voiced a widespread fear when it raised the memory of Munich in connection with Britain's search for what it called a "cheap relaxation" today.

A British visitor to Germany has therefore to spend a good deal of time in reassuring his hosts that the British are not going to abandon Berlin, and even more in finding out why German fears are so profound about even an interim agreement on the status of the city. The basic reason seems to be that the German assessment of Russian motives in Europe and Berlin differs profoundly from the American and British. While the Anglo-Saxon powers see the Berlin issue as one small facet of a world-wide problem, a hot spot which should have priority for a douche of cold water in the general effort for détente, the west Germans believe that Mr Khrushchev has chosen to heat up the Berlin issue expressly to undermine and divide the West, and that the only answer is to stand firm.

Since Mr Khrushchev visited President Eisenhower in the United States, it is true, even the Bonn government has begun to recognise that a gradual easing in east-west relations, and a more liberal evolution inside Russia, may be on the way. But Berlin, the Germans believe, where the West is vulnerable and weak, is the one place where there is no room to talk at all. A great deal of legal nonsense is talked in Germany about Berlin, but behind this smoke-screen lies a simple and real fear.

West Berlin, left high and dry by the accidents of 1945, is highly vulnerable. Its freedom rests on the presence of allied troops, guaranteeing the intervention of the western powers if it is interfered with, and on the confidence of its people that it will stay free. The Germans recognise that mild modifications of the *status quo*, like the small reduction in allied troops suggested at the Geneva conference of foreign ministers last year, would make no material difference to the city's position; what they fear is that any interim arrangements would undermine confidence, and would then be followed inexorably by Russian demands for more. Even suggestions for new guarantees of access to the city are looked at sceptically. What more, they ask, could these offer than the promises to "facilitate traffic between Berlin and the zones," made in the Paris agreements of 1949 which ended the blockade, and evidently regarded by the east Germans as far from sacrosanct?

The same scepticism about communist intentions lies behind all the opposition to any recognition of, or dealings with, the east German government—an attitude shared by all but a small left-wing minority of Social Democrats and some Free Democrats. A good many people in all the main political parties, as well as in the Bonn foreign office, have recognised that a rigid application of the Hallstein doctrine, which inhibits Bonn from getting on terms even with Poland, does more harm than good. And despite the bold front the west German government has been putting up, it has begun to sink in at Bonn that Mr Khrushchev is in a position to

effect his threat to sign a separate peace treaty with east Berlin whenever he likes. Few Germans seem yet to have faced the question of what the West does if the Russians simply hand over certain executive responsibilities on the routes to Berlin to the east Germans, as they could, in ways that present no conceivable *casus belli*. It is this sort of practical consideration that makes it hard to see how the pristine purity of the west German doctrine that the east German state does not exist can be maintained.

But accepting the fact of its existence for certain practical purposes is a very different matter from sending ambassadors to east Berlin. To the west Germans the east German government is still a quisling government and fanatical to boot—an impossible negotiating partner. To them a diplomatic recognition of the east Berlin regime would mean writing off German unity indefinitely. Such a step would have profound implications for the Berlin question, because isolated west Berlin lives on the hope that the unity of Germany will one day be restored—and because its future can only be made secure if Germany can in fact be reunited.

Yet, whereas Dr Adenauer has made his own the firm Berlin policy of the Social Democrat, Herr Brandt, the city's governing mayor, he has certainly not adopted the Social Democratic corollary: that in pursuit of German unity the West should be more flexible about the general problem of central Europe. On Berlin, Dr Adenauer has German opinion wholly behind him; on these broader issues, its backing is a good deal less than unanimous.

RECENT German visitors to Britain, like Herr Brandt and Dr Krone, the Christian Democrat parliamentary leader, have returned home reassured about the British Government's stand on Berlin. The general feeling seems to be that the British are over-optimistic about Mr Khrushchev's intentions, but will stand fast in a pinch. But the deep sense of unease in western Germany about British intentions flows not only from misgivings about government policy. The frightened feeling that the British, secure in their island dug-out, and unaware of the ceaseless communist purpose which the Germans observe in the front line, are being lulled into another Munich may seem exaggerated in London. It is, however, nourished by the recurrent attacks on Germany in a part of the British press; the feeling that harsher standards are applied to the young democracy in western Germany than to the police state run from east Berlin cuts deep.

It has been difficult to separate emotion from real issues in the almost incessant bickering between Britain and west Germany that has marked the past eighteen months. On each of the matters of contention—east-west relations, swastika-smearing, bases in Spain—there has been a real issue at stake. But each burst of inflated criticism from the anti-German press in Britain, duly reported home, leaves a sediment of bewildered distrust in German minds which grows steadily and has now reached a dangerous level. Some Germans imagine that British hostility is economic, the jealousy of a competitor. Among politicians and officials in Bonn the belief still persists that the British are out to kill the common market. Perhaps most disquieting of all, Britain's natural friends in Germany, people who want to root out the last vestiges of nazism, and who regard Herr Strauss's plans for Spain as a clumsy folly, are beginning to get tired of the constant recrimination from across the North Sea. The fund of potential goodwill towards Britain that still exists in Germany, a belief that Britain still offers political and moral examples worth studying, these cannot survive indefinitely if the British persist in looking at the Germany of 1960 with the eyes of 1940.

For all that, the ordinary German gets small comfort from the French alliance on which his government sets such store. He sees France's future as uncertain and its friendship as a hothouse plant. And, in Bonn, the feeling that American policy is blowing hither and thither in the winds of departmental argument as the summit approaches causes disquiet, too. The sense of isolation—which perhaps lies behind Dr Adenauer's curious outbursts against what he labels as communist attempts to isolate west Germany—is not confined to him alone. If it continues to develop as it is doing, it could have unpredictable and perhaps perilous consequences when the long Adenauer era at last draws to an end.

Buying at a Discount

A glance at a growing form of cut-price trading

COMPETITION in the retail trade takes many forms. At its most obvious, it is transforming the average suburban high street from a straggle of small independent shops into a stream of professionally managed self-service stores and supermarkets. Less obvious, but increasingly well documented, are the straight price reductions now offered by many of the traditional shops which have cut their costs by joining a retail buying chain. But another major variety of price reduction has remained—almost by its very nature—largely hidden. This is *discount trading*, whose benefits are now reaped, on one estimate, by as many as one quarter of the country's shoppers. Its advantages, in contrast to those of ordinary cuts in prices, are not yet available to all.

Traditionally, the discount is a special rebate given by the retailer or the manufacturer to a favoured customer—which here normally means a large or a well-organised one. Obvious examples of such customers would be big firms, trade associations, trade unions, professional groups or clubs. People in all of these organisations may be able to obtain substantial reductions in the prices of a wide range of the goods that they buy; indeed, the possibility of doing this may well be one of the main attractions of joining the group. This is true, for instance, of many gardening and sports clubs. It could be true of certain white-collar unions. The discounts offered to these people are sometimes simply the result of their greater bargaining power as a group of customers; or, by arrangement with such giant concerns as Imperial Chemical Industries, Unilever, British European Airways, and various insurance companies, discounts may be given in return for the retailing and distributive job done by the clubs the firms support.

More generally, three distinct types of discount trading can be sorted out. The first is the cheap rate at which an employee of a company, or a member of a profession, is able to purchase the company's or the profession's own products. Car workers, for instance, can get cut-price cars, soap workers cut-price soap, insurance workers cut-price insurance, bank employees free banking services, professional photographers cheap films, musicians cheap music, and doctors and medical auxiliaries cheap chemists' goods. More significantly—because of the wider range of products which they handle—workers in the retail and wholesale trade are usually allowed special terms on all the purchases they make from their own employers. Salesmen also do particularly well. Apart from their own samples, which need not by any means all be distributed and which can be bartered for the samples of other firms, many of them get a virtually free car, a free supply of any special offers their firm may be making and various other free items such as razor blades ("to remove window bills"), brief cases, writing materials and hats.

The second type of discount, which again may cut 5 to 15 per cent—and occasionally 20 per cent—off the purchase price, is a more arbitrary one. Certain firms, clubs and unions of employees pass on to their members the chance to buy, at a trade discount, a small range of goods which they do not themselves make but with which they have trading connections. BEA employees, for example, can get a discount not only on air travel but also on certain general lines of goods stocked by the company; many Unilever employees can get cheap flower bulbs; estate agents can get cheap wine, journalists cheap books, doctors cheap life insurance, and civil servants cheap mortgages and hire purchase. The possibility of securing discounts on this rather random selection of goods—all of which have in common a normally high margin of retail profit—depends primarily on the pushfulness of the buying group involved; the discounts are widely available to people who know where to get them. Some employers, on the other hand, make no effort at all to secure these (very real) advantages for their staff; the more diehard even object to discount trading on principle. Others get the advantages but keep the fact as quiet as possible because they fear retaliation from the better organised sections of the trade. But, broadly speaking, this type of discount is most often available to members of large organisations and to the white-collar workers in them.

THE third type of discount is the comprehensive one offered by a variety of retailers to all members of a particular group. Most notably, these concessions are offered to associations of civil servants, teachers, local government officers and bank officers, and employees of some big firms (and their friends) in great profusion; they are also offered, on a much more modest scale, to members of smaller firms and certain manual unions such as the Transport and General Workers' Union. A glance at a few of the union magazines—one, but not the only, way of letting members know about possible discounts—confirms this. *State Service*, the organ of the Institution of Professional Civil Servants, contains regular offers of a discount of 20 per cent on rings, watches, jewellery, clocks and cutlery, of 15 per cent on carpets, of 12½ per cent on washers, refrigerators, tape recorders, radios, TV sets, etc., and "reduced" rates on other items like holidays and motor insurance. Since the arrangements are mostly made with the staff side of the appropriate Whitley council all that is needed to get the discounts is a union card. Nor are the advantages confined to civil servants. The *Bank Officer* (organ of the National Union of Bank Employees) contains a similar list of offers and others—such as for 7½ per cent off wines and 5 per cent off clothes—as well. In contrast, the T & GWU *Record* contains only a very few offers, though they are useful ones; recently a 10 per cent discount to T & GWU members was offered on furniture, bedding, carpets, etc., and, like the railwaymen, they seem to be favourite targets for offers of bargain holidays.

It is the rapid growth of this third and pervasive type of discount—and the news that Antony Jackson Ltd. is planning to start a discount house in Manchester open to the general public—that is causing the small shopkeeper most concern. Not only is the new form of trading doing him out of business directly; it is also encouraging normally conservative people to write around to try to get discounts for themselves. The National Chamber of Trade, the country's main spokesman for the small shopkeeper, has been holding up to ridicule two recent circulars, one from the Poole branch of the National Union of Teachers and another from the staff side of the Winfrith Heath Atomic Energy Establishment, asking shops for discounts for their none too numerous members. But if these people's special patronage is not thought worthwhile by the retailer, doubtless the discounts will not be conceded. This is no argument against any group trying to use this simple expedient to lower its members' cost of living.

ON the contrary, an effort by any group of consumers to concentrate their buying on a few firms that can afford to give a discount is likely both to increase retailing efficiency and to lower costs. It is often found, for instance, that these firms offering discounts give little service; they are really wholesale warehouses selling on a "cost plus 10 per cent" basis, from which the individual customer can buy the goods he wants. He can always pay for service at a modish store if he wishes, but by buying at a discount the British buyer—like the American one—is able to do his retailing himself. The (often artificial) distinction between "the trade" and the individual consumer is thus removed. The investigations by the Consumers' Association (publishers of *Which?*) into the quality of goods sold on discount showed that they were anything but shoddy; many of the association's "best buys" were freely available. There seems no reason why such do-it-yourself retailing schemes should not spread.

If they do, the one disadvantage of discount trading would be removed. Its drawback at present is that the discounts are available only to certain classes of people—and primarily to those who are doing quite well already. What is needed is for the public generally to be given the opportunity to buy cheaply from a warehouse if it wishes. One measure that would help would be the abolition of a manufacturer's power to enforce resale price maintenance, which in turn would enable a discount house to advertise its bargains in the national press. At present a general discount house has to devise ways of getting round this problem. Messrs Antony Jackson's will have to insist on customers becoming "members" because of the resale price control on many consumer durables.

NOTES OF THE WEEK

FRANCE AND BRITAIN

Le Weekend

PRESIDENT and prime minister merged into the sylvan scene at Rambouillet on Sunday, while their ladies surveyed the sheep farm and dallied in the dairy. From this and all other available evidence it has been readily assumed that the talks were informal, exploratory, wide-ranging and probably adequate. Mr Khrushchev's health would be an unexpected topic: for the rest, the agenda is reliably understood to have been at Sixes and Sevens for at least part of the time. Nothing that passed could be called a negotiation.

Both sides have let it be known that Franco-British relations are the better for the day and a half's conversation; it is something that an exchange of this kind has taken place at last. There has been a sense of relative détente between Paris and London since Christmas, which the acceleration of the Common Market has not visibly disrupted. This is all to the good, provided the amicable enthusiasm aroused by General de Gaulle's state visit next month is not taken as a substitute for hard talking and thinking about the partnership in the coming months.

. . . AND RUSSIA

Tsar or Commissar?

MR KHRUSHCHEV'S bout of 'flu happened to coincide with a last-minute Franco-Russian row over the arrangements for his visit; one or other was enough to postpone his arrival in Paris from the 15th to the 23rd. The row seems to have been about whether Mr Khrushchev meant to travel as head of state or commissar. The French were reluctant to allow either him or M. Thorez the political capital of a visit to the Mur des Fédérés (where the last *communards* perished in 1871) or a jovial celebration with the Franco-Soviet Association.

Perhaps rather more seriously, General de Gaulle seems to have been disturbed by the possibility of Mr Khrushchev speaking his mind anywhere in the Strasbourg or Verdun country. The French comrades are now saying that since Mr Eisenhower was allowed to make a public speech at the Hôtel de Ville in Paris last September, Mr Khrushchev, too, should have his turn. For his part, Mr Khrushchev is thought to have opposed a trip to the Hassi Messaoud oilfield and to French military installations. It may be thought a sign of grace on his part that he has agreed to stay on past March 31st, when such desperate characters as Herr Strauss and Mr Watkinson will be loose in Paris for the Nato defence ministers' meeting.

General de Gaulle is no novice in these gambits: Mr Molotov will probably never forget how he walked out on Stalin in Moscow in 1944. Connoisseurs of the art will judge the victor in the present ploy by the final itinerary agreed on for Mr Khrushchev. Since the tour is to be shortened, it should be easy enough to cut out what he has objected to; but will he get all the additions he wants? It may be a measure of the importance Mr Khrushchev attaches to these matters that no one in Moscow apparently dared to negotiate with the French while he was away in south-east Asia.

. . . AND AFRICA

Algerian Stalemate

A CHAPTER in gaullist history has ended with a statement by the Algerian government-in-exile in Tunis which puts a stop to illusions about the imminence of a negotiated settlement of the war. After General de Gaulle's tour of Algeria and his reassurances to French officers, it was expected that the insurgents would proclaim the futility of further discussion; and this is what they did on Monday, in unequivocal terms. The Tunis statement accuses General de Gaulle of having emptied the idea of self-determination of all its meaning, of seeking to perpetuate colonial domination, and of leaving the Algerian people with no choice but "to pursue the war of liberation until independence."

In the forthcoming months attention will no longer be focused on the political positions of the French government and the insurgents, and on the extent to which they approach each other or diverge. It will be centred on the war and its international consequences. The Algerian government-in-exile will set about restoring its diplomatic position, temporarily shaken in the past year by General de Gaulle's offer of an apparently liberal solution. M. Ferhat Abbas and his colleagues are now likely to turn to Washington with the argument that their conciliatory efforts have been fruitless, and that it is now up to the Americans to put pressure on the French government. Such a diplomatic offensive would have Afro-Asian support, and might be coupled with hints of an "agonising reappraisal" which could force the insurgents to resort to the "Chinese alternative."

International pressure, however, will not be the only problem General de Gaulle has to reckon with. There is also the undoubted disappointment at home. The general's popular strength has rested largely on the belief that, unlike his predecessors, he could bring the war to an end. The pained reactions after his Algerian tour of men as faithful to the general as M. Mollet and M. Mauriac are symptomatic. Naturally, France can carry on the Algerian war and live. The Fourth Republic proved it for quite a time; but that is not a very encouraging precedent. It is in the general's interest that the new, gloomy chapter that has opened should not be a long one.

LABOUR PARTY

Patched Up

LORD HAILSHAM may get away with criticising the National Anthem; but Mr Gaitskell must not desecrate Clause 4. Once some of the big union leaders had made this clear to the party leader, and he had totted up the block votes they wield at Labour conferences, the battle was essentially over. The much heralded special meeting of the National Executive was a planned anticlimax, with the vice-chairman, Mr Crossman, fresh from being publicly ordered to the back benches by Mr Gaitskell, contributing small points of drafting as cheerfully as the rest of them—and rather more effectively than most.

Long before the meeting it was plain that, in so far as Mr Gaitskell may really have thought that he could split off and isolate the minority of fundamentalists, this battle was lost. The political members of the National Executive would give their leader no real support; and Mr Gaitskell must in fact have known in his heart that they would not—otherwise he would surely have lined them up on his side before making his Blackpool speech. From then on Mr Gaitskell had a maximum and a minimum aim: the first being to bludgeon through the replacement of Clause 4 by mobilising union support and by hinting at his own possible resignation; the second being to get his own draft of the party's aims accepted alongside Clause 4. The maximum aim was soon ruled out because the union leaders reported that they would not carry their annual conferences on any such change; and because, one by one, some brusquely in public, some sorrowfully in private, the political members of the Execu-

tive warned Mr Gaitskell that a threat of resignation would not work. But since practically no one on the union or political side wants a change of leadership at this moment, there were plenty of willing hands to assist Mr Gaitskell in achieving his minimum aim. "Unity" was thereby restored in the party, at the expense of still failing to lay to rest its old Marxian ghost.

Exit Mr Crossman

AFTER two days of seeing his photograph alongside his leader's on all the front pages, Mr Crossman retires to the obscurity of the back benches, from which he will doubtless periodically contrive to sparkle. The experiment which Mr Gaitskell undertook of attempting to introduce this exceptionally talented man of ideas into the policy-making ranges of the parliamentary party was a worthwhile one, though it ended in grief. For a host of reasons, most of them temperamental but some having to do with the inherent difficulty of combining the roles of doer and commentator, Mr Crossman has managed over the years to antagonise substantial sections of his parliamentary colleagues, particularly the trade unionists. For his hard work on pensions he finally began to earn the respect of many who had mistrusted him, and Mr Gaitskell's use during the election of his experience as a former professional propagandist brought him for the first time into a temporary position of direct party influence.

But Mr Gaitskell's unreadiness to adopt his proposal immediately after the election for an appointed Shadow Cabinet (which could incidentally be expected to include Mr Crossman himself), and Mr Crossman's own failure to get elected to the present Shadow Cabinet despite the leading role he had played in the general election, left him in an anomalous position. It is easy to understand that a man with his restless preoccupation with ideas—a rare enough distinction, after all, among politicians—should hardly be content to accept full "Shadow Cabinet discipline" in return for an occasional appearance on the front bench to handle questions and debates on pensions.

In practical terms, Mr Gaitskell felt he had to take action because the discipline of his Shadow Cabinet seemed liable to break down if he did not. But while it may be a far-sighted training policy to give front bench duties to backbenchers at a time when the Opposition is many years separated from memories of ministerial experience, Mr Crossman has a point when he asks whether it is wise to shut off the cream of the backbenchers from independent public discussion of issues for which they have not been made individually or collectively responsible. Mr Gaitskell seeks to avoid this by basing his action on Mr Crossman's unwillingness to promise not to campaign against the Labour party's defence policy in the future. But there is obviously a difficult line to draw, which ought always to err in the direction of free speech.

BY-ELECTIONS

The First Tests

THE first two by-elections of this Parliament were taking place on Thursday, in Labour's very marginal Yorkshire seat of Brighouse-Spenborough (majority only 47 last October) and in the Conservatives' very safe London suburban seat of West Harrow (majority 18,000). The latest public opinion polls suggest little change in the major parties' standing since October; but the general trend in recent local council by-elections seems to have been a sizeable and apathetic fall in the Labour vote, a smaller (but also quite noticeable) fall in the Conservative vote, and a rise in support for most Liberals and some independents. It remains to be seen whether this is any guide to what will happen amid the greater excitement of parliamentary by-elections. For what the precedent is worth, the first marginal by-election in the 1955-59 Parliament—at Greenock—showed a 3 per cent swing to Labour. After the shock of general election defeat, some Labour supporters who might have stayed away in elections for safer seats turned out in a high poll at that Greenock by-election, presumably to show that they did not want Labour to be given yet another well-publicised buffet off the political stage.

In the West Harrow constituency, which stretches northwards as far as true blue Pinner and Hatch End, the late Sir Albert Braithwaite won 70.9 per cent of the vote to Labour's 29.1 per cent in a straight fight last October. This time the election has been four-cornered. A Liberal has been fighting with the express (and pretty tough) aim of beating Labour for second place. It will not be surprising if a number of former Tory supporters have deserted to him to try to help to rub Mr Gaitskell's nose in the dust, but the interesting thing will be to see if he has attracted many of Labour's former faithful as well. On Thursday almost everybody seemed to expect an apathetic turnout. The fourth candidate has been a right wing independent ("prosecute wildcat strikers," "cut government expenditure") who will presumably have drawn any votes he has secured away from the Tories and Liberals. But he was expected to save part of either the Liberals' or Labour's face by filling the embarrassing bottom place in the poll.

EUROPE

The Seven in Vienna

FACED with the prospect of an accelerating common market, the ministers of the European Free Trade Association, meeting in Vienna last weekend, approached the question of reciprocal tariffs cuts with the Six on July 1st in a reasonably generous spirit. On that date the individual members of the Seven are due to cut tariffs in each other's favour by 20 per cent; they seem to have agreed in principle to extend these advantages to the Six as well if the Six give them a fair return.

The group was wise not to formulate its proposals in rigid terms, for it has been clear for some time that the Six will not reciprocate by giving the Seven advantages identical in form to those the Seven offer them. To do that would be to continue to operate the common market as a free trade area, which the French are not prepared to accept. Backed by the Americans, they want rapid progress towards the single common tariff, which has symbolic importance for them. The European commission was trying to soften the impact when it recommended on March 3rd that the new common tariff should be 20 per cent lower than the average which would result from a straight application of the Treaty of Rome. The proposal has the disadvantage for British industries that they will in fact begin to suffer from discrimination in their established markets in west Germany and Benelux. But though a reduction of the common market tariff will not assuage all the pains of discrimination for the outsiders, it is obviously better than nothing at all.

If the short-term gains that the Seven would get from the commission's plan prove smaller in value than the 20 per cent cut in individual national tariffs that the Seven are offering in return, there may be pressure to hold back. If such a move is successful it seems important that the weight of such reductions as are in fact made falls in the right place. The right place is on the high tariffs in the group—the British, and to a lesser extent the Austrian and Portuguese—not just because high tariffs are bad for the economies protected by them, but because a levelling down would help towards the harmonising of European tariffs generally—and that seems a precondition of a more permanent agreement later on.

ITALY

Opening to the Left?

THE latest Italian cabinet crisis, which is as usual both protracted and tortuous, is also proving unusually interesting. Signor Segni resigned on February 24th, after the Liberals had withdrawn their support, because he did not wish his parliamentary majority to depend on the extreme right alone. Exactly two weeks later, on March 9th, President Gronchi, having unsuccessfully asked Signor Piccioni to try his hand, turned once again to Signor Segni. And last Monday, the central direction of the Christian Democrat party agreed that Signor Segni should this time look to the left and try to form a centre-left coalition of the Christian Democrats, the Social Democrats and the Republicans. At the time of going to press, he is still trying.

Signor Segni's decision to look leftward must have caused some surprise in Rome, where by the end of last week the possibility of such a move, although it had been much discussed, was believed to be dead. Signor Segni, however, may have decided that an opening to the Left must be seriously explored if only to demonstrate that, although it would correspond to the present trend in Italian political thinking, it would not be politically practicable.

It may, indeed, not be. Assuming that the Christian Democrats, the Social Democrats and the Republicans can agree among themselves on a programme, they would still need to pick up a few outside votes to command even a precarious majority. If, however, their coalition could count at least on the benevolent abstention of the Nenni Socialists, it would enjoy a comfortable majority. This, then, is the crux. Signor Nenni himself would be willing to support a centre-left government, provided its programme was one that he could, at least passively, accept. Among several tricky points in Signor Segni's present attempt, the trickiest is likely to be the anti-communist declaration that he will feel bound to make in some form or another. Yet it is essential that Signor Segni and Signor Nenni should agree on as definite and clear-cut a programme as possible, or the partnership will not work.

But even if Signor Segni does manage to reach an understanding with the Socialists, can he sell this to his party without splitting it? Already there have been angry mutterings from the Christian Democrat right wing and from the Church at the possibility of a centre-left government. Perhaps Signor Segni's greatest asset—if he really wants this solution—is his own reputation as a moderate conservative; if he cannot lead his party leftward, it is hard to see who can.

CENTRAL AFRICA

Mr Macleod's Programme

IN last Tuesday's debate in the Commons the Labour party gave Mr Macleod a remarkably friendly send-off for his mission to Nyasaland next week; when Mr Callaghan refers to Sir Roy Welensky as one "who would genuinely like to see a partnership" it is almost possible to talk of a bipartisan approach. The reason for this greater cordiality over African policy is easy to find. Mr Macleod's Kenya policy has given the Labour party a real token of his liberalism; and the Labour party has taken note of the risk that he is running by it. This week's regrettable *volte face* by the African leaders in Kenya—they are refusing to fulfil their promise to enter an interim

Brighouse Before Philippi

Our special correspondent who has been covering this week's marginal by-election writes:

THERE is, of course, no such place as Brighouse and Spenborough. The marriage was made in an Electoral Commissioners' limbo; and whereas one unwilling partner, the smallish industrial town of Brighouse, exists the other, Spenborough, does not. All that exists is a Spenborough Borough Council, which collects rates from the fiercely parochial residents of a collection of what are called "villages" but are in fact pocket industrial towns without a trace of rusticity about them. Although Cleckheaton, the principal Spenborough "village," is only five minutes' drive by car from Brighouse anyone would think, to hear local people talk, that they were on opposite sides of the moon. Despite the increase in car ownership, the natural lines of communication for most people are still the bus routes. As a consequence, Brighouse looks to Huddersfield and Halifax; the Spenborough villages to Bradford and Dewsbury.

THE area which now makes up Brighouse and Spenborough has never been safe for Labour despite its heavily industrial character. For this there are doubtless many historic reasons. Probably the most significant is the survival, in bewilderingly large numbers, of prosperous small firms, making a great variety of goods, from brandy snaps to tinned metal skewers, from electro-plating and surgical equipment to shoulder pads and horseradish sauce. There is "brass" behind many of these mucky walls. The people are proud and fiercely independent, with many of them avowing a passionate loyalty to the Liberal principles of free trade.

It is not altogether clear how the free traders of Spen Valley could have stuck with Sir John Simon. But the United Liberal and Conservative candidate, Mr Martin Shaw, defends his title on the ground that Mr Macmillan's is by and large a free trade government. He can also claim a legitimate line of descent because in 1950, when he was chairman of the local young conservatives, he was instrumental in fixing up a formal merger between the Conservative Association and the official Liberal Association (presided over by his future father-in-law).

LAST October the late Mr John Edwards retained Brighouse for Labour by 47 votes, which is not a majority but an accident. What factors might influence the tiny shift in the votes which could make all the difference this time? In favour of Mr Colin Jackson, the able and articulate itinerant lecturer and globe-trotter who was the local Labour party's choice (rather a surprising one in view of the Yorkshireman's traditional distaste for "comers-in"), it can be said that his combination of easy knowledgeability and folksy manners have made an excellent impression on those who have been exposed to it; that the Labour party organisation has been greatly improved since Mr Edwards's death, which would not have been difficult since it scarcely existed before; and that the professionally skilful use of publicity by Mr Jackson and an efficient operator from Transport House may have shaken just a few people about Mr Shaw's double-decked credentials as a "Liberal and Conservative." Mr Jackson has also laboured away at making an issue of the Fylingdales early warning system, which would "make a Hiroshima out of Brighouse," besides not being any good.

On the other side, Mr Shaw's assets are more obvious and numerous. He is a local man, a personable candidate and a fairly good speaker; he has been fighting the election as if it were an incumbent's battle, calling for "a constructive policy of backing Mr Macmillan and his government." The Conservatives' local organisation has remained superior to Labour's; the recent general election gave it a chance to pinpoint its marginal faults, and party workers are in good heart because the 47-vote margin is a tremendous incentive to "give one last heave." The daily news of Labour splits cannot have helped Mr Jackson, especially as it was widely considered that some Labour voters whose sympathies had been inclining rightwards had put off making the shift last October because of respect for the late Mr Edwards. It is also recalled that in 1950, when by strange coincidence the identical situation occurred of a Labour member dying shortly after a general election, the Tory vote went up by 90 in the by-election and the Labour vote went down by 1,500.

IT must be confessed that the Yorkshire voters show little overt sign of political interest. The visitor to Brighouse hears a great deal about the Yorkshireman's dour temperament, which does not give away a thing before strangers. Maybe he does not before individual strangers, but once put a microphone or a television camera before him and he becomes, like other supposedly apathetic people, a raging political partisan. To judge from the stormy broadcast meeting in Brighouse, which was utterly unlike any other meeting during the campaign, we shall soon become a nation of apathetic watchers of television shows portraying constituency after constituency as seething with political conflict and interest.

multiracial ministry—is one sign of these risks; the recent murderous attacks on Asians in Kenya are another. In the Federation itself Sir Edgar Whitehead, Prime Minister of Southern Rhodesia, is replacing Sir Roy Welensky as Labour's bad boy; when Sir Edgar (under the pressure of his own local opposition led by Mr Harper, an avowed secessionist) begins to talk of taking Southern Rhodesia out of a federation which is liable to be dominated by African nationalists in Nyasaland and Northern Rhodesia, the British Labour party is bound to think that there must be something to be said for federation after all.

Mr Macleod (having meanwhile disposed of Dr Jagan and the Guianese nationalists) will face his hardest test in Nyasaland. The Governor, Sir Robert Armitage, remains firmly opposed to letting Dr Banda and his supporters out of jail before the Monckton Commission arrives in Blantyre; he is influenced by reports from the security authorities which have evidently worried even Mr Macleod. Sir Roy Welensky has obviously indicated that if public disorder follows Dr Banda's release he will have to put Federal troops back into Nyasaland. This would take the Government straight back to the troubles which led to the Devlin commission.

There seems little doubt that Mr Macleod's aim now must be to take out with him to Nyasaland the draft of a liberal new territorial constitution (i.e. one for African majority rule of Nyasaland but within the Federation); and that he must try to persuade Dr Banda to help work this interim constitution and to promise to keep the peace until the London conference next autumn or winter reviews the whole future of the Federation in the light of the Monckton report. But Mr Macleod knows that the offer of any such constitution will set Southern Rhodesia in a fever, put Sir Roy Welensky in a still more difficult position, and probably cause Sir Edgar Whitehead to lose the impending Southern Rhodesian elections to Mr Harper. To keep the possibility of a federation alive amid these bitter racial cross-currents is a laborious task.

SOUTH AFRICA

Dr Verwoerd Replies

To listen to Dr Verwoerd's reproaches to Mr Macmillan for criticising one of the Queen's kingdoms, it might be thought that the reduction of the monarchy to a shadow of a shadow in South Africa had never occurred and that "God Save the Queen" was sung there as often and lustily as in 1910. Mr Macmillan's cautious frankness, however, is not the reason why Van Riebeck now appears on the stamps, or why the Queen's image no longer appears on the coins of the Union. Nor did Mr Macmillan precipitate the bill, now going through the South African parliament, for a plebiscite on finally replacing the crown by a presidential top hat. Dr Verwoerd, in fact, was giving rein to an Afrikaner sense of humour.

There was nothing humorous, however, in his despairing cry to the colonial powers not to recall their legions from Africa, or in his foreboding that if the plain duty of white men everywhere to stand by the white man in Africa was repudiated, even Afrikanerdom was ultimately doomed to sink beneath the tide of black nationalism, or, as Dr Verwoerd sees it, barbarism. In short, Dr Verwoerd feels uncomfortable; and the growing signs that the winds of change have reached the Portuguese territories which flank the Union on either side may be an important contributory cause. All this should help his campaign for the republic, which will be represented as the fort into which the white man in Africa (including Rhodesian, Kenyan, Belgian and perhaps Portuguese settlers) must retreat to stand siege. If votes do not win him this republic Dr Verwoerd now threatens "harsher" methods; so much for the white heritage of the rule of laws. Indeed, of positive reasons why the West should change its policies in Africa to preserve baaskap, Dr Verwoerd advanced not one. And in his doctrinaire assertion that Africans were too inferior as human beings to conduct civilised countries he offered a sound reason for diplomatic dissociation from the Union. Dr Verwoerd simply does not know how embarrassing his manners can be in the multiracial, polyglot gathering which the West has become nowadays.

FARM PRICES

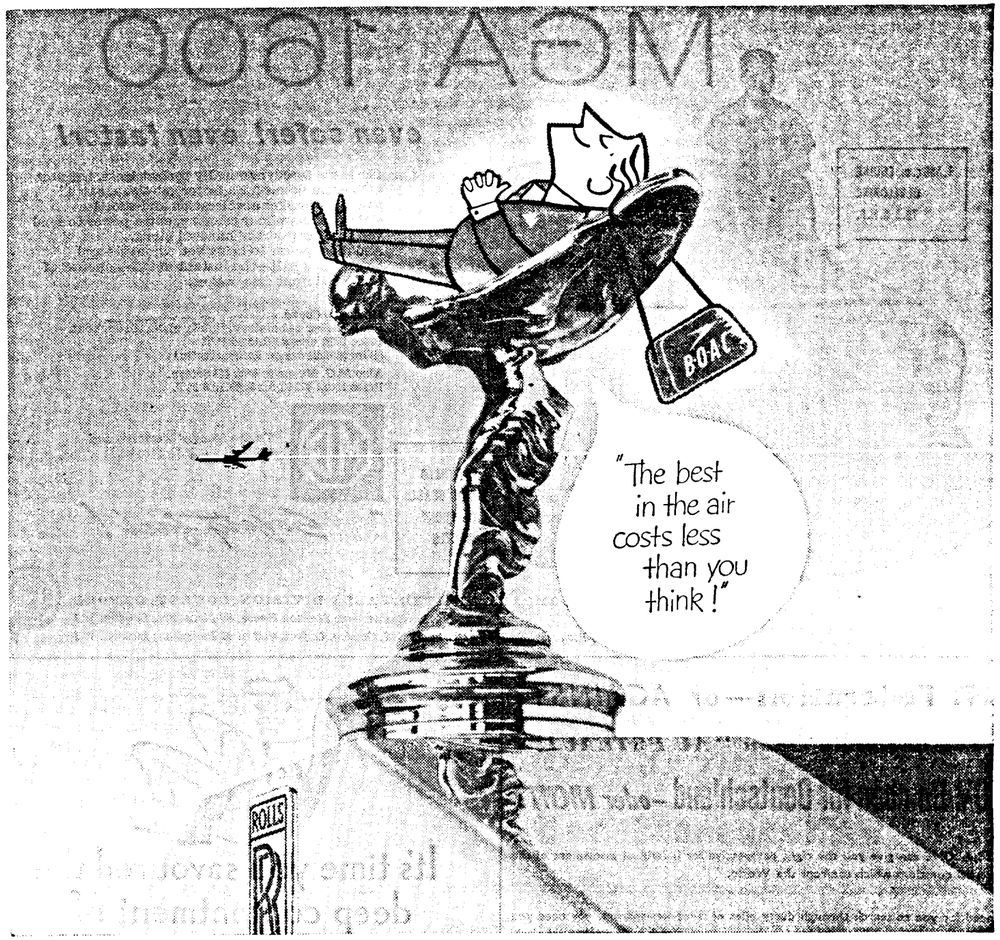
A Firm Stand

For the second time in the history of the annual farm price reviews the Government has "imposed" a settlement on the National Farmers' Union, instead of reaching agreement with it. The disagreement between the Government and the union turned on a question of interpretation, in which Mr Hare has rightly come down on the taxpayers' side. In the past year agricultural production has risen sharply; so, helped by favourable weather, have farmers' total earnings, and so too has the taxpayers' subsidy bill which has risen from £241 to £259 million. Weather apart, however, the general trend in the real value of farm earnings is slightly downward, and the farmers' complaint is that they are getting rather less for producing much more. The Government, *per contra*, has viewed the rise in production as a warning that the subsidies will cost still more unless prices are cut.

The Government has not in fact cut the guarantees as sharply as it could have done under the terms of the "long-term assurances" to which the union agreed. Instead of making a cut of £32 million (the maximum possible) it has made one of £22 million; after allowing for reimbursement of farmers' increased costs, this means an actual reduction in the value of the guarantees of only £9 million. Guaranteed prices for eggs, milk, sheep, cereals, and sugar-beet have been slightly reduced; prices for pigs and potatoes have been increased. The increase in the price for pigs is the one dangerous element. Doubtless it is meant to reassure producers that they will not be "abandoned" to the rising pressure of Danish competition, but the truth is that they ought to be abandoned unless they can compete more efficiently. This is a strange time to add further to a subsidy which is about to go up as the Danish tariff comes down; if there must be more aid for pigs it would be much better to give it in specific grants for technical development.

Pigs apart, the Government's agricultural policy continues to move in the right direction. The union's displeasure is becoming less effective through being voiced too often, and because the public is increasingly recognising that there is no real alternative to cutting the guarantees while the subsidy bill remains so high.

WAGES



Not So Exceptional

"I THINK that the House, the trade unions and the country have accepted that the railways are in a rather exceptional position. None of us, after all we have gained from the stability of prices, wants to set off something that will lead to a wage price spiral again." So said Mr Macmillan in his statement about the railways last week. Events have immediately proved him wrong. Within the week the wages of all London busmen and railway shopmen have been raised by 5 per cent, and those of municipal busmen by rather more. None of these increases would have been granted in this form but for the railway surrender. All of them will have wide repercussions, first among the 100,000 employees of provincial bus companies, then among municipal workers generally, and finally among engineers both inside and outside the railway workshops. The spread in this last direction could be potentially the most inflationary of all.

ELECTRICAL TRADES UNION

Next Step

The Trades Union Congress's request this week for an inquiry by an outside legal expert into the Electrical Trades Union was clearly the right step. The ETU has refused it, but has apparently suggested that it might accept a one-man inquiry by another trade unionist, provided he is someone whom they regard as being free from anti-communist bias. The danger

is that the ETU might get away with this, through being cunning enough to suggest some trade unionist who himself has a respected name. There are three important reasons why it is essential that a lawyer should be the choice. Being an outsider, he would not be under the same pressures as an isolated leader (however respected) of a left wing union could be ; he would have the training to sift the evidence quickly and to parry the powerful dialectic of Mr Haxell ; and, when he made his report, it would—if it acquitted the ETU—have a much greater impact on public opinion than an internal inquiry. If malpractice was proven, however, the effect of the inquiry would be much the same in either case. The TUC should therefore not be side-tracked. It should insist on an inquiry by a lawyer ; if this is again refused, it should draw the obvious conclusions and proceed to its next disciplinary step.

SOUTH KOREA

Dr Rhee's One-upmanship

THAT durable octogenarian, Dr Syngman Rhee, is now one up on his western competitor, Dr Adenauer, having been elected this week to his fourth term of office as President of the Republic of (south) Korea. Following a macabre precedent established four years ago, Dr Rhee's presidential rival, Dr Chough Pyun Ok, died before polling day, and the only question was whether Dr Chough, whose name remained on the lists, would collect a sizeable "memorial" vote from disappointed Democrat supporters. In 1956, the late Mr Henry Shinicky polled 1,600,000 votes posthumously.

There is no suggestion that these deaths were due to unnatural causes. But it may be questioned whether President Rhee, who had already weighted the scales on the side of his ruling Liberal party, really deserved the luck of an uncontested election. Since the last presidential election, the Progressive party—which proposed that only peaceful means should be used to reunite south Korea with its communist northern half—has been outlawed, and its leader, Cho Bong Am, executed. During the present campaign, two Democrat campaigners met violent ends and others were impeded in various ways. In addition, public money was used on a lavish scale to print and distribute Liberal posters. Under such conditions, it is small wonder that the Democrat vice-president, Dr Chang Myun, lost his job to Dr Rhee's nominee, Mr Lee Ki Pong. In south Korea, as in south Vietnam, opposition is a hazardous undertaking.

CYPRUS

Tough Bargaining

IT is now more than three weeks since Mr Julian Amery returned to Cyprus and began what it was hoped would prove the final round of talks on the transfer of power in Cyprus. Optimism has waxed and waned, but the going has been consistently tough and by Thursday afternoon almost the only matter of any substance on which the negotiators had announced agreement (on February 29th) was the size of the training areas for British troops outside the two sovereign bases.

No serious bargaining, it is believed, has taken place over the major stumbling block—the size of the sovereign areas themselves. The British have preferred to concentrate on trying to get the less important matters out of the way, so that Archbishop Makarios cannot revert to them—as has apparently sometimes been his custom—in order to confuse the major issue. But the archbishop (or his advisers) have been as ready to quibble over a minor point as to dig in their toes over a major one ; this week the negotiators have been bogged down in intricate haggling over the question of Naafi status and facilities, which was at last settled on Wednesday. Last week no agreement was reached either on the amount of British economic aid to the new republic, or on two important points concerning the sovereign base areas. The British, who have already agreed to hand over the civil administration of these areas to the Cypriots and to ensure their economic integration with the rest of the island, propose to spell out these concessions in a "declaration of policy." The Cypriots, on the other hand, want a declaration of a different sort, which would be legally binding ; but the British, as might be expected, maintain that if they give away the right to resume full control in an emergency, they will be making nonsense of the retention of soveignty. There has also been much argument over the archbishop's contention that if Britain should ever decide to relinquish the bases, they should automatically be returned to the Cyprus republic and not, as the British feel they might want, be leased to Nato or any other international organisation.

Mr Amery has other calls on his time and cannot stay in Cyprus for ever. It is much to be hoped that he will even yet be able to complete his task before he goes. Archbishop Makarios, who has plenty of nationalist critics breathing down his neck, is naturally anxious to secure the best possible bargain. But the continued uncertainty and the protracted and often petty bargaining are bound to poison the atmosphere in which the new republic must begin its career.

CARAVANS

An Unsolved Problem

THE Government's Bill for the control of caravan sites seeks to tackle only one half of a problem, and it is therefore likely to be a flop. Its main provisions, which follow the lines of Sir Arton Wilson's earlier report, are directed towards preventing slum conditions in residential caravanning, a way of life which is assumed by implication to be on the decline. Accordingly—and no one can cavil about some of these suggestions—public health regulations over caravans are to be tightened up, planning controls made less easy to evade and fines for their infringement made much stiffer. The Bill also gives local authorities the right to insist on proper fire precautions, better lay-out and reasonable landscaping of sites for which they issue a licence, and rightly insists that the authorities should

The Economist

MARCH 17, 1860

THE UNPOPULARITY OF FREE TRADE

¶ The common mass of Frenchmen who maintain and support the present Government are almost to a man opposed to free trade : and it is not wonderful that it should be so. Free trade is very rarely a popular doctrine anywhere ; it requires a great deal of careful consideration and matured economical experience to have a faith in it. In all the early states of industrial progress the popular sympathies are opposed to it. In all but very cultivated countries it is the *producer* who regulates the course of public opinion as to the article he produces. He is all day long occupied with it ; he is believed to understand it ; if he does not understand it, no one else does. He speaks with the authority of personal experience as to the course of his trade ; he has the statistics and the details of it ready to his hand. In consequence he has an indefinite influence on the minds of those to whom he speaks ; and the producer is everywhere and always *inclined* to oppose free trade. We have seen in the recent debates on cork and silk, and, indeed, in almost every other free-trade debate from the time of Mr Huskisson until now, how those even who admit the general doctrine strive to except from its application their own article. There is always a modifying circumstance to which they would direct our attention ; and from this we can judge what would be their feeling in a country where the doctrine of free trade was unpopular, and where only a few speculative persons believe in its truth. . . . Free trade is intended to benefit "the consumer", but he can hardly be got to attend to the matter, to be convinced that he is benefited. A small cheapening of price is a heavy burden on the producer, and he is eager to oppose, for he bears the whole of it ; it seems very little to each individual consumer, for the aggregate benefit has to be indefinitely divided among a large number of persons. The general community in almost all countries care little for commercial freedom, and the producing classes are opposed to it. In France it is so. The general doctrine is, that free trade is all very well for England, which has "ships, colonies, and commerce," but that it will not suit less advanced countries.

in turn allow operators longer-running licences in order to make the capital expenditure required worth while. A few exceptions to these rules are allowed, as in the case of showmen and boy scouts. But by and large, the aim is to restrict residential caravanning to its present proportions—indeed, even to reduce it a bit by cutting out some of the considerable fringe of unlicensed site operators who flourish under the present law.

In this aim, the Bill is not likely to be successful. The demand for residential caravanning already far exceeds the supply of caravan sites. That demand is growing, not declining, and the Government's reason for thinking the reverse—that most caravanners told Sir Arton Wilson that they would prefer to live in a council house—is groundless so long as no houses are built in areas where caravanners want to live. Often they cannot be. Unlicensed caravanning is most persistent in areas like Surrey where the number of jobs is increasing but the county council refuses, because of its green belt policy, to build any more houses.

The consequences of the present Bill, if passed, look like being three. First, many of the sites that are unlicensed at present, as well as all those that are, will in the end get a licence (if only because of the physical difficulty of rehousing their occupants); secondly, a few sharks will be forced out of business; and thirdly, starting from the present base, a new fringe of unlicensed operators will spring up, against whom the local authority will have more legal powers than in the past. But, in the last resort, authority will still be able to act only by turning people on to the streets. This is so unpleasant a proceeding that the councils will hesitate to use their powers—as they do now. What the Bill needs is more emphasis on measures to help expand the supply of decent caravan sites, and less on trying to suppress the demand for them.

ADMINISTRATION

Servants of Africa

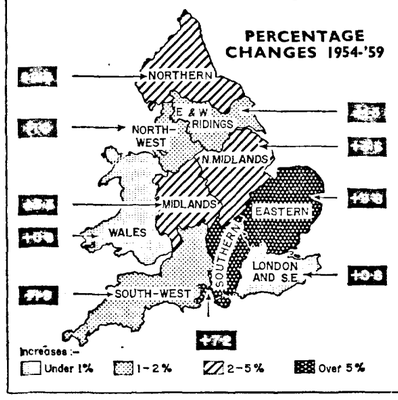
THE recent conference in the Colonial Office on the creation of locally-based civil services got none of the publicity which has centred on more exciting recent conferences at Lancaster House, but it was the concomitant of the forced march of African territories to independence. The facts are that the various plans, such as the "special list scheme" to keep white bureaucrats working under black masters, are not retaining enough senior administrators; while the rapid promotion of junior Africans is leading to yawning gaps in the lower ranks. In every territory a crash programme is needed to bring in, and to train, public servants—at every level from native and district administrative officers to permanent secretaries. More should have been done earlier; even so, British territories are rather better off than French or Belgian. The shape of things to come is indicated in Guinea, where United Nations officials are helping out. No independent African territory has yet taken the full strain of sustaining the apparatus of a modern state with African administrators alone.

The urgent and familiar need is the expansion of Africa's secondary and higher education. The main obstacle in its way is not now shortage of money, goodwill from colonial governments, or buildings: it is teachers. The scheme proposed by the Ministry of Education last month to make it worth while for British teachers to serve in Africa is, therefore, vital to any plans to speed up the training of African bureaucrats. But it comes late, and nobody knows if even the 400 British teachers asked for will come forward.

POLITICAL JUSTICE

Pots and Kettles

IN the pre-summit season, something of an effort is evidently being made by communist governments to exploit the feelings aroused in Britain by swastika-smearing and the Spanish bases episode. That, at any rate, seems a natural conclusion to draw from the stream of propaganda about ex-nazis in high places which has been landing on the desks of journalists in the last few months, or from the curious press conference given by the Czech ambassador on March 10th on a German matter. The ambassador announced that evidence of war crimes against thirty-seven west German judges and public prosecutors was going to be submitted to the west German ministry of justice by an unofficial Czech body, the Union of Anti-fascist Fighters.



The Foreign Office, not unreasonably, has rebuked Mr Galuska for this use of a diplomatic mission to conduct propaganda against a friendly state. The ambassador himself made no secret of the fact that the timing of his conference was inspired in part by the fact that public opinion in Britain was already aroused against Germany. Nor did he hesitate to link the cases he put forward with the total economic, political and social set-up of the west German state.

To say that the meeting was a propaganda exercise does not mean that everything that was said was untrue. In one case, that of a judge in the west German Federal High Court, the Czechs seem to have mixed up the names and picked on the wrong man. But there are judges in west German courts with a murky past, who do not seem to be ideally chosen to administer the rule of law. Under pressure from international and domestic opinion the west German government has recently begun to look again at the records of some of its judges and has agreed to examine evidence from east Germany against them. It must be hoped that this is seriously done; and the examination might well include the Czech evidence—regardless of the motives which have caused it to be put forward. May 8th is apparently the last date on which charges of manslaughter arising from the period of the last war can be brought under west German law.

All the same, if the gloves are off, it is worth while to point out what an excellent thing it would be if the evidence about judges who have inflicted brutal sentences in eastern Europe in the past twelve years were treated seriously as well. Czechoslovakia is distinguished among Communist countries as the one that has not revised the wicked trials of the last years of Stalinism, or rehabilitated the victims of those trials—let alone dealt with the judges.

Population Shifts

England and Wales

The populations of the home counties, other than Middlesex, continue to rise as people move in from other parts of the country and especially out of London. Last year, there were 114,000 fewer people living in Greater London than in 1954. The new towns have helped considerably in the dispersal.

TOWN v. COUNTRY

	Population in 1959 (millions)	Percentage change since 1954
Conurbations	16·8	−0·3
Urban areas with populations—		
100,000 and over	5·9	+0·1
50,000 to 99,999	3·5	+2·8
Under 50,000	10·2	+7·0
Rural districts	9·0	+4·6
England and Wales	45·4	+2·5

The problem of office expansion

gave this board of directors a headache. New commitments meant increasing the staff. Getting them was bad enough, but where could they be accommodated when once employed?

Stevenage New Town can provide all the facilities you require. The Development Corporation has already let 25,000 square feet of offices in the Town Centre. The first separate office block (of 20,970 sq. ft. gross area) will be available this summer at a rent of £8,600 a year. Employers can guarantee first-rate housing accommodation for their staff, whilst there will be a steady rise each year in the number of school-leavers available for employment.

whichever way you look at it

"Congratulations on your company's very successful year!"

"Thanks, it really was quite outstanding. We included private trade shows at the Connaught Rooms in our sales drive and the results far exceeded our expectations. In addition I and my co-directors held a series of receptions there which resulted in a lot of new business and saved us all—especially the sales side—a great deal of time and effort.

In the Princes Restaurant here we can have one of the best lunches in London and they can show us the rooms afterwards. You won't find a better place for your show."

The Connaught Rooms were the first to install permanent closed circuit television and a simultaneous multi-lingual translation system. Other facilities include film projection and tape recorders. There are twenty-six rooms available. The finest food and wine are served with an excellence which comes from years of experience.

AP31A

My word!

This is a good whisky

There is no mistaking that delicate bouquet. No mistaking such velvet smoothness. No mistaking the heart-warming strengthening glow which has never a trace of fire. No doubt about the "know-how" of those who order it by name. "White Horse – the whisky you can tell blindfold".

WHITE HORSE Scotch Whisky

Now at last there is more White Horse around. Ask for it by name and show that you too know a good whisky.

WALES

The Condition of Wales

THE present implicit attitude of most Westminster politicians towards Wales is that it is less than a nation in the full sense (*pace* the Nationalists), but a great deal more than a mere geographical region ; and that this fact gives a particular colour to its regional problems—outlying area, awkward internal geography, heavy reliance on threatened primary production, agricultural fragmentation. For better or worse, the "viability" of Wales as a social entity therefore matters more than the similar "viability" of, say, Cornwall. An accelerated draining away of Welsh people, capital, economic enterprise and general initiative towards the Midlands or London would cause greater local social distress and thus, probably rightly, greater national political fuss.

Seen from this angle, the annual report of the Minister of Welsh Affairs (Cmnd 961) is a reasonably cheerful document. Unemployment in Wales is still uncomfortably higher (3.3 per cent) than in Great Britain (1.9 per cent), but the improvement through 1959, although unevenly spread through the Principality, kept pace with that in the United Kingdom. So did the growth of new industrial development, encouraged by the Distribution of Industry (Industrial Finance) Act and by the restoring of assistance available under the earlier Act of 1945. Current recovery and future prospects in Welsh anthracite mining show more brightly than in the British coal industry as a whole. Welsh farmers have responded "in a veritable flood" to the small farmers' scheme ; and forestry is expanding in remote areas where many holdings are outside the scheme's scope.

It is not, however, the report's business to estimate how far the public money spent on these various forms of aid—whether specific or general—can be regarded as economically rational help in the tiding-over of an awkward transition ; or, alternatively, as the provision of a set of props, due to be continually reinforced at increasing expense, for areas and enterprises for which no rational future exists. Such props may be provided either for humanitarian reasons or to pacify a politically awkward bunch of outliers. The latter motive is unlikely to be acknowledged ; the former may be better served if disentangled from economic wishful thinking. It would be nice to have evidence that someone is keeping a critically appraising eye, with these distinctions in mind, on the developments recorded in this report.

LIBRARIES

A Penny for the Author?

THERE ought to be enough authors among members of parliament to ensure serious consideration for Sir Alan Herbert's projected bill to obtain some remuneration to authors and publishers out of the use of their books by public and circulating libraries. It is an old grievance of authors that a book which is lent out 200 times (about as much as its physical life will usually stand) nets them no more than the royalty on a single copy sold to a private buyer—while publishers have to stand the cost of the provision that public libraries can buy at a ten per cent discount. By contrast, authors and composers of gramophone records, have long been protected (perhaps over-protected) by being allowed to charge for a "public performing right" under the Copyright Acts.

Sir Alan wants a somewhat similar "public lending right" to be reserved by Parliament to authors of books in copyright. Under the various formulae which Sir Alan sets out, this device might bring in about £1 million a year on the 400 million books issued by library authorities yearly (not, of course, all of them books in copyright) ; the exact method of distribution to authors would be left to the discretion of a "Lending Right Association."

The commercial circulating libraries would presumably raise the money required by putting up their subscription charges ; under Sir Alan's scheme the public libraries' share would have to come out of either the rates or a state subsidy. There is some illogicality in this. Why not a nominal charge on the borrower for each book issued ? There might be certain administrative difficulties, but the system of a direct charge is used by the "Tuppenny Libraries." There would be strong objections from some librarians, on the grounds that the whole principle of the Public Libraries Act of 1892 was to provide free books. But the money the authors are claiming under Sir Alan's bill could be met by a charge of ½d. or perhaps 1d. a book issued. Whose principles would be offended by that ?

SOVIET UNION

Making Friends ...

MR KHRUSHCHEV, on his Indonesian tour, revealed that a university with the impressive title "friendship of the people" would soon be opened in Moscow. The new university will cater for foreign students, chiefly from Asia, Africa and Latin America. Scholarships and paid passages will be provided for all the students. This is not for a distant future : 500 students are expected this year, and the eventual target is about 4,000.

At the present moment there are some 3,000 foreign students, most of them Chinese, in Soviet universities. About half of them are concentrated in Moscow. There is no question of shifting all the foreign students to the new university, which is described by the Russians as an addition to their aid for the backward countries.

The project marks, in fact, a return to a Leninist precedent. In the early days of the communist regime Moscow had its Universities of the West and of the East, as well as a Chinese University named after Sun Yat-sen and presided over at one time by Karl Radek. Stalin abolished these institutions as hotbeds of opposition and Trotskyism. Their abolition marked the high-water line of Soviet isolationism. The present return to a more international approach is, however, made with a difference. The new university will not exist officially for the training of communist politicians, but for the production of engineers, doctors, technicians and other useful people. But it will have a political impact.

LETTERS

British Drug Houses

SIR—I find it difficult to understand the criticisms implicit in your note about British Drug Houses' work on the oral contraceptive and the takeover bid under the heading, "Overstepping the Mark."

Your note would seem to convey to anyone who did not know the facts that BDH had encouraged shareholders to assume that it had a new product about to go on the market and had not warned them that there would be a delay—which could be fifteen months—before it would be known whether the new drug would succeed. In fact, such a warning was clearly given in my letter to shareholders of March 4th, from which I quote:

> Only the use of these substances by women under medical supervision can confirm that they are as effective and as free from harmful effects as the animal tests have indicated. Such tests must necessarily take some time to carry out, and we cannot expect the results to be available before mid-1961.

Furthermore, the letter concluded:

> Normally I would not have thought it appropriate to inform you about this matter—with its many uncertainties as well as its hopes—until our Annual General Meeting; for we are by nature a cautious board. But in the present circumstances I felt that I must place the facts before you so that you can have them in mind when considering Fisons' offer.

In view of this, I cannot see any justification for your remark: "It will not be their [the shareholders'] fault if they assume that their company has a revolutionary, and presumably highly profitable, new product about to go on the market." The press statements issued on our behalf at the press conference on March 3rd, which were much more detailed than my letter to shareholders, also emphasised that conclusions from tests on humans could not be reached in less than about fifteen months from now.

More puzzling than the inaccuracies of your note is the implication that, in telling shareholders of their company's discovery, the board did something that it should not have done. I disagree. I consider that we should have been failing in our duty had we not given them this information. Surely it is incumbent on a Board of Directors, when the company they serve is the object of a takeover bid, to put their shareholders in possession of all the relevant facts?—Yours faithfully,

GEOFFREY ELEY

British Drug Houses, London, N1

The French

SIR—I cannot entirely agree with the view Mr Mork expresses on your article "Gallocentricity and Nationalism" in his letter published in your paper. I do not consider your article misleading and malicious, but Mr Mork may be right in saying that it serves no useful purpose, if he means by this that it does not help to promote friendly feelings between the two peoples. But one might ask then how far the description given in an article of this kind should go. There are always occasions when it is not expedient to say the full truth.

It may be true that it would be easy to write a similar story about practically any country, including Britain, but the story would then not be unfair merely because it states conditions as they are. As far as the conditions described in your article are concerned I do not think that your correspondent has made a good assessment. This is not only my opinion but also that of a few Frenchmen to whom I have shown it. There were, of course, others who were furious but this, too, seems to be a characteristic of French mentality, i.e., that they do not easily support criticism when it is unfavourable to them. The French, certainly, have many virtues but it is difficult to discover those of modesty and readiness to accept fair criticism, especially when it is directed against their outmoded ideas of grandeur and gloire.—Yours faithfully,

Amiens (Somme) HANS BERBEN

*

SIR—I must challenge Mr Mork's assertion that my article "does not illustrate conditions as they are in France." I fear that Mr Mork cannot have followed the French press very closely or attended many public meetings, or even private gatherings where current affairs are discussed, in France these last two years.

But I am appalled to learn that Mr Mork and Mr Duncan credit me with unfriendliness towards the French. In my defence I could cite many articles in *The Economist* and elsewhere praising French achievements (e.g., in the realms of aviation, education and solar energy) and the French way of doing certain things. I have frequently sought light relief at the expense of British cooking, primary education and other island horrors; and I assure Mr Mork that Britain's lack of a civilised road and railway system is well up on my list of subjects for deserving sideswipes.

I admit to disliking nationalism, having seen too many countries ravaged by it and too many promising reformist governments diverted and corrupted by it; and if Mr Mork and Mr Duncan feel anything like my affection for France and the French I cannot believe that they are really indifferent to the rape of the French intelligence that is now being conducted by official propagandists and conformist editors who appear to hold this great people in the same sort of contempt as their Egyptian opposite numbers hold the peoples of the United Arab Republic. Every effort is being made by the official radio and TV, and by the nationalist press, to anaesthetise public opinion and discourage rational discussion.

When politics are debased to this level, democracy cannot survive for long. Two years ago the Ministry of the Interior estimated that ten per cent of the French civil population would vote for overtly fascist candidates, if given the opportunity, and that another fifteen to twenty per cent could fairly easily be swayed by fascist propaganda. Today these percentages are higher outside the six biggest towns (where the communists are gaining support). If the present conditioning continues for another two or three years, and liberals continue to be denied access to the radio and TV, democratically-minded Frenchmen may find themselves in a minority.

It is no service to France to suppress or gloss over this trend. On the contrary, prestige-conscious governments and editors are often far more responsive to foreign than to domestic comment. American and continental criticism helped to bring British governments to their senses on three famous occasions—Palestine, Suez and Cyprus. The State Department is healthily sensitive to foreign criticism of the segregationists' misdeeds in the Deep South. A liberal French editor told me that he didn't think my article would do much good, though, because it was too mild.—Yours faithfully,

YOUR CORRESPONDENT IN SOUTH-WEST FRANCE

Electricity

SIR—Mr Victor Cavendish-Bentinck suggested in a letter to you that the Electricity Boards could greatly increase the amount of off-peak power sold by giving householders the same terms for the use of storage heaters during off-peak hours as are granted to business premises.

Two issues are involved in this suggestion, namely, the availability of favourable tariffs for electricity consumed off-peak and the availability of suitable thermal-storage equipment to take advantage of them. Favourable tariffs are available to householders and, as a result, Electricity Boards have been very successful in selling off-peak electricity for floor-warming in new domestic dwellings—particularly for multi-storey flats.

For existing domestic premises, however, no heaters with comparable thermal-storage characteristics are available as manufacturers are discouraged from developing a market because of the purchase tax liability of domestic appliances. (Thermal-storage block heaters designed for business premises are purchase tax free.) A thermal-storage heater costs more to produce than the direct electric radiator and the purchase tax liability is also correspondingly greater. It may thus be priced out of the market in competition both with the electrical alternative and with non-electrical central-heating systems which are purchase tax free.—Yours faithfully,

G. MORLEY DAVIES

The Electricity Council
London, SW1

British Council

SIR—We were interested to read that some people in England consider the British Council as a society for the protection of depressed madrigal makers. As an organisation which has amongst its objects the promotion of madrigal singing in Bombay, we were very amused to read this, especially as we think that the British Council is doing an excellent job in promoting things British in this country. Recently we had the privilege of sponsoring performances by the Oxford Playhouse Company in Bombay under their auspices which were very enthusiastically received by our audiences. One is therefore surprised to read from time to time that the British public does not appreciate the value of the work the British Council is doing in these fields. We trust that in the course of time this work will be as much appreciated by the people who pay for it, as it is by us. While I must hasten to add that we are by no means "depressed," I can only say that such visits by British dramatists, professors, etc., to this country are too rare.—Yours faithfully,

M. H. MODY

Bombay Madrigal Singers' Organisation

Magic Numbers?

SIR—Upon the Chancellorship of Oxford University, much that is weighty has been said and written. I venture to draw your attention and your readers' to one fact that does not appear so far to have been noticed. The total votes recorded as cast for the two candidates were made up of the same four figures, namely 1, 6, 7 and 9—though in different arrangement. The fact is at least remarkable. I do not for myself suggest any significance in the fact, either sinister or mystical; but it may be that some of your readers can do better.—Yours faithfully,

EVERSHED

Royal Courts of Justice,
London, WC2

Interest Rates

SIR—In your issue of March 12th you attribute to us views on interest rates which were, in fact, expressed by a correspondent, Mr Vaughan Dale, manager of the Hinckley and Country Building Society.

We are an independent journal whose columns are open to anyone who we feel has a useful contribution to make to the discussion of building society affairs. In this instance we specifically stated that the views expressed in Mr Dale's article "were his own personal views and did not necessarily represent those of his own society or of any other body."—Yours faithfully,

J. G. T. FORBES

The Building Societies Gazette

BOOKS

Giant of Endeavour

The Life and Times of Ernest Bevin: *Vol. I, Trade Union Leader 1881-1940*

By Alan Bullock.

Heinemann. 685 pages. 50s.

ERNEST BEVIN is now agreed to have been one of the outstanding Englishmen of his generation. He is one of the few men who stand in the same class as that other giant of endeavour, Sir Winston Churchill; and his life history, from agricultural labourer in the west country to Foreign Secretary in the postwar Labour government, epitomises two of the greatest social changes of this century: the rising power of organised labour and the growth of socialist ideals. The steps by which he reached the top, through the Bristol branch of the dockers' union, the Transport Workers' Federation, his own Transport and General Workers' Union and the Trades Union Congress, have an epic ring—although behind the epic lies a story of hard work (up to seventeen hours a day seven days a week) and negotiating activity that few could attempt, let alone sustain. A great book, which would supplement Mr Francis Williams's lively biography, was needed to tell this. Mr Bullock has certainly written it.

The book's first merit is its enthusiasm. Mr Bullock clearly admires Bevin enormously and has written in a style that portrays vividly much of both Bevin himself and the trade union activities that dominated most of his life. Trade unionism, as seen through Bevin's eyes, is made here a vital matter of helping down-trodden and underprivileged people, not the dreary procedural rigmarole which it often appears. Along with this enthusiasm, Mr Bullock has brought to his task both the patience to sort through and assess a mass of official documents and the understanding to draw a convincing social picture from them. It is the sort of book that Bevin himself would have liked.

First and foremost, Bevin emerges from these pages as a trade unionist and an organiser. He had the energy to be constantly enrolling new members into his union, the sympathy to find out what their grievances were, the skill to bargain over these grievances with employers and the personality to get his members to accept the bargain he had struck. His chapel training had also made him a forceful, if ungrammatical, speaker. Such ability is in demand at any time, but never more so than by the weak and divided trade union movement before the first world war. Bevin found in his job as union organiser enormous scope for his managerial talents. He created new branches, negotiated scores of new agreements for the men, formed the huge Transport and General Workers' Union, and, in a decade, succeeded in turning the transport workers and dockers, from being some of the most ragged unionists in the country, into a spearhead of industrial attack.

Attack is the word. For most of his life, Bevin was an outspoken opponent of anything and everything capitalist. He despised the profit motive and felt that a society built upon it was always bound to exploit the working class. With certain exceptions (such as in the flour milling industry) Bevin also had a beefy distrust of many of the employers he came across. His attitude towards them was that, given half a chance, they would delight in cutting wages to the bone. But, although his militancy made him in the twenties one of the most hated men in the country, airy talk of revolution had no appeal for his practical mind. He wanted nationalisation, a higher share of profit for labour and, above all, a system for decasualising the docks; but communism and even the vagaries of intellectual socialists remained to the end one of the banes of his life.

This first phase of his life ended with the failure of the general strike in 1926. This convincingly showed the limits of industrial action and turned Bevin's thoughts to a wider field. The breadth of his imagination was now shown for the first time. He began to seize every chance of putting forward labour's "voice" in what he thought were important places, such as in the Mond-Turner talks and the Macmillan Committee on finance and industry. He devoted much energy to the *Daily Herald* and even started up an unsuccessful labour weekly. His analysis of the 1929 crash and the consequent unemployment stands up as well as anybody's to the verdict of history; so do his consistent and forceful condemnations of Nazism. By the end of the thirties his interest, first in international labour problems and then in general problems of foreign affairs, had begun to pave the way to his appointment as Foreign Secretary after the war.

It is the fault of Mr Bullock's otherwise admirable biography that out of this welter of history the vigorous, uncouth, fist-shaking, tough, even domineering character of Bevin only emerges in part. In so far as the unions' history is Bevin's history, he is safe. But the trouble is that Mr Bullock is too kind to Bevin as a man. Bevin, as he says, had a tremendous sense of loyalty to group decisions; but he had very little time for those who disagreed with him in the first place about what these decisions should

be. For, like all self-made men, Bevin was no angel. He had fought his way up in the roughest school of all and was on occasions (such as with Tillett in the Transport and General Workers' Union or Lansbury in the Labour party) as hard as nails. But these incidents do no more than qualify his great achievements. Of these Mr Bullock's next volume should provide a richer proof yet.

Prison of the Future?

Anatomy of Prison

By Hugh J. Klare.
Hutchinson. 160 pages. 18s.

THE Victorians thought large, and invested their ideas about social welfare in the huge institutions that their heirs have come to hate but cannot afford to abolish altogether. The orphanages have been replaced by cottage homes and nurseries, and the large workhouses are being broken up into old people's homes. But the mental hospitals containing over 2,000 patients are still part of our social capital, and so too are the prisons, many of them housing anything from 500 to 1,000 offenders—as Mr Klare says, if these prisons were people, they would be "huge, surly brutes, in threadbare clothes, with a look of fanatical puritanism in their eyes."

As secretary of the Howard League for Penal Reform, he knows the daunting effect such buildings can have both on prisoner and gaoler. But he also knows, and this is what is refreshing about his approach, that the physical side of prison life—the cells, the yards and the lavatories—are not the sole, or even the most important, aspect of it. It is personal relations that make or mar a prison. Where they are good, where the prison officers can be relaxed with the prisoners, can welcome without resentment the non-security staff such as the psychologist and the social worker, and are on terms of mutual trust with the governor and assistant governors, a prison has an atmosphere totally different from one where the tension can be sensed from the gates.

A large part of Mr Klare's book is devoted to this aspect of prison life; he shows how, even when a progressive penal policy has been accepted, the artificial nature of prison life can often thwart it. But the importance of good relations between the various groups that make up a prison community has been fully accepted by the prison commissioners. The novel part of Mr Klare's book is his suggestion that the commissioners' policy of segregating the first offenders and prisoners of good personality in training and open prisons should perhaps be modified. Mr Klare would like to see built a small experimental prison for 150 prisoners, who would consist of a balanced mixture of the good, the weak and the bad—though not the hopeless. These would eventually be divided for their working day into small groups, similarly composed, and part of each group's day would be devoted, under trained staff, to group discussion or even group therapy. The purpose of this group method, which is well established in mental hospitals, is to enable the prisoners to gain insight into themselves and their behaviour, and the purpose of mixing the good personalities with the bad is that the good ones can underpin the group and give the staff something to build on.

Mr Klare is so convinced of the benefits of "groups" that he seems to have ignored the danger of one or two strong but bad personalities dominating their group. But there is truth in his observation that by segregating the best prisoners in open prisons we are winning too easy victories; the real test of a prison system is whether it reclaims any recidivists. Mr Klare asks, modestly and undogmatically, that his proposal should be given a trial. With the fortunate conjuncture of progressive prison commissioners and a progressive Home Secretary that now obtains, there is a good chance that it may be.

Gaullist France

The Fifth Republic

By Nicholas Wahl.
Random House. 130 pages. 95 cents.

The French Constitution

By William Pickles.
Stevens. 52 pages. 6s. 6d.

THE institutions of the French state have been so drastically remodelled by its new masters that any account of their present condition must be welcomed; Mr Wahl gives a lucid and intelligent one. He covers all the ground well, and is especially convincing in his detailed demonstration of the supreme technical importance of the presidency. One of the major differences between the Fourth and Fifth Republics is that now policy-making, not cabinet-making, has become the centre of political interest, and Mr Wahl discusses this very sensibly, though it may be felt that he underrates the importance of policy issues under the Fourth. He makes the excellent point that the gaullists "have rejected the alternative of true mixed government in which the executive and the legislative are honestly balanced" and that this is their Achilles heel. The book also contains a complete text of the constitution.

Unfortunately, it has some conspicuous defects. Mr Wahl tends to write as an apologist for the regime (he has talked to General de Gaulle and M. Debré, but not, it appears, to M. Mendès-France) so that he gives his own, very sensible, criticisms less weight than they deserve. Surprisingly, for a citizen of the United States, he consistently over-estimates the soundness of gaullist arguments in favour of an overwhelmingly strong executive *vis-à-vis* the Assembly, and his representation of dissenting views is half-hearted, to say the least. Those who believe that the cause of France's various maladies lies deeper than the clash between its "administrative" and "representative" traditions of government will find him superficial and, in his faith in paper solutions, complacent.

This work, primarily a descriptive one, is also disfigured by attempts at historical analysis of the origins of the Fifth Republic, which are tendentious and unnecessary.

Mr Pickles's textual analysis of the Fifth Republic's constitution is a useful piece of work. The translation has been done with care, and the elucidation of difficult concepts for the Anglo-Saxon mind (particularly when enshrined in General de Gaulle's own prose) has not been shirked. The attention paid to the organic laws supplementing the constitution is particularly valuable. The inherent defects of the gaullist idea of government need no further comment: the pity is Mr Pickles's fears are coming true.

Cash, Credit and Coinage

British Monetary Experiments 1650-1710

By J. K. Horsefield.
G. Bell. 363 pages. 45s.

THE second half of the seventeenth century witnessed the birth of various monetary problems that were to be the subject of controversy right through the eighteenth and nineteenth centuries, and even into the twentieth with the deliberations of the Cunliffe Committee. Mr Horsefield's study throws a great deal of new light on such questions as the devaluation controversy in 1691, the early history of the Bank of England and of the first experiments in commercial banking including the Lombard banks and the land banks.

When recoinage of the debased silver coinage was being contemplated, there was a protracted controversy among the pamphleteers, including Locke and Lowndes, on whether the currency should be devalued at the same time. As the advocates on both sides assumed that devaluation would have as big an effect in the one direction as the other, they overlooked the essential point that the proposed devaluation was actually smaller than the deterioration of the currency already existing. In analysing the intricacies of this problem the author makes impressive use of modern monetary theory and penetrates the pamphleteers' excessive verbiage to test the validity of their arguments. An interesting by-product of the controversy was what is probably the earliest complete statement of the self-balancing mechanism in international payments.

The account of the Bank of England's early years is taken as an opportunity for considering how far an institution formed to solve the problems of government finance consciously developed into a central bank. In the pamphleteers' arguments about the Bank's policy and the rate of interest in 1694-95, we may detect the first signs of concern over the appropriate discount rate. And in the first decade of the eighteenth century we may note that the Bank's Court may have already accepted in practice what for another hundred and fifty years it denied in theory—an obligation to hold more cash than other financial institutions.

The period covered by this study was noteworthy for the number and variety of the schemes for increasing purchasing power by new forms of credit institutions. They may be divided into four types: Lumbard banks, which sought to base credit on goods; plans to capitalise Government revenues; banks based on commercial obligations; and banks on the security of land. But apart from the Bank of England and the Bank of Scotland, all failed—even the Government Land Bank of 1696—for they were prevented by the extreme shortage of currency created by the recoinage from acquiring sufficient liquid resources to inspire confidence in their operations.

Mr Horsefield has produced a scholarly work of merit; it is a rare combination of skilful theoretical analysis and meticulous use of sources.

Failure of Vision

The Arabs in Israel

By Walter Schwarz.
Faber. 172 pages. 21s.

"THE messianic vision that has lighted up our path for thousands of years . . . has imposed upon us the duty of becoming a model people and building a model state." This standard, set by the Israeli prime minister (Mr Ben-Gurion) himself, invites judgment of the same stringency. Does Israel's treatment of its 220,000 Arabs, one-tenth of the total population, provide an example for other countries with minority problems? Mr Walter Schwarz, who has plunged boldly into Israel's least tranquil waters, finds that by their own high moral standards the Jews in Israel have failed; although their Arab minority is materially fairly well-off, it has no sense of loyalty or equality.

The Israelis are justifiably proud of the way in which they have improved the living conditions of most of their Arab population. The Arabs in Israel have shared some of the fruits of a planned, expanding welfare state; they have been admitted into the framework of Israel's parliamentary democracy; their children have a good chance of education. But, as Mr Schwarz reports, these very real achievements crumble to pieces against the background of military government, curtailed freedom, individual injustices and the firm relegation of minority interests to second place. At a pinch, the Israelis see their minority in terms of a security problem, and since Israel's defences must necessarily be in a continual state of alertness, security takes pride of place.

Most minority problems nowadays concern the rights of settlers when the indigenous population has taken over. In Israel it is the other way round. The Arabs were farming or trading in Palestine when the Jewish settlers took control; in the confusion of the Arab-Israeli war, most of

the Palestinians lucklessly fled and the 200,000 who, by accident or good sense, remained, have never accepted their change of status. Their deep disaffection towards the Jewish state is kept alight by the propaganda continually pumped into their ears from the neighbouring Arab states. This is inevitable. For so long as the Arabs outside Israel are talking of eliminating the Jewish state, the Arabs who are left in the country will not come to terms with the existing state of affairs.

But Mr Schwarz, who travelled about Israel for eighteen months questioning, listening and thinking about these questions in order to produce at the end an admirably objective and exceedingly well-written account, comes ineluctably to the conclusion that the Israelis themselves do less than they might to change the minds of their disaffected minority. The Arabs have lists of specific grievances; these include the displaced villagers who, in their own words, received less than the price of a tablecloth as compensation for each square yard of confiscated land, and now have the added pain of watching Jewish settlements prosper on the site of their former lands. But over and above these special resentments, Mr Schwarz finds a general failure of comprehension; most Israelis know very little, and care less, about their Arab population. This is all the sadder because only in Israel do Arabs and Israelis have the opportunity of meeting one another peacefully; the Arab minority might have the pilot plant for Israel's deep-rooted ambition to bring social progress to the Middle East.

Changing Law

Law in a Changing Society

By W. Friedmann.
Sweet & Maxwell. 548 pages. £2 10s.

Judicial Review of Administrative Action

By S. A. de Smith.
Oceana Publications, New York. London: *Stevens.* 533 pages. 70s.

Like his earlier volume, "Law and Social Change in Contemporary Britain," Professor Friedmann's latest work is inspired by the theme that law must respond to social change if it is to fulfil its principal function as an instrument of social engineering. American law schools, and consequently American lawyers, have long recognised the close connection between law and the social sciences, but English lawyers have been traditionally reluctant to analyse the effects of social changes on contemporary law. English judges, Lord Justice Denning always excepted, are still enmeshed in the fiction that they do not make but declare law, and the most gifted of our academic lawyers have concentrated on applying the analytical methods of linguistic philosophy to legal concepts, rather than relating the law to social studies. The Cambridge Institute of Criminology is a unique exception.

Despite this general hostility, English law, Professor Friedmann shows, has been influenced by the new disciplines, and has had to modify itself to accord with changed social conditions. Thus judges have had to abandon the classic concept of contract as a bargain freely entered into by equal parties, and recognise that it is no longer relevant in a world where standardised contracts are common form, and statutory conditions are increasingly imposed by the legislature. Professor Friedmann's brilliant analysis of the shift in the law of tort from fault to strict liability and of the modification of the idea of negligence, under the impact of public and private insurance, is particularly illuminating. English law has been slower to respond to changes in the philosophy of punishment, perhaps because only liberty instead of property is at stake here. A chapter on the need for law in the developing international community, and on acute analysis of the meaning of the rule of law today, complete a notable work of comparative jurisprudence, which draws freely on United States, Commonwealth, and foreign legal systems, as well as on English law, to illustrate its themes.

Dr de Smith's book is directed to a rather more specialised audience and is more restricted in scope. It describes the part played by English courts in reviewing the orders and decisions of the ever-multiplying administrative authorities and special statutory tribunals. Administrative law has long been the Cinderella of English jurisprudence, partly because of prejudices going back to the days of the prerogative courts, and partly because of the influence of Dicey and his argument that administrative law violated the rule of law. This book, while of primary use to the practitioner, is a valuable addition to the growing body of work on English administrative law, which will eventually ensure that the subject is adequately taught in the universities.

Under Restraint

The Pane of Glass

By J. B. Martin.
Gollancz. 397 pages. 30s.

Most books about mental hospitals have been written by former patients, and they suffer from this subjectivity. Mr Martin's book gives an exceptionally detailed and dispassionate account of the structure, organisation, economics, staff and patients of what he asserts is an average State mental hospital in the United States caring for 2,700 patients.

He evidently spent weeks in the hospital, going round with the doctors, attending case conferences, watching in various kinds of wards how the attendants managed their patients, and his straightforward description of what he saw is studded with illustrative case histories. The account rings true and its coolness adds more than any whitehot protest could to an indictment that is severe but seems only half intended. The indictment is not made up of brutalities but of too few trained doctors and too few attendants (none with adequate training) trying to look after too many patients in the repressive and restrictive conditions that, in Britain and elsewhere, have been shown to be mainly responsible for the turbulent and degraded behaviour of patients in "the back wards."

Mr Martin's visits were unfortunately made as long ago as 1955, but in a final chapter he brings his account up to the middle of 1958. Despite the intense interest in mental hospitals, and the money poured into them, in the interval, he found little essential change. There were more doctors and staff; disturbed behaviour had diminished because of the new drugs; but there were still no unlocked wards and some patients were still physically restrained.

It seems safe to say, at the risk of sounding smug, that few of the conditions described in this book exist in any mental hospital in Britain today, and they have not done so for many years. There are several reasons for this. Since the days of the reformers of the eighteenth century British hospitals have always had a tradition of non-restraint, though it has worn thin at times; the Commissioners of the Board of Control, so soon to disappear, have taken care that the practices of the best hospitals are spread over the country; the nurses are well trained though there have never been enough of them; voluntary admission has been so far encouraged that some hospitals admit 19 out of 20 patients without formality; some hospitals find it possible to have all or almost all of their wards open and unlocked; physical restraint is virtually unknown and the isolation of a disturbed patient most uncommon; many kinds of therapy, quite apart from the successful physical and drug treatments, are tried out; and an atmosphere of hope, enthusiasm and stimulating controversy has replaced the stench and apathy of thirty years ago. All this has been achieved despite a severe degree of overcrowding, which is fortunately at last diminishing.

In this country, moreover, the health service spares us the thought of the patients described in this book, who may wait seven weeks in hospital till their relatives can or will provide the cost of the new drugs to treat them; of others who relapse after leaving hospital because they cannot afford the drugs necessary for continuing their treatment; and of doctors who cannot run follow-up clinics for discharged patients because the local practitioners accuse them of practising socialised medicine and of taking away their livelihood.

Mr Martin presumably spent his time between 1955 and 1958 in visiting psychiatric hospitals of other types and in collecting material for his short and masterly survey of the dimensions of psychiatric illness in the United States today and the resources applied to it, including research into causes and treatment. This information is not available elsewhere except in scattered publications; it is an additional reason why everyone working in psychiatry should read this excellent book.

A Camera's Eye

A Regional Geography of Western Europe

By F. J. Monkhouse.
Longmans. 746 pages. 50s.

The "western Europe" of the title is not the broad grouping of states commonly defined as western Europe today. This book is part of a series, and by editorial decree is confined to France and the Benelux states only. It is further limited in scope by the writer's quite explicit views on the aims of regional geography, these being, as quoted from the late Professor Ogilvie, "to describe the regions of a country as they are and to discover the causes that made them what they are." There can be no dispute about the achievement of at least the first of these aims; geographically speaking, Professor Monkhouse is a camera. With immense patience and industry he has recognised what must be hundreds of regions of one size or another, and to a length of 700 pages described in detail their physique and the more immediately visual aspects of their human geography. All geographers will be indebted to him for the assembling of this rich quarry of geographical material within a single volume.

It may, however, be argued that a regional division deliberately and explicitly based on physical geography neglects the differentiating effect of human groupings and associations, in which an old country like western Europe is so rich. The most important geographical division in Belgium, for example, is almost certainly the boundary between Flemish and Walloon-French speech, which cuts right across Professor Monkhouse's physical divisions. It is impossible to make any meaningful contrast between industrial or urban development in the Flemish and Walloon districts without first investigating their differing rates of population growth.

On a larger scale, the various states themselves, by their differing policies, bring about immense geographical variations. Without reference to such human factors, which may have scant relationship to physical geography, any regional division is incomplete. Professor Monkhouse has amply provided the underlying framework for the total regional geography of western Europe that has yet to be produced; is it too much to hope that he will one day write it?

Societies in Change

Social Mobility in Industrial Society

By S. M. Lipset and R. Bendix.
Heinemann. 330 pages. 30s.

The subject of this American study—social stratification and social mobility—is one that is increasingly attracting attention outside the *cénacle* of professional sociologists. Indeed, there are political observers who attribute the result of the recent, and indeed, the preceding, general election to deep-seated changes in society, which are making this country more like America in terms of living-standards and class-structure.

It is one of the purposes of the authors of this book to submit this type of generalisation about contemporary society to the test of empirical evidence. This evidence consists in large measure of secondary analyses from varied sources both American and international—contemporary surveys, official statistics and miscellaneous material of an historical character (the latter manipulated with considerable ingenuity)—and one primary source, the Oakland Labour Mobility Survey conducted by the Institute of Industrial Relations. Although the purist in survey-methodology may rightly argue that some of the conclusions are drawn from slender evidence and that the data are often discontinuous and incomplete, the book is nevertheless a courageous attempt to validate the substance of much of today's political thought by means of quantitative comparisons relating to many countries and stretching over the whole modern era.

The authors provide support, from their evidence, for Professor Schumpeter's famous dictum about class and mobility—"... for the duration of its collective life, or the time during which its identity may be assumed, each class resembles a hotel or an omnibus, always full but always of different people." They are also particularly struck by certain common features, the products of industrialisation, that afflict both an egalitarian meritocracy like the American and one established on the Soviet pattern. This certainly points the need for a socially understanding, as well as a mechanistic, approach to the development problems of the backward areas.

The canvas of this work is vast and ambitious in theme, clime and time; it will accordingly arouse controversy about some of its findings. But if it succeeds in stimulating some of the further empirical studies which it advocates, it will not be wasted.

OTHER BOOKS

A Textbook of Money. By S. Kortweg and F. A. G. Keesing. *Longmans.* 328 pages. 35s.

This is a good, solid, highly professional job carried out by authors having practical as well as academic experience of their subject. It is primarily institutional; a brief introduction and a concluding survey of theories buttress a main structure in which (although the authors are always ready to use schemata and abstractions when necessary) description and history constitute the chief elements. It has had a long run of success in its country of origin—the original Dutch edition was published in 1945—and one can easily see why.

Whether it was worth translating the latest revision into English is another matter. Ten or even five years ago, yes: but today "A Textbook of Money" has a certain air of having missed the bus. It is not precisely out of date, having been scrupulously revised to 1959. But the amount of space devoted to the pathology, as it were, of money and monetary policy—fifty pages on "Money in a War Economy" and "International Payments Restrictions" as compared with less than forty on the whole of monetary and interest theory—is, one may devoutly hope, much less well suited to the conditions of the sixties than to those of the forties and fifties. Nor is this lopsidedness compensated by any outstanding merits of presentation. The authors' style is dully pedestrian; they have no knack of vivid presentation: and they are not even particularly clear. For the English reader, the advantages of "A Textbook of Money" are marginal. It may be a useful change to approach monetary institutions from a European rather than an English or American angle; and the process by which these institutions have returned in recent years to a more nearly normal working condition is more fully described here than in any other textbook of comparable general appeal. As a standard introduction, however, it is unlikely to repeat its original success.

Annual Abstract of Statistics. No. 96, 1959. Central Statistical Office. *Her Majesty's Stationery Office.* 329 pages. 21s.

At an unchanged price, this volume is once again remarkably good value, providing a mass of statistical information in a convenient well-printed form. There are no outstanding changes in content from the previous edition.

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Dead Centre on Civil Rights

WASHINGTON, DC, *Wednesday night*

IF there is one lesson to be learned from this year's attempt to better the lot of Negroes in the South, it is that the middle of the road is not necessarily the place where progress is fastest. In the month-long debate in Congress the two Democratic leaders, Senator Johnson and Mr Rayburn, have floated to a position midway between the northern liberals and the southern segregationists as precisely as if they were bubbles in a spirit-level. The resulting legislation, although its final details have yet to be decided, seems fated to be only the most modest step forward. The hope that the new law would bring Congress to the rescue of the courts in their painfully slow struggle to end racial discrimination in the schools is apparently going to be frustrated. The one important consequence of a month's talking looks like being a provision to help Negroes to register and vote, and even this is subject to a couple of qualifications. In the form in which it will probably emerge from Congress, the new machinery to aid voting is complicated and may also prove to be unconstitutional; and, in any case, it is only another attempt to do what the last civil rights Act of three years ago was meant, but has failed, to do.

This being so, the observer is entitled to ask whether the battle has been quite as hard-fought as the cries of the contenders have suggested. Since February 15th, when Mr Johnson brought up the subject of civil rights in the Senate in fulfilment of a promise he made last year, there has been something faintly unreal about the drama. The Senate, that tortoise of the debating world, has crawled through four weeks of argument, including a record 83 hours in continuous session, only to sit down at the last moment and munch buttercups while the House of Representatives, which did not start moving until a week ago, flashed hare-like past it. It is true that the time was not wasted entirely. The Southerners stuck commendably to the subject—though the Senate's rules did not oblige them to—and made two or three criticisms of the Administration's proposed Bill which won general assent. But the debate was oddly passionless; some of the Washingtonians who visited the Senate Gallery as an alternative to the late, late show on television had to be reminded that, unlike the Senators, they were not allowed to fall asleep.

The fact is that, about half-way through the Senate's deliberations, an unspoken understanding developed between everyone, except the liberals, on two points. The first point was that it would be best to delay a decision until the House of Representatives, where the rules limit the length of debate, produced a Bill this week. The second was that the Senate would probably pass this Bill as it stood, if it dealt only with voting, plus a few "fringe benefits," and kept off the subject of the schools. It seemed that the Southerners would settle for something like this, and abandon their filibuster, when Senator Russell hinted that they found the voting provisions the least offensive part of the Administration's proposals. It became obvious that the majority of Republicans, together with Senator Johnson and the loyal squad of Democrats—mostly from the West—who follow him wherever he goes, were thinking of the same thing last Thursday when they stopped the northern liberals of both parties from getting the two-thirds majority needed to close the debate. In principle, anyone who wanted any kind of Bill could have voted for closure and settled its provisions afterwards. But the middle-of-the-road alliance between Mr Johnson's followers and those of Senator Dirksen, the Republican leader, obviously preferred to hold back their votes until they were sure that the unwanted parts of the Bill would be chopped off.

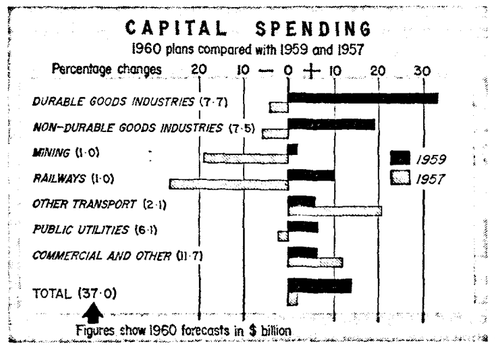
This week the House of Representatives has done what Mr Johnson and Mr Dirksen hoped it would do. On Monday it refused once again to go on record in support of the Supreme Court's ruling in 1954 that racial segregation in the tax-supported schools is unconstitutional; it has also declined to help compliant school boards in the South to end segregation by paying part of the cost. The plan to let the Attorney General go to court on behalf of Negroes in any case involving official discrimination (and not merely as he can now, in cases affecting their right to vote) was rejected by the Senate last week, although Senator Douglas said that to go to court privately costs, on the average, about $19,000. An attempt to reinforce equality of opportunity for Negroes at work has also been defeated.

All that Congress seems likely to pass, apart from the provisions about voting, is a minor clause designed to discourage fanatics from planting bombs and another to provide education for servicemen's children if the schools which they attend shut down rather than admit young Negroes. It may also be made a federal crime to obstruct a court order by violence or threats. Last Friday, in a particularly neat piece of parliamentary judo, the northern Senators from industrial states were twisted into the position of voting against this item because it had been extended to include court orders directed at trade unions; but they may yet be able to unravel their principles.

THUS the value of the measure Congress passes this year depends almost entirely on the effectiveness of the plan to help Negroes to vote. It may not be effective at all. The centrist block, which has the last word in both Houses, seems content to adopt some version of the Administration's scheme under which federal courts would be empowered to appoint voting referees. These could register Negro applicants as qualified to vote if it was proved that local registrars had discriminated against them. But Senator Hennings, probably the most able lawyer in Congress, suggests that this may be unconstitutional because it requires the court to find that there has been a "pattern or practice" of discrimination; Article III of the Constitution seems to prohibit a court from making any judgment beyond that involved in the individual case before it.

The liberals also claim that the Administration's plan is unnecessarily complex. Not only, they say, would the Negro have to wait until a court decided that he had been the victim of a pattern of discrimination, and then to show a court-appointed referee that he was entitled to vote; he would also have to wait until the court had, first, given its blessing to the referee's decision and, secondly, ordered the state voting officials to comply with it. At each stage it would be possible for segregationists to delay the matter by appealing. Senator Hennings wants to eliminate some

of these obstacles by empowering the President to appoint enrolment officers as soon as a single case of discrimination is proved. This would remove the necessity of finding a "pattern"; and the decisions of enrolment officers appointed by the President would not need to be confirmed at each stage by the court. But the middle-of-the-roaders appear to be ignoring his recommendations. The House has stuck to the referee plan and even looks like modifying it to increase the segregationists' opportunities for delay.



It seems clear that the "moderate" position adopted by Senator Johnson and his allies in this debate is moderate only in the sense that it stands in the mathematical middle of the rival forces. The failure of Congress—unless it has a last-minute change of heart—to help the courts to end segregation in schools has to be measured against the fact that in the last four years the courts have managed to get only 752 Negro children into white schools where there is strong local resistance. The voting provisions have to be judged in the light of the fact that the 1957 Act, which was also meant to help Negroes to vote, has enabled the Attorney General to come to their assistance in no more than four cases, only two of which have been brought so far to a successful conclusion. Racial discrimination in the South, enforced by the sporadic terrorisation of Negroes, is still almost as strong as ever. Congress hopes that, if the Negroes can be got to the polls in sufficient numbers, other forms of equality will follow in the course of time and need not be insisted on now. But if the voting provision turns out to be ineffective this year's measure will have accomplished virtually nothing.

Spring Survey

THE economy's springtime spring upward, awaited with extra eagerness this year after the disappointment of the winter, was given a bright start by the government's latest survey of businessmen's plans for investing in new plant and equipment. The 1960 forecast is for capital outlays of $37 billion, slightly more than in the record year of 1957 and well above last year's $32.5 billion. Moreover, the survey shows a stronger upward trend than had been prophesied earlier and one that continues throughout the year. Already there has been a good beginning, with capital spending in the first quarter running higher than was expected last autumn—but this is mainly because it fell off at the end of 1959 as a result of the steel strike.

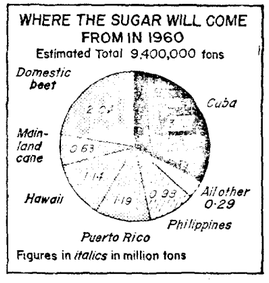
The survey was conducted in January and early February, after the sharp fall in the stock market had begun, but as this has gone on businessmen may have had second, less optimistic, thoughts. It has also been pointed out that so far their plans have not been supported by the solid evidence of a substantial rise in contracts for new construction or in orders for new machine tools. The two industries which intend, according to the survey, to step up their spending most notably—steel (67 per cent over 1959) and motor vehicles (59 per cent)—are both doing less well than they had expected in January. On the other hand they have both spent heavily in recent years on expansion and improvement and have no shortage of capacity; the steel companies, at least, must be feeling poor after the long stoppage in their plants. That even so they were planning to spend more reinforces the view that at present most capital spending is inspired by a desire to reduce costs of production and will not necessarily be curtailed just because a firm is doing badly. New technological developments encourage outlay on new plant and equipment; so does competition from foreign companies in markets both at home and abroad. This is said to be one of the reasons why the steel industry wants to increase its capital spending this year.

If this surveys proves accurate—and past experience suggests that it will—the mounting rate of capital spending will offset the depressing effect of the decline in the rate at which businessmen are building up reserve stocks; the stimulus to this type of investment which came with the ending of the steel strike has slackened off sooner than expected. But this stimulus had exaggerated the

rise in industrial output in January and there is therefore little significance in the fact that it fell off slightly in February from this unusually high level. In addition the February figures for unemployment, a record for the second month in succession, are *heartening; there were 65.4 million people at work and only 3.9* million out of it, a fall of 218,000 from January at a season when unemployment does not normally decline. On the other hand, there was a drop in the number of hours being worked in factories, as a result of cutbacks in automobile production, and the number out of work for long periods remains obstinately high.

Draw Over Berlin

WASHINGTON, DC



THE talks this week between Dr Adenauer and President Eisenhower have resulted pretty much in a draw, with a slight edge to the Chancellor. The Americans still insist on discussing the status of West Berlin with the Russians at the summit and on trying to reach an agreement if possible. Dr Adenauer told a group of American journalists in New York on Monday that he is opposed to any negotiations on Berlin, but it seems probable that he had abandoned any hope of converting the Americans to this view even before he arrived. The Administration is reliably reported to have expressed some irritation recently at the rigidity of Dr Adenauer and it would have been unwise for him to have tried to use his supposed "veto" over western policy. However, he did obtain a statement setting out the limits beyond which negotiations will not go.

Apart from the unexceptionable proposition that the freedom of the Berliners must be preserved, there is clearly some divergence of view in the National Security Council, which lays down the lines of American policy. For example, at his press conference on Wednesday the President hinted that the present legal status of the West in Berlin, which is based on occupation rights, cannot be changed. But the State Department is playing down this attitude and saying that, if the Russians were to offer an agreement acceptable in other respects, a new legal basis for the western presence in Berlin might still be negotiated in exchange for occupation rights. Dr Adenauer's position is that the western powers should not agree to do more than reinterpret what is entailed by occupation rights.

There is an interesting emphasis in the communiqué on self-determination for Berliners. The Americans put this in simply to embarrass Mr Khrushchev, who has been talking a great deal about self-determination while he has been in Asia. But Dr Adenauer seems to be taking up the idea as a way of limiting any concessions over Berlin at the summit. Hence his suggestion that the people of Berlin should vote on whether they like the present state of affairs. There will still be negotiations on Berlin, but only within a narrow area of manœuvre, and they will be limited to the possibility of an interim agreement embracing minor changes in the western garrison and so forth. The State Department is less hopeful than it was last autumn that the Russians will accept this and work is therefore continuing on plans for what the West will do if they turn it down.

No Sugar Stick?

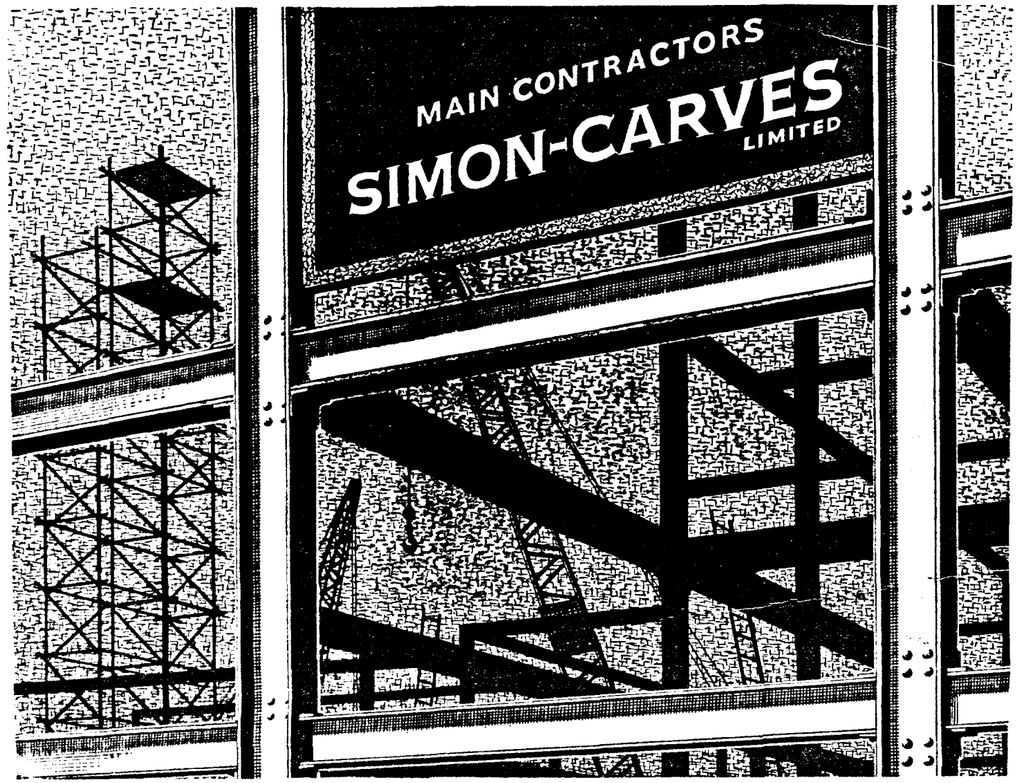
LATE last month, when Cuba offered to renew negotiations with the United States—chiefly over compensation for the seizure of American property and the activities of Cuban exiles on the mainland—it tried, unsuccessfully, to exact a condition: that nothing would be done, during the negotiations, to damage the Cuban economy, that is, to cut the Cuban sugar quota. Cuba supplies the United States with about a third of its sugar, at a price of over 5 cents a pound, which is 2 cents more than the world price; these sales, in turn, provide Cuba with over half of its foreign exchange. Yet only Cuba will be to blame if the quota is cut. After Cuba had signed an agreement to sell sugar to the Soviet Union at the world price, Major Guevara, the President of the National Bank, denounced the American premium price as "economic enslavement" (because it discourages economic diversification) and Señor Castro himself, after accusing the American government of blowing up a French munitions ship, with the loss of 75 lives, is now condemning the United States as Cuba's greatest enemy.

Even if it wished to, the Administration could not guarantee that Congress will not alter the quota. The President cannot even drum up much enthusiasm for his own scheme, which he has sent to Congress this week, after a long search for someone to sponsor it. The Administration would like the Sugar Act, which expires in December, to be extended for four years without any change in the complicated formula governing the quotas, but with the President given the power to alter them if he sees fit. However, Mr Cooley, the chairman of the House Agriculture Committee, and a number of his colleagues, hate to share the quota-setting power with the Administration; they argue that an extension of the present system for only one year would be a sufficient warning to Señor Castro to watch his step. Even the mainland producers of beet and cane sugar are not pressing as hard as might be expected for a reduction in Cuba's privileges. They enjoy a nice cosy monopoly of the domestic supply and fear that this might be disrupted if new producers had to enter the industry; moreover, they suspect that any reduction in the Cuban quota would be only temporary, since it would cause such havoc in that island.

All this is not to say that Congress may not take the bit between its teeth when the Sugar Act reaches the floor. But the Americans know that one reprisal provokes another; Cuba could seize not only the big American naval base at Guantanamo, but also nearly $800 million of American investments on the island; only about $6 million worth have been expropriated so far. Finally, exasperating as it is for the hand that keeps Cuba afloat to be bitten quite so regularly, no one wants to make the Cuban people suffer for the wildness of their leaders.

Western Approaches

I—California's Not Browned Off



FROM A CORRESPONDENT IN SAN FRANCISCO

LAST week, as had been expected, the Californian State Legislature refused, for the eighth time in the last 27 years, to abolish capital punishment. The refusal was a rebuff not only to Mr Caryl Chessman, whose death sentence had brought the issue up at this time, but also to Governor Brown, who had tried to shift the responsibility for reprieving Mr Chessman on to the State Legislature. There is now little or no hope for Mr Chessman, whose execution is fixed, for the ninth time, for May 2nd but there is still plenty of hope for Mr Brown.

He embarrassed and angered his Democratic supporters in the Legislature by involving them, in an election year, in a controversy which cuts across party lines and moves voters deeply. But his readiness to act in a way so politically unwise has given him a quixotic appeal for the young liberals who are an important element in California's Democratic party. And the Democratic legislators whom he put on the spot by bringing up the issue of capital punishment still seem to be behind the rest of his programme. If, with their help, he can defeat Republican efforts to reduce taxes and can push through important Bills affecting the state's system of higher education, he will emerge from the present legislative session with little, if any, damage to his reputation as California's first effective Democratic Governor in this century.

Such a success would also confirm his influence over California's huge delegation—162 members with half a vote each, second in size only to New York's—when the Democrats meet to choose their presidential nominee in Los Angeles next July. Nominally, these delegates will be pledged to support Mr Brown, as California's favourite son, until he releases them. But he has made it clear that he will do this as soon as they have served his strategic bargaining purposes during the early ballots. Once the delegates are released they are unlikely to vote as a unit, since the group is a representative cross-section of the diverse elements in the Californian party. Senator Kennedy claims that two-thirds of them will support him and that this is why he decided not to enter his own list of delegates in opposition to the Governor's, even though public opinion polls had shown that the Senator might easily have won. Most observers think his claims exaggerated, but by staying out he has certainly won sympathy among the professional politicians who still dominate Democratic affairs in the state. A contest would have cost money which they would prefer to save for the election campaign itself and might have split the party, thus perhaps losing for the Democrats both California's presidential vote and their control of the State Legislature.

What happens in April, when Wisconsin voters will show what they think of Senator Kennedy and Senator Humphrey as potential Democratic presidential nominees, will have an important impact on Californian Democrats. For the liberal Mr Humphrey has a modest but enthusiastic following among the young intellectuals who have had so much to do with the revival of the party in the state. But if the Wisconsin result shows that he has no chance of the nomination his admirers will turn to Mr Kennedy, or perhaps

EXPANDING CONTRACTING

Simon-Carves, in their specialised fields of mine engineering, coal cleaning and carbonising plants, chemical engineering, power station construction and so forth, have amassed eighty years' experience of large-scale contracting.
On the basis of this experience Simon-Carves are now often appointed main contractors for complete multi-million pound plants for which the process know-how comes from the client and the contracting know-how from Simon-Carves.

This business of engineering to clients' own flow-sheets is rapidly expanding: in recent years, for instance, Simon-Carves have been main contractors for plants to produce carbon black, phosphorus, sulphuric acid and cement clinker, polythene, and superphosphates.
Given a site and a customer's briefing, Simon-Carves will accept responsibility as main contractors for the construction of almost anything from a steelworks to a fertiliser factory — from green field to production.

to Mr Stevenson, who remains a favourite in the state and already has substantial support among its delegates to the Democratic convention. However, Senator Symington is popular with some of the more conservative delegates, although so far few of them have shown any interest in Senator Johnson.

II—Oregon's Free-for-all

FROM A CORRESPONDENT IN PORTLAND

Of the several states holding presidential primaries this spring, only Oregon will give the voter an opportunity, on May 20th, to show whom he prefers among virtually all the candidates who are conceded a chance of winning the presidential nomination of either party. The only name on the Republican ballot will be that of Mr Nixon but there will be six Democrats, all of them members of the Senate: the majority leader, Mr Lyndon Johnson, Mr Kennedy, Mr Humphrey and Mr Symington, who are serious contenders, and Mr Kefauver and Mr Wayne Morse of Oregon, who are not. Senator Morse, who would like to be Oregon's "favourite son" may well find that his fortunes will be adversely affected by the wave of popular feeling for the state's other Senator, Mr Neuberger, who died last week at the early age of 47. The two men had been engaged for several years in an intra-party feud, which continued to simmer during Mr Neuberger's last illness. The Governor has appointed a successor to serve for the rest of Senator Neuberger's term but Mrs Neuberger, who has been active in politics in her own right and as part of a famous husband-and-wife team, will be the Democratic candidate in November for her husband's seat.

Oregon's unique test of popular sentiment on the presidential candidates was arranged deliberately by the State Legislature, which last year gave Oregon's Secretary of State, Mr Appling, authority to determine which presidential candidates are "generally advocated and recognised in national news media throughout the United States" and to enter their names on the ballots. A few days before the deadline for filing on March 11th Mr Appling announced

Leasing for Profits

FROM A SPECIAL CORRESPONDENT

While some business men still consider it daring for a firm's directors to buy equipment on credit instead of for cash, others are already asking: "Why buy it at all?" and are plunging into an even more heterodox form of financing. They are expanding their operations without additional fixed investment in capital equipment by renting items as various as delivery trucks, jet aircraft engines, office furniture, electronic machinery, shop fixtures and tugboats. Tirelessly promoted by a number of professional leasing companies, all of them founded in the past seven years, equipment leasing reached a record volume of $2 billion in 1959, compared with about $450 million in 1953, and there is no obvious reason why the pace should not become even faster.

The system itself is not new. In some special cases, particularly that of machinery protected by patents, it has been common practice for many years. But now, generalised into "a new concept in business philosophy," it is offered as a tool for management almost as fundamental as double-entry bookkeeping. The mechanics are simple: the desired equipment is ordered from a manufacturer who is immediately paid in full by the professional leasing company by means of a bank loan. The leasing company is then the legal owner to whom the user of the equipment pays a graduated annual rent sufficient to cover repayment of the loan, costs of administration and a leasing fee. Leases usually run for from seven to ten years, covering about 70 to 85 per cent of the useful life of the equipment. Cost of maintenance and insurance is borne by the lessee, who may terminate the lease after an initial period, renew it at a much-reduced rental after its expiration, purchase the equipment or return it to the owner.

The immediate disadvantage of rented equipment is that it costs the lessee from 8 to 36 per cent (depending on the term of the lease) more than its purchase price and is not an asset which can be re-sold or borrowed against. On the other hand, unlike hire purchase, the manufacturer's usual discount for cash is available and there is no large initial down payment. But the basic case for leasing equipment is that it frees a company's capital, cash and credit resources; instead of being locked up in machinery, they can be concentrated on producing more goods, selling more, advertising more. The argument of the professional leasing companies is that "profits are made through the use, not the ownership, of equipment," a truth they regard as undeniable except by those in whom hopelessly outmoded feelings of "pride of ownership" still linger.

There are also a number of specific advantages offered by renting equipment. Probably most important is that it provides a hedge against obsolescence, notably in such new and fast-changing industries as electronics manufacturing, while in businesses with heavy office expenses, such as insurance companies, the savings in labour costs that can be made by automation, and the high price of such equipment, is encouraging the practice. A company may also find it impossible or undesirable to raise new capital for expansion. The enormous cost of conversion to jet aircraft, for instance, has led American Airlines to rent $67 million worth of jet engines from three manufacturers. One of these—the General Motors Corporation—has recognised leasing as an aid to selling and has set up its own subsidiary to handle the leasing of jet engines.

Equipment leasing also offers flexibility to managements which are restricted in various ways. A construction company, for instance, must by law maintain a certain financial reserve in relation to its fixed assets, but it can keep certain assets from being "fixed" by renting instead of purchasing them. Such public institutions as hospitals and schools, whose use of tax money and endowments is often arbitrarily regulated as regards the division between operating costs and capital expenses, find leases enable them to manoeuvre more freely between the two. Firms that are concerned about the ratios on their balance-sheets of their long-term commitments can conceal lease arrangements as current obligations, while outright purchase of the same equipment might involve a "long-term" debt.

Such "flexibility" has of course drawn the scrutiny of tax officials; in fact, they have been so vigilant that leasing is one of the few new management practices that does not offer any substantial tax advantage. Accelerated amortisation of equipment costs, which may provide tax benefits, is one feature that makes holders of government contracts favour the renting of equipment since all the costs can then be charged against the contract.

In spite of its continued growth, the leasing fad has not yet passed its first practical test—whether the professional leasing companies themselves can make a profit. Few of the leases have expired as yet and it remains to be seen whether the companies can succeed in disposing of the enormous quantity of equipment they have bought. So far they have made very little money. Therefore they must either sell their rented equipment profitably or raise their leasing fees sharply—a move which would make their services less overwhelmingly attractive to potential customers.

that he would enter the names of two Republicans, Governor Rockefeller of New York and Vice President Nixon, and of six Democrats, Senators Johnson, Kennedy, Humphrey, Symington, and Kefauver, and Mr Stevenson.

Mr Rockefeller, Mr Kefauver and Mr Stevenson promptly exercised their right to withdraw, by filing an affidavit saying, in each case: "I am not now and do not intend to become a candidate for the office of President or Vice President in the forthcoming election." Thus Governor Rockefeller gave the first concrete reaffirmation of his earlier announcement that he had withdrawn from the presidential stakes. But Senator Kefauver's disclaimer did not fulfil the legal requirements, so his name will stay in, although he will not campaign for votes. Although he has twice sought the Democratic presidential nomination, the Senator is not considered to be a serious contender this year, and the presence of his name on Mr Appling's list was a surprise.

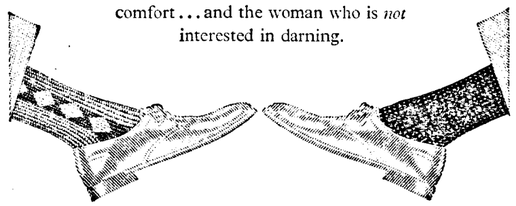
SENATOR MORSE'S name will appear on the Democratic ballot because 5,000 of his supporters signed petitions to put it there; Mr Appling, did not consider him a "generally advocated" candidate. (Senator Morse himself said recently that if his own "bid" for the nomination failed, he would support Senator Symington, because he thinks that Mr Stevenson, his first choice, is telling the truth when he says he does not want the nomination.) For many years, Oregon has permitted candidates to be entered on the petition of 1,000 or more qualified voters, and when this is the case the candidate may not withdraw. Since this action by his supporters, which he has said was against his will, Senator Morse has announced that he will make a determined campaign to win the Democratic primary. And he has taken so much heart that he has entered voluntarily the primaries in the District of Columbia and Maryland. He is a sort of "favourite son" in both. In addition to representing Oregon in the Senate, he lives most of the year in Maryland, where he has a farm; and he has served for a long time on the Senate District of Columbia Committee.

Two of the serious Democratic contenders, Senator Johnson and Senator Symington, will not campaign actively in Oregon or elsewhere. But the Oregon primary is the only one in which their names will appear as candidates. And it is worth noting that, by refusing to file the categorical denial of candidacy provided by Oregon law, both of them have acknowledged, for the first time, that they are seeking the Democratic nomination. Senator Johnson and Senator Symington are not expected to win more than a few hundred votes each. Mr Johnson is especially weak in Oregon, where he is regarded as a member of the southern block, not the western one with which he has sought to be identified; this prejudices his case in a state which has led the way in adopting legislation to ensure fair employment practices towards minorities and to ban racial discrimination in public places.

The real contest will be among Senators Morse, Kennedy and Humphrey, with Senator Humphrey expected to come third. This is partly because Senator Morse is popular with the trade unionists who, if he were not standing, would probably vote for Senator Humphrey. Either of the outsiders, if he does badly, can blame this on the unexpected intervention of a well-known local figure who has been re-elected to the Senate twice, with big majorities. But Senator Morse himself may be running some risk; although no prominent local Democrat has opposed his candidacy in public, leaders of the party in Oregon are actively supporting his major opponents in the primary. Representative Edith Green of Portland is chairman of the Kennedy campaign in the state, and her Democratic colleague in the House of Representatives, Mr Porter of Eugene, has publicly endorsed the candidacy of Senator Humphrey. Senator Morse will have to defend his Senate seat in 1962, probably against Mr Hatfield, the popular Republican who is now Governor, and some Democratic leaders believe that Senator Morse is taking a political chance by pitting himself this year against such national figures as Senators Kennedy and Humphrey.

Caesar's In-Laws

THE latest development in the television scandals has reinforced the Democrats' contention—of which much will be heard before next November's election—that there has been just as much mess in Washington under the Republican Administration as under its Democratic predecessor. In February Mr John Doerfer, the Republican chairman of the Federal Communications Commission, unwisely accepted hospitality on a Florida businessman's yacht for six days, with a free flight to and from the holiday, although the businessman owned several broadcasting stations whose licences will shortly come up for review by the FCC, and although Mr Doerfer had been in exactly the same sort of trouble before. After being attacked from all sides and being interviewed by President Eisenhower he resigned, still protesting that his friendships had never affected his impartiality. The Democratic attack is now concentrating on Mr James Durfee, head of the Civil Aeronautics Board, who has been nominated for a federal judgeship by the President. Like Mr Doerfer, he is from Wisconsin, and like him, or so Senator Proxmire, his chief assailant, alleges, Mr Durfee has not been able to resist free travel, even when it was given to him by the airlines that he was supposed to supervise.



As in the case of that frailest of Caesar's wives, Mr Sherman Adams, public and congressional opinion is worried about the unexpectedly low level of ethics or common sense in officials chosen by Mr Eisenhower, and by the apparent failure of the federal regulatory agencies to carry out their duties effectively. The FCC, for example, was one of the two independent agencies singled out by the Attorney General as responsible, because of its inefficiency and indolence, for the growth of venality in television; the other was the Federal Trade Commission. It was also the commission from which Mr Richard Mack resigned in 1958, after being charged with financial indiscretions.

To get rid of these and other abuses, various Bills have been put before Congress and hearings on some of them were to begin in the House this week. They are of two types, moderate and radical. The moderate ones, which would lay down stringent codes of conduct for government employees and those having dealings with them, seek to do no more than to remedy the present situation and to stimulate the agencies to take a firmer line in the future. The radical Bills, on the other hand, which have little chance of passage, for the present at least, aim at reconstructing the agencies from top to bottom, on the ground that, in their present shapes, they will never be effective. But many people argue that what is really needed is not new legislation, but the appointment of better men as commissioners and the allocation of more funds for their work.

A SHIP THAT SHAPES THE FUTURE

The success of a ship does not depend on the admiration she arouses, nor on the records she breaks in her first few years of service.

For the life of a ship is measured in decades. She must not only meet the most exacting of contemporary demands, but the potential demands of the years ahead. This is why 'Canberra' is truly a ship that shapes the future. The factors which influenced her design are those which held most promise. In her shape, size, speed, layout and planned route pattern she fulfils exactly her calculated role.

From 1961, 'Canberra' will join the P & O fleet, shaping future standards of speed and comfort between England and Australia and across the Pacific to the West Coast of North America. She will carry 550 first-class and 1685 tourist passengers and a crew of over 1000.

45,000 tons, length 820 ft., beam 102 ft., draught 32 ft. 6 ins. Service speed of 27½ knots. Built by Harland & Wolff Ltd., in Belfast.

THE WORLD OVERSEAS

Back to the Old Green Table

FROM OUR SPECIAL CORRESPONDENT AT GENEVA

As the Disarmament Conference began on Tuesday, a Soviet official source declared that there was no room for depression. To echo Queen Victoria's staunch sixty-year-old wartime maxim was apt. The omens were mainly favourable and the participants mainly affable and eager to emphasise their readiness to consider the suggestions of others. The unexpected sunshine streamed through five tall windows as the ten delegations sat down at the battered old tables, hastily covered with properly symbolic green baize, that had served the disarmament negotiators of the thirties.

The veterans of prewar Geneva were all the more nostalgic because this conference, unlike the usual United Nations gatherings, with their colourful and lively Asian and African elements, is very much a European occasion touched by Gallic logic, Polish courtesy and even fluent Bulgarian French. But the veterans naturally wondered if the new wine would flow this time through old bottlenecks. Most delegates expect a long, long session, some are seeking Swiss schools for their children. At the first formal meeting some of those who have been here negotiating about nuclear tests for nearly eighteen months sat in with a visible air of conscious seniority, and the newcomers duly took note.

In both spirit and detail, this conference presents much that is familiar to such senior disarmers as M. Moch. Two plans, both suitably obscure, now confront each other. The West's is laboriously complex, full of compromises, and painfully if honestly lacking in propaganda value. The Soviet one, though in fact even more obscure, achieves a superb simplicity by firmly passing right over even those difficulties whose existence has been admitted by Mr Khrushchev himself. Delegates seem sufficiently aware of the gaps that still yawn to hesitate before passing any final judgments on each other's proposals. On Tuesday some superficial Soviet block criticisms of the western plan stirred Mr Ormsby-Gore to quote Mr Khrushchev's recent warning against over-hasty verdicts, and on Wednesday Mr Zorin publicly acknowledged this point and held his fire.

The Soviet plan remains exactly as it was presented to the United Nations Assembly on September 18th. Mr Zorin's clarifications on Wednesday merely indicated how the three stages might fit into the four-year period. While claiming that the Soviet programme is "now known to the entire world," he is still so coy about the key points that even his own colleagues on the Soviet delegation seem left in confusion. One such point is that at the end of the second Soviet stage, the nuclear powers will still have all their nuclear weapons and rockets while the other nations will have been totally disarmed. A direct question to Mr Zorin got a very indirect answer—but even that confirmed that the point is as stated. It is curious that, though the non-nuclear countries would seem unlikely to be enthusiastic about this aspect of the Soviet plan, Mr Zorin claimed the strong support of the Indian and other Asian governments.

It is this total lack of balance between nuclear and conventional disarmament that most sharply differentiates the Soviet plan from the western one. On controls, more probing will be needed to determine how far the latest western terms satisfy Soviet insistence that at each stage only those control procedures that are appropriate should be applied. The western plan, as it has developed from Mr Selwyn Lloyd's proposals at the United Nations Assembly on September 17th, seeks ingeniously to begin with measures of both disarmament and control that are relatively painless, success with which could create some initial confidence. Its subsequent progress to complete disarmament is marked throughout by the way the balance is kept at each stage between nuclear and conventional disarmament, and by the corresponding development both of the proposed International Disarmament Organisation and of an even more portentous, but much more shadowy, peace-keeping organisation—an element highly repugnant to the Russians.

Both plans have their odd features. Some of the unclear points in the western one are explained by its modification to meet some, though not all, of the French arguments: thus manpower figures are offered only for America and Russia. Some Paris reports that the plan had been completely reshaped at France's behest remain, however, inexplicable; it is still essentially on the old Lloyd lines. As to timetables, while it would seem unnecessary to take Mr Khrushchev's four years too literally, it is strange that the West cannot even suggest target dates conditional on fair progress. However, the Swiss government this week finally managed to approve a definition of *café crême* after twenty-four years of effort, so it is doubtless wise not to underestimate the time required for a delicate negotiation.

Among the things that the Russian plan blandly ignores are Mr Khrushchev's own repeated admissions that there is no sure way of detecting all the existing stocks of nuclear weapons. M. Moch took up this point in his own opening speech, a brilliantly brief résumé of the terrible logic of our age. Nuclear disarmament said M. Moch, is what the peoples of the world expect from the negotiators here and it would be a betrayal of their hopes not to concentrate on it. Since the stocks could not now be totally eliminated, he went on, the problem had to be tackled by controlling nuclear vehicles—rockets, satellites, aircraft, submarines—and by quickly and drastically reconverting to peaceful use those stocks whose existence could be determined: merely to cut off production of nuclear weapons would mean consecrating the power and privilege of the nuclear powers.

The western delegates remain unhappy about the Soviet idea of what forces could be kept by governments to maintain internal order. Theoretically, as Engels once wrote, a communist state should need no such forces. Mr Zorin, pressed on this point on Wednesday, was less definite: the size of these forces, he said, would be negotiated "taking into account the peculiarities of each state." He insisted that they would be "insignificant" but one wonders whether insignificant forces could maintain order in, say, Tibet or Algeria, or even in Nyasaland.

As for a peace-keeping organisation powerful enough to protect the weak in a disarmed world, Mr Zorin simply brushes the whole question aside as being an attempt to divert attention from disarmament plans: the Russians remain strongly opposed to any

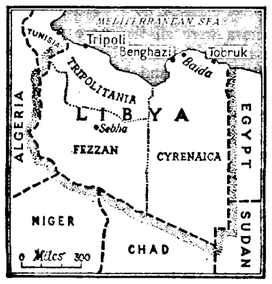
idea of an international peace-keeping force, and insist that after complete disarmament even the smallest state will enjoy automatic security. This may seem utopian, but the West's ideas on the subject are also still far too cloudy to be termed realistic. Western delegates argue that it is useless to define the shape of the peace-keeping organisation or its relationship to the United Nations until Russia has said "yes" or "no" to the plan as a whole. But clarification might help the Russians to make up their minds; it would be welcomed by many others here who at present have little idea what is contemplated; and it would also be welcomed by the United Nations staff, who do not yet know if the western plan means a shot in the arm for the United Nations or a kick in the pants.

It is easy to be cynical about utopianism when the air is so thick with huge, cloudy shapes. But this conference's terms of reference are utopian; and Mr Zorin makes a fair point when he says that total disarmament could avoid some of the difficulties that have baffled all plans for partial disarmament. Anyway, the right choice of partial measures must largely depend on clearer ideas of the ultimate goals. The task for all parties here is to peer deeper not only into others' intentions, but also into their own somewhat schizoid minds. A good deal more probing has to be done before the fate of this conference can be forecast. Most of the cards on the green table are still lying face downwards.

Libya's Oil Boom

FROM OUR SPECIAL CORRESPONDENT IN THE MIDDLE EAST

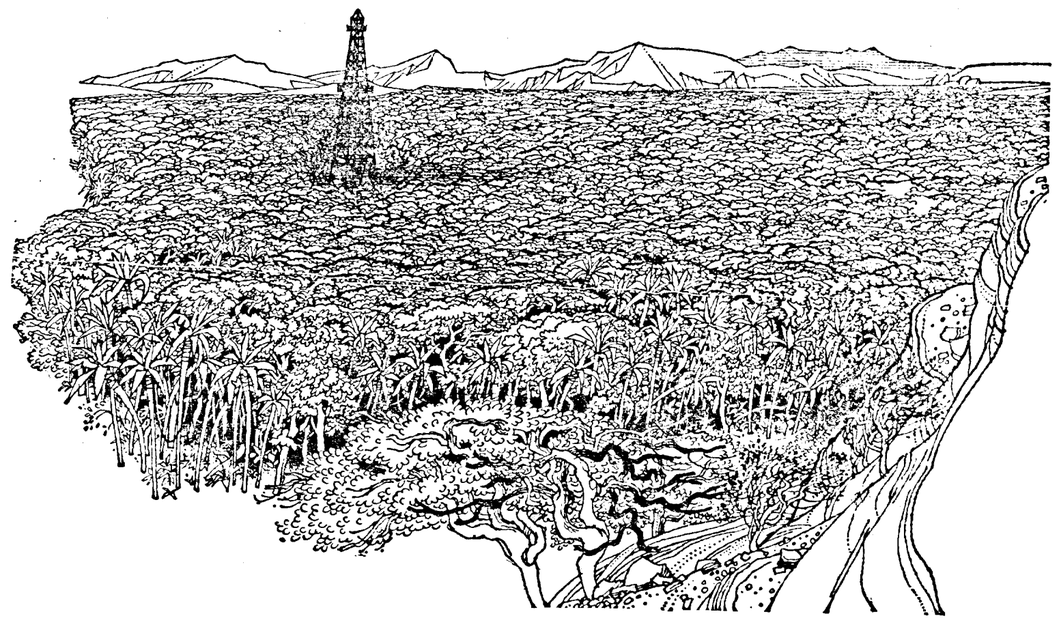
FOR Libyans, the present period is like waiting for a rich uncle to die. On the one hand there is a feeling that the expected inheritance must be wisely invested for the future; on the other, the temptation to have a fling after long years of austerity.



The map of Libya most frequently posted in local business and government offices is no ordinary one. It shows the gerrymandered outlines of the 84 oil concessions granted so far by the federal government to seventeen companies. There has never been anything like it in the history of Middle East oil. Eighteen months ago there was still some question whether the country would ever produce enough oil for export. There is no doubt now. Estimates of the reserves beneath Libyan sands depend at present largely on the estimator's enthusiasm. Some say that there is enough to put Venezuela, Kuwait, Saudi Arabia, Iraq and Persia out of business; others, more cautious and more realistic, merely claim that it is another Kirkuk, possibly another Kuwait. To find the answer, 26 drilling rigs, more than have ever operated at one time in any Middle Eastern country, are at work.

The oil companies are not only trying to find more oil, they are hoping to discover where in any one concession area it lies. The Libyan petroleum law requires that within five years from the date of a concession a quarter of its area must be relinquished. Many of the concessions will be five years old late this year or early in 1961. The question that everybody asks, and nobody dares answer, is when Libyan oil will be exported. The profit to the government on 200,000 barrels a day for a full year would amount to about £15 million, equal to the federal budget for 1958-59.

Since it became independent (on Christmas Eve, 1951) Libya has survived on foreign aid. When the newly elected parliament met recently at Tripoli there was much bold talk of dispensing with such help; but this cannot be done safely until that unspecified date when the oil revenues begin to come in. There are shadowy plans for 70 per cent of the oil income to be put into a development fund, the provincial and federal governments getting 15 per cent each for general purposes. The Libyans have before them examples of the sometimes unhappy experiences of the other oil-bearing Arab countries. They are not likely to repeat in detail the engineer's dream that once was Iraq, the plushy welfare state that is Kuwait, or the profligacy of Saudi Arabia.



The United Kingdom of Libya is not as united as it might be. There are two capitals, neither of them particularly Libyan in character. Tripoli is provincial Italian; Benghazi is provincial Egyptian. In November the federal government moved across the desert from Benghazi to Tripoli with all its clerks and filing cabinets. The king does not tarry long in either capital. He prefers the quietness and solitude of the village of Tobruk, far away towards the Egyptian border. The country's chief problem is that Tripolitanians and Cyrenaicans are jealous of each other. The third province, the Fezzan, is sparsely populated and run as a feudal barony by the Saif al-Nasser family. Companies that work in one province cannot easily shift personnel to another, and foreigners cannot move from one to another without having their passports checked.

On the whole, the Libyans have made good use of the money they have received from the United States, Britain and the United Nations. The main roads, an inheritance from Italian imperial dreams, have been kept in good repair; much attention is being given to the improvement of agriculture; and the machinery of government works more smoothly than in some of the neighbouring countries. There has been mistakes, such as the construction of the ill-fated new federal capital city at Baida, high in the green mountains of Cyrenaica; the costly road from Tripoli to Sebha, the capital of the Fezzan; and the road from Tobruk to a religious school deep in the desert. These mistakes reflect a weakness in the government: those who can convince the king that a project is worthy are liable to get their way whether it fits in with the country's general needs or not.

Trained men are scarce; so is money. The oil companies compete with each other and with the government for the services of the few well-qualified Libyans—the better pay offered by the companies usually proves more attractive than government service. At the moment, those who leave the government cannot be replaced, but 300 Libyan students now studying abroad will soon begin to fill the vacant positions. Those students who get government grants are put under an obligation to work for the government for twice the length of their foreign schooling. Many government officials are going into business for themselves and are resigning from the government to do so—and not, as in some Mediterranean countries, trying to keep a foot in both doors. From Lebanon, Saudi Arabia and Kuwait, men already rich are gathering in Tripoli or have sent their agents there in hopes of sharing the impending wealth. Most of them have plenty of money to invest, but they are discovering, as others found when they rushed off to Kuwait and Saudi Arabia a decade ago, that the local business men also can drive a hard bargain.

Those who are most concerned about Libya's future economic progress await anxiously the publication of the report completed last year by a survey mission from the World Bank on the entire Libyan economy. It is there that they hope to find a plan for economic development so attractive that the Libyan parliament will give it prompt approval. The government bankers and the commercial bankers differ about the nature of the boom which is now only beginning. The government does not want a wild inflation; the commercial bankers are anxious to extend credit against the day

'Fill her up...'

Every motorist knows this phrase. You yourself probably use it hundreds of times. But have you ever thought where the petrol that flows into your tank *begins*, and what happens to it before you get it?

It begins, most likely, in some outlandish spot. Nature unkindly deposits the largest supplies of oil in the most difficult places. To find oil, you must penetrate jungles, explore deserts and even delve under the ocean bed. And you may be unlucky. More than a million exploratory wells have been drilled over the last 90 years and only a fraction has yielded oil.

Shell spends millions of pounds each year searching for the oil which the modern world needs increasingly. Once located, and brought to the surface, it must then be carried thousands of miles by pipe-line and tanker to world refineries.

But this is only a start. To turn the crude oil into a modern high-octane petrol such as *Super Shell*, new refinery processes are employed which produce, at an economic cost, fuels far superior to those obtainable before. Chemical 'additives' are also used to step up performance without adding to the cost per gallon. A notable example is the Shell ignition control additive — I.C.A. — which overcomes faulty ignition due to engine deposits and so keeps engines smooth.

I.C.A. was a great research achievement, the most important in petrol for over 30 years, and it is exclusive to Shell. Valuable in every car, it is vital in modern high-compression engines. When you say 'Fill her up' at your Shell Station you benefit directly from fundamental developments such as this which are making motoring better for everyone.

YOU CAN BE SURE OF SHELL

when the big money begins to come in. It does seem possible that the poverty that Libya has known all its short independent life has made the government unduly cautious ; an expanding economy cannot be dubbed inflationary merely because there are a few more people in the country willing, and able, to pay more for better goods and services.

Pictures of President Nasser adorn shops and public places all over Libya ; but almost always the Egyptian president shares the place of honour with Libya's own king and crown prince. The influence of Egypt is naturally great. Arab politicians are apt to find, however, as the businessmen have, that the Libyans, though they may be among the least sophisticated of Arab nations, know what is best for themselves.

Prophetic Warning for Canadians

FROM OUR OTTAWA CORRESPONDENT

ALTHOUGH Mr Diefenbaker wears the mantle and employs the oratory of Canada's prophet, a more truly prophetic voice has now been heard from a figure little known to the public. Mr J. E. Coyne, governor of the Bank of Canada, has written a preface to his annual report, published this week, which is in the proper tradition of prophets because it says unpopular things, in direct challenge to the prevailing comfortable assumptions, and calls for a change of heart. It is also simple, as prophetic utterances should be. His message, in colloquial modern terms, is that Canada has been on a binge for too long and had better sober up quickly before somebody takes the bottle away. In more dignified Old Testament terms, he is attacking the golden calves, which Canadians have set up for worship. One calf is called the " rate of expansion " and the other the " rising standard of living."

In the past those solitary voices that have given warnings against the continuing heavy reliance on foreign capital have been confuted with the reply that any reduction of capital inflow would reduce the rate of expansion and the standard of living. Mr Coyne has launched his attack directly on these false idols. He says " the attempt to accomplish too much too fast "—which embraces both excessive consumer spending and capital works—

> has given rise to huge deficits in our international balance of payments, to a large and growing volume of foreign debt by governments and businesses which do not have foreign operations to support that debt, and has gone hand in hand with a growing degree of foreign predominance in Canadian business.

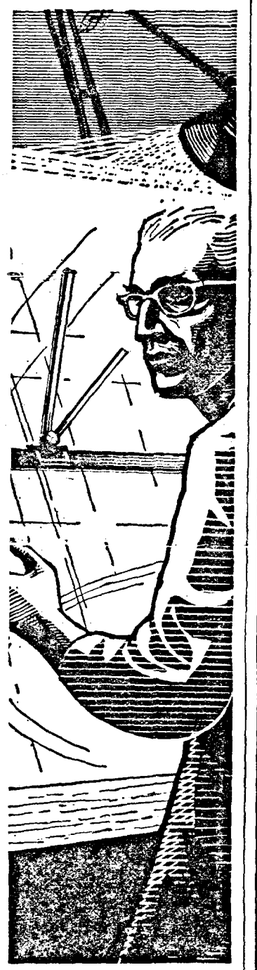
He could cite details of the 1959 balance-of-payments deficit, which was a record at $1,460 million. Of this sum $1,074 million resulted from " invisible " transactions, of which at least $600 million was related to the service of foreign capital. The deficit on merchandise trade at least fluctuates. It has ranged between $730 million at the height of the 1956 boom to $170 million in the 1958 recession. But the invisible account, dominated by debt service, dividends and payments for business services, leaps up remorselessly year by year, each year's deficit adding to the payments of future years. Even if Canadians wanted to go on in this way, says Mr Coyne, the supply of foreign capital will not continue indefinitely. " We must in the end learn to live within our means." He adds that " it would in my view be the path of realism to move firmly in that direction on a broad front without delay."

It is yet to be seen whether Canada is in the mood to stone the prophet or to heed his warning. In some respects Mr Coyne's timing may be favourable. There is much evidence that the business world is more concerned about present tendencies than it has been for many years. The public has been both puzzled and distressed that unemployment should remain high even with the economic cycle on the upswing. It is now plain for all to see that the capital investment boom of 1955-57 left many important Canadian industries with a capacity exceeding the available market. And the 5 per cent premium on the Canadian dollar, which results from the capital inflow, is a constant irritation both to exporters and to domestic manufacturers struggling against import competition.

From the government there has so far come little indication that the fundamental problems are either recognised or understood. Mr Gordon Churchill, who succeeded Mr Howe as minister of trade and commerce, has been outhoweing Howe in cheerful assurances. But the key man is Mr Donald Fleming, the finance minister. He has acknowledged the damage resulting from the anomaly of a high exchange rate, and with the budget due in a few weeks' time it lies primarily in his hands to cope with the situation. If he follows Mr Coyne's advice, his budget aims will be, first, to avoid excess in spending and borrowing by all sectors of the economy ; second, to induce a " more moderate approach to economic development " ; and third, to promote a " greater diversification of Canadian production " leading to a more balanced and stable industrial structure. The measures required to achieve these ends have not been specified, but Mr Coyne says the problems can all be tackled once Canadians resolve to " cast aside easy-going illusions and stand on their own feet." It would certainly be quite a change.

Trials of Benelux

FROM A CORRESPONDENT IN HOLLAND



WHEN on September 5, 1944, the Belgian, Luxemburg and Dutch governments in London signed an agreement for a customs union (the name Benelux came later), the ministers certainly did not expect that fifteen or sixteen years from that date the economic union that was intended to follow it would still be waiting for ratification, or that meanwhile a bigger European integration, the common market, would have come up close upon the heels of Benelux. What prompted the Benelux ministers, at the end of the second world war, to seek economic integration ? Mainly, the conviction that the war would be followed by a regrouping of power in the world and the fear lest in these regrouping operations the interests of the small powers would be pushed into a corner.

The Benelux pioneers appear to have underrated the difficulties. Admittedly, to bring the customs union into force on January 1, 1948, and to break down many intra-Benelux trade barriers, was not too big a job. But the complete liberalisation of the three countries' economic, financial and fiscal structures proved an extremely difficult task, the more so since this is a voluntary economic coalition without any supra-national structure. Since 1948 there have been sharp fluctuations in Benelux " temperature." There were times when all seemed too good to be true, and others when the outlook was bleak and seemingly hopeless ; times of affectionate embrace between the Benelux ministers and times of acrimony.

Looking back over the fifteen years, here is what, in the main, has been achieved. All industrial products, except nitrogen fertilisers and rough diamonds, are fully liberalised in intra-Benelux trade. Customs duties have disappeared. Benelux has a common outer tariff. Only about two per cent of all Benelux goods traffic can still be made subject to quotas and special regulations. There is an almost complete co-ordination of Benelux trade policy: nearly every trade pact is now concluded in the name of Benelux. Benelux workers are free to settle in any of the three countries. In the sphere of capital movement there is a large measure of

Leading Architect says . . .

We pick the locks a burglar can't

My partners and I have our offices in a largish block. Since a porter shuts the whole place up at night, we had never bothered much about possible burglaries.

As so often, the impossible went and happened: through some slight slip-up on the porter's part, a burglar got in. After picking our locks he lit a cigarette, had the safe open in seconds, and removed our cash.

Before he left—as easily as he had entered—our burglar dropped his cigarette end tidily into the drawing-office w.p.b. The plans that were burnt cost us, directly and indirectly, *twenty times* the value of the stolen cash.

So we did what we ought to have done ages ago. We went to Chubb. We chose a handsome set of locks that the burglar can't pick or saw open. Our safe is proof against most knavish tricks and fire-resisting into the bargain, while our precious drawings now lie in a thoroughly practical fire cabinet.

Naturally, all our new clients hear the name of Chubb when we discuss security arrangements. It is a good name to have in mind if you have any worries on that score.

The address is . . .

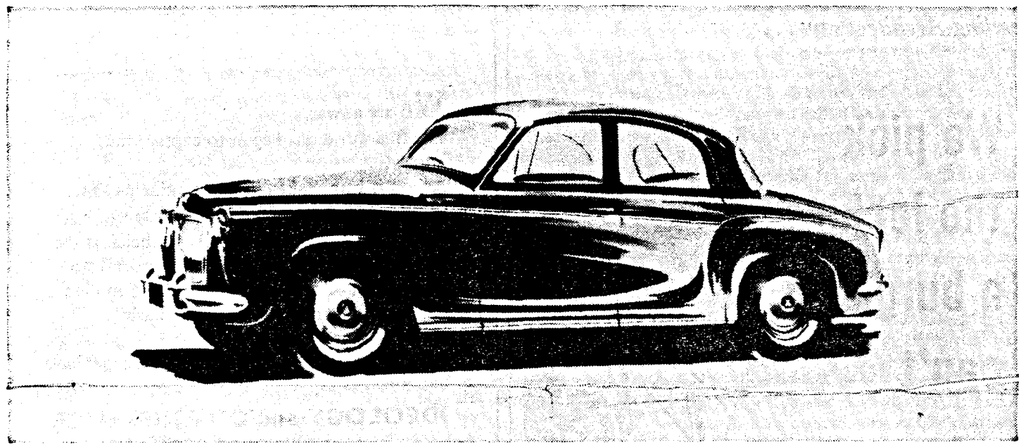
CHUBB & SON'S LOCK AND SAFE COMPANY LTD.
175-176 TOTTENHAM COURT ROAD, LONDON W.1

WE are at war.
The free world has begun to capture the initiative.
Action is being taken in five continents that is putting Communism on the defensive.
While Mr. Khrushchev tirelessly proclaims the unvarying aims of Communism, a manifesto which in three months has gone to 75 million copies in 24 languages, states the basic ideology of freedom.
Pravda, Izvestia, Trud and Radio Moscow have had much to say about it. This 32-page manifesto

IDEOLOGY and CO-EXISTENCE

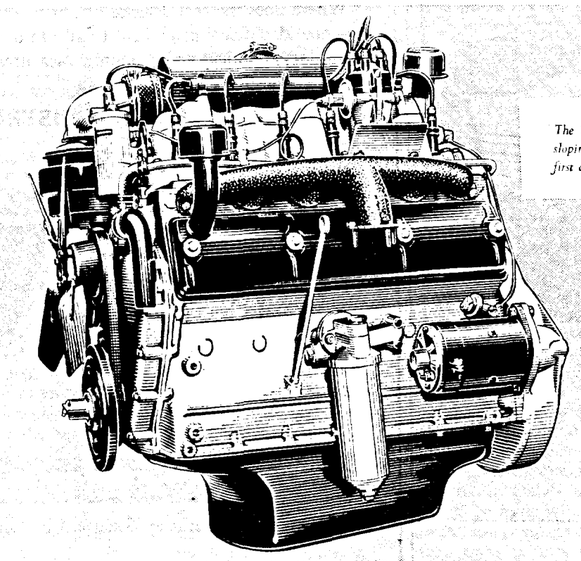
exposes the Communist strategy to lull the free world to sleep.
Co-existence may mean live and let live to the average Englishman.
But its advocates in the Kremlin have time and again recently warned that co-existence between ideologies is impossible.
" We are waging and shall wage an implacable struggle for the Marxist-Leninist ideology, for the triumph of the ideals of Communism," said Mr. Khrushchev in Budapest last year.
How can we find the superior strategy to outmatch and answer Communism ?
Where does the real defence of our freedom lie —the ideological armament to add to our military, political and economic measures ?
These questions are answered in

IDEOLOGY and CO-EXISTENCE



It is going to the homes of Western Europe.

A copy will come through your own letter-box.
It does more than diagnose the problem—it shows the answering ideology to Communism at work on a world scale—with effective results.
It may clarify what you can do for the nation at this hour of history.



MORAL RE-ARMAMENT

4 Hays Mews, Berkeley Square, London, W.1

The new ROVER 100

The Rover 100 replaces the highly-successful '90' and '105' models and is in fact a development of them. It has even more smoothness than the '90' and a performance comparable to that of the '105'. The Rover 100 is powered by the new Rover engine with a 7-bearing crankshaft. Front wheel disc brakes and overdrive are standard equipment. Price £1538.4.2 (inc. P.T.)

The Rover 100 has an entirely new 2.6 Litre sloping head engine, with 7-bearing crankshaft, first developed for the 3-Litre.

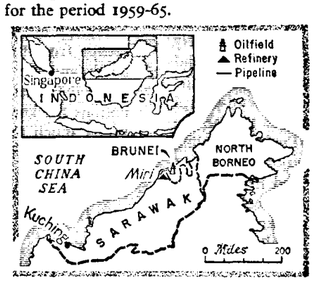
THE ROVER COMPANY LIMITED, SOLIHULL, WARWICKSHIRE AND DEVONSHIRE HOUSE, LONDON, W.1.

freedom. A Benelux passport union is to be established this year.

But: there is still no harmonisation, let alone unification, in the financial and fiscal sectors, and there is no monetary union (admittedly, none was intended). Nor is there as yet any sign of harmonisation in the legal and social spheres. All these shortcomings and defects, however, would have been no stumbling block to economic union if there were not the problems of the Scheldt-Rhine link and, above all, the agricultural problem. Belgium's and Holland's agriculture (and horticulture) are very different. The Dutch farmer mostly applies highly modern methods, but all the same receives government subsidies, while wages and costs in Holland are still far below the Belgian. That is why the Belgian government, under constant pressure of the farmers' union, has reserved the right to close the frontier to certain Dutch agrarian products, unless prices are levelled up by means of a duty on these Dutch products.

Here was a source of much dissension. And when, by the Dutch account, the Belgians were unduly stubborn, the Dutch

Sarawak Catches Up



BY A CORRESPONDENT

Sharpen the bayonets, sharpen the bayonets
At night I bring you for sentry duty;
If anyone dares to attack us,
You shall pierce his dog's heart and bowel.

IT was for teaching this sort of song to Chinese children that two Chinese were deported from Sarawak last October. The familiar crudities of communist propaganda have recently become one more disturbing factor in a country which till now has been conspicuously out of step with the times. Sarawak was given to the Brooke family by the Sultan of Brunei in 1841, and was ruled as an English country gentleman's estate until the second world war. In 1946, it was the Colonial Office's last acquisition, and it is still said to be one of the colonial places where coloured people are glad to see an Englishman. But this old world atmosphere is rapidly disappearing; against a background of a shaky economy and curtailed development schemes, racial divisions are intensifying and communism has for the first time become an issue.

In 1958, of the estimated population of 655,000, 250,000 were Dyaks, 200,000 Chinese, and 160,000 Malays. Once headhunters, the Dyaks live by primitive farming in the interior. The Malays farm more scientifically, though without enthusiasm. They were favoured by the Brookes, and they still staff much of the civil service; after Sir Charles Brooke had ceded Sarawak to Britain in 1946, in an atmosphere of ungracious haste and family mistrust, Malay groups for several years supported his nephew's claims (it was a Malay who assassinated the second governor in 1949). The Chinese are found as traders everywhere, but about 70 per cent of them are urban. The middlemen of South East Asia, they resemble European Jews of the Middle Ages: hostility to them is proportional to their own ambition and ability. Their success breeds on itself; rich Chinese endow Chinese schools, which educate more Chinese, to make more money and endow more schools, and so on. In Sarawak in 1958 there were seven times as many Chinese in secondary schools as Malays and Dyaks combined. The Chinese are comparatively recent immigrants; their links with China lead to accusations of divided loyalty, their dominant socio-economic position to allegations that they want to set up a Chinese based apartheid.

Sarawak's economic statistics are dominated by oil; this is imported crude from Brunei, refined, and re-exported. Sarawak's own oilfield at Miri, which was the first in Borneo, is small and on the way to exhaustion. Apart from oil, rubber and pepper are the main exports. The first is increasingly undermined by synthetic products; pepper prices, after a boom in 1950-52 which encouraged enormous expansion in Sarawak, have only just started to recover from a steady decline since 1956. Not counting Brunei oil, Sarawak had trade deficits in 1956, 1957 and 1958. The ambitious 1955-60 development plan has had to be modified for the period 1959-65.

Politically, Sarawak has long been underdeveloped. The placid rule of the Colonial Office (there have been only two operative governors in thirteen years) largely continued the benevolent but decentralised government of the Brookes. Outside influences have not been strong. Rich Malay Brunei has been discouraged by Sarawak's poverty from seeking any sort of union: closer relations with China have been opposed by public opinion as well as by policy: until the air age, jungle or sea has cut off the rest of Indonesia. Routine political advance has been represented by the 1957 constitutional amendment, which gave a majority to the elected members of the legislative council. But recently more radical ideas seem to have gained currency. In addition to frequent complaints of communist teaching in Chinese schools and elsewhere, Chinese political activity in Singapore, under Mr Lee Kuan Yew, is providing an up-to-date model—as well as expert instructors. The communist theme has provided a new focus for anti-Chinese feeling; today, in the light of recent expropriations of Chinese in Indonesia, such feeling has a new significance.

There was thus probably a combination of ambition and self defence behind the formation in Kuching, last June, of the Sarawak United People's Party; its multi-racial front only thinly conceals Chinese initiative and organisation. Despite its founders' claims of multi-racial dedication to economic and political advance and racial harmony, its opponents fear it as a strictly Chinese weapon, and have mobilised all the traditional mistrust of the Chinese. (Their retaliatory importation of their own expert from Singapore alarmed and outraged the SUPP.) Dyak leaders strongly opposed what they considered a Chinese party which would inveigle naive Dyaks into making demands they neither needed nor understood. The governor in a broadcast expressed the widely-felt fear that party politics would lead only to dangerous racial divisions. The SUPP was anonymously threatened with the foundation of "a native revolutionary party to finish the lot of you." In general, the new party was greeted with a confused hubbub of approval for things as they are. However, in the Kuching municipal elections last autumn, candidates known to be sympathetic to the SUPP were overwhelmingly successful.

Such activity seems likely to intensify existing divisions. The Chinese inevitably dominate politics; their only potential rivals, the educated Malays, are largely disqualified from active participation as being civil servants. The Malays have been reduced to vague talk of "Pan-Islamism"; the Dyaks to even vaguer threats and memories of the past. In socially-unbalanced Sarawak, whose unfavourable economic position is enhanced by lack of coherent relations with its neighbours, premature independence could lead to chaos. It is not entirely paradoxical that here where colonial rule arrived so late there seems to be a practical case for its continuance.

lower house at the end of last year adjourned the debates on the bill for ratification of the treaty of economic union which had been signed in 1957. This put the cat among the pigeons. Where was the much boasted "Benelux spirit"? To be candid, in all these fifteen years a Benelux spirit has never got a real foothold. There is a lukewarm approval in certain sectors that are doing well out of Benelux; no more.

This indifference towards the Benelux union, especially in some Belgian quarters, has increased as the European common market has begun to come into being. Not only do many Belgians appear to feel happier in closer contact with their French than with their Dutch neighbours, but both in Belgium and in Holland people began to ask why the Benelux union was still necessary if it was so soon to be absorbed in the much bigger European Community. The signs of this indifference towards Benelux have alarmed the Benelux authorities, and the gradual coming into effect of the European market seems to have helped to drive the Dutch and Belgian ministers closer together again, reminding them of the watchword of their 1945 predecessors: "Small powers, close your ranks, lest you will be trampled down by your bigger brethren!"

At the Benelux ministers' conference, held near Brussels on February 20th, both sides seem to have made such concessions that the ratification of the economic union treaty by the Dutch parliament is now almost assured. The Dutch have consented to reopen the talks on a Scheldt-Rhine canal crossing the Netherlands. The Belgians have agreed to keep their frontiers open to Dutch vegetables and fruit, even if, under the common market regulations, the common market frontiers might be closed to these goods; though the condition is made that Holland will prevent pressure on Belgian prices. This does not mean that all is well. A Benelux spirit has certainly not been created out of the blue. But the Benelux governments have become aware that the union is essential to safeguard the interests of the three small countries within the bigger common market. They need to co-ordinate their policies and their voting if they are to have their share of influence on common market policy.

THE Benelux countries are convinced free traders. They sincerely deplore the division of western Europe into the Six and the Seven, they dislike French protectionism, and they want the lowest possible "outer tariff" on raw materials and semi-manufactures. They are not willing in any circumstances to lose the important British and Scandinavian markets. As Professor Collin, chairman of the Belgian Benelux Committee, has said, they do not want to be the victims of the rift between France and Britain.

What is now needed is an early ratification of the Benelux treaty of economic union, and the firm pursuit of a joint Benelux policy within the larger European community. But this last requires more than a wish, however sincere; it requires the solution of the conflicts of (mainly agricultural) interest between Belgium and the Netherlands. Sacrifices are necessary from groups in each of the three countries. A common Benelux policy also assumes that the Belgians will not go on falling in with the wishes of their big common market brothers in order to get their votes for the establishment of the European Community's seat in Brussels. Last, but not least, a better understanding is needed of the necessity of Benelux among the industrial, agrarian and trading interests in the three countries and among the populations generally. There is serious danger in delay now that the formation of the common market is being accelerated.

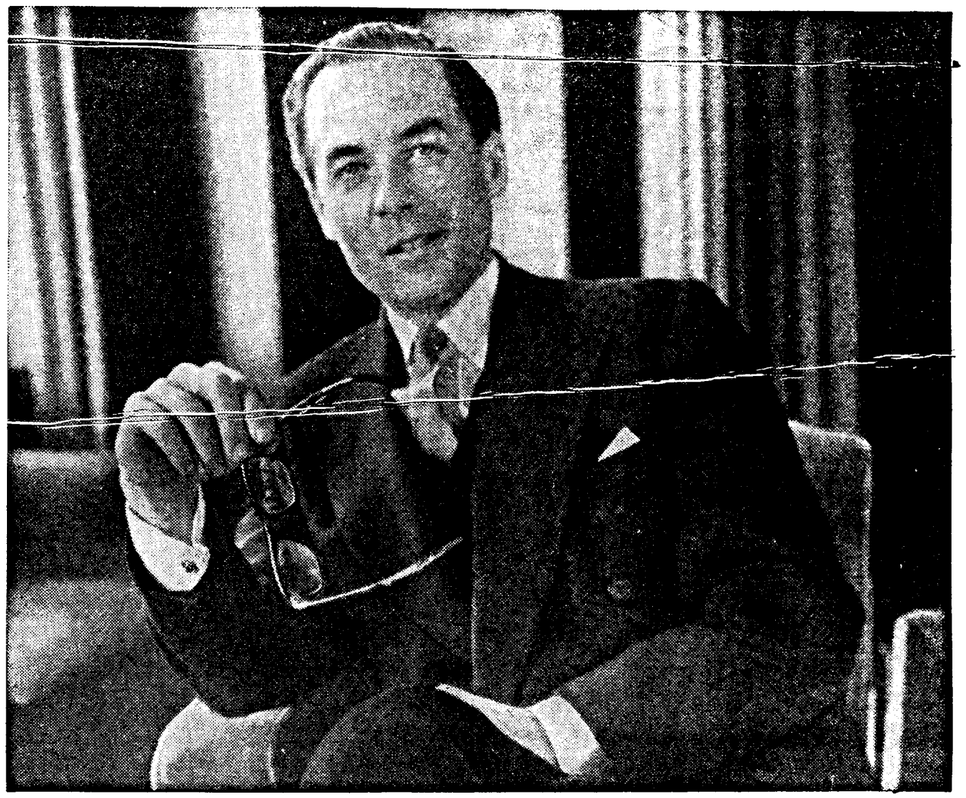
Israel's Afro-Asian Bridge

BY A CORRESPONDENT

THE Arab League's economic and diplomatic warfare against Israel seems to do better on the European front than in what might be thought of as its own territory—the countries of the Afro-Asian block. The Israelis have leapt the Arab land barrier nimbly and are working patches in the aspiring, but under-developed, gardens of new independence all the way from Lagos to Rangoon.



Nowadays in the Miami-like lobby of the Dan Hotel at Tel Aviv or the more sober halls of the King David at Jerusalem, as like as not you will run into the prime minister of Chad, a group of high officials from Burma or Nigeria, a member of the Ghanaian government, or perhaps a trade union delegation from Guinea. In a remote communal settlement on the northern frontier of Israel a group of Burmese army officers, with their families, have been living with the settlers. They have been studying Israel's strategic agricultural settlements with the object of introducing a similar system along their own insecure northern frontier.

The largest building and contracting firm in Israel, Solel Boneh (literally "to build and to pave"), which is owned by the federation of trade unions (Histadrut) and has a yearly turnover exceeding £45 million, has recently concluded a partnership agreement with the East Nigerian development corporation, which will be under government control but Solel Boneh general management. Solel Boneh is also working with the Ghanaian national construction corporation, and has important contracts in Burma. Another Israeli group is carrying out road-building and general construction work in Liberia. The Haifa navigation company, Zim, helped to launch Ghana's ambitious seafaring project, the Black Star Line, although it recently decided to sell its 40 per cent share to the Ghanaian government.

These developments may not represent very large sums in terms of dollar, sterling or rouble world investment. But they mean a great deal to Israel, economically, politically and psychologically. They represent a substitute for the closed Arab markets, and an escape from the Asian and African isolation that the Arabs have tried (and are still trying) to impose on Israel. They also give Israel the satisfaction of placing at the disposal of under-developed nations the knowledge that the Israelis acquired while overcoming pretty much the same problems as those facing many of the new nations of Africa and Asia. The trade figures are not exciting yet, but they may become so. Israeli exports to Afro-Asian countries account for about 7 per cent of all Israeli exports; they rose from about £3.5 million in 1958 to nearly £4.5 million last year.

Politically, and as a means of countering Arab League propaganda and pressure within the block, the scientific, educational and technological tutoring of some Afro-Asian countries by Israel is of particular importance. The visitor to Burma can hardly fail to run up against Israeli engineers, soil-conservation experts and health specialists. When the Duke of Edinburgh was in Ghana he called in at the government's nautical school and talked with the two men in command; both were Israeli naval officers. There are 15 Israeli instructors attached to Ghana's national school of aviation. Israeli teachers and health service experts are at work in Ethiopia; others in Chad; soil and water experts in half a dozen African countries as well as in Burma.

The economic relationship between Israel and Japan is growing warmer. The Japanese have been considering investment in a railway from the Dead Sea to Eilat, on the Gulf of Aqaba. A Japanese-Israeli tunny-fishing corporation has been set up. Small though most of these things are in themselves, they are steadily adding up to a significant total.

'TCA certainly brings home the value of Canadian markets'

It was only yesterday—wasn't it?—that rich Canadian markets seemed just a little distant. Funny how quickly geography dates: because these very same markets are now practically on your doorstep almost begging you to collect your share of new business. This situation is nicely helped along by TCA—Canada's own international airline. TCA's transatlantic services enable you, your executives, and technical men, to make flying visits to anywhere in Canada, *any day of the week*. And TCA Air Freight offers you a direct-delivery service that ties up the whole of Canada into a neat marketing proposition.

For the rest of the story, the people to get in touch with are your Travel Agent and Forwarding Agent.

NEW TCA AIR FREIGHT RATES

save you up to 60% across the North Atlantic

- 35% reductions in basic cargo rates for consignments weighing 500 kilos and over.
- Up to 60% reductions on many special commodities.

New rates start 1st April.

The Weekend is the Time

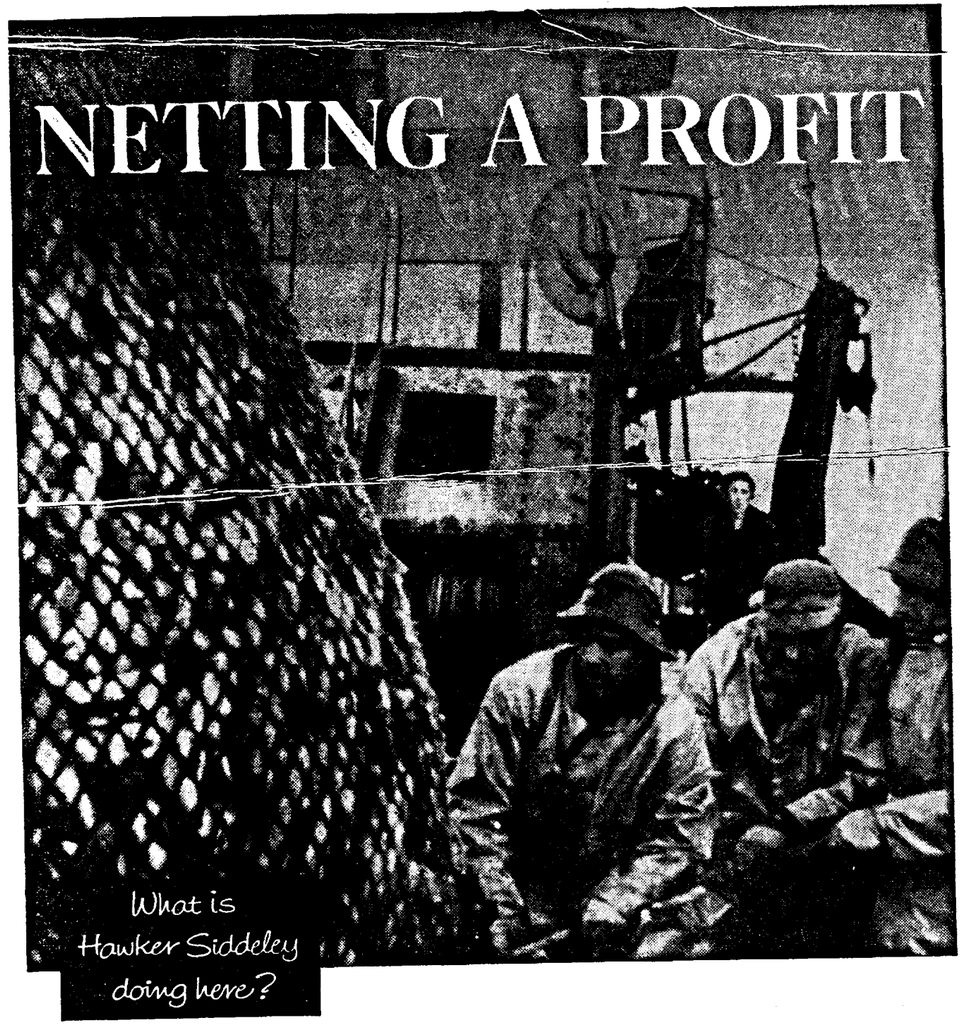
—when the Marsden family is a family!

THE WEEKEND IS THE TIME the Marsden family looks forward to. Only time they have breakfast together, for one thing. Because they *are* together at the weekends. A family—behaving as a family.

THE WEEKEND IS THE TIME the Marsdens do most of their television viewing, because they have so much more leisure. They're relaxed, receptive, in the right frame of mind to take in and appreciate what they see on television.

THE WEEKEND IS THE TIME the Marsdens make most of their buying decisions—because they're all there to talk things over. They live in Bolton; that means they're part of the ABC Television audience, at weekends in the North and Midlands. They have more money than ever before, and they're spending it on better living and modern comfort in their home.

THE WEEKEND IS THE TIME to reach the Marsdens—and four million homes like theirs in the ABC Network. That's half the ITV homes of England and Wales, and more than half the buying power. If the Marsdens fancy something, they get it—even if they do have to save for a bit. So if you sell what they want, tell them about it—through ABC Television.



THE WEEKEND IS THE TIME!

THE BUSINESS WORLD

Verdict on Money

THE Radcliffe report on the monetary system has had a rough passage since it was published last August. Now it is possible to read it in perspective, with the evidence put before the committee—one volume of nearly a thousand foolscap pages of oral evidence, and three of written memoranda, which at £13 10s. the set give a mammoth if necessarily untidy encyclopædia of the principles of economic management in Britain and of recent economic events at a reasonable price. Here for the first time since the Macmillan inquiry, into the different world of thirty years ago, officials of the Treasury and the Bank of England explain in formal papers and under searching cross-examination the working of their monetary instruments, which hitherto has been partly hidden, and their general way of thinking. The same treatment is applied to the often equally reluctant commercial bankers and to the big City institutions; while views on the working of the monetary system have piled in from the anything but reluctant academic economists and monetary thinkers. Directors of great British companies and nationalised industries say how they plan their investment decisions, and central bankers abroad explain their relations with their governments and give their views of monetary techniques—presenting, as it were, miniature Radcliffe reports of their own.

All these views and facts will take a long time to absorb. But a first look at the evidence throws important new light on the report itself (as well as confirming the preponderant role in the committee played by Professor Sayers and Professor Cairncross, and the strong chairmanship of Lord Radcliffe). The full documentation that is now available, together with many important assessments of the report by outside observers and critics in the past six months,* call for a second look at the exercise as a whole to see where the principles and practice of monetary affairs now stand. The accompanying section on liquidity is a good example of how ideas none too well explained in the report have become clearer on reflection. We hope next week to comment on the new light thrown on such specific subjects as gilt-edged policy, special deposits and the Bank of England.

"They believe in monetary policy, but they do not believe in it very much." Lord Robbins's justifiable taunt turns out to be no less applicable to the monetary authorities than to the committee to which they gave evidence. "The burden of papers we have had from the Treasury," Professor Sayers burst out during the proceedings, "has been again and again to indicate a disbelief that any useful consequence of any degree of weight would emerge from moving interest rates." Nor was any greater faith displayed by the Bank of England. In a note written in June, 1957, on monetary experience during the preceding five years the Governor put the main emphasis on impediments to monetary policy: the effect of taxation, the growth of the public sector, the great weight of public debt, the fact of inflation. To cope with these new difficulties, the Bank of England maintained, Bank rate had to be strongly supported from the government side; hence the reliance on the "package deal" combining a rise in interest rates with restrictive or rationing measures of a non-market kind. The sceptic was left to infer that whatever virtues monetary policy could claim in the past, it was inadequate to cope with the problems of a modern economy.

Yet three months later the authorities showed by their dramatic action that it could cope. In the cold print of the Radcliffe record, some of it taken before September, 1957, and all of it coloured by the years of pre-1957 experience, the Bank of England often appears faint-hearted and irresolute about monetary control: at one point it provokes a mind as clear as Lord Radcliffe's to complain: "It is the argument I cannot get hold of." Yet it is an old experience that the Bank, and indeed the City generally, never does itself justice at inquiries of this kind. It finds an innate difficulty in rationalising and explaining the motives for its actions. The deputy Governor, Mr H. C. B. Mynors, in effect recognised this:

> I am not sure that we do not speak a little with two voices, if I may make a confession. Sometimes we say that, if we were to go up [with Bank rate] in isolation, nobody would pay any attention; and sometimes we say that we could not go up in isolation because that would scare people frightfully. (Q. 2231)

Certainly faith in the efficacy of monetary action has increased in the past two years. First, the example of 1957 has played a big part, under-emphasised in the Radcliffe report but

From the Evidence

Q.3348 *Professor Sayers:* When you guess at what the Bank rate is going to be on each of the 13 Thursdays ahead, how do you go about the guess?—*Mr Trinder* (Union Discount company): We read *The Economist!*

Q.3351 *Mr Woodcock:* Have you a staff of experts who read *The Economist* for you?

* Three outstanding contributions, if an arbitrary selection may be made, are those by Mr Robert V. Roosa in *Lloyds Bank Review* of October last; Lord Robbins in his maiden speech in the House of Lords on November 11th; and Sir Dennis Robertson in the December issue of *The Banker*. Nor is *The Economist* ashamed of its own first appraisals on August 22nd and 29th last year.

apparent at many points in the evidence. Secondly, the Treasury to-day is headed by Sir Frank Lee, who displayed a notably greater faith in Bank rate to the committee than did the Treasury representatives of the time. Thirdly, excess liquidity is no longer such a problem as it was in earlier post-war years. Fourthly, the sensitivity of the banks to official control has been greatly increased by the great rise in their advances and fall in their investments; this movement is of an order that the bankers dismissed in their evidence only two years ago as being "in the realms of theory." The authorities' treatment of the present boom already shows marked and healthy differences from their measures in 1954-55—which both the Governor and officials in Whitehall now openly admit were too hesitant and too late. The increase in Bank rate from 4 to 5 per cent in January came before it was generally expected, and with the one exception of the abortive ½ per cent in January, 1955, it is the first increase since the war independent of stiffer regulations, controls or taxes.

JANUARY'S Bank rate move has lately been followed by a sharp jolt to the gilt-edged market, which has been especially successful in its damping effect on business and stock market exuberance. It is unfortunately by no means clear how far the wider effects of this move were intended; the Chancellor this week evaded the question and repeated the intimation that the Bank of England simply let the market feel the effect of heavy selling by the banks. The issue whether the authorities should play an active role in influencing long-term rates of interest and in pressing their funding sales of bonds is thrashed out at length, and not without passion, in the Radcliffe evidence. Mr Cobbold, on the whole, stands firm on the impracticability of any direct policy of this kind, and uses some strong words about the damage that would be done to "Government credit." At one or two places the Governor, and Treasury officials questioned on the same point, seem to concede that there may be theoretical argument on the other side; but they still do not seem to realise that this issue is central to the part that monetary policy can play.

Surely one of the reasons why the postwar conjuncture looked so formidable to the monetary authorities is that they could never bring themselves to believe that they could get debt management truly under control. Even when the funding of short-term debt became firm policy in 1955, the exercise was limited to what the market would take without being pressed; thus the authorities were relinquishing not only influence on long-term interest rates but control of the supply of money itself. In a world in which the volume of public debt is so important, and must be expected to remain important, active debt management is as crucial an instrument of monetary policy as Bank rate alone was in the old days. The insistence of the Bank of England that for it to take the initiative in the long-term market would be disastrous in practice could not be ignored by the Radcliffe committee, and played its part in the belittling of the role of monetary policy in some sections of the report.

What is the balance-sheet of the whole Radcliffe inquiry? The report carried some dangerous suggestions. There was a general partiality for the soft centre, for the "open mind" between direct controls or market instruments—epitomised in a leading question by Sir Oliver Franks (1525). There was an odd academic impatience with any arrangement not logically tidy, even if it worked tolerably. Instead of being thankful that the Bank and Treasury manage to work reasonably together despite the confused nationalisation Act, or that changes in Bank rate have psychological effects on business-men, the committee felt impelled to engineer some other mechanisms which looked more logical but would have been unworkable. As it happened, the government of the day took all the right decisions on these recommendations, and rejected them. Most of what is left is to the good, and it is important.

First, by bringing the monetary authorities of both ends of the town under public examination the committee did much more than satisfy the curiosity of observers and historians; it has forced the authorities themselves to do some hard thinking about their real aims, and by all the signs such thinking is needed. Secondly, the committee has already secured the publication and collection of considerably more financial information, and here too the authorities themselves will benefit by the exercise. And thirdly, and somewhat paradoxically in a document that in many ways plays down the role of monetary policy, the report brings out the key place within that policy of the rate of interest. Little importance is attached to the short-term influence of interest rates on investment decisions—a controversial conclusion that appears to be drawn from an over-simple reading of the evidence. But the interest rate is seen as the effective regulator of the "single market" for credit, in which, as is explained opposite, financial institutions other than commercial banks can quickly expand their business if the banks' credit alone is being squeezed.

Nothing so deters any lender as the falling capital values associated with a rise in interest rates. Thus the argument comes back to official tactics in gilt-edged. It is not only the volume of funding sales, affecting the volume of money, that is important but also the terms on which they are made, affecting people's liquidity and expectations. The rate of interest, in contrast to a Capital Issues Committee or a request to commercial bankers or calls for special deposits, is an instrument that strikes directly at the general willingness to lend, rather than damming up artificially certain sources of lending. This is the real lesson of Radcliffe. Will it be learned?

New Light on Liquidity

ON the principles of policy, the Radcliffe committee's main conclusion was that the "centre-piece" of monetary action—the thing the monetary authorities should seek to influence—should be the "liquidity of the economy as a whole," or the "whole structure of interest rates," rather than the quantity of money. Central though this proposition was in the committee's thinking, it was not clearly explained: it has caused more general bewilderment than any other aspect of the report. And a first selective glance suggests that no full explanation emerges even from the evidence. In these past six months, however, a number of economists and other commentators have been worrying away at this concept, and seem to have uncovered what the committee had in mind. It proves to be a useful contribution to the analysis of how monetary measures work.

If variations brought about in the amount of money are to be the means of influencing total demand upon the economy, it has to be shown that there is a reasonably dependable relationship between these two quantities. But all experience has shown the relationship to be highly variable, depending upon money-using habits. An unchanged amount of money could support an increased volume of demand and of national income if it was used more intensively. That is to say, the effective supply of money, as classical theory would put it, depends not only on its physical amount but on its velocity of circulation. The Radcliffe Committee appears to be saying that velocity—though it prefers not to use that term—is the more important variable and the extent to which it may vary in practice will be influenced by the amount of substitutes for money that become available from time to time.

Velocity of money will be increased—so that an existing amount of money will support a bigger demand for goods and services—if money that is temporarily held "idle" is transferred by its holder to somebody who will immediately spend it (returning it to the banking system at another point). The holder who relinquishes it will do so only if he receives in return an asset which, though less liquid than money, can be regarded as a reasonable substitute for his purpose, and in addition offers him an interest payment corresponding to his sacrifice of liquidity. This proposition is strictly in line with classical analysis: the new feature, exposed by the Radcliffe committee, is the large part played nowadays by money substitutes, and financial intermediaries, in promoting this process of speeding up velocity. Especially is this function performed by institutions such as building societies and hire-purchase finance companies.

When a bank depositor decides to switch part of his balance into a deposit with a building society or a hire-purchase finance house, he is expanding the effective supply of money. His hitherto "idle" balance finances an increase in house-building or in the output of motor-cars or washing machines: the money moves from his bank account, and after a number of intervening moves, comes more or less temporarily to rest again in the bank accounts of shareholders or employees or suppliers of the builders or the makers of cars or washing machines. Few bank depositors would have been prepared, however, to make this switch into building or hire-purchase finance if there had been no intermediary financier. The IOU of the buyer would not have been a good enough "substitute" for money to make the transfer acceptable, except to a few adventurous operators—and then only in return for a high interest rate. The existence of efficient intermediaries enjoying public confidence, however, can attract large numbers of people thus to activate their bank balances—because the deposits in these institutions are, for their purpose, reasonable money substitutes. Thus in these circumstances the switch may be made, and velocity increased, without the stimulation of any large rise in interest rates.

Because of this, the Radcliffe committee appears to be saying, these facilities have a great elasticity that may much more than outweigh the effects of changes in the amount of money. Therefore, instead of focusing its attention mainly upon control of the money supply, monetary policy should seek to influence the operations of these intermediaries, these suppliers of "near-money" assets. This could be done by imposing liquidity controls on the whole range of financial institutions—an awesome prospect; but the committee recognises that a much more direct and simple method is to influence the whole pattern of interest rates.

Agenda for the Railways

Just how "radical" will the Government be in its re-appraisal of Britain's railways? The Prime Minister last week did not give much to go on

So the railways are to be subjected to yet another "radical review" of their size, structure, and finance. The long drawn-out strategic withdrawal of the railways in the face of competition from other, newer forms of transport has seen this kind of exercise many times before. Is the one now in prospect likely to do the job any better than its predecessors? Will it really produce the outlines of a railway system with a "size and pattern suited to modern conditions and prospects"—to which one should add, with the kind of relations with governments and the public—that will hold out a genuine chance of its being able to act like any normal commercial, competitive organisation with a sensible hope of earning some money?

The hope, even after last week, is still a faint, sceptical one. Admittedly, now that the size of the bill for a plenitude of railway services can be more plainly seen, there is a better chance that a realistic reassessment can now be made of the kind of railway service the British economy needs and is prepared to pay for. Never, since the debut of road transport after World War I, have the railways appeared likely to return to the prosperity they enjoyed early this century. The four compulsorily-amalgamated companies of the two inter-war decades were never able to earn the "standard net revenue" that the 1921 Act was supposed to have provided for their shareholders. And only for a fleeting period, in the very early fifties, did the nationalised railway system get anywhere near covering its "share" of the Transport Commission's central administrative and interest charges.

The vain hope of stemming the ebb of the railway tide as the flood of road services rose has been compounded by more positive acts of public interference with a transport system that found that it had to compete. Too few of its "public service" obligations were lifted, too late; it was denied the full opportunity to keep its charges abreast of the inflation of its costs; both full ordinary maintenance and large-scale modernisation were delayed, first for reasons of wartime necessity and then according to more arbitrary post-war "priorities." Lately the weaknesses this negligence left undisturbed have begun to be more fully exposed. The cost of servicing the railways' new, belated investment as well as their existing fixed-interest capital—some of this still capable of earning revenue, some of it representing redundant assets—happened to coincide with a period of recession in industry generally and a much longer malaise in the railways' principal major customer for freight, the coal industry. A sound railway system ought to have been able to cope with both.

Up to 1955 British Railways incurred net annual losses (after being charged a proportionate share of the Transport Commission's central charges) averaging about £15 million a year for the eight years. In 1956 the overall loss, on the commission's own published calculations, shot up to £58 million, in 1957 to £75 million, and in 1958 to £105

million; last year it almost certainly was even higher. The recession in railway traffic and the continued inflation of railway costs and charges can hardly have accounted, in the last two years, for more than £50 million annually of this sudden, alarming deterioration. Nor are the railways as they stand likely to be able to cope much better in the immediate, and nationally more prosperous, future with the new imposition of another £40-£50 million a year of "fair and reasonable" wages for railwaymen by the Guillebaud formula. In the light of these figures, it hardly seems important financially whether the commission's other activities, London Transport, British Road Services, the Tilling and Scottish bus groups, and so on, are "hived off" or not. Their combined overall surplus in the last eleven years has not varied greatly from an average of £5 million or so a year.

How does one cut this mounting bill to a more tolerable size? The Prime Minister has proposed that a "special planning board" be set up, "as a mattter of urgency," to work something out. Why the cabinet committee, the Ministry of Transport, or the Transport Commission itself, all of whom have all the facts and figures they could desire and the closest familiarity with the problem, cannot produce proposals as acceptable as those to be sought from an "impartial," outside committee is difficult to understand. Much can be said for sober, deliberate outside inspections of these public industries in general (and the Select Committee on the Nationalised Industries, which has just got round to the railways, may take well over a year to do so). But past experience does not suggest that the Government will easily find a handful of *di ex machina* able and willing to do the inspired spadework for the legislation it hopes to introduce as early as next autumn.

Mr Macmillan did give some inkling of the trend of some of the Government's own ideas. The most specific one was that the proposed reorganisation should include "decentralisation of management, so that individual undertakings, including the regions of British Railways, should as far as practicable, be made fully self-accounting and responsible for the management of their affairs." There is much to be said for continuing the decentralisation begun by the 1953 Act so far as it is practical and worthwhile to do so, especially perhaps in making the relations between the commission and its non-railway undertakings resemble more closely those of a holding company with near-autonomous subsidiaries, each subsidiary company having its own realistically valued capital structure. But whether the same is worth doing for the railway regions is very much less clear (another expert committee, already at work, is looking into the question of whether it can be done).

There has already been a considerable degree of decentralisation to the regions and further, to line and division management, in the detailed way in which the railways' commercial and operating policies are carried out; and the rapid strides the commission has been making in railway costing methods should be of increasing help here to management. But so long as the policy reins on modernisation, investment, finance, and above all on wages are held at the centre, regional accounting does not appear to have much point and it might have commercial disadvantages. Who, it must be asked, will make the Scottish region viable? The most helpful element of further decentralisation would lie in shifting wage negotiations from the centre, but now that the idea of having the same railway wage rates for, say, Cornwall and Birmingham, has been embalmed in the Guillebaud report the unions are unlikely to be prised out of this position of advantage.

But decentralisation, whether it stems from the nature of the business or whether it is imposed by politicians for the gratification of party dogma, is not likely to make much of an impact on railway finances. If reorganisation is to earn money, it will mean a ruthless cutting down of services that cannot pay and the removal of all unreasonable impediments to commercial freedom. Mr Macmillan has stated that the railwaymen must accept this, as the only way "fair and reasonable" wages can be afforded, and that the public must accept the sacrifices of convenience and the raising of fares and charges (particularly on commuters' rail services) that this means. But its full implications also have to be impressed on the minds of the commission and the Government itself.

What is needed is a more rapid closing down of services, stations and lines than the commission appears as yet to have in mind for the next three years. The habit of cross-subsidisation and the inevitably arbitrary way in which the railways seek to recoup their overhead costs from traffic that manages to cover its direct costs has led the commission to wait until a service is earning well below even its direct costs before setting in motion the ponderous machinery for closing it down. Though branch lines serve to collect long-distance traffic, too many services, including most passenger services, are failing to make a reasonable contribution to overheads, and this makes it difficult for the commission to use its new flexibility in freight charges and cut charges to win more traffic and a larger net revenue. The remedy must be to raise fares, to abandon the service, or to ask a specific subsidy for, say, any line that the Government wishes to be kept open for reasons of defence or (occasionally) social policy.

The power to remove outdated restrictions and obligations from the railways lies primarily in the Government's own hands. Most of the major handicaps, first imposed when the railways had a monopoly of inland transport, were lifted by the 1953 Act. The remainder, still in the statute book or stemming from the commission's self-imposed ideas of its public duties, do not add up to much individually, but together they constitute an appreciable burden. Through an oversight in the drafting of the 1947 Act, for example, the commission is powerless to make full commercial use of the valuable sites it owns in cities—such as property development over stations, depots and the track itself. But much the most onerous handicap, in practice, is the power of ministers to interfere. Conservative administrations since 1951 have a sorry record of overthrowing decisions that the commission had secured from the Transport Tribunal for increases in fares or from the Transport Consultative Committee for the retrenchment of uneconomic services. Much of the commission's cumulative loss up to 1956 could be ascribed to delays or refusals in securing higher charges to cover rising costs. After the coming major bout of reorganisation the Government should promise itself, and the public, to lay off.

Answers to the two most critical, and final, questions about this reorganisation—how much of the money that has been put into the railways must be written off as a complete loss and whether in some revamped form the railways can make themselves viable in the future—depends largely upon just how much dead and dying wood this latest reappraisal manages to lop off. The commission's present capital obligations consist of Transport Stock, which by 1955 had mounted to £1,444 million, and since then of Treasury advances to modernise the railways and to finance their deficits, to the tune of more than £400 million by the end of 1958. Last year probably another £200 million or so more was taken in advances, making over £2,000 million in accrued obligations for an organisation that now does about £750 million worth of business a year and, on its own reckoning last year, hopes to make a working surplus in 1963 of £20-£70 million on its railways and of £30-£35 million on its other undertakings, before interest charges (and before Guillebaud). By 1963 these charges will reach £85 million (£62 million for the railways); but by then the deferred interest on the modernisation and deficit advances will start falling on current revenue, adding a further £5 million in 1963 and up to £34 million extra in 1965. In addition, the first repayment of these advances is due in 1963.

These charges will still have to be paid whether or not they are formally entered into the commission's accounts. The proposal for the Government to assume the costs of railway track, which have been estimated at about £120 million a year, most of it in wages and other maintenance expenditure, and charging the commission a fixed annual rent (say, £40 million?) at least has the merit of tying down any public subsidy to something specific. But, for various reasons, the suggested analogy with road investment does not hold up, and one also wonders whether a "fixed" subsidy of this kind without any other changes in financial arrangements, would not have to be raised before many years are out. At some time, the upshot is bound to be what many self-respecting private railway companies in a similar state of shrinking activity would do, and often have done. That is to go into liquidation, write down their capital, and get the shareholders to accept the capital loss. The fact that the shareholders in British Railways are the nation as a whole makes this way no more escapable and commercially no less desirable. But capital manipulations and dramatic transfers from one public account to another will not solve the problem of making current ends meet. If the public purse takes over responsibility for financing a large part of the railway's track costs, it will still be a subsidy. It has for some time been paying out the guaranteed interest on Transport Stock that the commission has not earned, and perhaps never will. The choice is not between subsidy and no subsidy, but to find a form of subsidy that offers the minimum invitation to railway workers or users to seek benefits for themselves at public expense and one that would keep the financial control over the railways as taut as can ever be possible while they are mendicants of the State.

BUSINESS NOTES

LINERS

Specification for a Trade

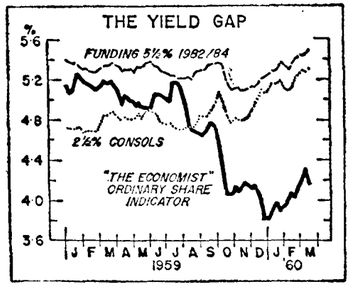
Both P & O's *Canberra*, launched this week, and the Orient Line's *Oriana*, launched in November, are being built to the same basic specification, which was dictated by the economics of liner operation on the Australian and Far Eastern trades during a period of rapidly rising shipbuilding costs; but to meet that specification these two companies in the P & O group chose two sharply differing designs. The *Oriana* is to have its engines amidships, following the established layout of most major passenger liners, and will use geared turbines. But the *Canberra*, following Shaw Savill's initiative with the *Southern Cross*, adopts a layout with engines and funnels at the rear, and will use turbo-electric propulsion.

When these companies began building new liners for the Australian trade after the war, they decided on 22-knot vessels such as the *Himalaya*, *Orcades* and *Chusan* (of up to 28,000 tons gross) to supplement the pre-war 18½ knot 24,000-tonners already operating. In 1954-55, considering further liners for this trade, the group decided that 22-knot 28,000-tonners, because of rapid inflation in building costs, would cost too much by the time they could be delivered to operate as an economic proposition. The most economic way to deal with the higher building costs seemed a faster, larger ship, which would cost more initially but could spread this cost over a much greater annual carrying capacity. The next practicable step upward in speed was to 27 knots (which would cut another day off the longest leg of the voyage), which meant a longer and larger ship of the order of 40,000-50,000 tons: *Oriana* will be 40,000 tons and *Canberra* 45,000 tons gross, carrying 2,100 and 2,250 passengers respectively. Each vessel will cost about £15 million: uncomfortably for P & O the investment that seemed to them most likely to prove economic happened also to involve the largest investment per unit.

Economic operation of two such vessels along with the group's existing fleet (which from next year will have vessels capable of reaching Australia in five, four, and now three weeks) depends upon development of the service as well as the tonnage. The Australia trade is sharply seasonal and carries much one-way traffic because of migration; in 1954 the Orient Line began to extend it with voyages across to the West Coast of North America, and P & O joined in in 1958. When the two new vessels are in operation next year, the group will offer on these "Orient and Pacific" services voyages linking North America, the Philippines, Hongkong, Japan, and Australia linked with its Australian trade, plus cruises—what P & O calls "six trades in one."

Design for a Ship

Both of these liners incorporate novel technical developments, such as the use of all-welded aluminium superstructures to reduce weight and increase accommodation; but *Canberra's* designers have put a particular accent on innovation. The unconventional layout, with engines aft and officers and crew accommodation forward, leaves an "hotel block" free amidships for passenger accommodation; to avoid the cargo trunks that normally cut through these passenger decks to the holds below, two of the ship's three cargo holds will be loaded sideways, using a special conveyor system. An automatic lift and conveyor system, again, will move baggage preselectively between cabin decks. Lifeboats, all of glass fibre, are located, not on the top deck, but three decks down, flush with the side of the ship. Plastics are used extensively in the cabins, both for structural units such as showers and for finish; the use of pvc and melamine surfaces will mean that no painting will be needed in cabins throughout the ship's life. The ship will be fully air-conditioned, which can be noisy, and incorporates 17 lifts, plus large amounts



of other powered equipment ; against these, and against the equally irritating noises that passengers inflict upon each other, bulkheads have been specially designed to be sound-proof.

The *Oriana*, built by Vickers-Armstrongs, may come into service by the end of this year ; the *Canberra*, built by Harland & Wolff, early next spring. The group has 16 liners already operating on these services in the P & O and Orient fleets, which are now to be integrated in administration as well as in operation ; the two new vessels will add a third class of size and speed. They will not, however, be tied to a regular round-the-year service ; they have been designed to be shifted between the different linked trades, to avoid the seasonal slackness on particular routes, and to fill in between with short cruises. The group is placing great importance upon developing custom from American and Canadian travellers in the still developing "Orient and Pacific" trade. Although protective American maritime regulations preclude British liners from picking up and delivering passengers between certain logical ports, such as San Francisco and Honolulu, all the extra tonnage coming on to the Pacific in recent years has been British. With the five liners now taking part in this service, "O & P" has gained the bulk of the increased ocean traffic, at the expense of the subsidised American President and Matson lines ; the two new ones, the group hopes, will bring it fresh gains.

IN THE MARKETS

Resistance Point

HAVING fallen by 10 per cent from its New Year peak of 343 to 306, the *Financial Times* ordinary index had recovered to 320.4 by the close on Thursday. In the week to Wednesday *The Economist* indicator rose by 14.5 points to 357.4. Resistance to a further fall in equity prices has in fact come at a point where many observers had predicted it would. A somewhat vague notion of a floor to the industrial market at the 300 mark may be present in some investors' minds, but this week's recovery was also based on more tangible reasons. First, the amount of stock that the market had to absorb from sellers was small and many of those that sold were weak holders. Secondly, the slightly better tone on Wall Street has made the British market just that little more confident. Thirdly, past decisions to buy equities at low dividend yields are now visibly justified by a string of encouraging profit and dividend statements.

The assumption, however, that some brokers are now making that equities, having suffered their shake-out, will move steadily forward again is subject to certain qualifications. First, the amount of buying of equities that has occurred has not been exceptional so far. There has been, it is true, some institutional buying of such stocks as Tube Investments in ex-rights form, mainly for the pension funds. The life funds are still being attracted by the high running yields on fixed interest stocks. The narrowing of the yield gap, as shown in the accompanying chart, has been too slight to make them alter that view. Secondly, the London market could not remain unaffected by another fall in Wall Street—not least because, when allowance is made for double tax relief, some American equities would then offer attractive yields compared with British equities. Thirdly, if the dividend statements to be issued in the next few weeks by many industrial giants should fail to match expectations, the market could suffer a psychological jolt.

There is thus plenty of reason for caution in a period before a Budget to which investors are looking more with trepidation than hope. One symptom of this caution is to be found in the record application last Friday of over £500 million for Treasury bills. Part of the increase in applications came no doubt from abroad, as a consequence of the falling bill rate in New York (which this week dropped to 3.44 per cent, more than a point below London). But another and perhaps more significant part of the outside demand for bills was from investors wanting to stay liquid and industrial companies preferring the security of Treasury bills to the market for short dated bonds, which has to absorb stock sold by the banks: there have been further sales this week.

THE ECONOMY

Worse Confounded?

VARIOUS official figures now being published are filling in some of the gaps in the statistical account of what went on in the British economy in 1959; in a week or two, with the Economic Survey, the Treasury will be offering its official gloss on these preliminary figures of national income and expenditure. The latest batch —which fill in some of the last quarter's data on fixed capital expenditure and most of the evidence about investment in stocks and work in progress—does not seem likely to make the official economist's exercise in reconciling national income and national expenditure last year any easier. The statistical discrepancy between estimates of the gross domestic product based upon measuring the various elements in demand and estimates based upon what happened to production and imports may now, if anything, yawn wider.

At the turn of the year, with much the same amount of incomplete data available up to the third quarter of 1959 as is now available up to the fourth quarter, most analysts reckoned that the discrepancy implied a much greater increase in stocks throughout the economy than the direct evidence was tending to show: otherwise, where were all the resources produced and imported going ? The knowing coined a new conceit for the jargon—"unidentified stocks." (Stocks that people do not know they possess are not necessarily just a flight of fancy, as in recent years British Railways have discovered.) But all one can say to this is that the latest evidence about changes in stocks during the last quarter of the year may leave a good deal more unidentified. It implies an increase in stocks in manufacturing and distribution, which account for about three-quarters of total stocks in the economy, of no more than £155 million during 1959, or £110 million at constant 1954 prices, against stockbuilding of £50 million (at 1954 prices) in these sectors of the economy during 1958. There were certainly major increases in coalmining stocks last year; but were stocks held in other sectors outside manufacturing and distribution, such as agriculture and forestry, the public utilities, and the Government's own stocks, rising very sharply ?

The Board of Trade's latest estimates of fixed capital expenditure in manufacturing, construction, road passenger transport, distribution and other services (which again account for the vast majority of "private sector" investment other than private housebuilding) in the last quarter of 1959 suggest that this was about 2½ per cent higher than in the same period of 1958, fixed investment in manufacturing industry being down by 8 per cent in value and that in the other industries and services up by 17 per cent. In volume, for the whole year, this would suggest that investment in manufacturing was 9 per cent lower than in 1958 (the industrialists' had forecast that it would be 10 per cent. down) and that fixed investment in all these industries and services was virtually unchanged from the year before. Most guesses to date would have implied quite a significant increase.

FORD MOTOR

A Good Dividend

IT is hard to please some people. The £1 ordinary shares of Ford Motor enjoyed a good market in advance of the dividend statement, climbing from 97s. to 105s. 3d. within a week. Yet on an excellent dividend of 17½ per cent the shares have fallen back

to 103s. 6d. The 1959 dividend compares with 12 per cent in the previous year and is up to best expectations in the stock market. It is covered more than four times by earnings, so that Ford shares offer a dividend yield of 3½ per cent and an earnings yield of about 15 per cent. One reason given for the marking down of the shares on Thursday in the face of such welcome news was also advanced a year ago : the absence of a scrip issue.

SALES AND INCOME

(£'000's)

Six months ended	June 30, 1958	Dec. 31, 1958	June 30, 1959	Dec. 31, 1959
Sales	110,200	96,400	117,200	116,000
Trading profit	12,631	12,061	16,161	16,031*
Net income	6,894	6,426	9,311	10,470
Vehicles sold	*228,773*	*192,799*	*238,982*	*233,875*
Trading profit per vehicle	*£61¾*	*£63*	*£67½*	*£68½*
Trading profit/ sales	*11½%*	*12½%*	*13¾%*	*13¾%*

* Including tax provision of £1,225,000 made in the first half of year and now no longer required.

Another was that, though over the full calendar year Ford's gross profits had risen by 30 per cent (from £24.7 million to £32.2 million) and its net income by as much as 48½ per cent (from £13.3 million to £19.8 million), results in the second half of the year were a little disappointing in comparison with those of the first six months. It is true that after allowing for the tax write-back the gross profit margin has fallen by about one per cent. But those margins and profits earned per vehicle are still running at a high level. Moreover, shareholders had been given ample warning that the building up of production of new models and the running in of new plant would add to costs in the last months of 1959. These additional costs are now presumably in the past and there is every indication that the "Anglia" has been particularly successful in the market for new models.

LOCAL AUTHORITY BILLS

Treasury Officiousness

THERE are 17 private bills before Parliament promoted by local authorities which include clauses to take powers for the investment of a proportion of their superannuation funds in industrial securities. As many authorities already have these powers, usually to put up to half their funds into industrial ordinary and fixed interest stocks. The bill to widen the powers of investment for all trustees, which has been promised "early next session," will extend these powers generally to all local authorities, who will then have no need to promote their own legislation for the purpose.

It seems that the Treasury has taken the view that the seventeen bills should not be allowed to go forward with the investment clauses in them where they are general bills or should be withdrawn if they are one clause bills for this specific purpose. What the reasoning may be is not at all clear, for no Treasury spokesman has explained it to either House. The Parliamentary Secretary to the Ministry of Housing and Local Government has said that because of the general legislation next session "the Government feel that they must oppose these provisions in these Bills." And on Tuesday the Lord Chairman of Committees disclosed that motions might be tabled in the House of Lords for the rejection of the Derbyshire and Northampton County Councils' bills—which could only be Government motions, based presumably on this objection.

This has become a silly affair, with deputations and mutterings of defiance from the county hall Hampdens. But it is entirely the Treasury's fault for taking an absurd and oppressive line. The fact that all authorities will some day have these powers under the general act should not be prayed in aid to prevent those who are prepared to go to the trouble and expense of obtaining them now. It is not beyond tion between existing powers and the the wit of man to secure a tidy accommodageneral legislation—when eventually that gets on the Statute Book.

AIR FARES

£57 to New York

IT is comforting to find even one form of transport that is cutting rather than putting up, its prices. The airlines have agreed after three weeks' discussion in Paris to changes that amount to extending the third class fares introduced on the North Atlantic to virtually all parts of the world, and to dropping the old second class tourist service entirely. They have sanctioned, for

Aid on Paper

THE one visible result so far of the Washington meeting of western creditor nations and Japan—now styled the Development Assistance Group—is a mass of conflicting figures. In the inevitable statistical game of showing how much one's own country is doing already, a surprising number of countries appear to have won. The most impressive performance, certainly in public relations, is that of France, whose figures apparently convinced the State department early this year that it was providing three times as much aid to under-developed countries in relation to national resources as was the United States, and four times as much as Britain. Apparently this calculation is now regarded as unreliable ; sceptics have been heard to ask whether the French figure includes the Sahara bomb. Then there have been some differences about Germany's contribution, where estimates range from 0.005 per cent of national income on a British calculation to 1.2 per cent on the generous basis the Germans themselves use.

Now that everyone has had his fling, the obvious course is to turn the job over to an international organisation. A questionnaire has already been sent out by the Organisation for European Economic Co-operation, whose efforts to make such comparisons in the past have been suppressed by member governments who would come badly out of it. The threat of extinction is now hanging over OEEC, but this is just the sort of task that would justify its continued existence. Its officials should be quite clear of the figures they want and should expose any governments that do not supply them. There is no single measure. Private investment abroad cannot be excluded, even if it should not be counted on the same basis as grants from the public purse. The great thing is to get comparable figures under the main heads ; this should certainly be done before the next meeting of the Assistance Group in Bonn in the summer.

A good example has been set by the British Government this week in a white paper giving full details of its own contribution (Cmnd 974). The table shows the composition in the past three years of direct government assistance to under-developed countries, nearly all in the Commonwealth. It will be seen that total government aid has risen by 70 per cent between 1957-58 and 1959-60, to £138 million, largely on account of the more liberal attitude after the Montreal conference of 1958 to applications for direct Treasury loans under the Export Guarantees Act. These loans are tied to the purchase of British goods, but not in most cases to particular items. Private investment to the less developed countries adds another £100 million or so (twice as much as that is invested in Canada, Australia and other "developed" countries). Thus some £240 million or about 1¼ per cent of Britain's national income "goes to benefit the less developed countries."

UK GOVERNMENT AID TO POORER COUNTRIES

* To Malaya, Kenya and Cyprus, excluding military expenditures.

the first time on a main trunk route, the principle of a fare discount for old aeroplanes, and have agreed to experiment, again for the first time, with fares that undercut those charged by the shipping companies.

The decision to streamline fares on the North Atlantic was described in *The Economist* two weeks ago; the number of classes provided has been reduced from four (de luxe, first, tourist and economy) to two, a first and second class, with discounts for propeller-driven aircraft of all kinds, including the Britannia, of 6 to 7 per cent according to season. This "propeller" discount is at present being allowed on the North Atlantic only, and it is on this route too that the airlines have decided to offer a 17-day excursion ticket during off-season (winter) months costing as little as £114 on propeller-driven aircraft and £125 on jets. This offers a journey from London to New York at £57 compared with something over £60 by sea, and it is about 34 per cent lower than the cheaper of the two basic air fares. Whether it is aimed against the growing volume of charter flying (operated by scheduled airlines as well as charter companies) or merely against sea traffic, this new fare is regarded by many as the most important innovation to emerge from the Paris conference, and by travel agents as a considerable incentive to business flying.

Fares to the Far East (other than first class fares which go up, have been cut by 10 per cent for the whole journey, and by rather less for flights that do not go the whole distance. Fares to Africa—again excluding first class fares—have been cut by an average of 10 per cent, but in a few cases by as much as 16 per cent. European fares were reduced, jig-saw puzzle fashion, at a conference held last autumn. That conference should also have settled these newly announced fares, but it failed to reach agreement on the extent of the cuts to be made and on the fate of the tourist service. The decision to eliminate tourist flights on the North Atlantic, and in effect to replace them on other routes by cheaper flights (to the standard of North Atlantic third class) will be regretted by few airlines other than BOAC; but three levels of fare suited the corporation's custom and it did in fact carry a fair volume of tourist traffic on the North Atlantic long after other airlines had ceased to do so. The fare cuts to the Far East will presumably now make it unnecessary for BOAC to go it alone and reduce fares to British territories in the Far East, as the Minister of Aviation had threatened the corporation might do if the Paris talks failed. The breaches in IATA's ranks appear to have closed.

OVERSEAS TRADE

The Gap Widens

BRITISH exports are still rising fast, but imports are rising faster. The provisional customs returns for February, seasonally adjusted by the Board of Trade, show that exports in the months December, January and February were 4½ per cent more than in the previous three months and 9 per cent above the average for the year 1959: imports were 5 per cent more in December-February than in September-November and 12 per cent above the average for 1959. Actual imports for January and February together, at £731 million, were £111 million higher than for January and February, 1959; exports were £91 million up at £612 million.

UNITED KINGDOM TRADE

(Recorded values: £ million per month)

	Exports f.o.b.	Imports c.i.f.	Re-exports f.o.b.
1959.....	277·1	332·5	10·9
1959—			
1st qtr.	263·4	313·6	11·1
2nd "	281·8	327·8	10·7
3rd "	263·2	327·9	9·9
4th "	300·2	360·7	11·7
September .	246·5	330·1	11·2
October ...	306·0	360·2	14·6
November .	298·3	356·9	9·5
December..	296·6	371·9	10·7
1960—			
January	316·3	367·0	12·0
February...	295·8	364·4	9·4

The crude "trade gap," after crediting re-exports, has thus widened to £59 million. It was £39 million in January, averaged £49 million in the fourth quarter of 1959, and £43½ million in the whole of 1959. The accelerated increase in imports may be partly due to a rebuilding of stocks of raw materials (some of which are costing more) by industry. Although sterling continues strong in the market, there is little room for a decline in the current surplus, and if the trend continues to be adverse the authorities will see further reason for restraining home demand. But the evidence so far is well short of alarming.

TRADE ASSOCIATIONS

Information from BEAMA

UNLIKE many trade associations, the British Electrical and Allied Manufacturers' Association is not itself a party to any trade agreements, and thus is in no way directly concerned with the Restrictive Trade Practices Act. BEAMA, however, represents all sectors of the electrical industry, from the heaviest equipment to domestic electric appliances; and within several of its subsidiary sections restrictive agreements relating to prices or conditions of supply do exist between individual firms. The association's latest annual report, published this week, notes that BEAMA members account for at least 80 per cent of the total output of Britain's electrical manufacturing industry; thus, the report adds, the association "has a responsibility for aiding the progress and prosperity of the Industry as a whole."

It is now proposed that BEAMA should establish a comprehensive statistical and information service for all its members, providing not only statistics of output and sales but more detailed commercial intelligence—perhaps even details of the terms of past contracts, notification of orders and enquiries, and the full circulation of price lists—to "provide facilities and the organisation through which (BEAMA) members can co-operate in their mutual interest. . . . One of the chief causes of price warfare is the lack of information about turnover, price levels and costs. Without unity in the industry and a frank interchange of information, there is always a danger that uninformed and even irresponsible price competition may develop to such an extent as to imperil the long-term stability of the industry."

Last July BEAMA took over publication of statistics of sales of domestic electric appliances, at the request of the Board of Trade, which had previously collected them. These statistics are now more complete than those formerly supplied by the Board; even non-members contribute to them, the figures being prepared by independent accountants. It is not proposed to increase the information interchanged about domestic appliances. But information relating to the manufacture of heavy electrical equipment may include not only aggregated data but individual figures for "inter-firm comparisons." To the extent that BEAMA's services enable its members to run their businesses more efficiently, this development can hardly be criticised. But even if this information should be used to prevent "uninformed and irresponsible competition" by, say, makers of transformers—whose agreement has already been referred to the Restrictive Practices Court—the exchange of prices and information of this sort, either by disinterested parties like BEAMA or by manufacturers, is completely outside the scope of the present Restrictive Practices Act.

BANK ADVANCES

New Figures

BETWEEN a quarter and a third of all bank advances made to personal and professional borrowers are recognised to be for house purchase. These figures from the evidence to the Radcliffe committee submitted by the London clearing banks are surprisingly high: it is not so long since banks denied that they ever lent for this purpose at all. The figures show a jump of 20 per cent in the six months to February,

British Banking in Asia

These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. An effective credit information service and skilled assistance and advice are available to United Kingdom merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK

(Incorporated by Royal Charter, 1853)

CAMPBELL DISCOUNT COMPANY LIMITED

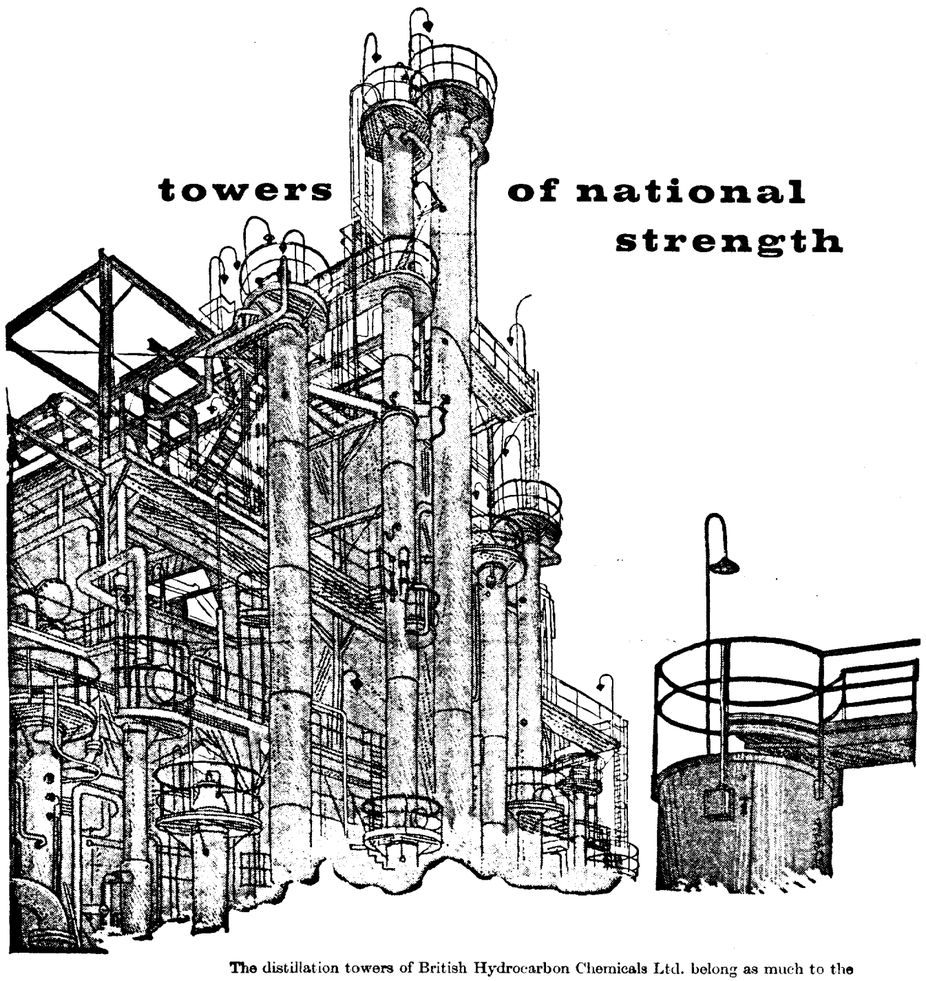
INDUSTRIAL BANKERS

Paid up Capital **£544,000** · Assets exceed **£3,000,000**

Directors: J. B. Campbell. J. W. W. Huntrods. P. H. Russell Smith, A.C.A. P. J. Cannon. G. Keighley.

Campbell Discount Co. Ltd. announce that they are able safely and profitably to employ a growing volume of money in satisfying the increasing demand for the Company's services. They, therefore, invite substantial deposits on the terms indicated below. The Company's banking business is conducted in conformity with the strictest canons of banking liquidity, and the proportion of liquid assets to deposits is maintained at 10 per cent, or 30 per cent of funds at less than one month's maturity, whichever is the greater. The Company is one of the most substantial independent industrial banking houses in the United Kingdom, and is conducting a diversified business over an area stretching from Newcastle-on-Tyne to the south coast.

Funds may be deposited on the following terms:



Money at 1 month's call, 5% per annum, maximum £10,000
Money at 3 months' call, 5½% per annum, maximum £50,000
Money at 6 months' call, 6% per annum, maximum £100,000

You are invited to write to The Manager, Banking Dept., Campbell Discount Co. Ltd., who will be pleased to send you an Audited Balance Sheet and booklet No. NC14 explaining our mode of operation.

towers of national strength

The distillation towers of British Hydrocarbon Chemicals Ltd. belong as much to the British industrial scene as to Grangemouth. From these symbols of a new age of prosperity there flows a continuous stream of chemical products that are revolutionising our way of life. Distributed to industry as raw materials, they include ethyl and isopropyl alcohols, phenol and acetone, butadiene and polyethylene . . . chemicals that have become essential constituents of such diverse products as drugs and detergents, meths and make-up, textiles and toys, plastics and paints, shoe soles and solvents. In eight years of operations British Hydrocarbon Chemicals Ltd. has taken its place among the major producers of the world and become a tower of strength in British industry today.

British Hydrocarbon Chemicals Ltd

GRANGEMOUTH · STIRLINGSHIRE

HEAD OFFICE: DEVONSHIRE HOUSE · MAYFAIR PLACE · LONDON W1 · TEL: MAYFAIR 8867

1959—but they were then only just above their total in November, 1951. These advances are normally on ordinary overdraft or loan, technically repayable on demand ; but in practice there is an agreed though usually flexible basis of repayment, which may sometimes stretch to ten or even fifteen years. For anyone who need not or cannot seek a longer term of repayment from a building society or insurance company, the bank overdraft with interest continually adjusted to the amount outstanding is an attractive proposition. The banks will presumably publish these figures regularly —as they might have done already.

Another interesting table revealed by the Radcliffe inquiry is on distribution of advances by size. One third by amount in

DISTRIBUTION OF ADVANCES

(by London Clearing Banks, June, 1958)

	Per cent of borrowers	Per cent of advances outstanding
Size of account :		
Less than £10,000	98·073	33·2
£10,000– £99,999	1·747	22·9
£100,000–£999,999	·165	23·0
£1 million & over	·015	20·8

mid-1958 were for under £10,000, and one fifth for £1 million and over (these to a total of around £400 million). Presumably the smaller advances have now become more important.

OIL HEATERS

Standards and Modifications

EVENTS have moved rapidly since the publication of the Government's report on the fire risk of the radiant type of oil heater. By Monday evening work on the revised standard for these was complete in its main outlines, incorporating tests for draughts of up to 18 miles an hour, tests for overturning, new arrangements for permanent instructions to be fastened on to the heater itself, and regulations for making the fuel tanks out of materials that cannot be corroded by paraffin. The industry had already undertaken to design all new heaters to these standards, but this is a voluntary undertaking which binds only those manufacturers now taking part in talks with the Government—and then not necessarily for all time.

The private bill introduced by Mr Gerald Nabarro which had its first reading on Tuesday, would close this last loophole by requiring all oil-burning appliances to conform to minimum safety standards—although Mr Nabarro was tactful enough to say that it was mainly imported heaters that he had in mind. There remains the question of heaters already built, both on retailers' shelves and in 3 million-odd households. The Home Secretary told Parliament that manufacturers were now willing to take these back and modify them to make them draught-proof wherever this could be done ; "I am assured that the charges . . . will be as low as practicable." Scientists who tested the heaters originally were pessimistic about the chances of modifying heaters already built ; some, they felt, could be modified by fitting a sleeve over the burner, but "unfortunately the majority of heaters do not lend themselves to such modifications." But they had in mind changes that could be made by a local ironmonger ; more elaborate modifications might be possible in the maker's own factory.

FUEL

Selling Coal Harder

ONE belated but still sensible move in the British fuel market during the last year or so has been the recruiting of quite a large force of technical sales representatives by the National Coal Board; whenever the board's marketing department learns that any business customer may

Plans for Parking

INTEREST in parking garages is slowly but surely increasing: while there does not appear to have been any formal assurance given to prospective investors that kerbside parking will be limited in the area of proposed garages, the spread of parking meters and the retention of a modified "pink zone" may have been partly responsible for the number of proposals for new garages put forward in recent weeks. An exhibition of car parking systems sponsored by the British Road Federation, which opened in London this week, contains plans and models of nearly two hundred garages of all types, from Britain, the United States and the Continent; these include eight proposed for or being built in London, and a dozen from provincial cities in Britain. Just how serious some of the schemes proposed really are is another matter—some have not yet been approved by local authorities. And even less is known about their economics.

Though most of the models shown use ramps up which cars are driven either by the motorist or an attendant, a few make use of lifts and mechanical "dollies." Such methods, their sponsors argue, in most cases allow a sufficient increase in usable space—up to two-thirds of the volume of the building for a garage using ramps—to offset the added cost of machinery. But while they also require fewer attendants, mechanical systems are considerably slower in operation than those using ramps, which may limit their suitability in commercial areas where a majority of the customers may arrive and depart at about the same time. The "Motopark" mechanical system demonstrated in London this week, for example, can park or retrieve a car in about one minute, depending on the height of the building. But some ramp garages, by using several entrances and exits, can be cleared at the rate of ten or twelve vehicles a minute.

ESTIMATES of capital cost for the schemes shown at the exhibition vary widely—from £400 up to £790 per car space, not including the value of the land. In most locations in the City and West End of London, it is thought that the capital cost of land will be at least equal to that of a ten storey ramp-type building.

A 366-car garage to be built in Audley Square for the Westminster City Council is to cost £1,100 a car space: £790 for the building and £310 for the land—a site of 17,700 sq. ft. bought by the Council for £112,500.

It is possible to calculate the rates which these garages, if built, will have to charge if they are to be profitable at various average rates of occupancy. But if, in spite of the prohibition of parking at the kerb in most places and charging for it where it is allowed, the rates are high enough to stop motorists driving in to work, many garages may find it impossible to operate at a profit. Most of the garages now in operation in London charge about 7s. 6d. per car for an eight-hour day. But the owner of a mechanical system installed in two floors of the basement of an office building in Cheapside stated last week that the economic price for a 50-car, single-storey garage in that district would be about 11s. per day and that without the saving of space made possible by mechanisation, the charge would be 15s. a day.

By contrast the 256-car, eight-storey mechanical garage being built on the site of the old Empire Theatre in Woolwich, which will be operated for the Borough of Woolwich by a private company, will charge 2s. 6d. for a twelve-hour day. The total capital cost of this garage is about £500 per car space, of which £400 is accounted for by the building and machinery. The garage will be leased to Shell-Mex and BP, who will sublease it to an operator. Woolwich, as a contribution to parking space for City commuters, would rank as a peripheral garage: but it is perfectly reasonable that the difference between the price there and the price of all-day parking on a meter or in an off-street garage in the centre should give the motoring commuter an idea of what it really costs to bring his car into the city.

be considering a switch to oil, these experts descend upon it to marshal the arguments why not. Up to the end of last year, they had neither stemmed the increase in industry's use of oil nor stopped the decline in its purchases of coal; but the adverse trend might conceivably have been worse without them. One does not hear much of their shading prices to keep customers; the board is generally selling through at least one intermediary in a trade where price competition is not exactly fervid, and many of the dealers who sell coal in large quantities handle fuel oil as well.

In the domestic market, too, the Coal Board is stirring itself to publicise the easy terms upon which consumers can obtain central heating equipment to use solid fuels. This week it announced a scheme under which domestic consumers and small businesses can obtain loans from Forward Trust, the Midland Bank subsidiary, for the purchase of such equipment (superseding an earlier scheme sponsored by the Coal Utilisation Council). Like the schemes sponsored by oil companies, the new one for coal is a personal loan scheme rather than one of straight hire purchase (no doubt because a central heating system can hardly be classed as a recoverable asset). There will be no deposit and repayment in five years for loans of more than £50, with the interest rate of 5 per cent on the original sums borrowed; sums between £20 and £50 must be repaid within two years at a fixed charge for interest of £5. These are somewhat more favourable terms than those sponsored by the oil companies, which usually carry interest rates of 6 or 6½ per cent.

Central heating systems fired with solid fuel usually cost less to instal than oil-burning systems, particularly in existing buildings; when gravity-fed stoves are used, their running costs are also generally lower, considering the price at which oil companies will supply the domestic consumer. But investment in central heating, for the householder buying it for an existing home, marks a major once-for-all improvement in standards of convenience as well as of heating. Unfortunately this advantage in cost for solid fuel, at this point in time, is not in all cases able to offset the attractions of the further convenience that other fuels offer—of not having to shovel the stuff.

BIDS AND DEALS

Sport and Print

Two companies with fluctuating profit records have figured prominently in take-over and merger proposals this week.

1. Purnell and Sons, the Bristol printers, has made an offer for the preferred ordinary and deferred ordinary shares in Waterlow and Sons, printers of the *Radio Times* and *The Listener*, of banknotes and railway tickets. The terms are £3 of 6½ per cent unsecured convertible loan stock in Purnell plus ten Purnell 5s. ordinary shares for every five £1 deferred ordinary shares in Waterlow. For 20 Waterlow preferred ordinary, Purnell offers £22 of 6½ per cent unsecured convertible stock. The offer is being made through Henry Ansbacher and Company, which is willing to buy the loan stock at par. On this basis the offer for the preferred ordinary is worth 22s. (against a price of 18s. 6d. before the offer) and with Purnell ordinary at 16s. 1½d. the offer for Waterlow deferred ordinary is worth 44s. 3d., against a price of 41s. before the offer. Waterlow shares have been above 45s. this year and the offer may not seem particularly generous. The market is obviously anticipating a better bid for on the news the shares rose to 40s. 9d. Much will depend on Waterlow's forecast of future earnings—in the year to September 30, 1959, the company made a net loss of £296,633—and how far it has been able in recent months to reorganise its own affairs.
2. Associated Rediffusion has made a cash offer of 15s. 9d. for Wembley Stadium deferred shares and of 35s. for the 7½ per cent participating preference shares. Both offers are recommended by the directors of Wembley Stadium, who have substantial shareholdings. Wembley Stadium covers over 72 acres and Associated Rediffusion say that it will be its policy to intensify the use both of the Stadium and of the Wembley Pool, and that it is expected to earn a return of about seven per cent on its investment. The rights of the BBC to broadcast and televise sporting events such as the Cup Final will not be affected by this deal.
3. Another take-over deal in the sporting world involves A. G. Spalding, makers of sports goods. BTR industries is selling this subsidiary back to its former American owners of the same name. The proceeds will be used by the directors of BTR Industries in fields more closely connected with the group's industrial activities. Spalding will continue to manufacture in this country.

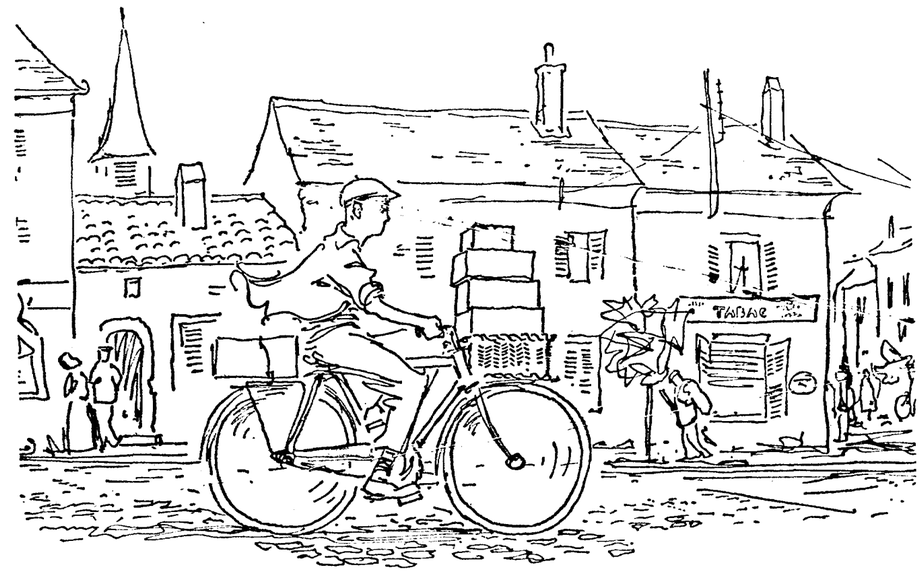
GILT-EDGED SERIAL

On Not Explaining

Two elementary lessons in the art of public relations should have been driven home to the Treasury and the Bank of England this week. On Tuesday the serial story of What Happened in the Gilt-edged Market on February 24th was carried at last into the House of Commons, where Mr Heathcoat Amory parried questions less

BANK NOTES

Unexciting



The new £1 note, the first in a new series of bank notes which have been under preparation for a number of years and are the first Bank of England notes to bear the portrait of the reigning monarch, is rather disappointing. An effort has clearly been made to move to contemporary form, but the design is unexciting and in places confusing. What is it that prevents Britain from having notes of distinction and coins of taste and convenience? Possibly the fault lies less with the Bank and the Mint than with the host of committees and authorities through which every innovation has to pass, so that in the result any touch of imagination is lost in compromise. Certainly the Comptroller of the Mint made some radical and sensible suggestions for new coins last summer: nothing has been heard from the Treasury about these.

On one aspect of the new series of notes the Bank of England deserves commendation. It has now agreed that to avoid confusion, especially for the blind, the new 10s., £1, £5 and £10 notes will each be a different size. The new £1 note is the same length as the present note but about half an inch narrower; the new 10s. note will be slightly smaller in both dimensions. It will be introduced towards the end of next year, and the £5 and £10 notes as soon as possible after that. The notes will have a continuous rather than a wavy-line watermark; this will permit use of advanced production machinery that prints the notes on continuous paper instead of separate sheets.

The notes retain the quaint promise by the chief cashier to present the Bearer on Demand with another note in exchange.

Reproduced with the authority of the Bank of England.

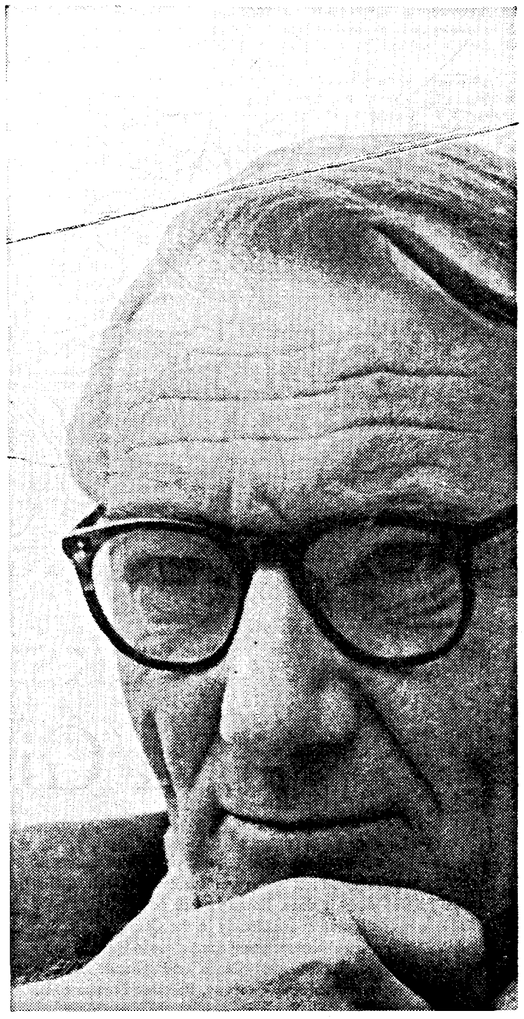
New packs for Jacques (and Giovanni)

THE TIDE OF PACKAGING has not yet swept Europe, as it has the United States and this country. But it will. And when it does, Bowaters will be there riding it.

For Bowaters are already in the Common Market. Their first three operating companies in Europe make packages in Rheims, Genoa and Ghent. And a £1,000,000 holding company, Bowater Europe S.A., has been established in Brussels.

Cartons, flexible packaging and corrugated cases will flow in increasing quantities from these three sources already established. And as the pace of industrial activity quickens in Europe so will the pace of Bowaters' expansion.

Bowater Europe will, in fact, be developed with the same power, direction and foresight that have characterised the Corporation's expansion programmes in Canada, the United States and the United Kingdom.



However it is pronounced, the name Bowater will be of increasing significance in the Common Market as a great international organisation breaks new ground in an old continent.

facts point to a buoyant future for

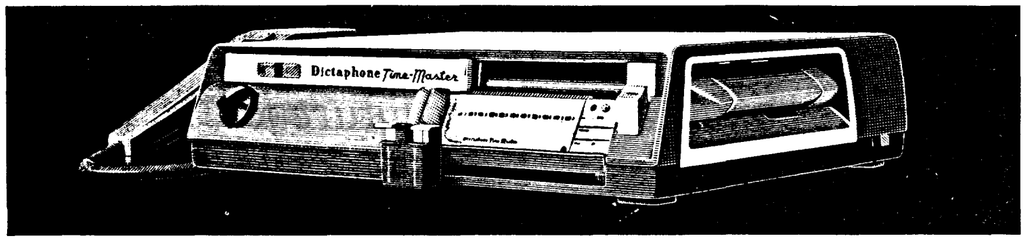
MEN WHO BUY WELL, BUY DICTAPHONE TIME-MASTER

Men who value quality and service are the men who buy Dictaphone Time-Master, because the Time-Master is the quality dictating machine. The Time-Master isn't a gadget to be played with for a few months and then discarded. It's a precision instrument designed to save time for a man whose time is valuable.

Dictating with Time-Master is as easy and pleasant as normal dictation to a secretary, but it is much more convenient and time saving. No matter where your secretary may be, you simply speak, and immediately your thoughts are on *permanent* record. Time-Master has these unique advantages because only Dictaphone Time-Master has the DICTABELT record.

DICTABELT 



Especially designed for dictation and twenty years ahead of all other recording media, the Dictabelt is exclusive to Time-Master.

Permanent recording on the Dictabelt makes accidental erasure impossible; gives crystal clarity; makes the true economy of one-use handling.

Visible recording gives instant place finding, prevents confusion, saves time.

Easiest to handle. You can fit a Dictabelt on the machine in 2 seconds, dictate, then have it transcribed; you can also post or file a Dictabelt like a letter.

Dictaphone TIME-MASTER has been accepted for the design index of the Council of Industrial Design.

Dictaphone Company Limited, 17-19 Stratford Place, London W.1. Phone HYDe Park 9461. Branches throughout the British Isles.

The words DICTAPHONE, TIME-MASTER and DICTABELT are registered trade marks.

clumsily, but still not much more informatively, than the Earl of Dundee had done in the two preceding weeks in the House of Lords. For all the protestations that the Bank marked down its prices only under the weight of selling by the banks, the investor has little regard for such nice distinctions —a point of some significance in the argument about whether it is "unethical" for the Bank to lead the market.

The irony of this whole episode is that the Bank of England has from the start tried to play it down (whether wisely or not is another matter). But once the newspapers had made their splash on the morning after, as they could have been expected to do with the stock market reeling and bewildered after a one-point drop in the government broker's support prices, the authorities naturally found it hard to backpedal. As Sir Oliver Franks remarked to the Governor of the Bank during the Radcliffe investigation: "There is a sense in which subsequent statements never catch up; that is a law of journalism." There is no substitute for a clear statement, or official guidance, at the time things happen.

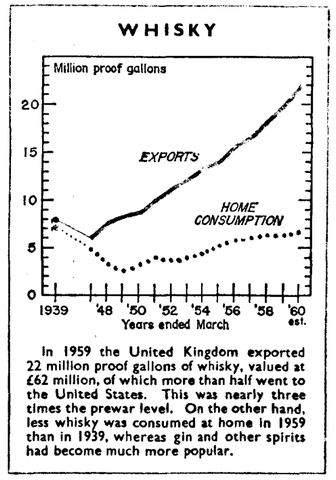
The other lesson, equally rich in irony, concerns information about the magnitude of official sales and purchases of gilt-edged. For long the Bank of England maintained that publication of these data would embarrass its operations. Under pressure from the Radcliffe committee it agreed to release back figures. It is safe to say that the figures made a better showing than most people had expected. But the authorities still keep them under wraps for a minimum of seven months; the latest official figures go no further than June 30th last. Private enterprise has now stepped in: a firm of London stockbrokers has circulated estimates of its own for the most recent period, and they put a very poor light on the gilt-edged market since the summer. Any calculation without access to full information of Exchequer financing must be hazardous, and it happens that there is one large observable miscalculation in the estimates that have been circulated, which would tend to exaggerate official purchases and understate official sales. But people are bound to make the best private guesses they can on matters that are important to them, and the chances are that if they do not know the facts they will assume the worst. That surely is an operational argument in favour of earlier publication of the figures about the Government's dealings in its own stocks.

ATOMIC ENERGY

Nuclear Power for India?

At the end of this month, the managing director of the General Electric Company's atomic energy group will leave for India to discuss the possibility of tendering for a nuclear power station of 250 or 300 megawatts. His will not be the first British team to visit India on such a mission. Discussions with various atomic energy groups in Britain have been going on intermittently during the past eighteen months, but in a slight aura of unreality because it was uncertain where India would find the £30 million needed to pay for such a station. The Indian argument for atomic power has been based on the vast distance across which coal would have to be hauled or coalfield-generated power transmitted to certain of the main industrial centres, and the capital expenditure on railways and rolling stock that would be needed to carry this coal. But although the Indian government has been able to raise loans abroad to pay for a good many ambitious capital schemes under the first and second of its five-year development plans, it has never yet been able to persuade foreign lenders, and in particular the World Bank, to finance the construction of nuclear power stations.

Now, however, the Indians appear to be a good deal more confident that they will be able to raise the money for a sizeable nuclear power station to supply base load power to the rapidly industrialising regions around Bombay—which are some considerable distance from the new Indian coalfields. The most economic proposal would be a 250 megawatt station drawing its power from a single reactor, but as a precaution against breakdown in base load supplies, the Indian Atomic Energy Commission may insist on the more expensive course of building a twin-reactor station with a total electrical output of 300 megawatts. Whether nuclear power would be economic under Indian conditions when it is plainly uneconomic in most other countries depends on the Atomic Energy Commission's own calculations about the cost of bringing in coal to the area. The sudden improvement in India's prospects of convincing foreign lenders that the proposal is economic is not due to an improvement in the performance that reactor engineers can offer, but to the recent signing of an atomic energy agreement with the Soviet Union under which Soviet scientists have not only offered to give India all help in building the power station—but even hinted that Russia might be prepared to provide the station for nothing. The American and British governments profess that they will not be put off by this kind of bidding, but there are bound to be misgivings about the size of the bill.



POLYPROPYLENE

Not Convertible

Both of the two newest thermoplastics, high-density polythene and polypropylene, have superior properties to conventional low-pressure polythene, which now accounts for almost all the polyolefin production in Britain, in the United States and on the Continent. Both new plastics are made by the Ziegler method, using a catalytic process and similar plant; high-density polythene (but not polypropylene) can also be made by the Phillips process, used in this country by British Hydrocarbon Chemicals. Of the two new materials, it is widely thought that polypropylene may have the greater potential market. Considerable research therefore, is now being done in hope of finding a way to convert existing plant for making conventional low-density polythene to the manufacture of polypropylene.

It was recently rumoured that the German firm of Badische Anilin had developed such a process, which would drastically cut the capital cost of making polypropylene for many firms. Most other attempts to make polypropylene by the same method as conventional polythene have resulted in nothing more than an oily liquid. The rumour has not been confirmed; but it is always dangerous to state categorically that something cannot be done in this industry, and it is known that Badische Anilin in Germany, DuPont and Union Carbide in the United States, and Imperial Chemical Industries are at present working on the problem.

ICI has good cause to wish for a way to make the new product in conventional polytheme plant, of which it now has a total capacity of 90-100,000 tons a year. The group is also building polypropylene plant with a capacity of 10-20,000 tons a year, which will be on stream at the beginning of next year. The only other producer of polypropylene in Britain is Shell Chemicals, which is building olefin plant of 30,000 tons a year capacity at Carrington, due on stream in 1962. Half of Shell's plant will make conventional polythene; the other half will make either polypropylene or high-density polythene, or both—the company has not announced the amount of each material which will be produced. In the United States some high-density Ziegler polythene plant has already been converted to making polypropylene, and dual-purpose plant may

In 1959 the United Kingdom exported 22 million proof gallons of whisky, valued at £62 million, of which more than half went to the United States. This was nearly three times the prewar level. On the other hand, less whisky was consumed at home in 1959 than in 1939, whereas gin and other spirits had become much more popular.

not be impossible. By contrast ICI's polypropylene plant will not be capable of making high-density polythene, which for some uses—moulded containers, for example—is superior to both conventional polythene and polypropylene.

INSURANCE FUNDS

The Underwriters

In its evidence to the Radcliffe committee, the British Insurance Association says that insurance companies underwrite about 50 per cent of new public issues. The figures are given in the table. They act individually; there is no question of the industry as a body dictating terms or attempting to dominate the market. With their large resources insurance companies are able to retain heavy allotments when an issue is poorly subscribed. Underwriters may at times be left with a very awkward commitment, as with the Vickers issue arranged on the eve of the 7 per cent Bank rate in September, 1957. More often they have to retain parts of issues where the price

Sources: Radcliffe memoranda of evidence, Vol. II; Midland Bank compilation of new issues.

has been pitched a little too finely. In return they get their underwriting commission. No figures are given of the actual amounts left with the insurance companies as underwriters. Total amounts subscribed by insurance companies to new issues are shown as £108 million in 1956 and £102 million in 1957, but these exclude certain offers and sales that were underwritten and include subscription to issues not underwritten.

Other figures submitted by the British Insurance Association showed the continuing trend in 1956 and 1957 away from investment in British Government stocks, though new figures of cash transactions show that even in 1957 the insurance companies bought more gilt-edged than they sold (whereas the book valuation fell). Gilt-edged are still as important, absolutely, in the portfolios as in 1938; other fixed interest stocks have declined, and equities and property bulk much larger. In a paper delivered to the Royal Institution of Chartered Surveyors last week Mr G. W. Bridge, deputy chairman of Legal and General, stated that his company alone owns property with a book value of more than £100 million (plus mortgages on another £80 million of property). The book value of investment in real property by all companies was £494 million at the end of 1958; and probably about half of this was attributable to four companies. Mr Bridge calculates that capital appreciation and dividend income has been about the same for both property and ordinary shares since 1945. His company has not found the problem of management an insurmountable obstacle; it has shown a preference for rack rented property and shop developments bought and leased back.

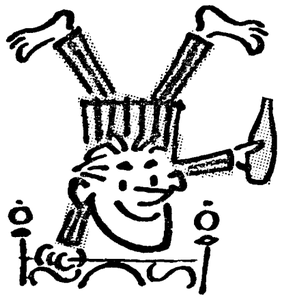
EURATOM

Second Thoughts

The Euratom Commission in Brussels is exercising great tact in negotiations with the US government and the US Atomic Energy Commission that must be causing almost as much embarrassment in Washington as they are in Brussels. In the middle of 1958, a US-Euratom agreement was signed under which a chain of American-designed nuclear power stations was to be built in Euratom's six-member countries. Their construction was to be backed by an intensive research programme on both sides of the Atlantic, the cost of which, estimated at $100 million for each of the 5-year periods covered by the agreement, would be borne equally by Euratom and the United States.

The power programme has not materialised. In spite of a considerable element of subsidy from the US government, public utilities have jibbed at the cost of nuclear plant. The only proposal going ahead now is in Southern Italy, and this is financed by the World Bank as its one and only venture into nuclear power. Two other projects which are eligible in the sense that they could be built within the time limits required (i.e., by 1963) are bogged down in Germany over finance and on the Franco-Belgian border over what the Commission calls "administrative and institutional difficulties." These difficulties may be overcome, but the obvious reluctance of electricity undertakings even to put forward proposals for consideration under the joint programme is a warning to Euratom, if any warning were needed, that nuclear power on the present American pattern will not be accepted in Western Europe. The horse refuses to drink.

In Washington Congress is debating proposals to extend the time limits under which European bids would qualify for the joint power programme; Euratom is trying to rid itself of the obligation to carry out research into reactor types which it considers obsolete and so to avoid waste of scientific effort. It has told the US government that "the Commission does not think that the research programme should be too closely tied to the programme for nuclear power construction proposed for after 1963." Lest these mild words be misunderstood, Euratom has coupled them with an ultimatum that unless the US agrees to such a change, it will cease to invite further bids for nuclear power stations under the US-Euratom agreement. Euratom knows well the importance that American industry attaches to this joint power programme, which would offer it a proving ground for nuclear plant that does not exist at home because other forms of energy are so cheap in the United States. The first reaction of the US Atomic Energy Commission has been to offer even more favourable terms to European utilities willing to buy American nuclear plant.



SOFT DRINKS

Blocks and Sachets

Two new types of fruit drink will be introduced to the British market next week. J. Lyons will sell a frozen orange juice called Motto—which stands for "more orange than two oranges"—and Unilever a fruit squash called Spree that will be sold in plastic sachets, like hair shampoo. Frozen orange juice has proved popular in America; Lyons hopes that it can persuade the British *en masse* to adopt the habit of drinking orange juice as an appetiser, which so far the makers of tinned juice and the greengrocers have failed to do. Motto costs 9d.—7d. as an "introductory offer"—for a 2 ounce carton, which Lyons recommends should be diluted to give 8 ounces of "orange aperitif"; if the strength is comparable to that of tinned orange juice, the price will be comparable too. Distribution at first will be through frozen food sellers in the area covered by London ITV; later dairies will deliver it with the milk on a national basis. The orange juice is imported from Spain, then concentrated and frozen by "a secret process" to give the final product. Secret or not, frozen fruit juices have been selling in the United States for a long time.

Spree is a normal squash, orange- or

lemon-flavoured; the attraction of the sachet pack to the maker is that it overcomes the distribution problems that exist with bottled drinks, which it is said to be uneconomic to sell more than thirty miles from a bottling plant. Unilever will make Spree only at Leeds, and sell it through grocers, confectioners and chemists throughout the country. At 4d. for a sachet to make one glass of squash it costs more than twice as much as bottled squashes; Unilever hopes that it will be bought to save carrying bottles or that children will buy it with their pocket money. This is another case of asking the consumer to pay more for some sort of convenience; here most of the convenience, however, would seem to accrue to the manufacturer.

THE JASPER CASE

Letter for Examination

When the hearing of the charges against Mr Grunwald, Mr Jasper and Mr Murray was continued at the City of London Court on Wednesday, Sir David Scott Cairns QC, counsel for Mr Grunwald, recalled that at the previous hearing Mr Havers, counsel for Mr Murray, had indicated that his evidence would be that a letter produced by the joint manager of the Lloyds Bank City Office and signed by Mr Murray was in fact a forgery. Sir David said that it made it appear that it might be a forgery by Mr Grunwald and he asked that this letter and five other documents should be examined by handwriting experts. The Magistrate, Alderman Sir Cullum Welch, gave permission for this to be done.

Mr Harry Kanter, a solicitor and a partner with Mr Grunwald in Harewood and Company, said that when the partnership started in March, 1954, one of Mr Grunwald's accounts was H. Jasper and Company, and that since 1957 this company had made various take-over bids. Mr Kanter said that Mr Grunwald consulted him only on legal aspects of these deals and that Harewood and Company acted for the State Building Society when they were granting mortgages for clients of the solicitors. He said that Mr Grunwald was the connecting link between the society and Harewood and Company and spent an hour or two at the State office daily. He said that there had been no files in the office relating to mortgages to Lintang Investments. Mr Kanter said that on September 21st last year he had found two letters in Mr Grunwald's room; Mr John Mathew, for the prosecution, said that the two letters were from the State Building Society and were signed by Mr Murray approving advances made in respect of Dolphin Square and Hyde Park North Estate.

Continuing his evidence, Mr Kanter said that his partner told him that he had to go to Cardiff on September 13th to complete the Ely Brewery take-over and that he thought he would take his wife with him and stay there for a few days. On September 14th he learned that Mr Grunwald was in Israel. On the morning of that day Mr Rose and Mr Jasper had telephoned him from Cardiff about difficulties in completing the take-over and he said that in a later telephone conversation he had told one of them that they should be quite tough about it. Mr Kanter said that a day or so later Mr Murray had told him when they were on their way to a meeting that he should say nothing about the £3½ million belonging to the State Building Society being used to purchase Lintang shares. Mr Murray said that if this was disclosed it would make the whole funding of the operation impossible. Mr Kanter said that he asked Mr Murray whether the State had any reports on title relating to these alleged Lingtang transactions. Mr Murray told him that he (Mr Kanter) had signed them. Mr Kanter commented: "I was rather surprised but I had signed about 300-odd letters a night for quite 18 months. Naturally I would rely upon responsible staff and I thought I might have signed reports on title in that way."

The hearing was continued on Friday.

SHORTER NOTES

It was erroneously stated in last week's issue of *The Economist* that the Sondes Place Research Institute is a Ministry of Power research laboratory; in fact it is a completely independent organisation doing sponsored research in chemistry, chemical engineering and mechanical engineering. Research on fuel cells has been carried out there on a contract from the Ministry of Power, with occasional support from the Central Electricity Authority and Shell Research; when the present contract expires in March this work will continue under the sponsorship of the National Research and Development Corporation.

★

The economic committee of the Arab League, at its meeting which concluded in Cairo this week, decided on a preliminary survey of the route for the proposed "Arab pipeline" from the Persian Gulf to the Mediterranean. It approved in principle but sent back for further study, however, the controversial proposal that companies exploring for oil in Algeria should be boycotted in the Middle East. Few of the majors have allowed themselves to be deterred by these recent rumblings from seeking concessions in the Sahara.

★

The North British Locomotive company suffered a group loss of £1,349,566 in 1959, £440,000 more than in 1958. A debit of £1,207,382 has been carried forward after a transfer of £100,000 from reserves. Revaluation of the holding company's assets has shown an excess of £1,457,918 over book values, which has been placed to capital reserve. Assets should now cover the ordinary capital of £1,250,000; though the loss in the second half of 1959, £363,000, was little more than half that in the first half of the year, shareholders may feel that this is small comfort after the several years of attempted reorganisation.

★

Iraq is continuing its policy of diversifying its external reserves. In December the central bank's holdings of sterling fell by a further £10 million, to less than £40 million; holdings of gold and currencies other than sterling rose to £66 million. A year ago Iraq held £84 million in sterling and only £19 million in gold and other foreign currencies.

★

Total revenue of Shell Oil Company in the United States in 1959 reached a new record of $1,819,954,000, against $1,674,132,000, and net income rose from $128,583,000 to $147,418,000. Earnings represented $2.43 a share and compared with $2.12 a share in 1958, as based on the 60,573,368 shares outstanding following the two-for-one split last December. Dividend payments were the equivalent of 25 cents a share for each of the first three quarters, but the last quarter's rate was raised to 27½ cents a share. Production of crude oil rose by 5½ per cent from 347,000 to 366,000 barrels a day, largely as a result of increased production from Louisiana and Texas wells. Output at the company's six refineries went up by 5.6 per cent, to 178,760,000 barrels; combined sales of automotive and aviation gasoline rose by 4.4 per cent; and sales of chemical products reached a new peak. Capital expenditures also went up, rising from $223,082,000 to $280,073,000.

★

The Austrian Bank rate has been raised from 4½ to 5 per cent, the rate from which it was reduced last April.

MR MICHAEL W. TURNER ON ASIA'S GROWING POPULATION PROBLEM

The Ordinary Yearly General Meeting of The Hongkong and Shanghai Banking Corporation was held on March 11th at the Head Office, 1, Queen's Road Central, Hong Kong.

Mr Michael W. Turner, CBE, the Chairman, who presided, said:

The hour for which this Meeting was called having now passed, I will read the Notice convening the Meeting.

Having read the Notice convening the Meeting, and a representative of the auditors having read their report, the Chairman continued:

Ladies and Gentlemen,

You will see that the Accounts before you have this year been drawn up in a somewhat different form from that which we have previously adopted. In view of the fact that we now own the entire share capital of Mercantile Bank Limited, we have decided to follow normal present day practice and to include, with the Balance Sheet and Profit and Loss Account of the Bank, a Consolidated Balance Sheet and Profit and Loss Account showing the overall position of the Bank and all its Subsidiary Companies. A list of the main Subsidiary Companies is shown in the booklet in your hands.

The profit for the year amounts to $28,134,959 which is an increase of $4,600,000 over last year's figure. This profit includes the dividend declared by Mercantile Bank Limited and, in accordance with normal banking practice, the profit has been arrived at after making transfers to the credit of our inner reserves, out of which full provision has been made for all known doubtful debts and contingencies.

It is proposed that a sum of $4,000,000 should again be written off Bank Premises. After allowing for this transfer and the interim dividend of £1 2s. 6d. per share, the directors recommend the payment of a final dividend of £1 17s. 6d. per share which, on the shares outstanding on December 31, 1959, amounts to $15,017,302, leaving a balance of $2,116,714 to be carried forward to next year.

It is proposed that the final dividend on the new shares issued since December 31, 1959, in connection with our offer to the shareholders of The British Bank of the Middle East, should be provided and paid out of the inner reserves of the bank. No dividend has yet been received from The British Bank of the Middle East and the payment of a final dividend on these shares is in effect part of the purchase consideration.

MR MICHAEL W. TURNER, CBE
Chairman and Chief Manager.

BALANCE SHEET FEATURES

Turning to the Balance Sheet of the Bank, the total shows an increase of $400,000,000 over the figure for 1958. The Issued Share Capital has increased by $12,311,375, representing the par value of the shares issued to former shareholders of Mercantile Bank Limited. The Reserve Fund has increased during the year by an amount of $47,186,643. This amount represents the share premium arising from the difference between the par value of the new shares and their equivalent cash value under the terms of the offer, less the excess of the cost of the investment in Mercantile Bank Limited over the total of the Capital, Published Reserves and Profit balance of that bank at December 31, 1958.

Hong Kong currency notes in circulation increased by $64,000,000 due to a rise in the Excess Note Issue and this increase is reflected on the other side of the Balance Sheet by a similar increase in Hong Kong Government Certificates of Indebtednesses. Current, Deposit and Other Accounts show a rise of $163,000,000, while Amounts due to Subsidiary Companies at approximately $97,000,000, mainly represent funds placed at our disposal by Mercantile Bank Limited.

When we turn to the Assets side of the Balance Sheet we find Advances rose by $213,000,000 and Trade Bills Discounted by $127,000,000. Cash in Hand and Balances with other Banks and Money at Call and Short Notice show falls of $17,000,000 and $67,000,000 respectively. British and Other Government Treasury Bills are lower by $207,000,000 which is, in part, reflected by an increase in our Investments of $162,000,000 and loans granted on a short term basis to Local Authorities and first class Finance Houses in the United Kingdom. These loans amounted to $56,000,000 and are included under Advances to customers.

It is satisfying that last year's fall in both Trade Bills and Advances has more than been made good, which is a sign of the increasing economic activity in this area, particularly here in Hong Kong.

THE BRITISH BANK OF THE MIDDLE EAST

The offer to the shareholders of The British Bank of the Middle East was extended until the date of the closing of our books for the payment of the proposed final dividend and at that date we held over 99 per cent of the share capital of that bank. This has necessitated the issue of 133,307 shares of $125 each and our Issued Share Capital now amounts to $78,974,750. The British Bank of the Middle East is constituted under a Royal Charter and therefore it is not possible to acquire compulsorily the remaining shares under the provisions of the United Kingdom Companies Act. We are, however, in touch with the few remaining shareholders and we hope that we will be able to acquire their shares in due course. The original offer included payment of the final dividend for 1959 but, as it is no longer possible to offer shares which rank for this dividend, we propose to submit a new offer to the remaining shareholders, which will provide them with the same number of our shares as they would have received previously but with a cash payment in lieu of this final dividend.

The British Bank of the Middle East have in the past closed their accounts on March 31st but arrangements have been made for their year to end on December 31st in future and next year their figures will be included in our Group Accounts. Their last published Balance Sheet showed a total of £93,000,000 and when these figures are added to the total of our Consolidated Balance Sheet, which you will see is approximately £316,000,000, the total of the Group should exceed £400,000,000.

The changes in the Board of Directors during the year are shown in the Report which is in your hands and I shall make no further comment on them.

Sir Kenneth Mealing, Chairman of Mercantile Bank Limited, and Sir Cyril Jones, one of their Deputy Chairmen, joined our London Committee during the year. Sir Dallas Bernard, Chairman of The British Bank of the Middle East, and Sir Alec Kirkbride, a Director of that bank, have also recently accepted invitations to join.

In view of the development which is taking place in the New Territories in Hong Kong we have decided that the time has come to extend our banking services to that area. On February 1st this year we opened small offices, providing current account and savings bank facilities, in the premises of China Light & Power Co. Ltd. in Sheung Shui and Tai Po. Our new office in Tsuen Wan, which will provide a full banking service, is expected to be opened on April 18th. We have also acquired a site in Un Long where we shall erect a new building and negotiations are in progress to acquire other sites. I feel sure that these new offices will play their part in the growth of these rapidly expanding areas.

Before I close I should like to take this opportunity to express our thanks to the Branch Managers and the Staff of all nationalities for their continued loyalty and efficient service. With the expansion of our interests we will, I am sure, be faced with a number of problems, many of which may be somewhat different from those we have had to overcome in the past. I am, however, confident that these recent developments are in the best interests of the Bank and we must be prepared to meet any challenge with which the future may confront us.

Ladies and Gentlemen,

The Report and Statement of Accounts having been in your hands for the required period I will now formally propose their adoption as presented.

After the proposal has been seconded I shall be pleased to answer to the best of my ability any questions on the motion before you which shareholders may wish to ask.

The resolution having been seconded the Report and Accounts were adopted.

CHAIRMAN'S STATEMENT

The following is the statement by the Chairman:

The diversification of our interests has been a problem to which we have given considerable thought ever since conditions in the Far East virtually closed to us one of the countries in which a major part of our activities was previously centred. Progress at first was slow and was mainly confined to the setting up of our Californian subsidiary but in the last two years we have been fortunate in concluding satisfactory negotiations with two old established British banks. This has considerably widened our interests and has given us a stake in a number of territories in which we were not previously represented, Mercantile Bank Limited provided a number of additional offices in countries in which we operate, as well as in Pakistan and Mauritius, while our recent successful offer to the shareholders of The British Bank of the Middle East has given us an association with an entirely different part of the world. As a result our group now covers a wide area stretching from the Pacific to the Mediterranean and the alliance of all these interests will not only achieve a greater degree of solidarity but will also result in each component part being in a better position than before to serve its own particular territory.

The British Bank of the Middle East has for many years been well respected in the area from which it has taken its name and it has a staff experienced in the type of business which is carried on there. We would not wish to interfere with the management of this bank and it will accordingly continue to be run as an entirely separate entity, directed by its own Board operating in London in accordance with the Royal Charter. The friends and customers of this bank may, therefore, rest assured that their interests will continue to be looked after by the same organisation as in the past with the added advantage that their bank has now behind it the considerable resources of the whole group.

GENERAL

The end of the decade showed a distinct thaw in the climate of the cold war which, during the last ten years, has been the major influence in international relations. The past year in particular has been noticeable for the number of meetings between leaders of both sides and, with the summit finally fixed for May, there is hope that this will lead to a workable solution of some of the outstanding problems being reached. While the outlook in the West is better than for some time past there has unfortunately been little comparable sign of relaxed atmosphere in Asia. In fact a year, which saw the stern repression of an uprising in Tibet and border trouble in Laos, ended with China's relations with both India and Indonesia at a low ebb and the Bandung concept of co-existence between Asian nations receiving a severe set-back.

In the economic sphere the most noticeable event has been the growing strength of Western Europe. Not only has industrial production shown a steady improvement, but the balance of payments has suffered relatively little strain making it possible to relax exchange control restrictions and, to a large extent, abolish discrimination against dollar imports. The expansion has been well spread and, with the exception of coal and shipping, practically every form of industrial activity has been able to show rapid progress. Consumer demand has been particularly active while the rise in stock exchange prices is evidence of the feeling of confidence that exists in the public mind. In the United Kingdom the return of the Conservative Government, with an increased majority, laid to rest any immediate fears of nationalisation of the steel industry and sterling has shown considerable strength, notwithstanding the repayment of outstanding obligations and the subscriptions towards the increased capital of the International Monetary Fund.

The United States economy has also forged ahead and now that a settlement has been reached in the steel dispute there are hopes for further expansion in 1960. The continuing deficit in external account, however, has given cause for concern and has led to a growing demand by American spokesmen for other industrial countries to bear a larger share of the burden of assisting the under-developed areas, the major part of which the United States has so generously shouldered in recent years. The visit of Mr Dillon to European capitals in January this year had the dual purpose of presenting the American view on the provision of such assistance and of conveying her concern at the implications of the formation of two separate trading blocs in Europe. Although no firm conclusions were reached on these two points it was agreed, at the Atlantic Economic conference held in Paris, to explore the possibilities of enlarging the Organisation for European Economic Co-operation, to include the United States and Canada, and of co-ordinating aid to the less-developed countries. The necessity for such assistance can be readily understood when we compare the progress in Western Europe with that in Asia during the past year. It is true that the recent rise in prices of certain primary commodities has benefited the countries concerned while others have shown increased industrial production, but the overall growth is still small. Few Asian countries have reached the stage where they are able to expand rapidly under their own momentum and, while some of them may be passing through what a contemporary economist describes as the "take-off period," many are still only at the transitional stage.

A great deal of thought has been given to the problem of speeding up this development and to finding ways and means of augmenting the available resources to assist in this task. In Washington last September the setting-up of an affiliate of the International Bank, the International Development Association, which was proposed by the United States government, was accepted in principle. This new institution would, in the words of the American spokesman, provide funds contributed by governments "which can be lent on flexible terms including repayment in whole or in part in the currency of the borrower." In addition it was hoped that part of the local currencies which have been accumulated by the United States government from sales of surplus farm products could be used for development either locally or in neighbouring countries. The articles of agreement for this new organisation have been drawn up by the executive directors of the International Bank and have been sent to member governments which makes it premature at this stage to offer any detailed comment. Meanwhile the Colombo Plan has continued to provide assistance and technical co-operation to many of the countries in our area, and it is encouraging to see that this successful essay in mutual aid is being extended until 1966.

HONG KONG

Looking back on the year that is past, it is impossible not to express a feeling of satisfaction at the progress that has been achieved. Trade and industry have both made remarkable strides, development has continued at an increasing pace and Hong Kong products have found new markets and are expanding those already held.

While I do not wish to say anything that will mar this happy picture, it would be wrong if I did not express a word of warning to those who may be tempted to think that the present expansion must inevitably continue. Hong Kong is very dependent for its prosperity on selling its manufactured products in the markets of the world and of necessity it is those countries with the higher standards of living which are likely to be the best customers. It is therefore inevitable that, where those markets are, higher wage structures are to be found and many of the products from Hong Kong offer serious competition to domestic industries. This has resulted in pressure being experienced for voluntary quotas or outright tariffs to limit the volume.

While it can be argued that countries which are industrialised have a duty to allow reasonable markets to those embarking on this process, it is obvious that they will only do so to a limited extent and certainly not to the stage at which

their local industries will be put out of business. Most governments today are deeply concerned at the prospect of possible unemployment and are unlikely to sit by and see this develop without making some attempt to stop it. I am mentioning these facts, not with any intention of getting involved in the controversy that has arisen over the proposed quota on imports of cotton goods into the United States, but because I feel that the dangers which are inherent in the present situation may not be sufficiently appreciated in Hong Kong. On the other hand, I should like our friends abroad to remember that Hong Kong is a small manufacturing unit which can only survive and find employment for its growing population if it is enabled to market its goods, which even now account for only a small proportion of the total consumption of any importing country. I hope that some compromise will be arrived at which will give the more advanced countries time to make the necessary adjustments but will permit Hong Kong to continue to maintain a reasonable growth.

The working party which was set up by the government to frame a constitution for the proposed Hong Kong Federation of Industries is nearing the end of its labours and there are indications that it has achieved some success in reconciling divergent views. Although there is considerable room for a greater degree of diversification of Hong Kong industry, which is still too dependent on textiles, a certain amount of progress has already been made. Shipbreaking, for example, has now become a major industry and a large volume of tonnage from all over the world is turned into scrap in the Colony for export and local use. Other enterprises, completed or under construction, cover the manufacture of air-conditioning units, precision instruments and transistor radios, while the plastic industry has shown considerable expansion. An encouraging development in the textile industry has been the opening of the new factory by Jardine Dyeing and Finishing Co. Ltd. at Shatin, which has been equipped with the latest machinery for producing textiles of the highest grade.

It has been estimated that by 1967 the male working population of the Colony will have doubled and the government have decided in consequence that the New Territories should be further developed to provide opportunities for industrial expansion and employment with the minimum of disturbance to agriculture. Five major reclamation schemes are under consideration, each of which, together with the provision of roads, water supplies, electrical services, transport and workers' accommodation, represents a large and expensive undertaking and indicates the magnitude of this problem in the years ahead. It is to be hoped, however, that in its drive to reclaim land for further expansion the government will not forget the needs of those industries which require direct access to the sea.

The re-housing of the vast number of squatters continues and the hundredth block in the government's resettlement programme was opened at the end of November. Over 300,000 people have now been re-housed, at the expense of the Hong Kong taxpayer, but the need for more housing of this type remains as great as ever. On the other hand, there appears to be no dearth of private funds for new commercial construction of all kinds and the acquisition by the government of a large area of the Naval Dockyard should stimulate further development.

The Commission which enquired into the working of the electricity supply in the Colony found little fault with the technical achievements of the two companies concerned or with the way in which the demand for electricity had been met, but was critical of the manner in which charges were levied. The Commission's proposals that the undertakings should be acquired by a statutory authority and that the shareholders should be compensated by an issue of government stock are questionable in their application to conditions in Hong Kong. There is no reason to suppose that the proposed authority would be more efficient, or would be able to charge lower rates, than the companies which it would replace and the acceptance of this recommendation would be a complete break with the Colony's traditional method of leaving public utilities to private enterprise under conditions imposed by the government. It would also be difficult for the shareholders of the companies to dispose of their government stock, except at a discount, due to the known dislike of the Hong Kong investor for fixed interest securities. I hope that a compromise will be found which will give both consumers and shareholders the protection they should have but will leave the undertakings under their present management.

HONG KONG'S TRADE

The total volume of trade in 1959 was about 8½ per cent higher than the previous year, imports increasing by about 7½ per cent and exports by 9½ per cent. The total value amounted to HK$8,230 million, of which imports were HK$4,950 million and exports HK$3,280 million. Imports from China decreased by about one-quarter, although they still remain substantial, but imports from a number of other countries showed increases, particularly Japan, Pakistan, the United States and the United Kingdom. Exports to the United States, Japan and the United Kingdom were substantially higher, the United States replacing the United Kingdom as the largest market, but exports to Indonesia, Thailand and China declined.

The value of exports of Hong Kong products was HK$2,282 million, an increase of about 80 per cent compared with 1958, of which clothing accounted for about 35 per cent of the total and textiles 18 per cent.

The volume of business transacted on the Stock Exchange last year was the highest ever recorded, extremely active conditions being experienced in the latter part of the year and there were appreciable increases in the prices of nearly all shares quoted in the official list. In November some of the banks increased the rates of interest charged on certain categories of advances with the intention of curbing unhealthy speculation in shares. This had only a limited effect as new money from abroad continued to seek investment.

The demand for land in the urban areas of Hong Kong and Kowloon became more active in the latter part of the year while factory sites in the New Territories are fetching substantially higher prices.

Over 138,000 tourists visited the Colony in 1959, nearly 35 per cent more than the previous year, and while an estimate of their total spending is not yet available, it must have made a significant contribution to our balance of payments.

FINANCES OF HONG KONG

In his address, presenting the budget to the Legislative Council last month, the Financial Secretary expressed the view that the Colony had come to a turning point in its financial history. After twelve successive years of surpluses there will be a deficit for the current financial year and an even larger one is expected in the year ahead. Although revenue continues to exceed estimates, both the Governor and the Financial Secretary referred to the ever mounting cost of public works, both recurrent and non-recurrent, which the requirements of the growing population of Hong Kong and the expansion of industry have made necessary.

For the financial year 1960/61, revenue is expected to rise by about 5 per cent but estimated expenditure is expected to increase by 30 per cent to over HK$935 million, leaving a prospective estimated deficit of no less than HK$267 million. Expenditure on non-recurrent public works is expected to amount to HK$290 million and includes over HK$100 million on hospitals, the city hall, reservoirs and the airport while HK$40 million is earmarked for re-housing squatters. In reaching a decision to increase taxation on petrol and tobacco, to meet part of the estimated deficit, the Financial Secretary recommended that 20 per cent of the cost of non-recurrent public works should be met from revenue, leaving 80 per cent to be found from surplus balances. These funds are not inexhaustible and, although the Financial Secretary seemed to think that the revenue estimates were somewhat conservative, it is evident that the problem of financing future capital expenditure is causing the government considerable concern.

CHINA

The improvement in international relations in the west inevitably invites a re-examination of China's attitude towards other Asian countries. Disputes with India and Indonesia and events in Tibet would seem to indicate a more aggressive policy but this is not borne out by the lack of activity in other areas of possible conflict. On the whole, it seems more likely that her main preoccupation during the past year has been not with foreign policy, but with her internal affairs. The speed with which China is planning to increase her industrial potential is bound to result in stresses and strains, but any modifications in policy or practice introduced to relieve these should be viewed as temporary expedients and not in any sense as a weakening in intention to drive forward or a change in the broad direction of the advance. It is, however, evident that "the great leap forward" of 1958 left behind a number of pressing problems which have had a considerable influence on recent developments and almost certainly account for such slowing down as has taken place.

Reports from various sources in the early part of the year spoke of a growing shortage of staple foodstuffs in the cities. This was clearly due in part to transport difficulties but the extent of the malaise seemed to indicate a more deep rooted cause which naturally led to doubts as to whether the previous year's bumper production claims were justified. A communique issued in August confirmed that yields claimed in 1958 had been exaggerated, both agricultural and industrial, while the targets for the coming year were scaled down. Further evidence that all was not well in the agricultural sector was not difficult to find. The village iron foundries and other small industrial units were to a large extent closed down to free labour for agriculture and other purposes, permission, and indeed encouragement, was given to members of the communes to use their spare time to raise livestock and to grow vegetables on private plots, while the communes themselves have undergone some changes.

The weather played its part in adding to the difficulties as some areas suffered from consider-

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in Hong Kong with Limited Liability)

REPORT OF THE DIRECTORS PRESENTED TO THE MEMBERS AT THE ORDINARY YEARLY GENERAL MEETING HELD AT THE HEAD OFFICE, HONG KONG ON FRIDAY, 11th MARCH, 1960

The Directors have pleasure in submitting the Balance Sheet of the Bank at 31st December, 1959, together with the Profit and Loss Account for the year ended at that date. A Consolidated Balance Sheet and a Consolidated Profit and Loss Account of the Group are also annexed.

		Hong Kong Dollars
The Profit of the Bank for the year, after providing for taxation on profits earned to date and after making transfers to the credit of inner reserves out of which provision for diminution in value of assets has been made, amounts to		$28,134,959
To this must be added the undistributed profit brought forward from the previous year		2,085,475
		$30,220,434
An Interim Dividend of £1 2s. 6d. per share on 498,491 shares was paid on 10th August, 1959, amounting to £560,802 7s. 6d. at 1.2 13.16		9,086,418
leaving a balance available for distribution of		21,134,016
This balance the Directors recommend be appropriated as follows:—		
Amount to be written off Bank Premises	$4,000,000	
A Final Dividend of £1 17s. 6d. per share on 498,491 shares, £934,670 12s. 6d. at 1.2 15.16	15,017,302	
		19,017,302
Leaving a balance to be carried forward to next year of		$2,116,714

Since 31st December, 1959, 133,307 shares have been issued in connection with our offer to acquire the entire share capital of The British Bank of the Middle East. In accordance with the terms of this offer these new shares rank for the final dividend for the year ended 31st December, 1959. As no income has yet been received from The British Bank of the Middle East, the final dividend on these 133,307 shares, amounting to £249,951 equivalent at 1.2 15.16 to $4,015,943, has been provided for and will, subject to the approval of the members in general meeting, be paid out of inner reserves.

The above recommendations have been incorporated in the accounts.

The Authorised Share Capital of the Bank has been increased by 400,000 shares of HK$125 each in accordance with the resolution passed at the Extraordinary General Meeting held on 18th February, 1959, and now totals HK$100,000,000.

During the year the Bank completed the acquisition of the whole of the issued share capital of Mercantile Bank Limited, partly for cash and partly in exchange for fully paid shares of the Bank. As a result of this operation the Issued Share Capital has been increased by 98,491 shares of HK$125 each and at 31st December, 1959, amounted to HK$62,311,375.

The Reserve Fund has been increased by a net amount of HK$47,186,643 representing the premium arising on the issue of the above shares less the excess of the cost of the investment in Mercantile Bank Limited over the total of the Issued Share Capital, Published Reserve and Undistributed Profits of that Bank at 31st December, 1958.

DIRECTORS.—During the year Mr. L. B. Stone, Mr. R. J. Sheppard and Mr. B. T. Flanagan, Deputy Chairman, resigned their seats and Mr. C. A. Wright and Mr. G. T. Tagg joined the Board. The Hon. H. D. M. Barton, M.B.E., was elected Deputy Chairman.

Mr. G. M. Goldsack, Mr. W. C. G. Knowles and Mr. L. Kadoorie retire by rotation, but, being eligible, offer themselves for re-election.

AUDITORS.—The Accounts have been audited by Messrs. Lowe, Bingham & Matthews and Messrs. Peat, Marwick, Mitchell & Co., who are eligible for re-appointment.

By Order of the Board,
MICHAEL W. TURNER, Chairman.

Hong Kong, 29th February, 1960.

BALANCE CARRIED FORWARD		$ 2,818,798

NOTES ON THE ACCOUNTS

1. *Confirmed Credits, Guarantees* and Endorsements outstanding amounted in the case of the Bank to HK$498,599,005 (*HK$391,975,858*) and in the case of the Group to HK$805,898,556 (HK$401,298,240). In addition there were commitments in respect of outstanding Forward Exchange Contracts.
2. Foreign Currency Balances have been converted into Hong Kong Dollars at approximately the rates ruling at 31st December, 1959. The Sterling equivalents of the figures shown in the Accounts have been converted at the rate of HK$1=1/3d.
3. The Hong Kong Currency Notes in circulation are secured partly by the deposit of funds in respect of which the Hong Kong Government Certificates of Indebtedness have been issued and partly by the deposit with the Crown Agents of investments having a market value in the case of the Bank of HK$32,155,504 (HK$32,659,904) and in the case of the Group of HK$37,265,504 (HK$32,659,904).
4. Government Securities included in the Group Accounts having a par value of HK$6,228,571 (HK$6,628,571) were pledged as security for the deposit of public funds.
5. Investments and Cash included in the Group Accounts amounting to HK$550,176 (HK$315,792) were deposited with the Authorities in certain territories under the provisions of the *Trustee Ordinances of those territories. No account has been taken of assets held or liabilities* incurred by the Trustee Companies as Executors or Trustees in the course of their business.
6. Directors' Fees, London Committee Fees, Chief Manager's Remuneration and Special Administration Expenses of the Bank amounted to HK$1,095,165 (HK$1,099,536).
7. Contracts for outstanding Capital Expenditure amounted in the case of the Bank to HK$3,428,000 and in the case of the Group to HK$7,986,176.
8. There are contingent liabilities for uncalled capital in respect of certain of the Investments and Subsidiary Companies of the Bank amounting to approximately HK$27,000,000.
9. Mercantile Bank Limited became a Subsidiary Company during the year and the Accounts of that Bank and its Subsidiaries are not included in the comparative figures in the Group Accounts.
10. Pursuant to an offer which became unconditional after 31st December, 1959, the Bank has acquired over 99% of the issued share capital of The British Bank of the Middle East represented by 1,982,854 shares of £1 each, fully paid. The consideration has been satisfied by the allotment, subsequent to the date of the Balance Sheet, of 133,307 new Bank shares credited as fully paid up and by the payment of £451,705 in cash. *In accordance with the terms of the offer the said 133,307 new Bank shares rank for the final dividend for* the year ended 31st December, 1959. The amount of such dividend, viz., HK$4,015,943, has been provided for out of inner reserves, no income from The British Bank of the Middle East having been received by the Bank up to 31st December, 1959.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the annexed Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. In our opinion the said Balance Sheet with the annexed Notes gives the information required by the United Kingdom Companies Act, 1948, in the manner so required for a banking company and on the basis authorised thereby is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1959, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

We have also examined the annexed Consolidated Balance Sheet of the Bank and its Subsidiary Companies with the audited Accounts of those Companies, certain of which have been audited by other firms. In our opinion the said Consolidated Balance Sheet with the annexed Notes gives the information required by the United Kingdom Companies Act, 1948, in the manner authorised for a banking company and on that basis gives a true and fair view of the state of affairs of the Group at 31st December, 1959.

Hong Kong, 29th February, 1960.

LOWE, BINGHAM & MATTHEWS, PEAT, MARWICK, MITCHELL & CO., *Chartered Accountants, Auditors.*

able flooding while in others there was a severe drought. Notwithstanding these calamities, the grain harvest has been stated to be 270 million tons, 8 per cent higher than the previous year's revised estimate but well below the original claim of 375 million tons for 1958. Further evidence of strain can be found from a recent article by one of the chief planners which states that "a new contradiction has appeared with increasing sharpness." This refers to the growing shortage of labour in the countryside which is expected to get worse. To solve this problem it is necessary "to speed up the carrying out of the technical transformation and the mechanisation and electrification of agriculture." Other writers strike the same note and it seems likely that a larger share of the country's resources in the future will be devoted to this purpose.

The difficulties which I mentioned above have lead to a renewal of the discussion as to how effective the "mass movement" can be. Progress in 1958 was achieved by large numbers being allocated to specific tasks which resulted in other important work often being left undone. Would it not be better, it is argued, to strive for a more balanced growth with less emphasis on too many large undertakings which require an undue preponderance of scarce resources? This is a criticism which I think could be levelled at planning in other parts of Asia, but it has not found favour in China where the holders of such views are classified as "right opportunists." The communes have also come under fire, on the one hand that they were premature and on the other that, as they still allow socialist collective ownership, they do not differ greatly from the agricultural producers' co-operatives which they replaced. Articles from official sources have recently appeared to rebut these charges and claim that "the people's commune movement is a great mass movement that meets the needs of the Chinese peasants to develop the rural economy rapidly." The advantage of being able to deploy "more rationally" the large amount of manpower in the communes is also stressed, as is the saving of labour power due to the community dining rooms and kindergartens. While it is admitted that ownership in the communes is still basically socialist collective ownership, the communal goal is there and the area of communal ownership is expected to expand steadily. Meanwhile, it is clear that the Government is undeterred by the confusion that attended the introduction of the communes and is determined to base its rural and agricultural policy on this system.

There is, however, little doubt that industrial production has shown a marked increase during the past year and considerable attention has been devoted to improving the transport system. The stability in recent years of the internal purchasing value of the currency has been one of the most successful achievements of the present government, but of late there have been signs that the supply of money has outrun the quantity of goods available for purchase and efforts have been made to combat this by raising the price of what are considered unessential commodities and by an active drive for savings. This excess of purchasing power will certainly require watching and the speed with which it is absorbed will depend to a large extent on the success which attends the government's efforts to increase the availability of consumer goods, particularly foodstuffs, and also to improve the distributive system. Unless some measure of success in solving this problem can be achieved there may be a greater tendency, in the words of one of their own periodicals, "to wonder why each person in our country gains so little in spite of the enormous increases achieved in the production of some products."

JAPAN

The signing of the Japan-United States Security Treaty in Washington on January 19th, after fifteen months of negotiations, has opened up a new phase in relations between the two countries. It is true that the interpretation of certain clauses in the notes attached to the treaty has aroused considerable controversy in left wing circles in Japan but it is doubtful whether there is any strong basis of public objection and the government has a sufficient majority in the legislature to ensure ratification. There has been no evident improvement in relations with China, despite the desire of Japanese industry for a resumption of trade, and it is difficult to see how this impasse can be resolved so long as China insists on official political recognition as a pre-requisite, unless there is a major change of policy on the part of the Japanese government.

In my address last year I mentioned that there were signs that the economy was recovering from the balance of payments difficulties of 1957. This proved more rapid than appeared probable at that time and the foreign exchange reserves have risen by $US461 million to a total of $US1,322 million and are now higher than at any time since 1952, while the year has been one of the most prosperous in the post-war period. The volume of foreign trade has expanded considerably and an appreciable rise in the index of industrial production has been recorded. Japan has continued to make an energetic drive to increase her export markets and has achieved a considerable measure of success. Of particular interest has been the heavy industry sector where there has been an increase in exports of iron and steel, heavy machinery and various manufactured goods to the United States and to some western European countries. The textile industry, which is sustained by steady and increasing domestic consumption, has continued to expand and exports have held up well in spite of restrictions in a number of countries. Shipping is going through a difficult time, due to a reduction in overseas earnings and to cancelled orders for ship construction, and there is considerable depression in the coal mining industry caused by increasing surplus stocks for which there is at present no demand. The improvement in Japan's balance of payments position has resulted in repeated requests for relaxation of foreign exchange and import restrictions to which some attention is now being paid. Certain changes have been made permitting exchange rates to be quoted in a more flexible manner while the announcement made in January this year indicates that the government now seems to be committed to a gradual liberalisation of the elaborate import restrictions.

It is expected that this year's rice crop will be the largest ever recorded, despite the typhoon in September which caused such heavy damage and tragic loss of life. There has been continuing progress in rice growing techniques, which is steadily reducing dependence on imports, and it is being predicted that in the not too distant

future Japan will be self-sufficient in rice production.

The expansion in foreign trade has been accompanied by increasing industrial investment, particularly in the steel industry, and Japan now claims to be the fifth highest producer in the world. This, together with the rising demand for bank loans and a 16 per cent increase in the note issue, has not passed unnoticed by the monetary authorities who are apprehensive of any indications of the development of an investment boom, which has caused so much damage to the balance of payments in the past. As a precautionary measure the Bank of Japan raised the discount rate in December and has been restricting its facilities to the banks, which have, since September, been obliged to keep a small percentage of their demand and fixed deposits as a reserve with the Bank of Japan, and this percentage can be increased up to 10 per cent should it be considered necessary.

With the ratification of a reparations agreement with South Vietnam, Japan has completed her obligations under the San Francisco Peace Treaty. Reparations agreements have already been signed with Burma, the Philippine Islands and Indonesia, the other signatories to the Peace Treaty having renounced their claims. The total burden of these reparations agreements amounts to the considerable sum of about £367 million, payable over varying periods of up to twenty years, but most of this will be in the form of goods and services and should lead to an enlargement of Japan's trading opportunities in these countries. Present trends appear to indicate that the improvement in the Japanese economy will continue and that the outlook for 1960 is promising.

PHILIPPINES

The agreement reached with the United States over American bases in the islands and the settlement of some of the outstanding financial matters under dispute have done much to restore more cordial relations between the two countries. Economic ties with the United States still remain close, but the volume of their trade with the Philippines has declined in recent years and a trade mission is to visit the islands this month. There are, however, indications of the desire of the administration to establish closer relations with other Asian territories and to increase trade with western Europe. Relations with Taiwan have been somewhat strained due to a dispute over the repatriation of a number of Chinese from the Philippines.

There has been a marked improvement in the economy during the year with the achievement of self-sufficiency in corn and rice, an excellent sugar crop and a reported favourable balance of trade for the first time since the war. Progress has also been achieved to a limited extent in halting the inflationary pressures, as a result of higher taxation and the imposition of the 25 per cent margin fee on sales of foreign exchange. These measures, however, contribute to higher prices and there is very little sign that government expenditure is being seriously reduced, without which any sustained reduction in the money supply seems unlikely.

The budget shows a surplus of income over expenditure of Ps. 13 million. No increases in taxation are proposed which results in the estimate being based on existing sources of revenue and not being dependent, as has been the case in the past, on congressional approval for new measures.

In his annual statement of the nation address the President recommended an amendment to the constitution to enable national and local elections to be held at the same time every four years. He also urged the abolition of the capital gains tax, which acted as a deterrent to expansion, and the setting up of a congressional committee to study the possibility of a gradual system of elimination of controls. In general, the President seems satisfied with the present state of the economy and, even if there are still a number of disturbing features, the outlook seems more promising than for some time past.

VIETNAM

The internal political situation in Vietnam continues to be stable and the elections to the National Assembly at the end of August, in which the National Revolutionary Movement supporting President Ngo Dinh Diem was again successful, passed off quietly. Relations with Thailand and Cambodia have improved, the latter having finally abandoned all territorial claims on South Vietnam.

There have been encouraging signs of expansion in the economy during the year. Progress has been maintained in agricultural development which continues to receive the active support of the government. The area under cultivation of which 80 per cent is devoted to the production of rice, increased by about 10 per cent and now covers one-fifth of the country. Government loans to rubber planters have enabled replanting to be resumed for the first time since 1945. Industrial development has proceeded at a slower pace, but a start has been made on a number of light industrial projects aimed at conserving foreign exchange which, when in operation, will go some way towards rectifying the present unfavourable balance of payments. The improvement in road and rail communications during the year will benefit internal trade while the reparations agreement with Japan will enable such schemes as the hydro-electric project in the Dalat area to be undertaken.

Exports to the French Community, the principal market, which were suspended in January last year, were resumed in May following agreement that payment should be made in transferable francs. Exports of rice were appreciably higher than in the previous year and almost all the exportable surplus for 1959 amounting to 250,000 tons has been sold although somewhat lower prices had to be accepted towards the end of the year. A bumper rice crop for 1960 is forecast which is expected to provide even better results. Increased exports of rice and rubber and decreased imports have reduced the deficit in the balance of trade to a lower level than in recent years. If this improvement can be maintained an increasing amount of the available resources, including United States aid which is still substantial, can be devoted to development projects with a consequent benefit to the economy as a whole.

CAMBODIA

Events in Laos and the increased communist activities within the country have been matters of considerable concern to the government. In a speech made last month the Prime Minister expressed his anxiety over recent developments but reiterated his conviction that neutrality should still be the policy to be followed.

There has been a welcome increase of 8 per cent in the value of exports compared with the previous year and total imports are about 6 per cent lower, thus reducing the trade deficit to Riels 404 million. This, however, was more than covered by the value of foreign aid which amounted to Riels 550 million. A five year development plan has been drawn up in which the principal objectives are the diversification and improvement of agricultural production and a modest programme of industrialisation which is intended to reduce the country's dependence on foreign aid. The economy will benefit from the recently completed highway between Phnom-Penh and the new port of Sihanoukville giving Cambodian produce direct access to the sea.

THAILAND

The country continues to be governed under the interim constitution promulgated at the beginning of last year which, in form, is similar to other administrations in the past. No indication has as yet been given as to when a new constitution will be announced. The government appear to be devoting considerable attention to strengthening the economy and to improving and modernising the financial system. A new inland revenue code has been introduced, import duties have been increased and the tariff revised, while tax collection has been more efficient. The anti-inflationary measures, which have been introduced, have had some success and the official cost of living index is down to the level of 1957 but with an adverse effect on revenue as many of the price cuts imposed were suffered by government monopolies. In his end-of-the-year message the prime minister announced that the government had repaid all its debt to the Bank of Thailand and that expenditure had been kept within budget allocations.

Increased exports of rubber, tin and maize have offset the disappointing exports of rice, which were 4 per cent less than the previous year and the trade deficit was less than in 1958. This year's rice harvest is expected to be a good one with an exportable surplus of 1.3 million tons but, in view of the difficulty experienced in disposing of the 1959 surplus and the increasing competition, in world markets, a further reduction in prices may be necessary. In consequence the continued high level of imports has given cause for concern and merchants have been warned that action would be taken to curb imports if the present trend persists.

The setting up of a national council for economic development and an industrial finance corporation, in which we and Mercantile Bank Limited have agreed to participate by subscribing towards the initial capital, is indicative of the continued efforts being made to encourage industrial development. During the year a mission from the International Monetary Fund and a team, appointed by the United States government to study the investment climate from the point of view of the private investor, completed their investigations. Both groups have submitted generally favourable reports on the economy although the latter had some criticism to make regarding the complicated procedure involved in obtaining approval for investment projects.

FEDERATION OF MALAYA

The final stage of Malaya's transition to full parliamentary government was reached during the year when elections were held for all the seats in state councils and in the lower house of the legislature. The Alliance Party won overall majorities in nine states but lost heavily to the Pan-Malayan Islamic Party in the two east coast states of Kelantan and Trengganu, while in the national elections the Alliance won 74

out of the 104 seats. Tengku Abdul Rahman, who had resigned earlier in the year to devote all his time to organise the Alliance Party's campaign in both state and national elections, was re-appointed Prime Minister. He has made some alterations in his cabinet and re-grouped certain ministries, the most important innovation being the creation of a new Ministry of Rural Development under the deputy Prime Minister. This new ministry will co-ordinate and expedite the government's plans to open up the large undeveloped areas in the country to provide a livelihood and employment for the growing population and also to improve the lot of the people now dwelling in the rural areas. It should also result in more rapid agreement being reached with state governments over such matters as the alienation of land. A loan of US$10 million from the United States Development Loan Fund granted during the year, together with other Malayan dollar funds which have been made available, will provide the necessary finance.

Malaya continues to pursue an independent foreign policy and adheres to her intention of avoiding formal commitments, but an indication for the future may perhaps be found in the proposal for a South East Asia friendship and economic treaty made by Tengku Abdul Rahman during his visit to the Philippines. The remaining communist terrorists are now mainly confined to areas along the border with Thailand where their activities are much restricted. So long as this main body holds out, Malaya may have to accept this situation as a continuing border problem unless a combined operation with Thai forces can be launched against them. Communist subversion inside the country continues to engage the attention of the government but the emergency regulations have been lifted from some four-fifths of the country although these can be re-imposed should the need arise.

The fortuitous increase in the price of rubber during the year has enabled the estimated deficit of M$114 million for 1959 to be covered from increased revenue from this source instead of having to be met from the reserves. The 1960 budget envisages ordinary expenditure of M$888 million exceeding revenue by M$14 million and in framing his proposals the Finance Minister prudently based his revenue estimates on a rubber price only slightly higher than in the previous budget and well below current prices. Although there is a welcome decrease of M$37 million in the cost of the emergency, expenditure on social services and development continues to increase while public debt charges will be 20 per cent higher than in 1959. In keeping with the government's desire to avoid deficits on current expenditure, further taxation has been imposed which includes a reduction in the rates of personal allowances coupled with increases in the standard rates of income tax and higher customs duties on a wide range of imports. The progress of Malaya's first five year development plan was retarded in its early years by lack of funds but the improved financial position, together with a further instalment of the Brunei government loan, loans from the United States Development Loan Fund and assistance from the United Kingdom, will enable the government to undertake the expenditure of some M$250 million during 1960, with the result that the plan will be implemented to a greater extent than seemed likely two years ago.

The increased world demand for rubber and tin has benefited all sections of the Malayan economy. The gross amount of Malayan currency in circulation at the end of January this year, including Singapore and the Borneo territories, at M$1,125 million is the highest ever recorded, while private bank deposits, and savings accounts at the end of the year were 28 per cent higher than in 1958. The first certificates under the Pioneer Industries Ordinance were awarded during the year and a number of new industrial enterprises, both Malayan and foreign, have been set up while plans for others, including two oil installations, have been announced. To assist the private sector of industry an industrial finance company, Malayan Industrial Development Finance Limited, is to be established, the issued capital for which is being provided by the government, leading banks and insurance companies. The policies of the Alliance government are aimed at encouraging private enterprise and the development of trade and industry in all fields and the prospects of a further expansion of the economy are favourable.

TIN AND RUBBER

Increasing industrial demand for tin during the year has enabled the International Tin Council to authorise a progressive increase of export quotas for producing countries from 20,000 tons for the first quarter of 1959 to 36,000 tons for the first quarter of 1960, while the Tin Buffer Stock Manager has been able to reduce his holdings from 23,325 tons at the end of 1958 to about 10,000 tons at the end of 1959. Malaya's quota is now over 90 per cent of actual exports before restriction was introduced in December 1957 and this will enable all mines which closed since that date to resume operations if they so wish. The trend of consumption in the future appears to be favourable and the settlement of the steel strike in the United States is expected to strengthen demand still further.

The International Tin agreement expires next year and it would seem desirable in the interests of producers that an early decision should be reached regarding the future of the Tin Buffer Stock as, under the terms of the present agreement, it must be liquidated before 1961 unless it is incorporated in any new agreement which may be reached.

The rise in the price of natural rubber during the year, which was stimulated by heavy purchases by Russia, has emphasised the increasing demand for rubber of all types and the shortage of supplies of natural rubber. Earlier in the year it was announced that 570,000 tons would be released from the United States and United Kingdom stockpiles over a number of years but assurances were given that sales would be made without disturbing the market. Subsequent disposals of relatively small tonnages from these sources, which did not include high grade rubber, have had no appreciable effect on prices. These have averaged 101¼ Malayan cents per pound during 1959 compared with an average price of 80¼ Malayan cents per pound during 1958. The higher price for natural rubber, although beneficial to government revenue, is not in the best long term interests of the industry as a whole since it tends to discourage replanting with high yielding trees, particularly among smallholders, and also makes synthetic rubber with its steadier and lower price attractive to consumers.

During the last twelve years over 1,200,000 acres on estates and small-holdings have been planted with high-yielding rubber with potential annual yields of 1,500 pounds to 2,000 pounds per acre compared with an average yield of 500 pounds per acre for old rubber. This replanting and new planting is a continuing process and the Malayan rubber industry is well placed to meet the increasing demand for the consumption of natural rubber which is forecast for the future. Pan-Malayan exports of rubber for the year totalled 1,201,000 tons, an increase of 11 per cent over 1958, the highest ever recorded, of which Malayan production was 696,000 tons, 5 per cent higher than in the previous year.

SINGAPORE

The new constitution came into force on June 3rd last year when Singapore became a self-governing state within the Commonwealth, the United Kingdom retaining only responsibility for defence, foreign affairs and the right to maintain bases on the island. During the first six months of the new regime the duties of the Head of State were discharged by the United Kingdom High Commissioner in the person of the last Governor of Singapore but in December, Inche Yusof Bin Ishak, brother of the Minister of Agriculture in the Federation of Malaya, was appointed Head of State.

In the elections which preceded the new constitution the People's Action Party gained a decisive victory, winning 43 out of the 51 seats in the fully elected single chamber legislature and some 54 per cent of the total votes cast. The new government, composed of energetic young men, has a well disciplined party behind it and will, it is hoped, be able to give Singapore the firm, vigorous government that will be needed in dealing with the many problems likely to arise during the first years of the new state's evolution.

The new government inherited an estimated ordinary revenue deficit of M$14 million in the 1959 budget. Soon after assuming office, action was taken to eliminate this deficit by the immediate reduction in the emoluments of government servants and by reducing budgeted expenditure, while in September higher duties were imposed on cigarettes, petrol and foreign films. Further economies were expected to result from the abolition of the City Council and the integration of its various functions with several government departments. Also announced was the setting up of an Economic Development Board to replace the Industrial Promotions Board, a scheme to develop Singapore harbour facilities and a costly and ambitious housing plan. The new government also tackled the perennial problem of secret societies and has extended the Preservation of Public Security Ordinance for a further period of five years. These and other measures, together with assurances given regarding the treatment of foreign capital, have helped to create a more hopeful atmosphere than existed at the time the elections were held.

In his speech introducing the budget for 1960 the Finance Minister revealed that the measures taken by the government earlier in the year had had the desired effect and the actual results for 1959 are expected to show a small surplus. No further tax increases, other than the imposition of modest port dues, are proposed for the 1960 budget which shows an estimated deficit of M$6 million. The government's request that the United Kingdom should bear the cost of local defence will be considered in the context of aid for Singapore's overall development plan for the the next five years which will be discussed by the Finance Minister in London this year.

Trading conditions generally were quiet during the first half of 1959, due largely to uncertainties as to the effect of the impending constitutional changes, but the sharp rise in the price of rubber brought increased business

during the second half of the year. There has been a decline in the entrepot trade, exports to Indonesia in particular were over 60 per cent lower than the previous year, due mainly to restrictions imposed by the Indonesian government, but imports, chiefly of rubber, showed a substantial increase. Pan-Malayan trade showed an overall increase of about 9 per cent with a favourable balance of M$259 million compared with an adverse balance of M$369 million in 1958.

It seems clear that, notwithstanding the hopes expressed for rapid industrialisation in Singapore, commerce is likely to be the mainstay of the economy, both to provide employment and to produce the revenue, for some years to come. However, in its endeavours to meet the demands of the growing population for employment, the government is faced with the necessity of striking a balance between the retention of the free port status for the benefit of the entrepot trade and the desire to impose tariffs to protect newly established industries. Manufacturing is hampered by the fact that Singapore itself is a relatively small market, labour costs are high compared with Hongkong and Japan, and any locally made goods available for export are subject to tariffs in many countries including the Federation of Malaya. The proposals made by the Finance Minister in his budget speech regarding the creation of a common market and an integrated industrialisation programme for Singapore and the Federation would be of great benefit to the former but it remains to be seen whether they will be found acceptable by the Federation government whose problems are not exactly similar.

NORTH BORNEO

Amendments to the North Borneo constitution were announced in January this year whereby there would be a majority of nominated unofficial members on the Legislative Council which will enable the various communities and interests in the Colony to be more widely represented in the government. This modest constitutional advance is similar to that which has been introduced into other dependent territories in the Commonwealth in the past.

The continuing demand for the colony's principal exports of timber and rubber has resulted in North Borneo having another satisfactory year, with the combined value of imports and exports over 28 per cent higher than in 1958 and a favourable trade balance of about M$22 million. The revised estimates for 1959 show a revenue surplus and no further taxation is proposed in the 1960 budget which is expected to balance after providing M$5 million as a contribution towards development. There has been no appreciable increase in taxation since 1956, but a note of warning was sounded by the Financial Secretary in his budget speech when he drew attention to the fact that, while revenue had increased by just over 25 per cent between 1955 and 1958, recurrent expenditure had increased by over 56 per cent during the same period. A development programme has been drawn up for the next five years involving expenditure of M$70 million. The main emphasis will be on roads, harbours and airfields while finance will be provided from colonial development and welfare funds of over M$25 million and contributions from the revenue and locally raised loans. Agricultural development continues to show promising results and large areas of rich soil have been found in the Lubuk Valley which will be a valuable addition to the known resources available for exploitation in the future. The first shipments of cocoa to the London market have been well received while the reports of growth in the first oil palm plantations are encouraging. A further circumstance which seems likely to result in a certain amount of development has been the choice of the Kota Belud area as a new army training ground and this has already been described as the "Salisbury Plain of the Far East."

BRUNEI

The new constitution came into force on September 29th under which the post of British Resident, whose responsibilities included the general administration of the State has been abolished. His duties are now being discharged by a Mentri Besar, appointed by His Highness the Sultan, assisted by a State Secretary and other officials on the Malayan model. Ties with Sarawak have been severed and a High Commissioner, resident in Brunei, appointed by Her Majesty the Queen, will directly represent the United Kingdom Government which continues to be responsible for external affairs and defence.

The revenues of the State are still largely dependent on the oil industry and the comfortable surplus of income over expenditure continues. The government is, however, anxious to lessen its dependence on this source and is giving urgent attention to the development of agriculture, particularly rubber planting, and is encouraging the setting up of new industries.

SARAWAK

Trading conditions showed a great improvement compared with 1958, both the value and volume of exports being the highest since the boom years of 1950 to 1952. Increased prices for rubber, pepper and timber and a bumper illipe nut crop benefited the revenue considerably and this has enabled a deficit of some M$6 million in the Development Fund to be liquidated and a further sum made available for capital expenditure this year.

A revised M$115 million development plan covering the years 1959 to 1963 has been approved in which a number of uncompleted schemes in the previous plan are carried forward. The main emphasis in the new plan is on communications, agriculture and education and particular stress is laid on the need to accelerate the rubber replanting scheme.

Our office in Sibu was opened in August and has made very satisfactory progress. There is every indication that the demand for Sarawak's products will continue during 1960 and an increasing volume of bauxite exports is a valuable addition to the economy.

INDONESIA

Internal security conditions in Indonesia have shown little change during the past year and although the government has achieved a number of successes against the rebels there still remain appreciable areas where their control is far from effective. Using his powers under the state of emergency President Sukarno dissolved the Constituent Assembly in July and announced a return to the 1945 Constitution, which assures the new government a five year term of office and enables legislation to be promulgated by presidential decree. In January this year all political parties were brought under government supervision, while the military authorities continued to exercise a considerable measure of control over the administration.

Economic conditions have steadily deteriorated and severe inflation continues to be caused by heavy military expenditure which has been met by deficit financing. In an attempt to combat inflation drastic monetary measures were imposed at the end of August. These included a fourfold devaluation of the rupiah, the reduction by 90 per cent of the value of the higher denomination bank notes and the conversion of 90 per cent of bank balances of over Rp. 25,000 into government loans. These measures had the immediate effect of reducing substantially the amount of currency in circulation and the advances by the Bank Indonesia to the government but, at the same time, they almost brought the economy of the country to a standstill. Banks in particular suffered severe losses as no exception was made to cover notes held in the till. It should have been obvious, I think, that such a draconian measure could not, in itself, be expected to effect a cure, unless it were to be followed up by a reduction in government expenditure, and of this there has been no sign. Thus at the end of the year, the value of notes in circulation was again higher than at the end of August. The cost of living continued steadily upwards and by January it had in fact risen to such an extent that the government announced measures to impose price controls. It is hardly surprising that under such conditions our office in Djakarta has had a difficult year, and the recent directive that all foreign trade should come under direct government control will undoubtedly add to the disabilities under which we operate.

A dual nationality treaty was signed during the Bandung conference in 1955 under which the Chinese minority were to be given an opportunity of becoming Indonesian citizens and renouncing Chinese nationality. The treaty did not come into force and a large number of Chinese have been affected by the enforcement of a ban on all alien traders in rural areas. This has been the cause of an acrimonious dispute with China which has now been partially settled by the exchange of ratification documents relating to the treaty, but it is not yet clear how this will affect the problem of the displaced Chinese.

INDIA

The border dispute with China, which has cast its shadow over Asia, has not been without its influence on the Indian political scene. Dissatisfaction with the ruling Congress party's socialist policies had already become more vocal and the new Swatantra party, which was formed in August with a right-wing bias, gained many members, although it has found little support in West Bengal. When the news of the border incidents became known, strong condemnation of China's attitude was expressed in many quarters and a number of supporters of the Congress party were to be found amongst those who criticised Mr Nehru for not taking a more determined stand. While it is difficult to see at the moment any alternative party being in a position seriously to challenge Congress at the next elections, the differences within that party, which are becoming more pronounced, are likely to have their effect on its general policy. Relations with Pakistan, on the other hand, have shown a welcome improvement. The complex problem of the Indus waters seems likely to be settled and agreements on outstanding disputes along their frontiers have been signed.

In Kerala the central government felt compelled in July to take over the administration of the state and elections held last month resulted in an alliance of the Congress party, Praja Socialists and the Muslim League gaining a substantial success over the Communists in terms of seats in the legislature. It is noteworthy, however, that the Communists polled nearly one million more votes than they obtained in 1957 which raises doubts as to the validity of the claim that the party has lost popular support due to events on the Chinese border.

The economy showed general signs of improvement as the capital investment of the past few years is beginning to bear fruit. Industrial production, which has recently been somewhat stagnant, began to move forward and it seems likely that the targets set under the second five year plan will be achieved. While exports showed an upward trend imports were also considerably higher and the short-fall for the year is expected to be at least the equivalent of £150 million. As a result of arrangements sponsored by the International Bank aid seems certain to be provided for the rest of the present plan, but the total of foreign reserves, although showing an improvement, is still only about the level of last year's trade deficit. This gives some idea of the difficulties that will be encountered in drawing up the third five year plan and the unlikelihood of there being any major relaxation of the stringent import controls. While the Finance Minister on his return from his world tour expressed his appreciation of the interest shown in India's development, he went on to point out "that our foreign exchange needs for the third plan will be quite large and that the assistance required will have to be on a fairly long-term repayment basis." Meanwhile a visit paid to both India and Pakistan by three leading bankers with wide international experience, namely Dr Abs, Sir Oliver Franks and Mr Sproul, will enable a personal study of the economic situation on the spot to be made.

As a result of the favourable monsoon in 1958, the total output of food grains showed a substantial increase although it is doubtful whether the current crop will be maintained at the same level. Unfortunately this rise in production had little effect on food prices which increased sharply and the discontent became so vociferous that the Food and Agriculture Minister resigned in August. Much of the criticism was levelled at state trading which was considered to have aggravated the shortages and it seems likely that there will be less emphasis on this method in future. A report by an agricultural production team sponsored by the Ford Foundation focused attention on the magnitude of the task India faces in her effort to achieve self-sufficiency in food and, although some of the findings may be controversial, the problem seems likely to grow in intensity. A fourth agreement was reached with the United States to obtain agricultural commodities against payment in rupees.

The commissioning of the first blast furnace at the British built steel works at Durgapur by the President in December brings the three state-owned factories into operation. When full production is achieved in these plants and in the extensions to the private sector, it seems likely that India will be self-sufficient in steel. This should result in any surplus being available for export but there is some doubt as to whether the price will be competitive.

PAKISTAN

The military government under President Ayub Khan, which took charge at the end of 1958, has wrought a remarkable change in the political and economic condition of the country. The whole administrative machine has received a severe overhaul and holders of public office, who were found guilty of misconduct, have been dismissed. This has resulted in a more vigorous and forward-looking attitude permeating throughout the public service which has given the mass of the people a sense of purpose which has been lacking in the past. Land reform, which was found to be beyond the powers of previous governments, has been successfully tackled and considerable progress has been made in housing refugees. The first anniversary of the revolution was held in Rawalpindi, where the new seat of government has been established, and the President was able to look back with satisfaction on the achievements of the past year. Nevertheless, he stressed that they had a long way to go before the standards in Pakistan were brought up to those of the contemporary world.

The economic position of the country has also benefited from the better administration. The collection of overdue taxes has helped the revenue, inflation has been checked and the balance of payments has shown a steady improvement, so much so in fact that it has been found possible to cancel the standby credit provided by the International Monetary Fund. Exports have recently shown an encouraging improvement due to the new incentive scheme, although the exportable surplus of cotton continues to fall due to static production and increased consumption. The import licensing system has been thoroughly overhauled and, although consumer goods still remain in short supply, the more liberal availability of licences for raw materials has played its part in the rise in industrial production by about one-third. More encouragement is being given to investment from abroad and agreement has been reached on the establishment of an oil refinery in Karachi by a consortium composed of British and American oil companies, while a carbon black factory is being built in Baluchistan with foreign participation. The newly established Water and Power Development Authority has already made progress in utilising reserves of natural gas and extending and co-ordinating the various irrigation schemes in West Pakistan. Grain procurement by the government has been more successful than in previous years while rice production in East Pakistan has been improved by adopting methods in use in Japan but substantial quantities still have to be imported.

Notwithstanding the progress that has been made, many problems still remain to be solved and the country continues to be dependent to an almost unhealthy extent on substantial contributions of foreign aid, while self-sufficiency in food production will take some time to achieve. It is encouraging to note that last month President Ayub Khan announced the appointment of a committee to draft a new constitution.

BURMA

Internal conditions have continued to improve under the caretaker government led by General Ne Win and operations against the insurgents have been undertaken with more vigour, which has resulted in there now being a greater degree of security in the countryside than for many years. This enabled general elections to be held in February this year in which the "clean" faction of the Anti-Fascist People's Freedom League, led by the former Prime Minister, U Nu, gained a large overall majority. This was considerably greater than was expected, and the absence of any worthwhile opposition may not be in the best interests of the country.

The government has continued its measures to control prices of consumer goods, but the increase in import duties imposed in October and the shortages caused by severe import restrictions earlier in the year have caused prices and the cost of living to edge upwards. Steps have been taken to remedy this trend by a more generous issue of import licences in the second half of the year. Improved exports of rice, which were about 300,000 tons more than in 1958, and of timber, have resulted in a trade surplus of kyats 45 million for the fiscal year ended September 30, 1959, compared with a deficit of kyats 208 million in the previous year while the foreign exchange reserves increased by about kyats 100 million. The entry of quasi-government bodies into commerce in all its aspects has been a feature of business conditions in Burma for some time past. During the year a further development has been the increased participation of the army, which has turned its attention to a number of trading activities including a bank and a shipping line. The position of foreign trading companies will in fact be made almost untenable if, following the introduction of the export incentive scheme for indigenous exporters, the order that import licences would only be issued to Burmese nationals comes into force in June. Under these circumstances, it is doubtful whether the Foreign Investment Act, designed to offer attractive terms to foreign investors, or the proposed Industrial Development Bank, will have a great deal of appeal unless private enterprise is accorded more consideration than it has had hitherto.

The government continues to follow a policy of neutrality and non-alignment, but there have been signs of disenchantment with Soviet bloc countries particularly over matters connected with trade and aid. Relations with China have improved and one of General Ne Win's last acts as Prime Minister has been to sign a ten year treaty of friendship and non-aggression in Peking and also a boundary agreement under which both China and Burma surrendered tracts of territory now occupied by them.

CEYLON

Ceylon has been passing through an unhappy phase and for five months of the year the country was placed under a state of emergency. The position of the coalition government, weakened by the defection of a number of its supporters in parliament and by the resignation of the marxist members from the cabinet, became increasingly precarious and legislation was only passed by slender majorities. At the end of September the country was shocked by the assassination of the Prime Minister, Mr Bandaranaike, and this precipitated a further period of political unrest. Although the government remained in office under the new Prime Minister, Mr Dahanayake, it continued to lose support and, after narrowly surviving two no-confidence motions, parliament was dissolved in December and general elections are to be held on March 19th.

The budget for the next financial year shows a deficit of nearly Rps 400 million, the majority of which it is proposed to finance by local borrowing and foreign aid. In his budget speech the Finance Minister indicated that the Inland Revenue Department were having difficulty in applying and collecting taxes which in view of the complicated structure, including the wealth and expenditure taxes, is hardly surprising. The tax on debits to current accounts gives little encouragement to the public to develop the banking habit and has resulted in an unnecessary increase in currency notes in circulation, particularly of higher denominations.

In view of the disturbed political situation it is not surprising that there has been some deterioration in the economy and that little attention has been paid to the ten year development plan which was published during the year. External assets have fallen to the lowest level since 1954, the trade deficit amounted to Rps. 253 million compared with a deficit of Rps. 6 million for 1958 and the amount of treasury bills outstanding increased by Rps. 250 million. Fortunately the production and export of tea, which contributes over 60 per cent of export income, has continued at a high level and better prices for all grades were obtained during the second half of the year.

MAURITIUS

The first general elections under the new constitution were held in March when 90 per cent of the electors cast their votes. The Labour Party gained a clear majority by winning 24 out of the 40 constituencies and the new government continues to retain the support of the majority of the population.

Weather conditions during the year were on the whole satisfactory, and the sugar crop produced was an all time record at 580,000 metric tons representing an increase of about 10 per cent over the previous year. In terms of the Commonwealth Sugar Agreement the United Kingdom Ministry of Food purchased 343,375 tons at £45 2s. 0d. per ton, and the balance was sold in other markets at prevailing world prices.

The Commonwealth Sugar Agreement has been extended for a further year, that is up to and including 1967. The negotiated price for 1960 has been fixed at £44 8s. 0d. while the quantity which the Ministry of Food has agreed to purchase has been increased by 3 per cent to 353,425 tons representing a net gain in value.

The five year development programme, which was approved in 1958, is now gathering momentum and imports of machinery and building material show a steady increase. Textile imports on the other hand, have been lower as the market is dull and over-stocked.

Since the beginning of this year the island has had the misfortune to be struck by two cyclones. The second one, at the end of last month, has caused some loss of life and heavy damage, the full extent of which has yet to be ascertained.

CONCLUSION

I have now come to the end of my survey of the countries in which we and Mercantile Bank Limited operate and on the whole satisfactory progress has been made during the past year. The main problem which these countries have to face, is the necessity of increasing their national wealth to meet the needs of their growing populations. This fact is of course well known, but the extent of the increase in population may not be so generally realised. In view of the importance of this subject, I propose to conclude with a few figures from a comprehensive study, which has recently been published by the United Nations, Economic Commission for Asia and the Far East, on population trends in this area.

The main cause of the population increase has been the rapid fall in mortality "while fertility, on the contrary has generally remained constant." This has resulted in the population of the region rising from 934 million in 1920 to 1,462 million in 1956, and accounts for more than half of the increase in the world population during the period which rose from 1,800 million to 2,700 million. It is estimated that China has now a population of over 600 million with India just under 400 million, from which it can be seen that one person in every three in the world today belongs to one or other of these two countries.

The annual number of births per 1,000 population varies in different countries in this area from forty to fifty, a rate similar to that in Latin America, but more than twice the rate in the industrial countries in the West. While the birth rate remains relatively stable, mortality during the last ten years has steadily declined. India, for example, which had a mortality rate of 43 per 1,000 at the beginning of the century has reduced this to 30 or a little less. As a result, the annual natural increase in the region in recent years is an average of 1½ per cent nearly twice that of Europe, with Hong Kong, Singapore and the Federation of Malaya at least 3 per cent, China, Ceylon, the Philippine Islands, Pakistan and the countries bordering the Mekong River over 2 per cent, and India, Japan and the rest slightly below this. On the average 40 per cent of the population in the region is under fifteen years of age which is almost double the percentage in France and the United Kingdom.

I think these figures speak for themselves and I shall not labour the point by dealing with future trends except to add that the study estimates that by 1980 many of these countries will have doubled their present population. This is certainly a sobering thought and further explanation is unnecessary to show why the pace of development should not be retarded.

SOCIÉTÉ GÉNÉRALE DE BELGIQUE

The Annual General Meeting of shareholders of the Société Générale de Belgique was held in Brussels on February 23, 1960. The Governor, M. Paul Gillet, presided.

The Company's chief asset is its holding shares in financial, industrial and mining companies in Belgium, the Congo, Canada and other countries. The portfolio is shown in the Balance Sheet at the conservative valuation of 4,034 million Belgian francs (about £28.8 million sterling).

The investment revenue in 1959, consisting in the main of dividends paid to the Company from the 1958 profits of the firms concerned, inevitably reflects the 1958 business recession. Investment revenue was B.frs.529,931,114 (against frs.616 million in 1958), but the loss was partly offset by an increase of frs.18 million in the other earnings, which rose to frs.77,690,148.

After again providing frs.50 million for contingencies and frs.40 million for depreciation, and meeting other outgoings, the net profits for 1959, amounting to frs.469,303,450, were lower by only about 8 per cent than in 1958.

The General Meeting approved the appropriation to the Reserve Fund of a further frs.46.95 million, and the payment of a dividend of frs.510 per share (*Parts de Reserve*). The dividend compares with a distribution of frs.550 per share in respect of 1958.

The following are extracts from the Report of the Directors to the Annual General Meeting, giving a brief summary of the activities of some of the associated companies:

The resources of the *Banque de la Société Générale de Belgique* were increased by a further capital increase, and deposits rose by 10 per cent. A dividend of frs.85 (unchanged) was paid for the year 1958.

The *Compagnie Maritime Belge*, despite a decrease of 20 per cent in the 1958 profits, maintained its policy of fleet modernisation.

The *Société de Traction et Electricité* distributed a dividend of frs.162.50 for 1958, as compared with frs.160 for 1957. During 1959, the technical bureaux of the company took charge of the building and initial operation of several 120 mW thermal monoblock re-superheated power stations and participated in the planning of various projects in the nuclear energy field. They also continued their activity abroad as consulting engineers, notably in Columbia and Iraq. As a member of the Abelinga Association, Traction et Electricité is taking part in the planning work for hydro-electric development on the river Congo at Inga.

In 1959, *Papeteries de Belgique* participated with the Bowater Scott Corporation Ltd., of London, in the formation of *Bowater Scott Continental Company*. The object of the new company is the production of all cellulose products.

The *Société Belgonucléaire* further extended its field of activity. The company sold to a leading Swedish firm its rights in a 124,000 kW nuclear project worked out in conjunction with General Nuclear Engineering Corporation. The sale is evidence of the value attaching to this work.

Cockerill-Ougrée which, last September, opened a new steelmaking plant of 1½ million tons capacity, has adopted a five-year programme for investment expenditure of frs.7,000 million.

At *Forges de la Providence*, an investment programme of frs.4,000 million was completed and a further programme of more than frs.3,000 million put in hand.

The erection, near Liège, of *Tolmatil's* highly specialised plant, which is to be used entirely for the manufacture of magnetic plates, was completed in 1959 according to schedule. Manufacture on the industrial scale was put in hand about the end of the year.

The dividend paid for 1958 by the *Société Générale Métallurgique de Hoboken* was frs.525 net per share against frs.475 in 1957. The copper refinery, the uranium division, and the cobalt workshops worked at full capacity in 1959. New technical improvements, concerned mainly with semi-conducting metals, were perfected during the year. Merchant quantities of monocrystalline germanium, electronically pure selenium, pure oxides of tantalum and niobium are produced. In 1959 the company participated in the formation of *Génie Métallurgique et Chimique* (Méchim). The object of Méchim is to make available its own technical information and processing knowledge in connection with

the manufacture of sulphuric acid and related chemical products.

Despite the recession, *Ateliers de Constructions Electriques de Charleroi* (ACEC) paid a dividend of frs.45 (unchanged) for the year 1958. After July, 1959, the level of orders returned to normal. The company is now able to make the biggest components of generating and transforming gear; and in 1959 it also opened a new micro-motor factory at Ruysbroeck, near Brussels, took a number of steps to enhance its standing in the electronic field, and manufactured the apparatus for the first locomotive equipped with cilicium rectifiers. An increased volume of business is expected in the years ahead.

In 1959, *Petrochim*, in association with the Union Carbide Corporation of New York, participated in the formation of *Cobenam*. This new company will produce polyethylene.

The results of *Carbochimique* for 1958 enabled a net dividend of frs.50 per share to be paid, as compared with frs.75 for the previous year. A urea production plant, with a capacity of 50,000 tons per annum, was brought into operation at the end of 1959, and will be in full production during 1960.

Despite the political position of the Congo, new companies were created in 1959, and the investments made by the chief companies associated with Société Générale de Belgique amounted to frs. 3,500 million (£25 million sterling).

In association with the *Compagnie du Katanga*, a Dutch and a German group, the *Compagnie du Congo pour le Commerce et l'Industrie* (CCCI) took part in the formation of *Entreprises Agricoles et Industrielles de l'Equateur* (Agriqateur). CCCI also participated to the creation of *Syndicat pour la Recherche du Pétrole dans le Bas Congo*. A dividend of frs.260 per share was paid by CCCI for 1958, as compared with frs.300 for the previous year.

On January 4, 1960, the *Société de Recherches et d'Exploitations des Bauxites du Congo* (Bauxicongo) was formed by the *Société Forminière* and the members of the *Syndicat de Recherches Minières du Bas et Moyen Congo* (Bamaco).

The diamond concessionary *Société Minière du Bécéka* produced 16,090,034 carats in 1958, or nearly a million carats more than in the preceding year. A dividend of frs.220 was paid. In 1959 the company opened a central washing and concentration plant for diamond-bearing gravels, in which new procedures are applied for the automatic control of all operations.

Union Minière du Haut-Katanga will shortly bring into operation the first unit of the new copper-cobalt electrolytic plant at Luilu. Each unit will have a capacity of 50,000 t., and the plant will be completely automatised. Production of copper in 1959 rose to the record level of 280,000 tons. Production of cobalt was raised to 8,350 t. compared with 6,501 t. in 1958. The net dividend for 1958 was frs.1,500 per whole share (unchanged), involving a distribution of frs.1,863 million.

The Consolidated Profit and Loss Account of *Sogemines Limited* showed a profit of Can. $401,940 in 1958. This is 18 per cent higher than in 1957. *Iroquois Glass Company* was formed in July, 1958, and the first of the two glass furnaces was lit in April, 1959. A new chemical company, *Brockville Chemical Limited*, was formed in August, 1959. The factory is expected to come into production in the early months of 1961.

SCOTTISH EQUITABLE
LIFE ASSURANCE SOCIETY

1959 A VERY SUCCESSFUL YEAR

NEW BUSINESS REACHES RECORD LEVEL

Mr R. K. Cuthbertson, W.S., Chairman of the Board of Directors, presided at the One Hundred and Twenty-Ninth Meeting held on March 17th in Edinburgh. In the course of his remarks Mr Cuthbertson said:

We have had another very successful year. Our new business figures show a substantial increase over our record total of last year. Net new sums assured for 1959 amounted to £10,276,126. At the Annual Meeting in March 1958 Mr Watson, the then Chairman, drew attention to the fact that our new business had exceeded £6 million for the first time—in fact the total was over £6,600,000—and it is very gratifying to note an advance of more than 50 per cent over the last two years. The 1959 total is made up of sums assured of over £7,800,000 in policies on individual lives and of over £2,450,000 in policies on groups of lives in connection with staff schemes. Both these figures are greater than anything we have previously achieved while the increase of nearly £1,900,000 over the 1958 total is some £170,000 greater than the corresponding increase reported last year which was at that time a record.

High Interest Yield

Our premium income has increased by £240,000 and is now approaching the two and a half million level. The gross interest income has also risen substantially and exceeds £1,500,000 in the Life Assurance Fund. The increase arises partly from the growth in our funds and partly from enhanced dividends on ordinary stocks. The actual gross rate of interest earned is £6 10s. 4d. per cent, an increase of no less than 4s. per cent on the 1958 figure. This rate is eminently satisfactory and is the highest in our history but I think it well that I should issue a note of warning. In February of this year the Chancellor of the Exchequer made a further appeal that the benefits of higher productivity should not be absorbed entirely by increases in either wages or profits but should be shared with the consumer. Price reductions would do far more to consolidate our present prosperity than higher profit margins and dividends. It is likely that we shall see in the near future a trend towards reduced profit margins and we cannot anticipate the same rate of advancement in dividends as we have hitherto experienced. On the other side of the Account claims by death have risen by £100,000. As a result of the year's operations the Life Assurance Fund has increased by the sum of £1,720,000.

The total assets now stand in the balance sheet at over £26,000,000.

Increased Intermediate Bonus Rates

The Society's rates of intermediate bonus for 1958 and 1959 have been 46s. per cent per annum compound in the case of ordinary fully participating assurance policies and 42s. per cent per annum compound for ordinary fully participating deferred annuities. These rates were fixed at the Quinquennial Investigation as at December 31, 1957, the date of our last declaration of bonus. In view of the progress and prosperity of the Society the Directors decided that the position should be reconsidered although only two years of the present Quinquennium have elapsed. Full investigations have been made and the results I am pleased to say have shown a very strong and healthy position. The Directors have accordingly decided to recommend that the rates of intermediate bonus be increased in respect of premiums payable after December 31, 1959, to 50s. per cent in the case of ordinary fully participating assurance policies and 46s. per cent in the case of ordinary fully participating deferred annuities. These rates, as I have mentioned, are on the compound principle, i.e., the bonuses are calculated on the sum assured (or annuity) plus the bonuses already added to these benefits.

With-Profit Pension Scheme

The passing of the National Insurance Act 1959 focused attention on employers' pension problems and gave rise to increased activity in the market for assured pension schemes. In particular, growing interest has been shown in schemes arranged on a with-profit basis and in order to meet all requirements the Society has introduced a with-profit pension scheme. Those employers who assure their employees' pensions with the Scottish Equitable now have the opportunity of participating in the profits and general prosperity of the Society. The new plan offers immediate participation by the use of current premiums which are adjusted from time to time in light of conditions then ruling and further participation by quinquennial bonus allocated after the experience of the Society for each Quinquennium becomes known. The quinquennial bonuses which are related to the amount of the premiums paid are declared as a cash deduction from the ensuing five years' premiums. Employers who are considering the introduction of a pension scheme for their employees will be well advised to examine this attractive new contract which incorporates the latest and best developments in pension practice.

The Report and Accounts were unanimously adopted.

Copies of the Annual Report and Accounts available on request.

PHILIPS' INCANDESCENT LAMP WORKS HOLDING COMPANY

EINDHOVEN

The Annual Report and Accounts of the above-named company and of the Operating Company, Philips' Incandescent Lamp Works, will shortly be available in their English translation. The Holding Company owns fl.618,739,000 Ordinary shares of the Company out of a total of fl.619,030,000 and fl.143,622,000 Preference shares out of the fl.144,000,000 in issue. Below are given the Balance Sheet and Profit and Loss Account of the Operating Company as at 31st December, 1959.

BALANCE SHEET AS AT 31st DECEMBER, 1959

THE PRESTIGE GROUP LIMITED

Mr. Arthur Keating reports on a record year

HIGHER TURNOVER AND PROFITS: INCREASED DIVIDEND: ACQUISITION OF O-CEDAR LIMITED

The following are extracts from the Statement by the Chairman, Mr. Arthur Keating, and the Managing Director, Mr. T. O. Rauworth, which has been circulated with the Report and Accounts for the year ended 31st December, 1959.

● It is indeed a pleasure to begin this report by telling you that the results for the year 1959 represent all-time records for your Company in terms of both turnover and profit. Group sales totalled £5,260,758 and profit before tax amounted to £881,164 compared with £805,233 in 1958. Provision of £450,500 has been made for taxation on these earnings, leaving the profit for the year after taxation at £430,664. To this figure should be added £30,000 previously set aside for taxation but not now required, leaving the available net profit of the Group for the year at £460,664 compared with £435,019 in 1958.

● The balance of £1,519,116 on Profit and Loss Account brought forward from 1958 was reduced by the amount of £688,904 applied towards the capitalisation issue of Ordinary Shares made in April 1959, leaving £830,212. After transferring the sum of £41,000 from Revenue Reserve and adding the available Group net profit of £460,664, there is a total of £1,331,876 available for dividends, reserve or carry forward. In accordance with the terms of issue, £11,149 has been set aside for the redemption of Preference Shares in 1960. Dividends paid and recommended for payment will require £212,588 leaving a balance of £1,108,139 to be carried forward. The amount of the profit for the year retained in the business will be £236,927.

● At an Extraordinary General Meeting of the Company held on 2nd April 1959 resolutions for the increase of the capital to £2,500,000 and for a 3 for 2 capitalisation issue to Ordinary shareholders were approved.

Your Directors recommend the payment of a final dividend of 21 per cent on the Ordinary Shares, making a total dividend of 25 per cent for the year, compared with an equivalent total of 20 per cent in the previous year.

● The Consolidated Balance Sheet at 31st December 1959 showed a strong financial position. Fixed assets at cost, less depreciation, amounted to £1,033,039, a net increase of £27,105 on the previous year. Current assets totalled £3,658,144 of which £1,664,087 was represented by cash and short term investments. Stock-in-trade amounted to £1,278,354 compared with £1,165,852 at the end of 1958. Working capital amounted to £2,329,503 compared with £2,031,480 at the previous year end.

● Increased sales in the home market were again achieved. The most striking feature of the year's selling effort, however, was the additional business secured in export markets. In 1959 export sales accounted for more than a quarter of the Group's total turnover. This success was obtained by an export division whose representatives are travelling to all parts of the world throughout the year, and by means of sales companies operating in Belgium, Holland, Italy and Germany. We were especially successful in increasing sales of our goods throughout Europe. Every effort will be made to maintain and increase the Group's export sales throughout the world in 1960.

Home sales, operated under two separate divisions, "Prestige" and "Sky-line", are backed by wide-spread advertising in the national and trade press, magazines, cinemas and television. It is significant that the linking of the brand name "Sky-line" with that of "Prestige" is succeeding in giving this lower-priced range of our products almost as much prominence and public support as that of "Prestige".

● Sales of aluminium foil containers and baking tins for the baking industry were substantially increased during 1959. Prestige "Foilpak" containers are now widely used by bakers, frozen food manufacturers, airline companies and many others who are concerned with the pre-packaging of food. Similarly, the quality of our baking tins and the pan-glazing service offered to bakers have produced sales over a third higher than last year. New equipment is being installed which will enable us to offer to the commercial baking industry products representing the latest developments in the field.

● We are glad to report that your Company's offer to acquire O-Cedar Limited for £225,000 was accepted by holders of over 90% of the Ordinary Shares in February 1960 and that it is now a subsidiary of your Company. Plans are being made for the expansion of this business. Prestige has already been very successful with its household mops and the acquisition of O-Cedar Limited will now permit the Group to widen its activity in household cleaning aids. The company has a leasehold factory at Slough.

● The year has opened satisfactorily and every effort will be made to maintain the progress achieved in 1959. If further opportunities occur for expansion by the acquisition of other companies, they will be taken. Your Directors give a great deal of time to the study of such acquisitions and this will continue. The possibility of manufacture of our products in countries outside the United Kingdom is also kept under constant review, particularly with regard to the Common Market countries and our larger export markets.

If favourable domestic and world-wide economic trends continue, we can look forward to further expansion of the Prestige Group since it is by nature and by inclination a growth company.

THREE YEAR SUMMARY

	1957 £	1958 £	1959 £
Sales	4,207,947	4,988,379	5,260,758
Group Profit before Taxation	601,668	805,233	881,164
Available Group Net Profit after Taxation	284,668	435,019	460,664
Net Dividends	148,058	162,664	212,588
Other Appropriations	24,392	10,601	11,149
Group Profit Retained	112,218	261,754	236,927
	284,668	435,019	460,664
Total Net Assets	2,791,341	3,146,997	3,362,542
Issued Ordinary Shares (5s.)	£520,000	£520,000	£1,300,000
Issued Preference Shares (£1)	£464,190	£452,590	£441,640
Ordinary Dividends (adjusted for Capitalisation issue)	18%	20%	25%

If you are interested in obtaining a copy of the Report and Accounts containing the full Statement, please write to the Secretary, The Prestige Group Limited, Prestige House, 14-18, Holborn, London, E.C.1.

MASSEY-FERGUSON LIMITED

A BUSY AND EVENTFUL YEAR

The annual Meeting of shareholders of Massey-Ferguson Ltd. was held on March 10th in Toronto.

The following are excerpts from the address by Colonel W. E. Phillips, Chairman and Chief Executive Officer:

The Annual Report reveals an encouraging upward trend in sales and earnings and a significant increase in the margins earned.

1959 has been a busy, indeed an eventful year for us. It has seen the realisation of many of our earlier hopes for a much greater integration of our manufacturing facilities throughout the world, with a consequent marked reduction in our dependence upon outside suppliers.

The acquisition of the Banner Lane tractor plant and of the new facilities in France provides us with modern manufacturing capacity for some 125,000 tractor units per year. Together with previously existing facilities our total annual capacity for tractors and tractor components is now some 200,000.

We have spent in 1959 some $52 million for the establishment of production facilities in the United Kingdom and France. These plants are well equipped, admirably located in low production cost areas and well placed in relation to our customers in those markets.

We have now come to the point where the so-called reorganisation generally spoken of in the early days of 1956, is now largely complete. The task from now on is to make this new organisation work to produce a more reasonable level of earnings. That is the task to which we are now all dedicated. Your Company is now in a vastly improved position and better equipped to maintain and improve its position in every competitive market. As we now view our world market of 1960, a small but not significant improvement in total sales volume, would seem possible.

PRESIDENT'S ADDRESS

The following are extracts from the address of Mr A. A. Thornbrough, President:—

I shall first report the sales and operating results for the first quarter of 1960, and then indicate our prospects for 1960.

World-wide net sales, excluding French and German turnover taxes, for the three months beginning November 1, 1959, were $87,889,000 as compared with $82,505,000 in this period a year ago—an increase of 6.5 per cent. Approximately 17 per cent of annual sales of Massey-Ferguson, on the average, are achieved in the first quarter and it is also customarily the lowest quarter in net income.

Profit before income taxes for the first quarter of 1960 was $2,285,000 as compared with $3,747,000 last year. Net income for 1960 was $1,031.000 compared with $2,680,000, but after a larger proportionate income tax in 1960.

Sales prospects world-wide for the year still continue to indicate mixed situations. If projected sales programmes are achieved in the less favourable situations, there should be some increase in sales in 1960. Net income after taxes could reach, under favourable circumstances, approximately that of 1959. On the whole, however, 1960 requires very careful management attention and control.

ALDFORD HOUSE (PARK LANE) LIMITED

At the twenty-fifth annual general meeting held on March 11th in London, Lt-Col J. D. George, OBE, TD, FCA, the chairman, said: The Accounts deal with a period of nine months only instead of a full year. The reason for this change is that negotiations have been proceeding with a view to acquiring a very large addition to our property investments and it had been hoped to place Shareholders in possession of our proposals before today's meeting. This was, in fact, not possible and your Directors continue to apply themselves to this substantial transaction, which has reached an advanced stage. Completion will add very materially to the magnitude and stature of the Company and is likely to require a major change in its Capital structure.

Commenting on a professional revaluation of existing properties brought into account on September 29th last and which was reflected in an increase of Capital Reserve by £546,569 to a total of more than £650,000, the chairman said: It is intended, at the appropriate time, to take steps to make a substantial proportion of our Reserves available to Shareholders by the normal procedure of a Capitalisation Issue, and to increase our Share Capital so as to provide the shares necessary to satisfy the consideration payable for the new properties.

The report was adopted and a final dividend of 18¾ per cent (actual), equivalent to 25 per cent for a full period of twelve months was approved.

THE BAJOE KIDOEL RUBBER & PRODUCE COMPANY

The forty-eighth Annual General Meeting of the Company will be held in London on March 31, 1960. The following is an extract from Mr J. A. Clubb's circulated statement:

The combined net rupiah profits of the two subsidiary companies, after taxation of Rp.8,750,000, were higher at Rp.8.095,381 (Rp.4,559,300). Dividends totalling Rp.1,356,202 were declared and remitted under permit to London by the subsidiary companies. Of the £18,008 received, £6,706 are credited in the accounts for 1958-59 and the balance of £11,302 received between April and November, 1959, will appear in the accounts for the current year.

The parent company's net profit is £7,603. An interim dividend costing £3,579 net was paid on January 14, 1959. The balance available, £35,346, represents an increase of £4,865 over the amount brought in and the directors feel justified in recommending a final dividend of 15 per cent less income tax, making with the interim dividend 25 per cent in all. The cash assets of the parent company reflect the capital repayment to members of 1s. per 2s. share in June, 1958, namely £62,240.

In the current year rubber crops have so far been below those in the comparable period of last year owing to a period of extreme drought. The coffee harvest on the other hand has been a bumper one in East Java, but regrettably much of the Celebes coffee has again been stolen from the bushes by bandit-controlled workers. The results in rupiah seem likely to at least equal last year's.

DONALD MACPHERSON & COMPANY LIMITED

IMPROVED TRADING CONDITIONS

INCREASED PROFIT AND TURNOVER

MR R. P. CHESTER'S STATEMENT

The sixty-fifth annual general meeting of Donald Macpherson and Company, Limited, was held on March 17th at Winchester House, Old Broad Street, London, EC, Mr R. P. Chester, CBE, JP, chairman and managing director, presiding.

The secretary (Mr W. M. Lowe, MA, ACA) read the notice convening the meeting and the report of the auditors.

The following is the statement by the chairman circulated with the report and accounts:

I have pleasure in presenting the Report of the Directors and Accounts for the year ended October 31, 1959.

CHANGES IN DIRECTORATE

At the end of the financial year Mr W. A. Lowe retired after 40 years with the Company, and I should like to thank him for his loyal and valuable service during that time.

GENERAL

At the time of the Annual Meeting last year it was felt that the emphasis was on expansion and increase in business activity, following a year in which national measures had been taken to reduce consumption. It is well known that the efforts which were made to bring about this expansion were successful, and your Company has benefited from the improvement in trading conditions. This improvement in the economic climate did not make itself felt in your Company until the last quarter of our financial year. Efforts were made during the year to increase the overall sales of the Group and I am pleased to say that these have borne fruit. Capital Expenditure has again been on a lower level, but your Directors are constantly searching for improved methods of manufacture as well as the handling and packaging of materials.

Development work continues in our laboratories, and a new Industrial Development Laboratory has been opened at Bury. This will enable your Company to maintain and improve its position at the forefront of the paint industry.

Two of your Directors have recently been to the United States to visit a number of paint manufacturing concerns, and as a result of this visit we now have a very friendly association with one of the largest and most progressive manufacturers in the United States.

You will be pleased to learn that our Subsidiary Companies are progressing satisfactorily and are making a valuable contribution to the Group activities.

ACCOUNTS

The Net Profit of the Group before taxation amounts to £417,712, an increase of £37,083 as compared with last year. This increased profit can be attributed both to a reduction in overhead expenses and to an increase in turnover. The taxation provision amounts to £182,892, a reduction of £14,298 compared with last year. Owing principally to the change in the standard rate of Income Tax at the last Budget, there was an over-provision for taxation last year amounting to £23,960. The amount available for appropriation including £28,382 brought forward from last year is therefore £287,162.

APPROPRIATIONS

You will recall that our Interim Dividend paid in August was increased by 1 per cent to 8 per cent, and your Directors now recommend that the Final Dividend be increased by 2 per cent, making the total Dividend for the year 28 per cent. They also recommend that £100,000 be transferred to General Reserve and £5,000 to the Pension Fund.

Despite the halt in inflationary tendencies in the economy, they feel that the changes in technique in all aspects of paint manufacture which have occurred over the past few years are likely to continue, thus rendering present equipment obsolete more rapidly. They therefore consider it advisable that a further appropriation of £20,000 for Additional Depreciation of Plant and Machinery be made.

FINANCIAL POSITION

The Consolidated Balance Sheet again shows a strong financial position, with Current Assets exceeding Current Liabilities by £1,080,213. After the appropriation of £100,000 mentioned above, General Reserve stands at £650,000. Fixed Assets amount to £713,268 after normal depreciation and the £20,000 Additional Depreciation have been deducted. The total Nett Assets of the Group now amount to £1,568,177.

PROSPECTS

The past year has been a satisfactory one, one in which your Company shared in the increasing prosperity of the country.

With regard to the current financial year, it is reasonable to assume that the favourable tendencies which appeared in the last quarter of last year will continue. This is borne out by the fact that sales for the current year are better than last year. It must, however, be remembered that competition in the paint industry continues to increase. As I have mentioned earlier, your Company will continue to look for methods for the better utilisation of its resources. I feel, therefore, that we can look forward to another satisfactory report next year.

TRIBUTE TO STAFF

In conclusion, may I express on your behalf and on behalf of my colleagues on the Board, our sincere thanks to all employees of the Group for their efforts to promote the prosperity of the Company.

The report and accounts were unanimously adopted; the proposed dividend was approved; the retiring directors, Mr W. N. Gilbert-Harris and Mr J. M. Morris, were re-elected and the remuneration of the auditors, Messrs Marshall, Gibbon & Co., was fixed.

PROGRESS OF BANCA NAZIONALE DEL LAVORO DURING 1959

CAPITAL was increased in 1959 from Lit.1,150 million to Lit.20,000 million (£gs.11,527,400), of which Lit.10,835,061,268 (£gs.6,244,992) is already paid-up. The remaining balance will be paid-up by June 30, 1962, in three yearly instalments.

DEPOSITS rose from Lit.823,526 million to Lit.960,397 million (£gs.553,542,900).

PROFIT rose from Lit.1,075 million to Lit.1,606 million (£gs.925,600).

RESERVES, which totalled Lit.13,000 million after the adoption of the 1958 Balance Sheet, were reduced to Lit.10,000 million during 1959 as a result of a partial allocation to capital. After the 1959 Balance Sheet had been adopted they were increased to Lit.11,000 million (£gs.6,340,100).

STAFF RETIREMENT FUND rose from Lit.19,945 million to Lit.22,512 million (£gs.12,975,200).

PREMISES, ETC., figure at one Lira after Lit.869 million (£gs.501,000) had been written off during 1959. Real estate produced rents of Lit.949 million (£gs.547,000). Lit.490 million (£gs.282,400) spent on the installation, reconstruction and organisation of the Bank's premises and Branch offices last year, was also written off.

PARTICIPATIONS in the Special Sections and Sundry Participations stand at one Lira in the Balance Sheet after Lit.578 million (£gs.333,100) had been written off during 1959. Dividends therefrom amounted to Lit. 68 million (£gs.39,200).

TAXES paid in 1959 amounted to Lit.3,980 million (£gs.2,293,900).

RECOVERIES in 1959 amounted to Lit.277 million (£gs.159,700).

THE TOTAL OF THE BALANCE SHEET, exclusive of "Contra Accounts," rose from Lit.1,112,512 million to Lit.1,314,485 million (£gs.757,628,300).

SPECIAL SECTIONS

BANCA NAZIONALE DEL LAVORO also operates in various specific fields of activity through the intermediary of the following Special Sections, the annual accounts of which are shown separately:

— Section for Mortgage Credit
— Section for Hotel & Tourist Credit
— Section for Motion Picture Credit
— Section for Credit to Co-operatives
— Section for Credit to Medium-sized and Small Industries
— Section for the financing of public utility works and installations

The importance of these Sections, and the extent of their activity in their respective spheres during 1959 will appear from the following:

TOTAL CAPITAL FUNDS of the Sections rose from Lit.6,387 million to Lit.8,387 million (£gs.4,834,000).

TOTAL RESERVES of the Sections rose from Lit.3,797 million to Lit.4,737 million (£gs.2,730,300), after approval of the Balance Sheet as at 31st December, 1959.

ADVANCES AND LOANS (including half-yearly payments due), which on December 31, 1958 amounted to Lit.118,046 million, reached a total of Lit.149,249 million (£gs.86,022,500) at the close of 1959.

PROFIT of the Sections rose from Lit.905 million to Lit.1,091 million (£gs.628,900).

THE TOTAL OF THE BALANCE SHEETS OF THE SECTIONS, exclusive of the "Contra Accounts," rose from Lit.132,030 million to Lit.169,284 million (£gs.97,570,100).

THE COMBINED CAPITAL AND RESERVES OF BANCA NAZIONALE DEL LAVORO AND ITS SPECIAL SECTIONS AFTER THE ADOPTION OF THE BALANCE SHEET AS AT 31st DECEMBER, 1959, AMOUNT TO Lit.49,918,676,270 (£gs.28,771,571).

ENGLISH CHINA CLAYS, LIMITED

RECORD SALES AND INCREASED PROFITS

CAPITALISATION OF RESERVES

SIR JOHN KEAY'S STATEMENT

The forty-first annual general meeting of English China Clays, Limited, was held on March 16th at Hyde Park Hotel, Knightsbridge, London, SW, Sir John Keay, FCA (chairman and managing director), presiding.

The secretary (Mr R. L. Gale, ACIS) read the notice convening the meeting and the report of the auditors.

The following is the chairman's statement which had been circulated with the report and accounts and was taken as read:

The profits of the Group for the year to September 30, 1959, after providing £1,563,362 for taxation, amount to £1,720,932, an increase of £475,389 when compared with last year. To the profit of £1,720,932 has been added £102,098, being largely the amount over-provided last year for United Kingdom Taxation, consequent upon a welcome reduction in the Income Tax rate for 1959-60, which makes a total credit to the Consolidated Profit and Loss Account for the year of £1,823,030. This increase in the profits compared with those of last year is partly attributable to the inclusion of the profits earned by the Croft Granite, Brick & Concrete Company Limited, since its acquisition in the year under review, and to a full year's profits from the Devon Quarry Group. The Taxation Equalisation Reserve has been increased by £116,000 and now stands at £301,406, and £1 million is transferred to General Reserve, bringing this reserve to £4 million. Your Directors have pleasure in recommending a Final Dividend of 6¼ per cent tax free which, with the interim payment of 2½ per cent makes a total Ordinary Dividend for the year of 8¼ per cent tax free. The balance on Profit and Loss Account carried forward is £756,451, an increase of £103,142 compared with the balance at September 30, 1958.

The Consolidated Balance Sheet as at September 30, 1959, shows the Issued Capital and Reserves at £13,110,176, of which £11,058,502 represents Fixed Assets. The balance of £2,051,674 equals the surplus of Current Assets over Current and Deferred Liabilities—an increase of £773,988 over the corresponding figure last year.

A notice convening an Extraordinary General Meeting, to follow the Annual General Meeting, accompanies the Statement of Accounts and Directors' Report. The meeting is called for the purpose of considering a Resolution to capitalise the sum of £1,141,997 out of the reserves, by way of the issue, in the proportion of one new share for every five shares held, of 1,141,997 Ordinary Shares of £1 each fully paid, to all Ordinary Shareholders registered in the books of the Company at the close of business on March 2, 1960

The Directors are of the opinion that, provided unforeseen circumstances do not arise, they should be in a position next year to recommend that the present rate of dividend should be maintained on the Ordinary Capital, as increased by the proposed free scrip issue.

REVIEW OF CHINA CLAY SALES

In the year under review the level of sales has exceeded the 1957 figure, which was the previous highest, by approximately 7 per cent, to establish a new china clay sales record for the Clay Division. Once again it has been on the speciality grades that the greatest impact has fallen, and it is gratifying to see that the quality of English china clays is continuing to be a telling factor in markets which have become extremely competitive and quality conscious.

Despite the diversification of our activities in recent years, the maintenance of our china clay exports is a highly important feature of our prosperity, since approximately two-thirds of our china clay production is sold in overseas markets. It is pleasing to report that our exports have been increased during the year under review, due, to a certain extent, to easier sea freights, a factor upon which the effectiveness of our ability to compete depends.

The advent of the European Common Market and the Free Trade Area has had no effect so far on the level of deliveries to the Continent and Scandinavia, but we regard this as only a temporary position. We are watching the progress of the negotiations between the Outer Seven and the European Common Market with great interest, and it is to be hoped that these negotiations will be carried to a successful conclusion for the benefit of European Industry as a whole.

Deliveries to the Home Market have shown a welcome upturn, and it is encouraging to note that the major consuming industries are currently calling for larger supplies of our china clay.

CHINA CLAY PRODUCTION

Three additional drying plants came into production during the year to September 30, 1959. Currently a further two are under construction, both of which should be commissioned by September, and another, which was only recently completed, has just come into the production line. Modernisation of pit and surface refining plants has made good progress, whilst further extensions to the pipeline system and wet and dry storage capacity have been installed. A major construction programme is nearing completion, which will provide four additional berths and improved cargo handling plant at the Company's harbour at Par. The latter development will greatly improve the Home Trade and Continental shipping position by increasing the "turnround" rate of vessels using the harbour.

The very dry summer with its concurrent water shortages created a problem, the solution of which reflected great credit on the production team. The subsidiary company responsible for dealing with the removal of overburden and the excavating requirements of the Group has had a very busy year, and, favoured by a dry summer, has made a valuable contribution to the success of the year's trading in speeding up production.

The research facilities of the Group have been fully extended during the year and a number of developments, which are being evaluated on a pilot plant scale are showing promise.

An opportunity has arisen, since the conclusion of the year under review, to acquire the freehold of a large area of china clay-bearing land previously under lease to the Company. The effect of this purchase has been to reduce the area now leased to the Company to a relatively nominal acreage, and will render the operations of the Clay Division more flexible.

MINERAL AND CONCRETE PRODUCTS

The Mineral and Concrete Products Division has had a much improved year, and continued interest is being shown in Cornish Units for housing, and units for agricultural and industrial buildings. There are also interesting possibilities in the field of heavy weight precision concrete castings. Graded sands and aggregates for building and engineering work continue to do well and sales of Muscovite mica have been increased.

MOLOCHITE

Deliveries of Molochite for the year under review did not reach the anticipated level. Exports, however, show an encouraging increase and orders received during the current year indicate a substantial improvement in the total volume of demand.

BUILDING

The Building Division has had a busy year, which has resulted in a larger contribution to the profits of the Group. The volume of work undertaken for Public Authorities has increased, but it must be remembered that this activity is always subject to changes in Government policy. Private enterprise and building estate developments are making steady headway, though sufficiently large and attractive sites are becoming increasingly difficult to acquire as the acreage of land allocated in County Development Plans is taken up. The position would appear to call for a more flexible policy of land allocation for private development.

Reformite stone, with its natural appearance and varied shades, is proving very popular and sales were almost doubled during the year.

QUARRIES

The acquisition of the Croft Granite, Brick & Concrete Company Limited, which was approved by the shareholders on March 19, 1959, has extended the operations of the Quarry Division into South Lancashire, the Midlands, London and the Channel Islands.

After the conclusion of the financial year under review the Croft Company acquired the whole of the shares of the Patent Victoria Stone Co. Ltd., and the Erith Construction Co. Ltd. Both these companies manufacture concrete products, have well sited wharves on the River Thames, and constitute a valuable addition to the Group as a whole.

The Quarry Division generally, after a poor start due to the heavy rains of the winter of 1958/1959, has had a satisfactory year, which was mainly attributable to the exceptionally dry summer which followed. During this latter period the demand for quarry products, including agricultural lime, reached a very high level

Schemes are in hand to modernise plants, increase production capacity and to ensure that the quality of products is kept to the highest possible standard. It is most encouraging to see that serious attention is now being given to the country's road system; we are taking every possible step to be prepared and capable of offering a reliable service in respect of the road improvement programme. It is anticipated that the acquisitions, to which I have referred, should add to the efficiency of this service.

TRANSPORT

The Transport Division, with its two modern fleets for short and long distance haulage, has had a successful year's trading and has improved upon its results of last year.

CONCLUSION

Finally, I feel sure that you will wish to join my colleagues and myself in thanking the workpeople, staff and executives of the Group, at home and overseas, for their unremitting endeavour, loyalty and enthusiasm in contributing to the satisfactory results which I have reported to you. The understanding and relations which exist between the management and the operatives are of the highest order and a significant factor in the success of the Group.

On a personal note, I feel that the time has come to hand over certain of my executive duties and I shall accordingly be retiring, on March 31 next, from my executive appointment as Managing Director of English Clays Lovering Pochin & Co. Ltd., the china clay producing subsidiary. In so doing, I should like to express my very great appreciation and gratitude to my colleagues, and to the staff and operatives of the Clay Division, for the assistance and support which I have received during my twenty-three years' term of office. My association with the Group will, however, be continuing as I am retaining the Chairmanship of English Clays Lovering Pochin & Co. Ltd., and my other appointments in the Group, including those of Chairman and Managing Director of English China Clays Ltd. The executive duties which I am relinquishing will be assumed by Mr A. N. G. Dalton, the Administrative Director of English Clays Lovering Pochin & Co. Ltd., who has been appointed to the newly-created office of General Manager of that Company.

The report and accounts were unanimously adopted and the dividend, as recommended, was approved.

The retiring directors, The Right Honourable Lord Aberconway, Mr A. E. Grieve, Mr W. R. Northcott and Mr F. H. Simon, were re-elected; and the remuneration of the auditors, Messrs Allan, Charlesworth & Co., and Messrs Bourner, Bullock & Co., was fixed.

At a subsequent extraordinary general meeting of the company the proposed capitalisation of reserves was approved.

VOLTAS LIMITED, BOMBAY

The Fifth Annual General Meeting of Voltas Limited (Managing Director and General Manager, Mr S. K. Handoo), was held on March 14th in Bombay.

According to the Directors' Report, the accounts for the year ended August 31, 1959, after providing for taxation, show a profit of Rs 46,31,409 compared to Rs 28,75,396 last year. The Directors recommend a dividend of 13 per cent, subject to deduction of tax at source, which will leave in the hands of the shareholders a net amount slightly higher than 9 per cent free of tax distributed last year.

The following is an extract from the Statement of the Chairman, Mr J. D. Choksi:

As from September 1, 1958, Section 23A of the Indian Income-Tax Act no longer applies to the Company. This permits a higher appropriation to Reserves the strengthening of which I consider of major importance for financing future expansion plans. A decision has been taken to set up our own Manufacturing Unit and negotiations for the acquisition of suitable land for the purpose are in progress. We are in negotiation with a number of manufacturers of repute abroad for the indigenous manufacture of diverse products in the mechanical, electrical and air-conditioning/refrigeration fields.

While it is expected that local manufacture will, in years to come, form an important part of the Company's overall business, I wish to emphasise the Company's role in the field of imports. An importing house of our standing is a necessity for the proper functioning of the country's economy and will always have its justification in view of the part it plays in the implementation of the country's Development Plans. The confidence reposed in us by both the Public and Private Sectors of industry as one of the largest importers in the country makes it essential for us to cultivate this branch of our business with assiduity and enthusiasm.

We have once again succeeded in securing supplies from various overseas sources under deferred terms of payment and in arranging with the assistance of suppliers abroad for finance to be provided by foreign Banks in the first instance pending remittances over a period of three to five years.

Roche Products Private Limited, in which your Company is interested as a shareholder and main distributor, has made satisfactory progress during the year in the manufacture of pharmaceutical specialities and Vitamin A. Merck Sharp and Dohme of India Private Limited, in which Tatas and your Company are shareholders, has commenced production.

We are not a single industry, nor a commercial house tied to a particular type of product. We are entrepreneurs in the widest sense. We are always in perpetual motion, for in movement there is progress. Our aim and pride is to find new products and to make, build and sell them. I cannot promise you an ever-increasing prosperity. But I do promise you ever-widening horizons and increasing activities. Voltas is a name which stands for all this and which, in a short space of time, has become a household word. Shareholders may, therefore, be assured that our growth and diversification will continue and we may look forward to the future with well-founded confidence.

ARUSHA INDUSTRIES LIMITED

CHAIRMAN'S ANSWERS TO QUESTIONS

NET ASSETS POSITION OF NEARLY £2½ MILLION

At the conclusion of the Extraordinary General Meeting of Arusha Industries Limited, which followed the Annual General Meeting at the Connaught Rooms, London, WC2, on March 7th, Mr Lindsay Carstairs, the Chairman, declared the meeting open for questions.

Dealing with a question put by a shareholder, who had asked the Chairman if he would say something to explain the rather derisive comments in certain newspapers on his calculation of 20 per cent estimated dividend as being equivalent to the 75 per cent he had mentioned a year ago, the Chairman referred to the Statement in The Rights Letter which was then read out by the Secretary as follows:

Your Directors intend, provided that the estimated profits set out in this letter are realised, to recommend a final dividend in respect of the period to September 30, 1959, of 25 per cent less tax on both existing shares and the shares now being issued. This dividend will be payable in or about January, 1960.

Your Directors also intend, provided that the profits of the Group justify such a course, to recommend dividends for the year ending September 30, 1960, aggregating not less than 75 per cent, less tax.

The Chairman continued: What in effect happened was that instead of 25 per cent we declared a final dividend of 35 per cent. That was a very substantial increase, I may say. Also, so far as the comparison is concerned, you will notice that it clearly states—and that was my intention in making the comparison—that 75 per cent was forecast on the then capital as increased by that Rights Letter which was £203,000. Therefore, if we had maintained this anticipated declaration, we would have paid roughly £150,000 for the year 1959/1960. When I made my statement, I related it back to what was said in the Rights Letter.

The Chairman then called upon the Secretary to read the relevant statement in the Chairman's Review, as follows:

It will be remembered that in a letter to Shareholders dated 27th April 1959, it was stated that provided the profits of the Group justified such a course "dividends for the year ended September 30, 1960, aggregating not less than 75 per cent less tax would be recommended."

At that time the Capital of your Company as increased by the Rights Issue then proposed amounted to £203,634. Proportionately, that forecast represents a dividend of just over 20 per cent on the capital of £725,000 as now increased by these proposals.

The Chairman continued: The Press, quite properly, has said, "That isn't quite good enough, Mr Chairman. In fact, after this Rights Letter you bought something and issued for it £80,000 worth of shares, so that now your capital is £291,000. Therefore, if you are going to relate 75 per cent from the old to the new it is more equivalent to 30 per cent than to your phrase 'just over 20 per cent.'"

The Chairman added: I quite agree with that. I was relating it back to the Rights Letter. I did, however, use the phrase that I anticipated that the dividend would be substantially more than 20 per cent. Of course, if we had not consolidated these shares at this stage this confusion would not have arisen because I would have been in the very happy position of being able to announce that we would be paying in all probability (if the business affairs of the Company continued at their present rate) more than 75 per cent. What I was saying was quite proper. I was relating the whole thing back to the Rights Letter, which was in fact the prospectus and I said that my promise there was equivalent to a little over 20 per cent on the new capital of £725,000.

I feel that your Group is at such a stage and there are so many very substantial and old-established businesses—one or two of them are really basic industries in the country and one I think has been established for 360 years—that you would expect the Chairman of your Board to be a little conservative in what he says.

SATISFACTORY ACHIEVEMENT

One has to bear in mind at this period of time that your Company has paid out in cash almost £3½ million for the acquisition of businesses. Do not confuse that with the issue of shares. At the end of the day we are only left owing the bank on a loan account some £1,137,000—I think that is the figure—which is a pretty satisfactory achievement for any Board, any Company or any group of individuals in England today. We have paid back £2½ million and it has all been done within seven months, not the fifteen-month period which you are considering in these accounts. That is one factor.

Another factor is that we have also bought businesses for shares. I venture to suggest that where we have bought businesses for shares, so far as the issued capital of your Company is concerned it has been negligible to the value of the businesses we have bought. In our accounts it has shown up a capital profit in a share premium account of over £2 million.

The Chairman then reminded shareholders that the consolidation approved at the Meeting was no mere writing up of the shares as some people rather loosely referred to it. The extra 2s. of the 4s. shares now in their possession had had to be provided out of reserves—in this case the Share Premium Account. If the Company had not done the good business transactions which had created that reserve, the capitalisation could not have been done as it had been.

He continued: There is indeed gain in the sense that everyone is going to have five 4s. shares for every four 2s. shares which they held before. That is a pretty satisfactory arrangement out of your Share Premium Account.

The Chairman added that still another factor to be borne in mind, was that the net asset position of the Company 15 months ago, or indeed just prior to the Rights Letter, was something like £160,000. Now the net asset position was nearly £2½ million and even if one looked at the £900,000 goodwill contained in it, that was no fanciful figure. There were all kinds of ways of writing it off. They could do it by revaluing the assets which, he ventured to suggest, on anybody's guess, would be 60 per cent up on what they were in the books.

There is another factor, though, the Chairman continued. When you take the £900,000 goodwill off you are still left with a very substantial capital profit in such a short space of time. Someone may say, "Yes, but look at the current liabilities against the current assets."

TRADING IN MILLIONS

If we look at the current liability side against the other, there is an excess of £200,000 or £300,000. I ask you, what is £200,000 or £300,000 in a well-constructed Group like this? You are trading in millions of pounds a year. Any time you draw a balance-sheet all that might be different: it all depends when you draw it. This one was drawn up on September 30, 1959.

Continuing, the Chairman said he would like to deal with one more point. He knew this had gone beyond the question but it had given him the opportunity to clear the air a bit at least with shareholders.

It has been said, "Why don't you tell us what these companies would have earned if they had been in your possession for twelve months instead of these broken periods? Surely, it is quite simple. If you have a broken period of six months and you earned £100,000 all you do for a year is to double it. That is a notional figure. We will be quite satisfied with that." The Chairman added: If I fell in with that suggestion you would not like me very much. Being on the inside is always a little different from being on the outside and let us face it, shareholders are on the outside because they have placed their confidence in the Board. They are not in possession of all the information.

Let us look at what would happen if we did that. The Chairman then referred to the shipping port at Mostyn on the Mersey, a valuable asset to the Company. There weather conditions, shipping and loading arrangements entered into it; ships came from all over the world and there may be a lot of traffic in one six months. Was it safe to treat those receipts as if they were going to be the same for the other six months?

He also instanced a manufacturing concern which by the nature of its production may be tooling up for three or four months. When it got into flow production, in that six months' period it would have a wonderful return, but if the six months before that was taken, the return would not be so good. That was one of the reasons why it was not satisfactory to give a short-term indication of future results.

I would like to say another thing about that, the Chairman continued. Someone might say, "We agree with you, there are a lot of non-recurrent items. Let us say that you don't really know what the figure would have been. Forget taking off and adding on and issue your warning." Let me tell you the danger of that. I can give you some figures but they will be full of qualifications and it will probably be this time next year before we are taking account again and in the interim the figures may have varied. The profits may be up. Certainly we are trading satisfactorily at the moment. However, people do forget warnings. They like bold figures. You earn so-and-so, the net is so-and-so, but they forget the warning. Standing here officially with my Board, I do not think they would sanction me in doing that sort of calculation in this sort of business.

What I sought to do in those accounts was to tell you honestly what we earned.

Proposing a vote of "grateful appreciation for the Chairman and the Board," a shareholder said that rumour had not altered the belief of the genuine stockholder in the Company's affairs, and he felt that the Company would go on from strength to strength.

The proposition was carried unanimously with acclamation.

THE CARDINAL INVESTMENT TRUST LIMITED

ENCOURAGING PROSPECTS

The fifty-third Annual General Meeting of The Cardinal Investment Trust Limited was held on March 10th in London, Mr R. G. Mills (the chairman) presiding.

The following is his Review which was circulated with the Report and Accounts for the year ended December 31, 1959:

The Director's Report which covers the audited accounts for the financial year ended December 31st last draws the attention of Shareholders to all items of importance.

The final dividend of 10 per cent less Tax which is recommended by the Board will be paid on the increased Deferred capital as against 8½ per cent which was forecast in the Board's circular in June last when subscriptions were invited for additional Deferred Shares.

The analysis of investments at valuation shows that the policy of investing mainly in equities has been continued throughout the year.

The record of the growth of the Company over the past ten years given in the report shows *inter alia* that over that period £373,650 has accrued to the Treasury by way of taxation whereas the amount distributed to Deferred Shareholders in dividends has been £280,476, that is £93,000 less. It is to be hoped that over this decade the level of taxation will be reduced so that this proportion will be reversed.

With regard to the outlook, having regard to the many imponderables which can so quickly have their impact on share prices and dividends, it is always hazardous to forecast the future. You may recollect that at this time last year there was a growing uncertainty amongst investors in the face of the coming General Election. During the current year there is a Presidential Election due to be held in the United States of America, and what may happen in Wall Street can have a very considerable influence on our stock markets here. In so far as your Company is concerned the estimated revenue for the current year is encouraging and I feel that the accounts to be presented to you in a year's time should not be a disappointment.

The report and accounts were adopted.

SCOTTISH WIDOWS' FUND & LIFE ASSURANCE SOCIETY

IMPRESSIVE GROWTH OF NEW BUSINESS

SPECIAL BONUS BENEFITS

MR ALASTAIR C. BLAIR ON SOCIETY'S "OUTSTANDING VALUE FOR MONEY"

The 146th Stated Annual Meeting of the Society was held in the North British Station Hotel, Princes Street, Edinburgh, on Tuesday, March 15, 1960, Mr Alastair C. Blair (Chairman of the Ordinary Court of Directors) presiding.

In moving the adoption of the report and accounts, which were taken as read, the Chairman said:

1959 saw a reduction in the burden of taxation on the individual, and growing prosperity of industry. Both these factors affected favourably the total life assurance business completed by British offices which again reached a record level. The Society shared fully in this and indeed was able to show a relatively greater increase than most other offices. Again we completed a larger amount of new business than ever before and from the results given in the report you will see that the annual premiums under new ordinary life assurance business were practically £700,000 which is more than half as much again as the figure in 1958. The corresponding sums assured at over £22½ million were 40 per cent higher than in the previous year. To get the full picture on the life assurance side, we have to add the insurances under new Group Schemes and these together account for further new annual premiums of over £140,000 and for new sums assured of over £21½ million, making the impressive totals of more than £840,000 of new annual premiums and over £44 million of new sums assured. This figure of £44 million compares with under £17 million only five years ago, which gives some indication of the rate of expansion in recent times The total new annual premiums for annuities amounted to over £1,460,000, so that in the aggregate the new annual premiums under all the business we completed last year were more than £2,300,000 against £1,700,000 in the previous year—an increase exceeding one-third.

Much time has been devoted by our specialist pension staff to advising those concerned with existing pension schemes who will wish to decide by April 1, 1961, whether to come under the new State graduated scheme or whether to contract out of that scheme if their present pension arrangements enable them to do so. Nevertheless, this specialist staff found it possible at the same time to complete a record amount of new pensions business.

Our annual premium income last year was more than £12½ million, an increase of more than £1½ million over the figure of the previous year, but on the other side of the account commission and expenses of management were also higher which reflected not only the inevitable expenses of higher business but also the increase in costs in general. Nevertheless, the total expenses and commission related to our premium income was a little lower at 10.8 per cent as compared with 10.9 per cent in the previous year, and your Directors regard this as most satisfactory in the circumstances.

The main item in our Revenue Account is the transfer of £5½ million from reserves to the life assurance and annuity funds and that brings me to our decision to allow a special additional intermediate bonus although we had a quinquennial valuation and distribution of surplus as recently as the end of 1958. You will remember that we did much the same thing for with-profit policies in force at December 31, 1955.

Your Directors have decided once again to allow a special additional intermediate bonus, this time in respect of claims and surrenders arising on or after January 1, 1960, under with-profit policies which were in force at December 31, 1959, the bonus to be calculated at the rate of 1 per cent of the sum assured and existing vested bonuses in respect of each year's premium due on the participating scale on or before December 31, 1959 with a maximum of 5 per cent. It is the present intention of your Directors to replace this special intermediate bonus by a corresponding vested bonus to policies concerned which are still in force at the next investigation at the end of 1963. At the same time the Directors intend to allot to with-profit group pension policies which are then in full force a special bonus equal to 6 per cent on the reserves at the scheme anniversary immediately preceding January 1, 1960. The cost of these special bonuses—both intermediate and eventually vested—will be about £5½ million and we have transferred that sum now from reserves to the life assurance and annuity funds.

One might regard this decision as completing the action taken in 1955 now that the values of ordinary shares have come fully into line with the inflationary rise in prices in general which has taken place since the end of the War and it must give much satisfaction to the holders of with-profits policies that during a long period of inflation the Society took appropriate action on the investment side and allowed them special benefits which form some offset to the eroding effects of that inflation. Rates of intermediate bonus are naturally subject to reconsideration from time to time but, as on the previous occasion at the end of 1955, the Directors would not propose to make any reduction in the special intermediate bonus unless there were some unforeseen and catastrophic change in circumstances.

In view of the transfer of £5½ million from reserves, we have shown the rate of interest on our funds on two separate bases: first, assuming that no transfer at all had been made from reserves, in which case the gross rate of interest would have been the very satisfactory one of £6 11s. per cent compared with £6 4s. 10d. per cent in the previous year, and, secondly, assuming that the transfer from reserves had been made a year ago, in which case the rate of interest would have been £6 5s. 2d. per cent compared with the £6 4s. 10d. in the previous year.

BALANCE SHEET CHANGES

In the balance sheet you will note that the main changes are increases of about £8 million in British Government Securities, £2 million in each of the items, Debenture Stocks and Preference Stocks, and an increase of just over £6 million in Ordinary Stocks.

Our new money in the past year was invested in the main in fixed interest stocks, which were giving such handsome yields, and the increase in Ordinary Stocks is accounted for largely by the transfer from reserves as the value of Ordinary Stocks is shown in the balance sheet at £5½ million more than would otherwise have been the case.

In spite of our having brought in this £5½ million to the funds from reserves to provide for the special bonuses, our ordinary contingent intermediate bonus remains at the rate of 50s. per cent per annum compound—the highest rate of ordinary compound bonus ever allowed by the Society—and I would reaffirm our belief, in words used from this Chair last year, that "whatever may be the changing economic and financial conditions of the future the Society will continue to give outstanding value for money to its members and maintain its leading position as a with-profits life assurance office."

The Directors' report and the accounts as audited were adopted unanimously.

THE MESSINA (TRANSVAAL) DEVELOPMENT COMPANY, LIMITED

(Incorporated in the Union of South Africa)

A DECADE OF RAPID EXPANSION

COMMANDER H. F. P. GRENFELL ON NEAR AND LONG-TERM PROSPECTS

The Tenth Annual General Meeting of Stockholders of The Messina (Transvaal) Development Company, Limited, was held on March 16th in Johannesburg, Commander H. F. P. Grenfell, DSC, RN (Retired) presided.

In the course of his address to the Meeting, the Chairman said:

Before giving you my usual review of the year's operations, it may be of value if I recapitulate for you what has happened in the copper market since our last meeting, as it is mainly in that context that you should consider our results.

Viewing the past twelve months in retrospect it is apparent that from beginning to end the copper market was entirely dominated by strikes. During the first half of the year consumers had to evaluate the threat of a possible shutdown in June of nearly the whole of the mining and refining industry in the United States, and in the second half they had to cope with the effects of this stoppage which actually began in August and has only just ended.

The market situation was further complicated in July by the announcement of cuts in production by two large producers, the view being held at that time that production was running well ahead of consumption, and that perhaps, after all, there would be no major crisis in the industry.

In the event, however, the US steel industry was paralysed by a strike which began on July 15th and lasted until the beginning of January this year, and by the end of August there was a complete shutdown by the three main American copper producers.

As if this was not enough there was also a stoppage of work at the Braden Mine in Chile during nearly the whole of October, and in the same month a strike in the New York docks which lasted until the beginning of December.

It was inevitable that under these conditions there should be continual and at times considerable fluctuations in the price of copper, which made things difficult for consumers and producers alike throughout the year. One can only hope that with the settlement of the various disputes more stable conditions will obtain within the industry during the current year.

THE OUTLOOK

With the return to normal working in the steel industry there are indications that business activity in the United States may reach a record level during 1960. If this proves to be the case the near term prospects are for a reasonably steady market in copper, particularly as the prolonged strikes of the past year have left supplies in the pipelines at low levels.

Once these have been restored to normal one would expect the market to be influenced by the fact that at present world production is potentially running ahead of world consumption. However, as I said at our Annual General Meeting in 1957, with an increasing world population, the trend towards higher standards of living in all countries and the consequent continual expansion of industry, I feel that this is likely to be a temporary state of affairs and that the long term outlook is favourable for a substantial increase in world consumption.

Applying all these thoughts to our own fortunes I am confident that our results for the current year will be better than those presented to you today, and I continue to take an optimistic view of our long-term prospects.

As a result of the substantial allocations to Reserves made over the years and the addition of share premiums which accrued to the Company on the exercise of the options in July last year, the Balance Sheet shows a strong position with Capital Reserves and Surplus standing at over £8 million as compared with the Issued Capital of £492,500.

CAPITAL PROPOSALS

As you will have seen from the Special Notice accompanying the Report, your Directors propose to capitalise £1,970,000 of the Share Premium Account and issue a scrip bonus in the ratio of four new shares for every unit of stock held. You will be asked to vote on this proposal at the Extraordinary Meeting which will be held immediately after this meeting.

There is one other matter to which I should draw your attention before leaving the accounts and that is the recent issue of reserve capital by the Board of MTD (Mangula) Limited. The purpose of the issue was to raise sufficient funds to repay your Company the balance outstanding on loan account. I am pleased to tell you that the issue which was made last month at a price of 9s. 6d. per share was fully subscribed, and as a result your Company has been repaid in full, while Mangula is now free of all indebtedness.

Messina had already a substantial holding in Mangula, and as it subscribed for its full quota of the new issue, the result from the cash point of view will be a net influx of £360,000. This money will be nearly sufficient to meet the capital expense of bringing the Alaska Mine into production, leaving the balance to be provided from the Company's resources.

Looking back over the past ten years it will be seen that total assets of the Group (as it now is) have increased from £1,400,000 in 1950 to over £13 million today, and that the expansion that has been brought about—rapid though it has been—has in no way been achieved at the expense of our financial position.

Messina's ore reserves now stand at over 6 million tons with a copper content of more than 100,000 long tons. When I first became associated with the Company twenty-five years ago, they stood at 1,218,000 tons containing 29,100 long tons of copper.

Operating costs last year (including all overheads) were reduced to 31s. 11d. per long ton of ore produced. The equivalent figure per long ton of recoverable copper based on the smelter output, which was less than last year, is £124. On a short tonnage basis the comparative figures are 28s. 6d. and £111.

VERY SATISFACTORY PROGRESS

At Mangula where progress may again be considered as very satisfactory, despite the fact that the benefits of production at the increased rate of 3,000 tons of ore per day were only effective during the last quarter of the Company's year, profits improved from approximately £4,000 to nearly £400,000.

Operating costs were reduced from the previous year's figure of 27s. 8d. to 25s. 3d. per short ton of ore treated, and I confidently expect a further substantial reduction during the current year.

Development was continued in the Norah area where we have already proved the existence of approximately 230,000 tons of ore of better than average grade. A new prospect shaft is being sunk 2,000 feet north of the original Brian shaft.

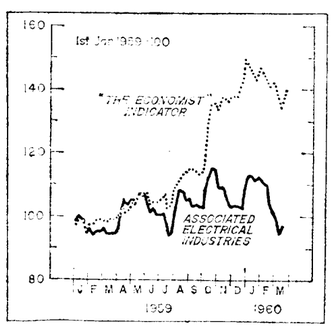
At Alaska, the work of preparing the mine for production is proceeding according to plan, and the construction of the new smelter is actually ahead of schedule. I have every reason to believe that both these projects will reach the operational stage by the end of the current financial year.

Finally I come to Sanyati where we are actively engaged in a programme of underground development from the Bradfield Shaft.

Comprehensive metallurgical tests have indicated that there should be no difficulty in treating the ore, although the precise method to be adopted has still to be decided. I hope to be in a position within the next twelve months to present you with plans for the exploitation of this property.

The Directors' Report and Balance Sheet and Accounts for the year ended September 30, 1959, were adopted.

The retiring Director, Mr R. P. Grenfell, was re-elected and the remuneration of the Auditors for the past year's audit was fixed.



At the subsequent Extraordinary General Meeting, the capitalisation and scrip issue proposals were approved.

COMPANY AFFAIRS

Associated Electrical Industries

LAST week's figures from Associated Electrical Industries were as good as could have been expected. Trading profits in 1959 were slightly lower at £15,371,000 (against £15,510,000); the latest figure excludes a profit on the sale of investments and other assets of £1,742,000 compared with £351,000 in 1958. A lower tax charge of £4,608,000 (against £5,968,000) helped to offset the increase in depreciation from £4,791,000 to £6,016,000 so that net earnings rose by about 27 per cent, from £5,101,000 to £6,490,000. The ordinary dividend has been left unchanged at 15 per cent, but the total cost of the distribution has gone up from £3,294,000 to £3,795,000, reflecting the issue of new shares in connection with acquisitions. Earnings now cover the ordinary dividend 1.1 times, compared with 1.4 times in 1958.

AEI faced many difficulties last year, not least the steady contraction in profit margins suffered by all manufacturers of heavy electrical equipment. Earnings from telecommunications equipment were hit by the run-down in the GPO's capital expenditure programme, but this should have been offset to some extent by the demand from British railways for diesel electric and signalling equipment. Some measure of the share of the loss which the group may have to bear on the completion of the £40 million Berkeley Nuclear Power Station is indicated by the setting aside of £750,000 against this contingency. Last year Lord Chandos, the chairman, said that 25 per cent of the expected loss had already been written off. AEI's stake in the consumer goods market last year accounted for about 10 per cent of its total sales and it is almost certain that AEI's earnings from consumer durables rose last year. But this is small compensation for the group for the difficulties that it has experienced in the capital goods market. The chart shows that, in common with other heavy electrical equities, AEI's £1 ordinary shares have consistently lagged behind the general run of industrial equities; pre-election buying last September lifted them a little but they had fallen back to their previous level by December. The recovery in January was equally short-lived and now AEI's shares at 56s. (to yield 5.4 per cent) are lower than they were at the beginning of 1959.

Jaguar Cars

AT 63s. 9d. xd Jaguar's 5s. shares yield only 1.6 per cent on the 1958-59 dividend of 20 per cent—the lowest return offered by a motor equity. This reflects the fact that the dividend is covered as much as ten times but it is also a measure of investors' confidence in the prospects of the group. Sir William Lyon's statement accompanying the full accounts should do nothing to shake it. Capital expenditure over the past five years has amounted to over £2½ million and last year some £1,854,000 was spent on fixed assets and tools, including the acquisition of the group's new factory at Coventry. In the year ended July 31st, production reached a record figure of over 20,000 units; trading profits jumped by 70 per cent from £1.6 million to £2.8 million; and net earnings more than doubled, from £624,337 to £1,385,059. Sir William says that demand for Jaguar's models is still growing.

The fluctuations in the market price of the voting and non-voting stock last year suggest that what on the surface appeared to be an attempt to wrest control from the present board of directors was countered only with difficulty. Real security of tenure might be best secured by a more liberal dividend policy. The earnings cover and the fact that liquid resources now amount to £4.7 million (against £3.6 million) suggest that something more generous than last year's decision to make a 200 per cent scrip issue and then effectively to double the dividend would be possible.

Swan, Hunter

TRADING profits of Swan, Hunter and Wigham Richardson, the shipbuilders, fell last year from £3,401,942 to £2,956,030; after a lower tax charge of £945,498 (against £1,270,624) net earnings have fallen by £236,810 to £1,255,475. The ordinary dividend remains unchanged at 10 per cent, after allowing for last year's 100 per cent scrip issue. With the flow of new orders to British shipyards drying up the relatively modest fall in earnings suggests that the group was still steadily working through its long order book. Even so, the market was disappointed with the preliminary statement and the £1 units were immediately marked down 1s. 10½d. to 34s. 7½d., to yield 5.8 per cent.

British Nylon Spinners

AFTER a 42½ per cent fall in trading profits to £6,298,545 in 1958, British Nylon Spinners has announced a 94 per cent increase in its 1959 profits to £12,216,402. Net profits are more than double at £5,665,899 after tax of £4,888,760 (against £2,700,000). The dividend on the £1 shares, which are held jointly by Imperial Chemical Industries and Courtaulds, has been raised from 18 per cent to 20 per cent. The 1958 fall in profits was a result of marked increases in costs, particularly of raw materials, during the initial period of gearing up for expanded production. In the early part of 1959 this preparatory phase was completed and was followed soon afterwards by a general improvement in textile sales. There was also a growth of further end-uses for nylon. This is why there has been such a substantial recovery in profits. Sales so far this year have continued to run at a satisfactory level, though conditions are still competitive.

The new factory at Gloucester will begin production in July. The cost of completing this factory is reflected in the sum of £3,610,000 outstanding for capital commitments on December 31st. The balance sheet shows that fixed assets have risen from £22,792,040 to £23,873,310. Stocks are slightly lower at £8,452,037 but debtors have risen from £2,342,122 to £3,588,042. Following the reinforcement of revenue and future taxation reserves, total liquid resources have risen from £7,351,954 to £12,019,243, of which an unchanged £4,603,500 is on loan, free of interest, to ICI and Courtaulds.

Nearly £3½ million has been added to revenue reserves, which now total £13,011,363. Of this sum £6 million is to be capitalised and the resultant one for three scrip issue will raise the issued ordinary capital from £18 million to £24 million. On this encouraging news from BNS, Courtaulds' £1 shares rose by 2s. 6d. to 64s. 9d. The £1 shares of ICI, which had risen by 1s. on the previous day on the statement from Calico Printers, gained another 10½d to 61s. 1½d. At that price they yield a bare 2½ per cent on the 1958 dividend of 8 per cent. The sights are certainly set high for the profits and final dividend statement, which is due next week.

Calico Printers

THE gloom shed by last year's full report of Calico Printers has been replaced by cheerful optimism in the stock market, where after the publication the £1 ordinary shares jumped by 11s. 6d. to 71s. In their interim report, the directors announced that royalty earnings on the "Terylene" patents for the first half of the current year amounted to £765,000, only a little short of receipts of £816,000 in the full year to June 30th last. Bigger sales at home by Imperial Chemical Industries contributed materially to this improvement. But over 60 per cent of CPA's royalty income comes from sub-licensees abroad, where the patents will continue for varying periods after the British patents expire in July, 1963.

The news here, too, is more encouraging, for both the commission printing and the merchanting sections of the business are enjoying a successful year and the directors are able to forecast a substantial advance in trading profits in the current financial year. In the light of the improvement in prospects the directors have declared an interim dividend of 12½ per cent, which compares with last year's single payment of 22½ per cent. This, however, included a bonus of 15 per cent, which reflected simply the increase in royalty income. Something better than 22½ per cent is indicated by this interim and the market has already set its sights at a total dividend of not less than 30 per cent for the year to June 30th next.

Bradford Dyers

THE £1 ordinary shares of Bradford Dyers have enjoyed strong support recently on hopes that compensation will soon be paid to the company in respect of its Egyptian claims. That prospect certainly seems more hopeful than it did a year ago, for the group's bank deposits in Egypt have now been released from sequestration and the sum of just over £1 million will be transferred to this country as soon as permission is granted by the UAR exchange control authorities. Moreover, an interim payment of £97,224 has been received in respect of Bradford Dyers' holding in the shares in Beida Dyers SAE. The value of these shares has been assessed at £1,774,470.

The British Government now has in its hands £27½ million in compensation moneys under the Anglo-Egyptian financial agreement and the directors of Bradford Dyers say they look to the Government for a further substantial and prompt distribution in respect of their claims. They reiterate their belief that the £27½ million will be far from adequate to meet claims in full.

Last year, the profit of the parent and the British subsidiaries again fell, shrinking from £380,978 to £246,385, and this was entirely responsible for the fall from £549,669 to £428,677 in the trading profits of the group as a whole. In fact, profits of overseas subsidiaries advanced from £168,691 to £182,292; there was also a rise in investment income, from £149,550 to £154,157. These increases were not sufficient to prevent the group making a loss after depreciation but before tax of £2,665, compared with a profit before tax of £70,102 in 1958. These results are rightly described by the directors as meagre, but in view of the group's adequate reserves, the directors have declared a final ordinary dividend at 3 per cent. No payment was made for 1958, but a special profits tax interim of 3 per cent was declared in respect of 1959. The directors say that there is some sign of recovery in the trade of the dyeing and finishing branches in this country. But the current price of 19s. 3d. for the £1 ordinary shares largely reflects hopes about a capital payment in the not too distant future rather than any about an improvement in trading.

Hongkong and Shanghai Banking

FROM the Pacific to the Mediterranean is the proud claim made by Mr Michael Turner, the chairman, of the extent of the interests of the Hongkong and Shanghai Banking Corporation. Last year both the Mercantile Bank and the British Bank of the Middle East were taken over and these acquisitions have gone a long way to filling the gap created by the bank's virtual exclusion from China. While the acquisition of the Mercantile Bank primarily reinforced the Hongkong's interests in countries where it already operated, the acquisition of the BBME has brought the Hongkong into an entirely new geographical sphere of operations. Mr Turner says that with these acquisitions total assets now exceed £400 million.

The balance sheet reflects a year of increased economic activity, advances by the parent bank rising by 20½ per cent, from £68 million to £82 million, and trade bills from £27 million to £34 million. Disclosed profits of the group were HK$29.4 million (against HK$23.5 million); but these figures do not include any profits from the BBME. The dividend is kept at £3 per share but the payment of the final dividend of £1 17s. 6d. per share to old BBME shareholders will be paid out of inner reserves, since it in effect represented part of the purchase price.

In his review Mr Turner contrasts the progress made in Western Europe over the past year with that made in Asia, pointing out that, although some Asian countries have benefited from the rise in commodity prices, economic growth is still small. He also gives those in Hong Kong, who think that the present rate of expansion both in trade and in industry will inevitably continue, a timely warning. The total volume of trade there in 1959 was about 8½ per cent higher than in the previous year while the value of exports of Hong Kong products actually rose by as much as 80 per cent. Now Mr Turner foresees increasing resistance to the colony's products from the more industrialised countries. Meanwhile, the bank's own HK$125 shares can still be put in the growth category; at £64⅛ they yield nearly 4¾ per cent.

International Nickel

IN 1959 this giant of the nickel world enjoyed one of the sharpest and swiftest recoveries in its history. The year before a world surplus of nickel forced the group for the first time in nearly ten years to work at less than capacity. The market last year turned full circle, with the result that net earnings jumped from $39.6 million to $85.2 million and shareholders received a dividend of $3.00 a share (compared with $2.60). Deliveries of nickel ran at a record level of 317,040,000 pounds (against 205,800,000 pounds) and copper deliveries rose from 210,570,000 pounds to 252,450,000 pounds. Deliveries of platinum metals which slumped to a postwar low in 1958 of 145,400 ounces climbed back to 384,600 ounces; the average published price of platinum which stood at $52 per troy ounce at the beginning of 1959 recovered to $77 later in the year, and in the first two months of 1960 it reached $82.

	1958 $ 000	1959 $ 000
Consolidated earnings :—		
Net sales	322,038	457,750
Other income	4,295	3,708
Net earnings	39,665	85,157
Net earnings per common share	$2·71	$5·83
Dividend per common share	$2·60	$3·00
Dividends paid	37,919	43,760
Consolid. balance sheet :—		
Liquic funds	125,283	126,690
Stocks	127,592	138,412
Net fixed assets	253,848	306,135
Current liabilities	24,262	33,130
Common shares	60·767	61·321
Reserves	381,159	423,556

Capital expenditure in 1959 amounted to $66,902,000 and more than two-thirds of this amount was spent on the group's nickel project in Manitoba; in 1960 capital spending is expected to run at $70 million, a large proportion again being earmarked for the completion of the Manitoba scheme which is expected to add 75 million pounds of nickel a year to total output.

Consumption of nickel in the free world touched a new peak last year of 420 million pounds, compared with the previous record in 1957 of 215 million pounds—and demand is still growing. Threatened political troubles in Cuba have encouraged many manufacturers to step up their stock-piling programmes and in the first two months of this year nickel deliveries by International Nickel outstripped production. In 1961 the directors expect world production of nickel to meet world demand, with the increase in production from the Manitoba mine and the running down of United States strategic stockpile more than offsetting any curtailment of supplies from Cuba. All present indications suggest the chairman, Dr John F. Thompson says, that the group will be working to full capacity throughout this year.

Canadian Pacific

ALTHOUGH Canadian Pacific's railway revenue rose by two per cent last year, expenses were up by three per cent, so that net railway earnings fell from $36.5 million to $36 million. That the railways did not participate more fully in the recovery of the Canadian economy is attributed by the directors to a fall in freight income as a result of the strikes in the United States steel industry and in the forestry industry in British Columbia. The company's net income from other sources was also lower at $12.7 million (against $13.4 million). Here an improvement in profits from the operation of steamships and hotels was more than offset by lower profits from airlines and by a further fall in oil revenues.

Last year Canadian Pacific's earnings provided a return of only 2.7 per cent on the net investment in railway property. The president, Mr N. R. Crump, arguing that the revenue received on the fixed statutory rates for grain falls far short of a fair return,

	1958 $ 000	1959 $ 000
Income Account :—		
Railway revenue	467·411	477·806
Railway expenses	430·919	441·760
Net earnings	36·492	36·046
Other income	13·409	12·678
Total earnings	48·724	49·901
Fixed charges	16·988	17·435
Net income	32·903	31·289
Preference dividend	3·069	3·029
Ordinary dividend	21·218	21·498
Retained earnings	8·617	6·762

says that a scheme has been submitted to the Royal Commission on Transportation which would maintain present freight rates for grain growers but which would also give some compensation to the railways. The unchanged dividend on the ordinary shares of $1.50 is paid out of earnings which have fallen from $2.09 to $1.97 per share and at $ (London) 45 the shares yield 6⅓ per cent. Any sturdy advance in earnings does not seem likely—and if and when there is one, it can really come only from Canpac's interests outside the railways.

N.V. Philips

LAST year's boom in the consumer goods markets was confidently expected to give N.V. Philips of Eindhoven one of its best trading years ever. And that indeed is what has happened. Sales have gone up by 16 per cent, from 3,595 million guilders to 4,182 million guilders; and trading profits have risen to a new record level of 740 million guilders, compared with 557 million guilders in 1958. Net earnings advanced by no less than 44 per cent, from 244 million guilders to 351 million guilders. Profit margins were higher, with net earnings as a percentage of turnover going up from 6.8 per cent to 8.4 per cent and the return on the net capital employed in the business improving from 13.6 per cent to 16.7 per cent. The ordinary dividend has been raised from the equivalent of 13⅓ per cent, allowing for the 5 per cent scrip issue, to 16 per cent and the holders of the cumulative participating preference shares will receive 8 per cent (against the equivalent of 7.52 per cent after allowing for last year's one per cent scrip issue). Exactly similar scrip issues are to be made again this year.

The rapid growth of this international giant over the past decade has on occasions led to some suggestions that the need for new capital must sooner or later become pressing. Once again, however, the full accounts refute any thought that Philips is in present need of new money. Earnings ploughed back last year amounted to 217 million guilders—or 62 per cent of the group's net earnings. The balance sheet shows that liquid funds have risen by 162 million guilders to 657,636,000 guilders. This reflects in part the low level of stocks carried last year and in part cash payments received from the conversion of convertible debentures. The big cash flow, which amounted to 266,568,000 guilders last year, should help to alleviate any strain that the expansion and modernisation programme will put on resources this year. The fl. 10 shares have now become equities that no portfolio of international stocks can be without, but the yield of 2 per cent offered by them at 150s. 7½d. put a big discount on growth.

United States Steel

IN spite of the 116-day steel strike last year the United States Steel Corporation was able to expand its ingot and castings production from 23.8 million tons in 1958 to 24.4 million tons and to step up shipments of steel products from 17.0 million tons to 18.1 million tons. But its share of the total output of the American steel industry actually fell slightly, from 28.4 per cent to 28.2 per cent. This was accompanied by a decline in profits, with net earnings falling from $301.5 million to $254.5 million. This represented a decline in earnings from $5.13 to $4.25 per common share, and earnings expressed as a percentage return on sales fell from 8.7 per cent to 7.0 per cent. The steel strike meant that for the second year running US Steel worked to less than 60 per cent of rated capacity and costs per hour were at a higher level than at any other time in the company's history. The explanation of the relatively high level of output lies in stock-piling by consumers in anticipation of the strike, at a time when "normal" demand was rising as the United States economy climbed out of the 1958 recession.

US Steel's gross capital investment in 1959 amounted to $366.1 million, compared with $448.1 million in 1958, and the decline reflects the dislocation and disruptions to construction caused by the strike. Capital spending authorised during the year dropped from $513 million to $331 million. At the current price in London of $151¼ the yield is 3½ per cent on the unchanged dividend of $3 a share.

ACCOUNT DAY	Mar. 29	April 12	May 3

MARKETS continued to be cautious until Tuesday when the rally on Wall Street and the continued flow of good company news helped industrial equities to recoup all of last week's losses. On Wednesday the improvement continued and by the close gains were evenly scattered; the biggest rises were seen in those shares which had suffered the sharpest falls in the past fortnight's setback. Buying was small but persistent, selling dried up and the continued shortage of stock helped prices to rise further than the volume of business seemed to warrant: the number of bargains marked on Wednesday was 14,143—only a slight increase over the previous Wednesday. In contrast to equities, gilt-edged stocks failed to join the rally and tended to drift lower throughout the week to Wednesday. A small amount of bank selling was reported but this was to some extent offset earlier in the week by a fair amount of switching operations from equities: 3½ per cent War Loan lost 7/16 to 62 9/16 and in the shorts 4½ per cent Conversion 1964 dropped 1/32 to 98 15/32. Medium dated stocks held up well with 4¼ per cent British Electricity gaining 9/16 to 85 11/16. Home Corporation loans were dull but reasonably firm: typically, 5½ per cent LCC 1977-81 closed unchanged at 100.

On Wednesday, gains in the industrial market were more widespread than on Tuesday and rises of 1s. were common in most of the groups. Over the week to the close on Wednesday *The Economist* indicator gained 14.5 points to 357.4. With London taking its lead from Wall Street it is not surprising that some of the biggest gains were recorded by American favourites: Unilever Ltd. rose 6s. 6d. to 139s., the NV shares gained 3s. to 172s., and EMI closed 4s. 3d. up at 54s. Fisons jumped 4s. 6d. to 52s. and Philips Lamps gained 4s. 1½d. to 150s. 7½d. following the excellent profit figures. Steel shares were in the forefront of this week's rally and Steel of Wales gained 3s. to 46s., John Summers 2s. to 72s. and United Steel 2s. 3d. to 77s. 3d. Heavy engineering shares, however, still appeared to be unpopular and most closed virtually unchanged over the week: Davy United were unchanged at 107s 6d., Power-Gas fell 3d. to 91s. and Henry Simons dropped 2s. 6d. to 49s. Simon-Carves gained 3s. 3d. at 48s. 9d. Heavy electrical shares gained ground over the week. AEI improved 1s. 3d. to 56s. 3d., English Electric 2s. to 42s. and General Electric closed 1s. better at 38s. 6d.

In textiles the good results from British Nylon Spinners helped Courtaulds to put on 3s. 9d. to 64s. 9d. (and ICI gained 1s. 10½d. to 61s. 1½d.). The payment of an interim dividend by Calico Printers prompted a jump of 13s. in its shares to 68s.

THE MONEY MARKET

APPLICATIONS at last Friday's Treasury bill tender for the £290 million of bills offered rose by £32 million to a new peak of £516 million. The discount market lowered its bid by 4d. to £98 17s., and its allotment rate fell from 59 per cent to only 27 per cent. The average rate of discount rose by about 11d. to £4 11s. 8.32d. its highest for 21 months.

In New York, by contrast, bill rates are at their lowest level since August. The rate on three months bills fell from 3.641 per cent to 3.451 per cent and that on six months bills even more sharply, from 4.024 per cent to 3.619 per cent. A further £290 million bills was offered at this week's tender against maturities of £240 million.

In Lombard Street there has been some slight improvement in the supply of money this week and on Wednesday, for the first time in two weeks no official help was given. Rates for overnight money have been kept up to $4\frac{3}{8}$ per cent but on Tuesday and Wednesday a few closing balances were taken down to the basic minimum of $3\frac{3}{8}$ per cent. There has been only small business in bills. June and end May maturities have been sold at $4\frac{17}{32}$ per cent since last week's tender.

CORRESPONDENTS IN ALL PRINCIPAL CITIES OF THE WORLD

. . . there's an able branch manager at the bank we use. And behind him is a district head office which has a finger on all our local problems, as well as on the broader issues of the outside world. So we are very well served at both branch and head office levels . . .

our bank's Martins

L9 *Martins Bank Limited Head Office: 4 Water Street, Liverpool 2*

In the City

The good professional man acts with a sense of responsibility illuminated by intelligence. His reputation and his business rise or fall on the shrewdness of his advice.

For investment he will often advise a good Building Society and he will count the Burnley among the very best. The Burnley offers the investor complete peace of mind. At the same time he enjoys a good rate of interest—3¼% tax paid, and the knowledge that his savings are freely available when he needs them. *Deposits in the Society are Trustee Investments.*

For full details please apply to:
12, Grimshaw Street, Burnley.

Selling into Scandinavia?

HAMBROS BANK OFFER UNIQUE, SIX-POINT SERVICE FOR BRITISH EXPORTERS

NEW markets to conquer! New trade to win! For thousands of British businessmen the newly formed 'Outer Seven' brings important new export prospects. Many will be especially interested in the rich potential of Norway, Denmark and Sweden. Hambros Bank can help them plan their friendly invasion. And this service includes Finland, although she is not a member of the Outer Seven.

Established in Copenhagen in the nineteenth century, Hambros have been closely linked with Scandinavia ever since. Now they have drawn upon their unique knowledge to formulate a special, six-point service for British exporters—a service already being used by hundreds of British firms.

THE SIX-POINT SERVICE:

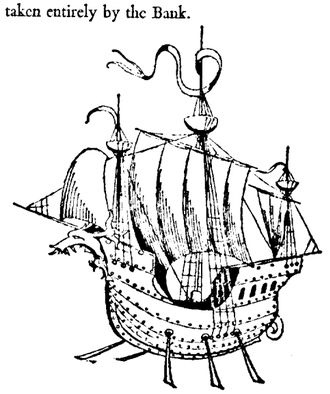
1. *Exploration:* Hambros will supply a preliminary report to any industrial firm on the market potential in Scandinavia for its particular products.

2. *Introduction:* After the market appraisal and in consultation with the client, Hambros is prepared to arrange introductions to agents and customers in Scandinavia.

3. *Investigation:* Next, through its Credit Research Department, Hambros can obtain confidential reports on their financial standing as part of its normal service.

4. *Negotiation:* The negotiation of the credit finance to enable contracts to be established can be carried out simply and easily by Hambros Bank, through its banking connections in the countries concerned.

5. *Credits:* The Bank will grant short and medium-term credits, subject to British exchange regulations, and regulations in the importing country.



6. *Risk:* The risk of financing exports to Scandinavian markets will generally be taken entirely by the Bank.

If you want to start selling in Scandinavia, or if you plan to expand your business there, write for further details to:

APPOINTMENTS

MANAGER—MARKET RESEARCH DEPARTMENT

The DIRECTORS of J. & J. COLMAN LTD. invite applications for the position of Market Research Manager. The appointment involves residence in Norwich where the factory is situated and duties are primarily concerned with foodstuffs of all kinds. Candidates should have previous experience of Management of a Market Research Department. The nature of the work involves fairly regular London contacts and offers good opportunities in Market Research itself and in commercial work generally. Wide experience in practical field work and a sound education (preferably to University degree standard), essential.—Apply confidentially, stating age, qualifications, detailed experience and salary required, to Secretary, J. & J. Colman Ltd., Carrow Works, Norwich, Norfolk.

LIL

LAPORTE INDUSTRIES LIMITED

ORGANISATION & METHODS DEPARTMENT

A Senior Assistant, to be based on Luton, is required by the Group Chief Accountant to augment the Organisation and Methods Department.

The fundamental qualification for the post is several years' experience in Industry, and preferably some experience of Organisation and Methods work. Equally essential is a sound appreciation of this aid to Management efficiency, whilst a knowledge of industrial accountancy procedures would be helpful.

The salary offered is attractive and prospects for a capable man are good. Age limits are between 28 and 35.

Applications, giving full details of age, qualifications and experience, should be made to The Group Personnel Manager, LAPORTE INDUSTRIES LIMITED, Hanover House, 14 Hanover Square, London, W.1, quoting ref. LIL/E1/18.

CENTRAL OFFICE OF INFORMATION require male ASSISTANT INFORMATION OFFICERS (unestablished) to assist with planning tours for officially sponsored parties of visitors from overseas, and escorting work in London and the Home Counties. Applicants should have a good educational background, an appreciation of current affairs in the U.K. and overseas, and a high standard of general knowledge. Details of any language qualification and of primary and secondary interests should be mentioned. Work involves irregular hours including Saturday and Sunday duties but hours are adjusted where possible to average 42 weekly. Salary according to experience and qualifications rising to a maximum of £1,085. —Write, giving age, full details of experience and qualifications, to Manager (P.E.981), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

BRITISH TRANSPORT COMMISSION invite applications for a post in the Economics Section. Candidates should have experience in the application of economic and statistical analysis to practical problems. Know and understand the content, meaning and reliability of national statistics of finance, trade and industry; have the ability to write briefly and clearly in non-economic language. Good honours degree or equivalent professional qualification desirable. Starting salary will be not less than £1,100 p.a.

Superannuation scheme; certain travel facilities; medical examination.—Write, stating age, education and experience, to Director of Establishment, British Transport Commission, 222 Marylebone Road, London, N.W.1, within 14 days. Addressed envelope for acknowledgment.

JOURNALIST required with view to appointment as Assistant Editor of monthly magazine covering some of the more progressive and stimulating aspects of business management.—Write Box 1299.

P.D. LEAKE RESEARCH FELLOWSHIPS

APPLICATIONS are INVITED from QUALIFIED MEMBERS of the ACCOUNTANCY PROFESSION for APPOINTMENT to a P. D. LEAKE RESEARCH FELLOWSHIP financed by the P. D. Leake Trust. The term of the Fellowship will be for the year commencing October 1, 1960, and it may be held in the University of Birmingham, the University of London, or the University of Oxford, the location of the appointment being determined by the three universities concerned in consultation, after consideration of candidates' preference and research interests.

The object of the Fellowship is to provide university facilities for an experienced accountant to carry out research in subjects with which the accountancy profession is directly concerned and within the charitable object of the P. D. Leake Trust, namely "to benefit and advance the sciences of accountancy and of political economy, including the subject of public finance and taxation." Only accountants who are members of United Kingdom accountancy bodies which are recognised for the purpose of United Kingdom company law are eligible.

The emoluments of the Fellowship will be £2,000, out of which the Fellow will be required to meet any consequential expenses of his appointment.

Further particulars may be obtained from the Registrar, University of Birmingham, Birmingham, 15, with whom applications must be lodged by April 30, 1960.

NORTHERN IRELAND DEVELOPMENT COUNCIL

Applications are invited for the post of Press and Publicity Officer to the Council.

The duties of the post, which is London-based, are to carry out advertising and press relations, under the Council's supervision, to inform British industry of the facilities for expansion available in Northern Ireland.

Experience in information and publicity work is essential, and a good general knowledge of industry is desirable.

Salary will be between £1,500 and £2,200, according to qualifications. Applicants should send full particulars, by March 31st, to the Secretary, Northern Ireland Development Council, 13 Lower Regent Street, London, S.W.1.

CENTRAL ELECTRICITY GENERATING BOARD

SOUTH WALES DIVISION

Vacancy No. 68/EC/60

Applications invited for superannuable N.J.C. appointment of ASSISTANT in the STATISTICS SECTION, GENERATION DEPARTMENT, DIVISIONAL HEADQUARTERS.

Salary Grade 3, £720 to £930 per annum.

Successful applicant would be required to assist in the analysis and presentation of technical statistics.

Possession of a Degree in Statistics, Mathematics or an equivalent qualification would be an advantage.

Special application forms obtainable from Secretary, South Wales Division, Central Electricity Generating Board, Twyn-y-Fedwen Road, Gabalfa, Cardiff, to be returned by April 1, 1960.

SURREY EDUCATION COMMITTEE

GUILDFORD COUNTY TECHNICAL COLLEGE, STOKE PARK, GUILDFORD

DEPARTMENT OF COMMERCE AND GENERAL EDUCATION

Applications are invited for the following additional posts commencing September 1, 1960.

Assistant Grade B to teach Economic History at Advanced Level, G.C.E. to full-time day students and some subjects which are required in the syllabuses of the various Accountancy and related professional Institutions to part-time day and evening students. Applicants should be graduates with sound academic qualifications in Economics.

Assistant Grade B to teach Commercial Subjects including Book-keeping, General Principles of Law and Commerce. Applicants should be graduates in Commerce or Economics preferably with membership of a professional Institute.

Burnham Scale salary payable.

Grade B (Men), £700 x £27 10s/£37 10s. — £1,150; (Women), £660 x £22/£26 — £920, plus appropriate equal pay addition.

Further particulars and forms of application obtainable upon request with stamped addressed foolscap envelope from the Principal.

INVESTMENT RESEARCH: vacancy on staff of Investment Trust Company in London for FEMALE ASSISTANT, aged 21-25 interested in the subject and preferably with some knowledge of Economics or Economic History.—Write Box J.E.874, c/o 191 Gresham House, E.C.2.

INFORMATION OFFICER

International business organisation concerned with international trade policy invites applications for post of Information Officer in its office in Paris.

The Information Officer is responsible for developing the organisation's long-term information programme. This includes editing monthly news sheets and technical publications; maintaining relations with the Press and organising press conferences.

Qualifications required are degree in Economics, journalistic ability and some years' experience of financial journalism or similar work. Some French an advantage. Age early thirties.

Salary by arrangement. Applications with full details to Box 1301.

NUFFIELD COLLEGE

GWILYM GIBBON RESEARCH FELLOWSHIP

Applications are invited from men or women who wish to conduct research in the field of government and administration. Preference will be given to candidates with experience in public service. The Fellowship will be for one year in the first instance. Further particulars and application forms can be obtained from the Warden. Applications should reach him by May 10, 1960.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

One Research Officer and one Research Assistant are required to work on a follow-up study, sponsored by the Department of Scientific and Industrial Research, of attitudes and vocational attainment of young men, which is expected to last two to three years. Applicants should have good degrees, preferably in Sociology or Psychology, and experience with survey work and interviewing. Salary scales: Research Officer within the range £900 x £30 — £1,500 a year plus £60 a year London Allowance; Research Assistant £600 x £25 — £675 a year. In assessing the starting salary consideration will be given to age, experience and qualifications.

Applications, indicating the position for which the candidates wish to be considered, and with the names of two referees, should be received not later than April 4, 1960, by the Secretary, The London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2, from whom further particulars may be obtained.

UNIVERSITY OF KHARTOUM

CHAIR OF ECONOMICS

Applications are invited for the Chair of Economics.

Salary: £S.2,700 per annum.

Cost of living allowance approximately £S.180 per annum at present. Outfit allowance £S.50. Passages for appointee and family on appointment, termination and annual leave. Superannuation Scheme. Appointment on contract for five years with possibility of renewal. Unfurnished accommodation provided at 7½ per cent. of salary.

Applications (10 copies) detailing qualifications and experience and naming three referees, by April 20, 1960, to Registrar, University of Khartoum, c/o Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

CENTRAL OFFICE OF INFORMATION require a SENIOR INFORMATION OFFICER (unestablished) to control the production of a group of documentary, television and advertising films. Candidates should possess experience of sponsored film production, a good publicity sense and a favourable grasp of public affairs. Some experience of television advertising and/or of overseas information work would be an advantage. Salary £1,395 to £1,650 (men); £1,370 to £1,650 (women).—Write, giving age, full details of experience and qualifications, to Manager (P.E.1018), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

LLOYDS BANK

Economic Adviser's Department of Lloyds Bank

has a vacancy for a woman graduate. The work will be largely statistical. A knowledge of elementary statistical methods is essential and some practical experience is desirable. Preferred age up to 26. Selection will follow an interview at which full details concerning salary, etc., will be given. Applicants are requested to write in the first instance to The Women Recruitment Officer,

LLOYDS BANK LIMITED
POST OFFICE COURT,
10 LOMBARD STREET,
LONDON, E.C.3.

THE COLLEGE OF AERONAUTICS

Applications are invited for the appointment of LECTURER in STATISTICAL METHODS and OPERATIONAL RESEARCH in the DEPARTMENT OF ECONOMICS and PRODUCTION. Candidates should be graduates with a minimum of three years' industrial experience in statistical or operational research. A knowledge of computer, work study and some consultancy experience would also be an advantage. The successful candidate will have the opportunity of participating in a full programme of research in a well-equipped operational research laboratory now under construction. Salary in scale £900 x £40 to £1,260 p.a., £58 to £1,650 p.a., with superannuation under F.S.S.U. and family allowance, commencing salary depending upon age, qualifications and experience. Consideration given to housing requirements. Applications giving full particulars and quoting the names of three referees to the Recorder, The College of Aeronautics, Cranfield, Bletchley, Bucks. Further particulars available.

GRADUATE in LANGUAGES, ECONOMICS, or SCIENCE, aged 23-27, required by Borax Consolidated Limited as assistant in Sales Department. Some commercial experience desirable, either home or export. Work covers correspondence and eventually visits home and overseas, pricing, supply, agents, buyers, trade associations. Good mixer desirable, hard worker and quick learner essential. Good salary and progress for right man. Non-contributory pension scheme. Apply in confidence, giving full details, to Staff Manager, Borax House, Carlisle Place, S.W.1.

UNIVERSITY OF ST. ANDREWS

Passages for appointee and family on appointment, termination and annual leave. Superannuation Scheme. Appointment on contract for five years with possibility of renewal. Unfurnished accommodation provided at rent up to 7½ per cent. of salary.

Applications (10 copies) detailing qualifications and experience and naming three referees, by April 20, 1960, to Registrar, University of Khartoum, c/o Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

Research Assistant

The WHITE FISH AUTHORITY invite applications for a Junior Executive appointment as Research Assistant in the Economics and Statistics Department. The duties of the post will be primarily concerned with the Authority's current programme of research into earnings, costs and productivity of various sections of the white fish industry.

Applicants should have a good degree in Economics, preferably with Industry and Trade or Statistics as a special subject. Some commercial experience in statistical work would be an advantage.

Salary scale £850 x £50 — £1,100. A contributory pension scheme is in operation, and luncheon vouchers and a five-day week are among other conditions of service.

Applications, giving names of two referees, should be sent to the Secretary/Solicitor, White Fish Authority, Lincoln's Inn Chambers, 2-3 Cursitor Street, London, E.C.4, so as to reach them not later than Thursday, March 31st.

CAREER IN CONSULTANCY

MANAGEMENT ACCOUNTANT

An interesting opportunity exists for a Chartered or Cost Accountant, aged 35-45, in a London based firm of Management Consultants. Wide experience of Management Accounting is essential and should include the installation and operation of standard cost of budgetary control systems. Further training in other aspects of Management Consultancy would be given to enable the successful applicant to widen his general experience. Starting salary would be in the £1,500 —£2,000 a year range.

Applications should give fullest details of education, background, previous jobs and salaries earned. Replies, which will be treated in the strictest confidence, should be sent to Box EL9, EPE, Romano House, 399/401 Strand, London, W.C.2.

H.M. INSPECTORS OF SCHOOLS. MINISTRY OF EDUCATION. Non-contributory pensionable posts in England for men and women, preferably under 45, with good educational qualifications. Experience in any aspect of Primary, Secondary or Further Education or in Teacher Training but especially in Mathematics, Science, English (including Drama), Physical Education (Women), Handicraft, Housecraft, Provision of Meals, Special Educational Treatment, Music, Art, non-vocational Further Education.

Men's starting salary (London) £1,585 — £2,520. Appointments may be made above the minimum. Higher posts filled by promotion; also some with £140 allowance.

Application form from the Secretary (Inspectors' Section), Ministry of Education, Curzon Street, London, W.1. Closing date May 6th.

MANAGEMENT ANALYSTS

A Major Oil Company in the Middle East has vacancies for experienced Management Analysts who possess a University degree or equivalent and who have had some years' broad experience of industrial commerce in major industrial concerns or with Management Consultants. Applicants must be familiar with the principles of organisation, manpower, materials and equipment utilisation. Age 30-45. Salary not less than £3,000 per annum after tax will be offered to men with requisite qualifications and experience. Two-year tours of duty followed by paid home leave. Married accommodation and free family passages available. Those qualified and interested should apply for further information, giving age and brief details of relevant experience, in the first instance, to Box EL865, c/o 191 Gresham House, E.C.2.

ASSISTANT EDITOR required on management journal. Salary £1,000 a year. Applicant must write good English, and must be methodical and meticulously accurate. Editorial experience essential. Degree in Sociology or Economics desirable but not essential. Pension Scheme—Please reply to the Editor, The Manager, 80 Fetter Lane, London, E.C.4.

CITY OF BIRMINGHAM EDUCATION COMMITTEE

CITY OF BIRMINGHAM COLLEGE OF COMMERCE

Applications are invited for the following posts, the duties of which begin on September 1, 1960:

ASSISTANT GRADE "B" IN ADMINISTRATION.

Applicants should hold a good Honours degree, preferably with practical experience in Government or the Nationalised Industries, and be able to lecture up to Final Degree standard.

SALARY—in accordance with the Burnham Scale for Teachers in Establishments for Further Education:

Men: £700 x £27 10s. — £1,150 per annum;

Women: £630 x £22 — £920 per annum, plus Equal Pay Increments.

Together with graduate and training allowances and increments for approved professional experience where appropriate.

APPLICATIONS (Full details of the post and form of application (to be returned within 14 days of the appearance of this advertisement) may be obtained by sending a stamped addressed foolscap envelope to the Principal, City of Birmingham College of Commerce, Broad Street, Birmingham, 1.

E. C. RUSSELL,
Chief Education Officer.

UNIVERSITY OF MELBOURNE

LECTURER IN ECONOMICS

Applications are invited for the above-mentioned position. The salary range is £A1,500 to £A2,100 per annum. Initial salary will be determined according to qualifications and experience. Superannuation similar to F.S.S.U. in Great Britain will be provided.

Conditions of appointment may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on May 31, 1960.

SENIOR COMMERCIAL GENERAL MANAGER

(Electronics)

A company occupying a leading position in the electronics industry needs a successor in its Head Office in London for the present Head of its Division dealing with the Industrial and Government markets. Applications are invited, in the first instance, for the post of Deputy to the Head of the Division, with the expectation of taking over the Division within the next two years.

The Head of the Division carries full responsibility for all the Division's work. He is responsible for surveying the market, forecasting sales, planning manufacture (in co-ordination with the production units), marketing and customer servicing, initiating development programmes, and the co-ordination of all these functions into a Division.

Some years' successful experience of responsibility for combining marketing with planning and production in an engineering field is essential—preferably, but not necessarily, in an electrical or electronics field. The position also requires a high order of intelligence, facility in grasping essentials quickly, and particularly, the ability to take and delegate responsibility.

The Company has a large and expanding share of a growing market. The successful applicant will be expected to make a major contribution to furthering this expansion.

Preferred age 36-44. Starting salary £3,000 plus the usual benefits. There is a contributory pension scheme. Prospects both immediately and longer term are very good. Government security clearance will be required.

Apply by March 28th, giving brief particulars, to the *Secretary, The Tavistock Institute, 3 Devonshire Street, W.1*, who are advising the Company on this appointment. Applicants' particulars will not be given to the Company without their consent.

IMPERIAL CHEMICAL INDUSTRIES LIMITED

DYESTUFFS DIVISION

have vacancies in their Work Study Departments

AT DIVISION HEADQUARTERS, BLACKLEY, MANCHESTER, AND AT THEIR FACTORIES THERE AND IN HUDDERSFIELD, BILLINGHAM AND WILTON

The posts would be of interest to YOUNG MEN

(a) who are qualified in Science or Engineering,
(b) who hold a degree in Arts, Economics, Commerce or Industrial Administration, preferably with mathematics to subsidiary or degree standard,
(c) who have had training in Engineering,
(d) with experience in Work Study.

The posts carry progressive salaries with good opportunities for promotion. The Company has a Pensions Fund and an Employees Profit Sharing Scheme; a five-day week is in operation.

Application forms may be obtained from the **Staff Manager, Hexagon House, Blackley, Manchester, 9.**

UNIVERSITY OF NOTTINGHAM

DEPARTMENT OF AGRICULTURAL ECONOMICS

Applications are invited for the appointment of an ASSISTANT TO THE HORTICULTURAL LIAISON OFFICER in the above Department at the School of Agriculture, Sutton Bonington, near Loughborough. Candidates should possess a degree in Agriculture, Horticulture or Economics. The appointment will be made in the grade of Assistant Lecturer, salary scale £700 x £50 to £850 with Superannuation Benefits and Children's Allowances. Conditions of Appointment and Form of Application, to be returned by April 9th, from the Registrar, The University, Nottingham.

THE DURHAM COLLEGES in the University of Durham

Applications are invited from graduates in Sociology, Economics or other appropriate subjects for the post of LECTURER IN SOCIAL ADMINISTRATION in the Department of Social Studies from October 1, 1960, or such earlier date as may be arranged. The person appointed will have special responsibility for tutorial instruction in problems of social policy. The salary attaching to the appointment will be £900-£1,650 a year.

Applications (three copies), together with the names of three referees, should be sent not later than April 22, 1960, to the Secretary, 38 North Bailey, Durham, from whom further particulars may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of Temporary LECTURER IN THE HISTORY OF ECONOMIC THOUGHT. The appointment will be made for a period extending from October 1, 1960, to January 31, 1961. The salary will be on a scale £900 to £1,650 per annum, according to qualifications and experience, with membership of the Children's Allowance Scheme. Applications should be sent not later than April 2, 1960, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

OXFORD UNIVERSITY

DEPARTMENT OF SOCIAL AND ADMINISTRATIVE STUDIES

It is proposed to appoint a Tutor in Public and Social Administration (man or woman), the appointment to begin on October 1, 1960; candidate should have high academic qualifications and experience of the working of the social services would be an advantage; stipend on scale £900 by £50 to £1,350 by £75 to £1,650 with superannuation; the point of entry depending on qualifications and experience.

Applications, with names of three referees and an account of the applicant's qualifications, experience and academic career, should be sent by April 30th to the Secretary, 40 Wellington Square, Oxford, from whom further particulars of the post can be obtained.

CHIEF ACCOUNTANT

required by the

UNITED KINGDOM ATOMIC ENERGY AUTHORITY

AT PRODUCTION GROUP HEADQUARTERS, RISLEY, WARRINGTON, LANCASHIRE

to be responsible to the Deputy Director (Finance and Accounts), for the Group's control, management and financial accounting.

Applicants should have held a senior position in a large industrial organisation and have had extensive experience in the control of qualified staff engaged on a wide range of accounting work. They should have practised successfully modern accounting techniques including Budgetary control and Standard Costing and be familiar with punched card/electronic and keyboard machine accounting techniques. Possession of recognised accountancy qualifications are essential.

SALARY WILL BE NOT LESS THAN £3,000

Contributory Superannuation—Staff Housing Scheme

Send postcard for application form, quoting reference P.138/J10, to Group Staff Manager, at above address

Closing Date: 4th April, 1960

Esso

ECONOMIST

Apply in writing to the Manager, Recruitment and Training,

Esso Petroleum Company Limited,

16 Charles II Street, London, S.W.1.

Quoting Reference E/1

Esso's Co-ordination and Economics Department have an immediate vacancy for an Economist. He will have specific responsibility for reviewing current developments in the U.K. economy. There will also be opportunities for relating such economic analysis to the Company's operations and policies.

Applicants should be aged about 30 and well qualified, both academically and by experience in industry. A good honours degree specialising in economics, with recent practical experience in the above field are essential.

The successful candidate will be based on London. There is a Contributory Pension Scheme and associated benefits; salary will be generous, based on experience and qualifications.

THE RHODES-LIVINGSTONE INSTITUTE, NORTHERN RHODESIA

Applications are invited for two research appointments:

(a) for a study of peasant farming to be undertaken by an agricultural economist, and

(b) for a study of reactions to mass media in Central Africa.

Salary scales: Research Officer (Special Grade), £1,910 x £90 — £2,180 p.a.; Second Research Officer, £1,600 x £50 — £1,900 p.a.; Research Officer, £1,200 x £50 — £1,600 p.a. Initial salary according to qualifications and experience. Provident Fund Scheme. Appointments on three-year contract with overseas leave privileges. Passages to Lusaka and return on completion of contract provided for appointee, wife and children up to equivalent of three full passages in all). Further particulars of research projects and conditions of service obtainable from Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, to whom detailed applications (six copies), naming three referees, should be sent by April 15, 1960.

RESEARCH ASSISTANT needed, full-time or half-time, for work in economics or statistics. Degree or other qualification required. Salary according to qualifications and experience within the range from about £450 to £600 p.a. full-time—Applications, with the names of not more than two referees, to the Clerk of the Faculty of Commerce and Social Science, the University, Birmingham, 15, by April 2nd.

AUSTRALIAN NATIONAL UNIVERSITY

RESEARCH SCHOOL OF PACIFIC STUDIES

DEPARTMENT OF INTERNATIONAL RELATIONS

Applications are invited for a RESEARCH FELLOWSHIP. Applicants should be qualified within the general field of Asian international politics. Other things being equal, preference will be given to candidates with background and experience in the foreign policies of Japan and the Far East.

The remaining salary will be determined according to qualifications and experience. The present salary range is £A1,437-£A2,152 per annum. As this is under review. Appointment will be for three years, with a possible extension to a maximum of five years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid and assistance with housing is provided.

Further details should be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on May 2, 1960.

SOMERSET COUNTY COUNCIL COUNTY PLANNING DEPARTMENT

Applications invited for the following permanent appointments:

(1) Two Senior Assistants, £785-£1,070.

(a) One in Town Map section, headquarters.

(b) One in Area Office, Yeovil.

(2) One Planning Assistant, £765-£880, in Area Office, Weston-super-Mare.

(3) Two Junior Planning Assistants, £610-£765, Radstock and Taunton Area Offices.

Applicants for (1) (a) and (b) should be corporate members of the T.P.I., R.I.C.S., or R.I.B.A., or have degree in economics or economic geography and some experience in a Planning Department.

(2) Must have passed intermediate examination of the T.P.I., R.I.C.S., or R.I.B.A.

(3) Should have completed training in a planning department or office of an engineer, architect or surveyor.

Application forms obtainable from the undersigned must be returned by March 29, 1960.

R. W. DALE,
County Planning Officer.

41 Upper High Street, Taunton.

UNIVERSITY OF BRISTOL CHAIR OF ACCOUNTING

The University proposes as soon as possible to make an appointment in the Department of Economics to a Chair of Accounting or in a subject dealing with Accounting as a fundamental way. Candidates should have academic and professional qualifications. The occupant of the Chair will assume responsibility for research in his subject and for teaching in the present degree courses. He will also have the opportunity, in association with his colleagues, of developing research and postgraduate study in fundamental subjects relevant to administration and management.

Applications (15 copies) (with the names and addresses of three referees) should be sent to the undersigned from whom further particulars of the appointment may be obtained. Candidates from overseas may send one copy by air if it is more convenient to do so.

This is a re-advertisement of a vacancy first advertised in spring, 1959. Persons who sign applied need not reply as their applications will still be considered.

H. C. BUTTERFIELD,
Registrar and Secretary.

PSYCHOLOGIST with Market Research experience required for senior position in the expanding Research Department of a leading West End Advertising Agency. The successful candidate will supervise all research projects on an important group of accounts as well as undertaking specialist work. Please apply Research Manager, Young & Rubicam Ltd., Park House, 8 Baker Street, London, W.1.

APPOINTMENTS REQUIRED

BACHELOR, 34, excellent personality, adaptable, no vices, seeks to attach himself to industrialist financier as personal assistant etc. Qualified accountant. Extensive experience of business, finance and company matters. Exceptional ability. Wide personal knowledge and social contacts. Others loyal and training service to right person. Highest credentials. Write Box 1291.

EUROPEAN INTEGRATION ADVISER. Major U.K. Group, completed studies free for similar or related work, car, consultant. Brilliant Cambridge science degree; 19 years Government Trade Service. Sec 45. Box 1292.

YOUNG professional Economist, with a sound knowledge and experience of the techniques and practice of Industrial and Commercial Market Research, wishes to consider opportunities where his initiative, imagination and training would make a positive contribution to a firm's marketing activities. He would be pleased to discuss any appointment in the strictest confidence—Correspondence in the first instance should be addressed to Box 1297.

BUSINESS AND PERSONAL

GERMAN GIRL STUDENT (20) wishes look after children in English family August and September in return for keep and pocket money. Box 1298.

HOLIDAY HOME with English family from July 1st to August 15th wanted for French girl of 14, anxious learn English. No other foreign students.—Full particulars and terms to Box 1302.

SAVILE ROW CLOTHES. We specialise in, and have in our showrooms, a wide selection of the finest hand made town and country clothes for the discriminating gentleman. Lounge and Sports Suits, Dress clothes, Overcoats, Hunting and Riding Kit are purchased direct from leading Savile Row Tailors, Huntsmen, London, etc. Our prices range from 10 gns. Alterations carried out. Bankers orders and orders by post accepted.—REGENT DRESS COMPANY, 12 Dover Street, 2nd floor (lift), Piccadilly, W.1. HYD 7180. Established 1922. Open 9 a.m.-5 p.m.; Sats. 1 p.m.

WEST HAM CORPORATION 5½%

MORTGAGES 3-10 YEARS

Special terms for loans of £5,000 or over.

TREASURER (K), 95 THE GROVE, LONDON, E.15.

MALE AND FEMALE office Vacancies.—Please call STELLA FISHER BUREAU, 436 Strand, W.C.2. TEM 0644.

A GOOD PLACE TO GO for the really good cameras now available, NEW Leica, Zeiss, Rollei, etc. Booklet free.—Wallace Heaton Ltd., The Camera Specialists, 127 New Bond Street, London, W.1.

GO TO HOLLAND. Hire a 1960 car, self-drive or chauffeur driven, from John Purcell Car Hire, 36 Upper O'Connell Street, Dublin.—Write for brochure and rates.

REMPLOY SPONSORSHIP SCHEME

Send for details which show an attractive proposition to manufacturers.

Write to the Managing Director, Remploy Ltd., 25-28 Buckingham Gate, S.W.1, or telephone VICtoria 9021 (12 lines).

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

JUNE 1960 EXAMINATIONS

The next Preliminary, Intermediate and Final Examinations will be held at the usual Home Centres on June 13, 14 and 15, 1960. Applications on Form C (obtainable on receipt of 4d.) should be sent stamped addressed envelope (foolscap size) to the undersigned as soon as possible, and in any case by not later than April 10th. No late entries will be accepted.

DEREK DO PRÉ, Secretary.

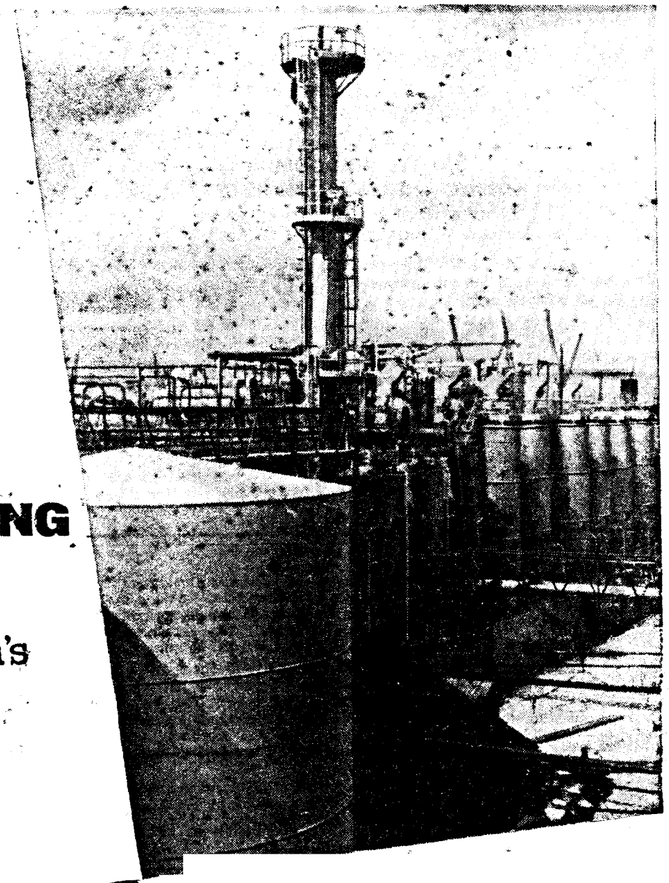
63 Portland Place, London, W.1.

FINANCIAL NOTICE

CANADIAN PACIFIC RAILWAY COMPANY Incorporated in Canada with limited liability.—NOTICE TO SHARE-HOLDERS.—The Seventy-ninth Annual General Meeting of the Shareholders of this Company, for the election of Directors to take the place of the retiring Directors and for the transaction of business generally, will be held on Wednesday, the fourth day of May next, at the principal office of the Company, at Montreal, at twelve o'clock noon (standard time, if so active). The Ordinary Stock Transfer Books will be closed in Montreal, Toronto, New York and London, at 3.00 p.m. on Tuesday, the twelfth day of April, 1960. The preference stock books will be closed in London at the same time. All books will be re-opened on Thursday, the fifth day of May, 1960.—By order of the Board, T. F. TURNER, Secretary. Montreal, March 14, 1960.

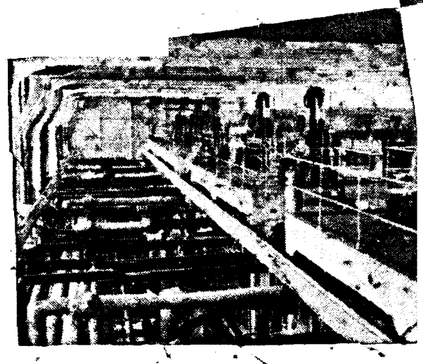
EDUCATION

SUCCESSFUL TUITION FOR THE B.SC.ECON. DEGREE



Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.Econ. (three years' entrance is included) at moderate fees. Typical Wolsey Hall students passed London Univ. B.Sc.Econ. exams 1956-59. Tuition also for G.C.E., Law, Statistical, other exams. Prospectus (mention examination) from E. W. Shaw Taylor, C.B.E., LL.B., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

SECRETARIAL TRAINING, especially for University graduates and other students, six-month and nine-months Pitman courses. Write Organising Secretary, Davies's, 158 Holland Park Avenue, W.11. PARK 4684.



EXPERT POSTAL TUITION

for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Company, Local Government, General Education, etc. Also many Practical Interest courses. Full details of any subject(s). Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (EO 2), METROPOLITAN COLLEGE, ST. ALBANS or call at 30 Queen Victoria Street, London, E.C.4.

Registered as a Newspaper. Authorised as Second Class Mail, Post Office Dept., Ottawa. Printed in England by St. Clements Press, Ltd., London, E.C.4. Published by The Economist Newspaper Ltd., at 22 Ryder Street, London, S.W.1. Telephone: Whitehall 1511. Postage on this issue: U.K. 4d.; Overseas 8d.

EDIBLE OIL PROCESSING PLANT in London's Dockland

From a process developed by our client, Loders & Nucoline of Silvertown, we designed and built a semi-commercial pilot plant in 1955-56. The success of the project resulted in Loders & Nucoline retaining our services for the design and construction of a full commercial scale plant which went on stream this summer. This is yet another example of our experience in the field of chemical engineering. Please call us and let us tell you how this experience can benefit you.

THERMOTANK IN AMERICA

Now they can give of their best

IN A

DETROIT RESEARCH LABORATORY

In a climate which is often uncomfortably hot in summer and cold in winter, administrative workers and scientists in this Detroit plant can depend on temperate inside conditions right through the year. Careful control of the atmosphere for the work itself is provided in the cold-vaccine laboratory. This air conditioning installation is one of many important contracts secured in the United States by Thermotank. Others include the supply of 4,800 high velocity units to the New State Department Building in Washington.

Thermotank can plan, design and instal air conditioning equipment for any requirement in any part of the world.

A WORLD OF BETTER CLIMATES WITH THERMOTANK

Here are a few more examples of world-wide service from Thermotank:

UNITED STATES Contracts for Texas Instruments, Standard Oil, American Telephone and Telegraph Company, John Hopkins University, Ford Motor Company and General Motors.

BRITAIN Full conversion of the liner S.S. 'ORCADES' to provide an installation with a capacity of 14,000,000 B.Th.U's per hour.

SOUTH AFRICA Thermotank installation for South Africa's largest office building, the United Building Society's new headquarters in Johannesburg.

start . . . .

Siegfried Marcus took the first motor ride in 1865. He built a much improved vehicle in 1875, which is preserved in the Vienna Technical Museum. In those days, the main object was to make the car go. Nowadays it is equally important to make it stop, and modern brakes must be capable of dealing with increased loads, higher speeds, frequent use.

and stop . . . .

Some of the world's most advanced motor vehicle designs use brakes in which the linings or pads are attached to the shoes by Redux adhesives. Longer life, greater efficiency, freedom from chatter and from scoring are a few of the resulting advantages. The same method is used for bonding the structures of more than seventy types of aircraft. Redux, developed by CIBA (A.R.L.) LTD., is one of a range of structural adhesives used throughout industry for bonding metals, glass, ceramics, plastics, wood, rubber and many other materials.

A standstill budget ?

...NEVER IN A LEYLAND'S LIFETIME

We at Leyland refuse to be downcast by gloomy forecasts of what the Chancellor has in store for Monday.
As far as we and our customers are concerned, the future has never been brighter.
We should know. In the past two years Leyland not only stepped up transport economy by introducing many new and improved vehicles, but also cut prices as never before. Seven distinct price reductions—remember?
And there's certainly no standing still at Leyland. New ideas . . . new methods . . . new specifications—all designed to bring down the cost of transport—are constantly under way.
Leyland build the world's largest range of heavy duty diesel trucks—3 to 150 tons—and build them to include every possible money-saving device they know: and they know quite a few.
So let's forget about soaring costs, falling markets, inflationary spirals and all the other depressing jargon. Instead let's remember that what Leyland have done before, they can—and will—do again. And that is—increase your profits by building the best trucks at the lowest possible prices.

Future world energy

The world will continue to depend on OIL for its development

The world's consumption of energy has been increasing rapidly. In recent years oil and natural gas have supplied the greater part of this increase. The oil industry expects to satisfy much of future growth in energy demand but needs to know how much.

Energy supply is vital to economic growth. But how are the two related? And what rate of economic growth can be sustained? In what parts of the world? These and others are the problems which challenge the oil forecaster.

The share of oil and the share of other fuels in the energy pattern of the future must be reliably estimated so that the oil industry can plan its expansion wisely.

Geographical surgery for Europe's new artery

The seven mile road tunnel being driven through Mont Blanc, Europe's highest mountain, will shorten the motorist's journey from Paris to Rome by 124 miles. It will be the world's longest road tunnel, providing an Alpine link—open all the year round—between France and Italy. No longer will the snow-bound roads of the mountain passes be a barrier to European communications and trade.

The Mont Blanc tunnel will take three years to complete and will cost an estimated £11,700,000. About four miles of the tunnel are being driven from the Italian side and the contractors, Società Italiana per Condotte d'Acqua, are using Atlas Copco equipment exclusively. Atlas Copco compressors, rock drills and Sandvik Coromant drill steels have been chosen for this project, regarded as a major contribution towards the unity of Western Europe.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

VOLUME CXCV - NUMBER 6034

A Risky Budget?

THE Economic Survey for 1960 is an unexpectedly cheering document for those who do not want the Chancellor to impose large increases in taxation next week: by the same token, it is a slightly unnerving one for those who think that the Chancellor's main resolve now should be to avoid taking risks with the economy. It leaves the balance of likelihood still in favour of a budget that should take slightly more away from the taxpayer than it gives back to him, but not of a budget as stern as economic rectitude might demand.

The survey includes—somewhere, in some guarded form—most of the right Keynesian phrases for a period of threatened inflation. "The Government's responsibility," it proclaims, "is to ensure that total claims on the economy do not exceed the total likely to be available from production." The urgent need to sell more goods overseas this year, it agrees, will be fulfilled "only if home demand does not hold back exports." We must get "the right balance between total demand and productive resources." But, when the document turns to prod tentatively at an assessment of how much restraint will be needed to achieve that balance, there is an unmistakable bias towards looking for things that might go right rather than for things that may go wrong. Parts of this survey have the uncomfortable ring of an essay in interpretative optimism.

The survey's first half-dozen pages are devoted to a study of why demand may not rise by quite as much in 1960 as some people have feared, and why production might rise by more than most people have hitherto assumed; its next dozen pages, incidentally, are devoted to an explanation of why its own *ex-post* figures about how much demand did rise in 1959 are very probably wrong. For the coming year, the survey's authors admit that Government current expenditure is scheduled to rise by 4½ per cent (compared with 2½ per cent last year), and that "total fixed investment may rise by as much as in 1959" (this follows a survey of business intentions which suggests that it might rise by considerably more); but it is argued that consumption may not rise by as much as it did in 1959 (i.e., that last year's record rate of personal savings may be further increased) and on the most uncertain variable of all—namely, stockbuilding—the Government sees reason to hope that the rate of accumulation will decline. The survey trusts that industrial output per head should rise by more this year than the average of 3 per cent attained in recent years, and it forecasts some increase in the labour force through the attraction of more married women into jobs and a still further decline in unemployment (which is already well under 2 per cent). It seizes eagerly on the hopeful point that "increased demand for plant and machinery should fall on industries which have not yet shared fully in the expansion and which still have some unused capacity." It agrees that, in the booming industrial cities, "the labour force, especially the skilled part of it, is already fully engaged," and that "as the year proceeds, it may become increasingly difficult to increase employment, particularly of skilled labour, in some areas." "This," concludes the survey in a magnificently insouciant mixing of long-term needs and short-term problems, "underlines the need to train more skilled people."

The dominant tone that seems to emerge from this document is a gentle soothing whistle, which could be designed to keep the Chancellor's political courage down. This is not to say that the Chancellor will necessarily heed this seductive sound and introduce none of the types of tax increases that were

tentatively, and with reluctant distaste, recommended in these columns last week; some further speculation on possible particular tax changes appears in a Note of the Week on page 20, and the survey itself is more extensively analysed on page 67. But if the survey's apparent recipe for mildness is followed on Monday, the British public should be very clear what that mildness will mean.

Nobody can possibly say that a mild budget this year will irrevocably lead to economic crisis and disaster. The pseudo-science of quantitative economic forecasting is subject to far too wide a margin of error, in any one year, for anybody to dare to say that. There are fortunately bound to be some years when everything that might go right will do so, and when none of the things that could go wrong will in fact materialise: when trusting to luck will turn out, very luckily, to be the most successful policy. But what should be frankly recognised is that, if the Conservatives introduce anything other than a stern budget on Monday, they will be making a complete reversal of the policy that they have followed for the last three or four years; if they do not increase taxes by something like £100-£150 million net a year, they will be relying on the recipe of hoping for the best, where hitherto since 1955 they have deliberately played for safety.

DURING the years of industrial pause (e.g., 1958) it sometimes seemed that the British Government could have introduced more re-energising budgets, that Chancellors could legitimately have reposed greater hopes in the sorts of succour (an above-average increase in output per man; the attraction of more married women back into the labour force) in which this year's survey so blithely confides. The odd thing, economically, is that the Government seems to have become reconciled to these hopes at a period of straining boom, when the chances of their materialising are so obviously reduced; the odd thing, politically, is that it should feel obliged to re-embrace them so early in a Parliament, when the general election is a full four years off. Why should the Government be reconverted in 1960, of all years, to the doctrine that it is better to run some risks of inflation than to incur the odium of restraining consumption?

In part, the explanation seems to lie in a changing *zeitgeist* in the Treasury. When re-expansionary policies have been successful for a while the apostles of risk-taking for expansion tend to acquire a new prestige; just as, during the years when cautious policies had been proceeding successfully for a while, the doctrine of excessive caution tended to acquire its own momentum. Logically, of course, a Chancellor's judgments should veer precisely the other way round. In still larger part, however, the explanation seems to be that there is a greater political barrier in the way of cautious budgeting at a time when caution implies an actual increase in tax rates (i.e. during a boom) than when it merely influences a Chancellor towards making a smaller reduction in tax rates during a recession than the more enthusiastic proponents of reflation might then advocate. This unfortunately also means that caution falls out of fashion when total demand is high, and comes back to favour when it is low—psychologically understandable perhaps, but economically perverse.

The apparent switch in the background emphasis of policy-making in this year's survey may represent less a reconversion of the Treasury to the old tenets of pre-1956 Butlerian expansionism than the adoption, by people who do not like the meticulous regarding of depressing economic balance sheets, of the philosophy of Rupert Brooke's fish:

> This life cannot be all, they swear.
> For how unpleasant if it were!

That seems to be the rationale behind some of the unexpectedly optimistic implications of this week's economic survey. If it also proves to be the main determinant behind the actions in next week's budget, it will be a shaky guiding star by which to steer the immediate economic destiny of a great trading nation. The outcome rests upon the quiet good sense of Mr Amory himself.

After the Tests

Mr Eisenhower's decision on the terms for halting nuclear tests opens a door; but the door opens on to a long, hard road

JUBILANT headlines in Wednesday morning's papers hailed the Camp David communiqué as one of the best bits of good cheer the postwar world has known. The excitement may have been overdone; but the new western move on nuclear tests is unquestionably wise and full of promise. Inevitably, there will be further speculation about the exact interplay between the departmental dispute in Washington and Mr Macmillan's spectacular dash to America. It seems clear that Mr Herter had carried the day and that Mr Eisenhower had ordered his opponents into line before the Prime Minister arrived last Saturday—but after his trip had been announced only two days earlier. This is encouraging evidence of the American Administration's ability to close ranks even after its internal differences have had a public airing—and even in a president's last year in office. But the fascinating business of analysing exactly what happened in what order ought not to preoccupy too many thoughts. Plenty of attention will be needed for the question: what happens now?

The immediate next steps are themselves likely to be pretty intricate. Just as the Russians, on March 19th, offered only a conditional acceptance of the American terms of February 11th, so now the Anglo-American acceptance of the Russian proposal is a conditional one. One of the conditions—the launching of joint research into methods of identifying minor seismic phenomena—should not present much difficulty, as it has already been accepted in principle by the Russians. The others concern the duration of the voluntary abstention

from "sub-Hiroshima" weapon test explosions underground; allowance for nuclear detonations of a purely peaceful nature; the international inspectorate's right to send out an adequate number of field teams to investigate suspicious evidence of explosions "on site"; and the issues still outstanding in the Geneva talks over the composition of the inspectorate and the voting balance in the commission that controls it. Unmentioned in the joint declaration, but apparently very much alive in official minds in Washington, is the question of on-site inspections of suspicious events below the "Hiroshima" level (that is, registering less than 4.75 on seismic instruments).

Reasonable though the conditions may be, they provide a necessary reminder of the complexities that still have to be unravelled. Technical advances may quite soon make the problem of the permissible number of on-site inspections easier to solve, and may even dispose of the specific matter of inspections of "below-threshold" phenomena before it has been formally raised in negotiation. The summit conference in May might provide the heads of government with an adequate incentive to settle the questions of composition and voting; there has already been a notable narrowing of the gap in this sector.

OF the immediate issues, the trickiest is the duration of the voluntary moratorium. This is supposed to be related to the time needed for the joint research programme, but political rather than scientific factors would seem to have been the determining factors—both in the Soviet demand for four or five years and in Mr Eisenhower's announcement on Wednesday that he can only offer until next January.

Whoever is President of the United States after January 20th, it will not be Mr Eisenhower. He can see no way of weaving into the mantle that will fall on to his successor's shoulders a pledge to abstain from underground sub-threshold weapon tests. This is essentially a matter for the head of the Administration; for the pledge, as now conceived, will take the shape of a unilateral declaration by the head of each government concerned, not of a treaty, which, once ratified by the Senate, would retain binding force for a new American Administration. However, the present movement of opinion in the United States indicates that every presidential candidate will have to take a public stand on the moratorium issue during this year's campaign; and that a favourable stand will win favour with the voters, provided that the Russians show a co-operative spirit over the joint research programme. The proposed treaty to prohibit all other types of nuclear weapon tests involves a separate problem of timing. However quickly it may now be concluded, it can scarcely hope for ratification by the Senate until after the November elections. The elections can, however, have only a modest effect on the present composition of the Senate, and virtually none on the occupants of the chairs of the key committees.

To give fair warning of the snags that still lie immediately ahead is not to underestimate the significance of what has just been done. The President's decision amounts to a real victory for the advocates of a policy of taking a cautious chance on Soviet dependability. A flat decision the other way would have slammed a whole lot of doors. This one, shrewdly though it is surrounded with conditions, keeps them open. Its effects will be more than atmospheric. Apart from its impact on the summit meeting, it is linked in several very direct ways with the broader negotiations for disarmament that are now under way in Geneva.

In British thinking, one of the principal facets of an agreement to halt tests is that it could provide a working model of international inspection, which might have great value in solving the problems of general disarmament. Whether or not Soviet fears of foreign visitations were modified by the experience of having a few hundred test inspectors on Soviet soil, the other nations would at least gain useful experience of the problems likely to be encountered in any wider inspection programme. From this point of view, there is much to be said for pressing the Russians a little harder to accept a larger participation by "neutrals" from uncommitted countries in the nuclear test inspectorate.

IN French minds there is an even more direct connection between the halting of tests and the progress of general disarmament; President de Gaulle and M. Moch have held firmly to the argument that France cannot bow to an agreement that in effect "freezes" the privileged membership of the nuclear club. Here France, despite the special position of which its Sahara test explosions serve as a resounding reminder, is only saying out loud what other "near-nuclear" powers prefer to be discreet about. The long-term effectiveness of any agreements to check the diffusion of nuclear arms among the nations must depend on the speed with which the nuclear powers can begin to strip themselves of their privileges.

That speed, however, should be no subject for illusions. The brisk pace of the negotiations on tests in recent weeks ought not to breed any forgetfulness of the fact that these negotiations have lasted for seventeen months; or that, in the earlier stages, Mr Tsarapkin was holding out for a parody of international inspection that amounted to self-inspection by each nation. This week at Geneva, Mr Zorin has been exhibiting a similar talent for slow-motion hedging in the ten-nation conference that began on March 15th and bids fair to run for many months. In this and in other ways, the mere negotiations on tests have provided some enlightening experience of the problems still likely to be encountered in hammering out a general disarmament programme.

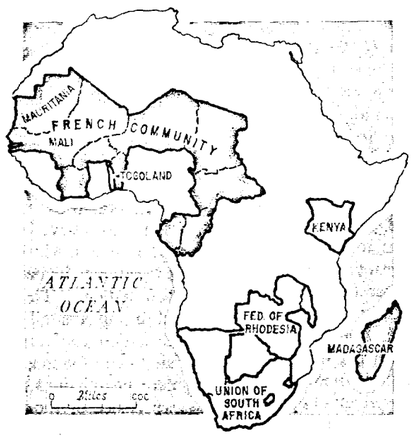
The good news from Camp David does indeed represent the opening of a door; but the door opens on to a rough terrain full of pitfalls, and the urgent need now is for the charting of a course through it which will have to be doggedly pursued, whatever the setbacks, for a period, not of months, but of years.

Budget and Economic Survey

Other aspects of next week's Budget and this week's Economic Survey are discussed in "Looking at 1960" on page 67, in a Note of the Week on page 20, and in Business Notes on pages 71 to 82.

An article "The Pekinese Turns" on page 18 discusses parliamentary control of government expenditure.

Urgent Africa



The crowding events of "the African year," this week mainly in southern and central Africa, are discussed in this special section

How Tough Can You Get?

White South Africa's chosen course has made its isolation complete, and is making its subjects ungovernable

MOST observers of the African scene have assumed that however fast and far the tide of African nationalism may roll, creating one independent black state after another in its course, it would be halted, at least for a long time, at the gates of South Africa. This is still the most realistic prognosis. But it is clear that in 1960 African nationalism will challenge white supremacy in the Union as never before: a challenge which comes simultaneously from within the Union, from the north and from the wider world of diplomacy beyond—including the councils of the Commonwealth and the forum of the United Nations.

How effective is this squeeze from all fronts likely to be? The immediate result of the Sharpeville blood-letting has been to cause the South African government to suspend the pass laws temporarily; and this has been followed by a bonfire of passbooks among Africans, together with other acts of incendiarism, which will make it hard to reimpose them. But the rushing through the South African parliament of yet another repressive measure— this time to outlaw the African Nationalist Congress and the more anti-white Pan-African Congress—and the arrest of two hundred liberals and "agitators" of all colours under cover of a state of emergency, indicate that Dr Verwoerd is not going to yield the keys of *baasskap apartheid* without a determined struggle.

The pass laws, which regulate what Africans shall be in what areas, reserves or locations at any time, are the lynch-pin of police control over the African population, as our South African correspondent explains in his dispatch on the next page. Dr Verwoerd's present tactics should therefore be clear enough. They are based on his belief, or pretended belief, that the mass of Africans are happy under apartheid, and are misled into revolt only by agitators. He is evidently trying to lock up the "agitators," white and black, as a preliminary to restoring full police control, on the assumption that the masses will then be too leaderless to resist.

The basic nature of South Africa's racial struggle is revealed in this pattern of reactions. For the Nationalists, the prime objective is to deprive the helot races of any power to organise; for organisation added to their superior numbers would enable the non-whites at last to challenge the superior fire power and mobility of the white forces. In the long run, the whole apparatus of apartheid is directed to this end, particularly through the destruction of African education by means of the Bantu Education Act. In the short run, the problem of law and order is to stifle organisation and leadership by educated men—"trained agitators"—so long as the masses are still capable of responding to it.

The critical question therefore is whether the non-white masses in South Africa can achieve or maintain an organised resistance (in which, of course, as elsewhere, intimidation will play its inevitable part). If they can, situations will inevitably arise one after another in which the Government will either have to abdicate or to shoot —with all the repercussions of shooting, at home and abroad. Of these, the events of the past fortnight are a sample.

SHOOTING is, of course a well tried form of government which has proved temptingly successful. But will it work in South Africa? There is no need to doubt that the white men are ready to fight for their lives; their solidarity in a tight corner has been shown by Sir De Villiers Graaff's prompt support for the government (though not necessarily for Dr Verwoerd himself). But governments that keep their serfs down by force prefer to hide it from the world, and the paradox of South Africa is that it is in many ways still an open society. The press is not yet under censorship, and foreign correspondents are free to report and to photograph. This means that South Africa must face (as Russia has not had to do) the full heat of informed world disapproval.

How influential is this on South Africa? The picture has been built up of stern, messianic Afrikaners indifferent to the strictures of a liberalistic and communist world. There is much truth in it; but there are signs that even Afrikaners find it hard to ride through world disapprobation. Clearly a proportion of the police dislikes the prospect of more Sharpevilles. More important, a substantial part of the Nationalist party is becoming confirmed by tragedies like these in the belief that Dr Verwoerd is leading them into disaster. Whether the events of this week alone will split Dr Verwoerd's party remains to be seen; he controls the powerful party machine. But the prospect is that, even if the present emergency can be weathered, new ones lie ahead. It is tolerably clear that on every fresh occasion there will be an outburst of world indignation, which in itself will encourage Africans to fresh resistance, with or without the instigation of "agitators."

Diplomatically, South Africa's isolation is almost complete. Britain has felt unable to oppose a debate in the Security Council on apartheid, which now formally becomes an international concern and no longer a purely South African domestic affair. In effect, the British Government has had to accept the American distinction between states whose policies promote racial discrimination and those that try to overcome it. It has had to face the fact that as the number of votes of independent African states in the United Nations grows (and half a dozen will be added this year) the cost, in terms of day-to-day diplomatic bargaining, of shielding South Africa becomes disproportionate. Even the Commonwealth prime ministers can hardly remain uninvolved if Dr Verwoerd attends the conference in May, and if New Zealand persists in its proposal that apartheid should be discussed formally then; it is, of course, certain to be discussed informally in any event. South Africa may then have to choose between leaving the club and facing an informal court of inquiry. In the diplomatic world at large South Africa finds itself increasingly shunned, playing no part in world or African affairs.

There are South Africans who would almost welcome this isolation, convinced that a chosen people must go its own dedicated way. They are unlikely to waken from their insular dreams until the cracking of the Portuguese territories opens their actual frontiers to infiltration. But, as our correspondent indicates, the number of South Africans, including many in the Nationalist camp, who see that they are in a cul-de-sac is growing. The Liberal and Progressive parties have grown bolder and are openly canvassing multi-racial solutions for South Africa which repudiate apartheid along with the pass laws, and are nibbling at the holy doctrine of white supremacy. Big business interests are ranging themselves behind them, as Mr Harry Oppenheimer has shown in his article in the latest issue of *Optima*, the organ of the Anglo-American Corporation. The dissenters are a minority, but their message to South Africa is more and more obviously the voice of common sense: that the hazards of the road back from apartheid are, however great, less than the disaster that lies in wait on the road ahead.

The Union's Moment of Truth

FROM OUR CORRESPONDENT IN SOUTH AFRICA

SOUTH AFRICA is reeling under the impact of a succession of events that have dazed, bewildered and frightened the people and landed the country in its worst crisis since the Anglo-Boer war. Overnight, as it were, the situation has changed from surface calm to near revolt and open rebellion. The killing of more than sixty African men, women and children on March 21st triggered off a chain of events without parallel in the Union.

The crisis really began, however, eight weeks ago, when Mr Macmillan made his "winds of change" speech in Capetown. This was followed by a period of shock and bewilderment which progressed through self-analysis and anger; the violence at Sharpeville was the climax. There is, too, a sudden realisation of the extent of South African isolation. While the whites are overcome by a sense of friendlessness, the non-whites are delighted, as well as a little astonished, that there is so much *sympathy* for them and their cause in the outside world. Early this week they were awaiting the debate on South African affairs in the United Nations Security Council with an optimistic feeling that the world was on their side.

TO the African people the pass system has become a mark of slavery. They have now reached the stage where they demand its unconditional abolition as a precondition of any move for political rights, a minimum wage and trade union privileges. It is surprising that the government should have been so completely caught out by the strength and vigour of the anti-pass campaign waged by the uncompromising Pan-African Congress. The authorities have known of the existence of the pan-Africanists for more than a year, but they have concentrated their attention on the more moderate African National Congress. The inevitable result has been that each organisation has sought to outbid the other; this explains why the ex-chief, Albert Luthuli, felt compelled to the gesture of burning his pass after the initial success of the pan-Africanists' campaign. The government is in a real dilemma over the pass system, for the apartheid structure is so largely based on passes, and the control that they make possible, that when pass law arrests were suspended last Saturday the whole apartheid structure was dealt a shattering blow. It is difficult to see how the pass system can ever be fully restored without inviting further turmoil.

Last week's concession, less to African demands than to the reality of a menacing situation, finds three million Europeans more sorely divided than at any time since the Union was founded. Although there is a broad area of agreement on colour between the two main parties and the two language groups generally, feelings over the republican issue are running high. Were it not for this fresh division brought about by Dr Verwoerd's announcement of a referendum for a republic, the current talk of a coalition or national government to show a united white front might have become a reality before now. Not only has such a suggestion been made by the expelled Nationalist party MP, Mr Basson—he suggests the former chief justice, Mr H. A. Fagan, as a compromise prime minister—but influential individuals in the two major parties would readily be found to support a coalition administration.

Dr Verwoerd

Meanwhile, the demands, which also come from the more thoughtful Nationalists, for a drastic reappraisal of the government's attitude towards the poor and rootless proletariat of nearly three million urbanised Africans become increasingly urgent. Apartheid has no plan for these people, beyond a minimum of housing and transport, and after nearly twelve years the consequences of this policy hiatus suddenly become terrifyingly and tragically clear. Public opinion in all parties is demanding a policy adjustment immediately in three fields: the permanent relaxation of the pass laws, particularly for "evolved" Africans; a fairly drastic modification of the liquor laws, which produce constant police clashes; and a greater say for the Africans in their own affairs, as well as some voice at a national level. Today the government has no real contact with urban Africans. The boiling pot has no outlet.

The government itself, however, has shown no sign of being prepared to consult urban African opinion. While the United party pleads for some representation of Africans in parliament, and the Progressives stand openly for a shared government on a civilised basis, the Nationalists remain adamant that political rights for the Africans must be confined to their own areas. That is why the minister of justice complains that the pan-Africanists "want our country." To the government, both the African congresses are "enemies" to be fought, not allies to be consulted. Afrikaners will rather die than give in, said a senior Nationalist MP this week, and by "giving in" he meant sharing political power with non-whites. Yet only the most bigoted and purblind Nationalists still really believe that the situation can be held by

force, or that South Africa can survive if violence becomes endemic. Where precisely the prime minister stands is not clear; his public utterances since the crisis broke suggest that he believes the only hope lies in still more separation, together with compulsion when necessary.

Thus, while the whites put their trust in the police and defence forces, and the Africans remain leaderless because of the banning and arrests of the past week, the initiative for the time being has passed out of the government's hands. But until they master the technique of protest without violence, the Africans are bound to be beaten by superior force. They are learning this lesson rapidly, as they appear to have learnt other organisational lessons without overmuch tuition in recent years. Lack of discipline, and a large criminal element which is determined to exploit the trouble for its own ends, and is exercising a reign of terror over thousands of peaceful, law-abiding people, are complicating the problem and losing the Africans' cause much sympathy.

But men of all races and all political persuasions appear to realise that an era has ended. At last it seems that South Africa's ruling race has been brought face to face with the question it has steadfastly ignored or refused to answer realistically: is the country going forward to democracy, and to a shared government in which all races will have a reasonable part? Or is it going backward into Nationalism's white laager, there to prepare for a *Götterdammerung* of Gothic design?

Gale in the Markets

SINCE Mr Macmillan's speech the capitalised market value of shares quoted on the Johannesburg Stock Exchange has fallen by nearly as much as £500 million. Last week alone market values of quoted companies fell by about £125 million, and they have fallen even more since then. The table shows how sharp the individual declines have been, not merely in gold shares, but in all South African industrial shares, in the stocks of the Union and Federation of Rhodesia governments, and in the shares of the copper and diamond producers.

Even without the riots and this week's declaration of a state of emergency, some reaction in Kaffir shares from their early January peaks had seemed likely. Investors must now decide whether prices, after the very considerable falls, discount not only what has happened politically but also what might happen. In the market it is pointed that the falls have usually been quite out of proportion to the amount of business done: what has

	Prices			
	Jan. 1, 1960	March 1, 1960	March 18, 1960	March 31, 1960
South Africa 3½% 1965/67	85¾	84½	83½	82

South African Breweries	32/-	28/9	26/-	21/3

happened is that jobbers, understandably reluctant to take more South African shares (or South African government stock) on their books, have widened their dealing margins. Selling from the continent has, however, been fairly large, particularly from countries such as Belgium, which through its own colonial links is especially sensitive to the "winds of change" in Africa. Only rarely have South African investors joined in the selling, and indeed buying orders in Johannesburg have led to partial and temporary rallies. This has been reflected in the daily see-saw movements in Kaffirs. There has, moreover, been a very large call option business in mining issues—a sign that investors are looking for (and are prepared to stake a certain amount on) a recovery from present levels. Whatever the political discomfort, there is the economic comfort that the recently developed gold mines are moving into the prosperous stage of production.

Federal Fears

UP to Thursday, at least, a courageously itinerant Mr Macleod had given no hint of his intentions for Nyasaland, and only an indirect indication that Northern Rhodesia's territorial constitution will come up for review at or after the eventual London conference on the Federation itself. But he has been left in no doubt of African feelings, in Lusaka by demonstrators, and in Nyasaland by a freezing silence which has unfortunately been successfully extended under Malawi party auspices to the Monckton commission also. It is clear that unless Mr Macleod can find some basis on which to get Dr Banda out of jail, he will not have fruitful talks with Mr Orton Chirwa and the Malawi Congress party about a new territorial constitution; the object of that constitution must be to get Africans to collaborate in governing Nyasaland, as an interim measure until the London conference completes its task.

So far, the difficulty about releasing Dr Banda has been the opposition of the Governor, Sir Robert Armitage, who fears riots, and of the Federal prime minister, Sir Roy Welensky, who increasingly fears the mood of the white secessionists in Southern Rhodesia itself. Their voice has steadily grown and now threatens to bring Sir Roy's United Federal party to the ground with a thump, on the argument that it is too liberal. But, paradoxically, the events in South Africa may strengthen both Sir Roy and the British Government, just as they seemed to be losing control of events. Neither Sir Edgar Whitehead, the prime minister of Southern Rhodesia, nor his right-wing rival, Mr Harper, can be so sure as they were a few weeks ago that Southern Rhodesia could go it alone with South African support, much less that there is any future for Southern Rhodesia as part of the Union. The tragedy of Sharpeville must have forced some Southern Rhodesian settlers back to the view that federation is after all by far their best bet; therefore this should be the moment to persuade them that only a liberalised federation, in which a Banda, a Kaunda and a Whitehead can co-exist, offers them a chance of a stable future.

Caretakers in Kenya

AS they had promised at Lancaster House, African-elected members are now entering the present Kenya council of ministers, in the interim until the new Macleod constitution can come into force. But the circumstances of their entry are grimly different from what was envisaged by the London conference. A new Kenya-wide African party has been set up, called the Kenya African National Union; and Mr Tom Mboya is not in charge of it. On the contrary, Mr Mboya has had a most difficult time in keeping his political feet in the past week, and has only just managed to shoulder his way on to the committee of the new party. Mr Gichuru, a prominent associate of Jomo Kenyatta's who has been released from restriction, has won the chairmanship. Those who feared that Mr Mboya would suffer for his courage in getting some sort of an agreement in London have been vindicated, and the diehard European belief that nothing more extreme than Mr Mboya was to be feared is now confounded by the emergence of Mr Gichuru, behind whom looms the figure of Kenyatta himself.

The Africans have, however, patched up an agreement with Sir Patrick Renison, the Governor, and have put three ministers and an assistant minister at his disposal; they have also agreed to allow Mr Musa Amalemba to continue in his post as Minister of Housing, though as a member of the New Kenya party they regard him as a renegade. Mr Blundell, who leads the New Kenya party, has acclaimed this happy ending. But Sir Ferdinand Cavendish-Bentinck is now coming to full flower as a racial politician, and is busy consolidating a new European party; he has bitterly denounced the new "caretaker ministry." Caretakers until what? To Africans this phrase inevitably implies that the next government alone can take important decisions, and that government is to be a truly African-controlled one. It is difficult to see what Sir Ferdinand's diatribes can do, except harden African determination to move from multiracial government to African government with as brief a transition as possible.

Africa in London

"AFTER all Moses was no damn fool when he lay down the injunction of an eye for an eye." Thus a recent issue of *African Voice*, the official organ of the African League; it supports the League's aim of driving out the last "imperialist butchers" from a continent which knew civilisation when Europe was "still a mass of filth." It is published in Burslem Street, London, E.1, and it circulates mainly to Africans in Britain. Like Paris, London has become one of the capitals of Africa. From the basements and garrets which a hundred years ago hatched the anxious schemes of the European radical exiles, there now comes a stream of fighting talk from men who will one day be cabinet ministers, premiers—with luck even opposition leaders—in independent Africa.

It is impossible to count the total number of African organisations in London; little groups overlap, merge, subdivide, and fade away. But the best place for the exploring journalist to start is probably with a relatively new co-ordinating body, the Committee of African Organisations. The CAO is not, as it anxiously points out, a political party, but its aim is to place itself at the apex of a federal structure of other African organisations in Britain and to co-ordinate the African attitude on events anywhere. It rents a tiny basement office at 200 Gower Street below the surgery of Dr Pitt (a West Indian who contested Hampstead for Labour last October); full-dress occasions often overflow into Dr Pitt's consulting-room. The CAO distributes a stream of hand-outs, pamphlets and press releases on behalf of Africans here and in Africa. It helped to launch the South African boycott movement (which is still rather uncomfortably operating from the CAO's premises). It does not confine its championship to British Africa, but promotes the cause of Mozambique, Kenya, the Cameroons equally; it sends out on behalf of Dr Felix Moumie his attacks on the French government ("*et son poulain Ahidjo*"). It recently sponsored the foundation of a new group, the Southern Rhodesian Congress Committee Abroad (to rouse British opinion and policy against Sir Edgar Whitehead's activities in Southern Rhodesia). The first rumblings have come from a hitherto undisturbed corner of Africa: it was naturally the CAO which distributed in London a protest from the Revolutionary Front for National Independence of Portuguese Colonies.

200 *Gower St.*

London is now the base of a number of important exiled professional politicians from Africa, who serve here as permanent contact-men for temporary visitors from their homeland. Among them are Mr Joseph Murumbe and Mr Peter Koinange, respectively public relations officer and bone of contention during the Kenya Conference; Mr Joshua Nkomo, president of the proscribed Congress party in Southern Rhodesia, and now the chairman of the new Congress Committee Abroad; and Mr Kenyama Chiume of the Nyasaland Congress, recently preaching Dr Banda's cause in Iceland. Some of these exiled politicians work for other Africans in London—i.e., for independent embassies; some take odd jobs; a few lucky ones get partial support from agencies such as Christian Action. They recruit their lieutenants from the articulate minority of African students in London. There are now 10,000 Africans studying at British Universities, polytechnics and other institutions. The politicians among them include those who are simply keeping their hand in during the years till they qualify, and those who prefer to operate here (there are "students" who have long since qualified, who have abandoned their courses, whose bar finals have been indefinitely postponed, staying on for the sheer pleasure of expatriate politics).

IT would be idle to pretend that "liberal Britons" make a very successful impact on the minds of African visitors while they are here. Bodies like the missionary societies, devoted though they are to the Africans "best interests," are considered too cautious and too non-political by most of the students. Other multi-racial groups, like the Africa Bureau or Christian Action, are more committed to African causes for their own sake. The Africa Bureau, whose leading figure is the Rev. Michael Scott, has upheld Tshekedi Khama and the Kabaka of Buganda, and has fought federation and the treason trials in South Africa; it lobbies, sponsors meetings and deals with extremists and moderates alike. But there is always the feeling that these groups stop short of true Africanism.

Behind the unified facade of the CAO, the politicians work in endless ramifications. Social and political functions mingle; nationalist loyalties merge into partisan alignments. A students' union meets for general business; but at the end each member has only to change his individual role for the gathering to become the relevant branch in London of the local African Congress. The Tanganyika Students Association follows the line of the TANU at home; it excludes all non-Africans from membership, despite their protests. The grandiloquently-named National Association of Socialist Students' Organisations is the English branch of Dr Nkrumah's Convention People's Party; it is tactful to recognise the difference between it and the Ghana Students Unit, a non-partisan administrative and welfare body. Some Ghanaian students, even in London, complain that it is unwise to talk too big about the mistakes of some of Dr Nkrumah's policies except in very reliable company.

WHAT are all these African organisations doing? They meet, discuss and pass resolutions, and sometimes send them home. The African League claims that it has a wide propaganda appeal to "all Africans"—that is, those in the United States and Caribbean as well as those in Africa and Britain—and the *African Voice* is backed up with many speeches in Hyde Park. But the league's membership is uncertain, and its elaborate constitution—which provides against lateness and flippancy—is concerned more with details of administration than with objectives. The CAO is much more sophisticated. Its supporters hope that it can create, here in London, some unity out of the confused pattern of inter-African politics; its leaders think there is too much argumentation by young Africans and would like to see an autonomous CAO out of reach of the sniping by the student bodies in particular. Its opponents say either that since Africans do not really understand each other's problems—and it is true that in London Kenyans do not know many Nigerians, and so on—any agreement will be quite superficial; or that the CAO's supporters are bargaining from weakness, because they have no political backing at home and do not represent significant African opinion. The conflict seems to be, as so often in Africa, between optimism and realism.

But one must try to avoid the British superiority complex of taking radical organisations—especially those run by the young—too lightly. The diversity of London African groups is the diversity of Africa itself; and some members of these groups are going, some day, to play a very important part in world history indeed.

French Africa's New Look

THE French Community is quickly shedding its colonial skin. Constitutional negotiations with President Tsiranana of Madagascar were only begun in Paris in February, and now the date of the island's independence has been fixed for next Tuesday. Madagascar is therefore the first of the twelve African states in the community to apply the principle, which General de Gaulle accepted for Mali last December, that overseas territories might become independent and yet remain within the community; this constitutes a break with the 1958 constitution, which specifically laid down that this development was out of the question. The control of finance, defence and foreign policy, hitherto reserved to the central authority of the community, will be transferred to the island, and it will apply to join the United Nations under its new name, Malagasy. However, the nature and degree of Malagasy's independence remain to be seen in practice: close economic and defence co-operation with France will continue, and it will stay in the franc zone.

Meanwhile talks have gone on with the Federation of Mali, which comprises the former territories of Senegal and Soudan. These negotiations have proved tricky, but their success is crucial for General de Gaulle's new African policy and it is expected that independence will be arranged for this year. Mauritania has already declared its intention of becoming independent in 1961. The political leaders of Chad, Gabon, the Congo Republic and the Central African Republic have agreed to begin negotiations in July with the object of uniting to form an independent equatorial state within the community; though Gabon, the richest of the four, appears at present reluctant to take the plunge.

The new French style seems, as it develops, to follow the general lines of the Commonwealth, with—at least in principle—a voluntary association of sovereign states. The preference of the Ivory Coast leader, M. Houphouet-Boigny, supported by Niger, Volta and Dahomey, for an Afro-French federation controlled from Paris, is outmoded, and they may soon adjust their policies accordingly. No one of the member states of the community is at the moment even thinking of emulating Guinea's sudden dash for freedom.

The Pekinese Turns

Are there any practical means of improving Parliament's performance in controlling government expenditure?

"The House of Lords was described as Mr Balfour's poodle. It seems to me that the House of Commons is in great danger of becoming the administration's Pekinese, able maybe to snarl and snap a bit after the event but never possessed of that current knowledge which is so essential if we are to have any chance of performing the function of watchdog."—Mr John Peyton, Conservative MP for Yeovil.

THERE must be something which Parliament is fit for. Until the last three weeks' extremely refreshing outbursts from both backbenches, on the subject of government expenditure, one had begun to doubt it. The mechanism (hereinafter known as "the System") for depriving Parliament of any function except that of running a Punch and Judy show on the front lawn to divert the people from looking through the windows of their government seemed so devilishly perfect. It starts with a superb confidence trick. MPs are persuaded that their very special quality is that they are laymen, without expert knowledge and uncontaminated by the company of experts whose presence would only generate work (*à la* Parkinson) and cause legislators to interfere with the execution of policy, which would be unconstitutional—even though Britain, to its everlasting glory, has no constitution.

Since, by definition, MPs are ill-informed, their comments cannot be expected to contribute anything of value either to the preparation of legislation or to the scrutiny of administration. The first is, therefore, expertly accomplished by the spending departments, dealing in the manner of the corporative state with "the interests involved"; and the second by the Treasury. The struggle between Crown and Parliament over the power of the purse has been ossified in ceremonial: the Crown's defeat is symbolised by the slamming of the door three times on Black Rod, Parliament's defeat by the passage of huge appropriations "on the nod." The Cabinet and the bureaucracy have superseded them both, and pinched their names into the bargain. Ministers call themselves "Crown" when they want to prove that it would be unconstitutional for MPs to say or, even worse, know anything, before policy has jelled and irrevocable decisions and commitments have been made. They call themselves "Parliament" when they want to demonstrate, as did the Minister of Power in last week's debate on the bill to provide fixed interest capital from public funds to iron and steel firms, that although MPs might not be able to ask him questions about the way public money was being spent there would still be parliamentary control because questions could be asked of the companies by the Minister.

To round off the System there is one further enormously subtle confidence trick. Expert practitioners like Mr Butler repeat periodically that the main purpose of Parliament is to conduct a political struggle between the parties. This sounds virile, and so creates the illusion that there is always something going on. Press stories can be guaranteed to deal very little with the substance of debate, but mostly with its implications for the unending election campaign. Thus when the Opposition recently provided for an unusually interesting defence debate, a general loss of conviction in the Government's doctrines on both sides could be represented as the ignominious collapse of the Opposition. This saves the Government from having to give more than a perfunctory explanation of its objectives.

On the face of it, permanent Tory rule would seem the ideal situation for the System. Parliament's historic role in resisting the encroachment of the Crown has now fallen on a regularly defeatable Opposition. When that Opposition is the Labour party, the role of curbing bureaucracy and scrutinising expenditure goes to politicians who are committed by conviction to multiplying the functions of government and spending more public money than the incumbents. Yet it is just now that the System is having to face a challenge over the control of expenditure. Because the Opposition, having continually missed its turn to bat, has begun to lose interest in the game,

Parliament, tiring of the monotony, has begun to look round for something more useful to do. This is the meaning of the recent expenditure "revolt."

THERE is, of course, already some detailed study of what the departments have told Parliament they would do, and whether they are doing it efficiently, by means of spot checks by the Committee of Public Accounts and the Select Committee on Estimates. But the System has contained their dangerous potentialities by a device of staggering simplicity. Their reports are simply not debated. There is also in existence an elaborate procedure whereby the estimates are examined by the Committee on Supply. The System also works here—the committee is far too large (consisting of the whole House) to make its job feasible. So the job is not attempted and all the committee's time is handed over to the Opposition front bench, to give its members a sporting chance of hitting Ministers over the head with their general policies.

One would have thought that the reports of the two genuinely investigatory committees would be very pertinent to this purpose. But it is an unspoken premise of these committees' "non-party" spirit that the party battle should for the most part ignore their concrete evidence. Should there be any temptation to violate this rule retribution is almost automatic: no matter how long the Tory party stays in office, every policy involving large financial commitments appears to have been so many years in the works that each uncovered blunder can still be shown to have its roots in the time of the Labour government.

What the Tory economisers are now demanding of their own (as they see it) prodigal front bench is not primarily a more detailed and complete raking through of the individual estimates. This was tried thirty years ago on the last occasion of a Tory campaign to restrain expenditure by, again, a (largely) Tory government. As a result of that campaign the estimates were sent experimentally to a standing committee, which achieved one memorable triumph: it eliminated plans for a second bathroom in the Lord Chancellor's residence.

Now, in 1960, a far more fundamental challenge is being made to the System. It is being suggested that Parliament should try to inject its opinions into the decision-making process before the estimates are *faits accomplis*. One idea is that a general debate might be held in October or November each year, in advance of the Treasury's crucial decisions on the estimates in December and January; and that in this debate MPs could air their own views about how the next year's expenditure by the Government should be cut or increased. In his typically elliptical reply to this suggestion two weeks ago, Mr Butler seemed to indicate that he was ready to try something of this sort—provided the party battle was scratched for the day of the expenditure debate, and that MPs were willing to behave in it like a "grand jury of the nation."

This could be an important constitutional innovation. But would it be likely to work in the way that the Tory economisers hope, or in precisely the opposite one? The possible practical disadvantages are two. First, the House could hardly break fully into the hidden chain of decision within the governmental machine without knowing what the departmental estimates are before they are chopped down by the Treasury in January. Yet to make public these "asking bids" by the departments could well wreck the Treasury's efforts to exercise control; it might stimulate vested interests to build up a head of pressure in favour of the departments' full requests. Secondly, however, if this autumnal debate were to be held without the benefit of any figures to guide the House at all, the main speakers would probably be Labour MPs who want to increase every form of expenditure at once, and Tory MPs who are in favour of economies in general terms but in favour of more spending on their own favourite projects.

THERE might be one way in which this—in principle, useful—idea of an autumn debate on expenditure could be rescued from these disadvantages. Shortly after he resigned from the Treasury in 1958, Mr Enoch Powell suggested that the Government, besides presenting its final expenditure estimates for the year ahead each budget-time, should draw up provisional "five-year budget estimates," drawing attention to the effect on future expenditure of existing long-term commitments. For example, we already know roughly how many old-age pensioners and schoolchildren there are likely to be, not merely in 1960-61, but well on into the mid-1960s; we can, therefore, tell what the real level of expenditure on services for them would be likely to be by then, if no policy decisions were taken meanwhile to increase pension rates or to improve school facilities per child. Similarly, some of the capital expenditure decisions already taken, especially on defence contracts and social investment, carry implications not only for spending in 1960-61, but for later years as well.

By the end of each summer recess, it ought to be possible for the government to cite very rough provisional estimates of what next year's total expenditure might be *on the basis of existing policies*. The government would then, in effect, be saying, "If present policies remained unchanged, it looks as if expenditure next year will rise by £x million"; the minister introducing the debate could then discuss briefly the sorts of policy changes that had been recommended by advisory committees and commissions in the preceding months (including wage and salary increases recommended in various public services), and ask MPs for their views on which might be the right priorities and where compensatory cuts might be made. In the nature of things, in an expanding economy, these "provisional expenditure estimates on the basis of existing policies" would be more likely to show a rise than a fall from year to year; with these figures before them, there would, therefore, be some pressure even on Labour MPs to suggest compensatory cuts, instead of merely pressing for more money for their pet projects in open-ended profusion.

A second and quite separate device would be the allocation of two parliamentary days each session to the chairmen of the Estimates and Public Accounts Committees; these days would be devoted to examining the reasons for past mistakes in government expenditure, with a view to helping avert such mistakes in the future.

These, then, are two ways, in which the Pekinese could turn and bark like a watchdog, if it really has the desire to do so. But has it? Unless the would-be reformers sustain their would-be-toughness with their front bench over a much longer course than Tories usually manage, the System will sooner or later reduce to nothing the current effort to make sense of Parliament.

NOTES OF THE WEEK

BUDGET

How to Tax?

THE two budget remissions that might normally seem most tempting to Mr Amory this year are a reduction in the standard rate of income tax from 7s. 9d. to a "rounded" 7s. 6d., and a more generous release of postwar credits in cases of hardship. There may be a case for the latter relief; the hardship test for postwar creditors last year was admittedly somewhat roughly and readily compiled. But it is still extraordinarily difficult to see how the Chancellor can prudently trim the income tax, unless he makes more than countervailing increases in indirect taxes (possibly in this event, he should even consider raising profits tax as well). There is some political support in the Conservative party for putting some other taxes up, if it enabled a token reduction in income tax to be made; but, in general, Tory backbenchers, citing misleading figures of the above-line budget surplus, regard proposals for increases in any taxes as emanating from long-haired theoretical spoilsports who need to be suppressed.

If, nevertheless, the Chancellor does introduce some net new restrictions in his budget—and in his heart he should know that that way prudence lies—higher indirect taxes or, possibly, regionally-differentiated taxes would surely be the best weapons to use. Some of the more "defensible possibilities" for increases in indirect taxation were listed in *The Economist* last week; we also tentatively mooted the case for a regional payroll tax (i.e., a surcharge on employers' national insurance contributions for workers in especially fully-employed areas) or a selective regional rerating of industry. It should be noted, incidentally, that this week's Economic Survey regards the fully-employed areas of the country as not merely London and the Midlands, but also the whole of southern and eastern England and the East and West Ridings of Yorkshire; the areas it regards as underemployed are Scotland, northern England, Wales and north-western England.

The survey also signals out the expansion of the health service as one of the "main" reasons for the new year's rise in government expenditure; the case for increasing the weekly health service contribution to the insurance stamp, or else for increasing specific health charges, is obviously reinforced by this year's figures. One thing that the Chancellor will be widely expected to do on Monday is to re-furbish Inland Revenue practice against illegal tax evasion, following upon the nonsensical situation revealed by the recent Hinchy case. A budget which cannot—or at any rate should not—be an immediately pleasing occasion in many other ways should at least be made into an engine of continuing administrative fiscal reform.

EUROPE

Threats or Cajolery?

WHILE the twenty-nation trade committee, meeting in Paris to discuss European and world trade, has done no more than postpone the issues, Mr Macmillan has been making a more spectacular contribution to the European problem. According to reports from Washington he has warned the United States that if the common market makes no concessions to the Seven, Britain may be forced to reintroduce discrimination against dollar goods and withdraw more of its forces from Germany. The second point bears out rumours of a similar warning uttered when Dr Adenauer visited London last November.

If such threats were made they are more likely to aggravate than to alleviate Britain's European problem. Attempts to put pressure on the common market have yielded none but adverse results so far; thus there was the warning of "defensive measures" in December, 1958, which gave the common market a flying start. Last autumn the threat was put into effect with the creation of the Free Trade Association; the result has been the acceleration plan now causing dismay in London.

When the free trade area negotiations were going on, the more extreme French accusations that the scheme was designed to torpedo the common market were hard to credit. The threats and pressures that have followed have rallied a good many other Europeans to that view. If it is true that Mr Macmillan indeed threatened Dr Adenauer with a withdrawal of military support, the deepening bitterness one encounters in Bonn becomes easier to explain. There are moments when British policy seems designed to help those people on the Continent who are working to exclude Britain, and to frustrate those who want it in.

SPAIN

Courtship

THE secret meeting on March 29th between General Franco and Don Juan, pretender to the Spanish throne, is one more stage in the apparently endless series of exchanges and wary manœuvres with which the two men have sought to reach a common position on the succession. General Franco long ago accepted the principle of a royalist restoration, but he wants the revived monarchy to have a permanent political complexion, the complexion of the present regime. Don Juan does not agree; he sees the restored monarchy as independent and above party—a guarantor of order and liberty, as he would put it. The difference has found expression in the dispute over who the new king is to be—Don Juan, or his son, Don Juan Carlos, whom General Franco hopes he can make into a more willing tool. If reports that General Franco has been in poor health are true, the pressure on him to settle the succession may grow. Don Juan is reported to have taken a stronger line than in the past at the latest encounter near the Portuguese frontier.

If a peaceful evolution inside Spain away from Falangism were possible it would obviously be in the interest of the western countries which have been progressively admitting Spain into the circle of their economic organisations in the last few years. Indeed, there have even been reports suggesting that a satisfactory solution of the succession was one of the conditions laid down when Spain was admitted to the Organisation for European Economic Co-operation last year.

The Spanish government still hopes for the full western badge, membership of Nato; and there was much disappointment in Madrid when the fuss over the plan for German bases set this hope back. In the United States the visiting Spanish foreign minister, Sr Castiella, has been putting the Spanish case. Against the argument that the admission of Spain would discredit the West and give legitimacy to the present (after all) Fascist regime, those who favour the move suggest that the western powers would be in a better position to guide Spain when Franco goes if Spain were fully in the alliance. But would they? The very numerous Spaniards who hate the regime might by then have identified Nato with it; and the search for change might cause them to look elsewhere.

Sr Castiella hardly allayed the doubts of the Nato countries he is courting when he spoke at Georgetown University on Spain's role in the last war. He himself, he explained, had fought beside the Germans against the Russians in the Spanish Blue Division. The Spaniards had been in the struggle against communism from the start. The same sort of talk caused irritation and embarrassment in west Berlin recently when a group of visiting Spaniards explained how loyally they would fight for its "liberty," as they had in 1943.

GERMANY AND JAPAN

Bygones and Reconciliation

AS Dr Adenauer's aircraft was about to land in Tokyo, a group of right-wing demonstrators unfurled a banner reading "Welcome to Adenauer," flanked with two swastikas. An indignant official of the German embassy tried to pull it down, but was held back by a Japanese diplomat. The swastikas were then discreetly veiled.

The tale is evocative, for the first visit by a postwar German chancellor to Japan inevitably calls up memories of a more unsavoury alliance, of which communist propaganda has made good use. And while these emotions provide no direct guide to the present status of the two countries, the defeated Axis powers have problems in common that arise from the past. Both west Germany and Japan have enjoyed a remarkable economic recovery since the war; both feel threatened by communism from a front line position, and have become, willy-nilly, allies of the democracies which defeated and occupied them. Both have a difficult task in gaining acceptance by and reconciliation with these former enemies.

For Japan these political difficulties are aggravated by a special economic problem. War and the West's experience of Japanese competition in the thirties have left Japan something of an outcast in world trade. It needs outlets for its exports in western countries, and it still does not play the valuable part in regional development schemes in South East Asia which it could play. Something of the common market spirit might usefully be applied to that part of the world. Both needs, however, are far from fully acknowledged by western countries, and west Germany might play a useful part in helping Japan to gain acceptance. Unlike Britain, it already gives Japan most-favoured-nation treatment under the General Agreement on Tariffs and Trade, and Dr Adenauer has evidently promised to do what he can to see that the European Economic Community, too, treats Japan liberally. In the new nine-nation group of industrial countries which is trying to develop a joint aid effort, Japan and west Germany are the two nations with the greatest untapped resources. That may give them a new importance in the western effort to help the uncommitted world.

TRADES UNION CONGRESS

The General Secretary

NEXT September Sir Vincent Tewson is to retire from his post as general secretary of the Trades Union Congress. His retirement comes at an important moment in trade union history. For several years now the unions have needed a controversial leading spokesman to conduct their public affairs. They have needed someone who would occasionally infuriate his member unions by speaking out in vernacular terms against particular trade union *sottises*; who would no doubt equally often infuriate the general public by some doughty utterances in support of official strikes; but who would be generally regarded as an Ernest Bevinish sort of figure, a secretly admired controversialist, a trying but respected John Bull.

This combination of specialist, publicist and national imp is not easily to be found anywhere, perhaps least of all among the sort of trade unionists who have been coming to the fore in recent years. It was certainly not found in Sir Vincent. He has never regarded this sort of thing as his job. He could keep the administrative machine at Congress House humming—though even here the blame for the low salaries that were offered and consequent high turnover of staff must be laid partly at his door. But, under his leadership, the TUC never shook off its tendency to shy away from controversial subjects, with the excuse that "we are, after all, only the employees of our members." Yet the doctrine that employees must never criticise their employers is not, one should have thought, an essential feature of trade union lore.

For some time now it has been assumed that Sir Vincent's successor will be one of his two principal lieutenants at Congress House, Mr George Woodcock or Mr Feather. Mr Woodcock is now the strong favourite. Does he have it in him to change, gradually but firmly, the whole character of the general secretary's job? He is of higher intellectual calibre than many other members of the general council; he is already something of a minor television and broadcasting personality (which Sir Vincent never became); those who know him say that he is probably not without ambition (but possibly, like Macbeth, without the illness should attend it?). His main handicap, which would apply also to Mr Feather, is that he has spent so many of his working years as a bureaucrat in Congress House; this is bound to make it even harder for him than it would be for an outsider to launch the TUC into a new orbit.

STRIKES

Just Gas?

IT is difficult to know how seriously to take the warning issued by one trade union leader last Tuesday that a shop stewards' plot had been set afoot to disrupt first the gas industry; then the electricity, port and motor industries; and to bring about major unofficial stoppages by or about the middle of next week. It is no doubt true that like-minded (which too often can mean bloody-minded) little groups of shop stewards have got together in these industries; when they got together, it would be in their nature to hatch "plots" for militant action, which they would not necessarily have the power to implement. But the union leaders are naturally worried by the mere fact that these stewards should be meeting each other, trying to form a horizontal structure of power that would cut across the vertical flow of union authority. And in the gas industry the "plot" seems to have been fairly far advanced. A timetable for strikes was apparently laid, and 260 maintenance men at gasworks in North London were called out on unofficial strike on Monday.

For the moment, however, the situation looks reasonably under control. Monday's stoppage had negligible results; another guerilla gas strike which had been planned for later this week was called off, because it seemed unlikely that all the rank and file would join it, once Mr Matthews had courageously drawn publicity to the "plot." The Amalgamated Engineering Union, which—as so often—is the union most troubled by the unofficial action, has firmly told its members to continue working. But should matters get worse, a further remedy is at hand in the public utility industries. By the Conspiracy and Protection of Property Act of 1875, strike action in gas or water undertakings was made illegal provided that it was done "wilfully and maliciously and in the knowledge that the action would deprive the consumer of supply." This clause was extended in 1919 to cover electricity power stations as well. One would like to see an end to the conspiracy of silence that at present surrounds this fact. Both the nationalised industries concerned and the trade union leaders seem to regard it as provocative to mention it.

NASSER'S TRAVELS

Old and New Friends

AMONG the criss-cross flights of migratory statesmen, President Nasser's visit to India, which started on Tuesday, has a welcome directness. The two countries have much in common and this goodwill tour was planned some time ago, although, coming now, it fits in well with other pre-summit manœuvres. Mr Nehru's calm neutralism has been President Nasser's lodestar as he stumbled over the perilous slopes between East and West; now, having gained a certain equilibrium, he will have been able to compare notes with Mr Nehru on the changing landscape—and what this may mean for the uncommitted. In these days of wide-ranging diplomacy, President Nasser has often appeared isolated within the walls of his own propaganda factory. Mr Nehru, who is fresh from discussions with Mr Eisenhower and Mr Khrushchev, and about to meet Mr Macmillan, the other Commonwealth premiers, and Mr Chou En-lai (with whom the United Arab Republic as well as India has recently been having trouble), will be able to put President Nasser into a broader picture than is visible from Cairo.

After his discussions with Mr Nehru, President Nasser moved on for a ten-day tour of development projects. This has become one of the accepted ways of filling out state visits, but for President Nasser it is more than a breathing space between talks. Since India and Egypt share the problem of an economy that has to thrust its way through a stifling blanket of over-population, this part of the tour could be genuinely instructive.

On April 10th, President Nasser moves on to Pakistan, which, as a member of the Central Treaty Organisation (successor to the Baghdad pact), is a less natural habitat for him than neutral-coloured India. But his visit marks the success of the diplomatic spadework that for some time has been preparing the way for a more cordial relationship between the two Moslem states (although, in an interview with a group of American journalists, he played down the religious link and reaffirmed his rejection of all pacts, religious or otherwise). Last month it was agreed to exchange Egyptian cement for Pakistan jute; the amounts were small but the deal was important as the first of its kind. In this warmer atmosphere, President Nasser may find a good deal in common with President Ayub Khan, in addition to their military backgrounds. For one thing, as Pakistan's new representative institutions are developing on roughly similar lines to those that President Nasser is seeking to introduce in the UAR, the delegation will have a chance to see their rather misty principles being tried out in practice.

IRAQ

Bold Clemency

HAVING survived in the last twelve months many gloomy prognostications, one serious revolt and an attempt on his life, General Qasim is now showing signs of a relative confidence. The eight men whom he reprieved last weekend had been under sentence of death for so long that it seemed unlikely that they would be executed, but the public act of clemency entailed a political risk that until now he has not felt safe to run. After the Mosul revolt of a year ago, the communists, who saw everything going their way, took the opportunity to press for the immediate execution of death sentences, whether the victims were representatives of the old regime or anti-communist nationalists who had helped to overthrow it. In the event, there has been no wholesale slaughter of political prisoners, although things looked grim last September when seventeen prisoners, including Brigadier Tabaqchali and Sayyid Said el-Qazzaz, were executed for treason.

The eight whose sentences have now been commuted to various terms of imprisonment are all prominent members of the pre-revolutionary regime; they include such well-known names as Dr Fadhil el-Jamali, who has been sentenced to ten years' imprisonment. Leaders who, because of their Baathist or pro-Egyptian sympathies, have fallen foul of the regime since the revolution have not yet felt the benefit of the reprieving spirit. This fact has not been missed in Cairo, where General Qasim is accused of making it up with supporters of the Baghdad pact while keeping "heroes of the revolution," such as Colonel Aref and Rashid Ali el-Gailani, in the death cells.

Although Colonel Mahdawi's grisly trials still go on and produce more death sentences (this time for the attempted murder of General Qasim) the last word is now more obviously with General Qasim himself. Our Middle East correspondent sets out on page 61 evidence for supposing that his is now the controlling hand. One additional sign of this new authority is the enforcement of regulations about carrying firearms in the streets. But basically there has been no big change in the situation; although General Qasim may be feeling more secure, and is certainly acting more boldly, it is still early days to conclude that his hold on power is sure.

ARGENTINA

Without Perón's Mantle

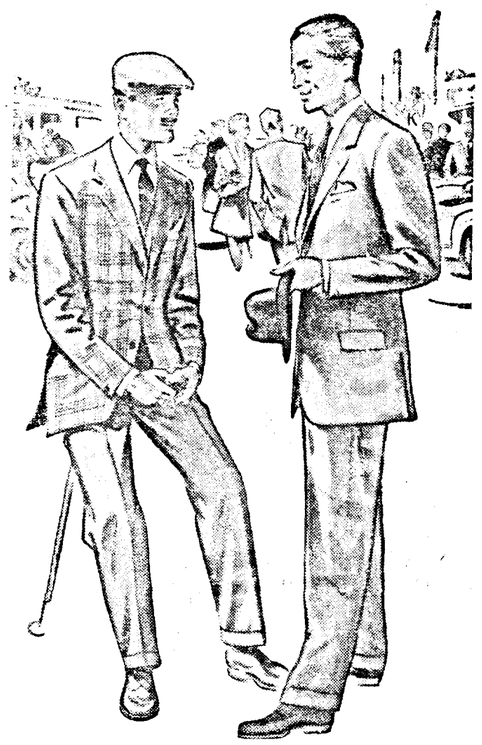
DR FRONDIZI was elected president in 1958 because a quarter of the electorate were led to believe that he would fashion himself on General Perón. When he disillusioned them, he abruptly lost their allegiance. This was forcibly demonstrated last Sunday, when Argentina held elections for half the seats in the chamber of deputies. Although Dr Frondizi still has a narrow majority in the chamber, his Intransigent Radical party polled less than a quarter of the total vote and came a poor third to the People's Radical party and to the peronista blank ballot, each of which accounted for 2 million votes.

Two years ago, the left-of-centre People's Radicals, led by Sr Balbín, were tipped to win over Dr Frondizi's left-wing party. But at the 1958 elections Sr Balbín won only 2½ million votes and Dr Frondizi 4 million —because, at the last minute, he got peronista support. Now the arithmetic has been turned upside down; Dr Frondizi has lost, as he could hardly fail to do, the two million who still look only for a Perón; they have returned to their blank ballot papers.

It is depressing to see the shallowness of Argentina's unpopular revolution so plainly shown up. The revolution in Cuba boiled up inside the country until the army crumbled. But in Argentina, General Perón was removed by the armed services, and the "shirtless ones" only remember that he gave them a higher standard of living than they enjoyed before or since; they forget, or never knew, the recklessness with which he used up Argentina's wealth to give it them. To outside eyes, President Frondizi's policies have been along the only line that could put the economy together again. He has welcomed foreign investment, provided incentives for industry, and been firm with the trade unions; in order to get American aid, he has introduced austerity. But his policies sent the cost of living up. The workers who have turned against him are not just being cussed; their poverty is real. Without losing sight of his long term goals, Dr Frondizi may, after this setback, feel compelled to remember some of the promises he made at that election two years ago.

ADOPTION OF CHILDREN

Cases in the Courts



TWO adoption cases heard in the High Court last week showed the pitfalls that may trap children's officers acting in what they believe is the best interests of a child. In the first case, a father asked the court for leave, which was granted, to appeal out of time against an adoption order that had been made in respect of one of his children. He was in prison, and his consent to the adoption order was dispensed with, apparently on the ground that he had persistently failed to discharge the obligations of a parent —a new ground allowed by the Adoption Act of 1958 in accordance with the recommendations of the Hurst Committee. In the second case, the prospective adopters appealed against the refusal of a magistrates' court to make an adoption order in respect of a child they were already caring for, whose parents had given consent but had later withdrawn it.

In both cases it would seem to the layman, and indeed it seemed to the magistrates, that if the welfare of the child were the sole consideration, it would be better served by adoption. In the second case, however, the justices refused to make an order because they could not find that the parents were withholding their consent unreasonably or that they had persistently failed to discharge their parental obligations. But in both cases the justices acted wrongly, according to the High Court judge, in reading, before they came to their decision, a secret report from the children's officer purporting to show why the parents' consent could be dispensed with. In the second case, they did not consider the report strong

enough to justify dispensing with consent, but they used it as evidence, which, according to the judge, it was not ; and they read it out after the parents' evidence had been closed so that the parents could not reply to it.

The way before children's officers and magistrates is thus clear. Confidential reports should only be used to satisfy magistrates that adoption would benefit the child. They should presumably therefore be restricted to such things as the child's history and whether he is happy with his prospective adopters ; they must not be used to prejudice the magistrates against the parents. The magistrates for their part cannot dispense with the parents' consent because of what they have read in a secret report, but only on evidence, admissible in a court of law, that the parents' actions or behaviour come within the grounds laid down in the Adoption Act.

PRESS AND LOCAL AUTHORITIES

Secret Councils

MRS THATCHER'S Bill to give the press a right of attendance at meetings of local authorities and other public bodies has now reached the committee stage in the Commons, where amendments are being moved which need careful watching. Her Bill is both right in principle and necessary in practice, which is why some local authorities want to whittle it down. In the main, it merely returns to the press rights that were given to it by Parliament in the Local Authorities (*Admission* of the Press to Meetings) Act of 1908 ; these rights were quite unintentionally removed by the Local Government Act of 1933, which empowered local authorities to transact most of their business in committees to which the 1908 Act did not apply. During last summer's printing strike some Labour-controlled councils therefore voted to put their full council meetings into committee, in order spitefully to exclude reporters from local newspapers that were defying the strike.

An important additional clause in Mrs Thatcher's Bill provides that the press may obtain advance notice of meetings' agenda ; this should help to subject controversial proposals to public discussion. The Labour party, among others, has suggested that a voluntary code of conduct rather than a statutory obligation would be sufficient to protect the press's rights ; but such a code already exists in the 1908 Act, and it has been flagrantly abused—especially by some Labour councils. Other critics have suggested that exclusion of the press sometimes confers freedom on council members to deviate from the party line, which the risk of publicity would reduce ; the tight control already exercised by political caucuses on many councils makes this argument unrealistic. A more cogent objection is that on occasion the presence of reporters might inhibit the work of some committees and sub-committees, dealing with such personal matters as the salary and discipline of council employees, or the government of schools and institutions. Individuals who had applied, say, for council houses might also suffer by having intimate details of their private lives revealed in the local press. But Mrs Thatcher's Bill already provides a safeguard that the press may be excluded by resolution whenever publicity would be prejudicial to the public interest, or the business under discussion is confidential, or for other special reasons stated in the resolution and arising from the nature of the business or of the proceedings. If anything, this clause requires tightening rather than loosening. It also seems probable that the Bill does not apply to sub-committees. On this and other points the Bill's wording could certainly be improved since its meaning is often hard to follow. A major omission is that no right of attendance is given to the public, but only to the press. Mrs Thatcher herself tried to rectify this anomaly, but her amendment was narrowly defeated. It should be moved again in the House of Lords.

EDUCATION FOR MANAGEMENT

Vague Advance

IN the expansion of both university and "sub-university" education during the next decade, management studies ought to play an important part. The scheme for such studies at technical and other colleges, which was instituted after the Urwick report of 1945, has never worked very smoothly. Last year, somewhat belatedly, the Ministry of Education appointed a working party of business men and educationists to suggest improvements. Their report has now appeared (economically in mimeographed form) and Sir David Eccles has broadly accepted their proposals. These are that the course leading to a diploma in management studies should be open only to those who have already taken a first degree or equivalent professional qualification, but that there should be ordinary and national certificates in business studies for which anybody with adequate educational standards (these are left vague) can study and sit.

The diploma, like the certificates, can be taken after part-time study (160 hours of "coursework") or whole-time study (a year at a residential college). At the moment, some 700 students are taking the present intermediate course in management, as an aid to self help in business; but very few take the newer course for a national certificate in commerce. These two courses are therefore, wisely, to be amalgamated.

But the new schemes, though useful enough, do not go very far. The suggested syllabuses are painfully vague (the mention of export techniques in particular is absurdly casual). There is little to inspire even the reddest of redbrick universities to have another look at this unabashedly vocational field of study. Neither the working party nor Sir David has made any effective recommendations for tackling the main problem in management studies—the lack of suitable teachers, whether whole or part time. At present, management studies are uninspiring because they are put over uninspiredly; anybody who knows anything about management in this country can make much more money practising it than teaching it. The American business schools,

MARCH 31, 1860

FRANCE AND BRITAIN

¶ It is to be hoped that we shall profit by the warning we have received as to the consequences of strict *personal intimacies* —exclusive alliances with foreign Sovereigns. THE ECONOMIST has never ceased to point out the mischiefs and the dangers of such intermixture of public and private relations. In the case of the Emperor of the French, this confusion of what ought to be kept most strictly separate has been singularly noxious;—*it has done us* much harm, led us into much danger, and *brought upon us much discredit.* It is not easy to doubt the familiar and convivial assurances, half jocularly given as if it was impossible you could be serious in asking them, of a boon companion or an intimate friend, with whom you hunt, smoke, play at billiards, and *attend bals masqués.* It is still less easy to tell such a man *that you believe he is playing you false.* In these hours of gaiety and unreserve, too, feelings are easily betrayed and secrets easily surprised; and they always, therefore, turn to the advantage of the party who is least sincere and least confiding;—and this party *never is the English-*man. . . . If the people *and the rulers of Great* Britain are at length fully alive to the character *and designs*, and probable designs of the French Emperor, and will permit themselves to be lulled into security again by *no* anodyne which he may offer; if they will quietly exchange the exclusive and exceptional intimacy which they have hitherto cultivated *with him alone*, for a mere ordinary alliance with France and a cordial understanding with the other Powers of awakened Europe; if they will at once—or as speedily as possible—withdraw from all *joint action* with the French forces, like that which so unluckily hampers us in China; and if, without the expression of any anger or mistrust, they will simply proceed at home exactly as they would if they looked only to what he has *done* and is *doing*, and had never heard anything he ever *said*: if, in a word, they would use their eyes more and their ears less, and think for themselves instead of asking him what they are to think,—then our worst fears will be allayed and our worst dangers will be ended.

though they vary from the dreadful to the brilliant, are far ahead.

Sir David and his new advisory council should re-read what the Anglo-American productivity committees said on this subject; and think hard about the fact that Britain's university population is going to be raised to comprise the 170,000 ablest young people in the country—all dedicated to the British university tradition that business studies carry no academic prestige ?

MATRIMONIAL PROCEEDINGS

Husbands' Charter

During 1958 24,000 applications for separation and maintenance orders, 7,000 applications under the Guardianship of Infants Acts, and more than 4,000 applications under the Affiliation Proceedings Acts were dealt with by magistrates' courts in this country. The Matrimonial Proceedings Bill, which, having been through the Lords, received a second reading in the House of Commons last week, consolidates and brings up to date the jurisdiction and powers of magistrates in these matrimonial cases. It also seeks to implement a minor social revolution.

For the first time the courts are to be given power to order a wife to maintain her husband. To obtain such an order the husband will have to show that his earning capacity has been impaired through age, illness or disability. A wife will be under no such obligation ; only her actual means will be assessed, so that the sexes are not yet made quite equal. When there are no young children a wife is often able to earn as much as her husband, and it seems inequitable to penalise a husband if the wife chooses not to go out to work. The Bill would be improved if it contained a direction to the courts to take into account not only the means but also the earning capacities of both parties. The Bill might also have put right another anomaly, the inability of a person named as an adulterer in matrimonial proceedings in a magistrate's court to intervene to rebut the charge. No reconciliation machinery is set up by the Bill, a function which must continue to be inadequately although valiantly discharged by the overworked probation officers.

Under the Bill, maximum maintenance allowances are raised from £5 to £7 10s. per week for a spouse, and from £1 10s. to £2 10s. for each child. The courts are also given wider powers over children who come within their jurisdiction, and in exceptional circumstances may commit a child to the care of the local authority.

RUTLAND

Ritual Sacrifice?

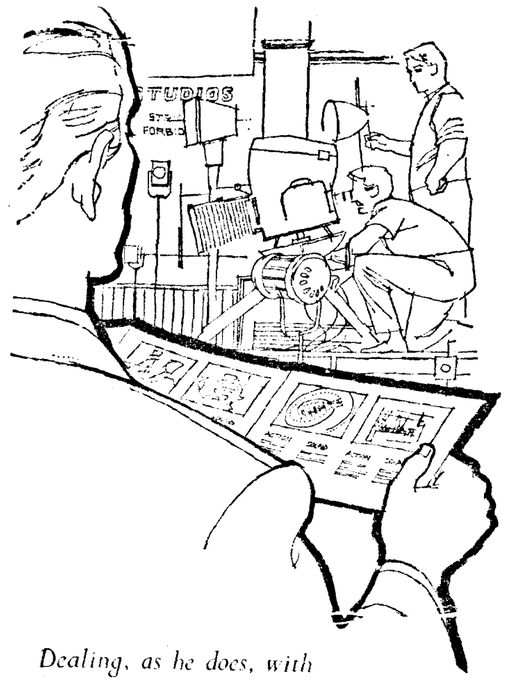
Rutland might be admired for its spirited fight to avoid amalgamation with neighbouring Leicestershire. Should it also be supported ? Sentiment apart, this tiny county (population 23,000) has one real and unusual asset—genuine contact with its own citizens. This no doubt is why a county with such obvious drawbacks can supply tolerable services (partly under contract from its neighbours), while yet charging lowish rates to its householders. The question that non-sentimentalists must ask is whether its disappearance would make any essential contribution to a worthwhile scheme of local government reform in the Midlands.

The answer to that question is gradually becoming clear. There is no worthwhile scheme of reform in prospect. The more closely one examines the Local Government Boundary Commission's recent proposals for the Midlands, the worse they appear—both in themselves and as precedents for other regions. The commission apparently decided that urban units approaching 100,000 population (like Cambridge and Solihull) have a right to county borough status, without bothering its head much about the effect on the counties—except where a county (like Rutland itself, or the Soke of Peterborough) undeniably looks very weak. This approach has two grave drawbacks. First, given the Government's parallel intention to delegate more powers to the larger urban districts, it threatens to increase the rural emphasis in county administration—which would not be good for county services, or for sensible planning, or for urban-rural relations. Secondly it threatens to turn the heavily built-up areas into blocks of independent county boroughs, with no provision for meeting common needs over police, water supply, higher education, or town planning. (Why in any case make Solihull with 90,000 people a county borough when the Government's minimum for conurbations was 125,000 ?)

Worst of all the commission seems to have no notion where it is going ; the arguments it has put forward for its Midlands proposals are thin and unsubstantiated. Rutland's case must be judged in this context. Its disappearance as part of a worthwhile reform should be supported by realists. But if it is just to be slaughtered sacrificially—there the case is different.

NATO AND WEU

Those Bases Again



The German military arguments for bases in Spain have at last come before the Nato defence ministers. If west Germany is to fulfil the military targets laid down for it by Nato, it needs more bases than it has. Herr Strauss has been putting forward three possible solutions: an integrated Nato supply system ; German bases in other Nato countries ; bases in Spain.

Nato solidarity has not so far evolved that integration has any chance of success yet. The hope must be that the second solution will be adopted and that France, Britain and the rest will give the Germans facilities to meet their reasonable needs. The Bundeswehr's difficulties would be eased, but not removed, by the British suggestion that Nato should stock up, not for a 90-day land war, as it does today, but for a campaign of no more than 30 days.

The legal position of German bases in Spain was discussed at a press reception given by Western European Union last week in London. It is agreed that, under the treaty, bases set up by a member country in a foreign country "on the mainland of Europe" would have to be inspected like bases at home. But how could a right of inspection be assured effectively in a host country that was not a member ?

One encouraging piece of news was that the inspection system, covering the bases, forces and arms factories of the member countries on the Continent, actually works, with a staff of some 200 inspectors on the job. A big loophole in the inspection system is, however, that because of the need to protect patents, surprise visits cannot be made to private factories, as they can to government arsenals and bases. The owners have to be notified in advance. Until recently, a convention for the judicial treatment of complaints arising out of visits, which was annexed to the Paris and London agreements, had not been ratified by any of the seven signatories (not just the Germans, as some press reports suggested). The British, the one power not subject to inspection, have now ratified—five years late—and the Germans have begun the legislative process.

A little-known power of WEU seems bound to hit the headlines in the next few months. The Council of Ministers must approve by majority vote the size of any stocks of atomic weapons manufactured and held by the Continental members. When France at last moves from the experimental phase to manufacture of atomic weapons, President de Gaulle can hardly be expected to like a provision which applies to France and not to Britain. The row that is likely to follow may well rub in the necessity for an effective, joint political control over nuclear weapons, a plan still cherished by a good many people active in WEU.

Dealing, as he does, with scriptwriters, story board artists, film producers, and television contractors, the agency's director of television is an advertising man of many parts — an impresario. But first and foremost he is a businessman, and it is his business to use the various talents within his department to make certain that every second of your commercial sells.

HADDONS

"Congratulations on your company's very successful year!"

"Thanks, it really was quite outstanding. We included private trade shows at the Connaught Rooms in our sales drive and the results far exceeded our expectations. In addition I and my co-directors held a series of receptions there which resulted in a lot of new business and saved us all—especially the sales side—a great deal of time and effort.

In the Princes Restaurant here we can have one of the best lunches in London and they can show us the rooms afterwards. You won't find a better place for your show."

The Connaught Rooms were the first to install permanent closed circuit television and a simultaneous multi-lingual translation system. Other facilities include film projection and tape recorders. There are twenty-six rooms available. The finest food and wine are served with an excellence which comes from years of experience.

The Budget

SIR—The theme of your leading article "Higher Taxes, but Where?" touches me with a deep nostalgia. One suspects, with alarm, that your distinguished editor has surrendered his chair to one of a number of retired Treasury officials whose theme has for years been, "Of course direct taxation should be reduced, but *not* this year." One knows the sorry tale by heart, and your version lacks even the virtue of originality.

On page 1191 you state, "the precedent which Mr Amory must at all costs avoid is that of the popular tax-relieving budget of 1955. . . ." I have always had a sneaking suspicion that the 1955 budget had nothing whatever to do with the subsequent inflationary troubles. Is it not a fact that those troubles were almost entirely the result of an investment-boom beyond the economy's capacity to digest; that nearly all the big investment decisions were taken months before the Budget; that the delivery situation in heavy industry was far too extended five and six months before; that there is no statistical evidence whatsoever to show that the graph of inflationary pressure took an upward twist *after* the Budget? Is it not a fact that there is no statistical evidence whatsoever to support the theory that the income tax reduction in 1955 added one iota to the subsequent inflationary problem?

—Yours faithfully, TED LEATHER

House of Commons

Industry in Scotland

SIR—Your leading article "Higher Taxes but Where?" contains an interesting reference to the possibility of checking overemployment in some parts of the country, without increasing unemployment in areas where it is already excessive. You mention that regionally differentiated taxes have to your knowledge been suggested only in *The Economist,* which has "tentatively floated" the proposal on a previous occasion. Floating a proposal perhaps implies a more dignified launching ceremony than we of the Scottish Council could aspire to, but we have at least flown a kite on the subject, some little time ago.

In July, 1958, and in April, 1959, the Scottish Council prepared and published reports on "Employment in Scotland," which briefly analysed the situation and prospects as they then appeared. The second of these reports showed that a reasonable and necessary goal for employment expansion in Scotland is the annual creation of 12,000 new jobs, net, in manufacturing industry, as compared with the figure achieved over recent years of 4,000. In considering means of helping industry to close this gap, the council recommended among other measures that producers should be allowed tax relief, additional to the normal capital allowances on plant, in the form of an investment allowance similar to that which was in force for a short time after 1955, and which was reintroduced last year. We proposed, however, that this allowance should be confined to designated areas where economic stimulus was needed. In making this suggestion, we also had in mind the geographically blunt nature of the conventional methods of controlling consumer spending.

The submission of these reports to the Secretary of State for Scotland led to discussions with Ministers which resulted in the appointment by the Council of a Committee of Enquiry into the Scottish Economy, under the Chairmanship of Mr J. N. Toothill. This committee is making a searching examination of the factors controlling the growth and location of industry, and it is our hope that it will define much more sharply than has hitherto been possible the nature and size of some of the influences which are at work. In considering the means which may be necessary to offset unfavourable conditions, the committee will take account of regional tax differentiation. The council therefore shares your interest in the stimulation of public discussion of this possibility.—Yours faithfully,

The Scottish Council (Development and Industry), Edinburgh, 2 POLWARTH

Urban Transport

SIR—I should like to take issue with some of the assumptions which seem to underlie your recent editorial comments on the Guillebaud committee's conclusions, and your comments upon the London bus strike of 1958. These assumptions are particularly alarming because they could easily lead to an eventual attrition of urban and inter-urban public transport in Britain. In the United States we are only now awakening to the enormous social costs which we shall have to bear because we have destroyed our public transport system. We allowed the system to decay because we made the same assumptions you seem to be making.

You assume that the pricing policy and the output policy of a state corporation must be called "irrational" or "uneconomic" when the corporation's revenue does not cover its full costs. Strict economic logic does not support this assumption; frequently the public interest is better served by deficit pricing, combined with subsidies. For numerous reasons the railway industry and urban transport are especially likely candidates for this treatment, though for rather different reasons in each case. I am aware that British law requires the railway system in general to cover its costs out of its revenues. But this fact is a legal constraint, not an economic argument. The state has congenitally ignored the law, and obviously the law could be changed.

In the case for subsidisation there are three main strands: the "marginal costs" argument, the "elasticity" argument, and the "external diseconomies" argument. Combined, they suggest that a self-sustaining rail system may be both impossible and undesirable. If additional service can be provided at a trivial additional cost, the price of the service should be trivial. Over a substantial part of the British inter-city rail network this criterion would imply lower charges, especially for passenger service. If the demand for railway service is highly sensitive to price, lower prices may actually increase gross revenue—though they need not suffice to push the railways into the black. Obviously, this argument cannot apply to the urban operations of London Transport. But in cities we can see most clearly the social costs of an expensive and infrequent public transport system. When people and things are diverted from rail or bus to car or lorry, the community eventually faces a sharp increase in its outlays—for highways, parking lots, urban reconstruction, police services, and so on. Since these costs are not charged against the passenger or shipper, when he switches to road transport, it is incorrect to say that the public has decided that these expenditures are desirable. The use of resources is distorted, in fact, because the market prices do not correctly represent the social costs.—Yours faithfully,

IAN M. DRUMMOND

Yale University, Connecticut

Falkland Islands

SIR—With reference to your interesting article on the Falkland Islands, you state that the islands are grazed by 800,000 Merino sheep. It is, of course, true that the Falklands' one economic activity is sheep breeding, so much so that mutton is known as "365" because it is eaten every day of the year, but the sheep are not merino. The wool is sold regularly in London and is fine cross-bred quality. Many breeds have gone into the existing Falkland, including Romney, Cheviot and more recently Corriedale, but there has been very little Merino blood introduced. The wool is excellent, but anyone who has handled it would agree that it has very few merino qualities.—Yours faithfully, K. G. PONT

Samuel Salter & Co. Ltd., Trowbridge.

SPRING BOOKS

The Birth of a Book

MR A. has at last had a novel accepted: 95,000 words written round the curious love life of King John. In a letter dated January 1, 1960, his publishers tell him they are so taken by its possibilities that they promise to try to bring the book out in November, to catch the Christmas trade. Mr A. is a bit dashed by this. He started writing King John in 1958, and it took a year to find a publisher. It will be 1961 before he knows if it has gone down well enough to justify finishing the second novel of the trilogy (the love life of Stephen Langton) or if he should turn to thrillers.

Mr B., his friend, is not a creative writer: but he has just finished an important book on the problems of the Belgian Congo. He too sent the typescript to the same publishers (who had already agreed to bring it out) on January 1st, pointing out that events were moving so fast that it was urgent to get the book out before a Belgian withdrawal from that territory converted it into a historical study. The publishers reply that it will certainly be "rushed": they might get it out by the end of October, but they still think that the best date for publication would be January or February, 1961. When, a few weeks later, Mr B. suggests that they should get it out to coincide with Congolese independence in June, 1960, he is told, regretfully but firmly, that this is "out of the question."

Why is it? Mr B. knows, if Mr A. does not, that an issue of *The Economist* contains 50,000 words, 75 per cent of which are written between Monday and Thursday midday, and they are all ready in print, with coloured charts and pages of figures, on Friday morning. Of course, he knows that hard cover books are a bit different—but need the difference be so great?

The answer is that the differences in the method and process of publishing books and periodicals are so great that it is usually impossible to bring out even the most urgent books on current affairs in less than six or seven months from delivery of manuscript, except when this is rushed through as a magazine operation, regardless of expense, of standards of production, or of marketing requirements. "Penguin specials" can be rushed through, at a pinch, in five to six weeks; a biography of Mr Antony Armstrong-Jones is being published by Anthony Blond Ltd. in May; the late Walter Hutchinson is credited with having once produced a bound book in a week from delivery of manuscript—to show it *could* be done. In fact, "up-to-date" or topical books are a relative term. Books, by their nature, cannot but be well behind events. The only question is whether it would be possible—and economic—to carve two months or six weeks off the present normal period of gestation, which is between nine months and a year—even two years for works of elaborately foot-noted scholarship.

But the author finds it hard to understand how the time is used during the ten months; for he knows the actual printing processes take at most a fifth of this time. It may help therefore to confront him with a normal publisher's schedule for a serious book of 350 pages. It runs like this:

Jan. 1	Typescript to printer for estimate of cost.
Feb. 2	Typescript back with estimate. Editorial reading begins. Queries to author begin. Typography and house styling, etc. Paper ordered.
Mar. 1	Typescript to printer for setting and galley-proofs.
Apr. 15.	First galleys to author.
May 31.	Last galleys back to printer with author's and publishers' marks via publishers' editorial department.
July 10.	Author gets page proofs, makes index, and index to printer.
Aug. 15.	Book passed for press.
Sept. 15.	Printed sheets to binders.
Oct. 15	Bound copies to publishers. Review copies out.
Nov. 15.	(Earliest) Date of publication.

Total time: 10½ months, provided all concerned keep rigidly to schedule. If Mr B. does some extensive rewriting at the galley stage to deal with the Brussels conference, which took place in January, and again on his page proofs in June to squeeze in the events of independence day, the chances are that proof-correcting will be so extensive (and expensive, so that the author will exceed the 10-15 per cent allowance of setting cost and have to pay for the excess) that time will be lost, and perhaps the book's place in the queues (a) for machining and (b) for binding may be lost. Then the book will appear in February (which secretly the publisher, who likes off-seasons for serious works, prefers to November—the right time to sell the love life of King John).

The reason for this is that every book is an individual product, unlike the successive issues of a periodical. Paper has usually to be ordered and made specially. Production is carried on in five places: the author's residence, the publisher's office, the printers, the jacket artist's studio and the binders. It shuttles between all these in the process, along with all the other books of the publisher, and his rivals, placed with this printer, which are in the pipeline too. The publisher rigidly allocates the time of his editorial staff (editor, readers, contact girls, production manager, art editors, publicity department, and so on). They work on each of his books in turn—and each book must join the queue at each desk. On each book his profit is quite small—perhaps only a few hundred pounds—so he cannot keep a large staff hanging about to rush one book through—nor can he afford always to pay for highly efficient staff.

Merchants and Planters

RICHARD PARES

The late Richard Pares discusses the relationship between colonization and capital, taking as representative the British tobacco colonies and the British and French sugar colonies of the seventeenth and eighteenth centuries. This is Supplement No. 4 to the *Economic History Review.* 10s. 6d. *net*

British Shipping

R. H. THORNTON

A second edition of this notably successful survey of the shipping industry introduces the new English Institutions series. The new edition includes a review of the prospects of nuclear-powered ships. 18 *plates.* 21s. *net*

CAMBRIDGE UNIVERSITY PRESS

The printers of books have one basic interest: to keep their machines and men busy. They, too, will not hang about—if the Belgian Congo does not turn up, or is delayed, they will push on with King John. And they will set the printing schedule to make sure that they have full continuity, which means a slow schedule in periodical publishing terms. Any variation means pushing up costs to a point that swallows the small profit. It is the advertisement revenue of periodicals that makes rapid, priority printing possible.

But this is not all. A book must be sold: and this is not a matter of bookstalls and sending out subscription copies. It is a matter of a traveller visiting hundreds of individual, and individualistic, booksellers, and proving that they should stock both the Belgian Congo and King John, in the teeth of the claims of the other two hundred titles published that week. It takes even a large publisher's travellers over a month to get round the London bookshops, which insist on seeing completed, jacketed copies. But, in the provinces, the travellers visit the bookshops only twice a year. Yet it is vital to have the book in as many bookshops as possible on publication day; it is the main part of the publishers' selling effort to have the book generally available. Some publishers reckon that it takes two to three months after they receive the bound copies to achieve this, which is the foundation of sales and success, except for the one-in-a-thousand best-seller. Of course, publicity is planned much earlier in the book's gestation, indeed from the receipt of a manuscript. But all must be dovetailed into the publisher's work on his other books: the traveller cannot go round with one book at a time.

The paperback publishers can cut out a little of this schedule—reprints need no queries to author, and marketing is done on a brand-name basis, more like the selling of a periodical. There is more standardisation, and less interest in reviews. Nevertheless, an original "Pelican" work may take nearly as long to bring out as a hard-backed new book.

Could the time-schedule be shaved? If authors were angels (and their typescripts as immaculate), publishers as efficient as hydroelectric scheme contractors on a penalty contract, printers likewise, and books standardised mercilessly in length, layout and typography, it could certainly be done. At any rate, one big publisher, Victor Gollancz, by skilled standardising (and reducing the jacket to a simple printed paper wrapper) does achieve it: his time for a topical book is six months (a reduction that is partly achieved by dispensing with autumn and spring catalogues). But even when one checks the normal ten-month schedule against a printer's timetable on the best suppositions, one is told that the printer needs five to seven months from the day he receives the typescript for estimating to the day he or his binder delivers bound copies to the publisher. It follows that for most publishers, using most book printers, eight to nine months is the bare minimum. To beat this, they must either push up costs or cut printing and marketing standards or both—which means taking bigger risks.

The author whose book does no more than keep the schedule given here should not grumble unduly. An author whose book exceeds these limits should first ask himself: is it my fault? If it is not (and if he is not demanding a sheet of collotype reproductions) he can start asking if his publisher knows his business and if the printers are falling down on the job. And a publisher with a topical book can notice that if he can shave three or four days a month from the schedule, he can get the book out at least six weeks earlier. A great deal can happen in the Belgian Congo in six weeks.

A Great Liberal

Gilbert Murray: *An Unfinished Autobiography*

Edited by Jean Smith and Arnold Toynbee. *Allen and Unwin.* 225 pages. 25s.

GILBERT MURRAY, we are told, disliked writing about himself, and he cut short the autobiography he had been persuaded to write when he found himself the central figure; he had reached the point where he graduated, got a professorship and married. What we have is a picture of life in Australia as he saw it in his first decade, a member of a spirited and intelligent family, and, a little more briefly, his education in England in the seventies and eighties. It is charming, interesting and necessarily slight. It is the greatest pity that he was not persuaded to go on to the more important years.

The other half of the book starts with a short sketch of the rest of his life (a little difficult to follow for those who do not already know the background) and for the rest is composed of studies of Gilbert Murray's more important activities by various of his friends. All are good, but much the most entertaining is an affectionate and slightly sardonic essay by Salvador de Madariaga on Lord Robert Cecil and Gilbert Murray as two British "civic monks" who seek to make the world a better place, but find to their dismay that it contains "a rather large proportion of small dark Latin nations and so on" (Murray's words, which come splendidly from the pen of a hellenist) who have their own ideas about how they should be governed and by whom.

This book does not pretend to be a full-dress biography; but it is a worthy tribute to a great man.

A Study in Nihilism

The House Built on Sand: *The Conflicts of German Policy in Russia, 1939-45*

By Gerald Reitlinger. *Weidenfeld and Nicolson.* 459 pages. 36s.

VERY few English-speaking people ever had much idea what went on in German-occupied Russia (or, indeed, any part of Russia) between 1941 and 1944, except that it was nasty. Soviet-held Russia suffered huge and swift losses of territory, troops and population. The rate of loss became more uneven, slowed down, and stopped; after Stalingrad (November, 1942) the tide began to roll back, though it took two more years for the Soviet Army to approach the frontiers of East Prussia. These vast movements were registered in the West on maps, but there was never anything like the mass of news that came from German-occupied France, Belgium, Holland or Norway, where, relatively speaking, military order and administrative system continued to reign. Yet the Germans must have tried to do something with the huge territories they conquered. What was it?

Mr Reitlinger has devoted great labour and long study to the task of explaining both what the German intentions were, and what actually happened. To say that he has made it all clear would be too much; at the end, watching the muck and the debris float to the surface as the whirlpool dies away, we are left with the impression of a vast interlude of nihilism, in which actions that were willed and things that happened are hardly to be distinguished from one another. Still, this may not be far out; Mr Reitlinger has illumined and documented much of the detail, and if his total picture is dizzy with movement and emotion, this is hard neither to explain nor to justify.

Hitler himself does not seem to have troubled to think out any ideas for the political treatment of occupied Russia beyond the destruction of the system of government that existed and the men, from top to bottom, who carried it on, together with the extraction of whatever Germany could get out of the place to support its own economy. He thought, or Rosenberg thought for him, that large areas of eastern Europe might be reserved for German rule and western colonisation, while others—White Russia, the Caucasus, the Cossack country, perhaps the Ukraine, and probably a rump Muscovy—might be allowed to exist as feeble separate states run by "a primitive socialist intelligentsia," to be chosen from among the survivors after a systematic slaughter of all capable of governing seriously.

But Hitler also thought that the Soviet Union would fall apart after one brief summer campaign. When this failed to happen, the urgency went out of the first frantic efforts to make a *tabula rasa;* and the execution of the design was thereafter left a good deal to chance and the conflicts of will of the various satraps. While the army did its best to get on with the war, the SS "action groups" roamed about exterminating racial enemies and creating general chaos; at the same time, earnest fellows from Rosenberg's Ministry for Eastern Questions began to turn up with half-baked political schemes for the "nationalities," which had at least, on occasion, the advantage that they required someone to be left alive. Various kinds of Quisling troops were scraped together. Party dug-outs like Erich Koch, assigned huge tracts of territory with little directive to guide them and no ideas of their own, obstructed the Rosenberg Ministry and brought in their personal quacks and time-servers. In the end, the returning Soviet army took the political decisions, still unresolved, out of German hands.

It is not necessary to romanticise Stalin, or the Soviet system, in order to find in this book much that explains why the Russian and eastern European attitudes to many questions, including the German question, are so different from the attitudes that appear self-evidently right to western statesmen. Mr Reitlinger's book contains another little lesson, not unrelated. The *dramatis personæ* of the German occupation of Russia, given in one of his appendices, indicates a partial continuity of personnel between Rosenberg's Eastern Ministry on the one hand, and on the other Professor Oberländer's Ministry of Refugees and the eastern department of the foreign ministry at Bonn today. Clearly some of the men who figured in the German occupation of Russia do make some contribution today to the formation of the policy of the Nato powers towards Communist Europe: how important a contribution is hard to say.

Very Old Lady

Servant of this House

By H. G. de Fraine. *Constable.* 210 pages. 25s.

EVEN in these modern days of high efficiency, the Bank of England retains a strong odour of past traditions and well-tried methods. The bottles are new, but the old wine survives. Those who delight to sniff its bouquet will welcome any account of the way in which the wine matured. Mr de Fraine provides an extraordinary link with the past. He died recently, nearly ninety years old, just after finishing this book, in which he demonstrates almost total recall; and he entered the Bank as a clerk in 1886. Most of the book is concerned with the Bank and London life in his earliest days, with recollections (for he is a natural antiquarian) of yet earlier generations. It is rambling, gossipy and rather shapeless, but written with charm and style.

In the eighties, no breath of reform had touched the Bank. The methods and mores

COLLINS

were more of the eighteenth than of the late nineteenth century. Mr de Fraine's account of these halcyon days is delightful. What he hardly explains is how a quill-pen system, with slowness and small scale as its backbone, was compatible with the commercial vigour of those times. Anyway, this paradise could not last. Mr de Fraine makes an interesting comment, that some of the worst abuses of a male world were almost automatically checked when female staff was introduced.

Then came the terrifying and now half-forgotten figure of Lord Cunliffe, who, by the most brutal methods, introduced needed reforms. Mr de Fraine, like many intelligent antiquarians, was a reformer and got on well with Lord Cunliffe. He suffered from it. One gets glimpses of the feuds and lasting resentments that are the curse of a closed society. But he won through, and spent the last twenty years of his life in charge of the Bank's great printing works at St Luke's, which he himself had founded.

Plain Mr Knox

By Elizabeth Whitley.
Skeffington. 223 pages. 25s.

THE precepts of John Knox are now honoured in Scotland more in the breach than the observance, or so they say in the manses. The fourth centenary of the Scottish Reformation, being celebrated by the Kirk this year (and apparently nettling 'pisky dignitaries more than papist ones), is a proper time for cogitation on such matters. There are no two ways about Knox. It says something for Mrs Whitley, writing from the manse of St Giles, that she comes out, plump and plain, that "Edinburgh and perhaps even his own congregation of the High Kirk of St Giles' are as ashamed today as they were four hundred years ago of his views on equality and his belief in the common man." It is just a pity that she has not been impelled (with due deference to the General Assembly, naturally) to take this a little further. There is a place for a modern estimate of the real force the Knoxian tradition still has in the Kirk. Can we see something of a dividing line in the controversy over Nyasaland?

But this is not the book Mrs Whitley has written this time. She has produced a vivid and friendly life, with the good sense to let Knox give the best parts of the story in his own words. They simply cannot be bettered. But Mrs Whitley is not above a telling aside (at the expense of episcopacy) when she writes of the 1560s: "It is good to read of those days, when the Anglican communion was freely open to the Scots: and when ordination by the laudable form and rite of the Reformed Church of Scotland was freely accepted by them." Knox would have appreciated that.

Repression in Tibet

The Revolt in Tibet

By Frank Moraes.
The Macmillan Company, New York. 223 pages. 10s. 6d.

The Flight of the Dalai Lama

By Noel Barber.
Hodder and Stoughton. 160 pages. 16s.

THE escape of Tibet's god-king, the Dalai Lama, to India in March, 1959, dramatised an insurrectionary situation that had been gathering strength for several years without much publicity. For a few weeks, the fate of this remote theocratic community commanded universal attention, as had the fate of Hungary late in 1956, and for the same reasons. In both instances, outside intervention was impossible, though in Tibet's case an additional obstacle was that Tibet, though the home of a distinct people with a distinctive religion, was not even recognised as a nation.

That the Tibetans consider themselves a nation is, however, plain enough both from their history and from the story of their revolt against communist Chinese rule. Of the two accounts of the revolt now available—both by journalists—the one by Mr Frank Moraes is by far the more comprehensive. Mr Noel Barber, who also wrote a book about the Hungarian uprising, has produced another lively "I was there" account, easy enough to read and reasonably informative, but inadequate for the serious student. It is only fair to add that it was clearly not intended for the serious student. Mr Moraes delves a good deal deeper, exposing lucidly and in detail the Chinese communist techniques of colonisation and the "reforms" that provoked the revolt of the martial Khambas against odds which they knew to be overwhelming.

The most counter-productive of these changes was the campaign against the Lamas, who were labelled "oppressors of the masses"; in fact, as Mr Moraes points out, the real aim was the destruction of the Buddhist religion, and the Tibetans saw through the Chinese slogans. A more effective, though long-term, weapon has been the swamping of Tibet by Chinese immigrants.

Both writers are severe in their condemnation of Mr Nehru, both for failing to speak up in defence of Tibet's autonomy and for his equivocal attitude towards Chinese aggression, both in 1950 and in 1959. Mr Barber accuses him of "hypocritically and falsely misrepresenting the entire Chinese-Tibet case"; Mr Moraes, who is Mr Nehru's biographer, is only slightly more restrained, and quotes with approval a remark by the former Praja Socialist leader, Mr Jayaprakash Narayan:

> It is true that we could not have prevented the Chinese from annexing Tibet. But we could have saved ourselves from being party to a wrong.

It is lamentable that neither book has an index, but Mr Barber's is well illustrated and has a useful chronology.

Peer's Daughters

Hons and Rebels

By Jessica Mitford.
Gollancz. 222 pages. 18s.

IT is all too easy to judge this book by its first third. That must be a delight to all admirers of Nancy Mitford's "Love in a Cold Climate" and "The Pursuit of Love," an autobiographical confirmation of so many of those fancies too wildly gay, surely, to be fact and yet too improbable to have been imagined. The chub fuddler is missing and where are dear Lord Merlin and darling Cedric? But most of the others are there. "Farve" is gloriously Uncle Matthew and "Muv" identifiably Aunt Sadie, "her hair strangely fluffy and her clothes strangely dowdy," with her seven children, six girls and one boy, and economising on the laundry bill by going without napkins (which recalls the economies on different kinds of paper made by Uncle Matthew). It was Jessica, aged nine, who told her dancing class the embroidered facts of life and scared them almost to death; it is Linda aged twelve in "The Pursuit" who plays this sweet prank.

So we have in this first section something of a "recap" by Jessica of Nancy's delights, and most enjoyable it is. These talented, wild and in some ways tragic girls were left to "Muv's" odd notions of education, feeding and medical care, with a succession of governesses, most of them promptly driven mad; Miss Bunting was the most successful for she taught shop lifting—"a little jiggery-pokery" round Oxford shops.

Jessica Mitford went off with Esmond Romilly to the Spanish Civil War, contributing as magnificent a quota of scandal as sister Unity did in her flight to Hitler. "Whenever I see the words 'Peer's Daughter' in a headline," Lady Redesdale once commented sadly, "I know it's going to be something about one of you children." From Spain, back to England and thence to America, with no clear purpose, no political convictions save the arrogant party line of the time, and with none too high a standard of common honesty. The reader now has to put up with portentous chapters that start "That spring the news from Europe was unrelievedly bad." Nothing seems to have happened since to modify the sharp blacks and whites of Miss Mitford's conception of the history of the late thirties. That is a boring achievement for such a lively mind.

It is interesting to speculate on the reasons why the Mitfords should have spent so much of themselves in girlhood—Unity, the admirer of Hitler; Diana married *en deuxième noces* to Sir Oswald Mosley; Deborah who was set on becoming a duchess and made it; Jessica with such warmth and yet taking so limited a view of the world through the political spectacles she first put on in the schoolroom. To these Nancy stands out as the glorious exception, a person in her own right and sharing her talents. The Redesdale coat of arms bore the self-assured motto: "God careth for us." It must have been a hard task.

Up the Apples

Up the Apples

A Dictionary of Rhyming Slang

By Julian Franklyn.
Routledge. 187 pages. 21s.

UP the apples to uncle and Bo-peep: or, to you and me, up the stairs (apples and pears) to bed (Uncle Ned) and sleep.

The example shows one rhyming-slang term in full and two in their truncated form, such shortening being a common feature of this sort of slang. Rhyming slang has, in Britain, always been predominantly Cockney: and it was partly Cockney in its origin, which dates from somewhere about 1830. In this book, Mr Julian Franklyn advances a new and largely convincing theory of its origin and early development; but perhaps he has not sufficiently allowed for the part played by the underworld throughout the history of this very odd branch of English, for certain rhyming terms are still being coined by crooks, and in the United States it is only the criminal world and its hangers-on who use it at all.

That rhyming slang is current in America will come as news to many. Part of it went to New York from England, but most of it from Australia (especially Sydney) to California during the latter half of the great gold rush and soon after. It had emigrated to Australia from England during the 1840s and 1850s, with a few additions later; now—indeed, since as early as 1890 or so—Australia has a rhyming slang of its own, and a few Australian terms are still being exported to America *via* (one surmises) the brilliant "con men" from the southern continent.

Before the first world war, British rhyming slang was confined to London, to such large provincial cities as Liverpool and Manchester, and to Dublin and perhaps Belfast. But that war and its successor did much to widen its distribution. Nowadays, it can be heard not only in the public houses, among transport men and construction men, and among true Cockneys in general, but elsewhere as well. For it is often used by people who are unaware that it is rhyming slang at all, as in "get down to *brass tacks*" (hard facts), or who, at best, are ignorant of the full term and its connotations, as in "Not on your *Nellie!*"—not on your *Nellie Duff,* not on your *puff,* not on your life.

Mr Franklyn has done a good job, both in the glossary and in the partly historical, partly analytical introduction, the list of meanings and the specimen passages. The result is as entertaining as instructive.

ERNEST BEVIN

VOLUME ONE
Trade Union Leader: 1881 - 1940

Sir Hughe Knatchbull-Hugessen offers portraits of selected members of the Knatchbull family, heads of which have represented Kent in the House of Commons since the time of James I. **Illustrated, 63s**

METHUEN

Good Companion

Literature and Western Man

By J. B. Priestley.

Heinemann. 522 pages. 42s.

MR PRIESTLEY has written a brisk guide to five hundred years of western literature. It is presumably intended for young people as the level of information is kept rudimentary: "John Keats was the youngest of these great romantic poets, but he was the first to die, in 1821 at the age of twenty-six." But it also engages more complex problems in a lucid and unpretentious manner.

Mr Priestley begins his survey with the dissemination of the printed book. He rightly argues that the notion of "modern" literature is inseparable from the fact of large-scale distribution. Although the work runs to nearly five hundred pages, Mr Priestley has reached the 1850s by page 200. This again represents a deliberate point of view. What we have here is a guide to contemporary literary consciousness and to its roots in the second half of the nineteenth century. In writing such a guide, Mr Priestley has done a valuable service. Younger readers have long had available to them adequate surveys of classic and Renaissance literary history. Mr Priestley has now furnished them with a sound introduction to the world of Galsworthy, H. G. Wells, Anatole France and Gorky.

Not surprisingly, Mr Priestley is best on those writers from whom he himself has drawn inspiration and whom he resembles in spirit. His "great tradition" would include Cervantes, Fielding, Manzoni and Dickens. He is excellent on the difference between Dickens and Thackeray: "Dickens possesses in full measure that fiercely creative will in which Thackeray, a big but slack and rather soft man, is deficient." He can illuminate in one perceptive flash the principal defect of Browning: "But his obscurity does not come from any great depth and subtlety of thought, but from technical whimsicalities and a rushing eagerness of temperament."

Elsewhere Mr Priestley's touch is less secure. His view of Stendhal as a grossly overrated novelist will find little acceptance and only a critic to whom German is altogether a foreign tongue could have lumped Rilke, Stefan George and Hofmannsthal together, declaring that "from the standpoint of world literature they are not great poets." And one can only wonder how Mr Priestley arrives at his conclusion that Jung's thought is "bolder and more subtle" than that of the classic Freudians.

But before so vast a canvas there is not much interest in quibbling at this or that detail. Mr Priestley roams over the entire compass of western literature with an easy gait. He communicates much of his own enjoyment of good books and refuses to be parochial. The slackness of his style is no doubt meant to make the going easier for the beginner. To someone just emerging into the immense world of personal literary adventure this book will be a heartening companion. May one hope that a future edition will include not only the little biographical notices of great writers but also a time-chart?

Decline From Radicalism

Robert Southey and His Age

By Geoffrey Carnall.

Oxford University Press. 245 pages. 30s.

SOUTHEY'S predecessor as poet laureate was the nonentity Pye, for whom he felt a justifiable contempt; but, ironically, the grandiose poetical effusions of the friend of Wordsworth and Coleridge are now scarcely more highly regarded than Pye's lamentable efforts: there can be few who read "The Curse of Kehama" or "Thalaba" in quest of pleasure. We remember Southey because Byron so brilliantly and cruelly immortalised him in "A Vision of Judgment," but who recalls that Southey himself wrote a poem of that title, which provoked the satire? Even the verses about the Battle of Blenheim and little Wilhelmine, which used to figure in every school anthology, have become derisory.

But if Southey's reputation as a poet is now abysmally low, his prose still commands respect. The "Life of Nelson" holds its place among nobly written English biographies; and recently the Clarendon Press published the "Journals" of his residence in Portugal and of his visit to France in 1838. These may have aroused sufficient interest in Southey's personality to warrant another publication from the same press, a study of the man against the political background of his age, which has for its sub-title "The Development of a Conservative Mind."

Southey was an active journalist, and in his correspondence too there is ample material for constructing a full and coherent picture of his political development. This Mr Carnall has done, tracing his progress —or decline—from the position of a Godwinian Radical and a Jacobin to that of an anti-reformist advocate of repression. The book is a sober and sympathetic account of how this rather nervous and easily discouraged man took fright and allied himself with the forces of reaction. Although he misread the signs of the times, there was plenty to scare him.

The trouble is that Southey, for all his personal kindliness and capacity for hard work, was not a man distinguished by much acuteness of judgment or humour or wit. He consequently makes a rather dull central figure for a book that undoubtedly does throw light on the political strains and stresses of that period of English history which literary critics know as the Romantic Age.

Writer and Reader

The Truest Poetry

By Laurence Lerner.

Hamish Hamilton. 231 pages. 18s.

A VAST deal of appreciation and evaluation of poetry and prose is nowadays undertaken even by sixth-formers and undergraduates; sometimes, unfortunately, with ulterior motives, since examiners have cottoned on to the importance of testing literary discrimination. Mr Lerner, who teaches at the Queen's University of Belfast, is not merely interested in how a specific poem works; he examines how literature itself works. He suggests what it may mean to the writer, as a mode of expression, and what it may mean to the reader, as enrichment of his experience. In order to pursue his investigations, Mr Lerner draws extensively on the theories of Collingwood, Dewey and Richards, and in illustration of his points he uses a splendidly variegated assembly of passages from Dickens and Empson and Penn Warren and Coleridge and Tennyson and dozens of others. His attitude is always alert and challenging, without being aggressive; and the number of interesting points he manages to raise within so small a compass suggests that the book might be rewarding material for a discussion group.

Mr Lerner pays due attention to the Romantic theory that poetry exists primarily for the sake of the poet himself, but he does not want it to grow too rarified and esoteric, "an aesthetic construct of great beauty addressed only to fellow initiates." Rather, he takes his stand on those older, but still vigorously championed, theories of literature which lay stress on its communicative power and connect it with other activities that widen our knowledge of the human condition.

Just how far and in what way and with what practical consequences the reading of a poem may affect us is the question at the very heart of the book, and it is unfortunate that one of the two poems which Mr Lerner selects as a sort of touchstone is Hopkins's "terrible sonnet" *I wake to feel the fell of dark, not day,* for in his interpretation of it he equates a sense of dereliction with the despair of disbelief. "Ten thousand difficulties do not make one doubt," said Newman; and in the emotional sphere it may be contended that repeated nights of anguish do not necessarily represent the loss of faith, but the loss of consolation, which is a very different thing.

It is only because a good many paragraphs of argument depend upon Mr Lerner's reading of the sonnet as a possible incitement to disbelief that the matter is worth remarking here. The texture of his book is close, which is a merit; and if it contains a good many contentious passages, they give the whole of the study a refreshingly lively and thought-provoking tang.

The Economic Consequences of the Size of Nations

Hommes de Lettres of the Third Republic

Pretexts

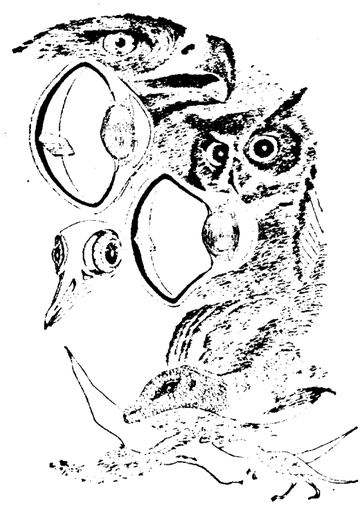
By André Gide.
Secker & Warburg. 352 pages. 35s.

Journal of a Man of Letters

By Paul Léautaud.
Chatto & Windus. 259 pages. 25s.

IT is a pleasant chance that brings these two books to publication at the same time, for they complement and mutually illuminate one another in a way which, for the English-speaking reader without special previous knowledge of the French literary scene of forty or fifty years ago, valuably dispels what would otherwise be a discouraging obscurity.

There is, of course, nothing obscure about Gide. Few French novelists of this century are better known to the British public, whether in translation or otherwise. As a critic, however—a critic of life and of letters—he has not hitherto "travelled"; and it is perhaps rather late for the "travelling" to begin. When he writes on Proust, on Stendhal, on Wilde, on Greek mythology, on the nature of literary influence—on enduring names and enduring topics—the lapse of thirty, forty or fifty-odd years is unimportant. And had he written, in the last decade or so of his life, reminiscences, for the benefit of a later generation, of Barrés, Maurras, Jammes, Gourmont, Huysman, Appollinaire, and the *Dadaistes*, he would no doubt have brought them vividly alive.



As things are, however, too many of the essays here reproduced require an editorial gloss longer than themselves. They give the effect of an overheard telephone conversation on an unfamiliar topic. The speaker, in this instance, is clearly intelligent, witty, serious, and, on the evidence of what one can hear, worth listening to; but as the other party to the conversation is only a name and quite inaudible, and the conversation itself concerns yet other almost entirely unknown individuals and almost entirely unfamiliar matters, the listener is left with very little to catch hold of.

With the very greatest art this may not matter. One can revel in *The Dunciad* without expert knowledge of the Augustan literary rat-race, though such knowledge must make appreciation exquisitely keener. But these notes, lectures, reviews and sketches are not, and do not pretend to be, great art. They display a critical faculty at once catholic in its appreciations and fastidious in its distinctions; a lively and far-ranging mind; a certain acerbity; a deep, and typically French, sense of the value and responsibility of literature. There they stop. Nothing of Gide's intimate self—the self revealed in "Si le grain ne meurt," in the "Journals," and in "Et nunc manet in te"—emerges here. A rather narrow public will find "Pretexts" fascinating; but does not a capacity to do so almost certainly presuppose the capacity to read it in its very lucid original French?

Paul Léautaud was an almost exact contemporary of Gide's, an occasional contributor to the *Nouvelle Revue Française* under Gide's editorship, and a frequenter, during the early years of the century, of the same literary circles. But while Gide went on, in the inter-war years, to fame and influence, Léautaud disappeared entirely from the public eye—to be disinterred in his eighties, a grubby and misanthropic hermit surrounded by stray dogs and cats, and to spend his last years as a much-appreciated radio eccentric. His "Journal" was begun in 1893 and continued until within a week of his death; this volume covers (in abridgment) the years 1898-1907.

It is an extraordinary record; the portrait of a most unendearing, indeed pathological, egotist who nevertheless is totally honest, with none of the usual egotist's self-pity, self-justification, wishful remembering and narcissistic self-admiration. The reader is confronted alternately with the subtlety of a Proust and the hilarious naïveté of a Pooter. One thinks of Pepys, of Boswell, of Havelock Ellis, and of Miss Pamela Hansford-Johnson's Unspeakable Skipton. It is undoubtedly Léautaud's fascinatingly unpleasant personality that is the prime attraction of his "Journal"; but it is also a vivid picture of the current literary scene and its characters. Names which, in Gide's essays, stand only for certain opinions, a certain style, an *œuvre*, here attach themselves to sharply thumbnail-sketched individuals.

Léautaud's translator, Mr Geoffrey Sainsbury, has pulled off the difficult feat of preserving an entirely believable and personal tone of voice. It is eminently the same voice as, some fifty years later, uttered Léautaud's last words, reported by Mr Alan Pryce-Jones in his Preface: "Maintenant, foutez-moi la paix."

The Seeing Eye

The Story of Eyes

By S. Sutton-Vane. Illustrated by Anthony Ravielli.
Phoenix House. 169 pages. 12s. 6d.

"I SEE." Everybody says it, yet no one stops to think that in two words he is proclaiming the most important connection in his system—that between eye and brain. This excellent small book about the asset of sight is a splendid corrective to careless talk, for "eyes alone are as useless without a brain as a telescope in a locked drawer with the key lost."

Mr Sutton-Vane is a layman who was one night struck, in the course of conversation, with the immensity of his ignorance about eyes. He set out to remedy it by means of the huge literature that exists on subjects ranging from embryology and optics to the new demands of the space-age. His hunt for information was so rewarding that he now passes on his discoveries, with the great advantage, for the ordinary reader, that he remembers what he did not know and also which commonplaces surprised him most.

On a subject that is largely technical, he has done well enough to keep at bay that bogy the professional critic—whether zoologist or ophthalmologist. (If one lunge is allowable, he ought to have said, on page 122, that he is describing the retina of the right eye; in the left, all is the other way about.) Yet he writes so readably that he holds the attention even of readers who may not in the ordinary course be interested in details about the emergence of animal life.

How do fish manage without eyelids? Why are your eyes brown and mine blue? Do birds judge distance? Why did Nero watch the games in his emerald? Has our baby got a squint? Do plants see? If you know the answers, this is not your book; if you want to know them, it is value for money. Its text is greatly helped by the illustrations, one of which is reproduced here; they are good artistically as well as technically. A footnote for hypochondriacs: this is not a book about eye diseases. It is about eyes in working order and its sensible recipe for those with complications is: "Go at once to a physician." Mr Sutton-Vane takes no chances; nor should his readers.

Amateur in Diplomacy

Lord Lothian (Philip Kerr) 1882-1904

By J. R. M. Butler.
Macmillan. 400 pages. 42s.

THIS is not strictly a biography, but a collection of essays on various aspects of one man's career. By avoiding the biographical form, Sir James Butler avoids the need to provide answers to some of the questions that must occur to his readers: such as why a man who contemplated becoming a Roman Catholic priest became an ardent Christian Scientist, or why one who had seen the innermost workings of British politics yet "never looked upon himself as a party man." The author says enough of Lothian's personality to make clear what an engaging and attractive character he had; to bring out also his quizzical, almost chameleonlike changes of line in conversation, and his readiness to discuss any and every idea.

Probably the most interesting and most important years of Philip Kerr's life were his four and a half years as private secretary to the prime minister, from 1916 to 1921. David Lloyd George enjoyed by-passing established channels, and notoriously ran a foreign policy of his own, with his own staff, which sometimes went against the aims of the diplomatic hierarchy on the other side of Downing Street. Of Kerr's part in this, which was large, Sir James can unfortunately tell us next to nothing; and informative chapters on *The Round Table* and the Rhodes Trust, though useful in their way, are no sort of substitute. After Lothian had succeeded to his cousin's marquessate in 1930 and served as Hoare's under-secretary at the India Office for an uneasy year in 1931-32, he became involved in Anglo-German relations; and the two chapters on his dealings with the Nazi leaders are much more valuable. They are buttressed by over thirty pages of contemporary documents, which do much to make plain both the barefaced disregard for truth of the Nazi chieftains, and the earnest willingness to arrive at a fair settlement that marked Lothian's phase as an appeaser.

The author is able to show that this phase was over before Lothian went to Washington as ambassador in 1939. Three concluding chapters display Lothian's intelligence, sobriety and warm human sympathies at work at last in a field worthy of his skills. Angry young men in England assumed at the time that Lothian, as a member of that amorphous coterie "the Cliveden set," would be preaching defeatism quietly in America; they were quite wrong. There is no evidence to suggest that Lothian wavered for a moment, when it came to the sticking point, about fighting Germany; and his great achievement was to convince the Americans that the British were fighting in an honest cause. The extraordinary crisis of 1940 called out an extraordinary effort from him—he secured fifty old but vital American destroyers, in exchange for bases in the West Indies; but the effort killed him.

Pre-James

Watch and Ward

By Henry James.
Hart-Davis. 238 pages. 16s.

THE Henry James industry must be running out of raw material. Otherwise it is difficult to understand why anyone should wish to publish a modern edition of "Watch and Ward." It is the master's first novel (1871) and he was later anxious to exclude it from the canon. Mr Leon Edel argues that the book may be compared to "Stephen Hero" and to "Jean Santeuil" in that it offers intimations of future greatness. But it is nearly impossible to sustain such a comparison. Both Joyce's early sketch for "The Portrait of the Artist" and Proust's preliminary essay in remembrance are in themselves of great quality. And they do cast a direct light on the later masterpieces. Neither is true of "Watch and Ward." It is a very bad novel and, with the exception of a few fortuitous touches, has little relation with anything in James's mature work.

Mr Edel rightly suggests that James was trying to do an American Balzac, but he fails to notice which novel by Balzac James most probably had in mind. It is "La Rabouilleuse," just about the nastiest of Balzac's fictions. Something of that nastiness passed into James's pale story. Mr Edel speaks of "peculiar sexuality" and invokes "Lolita" (a reference which may account for the decision to unearth "Watch and Ward"). The theme is plain enough: a bachelor rescues a young girl in melodramatic circumstances and decides to train for himself a future wife. After a number of interventions from without, Nora returns to her benefactor's bosom. What is disturbing is the elaborate manner in which James plays on the ambiguity of the relationship. "Are you, after all, related to me—my cousin, my brother?" asks the young lady. The older man only strokes her hair and evades the issue. Like Balzac, James seeks to communicate the subtle, hot-house eroticism that underlies the situation. The attempt leads him to an extraordinary passage on "a little precursory love-making." The young girl is seen as a flower whose petals might be "playfully forced apart."

Even these few words show how far removed the book is from James's responsible art. It is a mere piece of apprenticeship interesting, if at all, only in the light it throws on the distance James travelled between 1871 and the publication of "The American" in 1877. By not wanting "Watch and Ward" reprinted, James gave proof of sounder judgment than his modern editors.

Studies in the Industrial Revolution
edited by L. S. PRESSNELL
Essays presented to Professor T. S. Ashton F.B.A. by a distinguished group of economic historians. For the most part they throw new light on aspects of the industrial revolution in Britain from the early eighteenth to the mid-nineteenth century, but they also include an important study on the return to gold in 1925.

Poetry of the Netherlands in its European Context 1170-1930
THEODOOR WEEVERS
A stimulating introduction to the major achievements and characteristics of Dutch and Flemish poetry, which pays special attention to its contacts with, and (during certain periods) influence upon, other European literatures. The second part of the book consists of an illustrative selection of poems given both in original and translation. 35s *net*

UNIVERSITY OF LONDON
THE ATHLONE PRESS

Prince of Printers

Christopher Plantin

By Colin Clair.

Cassell. 317 pages. 63s.

To British bibliographers and book collectors Christopher Plantin is known as one of the finest, as well as (with the Elzevirs) the most prolific, of printers and publishers of the sixteenth century, with over 2,000 books bearing his own imprint and scores more that must also have come from his presses. To the typographer he is a household word both for the beauty of his books and of the many initials and cartouches cut by his artists, and for the sturdy type face which bears his name, but which was probably cut for him by Garamond in Paris or Granjon in the Netherlands. It is the type (noted for its blackness when unleaded owing to its generous "x-height") in which *The Economist* is printed, and which was the inspiration for the type designed by Mr Stanley Morison for *The Times* in 1932. But with perfect appropriateness Mr Colin Clair has decreed that this handsomely produced biography of "the prince of printers," as Plantin was called in his lifetime, should be printed in the type designed earlier by Garamond, like Plantin a Frenchman, who supplied so many of his types, both latin and exotics.

Plantin's personal story, however, has been curiously neglected in Britain, and this scholarly and readable biography now comes to fill the gap. Plantin the printer was a counter-reformation figure of the greatest interest, and his life vividly illustrates what it was like to be a publisher between the fires of the churches militant in the debated ground of the Low Countries. What the Inquisition left, Alva's Spanish soldiery usually destroyed. Plantin, however, survived everything—the Church, the Spanish fury, the revolt of the Netherlands, famine, plague and rapine—and left sons, daughters and sons-in-law to carry on the house which he founded, and which (with its wooden presses and its unexampled collection of early punches and matrices) can still be visited in Antwerp.

How he did so is an enthralling tale if, even when Mr Clair has told it, still something of a mystery. There is no doubt that Plantin printed heretical books before the arrival of Alva; in fact, there is no doubt that he was heretical himself, a follower successively of the mystic Henrik Niclaes, and his sect "the Family of Love," and later of Henrick Jansen Barrefelt, another kind of Anabaptist, both of whose writings Plantin printed. Yet his great patron, notably in the production of the famous polyglot bible, was Philip II of Spain; and when Alva crushed protestantism in the southern Netherlands in 1587, Plantin both became the licenser of all other printers, and himself printed the Index of prohibited books. He got into, and got out of, trouble with the Inquisition more than

Vincit diem pater is, Plantine, tuosque labores
Aeternum aeternum fama loquetur anus.
Nec laudare opus Invidia tu tenderis at tu
Illudres tantum tundat at ille vovs.

once; the whole chapter of his relations with religious intolerance strangely suggests a modern communist inadvertently running into bouts of deviationism.

For this reason Plantin has been described as a trimmer: a man who, to keep his big business going (he had at the peak of his fortunes 21 presses and 160 employees, an unheard-of number) played ball with whoever was in authority. But such an interpretation is inconsistent with the high regard in which Plantin was held by the renaissance scholars with whom he worked—not just as a printer or publisher (though he was all that and a bookseller and a haberdasher as well), but also as one who gave erudition to the world through the new medium of printing. Plantin, in fact, innately believed that he could be both a loyal member of the Church and a mystic; like most mystics, this made him tolerant if not worse—unconsciously an indifferentist. It is clear that he drew his great power of objectivity, his passionless passion to produce and, through production, to worship, from his mysticism rather than from the dogmas which caused men around him to be slain, cities razed and economies destroyed. He was in spirit closest to the artists of the time. To one of them—Rubens—we owe a portrait of this versatile renaissance man: craftsman, artist, businessman, political adept and philosopher.

Close Run

Waterloo

By John Naylor.

Batsford. 208 pages. 21s.

On such a well worn theme as the battle of Waterloo, one demands clarity rather than originality from an author. Modestly, Mr Naylor admits that his book has negligible claims to scholarship and none to original research, and he openly acknowledges his debt to Major-General Fuller's brilliant analysis of the campaign. His target then must be clarity. He clips

the bull, successfully combining retrospective comment with contemporary accounts of what it was like to fight in the smoke and roar of that day in June. Mr Naylor emphasises the bad and wrong decisions made by Napoleon, Ney, Wellington and Blucher. Perhaps a shade too strongly; it is almost as if in his anxiety to emphasise the perfectly rational and correct interpretation that Waterloo was Napoleon's failure rather than Wellington's victory, Mr Naylor momentarily loses sight of the fact that Waterloo was no different from most other battles in being a compound of errors. But this is excusable, for few errors have been quite so decisive. The desire to show what went wrong may also explain why on occasions the analysis of the important manœuvres seems a little repetitive.

The book is well illustrated, as were its predecessors in this "Battle Series," and it is pleasant to find within the compass of two hundred pages a full and careful study of the campaign and to be reminded how close a run thing it was. It has another incidental advantage: it reminds one how well some of Wellington's subordinates could write and may send the reader scurrying to find a copy, say, of Mercer's journals.

The Kara Sea

Siberian Arctic: *The Story of the Siberian Company*

By Jonas Lied.

Methuen. 217 pages. 30s.

In the year 1910 Mr Alfred Derry of Derry and Toms was obsessed with what seemed to him, but to few others, an idea of tremendous commercial promise. Far from High Street, Kensington, lay the Kara Sea, to the north of Siberia and east of Novaya Zemlya, providing the link between the North Atlantic and the great rivers Ob and Yenisey, whose upper reaches traversed the rich, fertile, but then quite undeveloped Siberian plain. What an opportunity to bring food to Europe, manufactures to Siberia. It was the Hudson Bay Company over again, in some ways even better. Once this idea was mentioned to Mr Jonas Lied, a young Norwegian of great energy, there was no holding him, and the Siberian Company was born. Initial failure was followed by growing success, until, in 1918, Lenin put an end to it just when the prospects seemed really dazzling. Mr Lied might at once have directed his energy elsewhere, but, apart from an understandable unwillingness to abandon everything, he was also by now a Russian citizen. Dark years followed, ending in release and a new career for him, but no such happy outcome for the company.

In most of this the author was directly involved, and it makes good reading. There follow some chapters on what has happened to the Kara Sea route in Soviet times. To some readers, this may perhaps be the most interesting part; not only for the facts (which are correct, but for some misleading statements about the war years), but also for the attitude of an imaginative and adventurous entrepreneur towards large scale state enterprise. The route has a future, as Mr Lied says—between 50 and 100 ships use it each summer now—but whether that future lies precisely in the directions he suggests is not so certain.

Dedicated to Power

Doctor Goebbels

By Roger Manvell and Heinrich Fraenkel.

Heinemann. 342 pages. 30s.

Influenced by devout Catholic parents and a Rhineland upbringing, Joseph Goebbels toyed at one time with the idea of becoming a priest. One of his many landladies, a well-to-do political patroness, said he reminded her of Savonarola, "so ascetic, so dedicated." But that was when, at the age of twenty-eight, he had just been appointed Gauleiter of Berlin and was already resolutely launched on his adventurous career as showman-in-chief for Hitler, the Nazi party, and the Third Reich. Hitler had given the Berlin appointment much thought. He chose Goebbels because, he said, "he had the two attributes without which no one could master the conditions in Berlin: intelligence and the gift of oratory." Did Hitler ever believe in Goebbels's sincerity?

It has been remarked that it was chiefly Goebbels who won the capital for the Nazi movement. He knew clearly how he intended to set about it: "to go for the street . . . our only road to political power." So he confided in a diary not meant for publication. Wit and cunning, stagecraft and guts, were his special personal contribution to the campaign. It is characteristic of the authors' thoroughness that they have consulted contemporary posters and handbills. In reply to one Berlin newspaper's charge that the Nazis were bandits, Goebbels assumed the title of *Ober-Bandit* in his next street proclamation. With his superb voice and shrewd showmanship, the lame little Gauleiter could fill the Sportpalast whenever he wanted to, and charm the huge audience out of their senses. He delighted in doing so. Just before it was his turn to speak, he would conspicuously change out of his ordinary jacket into one of black alpaca. He would weigh himself after a particularly strenuous performance, and claim he was two or three pounds lighter as a result.

The authors have obviously gone to immense trouble in piecing together the facts of Goebbels's life and death. They have consulted all the major surviving eyewitnesses, and probably all the documents (some may be in Russia). They have assembled some interesting photographs. And they have identified and discarded much legend. It is a dramatic, terrible and mystifying tale of a highly gifted man in quest of recognition and power. They tell it skilfully, and with dignity.

Books and Friends

The Truth about a Publisher

By Stanley Unwin.
Allen and Unwin. 455 pages. 25s.

As raw material for autobiography, the dappled memories of youth are better stuff than the crowded engagement-books of middle age. One has ruthlessly to prune the latter, or they clog the narrative. Sir Stanley Unwin, in spite of years of experience with mountains of manuscript, has not been ruthless enough. Therefore his account of the years before he became "an adult free man," which were lean years slaving for a shipbroker and for his parsimonious uncle T. Fisher Unwin, is the best part of his book.

The rest is jaunty, and overflows with zest and acumen, but is more of a personal addendum to his "The Truth about Publishing" than a portrait of his times and friends. Having bought a firm of his own and saved it from shipwreck in the first war, he was in the swim of exciting liberal-to-left political and literary thought. The names of thoughtful, sociable and often delightful people fill his pages, but are seldom given human dimensions. Graham Wallas and Gilbert Murray, Bernard Shaw and Bertrand Russell, Arthur Waley, Thomas Masaryk, Rabinadrath Tagore all pass by, but are noted rather than described. Only readers who knew or know them will get an image out of such phrases as Sir Stanley's bare "a fascinating person to talk to" (Beatrice Webb); it is not possible to share his satisfaction at his "courage to publish" a book of which he says only that it unmasked "certain irregularities."

The great exception to this stricture is his self-portrait. It is that of a highly contented man living at grips with the world, envying no one, and forever stretching himself not only in mind, but also in body and soul. He does battle for cause after cause. Railway companies are reprimanded, Lord Curzon put in his place; British book sales are boosted abroad, New Zealand mountain passes tramped at seventy with so much equipment that "constant falling was exhausting; nevertheless it was huge fun." No wrong that he can put right is left untackled; seldom, if ever, is he sick at heart. Few men have so happy a record of militancy, but then few are so confident that the breastplate of righteousness is a good fit.

Twenty Years Before

The Mind of an Assassin

By Isaac Don Levine.
Weidenfeld and Nicolson. 253 pages. 21s.

Later this year the Mexican prison authorities are due to release a middle-aged Spaniard, calling himself Jaques Mornard, who will then have completed a twenty-year sentence for a political killing on the outskirts of Mexico City on August 20, 1940. The fate of Trotsky's murderer, when he sets foot in the outside world again, is highly doubtful. He was refused normal parole (although an exemplary prisoner) in 1953. This year the Mexican police are expected to charge him with illegal entry (he used a Canadian passport in the improbable name of Frank Jacson), which should mean a further two-year sentence. After that, no one knows.

Through the years Jacques Mornard (or, rightly, Ramon Mercader) has held his tongue, not only about himself but also about the organisation that sent him into Mexico to contrive Trotsky's death. Mr Levine, after studying Mexican psychiatric reports, details produced by Soviet defectors, and new material he helped to dig up himself in Spain, has now produced some, at least, of the answers. His account of Mercader's life is consistent and coherent, with a few gaps, and the influence of the mother is suitably emphasised. This incredible woman, Caridad Mercader, a Cuban who fought in the Spanish war, visited Mexico herself to set the stage, followed her MVD paramour to a disillusioning stay in Moscow and now lives in seclusion in Paris, is by far the more interesting character. We do not give enough attention to regicides' parents.

At the end, Mr Levine still seems slightly baffled about the inner mind of the assassin, and is rather given to such banalities as: "Beneath the mask of the prisoner in Mexico lurks the Kremlin's happy robot of the future." The story of the plotting and of Trotsky's last days makes a highly readable police dossier. But is Mercader simply a zombie? He has kept silent chiefly to protect his mother, if not perhaps to steer himself to any small felicity in a world that can hold little for him. (After all is Mr Khrushchev going to greet one of Stalin's thugs with open arms? The Trotsky affair is a very sensitive one for him.) We may still have to wait some time to see exactly what Mercader's welcome will be.

A History of Sanitation

Clean and Decent

By Lawrence Wright.
Routledge. 294 pages. 30s.

Popular essays upon domestic sanitation are a more frequent publishing venture than the casual reader might imagine; Mr Wright acknowledges four in England since 1939. His own, a potted social history of the bathroom and water closet, arose almost by accident. Having agreed to organise and design an exhibit for a recent Building Exhibition illustrating "The History of the Bathroom," he found the necessary research acquiring a certain fascination of its own. A publisher suggested that the material might make a book; this judgment was strongly supported by

> the several journalists, amateur and professional, who saw the Olympia exhibit and its descriptive booklet, and had all—by coincidence—been just about to write this very book themselves. They only asked for the free loan of my notes, library lists, books, drawings and photographs. I hope that my refusals were gracious.

Mr Wright's own approach is a shade more technical than his would-be borrowers' might have been (he is an architectural painter with some experience of writing for architectural magazines). He is more interested in specific detail than in broad generalisations about shifting social habits; the one, in any case, so often tends to puncture the other. It is true enough, for example, that after the break-up of the Roman Empire "the taps were being turned off all over Europe; they would not be turned on again for a thousand years." But Mr Wright finds that the evidence is divided on the attitude of the Early Church towards sanitation: one can quote prohibitions of bathing, yet some of the monasteries, for example, anticipated the public health campaigns of today in their placing of the rere-dorter and laver. The public baths of mediæval times certainly disappeared, to be reintroduced as a novelty in the seventeenth century; yet the picture of Merrie England declining into dirty ways as the towns grew does not hold too much water, if that is the right phrase. The history of sanitation, certainly, displays no orderly progress; inventions arrived long before they made any impression on social attitudes and habits, and the attitudes, in particular towards bathing, fluctuated wildly and widely in comparatively short periods.

Mr Wright's discussion is easy, sophisticated and amused without being arch; but for many readers the main attraction of the book will lie in its illustrations of the plumber's achievements over the centuries. These achievements were sometimes enormities in every sense of the word; but others, in detail equally comic to our eyes, may make the modern bather wonder why he is so simply and crudely served in comparison with his grandfather. The shower (let alone that deeply un-English contrivance, the bidet) has now become a rarity; the washdown water closet, some 360 years after Sir John Harington's Ajax, would be reasonably efficient if it had a 3-gallon flush against the 2-gallon limit that most Water Boards in practice specify, but generally remains resounding; the standard bath seems if anything to get smaller, but most taps remain located for humans with prehensile feet. The Englishman's ideas about whether to take a bath, why, and what to take it in, as Mr Wright points out, have differed sharply in the first and second halves of both the eighteenth and the nineteenth centuries. It might be a good thing if, as he thinks possible, they do so again in this one.

A Galway Entertainment

The Anger of Achilles

Homer's Iliad translated by Robert Graves.
Cassell. 391 pages. 30s.

Here is another of Mr Graves's personal classics. In his introduction he sets out his views on the origin of the Homeric poems, stating them as facts, without argument. The Iliad was based on a prose story, whose prime purpose was entertainment: it (and the Odyssey, to which we may hope he will now turn his attention) "deserve to be rescued from the classroom curse which has lain heavily upon them throughout the past twenty-six centuries, and become entertainment once more; which is what I have attempted here." And, of course, Mr Graves has succeeded brilliantly in doing exactly what he has set out to do. It is a rapid, rattling, exciting tale, written in an admirable prose; the run of the battle scenes have probably never been better done; the savagery of the story is brought out to the full; but . . . but . . . at the risk of being written down a schoolroom pedant, one must record that something is missing.

First of all there are the many passages which Mr Graves admits to be poetical. In the original they tie in without break with the narrative portion; but not so in Mr Graves's version. He follows what (he tells us) is the example of the story-tellers of Western Ireland, who recite in prose but, when the spirit moves them, suddenly break into verse. So does Mr Graves, but, from a master, what odd verse: short lines, abrupt, rather dull, maybe what they sing in Galway, but most unlike Homer. Second, and more serious, Mr Graves deliberately distorts the translation whenever he can in the direction of the prosaic and the ludicrous. Take one example. Here is Hawtrey's translation of two famous lines:

> They long since in Earth's soft arms were reposing, There, in their own dear land, their Fatherland, Lacedaemon.

And here is Mr Graves's more workmanlike version:—

> The truth was that both her brothers were long since dead and buried in their native country.

How is the Greekless innocent to guess that Hawtrey's is practically a literal translation and that Mr Graves's is not?

All the nobility and most of the poetry have gone in this translation; and quite right too, Mr Graves would say, since that is an interpolation by Homer or the Homeridae. Very good: as an entertainment it is unbeatable; Mr Graves has put *Homer's Stories Simply Told* out of business; but, as Bentley said of Pope, "You must not call it Homer."

SOVIET SURVEY

has been called the most intelligent critical review of the long-range political, cultural, and ideological trends in the Soviet orbit. This may be an exaggeration. Readers of *The Economist* are invited to find out for themselves: sample copies are free on request, the yearly subscription is £1 (83), but those who answer this advertisement will be sent the current number in addition to the year's subscription. This current issue (120 pages) on Russia and the future of the Left will, if we are not very much mistaken, be the subject of editorial comment in many of the sixty countries in which our subscribers are located. We cover so many subjects that you may not find every single article of interest, but we are virtually certain that you will find in each number several contributions that are both eminently readable and important. Such is, for instance, our forthcoming series of Western economists' travelogues dealing with present conditions and current economic thought in the Soviet Union.

HAMISH HAMILTON

Clothes-wearing Man

The Dandy

By Ellen Moers.
Secker and Warburg. 372 pages. 36s.

THIS delightful book traces the history of the dandy from his Regency origin to his last decline at the end of the nineteenth century. It needed to be written: the concept of the dandy, to the ordinary reader of today, is a vague and undefined one to which different writers attach different meanings; but disentangle its lines of development—interacting but distinct—in England and France, and the pattern shows up with surprising clarity (given its essentially secondary nature) in the literature of the time.

The original dandy is a Regency product, and almost the personal creation of one man of repulsive genius, Beau Brummell, who created a persona which he managed to impose, without any advantages of birth or position, on the most exclusive of societies. The dandy is built round his clothes and his manners: perfectly dressed, unostentatious, reserved, self-loving, the master of *ton*, despising all values but those of a narrow and superficial society. It is not surprising that, when George IV died and the Reform Act broke down the dominance of the exclusives, there was a strong reaction against the more repulsive values with which the concept of the dandy was associated; the extraordinary thing is that so much of it, greatly changed, survived as something to be hated or imitated. Partly, no doubt, its survival was due to the mere strength of the reaction, which ensured that it should not pass into indifference: to us, the Regency means a period of graceful architecture and decoration; a hundred years ago it meant (with equal truth) a period of profound corruption in public life and high society.

Partly, moreover, dandyism owed its survival to the interactions between England and France; the French tradition, which started with the *anglomanie* of the Restoration and advanced, intellectualised out of all recognition, through Barbey d'Aurevilly and Baudelaire, was different from the English tradition both in kind and in phase.

Mrs Moers writes with great charm and skill. After 1830 the story is mainly literary, but clothes remain essential and she gives them their proper place. She ends with an epilogue on Max Beerbohm, the last of the dandies, who went back to "the oldest form of the tradition, the dandyism of pose and poise and a hedge against the world." One regrets only that, by confining herself to England and France, she excludes Lermontov, the noblest example, both in his life and in his great novel, of the tragic inner conflict between dandyism and feeling.

A Victorian Bombinator

The Dust of Combat: *A Life of Charles Kingsley*

By R. B. Martin.
Faber. 308 pages. 25s.

CHARLES KINGSLEY made a great deal of stir in his day. He did well at Cambridge, though not quite well enough to secure a fellowship; he took orders, and made a sensation as a young man by associating with Chartists. He adopted their ideas with enthusiasm rather than understanding, and was prominent for a time among the Christian Socialists who gathered round the great F. D. Maurice; but his anger at the iniquities of the early Victorian social system evaporated as he grew older, and he died a respected country parson, a royal favourite and a canon of Westminster. He was an earnest amateur scientist, collecting botanical specimens and wielding a geologist's hammer, without leaving any mark on botany or geology. He mastered a bad stammer enough to become an inspiring lecturer; Lord Palmerston made him regius professor of history at Cambridge, where undergraduates crowded his lectures and dons disputed whether he knew little or nothing of his subject. The queen and the prince consort thought highly of his sermons, for he was a strong protestant; no one else thought him a theologian. He wrote a savage anti-papist novel that has survived as a boys' adventure story—"Westward Ho!" He once said of himself, "I can write better poetry than any Englishman living"; twelve lines of his are in the "Oxford Book of English Verse." Indeed, his principal literary achievement was to provoke Newman into writing the "Apologia."

Kingsley had the misfortune, in short, to try to live in the intellectual stratosphere of a century ago without the necessary intellectual equipment: energy, kindliness and zeal alone do not make a thinker. The famous quarrel with Newman is well handled by his latest biographer, Mr R. B. Martin, who has used the extensive collection of Kingsley papers at Princeton, where he teaches English. He has not always been lucky in the aspects of English life he has chosen to discuss; in the spring of 1848, for instance, when London was filled with troops and marines, he says that "The merchant marines, however, were to be kept under close watch by the Thames police, for they were suspected of sympathy with the Chartists." But he has captured something of the flavour of the Kingsley household, which was joyous and lively; and he has at least appreciated two elements in Kingsley for which the canon would have been glad to be remembered: vigour and masculinity. A superb portrait photograph is the best thing in the book.

Bushmen Again

Kalahari

By Jens Bjerre.
Michael Joseph. 227 pages. 30s.

THERE is getting to be quite a library of descriptive books about the Bushmen of South-West Africa. This latest addition from Denmark is often interesting and sympathetic but is marred, unfortunately, by the author's evident wish to follow the example of Mr Thor Heyerdahl in combining "popular prehistory" with "curious travel." For this Mr Bjerre does not have the necessary equipment. He splashes around in the Pluvials without coming to much harm (except to give his otherwise lively book a lamentably dull beginning). Yet he should never have allowed the round assertion—under a useful photograph of the celebrated White Lady of the Brandberg—that the lady was a "4,000 year-old Cretan princess." The text does a little better than this by adding a cautious hint that the lady may possibly represent a fairly recent African; but a hint is not really good enough.

More serious is Mr Bjerre's evident lack of any serious knowledge of Iron Age prehistory in southern Africa. It is rather unforgivable, at this time of day, to throw off a reference to Monomotapa as being a country mentioned by Joao Baros [*sic*] as having "flourished in this part of the world between the ninth and fourteenth centuries." Even Joao de Barros, though writing from far away, knew that Monomotapa was situated in the plateau of what is now Rhodesia and not in the Kalahari.

But when Mr Bjerre gets down to describing his own travels he becomes a lively and intelligent observer. His writing is vivid and effective. He saw a good deal of Kalahari Bushmen and illustrates his book with excellent photographs in monochrome and some not-so-good photographs in colour.

Three in One

Emma Hamilton and Sir William

By Oliver Warner.
Chatto & Windus. 223 pages. 25s.

"THREE joined in one" was Emma's flippant adaptation of the motto of the Order of the Bath, with which both her husband and lover were decorated. Even the readers of the Sunday newspapers are familiar with this celebrated *ménage à trois*, but the first thing to be said about this book is that Nelson's Emma only occupies a quarter of it. The second thing to be thankful for is that justice is done to Sir William, who, far from being a senile cuckold, was a most intelligent and cultivated person. As the leading connoisseur of the day, he had an enormous influence on the taste of this country. He made the reputation of Pompeii; he inspired Wedgwood's Etruscan ware; and his collection (which included the Portland Vase) formed

the basis of the department of classical antiquities at the British Museum.

He married Emma (after living with her for five years) with his eyes open, fully realising that having acquired "a piece of modernity" he must soon be "superannuated." Casanova's comment on meeting the pair was typical: "It is always a mistake to marry, but when a man's physical and mental forces are declining, it is a calamity." But, as Mr Warner says, what Sir William could not have foreseen was how much he would admire the man who supplanted him.

Although we are grateful for this sympathetic treatment of a man whose reputation has been overshadowed by the flamboyancy of others, it is by no means certain that the same treatment should be extended to Emma. Mr Warner takes the line that hers were the "faults of circumstance, not heart." But even he is forced to admit in a postscript that her treatment of Lady Nelson was heartless to a degree, and by skating over the disgusting histrionics of her association with Nelson he leads the reader to think better of her than she deserves. But much must be forgiven a girl who was seduced by a naval officer at the age of 16, and passed from hand to hand until Greville unloaded her (aged 20) on to his uncle (aged 62). To have been the most radiant and admired young woman in society and then to die of drink and dropsy in poverty abroad is surely as tragic a fate as befell anyone. It is well that three such extraordinary persons should have found so tactful a biographer as Mr Warner, who has portrayed them in an admirably composed triptych.

More Organisation Men

Life in the "Crystal Palace"

By Alan Harrington.
Cape. 223 pages. 18s.

Men at the Top

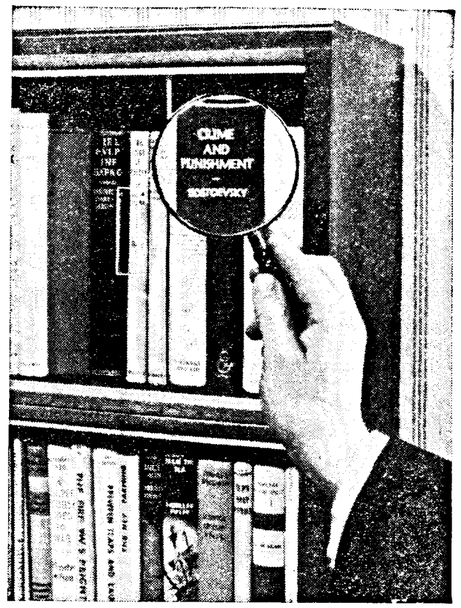
By Osborn Elliott.
Weidenfeld and Nicolson. 256 pages. 18s.

HERE are two more views of the American corporative state: one a friendly study of the present-day tycoons by an experienced journalist; the other a shriek of protest from a novelist and former public relations man, who sees people being seduced and anæsthetised by the boring paradise of the welfare company. Mr Harrington is concerned with the men and women who dare not smash their ways out of the "Crystal Palace" because of the pension at the end of thirty years of service; to him the company's very regard for human dignity is somehow dehumanising, although he has had enough experience of the jungle outside to appreciate kindliness. Mr Harrington's complaint is not only against the gentle, all-pervasive inefficient paternalism of the "Crystal Palace"; he also objects to the way Americans load themselves down with insurance policies, instalment payments, mortgages, families—all prison bars against adventure and joy when people are still young enough to relish them.

At one corner these books overlap, when Mr Elliott's men at the top stop to worry about the monstrous size of corporations, the over-centralisation and the tendency of Americans today to imagine that the affluent society will continue to pour forth its rewards without any one taking any particular trouble. But in the main his book is concerned with those who get up at five, or even four, for the sheer joy of being able to spend a few more hours thinking about their business before their families are awake, who work not for money (the tax collector takes too much) but for prestige and excitement. For them life has become more complicated and more challenging as the size of corporations has grown and responsibilities to the community have come to be accepted as part of the executive's job. Mr Elliott's readable survey contains a wealth of apt anecdotes and interesting chapters on business and politics, on business schools and on the recruitment of executives, but Mr Harrington's philosophical problems are outside his brief.

OTHER SPRING BOOKS

WILLIAM PENN. By Catherine Owens Peare. *Dobson.* 448 pages. 42s.



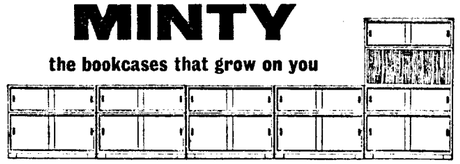
This is a sober and scholarly biography of a man who, as the American author says, "speaks to the condition of our times." Penn is not only an important figure in the history of the Society of Friends, both here and in America, but also the man who put into currency those ideas of European federation and religious toleration that are pertinent today. He was an exceptional Quaker because his birth and legal training gave him a position at court that enabled him to alleviate the sufferings of many of his humbler brethren. He was their spokesman in courts of law, in missionary journeys and innumerable tracts. Even if his city of Philadelphia did not live up to the name he gave it, the administrative skill and large vision with which he founded Pennsylvania deserve our admiration. This book, with its ample quotations and reliable narrative, portrays a man of great intelligence and good will.

A ROUND OF GOLF WITH TOMMY ARMOUR. By Tommy Armour. *Hodder and Stoughton.* 143 pages. 15s.

This belongs to the conversational rather than the ultra-scientific school of golfing books, with a certain charm and shrewdness but not so concentrated (as some are) that it is in any danger of driving the weekend golfer out of his mind with advice. It is all good basic stuff of the kind that every player is certain he knows already, is so prone to let slip from his mind and is always glad to rediscover from a master's writings and the drawing of a clever artist.

A REGIONAL HISTORY OF THE RAILWAYS OF GREAT BRITAIN. Vol. I, The West Country. By David St John Thomas. *Phoenix House.* 209 pages. 30s.

This is the first of a series of histories on the railway system of Britain region by region. For all lovers of railways, including those who lament the appearance of Swindon's last steam locomotive recently, it is a book that can be warmly recommended. It steers an attractive course between the standard histories of the Great Western and Southern railways and the popular kind of railway book, where the facts and dates are unreliable, combining attention to scholarship with an easy flow of narrative. The other regions will be lucky if they are as well served as the West Country has been by Mr St John Thomas.



The Case of the Tidy Corpse

An odd corpse or two around the house is one thing; but when your better half finds herself knee deep in crime she is liable to take a sudden passionate interest in the vegetable garden. If you find she has prepared an onion bed 6 feet long by 2 feet wide and 6 feet deep, it's time to stand well back from high cliffs, or you may well end up with policemen drawing chalk lines round the body—*your* body.

You have been warned. Don't risk it. *Today* (for it may well be later than you think) buy a Minty bookcase . . . and put your murderers where they ought to be—'Inside'—condemned to stay neat, tidy and dust-free for life. Your wife will admire the elegant prison, which can expand to take in the entire criminal fraternity. What's more, she'll plant onions in the onion bed.

Minty bookcases are *sectional* and may be started from as little as £10.1.0—on deferred terms if you prefer. Only at the Minty Centres shown below can you see and buy Minty bookcases (and furniture). These Centres are so placed that Minty furniture is within reasonably easy reach of most people. If, however, for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post ordering. Write to Dept. E.7, Minty Ltd., 44-45 High Street, Oxford.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Shaken by Rumbles

WASHINGTON, DC

NEARLY 7,000 well-meaning Americans have been filling Washington this week with the conviction that, while youth may be a stuff that will not endure, its problems are certain to. They are delegates to a White House conference called by President Eisenhower to help young people "to realise their full potential for a creative life in freedom and dignity." The conference, having been told by Mr Eisenhower on Sunday of his unshakable faith in the wholesomeness of most young Americans, is spending the rest of the week discussing a collection of papers written by distinguished teachers, sociologists and psychologists. Not all of them share the President's optimism. The subject at the back of everybody's mind—and the one thing Mr Eisenhower specifically mentioned in his opening address—was the frightening increase in the number of crimes committed by adolescents.

In 1958, the last year for which figures are available, 600,000 children aged between ten and seventeen were hauled before the juvenile courts. The figure has been rising steadily for a decade and is now nearly three times as big as it was in 1948, although the number of children in this age group has increased by little more than a third. One offence out of every eight can now be laid at a juvenile's door, compared with one out of twenty-four a decade ago. The statistician, gulping slightly, gets an even better idea of the problem when he realises that roughly one boy out of every five (the male of the species is considerably more troublesome than the female, at any rate in America) is involved in a court case at least once during his adolescence. But it is also estimated that for every child who winds up eventually in a juvenile court two others are picked up by the police for misbehaviour without actually being arrested. It is at this point that the statistician locks his door and puts his sons out of the window.

These figures suggest that the "rumbles" or gang fights which periodically stir public alarm—four children were killed in New York within a fortnight at the end of last summer—are only the visible tip of the iceberg; the vastly greater bulk of juvenile delinquency lies below the level of the headlines. It is true that some of the offences for which young people are arrested today would probably have been punished by parents, or dismissed as pranks, a generation ago. In addition, traffic offences are involved in a third of all court cases and breaking the less important traffic rules is almost an outdoor sport in America. But arrests of juveniles for assault have multiplied sevenfold in the last decade, and those for theft eightfold. There are signs that people whose job it is to worry about juvenile delinquency are shaken by these developments, and are beginning humbly to think anew about the whole problem.

One of the first beliefs to be abandoned is the fond idea that all the trouble has a single root. In particular, the theory that most delinquents need a psychiatrist is losing ground. Among 500 young troublemakers studied in Cambridge, Massachusetts, only seven per cent had psychopathic disorders; although individual killers are often unbalanced, the children who murder and commit other crimes in gangs are usually not. The same fate seems to be overtaking the belief that this is principally a problem bred of the slums, and of poverty. The grim statistics roll in from the respectable suburbs and the small towns as well, and a survey of three middle-class counties in New Jersey has shown much the same percentage increase as in the country as a whole.

If any single diagnosis is gaining favour it is that the growth in delinquency has coincided with the simultaneous decline of all three institutions—school, church and home—which used to imbue the young with a sense of responsibility to other people. Nothing is so dismaying about the average adolescent criminal as the absence of any real motive for the things he does and his almost total lack of shame. The "permissive" theory of upbringing which was so popular until recently weakened the ability of either parents or teachers to impose standards of decent conduct upon him at the very time when America's prosperity was making him more independent. This interpretation of what has happened has bred the horrible jargon of "sociopathic disorder." But it is also producing a welcome revival of the idea that, if the problem is to be solved, somebody will have to impose some restraints upon the young. One authority in New York, for instance, has coined the happy phrase that it is necessary to "modify their self-centredness."

A SENATE subcommittee led by Senator Hennings of Missouri, which has recently been investigating the subject, has found evidence which seems to support this idea. The very structure of the juvenile gangs, with its emphasis on authority, perhaps suggests what the members feel that they lack. In some cities social workers who attach themselves to such groups have discovered that they are often looked to for advice and guidance. In New York alone it is believed that these workers have prevented over four hundred "rumbles" and 192 possible killings either by calming the gangs down or by calling in the police before the fight began. And yet even in New York, probably the city which is best organised against delinquency, there are fifty or sixty bands of Stompers, Lovers, Royal Dukes and so on with whom social workers have no contact. This is not altogether surprising; these brave and devoted men are paid less than most unskilled factory workers.

Senator Hennings's committee has unearthed some other facts which will be useful in finding the right remedies. There is a close relation between the gangs and the problem of narcotics. In one community up to three-quarters of the members of gangs were found to take drugs; and it is significant that New York and Los Angeles—the two cities in opposite corners of America where so much violence and unpleasantness seem to flourish—are the places with the worst records of addiction among adolescents. It is also plain from the committee's inquiries that most juvenile courts, which were set up at the beginning of the century with the noble aim of giving special attention to young offenders, are hopelessly overworked and understaffed.

So far, most Americans have been circling gingerly around the problem of delinquency as if it were an infernal device discovered ticking one morning on the front lawn. One of the next questions to be answered is the extent to which the federal government has

a responsibility for taking it to pieces. Most of the legislation hitherto passed by Congress (except for the Acts prescribing how youths who break federal laws should be treated) consists of fairly minor provisions regulating the sale of drugs, weapons and obscene literature. A Bill to provide a modest allocation of $5 million a year for research into methods of controlling juvenile delinquency and for training staff has been passed by the Senate, but it is stuck in the House of Representatives.

Those who say that Washington should proceed cautiously are entitled to point out that, under America's federal system of government, the chief responsibility for dealing with delinquents is bound to remain with the states and local authorities. But Senator Hennings's committee thinks that no level of government has yet shown itself equal to the task. Very few communities take any action until they find a gang murder reported in their newspapers. One idea that the Senator's staff is mulling over is that an "ideal" anti-delinquency programme should be set up in the capital, of which Congress has direct charge. From the lessons taught by this model, other communities could learn ; and if the necessary measures turned out to be beyond their means, Congress might then be willing to reach into its pocket to help them.

Symington Smoked Out

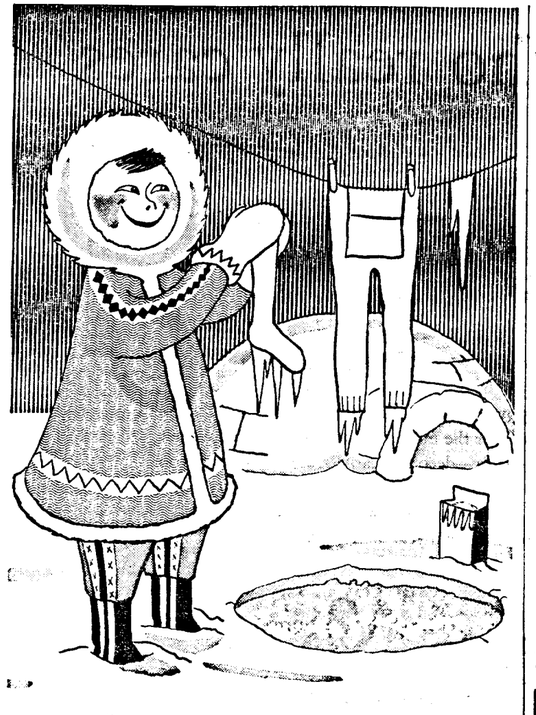
SENATOR SYMINGTON of Missouri, who threw his hat in the presidential ring last week, is one of the three leading Democratic possibilities who have been happy to play a waiting game, confident that neither of the two declared Democratic contenders, Senator Humphrey and Senator Kennedy, could carry off the nomination. But by last week Senator Kennedy was beginning to look so irresistible that both of his undeclared rivals in the Senate—Mr Lyndon Johnson and Mr Symington—were revising their strategy. Mr Johnson let it be known that he would probably come out into the open earlier than expected, perhaps in June, and Senator Symington, who lacks Mr Johnson's bag full of southern delegates and his responsibility for leading the Senate, decided to take the plunge at once. To be "everybody's second choice" will not be much consolation to Mr Symington if Senator Kennedy walks off with the nomination on an early ballot.

This is what Mr Paul Butler, chairman of the Democratic National Committee, expects to happen if Senator Kennedy runs well ahead of Senator Humphrey next week, as most observers think he will, when Democrats in Wisconsin show which of the two men they would prefer as their candidate. In a characteristically indiscreet off-the-record talk with reporters (which soon got out, to the fury of supporters of Senators Johnson and Humphrey and Mr Stevenson, all of whom Mr Butler virtually wrote off) the supposedly neutral chairman added that the nomination would be clinched for Mr Kennedy if he could cap Wisconsin with another victory over Senator Humphrey in West Virginia on May 10th. This would show that the Roman Catholic Senator from Massachusetts can carry a predominantly Protestant state as well as one like Wisconsin where his co-religionists make up a third of the population.

This impression that these primary elections will be decisive is one which the Kennedy forces have been propagating industriously. Senator Symington, who is putting himself forward as the focus of a stop-Kennedy movement and who has chosen not to risk his political skin in any primary, takes the opposite view ; he is making a virtue of his prudence by declaring the few contested primaries (there are only five) to be quite unrepresentative. He has the support of many Democratic political bosses and of Mr Truman, although the ex-President's blessing was not much help to Mr Harriman in 1956. But Mr Symington's speeches have been stale and uninspiring. Mr Stevenson's seldom are, and those which he is scheduled to make in the near future, although they are billed as unpolitical, might revive his fading chances of supplanting Senator Kennedy. Mr Stevenson's supporters are pointing happily to a new survey which, unlike the latest Gallup public opinion poll, suggests that, although he lost twice to President Eisenhower, Mr Stevenson could beat Mr Nixon, the virtually certain Republican candidate this year, by a handsome margin.

Civil Rights and Civil War

THE Senate has at last abandoned its own comprehensive civil rights Bill and is now debating the much narrower Bill which the House of Representatives managed to pass last week without any serious difficulty. The heart of this Bill provides for the appointment of federal referees to register Negro voters in places where state officials interfere with their voting rights. While Negroes are more often kept away from the polls by intimidation than by inability to register and while many people prefer alternative proposals for dealing with the registration difficulty, the House Bill is generally accepted by moderates on both sides of the controversy as being not only a measure which the South can "live with" but also a step forward. Even if it is only a short one it is the longest that is likely to be taken this year.



But if it is to be taken at all it is almost essential that the Senate make no changes in the Bill. If it does the measure must go through the House Rules Committee again and there it would probably be smothered by the reactionary southern chairman. For this reason the Administration is giving up two sections to which the Attorney General and many other people attach great importance: the provision of federal help for schools which are integrating their classes and the setting-up of a permanent commission to prevent discrimination against Negroes in employment. But these proposals may be revived if any attempt to amend the Bill in the Senate looks like succeeding. However Senator Johnson, the Democrat who drives his majority down the middle of the road, has no intention of allowing any changes—and so far almost everything about this year's civil rights Bill has gone almost exactly according to his plan. Even if the Southerners renew their filibuster, Senator Johnson is confident that with this comparatively innocuous Bill he can secure the two-thirds majority needed to close the debate. So it seems that everything, even most of the shouting, may be over as far as civil rights are concerned—in Washington for this year.

Elsewhere the uproar is just beginning, as Democrats from fourteen mid-western states made clear when they met last weekend in Detroit, the most progressive of the party's bases. They drafted an extremely liberal and solid plank on civil rights for Negroes and insisted that it must be included in the Democratic election platform next summer. And in an attempt, which may do more harm than good, to shatter the inevitable southern reaction before it crystallises, the national chairman of the party, Mr Paul Butler, never one to pamper the South, attacked Democrats there who are planning a wait-and-see policy at the nominating convention. He warned southern delgates that unless they arrive pledged to support loyally the party's presidential candidate and platform they will not be seated. Threats of civil war are nowadays an inevitable part of preparations for a Democratic convention but this year they are earlier and more bitter than usual.

Banks Branch Out

FROM A CORRESPONDENT IN NEW YORK

NEW YORK CITY's big banks, whose branches have been confined by law to the five boroughs, won a long sought victory last week when the State Legislature approved a new banking Bill permitting them to extend their operations beyond the city's borders. The vote was a surprise, for opponents of the measure

Marchon adds a sparkle to the world

People all over the world use detergents to make life easier and brighter. *Detergent manufacturers* all over the world know Marchon as the producers of a versatile, highly developed range of detergent raw materials.

Marchon make detergent chemicals and sell them all over the world.

For the man who really cares

The elegant styling of the Riley 4/Sixty Eight makes it one of the most modern cars today. But it's shaped for more than looks. Driving the 4/Sixty Eight is a very satisfying motoring experience, with ample power for safe overtaking and effortless fast cruising. This fine car is designed for the motorist's delight. Polished walnut veneer fascia and door cappings—real leather upholstery—deep pile carpets, are refinements you expect to find in more expensive cars, yet you get them all in the Riley 4/Sixty Eight at a surprisingly low cost. Before you decide on that new car try the Riley 4/Sixty Eight, a car you'll be proud to own year after year.

Ask your nearest Riley Dealer for a demonstration.

Price: **£725**

had been confident that the coalition of suburban Republicans and New York City Democrats, who had defeated it in the past, would remain intact. Instead, the Democratic leaders suddenly gave up their opposition and allowed members of the party to vote for the Bill. This last-minute reversal has led to charges of a deal between Governor Rockefeller and the Democrats, who are seeking additional state aid for the city, and even to accusations that Mr Rockefeller railroaded the Bill through because of his family's holdings in the Chase-Manhattan Bank, the biggest commercial bank in New York and second largest in the country. Mr Rockefeller's Superintendent of Banks was an active champion of the measure, but the Governor himself played a very circumspect role; after signing the Bill, however, he explained that he had considered it to be emergency legislation only because a law forbidding the creation of new bank holding companies was about to expire.

The fact is that banking legislation has been under consideration for many years, and the failure of the Legislature to take any action until now has tarnished New York's reputation for progressive leadership in this field. The district lines drawn up to restrict branch banking kept the big city banks in a strait-jacket at the same time as they encouraged the growth of many small independent banks, which have enjoyed the absence of spirited competition. Faced with a loss of deposits to institutions outside the city, banks in it have been stimulated to merge. But real expansion depends on being able to break out of the legal boundaries. It is true that the new law provides for only a limited extension of branch banking, but its supporters see this as the necessary first step towards a state-wide system. The law's significance, moreover, is not confined to the state; it will almost certainly set off changes in other states which have been watching to see what New York would do.

UNDER the provisions of the new Act, which goes into effect on July 1st, the city's banks will be permitted to operate branches only in the adjoining suburban counties of Westchester and Nassau, territories which are already served by a host of banks, some with branch systems of considerable size. Furthermore, New York City banks will not be able to set up new branches in towns where other banks have their head offices or in towns with less than 30,000 people already served by a bank. This means that there is little likelihood that the metropolitan banks will be able to establish many new branches in the suburbs; if they are to extend their operations it will have to be either by a merger with existing banks—the method favoured by the Chase-Manhattan—or by setting up a holding company to acquire existing banks, something the First National City Bank, Chase's main rival, has tried in the past, only to be thwarted by the Federal Reserve Board. The new law allows the formation of holding companies, which will be permitted to operate banks throughout the state; many who sought to retain the restrictions on branch banking, favoured this type of expansion, on the grounds that individual banks operated by a holding company normally retain their local associations, including managements and boards of directors. Bank holding companies, however, are penalised by a special federal tax of 2 per cent which may serve as a deterrent to some.

The New York City banks may proceed cautiously both because the price of bank shares has shot up and because of uncertainty about the attitude of the regulatory authorities, but they are certain to invade the suburbs. Their percentage of the country's bank deposits has been decreasing steadily and, while most of their losses have been to banks outside the state, there is no doubt that suburban institutions have been benefiting from the exodus of city dwellers. Because suburban deposits are now often idle, they are particularly attractive to the big banks, which are much more sensitive to the Federal Reserve Board's restrictions on credit than their suburban cousins because they use their reserves much more fully. These deposits are the big prize that the suburbs offer; in return, the large commercial banks can provide potential customers with a wider variety of services, as well as much broader credit facilities, than small banks can command.

Many suburban banks are more afraid of an invasion by mutual savings banks and savings and loan associations than of one by New York City's commercial banks. For the new law permits thrift institutions in New York City to open two branches in the suburbs (savings banks outside the metropolitan area are allowed one branch). Many commercial banks outside the city have been paying low rates of interest on savings deposits and they are threatened now with competition from mutual savings banks which offer much higher rates on such deposits and which are willing to provide loans on mortgages at rates below those which the commercial banks have been charging.

The public should benefit from this increased competition. The sacrosanct position of the local unit bank, which has had a traditional monopoly in the United States, has not always been to the advantage of the public and it is coming to an end. The development of mass retail banking is incompatible with the independent unit bank and, although the law has been slow to recognise the fact, the building up of local branch systems has done so. In breaching the district lines, New York may well be signalling an even bigger breakthrough.

No Transports

THE seventy-eight recommendations of a new study of transport policy by the Department of Commerce seem likely to join the five-year-old proposals of the Weeks report on the shelf. The most that can be hoped for is that Congress will take down a few of them as it pursues its own leisurely study of the complicated, controversial, frustrating tangle of government regulation of transport. The President, who asked for the study over a year ago, has sent it to Congress without either comment or endorsement. Mr Mueller, the Secretary of Commerce, has said himself that there is no urgent need for action on the twenty or so proposals which require legislation. Because the report is clearest and most detailed on what should be done to help the railways, the "unsubsidised sick man" of transport, the road hauliers and the spokesmen for the waterways are up in arms against it, as they were, for much the same reason, over the Weeks proposals.

The present document, which is both broader and more thoughtful than its predecessor, has two main themes: that government regulation should be reduced (except where it is needed to prevent cut-throat price wars or the abuses of monopoly) in order to give free play to competition; and that carriers in the air, on the waterways and on the roads which, unlike the railways, use facilities provided by the government, should be taxed to pay for them. Naturally this idea does not appeal to these carriers. But they are even more alarmed by any prospect of more freedom for the railways to set their own rates. There is a bitter fight going on already between the railways on the one hand and the motor and water carriers on the other over cuts in rail charges which might drive the railways' competitors out of business—so they say. Yet all these common carriers suffer, as the report points out, from competition on the part of private carriers who are exempt from government regulation; if the transport system is not to become even more distorted, competition should become more, not less, general.

Other recommendations for the railways are that it should be made even easier for them to merge and to drop unprofitable passenger services, and that the federal government should give up its war-time excise tax on passenger fares as soon as the budgetary outlook allows this. Unfortunately all that the study could do

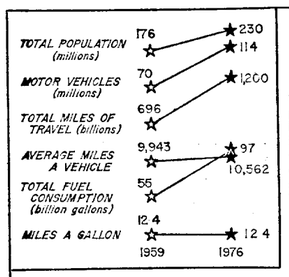
about the tax policies of state and local governments—which are a far greater source of financial headaches for the railways—is to recommend a new study of them. But the only industry which has given the report a really rousing welcome is the merchant marine; this is because its authors, in an attempt to see their way to the reduction of shipping subsidies, have embraced the protectionist line that the bulk of American surplus commodities (instead of 50 per cent) should be carried in American vessels.

Prejudice in Reverse?

FORGETTING past differences in order to further the battle for racial equality—or so they declare—Mr Hulan Jack, the Negro President of the Borough of Manhattan, and Representative Adam Clayton Powell, the coloured Congressman from Harlem, the great Negro district in that borough, have formed a " united Democratic leadership team." Among the team's detailed objectives are more political jobs for Negroes and the winning of municipal judgeships for two of their friends at this autumn's election. The alliance is sensational because Mr Powell has long been under attack from Tammany Hall, the Democratic party organisation in New York, and Mr Jack was the only survivor of a purge of Tammany candidates with which his new friend retaliated in Harlem.

Since then they have been bitter enemies, but now Mr Jack has fallen out with Mr De Sapio, the Tammany boss, and so needs Mr Powell's help. For his part Mr Powell also needs to consolidate his control of Harlem before he runs for re-election later this year. Mr Powell and Mr Jack are both in trouble at the moment because they have more in common than their pigmentation and their political skill: both are involved as defendants in separate cases concerning financial malpractices and both, by accusing their accusers of racial prejudice, are trying in effect to influence the outcome of their trials through Negro political pressure.

When he was first charged in January with violating the City Charter Mr Jack suspended himself from his duties until " such time as a final determination of my case is made." Nevertheless he seized the opportunity to return to office when a judge dismissed the charges against him as being defectively phrased, although the District Attorney has appealed against this ruling. Such insensitivity to the political decencies has raised a clamour for Governor Rockefeller to dismiss him, without waiting for the outcome of the case. Mr Powell was charged several years ago with evading the payment of taxes on his own and his wife's large incomes, but the case has only just been brought to trial. It has even been suggested that this postponement was Mr Powell's reward for supporting President Eisenhower in 1956. But Mr Powell remained an official Democrat ; under the congressional rule of seniority and in spite of his unpopularity everywhere but in Harlem, he is likely to be the next chairman of the House Committee on Education and Labour, unless he is sent to prison or defeated in the coming election ; the latter, at least, is unlikely.



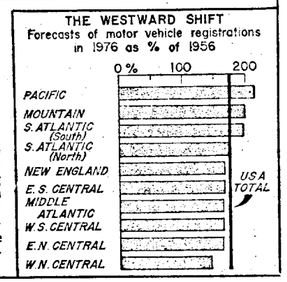
Cotton Upon the Waters

ONE of the grievances of the manufacturers of cotton textiles is that the export subsidy for raw cotton, which was instituted five years ago to offset the high domestic support price and to make raw American cotton saleable abroad, enables foreign manufacturers to buy American cotton more cheaply than their American competitors can and therefore to undersell them on their own market. Imports of cotton textiles have, in fact, more than tripled since 1954 as Hongkong, Formosa and Pakistan have joined Japan as suppliers of cheap textiles to the United States.

The Department of Agriculture is supporting the imposition of a fee, equal to the subsidy, on imports of cotton textiles on the ground that its programme to export more cotton is injured when that same cotton comes back to the United States in the form of textiles. This is alleged to prevent sales of raw cotton to American manufacturers which would otherwise have taken place. At the moment exports of raw cotton are going great guns—they are expected to be more than twice as large this year as they were last year—and they are thought to be responsible, in large part, for the present recovery in American exports.

The State Department, on the other hand, opposes anything which will make it harder for the under-developed countries to sell their textiles. Meanwhile Japan, which is America's second best customer, and buys much more cotton from America than it re-sells to it in the form of textiles, is threatening to suspend the " voluntary " quotas which it has imposed upon its textile exports to the United States and perhaps to switch to other fibres if the fee is imposed. The ideal solution, of course, would be to end the high support prices for cotton. There is some ground for encouragement, therefore, in the news that cotton growers seem to be opting in larger numbers for the lower support prices which give them freedom to plant more.

The domestic textile industry is by no means content with the proposal for an equalisation fee (even though, for practical reasons, this would be applied to all imports, whether they were made of American cotton or not). It wants country-by-country quotas based on total imports in 1954. But with the industry more prosperous than it has been for eight years, the Tariff Commission is not likely to recommend a quota, and if it did the President would probably not approve it. Indeed Mr Kearns, the Assistant Secretary of Commerce for International Affairs, recently read the industry a sharp lecture, declaring that American manufacturers, instead of making a scapegoat of imports, should concentrate on developing their exports (which also benefit from the subsidy). Soon after this, however, Mr Kearns, a strong advocate of liberal trade, sent in his resignation ; he denies that he did so under pressure, but the textile interests can muster a formidable roster of congressional sympathisers, both from the South and from New England.



AMERICANS ROLL ALONG

By 1976, according to official forecasts, there will be 95,000,000 passenger cars (and 19,000,000 lorries and buses) in the United States. This means that there will be three automobiles to every four persons of driving age, that is, between 15 and 74. The average vehicle is expected to use 855 gallons of petrol a year but the study was made before the new compact cars were put on the market.

The heaviest increases, in population, number of vehicles and distances travelled are expected in the West, particularly in California, New Mexico and Arizona, and in Florida, the other great tourist centre.

These forecasts predict a flow of traffic in 1976 14 per cent greater than was estimated in 1955 when the new interstate highway system was being planned. They have been compiled by the US Bureau of Public Roads from statistics prepared by the 48 states before Alaska and Hawaii were admitted to the Union.

MEN AT WORK on Consett's new 4-high Plate Mill

£14 million plant will be the most modern in the world

WORK on Consett's new 4-high Plate Mill was started in May, 1958. Progress has been impressive.

Now, half the roof is on and the 100-foot pillars which support the over-head cranes are in position. Three of these cranes are already at work, helping to install the mill's equipment, some of which has started to arrive.

The mill, which is scheduled to start rolling during the latter part of this year, will be capable of turning out finished plates 120" wide and up to 90' in length and will have a capacity of 10,000 tons of steel plates a week—plates with the finest finish in the world.

Consett's new 4-high Plate Mill will soon be making an important contribution to the industrial capacity of the North East—and of Britain as a whole.

Getting Older

FROM A SPECIAL CORRESPONDENT

THE United States, like a woman who has just taken a good look at herself in the mirror, is realising that it is no longer as young as it used to be. The result has been a feeling of shock, followed by an earnest search for remedies to the creeping problems of age. The number of Americans over 65 is increasing fast; while about 4 per cent of the population was in this age bracket at the turn of the century, today the 16 million senior citizens—as they are euphemistically called—are 9 per cent of the population. And if any considerable progress is made in the control of cancer and the circulatory diseases, the growth in the proportion of old people will be speeded up.

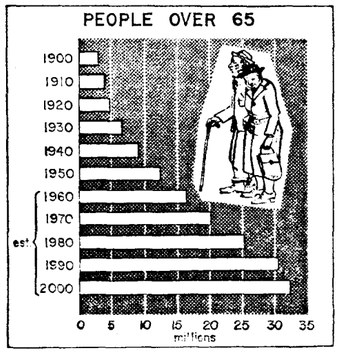
Perhaps because of its traditional accent on youth, the United States has reacted slowly to the implications of this minor population explosion. But now this attitude is changing. The press and the big magazines have tumbled to the fact that America's ageing population presents a problem of national dimensions—and a growing market for all kinds of specialised products—and that the subject is not too distasteful for either the public or the advertisers to swallow. And Washington has grown very much alive in the past few months to the immediate political implications of the growth of a block of older voters: in this year's election, more than 20 per cent of the eligible voters will be 60 or over and this figure will rise to about 25 per cent by 1970.

A few weeks ago a Senate subcommittee under the chairmanship of a Democrat, Senator Pat McNamara of Michigan, reporting after a year of intensive study all over the country, recommended that the highest priority should be given to expanding the social security system to include medical insurance for those eligible for government pensions. It also proposed an immediate increase in social security benefits; additional federal help for the construction of housing for the aged; and more opportunities for those able and willing to work beyond the normal age of retirement, including possibly legal provisions against refusing a job to an applicant solely because he was too old.

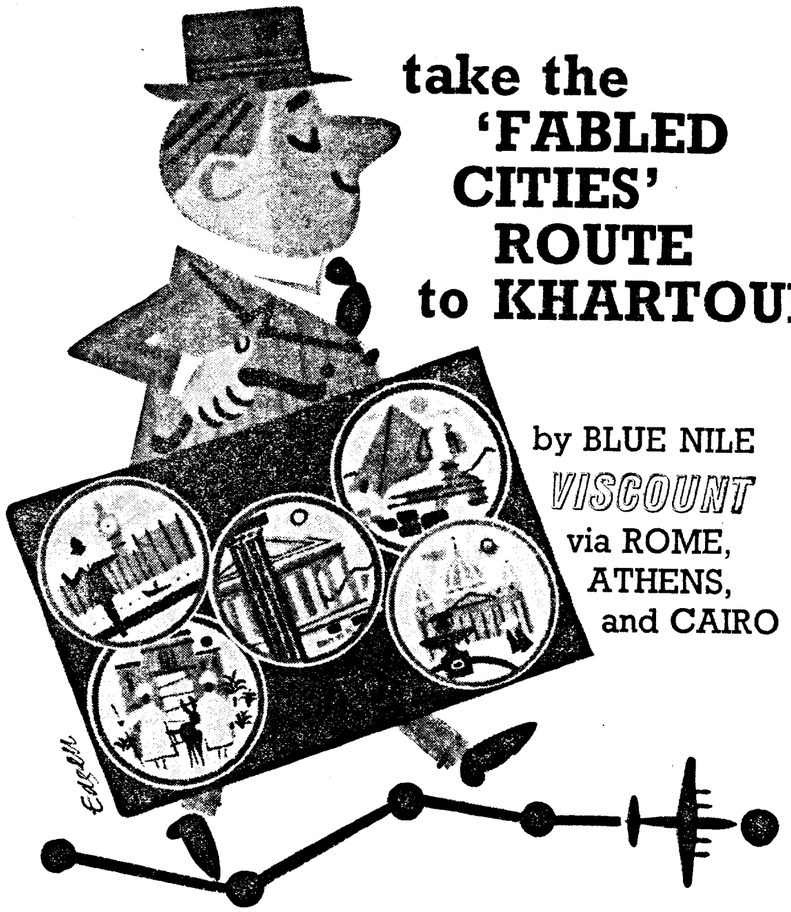
There is little doubt that illness and disability strike older people more frequently and more expensively than they do younger members of the population, and at a time when many of these older persons are living on fixed incomes. More comprehensive health care is therefore probably one of the greatest needs of America's old folk today; it is also a hotly-debated political issue. The debate centres on a Bill, first introduced in 1957 by Representative Aime Forand, a Democrat, which proposes that the social security Act be amended to provide insurance against the costs of hospital, nursing and surgical services for all people eligible for benefits under the Act. This insurance would be financed by raising the present social security tax, paid on wages by both employer and employee, by a quarter of one per cent, to 3¼ per cent each. The Bill would in fact introduce federal health insurance to the United States, on a limited scale.

As could be expected, the American Medical Association was violently opposed from the start to this form of "socialised medicine" and is urging its members to step into the political arena in their local communities to fight the proposed legislation. A number of other organisations, mostly associated with the drug and insurance industries, condemn the Bill, while the big trade union group, the American Federation of Labour and Congress of Industrial Organisations, has long backed it strongly. The AMA argues that private insurance for the elderly—which is growing by leaps and bounds—can easily cope with the situation, and claims that 60 per cent of the aged who need and want private coverage will have it by the end of this year, and 75 per cent by 1965. The answer of those who support the Bill is that the private insurance being offered to the aged is inadequate and too expensive for the pockets of those needing it.

Whatever happens to the Forand Bill, which has become a major topic of letters addresed to Congressmen by their constituents, medical care for the aged now seems certain to be a lively issue in the coming election campaign. The leading Democratic contender for the Presidency, Senator Kennedy, has already climbed on to the bandwagon with his own version of a national health insurance Bill. Backed, it is believed, by Vice President Nixon, who seems assured of the Republican presidential nomination, Mr Arthur Flemming, the Secretary of Health, Education and Welfare, has been urging the President to produce some constructive Republican alternative, such as government financial support for an expanded system of voluntary health insurance for old people. But Mr Eisenhower insists on waiting until the Administration has studied the problem further—a delaying tactic which is being much criticised by liberals within as well as without his party.



THE problem of the ageing is a complex, nagging one. The United States has lagged behind certain European countries in meeting the needs of the elderly, particularly in housing and medical care. The three-generation home is fast disappearing from the urban landscape of modern America, and loneliness has become a great scourge to many old people who are separated from their families. As men and women live longer, healthier and more active lives, the generally accepted practice of compulsory retirement at 65 is being re-examined. Mr Flemming recently called mandatory retirement at 65 "a lazy man's device for dealing with a difficult problem." Work is still the centre of the average American's existence, and doctors are reporting a growing number of mental breakdowns among retired persons who feel cut off from their "meaningful environment."



As human science prolongs human life, there will be mounting pressure for changes not only from the aged—who are not yet organized as a political force nationally, although they have already shown their strength in some state elections—but also from younger American families with a clearly defined personal interest in greater economic independence for their parents.

Some of the most disquieting evidence turned up by the McNamara subcommittee concerned the financial situation of the aged, showing that millions of them lacked the means to provide the "decent necessities of life." Almost 60 per cent of all old people —including wives and other dependants of income receivers—had less than $1,000 in cash income in 1958, while another 20 to 25 per cent received only between $1,000 and $2,000; the median annual income of aged men (including those working all the year round and full time) was $1,488.

The social security system, introduced in the ninteen-thirties, provides basic financial protection for the elderly. Congress has liberalised its benefits regularly and extended its coverage so that today six out of every ten old people receive monthly cheques. The average benefit for all persons on the rolls stands at about $72 a month, or $864 a year; the average benefit for retired couples is $120 a month, or $1,440 a year. The least favoured are the widows, one third of whom receive $50 or less each month. Company pensions also provide financial protection for the elderly, but they are a comparatively recent innovation on the industrial scene.

Eventually the Forand Bill or some similar type of legislation may become law, but this is not likely to happen in 1960. There is still a deep-rooted objection to federal health insurance in the minds of too many Senators and Congressmen. What seems more likely during this session of Congress is that the social security Act will be modified in some other, minor way for the benefit of older people. This has become an election year custom and there is no reason to suppose that 1960 will be an exception.

take the 'FABLED CITIES' ROUTE to KHARTOUM

by BLUE NILE *VISCOUNT* via ROME, ATHENS, and CAIRO

The BLUE NILE Viscount, maintained and crewed by Airwork for Sudan Airways, is the only service that exists primarily to serve the Sudan. Every Monday at Noon it leaves Gatwick Airport (only 35 minutes from London by fast train) and reaches Khartoum next morning stopping at Rome, Athens, and Cairo. If, for reasons of business or pleasure, you wish to break your journey at one of these 'Fabled Cities' and complete it later on you may do so* *at no extra cost*. The same concession applies on the return journey —every Thursday evening from Khartoum.

VISCOUNT **comfort—ROLLS-ROYCE speed**

The VISCOUNT 831, used for the Blue Nile Service to Khartoum, is larger, faster, and even more luxurious than earlier ones. An unusual feature is the FREE INFORMATION SERVICE on board, which supplies passengers with up-to-date news of Sudanese business, political, and social events—very helpful to newcomers and to those returning after a long leave of absence.

**Athens traffic rights are subject to Government approval.*

ASK YOUR TRAVEL AGENT ABOUT THE BLUE NILE *VISCOUNT* SERVICE TO KHARTOUM *and about the special 'stop-over' facilities*

SUDAN AIRWAYS' *technical maintenance is provided under contract by Airwork Limited who are also the UK General Sales Agents.*

The Weekend is the Time

—when the Marsden family is a family!

THE WEEKEND IS THE TIME the Marsden family looks forward to. Only time they have breakfast together, for one thing. Because they *are* together at the weekends. A family—behaving as a family.

THE WEEKEND IS THE TIME the Marsdens do most of their television viewing, because they have so much more leisure. They're relaxed, receptive, in the right frame of mind to take in and appreciate what they see on television.

THE WEEKEND IS THE TIME the Marsdens make most of their buying decisions—because they're all there to talk things over. They live in Bolton; that means they're part of the ABC Television audience, at weekends in the North and Midlands. They have more money than ever before, and they're spending it on better living and modern comfort in their home.

THE WEEKEND IS THE TIME to reach the Marsdens—and four million homes like theirs in the ABC Network. That's half the ITV homes of England and Wales, and more than half the buying power. If the Marsdens fancy something, they get it—even if they do have to save for a bit. So if you sell what they want, tell them about it—through ABC Television.

THE WEEKEND IS THE TIME!

Gunnar Ericson, President of the Facit Group — one of the world's leading business machine manufacturers and exporters.

Why are so many world-known business machines built **by Swedes?**

"I believe the answer to that is — Swedish technique and tradition.
You see, Swedes are mechanically gifted and have an almost reverent respect for quality, precision and craftsmanship.
And as inventors, builders and designers, Swedes — also descendants of Swedes abroad — have made pioneering contributions to quality production of modern business machines.
In relation to her population, Sweden today produces more business machines than any other country in the world.
And Facit, Sweden's leading manufacturer and exporter, which to date has produced more than 2 million business machines, has played a substantial role in this development."

If you would like to read the story of this achievement, your local Facit agent will gladly send you a free copy of our brochure "Why are so many..." — or you may write directly to Åtvidabergs Industrier, Stockholm 7, Sweden.

THE WORLD OVERSEAS

Britain and the Continental System

FROM OUR SPECIAL CORRESPONDENT

SOME of the British members of the Anglo-German conference, held last weekend at Königswinter on the Rhine, were reminded of a British naval disaster of 1782 by the name of the aircraft that took them on to Berlin and eventually back to London, *Sir Richard Kempenfelt.* "His sword was in its sheath; his fingers held the pen, when Kempenfelt went down with twice four hundred men." The bottom did not fall out of their craft as it is believed to have done (though the Admiralty never admitted it) out of the *Royal George.* They had, however, had to live through several days of dogged argument under the nasty suspicion of actually preferring the pen to the sword: a reproach that nobody would have thought of directing at Kempenfelt.

To be fair, the German side in the eleventh Königswinter talks did not maintain that the aspects of the German problem that came under discussion (Berlin; German unity; the German eastern frontiers) could be settled with Mr Khrushchev by the sword. They did, however, maintain, and with an unprecedented unanimity, that negotiation on these questions at present contained great possibilities of doing harm and virtually none of doing good. Confronted with such an argument, the British are apt to ask a little wearily what alternative course is suggested; and they get no answer. Both sides (British and German, that is) are roughly agreed that neither the division of Germany, nor the Berlin question, can be settled in a time that can be foreseen. The Germans are emphatic that the division of Germany is fundamentally intolerable, and that the subject must not, therefore, be allowed to rest. Thus the question between the two boils down to this: in a matter that cannot be settled and cannot be left alone, what ought the West to do in the high season of summit diplomacy that is opening? Discuss marginal concessions and offer reassurances of a kind that might persuade Mr Khrushchev not to upset the Berlin applecart? Or, acting on the assumption that no negotiation can produce any change except for the worse, stop talking about concessions, close the ranks, and allow the Russians to learn for themselves that the free use of one's elbows does not pay?

In previous years at Königswinter the line dividing the opinions has fluctuated and shifted as the talks went on, and in any event it has not been a line between the British and the Germans but between different kinds of people of either nationality. This year, for the first time, opinions divided plainly into British and German. This eleventh conference was also the first on which no consensus of opinion emerged on any major subject; what was said on the first day, and what was said by the same people on the third, were the same. As always, the personal tone of the talks was excellent; many of these people by now know each other fairly well, and there is an established Königswinter convention that it is possible to be tough in debate without giving or taking offence. The talks were useful; though they provided no solutions, they taught the two sides something about each other and about themselves. But it is necessary to speak of two "sides."

What has brought this change about? Among the Germans, the Christian Democrats had certainly not moved an inch; they are the government party, and nothing new is going to be said unless Dr Adenauer says it first. It was the Social Democrats, once the bitter opponents of Dr Adenauer's policy on the German question and its surrounding complex, who had moved. Their German plan has been buried; save for a reservation about possibilities of regional disarmament, their thoughts of disengagement are put away. Not only are the Bonn Social Democrats firmly backing up their governing mayor in Berlin, Herr Willy Brandt (as they should); for the first time, they have managed to get well over on his right, as a conversation with him on Tuesday showed. Part of this change is no doubt because the party is buckling and harnessing itself for next year's general elections. For the rest of it, the credit must go to Mr Khrushchev; his threat to Berlin has closed the German ranks—and the Social Democrats are, after all, the majority party in the west Berlin government. Whatever the reasons, it was several times necessary when a Social Democrat was speaking at Königswinter to peer at the name on his lapel, to make sure that he was not of Dr Adenauer's party.

AMONG the British parliamentarians something of an opposite process has taken place: with Mr Macmillan's commitment to summit policy, British Conservatives have become more inclined to explore possibilities of east-west negotiation on German, as on other, questions. However, there was another fact pressing the British to close their ranks; this was that they, as British, were under attack. Some of the German expositions of the German question, or of European Community policy, or of east-west relations, were directed to the subject itself; but not a little was directed to bringing out the inadequacy of Britain as an ally. To sense this did not take long; and the British, even those who had arrived in a mood to apologise for the excesses of anti-German propagandists in Britain, began to defend themselves.

This, so far as the Anglo-German relationship is concerned, may well be the heart of the matter. One was left with the impression that the search for disagreement on concrete questions (the phrase is not merely facetious; for once, the study group on "Anglo-German misunderstandings" was the best-attended and, oddly, the most fruitful) drew much more solid nourishment from German suspicions of Britain in general than it did from differences of substance about specific aspects of policy. Britain was insufficiently firm about Berlin; Britain was preparing to recognise the German Democratic Republic; Britain had not enough loyalty to agree that the Oder-Neisse frontier could never be accepted; Britain withdrew troops from Nato; when the Hungarians rose against Communism, where were the British? At Port Said, shooting Egyptians. Britain, too, had betrayed the movement for European union by putting its national identity first. The curious thing is that to the extent that these charges are true, almost all of them could be levelled with at least equal force against France. But they are not; and indeed the German partners in the Königswinter talks actually put them forward as the justification of the close harnessing of west German policy to France.

It is true that successive British governments have supplied Britain's European critics with a quite unnecessary amount of fuel on several of these grounds. As a result, no one can say with

any certainty which of the critics, who now represent the highest orthodoxy at Bonn, voice their complaints in the hope of getting them put right, and which use them as pretexts to justify the pursuit of a policy that aims at excluding British influence from Europe. Many men in the past have sought the exclusion of Britain from Europe in the honest belief that it was European union that they were after. This is a tradition that the Third Reich did not need to invent, but only to resurrect, since it was common to Imperial Germany and to Napoleon's Continental System alike. Is it dead? The question was put at Königswinter, but no answer was offered.

Mr K's Tour de France

FROM OUR PARIS CORRESPONDENT

THE slogan "Workers of all lands, unite" does not fit easily into diplomatic protocol. The dilemma of a revolutionary movement gaining power in a country and having, thereafter, to deal with other established states is neither new nor specifically Russian. But Mr Khrushchev's ambiguous dual position as Russian ruler and leader of international communism had less relevance to his British and American tours than to his visit to France, where the Communist party remains a political force. That is why many French conservatives, while resigned to the idea of the summit and to the need for negotiations with the Russians, were against Mr Khrushchev's tour of France, which they described as a communist publicity stunt.

Paris is worth a mass. Those who feared—and those who hoped—that Mr Khrushchev would indulge in revolutionary propaganda proved wrong. Both in Paris and in the provinces, although he did not recant his faith, he behaved like a nationalist statesman and not like a communist spokesman. It is difficult to guess the reasons for this "good behaviour." General de Gaulle's reaction to Mr Khrushchev's first speeches was not likely to encourage the Soviet leader's hopes of inserting a wedge into the Franco-German alliance. He may have thought that his presence alone in many French towns would give a sufficient boost to communist morale or, alternatively, that his moderate behaviour would weaken the idea of the Soviet "red peril" and, therefore, help the French Communists to move out of their political isolation. More probably, bred in a good Stalinist tradition, he did not bother much about the local Communists, but decided that to gain the good graces of his host would make his task easier at the summit; it might also bring future rewards because of French differences with Nato and the general's ambitions in Europe.

Whatever the reasons, Mr Khrushchev went out of his way to pay tribute to the general and to stick to his programme, although it was full of official visits and banquets and left almost no room for contacts with the population. His behaviour was exemplary from the very start. During the afternoon of his second day in Paris (March 24th) the square facing the Hôtel de Ville was packed with people. It was at this place full of revolutionary memories that President Eisenhower had addressed the Parisians on his last visit, and last week the Communists and their sympathisers, chanting slogans and waving flags, hoped to hear Comrade Khrushchev. But only the privileged ones in front saw his back as he climbed the stairs of the Hôtel de Ville. The crowd remained for another hour, adding "*libérez Khrushchev*" to its repertory, while he remained inside. Their reward was one quick wave of the hand as he was whisked away to the Chamber of Commerce.

Traduttore, traditore? Mr Khrushchev gave another proof of his moderation when facing the press at a luncheon. He was not in particularly good form; it is when faced with a hostile audience, as in Washington, that he seems to be at his best. Here he was all smiles. Asked what he thought of General de Gaulle, he replied that as a Russian patriot he appreciated the French patriotism of General de Gaulle. This tribute to the general's patriotism—hardly in the Leninist tradition—must have made awkward reading for M. Thorez and other French communist leaders.

Another awkward question at the luncheon dealt with Algeria. Mr Khrushchev parried it by repeating the Soviet approval for the policy outlined by General de Gaulle on September 16th. His emphasis on the fact that this approval was given to the policy as then outlined was generally taken as implying reservations about subsequent developments. Actually, in his original Russian, the Soviet leader described the general's programme as offering "independence" to Algeria. His interpreter immediately substituted "self-determination"—not betraying the thought, but correcting the line. *Pravda*, too, corrected Mr Khrushchev's Freudian slip. This was not the moment for jarring notes in the official Franco-Russian chorus.

Red Flag on the Marseilles Bourse. The gilded statue of Notre Dame de la Garde, dominating the town of Marseilles, had never before seen a red flag with hammer and sickle floating above the Stock Exchange. Opposite the Bourse, a tablet commemorates the spot where 26 years ago the last head of state to visit Marseilles, King Alexander of Jugoslavia, was assassinated. As if to remind the security men that the gangster reputation of Marseilles once vied with that of Chicago, a Communist sticking up posters was knifed to death by right-wing opponents on the eve of Mr Khrushchev's visit. The police were out in force and decidedly nervous. Indeed, if this trip has revealed nothing else, it has shown observers that the French state has even more policemen at its disposal than they thought.

It rained in Marseilles throughout Sunday. This did not prevent the crowds from gathering in a town which is one of the Communists' strongholds (since the war they have polled, on an average, more than a third of the votes in Marseilles). The faithful mingled with the curious on the Canebière and in the narrow, elegant street leading to the prefecture. The square facing the official building was filled well in advance. The crowd, for a Mediterranean crowd, was surprisingly quiet and patient, but it came to vociferous life when the guest finally arrived. Its political colouring could easily be gathered from flags, slogans and songs. The Marseillaise was quickly followed by the Internationale. For three-quarters of an hour the chanting crowd urged Mr Khrushchev on to the balcony. Finally, the light was switched on in the prefecture; Mr Khrushchev appeared on the balcony waving his hat and ending with a boxer's salute.

Missing Canon. Dijon, the former capital of Burgundy, is a quiet, old, middle-class town. Its mayor, Canon Kir, is not the French equivalent of the Red Dean. At 84, he is the oldest deputy in the National Assembly, where he belongs to the conservative group. But the canon, who fought in the first war and joined the Resistance in the second, remembers the Russians as his allies. Stalingrad, moreover, is the sister town of Dijon. Canon Kir firmly intended to meet Mr Khrushchev. But at the last moment, on orders (it is said) from Rome, he had to give up his plans and disappear from the scene.

The Roman Catholic church wages its anti-communist crusade on all fronts. Its orders to the French clergy to boycott the visit were quite natural. The Kir affair, however, has been bad publicity for the Church. The charges usually made against Communists—that they are subservient to a foreign power—are now thrown at the Catholics. Mr Khrushchev, speaking in the town hall, was adroitly temperate, referring all the time to the absent mayor, "who is with us in spirit." Outside, the crowd, which had come to greet the Soviet leader, hailed the canon and damned the bishop. Thoughtful French Catholics regret that the anti-clericals should thus have been provided with ammunition at a time when the schools act has made the relations between state and church a raw issue. But *Roma locuta, causa finita.*

Delayed Speech. The refrain in all Mr Khrushchev's brief pronouncements was disarmament, peace and the German threat. The fields of Verdun, with their tragic memories, provided an ideal setting for weaving these themes into a major speech. On Tuesday morning Mr Khrushchev did not seize this opportunity. In the afternoon, however, the tone of his reply to official greetings at Rheims was stronger than usual. He reproached Dr Adenauer with putting forward pretensions that Germany is the predestined "saviour of Europe." He told his listeners that the Soviet Union was a legitimate child of history, which western intervention did not prevent from developing Herculean strength. The rest was a repetition of the now classical Soviet thesis that, if no agreement is reached on Germany, the Soviet Union will sign a separate treaty.

Back to Paris. Through industrial Lille and agricultural Normandy Mr Khrushchev returned to Paris on Thursday. This weekend is largely taken up by political conversations between the two leaders. Mr Khrushchev will see whether his restraint has paid dividends and whether he can now expect the general not to toe the Adenauer line at the summit. The Soviet leader's press conference and broadcast should give an indication of his mood. The domestic question is whether the Communists have benefited more from the visit of their friend or the general from the polite tributes of his guest. Time alone can tell who was the winner in Mr Khrushchev's Tour de France.

Tambroni Takes Time

FROM OUR ROME CORRESPONDENT

SIGNOR TAMBRONI, who formed a minority Christian Democrat government on March 25th, has asked the political parties to suspend judgment on it until they have heard his investiture speech on Monday. It is assumed—but no one would swear to it—that he will present his team, in which all the Christian Democrat factions, but not all the party notables, are represented, as an emergency administration with no political platform and no ambition except to get the departmental estimates approved within the time prescribed by the constitution (June 30th). Signor Tambroni has denied that there is any need to talk about a general election after that, and it is clear that he is not thinking in terms of a temporary mandate. Partly for this reason, and partly because no government, however carefully balanced, can be entirely neutral, the other parties and pressure groups are now calculating their chances of drawing Signor Tambroni to their side; as a preliminary to this, each is trying to discover what lies behind the prime minister's sphinx-like exterior.

As usual, the most cynical are the Communists and the neo-fascist MSI, both of whom—the MSI more explicitly than the Communists—"threaten" this government with their support. Should Signor Tambroni find no backing (beyond his 272 Christian Democrat votes) except from one or other of these two parties, his position would be untenable. But if both should support him, then the national parliament would begin to look very like the Sicilian Assembly at the time of Signor Milazzo's discredited experiment.

Only one other party, the Socialist, is tempted—at least its leader, Signor Nenni is—to give Signor Tambroni the benefit of the doubt. Signor Nenni evidently believes that Signor Tambroni will try to keep the door open until negotiations for a left-centre coalition can be resumed at the point where Signor Segni very recently broke them off. This view is not shared by the Socialist party's right-wing nor by its rank and file. And Signor Riccardo Lombardi has pledged the party not to support the new government unless the prime minister accepts precise commitments on the three points which were in discussion during the recent negotiations: school reform, extension of regional autonomy, and the nationalisation of electric power.

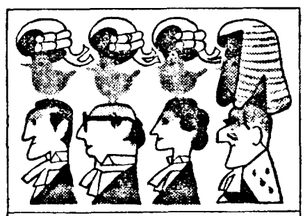
This attitude is partly dictated by the desire to stand by Signor Saragat, for the two socialist parties have drawn much nearer to each other and the Socialist right-wingers wish to repay Signor Saragat for his loyalty to them during the negotiations. For his part, Signor Saragat is very justifiably incensed at the way in which those negotiations were broken off in consequence of outside pressures, and although Signor Segni had known from the outset that the whole purpose of the operation was to break down the taboo which keeps the Socialist party outside the sphere of government action.

There is no doubt that, as soon as circumstances permit, the secretary of the Christian Democrat party, Signor Aldo Moro, and Signor Fanfani will pick up the threads of a negotiation to bring about a left-centre coalition of Christian Democrats, Social Democrats and Republicans, with the Nenni Socialists in tow. Twice this operation has been interrupted more or less violently and with the open or suspected intervention of industrial and ecclesiastical pressure groups. But the question cannot be indefinitely shelved. During the recent negotiations Signor Moro told his party that it had three months—six at the outside—in which to make up its mind. Once and for all the Christian Democrats must decide whether they can work with the Socialists or whether they refuse to co-operate at any price. A decision either way may lose the party some of its support, perhaps even cause it to split. But to make no decision at all leaves the party in the condition of Buridan's ass; and the next election could easily show how quickly a big party can lose its electorate. The Christian Democrats are vulnerable, for they count ten votes to every registered member. Very soon the party will find itself back at the fence it refused to take under Signor Segni. The question is who is to lead it over—Moro, Fanfani or Tambroni?

Sitting on the Iraqi Lid

FROM OUR MIDDLE EAST CORRESPONDENT

GENERAL QASIM'S policy towards the unpredictable forces that his revolution brought to the surface has entered a third phase. Whether the change of course was deliberately conceived or forced by pressure of circumstances must remain in doubt. Doubt, indeed, obscures most assessments of the general's aims. For although he often speaks in public, his meaning is elusive and sometimes quite escapes understanding.



The most obtrusive sign of the change, which set in early this year, is the frustration and anxiety felt among the Iraqi Communists and the growing confidence of their opponents. There have been anti-communist demonstrations in the streets of Baghdad. Dr Faisal Samir, the minister of guidance, who is credited with communist leanings, was shouted down while delivering a message from General Qasim to the Society of Islamic Ethics. The Communists are being attacked by name in the non-communist press in tones of mounting insult.

To take one recent example: a leading National Democrat newspaper accused the so-called Ittihad esh Shaab group (the majority communist faction that has been refused a party licence) of sabotage, preaching imported ideologies, shaking hands with Jewry, barbaric crimes and instigating civil war. After listing these peccadilloes, the newspaper called for the suppression of the Ittihad esh Shaab, the arrest of its leaders and confiscation of their property. Six months ago, such an attack would never have passed the censor; and if by some accident it had, the newspaper offices would have been closed, either by government action or by mob assault.

Most close observers of the Iraqi scene agree that when General

Nature Watching in SCHWEPPSHIRE

Typical bird lovers are represented in the picture by A., an expert in the display flight of albino passerines: B. once wrote to Peter Scott: C. bought a book called "Thoro' Bush Thoro' Briar, our Friends of the Hedgerows": D. usually raises an imaginary gun and says "Bang bang".

NO. 2 TOWN WATCHING. Nature is where you find it: and you find it just as much in the most exceptionally built-up areas as anywhere, perhaps more so. Familiar urban sights which please us are the "shredded lace" effect of the back-garden cabbage leaf after attacks from the pretty caterpillar of the Cabbage White. Observe the ant manoeuvre pattern swarming on the faucets and disposal exits of the ordinary kitchen sink; and the delicate "dust and ashes" trail left by the common moth on the common best suit.

The great thing to do is to observe. In the picture we see typical barristers of the High Court of Rolls Mastership and Improvident Tenure, typically pausing in their work to observe the first spring appearance of the Little Stink (Odor odor odor), half of a pair proved to have been breeding behind the immersion heater of No. 122 Fish Row, though this fact is kept a secret, and it is important that the birds should not be disturbed, nor, if possible, looked at, except by members of the Federation of Prevention of Not Taking Any Notice. The "Little" is easily distinguished from the "Medium" Stink by a slight pinkness of the left eye and a tendency of the inner wing coverts to turn from beige to biscuit colour near the tip, though this is, typically, only revealed when the bird is flying fast and at 800 ft. It is interesting, too, that the contents of the crop of the London variety tends to vary towards an admixture, with the common wire worm, of the common slip-on paper clip. *Song*, a quick "blimp-blimp-blimp-Chah". *Alarm note*, a deeper "brrrp brrrp". *Invitation movement*, a kick backwards with the left foot. *Eggs*, secret.

Remember, we want you to use your eyes for yourselves. We tell you where to look.

Written by Stephen Potter, designed by George Him

SCHWEPPERVESCENCE LASTS THE WHOLE DRINK THROUGH

Qasim emerged from the obscurity of the army to oust the Hashemites, he had in mind a homogeneous national movement in support of his aims. Hence his frequent references to the "indissoluble unity of the army and the whole people." But as soon as the revolutionary leaders had time to take a good look at their revolution, the dream faded. For the forces that supported it were simply not homogeneous. At one extreme stood the Communists, at the other the pan-Arab Baath movement. In between were Kurdish Democrats, National Democrats and the Istiqlal (Independence) Party, not to mention sundry splinter groups and divisive religious and regional tendencies.

As soon as this truth sank in, those close to General Qasim began talking of a "balance of forces." The general would accept the loyal support of all movements, provided no one of them tried to secure a dominant position in the state. This policy was killed by the precipitancy of the Baath, which resented the general's coolness towards President Nasser. Its various thrusts culminated in the revolt of Colonel Shawaf, after which it received a savage mauling in which the Communists gleefully joined. More blows fell on it after the attempted assassination of General Qasim last September. Its leaders are now in exile, in prison or in the grave. The Istiqlal had been decapitated in passing by the arrest of its veteran leader, Rashid Ali el-Gailani, who, after years of exile in Cairo, had links with President Nasser and had spoken out of turn on the subject of possible successors to General Qasim.

But the disappearance of the Baath and Istiqlal movements confronted General Qasim with new difficulties. In effect the "balance of forces" had been destroyed—by himself. With only the army and the National Democrats, he faced the cock-a-hoop Communists and their Kurdish allies. He can probably convince himself of the loyalty of the army, though the actions of Colonel Shawaf, Brigadier Tabaqchali and other senior officers must give him frequent food for thought, if not for nightmares. The National Democrats are certainly loyal, but, though rich in able personalities, they are weak in organisation.

DURING most of last year, General Qasim steered a zig-zag course *vis-à-vis* the Communists, yielding a point here, standing firm there. During these patient manœuvres, the third stage of his policy gradually emerged. His aim was no longer to achieve a balance of forces, but to check the growth of forces—except of those on which he could unconditionally rely. Paradoxically, this tendency was accompanied by reiterated promises that party activity would be resumed in January.

The general kept his promise. Party activity has been resumed. But, by common consent, it has proved a farce. Licences have been granted only to those parties whose programmes accord in full with the general's own views; and, except in the case of the National Democrats, the government seems to have been at pains to grant licences to the most insignificant groups. In fact, the general is sitting on the lid.

This emerges most clearly from the government's treatment of the Communists' applications for licences. One was put forward by Daud Sayegh, the leader of a small splinter group, the other by Abdul Qadir Ismail Bustani on behalf of the dominant Ittihad esh Shaab faction, which has set the pace and direction of communism in Iraq since the revolution. The first application was promptly granted; the second was then blandly rejected because "it was impossible to have two parties with the same name." When the Ittihad esh Shaab group applied again, under a different name, they were again rejected because "it was impossible to have two parties with a similar programme." By licensing the Sayegh group, which is entirely dependent on his favour, General Qasim has virtually captured the official Communist party of Iraq; and the majority group is left wondering what next to do.

What of the international angle? Iraqi relations with the West have got no worse in the past year; there are signs of positive improvement. One may take comfort from the fact that the Iraqi press has been allowed to say that imports from Britain are likely to reach a record level this year "owing to their excellent quality and competitive prices." As for the Russians, it is being argued that they would be embarrassed rather than helped by a communist take-over in Iraq, or even the threat of one. Such a development would certainly harden western attitudes at the summit, and might well evoke comparison, in the uncommitted nations, with Chinese actions in Tibet and Ladakh. Though the future of Iraq is still clouded, the acute and immediate fears felt last year have proved at least premature.

Canadian Defence Policy in Trouble

FROM OUR OTTAWA CORRESPONDENT

ON top of its economic and financial problems, which Mr Donald Fleming must face in his budget speech soon after this issue of *The Economist* has gone to press, the Canadian government is having a rough time with its defence policy. Mr George Pearkes started his career as defence minister by precipitating Canada into participation in the "joint" North American air defence command known as Norad, with a Canadian air marshal as deputy commander. The first result of Canada's participation in Norad was its acceptance of the elaborate American air force plan for "integrating" the Canadian air defence system into its new semi-automatic ground equipment and equipping the crucial sector between the Great Lakes and Quebec city with the ground-to-air guided missile called Bomarc. This was announced about the time that Avro's ultra-modern supersonic Arrow fighter was condemned.

The public—always fascinated by what flies through the air with the greatest of ease—latched on to the Bomarc missile as a symbol of the new defence era and as an American substitute for the Canadian manned interceptor. Canadians were puzzled. If the Arrow fighter was obsolete because Russia was putting its potential for nuclear attack into ICBMs, what was the need for all the semi-automatic equipment on the ground—computers, heavy radars, small gap-fillers, and instantaneous connections with the Norad command at Colorado Springs, all of them designed solely to intercept manned bombers? Above all, they fastened their attention on the Bomarc missile. Canada, they were told, was to get an improved version called Bomarc B, which would have a range of 400 miles compared with only 200 for the Bomarc A already installed in some of the United States SAGE sectors.

While the public for the most part neither understood the strategic thinking behind the air force's plans nor fully realised that the United States was paying for the new equipment (leaving Canada with only the cost of radar improvements, communications and construction amounting in all to about $125 million) it remained obviously sceptical. Suspicions might have been allayed if Mr Pearkes had been more skilful in advocacy than he was. Instead, Canadians received a series of reports that the Bomarc B missile had failed on its fifth, sixth and seventh tests, and each time Mr Pearkes reaffirmed his confidence in it. Finally the chief of staff of the United States air force went before a congressional committee last week to confess that the priority of long-range missiles made it necessary to prune defences against manned bombers. The chief victim, of course, was Bomarc B.

In the usual Washington manner, this news leaked out of a supposedly secret session of a congressional committee. Mr Pearkes, questioned about newspaper reports, characteristically refused to confirm them, explaining later it would not have been "honourable." Immediately afterwards Washington decided that

it must announce its new policy, and Canada's defence minister read the American statement to the House of Commons at the supper adjournment. A furore then broke out in the press and in public comment. Wrongly, it was proclaimed that Canada was sticking to the Bomarc missile which the United States was abandoning. In fact, the United States air force is keener than anybody in Canada to fill the gap which northern Ontario and eastern Quebec offer to any Russian bombers that might try to fly by the obvious route across Hudson Bay and James Bay towards the "industrial heartland" of the eastern United States. Cutting back anti-bomber defences around most of the United States, this was one sector where the Pentagon wanted to keep its best. But the fact that the Pentagon in Washington and Norad command in Colorado Springs had true responsibility for the installation in the Canadian sector, rather than the Canadian government, was not one that Mr Pearkes could proclaim with any pride of conviction to the Canadian House of Commons.

On Monday Mr Lester Pearson, as opposition leader, moved the adjournment of the house "to discuss a definite matter of urgent public importance," and, to the opposition's surprise, the Prime Minister asked the Speaker to accept the motion. Mr Pearkes described at length the consultations he had had with the American defence authorities, claiming that he was completely informed about their new plans. Yet in striving to establish the valid point that the American air force has not completely abandoned Bomarc B, he said that twelve American Bomarc bases would be kept besides two Canadian ones. In fact, the United States proposes to reduce its Bomarc bases from sixteen to eight. Fairly or unfairly, this error has seriously shaken confidence about the consultations with Washington.

There could not have been a better time for Mr James M. Minifie, the veteran Canadian correspondent in Washington, to publish his book pleading the case for Canada to adopt neutrality between the United States and the Soviet Union. The appeal of this line of thought can only gain from the present sense of confusion about defence policy.

A Letter from Germany

The following letter was written by a young German teacher at Munich university to an English friend who asked for his views on the political and social background behind the recent outbreak of swastika-smearing. It gives a vivid, balanced picture of the problems which democratic-minded young Germans have to face.

Dear ——,

I expect you know that I am a "non-political" person, that is, that I can't arouse myself to take an active part in political things; perhaps that is "typically German"—I don't know. But I have tried the whole time to follow the ugly manifestations of the new anti-semitism and neo-nazism both in the German press and in the English. I have not reached any solution or final judgment, but I will write down a few comments for you.

As far as the universities are concerned, there is practically no nazism or anti-semitism in Munich. It is perhaps not uninteresting that 2,000 students came to the memorial service for the Scholl brother and sister*. But if there is no nazism to be seen, with a few vanishing exceptions, one does notice on the other hand a frightening helplessness in the face of Marxist teachings. Here there is much ground to make up, yet I fear that nobody will run the risk of trying to make an "apology for democracy"; the economic miracle always seems to most people to be the best defence of democracy.

It seems bad that so many nazi professors are teaching again. When I say nazi professors I don't mean the extreme party members—these have really been for the most part pushed out—but the endless half-active people who never put up any opposition and swam willingly with the tide. Nowadays these people don't have the courage to take up a position on any question and personal success is usually more important for them than general problems. These men present a not unimportant danger because they are passive—and would at any time swear a new oath to any new government—including a communist one. A not unimportant number of young dons does, it is true, take a different stand, but it will still be many years before these people reach the top. (And may it not then be too late?)

Influence from the east is certainly at work. Unfortunately, however, the Bonn government is at pains to label all criticism which is levelled, say, at atomic arms as communist and to harry it where possible. The Bundeswehr plays a lively part in this. There is all too much inclination to rout out the pacifists (with harmless democratic means, naturally, like dismissing them from their jobs!). My brother, who is a primary school teacher and a former active officer, has already had occasional difficulties with his parents and superiors because of his now wholly pacifist point of view. I myself have more freedom in the university, but I observe the possible limitations on freedom of thought with concern.

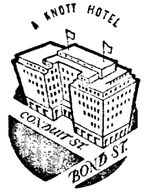
The foreign press and, unhappily, a large part of the English press, reports on German affairs in a very clumsy way. Partly it is straightforward propaganda. The articles are not always perfectly informed (I was able to test that in several places) and often a barely concealed hatred of Germany rises to the surface, which does not make a good impression here; England loses moral prestige as a result and in the end people say "Who do these people think they are? . . . Suez, etc." It really is ridiculous and primitive when contacts are made with eastern Germany, because (presumably) there are no Nazis there and all the good Germans are there while all the bad ones are over here. The right conclusion would be: put west Germany under Soviet rule, shoot a few thousand Nazis in west Germany, and then all the Germans will be good! Really, the English press ought not to write such nonsense.

One little thing which is, however, typical of the reporting. In the last *New Statesman* it was reported that two people turned up in SS uniform at a *Fasching** ball (so the news must be about Munich—though I hadn't heard about it). "They were turned away. Fancy dress, they were told was obligatory" (end of the article). What does this mean? Should one have laughed at these people and accepted the uniform as fancy dress? Firstly, there is a law that in *Fasching* all uniforms are banned. Secondly, if there are people who have such a sense of "humour" as to appear in uniform, one really can do nothing else but send them home. In addition, if my memory serves me right, some similar SS people also appeared at an earlier Munich *Fasching*, and turned out in the end to be Americans who wanted to be especially funny! As far as I know, an American soldier was involved in the swastika-smearing, too, and pushed himself particularly to the fore. So, please, an effort should be made to see that no nonsense is reported. I would like particularly to emphasise that the *Guardian*, for instance, reports very fairly about Germany; nothing is concealed, but one hears the positive side too.

I can give no recipe for the measures that should be undertaken to "educate" Germany to better ways even faster. But I believe that objectivity must bring results in these matters in Germany too, and that lack of it only makes the different attitudes even harder, which we all really want to avoid. So much then for high politics for today—unfortunately only the point of view of a young university teacher in a faculty where one is never very up to date.

* Two Munich students who were beheaded by the Nazis in 1943 for disseminating anti-nazi leaflets and ideas.

* Munich's annual carnival.



Chairmen vote for the Westbury

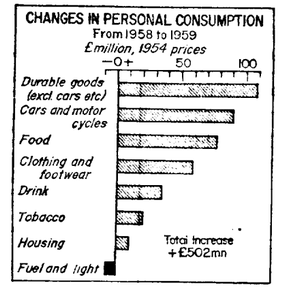
THE BUSINESS WORLD

Looking at 1960



Of course, the Surveys also reflect to some extent the views of the Government of the day ; at any rate, the adjectives do.
Sir Robert Hall, to the Radcliffe Committee.

FOR 1960, perhaps, the relevant adjectives are "further steady"—defining the kind of increase in investment and production that the Government aims at achieving "without damage to price stability or to the balance of payments." And it aims at that kind of increase, one might sense from the balance of the language of this year's Economic Survey, not without confidence. "Maintenance of the right balance between total demand and productive resources, vigilance about costs and prices and the securing of favourable circumstances for our export trade—given these conditions the country can look forward to a year of continuing progress."

Read along rather than between the lines, this survey of 1960 is notable among recent editions for being what it says: that is, primarily an appraisal of the year that it is published in, rather than a laboured recapitulation of the year before. It returns to the pattern of the 1954 and 1955 surveys in devoting about six pages to this year's prospect, rather than the page or two given to forecasting in the years between ; and it harks back to even earlier models in doing the looking forward first. Its account of 1959 is summary, with fewer details, as given the swelling flow of current statistics it should be ; one need not regret the particularising appendices that have disappeared (though should not the fuller details of public investment that appeared for the first time last year and have now been dropped be converted into an annual white paper ?). The fact that the hindsight in the survey is concerned mainly with what happened during 1959, rather than with comparisons between 1958 and 1959 (the comparisons here being focused on the fourth quarters of each year) is perhaps another acknowledgment of the fact that nowadays statistics are published more quickly and with seasonal corrections. So, perhaps, is the large amount of amendment of the figuring, back well into 1958, in this survey.

This year the surveyors are readier than of late to set down their guesses (with even a figure or two) about home demand in 1960:

Current expenditure by Government and public authorities, they reckon, is likely to rise 4½ per cent, against 2½ per cent in 1959, the biggest rise being in defence. (The estimates would suggest a rise of 5 per cent this year, but some of this is a rise in the pay of the Forces, which goes into personal consumption.)

Fixed investment is likely to rise "at least as much as in 1959—i.e., not less than 4½ per cent." This guess is built up from an increase of 6 per cent expected in public investment (against 6½ per cent in 1959); forecasts of increases of 14 per cent in manufacturing and 20 per cent in distribution and other services (against a fall of 9 per cent and an increase of 17 per cent, respectively, in these sectors in 1959) ; and a continued rise expected in private housebuilding (which rose by about a quarter last year). Would these add up to a rise in total fixed investment of only "as much as" in 1959?

Personal consumption, the surveyors expect, may rise by rather less than the 4 per cent by which it rose in 1959. Their main reason for this view is that credit is now tighter (unless they assume something else in the Budget). Against this is the huge cushion of personal savings that consumers could dip into.

Stocks, which the survey suggests rose last year by £235 million are expected to go on rising, but **the rate of investment in adding to stocks,** which is what is relevant to changes in demand upon the economy from year to year, is not expected to rise above the rate of 1959.

"Investment in stocks," said a Treasury paper presented to the Radcliffe Committee, "is extremely volatile and difficult to forecast." That was never truer than last year, when it was difficult enough to trust what evidence one could get after the event. Any predictions about changes in real demand and supply during 1960, as the authors of the survey frankly acknowledge, begins with the difficulty that one cannot be sure which elements in demand mopped up a large part of the extra resources that appear to have been supplied in 1959. There is a much larger unexplained discrepancy than usual between the evidence of growth in the economy from figures of income and output and the evidence from figures of expenditure (the first two showing an increase in the gross domestic product of 4 per cent (or more) between 1958 and 1959, and the third one of only 3 per cent). The Treasury says that "it is not possible at present to resolve the conflict ; the truth probably lies somewhere between the two alternative estimates." It provides its figures of national income in terms of the 3 per cent increase shown by estimates of expenditure—but adds, honestly, that considering the inherent quality of the data it tends to prefer the higher estimate. This is a difficulty arising from the collection of raw statistics (often on a sample basis), rather than in their interpretation ; the discrepancy is not new, but the extent of it appears to be widening.

Looking forward abroad, the surveyors consider the world prospect "reasonably

favourable for the United Kingdom"; demand for exports should continue to rise. The volume of imports, also, must be expected to rise "at least as fast" as the 6½ per cent by which it rose in 1959 and there may be a slight deterioration in the terms of trade. Exports therefore need to rise by more than the 5 per cent increase of 1959. But overseas loans and grants are likely to rise further this year, and so is private overseas investment. The Treasury is prepared—and even seems satisfied—to predict another deficit on Britain's combined current and capital account of the balance of payments this year, as in 1959, though the size of the deficit will depend on the current balance.

This sounds a far cry from the need to find the resources for "a surplus on current account averaging about £450 million a year in the early 1960s," of which the Treasury was telling the Radcliffe Committee no more than a year ago, to allow a substantial increase in Government lending and private investment, leaving "a substantial margin for reducing short-term liabilities and building up the reserves." In 1960 that substantial margin is apparently, as in 1959, to be negative.

On the Treasury's arithmetic, so far as one can infer it from these glosses, it may appear that total real demand in the economy will not rise as much in 1960 as it did in 1959. Against this, on the supply side, apart from the increase in imports, the survey postulates a small increase in the labour force this year, partly from an increase in the number of married women taking jobs, and partly from a further decrease in numbers unemployed (down from 1.6 per cent ?). It notes the reserves of labour in "unemployment districts" and assumes—somewhat in advance ?—that Government pressure to move industrialists around the country will marry up employment opportunities and people out of work in these places. Some of the increase in investment demand this year, it fairly points out, will be on engineering industries still operating below capacity (order books have hardly yet lengthened in these industries to the extent that the business forecasts about investment might have suggested they would). It relies upon a larger increase in labour productivity this year than the average over the past decade, though not as marked a rise as it rejoices took place in 1959 (which after all, it should be noted, merely offered some belated return on industrial investment since 1954-55).

OBSERVERS outside Whitehall may feel that the prospective increase in total demand has been somewhat under-called in this survey, and the extent to which production of the kinds required can be increased without strain on resources somewhat overcalled. The National Institute of Economic and Social Research, for example, in its latest *Economic Review* (published on the same day as the Economic Survey) is now inclined to reckon that "the increase in real demand will be as large as [from the beginning to the end of] last year—about 5 per cent—while the increase in money demand will be larger." It feels that the remaining reserve of labour to be drawn upon this year is smaller than was earlier forecast (on the basis of employment figures that the Ministry of Labour has revised upwards by 270,000 people): "the rise in demand cannot suddenly be orientated in these directions [i.e. industries and areas with spare capacity and labour] and the pressure on other industries and on labour in other areas may grow considerably." It reaches somewhat similar expectations about the balance of payments to those of the official surveyors, but is (O what a change was here. . . .) inclined to be more concerned about them. It is also more specific, and less sanguine, than the official survey about what it thinks may happen to costs and prices this year.

Fairly enough, the Economic Survey says that this year "The outlook for costs is uncertain." Fewer workers gained smaller proportionate increases in wage rates last year; but earnings rose 5 per cent, and the winter's increases in rates might raise hourly rates of pay by 5-7 per cent this year in the industries concerned. The Guillebaud award on railway pay is bound to have some spreading influence; and there are some signs, as the National Institute points out, that the salariat, who are better served with this kind of award than manual workers, may now be setting the pace in cost inflation. The official survey has an unhappily mealy-mouthed paragraph of gentle admonition, supported by a later exercise in befuddling the figures on factors in costs and prices, about the profit element in prices; profits per unit of output rose last year. The National Institute is not inclined to cry inflation too hard; but if profit margins do not change, it thinks a rise in prices of 1 or 2 per cent is likely. The institute, indeed, suggests some direct attention to prices on the part of the Government—by reducing tariffs to give our manufactured goods more competition from imports, by the banning of resale price maintenance, and possibly by cuts in administered prices such as steel.

Between this official reading of the signs for 1960 and the rather less optimistic readings that the National Institute, among other observers, would now offer, there are little more than differences of economic emphasis (though in political overtones, as a leading article on page 11 points out, the optimistic adjectives of this survey may have greater significance). The survey gives the impression that the rise in Bank rate in January, followed by the Bank's gesture in the gilt-edged market, may have exerted enough restraint for now; others feel it ought now to be reinforced in the budget. The National Institute, fearing that the motor industry may once again prove a generator of excess demand, would be inclined to damp down this industry's latest expansion plans somewhat before they are put into practice, by a rise in purchase tax (adding, with a sophistry worthy of any Chancellor, that this "would not directly influence the retail price index; it does not include new cars").

Nobody would suggest that Britain is yet approaching any

roaring inflation; the difference of opinion is simply about how soon and how much one may need to retard the pace of advance, particularly in consumption and the industries serving it, to avoid inflation without losing the underlying momentum of the economy. To quote Sir Robert Hall once more, "The Government should have, and in fact, I think, has, the best statistics available," plus unequalled experience in trying to interpret them. But again, "... in the end, it is one's own judgment from the feeling of the thing about how things will go."

ISHRA's Task

"THE hope of the Government is that, within the lifetime of the present Parliament, the (Iron and Steel Holding and Realisation) Agency will complete its duty of substantially returning the industry to private enterprise. We are very hopeful that conditions will be such that the Agency will be able to make significant progress during the course of this year."

The Economic Secretary to the Treasury: March 22nd.

OTHERS besides Mr Nabarro have been perplexed about the current oddities of finance for the steel industry. The Government has landed itself in a circus act, and the ringmaster from Kidderminster has been having an enjoyable time flicking his whip at this spectacle of two horses being ridden in opposite directions. To be committed to the denationalisation of steel and committed also to the provision of £120 million of public money for the erection of new steel plants to be under private control suggests certain equestrian dangers.

Mr Nabarro was in some difficulty too: "We want," he said on Monday, "some of the money invested, but we do not want all of it invested." Which then raises the question: How much? The Government is committed by agreements barely a year old to provide £50 million for a new steel strip mill at Colvilles and £70 million (this apart from other money to be raised from ISHRA) for the new steel works and strip mill of Richard Thomas and Baldwins at Newport. Colvilles intend now to use as little of their loan as possible. RTB, on the evidence of Mr Geoffrey Eley's statement last month, will be a short-term borrower, for the company expects to repay it by 1971 and "without difficulty to pay a proper return on our capital" and carry out further expansion and improvements.

So this horse of an odd colour may not be too troublesome to manage in the end, and Mr Nabarro may get his wish. It will still have the result, for a time at least, that the public stake in steel will get bigger, which is an odd kind of denationalisation. What is the other horse carrying? Too much weight, alas, to be a very good goer. It has only one equity issue of any importance—RTB's ordinary capital standing in the books at £21 million. It has £132 million of prior charge obligations and £33 million preference capital of companies whose ordinary shares have been resold to investors. (These are together entered in the agency's books at the lower total of £125 million.) And it has £20 million of miscellaneous smaller holdings, of which Staveley forms a third. Beyond this, it has promised at least £30 million to RTB and £40 million to Steel Company of Wales. ISHRA's interests in steel, now and in prospect, are therefore around £240 million, while the Government is committed to finding up to £120 million. So the public stake can be put at a maximum of £360 million. When ISHRA was set up in July, 1953, it took over securities valued at £252 million—so that a hard man might say that it has not made much progress.

ISHRA sold the ordinary capital of nine of the ten major companies it acquired in July, 1953, in less than four years, along with about forty smaller ones. These companies were responsible at that time for about five-sixths of the industry's employment and output of crude steel. Since March, 1957, the agency has sold virtually nothing. That is not exactly its fault. For most of 1957 and all of 1958 dispute continued over the laying down of further capacity to produce steel strip—and in this argument the largest company still owned by the state, Richard Thomas and Baldwins, was directly involved.

By the time compromise solutions had been found late in 1958, the shadow of the general election put any further selling out of the question. Since the election buried the danger of renationalisation, steel shares have risen about 90 per cent in value. (It is worth remembering how long some of them stood at a biggish discount after they were re-sold a few years back.) But the agency did not take advantage of this post-election euphoria to sell off RTB; it may have felt some scruples about taking precipitate advantage of a roaring market and it must have felt some uncertainty about policy for further disposals. Now the Government, putting the finishing touches to its loans to Colvilles and RTB, leaves no doubt of its continued intention to denationalise—with the hope of "significant progress this year" as Mr Anthony Barber has said.

The task remains formidable in size and complexity—with the complexity stemming both from real marketing problems and also from public relations. Take RTB's ordinary capital first: £10,829,000 nominal, standing at £21,076,000 in ISHRA's books. RTB has spent over £33 million on development in the last five years, and its net tangible assets come to £58 million. Last year's earnings on issued capital were equivalent to over 60 per cent, and on assets employed over 10 per cent. It is clear that the agency ought to have a good chance of selling this ordinary holding for about £40 million—that is £4 a share at present issued and a profit for ISHRA of around £20 million. This would be consistent with earnings yields on existing shares now ranging up to 15 per cent and dividend yields up to 5 per cent. The problem here is not merit, but size; the agency has to repeat an operation on the scale of the Steel of Wales offer, which was a difficult one. To adapt the words used recently by the Governor of the Bank of England, a lot of money would have to chase this addition to the supply of good class equities to lift it off the market.

CAN denationalisation be regarded as complete after this is done? Politically perhaps, but not in the broadest sense so long as ISHRA holds £132 million nominal of debentures and £33 million of preference shares. The debentures range from 4½ to 5¾ per cent, so that the current value of the stocks (taking a 6 per cent market rate) would range from 75 to 96. These prior charges, ISHRA might argue, represent pound for pound the money that the agency has put into the industry and it would not do to sell them for less. This is the public relations point—to avoid the accusation of selling them off cheap. But there is another side to this argument. There is outstanding £233 million of Treasury 3½ per cent stock, 1979-81, originally issued as compensation, also standing around 75. These two different prices balance, and anything that the agency sold for 75 it could match by a redeeming purchase of steel stock for the same figure. ISHRA would, in effect, be all square and the only losers would be the original holders of steel stock.

This is so simple that it may defy Treasury ingenuity to bring it about. But the prospects would not be too bright for a series of big debenture issues, with Steel of Wales's £65 million of 5½ and 5¾ per cent debentures as the biggest lumps. Has any consideration been given to tap issues of these and other stocks, through a merchant banking house or for that matter through the Government broker? Is there no possibility of selling some part of them by tender? The first necessity is no doubt to sell RTB ordinary. But in the remaining term of this Government the opportunity should be pressed to dispose of blocks of prior charges, without serious regard to the argument about selling too cheaply if, as is most likely, they have to go at a sizeable discount. During that time the steel industry itself would be making calls on the market and ISHRA's operations would have to be timed accordingly. But the denationalised section of the industry last year was enjoying a cash flow of £60 million towards an investment programme of about £100 million, and it is certain to be far bigger this year.

The difficulties, as usual, argue themselves. Yet they are not of an impossible kind if they can be met with ingenuity and more freely ranging techniques than the agency has so far mustered. It is time for it to get into business for the last stage of its operations.

BUSINESS NOTES

BUDGET OUT-TURN

The Accounting Figures

As expected, the Exchequer figures released on Thursday night show a much larger ordinary budget surplus in the fiscal year that has just ended and a much smaller net deficit after debiting capital items than Mr Amory expected last April. But this improvement (in the conventional sense of the term) in the budget accounts denotes no commensurate improvement in Budget prospects next Monday. If there is any correlation nowadays between the performance of the Exchequer accounts and the appropriate policy decisions in the ensuing budget it is a negative correlation. The reason why last year's tax cuts left ordinary revenue considerably up on the year is that, partly as a result of the budget stimulus, taxable incomes grew faster than expected. The fact that they grew faster, and that at their buoyant level they are sure to provide another built-in increase in revenue in 1960-61, is not a source for tax cuts, which stimulate demand, but evidence of the need for restraining demand.

The final surplus above-line comes out at £387 million; that compares with a budgeted surplus of only £102 million, and is actually a little bigger than the surplus in 1958-59. Ordinary expenditure was broadly on target; but ordinary revenue, expected to fall by £155 million, actually rose by £151 million. Net capital expenditures "below line"—largely for nationalised industries—fell short of expectations, and the "overall" deficit was £314 million, compared with a budgeted £721 million. In comparisons with figures in earlier years, it should be remembered that before the 1956 budget nationalised industries other than the Coal Board did not draw their finance directly from the Exchequer (though they did indirectly); on the other hand, the Exchequer then bore the brunt of borrowings by local authorities, which in autumn, 1955, were shifted to the market.

IN THE MARKETS

Budget and Africa

PRE-BUDGET week has passed quietly in the London stock markets, as many people expected it to. A year ago there were big tax reliefs to discount; this year the optimists are hoping for "no change." If Mr Amory's proposals turn out to be mild, the removal of uncertainty could give some renewed fillip to equities. If he is plainly too mild, the fillip might possibly be strengthened in the first instance but subsequently undermined by fears of the need for new restraints in the summer; if, surprisingly, the Chancellor presents a tough budget of substantial tax increases, gilt-edged should stand to gain.

Price movements and the volume of business this week have been small both in gilt-edged and in most industrial shares—with the notable exception of shares of companies with substantial interests in South Africa. The sharp fall in this section is reported on page 16; by mid-week it was casting a shadow over the markets as a whole. In the week to Wednesday *The*

Economist indicator was little changed, at 361, compared with 343 three weeks before and the peak of 378 on January 6th. In the gilt-edged market there have been some further sales from the banks, but these have not pressed on the market.

"SHELL" TRANSPORT

Shell's Good Dividend

STOCK EXCHANGE dealers, who had cautiously expected "Shell" Transport to do no more than to adjust the tax-free ordinary dividend for last year's reduction in the standard rate by raising the payment from 18¾ to 20 per cent were taken completely—and very pleasantly—by surprise when on Thursday Shell announced a total tax-free dividend for 1959 of 4s. 9d. per share (that is 23¾ per cent). The £1 shares were immediately marked up in after hours dealings by 5s. 1½d. to 155s. 7½d., to yield almost exactly 5 per cent. This is yet another in the succession of good blue chip dividends this year. As a result, equity yields in comparison with gilt-edged yields are looking more reasonable than, say, three months ago.

The figures from the Royal Dutch/Shell group continue the strong trends in recent quarterly reports. Progress quarter by quarter is shown in the accompanying table. It shows considerable stability in gross margins over the last eighteen months, though there has been a slight fall in the last quarter of 1959. These gross margins are now strictly comparable as regards tax; the last two quarters, however, include the earnings of Canadian Eagle which the group absorbed completely last year. For the year as a whole the group has scored advances in output, sales and profits with the level of prices substantially unaltered. Strength in surplus as well as in scarcity has been demonstrated by this international giant. Its gross production of oil (including quantities received under special supply contracts) rose by 11 per cent, to average 2,465,000 barrels a day, and sales of crude oil and oil products, averaging 2,495,000 barrels a day, rose by 8 per cent. Refinery runs were also 8 per cent higher, at 2,369,000 barrels a day. In value, total sales and other income rose by over 9½ per cent, from £2,352 million to £2,579 million.

The group has continued to trim costs, as the other oil companies have done, and as a result its earnings before tax and depreciation were some 11 per cent higher at £522 million. After higher charges for tax and depreciation, the net income of the group was also 11 per cent higher at £175½ million, against nearly £159 million in 1958. From this income dividends amounting to £58 million, against £46 million, have been declared to the parent companies and shareholders cannot complain that they have been forgotten.

AIRCRAFT INDUSTRY

A Bunch of Carrots

THE aircraft industry has now been told in more detail of the terms on which the Ministry of Aviation is prepared to subsidise new civil aircraft; in the Minister's own phrase, it "is sniffing the carrot and I am waiting to get its reactions." This time the Government has no intention of signing a blank cheque; whatever phase of development Mr Sandys agrees to support, be it preliminary research, or design, or tooling for production, the Government's contribution will be limited to its agreed share of the original estimated cost, and if the estimate is exceeded, the company alone will have to find the extra money. This is the intention. Whether the Ministry will be as stony-hearted when put to the test has yet to be seen.

Among the candidates for Government support, the Ministry has already agreed to provide a share of the £8 million judged necessary to complete the development of the Rotodyne; it is expected to provide something towards the development of the de Havilland 121 jet airliner now being built for British European Airways and to do the same for Vickers-Armstrongs's competing VC 11 jet if Vickers can produce some customers. It may conceivably contribute towards aircraft already in production; the industry will certainly ask it to do so. Two projects falling into this category are Hawker-Siddeley's small Avro 748 transport, and Vickers-Armstrongs's big VC 10 jet, both in the form in which it is being built for BOAC and in its "stretched" version.

Government support for the VC 10 could be important to Vickers, since the new British Aircraft Corporation formed by Vickers, English Electric and Bristol Aeroplane is not assuming financial responsibility for aircraft such as the VC 10 which were already in hand when the corporation

was formed. The first members of the new board—but not the chairman—will be announced next week. The resignation of Mr Peter Masefield as managing director of the Bristol Aircraft Company strengthens the presumption that Vickers-Armstrongs will become responsible for aircraft production and English Electric for missiles.

But the biggest candidate for Government support is the supersonic airliner; both aircraft groups are due to submit their thoughts on this to the Minister during April. Hawker-Siddeley is proposing an airliner flying at something above 2,000 miles an hour, or three times the speed of sound. Because its skin temperature would reach 350°C, such an aircraft would have to be built of steel. The British Aircraft Corporation, impressed by the difficulties met by Bristol Aircraft in attempting to build a stainless steel research aircraft due to fly this summer, has pitched its sights lower, to speeds of about 1,500 miles an hour where skin temperatures remain at 175°C, well within the tolerance of existing light alloys.

POST OFFICE

A Step Towards Freedom . . .

AMONG Britain's nationalised industries the Post Office is the eldest by close on a century but, until the changes that were announced this week, it has been denied many of the advantages enjoyed by its younger sisters. Technically and commercially it has been going through a minor revolution in the last few years; now its organisation, too, is to be partly modernised. The telephone service, which provides most of its profit and absorbs most of its new investment, is progressively being developed towards a state of almost complete mechanisation, with a genuine prospect of considerable savings in operating costs and a much simplified, and more sensible, structure of charges. Two swingeing tariff increases, in 1955 and 1957, went far to put all its potentially remunerative activities on a sound economic basis. And, for the last five years, the Government has re-applied in a modified form the proposals of the Bridgeman Committee in 1932 to give the Post Office the appearance of "self-contained" financial status as the only government department that indulges extensively in trade—currently to the tune of more than £400 million a year (not counting the "banking" facilities that it provides, which involve handling more than £5,000 million annually).

Thus a clear limit has been set upon the use of the Post Office as a source of general revenue for the Exchequer: a fixed annual contribution, set at £5 million a year in 1955, was to be paid to the Treasury as a rough commutation of the taxes it would expect to have to pay as a fully commercial, trading organisation. But it was still subjected to the 170-year-old rule that

all moneys the Government receives must be paid into the Consolidated Fund and that all payments must have specific parliamentary and Treasury approval. It was still treated, not as a self-contained business, but like any other department disbursing the proceeds of taxation.

The further changes the Postmaster General announced this week, which will require legislation—promised for the next session of Parliament—will take this logical step forward when the present five-year trial period expires in March, 1961. The current finances of the Post Office, including provision for depreciation at current replacement cost, will be contained in a new statutory trading fund, completely severed from the Exchequer and freed of "meticulous" Treasury control. The confusing alternative set of cash accounts will disappear; so will the provision for Post Office self-balancing revenue and expenditure in the budget. An ampler report and accounts, on a normal commercial basis, are to be produced each year, and the responsibility of the Post Office since 1955 to balance its income and expenditure "taking one year with another" is to be made statutory.

. . . as Far as the Reins Allow

THESE changes in the status of the Post Office are intended to give it "greater commercial freedom . . . under the direct control of the Postmaster General, subject to his obligations as a member of the government and to parliament." But as spelled out in this week's white paper (Cmnd. 989) these obligations are likely to give him as much—or as little—real independence as before. Naturally, one could hardly expect the Treasury to give up the same control as for other public industries over investment policy and over capital borrowings needed to finance investment not provided for by depreciation (now rather less than half), as well as the annual payment in lieu of taxes: or Parliament to relinquish its right to receive full reports, to ask questions about routine matters as well as general policy, and to scrutinise the accounts through the Comptroller and Auditor General and the public accounts committee.

But three further obligations, two of them new, could invite too much interference. Treasury control of the pay of Post Office staff, who will remain civil servants, may be an inevitable part of the logic of continuing to run the Post Office as a government department. But Parliament has been provided with two additional, and questionable, means of control. The Postmaster General's power to draw on his trading fund will lapse annually unless it is renewed by an affirmative resolution of the House of Commons; and in future all, instead of some, Post Office tariffs are to be subject to Parliamentary approval. No doubt these proposals arise from some idea of providing parliamentary accountability of a nationalised industry that has no competitor and will have to provide some "social" services that are unremunerative. But no nationalised industry has previously been asked to seek the sanction of MPs for all its price changes or been made liable to a possible annual withdrawal of its working capital as if it were a suspect standing army. These two new proposed powers will need careful examination. They could become fashionable.

WALL STREET

What Institutions Hold

NO one knows just how big the role of institutions is in the London stock market, but on Wall Street the New York stock exchange provides the figures. At the end of 1959, all institutions together held $51 billion of listed common stocks (i.e. excluding bonds) out of a total of $308 billion, at market values. In ten years the market value of the institutions' holdings has risen fivefold; yet the share of the total is still no more than 16.6 per cent. The private investor is still a much weightier influence on Wall Street than he is in London. The fastest growing institutional investors in America are pension funds (up from $0.5 billion to $10.8 billion since 1949) and open-end investment companies (from $1.4 billion to $12.8 billion). It is intriguing to see that college and university endowments are as large as the funds of life insurance companies.

COTTON INDUSTRY

The Wreckers Depart

THE wreckers downed hammers in Lancashire's mills last Thursday—the deadline for scrapping nearly half the spindles (12.4 million out of 25.3 million) and two-fifths of the looms (105,000 out of 259,000) put into the Government's reorganisation scheme. Because business is good most firms put off scrapping as long as they dared, but only a few—accounting for three per cent of both the spindles and looms to be scrapped—have been granted an extension of time. The loss of capacity is gradually being offset by more shift-working. About two million spindles are now working two shifts, compared with only one million last June, and a few firms have introduced a third night shift as well. The number of looms on two shifts rose by 2,000 to about 28,000 between June and January, and those on three shifts rose sharply by 4,500 to 12,500; more looms have been put on to shifts since then. An extreme measure of the gain in output per head is given by comparing output and the labour force last January and in January 1959, when short-time working was widespread. Output of yarn and cloth rose by about seven per cent during this period, and the labour force fell by about eight per cent, from 206,940 to 191,100; employees in spinning dropped by 10,500 to 75,000, and in weaving by 5,770 to 91,920; doubling, exceptionally, showed a small increase in workers (and a big increase in output).

This surgical operation has proved less painful than Lancashire feared. There are signs that the shortage of textiles is beginning to ease: though spinners' order books are still exceptionally long (nearly six months on average), they are not quite as long as they were, and weavers' order books have probably shortened a little too. Unemployment in the north-west region as a whole in March was in fact lower than a year ago. Though there is hardship in some districts, many mills are still short of labour. Many old mule spinners have not found other jobs, but their younger colleagues evidently have, in ring mills or other industries, and some of the married women have gone back into the home. It will be some time before employment

SEE SAW IN BILL RATES

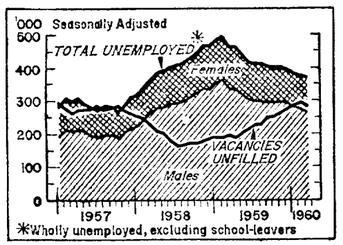
This year, as last, money rates have been moving in opposite directions in London and North America. But now it is London that is going up and New York and Canada where rates are falling, from the peak levels of last summer. The upshot is that whereas in the second half of 1959 bill rate in London, exceptionally, was below New York, it is now 1¾ per cent above it, and 1¼ per cent above the Canadian rate.

settles down, and before the industry knows how much it has paid in compensation to displaced workers. The spinners' current guess is about £2½ million, and the weavers' is £2-£2½ million. Spinning firms that have not closed down are likely to pay out, in compensation to employees and for the scrapping of other firms' machinery, about as much as they are receiving in compensation for scrapping their own. The remaining weaving firms will pay out more than they get back, because the proportion of firms closing down completely is much higher than in spinning. It will be longer still before the response to the Government's re-equipment subsidy becomes clear.

AIR TRANSPORT

BEA Breaks the Sound Barrier

On Friday, British European Airways closed its most successful financial year yet, and opened its first jet services to Europe, flying Comets to Athens and Moscow. The corporation also made history by becoming the first airline to be allowed to fly jets by night into and out of London airport, a concession that caused sharp questions to be asked in the House of Commons on Monday. It is possible to argue that BEA's Comet 4s, having smaller wings and carrying considerably less fuel than those of BOAC or the even bigger jets of American airlines, can get off the ground sooner, climb away faster than heavier machines, and thus cause much less nuisance. But there is not much doubt that this is the thin end of the wedge; the Ministry believes that anyone who can sleep through the take-off of a piston-engined aircraft can sleep equally soundly when a jet goes overhead, and may cautiously extend the concession to other small jets and ultimately even to the big ones.



BEA is introducing jet services roughly a year behind its main European competitors; later this summer it faces the difficult task of introducing a second new aircraft, the Vanguard. The cost of route proving with the Comet has probably eaten fairly heavily into the corporation's profit, and although it ended the calendar year 1959 with a net profit of £2 million, it is likely to end its financial year with a rather smaller balance, perhaps £1.5 million. This is still a very creditable achievement, since BEA's route network is made up almost entirely of the kind of short journeys which most airlines have to subsidise out of profits earned on their longer routes. But conditions in 1960-61 may be more difficult, not because traffic is falling below expectations, but because the corporation is introducing two new aircraft types, which inevitably increases engineering costs. BEA has already noted an alarming tendency for these costs to rise of their own accord since the move to its mammoth new engineering base. This rise could be accelerated by the introduction of the Vanguard, if not also by the Comet, because airworthiness requirements demand much more frequent overhauls of new aircraft types when they first enter service. With the Vanguard, however, much of the cost of route proving before it goes into service may be paid by the Ministry of Aviation, in accordance with a promise made by Mr Sandys to the corporations to take some of the sting out of his new Air Licensing Bill.

MANPOWER

Unemployment In and Out of Season

For some years the Ministry of Labour has calculated for its own use seasonally adjusted figures of unemployment and of unfilled vacancies. These were zealously guarded until Mr Macleod gave them some publicity last year. An article in the current issue of the Ministry's *Gazette* has now outlined the methods used and the estimated extent of the normal seasonal movements. But the Ministry still fights shy of offering an actual series of adjusted figures: it offers the reader the wherewithal to do his own arithmetic but seems to add, "Be it on your own head if you do."

The assumption behind such estimates are that the normal seasonal movements are independent of the level of unemployment

—that is, the Ministry adds or subtracts an absolute number rather than a percentage. Although probably rather less accurate than adjustment by percentages of the totals, especially when there are considerable short-term changes in the level of unemployment, this simpler method makes it easier to interpret monthly changes and to combine together unemployment in different industries.

A major complication in interpreting trends in unemployment and vacancies statistics is the effect on them of the number of school-leavers and the relation between the dates on which counts are taken and the ends of school terms. Accordingly the Ministry has excluded school-leavers from its exercise on seasonality in unemployment; but it cannot do likewise for vacancies. In future, the Ministry will publish monthly figures of "wholly unemployed persons excluding school-leavers."

The new calculations can be used in two ways: they can be applied to the original unemployment figures so as to eliminate seasonal factors as far as possible (as is done in the accompanying chart) or they may be used to show the expected normal change from one month to the next. Thus, the table shows that when this month's figures appear, a seasonal drop of about 23,000 may be expected in the numbers wholly unemployed (other than school-leavers) and a rise of about the same order in the number of vacant jobs. Unemployment normally goes on falling until July and the total seasonal decline from the January peak is about 100,000.

Seasonal movements may vary from year to year (the Ministry of Labour's calculations are based on an average for the period 1949-58). Moreover, adjustments for them will remove neither random fluctuations nor the effect of such abnormalities as extreme weather conditions. Too much, therefore, should never be read into a single month's count. Nevertheless, in spite of all the snags, some attempt at assessing seasonal changes must be made to understand these labour statistics. It is a welcome move that the Ministry of Labour has at last disclosed its hand, even if rather cautiously, and so relieved private estimators of tackling the job without the full information.

HARD TIMES FOR THE REVENUE

The Duple Case

Things are not going well for the Revenue this Hilary Term. Hard on the heels of the case of the second-hand suit come the Court of Appeal decisions in favour of car body builders and medical consultants. In both, the taxpayer will sense a commonsense reasonableness in the views of the judiciary: in both he may wonder whether the scales were not balanced precariously and doubt whether anything is final in the fiscal world until the Lords have had their say.

The Duple Motor Bodies case concerned the proper basis of valuing work in progress. The company did not add on-cost and had

Building Societies Reform

The opportunity has been taken in the new building societies bill to give all the law relating to building societies a modern look. The need for reform—in particular the need to protect investors from misrepresentation—was pressing, and the bill now puts in legal language most of the reforms that have long been urged, including the suggestions in our issue of January 30th.

Limits on Advances

The primacy of mortgage advances to owner-occupiers, leaving a reasonable opportunity for advances on commercial buildings, property development and big mortgages is secured without involving nice legal distinctions between owner-occupiers and other borrowers. The bill simply prohibits any established society from lending more than 10 per cent of its total advances in any one year on so-called "special advances." Special advances include:

(a) Advances of any amount to a corporate body.

(b) Advances of more than £5,000 to any person.

(c) Advances that would raise the mortgagor's personal debt to more than £5,000.

Mushroom societies that have been lending money for property speculation and development are dealt with in additional clauses designed to restrict future business of this kind to a bare minimum. If at the end of any year, special advances already amount to between 10 and 25 per cent of total advances, new special advances in the following year will be limited to 2½ per cent. If they are more than 25 per cent, no further advances can be made in the following year. The Chief Registrar of Building Societies will be empowered to raise these limits at the request of an individual society if he is satisfied that the special advances will go to building houses or flats to let. He will have the ultimate sanction of presenting a winding-up petition to the courts for any society that does not comply.

The bill also tries to ensure arm's length mortgage business by prohibiting any director, manager and secretary of a society or anyone with a financial interest in a property from making valuations. A director with a direct or indirect interest in a contract (such as a shareholding in a company to which an advance is made) must declare it to his fellow directors and the society must give details of such advances (including particulars of the shareholding) in an annual return made to the registrar.

Investments

At the moment societies can invest surplus funds only in the present range of trustee stocks. The bill provides that in future these funds should either be placed with an authorised bank or invested in a scheduled list of securities prescribed by the registrar with the consent of the Treasury. This extension will apply to the purchase of any new securities only; the list will be published when the bill becomes law and it is to be hoped that equities will not be included.

New Societies

It is now possible for four people, paying a fee of £20, to start a new society. The bill requires at least ten, each of them to subscribe £500 in cash in taking up the society's shares and to hold them for five years. To prevent evasion of this provision through the resurrection of moribund societies, the bill gives the registrar power to require similar shareholding qualifications for directors of a society with assets of less than £100,000 if it has changed its shape or character. The registrar will be able to prohibit a new society from using a name which he considers undesirable.

Advertising

The new bill provides that:

(a) No new society shall advertise without first securing the registrar's permission.

(b) The registrar shall have power to make general regulations governing the manner and form of advertisements for new money.

(c) For any individual society, he shall have power to ban the issue of any advertisement, require its withdrawal, or give directions as to its manner or form.

The Registrar's Powers

In addition to specific powers of control, the bill gives the registrar wide-reaching powers to act quickly in several matters:

(a) On 14 days' notice, he can require the production of books, documents and information to facilitate investigations.

(b) At his own volition and unhampered by any qualifying clauses, he can, at 14 days' notice, set an investigation in train.

(c) Whereas, under present legislation, he can order only a "stop order" on advertising, he will be able to prohibit the receipt of any new money on shares or deposits where he "considers it expedient so to do in the interests" of investors or potential investors.

(d) If, after issuing such an order, he is not satisfied that a proper proportion of the funds is being used to repay old investors he can petition the courts for a winding-up order.

Rights of Members

The bill, in effect, imposes a model set of rules on societies in which the rights of members are defined much as the rights of shareholders were defined in the 1948 Companies Act. It requires the societies:

(a) To keep proper books of accounts.

(b) To present to an annual general meeting a report and accounts in a form prescribed by the registrar. These will have to be signed by properly qualified auditors as giving, *inter alia*, a true and fair view of the society's affairs.

(c) To give every new investor a copy of its latest accounts.

(d) To send each year a copy of the annual report and accounts to any member who owns more than £25 in shares.

(e) To send a copy of the accounts to any shareholder or depositor who asks for it.

(f) To file with the registrar an annual return, framed in accordance with the registrar's requirements, which would include details that would not necessarily appear in the annual accounts.

(g) At the request of any shareholder or depositor to send him a copy of the annual return.

(h) To give every member entitled to vote the right to demand a poll and to vote by proxy.

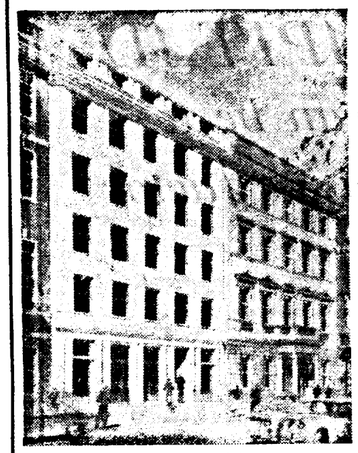
(i) To compile a register of members (entering names and addresses only) and to open that register to inspection by members so long as their application to do so is not considered "frivolous."

Mutual Protection

The bill would make it possible (as it has not been hitherto) for societies to aid each other:

(a) A society can, with the registrar's consent, lend money to another which is in "financial difficulties." (This seems to echo the Scottish Amicable affair.)

(b) The societies can establish a mutual guarantee fund.



(c) The societies can insure their funds to protect investors against the possibility of loss.

(d) Unless they secure special dispensation from the registrar, any societies proposing to merge will be required to send to their members detailed particulars of the state of their finances and the terms of the merger, including any compensation to be paid to directors. (This seems to echo the Sheerness and Gillingham affair.)

Thus the new bill governs every aspect of the affairs of a building society. It has been welcomed by the Building Societies Association—as well it might, for the association must have had a big hand in framing its contents. It offers a measure of protection to investors in building societies enjoyed by few, if any, other investors. It confirms a prime distinction on the title of building society. Once it comes into force—as it seems likely to do without substantial amendment—the societies will be able to pursue the job of lending to owner-occupiers and borrowing from the saving public on terms that are better secured and should be free and competitive. The bill represents a departure from the old friendly society basis of the building society towards an organisational form much better tuned to modern needs.

A MAGNIFICENT NEW OFFICE BLOCK

IDEALLY SUITABLE FOR A COMPANY HEADQUARTERS

6 ST. JAMES'S SQUARE S.W.1

sq. 106,000 ft. INCLUDING A PRIVATE GARAGE

TO LET

WITH POSSESSION IN JUNE, 1960

Sole Agents:

D. E. & J. LEVY, ESTATE HOUSE, 58, HAYMARKET, S.W.1 (WHI. 0161)

C. H., over 3,500 sq. ft.

RENT £4,250 p.a. ex.

HERTFORD COURT

14-15 HERTFORD STREET, MAYFAIR

A newly constructed building of flats comprising 2 bedrooms, reception room, fitted kitchen, tiled bathroom.

To be let without Premium

Leases 7 yrs. *rent from £750 p.a. ex.*

Garage Space Available / All Modern Amenities

ASHFORD, KENT

CORN AND STOCK FARM 180 ACRES.

Close to this thriving and rapidly expanding Town

Georgian House

5 bedrooms, 3 reception rooms, box room. Main services, cottage of 4 rooms and bathroom etc.

Excellent Farm Buildings

Includes 10 bay steel and asbestos barn, attested cowhouse, timber barn, etc.

FREEHOLD WITH POSSESSION

THE JASPER CASE

New Charges

ON Wednesday the prosecution concluded its evidence at the City of London Court on the charges against Mr Grunwald, Mr Jasper and Mr Murray. All three were sent for trial at the Old Bailey. They all pleaded not guilty and reserved their defence and were allowed bail of £40,000 each. The proceedings had lasted for two months, and at the last of the sixteen hearings four further charges were made against Mr Grunwald and one against Mr Murray. All three are defending the charges listed in *The Economist* of January 16, 1960, except that the charge of false pretences against Mr Jasper in an alleged transaction with Mr Lazarus Nidditch of Ely Brewery on September 14, 1959, has been replaced by one of making a reckless statement. New charges against Mr Grunwald are that he fraudulently converted to his own use £150,000 entrusted to him by the State Building Society (Mr Murray is charged with aiding and abetting in this alleged fraudulent conversion); that he fraudulently applied £100,000 while a director of R. E. Jones and Company; that similarly he fraudulently applied another £40,000 while a director of that company; and that while a director of Rubens Rembrandt Associated Hotels he fraudulently applied £10,000.

The final witness for the prosecution was Mr Davis Leigh, an official of the Registrar of Friendly Societies, who said that he conducted an investigation into the State Building Society in September and October last year. At that time, £4,489,100 of the society's assets had been advanced to the Jasper group of companies and so far as he could ascertain only £100,000 or £200,000 had been repaid.

At the conclusion of the case, Mr Morris Finer for Mr Jasper said that if anybody asked what the "Jasper Case" was about, the answer would be the alleged conversion of £3,250,000 from the State Building Society. Mr Finer said: "I wish to make it plain on Mr Jasper's behalf that it has never at any time been suggested, let alone charged against him, that he, by so much as an inkling, has been concerned in that matter." Mr Finer added: "In our submission no one from today onwards is entitled to call this case the Jasper Case."

MONTAGU AND WOOD HALL

Merger with a Difference

THE new is to be linked with the old in a somewhat complicated deal arranged between Samuel Montagu, pre-eminent as bullion and foreign exchange dealers for over a century, and Mr Michael Richards, chairman of Wood Hall Trust, which, since its reconstitution in 1952, has grown rapidly as an industrial holding company. Samuel Montagu has acquired from Mr Richards 360,000 5s. ordinary shares in Wood Hall Trust at 35s. each, slightly below Wednesday's market price of 35s. 9d. This represents 12 per cent of the issued capital and the major part of Mr Richards' holding. It has also bought the 100 Wood Hall management shares at 140s. each; these shares

Insuring East-West Trade

FROM A CORRESPONDENT IN VIENNA

WHEN the occupation troops pulled out of Vienna in 1955 there was considerable speculation about the future possible role in the international field of the superannuated Hapsburg capital, in size and structure so obviously disproportionate to the reduced administrative needs of modern Austria. Some of the city's former eminence has since been restored by an influx of world atomic officials. And there are now signs that Vienna, officially neutral and ideally situated, is developing into an *entrepot* of trade between East and West.

One manifestation of this is provided by the "Garant" insurance company, set up in 1958 on Soviet initiative as an Austrian company with a paid-up share capital of Sch. 6,000,000 (£80,000) and a mixed Austrian and Soviet supervisory board. The avowed object of the new company was to plug the gaps in credit insurance in East-West trade; its management aspires to stimulate this trade by offering forms of cover not normally obtainable from established underwriters. For this reason recently published details of Garant's first full year of operation may make interesting reading for the intending British exporter to Soviet block countries and China. Garant certainly cannot be dismissed out of hand, as it has been by the Vienna correspondent of a national newspaper, as a Soviet political manœuvre.

Undoubtedly the most attractive aspect of the facilities offered, particularly for extended credits, is the complete cover available against the risk of non-payment. Countries within the Soviet block are in fact looked upon by credit insurance organisations in the West as prompt and scrupulous payers: the commercial risk is much smaller than in the United States. It is the political risk alone that excludes such countries from top status accorded by organisations such as the Export Credits Guarantee Department and Germany's Hermes. Garant's policy not only covers the political risk at a low premium but, adducing the company's neutral domicile as an added advantage, the management offers a 100 per cent cover. Western institutions, where they cover the identical risks, prescribe an acceptance by the client of his own liability for 5 to 15 per cent of the total cover. Moreover, because of its especial position, Garant claims that its policies facilitate clearing business, a regular feature of trade with some Soviet block countries.

TOTAL premiums on insurance and reinsurance business transacted by Garant in its first year amounted to about 30 million Austrian schillings (over £400,000). Cover is also currently offered for transport insurance of every description, with attendant risks (e.g., civil commotion, confiscation, strikes, etc.); machinery breakdown, with guarantee; assembly of machinery; and insurance for trial runs. Cover for non-payment is subject to the sole exclusion of rejection of goods by virtue of "rejection of quality," this being a matter of fact determinable by the contracting parties. Rates of premium do not compare unfavourably with ECGD, and Garant is prepared to negotiate special rates where large capital goods contracts are involved. Such contracts are likely to predominate in Britain's exports to the Soviet block and Chinese markets for the foreseeable future. Garant reports that apart from numerous small contracts it has already covered "a whole range of larger risks, where cover reached a sum of Sch. 100 million and beyond."

Granted the apparent commercial seriousness of Garant's initiative, which has clearly awakened considerable interest in Western Europe (particularly in Western Germany), there are still two drawbacks in the way of the British manufacturer considering the use of Garant facilities. The minor drawback is that Garant cover is available only to those who place their marine and transport insurance with it. The major drawback is that the manufacturer has to obtain finance from his own banks, which usually require an unconditional guarantee of payment from ECGD in the event of default by the customer. At present it is very doubtful whether banks in Britain would accept as an alternative a guarantee by a company based abroad with a substantial Soviet interest. However, on the Continent, particularly in Western Germany, it is understood that an increasing number of manufacturers are finding it possible to get credit on the basis of a Garant guarantee, and to take full advantage of what appear to be commercially reasonable terms.

carry one-third of the total voting rights, but it is a condition of the sale that these special voting rights should be surrendered. In exchange, Samuel Montagu would be given a three-year option to buy up to one million shares at 40s. in the first year, with the price rising by 2s. each year. If this option were exercised, Samuel Montagu would then hold just over one-third of the ordinary capital and would thus have virtual control. With the proceeds of the sale Mr Richards will acquire an unspecified holding in Samuel Montagu and become a managing director.

The interests of Wood Hall Trust range over the wine and spirits field through David Sandeman to the estate and property business through Davis Estates. It also controls Hart, Son and Company, merchant bankers. This concern is to be sold separately to Samuel Montagu for £600,000—having cost Wood Hall Trust £75,000 five years ago. In addition, before the purchase is completed, Hart, Son and Company will pay to Wood Hall a tax free dividend of £100,000, reflecting about nine months' profits in the current year. Thus Samuel Montagu will be brought not only into the industrial field but through Hart, Son and Company will participate for the first time in active new issue business.

For shareholders of Wood Hall Trust the advantages are not so immediately obvious. They are not to receive a bid for their shares since it is considered that in the long term they will receive greater benefit from retaining their holding. That may well be so since Wood Hall Trust will now have Montagu's substantial backing, though it will have, presumably, less concentrated attention from Mr Richards. Full details of the deal and current information on the company's trading will be sent to shareholders shortly, on which they will be asked to give their approval.

LEAD AND ZINC

According to Plan?

The recent recovery in lead and zinc prices tends to confirm the forecasts of the United Nations conference last January. The conference found that lead would still be in surplus, despite the expected rise in world consumption this year. It therefore suggested that sales should continue to be restricted at least for the first nine months, and the cuts offered by producers reduced the apparent excess to a rate of only about 50,000 tons a year. In zinc, the conference found that even with supplies unrestricted this year there would be a deficit of roughly 75,000 tons which could be made good mainly from commercial stocks (which are excessive only in the United States) and by sales from the British Government's stock. Subsequently both metals weakened in the London market, lead mainly because of the indifferent outlook, and zinc mainly because of the delivery of surplus American metal here. In the last few weeks forward zinc has almost fully recovered, closing on Thursday at about £91 a ton, and prompt metal again commands a premium. As supplies do not yet seem to have returned fully to normal, zinc might move higher for a time, provided no more American metal comes on the market. In the United States itself producers' stocks of zinc fell in February for the fifth consecutive month, neatly illustrating the conference's point. Lead is evidently responding to the rise in consumption and the restrictions on sales. Forward metal has risen by £2 15s. to about £76 a ton, which is £7 dearer than a year ago, and prompt metal commands a small premium. Producers are no doubt delighted by the recovery, but with most of 1960 before them they may be reluctant to trust the most carefully framed forecasts too far.

BALANCE OF PAYMENTS

Sterling Area Recovers

The Economic Survey and a separate white paper on the balance of payments* confirm that the whole of last year's decline in Britain's current surplus was attributable to a fall in the surplus with the other sterling countries, from £427 million to £219 million. The deficit with non-sterling countries declined a little further, to the low level of £74 million. With North America there was a surplus of £143 million, after crediting net invisible payments of £154 million. The surplus on invisible payments as a whole declined from £251 million to £203 million; the main cause was a drop in current overseas earnings of the oil industry, reflected in the drop in "other (net)" from £380 million to £316 million. As the balance of visible trade swung from the exceptional 1958 surplus of £98 million to a deficit of £58 million, the current surplus as a whole dropped from £349 million to £145 million.

The overseas sterling countries improved their balance with non-sterling countries as well as with Britain. The rise in their exports was not yet reflected in a rise in import spending, and their current deficit with non-sterling countries dropped from £445 million to £179 million, while their receipts of capital from non-sterling sources, a record £392 million in 1958, still reached £306 million last year. The sterling countries were thus able to raise their London balances by £184 million, to £2,703 million at end-1959. Holdings of non-sterling countries fell, but only as a result of special transactions by the German government, without which there was a rise of about £20 million.

The balance of payments paper provides interesting figures (which should surely form part of the regular series) of the division of sterling balances in official and other hands. These show that between end-1957 and end-1959 holdings of central banks and other official funds remained more or less unchanged, at around £2,500 million. But private balances in London rose sharply, from £764 million at end-1957 to £961 million a year later and £1,008 million at the end of last year. The sharpest increase in these balances has been in the balances of residents outside the sterling area, though the private balances held by sterling area residents are still the higher in total. Details of the form in which overseas-owned balances in London were held in 1957 and 1958 are given in an appendix to the memoranda of evidence to the Radcliffe committee (Vol. 2, page 218).

LUBRICATING OIL

Competition in the Sump

The new oils introduced in the last week by Regent and Shell are a sign of the efforts that the petrol companies are making to obtain a larger share of the market for motor lubricating oil. This is apparently one of the more profitable sides to the oil business—the motorist buys in small quantities, and shows little awareness of the price that he pays. It is still dominated in Britain by Castrol, much to the irritation of the major oil companies that sell Wakefield some of its base oils and see most of its sales made through the garages that they control. Castrol claims that it still has about half of the retail oil sales, the same proportion as it had before the petrol companies began their campaign for exclusive selling amongst the garages—though some rivals maintain that its share has fallen and is now less than half. Shell is believed to be the second best selling oil, with perhaps a fifth of the market, followed closely by BP, and then by Esso with about a tenth of the market; Mobiloil has about a twentieth and Regent rather less.

Total deliveries of lubricating oil to the home market, 925,200 tons last year, have not risen as fast as the number of vehicles on the road; they went up by under 3 per cent between 1956 and 1959. About two-thirds of the total is sold in the retail motor market. Modern cars have smaller sump capacities than old ones, need the oil changing less frequently, and burn less of it. Castrol seems to gain the strength of its position from the appeal of its XL grade to the owners of older cars; XL forms some 70 per cent of its sales. The petrol companies' oils, with their emphasis on such qualities as detergency which may be undesirable in an old car, seem to be aimed more at new cars, for whose needs they compete with Castrolite. Regent's new Havoline oil, for example, is claimed to be the most detergent of any on the British market, as well as having additives that are claimed to reduce sludge formation and wear. The Shell oil has additives claimed to leave no ash if burnt in the combustion chamber, as the normal metallic additives would: this could be a most useful property in a high-compression engine.

The companies that have suffered most from the oil companies' exclusive dealing practices are the smallest, which can no longer sell their products through most garages, and Mobiloil. This is seldom sold by other petrol companies' sites, which are obliged by demand to tolerate Castrol; from being the second best seller a decade ago, Mobiloil fell to the back of the field, though it is recovering ground as it opens more petrol stations. This gives Castrol some reason to fear a similar fate. But supplies of base oil can be obtained from independent oil companies on the Continent or from the United States—such as Ashland, the American company that makes Valvoline lubricating oil and has just begun marketing through garages in Britain. And competition with the major oil companies still seems a little easier in lubricating oil than in petrol.

TEA PRICES

Check to the Fall

The sharp decline in tea prices, especially of plain tea, was checked this week. At Wednesday's auctions in London plain tea held steady at the lower prices reached on Monday, and higher quality teas were often slightly dearer than on Monday. For the week as a whole plain tea sold at 3s. to 3s. 6d. a lb., which is about 10d. below the high prices prevailing at the end of last year. The trade is far from unanimous about the reasons for the decline: some argue that it is largely attributable to a decline in quality, which is in any case indifferent at this time: others say that quality has not deteriorated further.

But clearly buyers must have thought recently that their stocks were high enough,

Gilt-edged Encyclopaedia

A leading firm of stockbrokers in the gilt-edged market has issued a further supplement to its *chef d'œuvre* "British Government Securities in the Twentieth Century." This remarkable piece of research includes a full analysis of the national debt in each year this century, a full history of each individual stock, and an interesting series of charts showing the fluctuation of prices and yields of each stock within each period between changes in Bank rate. This year the compilation also includes two revealing tables published in the evidence to the Radcliffe committee, showing for the first time the portfolio of the Bank of England Issue department, though the latest of them run to March 31, 1957.

DISTRIBUTION OF NATIONAL DEBT

Total	4,195	100	18,630	100

* Not known.

At that date the portfolio of about £2,000 million of the Issue Department was split fairly evenly between bills and gilt-edged securities. Its gilt-edged holdings, together with those of the National Debt Commissioners, amounted to 20 per cent of the nominal total valuation, and other public departments and the Banking Department held another 4 per cent. Holdings other than in the main financial institutions are believed to have been about 40 per cent of the total. Official holdings of Treasury bills are proportionately more important, at 37 per cent, but all but the great bulk of these holdings is in "tap" bills supplied only to the departments. Holdings of the commercial banks and discount houses form a larger portion of outstanding Treasury bills than of market securities, but the Radcliffe figures confirm that "outside" holdings of bills have been rising in recent years.

In its introductory survey, the firm of stockbrokers refers to the general fashion of decrying gilt-edged. But it offers a telling footnote to the recent agitation for the Government to alter the terms of 3½ per cent War Loan; in all but one of the first seventeen years of the stock's life the price was well above par. The survey also refers to one singular advantage of gilt-edged over other investments, their mobility: "one large fund has calculated that the switching profits from its gilt-edged portfolio outweighed in the past year the increases in dividend from an equity portfolio of comparable size".

Some new information on recent movements in gilt-edged appears in the Economic Survey, with a time lag notably less than the seven months on which the authorities have insisted hitherto. Over 1959 as a whole, the authorities purchased a "substantial" net quantity of stock. Sales were not pressed on the market; but the reason given by the Treasury is that it was thought undesirable to check business recovery—not that to press sales at any time is impracticable.

and that they could afford to sit back in the hope that prices would fall. Now that prices have fallen, they are buying more freely. The increase in the quantities offered in the London auctions (largely owing to a seasonal rise in arrivals from Africa) probably contributed to the weakness of the market, and there has also been a sharp increase in arrivals of low-priced tea from Formosa and Japan, the bulk of which is sold direct, not through the auctions. Buyers may also have been influenced by the apparent decline in British consumption so far this year. Producers of plain tea in North India will hope that prices will soon improve. Few of them can sell tea in London at a profit at current prices.

POTTERY

Down the Drain

ONE of the secret worries of the pottery industry seems to be keeping the colours on its plates in face of modern methods of washing up. Some of the best decoration is done by putting the colours on top of the glaze and then firing them; "on-glaze" decoration therefore tends to be used for the more expensive products. But it is also liable, under certain conditions, to wash off in the sink, in spite of all the research done by manufacturers to find more durable colours. The current issue of the *Pottery Gazette* shows that soap is, surprisingly enough, the worst offender; it gives a clean bill of health to about thirteen of the synthetic detergents on the market (the Consumers' Association considers most of these fairly harmless to on-glaze decorations).

But as the *Pottery Gazette* shows, in its illustrations of plates stripped of every fragment of colour after a few hours' immersion in washing-up water, the damage is done not by the detergent alone, but by a combination of detergents and high temperatures. And the most dangerous temperatures, from 140°F to 180°F, happen to be within the range recommended for use in four separate dish-washing machines now on the market. Under the circumstances it is probably small comfort to housewives to know that on-glaze decoration under this kind of rough treatment stays on china, which is fired at high temperatures, rather longer than it does on earthenware.

PETROLEUM GAS

Pressure on Price

LIQUEFIED petroleum gases—butane and propane and mixtures of the two—do not sell as well in Britain as they do on the Continent and in the United States because they cost too much. United Kingdom consumption last year was in the region of 125,000 tons, compared with an estimated 820,000 tons in France, 600,000 tons in Italy and 320,000 tons in western Germany. But sales have recently been increasing rapidly (only 90,000 tons were sold in 1958) and one of the largest distributing companies, Calor Gas, is hoping to quicken the pace of expansion by finding new uses and by selling more cheaply on long-term contracts to industry. About 600,000 tons of liquefied petroleum gases are available as a waste product of United Kingdom refineries every year, but high distribution costs have so far ensured that most of it is wasted: until a greater quantity is transported in pressure tanks by rail, costs will remain high.

This means that the price per therm for domestic users (and industrial users in small quantities) is today around 46d, compared with, say, 33d. for electricity; 22d. for town gas; and 11½d. for paraffin (15d. for supergrade). There are some things that butane and propane can do better than other fuels, however, and in these fields sales have gone ahead smoothly. They are better for caravan heating and lighting, for some kinds of internal combustion engines (costs are saved when LPG is used in fork-lift trucks), and for industrial processes requiring a high steady flame and great cleanliness, the mass brooding of chickens, or the manufacture of special qualities of glass. But the balance of sales is expected to swing from domestic and commercial use to wider use in industry, including more sales to regional gas boards which use liquefied petroleum gas to enrich supplies in their grids. Factories that do not use gas might also provide a potential market. To help LPG compete in these markets, new contracts are being negotiated at more competitive prices—the result of pressure on an industry which has reached the end of the road of specialised sales at high prices.

SHORTER NOTES

Letters from the Underworld: Imperial Chemical Industries, which operates Britain's only salt mine, announced a reduction in the price of rock salt this week, from 68s. to 63s. a ton. The mine, at Winsford in Cheshire, is to be modernised, and output is to be increased from 150,000 to 300,000 tons a year. Most of this output is bought by local authorities, who use it to keep roads clear in the winter.

*

British films brought in nearly £5 million in overseas currencies in 1959, just slightly less than in 1958. Dollar receipts, at £1.2 million, were rather higher. These figures comprise, mostly, sums actually remitted to this country, not total earnings, and they also exclude the earnings of television films. A further £2.2 million (against £2.6 million) was received from blocked sterling accounts for the production or purchase of British films. At home, the decline in cinema going appears to be slowing down.

*

The National Council of the Passenger Vehicle Operators' Association has announced that it intends to form a trade association for self-drive car hire firms, of which there are now over 500 operating in Britain. Some of the proposed association's stated aims are admirable, such as ethical advertising and clearly stated tariffs; some are grandiose but rather unnecessary (e.g., a Seal of Quality and Integrity, and the regulation of insurance on hired cars, which is covered by existing law). Others, such as the elimination of price cutting and of credit cards, and the control of entry into the business, sound downright reprehensible. These last aims ("the benefits that only co-operative action can bring") are, however, outside the scope of the present Restrictive Trade Practices Act, which does not cover the provision of services.

*

The full monthly statement of the London clearing banks shows that in the four weeks to March 16th, net deposits fell by £127.2 million to £6,559.3 million. In that period "true" advances to borrowers other than the State boards rose by over £63 million, somewhat less rapidly than suggested by the individual statements discussed in these columns last week.

*

Holders of the ninth issue of national savings certificates, issued between 1951 and 1956, will be able to keep them beyond their original term of ten years; they will increase in value by 9d. a year, with an additional bonus of 6d. at the end of the seventh year. The yield of £3 12s. 8d. tax free over seven years compares with over £4 4s. on the current issue of certificates, but the switch is not worthwhile to people who may not keep their holdings for a full seven year term.

*

The World Bank has granted three loans totalling the equivalent of $40 million to the Belgian Congo to develop African agriculture and improve transport facilities. The loans are for terms of ten and twelve years and bear interest at 6 per cent; they are guaranteed by the Kingdom of Belgium. Private institutions in Belgium and other countries are participating in the loan to the extent of $5.7 million.

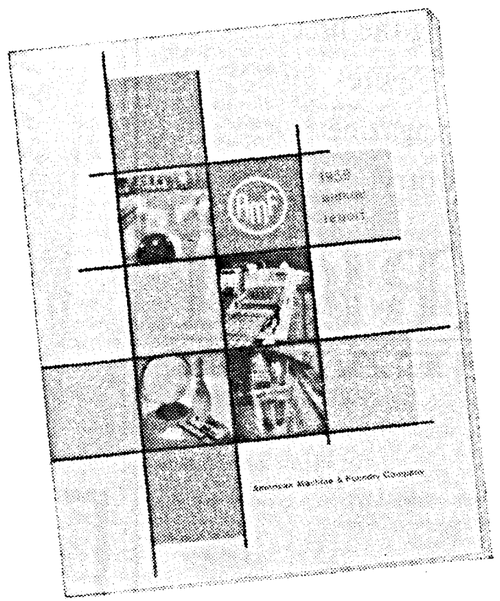
INVESTMENT in AUSTRALIA

Great interest is being shown in the United Kingdom at the present time in the possibilities of portfolio investment in Australia. To give authoritative information on this subject, *A.N.Z. Bank* has just published a new 68-page booklet "*Investment in Australia*", which covers in some detail such matters as



- ★ **Avenues of Investment**
- ★ **Securities for Portfolios**
- ★ **Trade or direct investment**
- ★ **Investment Intelligence**
- ★ **Brokerage, duty, taxation and exchange control**
- ★ **Services for investors and companies**

Copies are available free on request.

New performance records set by AMF

In 1959, American Machine & Foundry Company enjoyed the most successful year in its history. AMF's 26,077 stockholders and 13,475 employees can well be proud of this achievement. Furthermore, successes recorded in 1959 promise even healthier revenues and profits for 1960—AMF's 60th anniversary year.

A few of the highlights of 1959:

New Records — AMF sales and rentals totalled $283,754,000—an increase of 23% over the year before.

Net Income Up 67% — AMF net income increased 67%—$19,043,000 in 1959 compared with $11,423,000 for 1958.

1959 Stock Split and Dividend Increase — AMF common stock was split two for one on October 16, 1959, and a dividend of 32½¢ per share on the new shares was paid in the fourth quarter—the equivalent of 65¢ per share on the old shares... a 30% increase. 1959 marked AMF's 33rd consecutive dividend year.

Backlog & Future Rentals Rise — AMF ended the year with a record backlog of $158,372,000, which does not include future rentals from leased machinery.

Best Bowling Year — AMF Pinspotter installations far exceeded expectations.

R & D Expansion — AMF research and development facilities were expanded and the program broadened.

Record International Sales — AMF international sales volume increased 84% over the 1958 high.

All of these accomplishments, plus many more, are detailed in the 1959 AMF Annual Report. We will be pleased to send you a copy.

COMPANY MEETINGS

THE BRITISH OIL AND CAKE MILLS LIMITED

MR ESMOND ROBINSON'S SURVEY OF WIDESPREAD ACTIVITIES

The Annual General Meeting of The British Oil and Cake Mills Limited will be held on April 21st at Unilever House, Blackfriars, London, EC4.

The following is the Review by the Chairman, Mr Esmond Robinson, OBE, MC, which has been circulated with the report and accounts for the year ended December 31, 1959:

I should like to begin my first Chairman's Report by paying a very warm tribute to the invaluable services rendered by my predecessor, Mr Guy Chipperfield, who retired at the end of May. His Chairmanship, which began in 1948, covered the difficult transitional period during which oils, fats and feedingstuffs passed out of Government control, and his able and inspiring leadership which at all times pervaded not only the management, but all members of the Company—in the field, in the offices and in the factories—has brought added strength and prosperity to the Company, particularly in the development of its compound cake business. He has done invaluable work, too, for the National Seed Crushers' Association and for the International Association of Seed Crushers, the Presidency of which he still holds.

I have to record with deep regret the death of two former Chairmen of the Company—Mr John Westall Pearson and Mr Wilfrid Ward Cooper—since the last Annual General Meeting.

Mr Pearson was Chairman from 1910 to 1940. He was for many years the leading figure in the Seed Crushing industry and had a great influence for good on its industrial relations, being Joint Chairman of the Seed Crushing Joint Industrial Council from its formation in 1921 until his retirement. He was mainly responsible for the inauguration of the International Association of Seed Crushers and was its first President, an office which he held until 1951.

Mr Cooper was Chairman of the Company from 1946 to 1948. Although his term of office was hemmed in by postwar restrictions, he carried the Company through a most difficult period with great ability and determination.

It is also my very sad duty to record the sudden death in September of Mr Edward Campbell. He was appointed Director in charge of our operations in Scotland and Northern Ireland only last March, and his loss at the age of 50 is a grievous blow to the Company. Mr Kenneth Spreckley has been appointed to succeed him.

SEED CRUSHING AND EDIBLE AND TECHNICAL OILS

The tonnage of seed handled by our mills during 1959 showed a welcome increase over that of the previous year, and our share of the national total, which itself also was bigger, has been fully maintained. There was, however, a change in the pattern of seeds handled, this being largely due to the fact that supplies of copra and palm kernels continued to be inadequate. Soya beans, however, were in plentiful supply, and the larger quantity of oil and meal produced from these was readily consumed. It has, in fact, been encouraging to see soya oil used to an increasing extent both for edible and technical purposes. While developing countries expand their crushing plants and handle more home-grown oilseeds such as groundnuts, copra and palm kernels, rapid agricultural advances in North America and China have led to a much greater production of soya beans and during the years ahead we can expect that these will play an ever increasing part in the Seed Crushing industry in this country.

PRICES OF OILS AND FATS

It is, I think, of interest to record again the prices ruling throughout the year of some of the principal oils in which we are interested. You will observe that, generally speaking, 1959 was a year of rising prices, but, except for occasional and short-lived periods of marked price movements, the tenor of prices has been fairly even. The absence of any serious international crisis has obviously contributed to a more stable market and has allowed the economic factors of supply and demand to play their normal roles.

PRICES OF IMPORTED CRUDE OILS AND FATS
(Per ton, c.i.f./ex Ship)

	Dec. 31, 1958 £	Mar. 31, 1959 £	June 30, 1959 £	Sept. 30, 1959 £	Dec. 31, 1959 £
Palm oil	83	89	93	82	85
Whale oil.....	78	76	79	78	78
Lard.....	90	84	78	71	71

The increase in the price of groundnut oil at the end of the year reflects a considerable reduction in the estimate of the Nigerian Groundnut crop for the 1959-60 season. The prices of palm kernel and coconut oils naturally ran closely together and they may perhaps remain relatively high until world supplies of copra are restored to the level obtaining before the severe drought in the Philippines at the end of 1957.

Although national consumption of margarine throughout 1959 was greater than that for the previous year, largely because of high butter prices, our deliveries of oils and fats to margarine manufacturers declined. This was due chiefly to abundant supplies of cheap lard which seem likely to continue to be available for some time. Trade with biscuit manufacturers was also adversely affected by these plentiful supplies of lard and by the high level of price of the lauric oils. With other trades our business was reasonably well maintained, and increased export business to our associated and third party customers, coupled with increased sales of technical oils, enabled our 1959 deliveries in total to match those of previous years.

Our mills crushed more linseed than in the previous year and, although for long periods imported oil from the Argentine provided competition at prices uneconomic to the home crusher, our business in linseed oil showed some improvement. An increase in the supply of castor seed available to this country enabled us to make preparations to restart our castor mill in Hull at the turn of the year.

COMPOUND ANIMAL FEEDINGSTUFFS

Our sales of compounds increased substantially during the year, reaching a level considerably above that recorded in 1958. The increase was most marked in dairy foods, closely followed by that in poultry foods.

DAIRY INDUSTRY

During the last two years dairy farmers have had to contend with two extremes of weather, both inimical to milk production—the wet summer of 1958 and the prolonged summer drought of 1959. During the winter of 1958 a high level of concentrate feeding was needed in order to redress the poor quality of grass products made in a wet summer. Even so, by the end of the winter a marked change in the supply of liquid milk had taken place. The surplus of 1958 had almost vanished and a serious decline in the milk available for manufacture had come about. The size of the national herd had also declined and, at the beginning of 1959, the number of cows in milk was 120,000 less than the year before. There were naturally fears that the dry summer which followed would make it difficult to meet the demands of the liquid market itself, but in the event all these demands were met. Farmers were able to maintain their yields in spite of burnt-up pastures by turning over to winter rations much earlier than they would do in a normal season. This produced a strong demand for our dairy foods in the late summer and early autumn which was maintained until the end of the year.

These two seasons, with their completely contrasting weather conditions, have shown clearly the vital place which compounds play in milk production. Whatever may happen to other forms of fodder, compound dairy food provides a standard ration of constant quality capable of maintaining milk yields under all conditions. A significant sequel to the early feeding of dairy concentrates referred to above has been that in the last two months of the year the total milk output has begun to rise again despite the reduction in the size of the national herd.

MILK YIELD COMPETITION

Our 21st annual Milk Yield Competition was held in 1959 and at the annual Luncheon we were very glad to welcome Lady Netherthorpe, who presented the prizes and Lord Netherthorpe, who replied to the toast of the British Dairy Farmer.

A record number of 244 dairy farmers entered their herds which, with an average of just over 1,000 gallons per animal, produced between them 8,330,000 gallons of milk over 12 months. The economic significance of high yields of this nature may be judged by a comparison with the officially estimated national herd average of 720 gallons per cow. Thus, the 8,328 animals in the Competition delivered over 2¼ million gallons of

milk more than a corresponding number in the national herd, the value of this extra milk being £370,000. Another way of looking at it is that on the national herd average it would require 11,750 cows and heifers to produce a yield equivalent to that of the 8,328 entered in the Competition.

Looking back over the years since the Competition started in 1927, it is interesting to recall that there are now 23,000 nationally recorded herds compared with only 5,000 then, and that the average of those recorded herds is today 850 gallons per animal compared with 524. It is, I think, impossible to over-estimate the benefits which the growth of recording has brought, not only as a guide to the feeding, breeding and management of the herd, but also to the culling of its inefficient members.

BEEF PRODUCTION

The Company has continued to play its part in the expansion of beef production in the UK. Our work on testing bulls of the Aberdeen Angus and Beef Shorthorn Breeds for daily liveweight gain and economic feed conversion has proved of great and general interest, and this work which was inaugurated as a service to our dairy farmers is being continued in current tests with the Beef Shorthorn. We are glad to acknowledge the co-operation of the West of Scotland College of Agriculture, Durham County Council, Durham University, Aske.m Bryan (West Riding County Council) and Sutcleworth College in testing the progeny of these bulls.

POULTRY

Sales of poultry foods were maintained at a high level throughout the year, with the demand for our Hen Battery/Deep Litter Foods in particular showing substantial increases. During the year returns to commercial egg producers showed some decline due to the inability of the market to absorb the number of eggs coming forward at peak periods. The consumption of eggs at home is, however, below that of some other countries, notably the United States and Canada, and there is every reason to suppose that, with enlightened marketing consumption can be raised.

The production of table chicken continued to expand during the year, and this was reflected in an increasing demand for our broiler foods. The Hi-Gain Rations which we introduced towards the end of 1958 have produced some outstanding performance figures. We have extended our facilities at Stoke Mandeville, where exhaustive tests are being conducted into all aspects of broiler nutrition.

During the year we have started to publish certain details of egg quality, taken from data relative to our "500-Day" Random Sample Laying Trials. Similar facts are commonplace in America, but none have previously been reported in this country. They show that breeders must pay greater attention to the subject of internal quality if they are to lower the incidence of blood and meat spots, adverse features to which housewives strongly object. At the present BOCM Hen Battery Laying Trials (1959-60) every egg laid in Section I is being examined daily for its internal qualities.

PIGS

The pig industry suffered some setback during the year due to a big decline in the breeding herd and the low returns being paid to bacon producers. The market for pork and manufacturing pigs, however, which takes two-thirds of all the pigs slaughtered at home, remains strong, and there has been an increasing tendency for producers to switch their pigs to those markets which offer better returns. Nevertheless, with lower pig numbers, the demand for pig foods in general suffered particularly during the latter part of the year, when the full effect of the decline in the breeding herd began to make itself felt.

Pigs intended for both pork and bacon must put on weight rapidly at an economic cost. Our Research Establishment, which has been working for some years on the nutritional implications of this problem, completed its work during the year and we were able to introduce two new high-performance pig foods which incorporated the important results of this research. These foods should enable rapidly growing pigs to put on weight faster, whilst consuming less total food. Although these two foods were only introduced in the autumn, promising reports on their performance are already being received from commercial producers.

In our Barlby testing work we are re-introducing a pork section, as we believe it is important to obtain more information concerning the production of a meat that has grown so much in popularity.

In our boar performance testing conducted at Stoke Mandeville the capacity has been increased so that we can now test one hundred boars a year. Even so, the demand from farmers for places by far exceeds this number. We believe that the speed and economy of this form of testing gives it certain advantages over progeny testing. However, at this particular stage, performance testing should not be regarded as a replacement for progeny testing, but rather as a pre-screening that will ensure that only boars which have indicated good breeding qualities should go forward to the Progeny Testing Stations.

SHEEP

The higher level of prices paid to sheep farmers for both meat and wool has led to an increased interest in the correct use of concentrates for sheep and lambs, and our sale of Sheep Foods has made satisfactory progress. During the year we have conducted a number of experiments to assess the economics of early weaning systems when applied to ewes and lambs, and work along these lines will continue during the coming year.

FARMERS' VISITS

"Come and see them made" has been a Company slogan for many years, and over 8,500 farmers have visited our Mills during the last 12 months. In addition, our four farms have welcomed over 14,000 visitors this year, of which number 3,500 came from all parts of Great Britain—many parties in special trains—to Barlby for the two Spring Open Days, which have now become an annual feature at this farm.

A welcome and mutually beneficial feature of the farm visits has been the steady growth of interest on the part of scientific bodies, including members of the veterinary profession. This year, for example, we had the opportunity of holding a special Open Day at Barlby Farm for the Agricultural Section of the British Association for the Advancement of Science on the occasion of its Annual Congress at York.

FILM PRODUCTION

Since the production of our first advisory film, in 1948, our library has grown to 24 films on almost every aspect of cattle, pig and poultry husbandry. This year, in a film on Winter Milk Production, we were fortunate enough to secure the co-operation of Mr Kenneth Russell, Principal of Shuttleworth College and a leading authority on dairy husbandry, and the film has already been shown to over 15,000 farmers throughout the United Kingdom. It is confidently expected that, despite the attractions of television this nation-wide audience will have grown to 40,000 by the end of April, when the Company's nine film exhibition units close their nightly activities until next October, when a new season begins.

AGRICULTURAL ECONOMICS

Farmers are examining more and more closely the management and organisation of their business in an endeavour to bring about improvements in any of their individual enterprises and thereby an improvement in profits. With this in mind, the Company has this year added a new section—Agricultural Economics—to its other advisory operations. This section has started by looking primarily into feed economy on the dairy farm as its first investigation, and a survey has already begun on a number of farms in the South and West of England. Other livestock enterprises will be investigated as time goes on.

COMPOUND RAW MATERIALS

Cereal prices maintained a fairly constant level through the year, the outstanding feature being the record crop of home-grown barley. Before the War the home crop was about 1 million tons, of which hardly a ton went into compounds. In 1959 the crop was about 4 million tons, of which the biggest single user was the Compound industry. Our Company did its full share in taking supplies from the farms during the harvest glut and has continued to do so since, when deliveries have been more evenly spread, and we have been able to meet our requirements of barley entirely from the home-grown crop. This year's excellent quality has of course helped considerably and there are signs that the farmer, with improved drying and storage facilities, may be more prepared to sell forward, which is essential if we are to keep the quantity of our home-grown purchases at a maximum.

High-protein cakes and meals met a rising demand largely because of the dry weather both at home and on the Continent. Prices hardened substantially during the year—the difference between the lowest and highest figures being as much as £8 10s. 0d. per ton. Animal proteins, due to a world scarcity in the early part of the year, also showed higher levels, but values tended downwards towards the end of the year.

COMPOUND PRICES

At a time when there is so much talk about prices in every field of industry, it is interesting to find that the prices of our main lines of compound feeds are still appreciably lower than they were at the end of Control, although their quality and productive efficiency is far higher now than it was then. Dairy foods are about £2 lower, while our pig and poultry foods are between £4 and £6 per ton lower than they were in August, 1953. The fall in the price of many of our principal raw materials has naturally contributed to this, because raw materials account for such a large proportion of their total cost. At the same time we have been greatly helped in keeping our prices down by the fact that since August, 1953, our manufacturing and marketing costs have increased by only 18 per cent notwithstanding an increase of about 36 per cent both in our basic

wages and clerical salaries, and corresponding increases in the costs of fuel, power and other services.

ACCOUNTS

As will be seen, the trading profit rose from £4,905,379 for 1958 to £6,176,655. The increase of £1,271,276 was due partly to the expansion in the sales of animal feeding stuffs, to which I have already referred, and partly to improved results from our trade in edible and technical oils. Although our sales of edible oils were lower than in 1958 there was some improvement in the margins we obtained and profits were made from the movements in market prices recorded on page 8. Our technical oil business had a better year to which the increased throughput of linseed contributed. Notwithstanding the improvement in 1959, profits from our oil trade still do not show an adequate return on the capital employed in it.

The profit of the year after providing for taxation was £3,288,527 and after including released provisions for taxation of previous years of £221,810, which arose mainly from a lower liability to income tax on the profits of 1958 as a consequence of the reduction in the standard rate of income tax to 7s. 9d. in the £, the net profit was £3,510,337. Dividends on the preference and preferred ordinary stock absorb £247,768 and it is proposed to distribute the balance of £3,262,569 to our Parent Company, which holds all our ordinary capital.

Turning to the Balance Sheet, capital expenditure in 1959 amounted to £1,815,000 compared with £1,370,000 in 1958. The investment in stocks and debtors rose from £16,525,455 at December 31, 1958, to £19,869,671 at December 31, 1959, the increase of £3,344,216 being largely due to the additional finance required for our animal feeding stuffs business because of increased sales, higher prices and an abnormally large holding of home-grown grain at December 31, 1959.

PRODUCTION CAPACITY

To meet the increased demand for animal feeding stuffs plans have been made for augmenting production capacity in London, Avonmouth and Manchester. Work has gone forward on the mill in Northern Ireland for Associated Feed Manufacturers Limited, in which we have an interest, and its completion will relieve some of the demand on our Renfrew factory. Our Leith Compound Mill closed down in April and Scottish manufacture is now concentrated at Renfrew. Comprehensive arrangements have been made for the storage and delivery of compounds to be maintained at Leith. All the new and modernised plants have been working to full capacity. Provision has also been made in all areas for more raw material warehousing and for improved facilities for storing and delivering finished products which will help to meet the growing need for special purpose rations of all kinds.

The rate of capital expenditure on increased capacity is expected to diminish, but capital is still required to permit further development in the quality of our products, particularly of specialised lines. Improvements in our oilseed crushing plant have included a new and faster operating intake system for oilseeds at Greenock. In the Northern Area technical oil refining has, for reasons of economy, been concentrated in the remodelled plant at Hull and work is in hand on a new packing and delivery warehouse for edible and technical oils at Avonmouth.

The excellent accident prevention record of 1958 was maintained in 1959 with an accident frequency rate of less than 2 based on the calculation of the Royal Society for the Prevention of Accidents.

TRIBUTE TO MANAGEMENT AND STAFF

I should like to conclude this review by paying a very high tribute to the work of all members of the Company at every level, which has contributed so much to the results recorded in this Report and which has enabled new production records to be established at so many of the Company's factories

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED

SALES INCREASE MAINTAINED

The fifty-seventh Annual General Meeting was held on March 24th in London. Sir Duncan Oppenheim in the course of his speech said:

There was a moderate increase in the total volume of sales compared with the previous year but the pattern was not a consistent one throughout the Group. Competition in the industry continues to increase and whilst, in some countries, substantial gains have been made against competition, in others sales have been lost. Moreover, where competition is active, increased sales are not necessarily reflected in increased profits, since substantial expenditure must be incurred on advertising and in launching new brands to meet competition. However, your Company has the resources to meet the prospect of increasing competition with confidence.

A more serious factor is the effect of increasing taxation on tobacco products. In certain countries where our proportion of the market has been maintained, the volume of sales has been lower, the total consumption having been reduced as a result of heavy increases in tobacco taxation. I think it fair to say that the burden of taxation on the tobacco industry is one of the main reasons why world consumption of tobacco products is not increasing at a faster rate.

There has been a welcome reduction in the charge for United Kingdom taxation, after taking into account double taxation relief, due in part to a reduction in the standard rate of income tax in last year's Budget, but in the main to the reduced charge for United Kingdom Profits Tax, the flat rate of 10 per cent applying to the full year compared with six months of the year to September 30, 1958.

TRADING RESULTS

Allowing for a change in the method of conversion of foreign currencies, the Group Net Profit for the year shows an increase of £2,648,000, of which £1,268,000 is applicable to the proportion, including dividends from Subsidiaries, dealt with in the Holding Company's Accounts. Dividends from Subsidiaries include dividends paid by Brown and Williamson Tobacco Corporation. At the Annual General Meeting in 1952, the Chairman referred to the US dollar loan owing by Brown and Williamson which originated during the War and was refinanced in 1946 on conditions which restricted the Company's right to pay dividends. In view of the continued expansion of Brown and Williamson's business, it was subsequently found necessary to increase the amount of loan finance of that Company and at the same time to extend the period over which repayment is to be made, so that the final repayment instalment does not now fall due until 1979. Under the terms of this refinancing, Brown and Williamson was enabled to pay dividends subject to some reasonable restrictions and has been doing so for some years past.

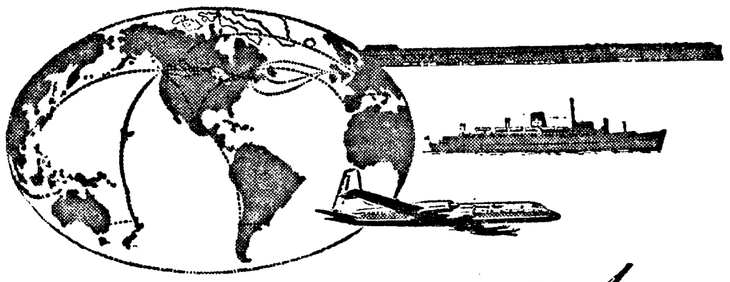
With regard to the future: there has been little change in the Group's trading position since last year and the rate of increase in total sales has been maintained. I do not look for any startling developments during the rest of the year. Subject, therefore, to any changes in taxation of Company profits in the coming Budget, I would expect the share of the Group Net Profit dealt with in the Accounts of the Holding Company to be no less than for the year to September 30, 1959, and I believe that it will be possible to maintain a total distribution of 2s. free of income tax per 10s. of Ordinary Stock. The increase in the first interim to 7d. free of income tax had no significance other than a step towards evening out the total dividend payments over the year.

The Report was adopted.

THE LUTON WATER COMPANY

INCREASED REVENUE

The Ordinary General Meeting of The Luton Water Company was held on March 24th at Luton, Mr A. F. Plummer, MC, AIEE, chairman, presiding.



The following is an extract from his circulated statement for the year 1959:

The Revenue from all sources shows an increase of £13,605 over the corresponding figure for 1958. After transferring £9,000 to Contingency Fund, providing for Taxation and paying Dividends, there will be a balance of £32,228 to be carried forward as compared with £28,009 brought in at the beginning of the year. Your Company supplied an estimated population of 126,450 (an increase of 3,116 in a year) within its statutory area with a daily average of 53.1 gallons per head, for all purposes.

With future long-term requirements in mind, your Company, in conjunction with other Water Undertakers, have been actively engaged in investigating the potentialities of the River Great Ouse as a source of supply. As a result, it is probable that a Bill will be jointly promoted in the Parliamentary Session 1960-61. The Bill, if successful, should enable all demands to be met in your Company's area of supply and any enlargements thereof for something like 40 years. Further, your Company will seek authority to abstract water from other sources.

Demands during the hot summer of last year were met without serious difficulty. The quantity pumped in the week ending July 11, 1959, averaged 9¼ million gallons per day—the highest output in the history of your Company.

The report and accounts were adopted, and at a subsequent Extraordinary General Meeting the acquisition of the Dunstable Water Undertaking was approved.

Canadian Pacific 79TH Annual Report RAILWAY COMPANY

Extracts from the report of the Directors to the Shareholders:

During 1959 your Company continued to improve and adjust its properties and services to meet changing requirements and to achieve increased efficiency. The dieselization program was brought close to completion, plans were advanced for new freight marshalling yards, centralized traffic control signal systems were installed in new areas, piggyback services were extended, and the new service integrating the handling of merchandise traffic was introduced in British Columbia. Also during the year the 17-storey, 400-room addition to the Royal York Hotel was opened, a daily domestic transcontinental service was inaugurated by your Air Lines, development of your oil and gas interests was actively pressed, and your Telex and microwave services were extended.

In May a Royal Commission was appointed to inquire into problems relating to railway transportation in Canada, and the possibility of removing or alleviating inequities in the freight rate structure. Your Company considers that the only serious inequity is that arising from fixed statutory rates on grain and grain products. The revenues received by your Company at these rates now fall far short of just and reasonable remuneration for the handling of this traffic. Accordingly, your Company has submitted to the Commission a plan which will maintain for Western grain growers the present level of freight charges on grain and grain products moving to export positions in Western Canada and at the same time provide the railways with compensation based on just and reasonable rates. Under this plan the difference is to be assumed by the Government of Canada as necessary assistance from the people of Canada to Western grain growers.

Competition from automobile travel has made it necessary over the past several years to adjust your railway passenger services. Passenger trains have been eliminated on some branch lines and reduced on certain main lines, and economies have been derived from the wide use of rail diesel cars. Continuing effort is being directed toward curtailing expenses in accordance with the reduction in railway passenger business.

Although 1959 witnessed a resumption in the upward trend of Canadian business activity which had been interrupted during the previous two years of recession, your railway did not participate fully in this recovery. Freight revenue was adversely affected by strikes in the steel industry in the United States and in the forest industry in British Columbia.

Railway revenue increased 2% over 1958, largely as a result of higher freight rates, while expenses increased 3% chiefly owing to increased labour costs. Net earnings were therefore slightly below those of 1958, and provided a return of only 2.7% on your net investment in railway property.

In view of the "freeze" on freight rates imposed by the Government last March, hearings were deferred on the application before the Board of Transport Commissioners for such increase as would permit attainment of the permissive level of rail earnings established by the Board for your Company. No clear indication has been given by the Government as to when it will be possible to proceed with the application. The results of operation of your steamships and hotels showed considerable improvement but a heavier loss in the operation of your Air Lines and the transfer of certain mineral rights to your wholly-owned subsidiary, Canadian Pacific Oil and Gas Limited, resulted in a decrease of 5% in Other Income as compared with the previous year.

Net Income, after fixed charges, totalled $31.3 million. After providing for dividends of 4% on Preference Stock, earnings available for dividends on Ordinary Stock and for reinvestment amounted to $28.3 million. This was equal to $1.97 per share on 14,332,006 shares of Ordinary Stock outstanding at the end of the year, compared with $2.09 per share on 14,211,783 shares outstanding at the end of 1958. Dividends on Ordinary Stock totalling $1.50 per share were declared, the same as in the previous year, and payment was made of 75¢ on August 1, 1959, and 75¢ on February 29, 1960.

Capital expenditures were $109 million. Of this, $67 million was expended on railway plant and equipment, $20 million on aircraft leased to your Air Lines, $12 million on steamships, and the remainder on communications, hotels, and other properties.

The Income Account of your Company shows the following results for the year ended December 31, 1959, with comparative figures for 1958:

ASQUITH MACHINE TOOL CORPORATION

MR ROBERT W. ASQUITH'S REVIEW

The thirty-ninth annual general meeting of Asquith Machine Tool Corporation, Ltd., was held on March 28th at Halifax, Mr Robert W. Asquith, MIPE (chairman), presiding. The following are extracts from the chairman's review circulated with the report and accounts for the year ended September 30, 1959:

As already announced, the trading profit of the Group for the year to September 30, 1959, before taxation, is £563,475, compared with £815,105 for the previous year. The net profit, after providing for taxation, attributable to the shareholders of the Corporation is £282,447, as compared with £369,017 for the previous year.

You will recollect that in my last year's review I gave an indication that it was not to be expected that the result for the year now under review would be as good as the previous year, and although I intimated that the company would pay 15 per cent dividend on the increased capital, as now recommended, the fact still remains that the results for the year are disappointing.

SUBSIDIARY COMPANIES

I report on all your subsidiary companies individually, but, broadly speaking, the Group, as a whole, has had a reduced turnover, resulting in an upward trend in fixed overheads. In addition, all your subsidiaries absorbed in their costs the engineering wage awards granted in October, 1958. Other reasons will be evident from the individual reports.

William Asquith Limited: The improvement in the order book for standard machines for this company which we had hoped for last year, did not materialise, and the orders received were, as forecast, for special and heavy machines.

It is generally acknowledged that technical development is one of the first essentials in the machine tool industry and is very expensive. The development which we have undertaken for the newly designed heavy and special machinery has been more costly than anticipated, and apart from the direct cost involved has had a detrimental effect on the Company's turnover.

Drummond Brothers Limited: It had been hoped that the prosperity in the automobile trade would reflect on the operation of this Company, but in fact it is only at the time of writing that these hopes show signs of being fulfilled, and the output of this Company was less than for the previous year.

George Swift & Sons Limited and Swift-Summerskill Limited: These companies have had a satisfactory year, but they have only achieved this in fulfilling the backlog of orders outstanding at the commencement of the year, and which, during the course of the year, have not been replaced by new business.

Modern Foundries Limited: This Company had a satisfactory year in spite of the fact that to a large extent its prosperity is dependent on the demand of the machine tool manufacturing subsidiaries.

Rotadop Limited: This Company continues to operate at a profit.

Drummond-Asquith Limited: This organisation continues to play its part efficiently, and I am confident that what has been a disappointing year for the Group might have been even more disappointing but for the alertness and efficiency of this subsidiary.

Associated Machine Tool Corporation (USA): I regret to advise you that for the first time this Company has shown a small loss.

The Kitchen & Wade Group: As you will recollect, your Company made an offer to acquire the whole of the issued share capital of Kitchen & Wade Limited during the past year, and this was ultimately accepted by the shareholders in February, 1959.

FUTURE OUTLOOK

You will doubtless expect me to say something of the future. I regret to say that I do not feel in any position to forecast results which would justify maintaining the dividend paid this year, and it is not your Directors' intention to pay an interim dividend, but to await the final results for the year. At the time of writing, nearly half the financial year is behind us, and the picture, so far, is not encouraging. William Asquith Limited has inherited from the last financial year the problems I have referred to, and with the type of orders they are receiving at the moment, the delivery dates are such that they cannot in any way affect the current year's results.

As you will have gathered, those subsidiary companies which include amongst their production a proportion of standard machine tools, are not obtaining a volume of business sufficient to enable them to run their factories efficiently. I think I should say that one reason for this situation is because some of our traditional export markets are now closed to us, and basically, in the domestic market, the demand does not seem to be there for the same volume of orders as we previously enjoyed.

We can look forward to improvements in the results of those subsidiaries catering for the automobile trade.

Your Company has been and is involved in considerable capital expenditure for enlarging and improving facilities to enable us to cater for the type of machines which are required by the engineering industry to-day.

The fact that our order book is consisting more and more of machines of a special nature and of lengthy production times, necessitates a larger stock and work in progress with all the attendant costs involved, including finance.

During the course of the year, two of your subsidiary companies entered into agreements with American companies for the manufacture and sale of their machines in the United Kingdom, Europe and the sterling areas, and this policy is being actively pursued.

You will have noticed from the balance sheet that there is a trade investment of £25,527, which is our initial investment in a new Company called Warner Swasey Asquith Limited, which has been established in Halifax for the production of Chucking Automatics, and is owned equally by The Warner and Swasey Company, of Cleveland, Ohio, USA, and your Company.

Your Directors are confident that this investment will be a profitable one in the years to come. The report and accounts were adopted.

FULL SCALE FLAG DISCRIMINATION MUST RESULT IN

One way full—one way *empty*

P & O Chairman Warns Consumers The World Over

"THE most serious problem facing British shipping today," Sir William Currie told P & O stockholders, "is that of flag discrimination, in fact I should say not only our own shipping, but also the shipping of other maritime countries. Since the war ended several countries have decided that they should possess a Merchant Navy."

THE HELPFUL EFFECT OF INVESTMENT ALLOWANCES

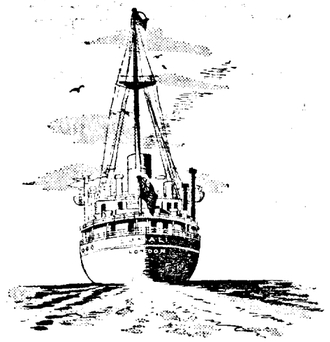
"The investment allowance," Sir William explained, "is a deduction from our taxable profits and is over and above the wear and tear based on the historic cost of our fleets and it is a much greater incentive to build new ships than was the initial allowance which it replaced in 1954. The initial allowance was originally introduced in 1946 and was merely a large slice of the cost of a new ship allowed as a deduction from taxable profits in the first year of a ship's life. The allowance had the disadvantage, however, that normal wear and tear on the cost of a ship came to an end after perhaps only twelve or fifteen years.

"The initial allowance merely postponed a shipowner's liability to tax, but the investment allowance is very much more helpful as it gives permanent remission of liability. It is of no help at all, however, unless profits are being earned and there must be many shipowners who cannot accumulate sufficient money out of taxed profits to build the ship that will entitle them to an investment allowance.

"It is very well known that shipping profits are liable to wide fluctuations, and we have had an example of that in our own Group in the last five years. What many shipowners would like to see is some extension of the present arrangements so that they can accumulate profits free of tax in good times to help them along when profits are non-existent.

"The taxation of profits is by no means the whole problem, however; it is becoming increasingly difficult to earn any profits at all and when there are no profits to tax, relief from taxation does not improve the position.

"But let us not look a gift horse in the mouth. When we do start to make profits again these increased allowances will form a most useful cushion and will enable the various constituent members of the Group to place profits to reserve free of tax, which is exactly what shipowners ought to be able to do. It is for this reason that I regard the maintenance of the investment allowance as essential to the well-being of the country's shipping industry.



"The result of flag discrimination, brought to its logical conclusion, is one way traffic—one way full and one way empty—thus increasing the cost to the consumer of his goods, for a ballast voyage must be paid for. The low percentage of retail cost which freight rates represent in competitive conditions clearly demonstrates the soundness of such a system.

"One of the most heartening aspects is the increased interest in shipping and recognition of its value to the Nation now being shown by the Press, by the public, and, most important, in the House of Commons."

THE COMMONWEALTH LINK

"The fortunes of British shipping," said Sir William, "were founded on the conquest and colonisation of Empire, and the complete reliance of this country and its economy on overseas trade.

"I joined Mackinnons at a time when the building of Empire was virtually complete. The reign of the late King George V saw the commencement of an era in which we have led all the peoples of the Empire towards self-determination. This phase in our history is nearly over. Few of the old responsibilities remain. Today we face the world as a Commonwealth of associated free peoples.

"Shipping as the link between the furthermost parts of Empire and Commonwealth has been intimately connected with every stage of their development. The political 'ups and downs' of progress towards self-determination have been reflected in the success or fortune of our operations.

"So it is with an intimate personal knowledge of much of that which has been achieved and a deep sense of conviction that I say what our country has done in the last fifty years represents the greatest contribution to mankind of any nation in the world's history. Great Britain has established English as the foremost language, it has helped countless millions to freedom and democracy, and still we remain friends with the world. No other Empire can claim such a record.

"Now Great Britain embarks on a difficult future, as the independent ideas that we have encouraged and often created, turn to narrow nationalism. Shipping is one of the first to suffer, as each of these new nations seeks to establish their own Mercantile Marine. We welcome their action if the new lines are established in full and free competition, but political attempts to discriminate unfairly against us, we must resist in every way we can.

"We have become victims of a situation which we have indirectly helped to create. We shall do what we can to maintain our position, but must also look to the Government of the day to recognise that our difficulties are very much political and so directly linked to the problems of our nation as a whole.

"I am not downhearted, however. The gradual increase in the standard of living must bring with it increased demand for goods and services which will be required of shipping. I leave this Chair more firmly convinced than ever that we shall continue to adapt circumstances to our own interests, and be justified in our faith in the future of our shipping."

ALUMINIUM LIMITED

ALCAN

MR NATHANAEL V. DAVIS ON COMPANY'S CONFIDENCE AND STRENGTH

The *thirty*-second annual meeting of Aluminium Limited will be held on April 28th in Montreal.

In the course of his general review of the Company's affairs in 1959, Mr Nathanael V. Davis, the President, stated:

Over the past two years, Aluminium Limited has passed through a period of reduced demand for its main product—primary aluminium—and difficult and changing competitive conditions. While the results have been trying to shareholders, employees and management, the Company has unquestionably gained strength, ability and confidence to meet the conditions which lie ahead.

Over this period the basic facilities needed for long-term expansion of primary aluminium production have been carried through to completion, the Company's markets have been materially diversified, and sales to independent and affiliated fabricators have increased in amounts more than offsetting the diminished sales to other producers.

Perhaps of greater potential importance, the Company's personnel have been realigned into a more tightly knit and widespread international organisation placed to serve customers most effectively and to unearth opportunities which show promise of enhancing the Company's position.

It is pertinent that the Company, oriented to meet changing competitive conditions, has continually looked with confidence to a return to improving markets for primary aluminium. While it is foolhardy to assume that the expected long-range growth in consumption will not be interrupted frequently and sometimes painfully, a turning point was reached in mid 1959.

The consumption of aluminium in the free world, which had declined slightly in 1957 and 1958, once again showed substantial growth during 1959 and particularly in the latter half of the year. In the early months of the year, Aluminium Limited's sales of primary aluminium and its smelter production in Canada were at reduced levels and earnings were low but, as the year progressed, sales and production rates increased and earnings improved.

THE YEAR'S RESULTS

For the year as a whole Aluminium Limited's net income, after all charges, including dividends on preferred shares of subsidiary companies, was $24,090,720 or 79 cents per share on the 30,357,552 shares outstanding at the year end. These earnings were a modest improvement over the previous year's net income of $22,464,510 or 74 cents per share on the 30,283,289 shares outstanding at the end of 1958.

Consolidated sales of aluminium in all forms were 643,328 tons compared with 581,195 tons in 1958. The progressive increase in sales during the year is vividly emphasised by a record 200,000 tons of sales during the fourth quarter. The Company believes, however, that this level of sales reflects some inventory buying in anticipation of a price rise which occurred on December 15, 1959.

In 1959 sales of semi-fabricated products by the Company's subsidiaries were at an all-time high, with dollar value about equal to dollar value of ingot sales.

Sales and operating revenues in 1959 amounted to $448,691,506 compared with $422,884,184 the previous year. Cost of sales and operating expenses were $292,380,796 compared with $276,724,241.

The year's earnings were somewhat above those in 1958 despite the increase in depreciation and interest charges associated with expanded but idle facilities. The earnings were also affected by a lower average realisation per pound of aluminium sold, reflecting the price reduction in 1958, although in the closing weeks of 1959 prices firmed with improving demand. The Company again experienced a loss on its shipping activities with, however, some improvement in the latter part of the year.

Cash generation in 1959, comprising net income, depreciation and reserves for future income taxes was $78 million or $2.58 per share. This compares with $71 million in 1958.

During 1959 quarterly dividend payments, in US currency, were at the rate of 17½ cents per share in the first quarter and 12½ cents per share in the succeeding three quarters. Total dividend disbursements were the equivalent of $15,994,535 in Canadian funds compared with $22,038,072 in 1958. In January 1960, in response to the improved volume of sales, the directors increased the quarterly dividend to 15 cents per share.

According to preliminary estimates, the consumption of aluminium in the free world in both primary and secondary forms reached a level of about 4,200,000 tons in 1959—an increase of about 20 per cent over the previous record level in 1956.

The growth was well distributed in all geographic areas but was particularly noticeable in Western Europe, the United Kingdom and Asia. Consumption in Canada and the United States also showed impressive gains. The more important categories of increased use of aluminium were in the fields of transportation, construction and packaging in a variety of forms.

While there was a welcome resurgence in demand during the year and the Company expects continuing growth in the years ahead, total free world demand at current levels is still below free world production capacity. It is of interest to note that while production facilities in North America were not fully utilised in 1959, producers in the rest of the free world have been operating substantially at capacity.

At the present time the total level of idle capacity in North America is believed to be about 500,000 tons per annum. The Company's Canadian smelters are currently operating at approximately 90 per cent of their rated capacity.

Aluminium Limited, being basically a producer of primary aluminium largely for international markets, is subject to greater fluctuations in demand than most other producers which are more fully integrated and largely organised to serve national markets.

During the year the Company's sales to other aluminium producers decreased by 45,000 tons as compared to 1958 but shipments to independent fabricators and to the Company's subsidiary and affiliated fabricating plants increased by more than 100,000 tons.

ORGANISATION STRENGTHENED IN ALL MARKETS

As a means of creating greater stability in the Company's position as a seller of primary aluminium, steps were taken during the year to strengthen its sales organisation in all markets and to expand its own fabricating activities in selected areas.

In Europe, Africa and the Far East the Company's sales and technical development forces have been expanded and new offices have been opened. It is expected that as a result of a realignment of its international marketing subsidiaries, the Company will be able to render greater sales, technical and promotional services throughout the world.

In the United States, the Company entered into an agreement with Apex Smelting Company, a leading secondary smelter, to acquire its assets, payment to be made in shares of Aluminium Limited stock. Acquisition of the Apex facilities should improve the Company's position in the United States market.

A new joint venture, Chryslum Limited, was also undertaken in 1959 with Chrysler Corporation of Canada to produce and supply aluminium alloys for Chrysler automobile plants in the United States and Canada.

During the year, expansion of the Company's existing fabricating facilities proceeded in thirteen countries, the largest single programme being undertaken in the United Kingdom where sheet facilities are being augmented through a programme involving a capital cost of the order of $25 million. Other fabricating projects—many of a pioneering nature—are either being undertaken or actively studied in twelve new areas.

During the year the Company expended $62 million on new plants and facilities—a decrease from capital expenditures of $103 million in 1958. Reduction in capital expenses reflects the near completion of the Company's new hydro-electric and raw material facilities which will provide a basis for easy and rapid expansion of smelter facilities in Canada from a present rated capacity of 750,000 tons to approximately 1 million tons per year.

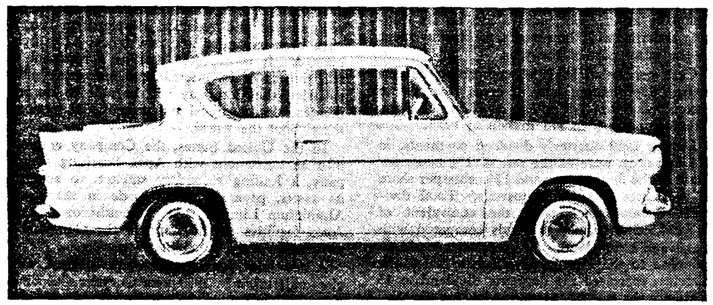
As expenditures for these facilities were completed, larger outlays have been provided for the Company's expanding fabricating activities.

Aluminium Limited enters the new decade well equipped to participate in the growth that lies ahead. In the past ten years the Company has invested more than one billion dollars in new facilities to provide an economic base for larger production as demand develops.

FORD

A decade of opportunity ahead

EXTRACTS FROM THE STATEMENT BY SIR PATRICK HENNESSY, CHAIRMAN



The 31st Annual General Meeting of Ford Motor Company Limited will be held on 22nd April in London.

The following is an extract from the statement by the Chairman, Sir Patrick Hennessy, circulated with the report and accounts for the year 1959 :—

In 1959 record results were again achieved by the Company. Sales at £233,180,965 were over 12% higher than in 1958, the previous best year, and trading income increased to £32,191,743. With income from investments, total income before tax amounted to £33,938,841. It is proposed to pay a final dividend on ordinary capital of 2s. 6d. per share which, with the interim payment of 1s. 0d. makes 3s. 6d. per share, less tax, for the year (excluding a special non-recurring interim dividend of 3% which was paid at the same time as the final dividend for 1958).

Figures at a glance	1959	1958
SALES	£233,180,965	£206,579,673
INCOME before taxation	£ 33,938,841	£ 26,390,558
TAXATION	£ 15,344,000	£ 13,070,000
CAPITAL EXPENDITURE	£12.75 million	£18.25 million
VEHICLES SOLD—Export	236,167	219,439
Home	236,690	202,133

The New Anglia, "the world's most exciting light car."

Capital expenditure in 1959 amounted to £12,748,948 and contracts for capital expenditure outstanding at the end of the year amounted to £5,144,000.

A YEAR OF MANY ACHIEVEMENTS

1959 was a year of many achievements. The most significant of these was the highly successful introduction in September of the New Anglia which has been enthusiastically acclaimed at home and overseas. By its outstanding qualities it has indeed merited the description of "the world's most exciting light car." Within three months, the New Anglia was being produced and sold at a higher rate than ever achieved by any other British car. Production now exceeds 950 a day and is steadily increasing to meet an even higher level of demand.

Demand for our medium and larger cars, the Consul, Zephyr and Zodiac models, has been fully maintained and they are being produced to the maximum of our capacity.

1959 also saw the successful introduction of the new Prefect and the new Popular, the latter, like its predecessor, being the lowest-priced family car on the British market.

The welcome removal of Purchase Tax on commercial vehicles in the 1959 Budget stimulated demand, and the sale of Thames trucks in the home market increased by almost 60% over 1958.

We again made more tractors than any other British manufacturer. Production of Fordson Majors and Fordson Dextas totalled 67,238 of which nearly 70% were exported.

Demand for our engines for marine purposes, agricultural machines, compressors and for numerous other industrial applications has greatly increased.

Altogether, sales of cars, vans, trucks and tractors in 1959 totalled 472,857 vehicles. Exports reached the record figure of 236,167 vehicles including over 53,000 exported to the U.S.A.

An average daily output of over 2,000 vehicles in the latter months of last year, is now 2,500.

HIGHLIGHTS OF 1959

- **The New Anglia, within three months of its introduction, was being sold at a higher rate than ever achieved by any other British car.**
- **Sales averaged almost £1,000,000 per working day.**
- ***With the completion of the* Dagenham assembly building, the post-war phase of expansion was brought into full operation.**
- **Zephyrs won the team prize in three major competitive events—Coronation Safari (East Africa), Tulip Rally and Alpine Rally—and a Zephyr was the outright winner in the R.A.C. Rally.**
- **Fordson tractors won the first three places in the World Ploughing Championship held in Northern Ireland—their sixth successive victory in that event.**

A DECADE OF OPPORTUNITY AHEAD

Our manufacturing facilities, engineering experience and financial resources place the Company in a strong position to take full advantage of what will be a decade of opportunity ahead for the motor industry.

The Company, which has recently completed its first major post-war phase of expansion, has been in consultation with H.M. Government concerning the location of further factories which are necessary for us to take our full share of the future growth of world markets. After exhaustive study of the relative merits of all areas affected by the problems of local unemployment, our economic requirements pointed to Merseyside, and there at Halewood we have chosen a site.

EXPANSION PLANS

At Halewood, we plan initially to produce 200,000 cars a year, with operations from metal stamping to final assembly—with engine, transmission and other components shipped direct—and subsequently to develop a fully integrated plant with increased capacity.

NEED FOR TRAFFIC ENGINEERING

The approach to universal car ownership in this country has caused apprehension as to the consequences, political, social and economic. Prevention or repression of growth is not a practicable policy. We must plan to live in comfort with the motor car as other countries with similar problems of traffic congestion have succeeded in doing. Only a comprehensive long-term plan involving central direction, and full use of modern traffic engineering techniques can solve these problems.

CLARKE, CHAPMAN & COMPANY LIMITED

DIVERSIFICATION OF PRODUCTION

The sixty-seventh annual general meeting of Clarke, Chapman & Company Limited, was held on March 24th at Gateshead.

The Chairman (Mr J. B. Woodeson), after reviewing the Accounts, said: Despite the sombre background presented by the present state of our principal markets, shipbuilding and power raising, I can report a satisfactory result for the year ended December 31, 1959.

In the present recession our interests are well diversified; the three principal fields being—on the marine side in the supply of ships' deck auxiliaries—on the steam generating side the manufacture and supply of conventional and nuclear power plant and thirdly, miscellaneous land sales.

This diversification of our products has been of great value throughout the long history of the Company, and it is only rarely that we have experienced the coincidence of shortage of orders in all fields at the same time.

There is no doubt that in the markets which are responsible for a large proportion of our output a recession exists, and I feel it is my duty to shareholders to make this position clear and try to assess the present situation as best I can.

In the past, when our Order Book stretched as far ahead as eighteen months and two years, it was comparatively easy for me to give a fairly precise forecast as to the future earning capacity of your Company. Now, of necessity, we are working on much shorter deliveries, especially on the marine side of our business.

The depression of freights and the nervousness in laying down of new tonnage has resulted in a lack of orders for our marine equipment. In addition to this we are feeling the effect of the economies exercised by the National Coal Board. I mentioned last year the difficulties concerning power station plant which, due to modern designs, have resulted in larger units and, in turn, a less number of orders being placed with those concerned with power station equipment.

The total result of all these factors, as far as one can see at the moment, is that there will be a slight contraction in the turnover this year which, if matters worsen, could affect the company's results.

MARINE DEPARTMENT

During the year we have have actively engaged in the standardisation of components used in the assembly of most of our marine products. While still meeting all our customers' special requirements, we have been able to reduce our costs in many cases and this has been a great help in meeting ever-increasing competition, especially from Overseas.

Our Marine Department, in conjunction with the Research and Development Department, has made considerable progress in the incorporation of the steam turbine for auxiliary machinery, and some important shipowners have adopted this method of drive for their main deck auxiliaries. I feel that these developments will grow and the benefit to your company will be increasingly felt.

During the year we have despatched a number of deck cranes. This has been a progressive department, and I am sure holds an expanding future for the company.

In the marine field I am quite certain that we are getting our full share of the orders that are available.

WATER TUBE BOILER DEPARTMENT

We have made good progress with our section of the nuclear power plant contract for Bradwell Nuclear Power Station now under construction. The many years we have spent on research and development in high-class welding is now certainly bearing fruit, and so far as our tube welding shop is concerned I estimate at least eighteen months' continuous work with what we have on order for Latina power station in Italy and other tube element orders.

As mentioned previously, orders for conventional steam raising plant are more difficult to obtain, especially now that few orders are obtainable from the Central Electricity Generating Board, which as you know, is an important customer. Certain rationalisation steps, however, are now pending and I feel that there is every chance of this situation improving.

So far as our industrial work is concerned, again I feel we are getting a fair proportion of the business.

The Research and Development department continues to play a vital part in the future of this Company, and without going into detail I feel that in the main aspects of our business this work is assuring our pre-eminent position as designers and manufacturers.

My thanks go to my colleagues, officials, staff and workpeople for their hard work and their contribution to the year's results.

I should like to say in conclusion that, notwithstanding my previous remarks regarding a shorter order book, I have every confidence in the future trading of your Company.

The report was adopted.

THE HALIFAX BUILDING SOCIETY

STATEMENT BY MR ALGERNON DENHAM

The one hundred and seventh Annual Meeting of the Halifax Building Society will be held in Halifax on April 4th, the President, Mr Algernon Denham, JP, presiding. The following are extracts from his statement:

During the year under review the Society has operated within the setting of a national economy which has been more favourable than for many years past. The Government are to be congratulated on their success in combining a greater measure of expansion with the maintenance of the strength of the pound sterling; this is a happy state of affairs compared with the recurring financial crises of former years.

The year will be remembered for the coming into effect of the House Purchase and Housing Act, 1959. Your Society has been accorded designation for the purposes of Part I of that Act, which means that our deposit department now has trustee status. The Act also provides for Government funds to be made available to building societies for the purpose of making advances on pre-1919 property. Your Board, however, have not thought it fit for the Society to participate in this arrangement, it being our view that the Society is already doing its fair share of this class of business out of its own resources and can look forward confidently to continuing to do so without Government aid. Briefly, we prefer to be lenders to, rather than borrowers from, the Exchequer. That this attitude is justified is, I think, amply proved by the facts. During the year, we advanced £13,502,607 to people seeking to buy pre-1919 property, a figure which continues to represent a substantial proportion of total building society lending in this category.

Throughout the earlier part of the year the pressure of mortgage demand remained extremely heavy and it was necessary to continue to impose restrictions. The additional investment inflow which came to the Society during the latter part of the year enabled these gradually to be eased until, towards the end of 1959, it was possible to remove them entirely.

During the year, 53,409 mortgages were granted, while re-advances were made on 9,356 existing accounts, mainly for the purpose of improving the borrower's property and therefore the Society's security, the total lending for the year being £81,650,000. These figures give some indication of the social benefit which the employment of our funds creates.

The assets of the Society have increased during the year by £50.8 million and now amount to £440.6 million, or some 15 per cent of the estimated assets of the Movement. This increase is a record for any one year, the previous highest annual increase being £46,713,355 in the year ended January 31, 1958.

The Society's liquid funds at January 31, 1960, amounting to £81,893,681 represented 18.6 per cent of total assets compared with 18.4 per cent in the preceding year. This figure is regarded by your Board as being adequate and, indeed, possibly more than adequate to meet the objects for which liquid funds in a building society are required.

The Society's reserves have been strengthened during the year by the surplus of £1,735,004 on our operations, making the total reserves at January 31, 1960, £15,960,667, equivalent to 3.62 per cent of our total assets compared with 3.65 per cent last year.

THE STEETLEY COMPANY LIMITED

(DOLOMITE AND REFRACTORIES)

The Annual General Meeting was held in Sheffield, on March 31, 1960

The accounts for the years ended December 31st, showed:

	1958	1959
	£	£
Trading Surplus	2,014,004	2,430,613
Taxation	1,057,504	1,179,994
Profit	956,500	1,250,619
Issued Ordinary Capital	4,251,561	4,251,561
Dividends	287,087	375,252
Undistributed Profits	669,413	875,367

The following is an extract from the statement to shareholders made by Mr N. M. Peech, Chairman:

The annual level of activity of our principal customers in 1959 differed little from that in the previous year, but we were able to maintain our growth in earnings for three reasons. First, we had the benefit of a full year's operation of the enlarged magnesia works at Hartlepool and were able to sell the output; second, we improved further the efficiency of our works with 80 per cent of the year's production being made in plant built since 1946; and third, the good summer weather facilitated sales of dolomite (magnesian limestone) for agriculture.

An assessment of the future requirements of refractories by the UK steel industry which is raising its capacity from 25 million to at least 30 million tons a year by 1965, has been undertaken. It appears that some of the new steelmaking processes and the greater production of electric arc steel, which together by 1965 may account for about a quarter of the total production against the present one-sixth, will use less refractories per ton of steel made, but they will continue to employ dolomite and magnesia materials.

A decision has therefore been taken to extend further the magnesia works at a cost of £3 million and to increase the production of basic bricks containing magnesia, which will cost £675,000. The Group sanctions for capital expenditure at this date amount to some £4,500,000, the highest in our history, but it is expected that this sum can be provided from current liquid resources and the cash flow that will arise under normal trading conditions over the next two years, so that it should not be necessary to seek further subscriptions from shareholders.

As to the prospects for this year, our order book is now much better than it was at this time last year, but it would be unwise to anticipate that our profits will rise in proportion to the output of our principal customer, namely, the steel industry, which is expecting to produce 24 million tons in 1960 compared with 20 million tons in 1959—an increase of 20 per cent. It must be borne in mind that, contrary to earlier expectations, last year we were able to employ the enlarged magnesia works at Hartlepool fully, thus there is little scope for increased profits arising in this important division of our business until the new extensions upon which we are now embarking are completed. Further, it is inevitable that full production from the new dolomite works at Whitwell, near Worksop cannot be obtained in the first few months of starting up, which is due to take place in the second quarter. We do, however, expect 1960 to be another satisfactory year.

REVERTEX LIMITED

TURNOVER AND PROFITS INCREASED

MR T. HARCOURT POWELL'S STATEMENT

The thirty-sixth annual general meeting of Revertex Limited was held on March 24th at 51-55, Strand, London, WC, Mr T. Harcourt Powell (chairman of the company) presiding.

The notice convening the meeting was taken as read.

The Secretary, Mr H. Wiltshire, read the report of the auditors.

The following is the statement by the chairman circulated with the report and accounts for the year ended September 30, 1959:

I am pleased to be able to tell you that your Company has had a good year and that both turnover and profits have shown an appreciable increase compared with the previous year.

The prospects for the present financial year are encouraging. Trading during the first four months has been satisfactory and the prospects for the remainder of the year are promising. We are exporting to over 50 countries and our products are being manufactured in a number of countries outside the United Kingdom. More than half of the total tonnage of all our products was used outside the United Kingdom. During the year our Sales and Technical representatives have travelled extensively and opened up new markets abroad. The laboratories have played an important part in developing a number of new products.

DIRECTORATE

You may have seen from the press announcements a few months ago that Mr A. F. Baillie retired as Managing Director of your Company at the end of last year. Mr Baillie became Managing Director over seventeen years ago and has rendered most valuable service. I am glad to say he has agreed to remain on the Board in a consultative capacity and I know you will join me in wishing him a long and happy retirement.

Mr H. K. Marsh and Mr C. J. Fitzgerald, who have both been associated with the Company for very many years, were appointed Managing Directors as from January 1st this year. We all wish them great success in their new responsibilities.

Dr Ian Kemp joined the Board of the Company in March last year and you will be asked to confirm this appointment later on in this meeting. Dr Kemp has been in the service of the Company for over twenty years, first as Chemist in charge of our research establishment in Malaya, and after the war as Chief Chemist to the Company on the home staff. Our business relies very much on its technical organisation and Dr Kemp's specialised knowledge is of great value to his colleagues on the Board.

PRODUCTS

Revertex (Concentrated rubber latex). With the passing of the emergency in Malaya we have embarked on a scheme to improve and re-equip our installations at Kluang, Central Johore. We have also augmented our European staff there and these factors are already helping us to meet with confidence the increasing demand for our latex products. The quality of our various established grades has been brought to a higher standard and we are now able to undertake the development of new and improved concentrates.

Deliveries of our Revertex grades have increased and it is likely that, resulting from negotiations now in progress, we may in the near future establish a new Revertex factory in another part of Malaya.

The year has seen a substantial rise in the market price for raw rubber. The high price of rubber and the increasing availability in this and other countries of synthetic latices are factors to be taken into account. We are confident that we can adapt ourselves to this situation and we believe that for many years to come natural and synthetic rubbers will be complementary in many branches of industry.

Emultex (Polyvinyl acetate emulsion). Our sales turnover of this material has increased, both at home and abroad, though the pressure of competition has caused some contraction in profit margins.

Alcotex (Polyvinyl Alcohol).—Further progress with the manufacture of this material has been made and the many technical problems which arise in producing particular grades of Alcotex for special applications are being surmounted. We hope that this branch of our activities will contribute increasingly to our general business.

Other Products.—During the year we have extended our factory premises at Harlow to accommodate the expansion of our compounding plant. The business in the numerous compounds manufactured by us, based on latex concentrates, Emultex and other new materials, has grown considerably during the year and arrangements have been made for compounds based on our products to be manufactured in a number of foreign countries.

South Africa.—I told you last year that our new subsidiary, Revertex (South Africa) (Proprietary) Ltd., had made an encouraging start. Our expectations for this venture have been more than fulfilled and the business in Emultex in Africa has made solid progress. In due time it is our intention to introduce other manufactures at the Durban factory in order to widen the range of business available to the South African Company.

ACCOUNTS

The profit of the year before tax amounted to £415,433 as compared with £397,373 for the previous year. This profit has been taxed at a lower figure than in previous years, and the net profit amounted to £223,333, which is £44,960 more than the figure of £178,373 for the previous year. This increase, with the figure of £27,000 of taxation overprovided in previous years, produced a total increase of £71,960, and is welcome, particularly during a period when overheads have tended to rise.

Dividend.—The Directors recommend the payment of a final dividend of 17½ per cent, less tax, making with the interim dividend of 10 per cent, less tax, paid last November, a total of 27½ per cent, less tax, for the year. The total dividend of 27½ per cent, less tax, will absorb the sum of £114,643, and the unappropriated profits, after allowing for the sum of £226,875 capitalised last year, will be increased by £135,690 to £598,227.

Staff.—Once again I must pay tribute to the zeal and enthusiasm of our staff. Many of them have played a great part in the building up of our Company and our thanks are due to them all.

The report and accounts were unanimously adopted; the proposed dividend was approved, the retiring directors, Mr T. Harcourt Powell, Dr I. Kemp and Mr S. Whyte, were re-elected: the directors were authorised to fix the remuneration of the auditors, Messrs Deloitte, Plender, Griffiths & Co., and a resolution was passed authorising the issue of share certificates bearing signatures applied by mechanical means.

BLUNDELL, SPENCE & CO.

(Manufacturers of "Pammastic")

OUTSTANDING SUCCESS AT HOME AND ABROAD

The seventy-first annual general meeting of Blundell, Spence & Company Limited was held on March 30th in London, Mr E. B. Calvert (Chairman and Managing Director) presiding.

The following is an extract from his circulated statement:

The improvement in trading conditions towards the end of the last financial year to which I referred in my previous statement was maintained and the period covered by this report proved to be one of steadily growing confidence and rising demand. Your Company was able to take full advantage of these circumstances with the result that the year was one of considerable sales expansion. It was also a year of many records—home sales—export sales—group sales and group trading profits.

Further progress was made in the development of sales of the Company's products to the home markets; continuing to work in the closest co-operation with main distributors, our own sales force expanded successfully our already extensive trade business by means of increased specifications and possibly still more encouraging was the marked increase in retail outlets which occurred throughout the country.

The strong demand for the Company's products continued from export markets and notwithstanding keen competition our position as one of the largest exporters in the Paint Industry was fully maintained.

Your Company's claim that its leading product "PAMMASTIC" is "The World's Best Emulsion Paint" still remains unchallenged. Sales targets for both home and export markets were more than achieved and for this world famous product it was indeed a year of outstanding success.

The great interest in Pammastic shown by the Dunlop Rubber Company Limited remains unabated and once again, I acknowledge the benefit your Company derives from this association and Pammastic enjoys from having behind it the research facilities of the vast Dunlop organisation, in addition to our own technical resources.

After reviewing the substantial progress of the subsidiary companies at home and abroad, the statement continued:

The trading of the Group for the year ended October 31, 1959, has resulted in a profit of £517,755, compared with £331,142, and your Directors propose a final dividend of 14 per cent. The total distribution proposed for the year will thus be 18 per cent on the Capital as increased by a one-for-two scrip issue, which is equivalent to 27 per cent on the old Capital.

The Group has made a good start to the current year. During the first quarter, sales of the Parent Company, both decorative and industrial have expanded and whilst a modest increase in operating costs is expected, it is anticipated that gross profit margins will be maintained at a level adequate to ensure a satisfactory final trading result.

The Australian and Indian subsidiaries have continued to prosper during the first six months of their current years.

Summing up, with the knowledge which is available to me, I consider the prospects for the current year are encouraging. I feel that Members can look forward with confidence to another good year and, subject to no unforeseen circumstances arising, your Board anticipates no difficulty in maintaining the present level of distribution.

The report and accounts were adopted.

ASHANTI GOLDFIELDS CORPORATION

THIRD SUCCESSIVE RECORD YEAR

The 63rd annual general meeting of Ashanti Goldfields Corporation Limited was held on March 30th in London.

Major-General Sir Edward L. Spears, Bart, KBE, CB, MC, FInstD (Chairman and Managing Director), presided and, in the course of his speech, said:

For the third year in succession, new records have been achieved in tonnage milled and gold produced. In the current year, if expectations are fulfilled, results should again show an increase over previous records. Planned gold output is 346,000 ounces. Production in the first six months of the current year indicates that this figure should be reached and may be bettered. Development results continue to be excellent. We have every reason for confidence in the future prospects of the Mine.

The attitude of the Ghana authorities towards the Corporation is co-operative and helpful.

As I said, production was an all-time record for the Mine. 406,365 tons milled yielded 321,366 ounces of gold. This is 41,167 tons and 38,836 ounces more than last year's record. For the first five months of the current year 183,500 tons have been milled for a gold recovery of 150,400 ounces. This compares to 168,000 tons and 127,550 ounces of gold in the corresponding period last year.

The Ore Reserves were recalculated at September 30, 1959, and are 1,993,105 tons of an average grade of 17.2 dwts per ton. This compares with 1,586,300 tons averaging 19.0 dwts per ton in 1958.

For the current year it is planned to increase the milled tonnage from 406,000 to 425,000 tons thus maintaining the progressive expansion that has taken place since 1956.

Commenting on his visit to Ghana in January and February of this year the chairman said: Ghana is frequently and sensationally in the news, but a habitual visitor like myself sees nothing alarming in the spectacle of an exuberant community, confident in the future and bursting with vitality.

In the main, the attitude of the Ghanaian people, always friendly, is, it seems to me, friendlier than ever.

The report was adopted.

ALBRIGHT & WILSON

LIMITED

The following is a digest of information appearing in the Annual Report for 1959, posted to stockholders on 30th March. The Secretary will be glad to supply copies of the Report on request.

	1959 £	1958 £
Group Sales	**34,500,000**	*32,200,000*
Group Trading Profit	**7,390,000**	*5,845,000*
Depreciation	2,283,000	*2,059,000*
Interest	449,000	*457,000*
Taxation	2,225,000	*1,542,000*
Minority Interests	147,000	*71,000*
Net Profit	**2,286,000**	*1,716,000*
Dividends	863,000	*645,000*
Retained Profit	1,423,000	*1,071,000*
Total Capital Employed ...	**30,761,000**	*28,683,000*
Ordinary Dividend—rate ...	**18.3%**	*13.6%*
—times covered	**2.8**	*2.8*

The dividend rates shown above have been adjusted to relate them to the capital of £7,130,687 outstanding after the one-for-four issue of fully-paid stock in September, 1959.

TRADING.—The expansion shown in 1959 followed record results in 1958. Sales in 1959 rose in value by about 7% and in volume by rather more, since some selling-prices, particularly overseas, were lower. Additional sales, improved operating efficiencies, generally stable raw material prices and higher investment income, constituted the main reasons for the increase in Group profit. In spite of intensifying competition, the total value of our exports was increased. Direct exports from the U.K. and sales by our subsidiaries in Canada and Australia amounted to about 35% of total sales.

CAPITAL EXPENDITURE.—£2,500,000 was spent by the Group in 1959. In the U.K. £1,400,000 was spent on additions and improvements to many plants and on research and development projects, including laboratory and pilot plant facilities at Barry and laboratory extensions at Oldbury. A vessel of 10,000 tons is being built for the Group for the transport of phosphate rock, and is due to come into service at the end of 1960. £1,100,000 was spent overseas, mainly in Canada, where we acquired a superphosphate works adjacent to our new works at Port Maitland, which is expected to be in production at the end of 1960. At the end of 1959, there were projects authorised involving future expenditure in excess of £5 million. In 1960 we expect to spend considerably more than in 1959. Cash and short-term investments at the end of 1959 amounted to £4,700,000.

PROSPECTS FOR 1960.—In all the countries in which we operate there have been forecasts of expansion. Nevertheless, we do not expect a large increase in the volume of our sales. We expect competition to intensify and profit margins to narrow. Figures in 1960 will be affected by the inclusion of Boake Roberts. Apart from this, indications are that the value of sales and profits will not differ significantly from the comparable figures for 1959.

The sixty-eighth Annual General Meeting of Albright & Wilson Ltd. will be held at the Company's office at 1 Knightsbridge Green, London, S.W.1, on 27th April, 1960, at 12.15 p.m.
