Mr Lewis C. Cohen, Chairman and Managing Director, in the course of his speech, said: The year 1959 was in various respects a momentous one for Building Societies—not the least important factor being the House Purchase and Housing Act 1959 which among other matters made it possible for certain societies to earn the distinction of Trustee Status for their deposit funds. I am proud to say that the Alliance Building Society was in the first list of those designated by the Chief Registrar of Friendly Societies as having Trustee Status.

During the year the total assets of the Society increased from £69,150,800 to £73,788,001. This growth was in the main due to Share Investors who placed £13,047,471 of fresh money with the Society. After withdrawals of £11,563,536 and crediting interest of £2,251,462 the total balance due to shareholders increased from £65,113,384 to £68,848,781. In the Trustee Department depositors' balances also grew from £1,528,077 to £1,762,313.

It may be recalled that last year's report referred to a considerable carry-over of liquid funds and a large amount of mortgage loans which had been agreed to but were not completed at December 31, 1958. This year's accounts reflect the position inasmuch as the total of new loans was £14,200,954, a figure which is over 50 per cent greater than 1958 and considerably in excess of any previous year.

The great bulk of this large amount was lent on the security of individual homes occupied by the borrowers themselves.

The demand for loans for house purchase continues to be very strong and tends still to outstrip the available resources. There seems to be every prospect of this state of demand continuing for a considerable time.

LIQUIDITY AND INVESTMENTS

For decades past the Building Societies generally have relied upon the Gilt-Edged market to provide suitable securities for liquidity—as indeed we ourselves did up to 1955. Our experience since then has shown such investments do not meet our requirements for liquidity purposes. Liquidity means 20s. in the pound when you want it—and not in say 15 or 20 years ahead. Since the "break" in the Gilt-Edged market in 1955 (which only reflected the fact that interest rates could not indefinitely be kept at artificially low levels) we have placed our Liquidity Reserves in Treasury Bills and in loans to Local Authorities repayable in full at short notice.

RESERVES

The year's results—which I have earlier stressed are really the outcome of many years of previous devoted effort—give us deep cause for satisfaction. Thousands of families have been enabled to buy their homes—the investors in the Society have enjoyed security and first-class service and we have strengthened our General Reserves by the impressive sum of £425,000 to a total figure of £2,245,000.

The report and accounts were adopted.

THE LINEN THREAD COMPANY

GRATIFYING IMPROVEMENT IN GROUP PROFITS

MR WILLIAM E. LUKE ON REORGANISATION AND DIVERSIFICATION

The sixty-third annual general meeting of The Linen Thread Company, Limited was held on March 24th in Glasgow, Mr William E. Luke (chairman and managing director) presiding.

The following is an extract from his circulated statement:

The financial year under review has not been an easy one for our management and therefore it is all the more comforting to be able to report fairly satisfactory Group results.

The consolidated trading profit in respect of the year to September 30, 1959, was £747,427 compared with a profit of £246,838 for the previous year, excluding the loss incurred during the previous year by the US Subsidiary which we sold in January, 1959. The increase in the trading profit on the more realistic basis was therefore £500,589.

The consolidated net profit for the year attributable to The Linen Thread Co., Ltd., was £419,538 compared with £136,221, excluding the US Subsidiary loss, an improvement of £283,317.

REORGANISATION

During the last financial year there has been a widening of the Company's activities which has necessitated a fairly significant management reorganisation. I have found it increasingly difficult, based in Glasgow, to co-ordinate and maintain personal contact with our various divisions in the United Kingdom and have opened a temporary office in London.

We have taken a long lease of Trevor House, in course of construction, opposite Harrods Ltd. in Brompton Road on terms which are considered to be favourable and where at the outset we shall occupy one floor only. This will be the Administrative Headquarters of the Group and it should be possible to move in around September of this year. The shops included in the leasehold will be let and also the part of the office accommodation surplus to our requirements.

In future the Company will be managed on a divisional basis, the four divisions at present being the Textile, Narrow Fabrics, Light Engineering and Canadian, each of which will have its own Managing Directors, my own position being that of Chairman. I shall continue in office as Chairman and Managing Director of the Holdings Company and maintain an overall interest in the divisions although their day-to-day management is the responsibility of others. For some time and for special reasons I propose to maintain personal liaison with certain overseas interests where our operations are carried out in partnership with others.

Having dealt with the company's activities at home and overseas the chairman continued:

DIVERSIFICATION

It is our intention to continue our policy of diversification and we are still looking for businesses which give scope for expansion and which can provide an adequate return on capital invested. The liquid resources of the Company are strong and as the loan notes owed to us by Indian Head Mills Inc., purchasers of our United States subsidiary, are redeemed, further cash will become available. This will be used in part to finance expansion within existing divisions and in part to buy new businesses which fit into our new status of an industrial holdings company. There may also be opportunities of developing from scratch a business in which we can enter a new field and in this connection I should like you to know that we have recently formed a company in Northern Ireland, called Beltico Ltd., for the purpose of manufacturing life-saving equipment, inflatable dinghies, pleasure craft and a variety of other articles, most of which will be made from fabrics produced within our own Group.

CHANGE OF NAME

At our last Annual General Meeting I was asked by a Stockholder whether the Board intended to change the Company's name. The question had been under consideration because it is realised that the name is no longer associated with many of the Company's activities. On the other hand, The Linen Thread Co., Ltd. has an excellent name and reputation in financial circles and with customers all over the world. Your Board feels, however, that if the name of the Parent Company should be changed the selling company within the Textile Division should continue to operate under the name of The Linen Thread Co., Ltd. The important matter of timing and the groundwork necessary to ensure the smooth introduction of any such change are being studied but it would be premature to put forward any proposals at this time.

COMMON MARKET

It is not easy to assess the possible effect on our various interests of the Customs Union that has been formed by the six countries in Europe. Belgium, France and Italy are all important manufacturers of flax yarns and unless an agreement is reached between the outer seven countries and the Common Market group, the gradual reduction of tariffs on linen yarn within the Common Market will, in due course, operate against the interests of linen yarn exporters in this country and might make it necessary for us to switch some of our export trade to one or other of the two factories which we operate in the Common Market area. Our export trade in the Light Engineering Division is not significant. We welcome the creation of a European Free Trade Area within the outer seven countries as a move towards freer trade throughout Europe and perhaps other parts of the world and as a means of enabling the Governments concerned to discuss more authoritatively the terms on which they might negotiate a broader European arrangement. Such a development would certainly be of benefit both to the Company and from an economic point of view to the nation as a whole. The political implications might, however, be somewhat hazardous.

PROSPECTS

Last year I told you that I looked to the future with confidence and optimism. On the short-term this forecast has been justified and I am more than ever convinced that the Company should do well in the future in all of its Divisions, not least the Textile Division, which is still the most important of them all.

The report and accounts were adopted.

HICKSON & WELCH (HOLDINGS)

FURTHER PROGRESS AND EXPANSION

The 8th annual general meeting of Hickson & Welch (Holdings) Limited was held on March 24th in London, Mr Bernard Hickson, MSc, FRIC (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

I am pleased to be able to report once more that there has been an increase in the trading profit. The total sales to customers of the products and services of the Group have also increased and are the highest the Group has so far attained. During the year under review we have made reductions in certain of our selling prices, but improvements in our technical efficiency and increased production have enabled us to obtain the increase in trading profit mentioned above.

We have acquired during the current year the whole of the share capital of Richardson & Starling Ltd., Winchester specialists in remedial treatment of building timbers and the preservation of stonework. The activities of that company are complementary to those of Hickson's Timber Impregnation Co. (G.B.) Ltd. and will enable the Group to provide an even more comprehensive service in this field.

Early in 1960 we purchased from the minority shareholders their shares in Hickson's Timber Impregnation Co. (Aust.) Pty. Ltd. and that company is now a wholly-owned subsidiary. We have every confidence in its further development.

Since the last meeting we have formed a small company in South Africa, known as Hickson's Chemical Co. (Pty.) Ltd., in which we hold a majority interest.

Hickson & Welch Ltd. have again increased their turnover and profit. Capital expenditure is higher than in the previous year.

Ronsheim & Moore Ltd. are still maintaining their position in supplying specialised products to the pharmaceutical and cosmetic trade.

Hickson & Dadajee Private Ltd. has completed the first stage of erection of its new factory and it is now in production. Trading conditions in India have improved and the company should progress.

Hickson's Timber Impregnation Co. (G.B.) Ltd. has again increased its sales of timber preservatives throughout the world.

Hickson's Timber Impregnation Co. (Aust.) Pty. Ltd. has consolidated its position and the number of contracts obtained with public authorities for the treatment of timber is encouraging.

Your associated company, Hickson's Timber Impregnation Co. (S.A.) Ltd., has made increased profits and these constitute a record for that company.

I am pleased to say that the companies in New Zealand and Malaya have increased their business.

The consolidated profit and loss account of the Group shows that, after deducting all expenses, £568,020 was earned before providing for taxation, compared with £547,223 for the previous year. The net profit attributable to the members of the Holdings company available for distribution amounts to £327,017.

I have before me details of the results of all the companies in the Group for the first four months of the current financial year. From these and orders in hand, together with the general climate of trade, I look forward to the results of next year showing an increase over the year now before you.

The report was adopted and a total distribution of 18½ per cent, including the special interim dividend of 2½ per cent paid in March, 1959, was approved.

THE UNITED STATES DEBENTURE CORPORATION LIMITED

The Annual Ordinary General Meeting of The United States Debenture Corporation, Limited, was held on March 30th in London, Mr Ion H. T. Garnett-Orme (the Chairman) presiding.

The following is an extract from the Directors' Report:

Once again the Revenue Account shows an increase in our income. Despite the fact that the change in the standard rate of Income Tax resulted in the estimated Double Taxation Relief receivable being reduced from £142,000 to £128,000, total investment income for the year has risen from £762,738 to £794,565, and net income available for distribution to the Ordinary Stockholders from £319,728 to £369,250.

The proportion of our permanent funds at market invested in North America has fallen from 47 per cent to 39 per cent. This does not indicate any basic change in policy and is due to the substantial increase in the market value of our sterling holdings. Although this year there has been a slight decline in the capital value of our dollar investments, the majority of these produce a stable and gradually increasing income, and many are in the Public Utility field which in this country is closed to investors. It is not our present intention to reduce the investment in this category.

Next year's income should show a farther increase, but this is subject to any change in investment policy in general and in particular to the possibility that the Board might decide to increase liquidity at the expense of income. Although it is proposed to increase the dividend from 9½ per cent to 10½ per cent, approximately the same percentage of net available revenue is being distributed as last year.

With the intention of making the Corporation's Ordinary Stock more readily marketable, it is proposed to apply to the Stock Exchanges concerned for permission to have the stock quoted in 5s. Units.

The report was adopted.

NATIONAL PROVIDENT INSTITUTION FOR MUTUAL LIFE ASSURANCE

PROSPERITY AND SAVING WITH-PROFIT PENSION SCHEMES

The Annual Meeting of the National Provident Institution will be held on April 26th in London.

The following are extracts from the address which will be submitted by the chairman, Mr Lawrence Emlyn Douglas Bevan:

During 1959 we witnessed a recovery of our economy which surpassed the expectations of most people; industrial production in this country displayed a marked expansion compared with 1958.

It is much easier to start saving in times of relative prosperity. It is also an opportunity for each of us to reconsider whether his own life assurance is adequate. Above all else it is the time to start a first policy if you have not one already. I believe there are many people in this country today enjoying a high degree of happiness and prosperity who have either no life assurance at all or perhaps only a modest amount resulting from weekly or monthly "collections." I strongly commend to them the rewarding results they can achieve by short and long term savings through life assurance, as well as the protection that it gives to the subsequent standard of living of their dependants.

NEW BUSINESS

I am sure you will have been pleased to learn that for the first time in our history the total new sums assured on individual assurances (after deducting reassurances) exceeded £10 million. The total net figure, including group life assurances of about £1.5 million, amounted to nearly £12.25 million. The expansion of our new business last year substantially exceeded the average for life offices generally.

For whole life assurances, both with and without profits, we have recently been able to reduce the normal rates of premium charged for women.

For endowment assurances, we have reduced the rates of premium in the without-profits class to an attractively low level. I would particularly draw your attention to the favourable terms that we now offer for without-profit policies generally. I have no need to remind you of our reputation as a leading office in the field of with-profit life assurance, but we realise that certain requirements are sometimes better met by non-participating policies. This often happens when a definite sum is required in connection with house purchase, provision for death duties, education or personal pensions. Moreover the most inexpensive way to give greatly increased protection for a growing family is to add family protection benefits to a basic whole life or endowment assurance, and these additions have become very popular with our members.

THE OBJECT OF LIFE ASSURANCE

We are so much aware today of the value of life assurance as an investment that we often forget its most important purpose, namely the protection of the family.

We particularly welcome young married men as members of the Institution, but we sometimes wonder whether it is always best in such circumstances to take out endowment assurance policies for a period of some 15 or 20 years. They already have certain family responsibilities, and probably more will follow. Their first care, therefore, should be to obtain as much life cover as possible. A young man of 25 prepared to pay a premium of £2 a month, can obtain from the Institution a with-profit endowment assurance for £334 for a term of 15 years. Allowing for bonuses such a policy will no doubt turn out to be a good investment, but how much better would be the protection for family in the event of his own unexpected death if he took a with-profit whole life policy for £1,137. He might go even further and make it a without-profit policy and increase the initial protection to £1,605.

It was with these thoughts in mind that I looked at our experience of 288 claims by death during 1959. The total claims due to unnatural causes came to over 15 per cent in amount of the total reported. The moral to be drawn from these figures needs no elaboration by me.

PENSIONS

Our new with-profit group pension scheme policy has been favourably received during its first year of operation. This contract brings together all the advantages of the alteration in the income tax law in 1956 for pension schemes approved under the Income Tax Act, 1952, section 379, as well as the benefit of sharing in the prosperity of the Institution. We believe it to be one of the most modern and profitable types of pension policy available in the market today and I can commend it to any employer who has not yet provided adequate pensions for his employees. Our pension department is ready at all times to give the benefit of our experience in arranging a scheme to suit individual requirements.

This leads me naturally to the subject of the new state graduated pensions. We welcome the facilities offered to satisfactory occupational schemes for contracting out of this part of the state scheme, and also the appointment in good time of the Registrar of Non-participating Employments. However, barely twelve months now remain for each employer to decide whether he should take advantage of the opportunity to contract out and I would urge any employer, who has not yet made up his mind, to tackle this problem as soon as possible. It will become increasingly difficult as we approach April, 1961, to give to every scheme the attention it needs.

MUTUAL BENEFIT

We are now in the third year of our triennium and the next valuation will take place on December 31, 1960. Naturally I am not in a position to forecast what rates of bonus we shall then be able to declare on our with-profit policies. What I can say with confidence is that we shall be able to show a position of undoubted strength. We face the future confident in our organisation and in the contracts we offer, and we can see no reason within our control which should prevent us from continuing to earn profits at a satisfactory level. The Institution has no shareholders and the whole of such profits are therefore reserved solely for the benefit of its policyholders. It is this mutual aspect of our business that I should like once again to stress because it means that our with-profit policyholders secure their contracts at what is virtually cost price.

THE CHARTERED BANK

106TH ANNUAL GENERAL MEETING

The one hundred and sixth annual general meeting of The Chartered Bank was held on March 30th at the Bank's Head Office, 38 Bishopsgate, London, E.C.2.

The Chairman of the Bank, Mr V. A. Grantham, presided.

Mr W. G. Pullen, Chief General Manager, read the notice convening the meeting and the report of the auditors. With the consent of the stockholders present, the report and accounts, which had been circulated previously, were taken as read.

The Chairman then moved that the report and accounts for the year 1959 be approved and that a final dividend of 7½ per cent, less income tax, be declared; an interim dividend of 7½ per cent, less income tax, having been paid in September, 1959.

The resolution was seconded by Sir John Tait and carried unanimously.

The retiring Directors, Mr Clifford Waite, CMG, Mr Ian Lilburn MacEwen, Sir Evan Meredith Jenkins, GCIE, KCSI and Mr William Ewing Eadie, CA, were re-elected Directors of the Bank.

Messrs Deloitte, Plender, Griffiths & Company and Messrs W. A. Browne & Company were re-appointed auditors, and their remuneration was fixed.

A vote of thanks to the Directors, General Managers, branch managers and the staff at home and abroad for their successful conduct of the affairs of the Bank was proposed by Sir John Woodhead, GCIE, KCSI and seconded by Mr Joseph Nissim.

BEAUMONT PROPERTY TRUST

SATISFACTORY PROGRESS

The twenty-sixth annual general meeting of The Beaumont Property Trust Limited was held on March 29th in London, Sir Cyril Black, JP, DL, MP, FRICS, FAI, chairman, presiding.

The following are the main features from his circulated statement:

The accounts for the year ended September 30th last will, I feel sure, be regarded as satisfactory, indicating as they do, satisfactory progress in the profitable development of this Group.

Property and General Revenue: This has risen from £273,437 to £324,826 and the profit for the year, after taxation, at £136,191, shows an increase of about £33,000.

Dividend: We have paid an interim of 3 per cent, less tax, on the Ordinary Share Capital, as increased by the bonus issue, and recommend a final dividend of 5 per cent, less tax.

Low Borrowing Ratio: The Freehold and Leasehold properties of the Group are subject to Secured loans consisting of Mortgage Debenture Stock and Mortgages amounting to only £1,355,850, i.e. 30 per cent of their Book Values. Your Directors will increase the borrowings to a reasonable extent as may be necessary to finance new purchases.

Important Sales: Since September 30th last, we have entered into contracts for important and profitable sales of further properties, in the main flat properties for sale prices totalling £1,037,500. We have arranged for the purchase of a number of first-class business properties let at moderate rents.

Further Capital: Your Directors have under consideration a proposal to increase the authorised Preference Capital to £1 million. We intend also to recommend that the Ordinary Capital, which consists of Shares of £1 each, be converted into Shares of 5s. each.

The report and accounts were adopted.

BANQUE FRANCAISE DU COMMERCE EXTERIEUR

The Meeting of Shareholders of the Banque Française du Commerce Extérieur was held in Paris on March 16, 1960, under the chairmanship of Monsieur Belin, Chairman of the Board of Directors, assisted by Monsieur Assémat, Vice-Chairman and Managing Director.

The Chairman, on behalf of the Board, read the Report covering the financial year 1959.

As a result of expansion in business with foreign countries, particularly exports, the number and value of the transactions conducted by the Bank show an increase. The total appearing in the balance-sheet has increased by 18 per cent.

Despite this increase in business, however, the reduction of interest and commission rates has not enabled the net profit to be wholly maintained. This—after deduction of all charges, sums written off for depreciation and provisions—amounts to NF4,923,870.84 (492,387,084 francs) as against NF5,652,315.52 (565,231.552 francs) in 1958.

After having made provision for statutory allocations in favour of shareholders, staff and welfare services, the Board has appropriated NF1,700,000 (170 million francs) for the general reserve fund and placed at the disposal of the Meeting of Shareholders a balance of NF1,597,759.30 (159,775,930 francs).

The Meeting, after having heard the Report of the Auditors and taken note of the comments of the Welfare Committee, unanimously approved the accounts and, in particular, resolved to allocate to the shareholders an additional dividend of 5 per cent and to strengthen the general reserve fund by a further sum of NF400,000 (40 million francs).

The Bank's own funds, excluding provisions, will accordingly total in the aggregate NF36,840,000 (3,684 million francs).

APPOINTMENTS

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of Temporary LECTURER IN THE HISTORY OF ECONOMIC THOUGHT. The appointment will be made for a period extending from October 1, 1960, to January 31, 1961. The salary will be on a scale £900 to £1,650 per annum, according to qualifications and experience, with membership of the Children's Allowance Scheme. Applications should be sent not later than April 9, 1960, to the Registrar, the University Manchester 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF GLASGOW

ASSISTANTSHIP IN SOCIAL AND ECONOMIC RESEARCH

Applications are invited for an Assistantship in the Department of Social and Economic Research to assist with an enquiry into "fringe benefits" in the United Kingdom. Applicants should possess an honours degree in Economics or a related subject, but applications will be considered from persons due to graduate this year. Salary scale: £700-£850 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (3 copies) should be lodged, not later than April 30, 1960, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

For further appointments and other classified advertisements see pages 110 and 111

SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail £4 . 10 ; overseas £5

By air see below

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

COMPANY AFFAIRS

Ford Looks Ahead

THROUGHOUT the bull market last year, as the chart shows, Ford Motor ordinary shares were moving ahead more rapidly than the general run of blue-chips. So too, it must be added, were other motor equities: a natural consequence of expansion within the industry and the big earnings cover on the dividends. Ford at 98s. 3d. yield 3½ per cent on the increased dividend of 17½ per cent, less than any other motor share except Jaguar whose dividend is covered nearly ten times by earnings. Ford's dividend is covered over four times but that is not the only reason why the shares enjoy so much favour among investors.

Last year vehicles sold at home rose from 202,133 to 236,690 (which included a 60 per cent increase in the sale of Thames trucks) and the number exported from 219,439 to 236,167; total sales rose from £206½ million to £233 million and the gross income before tax went up from £26.4 million to £33.9 million. All this was achieved in a year which saw an expansion from £85½ million to £100 million in the capital employed in the business.

Indications about the future are scattered throughout Sir Patrick Hennessy's statement. Speaking of a decade of opportunity ahead, in which he naturally urges the Government to do much more about Britain's roads and traffic congestion, Sir Patrick points out that there is one car for every three families in this country and that

"clearly this process will continue." Undoubtedly, he adds, there will be parallel increases in the car population throughout Western Europe and "substantial advances" elsewhere. Sir Patrick takes note of the expansion in capacity to meet what he describes as "the unprecedented demands of the growing world market" and he concludes that all the indications point to increasing competition in export markets.

For Ford to gain its full share in the growth of these markets, it has to expand its capacity further, and would have preferred to do so in the Thames estuary. But it is going to Merseyside, where initial production will be about 200,000 cars a year. So are other large manufacturers: Sir Patrick hopes that the Government's view that a shortage of labour will not develop in this area will prove to be right. Ford will also move production of commercial vehicles to Slough. These moves should relieve congestion at Dagenham. Holding British and American gilt-edged securities worth £67 million, Ford should have no difficulty in financing this further phase of development.

These developments are some way ahead. The immediate prospect for Ford cannot be seen as anything but good. Demand for its medium and larger cars has been fully maintained and they are being produced to the maximum of capacity. Within three months of its introduction the Anglia, Sir Patrick claims, was being produced and sold at a higher rate than that achieved by any other British car; production already exceeds 950 a day and is being increased further. Total daily output which ran at over 2,000 vehicles in the last months of 1959 has now been raised to over 2,500.

British American Tobacco

TWO main points of interest emerge from the statement made by Sir Duncan Oppenheim at the annual meeting of British American Tobacco. First, it had been generally thought that the United States subsidiary, Brown and Williamson, would not pay any dividends to the parent company until the dollar loan made to that company had been repaid. Sir Duncan now reveals however that the American subsidiary has been distributing dividends for some years. He also announced that because of the continued expansion of that business the loan had been increased and the period of repayments had been lengthened. The loan will not be finally repaid until 1979. BAT's income from Brown and Williamson does not therefore turn, as the market thought it did, on a maiden dividend but on the possibility that the dividend might be raised. For the bulls that cannot be quite so alluring a prospect as their first, mistaken assumption.

Secondly, the market had also hoped for a further increase in dividend this year following the raising of the first tax-free interim payment from 5 to 5⅝ per cent. But Sir Duncan says that the sole purpose of that increase was to even out the dividend payments and he goes no further than saying that he hopes to maintain the dividend at 20 per cent, tax free. He forecasts a further reduction in earnings from factories in this country but he hopes that this will be balanced by higher dividends from subsidiary companies abroad, in which production still goes on rising. The chairman's statement was followed by some selling, largely by small investors. The 10s. shares fell by 6s. 6d. to 63s. (to yield 5¼ per cent) while the £1 shares of Imperial Tobacco, which has a big holding in BAT, fell by 6s. 9d. to 67s.

Waterlow and Sons

THE directors of Waterlow are trying hard to fight off the bids made for the company's preferred and deferred ordinary shares by Purnell and Sons, the Bristol printers. This is very clear from the circular they have sent to shareholders together with the formal offer from Henry Ansbacher and Company on behalf of the bidders. Mr Philip A. Waterlow, the chairman, repeats the directors' earlier advice to shareholders not to accept the offers.

But the directors can scarcely hope to enlist full support unless they are willing to take shareholders more into their confidence. Their circular lacks concrete information—though it reveals that Sir Harold Gillett has been appointed to the board, a move which certain institutional investors had been urging. Sir Harold has agreed to become deputy chairman and also to make a report to shareholders on the state of the affairs of the company. Mr Waterlow also discloses that an offer for the purchase of an undisclosed property (believed to be its head office in Great Winchester Street) has been accepted. This will result in a capital profit but Mr Waterlow gives no figures, either of the price or of the profit.

He also says that turnover has increased substantially this year and that profits available for distribution should at least equal the income offered to shareholders by Purnell. This indicates a rapid recovery, for the company made net losses in the past two years. To match Purnell's promise, Waterlow would have to declare a dividend of not less than 12½ per cent, higher than any payment that it has ever made in the past. Shareholders would be able to assess the worth of their shares more accurately if they were told exactly what dividend the Waterlow directors have in mind and exactly how substantial are the tax losses which the company will be able to set off against future profits.

At 43s. Waterlow deferred are now 9d. below Purnell's offer price. With Purnell ordinary at 15s. 9d., the offer of 10 of the 5s. shares and £3 of 6½ per cent convertible loan stock for every 5 shares is worth 43s. 9d. Unless more concrete evidence on both profits and asset values is forthcoming from Waterlow—and here much would seem to depend on Sir Harold Gillett's report—some deferred shareholders may be tempted to sell through the market. The offer of £22 of 6½ per cent loan stock for every 20 Waterlow preferred ordinary is equivalent to 22s., as the stock can be sold to Henry Ansbacher at par, and is one which many shareholders may find too attractive to resist. These shares count for 30 per cent of the total votes.

Aluminium Ltd

UNLIKE the integrated producers in the United States, Aluminium Limited does not consume the bulk of its output of raw metal in its own fabricating plants. Recession is therefore apt to hit the company more severely than its rivals, and recovery to be correspondingly delayed. Consumption of aluminium in the free world reached a new peak of 3.6 million short tons last year, nearly 25 per cent higher than in 1958 and about 20 per cent above the previous best in 1956. Yet Aluminium Limited's results for the year broke no records. But by the fourth quarter total group sales had revived to a record 200,000 tons, though apparently buyers were tucking some metal into stock in anticipation of higher prices (wisely: prices went up last December, the company's price in Britain rising by £6 to £186 a ton delivered). And now, says the president, Mr Nathanael V. Davis, in his annual statement, the company's smelters in Canada are operating at about 90 per cent of capacity, compared with only 65 per cent at one period last year

Group sales of raw metal and semi-fabricated products rose from 581,200 short tons to 643,300 tons in 1959; operating revenues recovered from $422.9 million to $448.7 million, and the consolidated net profit showed a modest improvement, from $22.5 million to $24.1 million. Earnings per npv common share went up from 74 to 79 cents and the dividend was set at 55 cents. Since then, a quarterly interim of 15 cents has been declared for 1960. Cash generated in 1959—net income, depreciation and tax reserves—amounted to $78 million, compared with $71 million, and capital expenditure fell sharply from $103 million to $62 million, reflecting the near completion of the new hydro-electric and raw material facilities.

The company fared relatively better outside than inside its traditional markets—the United States, Britain and Canada—last year. Its total deliveries outside these three countries rose by a half; it accounted for over half of all imports into the European common market and for almost three-quarters of all imports into Japan. British consumption last year rose by 15 per cent, but the company's business in Britain did not benefit proportionately. This squeeze in Limited's share of the British market must be attributed to declining sales of raw metal following the link up between the American company, Reynolds Metals, and Tube Investments, which later bought control of British Aluminium, and the association of Aluminum Company of America and ICI.

North British Locomotive

NORTH BRITISH LOCOMOTIVE has been in so parlous a state for so long that its shareholders might be excused for wondering whether it would ever again become profitable. The group's loss of £1,349,566 in 1959 included £462,306 provided for a loss on contracts (£250,000 of which relates to work carried out before 1959), £251,399 for elimination of administration expenses from work in progress, and a trading deficit in 1959 of £461,337. Shareholders may see some comfort in the decline in this deficit from £634,505 in 1958, but the trading loss was higher for North British Locomotive in the second half of 1959 than it had been in the first half: £242,940, against £190,827. These fluctuations in the trading loss seem largely to reflect changes in the rate of output.

The new chairman and chief executive, Mr T. Coughtrie, and the new vice-chairman, Lord Reith, began to reorganise the company last September; engine and transmission production, previously scattered, is being concentrated at one works. Mr Coughtrie regrets that what they set out to do in September has not had the speedy and satisfactory result required, saying that "things were more difficult than at first realised, and it may be that we did not move drastically enough." He does not explain whether this means that production remains unprofitable; but he does say that further reorganisation of production is under consideration.

Orders on hand at the end of 1959 were worth just over £11 million, £3 million less than a year earlier. No export orders have been received; all are from British Railways. Revaluation of the company's assets on a "going concern" basis has shown stockholders' funds to be equal to £2,325,536, of which £1,500,536 relates to the £1,250,000 of ordinary shares. This is at book value and shareholders may wonder what, if the worst came to the worst, would be attributable to their shares on liquidation. So far the government's decision to keep the company going by lending it £1,750,000 has not achieved much, if any, tangible return; nor has the company's decision to attempt the change-over from steam engines to diesels—from one technique to an entirely different one.

Mining Finance Dividends

IN the disturbed state of the Kaffir market the good increases both in profits and dividends announced by **Anglo American** and Union Corporation have largely been ignored. A good showing had been expected from Anglo American, for it had received higher dividends from the OFS gold producers and had benefited from the better results and dividends from the Rhodesian copper mines and the bigger interim declared last year by De Beers. Anglo American's net income, in fact, advanced from £5,900,367 to £6,950,000 and the directors have raised the ordinary dividend from 8s. to 9s. per 10s. share. At 162s. 6d. the 10s. shares are slightly lower than they were a year ago and yield 5½ per cent.

The directors of **Union Corporation** have raised the dividend from 3s. 6d. (including a bonus of 6d.) to 3s. 9d. per share. The rise in its income was very sharp, with net income (after tax of £830,119 against £700,241) advancing by 50 per cent from £1,903,957 to £2,856,915. From this the increased dividend absorbed £1,148,437. At 56s. 10½d. the shares yield 6¼ per cent. For the future much will turn on the outcome of Union Corporation's investments in the Kinross area in the Far East Rand, notably Winkelhaak Mines, where profits are now running at over £100,000 a month and the new Leslie and Bracken mines, where production should begin within the next four years—and of course on political influences.

Lombard Banking

FOLLOWING hard on the recent one-for-two rights issue by United Dominions Trust, Lombard Banking is raising almost £5 million in a similar fashion. Shareholders are offered one new share at 22s. 6d. for every two held. The preliminary profits statement published early in March showed a very sharp rise in gross profits in the year to December 31st from £1,383,363 to £2,380,918, and in net profits from £440,451 to £915,825. The full report, due to be published soon, is certain to show an impressive increase in loans and hire purchase advances. The directors have already said that at the end of last year net tangible assets attributable to preference and ordinary shareholders amounted to £5,850,405, compared with £2,628,143. They expect to raise the dividend on the increased capital from 18 per cent to 19 per cent. On this news the 5s shares rose by 1s. to 31s. 9d. to make the rights worth about 3s. 3d. In fact the new shares opened on Thursday at 4s. 10½d. premium, to yield 3.6 per cent on the forecast dividend. In view of the tightening of credit and of the reduction in the ratios of equity capital to total borrowings following on last year's HP boom, other HP finance houses may also come to the market in the next few months.

Associated Electrical Industries

SHAREHOLDERS in Associated Electrical Industries have to wait until the annual meeting to hear what Lord Chandos, the chairman, has to say about the group's trading experience last year and its immediate prospects. This year's directors' report contains a wealth of statistical information about the company over the past ten years. Perhaps the most significant point to emerge from these statistics is the steady contraction in profit margins. Last year sales rose by 14¼ per cent, from £181 million to £208 million, but trading profits rose by only 6 per cent, from £15.9 million to £16.9 million. Over the past ten years sales have risen almost fourfold from £57 million to £208 million; trading profits have risen little more than twofold. As a percentage of sales, trading profits have fallen from 15.3 per cent five years ago to 8.15 per cent. Orders received last year rose by about £14 million to £182 million; this figure excludes two major orders placed since the end of the year, one for the generating set of Canada's first nuclear power station, and the other, worth £2¼ million, for equipment for the South African railways.

The consolidated balance sheet shows a rise in bank overdrafts from £2,813,570 to £6,110,165 and a fall in quick assets from £7.6 million to £5.2 million: this results largely from a rise in stocks from £79.8 million to £83.3 million and in debtors from £52 million to £57 million. The £1 units at 55s. yield 5½ per cent on the 15 per cent dividend, covered 1.2 times by earnings.

C. A. Parsons

FOR a company engaged in the heavy electrical industry C. A. Parsons did reasonably well in 1959. Thanks mainly to the steady working through of a fairly long order book the group has been able to report an increase of £267,000 in its trading profits to £3,648,689; after a higher tax charge of £1,269,575 (against £1,240,454) net earnings have risen from £2,091,284 to £2,209,114. The ordinary dividend (which last year included a special interim of ⅜ per cent) has been effectively increased by 1¼ per cent to 9⅜ per cent. In January the directors announced that talks were taking place with A. Reyrolle and Company (which already owns 40 per cent of Parsons' equity) with a view to merging the two groups and the outcome of these negotiations is believed to be imminent. The £1 shares at 49s. 6d. yield 3.8 per cent.

Department Stores

MR R. A. L. COHEN, chairman of **Lewis's Investment Trust**, says in his statement to shareholders that most of the expansion in the group's trade, reflected in the rise in profits from £4,971,693 to £5,453,531, occurred between November, 1959, and the end of its financial year on January 31st. Trade has continued to expand since then. One important factor making for bigger earnings is that the £3 million Bristol store is now trading at a profit, although it is still only a modest one. This profit, because of investment allowances, bore no tax at all last year. These allowances also reduced Selfridges' tax liability, and together with the reduction in the standard rate they brought the total tax charge down slightly to £2,405,221, even though higher profits were earned.

Publication of the report brought the 4s. shares up by 1s. 3d. to 24s. 9d. This seems to have been based on the news of a further property revaluation within the group. The consolidated balance sheet at end-January shows a rise of over £4 million to £24 million in the value of net fixed assets primarily as a result of the revaluation of properties of the parent company. After this revaluation, a 25 per cent scrip issue was made last October. Now Mr Cohen reveals that Selfridges has acquired the remaining part of the Oxford Street freehold from the "Pru" and he expects the revaluation of "what must be among the most valuable areas in London" to throw up a substantial surplus over its present book value of £5,772,986. When this and other revaluations are completed, another scrip issue seems a distinct possibility, but this is heavily discounted in the present yield of only 2¾ per cent on the increased dividend of 17 per cent.

The consolidated balance sheet of **Bentalls** also reveals an increase in net fixed assets from £2,145,149 to £2,392,356. This reflects not only the completion of further extensions at the main store at Kingston but the acquisition of Mary Lee, a leading fashion store in Tunbridge Wells. Only six months trading from this new acquisition are included in the consolidated accounts, which show a rise in trading profits in the year to January 31st last from £665,075 to £729,651. Group sales exceeded £9 million, although the benefits of extra trade from the Kingston extension did not begin to accrue until the last months of the financial year. The ordinary dividend has been raised from the equivalent of 13⅓ per cent to 16⅔ per cent, but at 17s. 6d. xd the 2s. shares still yield only just over 1¾ per cent. Although the directors denied last November that they knew of any takeover bid, the present price and yield suggest that some investors have that possibility in mind.

Times Furnishing

THE boom in furniture sales, which as yet shows no signs of slackening, gave Times Furnishing a record year in 1959; and its tailoring subsidiary, Willerby's, should have done equally well. But because companies engaged as heavily as Times Furnishing is in hire purchase business do not take the full profit on such contracts into account until the last instalment is paid, the trading profits of the group actually show a slight fall, from £992,022 to £925,397. This figure, however, is struck after providing £580,165 (against £334,341) for unrealised profits on hire purchase contracts. Net earnings fell from £334,874 to £283,636 but the ordinary dividend has been raised from the equivalent of 11¼ per cent to 13¾ per cent on the capital as increased by last year's 100 per cent scrip issue. Hire purchase debts at the end of 1959 amounted to £5,309,148 and compare with £3,845,567 at the end of 1958. Times Furnishing can thus look forward to a reasonable rate of return this year. Investors are now used to "leads and lags" in the hire purchase earnings of companies and this is reflected in the yield of just under 4½ per cent offered by the 5s. ordinary shares of Times Furnishing, now standing at 15s. 7½d.

London Stock Exchange

FIRST DEALINGS:	Mar. 21	April 4	April 25
LAST DEALINGS:	April 1	April 22	May 6
ACCOUNT DAY:	April 12	May 3	May 17

NEXT week's budget and the news from South Africa overshadowed the London market for most of the week. Over the week to the close on Wednesday the *Financial Times* Gold Mines index lost 6.5 points to 70.2—its lowest level since February 13, 1958. The sharpest falls were on Wednesday when news of widescale arrests in South Africa and, later, of a declaration of emergency in some parts of the Union, induced heavy selling by Continental investors (who from the outset have been more nervous than British holders of South African issues). In gold shares, Free State Geduld slumped 22s. 6d. to 125s. on the week; Western Holdings lost 21s. 3d. to 126s. 3d. and President Brand 6s. 7½d. to 58s. 9d. Among finance houses, Anglo-American dropped 1½ points to 7¼. Diamond shares lost ground, too, with De Beers 27s. 9d. lower at 138s. 9d. Among South African industrial shares OK Bazaar fell 8s. 7½d. to 45s. 7½d. and South African Breweries 3s. to 21s. 6d. Losses were generally smaller in South African Government stocks; 3½ per cent South Africa 1965-67 fell 1 point to 82.

Gilt-edged stocks have been quiet over the week to Wednesday and price movements have been slight. Among irredeemable stocks 3½ per cent War Loan put on ⅛ to 62 13/16 and in the shorts 4½ per cent Conversion 1964 declined 3/16 to 98¼. Medium dated stocks were little changed over the week. Home Corporation loans were also quiet but firm with 5½ per cent LCC gaining ⅛ to 100½.

Business in the industrial equity market has been on a small scale but the undertone has remained reasonably firm, though on Wednesday the jolt in the South African section had wider effects. Over the week to Wednesday's close *The Economist* indicator fell 0.9 to 361.2. Steel shares came back slightly; Steel of Wales lost 1s. 3d. to 45s. 9d., United Steel 3d. to 81s. and John Summers 1s. 3d. to 75s. Heavy engineering shares were mixed, with Guest Keen closing unchanged at 90s. 3d. and Henry Simons also unchanged at 50s. Simon Carves, on the other hand, gained 6s. to 53s. Heavy electrical shares were firm, with AEI 9d. better at 55s. 6d., English Electric unchanged at 43s. 6d. and General Electric also unchanged at 39s. 9d. American favourites came back a little. Fisons dropped 6d. to 52s. 6d., Unilever 1s. 6d. to 142s. 6d.; Unilever NV dropped 2s. 7½d. to 174s. 7½d. Turner and Newall, which also has substantial interests in Africa, fell 6s. to 103s. 6d. Tobacco shares were weak on last week's rather gloomy statements from the chairmen of BATs: BATs lost 5s. 10½d. to 62s. 10½d. and IMPs lost 5s. 1½d. to 66s. 10½d. Oil shares were generally firmer ahead of the oil dividend season.

THE MONEY MARKET

THE discount market maintained its bid at £98 16s. 11d. at last Friday's Treasury bill tender, but its allotment improved further from 49 per cent to 54 per cent. Total applications fell again, from £449 million to £439 million, and the average rate of discount rose by 1½d. to £4 12s. 5.03d. At this week's tender the offer was reduced to £280 million of bills against a similar amount of maturities.

For the first time in 10 months the United States Treasury bill rate fell below 3 per cent this week to 2.792 per cent on three months bills. By contrast, the rate on six months bills was fractionally higher at 3.187 per cent.

Money was in short supply in Lombard Street up to the week-end. The position was accentuated by the absence of bill maturities caused by the Christmas holidays. On Friday and Saturday a small amount of official help was given and with the use of full privilege facilities the market was able to avoid borrowing at the Bank. This week has seen somewhat easier credit conditions, but except on Tuesday rates for overnight money have not fallen much below 4¼ and 4⅛ per cent.

(1) Retained imports. (2) Owing to changes in classification 1959 figures are not strictly comparable with those for earlier years. (3) 1957 figures in *italics* include trade with the Channel Islands, now excluded from the value figures. (4) Average for fourth quarter. (5) Average for first quarter. (6) In 1959 indices for total imports and exports, but not for the classes, are adjusted to include trade with the Channel Islands.

Did you know that

this nut

could buckle your business?

A steam loco-type crane runs on a track. If the track is faulty—if, for example, a nut is loose on a fish-plate, chair, or sprag, a travelling crane may wobble, tilt, and topple, to end up overturned. The cost of such a mishap is impossible to predict: while it may be measured in time lost, profits lost, it could also very possibly spell a life lost.

Vulcan know

Cranes overturn for a number of reasons—most often for a combination of reasons only discernible to the expert eye. That eye belongs to the Vulcan Engineer Surveyor. He not only knows where to look for the likely faults but is trained to see any potential danger spots in the immediate vicinity. Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection *and* protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

Vulcan are specialists

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to Dept. 17.

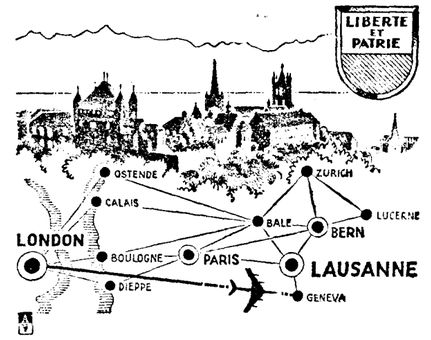
A flaw in the crystal?

What does she see in that crystal? A long life or a short life? A large family or an only child? Good luck or difficult times ahead?

Whatever the gipsy tells you, you know that life is bound to be full of uncertainties—and anyway, you wouldn't plan your life on what she sees in her crystal.



There is one really sound way to plan for the future—a Prudential insurance policy. It will smooth over the unexpected troubles that may arise and provide for you when your family has grown up.

Take out a policy early in life—it comes cheaper that way! When you've talked it over with the man from the Prudential and decided which one suits you best, you can sit back and let the future take care of itself. *The address of your local Prudential office is in the telephone directory.*

Ask the man from the

APPOINTMENTS

A CAREER IN MARKETING AND ADVERTISING

We make and market a growing number of leading food products backed by publicity operations which are among the largest and most progressively managed in the country.

We want young men to join us on the marketing side of our business. They will be taught the art of large scale marketing and will be given every encouragement to progress to senior management.

The work calls for intelligence and imagination of a high order, coupled with energy to drive projects through to successful completion. Candidates should preferably be under 26 and with previous experience of retail selling or advertising agency work. University degree an asset but not essential.

Salary will be within the range £800-£1,400 dependent upon experience and qualifications.

Detailed application to: Personnel Manager at Devonshire Works, Birmingham, 12.

ALFRED BIRD & SONS LIMITED

EDITORIAL ASSISTANT required on Management Journal. Starting salary £750. Applicant must have good English and be methodical and meticulously accurate. Degree in Sociology or Economics an advantage.—Please reply to Box 1308.

BICC

MARKET RESEARCH OPERATOR

Applications are invited from candidates with qualifications in economics or market research, to assist the Market Research Manager in economic forecasting, surveys in the field of capital goods and other similar work. The preferable age group is 25/30 years and salary will be paid according to age, qualifications and experience, full particulars of which should be forwarded to the

PERSONNEL OFFICE,
BRITISH INSULATED CALLENDER'S CABLES LIMITED,
SURREY HOUSE, TEMPLE PLACE,
LONDON, W.C.2.

OXFORD UNIVERSITY INVESTMENT SECRETARY

The Curators of the Oxford University Chest propose to appoint an

INVESTMENT SECRETARY

to be responsible under the Secretary of the Chest (the chief financial officer of the University) for the handling of all investment business. The University's portfolio amounts to some £10 million, including gilt-edged stocks and a wide range of equities, in the management of which the Curators are advised by an expert Investment Committee and a firm of Stockbrokers. A university degree, a professional qualification and experience of investment business are all desirable but not essential and the Curators are prepared to send the successful candidate for a period to a financial house to gain experience before taking up his duties in Oxford. Candidates should be between 30 and 45 years of age. Salary according to age, experience and qualifications within the range £1,800 to £2,100, together with children's allowances and pension rights under the Federated Superannuation System for Universities. Appointment to be taken up not later than October 1, 1960. Applications together with the names of two referees, to be sent not later than May 14th to

The Secretary,
THE UNIVERSITY CHEST,
OXFORD.

ENGINEERING Distributors, London based, seek EXECUTIVE of first-class capacity with wide engineering knowledge to *join in formulation* and execution of expansion policies. Remuneration and status commensurate with size of job.—State experience and current salary to Box 1309.

For other appointments see page 100

UNIVERSITY OF GLASGOW

LECTURESHIP IN ECONOMETRICS

Applications are invited for a Lectureship in Econometrics in the Department of Social and Economic Research. This is primarily a research post and the successful applicant will be expected to act as a consultant to the Department's existing research projects in addition to conducting his own research. The research facilities include a DEUCE computer. Salary scale: £900-£1,650 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (8 copies) should be lodged, not later than May 14, 1960, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

Pfizer

NIGERIAN ACCOUNTANT

The Pfizer International Organization has recently set up a marketing company in Nigeria. It now wishes to appoint a Nigerian as Accountant to the Company.

Applicants should already be qualified accountants, or nearing the completion of their professional studies. They must be available for interview in Great Britain but ready to return to Africa. They will be joining a progressive company whose products should find a ready market in Africa.

Details of salary and conditions of employment will be discussed at interview, and in the first place applicants are asked to send details of age, qualifications and experience to the:

Chief Personnel Officer,
Pfizer Ltd.,
Richborough, Sandwich, Kent,
quoting reference J0703

THE PFIZER GROUP

MARKET RESEARCH OFFICER

(CONSUMER RESEARCH)

Mars Limited, the well-known confectionery manufacturers, invite applications for the post of MARKET RESEARCH OFFICER (CONSUMER RESEARCH). The successful applicant will be responsible to the Market Research Manager for research into all aspects of consumer behaviour and attitude connected with the Company's existing and development products; and he will be expected to have both technical qualifications and the ability to initiate and interpret research in terms of marketing decisions.

This is a position to which the Company attaches considerable importance. It occurs in the context of a department which maintains a large field force and considerable data processing resources, and which is engaged in measurements and investigations of markets at every level. A wide methodology is used and encouraged, and there is a very full scope for experimental work and the development of technique.

Applicants should be between 25 and 30 years of age, possess a degree in economics or psychology, and have spent two to three years in the Market Research Department of a manufacturing company or an advertising agency, with particular experience of research into consumer attitudes and preferences. The salary range is between £1,450 and £1,830 per annum; there is also a particularly generous non-contributory social security scheme which covers pension, life insurance and sickness.

Please write giving full details to the

Chief Personnel Officer, Mars Ltd.,
Dundee Road, Slough, Bucks.

UNIVERSITY OF NOTTINGHAM

DEPARTMENT OF EXTRA-MURAL STUDIES

Applications are invited from graduates for appointment as (a) TUTOR IN INDUSTRIAL RELATIONS in the grade of Lecturer. Preference will be given to candidates with qualifications in Sociology or in some other appropriate field of Social Science. Salary scale: £600 x £50 to £1,350 x £75 to £1,650.

(b) ASSISTANT TUTOR IN ECONOMICS in the grade of Assistant Lecturer. Salary scale: £700 x £50 to £850.

Both appointments carry family allowance (£50 p.a. for each child) and Superannuation benefits. Both Tutors will be expected to teach in Day Release and other special courses for Industrial Workers, as well as in normal Extra-Mural courses. Conditions of appointment and form of application, which must be returned by Wednesday, April 27, 1960, from the Registrar, The University, Nottingham.

W. G. STONE,
Director of Education.

OPPORTUNITIES FOR WOMEN GRADUATES

BRITISH NYLON SPINNERS LIMITED

has vacancies in its Consumer Research Section for women graduates under 26 years of age.

The work involves interviewing members of the public on Consumer Surveys, which are especially concerned with problems in the new and interesting field of synthetic fibres and clothing. Retail Surveys are also made. Investigators are based in London and about three quarters of their time is spent interviewing in London and the provinces.

After training, those appointed will be able to collaborate in all stages of the research and there are good opportunities to progress. Working conditions are excellent and include first-class hotel accommodation when away from London and three weeks' annual holiday.

Apply in writing to
PERSONNEL OFFICER,
BRITISH NYLON SPINNERS LIMITED,
69 KNIGHTSBRIDGE, LONDON, S.W.1.

UNIVERSITY OF GLASGOW

ASSISTANTSHIP IN POLITICAL ECONOMY

Applications are invited for an Assistantship in Political Economy. Salary scale: £700-£850 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (three copies) should be lodged, not later than May 2, 1960, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

AUSTRALIAN NATIONAL UNIVERSITY

RESEARCH SCHOOL OF SOCIAL SCIENCES

Applications are invited for appointment to a FELLOWSHIP in the DEPARTMENT OF POLITICAL SCIENCE. This Department conducts or commentates research into political parties and party systems, Parliamentary government, the relationship between social groups and the State, comparative politics, political communications and political theory.

The salary limits are £A1,832-£A2,002 per annum. Appointment is to age sixty-five, subject to confirmation after five years. A Fellow is entitled to one year's study leave on full pay, plus a contribution towards travel and other expenses in every seven years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid and assistance, with housing is provided.

Further details should be obtained from the Secretary, Associations of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on May 2, 1960.

NATIONAL COLLEGE FOR THE TRAINING OF YOUTH LEADERS

Appointment of Principal

Applications are invited from men and women with appropriate qualifications and experience for appointment as PRINCIPAL OF A NATIONAL COLLEGE for the Training of Youth Leaders. The college is being established at Leicester as part of the Government's plan for the expansion of the Youth Service. The appointment will be made to take effect as soon as possible, and in any case not later than September 1, 1960.

The main purpose of the college will be to provide a one-year course of training for mature people who wish to take up paid full-time youth leadership as a career. Approximately 300 students (men and women) will be admitted in the first year, starting in January, 1961, and thereafter approximately 130 students will be admitted annually during the life of the college, which is expected to be five years. Most of the students will be accommodated in the college or in a hostel associated with it.

Salary: £2,050 x £50-£2,250 (non-residential).

Forms of application, which must be returned by April 19th, and further details may be obtained from the Secretary, Ministry of Education, Youth and Adult Services and General Branch, Curzon Street, London, W.1.

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

Applications are invited for (A) LECTURESHIP or (B) ASSISTANT LECTURESHIP IN ECONOMICS. Salary scales: (A) Grade I, £1,500 x £50-£1,800 p.a.; Grade II, £1,350 x £50-£1,600 p.a.; (B) £1,200 x £50-£1,350 p.a.; entry point determined by qualifications and experience. Passages to Salisbury for appointee, wife and dependent children on appointment, with allowance for transport of effects. Superannuation and Medical Aid Schemes. Unfurnished accommodation at rent of 15 per cent. of salary. Assistance given for triennial visits overseas. Detailed applications (6 copies) naming 3 referees, by May 10, 1960, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

UNIVERSITY COLLEGE OF WALES, ABERYSTWYTH

Applications are invited for the post of Lecturer or Assistant Lecturer in the Department of Agricultural Economics to take up duties on October 1, 1960. Applications, with the names of two referees, should reach the undersigned, from whom further particulars may be obtained, by April 25, 1960.

T. MALGWYN DAVIES,
Registrar.

HONG KONG. CHARTERED ACCOUNTANT required by large old-established British Merchant Company. The Company is part of a group and there are good career prospects. Home Contract terms. Accommodation provided, salary according to age and experience plus appliable allowances. Provident Fund and Pension scheme. Candidates under 28 preferred.—Write, Box D.—4, c/o Street's, 110 Old Broad Street, E.C.2.

THE POLYTECHNIC, 309 REGENT STREET, W.1:

SCHOOL OF COMMERCE

Applications are invited for a full-time appointment as Grade B TEACHER, duties to commence on September 1st next, to teach Accounting, Economics or Law as main subject to small B.Sc.(Econ) and third professional level and preferably one of the other two as a subsidiary subject. The salary scale for a graduate rises to £1,240 per annum, plus London Allowance of £38 or £51. Additional allowances are payable for a good honours degree and training where appropriate. The commencing salary will depend upon qualifications and experience and may include up to twelve increments in respect of industrial experience. The post is subject to superannuation and some concession in this respect may be made for previous industrial employment.

Application form, to be returned by April 22nd, may be obtained by sending a stamped addressed foolscap envelope to the undersigned.

J. E. RICHARDSON,
DIRECTOR OF EDUCATION.

D.S.I.R. requires a PRINCIPAL SCIENTIFIC OFFICER (Economist) in Economics Section, London, S.W.1. Headquarters, to take a leading part in planning and executing studies of the research and development needs of industries or sectors of the national economy. 1st or 2nd Class Hons. degree in Economics required with experience either in industry or in research in industrial economics. A lively interest in technological development is desirable. Superannuation under F.S.S.U. Scheme. Salary (men) in the range £1,500-£2,120. Application forms from Manager (P.E.1265), Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Closing date April 12, 1960.

UNIVERSITY OF GLASGOW

ASSISTANTSHIP IN SOCIAL AND ECONOMIC RESEARCH

Applications are invited for an Assistantship in the Department of Social and Economic Research to assist in the research of the Department. Applicants should possess an honours degree in Economics or a related subject, but applications will be considered from persons due to graduate this year. Salary scale: £700-£850 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (3 copies) should be lodged, not later than April 30, 1960, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

For other appointments see page 100

UNIVERSITY OF ST. ANDREWS

Applications are invited for the post of LECTURER in POLITICAL ECONOMY in St. Salvator's College, St. Andrews. Preference will be given to a candidate able to teach economic doctrine and the theory and practice of money and banking. Salary scale (subject to upward revision) £900 to £1,650, starting salary according to qualifications and experience. F.S.S.U.; family allowance; grant towards removal expenses. SIX copies of applications, along with the names of three referees, should be lodged not later than April 30, 1960, with the Joint Clerk to the University Court, College Gate, St. Andrews, from whom further particulars may be obtained.

UNIVERSITY OF BIRMINGHAM

Applications are invited for a Lloyd-Matthew FELLOWSHIP in SOCIAL PHILOSOPHY, tenable from October 1, 1960 for two years, and renewable for a third year at a salary within the range £700-£900 p.a.

Applications (four copies), including the names of two or three academic referees, must reach, by May 14, 1960, the Assistant Registrar, The University, Edmund Street, Birmingham, 3, from whom further particulars can be obtained.

APPOINTMENT REQUIRED

IRISHMAN, 34 yrs., initiative, ambitious with non-stop connections throughout Ireland, requires representative section of agencies.—Replies confl. Please 3501/50 or Box 1305.

TRAVEL

HOLIDAY VILLAS ABROAD

A Mediterranean Summer on a villa on the beach can cost you as little as £25 a week or as much as £250—June simplicity or August luxury. Choose your beach from over 50 all along the coasts of

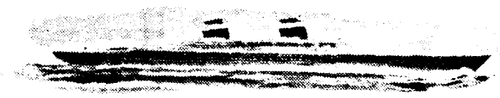
Published weekly every Saturday by Thirty-two Times a Year at Bungay, England.

WORLD'S SMARTEST RESORT, WORLD'S FASTEST SHIP

Sail with a gay Who's Who on s.s. "United States"



To America in five days! From the moment that deep ship's whistle fills the air, your trip on the UNITED STATES is an unforgettable experience.

You enjoy Meyer Davis dance bands . . . gourmet meals . . . pre-release films . . . cinema horse-racing . . . a heated swimming pool.

Your fare includes acres of deck space . . . luxurious air-conditioned accommodation . . . liberal luggage allowance . . . plus 5 days of the world's most palatial resort life thrown in! There is no finer food and service anywhere than on this great ship and her charming running-mate the AMERICA.

By Presidential proclamation, 1960 is a special "Visit America Year." Your voyage can be a glorious holiday for your family too. With the lifting of restrictions on currency for travel you can get virtually unlimited dollars for expenses on board and in the United States and Canada. The luxurious Cabin and Tourist classes can meet any budget problem. And you can pay all fares to your destination and return in sterling. Also, when the low Thrift Season fares are in operation there is an additional reduction of 10% on Round Trip fares during the same period.

Consult your Travel Agent about inclusive tours based on our "in-America-when-you-step-aboard" sailings.

It's sparkling, gay, lively—but no two guests get the same impression of the Captain's Dinner. This is how Tom Keogh, the well-known illustrator and stage designer, sees it.

Since restrictions on currency for travel have been lifted, more and more wives go with their husbands on business trips to America.

NO FINER WAY TO THE U.S.A.

GLOBAL SYMBOL...LOCAL SERVICE

CLARK BROS. CO. – compressors & gas turbines
DRESSER-IDECO COMPANY – steel structures & buildings
DRESSER MANUFACTURING DIVISION – couplings, fittings & rings
THE GUIBERSON CORPORATION – oil tools, molded rubber products
HERMETIC SEAL TRANSFORMER CO. – electronic transformer development-manufacture
IDECO, INC. – complete drilling rigs & equipment
LANE-WELLS COMPANY – technical oilfield services
MAGNET COVE BARIUM CORPORATION – drilling muds & chemicals
PACIFIC PUMPS, INC. – centrifugal pumps & oil-well plunger pumps
ROOTS-CONNERSVILLE BLOWER DIVISION – blowers, meters, vacuum pumps
SECURITY ENGINEERING DIVISION – rock bits & oil-well drilling tools
SOUTHWESTERN INDUSTRIAL ELECTRONICS – electronic instrumentation, computer systems

Dresser equipment and technical services are now available around the world

Since oil and gas are produced, transported and processed throughout most of the world, Dresser's operations are conducted on an international basis.

Many types of equipment, engineered and produced in the United States by companies in the Dresser group, are also manufactured under license abroad. The phrase "One of the Dresser Industries" identifies the family relationship of the diversified operating units, each of which is independently managed for maximum efficiency.

Each Dresser company possesses global experience, specialized research and engineering talent, and modern manufacturing facilities keyed to the technical needs of the industries it serves. Individually, in combination or as a complete group, Dresser companies are prepared to meet your particular requirements. Call in your local representative of any Dresser company, or write to us for your copy of the "Dresser World-Wide Guide."

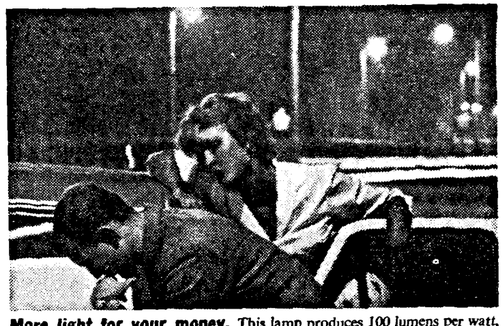
TOMORROW'S PROGRESS PLANNED TODAY BY MEN WITH IMAGINATION



AEI

WORLD ELECTRICAL NEWS IN PICTURES-1

Heart of Kariba! At the heart of one of the world's most ambitious engineering projects—the great new Kariba power station on the Zambesi in Central Africa—stand six 100 MW waterwheel generators, which are being supplied by AEI. Behind the dam will be the world's largest man-made lake. Its construction has entailed moving 50,000 people and many thousands of animals. Ultimately Kariba will feed about 1½ million kilowatts of power to the growing industries of Rhodesia and Nyasaland, and especially to the great copper mines of the north. AEI is also supplying twenty-five 330 kV oil circuit breakers and 50 miles of cable—the total order being worth some £4½ million. Merz and McLellan are the mechanical and electrical consulting engineers to the Federal Power Board for this project.

More light for your money. This lamp produces 100 lumens per watt, which is 25% better than any other commercially available lamp. It is the new Mazda Sodium Linear lamp developed solely by AEI. For the standard of light required it can be mounted higher and so spread its light further and more evenly, which means fewer columns, and lower costs to install maintain and run.

A million times larger than life. The AEI electron microscope, with AEI's new image intensifier, allows us to 'see' (without photography) parts of body cells or viruses, magnified up to 2 million times. Magnify this sheet of paper that much and it would blanket half of Britain. The AEI electron microscope and intensifier featured on BBC TV's recent "Science International" programmes when viewers saw, for the first time, fine detail of cell structure (as in the famous Upjohn model above).

AEI stands for **Associated Electrical Industries Limited**

Britain's Largest Electrical Manufacturer

33 GROSVENOR PLACE · LONDON S.W.1

—a single manufacturing company uniting the people, traditions and knowledge of such world-famous names in electricity as Metrovick, BTH, Siemens, Ediswan, Henley's, Birlec and Hotpoint. *With its 100,000 employees, 60 factories, 94,500 stockholders, £133,000,000 capital, and £208,000,000 sales last year,* AEI *is helping Britain to compete in the electrical markets of the world.* AEI resources are increasing the world's supply of electrical power; AEI research is finding new ways for people to benefit from it. Every working day in the year AEI delivers another £800,000 worth of electrical equipment to its customers.

Is your Chairman happy?

A Specialist firm took over our catering last month and the food in the Directors' Room has been every bit as good as you'd find in the most recherche restaurant.

This, of course, has had its mellowing effect. But what has made *all* the difference to our Chairman is that the "ordinary" canteen food has improved so much that productivity's actually gone up!

Calling in John Gardner was the Chairman's own idea. He said that they were just about the largest and best industrial catering outfit in the country. He said that their expert buying and skilful administration would transform the food and save the firm a good deal of money and worry. He was right.

May we suggest that a copy of John Gardner's "Top Management Guide 12 to 2 Planning" finds its way to your Chairman's desk?

Please write to:

Where is paper's greatest future in packaging—

protection or display?

Altogether no less than 42½ per cent of Britain's total output of paper and paperboard products is used for packaging the nation's consumer goods and the materials needed by industry and agriculture.

Where does paper's greatest future in packaging lie? As a functional material or as window-dressing?

This article sets out to answer this question and to discuss the opportunities of Britain's paper industry in this continuing 'Packaging Revolution'.

PAPER'S SUPREME ASSET

An observer gazing into a modern supermarket, with its bewildering diversity of colourful product packs, might be forgiven for supposing that paper owes its supremacy as a packaging material mainly to its display and merchandising qualities.

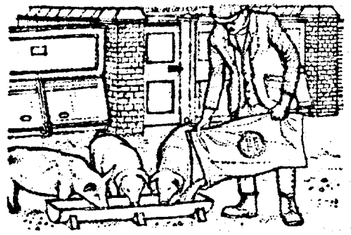
There is indeed some justification for this viewpoint. But as will be discussed in detail later, sheer merchandising ability is only one of the many natural advantages which paper and paperboard products possess. Undoubtedly, their supreme asset is that they are inherently capable of progressive technological improvements. This, above all else, has made paper perhaps the most versatile of all the materials upon which modern society depends and has led to the development of the whole vast range of modern packaging products.

THE PRODUCT MAKES THE PACK

Nowadays, packaging products made from paper and board literally keep the nation's economy moving. Our raw materials are transported and stored in them. Our consumer products are protected by them and marketed in them. The variety of different types of 'pack' is endless, ranging from tailor-made multiwall paper sacks to simple paper bags, from intricately designed corrugated cases to ingenious folding cartons.

In fact, it is true to say that there are as many packs as there are products, since each product needs a pack that combines, in the correct degree, functional properties of protection, convenience and hygiene.

Just what are the advantages which have made paper and board ideal for modern packaging? They are hygienic. They provide strength and protection without being costly.



They can be readily 'made-up' in a wide variety of shapes, strengths and sizes. They are easily transportable and easily disposable after use. They are particularly suitable for printing, including colour printing. Furthermore, they lend themselves well to use with other modern materials such as plastics and resins.

Due to the successful technical exploitation of all these qualities, a veritable 'Packaging Revolution' has taken place. Reed statistics show that, over the last ten years, the market for paper and board packaging products has increased by as much as 100 per cent. It is confidently predicted that this expansion will continue.

PAPER GETS THE SACK

Perhaps the most striking of the many developments which have taken place has been in bulk packaging. Here specialised paper products have become the standard containers for a vast range of products.

Multiwall paper sacks, for example, have largely replaced conventional sacks for the

bulk packaging of many free-flowing products. These include cement, fertilisers, chemicals and animal foods; also human foods such as sugar and salt.

Perhaps the most important reasons why so many industries today prefer these low-cost containers are the strength, hygiene and protection achieved by their multi-ply structure. Tailor-made qualities, such as 'wet strength', can easily be built in by incorporating specialised papers to suit customer's requirements. Paper sacks are also very easy to fill, highly suitable for mechanical handling, and possess exceptional stacking properties.

AN EXPANDING MARKET

The marketing of paper sacks was pioneered in Britain by a Reed Paper Group Company, Medway Paper Sacks Limited, who have also originated many successive technical improvements in their production.

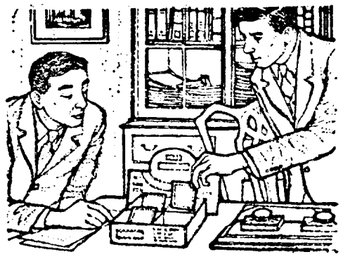
The market is still expanding rapidly, both in existing and new product categories. It includes many goods which formerly could only be sold seasonally but now, because of their greater storage life in paper sacks, can be stockpiled and marketed all the year round.

SPECIALISED PROTECTION AT LOW COST

Multiwall paper sacks, of course, are only one instance of the adaptability of paper in modern bulk packaging. No less impressive has been the technical development of the corrugated cases which today are used as 'outers' for packaging so many canned foods, bottled goods and other manufactured products. Also as individual packs for articles such as household goods, TV tubes, and fragile instruments. They have many of the same virtues as paper sacks. But their low-cost, tailor-made protection is due to structural design and the internal cushioning achieved by the corrugating process.

The market for these versatile, non-returnable containers is still expanding. A major recent success has been their widespread adoption for the bulk transit of eggs.

Parallel with the development of corrugated cases, there has been that of solid fibreboard cases. These strong yet inexpensive containers are widely used for bulk packaging various somewhat heavier goods, particularly those which do not demand the specialised cushioning effect of corrugated cases.



SELLING THROUGH 'EYE-APPEAL'

So far then, packaging seems to be far from mere window-dressing! But what of the many forms of retail packaging with which the housewife is so familiar? The vast array of gaily competing cartons. The paper tubes, the waxed bread wrappers. The colourful wrapping papers and carrier bags. The many attractive coated or 'glossy' packs, incorporating plastics or foil laminates, which have developed so greatly since the war.

With most of these, without question, packaging's sheer 'eye-appeal' qualities prominently hold the stage. They are likely, and are intended, to influence the woman in her choice between one competing product and another. But they are not window-dressing alone. Primarily today's packaging is hygienic, protective and convenient—as well as being glamorous—and it is this combination of qualities which today's housewife recognizes and welcomes.

WHO DOES THE DRESSING?

The truth then is that the merchandising qualities of paper packaging products, however important, are literally superimposed on their functional merits. They are put there not by the retailer, who turns them to advantage in his shop. Not by the wholesaler, who acts mainly as a link in distribution. But by the manufacturer, who nowadays has assumed the main responsibility for breaking down goods from bulk. It is he who, because of increased competition in the retail trade, must 'dress' his products with the ever better,

more attractive packaging which modern housewives demand.

PLANNING YOUR FUTURE NEEDS

Which factor will contribute most to the future development of Britain's paper packaging products? Their functional merit or their merchandising ability? Without question, *both* these assets have unlimited potential for meeting the nation's growing and changing packaging needs.

To achieve this, the Reed Paper Group, which offers a complete nation-wide Packaging Service, is laying maximum emphasis on realistic forward thinking. Experts of the Group's Packaging Division are carrying out constant, intensive technical and marketing research. Not only to meet the immediate and future needs of customers. But to devise the new, even better and more economic packaging that will be required for new products, new manufacturing methods and new conditions in the retail trade.

This same flexible thinking characterises all the Group's activities at every level—product marketing, machine and production planning, management selection and personnel training. The ultimate aim is kept always in view. To plan the *right* packaging for the product so that it reaches you, the consumer, in the best possible condition.

A further article in this series will appear in The Economist on June 25th.

COMPONENTS OF PROGRESS...

More than a million cars from the assembly lines . . . more than half-a-million for the export markets. That is the fantastic production achievement of British manufacturers between the Motor Shows of 1958 and 1959. And how many million component parts comprise this long, long cavalcade of progress? The figure defies imagination. But we do know that scarcely a car has taken the road without one or more Dunlop contributions. Tyres, of course (the majority of manufacturers fit Dunlop); foam rubber cushioning for comfort; engine mounting blocks; rubber sealing strip; panel fabric; various adhesives; and important new developments such as Dunlop disc brakes and rubber suspension systems. Dunlop is indeed a company of many parts serving an advancing motoring world. This is progress within progress, an industry within an industry. This is enterprise which helps to increase our national prosperity and the well-being of us all.

Psychic Bid

WHEN Mr Amory rose to present his budget last Monday, the main question was presumed to be whether he would make a sufficiently large increase in taxes to satisfy purist economists, or whether he would refrain from doing so in order to avoid annoying his Conservative backbenchers. When he sat down he had made only a miniscule net increase in taxes for the coming year, but he had done so in a way that seemed deliberately designed to annoy his Conservative backbenchers as much as possible. This was a very odd budget, and it is having odd consequences in public discussion. The cross-bench debate in Parliament this week has been between those who have congratulated and those who have castigated Mr Amory for being austere, when in fact by all past standards he has been lenient.

In his budget speech the Chancellor recognised that he had to expect certain increases in demand in 1960 (an increase in consumption "of the order of 4 per cent," in Government current expenditure by "about 4½ per cent," private fixed investment by "at least 10 per cent," public investment by "about 6 per cent"). Together these would add up to between £900 and £1,000 million. This prospective increase in demand is almost certainly larger than the record increase in real gross national product that was achieved last year; last year's increase is at present estimated (admittedly, probably underestimated) by the official statisticians to have been only some £700 million, although the economy was then starting from a position where it had some unused resources to re-employ. Even when every allowance is made for the smaller scale of the problem between the two financial years (1959-60 and 1960-61) as distinct from between the two calendar years (to which the above figures relate) and for the head start given by high production in the first three months of this calendar year, there is still a clear gap between expected demand and probable supply for 1960. According to the tenets of orthodox Keynesian finance that gap should be covered by tax increases. Some stern purists estimate the gap at over £200 million, others at perhaps between £100 and £150 million, but nobody can argue with a straight face that the "just the right level" of restraint is likely to be the £12 to £13 million of net tax increases which this budget has in fact imposed.

Mr Amory has forborne to raise taxes by more than this, presumably for one or all of three reasons: either because he regards such action as "politically impossible" (even although the next general election is a full four years off); or because he accepts the thesis that increases in taxation tend to be inflationary because of their effect on wage demands (and prices); or because he regards these annual forecasts of the probable increases in demand as so shaky that stern action cannot sensibly be based upon them. One must have every sympathy with any sceptical view of statistical prognostications. But to say that official forecasts of demand are often wrong is not the same thing as to say that one can confidently trust that they are overestimates; as a matter of hard fact, they have more usually (as last year) been underestimates. That is why there must be some concern that Mr Amory has chosen this year of threatened inflation to tilt the balance further from statistical budgeting to psychological budgeting. Fiscal policy, the new Treasury philosophy appears to say, should give up the absurd pretence that it can try to be a neat regulator of total demand; budgets should now be recognised as important mainly for their impact on men's, especially

business men's minds. That is the only pattern one can discern behind this year's tax changes.

In order to offset £27 million a year worth of minor reliefs —such as the greater releases of postwar credits to hardship cases, the abolition of the cinema tax, and the higher income tax allowances to widows and elderly dependants—Mr Amory has increased the tobacco tax by £39 million a year (equivalent to 2d. on a packet of twenty cigarettes); the £12 million net which he thus acquires is utterly insignificant as a force to reduce demand, but the Chancellor obviously regards it as psychologically important to be able to say that he has taken something net back. Secondly, he has announced an increase in profits tax by 2½ per cent, which will bring in virtually no new revenue this year and which even next year is unlikely greatly to cut demand; profits tax is less effective as an anti-inflationary weapon than almost any other tax, because relatively (repeat, relatively) less of it is paid by money withdrawn from spending and relatively more may come out of corporate saving. But once again the Chancellor apparently regarded it as psychologically important to make businessmen feel that he stood ready to impose "just a touch of the brake" on their ebullience, even although he is not immediately going to restrain their markets. The third main feature of the budget—the Chancellor's assault upon tax avoidance (discussed on page 178)—has some of the same objectives, though its purpose (as distinct from some of the methods chosen) is much more easily defensible than the increase in profits tax. But, *pace* popular mythology, the real resources that can be saved here are tiny; even the Chancellor's fairly draconian measures are not expected to have any appreciable effect on the revenue in any one year, and Mr Wilson's proposed measures would not do so either.

It is quite obvious that Mr Amory has had a political fight, within the Cabinet and elsewhere, to be allowed to show even this degree of seeming sternness in his budget; and two arguments can be proffered in support of his tactic of making this mouse of a budget a surprisingly pink mouse, designed to frighten capitalists only. Part of this year's threatened upsurge in demand arises from the sudden rise in spending decisions taken by businessmen last October, in delighted response to the Conservatives' election victory; if a doubt can be instilled whether all businessmen under a Conservative government will always and inevitably have it so good, perhaps some of these spending decisions might just conceivably be cut back. In this unwonted role of trying to look like an ogre while not actually reducing order books, Mr Amory's most valuable allies this week have been his right wing Conservative critics; if the Lord had not created Mr Nabarro, the Chancellor might have been well advised to essay the improbable task of inventing him. Secondly, the Chancellor is presumably hoping that trade union leaders may be induced to greater restraint later in the year, when they remember what anti-capitalist things he has done. But there are potent reasons to doubt whether this procedure of scowling at profit-makers, and marginally increasing the tax on smokers, will be enough to contain inflation.

The first of these reasons is that Mr Amory himself clearly does not really believe that it will. In each of his two previous budget speeches, he had intimated that he stood ready to expand demand further later in the year if circumstances showed that he had not re-energised the economy enough. This time he said on Monday that it was "likely" that he would have to "take other steps to restrain further expansion of private credit"—clearly because he suspects that the economy may soon be re-energising itself too much.

As for hopes that beastliness to capitalists can have any effect in inducing trade union wage restraint, the answer to that was given—in almost comic relief—to ten million televiewers on Monday evening. "Although," said Mr Cousins in a television interview, "this is the first time, so far as I can remember, that a Conservative Chancellor has increased the profits tax. . . ." In fact, in four of the last ten Conservative budgets Conservative Chancellors have increased the profits tax; they have used it as their first weapon whenever there has been a whiff of inflation in the air; and after each of these occasions, politicians have eagerly and privately explained to the Press that this sort of action makes a much greater psychological impact on trade union leaders than outside cynics suppose. At the end of this protracted essay in impact-making, the biggest of trade union leaders, transparently honestly, does not remember that these exercises designed to impress him have ever been undertaken at all.

So much for the psychological economics of Mr Amory's pink mouse. It is reasonable to suspect that its pinkness has a political objective as well. The idea is that since a budget that does not shower tax reliefs is bound to be unpopular, it had better be made unpopular in a way that marginal voters will not regard as redolent of traditional right wing Tory vice. This is a political tactic that Mr Macmillan has seemed to favour before (it is astonishing how closely the details of this budget repeat those of the single and very unsuccessful budget of Mr Macmillan's own chancellorship in 1956). But the simple fact about the politics of this (or any other) budget is that they will prove successful only to the extent that its economics do not prove to be inadequate.

If economic expansion continues without inflation throughout the coming year, then the fact that this budget gave no tax reliefs will be forgotten by the British public almost as quickly as it will be forgotten by Mr Nabarro; if inflation intervenes, and expansion has to be checked by whatever means are available, then the fact that this was a profits-taxing budget will be forgotten by the indignant marginal voter almost as quickly as past essays in taxing profits have already been forgotten by Mr Cousins. The immediate future of British politics and the British economy will depend wholly on whether Mr Amory's calculated risk with the unclosed inflationary gap comes off.

It may, indeed, come off. This budget leaves the British economy still advancing at very high speed down the middle of the road, with Mr Amory waving his hand over the brake but still forbearing actually to touch it. It may be that none of the impediments that could lie in the middle of the road just round the next dangerous corner will actually appear there. Even if they do appear—if a one or two per cent inflation of prices is now suffered, or if a balance of payments deficit recurs—it may be that the rot can be stopped there, without interfering with expansion, by the credit controls that Mr Amory has very clearly proclaimed to be the next, and possibly early, defences.

If these credit controls take the form of action to thump gilt-edged prices down in the market and to raise Bank rate, then the Government will be relying on the sort of economic policy that *The Economist* itself has long advocated in general principle; it will be laying relatively greater reliance on high interest rates, and relatively smaller reliance on high taxes. It could be wished that this experiment were being started at a less difficult and unpropitious time, when there was less danger that it might have to work directly against a general expectation of increases in prices, which the railway wage surrender of last February may now be setting in momentum. If the credit controls that Mr Amory has in mind are, less desirably, Bank of England special deposits, hire purchase controls or (much less likely) compulsory liquidity ratios for the commercial banks, then one must be even less sanguine that these will suffice by themselves to turn any powerful engine of inflation into reverse. By greatly increasing expenditure (which was the original sin) and then refraining from raising taxes to pay for it, the Chancellor has laid a heavy burden on the broad shoulders of credit controllers; it is a burden that a more neutral fiscal policy could have made less onerous for them in 1960.

Search for Time Past

General de Gaulle's visit should now encourage Britain and France to see their differences for what they are

London's cheers are still in General de Gaulle's ears. He may wonder what exactly they mean. London has given two welcomes this week: to the Queen on her first appearance since the birth of Prince Andrew, and to the General de Gaulle whom it has not seen since the Normandy landing fifteen years ago. How many cheers there were for the President of France and the *entente* is harder to guess at. The English are a sentimental people: never more so than in the ineffable presence of their own past. They were even ready to believe on Tuesday that the general's khaki uniform was really the same one he wore when he arrived in that ominous June of 1940: perhaps he even thought he was the same man.

Memories have been jogged this week by the state drive, by the lustrous group on the palace balcony, and by General de Gaulle's very presence, of what Britain and France once were to the world and to themselves. For two peoples now preoccupied with their dwindling influence and status some things are infinitely precious. For Frenchmen the uninterrupted greatness of France depends on General de Gaulle's action when his country was "struck down in the vanguard of the battle." For Britain that time of mortal peril was the last when it appeared as an independently great power. This week the general and the people of London alike have indulged in an affectionate, nostalgic and understandable recollection of days that are done.

Has anything else happened? In an emotional experience minds and manners can change with a rapidity that baffles the intellect. Impulses are given voice, ideas become clear that were only half-clear before, and a new shape of things falls into place. For General de Gaulle, as *Le Monde* has pointed out, Britain has been many things already: refuge, school, ally, rival and model. It is too early to know what idea of this country he has taken away this time. He will have sensed, it may be hoped, the deep but very rarely expressed sympathy for France that has survived the conscious and unconscious offences against the alliance committed by each side. Since the *entente* came into being after King Edward VII's state visit to Paris nearly fifty years ago it has been plagued by blunders and blindness, by the pride of two powers aware of how precarious their greatness was becoming, by their weakness in refusing to acknowledge their faults to each other, and by their very reliance on the displays of friendship that pomp and circumstance provide both to express their formal unity and to hide the wide, and often legitimate, divergences of their everyday policies.

General de Gaulle is himself the personification of the psychological strength and weakness of the Anglo-French relationship. His respect for this country has endured despite his frequent and bitter objections to its behaviour. He has felt drawn to British sympathy, even when most estranged by the manifestations of British selfishness and superiority. He had his diplomatic training in the cabinet room in Downing Street. From the Churchillian presence, and from his whole wartime experience, he emerged, as he has declared in the last volume of his memoirs,* with two inflexible principles of conduct. These have been to obey the iron rule of nations: "to give nothing for nothing," and to identify in alliances, however cordial, the "hallowed egotisms" of their principal members. It is no wonder, then, that Anglo-French relations have come so often close to the rocks.

It is possible to take issue with the historical interpretation that General de Gaulle has put on British conduct towards him. Even so, it has seemed that if ever the circle of misunderstanding and mistrust were to be broken, some minor truths would first have to be spoken and some small gestures, however contrary to the iron rule of nations, made. General de Gaulle paid in Buckingham Palace the generous tribute to British resistance in 1940 that Britain has somehow wanted to hear and that some Frenchmen, however understandably, have seemed reluctant to make. Have we now, at long last, got 1940 off our chests? Has General de Gaulle at length recognised, in the marks of official and unofficial attention this week, a British willingness to treat him as an equal?

Many things still divide us: let us say so in future. When they are perverse, nonsensical, xenophobic naggings on each side, such as a correspondent reports on page 170, it is neces-

* "Salvation, 1944-46." Weidenfeld and Nicolson. 298 pages. 30s.

sary to bring them into the light for what they are. When they are important questions of policy it is all the more urgent to tackle them in their own context: not to see them as a deliberate continuation of the Hundred Years War.

The chief difference between Britain and France at this time is analysed in the article that follows. It must be said frankly that the opinion has grown up in this country that, in the last resort, General de Gaulle would not welcome British adherence to the common market, any more than M. Schuman, in his heart of hearts, wanted British membership of the coal and steel community ten years ago. If this is so, let it, too, be said ; there are political reasons for such an attitude that are perfectly explicable to British opinion. What Britain cannot swallow is the fact that the French continental system seems to be deliberately aimed at this country's interests. There are more voices to be heard in Britain today than ever before lamenting the opportunity that this country missed in its European policy after 1945. But that is not to say that Britain can make the decisive gesture to improve these relations at this stage. Only a word from General de Gaulle, when he has finally made up his mind about the form of Anglo-French relationship he wants, would alleviate the fears that must otherwise fester at each successive development of the common market's plans.

BRITAIN'S psychological attitude towards France has already been influenced by the general's advent. There are continuing and not wholly groundless fears of General de Gaulle's policies. He is assured of British, and American, sympathy whenever he seeks to secure a political settlement in Algeria. But that does not mean that France's allies are not entitled to criticise his apparent failure to end the feudal relationship between Paris and the French army in Algiers. It ought not to be taken as a slight when those who question the wisdom of Britain's nuclear armoury apply their arguments to the general's vision of an independent French striking force. When there is a difference of opinion over summit policy it is worth while expressing it; the news always get out anyway and is distorted by secrecy. All these feelings are still present in Britain after General de Gaulle's visit. But some strange and surprising portents have been visible too.

After all, it is not every day of the week that a foreign statesman of General de Gaulle's pretensions is treated with respect by such tribunes of the people as Mr Muggeridge and Mr Crossman. No other visitor, known to be at such loggerheads with British policy, could have received as sympathetic a welcome as General de Gaulle has done in the streets of London. It may simply be a tribute to a great, if fallible, man. It may, perhaps, be something more ; it is too soon to tell.

To suppose that anything concrete has transpired in General de Gaulle's intermittent conversations with Mr Macmillan this week is difficult ; after all, there seems to have been no attempt at serious negotiation during their lengthy talks at Rambouillet last month. The general's real demands from the Anglo-Saxon powers can only be satisfied in Washington in a fortnight's time. There were signs in his speech at the palace that he regards Britain, for all its necessary and inevitable concern with continental Europe, as still primarily an Atlantic power. If this is so, it may be supposed that his willingness to restrict and cushion the common market's influence on British economic interests will depend on how he sees the development of the wider western relationship. Even so, he must be aware that British understanding is still necessary to his ideas for Europe. His visit may have re-kindled some of the necessary sympathy. Something for something: the exchange this week has been about equal in sentiment and cordiality. But it remains to put it all to the test of reality.

Mr Macmillan's Map of Europe

A common hostility to Britain makes a bad cement for the European house ; it is a pity for British Governments to encourage it.

TWO days after the reports reached Europe of what Mr Macmillan said about the European Community in Washington last week, the European Parliament (the assembly of the common market) at Strasbourg expressed its support of Professor Hallstein's acceleration plan with only one dissentient. The European Parliament had not been untroubled by doubts of the wisdom of the Hallstein proposals, as the first day of debate, March 30th, had shown. However, it seemed enough for a British statesman to launch a serious attack on the community of the Six in its political aspects, for the parliamentarians of the community to put aside their economic and social doubts and rally to their political slogan.

A typical comment, though more mildly worded than many, was that of the *Frankfurter Allgemeine Zeitung*. The British Prime Minister was reported, accurately as it seems, as having recalled to the under-Secretary of State, Mr Dillon, Britain's struggle against Napoleon and his Continental System ; and also (though this the Foreign Office has denied) as having expressed misgivings lest the pan-European pretensions of the Third Reich might reappear. The newspaper retorted that this kind of European power-policy talk was unreal and out of date. It added that there was a real need for European union in Napoleon's day, and in Hitler's ; if the need had not existed, Napoleon and Hitler would not have been able to misuse it.

Paying to British statesmanship the accustomed compliment of assuming that it knows what it is doing, most of the European parliamentarians and commentators take it for granted not only that Mr Macmillan said what he was said to have said, but that he said it intending that it should be passed on, as a direct challenge to the European integrationists and a frontal attack on their political designs. This, remarked the *Süddeutsche Zeitung* in one of the very few articles that have urged the German public to consider the British misgivings seriously, was not a shot across the bows of Community Europe but a shot straight into them. Something about Mr Macmillan's conduct of diplomacy causes German journalists to dig out their naval metaphors : "Britain seeks to torpedo the European Economic Community" was the headline of the *Deutsche Zeitung*. But if this is naval warfare, neither side has a monopoly of torpedoes ; it is Mr Macmillan who has lumbered into the hostile periscopes this time.

Mr Macmillan is, of course, right to fear that if free Europe goes on organising itself into separate inner and outer groups, the resultant division will not be confined to its trading life but will tend to disrupt it politically. He has only to look at the trade figures, at the map, at the British strategic commitment on the Continent, and at the reasons for it (as compelling as ever they were) to see that in that event, British interests will not be unaffected. The fact that the biggest of the Six, France and Germany, harbour divergent aspirations and barely concealed suspicions of each other can be no comfort to Britain. The very paucity of common positive aspirations between themselves tends to make Frenchmen and Germans, or their governments, rely on a common distrust and jealousy of Britain to hold them together. Nobody can benefit, unless it is that jolly, thriving wooer in the background, Mr Khrushchev. Anti-British feeling will make a poor cement for the European house ; but how liberally the material for it is offered, and how readily snapped up.

AT least there is this to be said for Mr Macmillan's remarks in Washington, that they have brought the dangers and the fears out into the open where they belong. But what can be done to remove them ? To judge by the Foreign Office statement issued on March 31st, the day of Mr Macmillan's return from Washington, although the British Government has begun to grasp the nature of the danger, it still believes the choice of remedies to be wider than it really is. The statement attributed to Mr Macmillan the fear of

> a grave economic split reaching proportions that would inevitably threaten the political unity of Europe too .... The Prime Minister was pleading for the reduction of the economic gap to the minimum.

But the split is not just economic, and economic means alone will not close it. Professor Hallstein's plan to hasten the birth of the common market is a deplorable thing to those (including *The Economist*) who hoped that at least an effort could be made to use the remaining time, before the common market became finally differentiated from the rest of Europe, to effect either a merger or a reconciliation. But it was not devised purely from a whim. The Hallstein plan flows from a belief that the European Economic Community is a political organism in which the economic aims, though important, are subordinate; this is a quite different kind of thing from the European Free Trade Association, a traders' mutual defence society, whose political characteristics, if any, will be incidental.

The authors of the Hallstein plan do not want the two organisms to be brought closer together and made to resemble each other, because they do not believe that this could be done without diluting the character of their community. On the contrary, they are seeking to differentiate the common market from the free trade association as sharply and as quickly as they can ; to their mind, until their group is distinct from the rest, it will not have begun to be a union. Their attitude may be tiresome, and its realism can be doubted ; but to expect to overcome it only by a negotiation about trade arrangements is less realistic still. If Mr Macmillan wants to prevent the political division of free Europe which he fears, he will need a political weapon.

It is hard to see what weapon he can possibly expect to find so long as the British Government is not prepared, on some terms or other or in some manner or other, to enter the European Economic Community itself. The threat of a British isolationism is quite useless. As things stand, the Six have a watertight defence against all attempts to prise their relationship open. As they argue, it is not they who are dividing Europe ; what they are doing is to form a European union ; if any dividing is being done, it is by those Europeans who, while they will not join, object to the Six having a relationship among themselves different from their relationship with others. One may question whether some of the exponents of this attitude are entirely without mental reservations when they express pious regret that Britain will not come in—though one cannot question the sincerity of them all. But Britain's tactical position is equally hopeless whether they are sincere or whether they are not, unless Britain can make up its mind that to have stayed outside was a mistake that ought, at the first opportunity, to be put right. Short of that, the opponents of British influence in Europe have the whip hand.

Plainly there are big obstacles to such a course. The supposed weighty reasons why Britain can do no such thing have been so doggedly canvassed that they are now widely believed on the Continent, and the sincerity of a British change of policy would be questioned ; those Europeans now busy sighting British torpedoes would be up on the battlements in a twinkling, giving warning of a British trojan horse. The fact that the European Free Trade Association has actually been formed, under British leadership, has put Britain under obligations which cannot simply be discarded. The British would find it difficult to explain a change of policy to the Six, to their associates in EFTA, and to themselves ; but now that the dangers of the present course have been painted on the wall by Mr Macmillan, they ought not to find it impossible. The best place to start would be at home.

ALL this would take time ; and the danger is obvious that during that time, British relations with the Six will be going from bad to worse. What is needed is a period of peaceful co-existence within free Europe. But the "Europeans" will be pressing on with their acceleration measures ; the British might run into payments difficulties—perhaps more the result of domestic events, or of a general trade fluctuation, than of any foreign discrimination—and might be tempted to go in for restrictive trade measures themselves, as the Prime Minister hinted to Mr Dillon.

But a restrictive British trade policy would tend to make the common market more restrictive in turn, and the atmosphere would get worse instead of better. Liberal tariff policies, the avoidance of quota restrictions, and a readiness erring on the side of quixotry to extend to the Six and the United States as many as possible of the trade concessions which Britain is preparing to make to EFTA, would bring political dividends and, economically, would do more good than harm in the end. This, of course, assumes a firm hand in internal economic policy. It would, however, be the only way of strengthening the hand of the considerable groups within the common market

countries that want the trade policies of the Six to be liberal; broadly speaking, these are also the groups that dislike the European split and would be glad to see Britain in. In that way the gap between the Six and the Seven could be kept down to a manageable size while the search for a political settlement went on.

Trade policy alone would not do the trick. There would have to be other positive signs of a British desire to draw closer. The pooling of control over nuclear arms would be one field where that desire could be shown, and it could have special importance in clearing up the relationship with General de Gaulle. Success cannot be guaranteed for such a policy; but it does contain a possibility of success, which a policy of isolation and retaliation does not.

Dogs in Clover

Britain's dog population is declining quite sharply, but it is becoming much more select

NOBODY needs telling that Britain is a nation of dog lovers. The canine kaleidoscope that can be seen taking exercise every Sunday afternoon, the several thousands of dog shows a year, the national network of dog clubs and even two fans' weeklies, *Our Dogs* and *The Dog World*, speak for themselves. But British dogs are at present caught in a whirl of social change: they are going down quite sharply in total numbers, although they are going up in pedigree quality.

The movement of upper-class families from country houses to urban flats, the drift from the countryside into suburbia, and the spread of surburbia into the countryside have not been favourable to dogs. The number of dog licences taken out each year has fallen from 3.1 million in 1950 to 2½ million today. No doubt there are also many unlicensed dogs; but since the cost of the licence has remained at 7s. 6d. a year, while the value of money has fallen, there is no reason to suppose that there is now a greater proportion of canine tax-dodgers than there was in 1950. Meanwhile, the dog's main competitor in towns, the budgerigar, has gone ahead by leaps and bounds; its numbers doubled between 1954 and 1956 alone. In spite of the strong class element in dog ownership—it was shown by a recent market survey to be much more an upper- and middle-class animal than the budgie—it seems that the pull of keeping up with the Jones's status-symbolic dog has not generally been enough to offset the effects of urban life.

But within this smaller number of dogs there has been a change well in accord with the tenets of an affluent society. Pedigree dogs are now eagerly in demand, while mongrels are almost totally neglected (a source of concern, incidentally, to the RSPCA, since mongrels continue to be born). Thus, while the total dog population has fallen by 20 per cent in a decade, the number of pedigree dogs registered each year with the Kennel Club has more than doubled since 1940, and is now running at the rate of 127,000 a year. Pedigree dogs are preferred for many reasons. Their temperament can be accurately gauged while they are still puppies—an important consideration for those who are going to share limited flat-space with their dog for some years to come. They are also, say the breeders, more civilised and are certainly more helpful to the prestige of the owner. The limiting case, when dogs become merely a canine appendage of fashion, is shown by the overdressed poodles and pekinese which trot uncomfortably to and fro in Kensington between chi-chi flats and dog beauty parlours. But, in general, the trends in dog popularity have a more logical basis than that.

As the table shows, poodles are now the outstandingly popular breed of dogs; they are preferred because they are

ORDER OF POPULARITY OF PEDIGREE DOGS

	1959	1956	1938
Miniature poodles	1	1	47
Welsh corgis	2	2	18
Alsatians	3	4	8
Boxers	4	3	70
Toy poodles	5	*	*
Cocker spaniels	6	5	1
Labrador retrievers	7	7	6
Pekinese	8	6	4
Dachshunds	9	8	7
Cairn terriers	11	9	5
Wire-haired fox terriers	13	10	2
Scottish terriers	19	17	3

* Not recognised as separate breed until 1957.

good and intelligent town dogs and because, like pekinese, they appeal to women. (Women easily outnumber men in all fields of dog activity and their whims account for a considerable part of the dramatic changes in canine popularity). Corgis have done well ever since the Queen began owning them. The unchanging position of Alsatians and retrievers suggests a constant basis of male promotion and support. On the decline are spaniels, who headed the Kennel Club's league from the middle thirties until the late forties, and all sorts of terriers. Terriers have a bad public image; they are thought of as rat-catchers—and, say detractors, "are no more suited to modern living than an old lady to a sports car." But the real reason for their decline goes deeper, and raises fundamental questions for and about the modern dog-breeding industry.

FOR dogs, like any other commodities that are bought and sold, are a business as well as a pleasure. Commercial breeding is largely a woman's occupation, and one of very small-scale enterprise. There is the average breeder who sells her puppies at 10 to 15 guineas each, the owner of a fine pedigree who hires her dog for stud at between 3 and 10 guineas a time, the expert who sells mature champions to Americans at £150 apiece, the kennel owner who boards dogs for 5s. or 6s. a day, and the beautician who charges thirty shillings for a poodle's fancy "clip, bath and nail-cut." Some of these people depend for their entire livelihood on dogs, but it is rarely a very good livelihood and many of their competitors work part-time.

For dog-breeding is an occupation for enthusiasts. There are no limited liability companies in the business. Profit margins are narrow or non-existent, even on the unduly low costings usually adopted. The optimistic woman who, having made some pin money out of two bitches breeding in the back garden, tries to make a living out of twenty, housed in more elaborate kennels, very often comes a cropper. The end effect of many dog-raising ventures is to transfer income inexorably from husband to wife.

As long as the men do not object, however, the women's enthusiasm is unbounded. They tour the country with their elegant dogs, exhibiting at many of the 3,500 shows a year held under Kennel Club auspices, and possibly at others as well. These shows, attended by energetic country women in the inevitable horsey tweeds, are not only typical of one slice of British life (like amateur societies in the suburbs, dog shows are a meeting place for people who form the backbone of the middle-classes); they are also the profession's shop-window. With pet shops falling into increasing disfavour, the market place for dogs has shifted from the normal shop window to the dog show—and, from contacts made there, outwards through direct advertisement in the dog breeders' press. The export market, which last year took over 4,500 British dogs, is also tapped through the big shows, especially Crufts. Crufts had a record entry of 7,209 top dogs this February. It is from out-right winners in this event that the real money-spinning animals—like the pekinese for which an American recently offered £10,000—emerge.

But this show business has its dangers, for breeders and public alike. It puts a premium on the breeds of physically perfect dogs in a way that can, and often does, virtually destroy the animal's real character. Terriers were the first dogs which, in the interest of show-points, had their lively intelligence bred right out of them; over the years these bright and energetic dogs became smaller, prettier and more delicate until they were little more than a drawing-room show-piece. Bulldogs, originally fighting dogs but now more often asthmatic waddlers, have suffered the same fate. Poodles, once little-known hunting dogs, are moving fast in the same direction.

It is this inbreeding for physical perfection, and the consequent degeneration of stock, which perhaps above all else has been responsible for the constantly changing pattern of dog popularity. It is only dogs too big to be bred as indoor pets (such as mastiffs and Great Danes) or with a real job still to do in the country (such as Labradors and beagles) that have escaped this debilitating process. Here, as elsewhere, show-business has its snags.

NOTES OF THE WEEK

SOUTH AFRICA

Panic Within—

TOO deeply committed to go back, too panicky to stand still, the South African Nationalists plunge on down the path to disaster. Perhaps they never saw a choice. Their tactical retreat over the pass laws proved only temporary; in any case the emergency regulations enable a man to be locked up or beaten up without the excuse of a faulty pass-book. In the course of the debate on the bill banning the two African congresses Mr Erasmus, the minister of justice, declared that he would use all the powers at his disposal to break "the unprecedented reign of terror." The terror is now in the hearts of his shaken followers; by these desperate measures, effective though they may be in the short term, they are creating, not breaking, a reign of terror.

Because of the confusion and unreadiness of the great body of Africans, the government should not find it hard to outdo in intimidation the Africans who have been trying to enforce the stay-at-home. When it comes to threatening or bashing people into submission, the police still have the edge in experience and weapons over any African organisation, especially one whose leaders and spokesmen have been swept away into arrest. The methodical beating up of Africans in the Capetown streets and houses at the beginning of the week is only new in its scale and its publicity; the police have in the past doled out the same sort of repugnant treatment to the more independent minded African districts, such as Sophiatown, in order to show who is master.

Meanwhile the net of arrests has been spread wider than ever before, as has been shown up by the flight of Dr Reeves, the bishop of Johannesburg, to safety in Swaziland. The net includes the responsible and the irresponsible alike; there is now probably nobody left at liberty with whom the government could negotiate the end of this civil war into which it is thrusting the country.

How long can the South African government run things this way? Ultimately, the Africans will become less easy to intimidate. Members of the Pan-Africanist congress, led by Mr Sobukwe, have shown a new and much bolder face by courting arrest and refusing to defend themselves in court. Others will follow their lead. The only glimmer of hope in days that are dark with shadows is that the government's panic measures may jolt the Afrikaners rather than the Africans, into revolt. Many intellectuals have long been going through a painful re-appraisal; an article from South Africa records on page 180 the growing desire of the Afrikaans business section for liberal changes. On Wednesday, a group of industrial leaders urgently requested a meeting with Dr Verwoerd to propose, among other things, immediate consultation with moderate African leaders. In the end, it may be a crack in the White ranks that transforms the situation.

—Revulsion Without

OF all the many loads that have been cast on Mr Hammarskjöld's shoulders, the most unwieldy was the Security Council's instruction to him last week to make arrangements for reducing the threat that the South African situation poses to international peace and security. The council's resolution, which called upon the Union to abandon apartheid, gave its members (except for Britain and France, who abstained) a chance to express their repugnance at the Union's repressive

policies. But the marginal effect that this may have on the South African government probably does not compensate for the discredit the Security Council does itself when it passes resolutions for rhetorical effect.

Outside South Africa individuals can criticise the Union government with as much breath as they have in their bodies or ink in their pens. The more difficult question is what can usefully be done from outside at national or international level. Respect by one government for the privacy of the internal affairs of another is a good general rule. The reverse can, and often does, result in trouble all round. But by general accord there are exceptions to this rule; and the fear of creating precedents for the dragging of other skeletons out into the light should not prevent their recognition. It is now no more to a government's credit to be mealy-mouthed about South Africa's repression of its majority than it was once to turn a blind eye to Hitler's treatment of his Jewish minority.

On the other hand, the least valuable reaction for outsiders is to relieve their consciences, collective or otherwise, by blowing off steam. Probably the most salutary reproof can come from those who South Africa thinks are its friends; the critical resolution in the Dutch parliament this week may have been to many Afrikaners an even more telling blow than Mr Macmillan's speech at Capetown. On another tack, the Africa Bureau in London has suggested that the Security Council vigorously take up the question of United Nations trusteeship over South West Africa (which has always been denied by the Union) and so work towards establishing a UN "presence" in South Africa. This would be a path strewn with diplomatic hazards, but it is not less, and may be a little more, realistic than the council's resolution last week. The growth and spread of world revulsion cannot fail to make an impact even on the Union's hard skin—above all, through the minds of those Whites who already feel their government is sadly off course.

BUDGET DEBATE

Ranks of Tuscany

At the beginning of his budget speech, although nobody remembers this now, the Chancellor faced a restless Opposition side of the House. Question time had gone badly for some Labour members; Mr Boyd-Carpenter had baulked them, and Miss Hornsby-Smith annoyed them, with a string of smooth answers to a badly prepared budget day propaganda campaign on the pensions front. Mr Amory's necessarily dull opening statistical summary was interrupted by constant Labour muttering, as when he cited how unemployment figures have gone down ("Ah, but they're going up now," murmured one Labour MP, which they aren't). The implications of Mr Amory's surprisingly inflationary estimates of the probable rise in demand in 1960 seemed to pass over every member's head. The first chortles of delighted anger came from the Opposition as he made it clear that he would have no net reliefs to give away.

But, as so often, a joke completely restored the good humour of the House. "My first budget proposal relates to hackney carriages," said Mr Amory solemnly; two minutes later, as "inspired by reforming zeal, and moving on from one bold action to another," he proposed "a small alteration in the scope and administration of the duty on mechanical lighters," a now laughing House was his. It was at this stage, after dispensing his two doses of sweetness and light about heavy wines and cinema duty, that he turned round to hit his own side in the solar plexus, and for a time seemed to be recruiting the Opposition as his fans.

The most dramatic passages in the budget speech were the twenty minutes that he devoted to blocking tax evasion. As Mr Amory leant over the dispatch box, rolling out the word "retroactive" as he clawed back some tax money from colliery companies and attacking tax-loss farmers, he was cheered on almost solely by an Opposition from whom he was stealing some popular underclothes. His increases in the tobacco tax and in profits tax were imposed at full speechmaking gallop, but the increase in profits tax was still nearest to most members' minds when he sat down. As he did so, a sea of waving order papers greeted him from the other side, while behind him a few Conservative members were prodding their neighbours to suggest that perhaps they too ought to cheer. But on the Chancellor's right the Nabarro group of rebels were arranging their abstention on the tobacco vote.

Tory Revolt

So far, the Tory leaders feel that they can take the rumblings of budget revolt in their party with equanimity. Mr John Peyton, the member for Yeovil, is reckoned a more considerable personality than most of the other protesters; and some eyebrows have been raised at the abstention of so solid a citizen as his next-door neighbour in Honiton, Mr Robert Mathew. But in general the baker's dozen or so of malcontents tend to be written off as "publicity seekers" (such as Mr Nabarro), or "former Suez groupers" (like Lord Hinchingbroke) whose lack of enthusiasm for the present Government has already been discounted. Those with their ears to the constituencies' ground claim that there has been no evidence of a general outcry against the budget among members of the Tory party in the country. The possibility has not been overlooked however that the publicity given, particularly in the *Daily Telegraph*, the beloved bible of Tory colonels and country ladies, to Mr Nabarro's unbridled comments may in itself stir up trouble later on. Mr Thorneycroft's intervention on Wednesday, which was directed to demanding cuts in expenditure rather than in revenue, is regarded more uneasily. His strictures come much closer than Mr Nabarro's to pricking Mr Amory's conscience.

It is not the Chancellor's intention to have any truck with Mr Nabarro during the committee stages of the bill. Certainly he will not make any concessions that will involve giving revenue away, for he knows quite well that the real doubt about his budget is whether it has been too soft, not too tough. The personal terms of Mr Nabarro's attack upon Mr Amory have apparently been deeply resented by some of the Chancellor's colleagues. The one real storm over the Finance Bill is likely to centre on the discretion asked for by the Treasury to deal with tax avoiders in the City. The Government had originally thought (and perhaps still thinks) that it should be able to ride over this one—if necessary, by asking Tory members individually whether they want to find themselves in the same political corner as "some of the worst sharks in the business." This attitude ignores what the fuss will be about. The proposed changes in the income tax code are Labour-like measures that have been drawn up by Tory ministers (which gives them teeth without spite), but they will be operated by Inland Revenue inspectors (whose job should be to administer the law, never to create it). There are some important constitutional points here about controlling our bureaucrats as well as effectively thwarting our tax dodgers, and it is not only right wing MPs who will want to watch them.

EUROPE

Dr Erhard's Rearguard Action

Just when British pressure appeared to be giving the plan to speed up the common market an unlooked-for impetus, the internal opposition to the plan in western Germany has made itself felt with some modest effect. On Tuesday the Bonn cabinet welcomed the plan in principle but put off the decisions about its execution pending a report from the four ministers most closely concerned—Herr von Brentano, the Foreign Minister, Herr Etzel, the Minister of Finance, Dr Erhard, the Minister of Economics, and Herr Schwarz, the Minister of Agriculture.

Dr Erhard's opposition deserves some of the credit for this postponement, so welcome to the British. But Dr Adenauer may have been strongly influenced, too, by the objections of his Minister of Agriculture and of the powerful farmers' union. The farmers' hostility owes nothing to any wish to keep the common market open to the outside world. It expresses the simple protectionist desire to stave off as long as possible the competition from the rest of the community—particularly, in agricultural produce, Holland—which will make itself felt when the barriers fall.

It may be that the European Commission, in the person of Professor Hallstein, will now counter-attack and urge Dr Adenauer to expedite the plan. But there are strong technical arguments for delay, of which Dr Erhard will no doubt make good use. Legally, it is held in the Bonn Ministry of Economics that the acceleration plan needs approval by the Bundestag. This objection may well be overcome, but the technical difficulty of working out and preparing the application of the new tariff may still rule out July 1st as a starting date.

If the deadline is put off for three or six months, a little more time will have been gained for talks between the Six and Seven. But it would obviously be wrong to place much hope in these talks, so long as the fundamental division remains. It may be possible to alleviate some of the problems of the outsiders by postponing particular tariff charges, or applying tariff quotas in Benelux and Germany. But concessions of this nature might increase the reluctance of the French to apply their part of the bargain—the reduction by 20 per cent of the common tariff as it might have been. In the end the crunch of discrimination seems bound to come.

RUSSIA AND GERMANY

A to K?

Dr Adenauer is now the only one of the four leading western heads of government who has not had a private encounter with Mr Khrushchev this year or last. So it is hardly surprising that the idea of such a meeting should be mooted about. Dr Adenauer seemed to send up a kite in a speech in Los Angeles last month. Despite Soviet attacks on himself, he declared, such a meeting was not ruled out. Questioned at a press conference in Paris, Mr Khrushchev explained that he, too, considered meetings of this type to be valuable.

There are obvious reasons why Mr Khrushchev, for all the hard words he has been using about Dr Adenauer, might be interested in meeting him again. If serious negotiations on Berlin are in fact to be postponed until next spring, he might well find it convenient to break the long pause between two summit meetings by a talk with the German Chancellor which would show that negotiations were still alive. From Bonn's point of view, such a meeting would at least provide a demonstration to west Germany's allies that the Chancellor was not opposed to all talk with the communist powers.

Whether it would achieve anything else is another question. Dr Adenauer's last visit to Moscow, in September, 1955, resulted in the bringing home of the German prisoners in Russia and the opening of diplomatic relations between west Germany and Russia. The Germans, however, have made singularly little use of these channels, even though Dr Adenauer and Mr Khrushchev have corresponded at length from time to time, not always in friendly vein. A meeting between the two men might also bring only negative results. But it is just possible that both might feel obliged to emerge from the meeting with something positive to show their peoples.

DR BANDA'S RELEASE

The Miraculous Mr Macleod

After all the emotion spilled over Dr Banda's imprisonment it must have seemed astonishing to some people that his release should create scarcely a ripple in Westminster, as well as no riots in Nyasaland, and—so far—no apoplexy in Salisbury. The calmness at Westminster could have been foreseen. Dr Banda had never acquired the status of a "devil figure" of Tory mythology of the dimensions of Archbishop Makarios, Mr Kenyatta or even Mr Mboya—and many members on the Government's benches had felt uncomfortable about his continued detention beyond the publication of the Devlin report. In any case, Mr Macleod, whose timing both over Kenya and over Central Africa has so far been impeccable, ensured almost total immunity from domestic criticism by taking his most liberal actions in Central Africa just as the British press was full of outrage at what was happening in the Union.

The same factor must have helped him in Salisbury. Whatever local consequences Sharpeville may have for Mr Verwoerd's policies, its impact outside South Africa has certainly widened the Colonial Secretary's area for manœuvre in both of the plural societies on which he is at present concentrating. Now that Rhodesia's settlers have been brought face to face with a demonstration of what the South African alternative is really like, extremism there is temporarily hushed and the voice of conciliation can be more clearly heard. Dr Banda's dignified actions since his release have been perfectly directed to fit in with this mood. Although a cover of secrecy is being kept over the substance of his talks with Mr Macleod, it is quite evident what the aim of British policy is now: it is that Nyasaland should have Dr Banda as its African prime minister, but that it should maintain the closest possible ties (especially economic ties) with the other two members of the Central African Federation.

Nobody can tell whether Mr Macleod will manage to achieve this aim. But the critics of the Government's African policies on the left are increasingly finding themselves in the same remarkable position in relation to Mr Macleod as they do, over Algeria, in relation to General de Gaulle. After all the talk about both situations, once two master tacticians have appeared personalities are shown to matter far more than policy debates. All that anyone can do now is to cross his fingers and hope that each of these two contrasting prestidigitators somehow comes up with his rabbit in the end.

PARKING OFFENCES

Ticket Fines

Some fears have been expressed that the Government's new Road Traffic and Roads Improvement Bill, which Mr Marples hopes to get into force on September 1st this year, might impede the proper administration of justice. Its chief innovation, the ticket system of "post-in-your-own (flat rate)-fines" for certain motoring offences, was criticised by the Magistrates' Association some time ago for its exclusion of any opportunity to take previous convictions or individual income into account. These criticisms are unimportant so long as the system is confined to minor offences, breaches of mere administrative regulations which cause inconvenience but do not endanger the lives of the public. Two of the three offences to which the bill applies, obstructing the highway by parking or other means, and failure to pay the appropriate parking meter charge, clearly come within this category. But the third offence, of using a vehicle on the roads without lights or reflectors, is, potentially at least, much more serious, since it may well lead to loss of life. It has been suggested that cynical calculators might prefer to pay the fixed penalty, normally £2, rather than undertake the necessary but more expensive repairs. It is true that the individual constable will have the option of taking flagrant cases of violation to court—the motorist will not have any automatic right to a ticket—but the constable will not usually know the individual's past record. The motorist, of course, will still be allowed to fight each case in the courts if he wants to; if he has not chosen to post in his fine within the period set by the ticket, which will be not less than fourteen days, normal court action will be set afoot.

The bill's second major provision, the empowering of police authorities to appoint traffic wardens, is to be welcomed as a help to the police, who will be able to concentrate on more important duties; the ticket system will bring relief to the police's time, too. But suspicions exist that a new tribe of officials, armed with sweeping powers, are about to be unleashed to plague the public. The bill does something to allay these fears, since it emphasises the subsidiary role of the wardens as parking attendants and school crossing patrols; their duties, it is understood, will be at first restricted to stationary vehicles. Their powers are to be defined by ministerial regulations and will not be exercisable unless the wardens are wearing the prescribed uniform. But the real safeguard will be public opinion. These two innovations mean that after next September any parker who blatantly obstructs the highway will be much more certain than he is now to be caught and fined. So he should be. But if tickets fall on

merely technical offenders like autumn leaves, there will be a loud outcry from harried motorists ; and, on past experience, use of the new powers will then be informally eased.

The bill also makes some new attempts to tackle some of the pressing traffic problems of London and other congested areas ; these are discussed on page 193.

CYPRUS

Risky Poker Game

CYPRUS'S chance of a good start is being gambled away for a few miles of real estate ; a situation that depends above all on goodwill has already been soured, whatever may be decided in the end about the size of the British bases. Archbishop Makarios, Dr Kutchuk and Mr Julian Amery are meeting again in Nicosia to fish for the magic figure. At the beginning of the week Dr Kutchuk stepped in with a suggestion of 100 square miles—half-way between British demand and the archbishop's offer. The British have been giving the Turkish compromise "active consideration"; but the archbishop, fighting more for prestige than for land, has rejected it.

The Zurich and London agreements provided an escape from a disastrous situation, not a safe road for the future. The main reason for believing that the solution might work lay in the joint determination of Archbishop Makarios and Dr Kutchuk that it should. Now, after the exasperation of two postponements of independence, the confidence between the Greek and Turkish leaders, on which the agreements rested, has been badly knocked about. When the horse-trading over the British bases began, Dr Kutchuk was inclined to support the archbishop. Now he has veered towards the British side—which in the circumstances should cause no delight. At an anniversary celebration of Eoka on April 1st, the archbishop carried his brinkmanship a stage further by threatening a campaign of civil disobedience unless the talks were quickly concluded ; although he still spoke of setting up a constitution in accordance with the Zurich and London agreements, Turkish Cypriots have been interpreting his words as a reawakening of enosis.

Reactions to the archbishop's speech emphasised the degree of his isolation. The Greek government, plagued by its own troubles, and anxious only to have the Cyprus affair over and done with, dissociated itself from the archibishop's threats. Even the Greek Cypriots, though they were never enthusiastic about an agreement that diverged so far from their original aspirations, are less than solid behind him. The economic effects of this long transition period, during which unemployment has gone up daily, have given fuel to the left-wing opposition. Unfortunately, as the archbishop's position is weakened, the odds against the agreements working successfully grow.

DISARMAMENT

April Showers

"IN *my* country" said Kim, when his heated antagonist paused for breath, "we call that the beginning of love-talk". Perhaps the ten-power disarmament talks at Geneva have now reached a correspondingly intimate stage. Taken out of context, the words used by the delegates during the past week would seem to indicate that the conference has already reached deadlock. In reality, however, both sides are evidently digging in.

Last Friday Mr Eaton, the chief American delegate, said that the Soviet proposals would not meet the declared objective of complete and controlled disarmament, while the western plan would. On Monday Mr Zorin rejected the western plan even as a basis for discussion. On Tuesday Mr Eaton and M. Moch reciprocated, and drew a fresh burst of Mr Zorin's fire. Mr Zorin devoted a long press conference to demonstrating the rigidity of his position. But, at the end, he suddenly remarked that the conference had already yielded a certain rapprochement, and that there was no cause for despair. Meanwhile Mr Eaton had announced that his delegation meant "to sit here patiently and work out measures leading towards the goal of general and complete disarmament under effective international control. We came with this intention, we remain with this intention."

The apparent storm at Geneva seems, then, no more than an April shower. Will it bring forth sweet May flowers when summit time begins? That is more doubtful. Disarmament is a complex problem, and the heads of government will scarcely have the time, however strong their inclination, to get down to its real intricacies, though they may be able to cut one or two of the last knots in the tangle over nuclear tests. Mr Khrushchev, in particular, remains reluctant to face the essential difficulties. On his return to Moscow from Paris he announced that his views on disarmament agreed with those of General de Gaulle, and added:

> It was worth going to France simply to clarify the two governments' positions on this question. That is why I can claim that the journey was a success.

If the Soviet leader was in earnest, this curious episode shows what unhappy misunderstandings can arise in personal encounters at the highest levels.

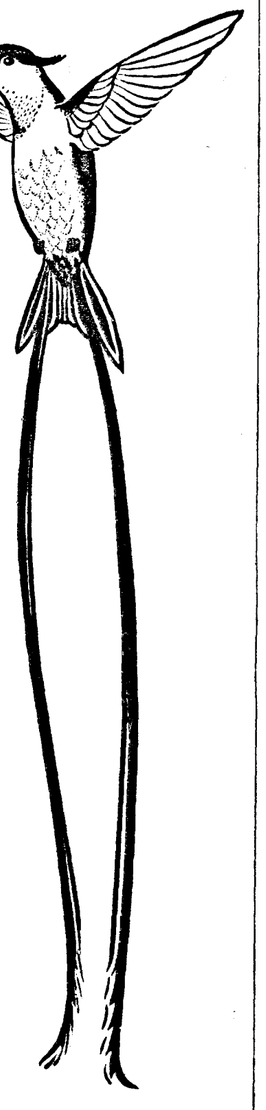
CEYLON

Rallying the Centre

ONE cannot yet safely predict who will represent Ceylon at the Commonwealth talks in London three weeks from now. The new prime minister, Mr Dudley Senanayake, is so placed that he has already had to suppress the distaste for political bargaining which he voiced during the election campaign last month. His United National party has regained its leading position, not by a great electoral swing—it got less than 30 per cent of the vote—but as a result of the break-up of the heterogeneous alliance against it that the late Mr Bandaranaike forged in 1956; and it needs at least a couple of dozen friends in parliament to give it a majority there. The new premier's programme cannot be debated until after the Sinhalese New Year, and it will be two weeks before any decisive vote is taken. His main strength lies in the public's impatience for stable government after months of tortuous and sometimes terrifying confusion. His main task is to show that the resurgent UNP is now a party, not of privilege, but of the centre.

Ceylon has unquestionably voted for the centre. The communists got only 4 per cent of the votes. An equally small number went to the new right-wing party formed by Mr Dahanayake, whose brief premiership had revealed him as a would-be authoritarian. Dr Perera's Marxist group, which at one stage seemed a real challenger, got only 10 per cent; Mr Philip Gunawardena's did no better, despite its bid for Buddhist clerical support—an unnatural marriage between rival dogmas at which a shrewd electorate looked askance. A third of all votes cast went to independent candidates, mostly moderates, and to the moderate rump of the Bandaranaike alliance, whose appeal, though hard to define, seemed all the stronger after the breaking away of the Dahanayake and Gunawardena groups from its two extremities.

Thus, while stability is not yet triumphant, moderation is. After the alarums and excursions of the Dahanayake interlude, Ceylon is relieved at the mere fact that the elections were duly held, and there is little desire for any more tub-thumping. The immediate situation, with its tricky parliamentary mathematics, may help the Tamil minority ; Mr Senanayake's promise to provide constitutional guarantees for minorities is of more significance than the now customary promise to proclaim a republic. Taking the longer view, Ceylon may now be nearer than any other Asian country to settling down to a steady pendulum-swing alternation between moderate left and moderate right.



COMMONS' ACCOMMODATION

The House Is Not a Home

TWO facts emerged from the House of Commons debate on its domestic arrangements. The first, according to the testimony of all, was that the Marquess of Cholmondley was charming. As Lord Great Chamberlain by hereditary right and landlord of the Palace of Westminster he walks backwards with the Earl Marshal in front of the Queen at the State Opening. The second fact was that in a certain unlikely set

introducing . . . . .

the Doctor Bird*

The Doctor Bird of Jamaica

Distinctive . . . colourful . . . industrious . . .He works hard, plays hard and enjoys a comfortable living. Investors are following the lead given by The Doctor Bird.

With a top quality English-speaking labour pool, customs concessions, available factory sites and tax holidays, Jamaica is ideally located to serve the rich markets of North, South and Central America and, of course, the other islands of The West Indies.

All this and political stability too!

The Doctor Bird has set the pace. He has many new friends, operating thriving industries in Jamaica, who are mindful of his example.

Get in touch with the Doctor Bird's representatives at the Jamaica Industrial Development Corporation.

**The Doctor Bird—Trochilus Polytmus—a humming bird indigenous to Jamaica, easily recognised by its long elegant tails, is as beautiful, unique and industrious as the Island and its people*

MARKETING · ADVERTISING · PUBLIC RELATIONS

of circumstances Major Legge-Bourke might become the next Lord Great Chamberlain.

This court official's status in Westminster has persisted since "time immemorial," a precise legal concept meaning that it was going strong at the coronation of Richard I. Mrs Barbara Castle, being the red-headed revolutionary that she is, wants to put a stop to it. Looking round for something to nationalise which will not cost the Labour party votes, she has lighted upon the Houses of Parliament, doubtless on the principle that the electorate will not resent anything being nationalised that it assumed was nationalised already. Moreover, the Marquess of Cholmondley is unlikely to rur an advertising campaign in the press.

Opening last week's debate, in an extraordinarily dim speech which sounded like one of the unhappier exercises in script improvisation by the "Method" school of acting, the Minister of Works, Lord John Hope, was understood to have promised MPs three hundred new desks under the roof in three years at the exorbitant cost of a quarter of a million pounds. He also suggested vaguely that if in the long run members really wanted an office block—which he doubted—they might have one on the opposite side of Bridge Street, where the site was due to be scheduled for use by the Government. This led some members to predict that the offices would be empty because their occupants would be "rubbing shoulders" in the House, and others to complain that shoulders would be unrubbed because the offices would be occupied. There were also inconclusive exchanges about the merits and demerits of having a telephone.

The first priority surely ought to be proper research facilities for MPs in a greatly expanded Library. Next, but only next, anyone who wants an office and a personal secretary ought to have one; those who still prefer to use Ashworths'—the specially privileged typing pool which is given space in the House already—ought to be able to do so in more comfortable conditions. This must involve extra building in the future, but in the meantime something could be done by dislodging some of the traditional wasters of precious space whose barnacle-like characteristics were vividly described in the all-party Stokes Reports of 1953-54. Since noble Lords and Mr Speaker himself are involved, the happiest solution might be that ingeniously suggested by Mr Wedgwood Benn—that of nationalising the Lord Great Chamberlain himself rather than his function. A political office-holder with such a title would surely carry more weight than a mere Minister of Works (a jumped-up First Commissioner at that, as those with quite short constitutional memories do not hesitate to recall).

EDUCATION

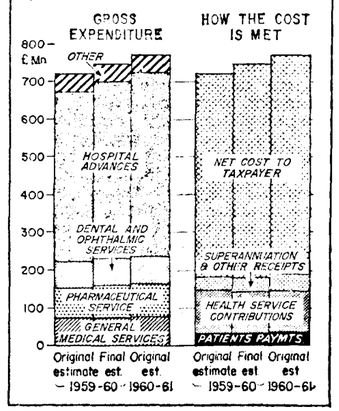
Plea for the Primaries

THE passing of the bulge through the primary into the secondary schools, and the publicity given to the discussions of post primary education by the Crowther and other reports, have left the primary schools teachers feeling rather neglected and flat; after all, they were the heroes of the postwar educational crisis. But they also, by weight of numbers, dominate the counsels of the National Union of Teachers, and it is not surprising that the union has therefore seen fit to bring forward this week (just before the union's annual conference at Easter) a reasoned complaint about the state of primary education.*

In a pamphlet, *Fair Play for Our Primary Schools*, the NUT assembles the evidence collected by an extensive questionnaire on the state of the primary schools, and there is no need to doubt the conclusion that far too many of them are over-age, overcrowded, and scandalously neglected in such elementary matters as sanitation; or, indeed, that there is even an elementary famine of pens, paper and textbooks in some of them. The responsibility for this lies partly with the central government, partly with the local authorities. The central government inevitably tends to concentrate almost entirely on getting new schools up to house the growing number of children—above all in new urban centres where no schools existed previously; sometimes the emphasis has been on showiness to impress voters, which has involved skimping on equipment and even lavatories in schools as a whole. But the defects of many of the older so-called "slum schools" can be met, or at least improved, by expenditures of £20,000 and less under the "minor works" heading of local council expenditure, and here the ratepayers and their guardians must take the blame (especially in certain Tory county councils).

But this pamphlet is not merely designed to show up bad schools. It has another thesis which is familiar: primary teachers must be paid more, must be given "equal status" with secondary teachers (largely by access to many more special allowances), and the maximum size of primary classes must be not 40, but 30 as in secondary schools. A quarter of primary classes have over 40 children now and will not be all reduced till 1968-70; to reduce the maximum to 30 would require another 50,000 teachers—on top of everything promised by Sir David Eccles in the debate on the Crowther report. This part of the pamphlet is eyewash. The primary teachers have a case; but there is no sense in asking for the moon.

* Fair Play for Our Primary Schools. The Schoolmaster Publishing Co., London, W.C.1, 2s. 6d.



LAW OF THE SEA

Commonwealth Compromise?

HOPES of a compromise on historic fishing rights at the law of the sea conference at Geneva now rest, as expected, with the Afro-Asian powers. After three weeks' exchanges the conference has duly reached the point where the marriage of the Canadian and American proposals must be brought about, or all else fails. The United States, as in 1958, has proposed a six-mile territorial sea, with a further six-mile fishing limit; states whose vessels had fished in those waters for five years would still be free to fish in the outer six miles. The Canadians suggested, again as in 1958, a

INCOMPLETE BILL OF HEALTH

The Chancellor announced no increase in charges to patients or in health service contributions in his Budget, so the taxpayer is to meet the whole of the higher cost estimated for 1960–61. That the bill presented for the new financial year is incomplete is clear from the fact that no allowance is made for the rises in doctors' pay and retrospective payments proposed by the Pilkington Commission. Nor does the chart show local health authority expenditure; for last year and this, Exchequer grants for these services have been excluded from the health service estimates as they are now wrapped up in the general Exchequer grants to local authorities.

six-and-six plan in which historic rights would not be respected. But the Canadians have all along recommended that bilateral agreements should soften the blow to the major fishing powers, as they intend to do for American fishermen in their waters.

The chief issue to be decided is how long a period can be offered to the fishing powers before they lose their historic rights inside the twelve-mile limit. Most of the Afro-Asian countries would probably prefer to close down on them at once ; but the fishing powers can muster enough votes to block a two-thirds majority. A strong Commonwealth push has now developed in which Pakistan, Ghana and Ceylon have all spoken up against wiping out prescriptive rights at one blow. Pakistan has suggested a rundown period of five to ten years ; Ghana favours seven. Their ideas are certainly rather less than the British trawler owners would like to consider. It takes appreciably longer—fifteen to twenty years—to get one's money back on a modern trawler built for existing fishing grounds. The question they may have to face is whether to accept this or be left with no recourse but the Admiralty's gunboats.

CHINA

Looping the Leap

China's Mr Amory, Mr Li Hsien-nien, minister of finance, has submitted the draft budget for 1960 to the National People's Congress. This body, which is communist China's underworked parliament, has been hearing from Mr Li a tale of economic optimism which, in some respects, is not unlike the Chancellor's account at Westminster. He described 1959 as "a year of economic prosperity, with increased financial resources, stable commodity prices and growing stockpiling." With a less bourgeois turn of phrase, he added that this prosperity was a result of last year's big leap forward and would pave the way for a continued leap forward this year.

The Chinese deputies had had ample time to study the official statement on economic progress in 1959, published on January 21st. According to the statement, last year's steel production reached 13.35 million tons. Even allowing for the sobering shock of last year's statistical climbdown, this figure seems too high not to include at least some iron; last August, it was officially admitted that only 8 million tons of steel were produced in 1958, instead of the 11 million tons previously claimed. The 1959 grain figure of 270 million tons sounds more realistic, but may also be exaggerated; the 1958 figure was marked down from 375 million to 250 million tons. As Mr Li admitted in his speech, last year brought drought and flood, which together affected 30 per cent of the total sown area. If the 1958 figure was indeed surpassed, the achievement was remarkable; Mr Li claimed that it was, and attributed the success to "the great superiority of the new form of social organisation, that is, the people's commune."

Mr Li's estimates of expenditure for 1960 are dazzling: 33.4 per cent more than last year on economic construction, 47.1 per cent more on social services and education, and 40.5 per cent more on "aid to foreign countries." Perhaps more interesting is the provision that spending on defence will be the same as last year (and therefore a much smaller percentage of a greatly increased budget). For what it is worth, this would suggest that the Chinese communists are not in the thick of a nuclear bomb programme ; though such expenditure can easily be disguised under other budget figures.

BRITISH GUIANA

Hard Bargaining

With Mr Macleod away in Africa, the final negotiations under Lord Perth's chairmanship for a new constitution for British Guiana were not an unqualified success. Though Dr Jagan was lured back into the talks for the last day, March 31st, after his mid-week walkout, he has left for home (via the United Nations, Cuba, and Venezuela) eloquently disgusted with the idea of negotiation and expressly pledged to more direct action in the future.

He has been fighting hard for a constitution like that of Singapore—independence in internal government, plus a treaty with Britain to control foreign relations, defence, and possible future links with the West Indies Federation. He insists that Guiana must have responsible government with a Guianese prime minister and cabinet. The proposals drafted by the London Conference do not meet his requirements. Thus, he considers that the office of premier will be an empty one—especially since the Governor will still be free to make decrees by order-in-council if he cannot have his way in the legislature. More important to Dr Jagan, the Governor is to retain control of the police. Dr Jagan wants a Guianese premier to have operational control of them, with a police commission to deal with promotion and recruitment. The crisis is largely one of confidence. Dr Jagan has implied that a recurrence of the 1953 troubles is impossible; he must feel that the British government's continued hedging against that possibility indicates doubt either of his word or of his political competence. Though divided on many things the Guianese delegation as a whole held that their political maturity entitled them to more than they got from this conference. Hard bargaining, with displays of brinkmanship, seems likely to continue.

THE PRESS

Missing the Beat

If any anti-apartheid move could make the South African Nationalists smile, it would have been Dr Nkrumah's decision to ban the distribution in Ghana of *Drum*, a magazine printed in the Union. *Drum* is a popular monthly, written and read by Africans, and in South Africa it has sailed as close to the wind as it dared. In search of material, its reporters have gone to forced labour camps, to farms where Africans were beaten to death, and to prison. The ban on racial grounds is so patently absurd that other reasons inevitably spring to mind. The special West African editions were doing well, and competitors would have been glad to have it out of the way. Its outspokenness may have annoyed Accra. Just possibly, like peaches and pineapples, the magazine was known to the Ghana authorities only as a South African product. In fact it belongs to a class of its own.

The Economist

APRIL 7, 1860

"THE SITUATION"

In our last week's impression we expressed a belief that the annexation of Savoy, the mode in which it had been effected, and the assurances and denials by which its consummation had been preceded, might—if the warning were duly interpreted and laid to heart—prove an indirect source of safety and tranquillity for Europe. But we should be sorry to lull our countrymen into fallacious or unwarranted security. Forewarned is forearmed; and without becoming alarmists we think it most desirable that all men—merchants as well as politicians—should carefully consider all the features presented by the present aspect of the Continent and all the rocks ahead which a dispassionate observation can discover and lay bare. It is foolish to pretend a comfort or tranquillity which we are far from feeling; to shut our eyes to obvious dangers, or to "cry 'Peace, Peace' when there is no peace"—nor, as far as we can discern, much prospect of peace for some time to come. We do not fear immediate rupture, nor any definite scheme of hostility; but we cannot disguise from ourselves that the position of affairs abroad is becoming singularly complicated, embarrassing, and uneasy, and calls for a more than ordinary amount of sagacity, vigilance, and resolution on the part of the British Government and the British people. A simple and obvious peril may be met and averted—and it would not become a great nation to manifest extreme anxiety in the face of such; but the *perplexities* arising from a variety of opposite and crossing contingencies all imminent and all grave, constitute a very different difficulty to deal with—and it is precisely this *perplexity* which is to our minds the peculiar feature of "the Situation."

Africa in London

SIR—Your article last week made a reference to Christian Action. As chairman of that organisation I write to try to dispel two misleading impressions to which this reference might easily give rise.

I have the greatest possible respect for the work of the Africa Bureau. But it was, in fact, Christian Action and not the Bureau which initiated a nation-wide concern in this country over the treason trial arrests in South Africa in 1956. And it was Christian Action which immediately established the Treason Trial Fund for the legal defence of the accused and the provision of aid for their families and dependants who would otherwise have been left destitute. Since December, 1956, more than £70,000 has been sent from our fund to the Treason Trial Committee in Johannesburg. Twelve months ago, our terms of reference were changed to include all similar cases of mass arrests, and other cases of victimisation on racial grounds in Southern Africa; and the title was altered to The Defence and Aid Fund.

In the light of the greatly increased needs resulting from the present distressing situation in South Africa we are now engaged in the task of trying to raise a further £150,000. Towards this total we have, to date, raised approximately £25,000. But this is only a drop in the bucket of need.—Yours faithfully, L. JOHN COLLINS.

2 Amen Court, EC4

South Africa

SIR—In the article "Dr Verwoerd Replies" you make the following curious statement:

"If votes do not win him this republic, Dr Verwoerd now threatens 'harsher' methods; so much for the white heritage of the rule of laws."

This sentence is directly misleading. As you are aware, it is the intention of the South African prime minister to hold a referendum on the republican issue. The "harsher methods" to which you refer imply nothing more than Dr Verwoerd's announced intention of allowing Parliament to decide the issue by majority vote at a later date, should the result of the referendum be negative.

You will perhaps recall that, in 1939, South Africa entered the war on your side as a result of a simple majority vote in Parliament. No referendum was held, although it was known that feeling was far from unanimous on the point. Was this then regarded by you as in some sense an abrogation of the rule of laws? If so, I can only say that you kept your feelings on the subject remarkably quiet until you no longer needed the assistance of South African troops to fight your battles; so much for the British heritage of fair play.—Yours faithfully, GUSTOF NORDSTRÖM

Stockholm

Senator McCarthy

SIR—Your review of Richard Rovere's book about Senator McCarthy contained the comment that the author had passed too lightly over the role of the press. I agree with that, and think that this would be a good subject for another complete study.

My point in writing, however, was to offer a comment on McCarthy's preoccupation with the press and its handling of his charges. His decline, I believe, resulted from the fact that most American newspapers strongly supported President Eisenhower and relegated McCarthy to the back pages or the wastepaper basket when his attacks turned to the administration.

I covered many of his activities for *The Milwaukee Journal*, which opposed him editorially. He invariably treated me with fulsome friendliness even after attacking my paper, but hesitated to attempt to talk directly with me and other *Journal* reporters. In 1955, however, he sent a query to me through an Associated Press man with whom he was friendly, asking a strange question which I believe provides an insight into his personality (and substantiating Mr Rovere's basic point about him). It was: Would it be news if he were to make a speech denouncing the practices in which he had engaged, defending the right to dissent, etc., and quoting Thomas Jefferson on these points. (He said he had been reading Jefferson thoroughly in the last two weeks.)

I told the intermediary that I thought this would be news, indeed, whereupon McCarthy prepared and gave such a speech, adding, however, that he did not think any newspaper would print it. I wrote a story about it, but it did not appear in the paper; I never knew why. Perhaps the editors suspected a hoax; possibly they were right. I thought it was quite a story, and I rather regretted that nothing was published; at the least, I was sorry to see McCarthy proved right in his judgment of the press handling. As far as I know, he never made that kind of a speech again.—Yours faithfully,

EDWIN R. BAYLEY

Governor's Office, Madison, Wis.

Libyan Oil

SIR—I would like to draw attention to one point in your article on Libya's oil boom which is not entirely correct. That is your statement that the oil concessions have been granted by the Federal Government.

It was my privilege to develop, in association with the authorities concerned, the draft petroleum law which was subsequently enacted by the Federal Government of Libya after consultation with the major international oil companies. A fundamental difficulty in preparing this legislation was the provisions of Article 38 of the constitution, which states that sub-soil wealth and prospecting and mining are a matter in respect of which legislative power is within the competence of the Federal Government, while "executive power in connection with the implementation of that legislation shall be within the competence of the provinces acting under the supervision of the Federal Government."

In order to comply with these somewhat complex arrangements, a "public autonomous juridical Petroleum Commission" was set up which "in the name of each and every province" is responsible for the implementation of the Petroleum Law under the supervision of the appropriate Minister. It is this Commission which, under Article 9 of the law, grants the concession, and not the Federal Government. This distinction is, of course, a matter of some significance to the provincial governments.

The remarkable degree of activity which has followed the enactment of the Libyan Petroleum Law is a very considerable tribute to the co-operative spirit in which the Libyan authorities have applied it, and provides a shining example to other emergent nations of the rewards which follow a welcome to foreign capital.—Yours faithfully, C. J. P. ANDREWS

London, W8

Manchester

SIR—In a note on the extension of the power of local authorities to invest pension funds in equities you suggest that we have changed our policy in Manchester in that we have just put £1 million of new money into gilts instead of equities.

This seems to be a widespread misunderstanding; we have certainly switched a further £1 million from pension fund investments in our own loans fund into long-term, high-yielding gilts, but at the same time we have spent a further £½ million of new money on equities, bringing our total to £3½ million.

When we bought our first equities in 1958, we also at the same time switched over £5 million from our loans fund to gilts, prices being then particularly low. What we have now done—prices of gilts being again very low—is entirely in line with our previous practice of spreading our investment portfolio over long-term, high yielding gilts, and equities.—Yours faithfully,

HARRY LLOYD
Deputy Chairman
Finance Committee

Manchester

[Our note said in reference to the eighteen local authorities who have powers to invest their superannuation funds in equities: "And the most successful among them, Manchester, has recently decided to put £1 million of new money, not into equities, but into gilt-edged."]

Sarawak

SIR—I wonder if I might add a postscript to the article that appeared in your issue of March 19. As a result of buoyant revenues during 1959 and the current year it is proving possible to expand the development plan for the years 1959-1963 (not 1965 as stated in your article). An announcement to this effect was made in the Governor's speech to Council Negri (the Legislature) on March 23rd. Details of the expansion are not yet available.

Sarawak, which was ceded to the Crown on July 1, 1946, was not the Colonial Office's last acquisition. North Borneo became a Crown Colony two weeks later. —Yours faithfully,

A. R. C. MORRISON
Information Office, Sarawak

Rutland

SIR—May I supply a few facts which I trust will confirm the doubts expressed in your note in your last issue, and convince you and your readers that Rutland should not only be admired but supported in its fight for survival?

First of all, if it could be proved that any vital national interest demanded that the county should be sacrificed, there would be little more to be said. This has never even been suggested.

As you say, the contact between ratepayers on the one hand, and councillors and officials on the other, is close. This is why Rutland pays a county rate of 13s. 3d. compared with 16s. 3d. in Kesteven, 19s. 3d. in Cambridgeshire, and 14s. in Leicestershire. And yet the ratepayers enjoy services, not merely (as you suggest) "*tolerable*" but in many cases better and more "human" than in other larger counties. For instance, in the provision of secondary modern schools Rutland led the whole country; and its programme was completed years ahead of most other countries. In each of them children can take GCE (O): while 22 per cent qualified for and obtained grammar school places, compared with a national average of 18 per cent. For the aged, beds are provided on a scale 50 per cent above that laid down by the Minister. Care of children, dentistry, chiropody, immunisation and all the countless other services are provided efficiently and economically. For some time every single village has had a piped water supply—to the envy of the inhabitants of many "large" counties.

Services provided under contract from neighbouring authorities (in some cases on a reciprocal basis) amount (excluding the police which is under an autonomous body) to only 3 per cent of the county's expenditure.

The Boundary Commission were charged to have regard, *inter alia*, to the wishes of the inhabitants, and community of interests. They do not appear to have done so. The people of Rutland, who, after all, have to pay for it, like their present county administration as it is. It does no one else any harm. Its continued existence thwarts no worthwhile reorganisation scheme.—Yours faithfully,

Preston, Rutland W. M. CODRINGTON

Argentina

SIR—In one of your notes you stated that "the import of Argentine beef, even canned, is prohibited in America on the ground of possible foot-and-mouth infection."

In fact, in 1958 the United States imported 61,000 tons of Argentine carcase beef and 34,000 tons of corned beef. These quantities represented 14 per cent and 36 per cent respectively of Argentina's total exports, and in each case the United States was second only to the United Kingdom as an outlet for Argentina's exports.—Yours faithfully,

K. RICHARDS

BOOKS

Policy and Strategy

Defence: *Policy and Strategy*
By E. J. Kingston-McCloughry.
Stevens, Atlantic Books. 288 pages. 25s.

Nato in the 1960's
By Alastair Buchan.
Weidenfeld and Nicolson. 143 pages. 12s. 6d.

BRITAIN is in many ways fortunate in its poverty. In the United States the arduous and urgent problems of national defence are studied in a score of semi-academic institutions and by a hundred able and articulate civilian authorities, who enjoy a status and prestige quite distinct from the equally numerous journalists and the innumerable service experts who also concern themselves in such matters. Their publications are both informative and stimulating, and if the total effect is bewildering the fault lies in the subject and, probably, in the reader rather than in their exponents. Yet it is doubtful whether any have really written more concise sense about defence, or made it so easily readable, as have the authors of these two books. A journalist and a staff officer respectively by profession, Mr Buchan and Air Vice-Marshal Kingston-McCloughry have established themselves during the last ten years as leading authorities on defence questions; it is hard, indeed, to name more than half a dozen others—and they are very complementary figures. With their backgrounds of, on the one hand, political and, on the other, service administrative expertise, with their wide knowledge of technological development, they converge to illuminate an area that is, for the layman, still a very murky one indeed.

"Defence" is a careful analysis of the organisation that that word presupposes, carried out in the solid and authoritative manner of a man who not only knows what he is talking about but knows also that his work is likely to become a standard textbook in staff colleges. It is a professional work: it refuses to consider war to be impossible or even unlikely, and doggedly considers how it should be fought, in whatever form it may come. Mr Buchan's book is of a very different type. He writes, not of war in the abstract, but of the immediate politico-strategic problem facing the West: and his work, as a result, is likely to be at once of greater immediate interest and, once this problem has been left behind, more quickly forgotten. This is a pity; for his book is the first of a series to be produced by the Institute of Strategic Studies, and as such should perhaps have had a more marmoreal and less evanescent character. The distinguished membership of the study group that helped to give it birth does indeed raise hopes, which are not entirely fulfilled; of a more leisurely and magisterial survey of the problems of western defence in all its aspects. In fact, this is very much Mr Buchan's own book, as he insists; so much so that Professor Blackett, as a member of the Council of the Institute, finds it necessary to dissociate himself very firmly from at least one of its conclusions; and as such it has an urgency about it, as well as a brilliant command of technical data, which makes it hard to regret its failure to be more "institutional."

Mr Buchan's main thesis is well known: it was considered in the editorial columns of *The Economist* of February 27th. Since Nato was founded, one of its main foundations, American nuclear supremacy, has been almost totally eroded; one of its principal underpinnings, the presumed superiority of tactical nuclear weapons in defence, is now entirely discredited; and the alliance is showing signs of developing into a collection of inefficient nuclear powers, striving for a nuclear self-sufficiency none of them can afford at the expense both of genuine interdependence and of conventional forces adequate to enable them to deal with probable emergencies. It is this thesis that has been expounded from many quarters and of whose validity Whitehall has at last become aware—as indeed has everyone with the possible exception of Messrs Gaitskell and George Brown; and if events have to some extent overtaken Mr Buchan, it is largely because he has acted as their unwearying and skilful coach. There is hardly a proposal in this book that has not already, since it was first circulated in draft six months ago, received an echo of approval at Shape, if not in London. The need for

greater mobility in Nato forces; the desirability of a mobile Nato reserve—now formed; the concentration on improvement of conventional weapons rather than on the further refinement of nuclear ones; the development of a Nato missile system, in which the British and French should be merged—such ideas are now rapidly becoming almost orthodox.

"Nato in the 1960s" was evidently devised as an urgent cry for reform in an age over which there still brooded the figures of Dulles and Sandys. Had it appeared a year ago, it might have been recommended as required reading for Ministry of Defence officials and members of Parliament, to expose the blindness of official doctrine; now it is required reading rather for the general public to show the way in which the official mind is at last beginning to move.

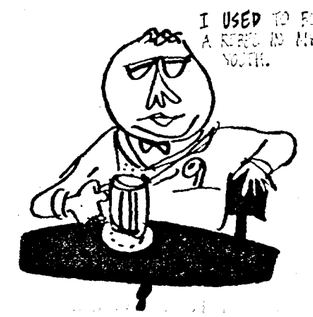
The vital question is: how far is public opinion prepared to follow this movement? Mr Buchan calls for two things that will certainly be unpopular: an increased contribution to Nato from European powers (including ourselves) in both money and manpower, both of which we can well afford if we try; and a far greater pooling of national sovereignty in a genuinely effective alliance. The Sandys policy offered sovereignty on the cheap in return for increasing the risk of nuclear annihilation. Mr Buchan offers nothing on the cheap—his proposals demand sacrifices of national pride, personal comfort and individual wealth—but they offer the best hope that we have of security, not only against our adversaries, but also against the dangers that indiscriminately beset all mankind.

Growing Pains

Economic Development
By Benjamin Higgins.
W. W. Norton, New York. London: *Constable.* 821 pages. 60s.

Six Lectures on Economic Growth
By Simon Kuznets.
Free Press of Glencoe, Illinois. London: *Frank Cass.* 122 pages. 28s.

PROFESSOR HIGGINS'S massive volume is in part a textbook in the oldest sense; it presents, expounds and compares the text. Like Messrs Gerald Meier and Robert Baldwin's "Economic Development, Theory, History and Policy," it offers an account of general growth theories from the classics onwards; but this account is much more tightly organised, critical and logically unified—and it comes down to the present day, with due attention to such moderns as Dr Harvey Liebenstein and Professor W. W. Rostow. In turning from general to particular themes (population; industrial evolution; instability; fiscal policy; foreign trade; international aid), Professor Higgins similarly introduces his readers to the state of the debate, expounding, comparing and assessing. But "Economic Development" is not only a report on past and current controversy; it is also a statement of its author's own conclusions, fortified by practical experience of missions to the underdeveloped countries and by much study of factual evidence, of which a generous amount, both descriptive and statistical, is provided. The result is a splendidly solid, well-built and comprehensive job—but, despite its firm internal articulation, a rather unwieldy one.



To apply to underdeveloped countries, unchanged, the economic theory evolved in advanced economies is (*pace* Messrs Bauer, Yamey, Frankel and others) to skate over just those questions which, in this context, most need an answer. As well—Professor Higgins sometimes seems to be saying—try to explain the mechanics of launching by the theory of navigation. Discontinuities, which are economic *curiosa* in the advanced economy, are critically important to the underdeveloped; the relations between rapidly and less rapidly advancing or actually stagnant sectors (notably peasant agriculture) present to underdeveloped nations a problem so different a degree as to be different in kind from the residual "dualism" of the advanced; it is not possible, in the economics of development, to treat as independent data such elements as population changes, technical innovations, and the supply of business ability. More generally, Professor Higgins agrees with Professor Myrdal that the notion of equilibrium is an almost useless tool in the development situation—where what requires to be understood is the nature of cumulative movements (in vicious or virtuous circles) away from equilibrium—"Development is a matter of feedback mechanisms, not equilibrating adjustments." He also agrees that decisions should rest on calculations of group rather than individual advantage. "What may be bad policy for each one of a thousand entrepreneurs may be good policy for the thousand entrepreneurs together"—owing to the crucial importance of discontinuities. All this implies, apart from a "big push" attitude to policy or to the role of the advanced countries in furthering it, the need for a major development in development theory itself. Professor Higgins concludes with a formidable programme of research, largely social and technological; even more than equilibrium theory, development theory consists all too evidently of a stack of empty economic boxes.

In format and style, few books could contrast more strikingly with "Economic Development" than does Professor Kuznets's "*Economic Growth*," consisting of six compact and austere lectures delivered in Mexico in 1958. As might be expected, Professor Kuznets's works from, and with, statistical magnitudes and time series: income sizes and distribution, rates of capital formation, occupational structure, terms of trade. This approach—at once less ambitious and more exacting—yields few specific and positive policy conclusions; but the wide variety of possible relationships and trends disclosed by the evidence con-

Have you discovered Feiffer?

A SHORT TIME ago Pendennis in *The Observer* examined the strip-cartoon characters in other newspapers (Colonel Pewter, the Gambols, the Bumsteads, Andy Capp, etc. . . .) with a kindly interest in their besetting sins (Pride, Envy, Sloth, etc. . . .). He made no mention of *The Observer's* own weekly cartoon strip by Jules Feiffer, for Feiffer's cartoons are not devoted to the adventures of any particular set of characters, or to any particular indulgences. But if you are beset by Doubt, Feiffer is your man . . .

These strip cartoons are like no others in the world. Highly individual, lazy-

eloquent drawings: long, block-lettered dialogues or thinkings aloud, with emphatic words in black: no stock characters, no square frames, no balloons, no winks, no nudges and not a damn thing explained. And, strangest of all, a deep, wry seriousness behind the comedy—so that, depending upon mood and matter, a Feiffer-addict may respond to a Feiffer cartoon by shouting for joy or by going away quietly to weep and wonder.

A young man called Bernard (but sometimes Howard) loses battles against his girl, his boss, his friends ("you can't win you can't win you can't win"). A long-robed patriarch 'reviews' the Old Testament—favourably. An Oedipus-like figure on a psychiatrist's couch skims through his lurid life ("My daughter's seeing you tomorrow. Boy, has *she* got problems.")

Jules Feiffer is young, unmarried, hip, an Eastern American with inherited puritanism, a citizen of Greenwich Village with a pass to every other Bohemia. Of his readers in *The Observer*, a majority says nothing, while two minorities applaud and hiss. It's a test of something . . . and not merely of cleverness. It's liable to grow on you. Have you discovered where you stand?

J.B.L.

AD/1

stitutes an effective warning against extrapolating or dogmatically generalising from the experience of a single period of history or a single nation. It is, says Professor Kuznets, "the whole climate in which basic decisions are made," rather than the predictive ability of economists in particular situations, that benefits from the kind of historical perspective imparted by these studies. In this final manifesto, Professor Kuznets effectively joins hands with Mr Higgins.

The Kaiser's Navy

Regierte der Kaiser? *Kriegstagebücher, Aufzeichnungen und Briefe des Chef des Marine-Kabinetts Admiral Georg Alexander von Müller 1914-18*

Edited by Walter Görlitz.
Musterschmidt-Verlag, Göttingen. 455 pages. DM 24.60.

ADMIRAL VON MÜLLER saw the rise and fall of the German navy from a unique position. He became the Kaiser's liaison officer with the navy in the autumn of 1908, and he remained in this post until the end of the Great War. He was not a Junker and he represented, at the court, an arm that the traditionally land-bound ruling class distrusted. On the other hand, although he was usually well-informed about matters of high naval strategy and policy, the admiral's influence on their formulation was negligible. He had much to say in questions of high-level appointments; but, even as a kingmaker, he exercised no control over the subsequent activities of his successful protégés. These limitations, however frustrating to von Müller personally, should have given him the detachment necessary for a chronicler; occasionally, they did.

Most of the entries in von Müller's diary consist of a record of a dull, daily routine. Nevertheless a number of passages—notably those concerning the adoption of unrestricted submarine warfare, the resignation in the summer of 1917 of Bethmann Hollweg, and the last days of Imperial Germany, when red flags flew in Berlin and von Müller was issued an army pistol for his personal protection—are of genuine interest in that they illuminate hitherto obscure events. But the editor must have thought that they contained weightier information: in the title of the book itself, he asks "Did the Kaiser Rule?" It is neither a clear question nor a good title; nor does von Müller answer it.

The Eighteen Hundreds

Nineteenth Century Britain

By Anthony Wood.
Longmans. 487 pages. 21s.

DESPITE the mass of material available on the nineteenth century, few good books spanning the whole period have been written. Perhaps this is because "the nineteenth century" is a convenient but misleading abstraction: the 1820s have little in common with the 1860s, or the sixties with the nineties. And when does "the nineteenth century" end? Certainly not in 1900, and there are numerous alternatives for Mr Wood's choice of 1914: 1870 perhaps, or 1906, or some year in the 1880s when the Victorian synthesis was visibly disintegrating, and some Tories might even select 1867 with the passing of the second Reform Act. Mr Wood is fully aware of the different epochs in the nineteenth century, but his five divisions will not commend themselves to all. His choice of 1901 as a watershed, while understandable in view of the Queen's death, is somewhat arbitrary since, apart from this, the year marks no especially important social or political development.

A mild dissension with certain of Mr Wood's judgments must also be registered. Should Lord Liverpool's abilities be rated quite so highly? The statement that the upper and middle classes opposed Chartist violence but not Chartist aims is highly questionable, and is contradicted by the pessimism evoked by the passing of the 1867 Reform. To call Peel's Bank Act of 1844, the absurdities of which were so mercilessly exposed in *The Economist* by both Wilson and Bagehot, "an essential element in Britain's economic supremacy in the 19th century," verges on the ridiculous. Mr Wood's list of significant results of the Crimean War omits the encouragement it afforded to isolationist policies. To write that Bagehot left the civil service unmentioned in the 1867 edition of "The English Constitution" is a little curious in view of his discussion and criticism of it in Part VI, *Changes of Ministry*. Nevertheless, throughout its considerable length the book on the whole maintains high standards of scholarship and readability, fills a gap by providing a broad survey of the whole century, and has the all too rare merit these days of being reasonably priced.

Employment and All That

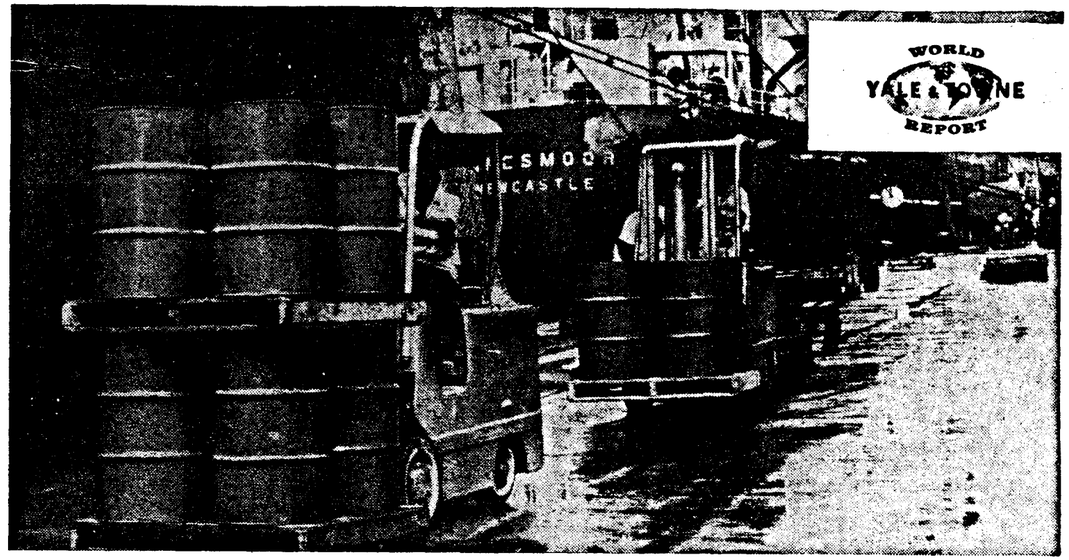
Problems of Full Employment

By D. J. Iles and C. J. Tucker.
Routledge. 275 pages. 20s.

HERE is a good idea disappointingly carried out. "Problems of Full Employment" is written for "the layman, and more particularly the voting layman." Its aim is to draw together into a single exposition all the relevant elements—institutional, social, historic, theoretical—at as simple a level as possible, so as to explain the causes that determine the volume, distribution and nature of unemployment, the policies by which it can be controlled, and the obstacles and problems confronted by such policies. Its scope is extremely wide, ranging from macroeconomics to case-studies of particular unemployed groups and taking in descriptive accounts of institutions from the International Monetary Fund to the Development Corporations of the new towns. There is plenty of statistical material.

This sounds like the response to a felt want; nothing quite like it has been attempted before. Unfortunately the authors are simply not up to their task, having neither the necessary intellectual grasp to tackle the subject at all nor the necessary knack of presentation to make it manageable for the "voting layman." On some topics—notably the crucial topic of wage policy—the argument never gets near the heart of the matter; on others it is positively misleading, as where inflation is described as a threat to the balance of payments without any hint that it is relative and not absolute national price levels that are important in this context. (Nowhere will the reader find any indication that inflation has other disadvantages and dangers than this; or, for that matter, any coherent account of the processes that set it in train.) Large chunks of necessary preparation are omitted—as when an account of the foreign exchanges is offered to readers innocent of any acquaintance with monetary theory or the banking mechanism. Generalisations appear in one chapter, supporting evidence (or, occasionally, quite contradictory evidence) is withheld until several chapters later. Apart from a single, easily-missed and casual reference, no distinction is drawn between the balance of trade and the balance of payments; the untutored reader is left to make what he can of the apparently contradictory statistical tables relating to each. No principle seems to govern the amount of detail allotted to institutions of different degrees of importance.

These are almost random criticisms; they could be multiplied to such an extent that one wonders who passed this book for publication. At least someone might have told the authors to verify what is surely the most hackneyed of quotations from Adam Smith instead of mangling it from memory.



A Rebel and Europe

Europe Will Not Wait

By Anthony Nutting.
Hollis and Carter. 122 pages. 12s. 6d. net.

MR ANTHONY NUTTING, who resigned from the Foreign Office in 1956 in protest against the Suez expedition, has since become something of a professional diplomatic heretic in print. In his new book on British policy in Europe he takes the gloves off, setting out, at times vividly, the failure of fifteen years of British policy towards the movement for European unity. The one sneaking doubt about the book is that it is not the first time that pro-European views have been expressed by public figures out of office. But so far none of them has managed to put them into practice when in power.

Unlike so many of the turgid works that have been written on the institutions and arrangements for co-operation that clutter Europe, this one has the great advantage of brevity. It describes in simple clear language, not the endless institutional elaborations of the European idea, but the sad tale

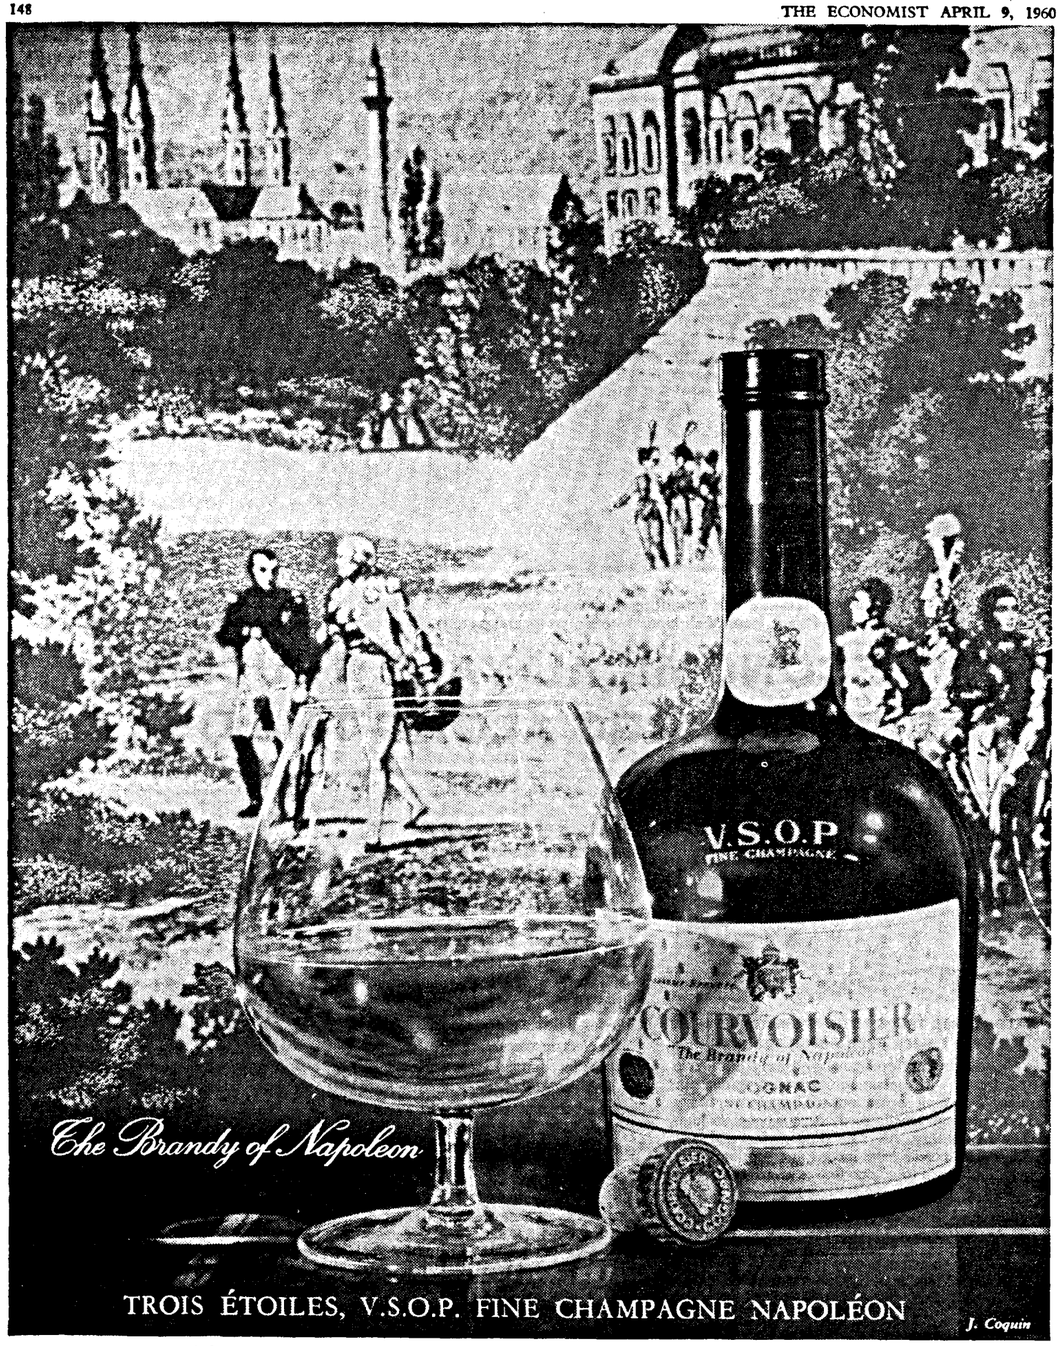
SINGAPORE — These efficient, versatile Yale fork lift trucks quickly move unit loads of goods on pallets from pier warehouse to shipside. In the warehouse, they lift and stack loads of all kinds — bags, crates and cartons. Capacities range all the way from 1,000 to 100,000 lbs.

ECONOMICAL YALE TRUCKS SPEED CARGO ALONG THE QUAY

YALE PETROL TRUCK WITH PNEUMATIC TYRES MOVES TIMBER OVER ROUGH TERRAIN

VANCOUVER, BRITISH COLUMBIA — Heavy duty Yale petrol trucks with pneumatic tyres prove ideal for outdoor handling operations. They move heavy loads over rough terrain easily because of their high degree of stability. All Yale time saving and cost saving petrol trucks have indoor and outdoor uses. Capacities: 2,000 to 20,000 lbs.

LIGHTWEIGHT MANŒUVRABLE YALE TRUCKS STACK PALLET-LOADS OF CASES



COPENHAGEN, DENMARK — Cases of beer are stacked for shipment, quickly, economically, by Yale Worksavers. These lightweight compact Yale electric trucks are ideal for use in cramped areas and on low-load floors. They have unusual manœuvrability and operate with easy finger-tip control. Capacities up to 7,500 pounds.

- Yale makes the world's most complete line of Petrol, LP-Gas, Electric and Hand Lift Trucks.
- All Yale Industrial Lift Trucks are uniformly high in quality, wherever manufactured.
- All Yale equipment available in currencies of the free world.
- For further information contact your Yale Sales and Service Representative — located in principal cities of the world.

of British policy towards them and the critical wrong turnings that were taken. Perhaps the best part of the book is the account of the failure of the negotiations on the European army, in which Mr Nutting worked closely with Sir Anthony Eden. He brings out dramatically how the concessions Britain eventually made to preserve German rearmament within the half-baked Western European Union would have saved the European army if they had been made a few months before. The story has a painful topicality today when the implications of German rearmament on a national basis are beginning to come home. The account of the free trade area negotiations, on the other hand, though adequate, is not the definitive, sophisticated tale that ought some day to be written about this abortive, complex but at times dramatic piece of diplomatic history. By the time these negotiations were under way Mr Nutting had left the seat of power. Nevertheless, taken as a whole, his book is the best straightforward indictment of British post-war European policy that has yet appeared.

His advice for the future, however, is not so convincing as his judgments on the past. Mr Nutting admits that he is not very certain of the answer himself. He goes on to say that Britain cannot join the common market now, since France would not have it in; but he then swings round to suggest a "merger between the common market and the commonwealth." The two propositions, which seem somewhat contradictory, require critical scrutiny. It is true, as he suggests, that "anyone in the Quai d'Orsay" will admit that France will look for a way to keep Britain out. M. Raymond Aron, reviewing Mr Nutting's book in *The Observer* on April 3rd, elaborated the theme that since 1950 French governments have made it as difficult as possible for Britain to come in—a view with which he seems to sympathise. But it is also true that there still are powerful forces on the Continent that want Britain in Europe. The tragedy is that British policy has never given them a chance, but has, by its half-measures, played into the hands of those who want Britain kept out.

At this late stage, however, it is highly doubtful whether those people on the Continent who feel Britain is a part of Europe could win the day, if Britain merely offered preferential economic advantages in the Commonwealth on the lines Mr Nutting suggests. All the signs suggest that what is needed is a new political approach. That means, in all probability, that Britain will have to be prepared to accept both the political approach embodied in joining the European Community and the close relationship between the Commonwealth and Europe which follows logically from that approach. Even given this fundamental change, time is short.

OTHER BOOKS

THE STAGES OF ECONOMIC GROWTH: *A Non-Communist Manifesto.* By W. W. Rostow. *Cambridge University Press.* 179 pages. 21s.

The substance of this important book will already be well known to readers of *The Economist.* An abridged version of the lectures was given in the issue of August 15 and August 22, 1959. An editorial comment appeared on August 22nd. Letters to the editor were published on September 5th, and on November 7th we published extracts from Mr Zhukov's reply to Professor Rostow, which appeared in *Pravda* on October 19th. Further reactions to "Rostow on Growth" were published in our issue of February 6, 1960; this also contained a shortened version of his reply to *Pravda*, which so far as we know was never published.

APPRENTICESHIP. By Kate Liepmann. *Routledge.* 214 pages. 23s.

Craft apprenticeship, as Gertrude Williams's book (brought out by the same publishers in 1958) has already shown, is a thoroughly outdated form of industrial training. It is often used by employers as a way of getting cheap labour and by unions as a way of restricting entry into their craft. More skilled men are needed in Britain today, but as the Government is becoming increasingly aware, the traditional methods may be far from the best way of obtaining them. Dr Liepmann's book confirms this. Both her excellent analysis of the background to apprenticeship and her examination of its current effect in particular cases (largely in the Bristol area) make a cast-iron case for reform.

A NEW APPROACH TO INDUSTRIAL DEMOCRACY. By H. A. Clegg. *Blackwell.* 145 pages. 18s. 6d.

This book presents a thumbnail sketch of some twentieth century ideas about workers' participation in industry, and a brief survey of how far they have been carried out in different countries. Experience has not been encouraging, to the visionaries at least. The extreme ideas of workers' control advocated in the early 1920s have been abandoned and even more cautious efforts in postwar Germany and Jugoslavia have not fared well. But slow progress there has been, as the Vienna Conference for Cultural Freedom, from whose debates the book originated, was generally agreed.

FRINGE BENEFITS AND THEIR FEDERAL TAX TREATMENT. By Hugh Holleman Macaulay, Jr. *Columbia University Press.* London: *Oxford University Press.* 254 pages. 52s.

This is a very useful and well thought-out analysis of the rapidly growing number of non-cash benefits provided by American industry for its employees. Company retirement benefits, life insurance, unemployment and health benefits and payments in kind are all examined. Both Mr Macaulay's conclusion that many fringe benefits at present tax-exempt or taxfree are so only because of muddled legal thinking, and his recipe for reform, will command widespread liberal support.

HOME AT GRASMERE. Edited by Colette Clark. *Penguin.* 326 pages. 5s.

Miss Clark here presents extracts from Dorothy Wordsworth's journal and intersperses them with a selection of Wordsworth's poems. This arrangement shows the general reader how close the link was between the journal and the poems and how often Dorothy Wordsworth was the inspiration and the source of William's best poetry.

LAW IN A CHANGING SOCIETY. By W. Friedmann. £2 10s.

This book, which was reviewed in our issue of March 19th, is published by *Stevens*, not *Sweet and Maxwell.*

INVESTING AND LICENSING CONDITIONS IN 34 COUNTRIES. *Business International, New York.* 108 pages. $60.00.

INVENTORY OF ECONOMIC STUDIES CONCERNING AFRICA SOUTH OF THE SAHARA. *Commission for Technical Co-operation in Africa South of the Sahara.* 312 pages. No price given.

The Stages of Economic Growth

W. W. ROSTOW

Economist readers will know something of Professor Rostow's views from the lively articles he contributed last year. These attracted worldwide attention, and even provoked a tirade from *Pravda*. This book, the basis of his articles, presents a comprehensive and realistic alternative to Marx's theory of how societies evolve; it considers today's problems against this background, and the hopes of prosperity and peace. *Cloth bound, 21s. net*

The Board that decided to see for itself

In the past fifteen years, 141 new manufacturing plants—some very large indeed, some quite small—have been added to the large, well-established industrial capacity of Northern Ireland.

To an expanding company urgently seeking an up-to-date new factory ready to walk into, or a site for one, where good labour is plentiful, where individual manufacturing needs can be amply met and where restrictions are few, Northern Ireland has much to offer.

Company Executives who are not prepared to allow important and costly development projects to be debated in the absence of all the facts, will do well to cause the merits of Northern Ireland to be looked into and assessed. More than one third of Northern Ireland's new plants have already expanded far beyond the scope of the original plans. Each of these projects is directly due to a Board decision to send a fact-finding team to see Northern Ireland—less than two hours from London by air—for themselves.

A company making such an assessment will find the Northern Ireland Ministry of Commerce more than helpful—with its comprehensive knowledge of sites, and factories (three ready now; twelve being built), services and amenities; with its ability to ease the burden of capital costs and bring a flexible, business-like approach to the business of expansion.

NORTHERN IRELAND

The Northern Ireland Development Council or the Ministry of Commerce will gladly provide any preliminary detailed information your company may require, and subsequently will make arrangements, as may be needed, for a fact-finding visit. All enquiries will be treated in the strictest confidence.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Labour's Love Regained

WASHINGTON, DC

In the spring of every other year, as an election comes in sight, a trade unionist's fancy lightly turns to thoughts of the Democratic party. The blossoms which are just appearing on the magnolias in Washington are no fuller than the hearts of the Democrats as they realise that the unions will probably be faithful to them, after their fashion, once again this year. For it looks as if Mr George Meany, the head of the American Federation of Labour and Congress of Industrial Organisations, has suppressed the temptation which came over that trade union group a few months ago to stay neutral in the election of President Eisenhower's successor next November. Almost certainly the AFL-CIO will support anyone the Democrats nominate, with the possible exception of Senator Johnson of Texas, and it is now in a better position to help its friends than ever before.

This help cannot be claimed by the Democrats as of right. The leaders of the AFL-CIO, sitting in the mural-bedecked splendours of their headquarters just across the park from the White House, have no official link with the much humbler office of the Democratic party a few blocks away. Until about thirty years ago a substantial majority of organised workers, beguiled by the promise of a chicken in every pot, regularly voted for the Republicans. Last year a number of developments suggested that they might return some of the way to their old allegiance. Many trade unionists, having exaggerated the significance of the Democratic victory in the elections of 1958, were exaggeratedly disappointed by the performance of the Congress which was then sent to Washington. In particular, the movement was disgruntled because many of the legislators it had supposed to be sympathetic to it voted for the Landrum-Griffin Bill, a conservative measure restricting the unions' freedom of action, when they found after a long debate that they could not defeat it. Last January, into the gap thus blown in labour's loyalty to the Democrats, there stepped the Republican Vice President, Mr Nixon, bearing gifts in the shape of a settlement of the steel strike on terms distinctly favourable to the steel workers.

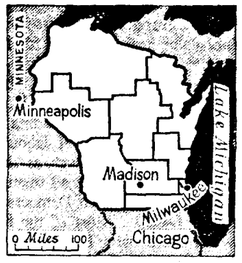
The result was dramatic. At the beginning of the year Mr George Harrison, the president of the railway clerks, let it be known that in his opinion the AFL-CIO should retire Achilles-like into its tent for the duration of the presidential campaign; and the leaders of two or three other unions, including Mr Al Hayes of the powerful machinists, gave questioning reporters the impression that they seconded the proposal. The searchers after straws in the wind, noting that Mr Harrison was the Democrats' adviser on labour matters, were more impressed by this incipient rebellion than they would have been if they had remembered that in America the railwaymen are among the most conservative of trade unionists.

But now soberer counsels have prevailed. Achilles has been dragged back out of his tent by his vulnerable heel, which is simply a reminder that for the unions to be neutral would increase the likelihood of a Republican President. The idea that the unionists might try to achieve a state of peaceful coexistence with Mr Nixon was punctured almost immediately after the steel settlement, when a steel workers' meeting booed a polite mention of his name by their leader. It has been further deflated, since the AFL-CIO is nothing if not a practical body, by the Gallup Poll's recent hints that Mr Nixon is no longer as likely to be the next President as people thought a few months ago.

At the same time, the unions' hostility to the Democrats has been mollified by other developments. The pundits within the AFL-CIO, who realised in 1958 (only nobody listened to them) that they could count on fewer than half of the members of the House of Representatives, are now pointing out that the Republicans in the House, with their vigorous new leader, are at least partly to blame for the present conservatism of Congress. Above all, the prophets who said that the end of the world was at hand when the Landrum-Griffin Act was passed now find life going on embarrassingly as usual. No trade union has yet found itself hamstrung by the new law.

This newly recovered enthusiasm for the Democrats is not evenly spread. It is doubtful whether the unions could swallow the gnat of Senator Johnson's nomination, even if this refusal subsequently obliged them to digest the camel of Mr Nixon's Presidency. Apart from the fact that the Senator's Texan upbringing makes it hard for him to understand the problems of workers in big industrial cities, the reasons for the unions' dislike of him are largely esoteric. Last autumn it was discovered that Mr Johnson had written a letter to a number of his more conservative supporters reminding them of his obliging votes in their favour on a number of labour issues. But the unions did not mind the votes as much as they did the relish with which Mr Johnson seemed to recall them.

Each of the other Democratic candidates has his admirers in the AFL-CIO. Most of the federation's leaders, in their hearts, would like Senator Humphrey to be the next President; but, since his chances of winning are becoming increasingly remote, they are unlikely to declare their heart's desire. As a second choice Senator Kennedy is thought to be the preference of Mr Walter Reuther of the automobile workers, and Mr Adlai Stevenson that of the steel workers. Mr David McDonald, the leader of the electricians and Mr Harrison, the erstwhile neutral from the railways, have already plumped for Senator Symington of Missouri as their idea of the best man for the office. On the flank of the movement Mr James Hoffa of the expelled lorry-drivers is blazing away at everyone in sight except Senator Morse of Oregon.



If Senator Kennedy turns out to be the Democratic nominee there will still be some qualms. It was he who introduced into Congress the labour reform Bill which the conservative alliance in the House of Representatives made more restrictive than he wished; although his efforts to temper this work were only partly successful he voted, like almost every other Senator, for the final version of the measure. But these qualms will be suppressed if the Kennedy bandwagon's wheels rumble loudly enough and whoever gets the AFL-CIO's support will have the help of a better organised body than the one which endorsed Mr Stevenson in 1956. Then the two halves of the federation, which had merged at the top only a year earlier, were united in fewer than half the states; by the coming autumn, when the rival groups in New Jersey will have been driven to the altar by Mr Meany's shotgun, the process of amalgamation will be complete. Although the steel strike has depleted the unions' funds, they will probably spend at least as

much as the $1.8 million which they laid out for the 1956 election. Even the lorry-drivers, who abandoned their plan for a vast election fund to be disbursed by Mr Hoffa at the same time as they lost their faith in all the Democratic aspirants for the Presidency, are likely to give substantial help to local candidates for Congress.

The remaining question is whether the unions can deliver votes as well as money. It has long been suspected that trade unionists are getting less Democratic as they move out of the cities into middle-class suburbanity. Some people have found evidence for this in a survey by Mr Louis Bean, the polling expert, which suggested that workers' support for Mr Stevenson declined more sharply between 1952 and 1956 than that of the population as a whole did. But this was probably due more to their ill-concealed dislike of Mr Stevenson's intellectualism than to a nascent liking for Republicans. Several inquiries suggest that many unionists (and more particularly their wives) who voted for President Eisenhower are unlikely to transfer their affection to Mr Nixon; a team of *Wall Street Journal* reporters who visited Wisconsin recently found a marked antipathy to the Vice President.

Senator Kennedy has particular reason to hope that this newly floating vote will turn to him. The trade unions contain a higher proportion of Roman Catholics than does the population as a whole, because the more recent immigrants from Catholic countries have not yet climbed into the middle class. Thus a Catholic candidate, especially a youthful one in a country where youth is still a major electoral asset, is likely to arouse more enthusiasm among the labour rank and file than any other nominee.

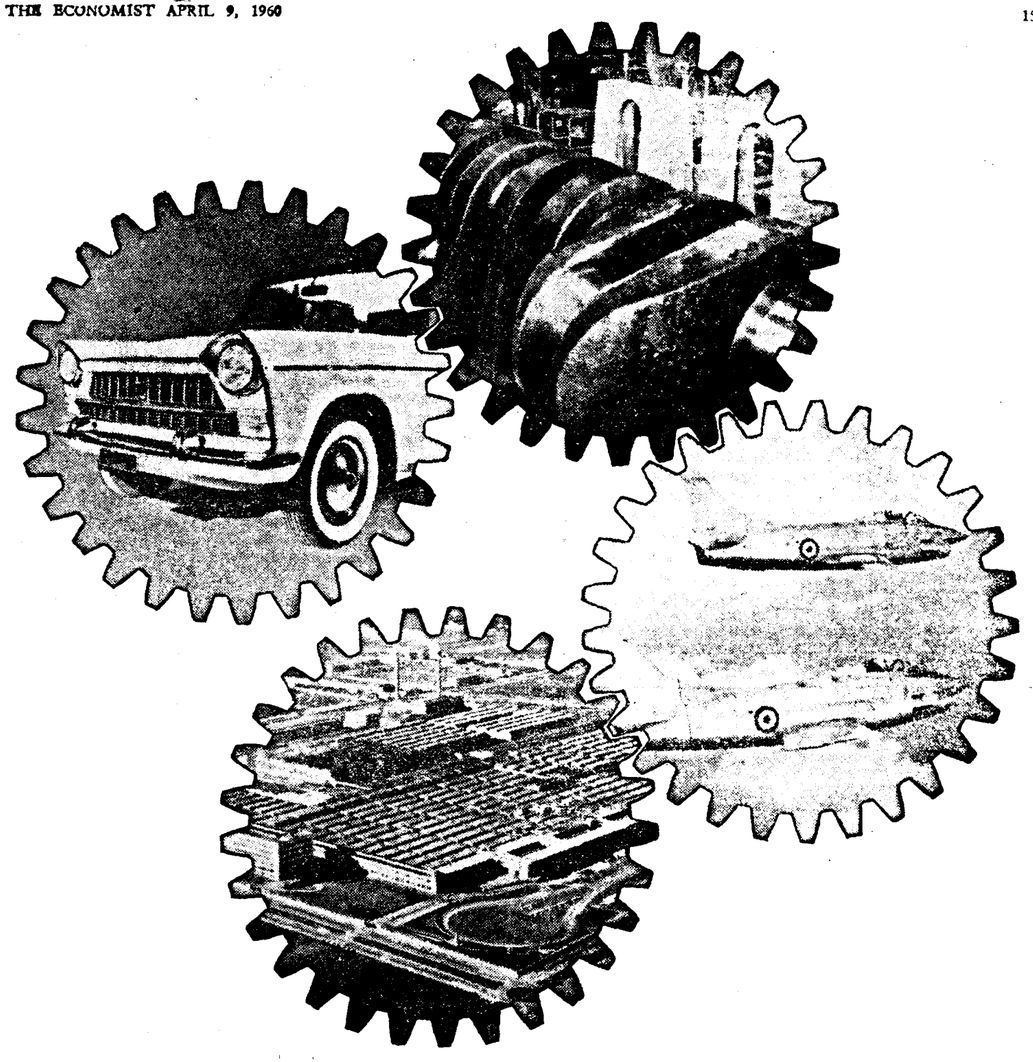
Wisconsin: Delphic Oracle

IF Wisconsin had gone to the polls a few weeks ago to show which Democratic presidential candidate it preferred, Senator Kennedy's victory over Senator Humphrey, his rival from neighbouring Minnesota, would probably have been hailed as a triumph; the Senator from Massachusetts won 106,000 more votes than Senator Humphrey—more than any other primary candidate in Wisconsin's history—and carried off 20½ of the 31 votes which Wisconsin will cast at the Democratic nominating convention in July. But both Senator Kennedy's friends and his enemies had become so convinced that his bandwagon was gathering speed hour by hour that the result came as an anti-climax.

Certainly he has not secured the important psychological lift which would have been his with a "knockout" victory acclaimed in the headlines—even though the convention votes which were at stake are so few. Senator Humphrey won 372,000 votes to Mr Kennedy's 478,000 and carried, as well as the three farming districts adjoining Minnesota, the district containing Madison, the state capital, and the state university where Mr Stevenson's supporters turned to him in an effort to stop Senator Kennedy's drive. Both Senator Kennedy and Senator Humphrey will soon move on to prepare the ground for their next clash, in West Virginia, early next month.

There are two additional reasons why Senator Kennedy's victory is not being taken at its face value. One is that he is a Roman Catholic, and the population of Wisconsin is about 32 per cent Catholic compared with 23 per cent for the country as a whole. The other is that under Wisconsin's unique law Republicans were free to vote in the Democratic primary if they chose. Senator Kennedy drew most of his margin of victory from three districts which are heavily weighted with his co-religionists, including the two into which Milwaukee, the state's largest city, is divided. But the men who matter—the professional politicians who will decide whether big uncommitted states such as New York swing behind Mr Kennedy—will view this as an asset unless many Protestants prove to have been alienated by his religion. Most of the big cities in such states have many Roman Catholic voters who in recent years have tended to vote Republican; to reclaim them would be a great advantage. West Virginia, which has hardly any Catholics, should help the professionals to make up their minds whether Senator Kennedy, as a presidential candidate, would lose more Protestant votes than he would gain in Catholic ones.

Mr Nixon's relatively poor showing on the Republican ballot—he won only 341,000 votes—was not unexpected since he was unopposed and did not campaign; he can take comfort from the erratic history of the Wisconsin primary, where Mr Truman did infinitely worse in 1948, yet went on to carry the state—and the country—in November. Less easy to disregard is the most recent Gallup poll, which shows Senator Kennedy forging ahead of the Vice President for the first time since Mr Nixon returned from his popular sparring match with Mr Khrushchev last summer.



Surprise from the Treasury

NEW YORK

THE Treasury created a stir this week both on Wall Street and in Washington by including a bond running for 25 years in its operation to raise the cash needed by the government between now and June 30th, when the 1960 financial year ends. For almost twelve months the Treasury has been excluded from the long-term money market because it is forbidden by law to sell long-term obligations paying interest of more than 4¼ per cent; with outstanding issues selling above this ceiling the Treasury has had to borrow exclusively in the short-term market. The recent easing in interest rates has been most marked in that market but it has had some repercussion on the capital market. Thus the effective rates on outstanding long-term government bonds have fallen fractionally below the ceiling and the Treasury has not hesitated to underline the new situation by offering a 25-year bond, callable in 15 years, at 4¼ per cent. The amount was left open, although limited to a maximum of $1.5 billion, and the rest of the government's cash requirements are being raised by the sale of $2 billion-worth of 2-year, 1 month notes at 4 per cent.

The Treasury's move is a bold one since it is very unlikely to help it in the battle which it is waging with Congress for the removal of the ceiling on long-term interest rates. Liberal Democrats, who are determined to keep government borrowing in its strait-jacket, feel that the Treasury has now proved that they were right to resist its request. Admittedly they can no longer accuse the Treasury of not trying to market a long-term bond when circumstances allow but they do feel that they have saved taxpayers millions of dollars in interest charges by not giving in in the meantime. The chances are now against the removal of the ceiling at this session of Congress, but the Treasury has no intention of giving up the struggle; interest rates, it feels, can rise as suddenly as they can fall.

The new callable bonds are not expected to go to a premium but there are some long-term investors—principally pension funds—who find them attractive. Government dealers expect that about $500 million worth will be sold; this is not a big amount but only a few weeks ago the Treasury could not have sold any at all. The changed situation owes a great deal to the Federal Reserve Board's recent relaxation of its restrictions on credit and to expectations in the money market that even greater ease is on the way. Just how far the central bank will go is not yet clear but with the Treasury

IN GEAR IN EXPORT MARKETS

This is Fiat. Prof. I. V. VALLETTA is the man behind this Italian industrial group which makes motor cars, aircraft, engines of all kinds for land, sea and air; and sells them throughout the world.

Such diversity of manufacture and market poses the big problem of maintaining a single image for the whole group—an image that *sells* Fiat transport engineering excellence as well as the individual products.

Prof. VALLETTA solves this problem by projecting the corporate personality of Fiat to men of influence around the globe through international advertising in TIME.

TIME, The Weekly Newsmagazine, New Bond Street, London W.1.

Five separate weekly editions putting sales in top gear in export markets everywhere.

TIME

FIAT

ITALIAN ENGINEERING EXCELLENCE... SOLD AROUND THE WORLD... *advertised in* TIME

President Eisenhower's call for the creation of bi-racial committees will not make much difference; the southern moderates think he should have issued it years ago and the southern segregationists are turning their usual deaf ear. But it was a different matter when Governor Collins of Florida appointed such a committee and said that, while owners of shops have a legal right to exclude customers,

> I think that if a business includes several departments and the general public is invited in to trade, it is morally wrong for the management to discriminate against Negro customers, denying them the services of one department.

His example made easier the task of negotiators working behind the scenes in many cities.

But it was not popular with members of the Florida Legislature or with other southern politicians such as Governor Vandiver of Georgia, who said that he did not see that any moral issue was involved. In the southern states the impoverished, static, agricultural economy inherited from the nineteenth century is giving way to an industrial economy based on rising consumption and the mobility of labour. But the political system, which has been characterised by a limited electorate, over-representation of rural areas, and demogogic attitudes on race, has not changed. Now, however, it is beginning to crack under the new economic pressure in some states such as Virginia and all are feeling the strain.

Rockefeller's Mixed Bag

GOVERNOR ROCKEFELLER of New York State and Mayor Wagner of New York City can both feel pleased with themselves. Their recent agreement on the amount of financial aid for education and welfare that the city will receive from the state in the coming year puts an end to a dispute that has dragged on for six years, largely because a Democratic administration in the city has had to seek largesse from a Republican State Legislature. Now, instead of having his grant cut by $7 million, as was at first threatened, Mayor Wagner has secured an increase of $41 million, with the hope of another $40 million if Congress disappoints President Eisenhower by relinquishing the federal tax of 10 per cent on the cost of local telephone calls.

Another part of the agreement concerns revision of the city charter, which has been a lively political issue since a state commission alleged that financial wastefulness and general inefficiency were endemic in the city government as it is now constituted. Mr Wagner, who was not himself attacked by the commission, has been trying, not very hard, for two years to secure permission

Concluded on p. 160

Date with Some Dates

FROM A CORRESPONDENT IN CALIFORNIA

EVERY February Indio, a Californian desert town on the main highway between Los Angeles and Phoenix, Arizona, celebrates the National Date Festival by transforming itself into the ancient city of Baghdad. Farmers, shopkeepers and other businessmen walk the streets in middle eastern costumes; a pretty girl is elected Queen Scheherazade; there are camel and ostrich races as well as western riding contests on the local fairground; and on its stage, which has a permanent backdrop of domes and minarets, an Arabian Nights Pageant is presented each evening.

All this is because Indio bills itself as the date capital of the United States. It does in fact produce about 95 per cent of the American crop; most of the rest comes from Arizona. In 1959, some 40 million pounds of dates were grown, with a market value of about $7 million. The date industry was established in Indio some forty years ago by pioneers who noticed the similarity between conditions there and in the traditional date raising regions in North Africa and the Middle East. To begin with deep wells had to be drilled to simulate oasis conditions, since the roots of date palms must be immersed in water practically continuously. But there has been an almost unlimited supply of water available since 1948 when the Coachella branch of the All-American Canal from the Colorado River was completed. Today some 3,200 acres, about one-third of the cultivated acreage in the bowl-shaped Coachella Valley, are devoted to date palms.

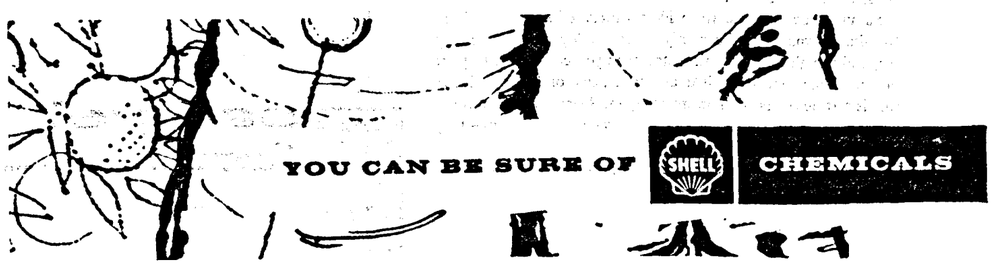
There are now a number of large, efficiently run, streamlined, expertly publicised date gardens in the Indio area; some are individual enterprises, others are co-operatives. They are visited by hundreds of thousands of tourists annually, with a peak of about 200,000 at the time of the Date Festival. At one date garden, a film, *The Romance and Sex Life of the Date*, is shown continuously, demonstrating that Nature has made dates as helpless and hapless as people. There is no heredity pattern for dates grown from seed and so they must be propagated by offshoots from the parents. It takes five to ten years for these young sprigs to develop enough onion-like roots to be ready for transplantation to a separate existence and about another eight to fifteen years for the youngster to grow to maturity.

In California, one male date is set out with 48 female palms on an acre. But the birds and the bees pay no attention to the female flower unless it has already been pollinated by the male and the wind is not a very satisfactory pollen-carrier. So man has to play a part if a good crop is to be obtained. In the gardens at Indio each spring pollen from cut male blooms is shaken by hand on to miniature powder puffs about half the size of a walnut, and laboriously dusted on to each individual female flower.

BECAUSE of this and other fussy jobs which must be done if dates are to be cultivated—each cluster must be covered with a waterproof paper bag to prevent damage by rain during the harvesting season in the autumn—it costs from $4,000 to $6,000 to bring an acre of palms into full bearing in California. However, the result is a premium product, selling at from 25 cents to $1.50 or more a pound, according to grade. As well as fresh dates, the Indio producers offer bread dates, fruit dried on the palm (the staple food of the Bedouins); a chopped-up blending of this, called date crystals, for cooking; and a ground-up version, date sugar, for sweetening.

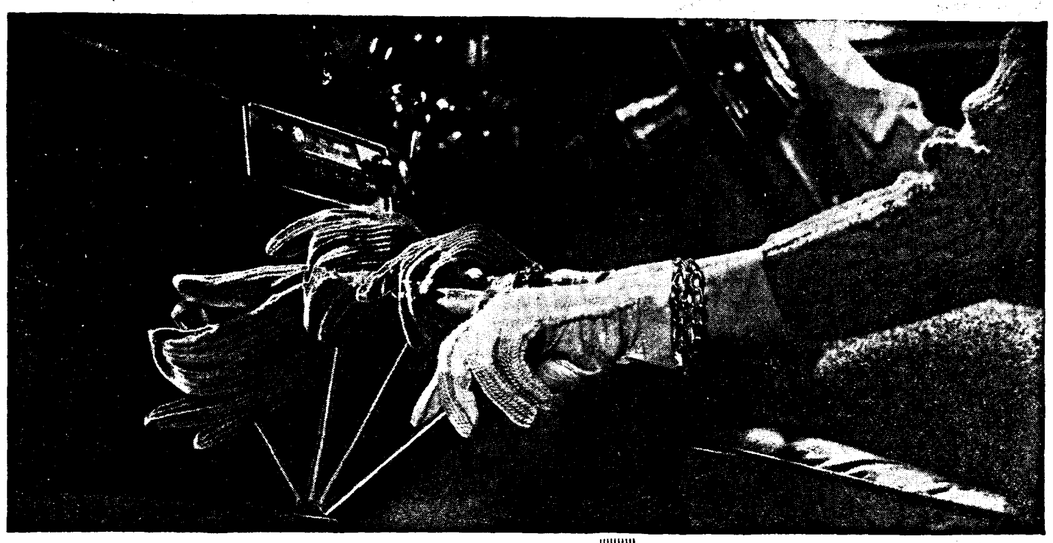
Indio has cornered the market for high-quality dates in the United States and ships its products by post all over the world. This international demand is growing now that restrictions on dollars are being abolished everywhere. However, the industry complains that it is being strangled by its high costs of production, especially those of specialized manual labour. Already some growers are digging up mature gardens and others may do the same as the value of land for building purposes booms in the desert hinterland of Los Angeles and as industry invades the Coachella Valley.

Protective Measures



In the citrus groves of California, plump and colourful fruits ripen in the sunlight that pours upon them—fruit from trees free from the attack of *Tylenchulus semipenetrans*, a pest found wherever citrus is grown. Where the citrus nematode is uncontrolled it restricts root and shoot growth, weakens trees and reduces the size and yield of fruit—damage often referred to as "slow decline". Replanting does not help, for *it is the soil itself that is infested.*

Consequently, California fruit-growers have given a ready welcome to Nemagon, the Shell soil fumigant that can be used after planting as well as before. Applied at low dosage rates around the roots of bearing trees, Nemagon has effectively controlled the citrus nematode and increased fruit yields by up to 20 per cent.



This story has been repeated in other parts of the world on grape, strawberry, olive, peach, walnut, fig, banana, pineapple and many ornamental crops, all of which have benefited from Nemagon. Ask your Shell Company for full details of this and the other Shell pesticides including aldrin, endrin, D-D and Phosdrin.

Nemagon Trade Mark

US gets its teeth into motoring

As you slip into gear and glide smoothly away, the whole power of your engine is transmitted, tooth by tooth, through the gear box. Tiny alloy steel surfaces you never see take this phenomenal strain in their stride.

In other parts of your car, alloy steel takes the stress. Differential. Crankshaft. Connecting rods. Roller bearings.

Who makes the alloy steel? US does—or, more precisely, a great part of it is made by Samuel Fox & Co., one of the subsidiaries of United Steel.

Samuel Fox produce the widest variety of special steels in Britain. In your car, the highly stressed alloy parts you rarely see, and the gleaming stainless steel trim you can't miss. In your home, stainless steel for sinks and saucepans, or the satin lustre that is setting the fashion on smart tables. Razor blades and roller bearings, steels for jet planes and nuclear power stations—they all start from Samuel Fox.

If high grade alloy steels are your problem, the one of US you need is Samuel Fox.

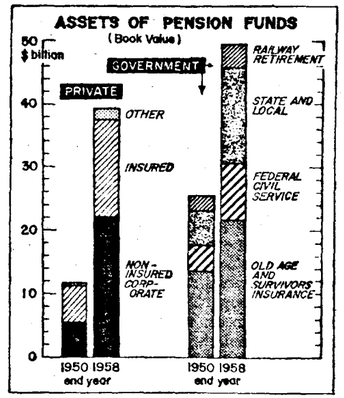
Pension Phenomenon

NEW YORK

THE outstanding development on Wall Street since the war has been the dominance of the stock market by the large institutional investors. But while the rapid rise of the mutual funds (or unit trusts) has attracted wide interest and increasing regulation by the government much less attention has been paid to the fastest growing, and in some ways the strangest, of these new financial giants—the company pension trusts. These trusts have quadrupled in the last decade, and now hold assets of $40 billion compared with $16 billion for mutual funds; and the probability is that they will double again by 1965. Having attained this impressive size, with plenty of growth still to come, corporate pension trusts are receiving some belated attention.*

Even in the nineteen-thirties, pension plans were still the exception rather than the rule, and they were confined, in the main, to executives and white-collar workers. During and immediately after the war, however, circumstances propelled both employers and trade unions in the direction of pensions for the rank and file. Faced with taxes that creamed off all but a fraction of their profits, employers found that they could set up a pension scheme (and take the credit) at little real cost to themselves; the Internal Revenue Service regards pension contributions as a legitimate business expense. At the same time the unions, which were debarred during the war from seeking direct wage increases, concentrated on obtaining and improving so-called "fringe benefits." The higher level of postwar wages (and of taxes paid on them) has made "deferred" remuneration even more desirable. Private pensions are taxable, but few employees have incomes in their declining years big enough to attract much tax. Indeed, the growth of private pension schemes is due, in large measure, to the fact that the taxpayer, in one way or another, foots a big share of the bill.

Today, one in every four employees is covered by a company pension plan. Schemes have been introduced in most industries where the unions are strong and the individual firms are large. The main groups excluded are the self-employed; farm workers; many (but not all) of the service trades; industries in which unions are more interested in raising low wages than in pressing for fringe benefits; and the great mass of small firms which cannot easily support a pension scheme. Sometimes, however, the unions have succeeded—as they have in the garment trade—in welding small employers into an industry-wide scheme.



The requirements that an employee must satisfy, and the size of his ultimate pension, vary considerably from scheme to scheme. The average plan grants him, after some 25 years of employment in the firm, a pension of between 20 and 45 per cent of his average wages. At present few schemes allow an employee to take his nest-egg with him if he leaves the company before he retires. This is a very costly privilege for companies to grant, but the desire of both employers and the trade unions to keep the labour force adequately mobile is encouraging a more liberal approach to this and other pension provisions.

Company pension plans are not, of course, the sole source of income for the American who has turned 65. In 1935, the federal government set up the Old Age and Survivors Insurance scheme which is financed by a tax on pay-rolls borne equally by employers and workers. The recipient can earn up to $1,200 a year, and can receive a private pension and unlimited unearned income without jeopardising any of his government pension. Today these average—on an annual basis—just under $900, with an additional $570 for a married man.

The trade unions regard pensions quite simply as "deferred wages." Employers, who in most cases foot the entire bill, seldom will go this far, though some concede that pensions have been "earned" to some extent. When the question of an employee's legal "right" to his pension has been brought before the courts, the law has usually sided with the employer. The beneficiaries of pension schemes are, in fact, more dependent on the solvency and good will of their firms than most of them realise, for nearly all contracts provide the employer with an escape-clause. The real testing point has yet to come. American business has had no major recessions to contend with since the war. And, since most of the schemes are very young, the number of pensionable people is small as yet in relation to the number of active workers.

THE ability to meet pension promises depends not only on the solvency of the company, but also on the efficient handling of the funds themselves. Most of the earlier plans were managed by insurance companies, but in the last few years employers have tended to set up their own trusts. This is because insurance companies are subject to some taxation and their investments in equities are strictly limited by law; a pension fund, on the other hand, is tax-exempt and can, if it wishes, put all its money into equities. However, few companies retain full responsibility for handling their own pension trusts; the banks act as trustees for three-quarters of the assets of these "non-insured" funds.

The portfolios of the "non-insured" pension trusts are weighted heavily in favour of corporate bonds; over half of their assets were thus invested at the end of 1958. Government securities, on the other hand, have been neglected almost entirely in the last few years in favour of the stock market; indeed, pension trusts have been investing nearly half of the fresh cash available to them in equities. Being essentially cautious in their investment policies, they have stuck mainly to "blue chip" securities. Nevertheless, pension funds are today putting more money into the stock market than any other group of institutional investors.

Individual pension trusts are growing to enormous size; the largest, that of the American Telegraph and Telephone Company, is approaching $3 billion. And with receipts to cover future liabilities exceeding current payments by some $4.5 billion a year pension funds are the largest single source of new capital in the economy—and will continue to be so for some time to come. This enormous buying power makes some observers wonder whether pension trusts will gain control of their parent companies, or alternatively of outside companies. Judged by their present practices, the answer on both counts appears to be in the negative. As a matter of prudence, most funds specifically prohibit investments in the parent company, or limit such purchases to a small percentage of the total portfolio. (An outstanding exception is the pension fund of Sears, Roebuck and Company, the giant mail order house, which owns 26 per cent of the company's ordinary shares. The voting rights have been passed on to the employees, who, if they chose to speak with one voice, would have a controlling interest.)

Similarly, the banks, in their role as trustees, have usually insisted on restricting the interest of a pension trust in any one company, and have refused to co-operate with employers who have tried to use the resources of pension funds to gain control of other companies. The banks have every reason to be cautious. The pension business, most of which is divided among a handful of the larger New York banks, is both expanding and profitable, and they do not wish to invite governmental interference. But even if the pension funds stick to a policy of spreading their favours thinly, they remain nevertheless stockholders of consequence.

* See, for example, *Pension Funds and Economic Power*. By Paul Harbrecht, S.J. The Twentieth Century Fund. New York, 319 pages, $5.00.

to revise the charter, but he has been blocked by the State Legislature. Now the Governor has promised to support his efforts, provided that the Mayor ceases to attack the commission as partisan. This is a small price to pay for such an ally.

The conservatives in his own party, which controls the Legislature, have been much harder for the Governor to handle. In the closing hours of the session last week State Senator Mahoney, a disappointed rival of Mr Rockefeller for the Republican nomination for Governor, managed to defeat four major parts of his legislative programme, including a Bill to outlaw racial bias in private housing and commercial premises, the encouragement of private shelters against atomic fall-out, and a scheme to give local communities more taxing powers to raise money for schools.

Mr Mahoney might not have been so inflexible if the Governor had agreed to cut taxes—something which the Republican legislators feel would help them in their campaigns for re-election this autumn. But Mr Rockefeller is particularly proud of the fact that this is the first year for a long time that the state has not had to borrow any money or to raid its reserve funds. Coupled with a general increase in aid to education, better insurance benefits and the first state-wide minimum wage law, this achievement enhances Mr Rockefeller's reputation as a responsible liberal, even if he did not have the political finesse to out-manœuvre Mr Mahoney. Many influential Republicans continue to feel that he would be a great asset as the party's candidate for Vice President, particularly now that Mr Nixon's stock seems to be slipping. But Mr Rockefeller, who cherishes presidential ambitions of his own, is unlikely to be tempted.

Speeding the Missiles

EARLIER this year when many Democrats and even some Republicans criticised the defence budget as inadequate and the President as pennywise, they were told tartly to mind their own business by Mr Eisenhower, who insisted that he knew more about defence than anyone else. What troubles many members of Congress is that in the next two or three years the Soviet Union will, admittedly, have more intercontinental missiles than the United States. Now, however, the President has approved moves by the Defence Department to speed up the production of missiles in this critical period and thus to blunt Democratic criticism. The room for manœuvre is not very great since the Administration has no intention, it appears, of increasing the total for defence spending significantly. More for missiles means less for something else.

The victims, which are to lose about $500 million next year, are the Bomarc air-to-ground missile and the electronic spotting network which goes by the name of SAGE (for semi-automatic ground environment system), both of which were designed to intercept enemy aircraft and which were not expected to be completely ready for several years. By that time the threat will be from missiles, not from bombers. As one Congressman pointed out unkindly, this might have been foreseen late last year when the defence budget for the coming fiscal year was being drawn up. But it takes time to persuade all the people concerned in such a decision. The Air Force hopes to spend the money which it is saving on 18 more Atlas intercontinental missiles, on the solid-fuelled Minuteman missile which should begin to come off the production lines in 1962 and on the Midas satellite. If this works as is hoped, it will give 30 minutes warning of the launching of any missile.

The Navy has also reached into its own pocket for $52 million more to speed up the building of the last 7 of the 12 Polaris-carrying nuclear submarines which have been authorised by Congress. The test-firings which it is conducting in both the Atlantic and the Pacific oceans have, however, struck a bigger target. They have so impressed the Secretary of Defence that more of these missiles and the submarines to carry them are to be built. So far, most of the tests have been successful, but a full-scale underwater firing of a fuelled missile is not to be attempted until next summer. Even so, the Navy is confident that it will have the first Polaris submarine on patrol before the end of the year.

SHORTER NOTE

Eighty-five per cent of American Foreign Service officers can now speak a foreign language. This compares with less than fifty per cent in March, 1958. Congress then allocated more funds for training at eight special language schools in the United States and abroad. Proficiency in German and Spanish is now such that two of these schools—in Frankfurt and Mexico City—are to be closed. But there are still more officers speaking a Scandinavian language than all Asian languages together (except Chinese), while by 1965 ten times as many will speak Finnish (20) as Swahili (2), a leading language of Africa.

* * *

It took New York's taxi-drivers just a year to defeat the City Council's effort to impose a tax of 10 cents on each trip in a cab. The unpopular levy is to lapse on July 1st.

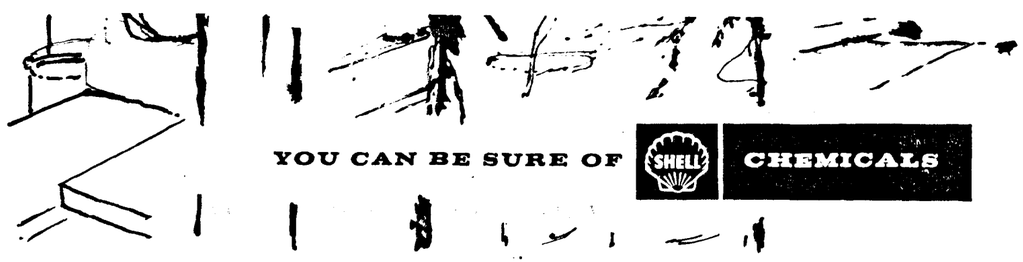
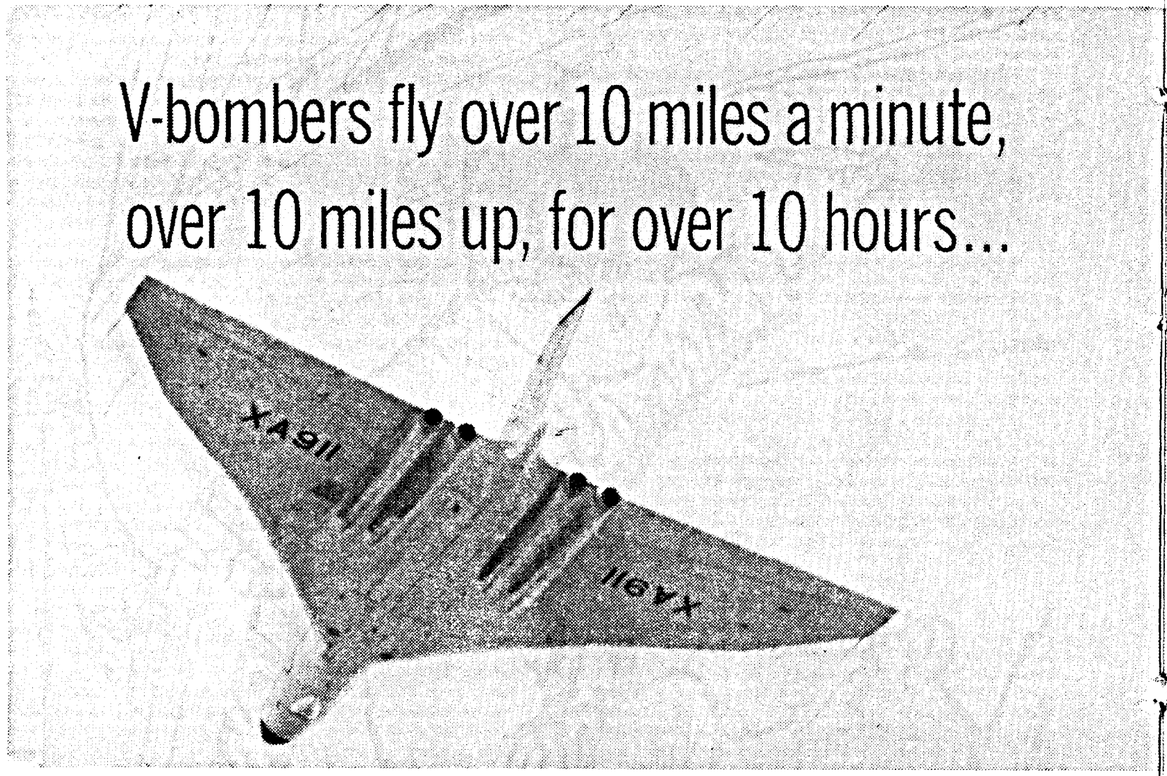
Protective Measures

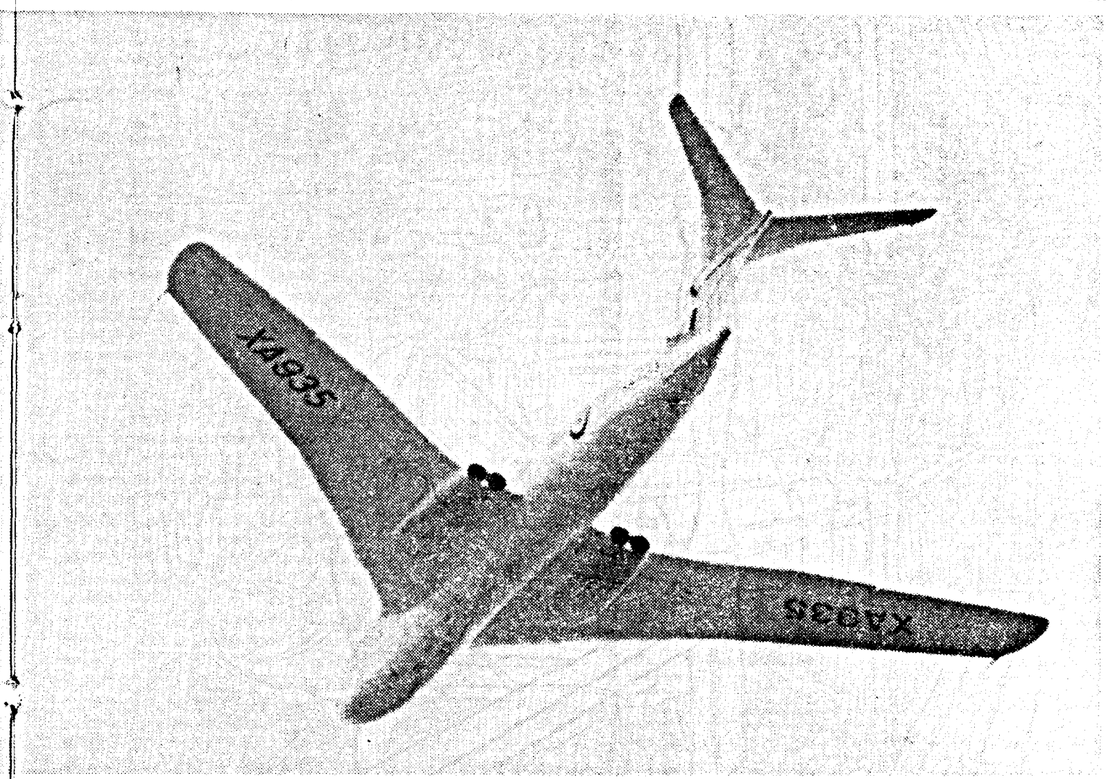


Those who go down to the sea in ships (and those who don't) know the value of surface coatings based on Epikote resins. These Shell-made epoxy resins—basis of the amine-cured, ester and resin modified systems used in today's best protective paints—keep corrosion at bay.

Food and drink containers (from a can of soup to giant mixing tanks), pipelines, swimming pools, tanker holds and other surfaces subject to chemical corrosion can all be safely, and profitably, lined with Epikote resin-based coatings—coatings that can be brushed, roller-coated, flow-coated, sprayed or dipped on to virtually any prepared surface.



Epikote liquid and solid resins are extremely flexible in formulation and form coatings that are among the most chemically resistant organic finishes known—withstanding, for example, the action of acids, lacquer solvents, hot concentrated sodium hydroxide and concentrated liquid detergents. For anything epoxy resins can do, for *everything* chemicals can do, call on Shell to help you.



Epikote Trade Mark

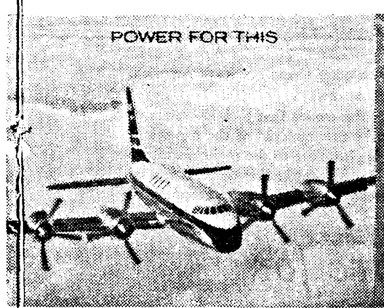
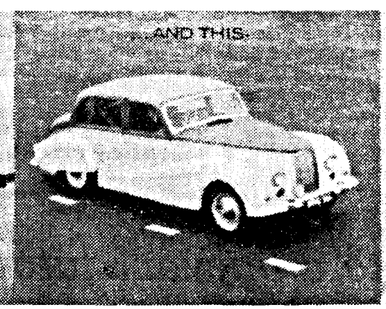
V-bombers fly over 10 miles a minute, over 10 miles up, for over 10 hours...



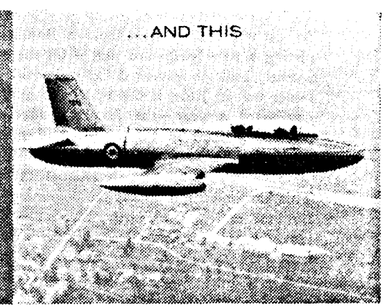
...AND BRISTOL SIDDELEY SUPPLY THE POWER

One of the largest manufacturers of motive power units in the world, Bristol Siddeley Engines Limited produce two outstanding high-thrust turbojet aero-engines—the Olympus and the Sapphire.

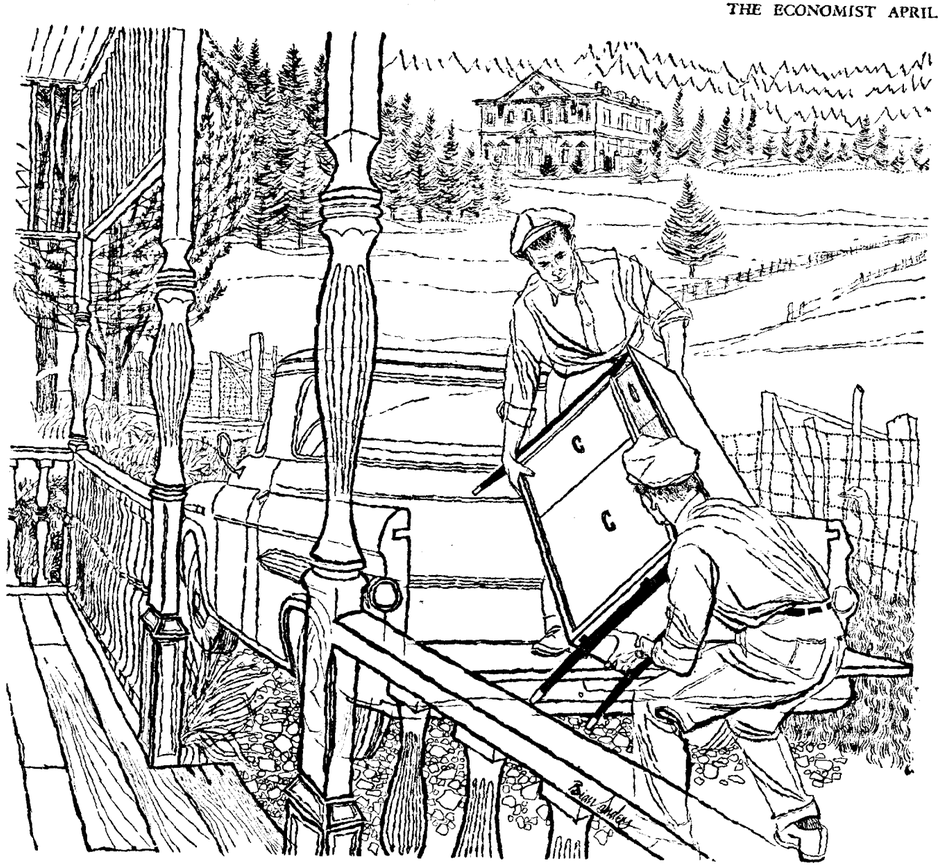


Between them these engines power the major part of the RAF's strategic V-bomber fleet. The Olympus powers the Avro Vulcan Mk 1 and 2, and the latest production version, the Olympus 21, is Britain's most powerful military aircraft engine. It delivers 20,000-lb thrust without reheat and it has a higher thrust/weight ratio than any other type-tested high-thrust turbojet in the world. A version of the Olympus will power the British Aircraft Corporation's TSR 2, the RAF's new tactical support/reconnaissance aircraft. The Sapphire, also built in enormous quantities in the USA, powers the Handley Page Victor Mk 1.

These two engines give the V-bombers sonic capability—long range—great altitude—a superior performance to all other aircraft of their type in the world.



BRISTOL SIDDELEY ENGINES LIMITED



The Bristol Siddeley Proteus powers the Britannia airliner. Four Proteus give this 130-seat aeroplane a speed of over 400 mph—a range of over 5,000 miles. Britannias are in service with twelve airlines and with RAF Transport Command.

The Star Sapphire car is powered by a Bristol Siddeley 4-litre engine. Combining great power with instant response, and exceptional quietness with luxurious comfort, the new Star Sapphire has a top speed of over 100 mph and an outstanding all-round performance.

Bristol Siddeley Viper turbojets range from 1,640–3,000-lb thrust. Various Viper versions power the Australian Jindivik, the Hunting Jet Provost, the Italian Macchi MB 326 (illustrated), and have proved their supersonic capabilities in mixed powerplant fighters.

New boarders in Carolina

AT CATAWBA IN SOUTH CAROLINA Bowaters are now completing a new hardboard mill – on the same site as their recently built 38 million dollar pulp mill. Scheduled to get under way in June, it will make 160 million square feet of hardboard a year – the fastest production cycle of any hardboard plant in the world. And that is not its only distinction.

NEW PRODUCTS

This hardboard mill marks the beginning of a new phase in Bowater activity in North America – diversification. In Europe, Bowaters have developed beyond the basic paper industry – into packaging, tissues, building boards, even drainpipes. Now the pattern takes shape in North America.

NEW MARKETS

It was not only the call of the woods that took Bowaters to Catawba. Surrounded by the raw material of the paper and board industry, Catawba is also close to the major furniture producing centre of the United States. For them, a special board. For Bowaters, a steady market. For the economy of the South, benefit.

East Germany's Farm Revolution

FROM OUR BONN CORRESPONDENT

ONE remarkable consequence of the Ulbricht regime's final assault on the last independent farmers in east Germany—there were still some 340,000 of them at the beginning of the year—is the surprise that it seems to have caused, not only in the onlooking Federal Republic, but also among the affected farmers themselves. Herr Ulbricht is known to be as orthodox a communist as any in the business, totally dedicated to a political philosophy of which common ownership of the land is an essential extension.

True, he held back for tactical reasons for five years. That was while the adolescent state was itself digesting a third of the estates and farms of 250 acres or more that it had appropriated in the summer of 1945, and distributing the remainder in mostly twenty-acre parcels to some 220,000 landless farm workers and farmers who had been driven from their holdings in the east. But ever since the second Socialist Unity Party conference in 1952, Herr Ulbricht has never left it a moment in doubt that full collectivisation was his aim. Pressure on the individual east German farmer to join the intermediate-stage producers' co-operatives—by withholding machines and fertiliser, for example—has been constantly exerted. But until this spring there was an understandable reluctance to risk dislocating the still inadequate harvests by impetuous and unqualified meddling.

Last week Herr Ulbricht gave the party central committee one of the reasons why he decided a month ago that the time had come to take greater risks and push more purposefully ahead. The advance was "a necessary political act in view of the summit conference." In other words, Herr Ulbricht is resolved to present the discomfited west with still more compelling evidence of the existence of a separate German state east of the Elbe, diverging increasingly, and seemingly irrevocably, in character and practice from the legitimately established Federal Republic. The surprise and indignation that are being voiced in west Germany at what is happening on the east German farms are mainly the outward manifestations of deeper anxiety about its ultimate significance for Germany as a whole. The Federal Government is compiling a white paper on the subject. In the Bundestag on Wednesday, Professor Carlo Schmid, the Socialist vice-president, speaking in the name of all four parties, protested against the further destruction of independence in east Germany—"the death of an important branch of the national tree."

There have been less happy utterances; thus Dr Franz Thiedeck, state secretary at the ministry for all-German affairs and a regular broadcaster to the Democratic Republic, told listeners to West Berlin's RIAS programme on March 26th that the east German farmers were being "degraded to daily wage earners." Excited newspaper commentators have been asking why the federal government and the West in general do not "do something." They do not propose what.

Immediate political advantage to the east German regime apart, it was decided at a conference of Soviet block agricultural experts in Moscow at the end of January to press on with collectivisation, in order to strengthen eastern European economic planning as a whole. The east German authorities rehearsed their tactics carefully during February and went briskly into action at the beginning of March. By the end of the month, without having had recourse to law or decree, or paid a penny in compensation, they announced that so many farmers had voluntarily joined the producers' co-operatives that 80 per cent of the arable land in the Democratic Republic was now socialised. The process is continuing so swiftly that several of the west German experts who estimated that it would not be completed until the end of the year, now surmise that Herr Ulbricht may be planning to celebrate its virtual fulfilment on May Day.

The 966 farmers who fled westwards during March all have much the same story to tell of the browbeating stratagems employed by visiting teams of activists to persuade the individual to forego the self-indulgence of private ownership, or. . . . It is not a pretty story. The hopes and the pride, and probably the pockets, of many have been hurt. Resisters have been noisily pilloried as warmongers. Protestant pastors have reported 38 suicides. Undoubtedly there would have been more refugees had not the authorities taken such precautions as to instruct the country banks to report any unusually large withdrawals, and the police to take off Berlin-bound trains anyone described on his identity card as a farmer or agricultural worker. All this is repugnant and distressing. Yet, to keep the matter in proportion, it is necessary to remember with what brutality the collectivisation of land has been carried out elsewhere during the present century. If they are compared with what Stalin did to the Russian countryside in the nineteen-thirties, the east German methods, relentless as they are, look mild.

EAST GERMAN AGRICULTURE
Progress of collectivisation up to end of 1959

	Number of producers' co-operatives	Number of members	Percentage of cultivable land
1952	1,906	37,000	3·3
1953	4,691	128,000	11·6
1954	5,120	158,456	14·3
1955	6,047	196,946	19·7
1956	6,281	219,599	23·2
1957	6,691	229,026	25·2
1958	9,637	352,938	37·0
1959	10,465	448,239	45·1

The character of the co-operatives into which, for better or worse, all the east German farmers are thus being dragooned, has increasingly resembled the model Soviet kolchose, as the years have gone by. Herr Ulbricht confirmed this trend in his address to the central committee, which was publicised to the extent of sixty columns in the April 1st issue of *Neues Deutschland*, the party's leading daily newspaper. The multitude of privately-owned holdings now being given up, he said, would be amalgamated with the land already socialised to form units of between 3,000 and 5,000 acres each. He anticipated that in consequence of the increased efficiency that would result, the Democratic Republic would, by 1963, be producing all the meat, butter, milk and eggs required for home consumption. By 1965 there should be surpluses for export. And, looking into the more distant future, Herr Ulbricht spoke of the agricultural towns that would come into being, with processing factories, storage plant, housing estates and recreational centres for the communities deriving their living in one way or another from the surrounding land. It is a brave picture. When the west Germans have recovered from their understandable indignation they might even find the proximity of such an experiment stimulating.

Mr Khrushchev Shows His Colours

FROM OUR PARIS CORRESPONDENT

For ten days Mr Khrushchev presented throughout France the studied, jovial figure of a national statesman, head of a powerful, peaceful nation. On the eleventh, and last, he proclaimed on French radio and television that his country was strong and would get stronger and richer because it was communist. The French anti-communist papers which, for days, had peered anxiously at the sheep's clothing could finally confirm in print that they had been right in crying "red wolf" from the start.

Mr Khrushchev was probably not spurred to his propagandist action either by the second French atomic explosion on April 1st, or by the failure to agree on any major issue with General de Gaulle. The gap separating their foreign policies is plain to see in the final communiqué. The agreement on the development of trade relations and closer co-operation in the fields of culture, science and—a novelty—the peaceful uses of atomic energy cannot hide the fact that on the key questions of disarmament and Germany the two protagonists have remained far apart.

Logic, however, rather than disappointment, explains Mr Khrushchev's final intervention. Last Saturday, the eve of his departure, he had his first opportunity to address the French public. He told them how much he liked their country and its people, and how necessary for peace were negotiations between heads of state. Then he turned to the achievements of his own country. Intended for foreign consumption, the picture had to be without blemishes (Stalin and the vagaries of his reign were not even mentioned). It was the story of success, of rising production, spreading education and improved social services. There was also a vision of the near future when hours of work would be sharply reduced and American standards of life exceeded.

How was it all being done? Here Mr Khrushchev made his declaration of communist faith. It was all possible because the Soviet Union has a superior social system, because "mankind's secular dream"—communism—dimly perceived by nineteenth-century French visionaries, was being turned in Russia into reality.

It is difficult to see what the subsequent French fuss has been about. Any communist leader could have made this speech. Mr Khrushchev has said it all before and will say it again. It is possible to question his facts, point out his omissions, and reject his interpretations. But it is strange to be astonished that the ruler of the Soviet state is a communist. On the contrary, the speech and the press conference, added to his previous behaviour on tour, give a more accurate idea of the man who will be returning to Paris in six weeks for the summit meeting.

The strongest impression he left is one of self-confidence. His insistent pleas for peace were made without apologetics or suggestion of timidity. Each reference to the German threat was coupled with a reminder that Russia could crush its opponents. As he told a questioner, Mr Khrushchev is an optimist by nature. This disposition of his is not limited to military matters. He seems genuinely convinced that, sooner or later, in ten years or twenty, Russia will win the economic race; that the Afro-Asian countries will go over to the communist block; that "western capitalism" is doomed, and a Soviet Union with high standards of living will soon be the new pole of attraction.

"Peaceful co-existence" suits him not only because of the horrors of nuclear war, but also because he is convinced of ultimate victory. Why run terrible risks when you expect to win without them? Disarmament has also for him the dual advantage of eliminating the risks of dangerous incidents and accelerating Russia's economic march.

Confidence does not necessarily breed concessions. The Soviet leader, with an air of sweet reason, admitted that, if progress were achieved on disarmament, the Berlin question could wait a while. He reiterated that Moscow would agree to certain international guarantees for a free city of Berlin. But he also repeated his threat that, in case of deadlock, a separate Soviet treaty with east Germany would render all previous allied arrangements void. The western heads of government will be faced in Paris with a hard bargainer who is convinced that time is his ally.

General de Gaulle kept to the background, leaving the centre of the stage to his guest. The only indications of his views are negative; they can possibly be guessed at from what did not get into the final communiqué. But the view, always held here, seems to have been confirmed that however awkward the general may prove as a partner in Nato, no agonising reappraisal will lead him to reverse alliances. It is even doubtful whether his position on Germany has become any more flexible as a result of Mr Khrushchev's visit. Even so, the Soviet leader has gone home professing the greatest satisfaction with his tour of France.

Nato, Germany and Spain

FROM OUR PARIS CORRESPONDENT

Integration is a magic word recurring in all Nato debates. In December, at the full meeting of the Nato council, it was the invocation used, unavailingly, against the French obstructions to General Norstad's plans; the debate started a major row. Although the issue was then passed on to experts and committees, nobody seemed to worry about France last weekend, when the Nato defence ministers met in Paris. The official explanation for this omission is that a compromise solution is now in sight, particularly on the integration of air defences, and everything can, therefore, be left to the experts to negotiate. The magic word, however, did reappear *in a new guise:* "integration of logistics" was the euphemistic head chosen for the discussions on German bases in Spain.

With curious discretion, Spain was apparently not mentioned even once at the meeting. But the German search for bases dominated the discussions. It was not only at the heart of the paper *on a unified supply system presented by Herr Strauss.* It was also involved in the British plan to revise Nato strategy by putting the emphasis on preparations for the early phase of a future conflict. The gist of Mr Watkinson's proposal was that, since it seems impossible to provide all the equipment and supplies necessary for a 90 days' struggle—Nato's *official military aim—priority should* be given to supplies for those "combat-ready" troops who would be involved in the opening stages. The premise implicit in this argument, and one indirectly questioned by Herr Strauss, is that a limited war in Europe lasting for some months can practically be ruled out.

Mr Watkinson's plan, naturally enough, fits in with the evolution of the British forces towards a professional army, small but ready for prompt action. But if it is accepted by Britain's partners, who are to study it over the next three months, Germany's demands for depots and other facilities outside its frontiers could, as a result, be scaled down from their present size.

Herr Strauss, for his part, argued that, on the central European front at least, a unified command should be coupled with a unified supply system. The German quest for bases would thus be turned into a Nato problem and not a specifically German one. However, most of the other ministers of defence, including the American and the British, and General Norstad himself, while paying lip-service to the desirable aim of the German proposal, dismissed it as impracticable. The obstacles to it are not only political. In military

growing up in Grangemouth

The new industry of petroleum chemicals—with its limitless possibilities of good for man—knows only growth and more growth. The impressive plants of British Hydrocarbon Chemicals at Grangemouth are striking evidence of this. Over £30m. has now been invested in this bold and far-seeing enterprise, and new plants continue to come into operation to meet the heavy demand from industry for products in the ever-widening petroleum chemicals range. Such success is not built on plant capacity alone, but on the skills and loyalties of men and women. A steadily increasing body of employees and their families is growing up in and around Grangemouth in an atmosphere of economic security. This in itself is one measure of the importance of British Hydrocarbon Chemicals Ltd. to Scotland, apart from the benefits it brings to men and women in all walks of life everywhere.

terms, the degree of standardisation of weapons, transport and other equipment is not sufficient to admit a unified and integrated system of supply.

It was, therefore, decided to try to solve the difficulty by bilateral deals, with Nato acting as a clearing house. It is reported that many member countries (Greece, France, Belgium and Holland) have already offered space for German depots or training facilities for German pilots. It is now up to General Norstad to relate the supply of facilities to the demand. He is to report within two months; a month later, the Germans are to say whether they are satisfied with the arrangements. It is no coincidence that the report on the Watkinson plan will also be handed in before July 1st.

Two conflicting opinions were held in Paris at the end of the talks. The official view was that Germany's natural demand for bases would be rapidly met within the allied framework and within Nato territory. The soldiers—and the sceptics—judged this much too optimistic. Indeed, there were rumours that it was all a vast piece of make-believe, with Herr Strauss merely agreeing to three months' apparent self-abnegation. At the end of that period, according to this theory, it would be regretfully announced that a solution could not be found within the frontiers of Nato; the Germans would be reduced, with regret, to seeking General Franco's hospitality, but this time with Nato's official blessing. In three months' time we should know who is right—and see whether the Spanish skeleton has vanished from the Nato cupboard or is merely to be paraded in a new guise.

Junkers and Samurai

FROM OUR CORRESPONDENT IN TOKYO

ALMOST certainly, Dr Adenauer did not come to Japan just to drink seaweed soup with Mr Kishi at an inn called the Palace of the Dragon King, overlooking pretty Lake Ashinoko. That the eight-day visit had political significance was the reasoning of both the Japanese ultra-nationalists and the Japanese communists, and therefore both turned up at Tokyo airport to greet the chancellor after their own fashion. The rightists unfurled German flags decorated with black swastikas, and distributed handbills obscurely declaring: "We are not Nazis, but, like Hitler, we are fighting for freedom." The communists carried placards that said: "Go home, Adenauer!"

Nor was Dr Adenauer himself particularly concerned to deny the political import of the first visit ever made to Japan by the head of a German government. As Mr Khrushchev wandered about France denouncing Adenauer, so did Adenauer devote many of his public utterances in Japan to denunciations of Khrushchev: simultaneous global performances whose humorous side was not lost on many Japanese, whatever the French may have thought of them. Dr Adenauer also developed a fondness for relating, even in the course of Kyoto *geisha* parties, his Pushtoon parable: if—he would argue, champagne glass in hand—it was all right for Mr Khrushchev to support self-determination for Pushtoon (his favourite tribal area, between Pakistan and Afghanistan), then a much more numerous and more significant people like the Germans were assuredly entitled to "the sacred right of self-determination."

Unfortunately, relatively few Japanese, and hardly any *geisha*, have the faintest notion where or what Pushtoon is. But the Japanese would of course like to recover lost territory—the Kuriles from the Russians and the Ryukyus and the Bonins from the Americans—and the chancellor made it quite clear that, in his opinion, Germany and Japan have or ought to have an identity of interests. Receiving an honorary doctorate from Keio University, he declared:

> We have both suffered heavy blows from fate, but we both begin to recover through our industriousness, we complement each other excellently—what more obvious than that we should draw much nearer in trade and in politics?

Yet it was the politics rather than the trade that chiefly interested him. The Japanese finance minister, Mr Sato, and the trade minister, Mr Ikeda, spent an entire afternoon trying, in the relaxing atmosphere of the rose gardens belonging to the former prime minister, Mr Yoshida, at Oiso near Tokyo, to get from the chancellor some reasonably specific promise of a relaxation of German restrictions on Japanese textiles and ceramics: they *did not* succeed. But, collecting an honorary fellowship from Sophia University the very next day, Dr Adenauer approvingly singled out Japan as "the only country in Asia where an intimate meeting with the tradition of the West has freely taken place." He then declared that

> from like-minded people, a common effort in defending the values that *give* meaning to our existence is demanded. . . . At the coming summit, the West will find itself facing a partner who has no regard for those values.

It is, perhaps, scarcely surprising that later the same day when the chancellor went to address the Diet, the Japanese Socialists blocked the proposed playing of the German and Japanese national anthems, on the ground that the performance would seem too much like a new Berlin-Tokyo declaration of war on bolshevism. But Dr Adenauer's self-confidence remained quite unimpaired. "The link between us was broken for a time," he cheerily told the Diet members, "but the hard times are behind us, and we can learn from each other."

Dr Adenauer, whose vigour amazed everyone, worked hard to put over his viewpoint. The eighteen German correspondents accompanying him worked no less hard. The public relations indeed were powerful, not to say overpowering. The German propaganda machine—in describing the visit, a temporary reversion to old-fashioned phrases somehow does not seem out of place—churned out masses of glossy photographs, speeches in three languages, official biographies handsomely bound, maps of divided Germany, and well-printed pamphlets ranging from historical surveys of German-Japanese relations to the Berlin problem.

How impressed were the Japanese? Hardly anything was left undone that might be expected to flatter them. At one reception, Dr Adenauer unexpectedly raised both arms in the air and commenced hearty *banzais* for the Emperor; at another, he untiringly shook hands with many of the 800 guests, as the champagne corks popped. The Japanese government responded amiably, by seeing to it that bystanders, especially school-children, had free paper German flags to wave wherever the chancellor went, including Tokyo's Kabuki theatre. Yet somehow the visit's Junker-like tread seems to have been too heavy for many Japanese. They have become in many ways a pragmatical people, and while they are anxious to sell more textiles to Germany, it is highly doubtful if they ardently wish to take the place that Dr Adenauer has offered them at Germany's side, as a near-western nation defending western values against the curse of communism.

The hard truth is that Mr Nehru, who totally lacked anything resembling a propaganda machine, got a much more genuinely

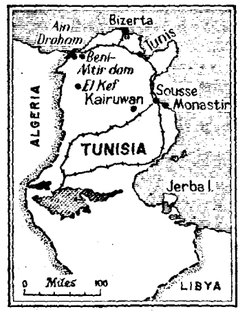
warm reception when he visited Japan three years ago. And the Japanese foreign office's free handouts of paper German flags were witheringly described by at least one Japanese as "an attempt, which failed, to create an Adenauer 'boom' to rival the Nehru 'boom.'"

Tunisia Goes to Work



FROM A CORRESPONDENT LATELY IN TUNIS

TUNISIA is the most stable of the north African states; for this it can thank the closely knit organisation of the neo-Destour party, now backed by the authority of the state. It was in the neo-Destour that President Bourguiba put his trust in the struggle for independence, and the party is still the special object of his care. Each provincial capital now has a little information centre, designed to keep the people in touch with the activities and aims of their government. Photographs of Tunisian ambassadors abroad (for example) are displayed against a map of the world which indicates to which country each diplomat is accredited. The hour-long radio talks which the President gives every Thursday are intended to serve the same purpose. Only his occasional references to Bizerta, the Algerian war, or the possibility of seeking economic aid from the communists attract attention in the world press. But, in fact, for some weeks past these matters have only occupied a very small part of his talks, which have been almost entirely devoted to the struggle for economic improvement and the need for investment, for hard work by everyone, and, of course, for more aid from America.

The reason is obvious. The economic situation and the multitude of unemployed are Tunisia's points of weakness. It is true that the dinar maintains its value, prices have remained stable for some months past, and the foreign trade position has improved. But Tunisia remains at the mercy of the climate. A rainless season can dry up the supply of oil, change a big surplus of wheat for export into an equally important deficit, and reduce the animal population by half. Industrial development hangs fire; local capital has not been forthcoming; the mills to process esparto grass locally, instead of exporting it as raw material, are still not established, though they were planned before the end of the protectorate. On the other hand, the expenses of defence and of a foreign service have successfully been met; the adverse trade balance has been reduced by the diminution of imports (as well as by a certain increase of exports) which principally served the needs of foreign residents, whose numbers have now been reduced by half.

The position is that independent Tunisia has not so far been able to eliminate the threat of economic stress which it inherited from the preceding regime—and in case of a real crisis it now has to rely entirely on its own efforts. No Tunisian would conceivably wish to go back to the former state of affairs, but there is a certain undercurrent of grumbling among the under-employed and under-nourished masses; and this is not entirely removed by work schemes which provide a minimum of nourishment and financial aid. It is perhaps heightened by a feeling that police control is strict. The elimination of the numerous goats in the interests of afforestation, though a measure which will have the approval of all agricultural experts, creates difficulties for a group of people who have little margin for making even the smallest sacrifice.

Some elements of the population have undoubtedly been shocked by the President's insistence that maintaining the standards of work must take precedence over the religious duty of fasting in Ramadan—and his personal exegesis of the Moslem tradition did not soften the blow. This does not mean that anything in the nature of organised opposition exists, and still less that any sympathy at all remains, at least in the north and centre of the country, for the rebel Salah ben Youssef. What exists is a mood, which successful government action may well overcome. It is this that has provoked the extraordinary emphasis placed by President Bourguiba on the economic battle.

A journey round the country fully bears out the President's claim that Tunisia is a country where people are truly at work. Around Ain Draham in the north and at El Kef the amount of work that has been put into terracing and tree planting is astonishing. Indeed one wonders whether there will not be a new problem in the disposal of all the cherries, pears, nuts, and other fruits which will soon be available if only half the young trees continue to grow as well as they are doing at present. Monastir, the President's birthplace on the east coast, was always a well-kept native town; now it is being rapidly transformed into a pleasant modern coastal resort. One new hotel is already open, and a restaurant situated on a promontory facing the highly picturesque town is nearing completion. A new stadium, public gardens, and an industrial school have been built. A little way out of town a colony of small, ultra-modern villas and a block of offices are almost ready to serve as summer quarters for the government. A large new tourist hotel is under construction by the sea. Communications are being improved by a new direct road to Kairuwan and by a small airport. Tourist hotels are also going up in Jerba and elsewhere and a substantial tourist traffic (largely from Scandinavia) has already begun. Many villages are also displaying a laudable, if occasionally oddly directed, activity in road building, street widening, and the laying out of little gardens.

The coming of independence in Tunisia has diverted into constructive channels some of the enthusiasm and energy that were previously devoted to the political struggle. The merit of this is not removed by occasional actions of doubtful taste, such as taking over part of the summer residence of the French ambassador to complete a town planning scheme drawn up, it is said, by a British architect; there does not seem to have been any immediate need for this. There has been some criticism, too, of the conversion of churches, whose existence is no longer justified by the number of foreign residents, for lay purposes—as for example, to house a much-needed public library at Kairuwan. There is, however, nothing deliberately anti-Christian about this; the government information centre at Sousse is located in the former sanctuary of a Moslem saint. Entirely praiseworthy is the conversion of the villas originally built to house the staff building the Beni-Mtir barrage into an orphanage. This institution not only houses and educates some of the waifs who used to haunt the streets of Tunis and other towns but also serves as a centre where boys of the neighbourhood can benefit from education, medical assistance and sporting facilities.

Channel Crosscurrents

FROM A CORRESPONDENT IN SOUTH-WEST FRANCE

SOON after the proclamation of the Fifth Republic, M. Edouard Depreux, one of the founders of the Independent Socialist Party, reminded his compatriots of the two constants that run through the policies of any right-wing regime in France: Anglophobia, and a bias in favour of religious education. His warning was soon justified in both respects. M. Michel Debré told a television audience early in his premiership: "The *Entente Cordiale* is dead"—and the official radio, television and news-agency monopoly (so closely controlled that in the first half of March alone the minister of information personally vetoed three television programmes) took its cue.

M. Debré's statement was a somewhat wishful exaggeration; but the *Entente Cordiale* is undoubtedly ailing. In recent years water has flowed to the mills of Anglo-French mistrust and misunderstanding from three principal sources: the British left-wing press, the French right-wing press (seconded since 1958 by the official propaganda machine) and Whitehall. The British left-wing press is the least important, and Frenchmen who read or hear of its comments on Algeria would be less irritated by its apparent hypocrisy and self-righteousness if they knew that it criticises British colonial blunders also. Since the main task of the BBC's excellent French service is to persuade the French that Britain is a liberal democracy and not a Dickensian slum ruled by a cloddish aristocracy, it would do well to include rather more anti-government material of this kind in its press reviews.

The French Right, militantly Catholic, anti-parliamentarian and anti-liberal, dislikes British and American institutions for both religious and political reasons, and strives to maintain a *cordon sanitaire* of misrepresentation to keep out "Anglo-Saxon" viruses. (Rightwingers still like to repeat the old *Action Française* dictum that "the British, having failed to subdue us by military means, took their revenge by exporting to us their poisonous parliamentary democracy."*) One important section of the Right—far more important than the innocent British ever realised—has never forgiven Britain for continuing the war in 1940 and thus wrecking the "divine surprise"; another, which includes many Gaullists, has never reconciled itself to the fact that France's liberation should have depended in so "humiliating" a measure on the heretical, unmilitary "Anglo-Saxons."*

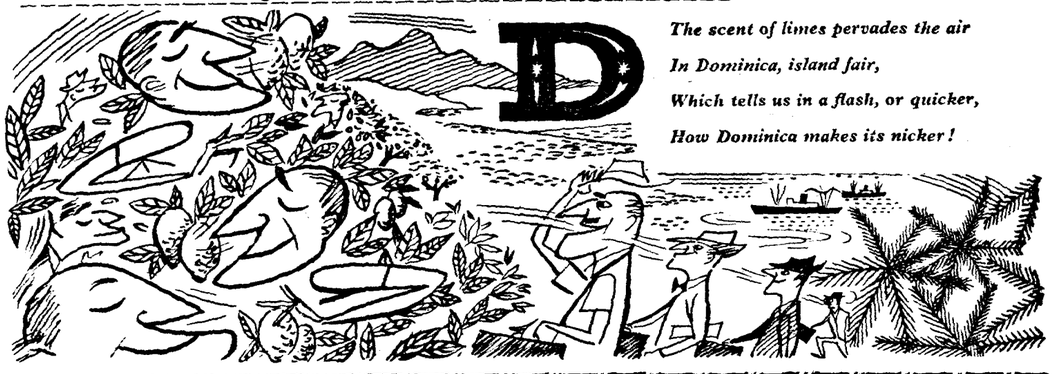
Except in *Rivarol*, ex-Vichyites rarely reveal their real grudge against the "Anglo-Saxons," but by attacking Britain and the United States at every opportunity they seek to justify their wartime conduct; similarly, some Gaullist publicists were first spurred to tilt at the "Anglo-Saxons" by lingering Vichyite taunts (which grieved General de Gaulle in particular and explain certain aspects of his wartime *raideur*) that they were British or American stooges.

Thus an apparent miscarriage of justice in the United States, a nitwitted debate in the House of Lords, and racist hooliganism in London or Little Rock will be reported at length by right-wing organs while news items indicative of the efficient working of Anglo-American democracy are truncated or suppressed. During last year's general election in Britain, the *Agence France Presse* coverage carried by leading provincial papers played down political issues and stressed the "strong chances of success" of the Sinn Fein candidates—who would not, however, be allowed to occupy their seats in parliament. When, in the summer of 1959, the number of unemployed in Britain dropped from 600,000 to 480,000, the RTF reported that it had risen to 800,000.

Most papers are so dependent on official channels for their foreign news and diplomatic comment, and the "conditioning" campaign is so contagious, that even the more enlightened editors are occasionally ensnared. In 1958, under the Fourth Republic, *Le Monde* stressed the effectiveness of the opposition in the British parliamentary system; in November, 1959, under the Fifth, it reported that the opposition in the House of Commons is of no more account than that in the present National Assembly.

The *Canard Enchaîné*, on which a high percentage of French schoolteachers depend for their understanding of current affairs, has taken to competing with the "*ultra*" press in the fabrication of falsehoods intended to discredit the "Anglo-Saxons" and parliamentary democracy.

Typical *Canard* canards: the "*ultra*" uprising in Algiers was inspired by British petroleum interests; Mr Robert Murphy has been appointed American Ambassador to Bonn so as to plot the disruption of the Paris-Bonn axis; the principal obstacles to peace in Algeria are the Esso and Shell companies; the editorial policies of the British press are directed by Whitehall; Sir Gladwyn Jebb and "certain British services" are intriguing against France in West Africa; the constitutional conference on Nigeria was in reality a meeting of anti-French plotters. . . . *Le Monde*, too, has credited Britain with anti-French designs in Africa—without, of course, offering evidence that might even remotely justify its charges. (One of *Le Monde's* more entertaining discoveries of recent years: that Israel's tortuous frontiers were traced by "*le crayon grotesque de Winston Churchill*"!)

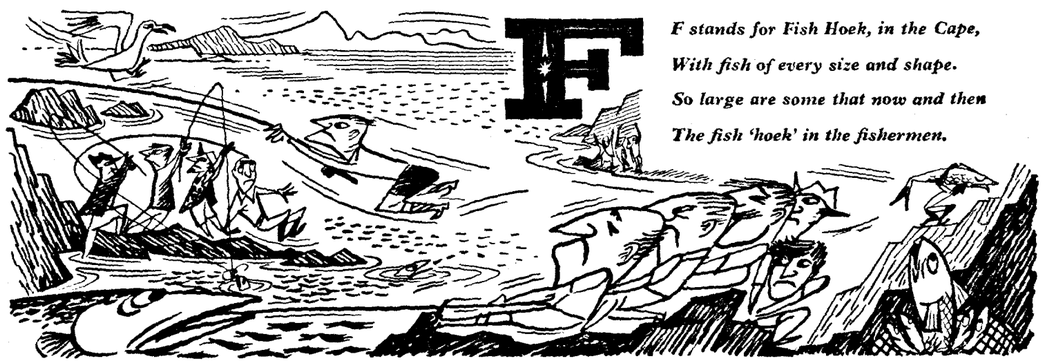


This pathetic nonsense (mild beside the outpourings of the further right) cannot just be shrugged off. Something like it is part of the mental picture millions of Frenchmen now have of Britain and British diplomacy. A current joke has it that when the Channel Tunnel is built Britain's share of the work will be its traditional *travail de sape*.

This picture is in part a legacy of wartime and prewar fascist propaganda, but Whitehall added several impressive brushstrokes in the immediate postwar period when one of its chief aims seemed to be to disillusion the majority of Frenchmen who were then pro-British. First, there was the Foreign Office's disastrous obsession with the Arab League—its apparent fondness for picturesque doomed pashas in preference to prosaic up-and-coming Europeans. The British propensity for taking friends for granted has never appealed to Frenchmen, and it struck them as sinister as well as insulting that British information services should devote so much more energy to chasing Levantine will-o'-the-wisps than to consolidating the *Entente Cordiale*. Then there were those ringing British exhortations to Western Europe to unite—followed by furious backpedalling whenever Britain was invited to join in. Frenchmen would be less than human if they failed to grin now that the British, hoist with their own petard, look like paying dearly for their self-exclusion from the new European community.

M. Debré and the present right-wing controllers of the RTF-AFP monopoly will not always be there, but the moderates who (one trusts) will succeed them will be only slightly less Anglophobic if French opinion as a whole is not better informed about Britain. The BBC's French service needs more time and more audible wavelengths. Provincial university towns would appreciate proof that there are still British orchestras and theatrical and ballet companies of international class. A cheap middlebrow publication dedicated to Anglo-French understanding is required. (At present the only publication in French reaching a significant cross-section of French journalists, officials and educators which gives a consistently friendly account of British institutions and policy, in so far as these impinge on the Near East and Africa, is the French edition of the *Jewish Observer and Middle East Review*. It is by such signs that the French will judge whether Britain is at last taking them seriously; and their deepest desire is to be taken seriously.

*A history textbook used in many primary schools recounts General de Gaulle's wartime adventures without even mentioning that Britain, too, was at war with Germany.



The ABC of the D.C.O.—a guide to some of the towns and territories we serve.

The scent of limes pervades the air
In Dominica, island fair,
Which tells us in a flash, or quicker,
How Dominica makes its nicker!

'Excelsior' the poem, as you know,
Tells of a sticky end
'midst ice and snow'.
The one we deal with shuns such
crude excess,
And thrives serenely in the O.F.S.

F stands for Fish Hoek, in the Cape,
With fish of every size and shape.
So large are some that now and then
The fish 'hoek' in the fishermen.

The lines above, though piquant, do not show
The many other useful facts we know.

But many business men have cause to thank
The trade reports provided by our Bank.

THE BUSINESS WORLD

Moderation the Aim

MR HEATHCOAT AMORY'S third budget is, as expected, in marked contrast to the reflationary budget of record tax reliefs that he introduced twelve months ago. This year, for the first time since 1956, the budget is intended to exert some disinflationary restraint upon the economy—by drawing back through tax increases somewhat more spending power than it releases through tax reductions and other reliefs. The net amount the Chancellor expects to withdraw is, however, very small, certainly much smaller than many people had thought might be necessary. The tax changes are estimated to bring in an additional £21¾ million this year, £46 million in 1961-62, and £72 million in their first full year; and this year's net intake by the Exchequer is reduced to a mere £13 million when allowance is made for new concessions that will accelerate the repayment of post-war credits.

Yet the Chancellor's diagnosis did not seem to differ much from that made here and elsewhere. He conceded that the reserves of labour and capacity, which justified the 1958-59 drive for reflation, have now been taken up "to a great extent." He emphasised the close connection between the pressure of demand in the home economy and pressure on the balance of payments and pointed to the deterioration in the external balance towards the end of 1959 as a sign of "incipient overstrain." Looking ahead, he expected every major category of demand, with the possible but not certain exception of stock-building, to go on expanding. The rate of growth during the year is indeed likely to slacken, especially in consumers' expenditure, because of the rising rate of repayments under hire purchase contracts. Even so, on the Chancellor's own hypotheses, as the account of the economy on page 175 makes plain, the total additional load of demand looks formidable. On the other side of the account, the existence of unused resources in some industries may enable production to grow at a "somewhat faster rate than we could hope to maintain year in, year out." Here the Chancellor made no quantitative forecast, but he thought it likely that the rise in demand would "fully absorb, and might even involve a danger of outrunning" the additional output.

This reckoning, supplemented by warnings of the importance of setting limits to demands that would compete with exports or productive investment ("It is my duty to see that these limits are not exceeded") might have been expected to form the framework for really firm, if not tough, budgeting. Instead, the Chancellor concluded that what was needed was a "moderate degree of restraint" by a "modest" net increase in taxation—and then proposed an increase that represents the merest fraction of the margin for error that is inherent in any calculation about the state of the economy.

But it is not to his fiscal measures alone that Mr Amory looks to guard against the danger of overstrain. Just as monetary and credit policy played a large part in last year's reflation, so may it play a significant part now the brakes are to be gently applied. The Government has "no wish" to take drastic action that might reverse the revival of private industrial investment; but "we have reached the stage where we should be cautious about further extension of credit." It must not be allowed to prejudice the stability either of the domestic economy or of the balance of payments. The "first steps" to change the climate for private lending were taken by the increase in Bank rate in January and the more recent shift in tactics in the gilt-edged market. But now there is a blunt warning of probable further steps:

> I must tell the Committee I think it likely that the time may soon arrive when it would be right that we should take other steps to restrain further expansion of private credit; and we stand ready to do so.

The Chancellor underlined this warning again at the end of his speech, leaving no doubt that these unspecified credit weapons are expected to stand guard in case his neutral budgeting should prove insufficient, and with the evident hope that the mere threat of using them may exert a useful restraint.

IT is, no doubt, good tactics to make the threat in such unspecific terms. They presumably embrace three possible groups of measures—control of hire purchase, Bank rate and "open-market" operations, and direct action upon bank liquidity or bank advances—the latter including the new weapon of special deposits, devised when the credit squeeze was ended in mid-1958 but yet to be used. Upon the banks, and possibly upon the stock market too, the psychological impact of the threat may be intensified precisely because they cannot know its exact shape. But scare tactics cannot be influential for long. If they have to be reinforced, it can only be by giving them shape; and the view in banking circles is that the shape will be the special deposit device of curtailing bank liquidity by requiring the banks to transfer to the Bank of England a given percentage of their deposit liabilities, the funds thus deposited at the Bank to be excluded from their liquid assets.

It may be that the principal force of this device lies, not in the precise mechanics by which it might operate, but in its coercive possibilities: within limits, the threat of using it might enable the authorities to "persuade" the banks to respond to informal requests—to put a brake on the rise in advances,

or to refrain from pressing sales of gilt-edged. If the scare is made that bit more specific, it might be effective a little longer. But the reasoning of the Radcliffe Committee has proved conclusively that discriminatory direct controls of this kind, like "directives" over bank advances, are appropriate only for short-lived emergencies. Over any long period, they will be evaded, or their intent will be frustrated by the diversion of business to other lenders—in the absence of suitable action on the rate of interest that plays upon the "single market" for credit and influences all types of operators in some degree. If, therefore, the Chancellor really is looking to credit policy to underpin his budget in the year 1960-61—surely no period of short-term emergency—he would do better to look to the precedent of February 24th in the gilt-edged market, and perhaps also to the Bank rate, than to repose his confidence in direct action of an untried and highly debatable kind.

There are forces already working on the Chancellor's side. Bank rate and the jolt to the gilt-edged market have had a noticeable effect. All the banks have tightened their scrutiny of advances. One big bank sent warning circulars to branch managers four weeks ago. So far the banks are naturally anxious to avoid discriminating against the personal borrower, after working hard to regain his custom in the last two years. There is no question of any general curb on new personal loans or personal overdrafts, let alone any question of a stern drive for reductions. Sensibly, the banks are turning first to large advances, especially those for "Mayfair finance"—some of which have gone beyond strict banking prudence. Some banks hope that the effect of their recent tightening may already be seen in the April figures, despite the cushion provided by unused overdraft limits. The Chancellor's threat has provided a further reason for restraint; tighter liquidity and the uncertain gilt-edged market are the real curbs.

The Budget Arithmetic

THANKS to the pace at which the economy has been expanding in the past fifteen months, the Chancellor was able to count upon an unusually large increase in the yield from existing taxes. In spite of the fact that last year's tax concessions will cost an additional £65 million this year, the budget assumed that the total tax yield would rise by £373 million, including an additional £242 million, nearly 11 per cent, from income tax and £98 million from customs and excise. Although non-tax receipts are expected to drop rather sharply, the net increase in prospective total ordinary revenue fell only a little short of the estimated rise in expenditure. Total above line expenditure, including an additional £25 million for debt service, was put at £5,586 million, or £342 million more than was actually spent last year. These estimates take no account of the substantial further addition to the costs of the National Health Service that will result from the Pilkington report.

On this basis the prospective above line surplus was only £14 million below the realised surplus of 1959-60, at £372 million. This surplus was then reduced to £282 million by the realistic decision to charge against the above line account—explicitly as a subsidy—the provision for financing the current deficit of the British Transport Commission, hitherto treated as a repayable loan from the Exchequer to the Commission and, as such, accounted below the line. The £90 million debited for this purpose (compared with £85 million advanced in 1959-60) takes account of the recent interim award to the railwaymen but makes no provision for the further addition to the rail deficit that is to be expected from the full implementation of the Guillebaud proposals. The remaining below line expenditure, gross, was expected to rise from £1,001 million to £1,045 million, after providing an additional £8 million for loans to nationalised industries (at £482 million) other than coal, and allowing for a reduction of £62 million in the net demands of the coal industry. Total net below line expenditure was estimated at £613 million, leaving a prospective "overall" deficit, before the proposed tax changes, of £331 million, compared with last year's realised deficit of £314 million.

The net effect of the budget, as already noted, will be to bring in an additional £21¾ million of tax revenue in 1960-61, thus raising the prospective above-line surplus to £304 million. The proposals for additional release of postwar credits will, however, raise the expected net total below line expenditure by £9 million, to £622 million. Hence the expected deficit on the Exchequer account as a whole is £318 million, which is almost the same as the deficit actually incurred in 1959-60, though it stands in marked contrast to the corresponding estimate made twelve months ago—when the deficit was put at £721 million.

The Tax Changes

Profits Tax and Dividends

BY raising the flat rate of profits tax from 10 to 12½ per cent, the Chancellor has increased the total weight of tax on corporate profits from 48¾ to 51¼ per cent. The arithmetic, in fact, has been reversed: what was payable in tax last year becomes the amount available for distribution this year and what was available for distribution now becomes the amount payable in tax—threepence either side of 10s. Corporate profits before tax went up by 10 per cent last year and dividends, following the introduction of a flat rate of profits tax two years ago and the reduction in the standard rate of income tax last year, went up at a slightly faster rate. Profits, the Chancellor said, will continue to run at a high level this year and his decision to impose a higher tax on them had been widely expected after the rather critical words used about profits in the Economic Survey.

To add 6d. in the £ on the taxes paid by companies cannot be described as a swingeing impost. The Chancellor seems to view it as one modest influence making for restraint. He was not willing, he implied, to clamp down on capital investment (which in many industries has only just begun to pick up again) and he left alone the investment allowances reintroduced last year. His hope seems to be that the increase in profits tax will apply a gentle curb on dividends:

> In view of the sharply rising trend of dividends I am satisfied that this increase shou'd not hold back sound schemes of re-equipment or expansion but is likely not to be without its influence on consumption expenditure.

Here Mr Amory may be relying more on psychological effects upon the attitude of directors towards self-financing than upon any immediate effect that the extra import would have upon a company's cash balances. The tax is chargeable against currently earned profits but payable in the following year. Thus it will bring in only £1 million this year, £40 million in 1961-62 and £65 million in a full year.

How effective will it be as an instrument making for restraint? If a company were distributing its earnings right up to the hilt—very few companies do—then the dividend would have to be reduced, as this notional example shows:

Old rate		New rate	
Gross profit	100	Gross profit	100
Income tax at 7s. 9d. in £	38 75	Income tax at 7s. 9d. in £	38 75
Profits tax at 10 per cent	10 00	Profits tax at 12½ per cent	12 50
Net income	51 25	Net income	48 75
Maximum net dividend	51 25	Maximum net dividend	48 75

If a company wishes to maintain its dividend and its profits remain unchanged it will do so under the new rates at the expense of the sums it ploughs back. Two examples based on dividends covered twice and three times show the change:

	Old rate	New rate	Old rate	New rate
Gross profit	100	100	100	100
Income tax	38·75	38·75	38·75	38·75
Profits tax	10·00	12·50	10·00	12·50
Net income	51·25	48·75	51·25	48·75
Net dividend	25·625	25·625	17·083	17·083
Retained earnings	25·625	23·125	34·167	31·667
Dividend cover	Twice	1·9	Thrice	2·85

The Economic Portents

My own judgment is that the prospective increase in demand arising from the factors I have mentioned is likely at least fully to absorb, and might even involve a danger of outrunning, the increase in production which can be expected.

IN setting out the view of the British economy in 1960 against which his budget and any forthcoming "other steps" must be assessed, the Chancellor this week was arithmetically more explicit than the Economic Survey last week. Wherever he could, he put figures to the changes he expected in demand between 1959 and 1960, from which one can draw inferences about the increase in supplies required to meet them. Often, as the survey had done, he compared also the changes he expected during 1960 with those that took place during 1959; with quarterly national income and expenditure figures now regularly established, it is possible to measure (though not with certainty) the balance of the economy over a shorter time-span.

Comparing 1960 as a whole with 1959 as a whole, the Chancellor expects a growth in consumers' expenditure of the order of 4 per cent, which at 1959 prices would imply an increase of say £450-500 million (net of taxes) in real demand. An increase of 6 per cent in fixed investment in the public sector would mean another £90-£100 million; the increase in private investment, which the Chancellor put at "at least 10 per cent," might add £210 million. The 4½ per cent increase in the current expenditure of public authorities would mean another £175 million or so. These elements in home demand would together add up to say £950 million, less something on account of stocks, which the Chancellor does not expect to rise as much this year as in 1959. He offered no guess at how much the rise in exports he hopes for may turn out to be, but in recent months exports have been 14 per cent higher than a year before. A lower rate of stockbuilding should exert some moderating effect on imports; so it may be convenient in this crude arithmetic to set the increase in demand on resources represented by any improvement in the current balance of payments against the decrease that is expected in the rate of stockbuilding. If the two should balance, it would leave the £950 million of extra home demand to be found entirely from home resources; if the balance of payments improves more than stocks fall, the demand on home production will be so much the greater.

The resultant increase—of the order of 4½ per cent on the gross domestic product—would be of a large order indeed; and if it could not be met, one might expect internal inflation and/or a deterioration in the balance of payments. It is true that with industrial production now 10-11 per cent above early 1959, the economy has begun the year with a substantial lead in output. If industrial production did no better this year than remain at its January-February level of 118-119 (1954=100) it would still offer an increase of 5-6 per cent over the 1959 average of 112. Any comparison of averages between this year—which begins at a high level and may increase at a moderating pace—and last year—which began much lower and rose sharply in its second half—may at first sight tend to exaggerate the increase required in the later months of 1960 and into the first quarter of 1961.

THE Chancellor's emphasis upon his expectation that during the later part of this year consumption and public investment may not be rising as fast as just recently, while the rate of stockbuilding may be dipping further below the level of late 1959, reflects this new Treasury focus upon the shorter-run balance of the economy. Demand as sketched above in averages for the whole year looks almost certain to outrun what can be supplied; but what might be called the shape of the comparison suggests that the strain upon the economy should develop more slowly from now on than during the past six months. This at least is what the Chancellor seems to expect; he hopes to have the opportunity to use monetary measures to adjust the head of steam in the boom more flexibly and in adequate time.

The effect of the new rate of profits tax is to reduce the earnings cover on all dividends by approximately one twentieth, as is shown in the accompanying table of companies that have recently announced their results:

	Div. %	Old cover times	New cover times		Div. %	Old cover times	New cover times
ICI	11¼	2·2	2·1	United Steel	13	3·0	2·9
Unilever	22·7	3·8	3·6	Lancs. Steel	8½	4·5	4·3
Ford Motor	17½	4·4	4·2	Tnr. & Nwll.	20	2·4	2·3
Hoover	45	3·9	3·7	Ind Coope..	15½	1·7	1·6
Imp. Tob.	22½	1·7	1·6	B'mont Pty..	8	1·2	1·1

On this sort of reckoning, the effect on dividend payments can be only marginal, even if profits remain unchanged. But profits are going to advance again this year and, as the next table demonstrates, they will have to rise before tax by little more than 5 per cent to leave a company's net income unchanged:

	Old rates	New rates
Gross profit	100	105·13
Income tax	38·75	40·74
Profits tax	10·00	13·14
Net income	51·25	51·25

Thus, given only a moderate buoyancy in gross profits, the influence of the increased profits tax upon dividends seems likely to be modest indeed. Where profits are falling, as they are for example in the shipbuilding industry, it may reinforce caution. But in most of British industry, how directors decide to adjust the balance between the claims of shareholders and the possibility that new capital, whether self-generated or raised from outside, will be less easy to find seems more likely to be influenced by the effect of any squeeze the Chancellor decides to impose upon credit than by his decision to raise profits tax. That can be said equally of the market in industrial equities.

Income Tax

Dependants and Housekeepers

IN Mr Amory's mixed bag of small reliefs the most important concession this year, costing £5 million, is the increase from £60 to £75 in the allowance for dependant relatives. The same increase is made in the allowance for single people looking after children, or any widower, employing a housekeeper. Mr Amory is also introducing a new allowance of £40 for widows and widowers looking after children who have no resident housekeeper.

Graduated Pensions

The proposed allowance of a flat rate of £15 to all adult employees for their graduated insurance contributions under the new state scheme beginning in a year's time, estimated to cost £11 million in a full year, seems an unjustified administrative convenience. It means that wage earners towards the higher end of the £9-£15 a week range, who will already be subsidising those at the lower range, will not be able to offset the whole of their excessive contributions against their taxable income, thus putting them at a double disadvantage. Employees at the lower end of the scale will get tax relief on a larger sum than they pay in contributions. If it is not possible to adjust this difference through PAYE, it should certainly be adjusted by later assessment.

Postwar Credits

Last year's concessions on postwar credits affected far fewer people than the Treasury estimated—payments reached £64 million, compared with an expected £89 million. Now the Chancellor proposes immediate payment, involving an additional £9 million and total payments this year of £27 million, to people who have been ill or unemployed for a continuous period of 26 weeks, to disabled people and to widows with credits in their own right. This introduction of social purpose is said to be more dubious than last year's once for all injection of purchasing power into the economy, and play is being made of the incentives opened up to people who have been away from work for 25 weeks. But if the citizen has an asset, should the state refuse to honour it and insist on paying him insurance or assistance? If the Chancellor can make concessions in future he might choose a straight reduction in the qualifying ages (at present 63 for men and 58 for women).

Estate Duty

Valuation of private companies

A MOST surprising feature of the technical side of the budget which will delight owners of private companies (and may disappoint takeover bidders) is Mr Amory's promise to modify the provisions relating to the valuation of company assets under Section 55 of the Finance Act 1940, when Parliament was more preoccupied with Dunkirk than with the Finance Bill. The section provides that the shares in a private company which pass on the death of a shareholder who has had control of the company at any time during the five years preceding his death shall be valued on the break-up value of the assets. Such a valuation may well be considerably higher than the going concern value of a company that is only modestly profitable.

For deaths after April 4, 1960, the going-concern value will apply. This may not mean that the negotiations with the Estate Duty office (where seven years is a typical span for a case) will be any easier. The "dim world peopled by the indeterminate spirits of fictitious or unborn sales," to quote Mr Justice Danckwerts in the Holt case, will be increasingly explored. But in most cases the values ultimately agreed should be lower.

Five-Year Rule

An important concession is proposed on the five-year rule, by which gifts made within the five years preceding the donor's death have been treated as part of his estate. In future they will be liable to full duty only if made within two years of death. There will be a rebate of 15 per cent for gifts in the third year before death, of 30 per cent in the fourth year and of 60 per cent in the fifth. The concession is expected to cost no more than £2 million in a full year which suggests that the five-year rule, despite hard cases, does not work out harshly for everybody. Indeed, actuaries declare that the expectation of life even at 80 exceeds five years.

In 1960-61 estate duties are expected to bring in £239 million, compared with £187 million two years before—which was much the same as ten years before that. The graduation in the duty will greatly reduce the arbitrary effect of the precise date of

death, and is welcome on that score. It remains to be seen whether it will discourage gifts designed to avoid death duties or stimulate more of them.

Concession for Unit Trusts

THE Lords and Commons of the trust world have now been put on an equal footing as regards tax. For a long time, unit trusts and their supporters have been urging that management expenses should be a charge against income tax. Up to this budget only investment trusts have enjoyed this concession and unit trusts have had to meet their costs out of taxed income. This made quite large inroads into distributions to unit holders. Representations by the unit trusts on this matter have been made to the Chancellor more than once. But in granting the unit trusts this relief the Chancellor said:

> I did not feel able to adopt this suggestion by itself since unit trusts enjoyed more favourable treatment than investment trusts in the matter of profits tax. Those now concerned have now told me that they would be content if their position in both these respects were assimilated to that of investment trust companies.

Therefore while he will now allow unit trusts to set management expenses against tax he has made them liable to pay profits tax.

These changes have been favourably received by the movement and the gain in yield to unit holders is likely to amount to perhaps one quarter of one per cent, no small increase on the current low level of yields. The incidence of profits tax is not likely to lie heavily on most unit trusts for most of their income is franked, coming in the form of dividends from companies which have already paid profits tax. The principal worry for the unit trusts will now be one of administration in claiming double tax relief on dividends from abroad. Since the final settlement of these claims can sometimes take years, it adds a certain complication to the accurate calculation of prices and yields.

Dearer Smoking

THE increase in the tobacco duty—equivalent to about twopence on a packet of twenty cigarettes and 2½d. to 3d. on an ounce of pipe tobacco—is the only tax change that will bring in much more revenue this year. The Chancellor reckons that the increase of 3s. 4d. a lb in the basic rate of duty—to 64s. 6d. a lb on foreign tobacco and to 62s. 11½d. a lb on tobacco from the Commonwealth that obtains the preferential rate—should produce an extra £39 million this year and £40 million in a full year. But unlike Mr Macmillan, his predecessor four years ago, when the tobacco duties were last raised (by 3s. a lb) Mr Amory has been much more cautious about the possible damping effects of his increase upon the growth of smoking. He expects that total receipts from these duties will rise from £788.7 million last year to £829 million this year, an increase of only £40.3 million, barely more than he expects from the increase in duty alone.

Will the amount of smoking in Britain now level off—at least for a while? For the last ten years tobacco consumption has been growing steadily at about two per cent a year, dipping only slightly and briefly below this average, and Mr Macmillan's expectations, following the last duty increase four years ago. At nearly 265 million lbs last year, consumption had at last made good the ground it lost in the late forties when tobacco duties were raised by the equivalent of 1s. 2d. on twenty cigarettes in two successive April budgets. But the present increase puts the price of the most popular brands of cigarettes, those that had been selling at 3s. 11d. for twenty, above the four shilling mark, which hitherto had been thought to have acted as some kind of point of resistance for the majority of smokers who buy in single packs at a time (and, more certainly, sets an immediate problem for cigarette machine vendors). Moreover, since 1956 a growing number of smokers, largely for economy reasons, have been switching to filter brands, which now account for about 13 per cent of the total cigarette market and, cigarette for cigarette, take a little less tobacco. Filter brands, at least, should be able to count on a boost in sales as a result of the budget.

Cheaper Wine Drinking

TWO minor reductions in duty that Mr Amory would not have chosen to make on this particular occasion, but felt he must, should go down well with the drinking public. He felt he had to cut the duty on imported heavy wines by a further 12s. a gallon—or 2s. a bottle—(the same amount as in 1958) in view of complaints about the level of this duty made by the Portuguese during the negotiations that led to the formation of the European Free Trade Association. He also considered the level of this duty "unsatisfactory both for the trade and for the revenue"; sherry sales have risen considerably in recent years, but sales of port have come down. A corresponding cut of 2s. is made in the Excise duty on British heavy wines.

The discriminating palate benefits further incidentally from the protests of Portugal; what the Chancellor has done for sherry and port would bring the duty on imported heavy wines below that on light wines imported in bottle, and he has felt obliged to cut these also by 12s. a gallon. This will benefit chateau-bottled French vintages by reducing the tax on light wines imported in bottle to within a few pence of that on wines imported in bulk; more notably, it may benefit sales of German and Italian wines, of which all grades are normally shipped in bottle. These reductions in Customs duties on wine will cost the revenue about £3.7 million this year; the cuts in Excise duty on British wines cost another £90,000.

Easier on the Eye

IN 1946, when the British cinema trade had its best year ever, entertainments duty brought the Exchequer more than £42 million out of the £118 million paid at the box office. By 1957-58, with gross takings down to about £90 million as the big screen steadily lost patrons to television, the duty was down to £26½ million; then Mr Amory, in his first budget, cut the rates of duty by roughly half. Last year, with a continued fall in admissions and a small further relief (excusing the first £20 a week of duty for each cinema), entertainments duty raised only £7,415,000 from takings of about £70 million. This week the Chancellor abolished entertainments duty on cinemas altogether; it had been lifted from all forms of "live" entertainment by Mr Thorneycroft in 1957.

"The steep decline in attendances has continued during the past year," said Mr Amory, "and many more cinemas have closed; and it seems that this process is not yet at an end. While no doubt this decline is mainly attributable to other factors, I have come to the conclusion that the continuation of the duty in present circumstances is no longer justified."

Since 1954, the number of cinemas in business in Britain has come down from 4,300 to 3,450. This final abolition of the duty is a relief primarily for the larger houses; earlier adjustments of the duty scale, culminating in last year's gesture during the passage of the Finance Act, had already effectively reduced the number of cinemas paying duty to only 1,300.

From the £7 million extra of box-office takings left in the hands of those exhibitors who have been paying duty, film rentals might ordinarily be expected to channel about £2 million to the distributors, and of this £1¼ million might flow back to the producers of films shown in Britain. Perhaps £400,000 extra might go to the producers who make films in Britain; this increase in their normal share of the box-office receipts does not appear, so far, to affect their right to the extra £3¼ million a year that is channelled off direct from the box-office in the form of a statutory levy on attendances.

The exhibitors have disclaimed any intention of passing on the benefit to abolishing the duty to the public via cheaper seats. They believe, no doubt logically, that the downward trend in attendances has little to do with seat prices; a seat in the cinema is certainly far cheaper than at most live entertainment, though infinitely more expensive than "free" television viewing. To cut prices without arresting the decline would simply lose the trade the relief that the Chancellor has given. Sir Tom O'Brien, equally, disclaimed any intention of leaving the exhibitors to enjoy their share of this relief alone; it should form a convenient basis, he thinks, for a substantial wage claim by cinema and film employees.

Mr Amory's Reforms

A CORRESPONDENT outlined in The Economist *of March 12th some possible reforms that Mr Amory might introduce in a year when the opportunity for tax reliefs seemed to be limited. He drew attention to three matters: compensation for loss of office; the "repeal" of the Gourley decision; and the moderation of tax-free commuted benefits under top hat insurance schemes. Until the Finance Bill appears, it will not be possible to say for certain that he hit the jackpot. But on a reasonable construction of Mr Amory's budget speech, he seems to have scored three out of three, and the Chancellor has thrown one or two other reforms in for good measure. But there are grave doubts whether he has not spoiled much of his effect by a proposal that would strike at the root of the principle that the taxing authority should define what it intends to tax and not make up the law as it goes along.*

FAREWELLS WITH TEARS

IT is easy to import prejudice into fiscal discussion through a catchphrase; the "golden handshake" is the perfect example. Distinction between the loss of a source of income and the loss of the income itself lay at the root of the proposals of our correspondent for reform in this field. The Chancellor proposes to bring within the tax charge voluntary payments at the end of employment and all payments described as compensation for loss of office—but to exclude reasonable lump sums in the nature of superannuation benefits. He also proposes to exclude payments arising from physical injury, certain payments made by the Government or local authorities, and redundancy payments of limited amount.

He gave no clear indication of the future procedure for taxing these sums. "Following the Royal Commission" was the phrase that the Chancellor used to outline his proposals. But our correspondent pointed out four weeks ago some good legal reasons that led to a solution different from the Royal Commission's "simple and defeatist" answer. One must await the Finance Bill to discover precisely what is in the Chancellor's mind, and in the minds of the Law Officers of the Crown; but the legal distinction that our correspondent drew between the end of the source and the end of the income seems to be relevant here—as is the question of replacement of one source of income by another.

A good deal depends (as our correspondent showed) on whether the Gourley principle is to be "repealed." On this the presumption is that it will be, although it cannot be said, on the Chancellor's words, to be certain. It must be hoped that the occasion will be taken to clear up these two analogous questions at the same time, for satisfactory law about compensation for loss of office can hardly exist contemporaneously with unsatisfactory law about compensation for injury.

On the commutation of retirement provisions, the Royal Commission suggested that the tax free cash sums to be paid under existing arrangements (all of them, incidentally, approved long since by the Revenue) should be limited to £10,000 and to £2,000 for new entrants. The difficulty here is the objection to retrospective legislation—a particularly touchy point in this connection, simple because prior Revenue approval has been secured for all these schemes. The clauses on these matters in the Finance Bill are likely to be among the most complicated that have ever baffled the legal, let alone the lay, mind.

THE UNCOMMERCIAL FARMER

AFTER the Comptroller and Auditor General's acid comments on hobby farming it is not surprising that Mr Amory should have decided to attack it. A majority of the loss claims each year are based on farming losses; yet the picture of the wealthy businessman making a fortune during the week and contriving astronomical losses at the weekend can be exaggerated. Spare-time farmers are a composite class—country landowners, cattle dealers, butchers, blacksmiths, agricultural merchants, as well as rich playboy ploughboys, and their losses may, in part at least, stem from the need to employ labour since their own time is largely occupied in other more remunerative fields. A large part of the apparent lack of profitability of the farming community as a whole is due to the size of new investment in recent years and to the generous, if not extravagant, capital allowances which Parliament has given to encourage it.

These and similar considerations led the Royal Commission to recommend that the law should be strengthened by adding to the definition of husbandry the words "carried on on a commercial basis and with a view to the realisation of profits." Mr Amory on Monday spoke of "a commercial basis and with a reasonable expectation of profit," which is not the same thing. The Ways and Means resolution omits the word "reasonable"—which is wise, for any attempt to settle what is reasonable in a taxing act is full of difficulty. It is difficult, incidentally, to see how this test could possibly be made to apply to forestry.

It will be unfortunate if the new provisions were to discourage pioneering or stop work on marginal land in areas of low employment. It will be equally wrong in principle if the Revenue were to skip its obligation to take the rough with the smooth. As the chartered accountants said in a memorandum to the Chancellor in 1957, there would be "a serious risk that, in the administration of such a provision a profit would become the sign of a taxable activity and a loss the sign of a hobby."

THE OFFSETTING OF LOSSES

AN individual who sustains a loss in one trade should be allowed to set it against the profits of another and pay tax only on the net balance. It is wrong that he should be able to use the same loss for two or three years running for the same purpose. Basically, therefore, there are no grounds for criticising the Chancellor's decision to repeal Section 142 of the Income Tax Act, which makes multiple relief possible, especially since the British system for allowing losses has become the most comprehensive in the world.

But it is fair to remind Mr Amory why abuse has been possible: in his own words, "because of the special rules for assessment in the early years it is possible for a loss incurred at the outset of a new business to be set against the profits of another business two, or nearly three, times over." But this is so simply because artificial commencement and cessation provisions produce artificial results in assessments. They are not always abuses of the Revenue: it is equally possible for a taxpayer to be assessed over his whole business life to a total which exceeds his aggregate profits. If the Chancellor would accept the advice to assess profits on an actual year basis such inequities would disappear.

POST-CESSATION RECEIPTS

ONE of the most puzzling of fiscal doctrines is that there can be no assessment on income unless there is a source: if the tree has been cut down there can be no fruit. The late Mr Leslie Howard and the late Mr Peter Cheyney carried on professions, as actor and author respectively, which were the source of their incomes. After their death royalties from their work continued to flow and the courts held that these were capital in the hands of their executors.

There are many cases where a profession ceases for reasons other than death—where, for example, a professional person enters into the relation of servant to a company; and if he owns the company it is fair to describe the situation, as Mr Amory described it, as being exploited by some taxpayers to secure freedom from taxation on their earnings.

The Royal Commission thought that such post-cessation receipts ought to be taxed; but they were also firm in their opinion that any change in the law should depend on two other changes—the acceptance of the right of self-employed persons to provide out of their gross income for retirement and the spreading of fluctuating incomes over a number of years. Retirement benefits were looked after in 1956, but relief for fluctuating incomes is still awaited. The Chancellor this week gave no indication of the machinery for charging these post-cessation receipts, though he surely cannot intend to bunch them in a single year.

MAKING UP THE LAW

THE Chancellor introduced his next proposal in proper words: "I come now to a particularly serious matter." But the ordinary man will regard what the Chancellor went on to say as serious for a totally different reason. He confessed, in effect, that all the efforts of his skilled advisers had proved quite unavailing against operators who were "manipulating stocks and shares with the object of depriving the revenue of its proper tax." Experience had taught him, understandably enough, that any provision that is limited in its application is carefully studied in order to find a new way of cheating the Inland Revenue. And he concluded that he must take wide general powers to check this practice.

It is possible to have much sympathy with the Chancellor in his predicament and no sympathy at all with the solution that he proposes. This is to introduce for the first time in the Income Tax code (although there is a shadowy precedent in the Profits Tax) a general provision against avoidance by transactions in stocks, shares and securities, by which an Inspector of Taxes who apprehends that transactions have been "arranged with the object of securing an income tax or surtax advantage" can nullify the advantage by direction, leaving the taxpayer with the mere right of appeal to the Special Commissioners, but not to any higher authority save on a question of law.

All the right words were used on this startling proposal. "I shall, of course, provide for the exclusion of *bona fide* commercial transactions not entered into with the object of securing a tax benefit." How does one square the two separate propositions in that sentence? If the taxing machine is defeated by schemes of fiendish ingenuity is that an argument for setting aside the immensely important constitutional principle that taxing statutes should be precisely defined? Is it acceptable that the Revenue authorities shall be able to make up the law for themselves as they go along, when their draftsmen have so far egregiously failed? Mr Amory hoped that this proposal would commend itself to the great body of fair-minded and honourable businessmen. They will be wiser to await the relevant clauses in the Finance Bill and to oppose as forcefully as they can any proposal that takes tax arrangements out of the statutes and puts them in the hands of the executive—whose existing powers of arbitrary decision already give enough cause for concern.

On the Chancellor's proposal to knock down the consequences that would flow from the Whitworth Park Coal case, even by retrospective legislation, it is possible to take a more charitable view. The essence of the matter here is that payments to former colliery companies were paid after deduction of tax and expected by all concerned to be so paid. The House of Lords decision in this case would lead to an adventitious advantage that nobody had foreseen or expected. Retrospection here will reverse a state of affairs that cannot be called meritorious, and save much time and cost. It is not usually possible to approve so clearly of what in general is an objectionable principle.

REVISION OF PENALTIES

STUNG, perhaps, by Lord Radcliffe's sharp comments in the Hinchy case, the Chancellor has moved smartly to reform the penalty provisions in the income tax code. In that case, the Court of Appeal had done their best to find some more generous and less ridiculous construction of the phrase "treble the tax which he ought to be charged under the Income Tax Act, 1952" and the Lords of Appeal in Ordinary themselves sought hard to find arguments in the same sense before they decided that there could be no ambiguity in the words.

The need for revision has long been evident, for the penalty clauses stem from rules laid down as early as the Napoleonic wars when taxes were low and the penalties not ostensibly oppressive. Indeed, on one reading of the law, it seems that Parliament in 1923 imposed an obligation on the executive to exact the full treble tax penalty even on innocent, though negligent, offenders. That requirement, if it exists, has never been strictly observed by the Revenue, no doubt because they have never had complete confidence in the strength of their own position. Settlements between the Revenue and negligent or guilty offenders have usually been based on a prolonged negotiation in which the inquiry branch of the Inland Revenue has not been reluctant to use the strongest pressure, in some cases stopping little short of blackmail. If the penalty provisions "have worked satisfactorily in the past," it is only because the Revenue, though exploiting pressure and threats, has shown much readiness to settle on its own terms rather than go to the Courts. Reform is long overdue.

REFORMS STILL NEEDED

IN a quiet year, so far as big issues go, the Chancellor put great emphasis on the stopping of gaps. There is little public sympathy for the tycoon who retires with a golden handshake to the hobby farm, where he enjoys himself stripping his dividends, washing his bonds, collecting the odd post-cessation receipt, executing the scissors movement and all the time keeping his boots clean.

But this lack of sympathy should not hide the fact that overzealous stopping of gaps can in turn cause injustice or indeed that the gaps themselves are there very often because the law needs reforming. In his third budget as in his second, Mr Amory shows little sign of having any heart for the way of basic tax reform as plotted by the Royal Commission: the actual year basis of assessment, the levelling out of fluctuating incomes, the assessments to surtax of the profits of private companies, improvements in the legislation governing overseas trading corporations, the basis of valuation of stock, the reform of the whole system of retirement benefits and, one could add, the recasting of surtax to fit the facts of modern incomes. And it is certainly time for a thoroughgoing look at estate duty and at the methods of working at the Estate Duty Office.

Kaffirs in their Place

Leaders of the South African business community are urgently seeking an interview with Dr Verwoerd to protest against his racial policies. This account from South Africa shows that the biggest element in business now is politics.

SOUTH AFRICA is now a fully fledged though not yet efficient police state, and that fact must be counted in any assessment of investment in this country. Two things hitherto differentiated the country from copy book police states: judges knew no fear and the press was outspoken. The *Habeas Corpus* Act is now suspended and the press is beginning to be muzzled by the Emergency Regulations. The police and the military now enter all parts of the country's economic life. The army has ringed the African townships in the Cape where people are on strike and in effect has blockaded the inhabitants; striking is illegal for natives. Police have been interrogating journalists; it is long since reporting the share markets justified thoughts of danger money.

The stock market has fallen fairly heavily since the shootings at Sharpeville. The *Financial Mail's* index of Orange Free State gold shares stood at 152.5 (1958=100) at the beginning of the year; it had dropped to 128.1 just before Sharpeville; last week's figure was 119.5. On the same three dates the industrial share index stood at 118.1, 116.0 and 111.2—a much more limited fall. Sales on the market have been heavy. Much of the selling appeared to come from London, but probably a good deal of it was on Continental account. Local investors have been selling, too. But the Americans have remained regular small buyers. This phenomenon tends to be overplayed in South Africa. A small number of Americans are taking a small hedge against their own currency. In Johannesburg's rather narrow market they look bigger than they really are.

Swiss, French and other Continental institutions have sold, including it is believed a big French domiciled finance company that has already burnt its fingers in Africa once. Local semi-speculative investors have been shaken out. The mining finance houses have no intention of playing King Canute to that audience. They have bought exactly where it suited them to buy, without any intention of holding the market. The fall would have been much greater had it not been for two buyers: Sanlam and SA Mutual, the two biggest mutual insurance offices. They have a special problem of investment. The 1959 budget taxed mutual offices for the first time on their income from interest, but not on that from dividends. So it became important to increase the proportion of equities (and of urban properties) in insurance portfolios. At the same time, private investors in farm mortgages have had most unfortunate experiences of default, and the Land Bank, a public body, is in effect taking the big private investors out of a proportion of their farm mortgage holdings, releasing money for investment elsewhere. The big mutual funds have several million pounds for investment, and if they do not acquire shares in a falling market, they may find it difficult to get them at all.

A fall in the market, it is fair to point out, seemed to be on the way before either the Sharpeville business or the state of emergency. London—and London passes on a large part of Western Europe's business—had been selling heavily all last year; something in the region of £20 million worth of South African securities were repatriated. Foreign selling gathered speed after the announcement of the proposed referendum on the Republic and after Mr Macmillan's "winds of change" speech in February. Local investors took what London sold, and it has never been obvious to whom those local investors could eventually sell. (With gold shares, technical progress in the industry can also be a bear factor in the market; record rates of shaft sinking mean record rates of capital expenditure at the cost either of capital dilution or of near-term dividends or both.)

ONE extraordinary feature of the market in these last odious days has been its sudden rallies. Rumour after rumour has broken the fall. The rises have invariably coincided with a rumour adverse to the Government. Dr Verwoerd was about to resign; thirty Nationalist MPs were about to cross the floor of the House; Dr. Dönges had been seen drinking coffee with Sir de Villiers Graaff.

All has been false. The significance is that whatever sounds bad for the Prime Minister puts the market up. He is the symbol of unbending stupidity to the business community almost as much as he is the symbol of oppression to the African. The market assumes that any change that removes him must be for the better. And it is general knowledge

that the Afrikaans business section and a great many thinking Afrikaners besides would like a moderate change. What Dr Verwoerd has produced is not just bad government but the absence of government. Too many white South Africans are armed. The business outlook is bleak. No one but a mad man would buy South African shares now, though mad men sometimes make money.

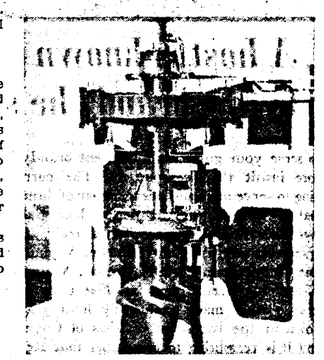
The real problem concerns direct investment. Right across the field of South African industry, overseas investment is firmly entrenched in subsidiary companies, partnerships, and minority shareholdings though, in mining finance and banking, portfolio investment is more important. The United Kingdom is by far the biggest foreign investor. The latest detailed figures of the Reserve Bank are for end-1956. At that date, as the table shows, the total UK stake in industry and mining was nearly £500 million; there was £125 million in banking and insurance, and with investments in trade and

New 'Long House' for the Wanapum Indians

Building the Priest Rapids power station of Grant County Public Utility District No. 2 of Ephrata, Washington State, U.S.A. Inside the barrage will be ten 131,000 h.p. water-turbine generating sets which, together with transformers, are all being supplied by English Electric.

One of the turbine runners being lowered into position at Priest Rapids. These runners are the largest so far built in Britain and are among the biggest in the world.

When the great Priest Rapids hydro-electric project was begun in Washington State, it meant, as so often happens, disturbing many historic sites and remains of the local Indians, the Wanapums.



However, cordial co-operation with local authorities has removed most of the relics to museums and provided a new site for the Long House, which the Wanapums use for tribal feasts and religious rites. Now a very different Long House is reaching across the Columbia River, a massive barrier of steel and concrete. And the throbbing heart of this power-house will be the ten huge generating sets made in Britain by The English Electric Company.

Every six weeks another English Electric turbine and generator set, with its massive forgings machined to smooth perfection and its myriad windings, is added to the impressive rank of machines in the Priest Rapids power-house. As it goes on line, still more power pulses into the electrical system of busy Washington State. When all ten are installed, over 1,200,000 h.p. will be at work in the "Long House."

Wherever power is needed

The U.S.A. is one of the many countries where English Electric has won a high reputation and a succession of important orders. At home, too, this company, with its huge technical resources backed by long experience in many branches of engineering, is making the equipment, first to provide us with more power—from coal, oil, gas, water, the atom—and secondly to utilize it, on our railways, in our industries and our homes.

Electric power leads to prosperity, both for us in Britain and for those other countries served by English Electric whose needs are often so much greater than ours.

Sectional model of one of the water-turbine generating sets for Priest Rapids. The feathering propeller turbine is rotated by water pressure and flow, driving the generator above it. The electrical power generated is led away to transformers for distribution to industry and the home.

POWER IS THE BUSINESS OF

ENGLISH ELECTRIC

... BRINGING YOU BETTER LIVING

THE ENGLISH ELECTRIC COMPANY LTD., MARCONI HOUSE, STRAND, LONDON, W.C.2

A MAN IS KNOWN BY THE COMPANY HE KEEPS

A host is known by the brandy he serves

To serve your guests an indifferent brandy is more insult than compliment. The correct thing to serve after meals is a cognac of liqueur quality. This is why the perfect host gladly pays that little bit more for a really fine liqueur brandy like Remy Martin. A genuine Fine Champagne V.S.O.P. Cognac. A brandy defined by French law as *Fine Champagne* because it is made exclusively from grapes grown in the two finest districts of Cognac. And it is reassuring to remember that Remy Martin make *nothing* less good.

PRIDE OF COGNAC

REMY MARTIN

Get off to a flying start by travelling Air France. Here are some of the many places in Europe we serve:

*PARIS from £9.19.0	*NICE from £27.0.0	MARSEILLES from £37.9.0
*ROME from £45.17.0	*MILAN from £33.15.0	*ATHENS from £100.16.0
*VIENNA from £48.7.0	*ZURICH from £31.19.0	*GENEVA from £30.5.0
*ISTANBUL from £112.1.0	*ANKARA from £117.0.0	*LISBON from £90.10.0
PALMA from £39.17.0	BARCELONA from £35.5.0	MADRID from £44.1.0
DINARD from £13.17.0	DEAUVILLE from £17.11.0	LA BAULE from £15.15.0

(the above tourist return fares are subject to Government approval, and are applicable from 1st April, 1960)

*and, for the last word in comfort, the points marked * are served by the Rolls-Royce jet Caravelle.

AIR FRANCE

THE WORLD'S LARGEST AIRLINE

A copy of our new leaflet in full colour "Air France Jet Holidays", will be sent on request. Write Dept. E.2, Air France, 158 New Bond Street, London, W.1, or your travel agent will supply. Ask, too, for details of the "Fly now, pay later" Air France Credit Scheme.

miscellaneous services Britain's total stake was £866 million. The American stake was £170 million, and has risen since. Investments of all foreign countries totalled £1,396 million. Control of mining finance has been shifting gradually to South Africa over years and the process will doubtless continue. In manufacturing industry very little of the investment is of the portfolio type, and it cannot be sold at the drop of a hat.

That explains why pressure on the exchanges has so far been slight. There can obviously be no thought of further relaxation of the exchange controls, which prevent South African citizens from moving their money out; but it should be possible unless matters get much worse to continue to allow non-residents free movement of their capital—a policy to which South Africa is firmly pledged. Most of the remaining foreign capital, however, is not in readily movable form.

(Gold mining only)	(189·5)	(118·4)						

At the beginning of the year a modest industrial revival was expected. Commodity prices had mostly been rising. The excessive stocks imported in 1958 had been sold and wholesalers and retailers were expected to rebuild stocks. Gold production looked certain to go on rising, more than enough probably to mask the fact that uranium would be a weak market in a few years' time. Now plans for industrial development by industry have naturally been held back. People no longer look for industrial revival. They count instead the cost of an effective strike in and around Cape Town and of more modest interruptions of production elsewhere.

IN South Africa business prospects must always be assessed partly in terms of politics. Today they depend wholly on politics—on when, rather than whether, there will be a different Government. The differences, for example, between Dr Dönges, finance minister and leader of the Cape Nationalists, and Mr Mitchell, leader of the United Party in Natal, are minimal; they represent different nationalisms, both antinative. And all sections of opinion outside Parliament except the over-enfranchised Afrikaans farmers would welcome some sort of rearrangement. A get-together of the right wing of the United Party and the left wing of the Nationalists would get a good reception from the business community. Any new government would have that. It might also release some of the immediate tension on the urban natives. It would be unlikely to solve South Africa's problems.

Through the Federated Chamber of Industries, business leaders have approached Dr Verwoerd. South Africans remember that the crisis brought about by the bus boycott in 1956 came to an end only after the Johannesburg Chamber of Commerce took on itself the task of acting as mediator between the African leaders and the Government. This time, Dr J. H. Moolman, head of the Wool Board, gave the lead, in a speech made ten days ago. He is respected by the Nationalists, as is any of their own number who achieves international standing. Whether industry will find a single voice is more doubtful. Many of its leaders know what ought to be said:

1. Raise the native wages. A very high proportion of the urban natives are below the subsistence level. They are denied trade unions, their strikes are illegal, their two political organisations are being suppressed. Unless their physical welfare improves, the repression will not hold them down long.

2. Back-peddle the whole distance on job reservation. This ingenious device for ensuring that all the burden of any unemployment falls on the natives is proving extremely inconvenient for employers too. If a "determination" does force the employer to replace blacks with coloured or with whites his wage rates rise, and since this is likely to happen when trade is slack it means that the impact of trade recession is not to reduce costs but to raise them. Moreover, job reservation deprives the employer of the mobility of his labour, since the determinations are different in different areas.

3. Industry ought also to tell the Government urgently to reconsider the Pass Laws. Those laws, not voting rights, are the nub of the Africans' discontent, as the Progressive party has realised. It is intensely humiliating for Africans of the small but growing middle class to be constantly grabbed by barely literate policemen and ordered to "show your pass, kaffir." It is intensely cruel that an African workman who has left his pass in his jacket and gone across the street in his overalls should be grabbed and thrown into prison or even sent to forced labour on a farm. It is because of these humiliations that the present resistance has sprung up.

But even if industry did find a common voice and say those things to the Prime Minister it might as well talk to the moon. "Kaffer op sy plek" (Kaffir in his place) is the attitude of the farming community that put Dr Verwoerd in power.

The immediate resistance may soon be suppressed. African wages leave no margin for a prolonged struggle. But such an uneasy peace will not give external investors the reassurance they need. They will be more impressed with the evidence of long-term malaise. In this potentially rich country, there has been a steady fall in labour productivity since 1954. Last year national income per head in real terms again showed a small decline.

If there were a get-together at the centre, some of the immediate strain might be released. There might also be a little less nonsense talked about a republic "within the Commonwealth as long as it suits us" and a little more realisation that it takes two to make a bargain. The sugar industry in Natal would be ruined by the loss of its Commonwealth quotas, and the canned fruit industry would scarcely be happy.

The ultimate potentialities of South Africa are enormous. It has the mineral weath, the communications, and the labour force, better educated and despite its poverty still better paid than in most parts of the African continent. It has a wide range of industry, well established. But the release of these human and material assets will not be achieved by suppression of the African organisations, arrest of the leaders and of all those whites who have shown friendship towards Africans.

BUSINESS NOTES

BUDGET MARKETS

Credit Cloud

DELIBERATELY, the Chancellor of the Exchequer injected uncertainty into the financial outlook in his budget speech, through his reference to the possibility of new credit restraints in the near future. By the test of the stock market, which had been looking to the budget to remove uncertainty, the threat has had its intended effect. Without it, prices of ordinary shares would very probably be rising steadily, as the net fiscal imposition is milder than most City people expected. The course of equity prices can be an important element in fomenting boom psychology, as well as being a reflection of it, and the authorities must be pleased with the check they have administered without actually doing anything. But to keep the effect they will surely have to act soon.

Gilt-edged, naturally, felt the first impact of the credit threat. No large selling has been reported this week, but the stream of small and medium sized buying orders from institutions that has been coming forward quietly in recent weeks has dried up. The banks appear to have made no large sales since late February, when they tightened their scrutiny of applications for large advances.

With the gilt-edged market uncertain as to quite where a floor will be established, dealers and financial advisers are finding it none too easy to decide on what terms new fixed interest stocks should be introduced to the market. Now that the budget is out of the way, the queue of new gilt-edged and corporation issues should move forward. Moreover, the Government seems to be anxious not merely to sell the ordinary shares of Richard Thomas and Baldwins back to the public but to sell off some steel prior charges as well. The Chancellor's comments on credit have naturally caused a temporary set-back in plans for new issues. It had, for instance, been hoped to bring forward a local authority issue between the budget and Easter; it is now not likely to come until after the holiday. To gain acceptance it may have to be offered at a yield of $5\frac{5}{8}$-$5\frac{3}{4}$ per cent.

Sponsors of new industrial debentures could clearly not get away with a coupon of $5\frac{1}{2}$ per cent as Tate and Lyle did in the second week of February. The rate would more likely have to be in the region of $5\frac{3}{4}$ per cent, with possibly 6 per cent on a really sizeable issue. Thus if it is decided to begin the sale of steel prior charges by offering a debenture in RTB as well as its equity—as some in the market now believe is possible—it will have to be offered on good terms. With the RTB issue not very far off, steel shares have weakened. Another element of uncertainty was injected into this market by a report that Mr Charles Clore and his associates had put a scheme before the Treasury for handling the denationalisation of RTB. Mr Clore has said that no such scheme has in fact been put before the Treasury and that there are no negotiations or discussions pending in relation to RTB. But, he added, he would naturally be interested if there was an opportunity to acquire a substantial holding in that company. It is the prospective weight of new issues, made up of rights issues of ordinary shares as well as fixed interest stocks, that the stock market has to take into its calculations.

NET GILT EDGED PRICES

Cautious Reappraisal

THESE calculations and the possibility that the screws will be tightened on credit have made the industrial equity market notably cautious. No one expects a sudden, sharp fall. But equally no one expects a sharp rise. On budget day itself, a stream of small buying orders found the jobbers naturally reluctant to take a view and go short on their books. As a result prices jumped. The *Financial Times* ordinary index gained 7 points to 331.2. In the next three days it shed 4.2 points, to stand at 327.0 on Thursday. Over the week to Wednesday, *The Economist* indicator, partly reflecting the gains made in oil stocks following the announcement of the "Shell" Transport dividend, gained 4.7 points to 365.9. After the budget, a few readjustments had to be made: tobacco shares were marked down and so were those equities with a very low earnings cover, while cinema and wine shares went up. The specific budget proposals, however, cast no shadow across the market as a whole. It was not what had been done to taxes but what might be done to credit that created an atmosphere of uncertainty. Banking and hire purchase shares were amongst those that lost ground.

The economy and profits are buoyant. But equity prices already reflect that fact; that is a reason for holding on to stocks, but it is not a reason for going on buying them. The institutions are not in the market with the same force as they were, say, a year ago. Good property developments (which have an equity element in them) and local authority mortgages continue to attract them. Moreover, it is to the institutions that the appeals for new money will be primarily directed. They can afford to be selective and to wait until a particular stock looks cheap. Then, as they did with Tube Investments after the rights issue and ICI at the time of the dividend announcement, they will buy. But this is a different kind of buying from orders placed last year which were designed to raise the proportion of equities held in their portfolios. The course of prices seems to turn more than it once did on the decisions of private investors.

RAILWAYS

A Committee Too Many

THE Chancellor of the Exchequer has done the obviously right thing in putting the railways' deficit advances "above the line" in the budget: since the Transport Commission has no hope of paying them back, these advances are properly being treated formally as subsidies and counted as current expenditure in the budget. The advance for 1960-61 has been put at £90 million, but this estimate does not allow for the cost of the final Guillebaud settlement, net of any gain in revenue from higher rail charges.

Since the Government is paying such large sums simply to keep the railways going, it has every right to set in motion a complete review of "the structure, finance and working of the organisations at present controlled by the commission." But it is hardly going about this the right way. It has turned over to a group of four varied businessmen the task of working out how best the Government's own conclusions can be put into effect. And these conclusions, as far as they were unveiled by Mr Marples on Wednesday and by the Prime Minister a month ago, do not appear to be very clearly formulated, beyond the expression of a wish for some kind of further practical decentralisation and the realisation that there must be some reconstitution of the commission's financial status—which Sir Brian Robertson himself asked for last summer.

Furthermore, this new "planning board" has been given only a few months in which to conduct this exercise. Two of its members are by training scientists, one is a chartered accountant, and the chairman is an engineer. Their views (are they to be published?) will no doubt be valuable, so long as they begin from the principle that a public transport organisation is a totally different animal from manufacturing industry. The board, moreover, is not yet complete: members have still to be appointed from the Treasury and the Ministry of Transport. After saying last week that the Transport Commission would be represented on the board, the Government has now decided that it shall not be. All in all, this exercise increasingly takes on the appearance of further pin-pricking for the Transport Commission who know something about how to run a railway and who need, above all, less interference from outside rather than more.

BRITISH PETROLEUM

Bigger Sales, Lower Profits

THE stock market had every reason to be pleased with the "Shell" dividend and results. After them, the British Petroleum dividend and results have come as something of an anti-climax. On Thursday the shares fell slightly from 58s. to 57s. 4½d. The tax free dividend is higher but not as high as some optimists had thought it would be. For 1959 it has been set at 2s. 2d., tax free, per £1 share (or 10⅞ per cent) and compares with 1s. 9d., tax free (or 8¾ per cent) paid for 1958. Grossed up at 7s. 9d. in the £, the dividend has gone up from 14.29 to 17.69 per cent. The results backing up this dividend show how much BP has had to bear the effect of lower prices in European markets.

SALES AND PROFITS

(£ million)

Six months ended	June 30, 1958	Dec. 31, 1958	June 30, 1959	Dec. 31, 1959
Gross sales	404·2	425·1	410·5	449·5
Net sales	295·1	303·2	293·8	318·3
Gross profit	57·9	62·5	57·7	57·9
Net income	25·9	37·0	23·5	39·9
Gross profit/net sales	*%* 19·6	*%* 20·6	*%* 19·6	*%* 18·1
Net income/net sales	8·8	12·2	8·0	12·5

Last year it sold 65 million tons of oil and oil products, 3 million tons more than in 1958, and the value of its sales, net of sales taxes and excise duties, went up from £598.3 million to £612.1 million. Its gross profit before tax, however, fell from £120.4 million to £115.6 million and the income it received from dividends and other income declined from £17.6 million to £15.4 million. After tax, its net income rose from £62.9 million to £63.4 million. But this is more than accounted for by the fact that credit given in respect of British tax relief in computing the tax charge has gone up from £10.4 million to £15.0 million. Credit for this tax relief is taken only in the second half of the year and this explains why net margins in the accompanying table are so much higher in the last halves of the financial years. It is the trend in gross profit margins which is of greater significance for investors in BP. In the second half of the year they will note that while BP pushed up the volume of its sales (which at 34 million tons were 3 million tons higher than sales in each of the three preceding half-yearly periods) expansion was achieved at the expense of some sacrifice in margins.

GOLD RESERVES

Inflow of Funds

STERLING responded well to the budget. Foreign opinion seemed impressed with Mr Amory's firmness in resisting pleas for tax cuts and, still more, by his declared readiness to act quickly with credit weapons. Against the US dollar, sterling rose on Tuesday to $2.80\frac{15}{16}$, its best since immediately after the election. Sterling also rose against Continental currencies, to $12.18\frac{5}{8}$ against Zurich and $11.71\frac{1}{2}$ against Frankfurt. The exchange markets were favourably impressed with the gold figures for March, which showed a rise of £21 million, or $59 million, after payment of the monthly instalment of £5 million on the drawing from the International Monetary Fund. This was the best result since April last year. Seasonal influences should be bringing gold into the reserves at this time, and exports of averseas sterling area countries are buoyant. But part of the gold inflow is attributable to the re-attraction of short term funds. In the last few weeks the Treasury bill rate in London has been 1½ per cent and more above the New York rate, and the cost of securing exchange cover against the forward risk has offset only a small part of the margin. And commercial borrowing is no longer so much easier and cheaper in London.

AIR FARES

The Price of Peace

FOR the best part of a year, the Government refused to say yea or nay to the request of several independent airlines to operate half-price flights to British territories overseas. Last autumn, the Minister of Aviation hinted plainly that if cut-price services were permitted at all, the nationalised air corporations as well as the independents would be allowed to run them. The hint was taken: this week details were announced of the settlement reached between the independent airlines that had made the applications and the corporations which had opposed them.

International second class fares are already going to be cut by between 10 and 16 per cent from next October on all routes other than the North Atlantic. But British airlines (corporations and independents) will run an additional, third-class service to British territories in Africa, the Far East and the West Indies at prices another 14 to 16 per cent lower than these new tourist fares. This represents a cut of 30 per cent on the fares now being charged (the change to be made in October when the new tariff comes into force). That is less than the 50 per cent cut for which the independents had asked (to the consternation of their accountants) but more than the 20 per cent cut that would have satisfied BOAC. It is not clear yet how these new third-class services are to be operated, or with what aircraft; but passengers will have to pay for the packaged meals which they may buy during the flight. And there is one significant omission from the list of places to which these cuts will reduce the fares. This was Malta: the cheapest air trip there, at a midweek night rate of £33 13s., is unchanged in price, though an independent airline had applied to operate a service for as little as £19.

The terms of the settlement reached between corporations and independents quash any old-fashioned ideas of genuine competition between them, but the independents, cramped and constricted by years of restriction, are not in a state to offer much in the way of competition to anyone. Nevertheless, the corporations have been obliged to make quite substantial concessions to them, BOAC more than BEA because more of its routes terminate in British territories abroad. The concessions take the form of a working partnership in which traffic will be pooled and the proceeds divided between the two partners with BOAC taking 70 per cent and its independent partner, 30 per cent. This share-out will take place regardless of how much or how little traffic either partner actually carries. Where several airlines are involved in the pool, as they are in Central and East Africa, the independent airlines probably come out of the deal much worse than these figures suggest. But it is still a great improvement

on the old arrangement that restricted them, when they could fly at all, to providing a given number of seats and a certain class of service. They are now guaranteed an income, and with it a breathing space in which to re-organise and re-equip their businesses—a prospect that has brought some cheer to the aircraft factories.

HIRE PURCHASE

The Offsetting Factor

AGAINST the general buoyancy in consumers' expenditure this year with which the Chancellor had to reckon in his budget statement, he counted "one offsetting factor"—the increase in the amount of income which has to be set aside for the repayment of hire purchase debt. "It is unlikely," he said, "that the net increase in this debt will be nearly so large this year as last and this will damp down the rise in total consumer demand." This effect of the surge in hire-purchase buying after restrictions were removed late in 1958 has been expected by other observers for several months past; in fact, repayment periods were so generally lengthened last year that the higher amount of credit being advanced took a long time to increase the total call of repayments on consumers' incomes. It was only in the last couple of months of the year that the net increase in the debt outstanding began to fall below the levels of a year before.

This process is continuing. New hire purchase contracts in January were 8 per cent higher in total value than a year before, and in February 18 per cent higher; and in March the number of contracts made for the hire purchase of motor vehicles was 41 per cent higher than in March, 1958. New business, therefore, was continuing to grow (though in the first quarter of 1959 hire purchase business was perhaps not as large as it would have been had not more people than usual expected cuts in purchase tax in the budget). But repayments were weighing heavier on the other side of the balance; the net debt outstanding grew by £16 million in February, as in January, as against increases averaging £19 million in January-February, 1959. The total debt at the end of February amounted to £889 million.

MOTORS

Expansion Begins

SOME further information about the plans of Ford and Vauxhall to expand their output and manufacturing capacity has become available during the past week. Ford mentioned in its annual statement that it will move the assembly of Thames lorries and 10-15 cwt vans from Dagenham to Slough, where last autumn it bought from Hawker Siddeley a factory of which it was already renting part for use as a store for spare parts. Lorry cabs and van bodies are made at the Ford factory in Southampton, so the site for assembly will in fact reduce the distance that these need to be transported; but engines, transmissions and other machined parts will have to be brought from Dagenham. Engines for the Popular and the 5 cwt van are already made at Slough, where at present about a thousand people are employed; when commercial vehicles are assembled there 2,000 will be needed.

Ford's existing assembly building for commercial vehicles at Dagenham will be re-equipped to add to engine production and machining facilities—as happened with its old car assembly building. Its output will eventually go to meet the needs of the Halewood plant near Liverpool. The cost of re-equipping this plant will presumably form part of the £25 million that Ford will spend apart from Merseyside, but expenditure at Slough falls under the previous £75 million expansion plan. More space for assembly at Dagenham is being obtained by transferring assembly of the Popular and 5 cwt van to Doncaster. But the company still reports that limits of capacity on engine production prevent it raising production of the Anglia beyond 1,000 a day at present,

Small Saving is Expensive Borrowing

THE Exchequer's overall deficit of £314 million in 1959-60 was entirely covered by net receipts from "small" savings through the National Savings Movement. Operations in gilt-edged, Mr Amory revealed in his budget speech (carrying the story forward three months beyond last week's Economic Survey and six months beyond the latest official figures) resulted in a net outpayment by the Government over the year, as sales of stock to the public did not match official purchases from banks and repayments on maturity.

So there was a "substantial rise" in the amount of market Treasury bills, though the bulk of the addition bypassed the clearing banks, much of it going into the higher overseas holdings. Such experience makes the national savings movement look a more certain source of long-term funds than the gilt-edged market; and Mr Amory has done his best to keep up the contribution by extending the limits of holdings of the attractive series of national savings certificates and defence bonds (less than a year ago he was hinting that he might have to offer a less attractive series) and by re-modelling the premium bonds scheme and increasing the interest allowance for it.

Lord Macintosh will be pleased (even if the building societies, meeting this Friday to consider their interest rate policy, are not) and the Government ought to be able to get the money this way. But it will do so at a stiff price. National savings certificates held for over seven years yield nearly 4½ per cent free of tax. For people paying tax at the standard rate that is equivalent to a true cost to the Government of 6⅞ per cent; for the £4,000-£5,000 a year man paying surtax at 4s. 6d. the effective rate is nearly 11 per cent. Premium bonds will offer an average yield of even more.

AT such true yields, it needs to be pointed out, the Government could sell quite a lot of stock on the gilt-edged market. And it can be sure that investors in high tax brackets will be prominent among the new buyers of savings securities, and that much of the inflow will not represent new savings but a switch from securities less attractive to them, including Government securities. An analysis made for the Radcliffe committee showed that at end-1957 there were 10 million "live" holdings of national savings certificates, of an average value of £189. But 42 per cent of the total amount was in holdings of more than 1,000 units (£750).

The maximum holding of the current issue of certificates, introduced in 1956, is being increased on Monday from £750 to £900. The terms of defence bonds are being kept the same, at 5 per cent coupon (subject to tax) plus a tax free redemption payment of 3 per cent after seven years, giving an equivalent gross yield to taxpayers at the standard rate of 5⅝ per cent. But a new issue is being brought out in June with a maximum holding as high as £5,000—and this is additional to the limit of £2,000 on the present issue.

For premium bonds the Chancellor is not only raising the maximum holding, from £500 to £800, but making the scheme more attractive, presumably as a result of the recent market survey—and correspondingly more expensive to the Treasury. The waiting period before bonds enter the prize draw is to be cut from six to three months. The rate of interest on which the prize fund is based is to be increased from 4 to 4½ per cent; more prizes are to be offered and there will be a few prizes of £5,000. Lastly, each bond will contribute one month's interest into the draw whether it is going in for the first time or not. The odds will thereby be stabilised, instead of lengthening slightly as hitherto. These changes will apply from the draw of November next, and will cover existing holdings.

despite heavy demand; delivery delays of 8 months for the de luxe model and 4 months for the standard are now being quoted in London.

Vauxhall has already begun work on the expansion of its Dunstable factory, where it is adding a second storey to one building and this providing an extra 380,000 square feet of space for machining. This is needed at present chiefly for commercial vehicle production, but when the new factory at Ellesmere Port is completed it will be used for car parts. With this addition to the Dunstable plant Vauxhall now seems likely to have capacity for well over 300,000 cars when its commercial vehicles are transferred to Ellesmere Port, as against its present output of 200,000 cars a year. Standard-Triumph International has also begun work on its expansion plans; last week building of the extension to its plant on Merseyside was started.

No details have yet been announced of the Government aid that Ford, S-TI or Vauxhall are to get. But if it resembles that given to BMC, which received the cost of its factory buildings in unemployment areas in the form of a loan, the total of Government aid could exceed £30 million, without counting whatever Rootes may get to aid as yet unsettled plans for a Scottish plant. But it is clear that the assembly of commercial vehicles, which has never been as concentrated into special areas as car output, will become even more scattered—stretching from Bathgate in the north to Slough and Southall in the south.

CAMP BIRD

Change Round

SHAREHOLDERS in Camp Bird must examine with the utmost care the proposals by its directors to change the status of the company. Camp Bird has been a finance company, paying tax on all its income, whether derived from dividends or the sale of investments. It had accumulated tax losses which could be offset against the tax charge. These losses have now been exhausted and profits from the sale of investments would be in the future exposed to the full tax charge. The directors therefore propose to turn the company into an investment holding company, which would pay tax only on its dividend income. Capital gains on the sale of investments would not then apparently be taxable but equally those gains could not be distributed by way of dividends. In the past the directors say the annual dividends of 20 per cent have been found mainly from profits on the sale of investments. They will not be paying an interim dividend this financial year but they seem to hope to be able to pay a total of 10 per cent.

A number of questions arise from the proposals:

(1) What will the attitude of the Inland Revenue be to the proposed change in status?

(2) When will the company's "two major developments"—the Camp Bird Mine in Colorado and the Cold Forging process—begin to pay dividends? And at what sort of rate?

(3) What is the net earning capacity of the group as an investment holding company? In their circular the directors say that "profits from the sale of investments" amounted to £656,269 in 1958-59, and "other income" amounted to £401,949 (including £143,750 attributable to a company which has since been sold). They estimate that profits from the sale of investments in the first six months of the current financial year amounted to £167,930 (and to £361,861 in the year to date) and other income to £241,470. The crux of the matter is: at what point is this "other income" struck? The consolidated profit and loss account for 1958-59 showed a gross profit of £666,709 but a note to the accounts said that this was struck after taking into account a profit on the sale of investments of £656,269 and after charges for depreciation, interest, directors' remuneration and auditors' remuneration. Thus figures for "other income" would appear to include trading profits of subsidiaries shown gross before various charges. The directors say in the circular that "other income" has been "ploughed back almost completely into the development of operating companies." The figure of £241,470 must surely be on a comparable basis with that of £401,949 in 1958-59 and presumably therefore it is again a gross figure.

(5) On what terms will the directors reduce the Camp Bird holding in Hartley Baird from 85 to 40 per cent by means of an issue, possibly by way of rights, later this year?

DIAMONDS

Decline in Sales

DE BEERS did not expect sales of diamonds to be as high in the first quarter as they were a year ago, and it has not been disappointed. The company announced this week that sales through the central selling organisation amounted to £20.4 million, a decline of £3.2 million from the peak reached in the first quarter of 1959. The sales do not yet include Russian diamonds, for which the organisation recently obtained exclusive selling rights in the western world. Sales of gem stones fell by £1.84 million, compared with the first quarter of 1959, to £14 million, and sales of industrial stones fell by £1.35 million to £6.4 million.

SALES BY THE CENTRAL SELLING ORGANISATION

	Gem	Industrial	Total
		£ million	
1959:—			
1st qtr.	15·9	7·7	23·6
2nd ,, ...	14·8	6·8	21·6
3rd ,, ...	16·9	6·3	23·2
4th ,, ...	15·5	7·3	22·7
1960:—			
1st qtr.	14·0	6·4	20·4

The decline in industrial sales must have seemed comfortingly modest. In the first quarter of last year American industry was rebuilding stocks after the recession, purchases for the United States stockpile had not yet ceased, and production—and presumably the sale—of synthetic boart in the United States was smaller than it is now. De Beers is trying to develop wider markets for industrial stones; it has also produced synthetic boart, and will make it in commercial quantities if this seems desirable.

COAL

A Small Matter of Mining

LAST year the 600 small mines that the National Coal Board licenses to private operators produced 2.6 million tons of coal. A small mine is defined as one where employment is "not likely greatly to exceed 30 people"; the board was empowered in the original nationalisation Act of 1946 to lease the operation of these under licence to private operators, and it actually left about 440 of them in the hands of the small concerns running them already. Some have gone out of production since, but in the years of high demand for coal the Board licensed many more. It began with temporary licences, but gave the operators "substantive" 10-year licences from 1950 onwards. Many of these small mining licences, therefore, came up for renewal last week; and the operators' complaints about the terms on which they had to renew, with an entirely different climate in the coal market from that of 1950, rumbled this week as far as the House of Commons.

The Federation of Small Mines of Great Britain, of which the South Wales association has been the most vociferous in complaint, argued that various points in the terms on which the Coal Board was prepared to renew these licences were onerous, and put an unfair share of coal's problems on to them:

> The royalties that they have to pay the Board on every ton sold—which took the place of the similar royalties they had to pay the former Coal Commission, and the adjusting payments between districts under the former Coal Charges Account—have been raised from 9d.-1s. a ton to 4s.-6s. a ton.
>
> Most important, the licensing agreements now set a limit on the basic annual tonnage per mine to be sold in the early sixties, and require each licensed mine to reduce its sales down towards this figure fairly quickly. The original proposals would have cut total sales to 1.5 million tons by 1962; modified proposals, which the federation felt obliged to recommend to its members at the end of March, will bring it down to 1.8 million tons by 1962.

The operators of small mines argue that this represents a cut of a third from the 1958 output (2.5 million tons) for their mines, against a planned cut of only 12½ per cent in the Board's own output from 1958 to 1960.

Landlord and Colliery

THE Coal Board has some answers to make. It says that as a landlord, owning the coal in the ground, it has merely adjusted its royalty charges, or rent, to changed circumstances—coal sells today for about 85s. a ton at the pit, against 47s. 9d. a ton when the earlier contracts were made in 1950. As to the cuts in output, it is prepared to quibble, though not much, about the small mine operators' slightly specious arithmetic. Its peak output was in 1957; from that year to 1960, it will have cut its opencast output by half and its deep-mined output by just over 10 per cent. About 600,000 tons of the private output is opencast, and this is coming down by some 300,000 tons during the period; the rest of the small mines' output will go down from, say, 2 million tons in 1957 to 1.5 million in 1962, or by about a quarter. Some part of the cut in the small mines' output will happen anyway by the exhaustion of certain small mines, so those left in business should not need to contract as sharply as the total figures suggest. Moreover, its divisions will be able to suspend any limits on the sales of anthracite, of which there remains a shortage.

How one sees the rights and wrongs of this depends partly upon which end of the telescope one happens to be looking through. Economically, however, it is not easy to see how the board can justify forcing down the sales of coal

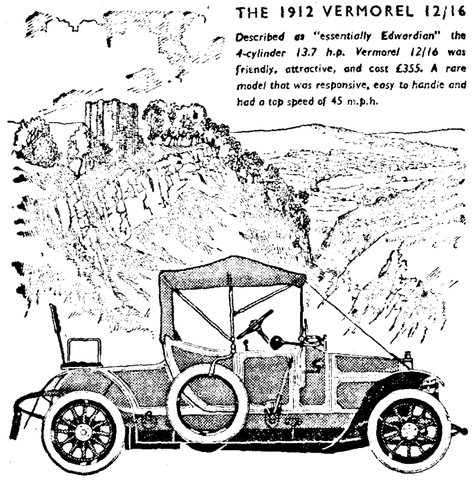
Big Jets, Small Sky

BY OUR SPECIAL CORRESPONDENT

FROM the Palace of Westminster to the Acropolis of Athens, separated 1,700 miles in distance and 24 centuries in time, takes less than four hours as the Comet flies. But when people talk loosely about the way the jets have shrunk Europe to a very small place indeed, do they realise that this applies to the sky also? And do they realise what this means?

It was brought home sharply to your correspondent last weekend that there is a world of difference between flying a big jet placidly across the North Atlantic, or even to Moscow, and leap-frogging it across Europe from London to Rome to Athens to Istanbul and on to the Middle East, landing on average every hour and a half to two hours. The aircraft is then at the mercy of the ground staff at every airport that it visits, and especially of the traffic controllers who guide it along the air lanes and bring it in and out of the airports. Their level of competence falls as the aircraft travels east, sometimes because the controllers are not properly trained, but more usually because their equipment is poor. And this, if it is not to create a downright dangerous situation, is liable to mean delays with aircraft held up waiting for clearance, either to land or take off. The faster the aircraft, and the more often it lands, the more havoc these delays can cause to its timetable and the more fractious its passengers become.

The 86-passenger Comet 4 of British European Airways is the biggest and fastest jet to be used so far on this kind of short-range passenger operation, where the economics depend on intensive utilisation for eight hours a day, and split-second turn round on the ground. This makes it particularly susceptible to small delays, due to weather, to ground handling and the difficulty of marshalling this large number of passengers, or to the niggling mechanical faults that bedevil every new aircraft. The delays snowball along the route until they upset schedules for days ahead.



The arrival in service of these big, fast machines, cutting the east-west journey from London to Athens by two hours to approximately four-and-a-half hours, is looked on by countries in eastern Europe much as the early railways must have been—a means of opening up inaccessible regions. Mr Onassis, the Top People's Billy Butlin, is credited (probably apocryphally) with having bought the failing Olympic Airways and equipped it with Comet 4s largely to carry tourists to his new holiday camps on the Greek islands. On the mainland, the Greek government is enthusiastically spending at the rate of more than £4 million a year on new beaches, hotels and coast roads of breath-taking beauty (and unprotected hair-pin bends) for the new tourists whom it expects to arrive by air. Last year's tourist income was about £15 million. In this way Greece hopes to draw off those holidaymakers who are being priced out of the French and Italian Rivieras, which have much the same climate, but lack the puritanical beauty of the Acropolis flood-lit above the neon lights of modern Athens. By that sleight-of-hand practised by airlines and travel agents, it appears possible to spend 15 days in Athens for £89, including the Comet fare, although the cheapest return air ticket shown on the timetable costs £84.

BUT more passengers mean greater congestion along the airways. The biggest menace in Western Europe is from military aircraft. The captain of your correspondent's Comet last weekend complained forcefully to the traffic controllers over France when his aircraft was recently "buzzed" by a French fighter which flew so close "that the passengers heard it." After a specially serious incident like this, military aircraft usually keep well away from the air lanes for some days, but airline crews know it is only a matter of time before they will reappear.

Ground controllers along air routes across France, Germany, Scandinavia and in particular Switzerland, are usually well-trained and well-equipped; their main difficulty is the number of aircraft with which they are dealing. Towards Italy conditions begin to deteriorate, largely because air traffic control is carried out by the Air Force; airline crews suspect that Italian traffic controllers are merely serving on a temporary tour of duty that forms part of their wider military training. It is perhaps not surprising that the less experienced among them have a reputation among the aircrews for getting flustered. Apart from this, the standard of radio equipment along the Italian air lanes is lower than in other parts of Western Europe. Aircraft flying in these lanes can lose contact with the ground for long periods—a serious matter when so many are flying together in the same zone.

LACK of equipment becomes more noticeable the further east an aircraft travels. The airport at Athens has perfect visibility nearly all the year round, a good approach over the sea and a long, strong runway. But its radio is nothing like as powerful as it should be for jet operations; nor are there enough separate radio beacons at the approaches to the airport to make it possible for several aircraft to converge on Athens together. The result is rather like trying to serve a busy railway terminal with a single railway track, and the effect will be intensified as airlines begin to make increasing use of Athens as a junction between routes to the east, west and south.

This is a fault common to many airports besides Athens. Authorities concentrate on runways and passenger buildings and forget that it is at least as important to see that the airport has enough aerial entrances and exits to prevent traffic jams in the air. It is this short-sightedness, and reluctance to spend money on equipment that yields invisible returns (in the form of punctual arrivals), that is largely responsible for what pilots describe as the shambles in the air over Western Europe—a shambles of which most passengers pass their journey in happy ignorance.

THE 1912 VERMOREL 12/16

Described as "essentially Edwardian" the 4-cylinder 13.7 h.p. Vermorel 12/16 was friendly, attractive, and cost £355. A rare model that was responsive, easy to handle and had a top speed of 45 m.p.h.

... the year of Lloyd George's Health Insurance Act ... and a year when no doubt some Vermorel owners visited Peveril Castle in Derbyshire ... Peveril Castle, which then, as now, proudly guarded beautiful Hope Valley ... Hope Valley, the weekend destination of thousands of motorists who find that the Bamford depot of the Kenning Motor Group — one of many in a country-wide organisation — gives them full and enthusiastic service.

INVESTMENT in AUSTRALIA

Great interest is being shown in the United Kingdom at the present time in the possibilities of portfolio investment in Australia. To give authoritative information on this subject, *A.N.Z. Bank* has just published a new 68-page booklet "*Investment in Australia*", which covers in some detail such matters as

- ★ Avenues of investment
- ★ Securities for Portfolios
- ★ Trade or direct investment
- ★ Investment intelligence
- ★ Brokerage, duty, taxation and exchange control
- ★ Services for investors and companies

Copies are available free on request.

AUSTRALIA AND NEW ZEALAND BANK LIMITED

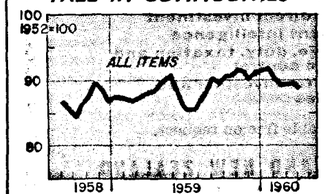
Telephone: AVEnue 1281

that anyone can sell at a profit while it is continuing to operate many of its own mines at a loss. Politically, moreover, it should know by now that one of the facts of life for nationalised industries is that one should not only not behave oppressively to small people but should never, in any way, seem to do so (unless one is in the electricity business, where, amid tremendous apologies about amenity, one usually gets permission to slap down the power station or transmission line anyway). The board might well ask whether any big private business in difficulties about selling its own output would be likely to lease odd small machines to individuals to let them add to its competition and undercut its prices. It has to behave better, that is to say, than a private monopolist might. But when one remembers the original arguments about nationalisation (are there any believers in public ownership of the means of production, distribution and exchange in the House?) was not that assumed to be one of the objects of the exercise?

THE CHANNEL



At Cross Purposes

ANY serious comparison of the various proposals for new direct physical links between Britain and the Continent must await the full publication of the report that the Channel Tunnel Study Group has presented to the Cabinet. The tunnellers themselves are divided between those who favour a straightforward hole in the ground and those who prefer a pre-cast concrete tube, laid in a trench on the sea bed and covered with sand, emerging at both ends like the holidaymaker who digs into the beach and leaves only his head and toes visible.

The *Compagnie Française d'Enterprises*, in association with Dorman Long (Bridge and Engineering) and the Merritt-Chapman and Scott Corporation of America, has presented the Study Group with a proposal for a bridge from Dover to Calais which would carry cars and trains, cyclists and scooter-riders, 242 feet above high-water level. This would enable the travellers to look down on the Hovercraft which, according to a paper read to the Royal Society of Arts by Christopher Cockerell this week, could do the job faster and better than ferries and more cheaply than aeroplanes.

Questions about capital costs, and about the possible return on whatever might have to be invested have not yet been answered satisfactorily by the proponents of any scheme; so far, the main thing that can be said for the bridge project is that, from the publicity point of view, it has gone swimmingly. The Study Group has the distinction of having spent more than two years examining probable capital and running costs and potential traffic in the future from the point of view of a tunnel: no other scheme bears this weight of research behind it. Only when its estimates about future traffic are published will it be worth while to speculate which way of getting across the channel is to get the traffic likely to be offered across most quickly, conveniently and cheaply. Then, perhaps, will be time to ponder the choice of claustrophobia and the fear of suffocation in 25 miles of undersea tube against one's confidence in being able to keep a car from being blown off a high, swaying bridge 21 miles long by gusts of wind that the Meteorological Office says may quite often reach force 9-10 on the Beaufort Scale.

FALL IN COMMODITIES

* Primary producers are enjoying expanding markets—but not higher prices. Since January *The Economist* commodity indicator has dropped by three per cent, owing mainly to declines in copra, tea, cocoa and copper.

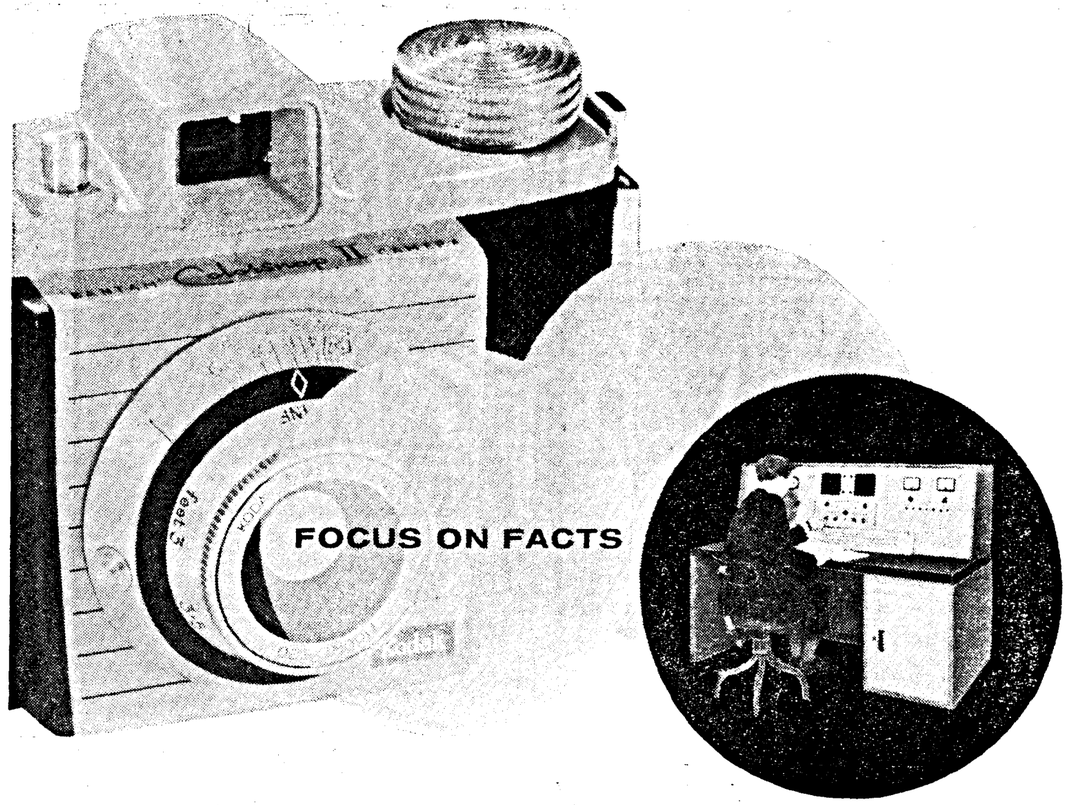
STATE BUILDING SOCIETY

Salvage Operations

IN the High Court a week ago dealings in 3,199,871 shares of Lintang Investments were frozen by Mr Justice Cross on the application of the State Building Society. The society was granted injunctions restraining any transfer of these shares or any entries in the company's share register pending the hearing of an action to decide who were the beneficial owners of the shares. No opposition to this order came from the respondents, who numbered sixteen and included Mr Grunwald and Mr Jasper as well as Mr Maxwell Joseph, who claimed 1,100,000 shares, Barclays Nominees (Branches) Limited, which claimed 1,300,000 shares, and Lloyds Bank City Office Nominees Limited, the claimants of 750,000 shares. Mr John Arnold QC, for the State Building Society, said that in the action the society would contend that the major part of the purchase money for these shares belonged to the society.

On the previous day at the annual general meeting of the State Building Society, Lord Reith, the new chairman, told 600 shareholders that proceedings had been started to recover the £3¼ million which had been obtained from the society. He regretted that the society would not be able to pay interest to members on July 1st but he said that the directors (who now include Mr James H. Robertson, a former general manager of the Abbey National Building Society) would keep constantly in mind the desirability of raising the limit on withdrawals. Lord Reith told the meeting that the directors would do everything possible to put the affairs of the society into a proper shape. He said: "We regard our responsibility not as undertakers to bury the society as quickly as possible but rather more as a team of salvage men coming to save what can be saved."

THE EXCHANGES



Market in "Euro-dollars"

WITHIN the last few months an active and growing market in dollar deposits has sprung up in London. It is a European market, but London is handling the vast bulk of the business. The currency in question is generally referred to as the "Euro-dollar," but it is in fact the plain United States dollar. The supply of Euro-dollars is provided by the working balances and accumulations of current dollars that have accrued with European merchants and banks during recent months as a result of the outflow from the United States to Europe and of the gradual disappearance of exchange control in Europe.

Until recently these dollars would have been compulsorily handed over to the central banks of the countries concerned; now they remain at the disposal of these private institutions. These funds are not left on deposit with American banks because of the official restrictions placed on the rate these banks can pay for such deposits—2½ to 3 per cent in New York. Now, moreover, there is no attraction in employing such dollars in US Treasury bills. There is, however, a persistent demand for dollar credits from banks and merchants in certain countries of Europe, such as Italy, and to a less extent France. In some of these countries the bulk of external trade is financed in foreign currencies. The dollars required for such finance are not readily or cheaply found in New York. The prime borrowing rate in New York is between 5 and 5¼ per cent and the borrower normally has to maintain a non-interest bearing deposit with the lending bank. The total cost of borrowing is thus usually over 6 per cent.

Merchant banks and other institutions in London have thus been able to operate well within the very broad margin set between New York deposit and lending rates. London banks have been prepared to take dollar deposits at rates varying according to the period of the deposit from 4 to 4½ per cent; at the same time they have been prepared to make dollars available to approved firms in Europe at rates well below the effective New York lending rate, still providing themselves with an adequate margin of profit. London is thus acting as a clearing house for Euro-dollars and a substantial business is being transacted.

An interesting variation of this dollar deposit business is that in some cases the London banks have converted the dollars into sterling, covered themselves by an

KODAK CHOOSE EMIDEC

Everyone knows Kodak, and the wide range of photographic goods they produce. It is not difficult to imagine the problem involved in maintaining an efficient production and distribution organisation.

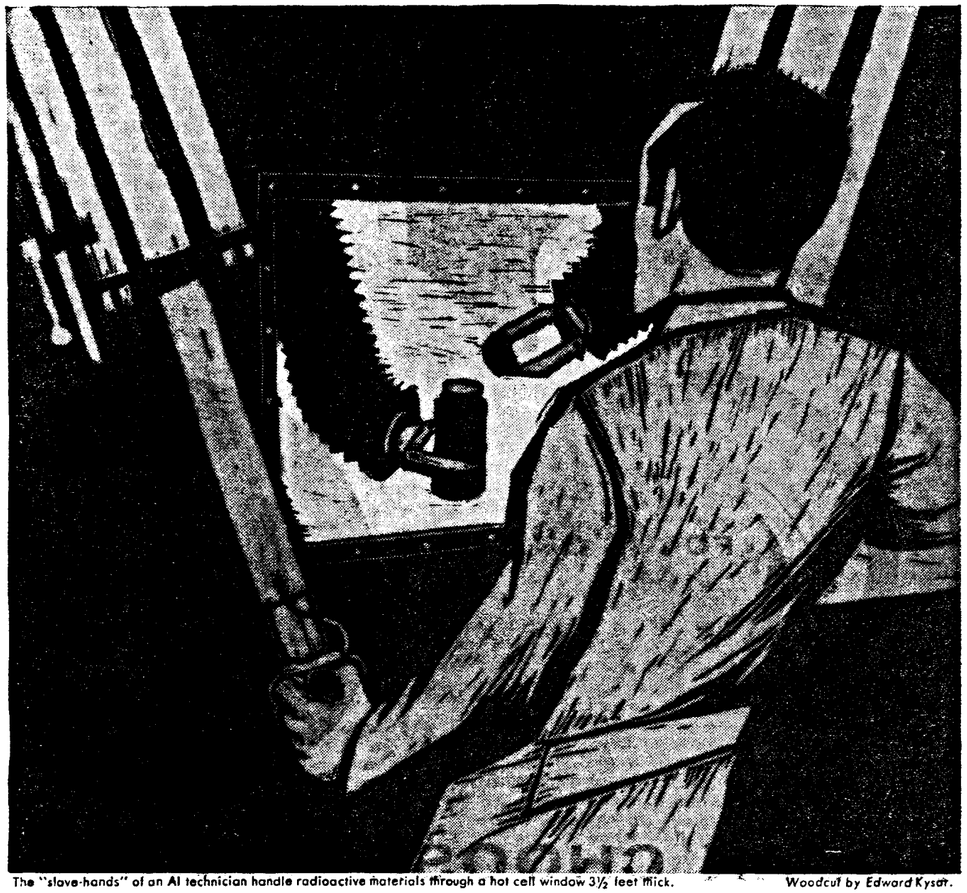
To keep pace with an ever-growing demand, Kodak has now ordered an EMIDEC 1100 electronic computer.

Designed and manufactured by E.M.I. Electronics Ltd., the EMIDEC 1100 is a high-speed computer, using transistor and magnetic core techniques.

Kodak will use the computer to maintain up-to-date records of stocks held at its nine wholesale branches throughout Great Britain. The EMIDEC will also print out invoices and maintain personal accounts and statistics for each of the organisation's 30,000 customers and trade outlets.

EMIDEC computers have been selected by many other large organisations and Government departments including:

AIR MINISTRY · B.M.C. · SAINSBURY'S · BOOTS · R.A.O.C. BARCLAYS BANK · GLAXO · ICI (PLASTICS DIVISION) MINISTRY OF LABOUR · MINISTRY OF PENSIONS · B.E.A.



Write for illustrated literature giving full details of EMIDEC computers.

The "slave-hands" of an AI technician handle radioactive materials through a hot cell window 3½ feet thick. Woodcut by Edward Kysar.

Let A.I.'s experience guide your Nuclear Power Program

The largest privately-owned facility in the world for remote handling of radioactive materials is located at Atomics International's 290-acre field laboratory near Los Angeles. Here the men who pioneered the creative peacetime uses of atomic energy are applying their 14 years of experience to developing advanced nuclear reactors and associated equipment.

Much of AI's work has been on projects for the U.S. Atomic Energy Commission. This includes the Organic Moderated Reactor Experiment at the National Reactor Testing Station in Idaho and the Sodium Reactor Experiment in California. AI has also built and is operating SNAP II, a 100-kilogram prototype reactor designed to produce 3 KW of electricity for space vehicles.

With some of the most sophisticated facilities in the world at their disposal, the men at AI are now conducting studies for large power station reactors in the United States and Europe. Two reactors are now actually under construction under AEC programs—an Organic Moderated Reactor in Piqua, Ohio, and a Sodium Graphite Reactor in Hallam, Nebraska. Smaller research reactors have been built by Atomics International for Denmark, Germany, Italy, Japan, Puerto Rico and several sites in the USA.

For details contact: ATOMICS INTERNATIONAL, Canoga Park, California, USA. Cable address: ATOMICS.

appropriate forward sale of sterling and employed the sterling by making loans to local authorities, hire purchase finance companies and other borrowers prepared to pay rates that more than cover the cost of borrowing the dollars and of meeting the forward exchange operation. Such domestic lending of dollar deposits amounts to a minor part of the total business, which runs into the equivalent of some hundreds of millions of pounds. Three institutions that specialise in such business are reputed to have on their books dollar and other foreign currency deposits equivalent to about £200 million. The bulk of this is re-lent to other European bankers and merchants.

STOCK EXCHANGE

Boom Statistics

THE annual computation of "Interest and Dividends upon Securities quoted on the Stock Exchange, London," provides some measure of the size and shape of the London stock market without adding much knowledge of what happened on the floor of the house during the year. The latest edition puts the total market value of stocks and shares quoted on the London exchange on December 31st at £37,670 million. This is £6,994 million higher than it was at the end of 1958 and £6,683 million higher than at the end of last June. Almost all this increase is due to last year's boom in equity prices, especially after the election; the market value of ordinary shares rose by £6,782 million to £18,992 million over the calendar year.

* At June 30th. † In calendar year.

The total of gross interest and dividends paid out last year rose by 9.7 per cent from £1,406 million to £1,543 million. Equity shares accounted for a large part of this increase, with ordinary dividends going up by £86 million to £716 million. Interest payments on loan capital rose by £51 million to £756 million, reflecting the maturing of Government stocks with low coupons and their replacement by stocks bearing higher rates. The compilers of the statistics estimate that of the gross interest of £1,543 million not more than £595 million net flowed into the pool of personal disposable income. They also estimate that the loan

Legislating for Traffic

ONE crucial difference between the traffic problems of London and those of most other large British cities is that responsibility for doing something to cope with traffic in the capital and power actually to do it is split up among too many bodies. For nearly forty years the Minister of Transport has been the nominal traffic authority for the London area. In practice, he can do little to discharge that duty without the co-operation of the many individual local authorities, who understandably tend to be guided by the more parochial needs of their own bailiwicks. But even before that stage is reached, the Minister is often obliged to go through the motions of consulting with the London and Home Counties Traffic Advisory, a 45-strong body representing an even greater number of interests.

Any permanent reform, drawing together these powers and duties, must presumably now await the report of the Royal Commission on London Government. The Ministry of Transport, in its own evidence to the Commission, argued strongly for a central traffic authority, with the power to follow through its own traffic regulations and ensure that the concomitant street works are in fact provided. This new body would not have planning and construction powers, nor would it be set up to control the provision of public transport. In short, it would do the job of the Traffic Department of many American cities.

LAST December, the present Minister of Transport, Mr Marples, successfully flew a kite in a House of Commons debate about such a unit being set up, experimentally, before the Commission reported. He envisaged the Ministry concentrating upon "a manageable area (of London)... for a limited period, say a couple of years or so," making some impact upon it, and thus by example hoping to stimulate similar ideas and action in other cities. He has since established in the Ministry a "London Traffic Management Unit," with Dr Charlesworth from the Road Research Laboratory installed as its head. In the Road Traffic and Roads Improvement Bill, published last Friday, Mr Marples offers proposals for enhancing the Ministry's, and thus the unit's, powers of executive action.

The "manageable area" of London turns out to be the whole of the London traffic area and the "limited period" will in fact be five years. But no one need complain about that: neither limit would be realistic if it were set much lower. Nor is there much room for criticising the principal extra powers being sought. The first would relieve the Minister of the compulsory obligation to consult the London and Home Traffic Advisory Committee both before issuing traffic regulations and before authorising a local authority to introduce a parking meter scheme. The second would strengthen his hand in getting local authorities to fall in with his particular schemes for controlling traffic. He would be able to invite them to carry out certain street works and improvements and, if they failed, to do the work himself and charge the cost to the council.

The Minister of Transport, moreover, would be able to introduce parking meter schemes in London wherever he thinks they are needed, and not just for the purpose of experiment or demonstration, if local authorities fail to take the initiative. He would also be empowered to arrange for temporary off-street parking to be provided, and charged for, for special occasions (such as Christmas shopping and the Motor Show). Provision is also made for pedestrians to be included in London's traffic regulations (and fined for offences) and for certain vehicles—doctors' cars?—to be excluded from waiting bans when they carry an appropriate identification ticket.

ONE rather surprising provision in the bill's proposals that will apply both to London and elsewhere (and permanently, not just for five years) is the power to introduce "parking disc" type schemes. A parking disc is a device a driver himself displays on his vehicle to show the time he arrived or the time he ought to leave a parking area, or both times. As Parisians have quickly learnt, these schemes are not easy or cheap to enforce. Something that may be less to the liking of the motoring lobbies is the repairing of the weakness in the 1956 Act that concerned the power to levy a charge for towing away vehicles that are causing an obstruction, are illegally parked, or appear to be abandoned. These charges will now be based upon a prescribed scale (rather than upon cost which has been found hard to ascertain and prove) and, furthermore, abandoned vehicles will now be sold off (after a suitable interval). Finally—and this will apply only for five years—an attempt is made to improve the commercial prospects of garages that local authorities provide by permitting them to let off other parts of the building for other purposes, lease the parking floors to a garage operator, and provide or arrange for petrol, oil and similar supply facilities to be installed. These changes all seem sensible. They are expected to come into force, mostly, next September.

stock holdings of institutions (excluding investment trusts) are of the order of £7,000 million and that their holdings of quoted shares are not less than £360 million (which they admit may be an under-estimate).

FROZEN FOOD

Birds Eye View

SALES of frozen food last year amounted to £36 million, twice as much as in 1957, and it is believed that nearly three-quarters of the business was done by the Unilever subsidiary, Birds Eye. This company, which has invested £10 million in the industry over the past six years and plans to spend another £7 million over the next three, has good reason to believe that it will be able to hold on to its share of this very fast-growing market: its selling methods have ensured that its displays dominate about two-thirds of the frozen food cabinets in the 65,000 shops which now have them.

Although the number and the average size of the cabinets installed are both increasing rapidly (there should be 85,000 cabinets by 1962), the fight for space inside them is intensifying. A Swedish firm, Findus, is holding its own with five leading domestic producers, but all come a very bad second to Birds Eye. Distribution of Birds Eye Foods is carried out through S.P.D., another Unilever subsidiary. Other market leaders have turned, or are turning, to direct distribution, but the large producers using wholesalers for distribution have exclusive dealing arrangements with them, and any newcomer would have to set up his own national marketing system or buy over an already committed wholesaler—both expensive processes.

The scale of Birds Eye's production should give it another natural advantage, the ability to keep prices down. The company has not been slow to do this in the past. Findus has the dual advantage of cheaper Continental raw materials and the Outer Seven agreement. But the whole market seems likely to keep up its present tremendous rate of growth for some time, both in its traditional fields of peas and fish fingers to housewives and in the new, mushrooming, fields of catering packs, pre-packed whole "convenience" meals, and new and more exotic kinds of delicacy.

RAW SUGAR

Quotas Unchanged

TO the surprise of many traders, the International Sugar Council resisted pressure for an increase in export quotas at its meeting in London last week. It took the sensible view that as prices were still well below the optimum range in the sugar scheme, quotas should be kept at 85 per cent of the basic export tonnages. Less surprisingly, the council was not enthusiastic about Cuba's ploy to have its sales to Russia of one million tons a year excluded from the scheme. Had Cuba gained this point, it would in effect have obtained a unilateral increase of a million tons in its quota. But Cuba did not come away empty-handed. Its desire for bigger exports was satisfied—for the time being at least—by the council's decision, ahead of time, to reallocate to Cuba and others about 750,000 tons of sugar that it believes some exporters will not be able to supply this year. Thus the effective supply was increased without increasing quotas, and Cuba can export an extra 400,000 tons.

The substantial increase in demand for sugar on the "free" world market this year is reflected in the council's latest estimates. Russia, an exporting member, now appears as a net importer of 800,000 tons and east Germany, another exporter (but not a member), as a net importer of 40,000 tons. These increases are partly offset by reductions elsewhere, so that total net requirements are raised by 515,000 tons to 6,365,000 tons. With exports from participants currently restricted to about 5,630,000 tons, plus likely exports from non-participants, the exportable supply becomes 5,985,000 tons, leaving an apparent deficit of about 380,000 tons.

The market was impressed by the council's firmness, as it was also impressed by the fixing of the remaining 425,000 tons of Cuban sugar bought by Russia this year at a price of 3.06 cents a lb, and the spot prices recovered to 3.10 cents. But late this week prices fell back, partly because the Cuban government, contrary to previous statements, has now increased the quantity of sugar to be produced this year by 200,000 to 5.7 million tons. However sensible this decision may be in Cuba, it sapped the market's confidence just when sugar seemed to be looking up.

SHORTER NOTES

New net savings through life assurance rose by 15 per cent in 1959 to the record level of £423 million. Of this total £36 million (against £32 million) came from overseas business. Total invested funds held by life offices amounted at the end of last year to almost £5,000 million.

★

In future when a company applies for a stock exchange quotation for the first time it will be required by the Stock Exchange Council, if it carries on two or more activities, to indicate the relative importance of each activity. This information will be required in cases where the activities are material in terms of either profits or assets employed.

★

An exhibition of business archives has been held in London by the National Book League, and it is hoped that it will later tour the provinces. The exhibits suggest that so far industry has shown little interest in the historical records that it may possess; destruction has been the normal fate at the hands of tidy-minded office staffs. This exhibition may help industry to realise that its records can be of historical interest, and not just for the preparation of the standard, brightly dreary, company history.

★

Imperial Chemical Industries has announced that the second stage of its Severnside development scheme will involve the installation of plant for the manufacture of ammonia and ammonia products at a cost of over £10 million. The plant will use oil as raw material, but the source of supply has not yet been announced. The plant will have a capacity of 100,000 tons a year, and will come into operation in 1963; following the plant opened at Shellhaven a year ago, it will add considerably to British production of nitrogenous fertilisers. ICI is also expanding the capacity of its methanol plant at Heysham by 45,000 tons by 1962.

★

Sharply increased profits have been announced by two leading industrial holding companies. In 1959 the trading profits of **Sears Holdings** rose from £8,239,428 to £10,163,558 and the ordinary dividend is raised from the equivalent of 20 per cent to 25 per cent. A further 20 per cent. scrip issue is to be made and the directors forecast that the present rate of dividend will be maintained on the increased capital. **Thomas Tilling** has reported a rise in its gross profits from £2,607,723 to £3,706,258 and the dividend has been raised from the equivalent of 12.05 per cent to 17 per cent. There is to be a 10 per cent scrip issue and the directors hope to be able to pay dividends on the increased capital rates not lower than those for 1959.

COMPANY MEETINGS

BANK OF SCOTLAND

GENERAL EXPANSION OF BUSINESS

LORD BILSLAND ON THE RADCLIFFE COMMITTEE'S REPORT

The Annual General Meeting of the Proprietors of the Bank of Scotland will be held on April 19th in Edinburgh.

The following is an extract from the circulated statement by the Governor of the Bank, The Right Honourable Lord Bilsland, KT, MC, DL, LLD:

Conditions in banking have been favourable during the past year. The freedom to lend, which was restored to the banks in July, 1958, has continued and the level of bank credit throughout the country has increased considerably to the accompaniment of an expanding activity in trade and industry. In order to meet this demand for bank credit, the banks have realised substantial holdings of Government securities during the year. A satisfactory feature of the expansion has been that it has not caused any increase in commodity prices and the inflationary influences which have been so prominent in recent years appear, at any rate for the present, to have been held in check. Nevertheless, it has become apparent that a continuance of these trends towards expansion at their recent pace might, if not restrained, lead to difficulty in the future and, as a moderating measure, an increase in Bank Rate of one per cent to its present level of five per cent was made in January of this year. This has been followed by warnings from official quarters against over-optimism and more recently by a withdrawal of support from the gilt-edged market, which has had the effect of making further sales of these stocks by the banks for the provision of funds for lending purposes less attractive. It remains to be seen whether these measures, which appear to have been timeous, will in fact have the desired effect. It is to be hoped that they may render unnecessary more stringent financial discipline. One must, however, view with some concern the effect of the additional strains to be put on the economy by pending wage increases and the increase of £340 million in the estimates of national expenditure for the new financial year.

The publication of the Radcliffe Committee's Report on the Working of the Monetary System and the recent issue of the evidence on which the Report is based have brought to public notice an exhaustive survey of all aspects of the country's financial system. Sufficient time has not yet elapsed for the lengthy evidence to be fully studied, but the Report in its references to banking makes certain comments of considerable importance to the banks.

Not unnaturally, our chief interest in the Report is centred on its review of Scottish banking conditions and we find satisfaction in the fact that the Committee have no criticisms to offer of the system as it now operates. The right of the Scottish banks to issue their own notes is re-affirmed and a wider understanding of the difference which exists between the financial structure of banks in Scotland, as compared with those in England, has emerged. This may be of particular importance should measures to restrain bank lending require to be re-introduced. The findings of the Committee would appear to show that measures of restraint which might apply in England might not be suitable for application in Scotland without some modification.

The Report stresses the desirability of the banks as a whole being willing to lend for a certain section of their advances on a long-term basis. At the same time it points out that the Scottish banks have been more ready to acknowledge "the existence and propriety" of some of their long-term lending than appears to have been the case in England. Recognition of the fact that certain advances are essentially of a long-term nature is no new concept in this Bank and to the extent that such advances have been made, this practice has proved beneficial both to our customers and to the Bank. The Report also refers to the need for the banks to establish a system for the handling of payments by means otherwise than by the use of cheques. This matter is at the present time receiving close study and will have an important part to play when the payment of wages by cheque, or by transfer to the wage-earner's account, becomes more universal. The large-scale adoption of this system of payment of wages is bound to have repercussions of considerable importance to the banks in their staffing arrangements and hours of business, a matter which the banks are actively considering.

BALANCE SHEET

The Bank has experienced a general expansion of business during the past year and the consolidated net profit earned of £914,700 shows an increase of approximately £210,000. The subsidiary Company, North West Securities Ltd., has made an important contribution to these improved results.

In September, 1959, resolutions to increase the Capital of the Bank were approved as a result of which £900,000 of the Reserve Fund was capitalised and distributed as a bonus of £1 of Stock for every £5 Stock held. At the same time, an issue of a further £900,000 of Stock was made to Proprietors at £2 10s. per £1 Stock. These issues were made in order to bring the paid-up Capital into better relationship with the increased liabilities of the Bank and to provide additional resources for future development. As a consequence, the number of the Bank's proprietors has increased by approximately nine hundred to a total of over eleven thousand five hundred, of whom over eighty per cent own holdings of less than £600 of Stock. The Bank has announced that from and after April 4, 1960 the fee for registration of transfers and all other notifications of change of ownership has been abolished.

The Capital now increased to £6,300,000 ranks for the final dividend of eight per cent actual, now recommended—the same rate as the interim dividend paid on the smaller Capital of £4,500,000. This dividend requires, after deduction of income tax, £308,700—the interim dividend having absorbed £220,500—and there has been applied to Reserve Fund £150,000, to Reserve for Contingencies £150,000 and to Pension Fund £80,000, leaving a surplus of £5,500 to be added to the balance carried forward, which amounts to £262,792.

In accordance with the Directors' intentions, announced when the new issues of Capital were made, £900,000 has been transferred from Contingency Reserve to the Reserve Fund to replenish the sum capitalised. In addition there has been transferred to Reserve Fund the premium of £1,350,000 on Stock issued and after the transfer of £150,000 from the year's profits the Reserve Fund amounts to £6 million.

A further increase in Deposits of over £9 million took place last year, the total recorded in the Consolidated Balance Sheet being £183,443,930. The great bulk of this increase is well distributed throughout the branches of the Bank and is partly accounted for by an increase of approximately four and one half per cent in the number of active account-holders during the year. Note Circulation is greater by some £400,000 and a large increase in Acceptances, Guarantees, etc. on behalf of customers has brought the total for this item up to £31 million, nearly double its level a year ago.

Advances have also risen during the year, banking advances being over £5 million higher and hire purchase advances nearly £2 million up, the total of these two items amounting to £61,735,934. Investments, which as customary appear in the Balance Sheet at less than market value, are £1,200,000 greater than last year and the Bank's strong liquidity position is fully maintained, the holdings of Cash, balances with other Banks, Money at Call, etc. being together £82,912,921.

HIRE PURCHASE SUBSIDIARY

The past year is the first complete year of ownership of the Bank's hire purchase subsidiary company, North West Securities Limited. Important progress has been achieved in the extension of the company's branch system the full benefits of which have yet to be forthcoming. The outlook continues to be promising in spite of increasing competition in the industry and your Directors feel amply confirmed in their decision to extend the Bank's services into the hire purchase field by ownership of this company.

PERSONAL LOANS

The adoption by the Bank of a scheme for personal loans was intimated last year. The Bank's experience of this scheme has been favourable. There is now evidence which shows that by this scheme the Bank is fulfilling a need for financial assistance to a section of the community which might not otherwise have been able to obtain it and is thereby acquiring many new customers. There is a constant and steady demand for these loans, but as they are repayable in monthly instalments, the total outstanding is not important in relation to the total advances of the Bank.

CENTRALISED ACCOUNTING

The announcement a year ago that the Bank had installed an electronic centralised accounting system evoked great interest. A year's experience of the operation of the system has confirmed its efficiency and economy. The scope of the system is being gradually enlarged and the transactions of nine offices are now being recorded by the installation.

JAGUAR CARS LIMITED

ANOTHER RECORD YEAR

SIR WILLIAM LYONS' STATEMENT

The Twenty-sixth Annual General Meeting of Jaguar Cars Limited was held on March 31st at the registered office, Browns Lane, Coventry.

Before opening the meeting, Sir William Lyons said: I would like to refer to the sad loss which our Company has sustained by the untimely death of our Director of Home Sales, Miss A. Fenton. For over 35 years Miss Fenton served me, personally, and our Company, with such single-minded loyalty and devotion to duty that I find it difficult to pay tribute to her in adequate terms.

I feel sure that you will wish to join me in offering sincere condolences to her relatives, and will agree that our deep regret at the loss of a loyal colleague be recorded in these proceedings.

In his speech, which was circulated with the Accounts, Sir William Lyons, the Chairman, said:

The trading profit shows a substantial increase compared with last year, and the turnover is a record in the history of the Company. The reduction in the rate of income tax, and the re-introduction of Investment Allowances on plant and machinery have resulted in a proportionately lower charge for taxation than that of last year. Heavy expenditure on plant and buildings has increased the Depreciation Charge but the Net Distributable Revenue after these charges is more than doubled.

It is our intention to recommend a dividend of 20 per cent on the Ordinary Shares. This compares with a final dividend of 17½ per cent and a special interim dividend of 12½ per cent which, together, made a total of 30 per cent paid last year, but the effective rate will now be double that of last year as it is payable on Ordinary Capital increased by the scrip issue of two for one.

STRONG FINANCIAL POSITION

Our Credit Bank Balance and Tax Reserve Certificates show a healthy increase, but I should warn that trading in the Motor Industry has a momentum which can fluctuate appreciably. It will be noted that our financial position is a strong one; this I must stress is essential to our future prosperity for, in spite of successful existing models, it is necessary constantly to plan and introduce new models requiring extremely heavy expenditure on tooling and new plant. Further, we have plans for expansion, as indeed we must have if we are to maintain a competitive position in the markets of the world.

During the year we have purchased the factory we occupy at Coventry and which is one of the finest and most modern in the country, being situated on some 78 acres including 10 acres of Recreation Park and having a covered floor area exceeding one million square feet.

The re-introduction of Investment Allowances was welcomed for its effect on our tax liability and as a sign that the Government recognise the need for Capital Expenditure on the latest equipment in order that we may maintain our competitive position in the world's markets. It is interesting to note that our Capital Expenditure in the last five years has totalled over 2½ million pounds.

NORTH AMERICAN DEVELOPMENTS

Our Subsidiary Company in North America, Jaguar Cars Inc., has had a profitable year, and is now deriving considerable benefit from the organisation it has built up, and I am pleased to report that its sales record continues to be very satisfactory.

During the year a new Subsidiary of our North American Company was formed, Leyland Motors (USA) Inc., following an agreement with Leyland Motors Ltd., England, for our American organisation to market Leyland commercial transport vehicles, which represent the highest standard of British Engineering, throughout the States. We look forward to successful results from this association.

Since entering the Mexican market where excellent facilities for local assembly have been established our exports to that country have been considerably increased.

I reported last year that, notwithstanding the establishment of the European Common Market, I could see no indication at that time of any recession in the demand for our cars. That confidence has been more than justified for, during the 1959 season, our exports to Europe as a whole rose substantially, and in the Common Market area alone sales were increased by 10 per cent in the face of increased competition resulting from the Common Market agreement.

We have welcomed the formation of the Outer Seven Group consisting of Norway, Sweden, Denmark, Portugal, Switzerland, Austria and the United Kingdom, and we view optimistically the expansion of our sales within this group where the progress made has been encouraging. It is to be hoped that the time is not too far distant when there will be a unification of the Common Market and Outer Seven groups which will lead to a further expansion of trade.

Unfortunately, the South African Government have reinstated their policy of fixing ceiling prices, and this has had the effect of eliminating the entry of all our models with the exception of the 2.4 litre. New Zealand remained a dull market during the 1959 season, but the position, I am glad to say, is improving.

Australia has continued its demand to the maximum which their licensing system has permitted and has proved a valuable market, but we remain hopeful that a more liberal policy of import licensing will come into operation in the near future.

During the year the Purchase Tax on cars was reduced. It is the hope of our Industry, indeed it is regarded as essential to its continued prosperity, that further reductions will be made in order that eventually we may be placed on equal terms with our competitors in other countries.

FUTURE OUTLOOK

I ended my remarks last year on the hopeful note that we could look forward to the future with confidence. The increasing demand for our cars throughout the world justifies continued optimism, but I cannot help but feel that the failure of Trade Unions—with whom we have every desire to co-operate—to discipline their members in the observance of National Agreements, is a most serious threat to future prosperity. If our competitive ability in the world's markets is lost, I believe this will be the reason for it. It has been said that Management is at fault in their labour relations. Whoever is at fault, differences should be resolved through the procedure of honest negotiations with goodwill on both sides. I do not, however, question the right of workers to withdraw their labour after proper negotiations through the agreed channels have failed to resolve differences.

I must express appreciation to all staff and workpeople for again achieving record production, and I also wish to place on record appreciation of the co-operation given by our Distributors and Dealers and our Suppliers.

The retiring Director, Mr W. M. Heynes, was re-elected.

The report and accounts were adopted.

TAIPING RUBBER PLANTATIONS

HIGHER PROFIT AND DIVIDEND

The forty-ninth annual general meeting of Taiping Rubber Plantations Limited was held on April 4th in London, Mr W. Anderson (the chairman) presiding.

The following is an extract from his circulated statement:

The profit earned during the year 1958/59 was the best since the Korean War boom year of 1950/51. Accounting for this were the higher average price of rubber, the larger crop harvested and the increased income from tin mining tribute. The net average price realised for sales of all grades of rubber was 3½d. per pound above the corresponding figure for 1957/58 but, despite higher wage rates following the rise in the price of rubber and heavier charges for export duty, the cost of production per pound of crop benefited by the increased productivity and averaged out at about the same level as the preceding year.

From our point of view as rubber growers the most satisfactory aspect of the year's working was the progressive increase in the crop of rubber harvested—1,795,000 lb against 1,466,000 lb in 1957/58 and 1,344,000 lb in 1956/57. The Board is adhering to the programme of rejuvenation which was laid down several years ago and thus in the present financial year we plan to replant 169 acres of old rubber followed by 116 acres in 1961, which will give us a total of 1,600 acres of young pedigree rubber, of which by then some 900 acres should be mature and giving a good return.

In arriving at a decision to recommend payment of a dividend of 15 per cent, the highest for the past 33 years, your Directors were not unmindful of the work still to be done to bring the property into first-class condition but there has been no encroachment on the Company's liquid resources. It was felt moreover that the shareholders should have the largest slice of the cake possible after the rather modest returns of recent years. Results for the current year so far are encouraging, both from the point of view of price and output of rubber. If this position is maintained your Board hopes to be able to consider the payment of an interim dividend in August or September next.

The report was adopted.

SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY

OUTSTANDING FIGURES FOR NEW BUSINESS

BUOYANT PREMIUM REVENUE

The One Hundred and Thirty-fourth Annual General Meeting of the members of the Scottish Amicable Life Assurance Society was held in the Merchants' House, Glasgow, on April 6th, Mr J. B. Findlay, CBE, DL (Chairman of the Ordinary Directors) presiding.

In moving the adoption of the Report and Accounts, the Chairman said that new individual assurances had been issued for record net sums assured of £15,500,000—a figure which exceeded that for the previous year by £2 million. He welcomed this evidence that the excellent value offered by the Society to its members for personal life assurance was more widely appreciated every year. In addition, 54 new group pension and life assurance schemes had been arranged, providing sums assured of more than £8,500,000 and pension benefits exceeding £1,700,000 per annum. Schemes for works employees had been quite a feature of the Society's group pension and life assurance activities in the last year or two, and considerable experience had been acquired in handling such schemes for very large industrial concerns. These outstanding figures for new business (both ordinary and group) were reflected in the Society's premium income, which had risen by more than £1,500,000 for the second successive year and now approached £11,500,000.

Claims by death showed very little change from the figures for the previous year—and, once again, the mortality experience had been very favourable. The Society's funds had increased last year by almost exactly £9 million to rather more than £74 million. It was notable that, during the first four years of this quinquennium, the funds had increased by no less than £30 million—and that during this same period interest earnings had risen by fully 10s. per cent. The quinquennial distribution of divisible surplus to with-profit policyholders would fall due at the close of this year. The first four years of the quinquennium had provided a very high level of profit—so much so that, at July 1st last year, the General Board decided to increase the rate of interim bonus from 45s. per cent to 50s. per cent per annum. This record level of interim bonus augured well for the forthcoming bonus declaration.

STATE PENSION SCHEME

While the graduated State pensions introduced by the National Insurance Act, 1959, would not come into force until April, 1961, the option to contract out of the provisions of the Act, so far as these graduated benefits were concerned, was a matter requiring the immediate attention of employers. One thing that might easily be overlooked in the mass of detail surrounding this subject was the relatively small size of the sums involved. Most employers would find that, on the new graduated scale, their National Insurance contributions were increased by less than 1 per cent of salaries, while the graduated pensions would be very small for many years ahead. These considerations had led many employers with existing pension schemes to accept the new graduated scheme as another small addition to the basic national pension. Employers who took this view would no doubt continue their own pension schemes side by side with the State Scheme and would thus retain their freedom to adapt or develop their schemes according to their own policy and the needs of their employees. The introduction of State graduated pensions proved to employers who had no pension scheme of their own that pensions related to earnings must be regarded as part of our way of life. The relatively low level of benefits in the State Scheme left plenty of scope for supplement above the subsistence level. Those employers who felt that the time had come to set up a pension scheme complementary to the State Scheme would find the technical knowledge and wide experience of the Society's Pensions Department readily available to them.

AUSTRALIAN VENTURE

Turning to what might well prove to be a maior event in the Society's long history—the decision to transact business in Australia—it had been felt for some time that Australia, with its rapidly expanding economy and increasing population, might provide a fruitful field for development. Accordingly, a year ago, two officials had gone to Australia to investigate the matter. On their return they had reported favourably and enthusiastically on the project, and the Directors had decided that the Society should begin operations there as soon as was practicable. Offices had already been opened in Melbourne and Sydney where business had been transacted since the beginning of this year. This new venture had excellent prospects and over the years it should result in increased prosperity for the Society.

The Report and Accounts were adopted.

THE CHARTERHOUSE GROUP

PROSPECTUS PROFIT AND DIVIDEND FORECAST EXCEEDED

"1959 was a great year for Charterhouse"—says Sir Nutcombe Hume, K.B.E., M.C. (the Chairman) in his Review to Shareholders "it saw the fulfilment of plans to rearrange and enlarge the Group and to float it as a Public Company amongst investors; and whilst it might be presumptuous to claim that its shares can yet be described as a 'Blue Chip' we hope and believe that they will be so regarded in due course."

"The public offer for sale of ordinary shares in May 1959 has resulted in a spread of the capital of the Charterhouse Group amongst over ten thousand investors." Sir Nutcombe added that it therefore gave the Directors particular pleasure to submit the first accounts since that event, which when adjusted to the basis used in the offer for sale, revealed a profit before taxation in excess of the estimate given in the prospectus. In consequence they felt able to recommend a dividend of 8 per cent by comparison with that of 7½ per cent then envisaged. He continued: "In these days no Board likes to suggest an increased dividend except when they can feel reasonably confident that it can at least be maintained. As your Directors see the future, the current year's profits should again be higher, unless of course some happenings beyond their control should supervene."

"There is so much activity in the field of amalgamation and so-called 'take-over bids' that the prices at which the control of whole businesses change hands have in many cases become quite unrealistic," commented Sir Nutcombe. "We shall continue to exercise the same care as always in buying or subscribing share capital of industrial companies and cannot therefore expect much in the way of the acquisition of new subsidiaries whilst values are at their present level. Because our Group already contains a number of successful and relatively large companies which can form the nuclei of growth by amalgamation our best growth prospects lie in that direction."

Reviewing developments during the year, Sir Nutcombe said that since the offer for sale they had added a Hire Purchase Company to the Group. During 1959 their wholly-owned subsidiary S. Japhet & Co. bought 62 per cent of the ordinary share capital of Noble Lowndes Finance—the name of which had been changed to Charterhouse Credit Company.

Commenting on Charterhouse Canada, the Chairman said that Company had last year again done better in circumstances which were by no means easy, and he added: "I think we can look forward with quiet optimism to its continued growth."

After paying a tribute to the outstanding work of the management "team," Sir Nutcombe concluded: "Given a climate in which the business of this country can develop and prosper, I am confident that our Company will participate in it."

THE PATALING RUBBER ESTATES LIMITED

MR H. B. E. HAKE'S STATEMENT

The Fortieth Annual General Meeting of The Pataling Rubber Estates Limited will be held on April 25th in London.

The following is an extract from the circulated statement by the chairman, Mr H. B. E. Hake, CBE, for the year ended October 31, 1959:

Our annual meeting is later than has been customary in past years: this year we publish the Strathisla accounts with our own and as a result of our recent acquisition of Jugra Land & Carey Limited, to which I refer later, group accounts will also be required in future years. No dividend has to be considered at this meeting as a second interim of 40 per cent in lieu of a final for 1958/59 was paid in January 1960 making 55 per cent against a total of 35 per cent previously.

ACQUISITIONS

Shareholders were advised on December 17, 1959, of our offer to acquire the issued capital of Jugra not already held by us. We now hold over 90 per cent of Jugra's issued capital and are taking steps to acquire the remainder. The acquisition of Jugra brings the total group planted acreage to roughly 45,000 acres, including 6,500 acres of coconuts and 900 acres of tea, and plans for extensive oil palm development on Jugra have already been formulated. Your Board considers Jugra a valuable acquisition and with further development of its jungle reserves offers prospects of highly profitable working.

The Strathisla Company, the entire issued capital of which was acquired for cash during 1959, went into voluntary liquidation in November 1959. That Company's estate and other assets have been transferred to Pataling. Strathisla's accounts cover the 16 months to October 31, 1959. Rubber production of 1,721,112 lb. for that period was sold as crepe, RSS and in latex form.

ESTATES

At all the Company's estates field conditions have been maintained at the usual high standard; particular attention has been given to the development of our valuable immature areas which at October 31st last amounted to 8,300 acres or about a third of total rubber planted.

Chuo, an isolated division of North Labis estate in Johore, unpopular with labour and unattractive as a replanting proposition, comprising some 1,500 acres of mainly old rubber, was sold in September, 1959, for approximately £126,000 (net) and has gone towards restoring cash resources used in purchasing Strathisla.

Our 1959 plantings of 1,300 acres include over 400 acres of new extensions. Having now replanted all our poorest-yielding old rubber, we are able to reduce Pataling's yearly programme to 800 acres. Our remaining areas of unselected rubber are, for their class, high-yielding, and with judicious exploitation of their bark reserves will continue to produce economic crops until finally replaced by modern material.

ACCOUNTS

The rubber crop for the year of 14,517,712 lb. (12,139.915 lb.) does not include that produced at Strathisla, but it includes the crop for a full year from Kuala Kubu and for ten months from Chuo.

Profit before taxation was some £330,000 more than in 1957-8, but taxation having taken an extra £110,000 the net profit at £538,000 is up by about £220,000. Appropriations to Capital and Replacement reserves total £260,000 and after allowing for dividends totalling 55 per cent absorbing £250,000 the amount carried forward is £176,000.

FUTURE PROSPECTS

For the current year the Company's rubber production including Strathisla's should top the 16 million lb. mark while Jugra's rubber crop should be about 6 million lb. A small proportion of Pataling's crop has been sold forward at satisfactory prices. Rubber outputs will continue to increase and it is expected that by 1965 group production will be approaching an annual rate in the region of 30 million lb. by which time the first oil palm areas planned for Jugra should be in production to augment group profits. Given the expanding consumption of rubber which the experts have forecast for the next few years and natural rubber maintaining its share, there should be a promising return on the Company's capital.

GENERAL INVESTORS AND TRUSTEES

HIGHER REVENUE AND DIVIDEND

The fifty-third annual general meeting of General Investors and Trustees, Limited was held on March 31st in London, Mr R. G. Mills (the chairman) presiding.

The following is an extract from his circulated statement:

The revenue for the year is better than was expected at the date of my last statement and you will observe the substantial appreciation in the value of our investments. These results are most satisfactory, but I suggest less significance should be attached to a valuation made on any particular date than to a steady annual growth in income. We recommend an increase in the total dividend for the year of 3 per cent.

Calculations have been made to ascertain the experience as regards income and capital value of anyone who invested £1,000 in the Company's Ordinary Shares in March, 1951, on the basis that he retained the free issues made in 1954 and 1956 and sold sufficient of the rights to new Ordinary Shares offered in 1952, 1955 and 1956 to take up the balance, thereby maintaining his own cash investment at £1,000. Income over the ten year period has multiplied 3.97 times and the value of the original £1,000 is now £4,940.

The estimate of income for the current year indicates that there should be a further improvement in revenue but not on the scale shown in the accounts under review.

Addressing the Meeting The Chairman stated that the Board had under consideration a Rights Issue to the Ordinary Shareholders the terms of which will be notified to them in due course.

The report was adopted.

THE NATIONAL MUTUAL LIFE ASSURANCE SOCIETY

ANOTHER RECORD YEAR

SUMMARY OF MR KENNETH MOORE'S STATEMENT

The Annual General Meeting of The National Mutual Life Assurance Society was held on April 5th at the head office of the Society, 39 King Street, London, E.C.2, Mr Kenneth A. E. Moore, FCA, the chairman, presiding.

In a statement which had already been circulated to the members of the Society together with the annual report and accounts for 1959, Mr Kenneth Moore said that the members would find the modernised form of the accounts more intelligible than the semi-statutory form hitherto followed.

The accounts showed that the Society's securities amounting to £14,755,630 at middle market prices were divided between equities at £5,677,242 and fixed interest stocks at £9,078,388. During the past year, appreciation and realised profits amounted to the exceptionally large figure of £1,682,037, so bringing the reserve fund up to £3,182,037. The directors had thought it prudent to regard £1 million of this in effect as a general reserve and to earmark the balance of £2,182,037 as a specific reserve against future fluctuations in market values. This investment reserve represents nearly 15 per cent of the total marketable securities or rather more than 38 per cent of the figure for equities.

Interest earnings are now shown on the more generally employed and more realistic basis of a percentage on the life assurance fund (excluding reversions) and not, as hitherto, on a figure including the reserve fund. On the new basis the rate for 1959 was £5 19s. 6d. per cent before deduction of income tax and £4 16s. 0d. per cent net.

NEW BUSINESS

The new business for 1959 at £5,674,000 gross less £1,700,000 reassured was the highest in the Society's history.

The next valuation is not due until the end of the current year but the usual interim internal valuation at the end of 1959 indicated trading profits at a satisfactory level. Interim bonuses continue to be paid at 52s. 6d. per cent per annum compound on whole life assurances, 47s. 6d. per cent per annum compound on endowment assurances and 20s. per cent per annum compound on the low-premium series.

Mr Moore concluded his statement by placing on record the thanks of the directors to Mr M. H. Oram the actuary and manager, and to the officials and staff throughout the organisation for their contribution to the satisfactory results achieved.

The report and accounts were unanimously adopted.

Immediately following the close of this meeting an Extraordinary General Meeting was held and special resolutions were passed effecting a number of amendments in the Memorandum and Articles of Association; it had been felt that certain amendments were desirable for the efficient conduct of the Society's business.

BAKELITE LIMITED

ALL PREVIOUS RECORDS SURPASSED

MR STANLEY ADAMS ON HIGH LEVEL OF TRADING

The following is a summary of the Chairman's statement circulated with the 1959 Report and Accounts prior to the thirty-fourth Annual General Meeting of Bakelite Limited, which will be held in London on April 28, 1960:

The sales and gross profit for the year under review constituted an all-time record. The trading profit for 1959 before taxation was £1,250,554 (£538,458) and after providing for Debenture Stock interest and taxation there remained a balance of £613,842 (£239,330). The proposed final dividend of 11½ per cent, together with the interim dividend of 6 per cent already paid, makes a total of 17½ per cent for the year, as compared with 15 per cent for the previous year.

TRADE REVIEW

The high level of trading activity which was maintained throughout 1959 resulted in an appreciably higher turnover both by weight and value than in 1958 or, in fact, any other year.

The heavy demands for our established products were maintained and there was a marked increase in the sales of our newer thermoplastics materials. In the polyethylene field our position was further improved and we are well placed to participate in the growing markets for this material. Sales of our VYBAK pvc materials had also expanded in spite of highly competitive conditions.

There are already signs of an improved position in the sales of our polyester resins which had previously been restricted by a worldwide shortage of one of the basic chemicals used in their manufacture. Our position in the phenolic moulding material field was maintained and there was every indication that the demand for these products would continue at a fairly high level.

Industrial laminated materials enjoyed a good year and it was confidently expected that this state would be maintained during 1960. The demand for WARERITE decorative laminates continued to grow and the new patterns introduced towards the end of the year are being very well received. WARERITE wallboard had also proved a very useful addition to our range and its end uses were becoming more numerous.

RESEARCH AND DEVELOPMENT

Considerable progress was made in improving and modifying our products, where necessary, to meet new applications. A number of our new materials have been successfully launched and it was expected that these would make an effective contribution to our future sales and profits.

OVERSEAS TRADING

Our overseas trading position had improved during the year and a determined approach was being made to expand the volume of our business in the world markets. Of particular interest was the completion of some large orders received from USSR. Close attention was being paid to the trading position in both the Common Market countries and the "Outer Seven."

Both our subsidiary and associated companies in India enjoyed a successful trading year and plans for further expanding their scale of operations are at present being progressed.

UCC

We continued to work closely with our American Associates, Union Carbide Corporation, and we welcome the periodic visits made by their executives.

PERSONNEL

There was no change in our directorate during the year, and the customary good relations continued between the Company and its employees. Management were mindful of the additional work which had been placed upon the employees in achieving the good results reported and wished to thank them for the way in which they had responded to these demands.

Mr Adams terminated his statement as follows: "We rejoice at our success, and we now go forward to face a new year which will certainly present its own problems, but which is one of promise and which we enter upon with considerable confidence."

FALCON MINES

The Fiftieth Annual General Meeting of Falcon Mines, Limited, was held on March 31st at Bulawayo.

Mr F. L. Wigley, Chairman, presiding, said: The Directors' Report and Accounts together with my Review of the Company's activities, which have been in your hands for some time, give full details of the operations of your Company for the year ended September 30, 1959, and I now propose to give you a brief account of the work done and the results obtained since the close of the financial year.

The tonnage milled at the Dalny Mine for the five months ended February 29, 1960, was 102,000 tons, which yielded 19,460 ounces fine of gold, equal to a recovery of 3.816 dwts per ton milled. The working profit at the mine for that period, based on a selling price of gold of 245s. 6d. per ounce was £61,408. In addition, £2,998 accrued from sales of gold at prices above 245s. 6d. per ounce in respect of gold produced during the three months ended December 31, 1959.

Regarding development, the total footage advanced during the same period was 4,519, of which 2,085 feet were sampled and 805 feet, equal to 38.6 per cent were payable, averaging 5.5 dwts per ton over a width of 66 inches.

At the Sunace and Bay Horse Mines the estimated working profits for the five months were £1,843 and £570 respectively.

The working profit for the three mines for the period was thus £65,819, excluding additional revenue which will accrue from the sales of gold at prices in excess of 245s. per ounce for the months of January and February, 1960.

On March 11th Dividend No. 13 of 6d. per share, equivalent to 10 per cent, was declared payable to Shareholders registered on March 31, 1960. This represents an increase of 2½ per cent (1½d.) per share compared with the dividend declared in March, 1959. Dividend warrants will be posted on or about May 9th.

The Report and Accounts were adopted.

ANGLO-SWISS SCREW COMPANY LIMITED

(Precision Turned Parts and Cash Tills)

MR FREY'S REVIEW

The forty-first Annual General Meeting of Anglo-Swiss Screw Company Limited was held on April 5th at West Drayton, Mr Oscar Frey, Chairman and Managing Director, presiding.

The following is an extract from the Chairman's circulated and spoken statements:

Sales in 1959 were a record but conditions remained very competitive.

Consolidated net profits were £108,000 before tax, an increase of 16 per cent.

Cash flow at £94,000 was 23 per cent up on last year. With 33⅓ per cent increase in sales stocks rose only 15 per cent, achieved largely by close purchase and stock control and also by suppliers quoting and maintaining reasonable delivery dates, although today steel supplies in particular are scarce and erratic.

In view of the strong financial position your Directors propose an increase in the final dividend to 7d. a share, less tax, making an effective total of 10d. a share for the year compared with 8½d. for 1958.

Resulting from the sale of certain investments there was also a realised capital profit of £26,980 and your Directors propose to make a special tax-free distribution of 6d. a share, absorbing £25,800.

If, as recommended, £35,000 is added to General Reserve, this becomes £155,000 and the Consolidated Capital and Revenue Reserves excluding Tax Reserve become £371,000.

Record output meant much hard work while in addition many problems arose from the acquisition of Aircraft General Supplies & Petronic Ltd. (AGS).

By the end of the year we had completed the transfer of AGS, including the production of the PETCO Cash Till, to our West Drayton works. With rationalisation and under more economical conditions a small profit was made by AGS in 1959.

The PETCO Cash Till at £18 is the lowest priced ticket issuing till on the market. While obviously very suitable for the smaller shop, it is instructive to note that a multiple organisation with a couple of hundred branches has recently ordered several tills for each shop. A great saving of time and effort is being achieved by installing the till at a number of strategic points throughout each store, so eliminating the need for a central cash desk.

Our Associate Company, British Engraving and Nameplate Manufacturing Co. (London) Ltd. is now in full production at Brighton and the Finchley Works have been closed. An extension is already being built and equipped, and although the year's results were good the liquid position remains very tight so that, as I forecast last year, we have foregone any ordinary dividend additional to our Participating Debenture interest.

Our order book is a record and sales are at a high level. Active trading can be expected for some time ahead, but if the Chancellor, to use the words of his Budget speech, takes "steps to restrain further expansion of private credit," there may be a reduced demand from some of the industries we serve.

I thank all employees and my colleagues for

the good results achieved, and I welcome the AGS employees who have joined us and thank them also.

The Reports and Accounts were adopted and an Ordinary Resolution was passed ratifying and confirming three Supplemental Service Agreements between the Company and the three Directors.

THE PREMIER INVESTMENT COMPANY

REMARKABLE INCREASE IN VALUE OF INVESTMENTS

MR P. L. FLEMING ON BOARD'S DIVIDEND POLICY

The sixty-eighth annual general meeting of The Premier Investment Company Limited was held on April 4th in London.

Mr P. L. Fleming (managing director), who presided, said:

You will have seen from the Accounts that the income was £435,000 against £385,000 in the previous year, so that we earned about 1 per cent more on equity capital 10 per cent larger than a year ago. This is so much a repetition of the improvement in your company's fortunes to which you must by now have become accustomed that it is hardly necessary to offer any comment on the Profit and Loss Account.

The Balance Sheet also looks much the same as a year ago, with the conspicuous exception of the value of our investments. This has risen from £6¾ million, which was an appreciation of 66 per cent on the book cost, to £94 million, which is an appreciation of 120 per cent. Even if we allow for a fall of about 5 per cent since the end of January this is a remarkable increase.

STOCK EXCHANGE PRICES

Owing to an oddity in the drafting of the 1948 Companies' Act an Investment Trust is obliged, alone among companies to publish a valuation of its Fixed Assets, which are its investments. If other companies were obliged to present an annual appraisement of their land and buildings, plant and machinery, ships or mines, shareholders would come to the natural and sensible conclusion that the whole process was a waste of time, because the value of these things should obviously be based on the profits they were capable of earning. That used to be the case with investments. When share prices were geared to income, or the expectation of income, it was reasonable to treat the Stock Exchange as a prophetic weathercock which indicated the wind of change, and to assume that high prices today meant high dividends tomorrow. But now that the new poor are chasing capital profits and the new rich are queuing up for the shares of famous companies regardless of yield it looks as if the factors that influence prices on the Stock Exchange are beginning to resemble the factors, whatever they may be, that influence prices at Sotheby's. The view of your Directors is that we shall do better this year than last year. In fact we feel pretty confident about that; but the very fact that we are maintaining the dividend at 14 per cent, instead of recommending an increase, indicates that we do not expect the rise in our income to be anything like as meteoric as that in the value of our investments.

STABLE DIVIDEND PREFERRED

You will appreciate that this habitual caution about paying dividends gives us just that little bit of elbow room without which we could not offer you these opportunities to subscribe for new shares at par; and we think that a stable dividend and an issue now and then is more to the taste of the average shareholder than a dividend which fluctuates. And we must obviously be getting near the time when we shall see fluctuations in our income. The fact that we in this country are raising our standard of living does not mean that we do not still have to earn our living; and there may be times when we have to spend less effort on selling to ourselves for deferred payment in pound notes and more effort on selling to foreigners for immediate payment in food; and that will have an unsettling effect on some industries. Hence the fluctuations. Fluctuations can only be got rid of in a planned economy; but the trouble about a planned economy is that foreigners may decide not to follow our plan—besides which people in this country have sufficient instinct for self-preservation to distrust planners, however inspired the planners themselves may imagine themselves to be, and however hard they may try to give a new look to Clause Four.

Hence, as I say, the fluctuations. But you can take it that there would have to be quite a serious, prolonged and (I may add) unexpected downward fluctuation in our income before we had even to begin to think about any reduction in your dividend.

The report and accounts were adopted and a resolution increasing the capital of the Company to £3 million by the creation of 2 million shares of 5s. each was approved.

JOHN EMSLEY LIMITED

IMPROVED TRADING RESULTS

The Thirteenth Annual General Meeting of John Emsley Limited was held on April 1st in Bradford, Mr Harold Jacques, FSAA (Chairman and Managing Director), presiding.

The following is an extract from his circulated review:

The trading result of the Group for the year ended November 30th last resulted in a profit of £66,186 (1958 Loss £148,770), after providing for Directors' Fees and Emoluments, Depreciation and Taxation, thereby increasing the balance of the Profit and Loss Account by £35,526, making a total on this account of £235,574 to be carried forward to next year.

The Directors recommend that, as two interim dividends on the Ordinary Shares have been paid, a final dividend be paid on the Ordinary Shares at the rate of 10 per cent actual, less tax, making a total of 25 per cent for the year.

The early part of the year was more or less difficult with the reducing values in wool, but as values became more constant, the position was somewhat improved, and today the problem is to give delivery as required by the customer. This is rendered difficult on account of the shortage of labour throughout the trade thereby causing delays in all branches. In regard to future trade there is a fair demand and margins are slightly better despite the intense competition; the export trade being still hampered with quotas and tariffs. The orders on the books show 30 per cent increase over the corresponding date of last year, and we should continue to get our share of the business available.

The report was adopted.

ERICSSON TELEPHONES

The Fifty-seventh Annual General Meeting of Ericsson Telephones Limited was held on April 1st in London.

Sir Harold A. Wernher, Bart, GCVO, TD (Chairman), in the course of his speech, said: The twelve months ended December 31st last was in many respects a difficult year. Labour costs increased considerably following the wage award granted in the engineering industry towards the end of 1958. The year's operations were also adversely affected by the Treasury cut in Post Office capital expenditure several years ago. The latter position is being progressively restored and during the next 2½ years it is planned to spend £270 million.

Our total sales were approximately the same as in 1958 but the profit margins on export sales were lower due to rather severe competition overseas. This set-back in our profit is a temporary phase and there are already signs of an improvement. We have a long way to go before we approach saturation point in the world's telephone needs and ancillary devices are constantly augmenting the demand.

The Trading Profit is £653,160, which compares with £1,002,396 in 1958. A considerable reduction in tax liability cushioned this recession and the net profit is £483,689 as compared with £466,020 in 1958. Fortunately the position has considerably improved during the past few months and with a good order book, allied to the present high level of world trade and full employment at home, I feel fully justified in ending on a note of confidence.

The report was adopted and the borrowing powers increased from £1,600,000 to £2,500,000.

APPOINTMENTS

UNIVERSITY OF GLASGOW

SENIOR RESEARCH SCHOLARSHIPS
RESEARCH GRANTS

The University of Glasgow has undertaken a programme of research on the International Relations of Scotland, i.e. on the influence which Scotland and Scotsmen have had on the cultural, political, economic, or military life of other nations, and the influences from other nations which have affected the life of Scotland.

Applications are invited for a Senior Research Studentship of the value of between £800 and £1,200 per annum, tenable for one year in the first instance but renewable for two further years. The holder will be expected to pursue his researches in archives and libraries abroad. Preference will be given to a suitably qualified candidate who proposes to work in the field of Scots-Canadian relations, but, failing such, candidates offering other programmes of work will be considered.

Applications (three copies) should be lodged, not later than May 1, 1960, with the undersigned.

Applications are also invited for Research Grants to enable suitably qualified graduates to pursue vacation research work on Scottish relations in European countries.

ROBT. T. HUTCHISON,
Secretary of University Court.

UNIVERSITY OF SYDNEY

LECTURESHIP IN SOCIAL ADMINISTRATION.

Applications are invited for the above-mentioned position. Applicants should have training and experience in the Social Science field, preferably Economic History with Sociology or Political Science.

The salary for a Lecturer is within the range £A1,500 x £A90 — £A2,100 per annum, plus cost of living adjustments (at present, £A34 p.a.), and will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of appliction may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on MAY 21, 1960.

THE UNIVERSITY OF MANCHESTER

EXTRA-MURAL DEPARTMENT

Applications are invited for the post of STAFF TUTOR for North-Western Derbyshire with the salary and status of either Lecturer or Assistant Lecturer in the University. Applicants should hold a good Honours degree in one of the following subjects: History, Geography, Social Studies, Philosophy, Politics. Salary scales per annum: Lecturer, £900 to £1,650; Assistant Lecturer, £700 to £850. Membership of F.S.S.U. and Children's Allowance Scheme. Initial salary and status according to qualifications and experience. Applications should be sent not later than April 2, 1960, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

For further appointments and other classified advertisements see pages 209, 210 and 211

COMPANY AFFAIRS

Vauxhall Expands

LAST year Vauxhall began to profit from its expansion programme. Profits before tax of £13,481,680 were more than twelve times those of 1958 and the highest that the company has ever earned; but profits after tax at £6,427,892 were still lower than those earned in 1954 and 1955. Net profits as a percentage of gross assets employed was much smaller: in 1954 it was 38 per cent, in 1955 24 per cent, and in 1959 10 per cent. This broadly represents the difference between running a plant largely built before the war well above its nominal capacity and operating a new plant at about its nominal capacity. Last year 246,085 vehicles were made in a plant designed to produce 250,000; this year, by installing extra machinery, engaging more workers and working overtime, 300,000 should be made. Sales in 1959 were worth £130.1 million, £35 million more than in 1958. The gross profit margin on sales was 10.4 per cent, compared with 1.1 per cent in 1958. This is smaller, it may be noted, than the margin of 13.7 per cent earned by Ford Motor in the same calendar year. Mr Copelin, the chairman of Vauxhall, complains that nearly half the company's sheet steel had to be imported from the USA and the continent, involving higher costs. The body design of current Vauxhall cars because of its complexity may also add to production costs.

Relatively, Vauxhall concentrates more on the production of commercial vehicles than the other big motor manufacturers do: they represented in volume about 36 per cent of total output last year, when the abolition of purchase tax stimulated sales, and represent about a third now. In value commercial vehicles represented nearly half of total sales last year. In the future Vauxhall will tilt production rather more towards cars. Its new expansion programme looks forward to only a small increase in commercial vehicle capacity but to one of about two-thirds in capacity for cars. At the moment Vauxhall cars are easier to obtain on the home market than those of Ford or BMC, which have put an emphasis on small cars—though Vauxhalls do sell well abroad, especially in Canada, where they outsold all other imported models last year. So big an increase in production as Vauxhall has in mind suggests that the addition of smaller—or at least cheaper—cars to its range may yet come about.

Last year, General Motors received a dividend of £2,450,000 from Vauxhall as well as being repaid loans of £2,680,800. The company does not hold the same position in the British motor industry that General Motors' German company, Opel, has there, but its future plans suggest that it hopes to expand its share of the British market substantially. With competition becoming more intense as each manufacturer seeks to do the same, that aim may be difficult to achieve.

Lombard Banking

IN a year of exceptional growth among the hire purchase finance houses Lombard Banking has done better than most. Gross profits in the year to December 31st jumped sharply from £1,383,363 to £2,380,918 and for the second year in succession the balance sheet shows that total assets have nearly doubled, rising this time from £51 million to £101 million. A major part of this increase stems from debtors and bills receivable which jumped from £42 million to £86 million; this figure is shown before deducting deferred charges which more than doubled from just over £3 million to £7½ million. This gives some indication of the profits likely to accrue to Lombard Banking in the next year or so. This substantial increase in hire purchase business has been financed in three ways: by bank loans, which have risen by £20 million to £24½ million, by deposits from the public, which rose by £18½ million to over £51 million, and by new capital, where last year's rights issue in preference and ordinary shares brought in over £3 million. Another £5 million in new capital will be injected this year from the rights issue of ordinary shares made last week. The directors have already forecast an increase in the ordinary dividend from 18 per cent to 19 per cent on the capital after this issue and once the financial year is completed they may find it possible to improve on this forecast—just as they were able to do last year. At an "ex-all" price of 27s the 5s. shares yield 3½ per cent on the forecast dividend.

Waterlow & Sons

IN his second circular to shareholders within a week Mr Philip A. Waterlow, the chairman of Waterlow, fills in some of the gaps left in his earlier statement. He confirms that the property offer is for the head office at Great Winchester Street and amounts to £500,000. Talks on the sale of this office began a year ago. Mr Waterlow reveals that the proceeds from the sales of this and other properties will amount to £1,280,000, which will produce a capital profit of not less than £450,000. The total proceeds are almost equivalent to the last balance sheet figure for all properties but these (including those which have been or are about to be sold) have now been revalued at £3,266,000. On this basis, excluding a large element for goodwill, the net asset value of each Waterlow deferred share is about 103s. This is more than double the worth of the Purnell offer of 45s. Waterlow deferred have risen by 11s. 7½d. to 54s. 10½d. since this statement.

Shareholders may wonder why equity earnings on these valuable assets have been so low: over ten years the return averages about 2½ per cent gross. Perhaps the fact that an interim dividend of 10 per cent is promised to shareholders once the half yearly accounts are completed is an indication that a higher return on assets can be looked for in the future. Sir Harold Gillett will no doubt pay particular attention to the earnings capacity of Waterlow in his report to shareholders. On these new figures the Purnell offer to deferred shareholders has certainly lost much of its attraction (limited as it was). There is now, for instance, the possibility of a capital distribution from the profit of the property sales. But to the preferred shareholders the situation is unchanged and their 30 per cent voting strength may be decisive.

Whitbread

WHITBREAD'S trading results for 1959 were disappointing and jobbers lost little time in marking the £1 "A" shares down 9s. to 126s. Gross profits, excluding special credits, fell from £2,754,712 to £2,594,629, but thanks to a lower tax charge of £1,217,812 (against £1,432,732) net earnings went up by £101,117 at £1,470,483. The ordinary dividend, covered 1.8 times by earnings, is unchanged at 25 per cent and the "A" shares now offer a yield of 4 per cent. In his statement last year Mr W. H. Whitbread, the chairman, said that what would do the company "more good than anything" would be a fine summer like that of 1955. Doubtless shareholders will now be anxious to know why last year's summer—to say nothing of the reduction in beer duty—apparently failed to do so. Whitbread was a pioneer in the postwar period in modernising its public houses and in rationalising production and distribution. More recently the other big breweries have successfully carried through similar policies. Has Whitbread lost any sales to them?

Glaxo

COMPARING like with like, Glaxo Laboratories' interim report shows that trading profits in the six months to end-December rose by 31 per cent, from £2,418,000 to £3,181,000, while turnover rose by 14 per cent. Net earnings attributable to the parent advanced from £1,305,000 to £1,668,000 and the interim dividend has been raised from 5½ to 7 per cent. The directors say that demand for the group's products remains unchanged but

Continued on page 203

Unilever in Prosperity

EACH year the economists at Unilever have a shot at what has happened to industrial production in the free world: their guess for last year was that it was ten per cent higher, having fallen by three per cent in 1958. Such an all-embracing statistic cannot be more than a general pointer. But it is a reminder that Unilever's sales and profits depend on the expansion of incomes throughout the world.

Last year combined sales rose from £1,728 million to £1,787 million, of which sales to third parties went up from £1,259 million to £1,329 million. Combined profits before tax advanced from £91¼ million to £113½ million and, after tax, from £47.3 million to £60.1 million. Expansion was not achieved at the expense of profit margins, even though the average cost of raw materials used by the group seems to have been slightly higher than it was in 1958. Indeed, the ratios of net profits (after tax but before loan interest) to turnover rose from 2.7 to 3.3 per cent and to capital employed from 9.0 per cent to the record figure of 10.3 per cent.

Unilever's managers speak of the rise of £14 million in stocks and debtors as a "small increase"—as well they might for the total was £368 million at the end of last December. The group's cash flow from depreciation and surplus profits was more than sufficient to finance that increase in inventories and also fixed capital expenditure, which at £41 million was "less than was planned". This year's capital expenditure will be more than this (possibly £10 million higher), but the directors are in no doubt that financial resources will be sufficient to meet requirements in 1960. This is self-financing on the grand scale.

There are parochial problems too—particular areas and individual products. In this country Unilever with different commercial approaches does not lean much, if at all, on resale price maintenance; in the Netherlands it is rigorously enforced. Shareholders in Unilever, which include most investors with any interest in a first class portfolio, will be familiar with the attention which the directors give to individual brands in particular markets: "In the Netherlands, Vita is doing well. . . . The Birds Eye business in New Zealand is going through a difficult time. . . . In the United Kingdom Persil, improved in quality, got back all the tonnage lost in 1958." And so on in great detail, though never sufficient to be of much use to trading rivals.

From this flow of information, shareholders can see when the balance of trade is tilting. Last year, it tilted more in favour of Limited than NV; Limited's trading profits went up from £41 million to £55 million while NV's rose from £50¼ million to £58¼ million. The principal factors making for these advances were:

(a) An improvement in profit margins in margarine and edible fats, when shorter supplies of butter helped sales of premium brands. This had a notable effect in this country and hence on Limited's earnings.

(b) While sales of soaps and detergents advanced almost everywhere, the increase occurred largely in the higher quality brands sold at better margins. Here Britain is the biggest market and thus Limited the principal beneficiary.

(c) A considerable rise in profits from toilet preparations sold in the United States accruing to NV account.

(d) The hot dry summer led to an increase in profits and sales on animal feeding stuffs. Again, Britain is the biggest market.

(e) So too is Britain the biggest consumer of Unilever's ice cream, which showed a substantial rise in sales and profits.

(f) Sales in the United Africa Group (under Limited) rose and bigger profits resulted from the steps taken to combat rises in costs and to improve margins.

FROM remarks scattered throughout the directors' report shareholders can judge where Unilever is likely to concentrate its efforts. In recent years the emphasis has been more on food products than on edible fats and soap, as is shown in the list of capital expenditures sanctioned by the directors. And in UAG, the keynote is increasingly merchandising and manufacturing, rather than trading and produce as the African market develops.

The direction of this international group with its apportioned markets depends on backing men, giving managers experience outside their own fields of specialisation, having trouble-shooters on call, and depending on much local responsibility and autonomy. A loosely knit structure of management works because the group's trade itself is loosely knit. The temptation always to be resisted is to think of Unilever as a domain in its own right, self-perpetuating in management and self-financing in capital. On the evidence of the dividend decision of 22.7 per cent for Limited and 20 per cent for NV this year it is being resisted admirably. But the generosity is limited to the final payment, with the interim regarded simply as a progress payment on account and not to be taken as an indication of the final payment. Because the total payment was higher last year, the interim payment this year should go up and the final will then be determined on the outcome of the year's trade. It would take a disastrous slump in trade to warrant a cut and the worst that investors really have to look for is that the final will be maintained at the previous year's rate. This in itself means a bigger total payment and the policy as a whole implies a reasonably steady upward progression in payments. That is a point to be borne in mind in looking at the yields of 3⅛ per cent offered by Limited at 149s. 3d. and 2½ per cent offered by NV at 185s.

Continued from page 201

that in some sections of the business severe competition is squeezing profit margins. They add that profits in the second half of the financial year will not be markedly different from those earned in the six months to December 31st. The recovery in earnings which got under way in the second half of 1959 (in the first half trading profits fell by 9 per cent and turnover by 3 per cent) looks as if it will be well maintained. Fiercer competition among pharmaceutical manufacturers especially in export markets, seems to have affected earnings, but this has been more than offset by the expanding sales of most of the group's food products. It is this factor which appears to be responsible for the improvement in margins.

The market is now plumping for a final payment of 9 per cent (against 8½ per cent). That would make the total ordinary dividend equal to 16 per cent (against 14 per cent). On that assumption the 10s. shares at 64s. 3d. would yield 2.4 per cent.

Murphy Radio

THE hire purchase boom and last year's reduction in purchase tax on radio and television sets are faithfully reflected in Murphy Radio's trading results for 1959. Its trading profits rose by nearly 50 per cent, from £451,400 to £668,085, and after a higher tax charge of £326,935 (against £250,448) net profits advanced by £150,718 to £358,442. For the first time in five years the ordinary dividend is to be raised, going up from 20 per cent to 22½ per cent. On this dividend the 5s. shares at 20s. yield just over 5½ per cent. In 1958 the group's earnings fell by some 25 per cent in the face of the hire purchase restrictions then in force. The rapid recovery is not, therefore, all that surprising and with the high level of retailers' stocks and the possibility that credit restrictions may be imposed this year, it seems open to question whether Murphy's sales and profits will remain quite so buoyant.

The Charterhouse Group

THE Charterhouse Group, as opposed to Charterhouse Investment Trust, became a public company last May. Shareholders in it now number 10,000 and they will be pleased with the results that the company recently published. The forecasts made in the offer for sale by the chairman, Sir Nutcombe Hume, have been exceeded both in profits and dividend. The ordinary dividend has been set at 8 per cent and compares with the estimate of 7½ per cent. Consolidated profits for the year to November 11th rose from £1,144,306 to £1,481,443, after charging £96,979 (against £238,481) for interest on bank overdrafts. These have since been repaid. These figures exclude the profits of the banking subsidiary, S. Japhet and Company, whose earnings after transfers to contingencies reserve were virtually unchanged at £88,995. The net income of the group, including Japhet's, rose from £488,931 to £666,097.

Unlike some other industrial holding companies, Charterhouse gives in its report a comprehensive breakdown of the group's activities. Thus from the profit and loss account it is clear that almost all the advance in profits came from its commercial and industrial investments in associated companies, which at book value account for about half the total assets. These are spread over 92 companies with textiles representing 18.9 per cent, general engineering 17.2 per cent, electrical 9.9 per cent and timber 9.8 per cent of the total book value. Profits of the nine industrial companies controlled by Charterhouse Industrial reported only a modest increase in profits, but several of these companies are linked with the oil and shipping industries and have been affected by a reduction in orders from these sources.

The range of the group's activities has been widened through the acquisition by S. Japhet of a 62 per cent interest in the hire purchase business of Nobel Lowndes, now renamed Charterhouse Credit. This was almost the sum total of new acquisitions last year, but negotiations for further acquisitions are now taking place. Sir Nutcombe Hume points to the unrealistic prices which have been paid for businesses in the present very active period of takeover bids and tells shareholders that they cannot expect much in the way of the acquisition of new subsidiaries while values remain at their present—and in his view, apparently, inflated—level. Shareholders can look forward, however, to a further increase in profits and they may not be over-optimistic in hoping for a higher dividend. The present payment is covered almost twice by earnings and the £1 shares at 39s. 1d yield just over 4 per cent.

Esso Petroleum

SALES of Esso Petroleum, the wholly-owned British subsidiary of the Standard Oil Company of New Jersey, rose by 16 per cent last year, from £259.4 million to £291.8 million. Net earnings advanced from £7.33 million to £10.35 million. The biggest increase in sales was in fuel oil; petrol sales were higher; aviation fuels also did well, helped by the expanding jet traffic over the Atlantic and "a valuable contract" from BEA; the increasing popularity of oil-fired central heating also boosted sales. About £28 million was spent on capital account in 1959 and among the more important developments of the group's expansion programme was the new refinery at Milford Haven which is now near completion. It is hoped that the first tanker load of crude oil will arrive there this summer; the initial capacity of the new refinery will be 4½ million tons. The dividend has been raised to 2s. per £1 share on the £80 million of capital as increased by last year's rights issue compared with 1s. on the £60 million of capital—involving a total payment of £4.9 million, against £1.7 million.

London Stock Exchange

FIRST DEALINGS:	Mar. 21	April 4	April 25
LAST DEALINGS:	April 1	April 22	May 6
ACCOUNT DAY:	April 12	May 3	May 17

AFTER the budget and the Chancellor's reference to the possibility of credit restrictions the stock markets were cautious. On Monday selling dried up and small buying was enough to push the *Financial Times* ordinary share index up 7 points to 331.2. Jobbers had the busiest day since January 25th and the number of bargains marked reached 20,359. Following the budget demand slackened on Tuesday, the number of bargains marked fell to 15,790 and the *Financial Times* index dropped 1.4 points. On Wednesday, too, prices went down with the expected stream of new issues now that the budget is out of the way, helping to dampen demand all round. Some of the worst knocks were taken by steel shares. Over the week to the close on Wednesday gilt-edged stocks have been generally quiet and prices fell. In undated stocks 3½ per cent War Loan fell ⅝ to 62¾. Medium-dated stocks lost further ground; typically, 4½ per cent British Electricity 1974-79 closed ⅞ down at 85⅛. Home Corporation loans moved lower in sympathy, with 5½ per cent LCC 1977-81 losing ½ at 100.

Industrial equities at Wednesday's close were mixed and in many cases the losses made after the Budget did not wipe out Monday's gains. Over the week to Wednesday *The Economist* indicator rose 4.7 points to 365.9. Steel shares over the week were little down on balance despite Wednesday's falls of about 1s. in most cases. Steel of Wales closed on Wednesday at 45s. 6d. after touching 47s. earlier, John Summers reached 74s. 9d. on Tuesday but came back on Wednesday to 73s. 3d.—a net loss over the week of 6d. In heavy engineering, Guest Keen made a net gain of 2s. 9d. to 93s. after touching 94s. at one time, Simon Carves one of 1s. 9d. to 54s. 9d. and Henry Simons one of 2s. 6d. to 52s. 6d. Davy-United gained 1s. 6d. to 109s. and Power Gas 2s. to 93s. Heavy electrical shares lost ground with AEI falling 2s. 1½d. to 53s. 4½d. and English Electric 1s. 1½d. to 42s. 1½d. American favourites did well with Philips Lamps jumping 15s. 1½d. to 178s. 7½d., Unilever Limited 6s. to 148s. 6d. and Unilever NV 10s. 4½d. to 185s. Among the shares specifically affected by the budget cinema shares gained ground with ABC 3s. 3d. up at 44s. and Granada "A" 1s. 7½d. better at 11s. 3d. Tobacco shares came back after the budget but over the week, thanks to substantial rises on Friday and Monday, many tobacco shares were able to show net gains. "Imps," for example scored a net gain of 9d. to 67s. 7½d. and BAT one of 10½d. to 63s. 9d.

Cape buying and bargain-hunting by London and Continental investors helped the gold share market to pick up a little. The *Financial Times* gold share index rose 0.8 to 71 over the week. Free State Geduld gained 10s. 3d. to 135s. 3d., and Western Holdings 7s. 6d. to 133s. 9d.; but President Brand dropped 3s. to 55s. 9d.

THE MONEY MARKET

THE Chancellor's reference to possible monetary action has caused much discussion in the market and attention is focused on the results of this week's Treasury bill tender. At the first Treasury bill tender of the new financial year last Friday only £260 million of the £280 million bills on offer were allotted. The discount market maintained its bid at £98 16s. 11d. and the average rate of discount came out virtually unchanged at £4 12s. 5.05d. Total applications rose from £439 million to £449 million and the market's allotment fell from 54 per cent to 41 per cent.

In New York the United States Treasury bill rate fell further from 2.792 per cent to 2.731 per cent on three months bills. The rate on six months bills, which had risen slightly last week, also fell below 3 per cent for the first time in fifteen months to 2.927 per cent.

On Thursday of last week, large tax payments and end-quarter influences led to a shortage of credit in Lombard Street and the authorities gave a very large amount of help. Since then, however, there has been a full supply of credit.

In the Country

The good farmer knows that the rewards of the future depend on the provision made today. He cannot afford to take risks with his seed or his methods: his crops must increase but they must be safe.

So it is with savings. With a good Building Society like the Burnley they grow and their safety is sure.

The Burnley offers the investor complete peace of mind—a good rate of interest—3¼%, tax paid, and the knowledge that his savings are freely available when he needs them.

Deposits in the Society are Trustee Investments

BURNLEY BUILDING SOCIETY

Assets exceed £60,000,000. Reserves exceed £2,500,000.

APPOINTMENTS

ASSISTANT TO MARKET INVESTIGATOR

A University Graduate (preferably Economics) who has recently qualified, is required for a responsible position in the Sales Department.

The work entails imaginative and detailed study of trends in the motor industry, home and overseas; the preparation of short and long term sales forecasts together with an analysis of the markets for the Company's products.

The Company is engaged primarily on the design and manufacture of Disc and Drum Brakes and Suspension Systems for road vehicles and tractors.

The applicant concerned must be prepared to travel in the United Kingdom and overseas.

Write giving details of experience and qualifications to Personnel Manager, Girling Limited, Kings Road, Tyseley, Birmingham, 11.

ACCOUNTANT FOR PERU

Balfour, Williamson & Co. Limited require a Chartered Accountant for a responsible and progressive position with their major subsidiary Company in Peru. Upper age limit 33.

Write in confidence to Personnel Manager:

BALFOUR, WILLIAMSON & CO., LIMITED,
Roman House, Cripplegate Buildings, London, E.C.2.

BRITISH FOOTWEAR MANUFACTURERS FEDERATION

Invites applications for the appointment of Director.

Applicants should be graduates under 45 years of age experienced in industrial administration. Knowledge of Trade Association work and experience of negotiation with Government Departments and Trade Unions would be an advantage.

Salary on appointment £2,500 with pension provision.

Applications in writing giving full details should be addressed, marked "Confidential," to

The President
BRITISH FOOTWEAR MANUFACTURERS FEDERATION,
22, Gilbert Street, London, W.1.

CANADA—International financial organisation requires young qualified investment statistician to work in Toronto after initial training in London.—Write giving full details qualifications, experience, age, etc., to Box 1310.

Engineering or Science Graduates under 35 are required for training as

MANAGEMENT CONSULTANTS

for Organisation and Work Study in Office, Industrial and Horticultural applications.
Salary range £1,200-£2,400 plus expenses.
Apply in writing to:

NOËL CLARK AND PARTNERS LTD.,
13, SHEET STREET, WINDSOR.

MANCHESTER EDUCATION COMMITTEE

COLLEGE OF COMMERCE

Applications are invited for the following posts:

(a) LECTURER in INDUSTRIAL and COMMERCIAL LAW in B.Sc. (Econ.) and professional courses;
(b) ASSISTANT Grade B to teach GENERAL PRINCIPLES of LAW, COMMERCIAL LAW and CONSTITUTIONAL LAW.

Salaries in accordance with Burnham Further Education Report, 1959. Lecturers, men, £1,370 by £35 to £1,550; women, £1,190 by £28 to £1,240 plus equal pay increments. Assistants Grade B, men, £700 by £27 10s. to £1,150; women, £630 by £22 to £920, plus equal pay increments. For Assistants graduate and training allowances are added where appropriate. Starting salary according to previous experience.

Forms and particulars (stamped addressed envelope) from Chief Education Officer, P.O. Box 440, Manchester, 3, returnable by April 18, 1960.

THE INSTITUTE OF PUBLIC ADMINISTRATION

invites applications for the post of Director of its Education and Training Unit which will shortly be established. A good knowledge of the theory and practice of public administration and of modern staff training methods, is essential; familiarity with Irish conditions and a good University degree or its equivalent are desirable.

The appointment will be for one year, subject to extension. Appointment on a secondment or part-time basis would be considered. Salary for a full-time appointment £1,500-£2,000 per year, according to experience and qualifications.

Full particulars to be supplied not later than Friday, April 22, 1960, on application forms obtainable at 42 DAWSON STREET, DUBLIN.

LONDON COUNTY COUNCIL

PHILIPPA FAWCETT TRAINING COLLEGE FOR WOMEN

94-100, LEIGHAM COURT ROAD, S.W.16.

APPLICATIONS are INVITED from MEN OR WOMEN for a SENIOR LECTURESHIP and a LECTURESHIP to organise a main course in Commerce commencing in September, 1960.

Applicants for the Senior Lecturer post should hold good Honours Degree in Economics or Commerce or another appropriate subject. It is desirable that they should be trained teachers and have teaching experience. Business experience would be an additional qualification.

Applicants for the Lecturer post should preferably be trained teachers and should be prepared to offer commercial subjects and one other general academic subject. Good business experience is desirable.

Salary will be in accordance with the Pelham Scales for training college staff, i.e.

SENIOR LECTURER: £1,370 x £35 — £1,600 (men); £1,271 x £35 — £1,501 (women).

LECTURER: £930 x £32 10s. — £1,370 (men); £930 x £32 10s. — £1,220 (women); plus London allowance of £35 or £31 (according to age and experience) increments within the scale for appropriate qualifications and experience and, for women, equal pay increments. Appointment will be to the Council's service with assignment to this college.

FURTHER PARTICULARS and APPLICATION FORMS (stamped addressed envelope) obtainable from the PRINCIPAL TO WHOM APPLICATIONS should be RETURNED by WEDNESDAY, MAY 4, 1960. Applicants should state for which post they wish to be considered. (793.)

BRITISH EGG MARKETING BOARD

requires at head office a qualified statistician, preferably with an interest in Agricultural Economics, to act as Assistant to the Chief Statistician. Duties will include the design and analysis of experiments; the estimating and forecasting of supplies, prices and costs; the maintenance of a statistical reference centre and the issuing of statistical bulletins. Commencing salary in accordance with age and experience. Superannuation scheme. Apply with full particulars to the General Secretary (S.13), Wingate House, 93-107, Shaftesbury Avenue, London, W.1.

STATISTICS and MARKET SURVEYS

Graduates with degrees in Economics with Statistics as the special subject, or Statisticians with equivalent qualifications, are offered a post in the Components Group Commercial Department. This is an excellent opportunity for a man aged about 30, who has had experience in the collection and preparation of statistical data and industrial market surveys. Some knowledge of electronics would be an advantage.

Attractive salary offered together with a generous non-contributory Pension and Sickness Benefit Plan.

Apply in confidence by sending a personal history to:

W. J. YEOMANS, PERSONNEL MANAGER,
STANDARD TELEPHONES & CABLES LIMITED,
FOOTSCRAY, SIDCUP, KENT.

AMERICAN ORGANISATION in London offers responsible executive post to man with good knowledge of investments and experience of portfolio management or trust administration; good salary and prospects for mobile retired man preferably 55-60. Applicants in confidence but with full details education and experience to Box E.F. 991, c/o 191, Gresham House, E.C.2.

COMMERCIAL TECHNOLOGIST

required by the

UNITED KINGDOM ATOMIC ENERGY AUTHORITY, PRODUCTION GROUP,

for the Economics Section, Commercial Directorate, to assist the section leader responsible for the economic analysis of gas cooled reactor fuel cycles, and the formulation of commercial policy in the supply and repurchase of nuclear fuels. The duties also include the preparation of forward cost estimates of reactor operation, the assessment of commercial soundness of capital expenditure proposals, and the analysis of the economic and commercial implications of plant operation in nuclear reactors and diffusion plants.

QUALIFICATIONS: Applicants must possess an honours degree or equivalent in Physics or be corporate members of the Institute of Physics preferably with a knowledge of costing procedure and commercial practice.

SALARY: £1,370 — £1,825 p.a. according to qualifications and experience. Contributory superannuation. Staff housing scheme.

Send postcard for application form, quoting reference P.142/120, to Staff Officer, United Kingdom Atomic Energy Authority, Production Group Headquarters, Risley, Warrington, Lancashire.

Closing date: April 25, 1960.

A FEMALE STATISTICIAN, aged between 24 and 30, is required for the Market Research Department of an International Company's Head Office in the City of London. Statistics part I essential. Commercial experience an advantage. The duties will include analysing survey results, desk research of published data, sample design and analysis, and collecting and maintaining statistical data. Salary £750- £850, according to age and experience, plus luncheon vouchers 15s. a week. Hours are 9-5.30 no Saturdays. 1960 holiday arrangements honoured. Write, stating present salary to Box 1411.

STATISTICIAN

required by

AN FORAS TAIUNTAIS (The Agricultural Institute of Ireland) for dynamics and survey statistical work. Salary and rating according to qualifications and experience. ESSENTIAL:— A Degree in Statistics and/or Mathematics or in Science, Engineering or Agricultural Science. DESIRABLE:— Experience of modern statistical techniques. Applications will be considered from candidates with Essential Qualification only who would be prepared to undergo a period of training.

Further particulars from— Director, An Foras Taiuntais, 34 Merrion Road, Dublin. Latest date for receipt of Applications (with names of three Referees and curriculum vitae) May 2nd, 1960.

MSL *have been retained to advise on the appointment of a*

COMMERCIAL DIRECTOR

for a British company in a group which has an unusually impressive record of progress over the past ten years and which includes among its interests the manufacture and marketing of a wide range of electrical products and appliances for the consumer market. Turnover in this field alone is about £20 million.

The Commercial Director will be responsible for co-ordinating the activities of four product divisions, each with its own manager and sales organisation. He will also be responsible for the formulation of marketing policy and the co-ordination and direction of sales and marketing activities, including planning the product ranges and forecasting annual production requirements.

This appointment is of such importance to the company that salary is a secondary consideration and will be arranged by personal discussion with the Chairman.

Candidates must have a sales background and be able to provide evidence of success in a similar or slightly subordinate position in a big company manufacturing consumer durables, preferably in the electrical field. Probable age 40-50.

Please send brief details in confidence, quoting reference S.2273, to P. J. H. Fryer. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED, 17, Stratton Street, London, W.1

MSL *have been retained to advise on the appointment of a*

DEPUTY TO CHIEF PURCHASING AGENT

for a large international group of manufacturing companies with H.Q. in London. The Purchasing Agent controls the buying function at home and abroad and is responsible for the procurement of all materials used by the group. His deputy will assist in the administration of the department; in long-term planning of a wide range of supplies; in negotiations; in representing the company on various committees; and later in visiting overseas associates and suppliers which will involve up to three months abroad each year.

Candidates, about 35, must have a good education and will preferably be economics graduates. They will be executives in supply work or marketing in a large company where long-term planning and the weighing of complex market factors is involved. Experience of commercial negotiations would be a useful asset and a broad interest in world affairs is essential.

Initial salary will probably be between £2,500-£3,000; prospects are very good; pension scheme.

Please send brief details in confidence, quoting reference S.2278, to D. M. Sidney. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED, 17, Stratton Street, London, W.1

MSL *have been retained to advise on the appointment of a*

YOUNG MARKETING EXECUTIVE

Age 29-33, and preferably a graduate with a sound practical knowledge of modern marketing techniques and experience in advertising branded consumer products, preferably foods. He must have worked in conjunction with advertising agents in the preparation of national campaigns and have the potential to progress from a starting salary of not less than £1,500 a year to a senior position in this export minded company, where exports already exceed several millions.

He will be based at the head office in London and will, under the Overseas Marketing Manager, eventually assume responsibility for marketing the company's world famous branded food products throughout the Commonwealth and certain foreign countries. This will offer opportunities for occasional overseas travel, visiting agents and studying markets to enable him to control, from London, a very substantial overseas advertising appropriation.

Please send brief details in confidence, quoting reference S.2296, to P. J. H. Fryer. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED, 17, Stratton Street, London, W.1

THE UNIVERSITY OF BIRMINGHAM

The University will offer a number of Scholarships, value £270-£340, to graduates and to those expected to graduate this summer who wish to read for higher degrees in the Faculty of Commerce and Social Science. There will be opportunities for advanced study and training in research in all the main departments of the Faculty and also in subjects common to more than one department.

Further particulars may be obtained from the Registrar, The University, Birmingham, 15, to whom applications should be sent before June 11, 1960.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of TEMPORARY ASSISTANT LECTURER IN GOVERNMENT (with special reference either to Western Europe excluding the United Kingdom, or to an "under-developed" area outside Europe) for a period of two years from September 1, 1960. Salary scale £700-£850 per annum. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than Monday, May 9, 1960, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE TANGANYIKA GOVERNMENT invites applications from those who are interested in financing the extension and improvement of the present road network. The estimated cost of these works over a period of years will amount to an annual expenditure of the order of £400,000. The Tanganyika Government proposes that it should make annual payments of 4 years in arrear from the beginning of the work, equivalent to the value of work done in successive years, less any payments made at the time (which may amount to up to 20 per cent of the value of the work done). A prerequisite of any acceptable arrangement is that the finance should emanate from a source from which the Government does not normally raise loans. In forwarding particulars of the terms under which finance could be made available, applicants should state the source and amount of the funds available, the currency, the rates of interest and exchange, and whether their offer would be limited to any particular firm or firms of contractors, or if they would be agreeable to financing projects where competitive tenders are invited from registered Public Works contractors. Applications should be addressed to:—

The Permanent Secretary,
Ministry of Urban Local Government and Works,
Private Bag,
DAR ES SALAAM, TANGANYIKA

BRITISH IRON AND STEEL FEDERATION

The British Iron and Steel Federation invites applications from men aged 30 or thereabouts for a post in its Secretariat Department. This Department is engaged in servicing the main policy-making Committees of the Federation as well as in general secretarial duties. The post might be of interest to a barrister who is considering opportunities outside the Bar—although it does not itself involve legal duties—or to a University graduate with a good degree and some subsequent industrial or administrative experience. The salary will be commensurate with the experience of the successful applicant. Applications should be addressed to The Secretary, British Iron and Steel Federation, Steel House, Tothill Street, S.W.1, to arrive on or before April 22, 1960.

For other appointments see pages 200 and 209

THE GLACIER METAL CO., LTD.

OPERATIONS RESEARCH

There is a vacancy in the Operations Research Department of the Glacier Metal Co. Ltd. for a young man or woman, of either sex, to acquire experience in, operations research. The major projects undertaken by the Department at present are in the field of production control and general financial control techniques. Many other projects are undertaken from time to time in both technical and administrative fields. The kind of person most suitable for the position would be an applied scientist, an economist, or an accountant. Starting salary in the range £950-£1,300 per annum. Age range 23-30.

Apply
PERSONNEL MANAGER (REF. 2752),
THE GLACIER METAL CO. LTD.,
EALING ROAD, ALPERTON, WEMBLEY, MIDDLESEX.

EAST MIDLANDS GAS BOARD

ASSISTANT STATISTICIAN

A vacancy occurs in the Commercial Manager's Department of the Board at their Headquarters in Leicester for a Assistant Statistician. The post is open to graduates in Economics or persons with statistical qualifications. Preference will be given to those who have knowledge or experience of market research.

The commencing salary will be within Grades A.P.T. 6 (£664-£927) of the National Salary Scales according to qualifications and experience.

The position is pensionable and the successful candidate will be required to pass a medical examination.

Applications, stating age, experience, qualifications, present appointment and salary, together with the names of two referees, should be sent to the Secretary of the Board, Beverley House, University-road, Leicester, not later than two weeks from the appearance of this announcement.

THE AUSTRALIAN NATIONAL UNIVERSITY

CANBERRA

Research Scholarships

Applications are invited from post-graduate students of capacity for research for scholarships in Anthropology (including Oceanic Linguistics), Demography, Economics (including Economic History and Economic Statistics), Geography (most branches, but not at present with any emphasis on soil ecography and climatology), Modern History (particularly in the fields of Australia and the British Commonwealth), Far Eastern History (China and Japan), Pacific History, International Relations, Law, Political Science (including Public Administration), Philosophy, Political and Social Philosophy and Statistics (including Mathematical Statistics).

The scholarships are tenable for an initial period of two years and may be extended for a third year. Scholars are expected to enrol for a Ph.D. degree.

The present value of a scholarship is £A925 per annum. Married scholars with dependent children may be granted an additional allowance of £A265 per annum in respect of the first child and a further £A80 per annum for each other child.

A grant will be made towards a scholar's fares to and from Canberra at the commencement and expiration of the scholarship.

Application forms and further information may be obtained from the undersigned*, to whom applications should be submitted, or from the Secretary, the Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1. The University regularly considers applications in June and November, but special consideration will be given to applications at other times. Scholarships may be taken up at any time after award, including vacation periods.

R. A. HOHNEN,
Registrar

Box 4, G.P.O.,
CANBERRA, A.C.T.

* A substantial knowledge of the relevant language is prerequisite.

LLOYD'S REGISTER OF SHIPPING
requires a
GRADUATE STATISTICIAN ECONOMIST

capable of investigating problems and producing data relevant to World Shipping, Ship Building and related subjects.

This appointment offers ample scope to the right man in the 35 age group and will attract salary commensurate with qualifications and experience.

Applications marked "Confidential," stating age, qualifications, present position and salary to The Secretary, Lloyd's Register of Shipping, 71 Fenchurch Street, E.C.3.

GOVERNMENT OF NORTHERN IRELAND

CHIEF AGRICULTURAL ECONOMIST

Applications invited for pensionable post in Ministry of Agriculture. Qualifications: degree in Economics or Agriculture and extensive experience of work in Agricultural Economics. Successful candidate may be required to undertake lecturing duties in Agricultural Faculty of Queen's University, Belfast. Salary scale £1,960 — £2,050. A candidate with special qualifications, training or experience may enter above minimum. Preference for ex-Servicemen. Application forms, obtainable from Secretary, Civil Service Commission, Stormont, Belfast, 4, must be returned, together with copies of three recent testimonials, by April 26, 1960.

MINISTRY OF HOUSING AND LOCAL GOVERNMENT

DIRECTING GRADE ARCHITECT

There is a vacancy for a Directing Grade Architect who on appointment will be responsible to the Chief Architect for the organisation and supervision of the professional side of a newly created Development Group. The work of this Group, which will form part of the Ministry's architectural advisory service, will include research into the design, construction and costs of housing and of other types of local government buildings. It will be concerned in the preparation of advisory bulletins and studies as well as the carrying out of selected development projects in the housing field. The post carries a salary (men, London) of £3,000 per annum.

Candidates must be registered architects and hold professional qualifications in architecture. They should have had wide building and contract experience, including experience of new constructional techniques, combined with design ability of a high order.

Application forms may be obtained from the Secretary, Civil Service Commission, 17 North Audley Street, London, W.1, quoting S.5324/60/D and should be returned to him by April 26, 1960.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE

Applications are invited for the post of Lecturer or Assistant Lecturer in Social Science. Further particulars may be obtained from the Registrar, University College, Cathays Park, Cardiff, to whom six copies of application should be sent not later than May 13, 1960.

Registered as a Newspaper. Advertisement Offices: 22 Ryder Street, London, S.W.1. Printed by The Chesham Newspapers Ltd. at 22 Ryder Street, London, S.W.1.

A cooling area of 3500 square feet and a weight of eight tons make the new giant KARBATE Brand Impervious Graphite Series 6850 Shell and Tube Heat Exchangers from UNION CARBIDE the largest in the world. Packed within the 45 inch shells of these KARBATE Heat Exchangers are 685 sixteen foot tubes, which, laid end to end, would measure out to over 2 miles of tubing. While these figures are impressive, you will find the unit's increased capacity and efficiency are even more so.

These KARBATE Heat Exchangers are in use as sulfur dioxide gas coolers in a process producing sulfuric acid from the petroleum industry's refinery sludge acid. The big exchangers operate in much the same manner as a dehumidifier or air conditioner. Moisture laden corrosive gases flow through the tubes of the vertically mounted units. Water passing through the unit's shell cools the gas and condenses out the unwanted moisture. The end result is a cooled, semi de-moisturized gas ready for further processing into a valuable product. And this is just one of the many uses of KARBATE Heat Exchangers in industry.

This reliable KARBATE Heat Exchanger series is available, in lengths ranging from six to sixteen feet. This new series of KARBATE Heat Exchangers is nearly double the size of other models and gives five times more cooling area. And these gas coolers of KARBATE Impervious Graphite are more economical and last longer than coolers made of less corrosion resistant materials.

FREE, write for booklet IE-4 and learn more about how you can profit from KARBATE Impervious Graphite units which provide the required heat exchange with less than ⅔ the area required by carbon steel units. Write to UNION CARBIDE INTERNATIONAL COMPANY, Division of Union Carbide Corporation, 30 East 42nd Street, New York 17, N. Y., U.S.A., Cable Address: UNICARBIDE, New York.

ALUMINEX—over 9,000 feet of it—in the Pannier Market, Plymouth, Devon.
Architect: Walls & Pearn, A/A.R.I.B.A. Plymouth.

ALUMINEX is like windows only bigger and often it's in the roof and it's very quick to put up

"Yes, but what exactly is ALUMINEX*?"*

"Brilliant patent glazing system made by Williams & Williams."

"I imagine the child means 'skylights' when she says 'often in the roof'?"

"Skylights yes, but it is also used to make whole walls of glass."

"What makes it so quick to put up?"

"It's light—aluminium you know. It's easy to assemble. It's an all-metal system—the glass is held in the glazing bars by special spring clips."

"Anything else?"

"ALUMINEX is weatherproof, resists corrosion, no painting, use it for anything."

"Anything? Bet they don't use it for atomic power stations!"

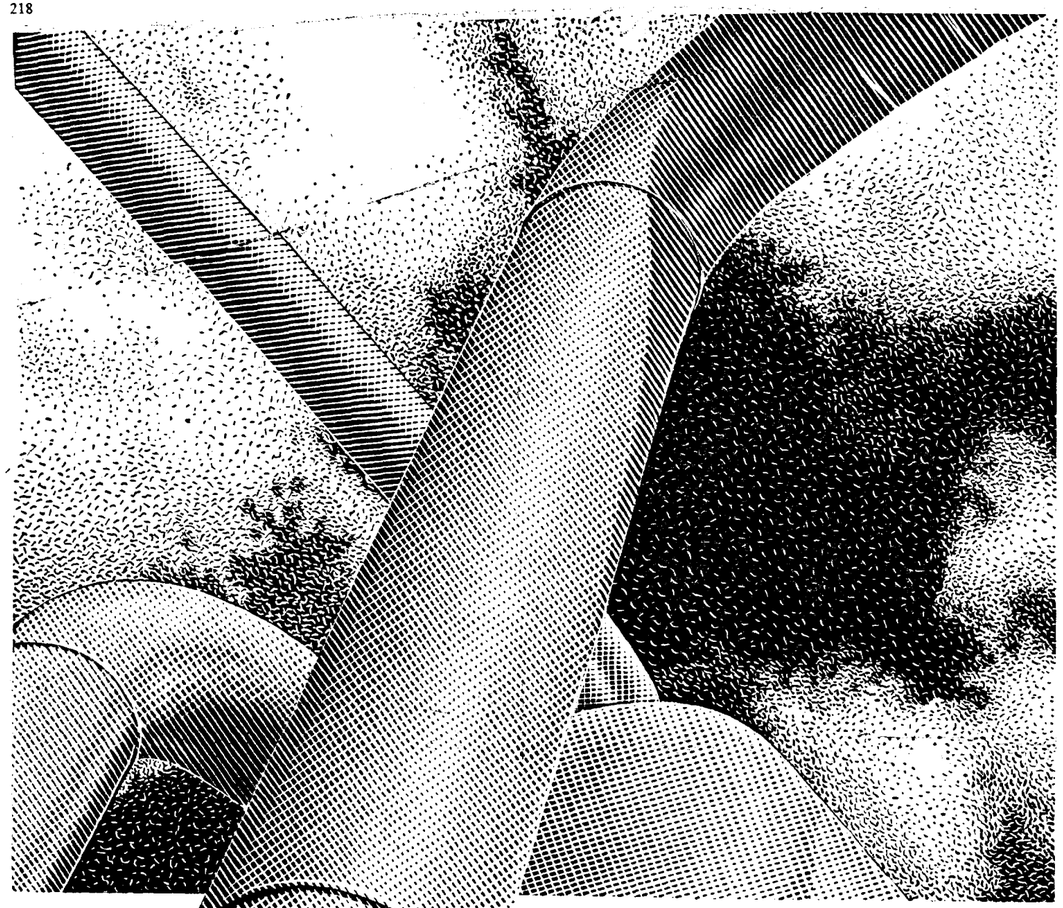
"You'd lose your bet—they use miles of it. And in other power stations, factories, hospitals. Sometimes they make vast sections of ALUMINEX open and close like giant windows."

"What happens if a classic product of our modern educational system heaves a brick through them?"

"Somebody calls a copper I expect."

"No, I mean what happens to the ALUMINEX PATENT GLAZING *by Williams & Williams?"*

"Oh that. Replace the glass in minutes. Look Fishbone —I'm busy. Go home, there's a good chap."



forward looking building products **WILLIAMS & WILLIAMS**

Williams & Williams make steel windows of every description, ALOMEGA and other aluminium windows, ROFFEN movable steel partitioning, ALUMINEX patent glazing, WALLSPAN curtain walling and many other products, all of which can be seen at our permanent exhibition at 36, High Holborn, London, W.C.1

Industrial outlook brilliant in MALTA

One great incentive after another

Holiday from tax

Exemption from . . . income tax for up to 10 years . . . customs duty on capital equipment and (in special cases) on raw materials and component parts. Normal drawback arrangements in force.

Substantial grants and loans

Grants or loans of 33⅓% and in special cases up to 50% of cost of capital assets. 100% grants on the transfer cost of existing plant.
Additional loans available where capital requirements are high. No exchange control restrictions on capital investments.

Low-cost sites and factories

Ready-built factories available at a rent of 9d. per sq. ft. for an initial period of 16 years.
New factories to your own specifications.
Fully-serviced sites on perpetual lease at a rent of about 10/- per thousand sq. ft. on industrial estate close to existing well equipped airport and modern deep-water berths under construction.

For a full account of the business opportunities in Malta, send for the official Brochure :—

MALTA AIDS TO INDUSTRIES BOARD

The sun truly shines on the industrialist in Malta. Here he is not only needed; *he is nurtured.* All the resources of the Malta authorities are swung solidly behind him, smoothing his way and speeding his programme. The incentives are exceptional. He sets up with low-cost factories, substantial financial grants and loans, and a labour pool that for size, skill and adaptability is second to none. The fact is that Malta is planning an industrial revolution—and top priority is given to the industrialist's every legitimate need. If you are thinking of setting up a new business or expanding an old one, consider Malta.
Malta really considers you.

MALTA *means business*

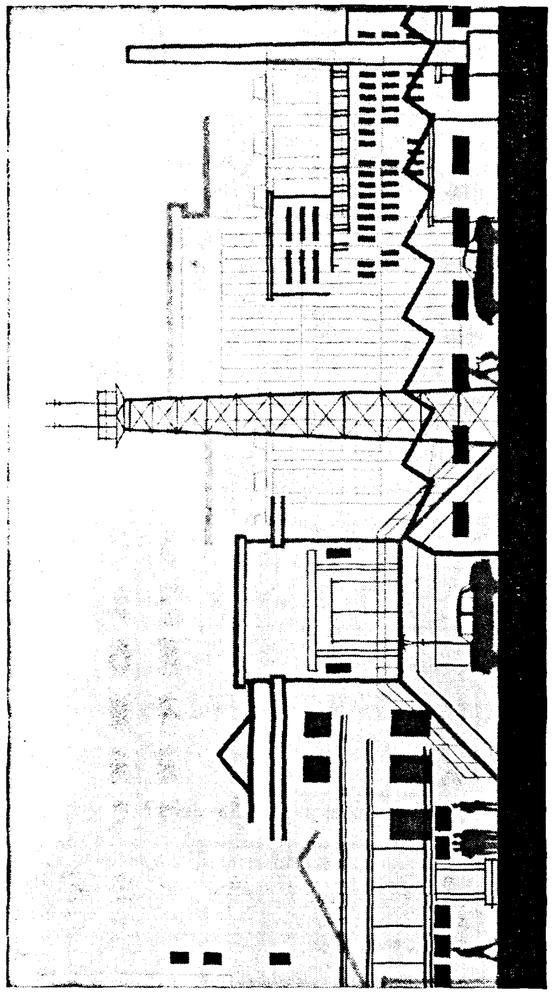
TR Services save time at Waterlow's

THEY CHOSE TR SERVICES

Printing formerly carried on in four factories has been concentrated in this modern building at Finsbury, London, with its 135,000 sq. ft. floor area. It specializes in rush work—and the private automatic telephone exchange which Telephone Rentals has installed will be of help there because it provides reliable and speedy communication between departments.

Waterlow & Sons, Limited, have been TR Subscribers since 1937. At five of their factories and offices they have P.A.X. and internal broadcasting installations.



What are TR Services?

A complete service in business and industrial communications offered on a rental basis. These services which are used by over 30,000 organisations in industry and commerce, include Internal Telephones, Internal Broadcasting, Staff Location and Time Control. TR Security (watchman protection, fire detection and alarms). Full details of how TR Services can help you will be sent on request.

Which makes what?

From the outside Mullard factories look like many others. Inside they are very different. Some of them are as spotless and hygienic as an operating theatre (special quality valves and transistors are made under these conditions). Some are almost Wellsian in appearance with their strange machines and conveyor systems (general purpose valves and cathode ray tubes are made in these). Others have a laboratory atmosphere with their white-coated engineers and assemblers (transmitting and microwave valves). Others again are reminiscent of heavier industries (magnetic materials and components).

All of them have evolved through forty years of specialisation in the large and growing family of electronic devices. But what count most are the products themselves. Produced in great numbers, they are unsurpassed anywhere in the world for performance, dependability and economy. Small wonder that they are used so extensively by Britain's leading manufacturers of electronic equipment.

Commonwealth in Convoy

SOUTH AFRICA looms darkly over the conference of Commonwealth heads of government that is due to open in London in two weeks' time. Already it seems ironic to recall how much perturbation has been caused in the past by the Nationalist government's declared intention of proclaiming the Union a republic ; if it were now to withdraw from the Commonwealth altogether, the economic consequences might well be gladly accepted for the sake of the political relief that Britain and other member nations would obtain. One does not necessarily expect just yet to see estate agents' advertisements for the sale of an imposing, but rather inconveniently exposed, building in Trafalgar Square (" Suitable for Embassy," as they say in the trade). But it is certainly high time for a searching look at the prospects for South Africa's continued membership.

Commonwealth ties, in general, do not snap, because they are never tight. No strictly formulated rules of conduct hamper the member nations: which is why they stay on in this comfortably easy-going club. The South African government's supporters make a quite proper point when they complain that it is being accused of violating a book of rules which has never been written—and which many of the accusers would not have accepted if it had been written. They may also contend, though with less logic, that condemnation of the Union's policies amounts to a kind of disloyalty to the Commonwealth. But the answer to both these points is that the member nations as a whole must be more concerned with the interests of the Commonwealth as a whole than with those of any one member—even, let it be added, if the one member concerned in any particular episode were to be Britain.

During the Suez conflict in 1956, scandalised British Tories could be heard plaintively asking: " What's the good of having a Commonwealth if it doesn't back you up?" They were a good thirty years behind the times in their information about the most fascinating of all the world's international institutions. It was the Imperial Conference of 1926 that approved the " Balfour formula," which declared the nations " freely associated as members of the British Commonwealth " to be " equal in status, in no way subordinate one to the other in any aspect of their domestic or external affairs "; and this declaration merely spelt out in trenchant words a state of things that had been a reality since the end of the first world war.

It is not difficult to understand why outdated conceptions of the Commonwealth persist. For the most part, the system has evolved so gradually, with so few moments of high drama, that the evolution has not fully sunk into the public mind. This has in fact been of immense psychological value. It has shielded the British from the bruising shocks of disimperialism ; it has enabled the emergent nations, from Canada to Malaya, to get the benefits of association without feeling humiliated. But it has meant that change has crept up on people.

Certainly, few of the seven hundred million inhabitants of the Commonwealth appreciate the riotous diversity of its constitutional forms. Some wild genius for inventive improvisation has, in this field, overpowered the more familiar British habit of cautious adherence to precedent. The family of ten sovereign sister nations that acknowledges Queen Elizabeth II to be its Head includes not merely two republics, and three states contemplating republicanism (one of which has rather civilly allowed the timetable for its intended break with the monarchy to

be partly determined by the recent royal birth). It also includes the twentieth century's nearest approach to the Holy Roman Empire—the elective monarchy of Malaya, an institution of which we have just been reminded, in sad circumstances, by the untimely death of its first King. And the other member nations have rubbed along tolerably well for a year and a half now with a military regime, in Pakistan, whose treatment of dissenting politicians has been a good deal firmer than anything Dr Nkrumah has yet done in Ghana; and whose president, by deciding to attend the London talks in person, has finished off the established description of these gatherings as conferences of the Commonwealth prime ministers, and set some nice new problems for the protocol experts who have to deal with visiting heads of state.

Just outside the circle of the present Commonwealth Ten, things get even more fantastical. Seniority in fantasy goes to the Irish Republic, which since 1949 has enjoyed the distinction of being formally outside the Commonwealth without being treated as a foreign country. In the Federation of the West Indies, while some politicians make much of the hardy legend that only a stubborn Whitehall blocks their road to sovereignty, the real obstacle is the islanders' inability to agree on such matters as a common postal system, let alone a definitive constitution. Tireless inventiveness, once again defying all precedent, has devised for Singapore a status of semi-levitation which can best be described as that of an independent dependency.

ONE can sympathise with those who feel that the whole thing is going too far, and who view with alarm the possibility of the appearance at future London conferences of an archiepiscopal president of Cyprus and an Italian-speaking president of a united Somali republic. Even if these portents can be averted, the prospect still looms of the arrival at the conference table of prime ministers (or presidents) not only from Nigeria and the West Indies but also from Tanganyika, Sierra Leone and other African entities, from Western Samoa, Fiji, Mauritius, Guiana and, in the fullness of time, enough other far-flung sisters to leave little elbow room either at the Buckingham Palace dinner table or even in the United Nations assembly hall.

Of course, Commonwealth membership may not really be fated to grow in such swift geometrical progression. Marriages may yet be arranged between small new states, particularly in Africa, where common sense also dictates some reunions between territories that have landed up on opposite sides of the Anglo-French language barrier. (Canadian advice might be useful here.) But this glance at the far horizon is not irrelevant to the problems of the immediate present. The course to be charted at the May conference must depend on where the sister nations want to land up towards the end of the twentieth century, not on nostalgic memories of doldrum days that are gone; and today the winds of change are bellying out their sails.

The Commonwealth premiers will meet with their minds preoccupied not only by the present turbulence in southern Africa but also by the imminent independence of tropical Africa's greatest state, the Federation of Nigeria. The final transfer of sovereignty to this realm of 35 million people will halve, at one blow, the population of the whole dependent empire. The emergence of a new nation equal in resources and population to all the oversea states of the French community together must powerfully affect the gravitational pattern in Africa. It will also carry the Commonwealth past yet another milestone, for after October a majority of the eleven sovereign members will be Asian or African.

This is the way the winds are blowing, and the sailing sisters must shape course accordingly. The question is not whether another course is possible, but whether the convoy can hold together on the one that the winds indicate. It has long been clear that the most important role of the Commonwealth in the world of today is to provide the kind of easy, equal relationship between western, Asian and African nations that they all need, but which is so hard to come by. The whole world has an interest in the maintenance and development of these links. Their strength has been painfully tested by such past events as the Suez conflict, the Kashmir dispute, the divergence between the allied and the uncommitted. Now, in Africa, the cohesion of the Commonwealth faces what may prove the most severe test of all.

NO less than seven of the Commonwealth Ten were involved in the UN Security Council's debate on South Africa: the Union itself; Britain, as a permanent Council member; Ceylon, as a temporary one; India and Ghana, which the Council admitted to its debate; Pakistan and Malaya, which were among the nations that called for the special session. As the grim news from South Africa has poured in, there has been talk among Indians and others of a choice between getting the Union expelled from the Commonwealth and withdrawing themselves. The latter part of this is not to be taken too seriously, except as evidence of the intensity of feeling. The Asian and African nations are too clearly aware of the mutual benefits of the family relationship to have any desire to break it up, especially at a moment when Britain's own policy in Africa is being vigorously transformed in a direction that gives them great satisfaction. But the question whether South African membership of the club is any longer to be reconciled with the common purpose of the other members is more serious. Unmistakably the feeling is spreading that even diversity must have its limits.

True, there is absolutely no precedent for a request to a member to leave. But, as has been noted above, the Commonwealth has in practice been the one sphere in which British addiction to precedent has been joyously cast aside. Again, expulsion, like admission, might be assumed to require unanimity among all the other members of the club; and, unanimous as the members may be in their abhorrence of the sjambok state, there are obviously wide differences in the degree of the embarrassment they feel about any move to drive out the offender. But that is not a divergence that can be taken for granted for much longer. Unless there is a dramatic reversal of the present policies of the South African government, it seems only a question of time before the requisite unanimity on this point will be reached. The sailing sisterhood is not one of those convoys whose speed is dictated by that of the slowest. Far less is it able to keep company with a wayward vessel whose engines seem to have got jammed at full speed astern.

Macmillan Pink

The political colour of this strengthened Conservative Government is now becoming apparent, not least to some of its own backbenchers

THE budget and the beginning of the Easter recess mark the end of the first lap of this Conservative Government with a hundred majority, and provide an occasion for first reflections about where it seems to want to go. The direction that Mr Macmillan has chosen is neither of those that most people talked about last October. At that time there was wide debate whether the Tories would "veer right" or "be liberal." In the event a strengthened Mr Macmillan has proved to be neither a conservative Conservative nor a liberal Conservative, but what some of his own faithful now blasphemously call a socialist Conservative instead.

The term requires some explanation. Mr Macmillan is no more a socialist in the strict sense than . . . one almost said than Mr Gaitskell is. The new Macmillanism, as it has emerged in these last five months, is a perfectly logical policy for historically-minded Conservatives to take up. A conservative is somebody who accepts present society and seeks to fit in with the forces that rule or sway it A liberal or radical is somebody who seeks always to probe to the roots of present society and to propound experiments whenever he thinks that these might do good. A socialist is now somebody who is fighting bitter mock battles to change a society that is past. It was natural that the first and third of these philosophies should look—and be—rather similar once Conservatives were no longer influenced by atavism but by the pragmatism which Mr Macmillan represents.

The old sort of traditional Conservative, who represented mainly the squire and the vicar and village worthies who knew their place, was killed in the 1945 flood. The waters are now rising even over the next generation of traditionalists: over the still sizeable but increasingly impotent block of Tory MPs who feel that the forces which ought to matter in society are small and protectionist businessmen with their livelihoods to make, the widow who inherited War Loan and has misguidedly held on to it, gentlefolk who have refused to nationalise their doctor but would still like to get free drugs, the Suez buglers, the imperial ideal, "our own folk" in Southern Rhodesia, and (on sufferance) the antimacassar section of the working class. Your more modern Conservative, the sort whom the Prime Minister favours, is on the side of the big battalions; a Macmillanite is one who believes that the forces which do matter in society are large and dynamic businessmen and salesmen who want their production to expand, trade unions, Gallup polls, Africa's teeming blacks (not its handful of whites), bureaucrats and committeemen and royal commission members with large spending plans, working people who are opposed to "profits" as an emotional concept but not as a practical fact, the ITV's audience rather than the BBC's, and national insurance pensioners rather than retired gentlefolk.

By thrusting his Government further forward to recognise these forces of today, pinching his opponents' clothes and jarring some of his own backbenchers' instincts in the process, Mr Macmillan can claim to be continuing the steady modernisation of the Conservative party; but he cannot claim to be moving it to the liberal left, for his object is to accept the society which these forces shape, not to probe or change it. In some fields of policy the new trend of Toryism is leading the Government in the direction that thoughtful liberals would wish: as in Africa. In some fields, the new trend is one that few thoughtful persons should approve: as in the spendthrift attitude to some public expenditure, and in the budget decision to compensate for this by imposing a popular tax on businessmen's profits instead of an unpopular squeeze on their markets. Sometimes the effect of Macmillanism is to repeat in a new setting the old conservatism's failing, that of failing to see that there are some establishment forces towards which the public's attitude is changing much faster than ministers think: as in the case of Mr Heath's policy of avoiding any annoyance to the trade unions. One of the most significant incidents of the past five months was when a group of Conservative backbenchers put down a motion proposing certain changes in trade union law, some of them admittedly reactionary changes but others designed to propound the sort of Company Act for trade unions which all liberals should support; immediately, other Conservative backbenchers were alerted by the Government to amend the motion to read that all these matters should be discussed between employers and trade union leaders instead. One's apprehension is that this desire to avoid any really controversial measures, to refrain from rocking any awkward boat, may now hold up Mr Butler's intended drive towards social (and especially penal) reforms as well.

BUT Macmillanism's most enervating effect is on party politics, both in the country and the House. Poor Mr Gaitskell is in a sad way for battle issues, because the Prime Minister has been depriving him of all his catchphrases. This is exactly what the Prime Minister has wanted to happen. What is the long-term effect of this no-party system likely to be? Some people assume that it provides a fine recipe for perpetual Conservative Government and an unhappy recipe for perpetually ineffective opposition. In fact, for two reasons, it is exceedingly unlikely to do so.

The first reason is that opposition of some sort is a popular pastime, as well as an inherent necessity, in a mass democracy. If the official Opposition does not provide it, somebody else will. There are three sources from which opposition to Macmillanism can come—from the more old-fashioned conservatives, from the liberals (with a small or big L), and from the Gaitskellites when they recover their feet. One excludes the Labour left wing from this list of contestants, because their actions are no longer relevant to the mood of the mass electorate, only to the process of internal maladjustment within the unhappy Labour party itself.

So long as Macmillanism remains in the ascendant, the three sorts of opposition that have emerged to it in the last few months will presumably continue, and on occasions oddly overlap. Liberals should find themselves allied to the right

wing Tory rebels on matters concerning general government expenditure and the trade unions. Labour will (or should) be allied to liberals on various questions of Home Office reform. The Tory right is likely to line up with Labour in calls for protectionism for various vested interests. Instances of odd alliances of this kind are likely to get great publicity in the press, with excited talk of party splits. Sometimes, where the criticism pricks particular ministerial consciences, they may have some marginal influence on policy; it is probable that the recent "revolt" against high expenditure will have some effect on next year's estimates, perhaps especially in the unpopular field of defence. But in the broad direction of policy there is no reason why pressure from any of these sources should change Cabinet attitudes by one jot—so long as the Government's popularity with more than half of the electorate persists.

But the second force that should save or shift us from permanent and unopposed Macmillanism is that it is highly unlikely that the popularity of the Government will persist. Some time every government runs into a bad patch, either through its own failings (this Government's Achilles heel may be its insufficient deterrence of inflation) or more often through sheer bad luck. When the swing of opinion sets in against this Government, a most interesting moment in British political history will have arrived. The first queston then will be which opposition—Labour, Liberal or even right wing Independent—catches the swing on the rebound. By all the odds of possession, which is nine points of our political law, Mr Gaitskell's Labour party ought to do so, but it has already shown itself almost unprecedentedly adept at muffing its chance. Scarcely less interesting, if present fissions widen, would be the effect of any temporary breeze of unpopularity on the hierarchy of the Conservative party itself.

For the duration of the fair weather season, however, the course of Macmillanism seems to be set. The last few months provide a useful guide to anybody who seeks to gauge what the Government's reaction will be to any problem that arises. Whatever is both expedient and popular with the mass electorate will be done; whatever is inexpedient and disruptive will not be done; the influences to watch are not the mutterings of Conservative backbenchers or Tory colonels in the constituency parties, but a master empiricist's judgment of what will seem most fair-minded and least controversial to the man on the Clapham omnibus.

Middle Eastern Targets

Will the Middle East come up for discussion at the summit? If the four powers could decide on a common policy of self-restraint, they would not have done badly

THE Middle East was the bad fairy of the 1955 summit. Passed over in the discussions then, it soon proved its powers to wreck the infant hopes that were nurtured there; before the year was out, the Soviet arms deal with Egypt signalised the opening of a new and dangerous phase in Middle Eastern affairs. By that stroke the Russians asserted their claim to become once more a power in the Middle East and now, five years later, the claim can no longer possibly be ignored. No new summit conference or chain of conferences can get far in making the world a safer place unless it tries sooner or later to establish some form of accord about a turbulent area that regularly sets the great powers by the ears.

High hopes are unrealistic. The throes of Arab nationalism and the nervy tension of the Arab-Israeli conflict, together the causes of turbulence, cannot effectively be quietened at the summit. At this stage there is no question of the major powers "settling" the Middle East in the sense of trying to solve its problems. All they can hope to do at an early summit is to settle some of their own attitudes in the face of the continuing unsettlement inside the region; thus they might, at the least, get some insight into each other's probable reactions when the next crisis comes along. If they cannot pacify the area, they can take steps to ensure that they neither aggravate its bellicose fevers, nor become infected by them themselves.

Mr Eisenhower and Mr Khrushchev have a common starting point in their mutual desire to avoid war. The Iraqi revolution in 1958, which could have caused a head-on collision between the powers, showed, when the sparks died down, the glimmerings of second thoughts and self-restraint. The Americans and British had hardly landed their troops in Lebanon and Jordan before they began asking themselves how they could get them away again; while, for their part, the Russians quickly converted their exclamations of horror and disgust at the Anglo-Saxon intervention into a reasonably pitched proposal for a conference. Here were the undertones of a common interest that the summit could, perhaps, affirm.

The classic approach would be to divide a contentious area into spheres of influence. But in present circumstances such an idea is a non-starter. It runs against the diplomatic current, makes no modern military sense, and pays no heed to the Arab unitary movement. This being so, the powers, to get anywhere at all, will have to think about the alternative course (perhaps less attractive) of setting limits, and visible limits at that, to their own freedom of action in the face of local rebuffs. Sooner or later there are bound again to be developments that either Russia or the West will think unfortunate. The question is, are they willing at this stage to limit their field of manœuvre by a tacit agreement not to intervene with force? For there are only two practicable alternatives: either Russia and the West both agree to eschew the show of force if things go wrong, or both sides, recognising the risk involved, reserve the right to use powerful means of persuasion or dissuasion. In short, either the Anglo-Americans and the Russians agree to tie their hands in advance or they risk getting their fingers, and more, painfully burnt.

Any acceptance of political and strategic limits would mean a much tougher sacrifice for the West than for the Soviet Union. The Russians would probably only be called upon to postpone opportunities, while the Anglo-Saxons might find tangible advantages and existing alliances crumbling. The fact that Moscow was content for nearly ten years after the war to leave the area substantially alone suggests that none

of its interests is so vital as to be unnegotiable. Historically Russia has set its sights on effective control of the eastern Mediterranean and the head of the Persian Gulf, aims that may be presumed never to have died. But the Russians of the present day, since their return to the Middle East in 1955, have given priority to preventing local states from joining the pro-western group and to purging the area of American and British military power.

There is no basis for supposing that these efforts to dislodge the West will be called off because of any summit talks; all that can be reasonably hoped is that they are not pursued into their more dangerous depths. In other words, in the post-summit calm, Moscow will go on tickling for trout, but it may think twice before lashing the stream for salmon. By dint of identifying themselves emotionally and financially with the prevailing mood of anti-western Arab nationalism, the Russians have won fairly deep footholds in the United Arab Republic and Iraq. Naturally they would be bitterly reluctant to abandon these positions, but the wrench of losing them would be less painful than the wrench of losing its particular position in, say, Persia or Saudi Arabia would be to the United States. Russia has no alliance with any Middle Eastern country; the West will go to the summit fresh from a Nato ministerial meeting in Istanbul on May 2nd, and at the end of April the foreign ministers of the Central Treaty Organisation are meeting in Teheran.

Because they are more deeply entrenched, the British and Americans are bound to be on the defensive in any summit horse-trading over Middle Eastern positions. Their interests are less disputable and far less disguised. Britain is still heavily dependent on Middle East oil, although the sequel to 1956 showed that this dependence was not such a life-or-death matter as had been supposed. The strategic interests, too, are visible on the surface: the Middle East terrain is an essential part of the western policies of containment, and also provides the United States with an extra dispersal area for its striking force in case of real war. There is no suggestion that the West should abandon any of its trenches—only that it should not risk war by defending them if the surrounding area grows less friendly. The Russians, being less well dug in, and having fewer tangible advantages, can more easily take the initiative of committing themselves to this sort of inaction.

A TACIT agreement to remain militarily inactive in the face of local reverses is a modest ambition. It would not end the area's turmoils, only avoid their spreading. Even so, it may well be too high a target for the British Government, which could find itself the odd man out by insisting on special reservations to protect its interests and commitments in the Persian Gulf territories. Any formula of agreement would almost certainly have to be restricted now to internal upheavals; it is early days in the détente for the great powers to agree on a common stance should the armies of a Middle Eastern state cross the frontiers of a neighbour—although that might have to come.

This leads directly to the question of Israel and the continuing dangers of the undeclared war between it and the Arabs. Moscow has long ago been able to bury the awkwardness of its early recognition of the Jewish state with attacks on the "imperialist stooges" who, on the Soviet thesis, run Israel. This attitude has served the Soviet Union well in its relations with the Arabs, and Mr Khrushchev is likely to be most gingerly in his movements towards any suggestions for cooling the conflict. And, if the United States, Britain and France can find no way of guaranteeing Israel's territorial integrity beyond the really rather discredited tripartite declaration, it would be a lot to expect the Soviet Union—which here has the more to lose—to commit itself more openly.

There is, however, another more limited field for a possible accord. The temperature of the Arab-Israeli dispute is at least partly controlled from outside by the supply of arms. The tripartite declaration stated, somewhat ambiguously, the western intention of ensuring that neither Israel nor the Arab states obtained arms in excess of what they needed for defence; by this principle a rough balance of weapons was maintained until the Soviet Union's re-entry on the scene shot the principle to pieces. Since then the arms race between Israel and the Arabs has bundled along at dangerously high pressure, with Egypt and the Soviet Union setting the pace. If the right mood were created at the summit, it ought not to be altogether impossible for the four powers to decide at least to refrain from heating a cold war into a hot one by giving one side or the other a provocative military advantage.

Whether these discussions get anywhere—or, indeed, whether they take place at all—will depend on the prevailing mood at the summit. If all has gone well elsewhere, the Soviet and American leaders may be prepared to make explicit their resolution not to allow Middle Eastern quarrels to embroil the great powers with each other. But the four statesmen can decide only what not to do. And as the great powers draw in their horns, the field of decision of the Arabs and their neighbours necessarily widens.

The Economist

APRIL 14, 1860

THE CAUSES OF STRIKES

We have before informed our readers that a Committee of the Social Science Association has been for some months vigorously at work on . . . the practical causes and effects of Strikes. . . . But while the Committee have found their inquiry much easier and smoother than they expected with regard to the men,—they have certainly found it much more embarrassed and difficult than they expected with regard to the employers. Here,—with many honourable and praiseworthy exceptions,—secret diplomacy has been perhaps the rule. . . . But the questions at issue between the employers of labour, and the combinations of labour, are questions of principle,—questions as widely canvassed, as eagerly debated, as passionately contested as ever. . . . There is no peace, as yet,—there is only truce between capital and labour in this great country. All true men must wish this uncertain and inconstant calm to be exchanged for a durable and well-founded peace. What better method can be adopted than to forward in any way the inquiries of such a Committee as that to which we have drawn attention? It belongs to neither party. It contains representatives of both parties, and many who belong to neither, and simply desire to attain the truth. It sincerely desires to bring to light the secret of the chronic strife between those whose interests, moral and material, are really identical. And when the inquiries of such a body are stopped with the traditional answer, "Least said soonest mended," one inference, and but one, will be drawn by the public at large. They will say with some justice, that there is most real uneasiness where there is most secrecy. It is because we sincerely believe that Trades Unions may be really taught to accept wider and juster views of the relations between capital and labour by a frank policy, that we urge this policy so warmly. Now is the time to prove that English capitalists sincerely consult the interests of their *employés*, and are anxious for a cordial understanding with them. If the Unionists are met with rebuffs at a time when they are eager to come to frank explanations on the neutral ground of the Social Science Association, an opportunity is lost which may never recur.

Buried Treasurers

The Liberal party has tried to reform its organisation in a way that some people recommended that Labour should do. But it has run into personal problems as a result

In both the Labour and Liberal parties the office of Treasurer, the only departmental head directly elected by the full membership of the annual conferences, could have provided a key to the current efforts to renovate the party structure. In both the chance has been missed. Except for the two years during which the Treasurership was occupied by Mr Gaitskell little attention was paid to its potentialities by the postwar Labour party. For years it was a sentimental resting place for the late Arthur Greenwood; Mr Aneurin Bevan disappointed those who hoped he would exploit it fully; and now, faced with a fight between two vigorous candidates in their prime, Mr Harold Wilson and Mr George Brown, the party looks like ducking out again. Once before, for the sake of a quiet life, Labour drafted its faithful Welsh wheelhorse Mr James Griffiths to the Deputy Leadership; now for the same reason it is planning to draft him as Treasurer.

In the Liberal party the experiment of having an active, practically full time Treasurer—whose proper interest in consolidating the financial relationship between constituencies, regional federations and national headquarters would give him a firm grip on organisation—has ended ingloriously with the resignation, with a public explosion of resentment, of Colonel Patrick Lort-Phillips.

The war of the two Liberal colonels—Frank Byers, Field Marshal Montgomery's staff officer turned mining company director, and Lort-Phillips, the radical regular Guards officer turned gentleman farmer—had long been working up to this flash point. Colonel Byers, who would have been the bright young leader of the postwar Liberal party had he not lost his seat by 97 votes in 1950, accepted the next political meteor to appear during his political eclipse, Mr Jo Grimond, but not the one after that—Colonel Lort-Phillips. Mr Grimond, after all, did get into the House; Colonel Lort-Phillips's suddenly soaring prestige came from a moral victory only, when he came bottom (but not very badly bottom) at the Gloucester by-election in 1957.

Suddenly, after Gloucester, the new Liberal colonel seemed to be doing everything—agricultural expert, official spokesman on foreign affairs at the Torquay Assembly, Treasurer of the party. When he abandoned the rustic fastnesses of Pembrokeshire to take up semi-permanent residence in the Guards' Club, so as to come to the aid of the party, he must have thought himself a Liberal insider. But he found that he was not. Once Torquay was over, Colonel Lort-Phillips's views were no longer sought on foreign affairs, and he was soon replaced as chairman of the committee on agricultural policy by Mr Mark Bonham Carter, who had actually won a rural seat at Torrington in 1958 and needed a policy with which to defend it. Once the serious business of campaigning for the general election began Colonel Byers, who was still the hero of the immediately postwar generation of Liberals, popped up for a politician's holiday out of the Rio Tinto mines and formed a dyarchy with Mr Grimond—the colonel concentrating on the mainland of Britain, the Liberal leader on the islands of Orkney and Shetland.

Since the election the dyarchy has been institutionalised. Mr Grimond carries around Liberal policy in his hat—or he would, if he wore a hat. Colonel Byers runs everything else—except when he is down his mines, when Mr Bonham Carter runs it for him. The Liberal party has in fact brought off two things which some of the leaders of the Labour party thought of doing in the first flush of defeat but failed to bring off. Mr Crossman's notion of making permanent the small *ad hoc* campaign committee (headed by Mr Crossman) was accomplished by Colonel Byers, in whose favour the Liberal National Executive delegated most of its responsibilities. The abortive plots to dispose of the Labour party's "paid public figure," Mr Morgan Phillips, ended with his promotion to greater public prominence while retaining his grip on the organisation; the more ruthless Byers committee dumped Mr Herbert Harris, who had been given a similarly misconceived status. A young man of promise was put in command of the Liberal party staff under the political Byers committee, while the Labour party still faces the task of finding a first-class administrator who will be willing to serve in the new co-ordinating post in Transport House as a subordinate to the bureaucrat-in-chief.

All these are Liberal accomplishments. And Messrs Byers and Bonham Carter can point also with pride to the new Liberal research department, which has been adequately endowed and waits only on the shortly impending choice of a suitable director; and to the Liberals' new full-time local government officer, who has been following up the scattered successes of Liberal candidates in local council elections, running training courses, and stimulating more systematic candidacies. The new and compact Liberal set-up with two members of the five-man Byers committee, Mr Holt and Mr Thorpe, overlapping with the parliamentary party, and with a wieldy "Shadow Cabinet" consisting of these two bodies plus Lady Violet Bonham Carter, Lord Rea and a few other co-opted members and party officials has quickened the party's public reactions to new developments.

But Colonel Lort-Phillips brings against these advantages a twofold indictment. In the first place, he himself has been squeezed out of any effective influence. Secondly, the system is too authoritarian for Liberals. There are, as it happens, some differences on policy between Colonel Lort-Phillips and Mr Grimond. They are related to the Liberals' ambiguous relationship to the nuclear bomb. Mr Grimond has for a long time been advancing a technical case, which has now become fashionable in military circles, for turning the independent British deterrent into a Nato deterrent. Somehow or other this message has been transmuted down the line into a moral gesture against the bomb, indistinguishable in the case of some forty Liberal candidates in the last election from the highly emotional approach of the unilateral disarmers.

Colonel Lort-Phillips's personal position is somewhat different from both, but near to the disarmers. In his pamphlet "The Logic of Defence," which was originally circulated privately as a memorandum for discussion within the Liberal party, he puts the case for small supra-national conventional forces to police local outbreaks of violence. He is against Europe participating in the deterrent either strategically or tactically.

The colonel's disillusionment with the present leadership began when he discovered that there was no way in which his memorandum could be discussed. Rightly or wrongly he has come to the conclusion that, at a time when new recruits are being attracted to the Liberal party as a party of ideas, new thoughts only get anywhere if they happen to interest the Bonham Carters. He resents the way Mr Harris was sacked without any consultation with such elected officers as himself. Having raised extra money for headquarters by selling to the constituency associations his scheme for an annual pledge of £100 a year (with the first £1,000 in a region going to that region's federation) he objects to finding himself without any organising function.

Colonel Lort-Phillips's status has been complicated throughout by the fact that, in line with historic Liberal practice, there were two other titular Treasurers, of whom one was mortally ill and the other of whom, Lord Grantchester, was a relic of the old days when the Treasurer's title was distributed among prominent Liberals who either were rich men themselves or knew rich men well enough to pull in the "old boys'" cheques. On the death of the former the vacancy was filled by Miss Heather Harvey. Despite Colonel Lort-Phillips's seniority, she was chosen by the National Executive to represent the three Treasurers on the Byers committee. Colonel Byers, moreover, is said to be temperamentally disinclined to occupy time in consulting committees, while Colonel Lort-Phillips, as an elected officer, objected to being disciplined as "an unruly backbencher."

The two colonels were at one in setting out to avoid a repetition of the horrible fiasco of the Torquay Assembly, when an elderly and inaudible party president recalled the warning he had addressed to the Government against raiding the Road Fund during the one year in the 'twenties when he had served in Parliament and undertook not to "exacerbate the situation in the Formosa Strait," while the last Liberal Assistant Postmaster General shuffled ceaselessly to and from his all too prominent place on the front of the platform.

Colonel Byers's approach, with the aid of two or three vigorous young men like Mr Thorpe, has been to barnstorm his limper colleagues on the forty-man executive, heavily overloaded as it is with superannuated vice-presidents, into letting him short-circuit the present chain of command. Colonel Lort-Phillips wanted the alteration of the chain itself on democratic lines, so that the younger members of the party who are willing to do something should have policy-making roles. He wanted more officers directly elected to be heads of departments, in place of vice-presidents like Sir Andrew McFadyean, who miraculously clings to the chairmanship of the party's foreign affairs committee despite the overwhelming rejection of his right-wing views at each annual assembly. Above all, Colonel Lort-Phillips has been advocating the election of a policy panel, whose members should organise policy-discussing sub-committees of a revitalised executive.

By deciding to resign now and take his case against his brother officer to the public, Colonel Lort-Phillips has opened himself to the reproach of not having the patience to wait until June 12th, when the Byers committee will expire in any case unless the executive decides to renew the experiment. But the last straw was the evident pleasure he thought he detected at party headquarters at his decision not to accept renomination for election to a Treasurership at this year's Assembly. His next move will be to seek a constituency at a by-election. If he can repeat or improve upon his performance at Gloucester, he is confident of coming to the Assembly with the prestige to challenge the present dispensation.

NOTES OF THE WEEK

WAGE CLAIMS

What Time Lag?

The season of union conferences will open in earnest this Easter weekend, and continue well into July. It looks like being an even more crucial season than usual for the British economy. The pattern of wage advances for 1960 now seems fairly clear. Far in the front come the prospective Guillebaud increases of between 8 and 18 per cent to railwaymen. Other awards have been less inflationary. The engineers, with their two hour reduction on the working week without loss of pay, got an effective increase that can be variously estimated between 4½ and 6 per cent, according to the amount of overtime to be expected; other smaller unions have done less well. It seems fair to assume that the workers who have still to get wage advances—rather less than half the total—will follow the same general precedents. The net result could well be an advance of between 4½ and 5 per cent in labour costs throughout British industry by the summer, compared with a year ago.

As output per man hour is unlikely to increase by more than about 3½ per cent during the year, this increase would be inflationary unless there is a gap of, say, fifteen to eighteen months between this round of wage settlements and the next one. The time lag is the key factor. If the unions decide in the next few months to follow the hoary precedent of putting in one claim as soon as the last is over, and fighting resolutely and immediately for it, the wage-price spiral will start again. Of course, wage claims of some sort always are tabled at annual union conferences. But in a calm year, with the help of good stage management, the extremists who want an immediate showdown in industry are usually defeated; the conferences are then confined to passing windy resolutions on the necessity of industrial action which do not bind the executives to any cut-and-dried bargaining timetables.

On the face of it, this should be a calm year; the complete lack of support from rank and file workers for some recent strikes called by the National Committee of Shop Stewards, and the union leaders' prompt condemnation of these attempts at unofficial action, suggest that passions in the movement are hardly at boiling point.

But conference debates are often swayed by accidents of the agenda and of personalities, and all sorts of unpredictable oddities of union mood can determine whether or not the executives emerge with a sense of militant urgency in pursuing their next claims. It is for these accidents and indications of mood that this year's conferences will be watched.

NYASALAND

Long Way to Go

MR MACLEOD admitted last weekend that he does not think the London conference on Nyasaland in midsummer will be a success "unless there is a considerable move away from the positions taken up by the different parties concerned." That is also the impression that emerged from Dr Banda's televised interviews in London last week. The Nyasaland leader has come out from detention very ready to bury the hatchet with the British Government, but still excitedly waving it at Sir Roy Welensky.

Mr Macleod has clearly had a three point plan in mind for Nyasaland. The first need was to establish personal *rapport* with Dr Banda. He has succeeded in that; the doctor is now full of praise for Mr Macleod as "a Christian gentleman." The second need is to get Dr Banda used to the idea of thinking like a chief minister rather than a perpetual opposition leader; that will presumably be the object of the midsummer conference on Nyasaland. The third aim is to get Dr Banda, in this new mood, and presumably also Mr Kaunda, the African nationalist leader in Northern Rhodesia, to sit round the table at the post-Monckton Commission conference (next October) on the future of the Federation of the Rhodesias and Nyasaland. The aim there must be to replace the present Federation by some much looser form of association, largely economic in character. The trouble is that Dr Banda is still loudly proclaiming that at no negotiations this year will he agree to accept any continuing form of association with Southern Rhodesia at all.

What should Britain's attitude be? The case for wanting to see some continuing form of association is overwhelming. Even if Dr Banda were to lead an independent Nyasaland out of the Federation tomorrow, wage-seeking Nyasalanders would still go to work in the Rhodesias, and only through some continuing form of association can the Nyasaland government hope to influence their labour conditions when they get there. An association is the best way that Dr Banda can hope to help the black Africans in Southern Rhodesia too. Politically and internationally, a complete break between the territories comprising the present Federation would make the Zambesi the bitter dividing line between black Africa and white-dominated Africa—the most dangerous frontier to peace in the world. The aim must still be to make Central Africa a buffer zone, in which one black government (Nyasaland), one very temporarily colonial government (Northern Rhodesia) and one government that is bound to be white-dominated for a while (Southern Rhodesia) work together in some degree of economic association and commonsense.

There are two obstacles in the way of that solution: the remaining racial arrogance of some white Southern Rhodesians who do not realise that the world is changing, and the remaining inferiority complex of Dr Banda who does not realise how much political forces have changed. The first obstacle should have received a battering from the world's reaction to events in South Africa; it is going to be no less necessary during this year to keep up an intelligent assault against the second obstacle too.

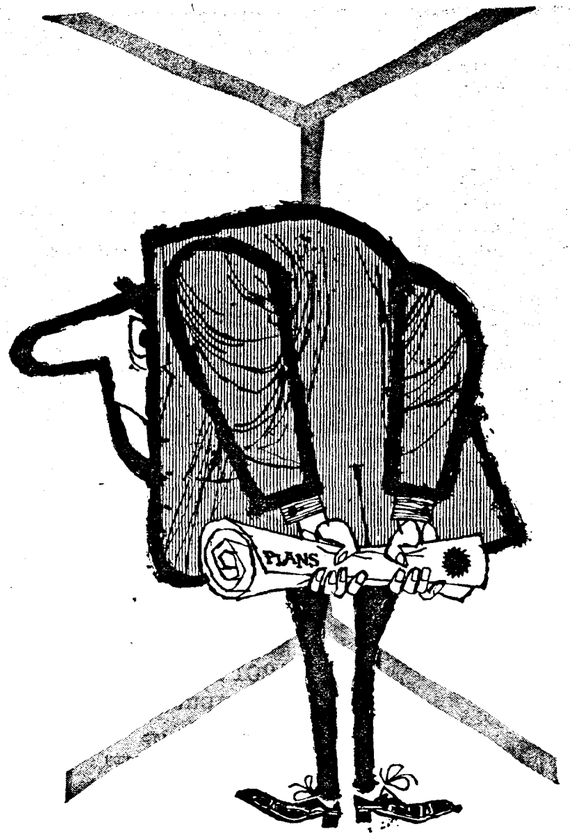
ITALY

An Expedient Fails

WITH the resignation on Monday of Signor Tambroni after a weekend in office, Italy entered its eighth week without an effective government. Signor Tambroni, a Christian Democrat, had presented his minority administration as one of "ordinary business," which at least might get the budget passed and assure that Italy had authoritative representation in foreign affairs during the summit times ahead. He squeezed through the vote of confidence in the chamber of deputies on April 8th with a majority of seven.

But his government was tarred by its dependence upon the 24 neo-fascists—the circumstance which had led Signor Segni to leave office on February 24th, his other right-wing support having been withdrawn. Several of Signor Tambroni's ministers promptly resigned. With his ministry tumbling about his ears, Signor Tambroni reluctantly submitted to the insistence of his party executive that he should abandon his forlorn enterprise; though the remnants of the cabinet continue to supervise day-to-day business, and Signor Segni has represented Italy in Washington at the meetings of the western foreign ministers to prepare for the summit conference.

It appears likely that the Christian Democrats will now give up their pursuit of a single-party administration; they will probably try to form a coalition with the other moderate democratic groups—the Social Democrats, the Republicans, the Liberals, and possibly the Monarchists. This is the old De Gasperi formula; and it would obviate the need for allies further to the left or right, which in recent weeks has threatened to split the party asunder. But such negotiations could prove extremely tricky. Questions of domestic social reform, and the possibility of a more flexible policy towards Russia, lately uppermost in Italian politics, have served to bring out the division between conservatives and progressives among the centre politicians. It will not be easy to find a programme on which they will all agree. The Social Democrats especially are now on better terms with the Nenni Socialists, and they may not have despaired of the Christian Democrats making a move to the left—a step which President Gronchi is believed to support. If the negotiations founder, then the President may yet resort to early dissolution of Parliament.



SOUTH AFRICA

State of Siege

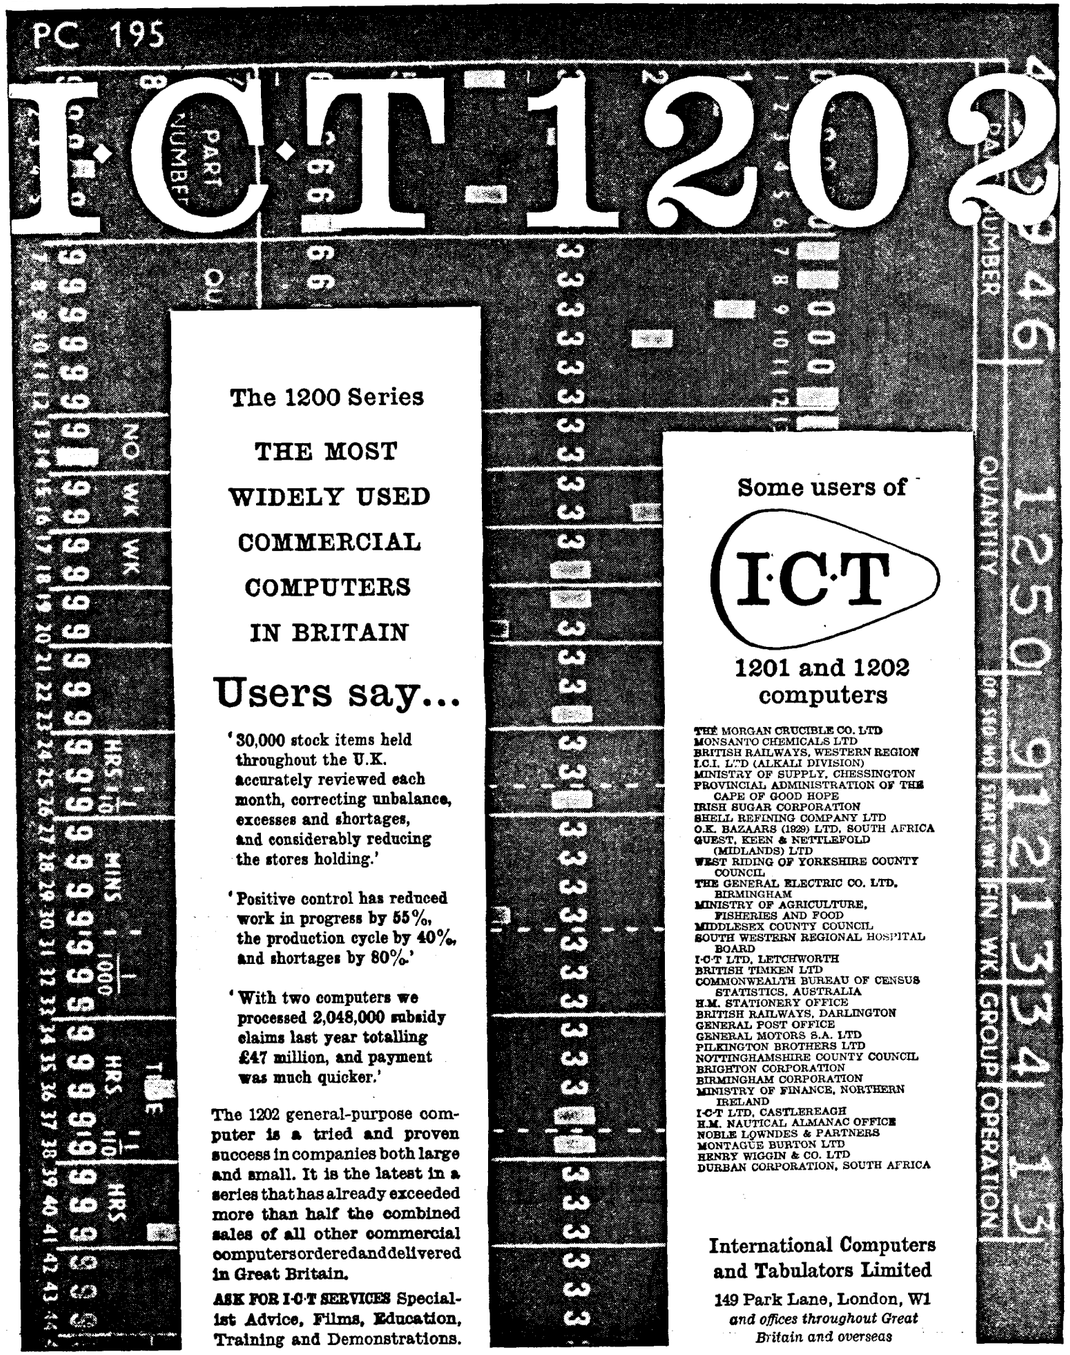
FREAKISH and irrelevant to the main issue, the attempt by a white farmer on the life of Dr Verwoerd on April 9th is yet the product of the same senseless immoderation that engulfs South Africa. The month-long crisis was artificially engendered out of largely irrational fears, the result of wearing blinkers for too long. A few minutes before he was wounded the prime minister, the light of crusade in his eyes and the reasonableness of his tone clashing with the melodrama of his words, was telling a farming audience of South Africa's fight for very existence. At what windmills was he tilting? The government ranges against itself a ghost army of communists, intimidators and terrorists. The emergency regulations that have been clapped on to a third of the Union would be called in many countries a "state of siege." The Nationalists, appalled by the evidence both of their isolation and of the fact that the Africans, too, can organise and discipline themselves, speak and act with the logic of siege.

In this atmosphere, the attack on Dr Verwoerd may at first close the ranks of his supporters. That it has not been thought necessary to appoint an understudy while the prime minister is out of action points to a period of suspended animation. The Africans, with their leaders skimmed off, are unlikely to force a situation that cannot be dealt with in familiar ways. The United party, already demoralised by its own half-heartedness, will find it harder than ever to make itself heard through the English-Afrikaner tensions released by Mr David Pratt, the assailant, from the Union's pandora's box of racial complexes. The Dutch church is entering a struggle of its own with the World Council of Churches. There remains the influential group of business men who had been on the point of approaching Dr Verwoerd with their suggestions. It is doubtful whether the prime minister would have been deflected from his crusade by concern for business; his shadow government may be more impressionable.

At the best, the government may make some minor changes to take the sting out of outside criticism. Above all, its aim is to restore stability. But South Africa will never be the same place again. The means used by the government first to create and now to dispel the crisis were new in degree, not in kind. But in the course of the crisis there have been three changes. The world

Cornered?

This-a-way and that-a-way have gone all your pretty dreams. Not even the excavators are on the site yet!
And that on top of the delay over planning permission ... draft plans ... second thoughts—and third! Tight corner you are in, Sir. Listen. *Next time, contact Costain first.* A straight line from your office—or your adviser's—to ours is the shortest distance between those building problems and their solution. Our skills, experience and resources are unmatched.



Here, for example, are a few projects recently completed by Costain:

TRANSISTOR FACTORY SWINDON · THE KARIBA TOWNSHIP
BEA WEST LONDON TERMINAL · IBADAN TEACHING HOSPITAL · BP RESEARCH STATION

It's never too soon to call in Richard COSTAIN Limited

BUILDING & CIVIL ENGINEERING CONTRACTORS, LONDON, ENGLAND

Home Branches: Bristol · Canterbury · Grays · Newcastle · Plymouth MIDDLE EAST · RHODESIA · NIGERIA · CANADA · WEST INDIES · SOUTH AMERICA

has had its eyes opened. The Europeans in the Union have begun to perceive their isolation (a letter on page 261 throws light on the process). The Africans have begun to discover their own strength in passive resistance.

PARLIAMENTARY CONTROL

New Winds of Inquisition

IT now seems likely that the Government is ready to risk quite an important constitutional innovation in its attempt to meet Tory complaints about lack of parliamentary control over expenditure. While Ministers normally have to cope only with the easy ritual of question time, where the rules are heavily weighted in their favour, senior civil servants have been known to tremble at the approaching rigours of cross-examination by the MPs on the Public Accounts Committee. The Government is now thinking of exposing both its Ministers and their senior advisers to such an ordeal before either a new Committee on National Expenditure or an expanded and reinforced Select Committee on Estimates.

This apparently is what Mr Butler had in mind when he made his curious reference to "administrative policy" as a legitimate new field for MPs' enquiry. Ministers are theoretically supposed to decide policy, and civil servants to conduct administration. But in fact there is a large zone in which their responsibilities intersect—and it is frequently in this zone in which the practical decisions are made about the distribution between the different departmental functions of money voted by Parliament. Priorities were once said by Mr Bevan to be the religion of socialism—implicitly or explicitly they are the theology of all bureaucracies. It should aid the cause of parliamentary control if some of them were dragged out into the open air and the evidence of Ministers and their advisers were tested against each other.

To judge from Mr Butler's intervention in the recent debate on control of expenditure launched by the scion of Sandwich, he intends this new type of committee enquiry to be linked to one or more debates on national expenditure. It is not clear how far Mr Butler himself has worked out the implications for the parliamentary calendar. But one scheme that is being discussed would allot six days altogether to this purpose. An increase in the number of Supply Days (which are normally the Opposition's time) from twenty six to twenty nine would provide for half the extra time being supplied by the Government and half by the Opposition.

Two of the six days would provide a debate in the autumn on the Consolidated Fund Appropriation Bill, for which the select committee's investigation would be expected to provide information on the general trends of Government expenditure as revealed by administrative decisions that have long-term financial implications. Two more would make a full-dress debate possible on one of the Consolidated Fund Bills in the spring just before the budget. The estimates, which the autumn debate would be supposed to influence, would be out by then—and much fuller investigations would have taken place in the select committee. The final two days would be controlled by the chairman of the Public Accounts and Estimates Committees and would deal with their reports.

There are some obvious questions that spring to mind. Would the new Select Committee, or the old Estimates Committee writ large, have time to do anything useful before the first (autumn) debate? If not, should it be a standing rather than a sessional committee (like the present Public Accounts Committee but unlike the Estimates Committee), and should it work during the recess? If on the other hand there is no accurate information until the March debate, will it not then be too late for the Government to be ready to accept corrections to its proposed estimates from "the grand jury of the nation"?

OMBUDSMAN

No Kafka in Elsinore

IT is excellent news that "Justice," the unofficial all-party group of lawyers headed by Lord Shawcross, has managed to obtain the services of Sir John Whyatt, the former Chief Justice of Singapore, to look into the chances of adapting the Scandinavian institution of Ombudsman for British use. In the two years since Professor Stephan Hurwitz, the Danish Parliamentary Commissioner, delivered his first lecture in London about his job, the evidence has piled up of the need for some British equivalent of the "grievance man" to whom a citizen can turn if he feels he has not had his due from those in authority. Despite the presence in Britain of the Citizens' Advice Bureau, which Denmark does not have and which the Danes are eager to investigate, a further weapon is clearly needed against Bumbledom here.

When Dr Hurwitz, who is over in London again this week to broadcast for the BBC's Third Programme, dealt impressively with questions from the press, he laid the highest stress on the element of mental hygiene in his work. Of the thousand complainants against authority that he and his five assistants deal with in a year, between 50 and 70 per cent are generally told straightaway, within one hour, that there is nothing to be done; in only 10 per cent of the cases can the Ombudsman ultimately discover a remedy. But Dr Hurwitz tries to see every applicant personally, if only to explain to him why he has no leg to stand on. The whole principle behind his conception of his office is that there must be a top man whom every citizen knows that he has access to in case of need. He regards himself as applying therapy to the Kafkaesque sense of being passed endlessly from one office to another.

For this reason Dr Hurwitz, while recognising that a system that is appropriate to a nation of five million Danes will need some modification to fit the circumstances of a population ten times as large, rejected emphatically a suggestion made recently in *The Economist*: that a British Ombudsman should select only those cases to investigate which were likely to raise points of general application. After listening to Dr Hurwitz arguing his case, it is easy to be convinced by him that a major principle is involved in giving the citizen confidence that, however esoteric his problem, he can count on having it taken up.

Therefore the problem still remains of how to cope with the much larger number of cases that are likely to arise in Britain without running the risk of bureaucratising the new institution. Dr Hurwitz's own tentative solution was that there might be regional Ombudsmen who would handle the great majority of straightforward cases, leaving the top man in London to follow up the tough ones. An alternative and perhaps preferable solution would be to have a separate man to handle each major type of complaint—one for complaints against local government authorities, one for those against organs of the central government, perhaps a special one for property cases, and so on.

GERMANY

Exit Dr Oberländer

ON April 8th the news leaked out in Bonn that Dr Adenauer had bowed to the growing pressure of international and domestic opinion and agreed to get rid of Dr Oberländer, his Minister for Refugees. It is a move long overdue; Dr Oberländer is the most conspicuous of the men in high places in Bonn who were closely identified with Nazi policies. No clear verdict has yet been given on the charges of war crimes that have been made against him—particularly, that he had a part in a massacre at Lwow (Lemberg) in June, 1941. But whether Dr Oberländer was innocent or guilty in this matter, he was active in Rosenberg's Eastern Ministry in the war. He was a prominent theorist of the "German mission" in eastern Europe; he advocated the wholesale shifting of populations to fulfil it; in sum, he was involved in wicked and disastrous policies. He has never seemed suitable to sit in the cabinet in Bonn.

For some time, indeed, the minister has been a growing political embarrassment to Dr Adenauer, offering a sitting target for communist propaganda. And in the past few months a campaign has been mounted against him, as part of the general communist attempt to make the most of the differences between west Germany and its allies on the eve of the summit conference. Until last week most of the alleged evidence of Dr Oberländer's war crimes emanated

from east Berlin. But last week Russia itself chimed in. A commission, adorned by such unexpected figures as Professor Lysenko, the biologist, and Metropolitan Nikolai of the Orthodox Church, found the minister guilty both of participating in the Lwow massacre and of other crimes in the Caucasus. The east Germans, not to be outdone, summoned Dr Oberländer to appear for "trial" by them.

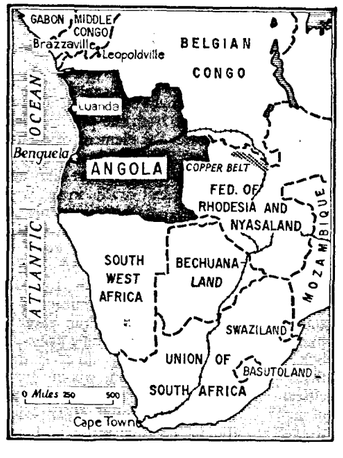
Dr Adenauer has defended Dr Oberländer out of anxiety not to appear to give way to communist pressure. Yet when the pressure was not there, no urgent need to act was recognised. Now, at last, the Chancellor appears to have taken the plunge. The pressure of events had last month persuaded the Christian Democrats to set up a "court of honour" to investigate Dr Oberländer's past. Last week the Social Democrats put forward a motion in the Bundestag, calling for a parliamentary inquiry. Anxious to avoid discrediting his government while the summit season was on, Dr Adenauer appears to have arranged for Dr Oberländer to go on leave before Easter and resign by May 5th.

Eastern Ambitions

ONE reason for delaying Dr Oberländer's resignation is to enable him to claim the pension of a former minister, which he can do early in May. The chancellor's aim now is, plainly enough, to get Dr Oberländer out with the minimum of fuss. Dr Oberländer after all has rebuilt his political career since the war by making himself a leader of the refugees expelled from the east, and making himself a spokesman of their claim to return. Dr Adenauer has always held that the sting of this irredentist group could best be drawn by having its representatives in the cabinet.

Although the refugee leaders have not become less vocal, their political strength has been whittled away in the seven years since Dr Oberländer entered the government. When Dr Oberländer was elected to the Bundestag in 1953—to become at once a member of the federal government—he was a representative of the refugees' own party. A year later, after an internal struggle, he became leader of the party, but this did not last long. In 1955 the refugee party went into opposition; Dr Oberländer preferred to stay in office and became a member of Dr Adenauer's Christian Democratic Union. Shorn of its leaders, the refugee party lost electoral support and is now all but extinct. Time, and the chancellor's divisive efforts, have successfully destroyed the grouping as an independent political force.

Whether Dr Adenauer's judgment was right or wrong in 1953, there is not much doubt now that the men whose political profession it is to keep German eastern ambitions alive do more harm in office than out of it. Herr Seebohm, the minister of transport, is another example; on April 3rd he spoke, not for the first time, of the right of the Sudeten Germans to return home and decide their own political future. At the same meeting Herr Wenzel Jaksch, the Sudeten German Social Democrat, suggested that the Sudetens, Czechs, and Slovaks should form a sort of Benelux, with each group enjoying equal and partially autonomous political rights.



Such remarks are not in quite the same class as the outrageous suggestion made the same weekend by Herr Schneider, leader of the Free Democrats in the Saar, that the Munich settlement, which gave the Sudetenland to Germany, still had legal force. Still, one must wonder whether the political encouragement the federal government gives and has given to the refugees—the financial help to their organisations, the benevolent ministerial appearances at their rallies, the ambivalent talk of a German right to the territories they come from—has not made them more determined to change the status quo in central Europe, instead of helping them to settle down.

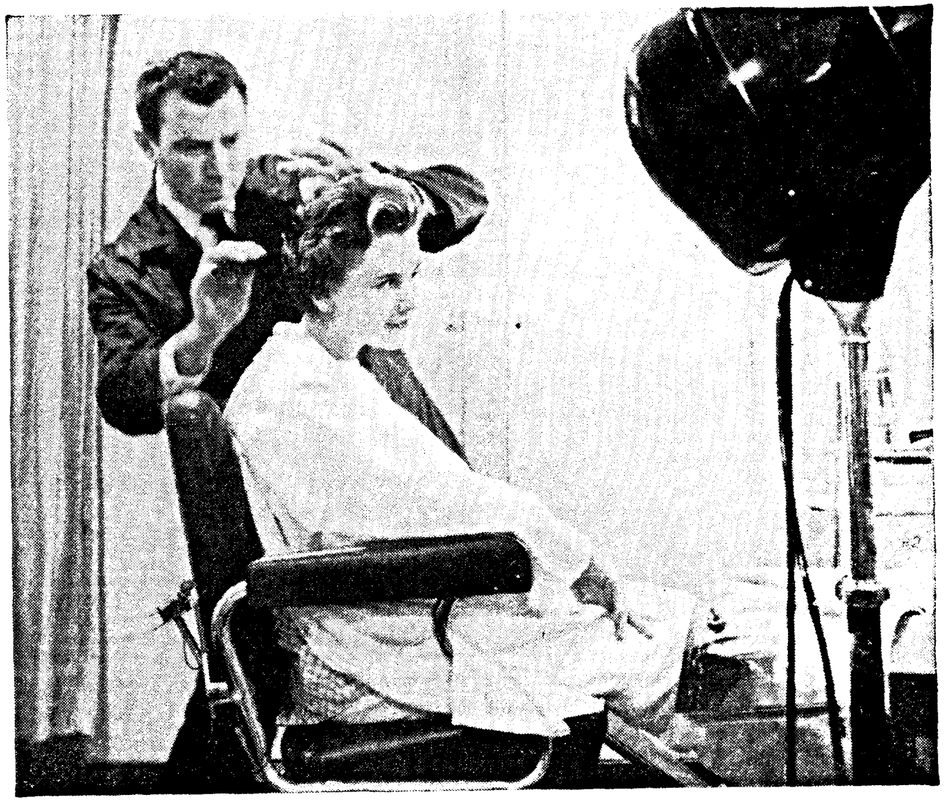
ANGOLA

Portuguese Buffers

REPORTS recently filtering out of Angola suggest that the Portuguese have not successfully isolated this west African territory from the political fevers raging among its neighbours to the north. The Portuguese authorities have denied persistent rumours of fighting between government troops and organised bands of African rebels. But the situation appears to be disturbed, though not yet eruptive: warships are being sent to patrol the thousand miles of Angolan coastline, garrisons near the Belgian Congo have been reinforced, and a large batch of people, white and black, have been arraigned on charges of treason connected with the outbreaks of disorder in Angola last year.

The official policy of Dr Salazar's regime is to assimilate all inhabitants of the overseas territories as equal citizens of Portugal, regardless of colour. And in 1955 these territories were incorporated as provinces of metropolitan Portugal—a move which has also conveniently kept the United Nations from demanding that they be reported on like other non-self-governing areas. In fact less than one per cent of the four million native population in Angola have acquired citizenship. The rest are legally "indigenas"—natives; and they are subject to an elaborate complex of administrative controls, including the hated forced labour laws. There is probably less discrimination simply on grounds of colour than elsewhere in Africa, and miscegenation has never bothered the Portuguese as it has other colonising powers. But the large influx of white mainland immigrants in recent years has emphasised the racial and economic distinctions, while also absorbing much of the increased investment by the government.

Organisations like the Angola People's Union and the Popular Movement for the Liberation of Angola have for some time given a subversive coherence to native discontent. They were represented at the All-African People's congress at Tunis in January, and it is said that the Algerians then offered to train the Angolans in guerrilla warfare. Certain of the anti-Salazar politicians have also dabbled with the native revolutionaries. The critical time will come when the Belgian Congo achieves its independence on June 30th. Many Angolans, including four of those accused of treason, have fled to Leopoldville. The young Congo state will hardly restrain them from preaching freedom across the border; however, they may find the Portuguese a tougher nut to crack than the Belgians. The Portuguese have made a mystique of their missionary and civilising role in Africa. As in Goa, they will try to sit out any more troubles that arise, ill-equipped as they are to deal with a full scale rebellion. The South Africans, who see Angola and the Portuguese east African province of Mozambique as buffer states against black nationalism, will be wishing them luck.



GERMANY AND GUINEA

An Incident Closed

CONFRONTED with the righteous wrath of Bonn, M. Sekou Touré has decided that the young state of Guinea is not, after all, in diplomatic relations with east Berlin. Nobody has explained how M. Touré's ambassador to Moscow, M. Seydou Conte, came to be seen on the east German television early in March in the act of handing his credentials to the aged east German president, Herr Pieck; and probably nobody will, the west Germans having expressed their satisfaction with a disclaimer put out in Conakry, and their intention to let the matter drop.

For the moment, therefore, Bonn's superior prestige and (no doubt) Bonn's stronger economic pull have prevailed over east Berlin. M. Sekou Touré would obviously have preferred to be in diplomatic

There's a dance on deck tonight . . .

Well, it's in the Lounge really. But, for cooling breezes, doors and windows are wide open to the deck, where the scrubbed boards are smooth to the light fantastic toe and where, from the rails, a girl and her partner can see the Southern Cross above them.

The Captain's invited her to a cocktail party tomorrow, and then it's the new Cary Grant film. Bathing in the deck pool, a trot on the gymnasium camel, sun-tanning, noisy card games with Jeremy and his table mates, meals (she'll have to take a deep breath on the bathroom scales if she goes for everything she likes the look of on those five-star Union-Castle *menus*) . . . and sleep.

Thirteen and a half Grand Hotel days to the Cape, with sunshine and smooth seas, a cabin almost the size of her room at home and masses of luggage without extra charge. That's the way to travel!

THE GREAT NEW 'WINDSOR CASTLE'

She comes into service for her maiden voyage on August 18th, all 38,000 tons of her. She will set new standards of amenities for luxury passenger travel. First Class and Tourist.

the going's good by

SIR LINDSAY PARKINSON

SPAN THE WORLD

The new Lune Bridge. One of the 24 re-inforced concrete bridges bearing the new 11½ mile Motorway, built by Sir Lindsay Parkinson & Company Limited.

The opening of the Lancaster By-Pass on April 11th is another step forward in providing Britain with the Motorways she needs.

Sir Lindsay Parkinson & Co. Ltd. were the main contractors for this Three-and-a-half-million pound scheme.

THEIR RECENT MAJOR CONTRACTS INCLUDE

NIGERIA: The first television station in West Africa. CYPRUS: Permanent barracks for the War Department. GHANA: The Tema deep-water harbour (Parkinson-Howard Ltd.) BRITISH GUIANA: The Boeraserie Extension Project (Drainage and irrigation). AUSTRALIA: A 13-storey building in Sydney containing the Attorney-General's office and barristers' chambers. ENGLAND: The Extension to the Royal Hospital, Chelsea, and a new factory for Vauxhall Motors Ltd, at Luton, as well as various contracts for industrial projects and housing estates throughout the country.

SIR LINDSAY PARKINSON
AND COMPANY LIMITED

Head Office: Sir Lindsay Parkinson & Co. Ltd, 6 Lambeth Road, St. George's Circus, S.E.1

relations with both German states, but since he was forced to choose, he has chosen Bonn, which showed him marked friendliness when he was there during the winter, and which can no doubt offer him even more in economic aid. No doubt the effect will be in practice that his capital will have two German missions, one nominally an embassy, the other nominally perhaps a trade mission, perhaps a consulate-general, as in Cairo ; and, as west Germans drily remark, if a German calls a taxi to drive to the German embassy he will be asked, as he is in Cairo, "Which one?" But the letter of the Hallstein doctrine is respected. East Berlin, if it has lost prestige as a result, has been at pains to acquire goodwill by scrupulously not making a fuss.

The last major incident of this kind was with Jugoslavia in 1957 ; and it ended in the closing of the west German embassy in Belgrade. In exchange, Marshal Tito got an east German diplomatic mission—a bad bargain both for the west Germans and for the Jugoslavs, whose relations with east Berlin have since been consistently bad. Other incidents of the same kind have been only narrowly averted, as in Cairo ; in order to hold the line in the Arab countries generally, Bonn has held in reserve a card of its own, the threat to exchange ambassadors with Israel if the Arabs recognise east Berlin. So far, this has sufficed.

The whole exercise of preventing recognition of east Berlin is, however, an artificial one in uncommitted African and Asian countries whose people cannot be expected to see much difference between one German and another. As time goes on, the price of securing compliance is likely to rise. A curious and in a way unexpected part of the price on this occasion has been a marked irritation with Dr Adenauer's government on the part of General de Gaulle, who has not forgiven the Guineans for leaving the French Community, and who regards the west German eagerness to "appease" Guinea as pusillanimous and naive.

RELIEF OF POVERTY

Irresponsible in Which Sense?

LABOUR intellectuals are increasingly looking to Professor Richard Titmuss as the socialist thinker most likely to provide their party with something to rouse their conscience and give them new injustices to campaign against. It would be a pity to dismiss his latest pamphlet "The Irresponsible Society"* as a piece of alarmist wrong-headedness—even if he does devote part of it to excoriating *The Economist*. He makes some good points. One is that, with the general increase of affluence, a dangerous amount of steam has gone out of Britain's once powerful social conscience. A complacent society has lost much of the impetus needed to clear up slums, slum hospitals, slums *tout court*. At debating society (or Parliamentary) level, one can no doubt make this proposition. At any other level, of this proposition. deplorable fall-off in spcan recognise a the Quaker sense) with a concern (in unlucky minority who are fate of the reason or another unrescued from for one

It is also possible—even while the esh refuses actually to creep at Mr Titmuss's picture of the sinister and irresponsible power now wielded by the big insurance companies—to accept the case for imposing on these companies at least those legal obligations of publicity carried by their counterparts in the United States. One need not be a socialist, either, to be worried by the arbitrary standards of selection and rejection to which would-be clients of private pension schemes are subjected, and by the immobilising effect of "company welfare" on its beneficiaries. All these questions need ventilating, and it is good that Mr Titmuss should ventilate them.

His main argument exhibits, however, a confusion only too characteristic of most thinking about the welfare state: the confusion between the elements of prudence and of social solidarity. Prudence demands provision against contingencies and an averaging-out of income over the earning and non-earning phases of life ; it has hitherto been a virtue that only the middle class could afford, but Britain is moving into a much more generally middle class society now. Solidarity demands that the strong aid the weak, permitting none to fall below an acceptable standard. These aims are distinct. There is no reason in logic, ethics, or practical convenience why insurance schemes as such should conform to a special equalitarian imperative: why, specifically, the pension element in a company's bargain with its staff should come in for more opprobrium ("welfare for the better off") than the salary element. To unravel this muddle would be a useful preliminary to the exercise of that "social inventiveness" in relieving distress for which Mr Titmuss so rightly pleads. The effect of Mr Titmuss's pamphlet is deliberately to tangle it further.

*"The Irresponsible Society." By Richard M. Titmuss. Fabian Society. 20 pages. 2s. 6d.

FRANCE

Algeria Again

BACK in Paris, with the French press still registering surprise that he was so warmly received in London, General de Gaulle is preparing to leave on Tuesday for Washington. He has had much to take up his attention in the brief interlude between foreign visits—particularly the Algerian question, which, once again, shows signs of becoming dangerously international.

The Algerian insurgent government in Tunis anounced on Monday its willingness to enrol volunteers "without distinction of origin," giving merely a priority to technicians. The threat of Chinese "volunteers" is now, therefore, more alive than ever. In Paris, there are rumours that the insurgents intend to intensify the struggle by throwing into battle the 10,000 or so men now held safely in reserve behind the Tunisian border. The persistence of these rumours, coupled as they are with hints that French troops would have to pursue the enemy across the border, has given rise to a recurrence of the Tunisians' fears that France intends to invade their territory. President Bourguiba has now declared publicly that the hopes he had pinned on General de Gaulle were misplaced and that it is high time to resort to international "good offices" again.

All this is strangely reminiscent of the last days of the Fourth Republic. The last thing General de Gaulle would wish is foreign interference. But what is he going to do to settle the conflict on his own? Local elections are to be held in Algeria at the end of May and there is talk of negotiating a statute with the newly elected representatives. The insurgents, however, have made it plain in advance that they will treat these men as French puppets. Something more spectacular than these elections will be needed to get some possibility of manœuvre back into a situation which the general has admitted to be deadlocked. He goes to Washington in search not of memories but of concessions ; he may be asked questions about Algeria in reply.

DISARMAMENT

Till May is Out

HARDLY anybody can have expected the ten-power disarmament talks at Geneva to make quick headway. The agreement to adjourn throughout the month of May is neither startling nor disconcerting. Before the summit conference (May 16th), the Geneva delegations will have to ponder such evidence as they have obtained about each other's views and the possibilities of progress, and prepare reports for the heads of government. After the summit meeting, they may have to digest its results (if any). A sceptic might deduce that the main effect of the summit will be to impose new delays ; but then nobody at Geneva seems particularly in a hurry.

Certainly the Russians are not to be hurried. In four weeks of debate, Mr Zorin has steadily refused to get down to brass tacks. He fluffed rather badly on April 8th by announcing a "new" formula which proved to be, in M. Moch's words, "the same salad with more Russian dressing." He has stripped the Soviet proposals made last September of what little specific content they had. It turns out that Mr Khrushchev's "four-year" timetable will in reality last a good deal longer than four years ; that priority is not after all to be given to conventional disarmament ; that, if the conference were to accept the Russian terms tomorrow, no immediate measures of

disarmament would follow; and that the Russians have not yet really begun to think about the problem of determining the size of the armed forces that they would still leave in existence after "general and complete" disarmament.

Yawning though the gaps in the western plan are, the five western delegations have at least tried to discuss concrete steps to be taken. Their frustrated suspicions that Mr Zorin is merely marking time are understandable. But no provocation can quite account for Mr Herter's lapse when he told his Friday press conference that he found the Russian desire for a longish adjournment "puzzling." The decision to close down for the whole of May was a common one. The American delegation and the State Department were left red-faced by this evidence of faulty liaison between Washington and its men in Geneva.

CATTLE BREEDING

Unfair to Bulls?

THE Milk Marketing Board's proposal for the establishment of a more scientifically concentrated artificial insemination stud for dairy cows has run into fierce opposition from the cattle-breeding societies. One spokesman of the Friesian Cattle Society has called it "a plan to nationalise more than two-thirds of the nation's cattle without compensation. The Milk Marketing Board's pilot scheme now in operation affects only the North of England; but the board plans to extend it eventually until all the (approximately) two million dairy cows of Britain are served by no more than two hundred "proven" bulls. The breeding societies' own objection to the scheme is obvious: it would, if carried through on a national scale, enormously reduce the demand for bulls—producing, indeed, a classical case of technological redundancy.

Anybody who believes in efficiency need not worry overmuch about that sort of complaint. Among other objections to the scheme, only a geneticist could pronounce either on the reliability of the bull "proving" process, or, more important, on the danger of inbreeding; the marketing board, after taking the best expert advice from all over the world, has no misgivings. But there is one danger that might be overlooked.

The breeding societies themselves have often been under fire for encouraging—in an inappropriately aesthetic spirit—breeding for points of show-ring conformation very shakily, if at all, related to function. In the marketing board scheme, function will come first, as it should. But there is a danger—the danger besetting all technical specialists—of defining function the wrong way. A high yield of milk per cow is not an all-transcending aim in itself; it is simply one way of getting down cost per gallon. It would be only too possible in a remote

NOTES OF THE W[illegible] by selecting artificial insemination sc[illegible]elds regardless of stamina and sturdin[illegible] of bovine prima donnas: demandin[illegible]nousing and veterinary and general [illegible] which would make them as uneconc[illegible] an equal number of scrub cattle. The [illegible]oard's administrators will need to g[illegible]d against falling under the spell of [illegible]cientists interested in statistical gamesmanship about record yields. They should keep in the closest touch with the men who milk the cows—and who live on the payoff.

IRAQ

Winds from the West

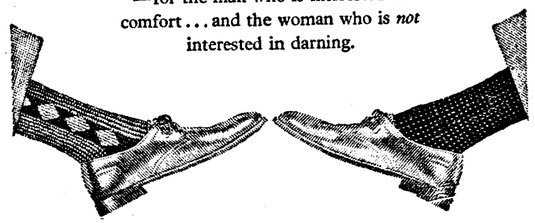
MR MIKOYAN, Russia's peripatetic deputy prime minister, has been spending this week in Iraq. Few visitors to Baghdad particularly enjoy themselves, and Mr Mikoyan, despite the warm welcome he received in the streets and the bounty he has on offer, was probably no exception. The contrary winds that now blow over Iraq are not all favourable to Moscow. The decisive split in the Iraqi Communist party has left the larger, orthodox faction out in the cold, and Russian newspapers have sourly disowned the party that has got the government licence. So far, Moscow has not had to make the choice in Iraq that it had to make in the United Arab Republic between Arab nationalism and the local communists. But, at any rate for the time being, its policy of working through the Iraqi Communist party has come to grief. General Qasim, no less than President Nasser, is going through the motions of wanting to be master in his own house.

Mr Mikoyan's main concern is to give body to the Soviet-Iraqi economic and technical agreement signed in Moscow a year ago. Of the many development projects that were then proposed, few have actually been started; the Iraqis have even been showing an inclination to buy British. But it is not the Soviet practice to allow short-term rebuffs to upset long-term economic arrangements. On the contrary, Russian aid to Syria has recently been extended and, to keep a balance, the same may be done for Iraq.

A few months ago, one of Mr Mikoyan's principal hosts would have been Dr Ibrahim Kubba, who, as minister of economics, signed the aid agreement. But Dr Kubba, whose views were far to the left, was sacked from the government in February. His last post had been the ministry of agrarian reform, and his departure has meant immediate changes in land policy. Dr Kubba was trying to push through some form of collective farming based on peasants' associations, but his ideas hung fire, and the land was allowed to run to waste. Most of the landlords, waiting to see what would happen, did not bother to cultivate their fields, and the peasants grew only enough for their own food. The new minister has dropped all idea of collectivisation and is searching, with active help from Danish, Dutch and British experts, for a new formula on co-operative lines. Although Mr Mikoyan will not allow these west winds to chill his philanthropy, he may well conclude that in Iraq, as well as in the UAR, Arab nationalism is a more dynamic, though less predictable, revolutionary force than communism. He might even advise his government to modify its policy accordingly.

SIERRA LEONE

Diamond State



SIERRA LEONE'S constitutional demands have never been extreme, and the conference which opens at Lancaster House next week is likely to deal with matters of detail rather than of principle. Certain problems do not arise in a country whose population of 2,260,000 includes only 2,000 Europeans and Asians combined. But details can be troublesome. The "United National Front," in which all parties are at least temporarily together in working for independence under the premier, Sir Milton Margai, is brand new and untested in action; and if Mr Macleod agrees to the recent suggestion of December 7th (Sir Milton's birthday) this year as independence day, there will be little time to spare.

Questions still unsettled include the constitutional position of the chiefs (twelve, elected on a tribal basis, sit in the House of Representatives), and the relationship between the Creoles (descendants of freed slaves and immigrant Africans) and the indigenous Africans. The Creoles resent what they regard as the swamping of their vote by general enfranchisements, but so far have declined to take an active part in politics. But these are probably internal matters to be settled after independence. More urgent is finance. An independent Sierra Leone will have to rely heavily on iron and diamond mining; in recent years, illicit (untaxed) exports of diamonds have been at least four times the value of taxed exports. Moreover, the riots of January last year showed that the unofficial diggers can be a threat to the much better worked preserves of the licensed Selection Trust. If Sierra Leone is to be economically viable, any government will have to get this matter under control.

But, in any case, in the short term Sierra Leone is likely to be short of money. The premier has shown himself in the past to be both realistic and moderate. Independence cannot be far off for any sizeable West African country; but it is to be hoped that Sir Milton will be able to keep his brand-new coalition together without letting political considerations drive economic sense out of the window.

BOOKS

Evolving Man

The Future of Man: *The Reith Lectures 1959*
By P. B. Medawar.
Methuen. 128 pages. 10s. 6d.

NOT for the first time, the Reith Lectures come out better in print than over the air. This is no reflection on lecturer or producer: it derives from the very conception of the Reith Lectures. They are supposed to provide the very best statement, by the very best authority on each year's chosen theme, for listeners who are assumed to be intelligent but—and this is the crucial point—non-expert; who must, therefore, not only follow an intrinsically exacting exposition but also acquaint themselves as they go with an unfamiliar vocabulary and set of working concepts. This is precisely the situation in which the spoken word is most inferior to the written, since it permits no turning back to recall or clarify and no variation of tempo to fit the varying receptiveness of individual listeners to the different stages of an argument or to different expository techniques. And yet—would Professor Medawar's intelligent lay public have otherwise read his book? Even apart from the fact that books cost money while listening is free? Probably not. The lectures are an essential part of a two-stage process; and if they were not unsatisfying as well as stimulating, if they did not tantalisingly overstretch their listeners' abilities, they would not do their job.

That job is no less important because it is rather the nature of the evidence concerning the future of man than that future itself which Professor Medawar has realistically elected to handle. He plays himself in, gently, on the techniques of demographic prediction; then he turns from quantity to quality. Genetically, man remains a "wild" species; it would take millennia of specialised tyranny to make any human strain breed true, and it is probable that the qualities that deliberate breeding might seek are essentially those of hybrids and therefore unstable. On the other hand, the environment against which genetic variety is tried out is increasingly and accelerat-ingly under human control. Professor Medawar does not predict the consequences of this control, but he offers, illuminatingly, an account of the still incomplete data on which even the most general assessment must be based.

To anyone brought up on the hard doctrine that humanitarianism and eugenics are hopelessly incompatible, this account, while not justifying total complacency, is decidedly reassuring. The chapter on the relationship of intelligence to fertility is a case in point. If (which remains doubtful: the latest evidence is as encouraging as the theoretical inference from earlier evidence is discouraging) the national level of intelligence is declining under the influence of differential fertility, that decline is neither unlimited nor irreversible, but most probably "a short-lived episode marking the slow transition from free reproduction accompanied by high mortality to restricted reproduction accompanied by low mortality." Rather less reassurance is to be derived from the ensuing discussion of "fitness" in general. Biologically, "fitness" is fitness to survive and procreate *in the given environment*: in the setting of modern civilisation the tougher environments of earlier centuries are irrelevant to the "fitness" of those to whom they would have proved lethal. "Fitness" in the normal sense implies much more than this: it implies not merely some reserve of resilient toughness in hand but also a variety of traits desirable in themselves, from physical and mental vigour and harmony to a capacity for parental devotion and social co-operation. The progressive separation, through environmental change, of biological "fitness" from the desirable traits once linked with it is surely a graver matter, with bigger ethical (and economic) implications, than one would gather from an argument concerned entirely with certain rare and contingently remediable genetic defects.

But the key to this and other social problems on the fringe of genetics is offered in Professor Medawar's last chapter, which deals with "breeding" in the older sense of the term. Tradition and education transmit characteristics from generation to generation in what is essentially a biological but non-genetic heredity; the evolution that occurs along this channel is a Lamarckian evolution—and, consequently, in our own hands. "Nature" (which emphatically does not "know best") has no overriding power to shape or veto social change. Judgments to the contrary, says Professor Medawar with all the weight of his authority, are "bad judgments based on bad biology."

Expatriates

A Family of Friends
By Robert Allerton Parker.
Museum Press. 232 pages. 27s. 6d.

ROBERT PEARSALL SMITH was a well-to-do American Quaker, who was caught up in the stream of revivalist religion and came over to England in the seventies, where he had a brief success as a preacher in the best society. His success was not lasting and there was a breath of scandal: he returned to America, resumed his business and abandoned religion. But England had left its mark, and twelve years later he and his family settled down there for good, after a few peaceful years in which he had rather surprisingly become a close friend of Walt Whitman. This was the origin of what became a very well-known English household. Mrs Pearsall Smith became an inspirational writer of religious books with a large circulation in America, and the dominating head of a talented family; her son was Logan Pearsall Smith, whose life was spent reacting to her influence: her daughters married Bertrand Russell (as his first wife) and Bernard Berenson.

Mr Parker has written a chatty, rather superficial book about the family. He is more at home in the religious background of America (about which he has written before) than in the intellectual life of England. The book covers too many people and events to go deep into any of them, and suffers because some of them have been dealt with so much more thoroughly by others. But it is entirely readable and none of his subjects is a bore.

Oriental Renaissance

The Face of the Ancient Orient
By S. Moscati.
Routledge. 344 pages. 30s.

THE profound transformation that is at present taking place in our knowledge of the ancient Near East is aptly described by Professor Moscati as an Oriental Renaissance. Recent discoveries have not only thrown fresh light on the remarkable character and achievements of its civilisations; they are also demonstrating to an increasing extent the debt owed to the Orient by Greece and Rome. Such developments clearly have an importance and interest extending far beyond specialist circles, and this account of the pre-classical civilisations of the Near East, by the Professor of Semitic Philology in Rome University, is primarily intended for the layman.

The author has not attempted a detailed exposition; instead he has given a comparative study of those features which, in his view, are essential and characteristic. Thus he has dealt "not with history, but with historical outlines; not with religion, but with religious structure; not with literature, but with the literary genres; not with art, but with artistic types." Source material is used selectively, original texts being quoted or monuments described to typify ideas or styles of art. This is an excellent method of approach in that the reader is not burdened with a mass of detail but is presented with a clearly defined picture of each civilisation and can assess the extent to which its characteristics are peculiar to it, or are derived from or shared with other Oriental peoples. The weakness of this schematic treatment is that it tends to oversimplify what is, in fact, a very complex subject.

The most informative and illuminating

sections of this book are those dealing with literature and religion. The treatment of art and archaeology is less satisfactory and betrays an imperfect acquaintance with the source material. For example, in discussing the derivation of Assyrian art, Professor Moscati fails to note the important influence exercised by the Hurrians; similarly, the debt of Achaemenid art to Anatolia and Greece is scarcely mentioned, while the Egyptian influence is exaggerated. It is also startling to read that the art of ivory-working was "brought to its greatest perfection by the Assyrians." The great bulk of the ivories found in Assyria, including all those described by the author, are of Phoenician or Syrian workmanship. It is true that an Assyrian school existed, but it is quite different in style and technically and artistically inferior to that of the West. Within the limits of this review it is not possible to draw attention to every error, but in general it must be said that descriptions of archaeological material are often inaccurate and that the origins of artistic motifs are sometimes wrongly attributed.

Modern German

Langenscheidt's Concise Dictionary: *German-English*

By Heinz Messinger.
Berlin: *Langenscheidt.* London: *Methuen.* 672 pages. 17s. 6d.

SHORTER and handier than the classical Muret-Sanders to which it owes a debt, bigger and fuller than the pocket Langenscheidt, Herr Messinger's new dictionary is excellent value for money; students of German will find that it meets their ordinary needs. The German language has gone through many changes in the last thirty years or so: first, the fall from grace of Latin, French, English and other exotic or hybrid words under the Nazis; then, with the war, a proliferation of new military, technical, and even social terms; and after the war a new and unexampled receptivity to foreign usages, accompanied by the fairly general dropping of the Gothic letter.

Herr Messinger is self-consciously receptive to new words and connotations, in German and English. This is not always a help. *Telly* is becoming an established English word and he was right to put it in; but we could have done without *hubby* (*Ehemann*) and *Little Mary* (*Magen*). *Baby*, a word not seldom on the lips of modern German ladies, is not there by itself, but four compounds of it are—and all, from the look of them, taken from trade catalogues; what on earth is a *baskinette* (the English word offered for *Babykörbchen*)?

Manager is not to be found among the German words, though *Managerkrankheit* is; what a pity to have to render this interesting social-medical phenomenon merely by *stress disease*, a term from which the board meetings, the orange juice and caffein-free coffee, the long hours on the autobahn, and the strenuous little excursions with Rosemarie can hardly be inferred. *Knockout* is there, and *Plexiglas*, *Toto*, and *Traveller-Scheck* (why not *Reisescheck*, for goodness sake? But, to be fair, that is there, too). So are *Kobaltbombe* and *verdünnte Zone* (but not *Disengagement*). Communist east Germany is allowed here and there to make its not very stimulating impression on the language with words like *volkseigen* and *Aktivist;* but the first traces of a linguistic fissure between west and east German are perhaps to be detected in the absence, say, of *Kombinat* or the failure to offer a more convincing translation for *HO* than *Trade Organisation* (a *HO* being, in common speech in east Germany, a kind of shop).

Then there are the common neologisms that serve the journalist, the commentator, and the public relations man as daily ammunition (*Public Relations*, by the way, is not admitted to Mr Messinger's German vocabulary; nor is *Teenager* or *Drink*, though *Mixer*—barman—is). Our German colleagues are daily grasping *heissen Eisen*, standing *im Zeichen* of this or that; in an hotel you show yourself *anspruchsvoll*, you are charged in revenge *pauschal* for things you may not have had, and in a few go-ahead towns you are fairly lucky if you do not get *schikaniert*. For the lexicographer, there is always plenty going on.

Science for the Million

Satellites and Scientific Research

By Desmond King-Hele.
Routledge. 192 pages. 21s.

Man in Space

Edited by Kenneth F. Gantz.
Hollis and Carter. 318 pages. 30s.

Science as History

By Heinz Gartmann.
Hodder and Stoughton. 365 pages. 25s.

Science

Edited by J. Bronowski and others.
Macdonald. 367 pages. 45s.

OF these four books, two belong to the old and two to the new school of popular science writing. Head and shoulders above the rest stands Mr King-Hele's book on space research, written by a member of the Royal Aircraft Establishment at Farnborough, who has already used satellites to make substantial scientific discoveries of his own, and published at a time when the Government is, and public opinion should be, forming a decision on whether to commit this country to the expense of an independent space research programme. Most authors of books on space are obsessed with the mechanics of getting there, and do not seem to care much about the work to be done on arrival, so that the lay reader can be forgiven for wondering whether the game is worth the candle. Mr King-Hele has a better sense of proportion. He treats rockets merely as vehicles for carrying instruments up into space and what matters to him—and it matters passionately—is the behaviour of the sputnik once it has gone into orbit. This is scientific curiosity fired with a genuine liking for the object studied, the kind of personal relationship established by a bird watcher, or by an explorer for the living creature he is trailing. Mr King-Hele spent night after night watching for a glimpse of the rocket of Sputnik 3, and the sputnik rewarded his patience by showing him how to make his most important calculations about the varying density of the atmosphere.

"Man in Space" is concerned with space research of a different kind. It is a series of essays, written by the men involved in the American Air Force programme aimed at flying a man into orbit round the earth and back again. Although the turgid verbosity of most of them drives an English reader to near distraction, the importance of what they are saying forces its way through until it grips first the attention, then the imagination, then the emotions. Here is space flying with the lid off, the appalling engineering difficulties, the medical problems, the psychological strain leading to hallucinations, and the occasional moments of wonder. No one who reads this book will ever again make jokes about space travel or feel anything but respect amounting to awe for the men preparing to risk their lives on the venture.

Both these books are written for the layman without scientific training, but the important difference between them and the old school of popular science writing is that they do assume that the reader, however non-technical his background, is prepared to give them as much concentration as he would, say, to a political biography. Herr Gartmann makes no such assumption. In "Science as History" he jollies his readers along with anecdotes and touches of local colour, contemporary illustrations and chapter headings like "Wings for Adam." The whole thing slips down as painlessly as a sugared pill, and all that remains is the taste of sugar: science has somehow got lost on the way.

The Macdonald Illustrated Library's Science, by contrast, is the old, didactic school of science writing at its best, which can be very good indeed. With the simple object of giving information, it throws in every trick known to publishers: an editorial board of unimpeachable scientific repute and great respect for clear concise English; beautiful printing; lavish illustration with photographs, diagrams, drawings, in black and white and colour, factual or impressionistic—whichever helps best to put a technical idea across. Whose inspiration was it to use Seurat's pictures to illustrate the science of colour? This is described as the first volume of a "library of modern knowledge for young readers and their parents." Some of it may be a bit elementary for the children, but it is just right for their parents.

Oh! What a beautiful day!

No, they didn't see the little black cloud coming up behind the trees. It was a beautiful day when they set out and, so far as they are concerned, it still is . . . Young love makes a better umbrella than a newspaper! Of course, if anyone wanted a waterproof paper umbrella it could easily be made and probably has been, for paper is the most versatile of materials. Symphonies, best sellers and the world's correspondence are written on it. It wraps practically everything under the sun, from food and other goods that need perfect hygienic protection to undersea cables that need perfect electrical insulation. In a thousand ways, all day and every day, paper in all its variety is making an invaluable contribution to modern living.

Useful in paper making and essential in paper converting are chemicals from petroleum. The paper industries rely extensively on Shell for these chemicals, and their uses are as widespread and various as those of paper itself. Shell is one of the nation's biggest producers of high quality solvents, petroleum waxes, detergents, glycols and polyglycols, and a host of other chemicals. If you would like more detailed information it will gladly be given. If you have any problem involving the industrial uses of chemicals, Shell would be pleased to help you find the right answer.

Write to the Advertising Manager, Shell Chemical Company Limited, 170 Piccadilly, London, W.1.

YOU CAN BE SURE OF SHELL CHEMICALS SHELL

Visual Discoveries

Art and Illusion

By E. H. Gombrich.
Phaidon. 497 pages. 70s.

Tiepolo Drawings in the Victoria and Albert Museum

By George Knox.
Her Majesty's Stationery Office. 122 pages. 63s.

PROFESSOR GOMBRICH has written a challenging book, a fit companion to his earlier volume "The Story of Art." In his stylish and richly informed way, with the mind both of an art historian and a scientist, he re-examines the basic problems in the theory of the visual arts and makes us both look at and see afresh what is involved in accepting an image as a likeness.

Surrounded today as never before by the visual image, in advertising, on the screen, in the press, we inevitably look upon the representation of nature as something commonplace. As this book traces how this attitude has come about, we are asked to realise how much of what we call "seeing" is conditioned by habits and expectations and what a distinction there is between what we really see and what we infer through the intellect. What the onlooker reads into the shapes on a painting, it is argued, depends on his capacity to recognise in them images stored in his own mind; he can never really separate what he sees from what he knows.

The two-dimensional representation of nature is necessarily incomplete; the medium which the artist chooses sets its own limitations; there can never, therefore, be an unambiguous naturalistic art. After all, the theory of perspective is no more than a scientific convention. This is, Professor Gombrich contends, the very reason why art has a history: the inventions of representation have been a bigger factor in the development of picture-making than changes in the artist's powers of observation. "Making comes before matching" is how he expresses it, agreeing with Malraux that the artist is more dependent upon art than nature.

This book is based on the Mellon Lectures delivered in Washington in 1956 and although these have been much expanded, the informality of a discourse survives. And if the analysis sometimes strays from the main thesis, it is none the less rewarding for that. The text is supported by some three hundred excellent well-chosen plates, many of which are uncommon examples. "Art and Illusion" is exploratory in the finest sense of the word and if at the end we are still left with many questions to ask, it is surely with a better informed curiosity. Although a new visual classification may be needed to understand abstract painting, one finds it easier to believe in such a classification after having read these pages. The aim of the action painter, we are told, is to make us "read his brushmarks as traces of his gestures and actions."

On more familiar ground, Professor Gombrich reminds us how skilfully light and space can be indicated in black and white by reference to one of Tiepolo's prints. This is exemplified over and over again in the pages of the fully illustrated and annotated catalogue of the collection in the Victoria and Albert Museum of the drawings of this great decorative painter of the eighteenth century. The draughtsmanship and the jauntiness of some of these drawings are a delight and many people will think that some of these experimental studies are preferable to the completed work.

Churches Inside and Out

Fashions in Church Furnishings, 1840-1940

By Peter F. Anson
The Faith Press. 383 pages. £2 10s.

Liturgy and Architecture

By Peter Hammond.
Barrie and Rockliff. 206 pages. 37s. 6d.

IN his fascinating and unique book Mr Peter Anson has chronicled the activities of church adorners from the years of the Oxford movement down to the liturgical revival of our own time. Its wealth of detail will heighten the Easter joy of ecclesiologists, who will be further delighted by the book's carefully chosen illustrations and the author's own line drawings, which embellish the text.

Mr Anson has not attempted to write a definitive history of Church art for his chosen period, but, like Ronald Knox in "Enthusiasm," has traced a pattern of changing taste from specimens that he has collected over a lifetime. Fashions in church furnishings do not move lineally but cyclically, outlining an arc from opulence to austerity, so that today we seem to have reached the furthest point from Tractarian sumptuousness and are entering a period of what has been called "spiritual nudity." The churches Mr Anson describes are all English, and Anglican rather than Roman, since Establishment churches in a study limited to England afford the art historian more scope. The comprehensiveness of Anglicanism leads to an endless variety of *décor* in its public worship, while the rigidity of English Roman Catholicism is reflected in the greater standardisation of its church ornaments.

In attempting to identify Victorian craftsmen, Mr Anson is rueful over the lack of co-operation from clergymen and church officials; many of them seemed ashamed of their treasures, and opined that the sooner this bric-à-brac was swept away, the sooner would ecclesiastical art revive in England. Their astringency is fully shared by Mr Peter Hammond in his timely, well written, and profusely illustrated book, to be published on April 25th. He explains the deplorable failure of the Church of England to create a living architecture in recent decades on theological rather than aesthetic grounds. The Church has failed to think out afresh its own function and that of the *domus ecclesiae* in a post-Christian society, and has thus given architects no adequate guidance. Hence we have had to put up with revivals of fossilised architectural forms, which confirm the impression that Christianity and the Church belong to the dead past. The tragedy of missed opportunity is all the greater since today churches are the only Christian symbols that can easily be seen by all. The remedy lies, not in the superficial modernism about which Mr Hammond is equally scathing, but in linking church design to the theological insight, biblical scholarship and liturgical practice of the present generation. Mr Hammond's book is a notable contribution towards the achievement of this end.

OTHER BOOKS

REFUGEES 1960: A report in words and drawings. By Kaye Webb and Ronald Searle. *Penguin.* 48 pages. 2s. 6d.

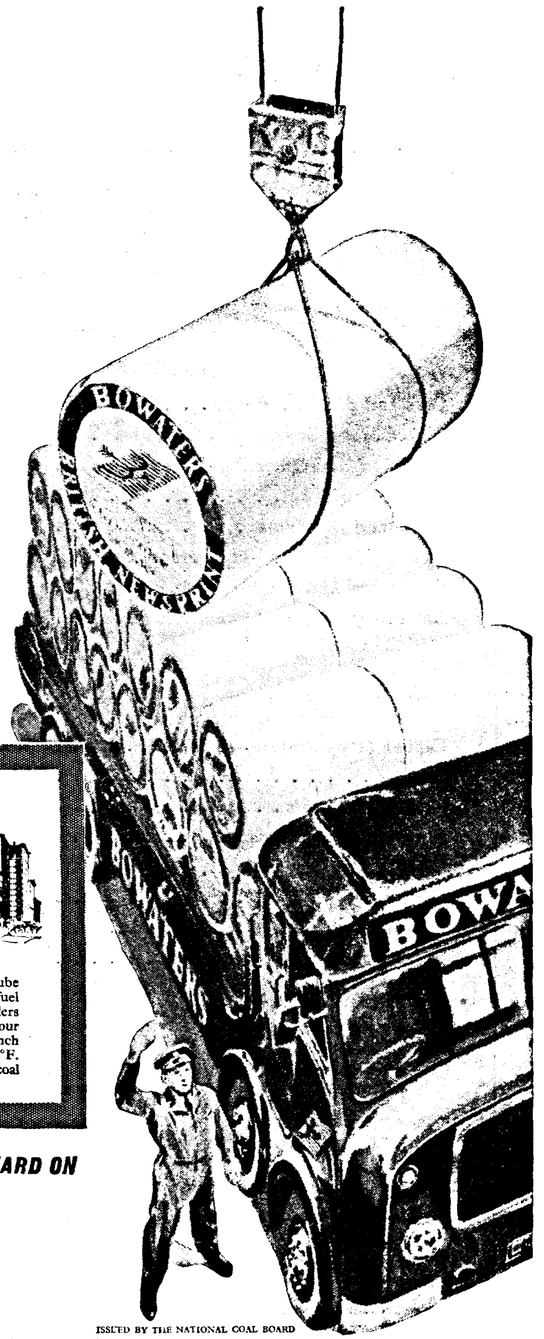
It is not easy to imagine what life in a refugee camp is like. Mr Ronald Searle and his wife, Miss Kaye Webb, who visited several camps in Austria, Greece and Italy, have done a service in producing this little sketchbook. They show the buildings, ranging from a huddle of huts to stark disused barracks, the rooms that are sometimes barer than a hospital cubicle, sometimes lace-curtained and even homely. But their main purpose is to show the people, and by sketches and short case histories describe the kind of person, and child, who has got caught in the void of refugee life. The lasting impression from their report is the blankness in the eyes of a group of people who have stopped believing that they can do anything for themselves—and have dwindling faith in others. All proceeds from the sale of the book are to go to the United Kingdom committee of the World Refugee Year.

SOUTH FROM TOULOUSE. By Andrew Shirley. *Chatto and Windus.* 252 pages. 25s.

"South from Cahors" would be a better title for this book, which describes the region south and south-east of the river Lot as far as the Pyrenees and the Mediterranean. It is a region unfamiliar to the general run of tourists, though unfortunately books like this and Miss Freda White's "Three Rivers of France" (the Dordogne, the Lot and the Tarn) published by *Faber* some years ago will stimulate increasing numbers of people to visit it. Mr Shirley is most successful at describing the historical treasures of the region. At other times he tends to be arch, especially in retelling his conversations with the locals. His account of Conques is so full and will attract so many of his readers that it is a pity that on his sketch map it is put completely in the wrong place.

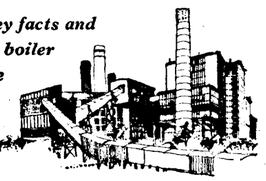
BOSTON—A TOPOGRAPHICAL HISTORY. By Walter Muir Whitehill. *Harvard University Press.* London: *Oxford University Press.* 244 pages. 40s.

THE SILENT TRAVELLER IN BOSTON. By Chiang Yee. *Methuen.* 287 pages. 30s.



Those who know Boston well will find much of interest in the minutiae of Mr Whitchill's book, with its many charming prints and illustrations of Boston down the ages. On the other hand no one need have visited Boston at all to derive pleasure and a good deal of understanding, both of New England and of China, from Mr Yee, who, as a "Silent Traveller," sketchbook in hand, has now added Boston to his earlier journeys to Dublin, Edinburgh, New York, Paris and Oxford.

Coal keeps Bowaters in the news



THE MEN AT BOWATERS who run their international organisation producing paper, board and packaging of all kinds have a precise knowledge of all that goes to make their top quality products. That is why they chose coal to run the powerhouses that begin the process of paper-making at their great mills in the United Kingdom.

They chose coal because coal, mechanically stoked, provides the maximum heat at lowest cost. Furthermore, modern coal burning equipment is smokeless, and our coalfields can produce—for generations to come—*all* the coal that British industry will need.

The next time you are working out your fuel problems, remember Bowaters. For their pulp and paper mills in Kent and Cheshire they chose coal—one of the factors that point to a buoyant future at Bowaters. The same decision made by you may well begin a success story that could make headline news—on Bowaters' newsprint.

Here are some key facts and figures about the boiler installation in the Bowater paper mills at Kemsley

Boilers:	10 water-tube
Method of firing:	Chain grate stokers and pulverized fuel
Boiler efficiency:	80% old boilers, 88% new boilers
Maximum steam rating:	940,000 lbs per hour
Maximum steam pressure:	1,500 lbs per sq. inch
Maximum steam temperature:	915°F.
Annual fuel consumption: (*Kemsley alone*)	320,000 tons of coal

PROGRESSIVE INDUSTRY IS GOING FORWARD ON

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

A Catholic in the White House?

WASHINGTON, DC

SENATOR KENNEDY'S victory in the Wisconsin primary, where voters had a chance to show which presidential candidate they would prefer, has been discounted considerably because it was achieved in large part through block voting by his fellow Roman Catholics. But it has called attention once again to the importance of religious loyalties in politics and, more specifically, to the massive power of Catholics in the Democratic party. By normal standards, Mr Kennedy's triumph over Senator Humphrey was decisive and impressive. But the outcome was much less important for its own sake than as a test of how religious affiliations would affect voting if a Roman Catholic were a candidate for the Presidency. On this crucial point, the results were at best inconclusive.

As the first Catholic to become a serious contender for the Presidency since Al Smith ran unsuccessfully for the Democrats in 1928, Senator Kennedy was naturally expected to attract unusually strong support in predominantly Catholic neighbourhoods. If Wisconsin was to enhance his chances of winning the Democratic nomination, however, he would have had to demonstrate that he could make a good showing in Protestant areas and particularly in the small towns and farming districts. There he did fairly well, but not well enough. Three of the ten congressional districts provided Mr Kennedy's margin of victory. All three are heavily Catholic and two are normally Republican. The returns in these districts tended to confirm the view that many Republican Catholics "crossed over" and voted in the Democratic primary for Mr Kennedy instead of participating in their own primary where Vice President Nixon was unopposed. Such cross-overs would be much less likely to occur in a presidential election.

Mr Kennedy carried the fourth district, a Catholic, industrial one in Milwaukee, by 89,000 votes to Mr Humphrey's 42,000. He won the neighbouring fifth district by 68,000 to 53,000, and the eighth, which is in heavily Catholic Green Bay, by 59,000 to 23,000. He won two heterogeneous districts by smaller margins. Of the four predominantly agricultural ones, he lost three. He also failed to carry the second district which includes Madison, the state capital which is the home of the State University, where many intellectuals who actually prefer Mr Adlai Stevenson voted for Mr Humphrey in order to prevent a Kennedy sweep. The Kennedy supporters retort that in communities such as Sheboygan, Janesville and La Crosse, where Protestants are overwhelmingly predominant, Mr Kennedy won easily. But there was too much evidence of religious solidarity in the pattern of voting to make this rebuttal persuasive. In the town of Little Chute, for example, which is Catholic and Democratic, the vote was Kennedy 1,170, Humphrey 48. Several Protestant towns swung sharply to Senator Humphrey.

It is necessary to bear in mind the events of the Smith campaign of 1928 to understand why politicians and journalists carry their analysis of these voting patterns to Proustian extremes. Smith was not only defeated; his candidacy also provoked an explosion of anti-Catholic bigotry. The antagonisms aroused in the campaign appalled the country and destroyed for a generation any chance that either party would risk nominating a Catholic for President. But the steady increase since then in the number of Catholic office-holders at all levels below the Presidency has made it inevitable that eventually one of them would attempt to succeed where Smith failed. There are 37 million Roman Catholics in the country, which suggests that there are approximately 14 million Catholic voters. Most of them lean toward the Democrats, but with increasing prosperity some have turned to the Republicans. Catholics are concentrated in the states of the eastern seaboard, the industrialised Middle West, the mountain states, and California. There are relatively few of them in the South and in the agricultural regions of the Middle West. The states with a high proportion of Catholics are the heavily-populated ones which cast a big electoral vote and are pivotal in determining who wins the Presidency. They include New York, Massachusetts, Pennsylvania, Ohio, Michigan, Illinois and Wisconsin.

The great lure of the Kennedy candidacy from his party's point of view is that he would attract an abnormally large vote in these key states. The great risk is that, if his candidacy aroused latent Protestant fears and antagonisms, he might lose the party more votes among Protestants than he gained among Catholics. Senator Kennedy's contention, in effect, is that he can get a "bonus" of Catholic votes without an offsetting loss among Protestants. In Wisconsin, he demonstrated his strength among Catholics but he did not show quite enough strength among Protestants to quell all doubts.

MR KENNEDY'S candidacy marks a new stage in the rise of Roman Catholics in American politics. The Catholic immigrants, spearheaded by the Irish, who began to come to the United States in great numbers after 1840, won the political control of New York, Boston and some smaller cities in the last quarter of the nineteenth century. Some Catholic Mayors and members of Congress were elected, but not until 1918, when Smith was first elected Governor of New York, did the immigrant Catholic community produce a national figure. At the time he ran for President ten years later, Catholics in high offices were still rare and his career was the exception, not the rule, for Catholic politicians.

In the thirty years since Smith, the Catholics have broken through to win Governorships and Senate seats in almost every state outside the South. This is a result of their increased voting strength and of a more tolerant spirit in the country. Massachusetts elected its first Catholic Governor in 1913 and did not elect its second until 1934, but since that time five of the state's eight Governors have been Catholic. Two years ago, Catholic Governors were elected for the first time in Pennsylvania, Ohio and California.

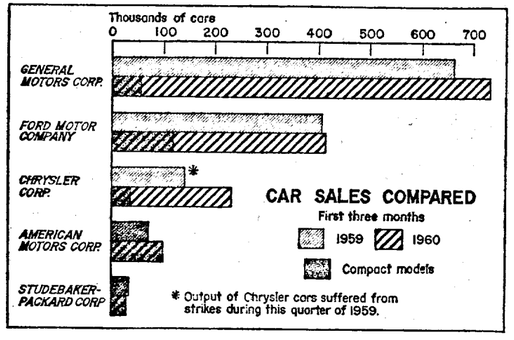
Paradoxically enough, these high-ranking Catholic office-holders are not, in most instances, friendly to Senator Kennedy's candidacy. Their states are only about one-quarter to one-third Catholic, and they fear that a Catholic in the White House, coming on top of a Catholic Governor and Catholics in many lesser offices, might strain the tolerance of the Protestant majority and provoke

a reaction that would injure their own political futures. Major Catholic office-holders also often have local problems which they fear would be aggravated if the Democrats nominate a Catholic for the Presidency. Governor Lawrence of Pennsylvania, for example, is eager to win control of the upper house of his State Legislature in this autumn's election. Since the marginal seats lie in Protestant rural districts, he fears that a presidential campaign which aroused religious feeling and caused Protestant voters to swing to the Republican party would destroy his hopes for a legislative majority. Governor Lawrence, in spite of intensive wooing by Mr Kennedy, has kind words only for Senator Symington and Mr Stevenson among the potential presidential nominees.

Mr Kennedy's strongest source of support comes from the rank-and-file of Catholic voters to whom this handsome, wealthy, talented young man is a hero. The sentiments of these voters are known to the local and county leaders of the Democratic party and are often shared by them. The result is that, while state and national grandees like Governor Lawrence and Mr Carmine DeSapio of New York talk airily of Mr Symington, many less well-known but powerful local bosses, such as Mr Charles Buckley in the Bronx and Mr William Green in Philadelphia, are leaning to Senator Kennedy. These members of the party organisation have great influence over the selection of delegates to the nominating convention and over the manœuvring at that convention.

The Catholics, while taking possession in recent years of many high public offices, have not relinquished their traditional hold over the party organisation which they began to develop seventy-five years ago. Mr Paul Butler, the Catholic chairman of the Democratic National Committee, is openly a partisan of Senator Kennedy. Sixty of the sixty-four county chairmen in New York State are Catholics and most of them are for Mr Kennedy. Catholics make up the majority of city and county committeemen in Chicago and other key cities. The intensity of pro-Kennedy feeling within the lower ranks of the party organisation in Ohio had a great deal to do with the decision of Governor DiSalle to support Mr Kennedy, toward whom the Governor had previously been cool. Senator Kennedy disavows any hope that people will vote for him on religious grounds, but his chances of winning the nomination nevertheless depend to a considerable extent upon the solidarity of his co-religionists and upon their pivotal positions in the party machines. In spite of the ambiguity of the Wisconsin results, only a marked upsurge of anti-Catholic feeling in the remaining primary elections would convert his religion from a net political asset to a debit.

On Record for Negro Rights



A NEW Act to protect Negro rights, only the second one ever passed and one to which both parties will point with pride in the coming election campaign, now seems assured. Last week the Senate passed the House Bill, almost unchanged, by the massive vote of 71 to 18; only the handful of Southerners (including Senator Fulbright, who has an insecure seat in Arkansas) stuck to their over-run guns. The Republicans, who in the past have often traded favours with the South, voted to a man with the northern and western Democrats. The Senate leaders are now confident that the House will accept promptly the few alterations made in the Bill and the President has promised to sign it. Such striking unanimity is a tribute both to the march of human rights and to the anxiety of both parties to court the powerful Negro vote in northern cities by showing solicitude for the underprivileged Negroes in the South.

Senator Dirksen, the Republican leader, worked hand in glove with Senator Johnson, the Democratic leader, to herd the willing majority toward an agreed compromise which, after eight weary weeks of argument, most members of Congress were only too anxious to put behind them. This bipartisan steam-roller frustrated the Democratic liberals at every turn when they sought to broaden and strengthen the Bill; they feel cheated and embittered. Senator Johnson has shown once more that he can build a bridge between the North and the South, but the Bill may not be strong enough to attract the northern support he needs if he is to win the democratic presidential nomination. However, that he did not have to invoke closure suggests that the measure has not endangered the South's support for him at the nominating convention.

The price of this achievement is a Bill stripped down to the matter of voting rights and one, moreover, which men from such different ends of the political spectrum as Senator Eastland of Mississippi and Mr Wilkins, of the National Association for the Advancement of Coloured People, suspect will make little difference in the South. The Attorney General, who will have to bring the court cases which will start the complicated new machinery moving, disagrees. But even if the scheme (which he devised) for enabling federal courts to register Negroes to vote works as he hopes, Negroes will still have to brave threats of violence and economic pressure to use it. At least the Southerners failed in their attempts to limit the voting provisions to congressional elections and to exempt the all-important (in the South) contests where candidates are chosen. In addition the Bill ensures the preservation of voting records and prescribes penalties for obstructing a court order and for fleeing across state lines to escape prosecution for blowing up buildings.

False Spring in Detroit?

IN the middle of March the number of new cars in automobile dealers' showrooms passed the million mark for the first time. Under today's conditions this is not as disturbing as it sounds: with customers shopping for cars as they do for groceries in a supermarket and going elsewhere if the exact style and colour which they want is not waiting to be driven away, dealers are glad to carry far larger stocks than they used to do. Nevertheless, manufacturers have already started sales contests among their dealers, a stimulating device which is not normally used until nearer the end of the model year. These contests are probably one reason why sales improved sharply toward the end of March; another is the abnormally discouraging weather during the earlier part of the month. Comparisons with 1959 mean little, since last year was a poor one for the industry, and it is still too soon to judge whether the March rise in sales is a true spring upturn. There is certainly

little reason to think that it heralds an old-fashioned spring boom or a record production year.

For these to develop there would have to be a resurgence of demand for the standard cars which are still responsible for about 75 per cent of total output ; yet the only real enthusiasm this year has been for the new compacts of which over 42,000, the highest number ever, were produced during the last week of March. Total output of all cars during the first quarter was just over 2 million, almost a record for the period, but not up to the 2,250,000 which had been forecast by the optimistic ; in the second quarter output seems sure to be substantially lower, even if sales do maintain their present high rate.

At least the manufacturers can comfort themselves with evidence that compact models are doing as much harm to imported cars as they are to the traditional American product. Except in December, sales of imported cars have fallen ever since last June although nearly 5,000 more—40,420 in all—were still sold in January (the last month for which figures are available) than in January, 1959. The chief sufferers have naturally been those which compete most directly in size and price with the compacts ; these are the British Austins, Hillmans, Morrises. Imported luxury and sports cars have no domestic rivals nor, for the present, have the cheap—to buy and to run—Volkswagens and Renaults ; these two, and Opels, were the only imported makes to gain in sales in January. But it is reported that the demand for foreign, as well as domestic, cars improved during March.

All Set on the Set

After contradictions, recriminations and unnecessary delays, all typical of the film industry, Hollywood's movie actors are once again working on the sets of the seven major companies. While the strike went on for a month, it probably did not go on long enough to drive any of the remaining companies out of the production side of the business altogether. The three-year settlement provides for increases in minimum pay for all classes of film actors, for future contributions by the companies of 5 per cent of the actors' wages into pension, health and welfare funds and for immediate contributions, amounting to $2,625,000 to be paid in instalments, to establish these funds ; they have not existed for film actors until now. This last concession, in effect a payment for past services, meets part of the actors' demand, the basic issue in the strike, for a share in any income from television showings of films made since 1948. Under the settlement the actors are also to receive 6 per cent of television receipts from films begun since the end of January.

The emphasis on television showings, long recognised as the industry's only way of recouping its past losses, reflects the opportunities offered in this field by the recent revival of experiments with subscription, or pay, television as an alternative to programmes financed by advertising. The Zenith Radio Corporation is seeking permission to start a three-year test in Hartford, Connecticut, along lines which the Federal Communications Commission is expected to approve, of a system of broadcasting scrambled signals over regular television channels ; these become clear when decoders are fixed to the recipient's television set and he pays either with a coin in a slot or by a monthly bill. Already in operation in a suburb of Toronto and expected for various good reasons to be more successful than a similar experiment two years ago in Oklahoma is the Telemeter system, which brings television into subscribers' houses on a special wire ; the great advantage of this system is that it can offer a choice of three programmes simultaneously.

The Telemeter firm is a subsidiary of Paramount Pictures Corporation, one of the film companies which have been involved in the strike, and the Toronto subscribers have been seeing the latest films from all the companies on their screens ; residents of Hartford are promised similar opportunities if Zenith is allowed to operate there and Telemeter hopes to set up its system in several American suburbs before the end of the year. The theory is that this type of television appeals particularly to young couples who cannot afford the parking and baby sitting charges, as well as the price of seats, which are involved in a visit to the cinema. If the opposition of the broadcasting networks and of the cinema theatre owners does not succeed in choking off these latest enterprises, as it has managed to do with similar projects in the past, then the film producers, and the film actors, see a guaranteed and profitable new market opening up before them. It is still very much needed even though cinema attendances have shown a marked improvement since last summer.

Freedom for Nixon

The Vice President received two political gifts from the White House last month. The first was Mr Eisenhower's blessing on the man who seems sure to be the Republican nominee for the Presidency this year and the President's offer to campaign for him. This was welcome, but Mr Nixon may have valued more Mr Eisenhower's assurance that the Vice President is free to develop his own political programme. In any case, he has lost no time in taking advantage of it. Last week he told a group of editors of Protestant publications that the United States should provide information on birth control to countries asking for it—a stand which Mr Eisenhower opposes strongly and which may embarrass Senator Kennedy, the Roman Catholic Democrat whom, the Gallup public opinion polls claim, could beat Mr Nixon today. This bold initiative does not bear out the commentators who have been saying that the Vice President might be at a loss now that he has been given his head.

There is every sign, indeed, that he is anxious to associate himself with more forward-looking social policies than the present budget-minded Administration will accept. Mr Nixon knows—and indeed has said—that the Republican candidate and his party will have to make the fight of their lives to win in November. This is because the Republicans are the minority party and Mr Nixon lacks the unique personal appeal of Mr Eisenhower to independents and Democrats. According to the Gallup poll, 47 per cent of the voters are Democrats, 30 per cent Republicans, and 23 per cent are independents. Mr Nixon himself said recently that the party is weaker than it has been since 1936. If Mr Nixon is to be elected he must develop issues to attract the independent voter. This is why he has been pressing the Administration (apparently with success) to submit its own programme for providing medical care for old people instead of letting the Democrats walk off with the whole issue. He may also succeed with education ; farm policy will be a tougher nut to crack, and defence—the President's speciality—is probably best left alone.

The Vice President is too old a campaigner to panic at an unfavourable poll ; he is holding to his belief that his place now is in Washington and that, in any case, it is best to reserve all his strength for a big push after the conventions. Then, he promises the most vigorous and searching campaign ever conducted. Some Republicans who are less stoic (or not wholeheartedly in Mr Nixon's camp) have seized this opportunity to revive talk of Governor Rockefeller of New York—a liberal who would have no difficulty in dissociating himself from the Administration's record—as the Republican candidate. But even Mr Rockefeller, who hinted last week that he was still available and who has so far failed to join the Nixon team, admits that such a draft is unlikely—unless Mr Nixon's popularity continues to wane. At least, however, such talk keeps interest in the Republican nomination from dying out altogether.

Floods Forever

FROM A CORRESPONDENT IN COLORADO

THIS spring's serious flooding in eight mid-western states, as a result of last winter's exceptionally heavy snow and rain storms, underlines the contention of a group of geographers at the University of Chicago that in the United States great floods, overwhelming all protective works, are inevitable from time to time. Furthermore, according to the group's report, which was financed by the Ford Foundation through Resources for the Future, Inc., the damage done is going to be incalculably greater than it has been in the past, largely because of the constricting and damming effect of building houses, roads, etc., on the plains which were originally made by the floods themselves along the banks of America's huge rivers. These construction works pile up the water higher than it would go otherwise and mean that there are far more valuable properties for it to destroy than when the flood plains were left comparatively undeveloped. In fact, these geographers say, much of the country's huge and expensive programme for controlling floods, believed by the public to be going well, is being vitiated by complaisant local politicians, public authorities and land developers, who allow intensive and costly building on the flood plains in and near major towns, under the assumption that major floods have been controlled out of existence—an assumption which has just, once again, been proved untrue.

Between 1903 and 1959, according to the geographers, floods did about $10 billion worth of damage (in 1957 dollars). The cost of such damage averaged $105 million a year between 1903 and 1936, when the Army Engineers took over the central responsibility for controlling floods; since then losses have averaged $329 million annually, partly because of the great floods of 1951 and 1955, each of which did more than $1 billion worth of damage. But, generally speaking, these figures reflect only tangible losses, largely in towns, and the Department of Agriculture figures that if damage to crops, soil and watersheds were added the amounts would be doubled. Also, before the latest disaster, the Red Cross had spent more than $100 million since 1936 on direct flood relief and the Federal Bureau of Roads a like sum on repairing flood-damaged federal highways and bridges, without accounting for similar expenditures for state and local roads. Nor does this exhaust the amounts which government organisations have had to spend on relief and rehabilitation after flood disasters.

Since 1936, meanwhile, the Army Engineers have finished work on some $4 billion worth of floor-control projects, with $3 billion worth still under way, and have a backlog of projects which will cost another $20 billion; the latter, however, are largely the result of the efforts of members of Congress to get as many projects as possible promised for their own districts and many of them will never be built. Moreover, the above figures are not the complete current costs of controlling floods. The Tennessee Valley Authority and the US Bureau of Reclamation each have flood-control programmes; the TVA's scheme, as successful as everything that agency undertakes, has already repaid nearly three-fourths of the original outlay in savings from loss by flood. And nearly one hundred projects are in hand under the 1954 Watershed Protection and Flood Control Act, which offers grants-in-aid to local agencies.

Yet the geographers say that the danger and expense of floods may continue to mount all over the country as long as towns continue to expand at their present rate and as long as present patterns of land use prevail. The remedy is to keep the people away from the water rather than to strive fruitlessly to keep the water away from the people, to regulate the use of the plains so that the valleys are left empty to accommodate the inevitable floods. The recommendations of these experts are all aimed at slowing down the congestion on flood-plains by such means as ceasing to build roads which both encourage development there and create new obstructions behind which floods build up. But it is virtually useless to talk about such remedies in the face of popular and official indifference and of pressures from speculators and promoters, backed by local chambers of commerce and by local administrators anxious for more taxable properties.

Madison Avenue Looks at Britain

By courtesy of British Railways.

NEW YORK

THE image of Britain that emerges from the advertising pages of American magazines is of distinctly prewar vintage. No nonsense about the rise of the welfare state or the demise of the servant class has, for the most part, disturbed the traditional theme—that Britain is the country of class distinction, timbered cottages and quiet good taste. This advertising, with its great fondness for ancient buildings and the ubiquitous "bobby" is as much the creation of Madison Avenue as are the advertisements for domestic goods.

Practically all British products being promoted in the American market are in the hands of an American advertising agency. The British manufacturer retains, as a rule, a say over the character of the advertising; so, sometimes, do the American importer and such third parties as automobile dealers or (for beverages) bottling plants in the United States. But in general it is true to say that the style of this advertising reflects Madison Avenue's view of the average American's view of Britain. It is drawn from what are believed to be the most common associations with Britain and, in turn, it reinforces these associations. As one advertiser remarked: "If the English did their own advertising it wouldn't be 'British' enough."

Apart from Scotch whisky, which has attained the status of a domestic staple, few British products attempt the very costly business of cracking the mass market. Instead they concentrate their advertising in a small group of "prestige" magazines of which the *New Yorker* is the outstanding example. Indeed, over a fifth of the *New Yorker's* advertising is now foreign, and over half of this is British.

The advertising agent is aiming at people who believe that they have superior tastes and certainly have superior incomes. His favourite line of approach when handling a British product lies through subdued snob-appeal. Thus the Humber is presented as the car "given to beautiful under-statement. . . . Elegance without excess." And the Vauxhall, despite the fact that its marketing is in the hands of the General Motors Corporation, is invariably displayed against a backcloth of old-world charm with owners dressed in riding breeches or suitable tweeds, and a few fox-hounds thrown in for good measure. At a jauntier level, one immaculately-rain-coated Englishman confides in another: "Wouldn't it be *ghastly* if everyone owned a Burberry?" Or "Don't wait to inherit Spode."

By courtesy of Rodex.

While to English eyes the "snob-appeal approach" is sometimes offensive and often unimpressive, American advertisers rate it highly for the promotion of British goods. A more serious criticism of British advertising is that too much of it is inoffensively dreary. And the rather desperate emphasis on its country of origin seems to say: "We know this product is not competitive in price or design, but it *is* British-made and we've been making it for a *very* long time." In a different field, the illustrations in advertisements for Cunard look old-fashioned beside their good slogan "Getting there is half the fun," while those for British Railways are guaranteed to make any Englishman blush.

What is considered by Americans to be good advertising for a British product may well be greeted with raised eyebrows across the Atlantic. A striking example of this is the campaign of the British Travel Association. To persuade the American tourist to brave the climate and go to Britain, the BTA, with the aid of a government grant, has exposed him for several years to stunning photographs of the old world charm that he expects to find in Britain—thatched cottages and hollyhocks, Cotswold villages and rolling farmland, castles and ghosts. This "corny" presentation of Britain has come in for a good deal of criticism at home. In particular, objections have been raised about the accompanying text which is rarely an example of that British understatement lauded in other advertisements. And when the BTA sets out to extol the virtues of English food, native critics feel distinctly uneasy; it is true that the pictures are mainly of such uncooked delicacies as Stilton cheese and strawberries and cream, but where would the tourist find that exquisite rare roast beef?

By courtesy of Schweppes, Ltd.

Among the American advertising fraternity, the BTA campaign is rated a considerable success. More important, there is every indication that it claims the attention and the approval of those at whom it is aimed. The number of American visitors to Britain has quadrupled since 1949. The agency which handles this advertising is, as it happens, headed by a Briton, Mr David Ogilvie, who has to his credit such successful advertising characters as the bearded Commander Whitehead of Schweppervescent fame and the eye-patched man in the Hathaway shirt. He defends the deliberate "one-sidedness" of the campaign on the grounds that its aim is to attract Americans to Britain—not to please the British "who are there already."

While the advertising for British goods is largely American-inspired, its shortcomings cannot, in the main, be blamed on Madison Avenue. Few British firms have felt inclined to embark on advertising campaigns large enough to interest the more enterprising agencies or to warrant a great deal of attention. And even fewer have been prepared to invest enough money and legwork in establishing a distributive network to back up their advertising. As one advertiser remarked: "British manufacturers are afraid of the American market—they wish it would go away."

Some of the larger agencies do not undertake accounts with billings of less than $300,000 a year—and many British ones are in the $20,000 class or even less. Moreover, the handling of a foreign product involves the agency in serving several masters—which can be tiresome; there are the added difficulties of co-ordinating advertising with deliveries and model changeovers (this is an area in which British firms do not have a good record); and many British goods are handled by small importing firms with little expertise in marketing a "prestige" product. Thus British accounts, with a few notable exceptions, rarely get the best that Madison Avenue has to offer.

Group advertising offers one solution to the problem of size. But although the woollen manufacturers have co-operated with some success, British firms do not take naturally to "togetherness." It is generally agreed that sales of British china in the American market would have benefited enormously from a joint advertising campaign to keep alive the reputation of bone china, but the exporters have failed repeatedly to agree on a programme.

British advertising has not been without its star turns. The Rolls-Royce advertisements have received top honours, as has also the Schweppes campaign. Jaguar's four-colour advertisements, which give a stunning impression of elegance and "British craftsmanship" (against an American background) are examples of British advertising at its best. Rose's Lime Juice is making a large bid to get a foot in the American market; it is said to be spending $250,000 this year on what is a very sophisticated (and completely "un-British") advertising campaign.

Recently many British firms have been prodded into bigger and better advertising by their European competitors. In the past, except for the various airlines and tourist agencies, there has been little direct advertising for other foreign products. But the picture is changing rapidly. Spending on advertising for foreign cars jumped from $2.7 million in 1958 to $7.5 million last year, with much of it coming from the continent, and even from Japan. This year the Renault company alone is putting $5 million into its American advertising budget—the firm says it is thinking in terms of the next hundred years.

Most of this advertising is being handled by first-class American agencies and is of very high quality. The Renault campaign, which takes full advantage of the language barrier ("Le Car Hot"), is the envy of most advertisers. And the Volkswagen advertisements, with the accent on efficiency ("Repair 'em? I've got enough parts to build 'em"), are equally arresting. When handling a French product, the American mind runs to gaiety and colour, while a German product gets the "efficiency" treatment—and in neither case is the country of origin given much play. Can well-worn oak-beamed cottages and subdued snob-appeal compete, or should Madison Avenue restyle its image of Britain?

THE WORLD OVERSEAS

The Unquiet Congo

FROM A CORRESPONDENT IN LEOPOLDVILLE

ANXIETY is widespread among the European community in the Congo, with Congolese independence less than three months away. Everyone is aware of the hasty improvisation going on. If all parties appeared to be in agreement at the Brussels conference, it was because the Belgians no longer had any choice. The Congolese themselves were astonished at having won so easy a victory in what they had expected to be a difficult struggle. It seems that they are now beginning to understand the extent and seriousness of their responsibilities.

The European anxiety is shown in a very considerable increase in capital sent back to Belgium. The financial haemorrhage has been put at a milliard and a half Belgian francs (over £10 million) between December 15th and January 31st. It is going on at the rate of about a milliard a month. M. Scheyven, the Belgian minister for economic and financial affairs, who has just undertaken a tour through the Congo, has urged the large firms to set an example of calm and confidence. But the smaller companies and individuals are repatriating their money as fast as the law allows: five thousand francs a day. The verbal assurances given to European interests by the future Congolese leaders since their return from Brussels are considered valueless because those who gave them could not speak with any precision.

The authorities have kept quiet about this situation. Some make out it has been stabilised, but a Belgian expert has explained that this optimism is caused by the fact that "a deficit exists which is thought to be normal only because it is chronic."

The political situation is not improving: quite the reverse. There is apprehension over how, and by whom, the Congo will be governed. Now that the nationalist fight is over, the political struggles for power have begun. They may well bring bloodshed. The latest clashes in the Katanga, which ended with seven dead and 158 wounded, have increased the general pessimism. In fact, nothing is settled. The *Mouvement National Congolais* (MNC) remains divided into two wings, led by MM. Lumumba and Kalonji, both fierce rivals. The Abako, the party of the Bakongo, has just split as a result of the personal quarrel between MM. Kasavubu and Kanza. The savage and cruel war between the Baluba and the Lulua, in the Kasai, is far from being finally put down. For a year now, these emergencies have become common form. It can be said that, on the eve of independence, the Congolese political parties remain, with the possible exception of M. Lumumba's wing of the MNC and the European-inspired *Parti National du Progrès*, the political expressions of antagonistic racial groups whose traditional outlook, formed for centuries by tribal custom, has still not been changed by any mixing. Finally, it cannot be substantiated that the secessionary spirit that prevailed among the Katanga tribes, in reaction to that of the Bakongo (in the Léopoldville province), has been definitely extinguished.

In financial affairs it seems that the point is rapidly being reached of complete incompatibility between the Belgian and Congolese viewpoints. The Europeans want the full exercise of the rights given them under the colonial regime: the free repatriation of their capital and the free transfer of their profits. They are well aware that they furnish much the greatest part of the Congo budget and think that this justifies the normal guarantees that ought to be given them. But the Congolese, too, want guarantees at the forthcoming economic conference. They want most of the eleven to twelve milliard francs that leave the Congo each year as dividends, savings and floating capital to remain there. M. Nguvulu, president of the *Parti du Peuple*, denounced at a recent press conference "the system of the highest profit in the shortest time." He demanded the control of all national property and major national enterprises by the state, the reinvestment in the Congo of profits secured by the exploitation of national resources, and the raising of the general standard of living.

It is true that this crisis could be delayed if, in fact, as certain Congolese circles assert, most of the principal Congo leaders have been "bought" in Brussels by the major concerns, the *Société Générale*, the *Groupe Empain* and *Brufina*, which control the entire economy of the country.

UP to now, the measures considered by the Belgian government seem altogether inclined in favour of the Europeans. The effort is being made in Brussels to continue the free movement of capital for as long as possible. An agreement between the National Bank of Belgium and that of the Congo envisages aid by the former to the latter with, in return, financial guarantees (the blocking of the Congolese reserve deposits as a guarantee of the Belgian francs loaned) and also political ones (the repayment of the Congolese reserves in gold and dollars will not be carried out until after the repayment of credits in Belgian francs has been honoured).

These measures simply mean putting the Congo treasury under the complete control of the Belgian bank and, as a result, the subjection of the future Congo state to Belgium. Already some Congolese have been roused and have begun to denounce "the dirty little game in which Belgium wants to entangle the Congo."

Belgium is considering undertaking loans in the name of the Congo government: one, short-term, from the United States for $20 million, the other, long-term, for $40 million from the International Bank for Reconstruction and Development. But the Belgian parliamentary commission for finance has specified that both the repayment of these loans and the servicing of the interest (which would considerably increase an already very heavy public debt) should be entirely at the charge of the Congo treasury.

Finally, the Belgian government also envisages the anticipated payment of royalties and dividends owed to the Congo treasury—which some observers think is a matter of spending one's money before one has it.

Officially, the total of public and private aid to the Congo will thus be raised to five milliards (in francs and dollars) between now and June 30th. But it must be emphasised that the deficit on the ordinary budget will reach two and a half milliard francs for 1959, and that the budget stabilisation fund is totally extinguished. These new measures thus consist of digging one hole to fill in another.

Is it possible to increase Congolese taxes to remedy this financial deterioration? It seems not. The proportion of existing taxes and duties to the national income is already 24 per cent. It all means that the Congo, an underdeveloped country, has the unhappy privilege of entering independence with a financial burden four times greater than that of India and Pakistan, and as heavy as those of European states.

The newspaper *Notre Congo*, the organ of the Abako (the Bakongo party) has declared in an editorial: "This economic aid is, at bottom, only a disguised form of paternalist colonialism." The paper's comments have added importance because M. Kasavubu, the Abako leader, is a member of the present executive council, charged with financial and economic affairs. The editorial issues a warning that the round-table talks on finance promise to be much more dangerous than the earlier political discussions.

Byzantine Tactics in Cyprus

FROM OUR CORRESPONDENT IN NICOSIA

CYPRUS is emerging from a bout of All Fool's Day madness. Archbishop Makarios's speech on April 1st threatening a campaign of civil disobedience if the island's independence were not soon proclaimed, followed by Dr Kutchuk's broadside a few hours later with its wild talk of civil war, seemed to set the clock back two whole years, and overshadowed the tortuous negotiations on the bases at Government House—which are now entering their eighth week. In the process people have ceased to talk about when independence will take place, but rather whether independence will take place; although this pessimism is almost certainly unwarranted.

It has perhaps not been sufficiently understood that the archbishop's controversial speech was essentially designed for home consumption. The occasion was Eoka Day, the anniversary of the start of Eoka's campaign against the British five years ago. Thousands of excited supporters were thronging the archbishopric, and cadres of Eoka men were on parade in their guerrilla uniform. For months Archbishop Makarios had been goaded, sniped at, and reviled by an irresponsible and malevolent political opposition—both extreme right and extreme left wing—for his alleged "pusillanimity" towards British "imperialism." Obviously he felt this was the time to show his mettle and hit back at the critics by twisting the British lion's tail. (The Greek government, however, thought differently and a significant absentee during Archbishop Makarios's performance was the Greek consul-general in Nicosia, Mr Christopoulos.)

The archbishop, as Greeks so often do, failed to take into account the susceptibilities of the Turks. Far more important, from the long-term standpoint, than threats of the unilateral implementation of the Zurich agreement (which no one so far has taken very seriously) or of a civil disobedience campaign (which has been a damp squib as far as Government House is concerned) were the unhappily worded earlier parts of his speech which prompted the inevitable explosion from Ataturk Square. When Archbishop Makarios used phrases like "continuing the struggle with a view to consummating the victory" he almost certainly did not have *enosis* in mind—and indeed it is the ultimate in the island's illogicality to accuse him of scheming for *enosis* when at the same time he is alleged to be "plotting" to put into effect on his own the very agreement which rules out *enosis* for ever. But among the Turks his figurative phrases stirred the old phobia, and the damage was done: damage which, in its long-term implications, is much more serious than the temporary furore over the bases dispute. In the ensuing days the leaders on each side have wisely kept their heads and tension has subsided; but the whole episode has been none the less an unhappy revelation of the almost pathological distrust that still prevails between the two communities.

Amid these alarms, it is perhaps a matter for congratulation that the talks at Government House have plodded on, relatively undisturbed and unquickened in atmosphere or tempo. The British Government's handling of the affair has been as paradoxical as the very island itself. The table-thumping days of January and February when Britain, at regular intervals, kept on telling the world that it had made its final offer and that it would stand no more nonsense, seem to belong to another era. Take it or leave it tactics, Whitehall now appears to realise, never work with the Cypriots. They neither take it nor leave it, but somehow always manage to keep on talking. Thus, paradoxically, Mr Amery, who appeared to the Cypriots to be proud and peremptory, with very little provocation, in the early stages of the dispute, has emerged, sun-tanned and regarded almost as a resident of the island, as a paragon of patience in the face of what has looked like provocation from the other side, illustrated most ludicrously in the marathon haggling over facilities for the Naafi.

The general bouleversement caused by the Eoka Day events was not, of course, the most propitious background for Dr Kutchuk's latest compromise gimmick of 100 square miles for the size of the two bases. Greek rejection was almost inevitable, if only for the fact that in the past two weeks Dr Kutchuk, now apparently exasperated by what he regards as the unnecessary haggling over details by the Greek side, has almost openly begun to side with the British. This is a significant, and in a sense regrettable, twist in the whole tortuous affair; for up to now the only happy by-product had been that the Greeks and Turks were, publicly at least, standing shoulder to shoulder.

The general Greek reaction to the various proposals is almost comically illogical. If one converses in generalisations with any intelligent Greek Cypriot, one will almost inevitably be told with great emphasis that it does not matter one iota whether the size of the bases is thirty, sixty, eighty, one hundred or one hundred and twenty square miles—the whole affair must be seen *sub specie aeternitatis*. And no sensible Greek is going to haggle over a few square miles. If one then asks whether Dr Kutchuk's one hundred miles should not therefore be accepted, one's informant, rearing like a frightened filly, immediately explodes: "But that is quite impossible."

WHETHER some face-saving figure near one hundred is possible is, however, now the subject of acute speculation. Despite the blanket of secrecy about the exact stage of the negotiations, it seems clear that a figure in the nineties is under the political microscope both in London and Nicosia. But it hardly seems likely that the extent of the bases will be settled in isolation, and local diplomatic sources believe that some sort of package deal will eventually emerge, in which Britain makes some minor concessions or adjustments on the other two outstanding issues, the arrangements for the civil administration of the bases by Cypriots and the question of Britain's financial aid to the future Cyprus Republic. For weeks now each side has shown a curious, almost other-worldly disinterest in this latter question, which contrasts oddly with its past record and known proclivities. One is almost given the impression that in the warm glow of the intimate *tête-à-têtes* at Government House, both sides are too gentlemanly to mention such a subject as money. The day is not far off when they will. In brass tacks, if the British taxpayer forks out a few more million pounds in aid, then the final stages of the negotiation may well run on oiled wheels.

Amid all this intrigue and speculation one or two harsh realities

remain unmistakably clear. If the situation is not soon resolved, the island's affairs will certainly drift from bad to worse. This may or may not mean a campaign of civil disobedience (many Britons here believe that Archbishop Makarios is bluffing, many Cypriots close to him say he is not). But it would certainly mean that the Greeks would suspect the British of deliberately trying to hold on to the island indefinitely, that the Turks would suspect the Greeks of "plotting" in some mysterious, circuitous fashion to bring about *enosis*, and perhaps most serious of all, that the island's grave economic plight would worsen and thereby greatly strengthen the hand of the astute communist-controlled left wing. Both Archbishop Makarios and Dr Kutchuk are now alive to the dangers. Despite all the haggling and alleged "filibustering" of recent weeks, despite even the Eoka Day speech, nothing has happened to dispel the basic impression that the archbishop has always wanted to settle the affair in the end. There are signs that he is near the point where he feels he can do so and present himself to his people as an untarnished patriot.

Turkey's Electoral Temptations

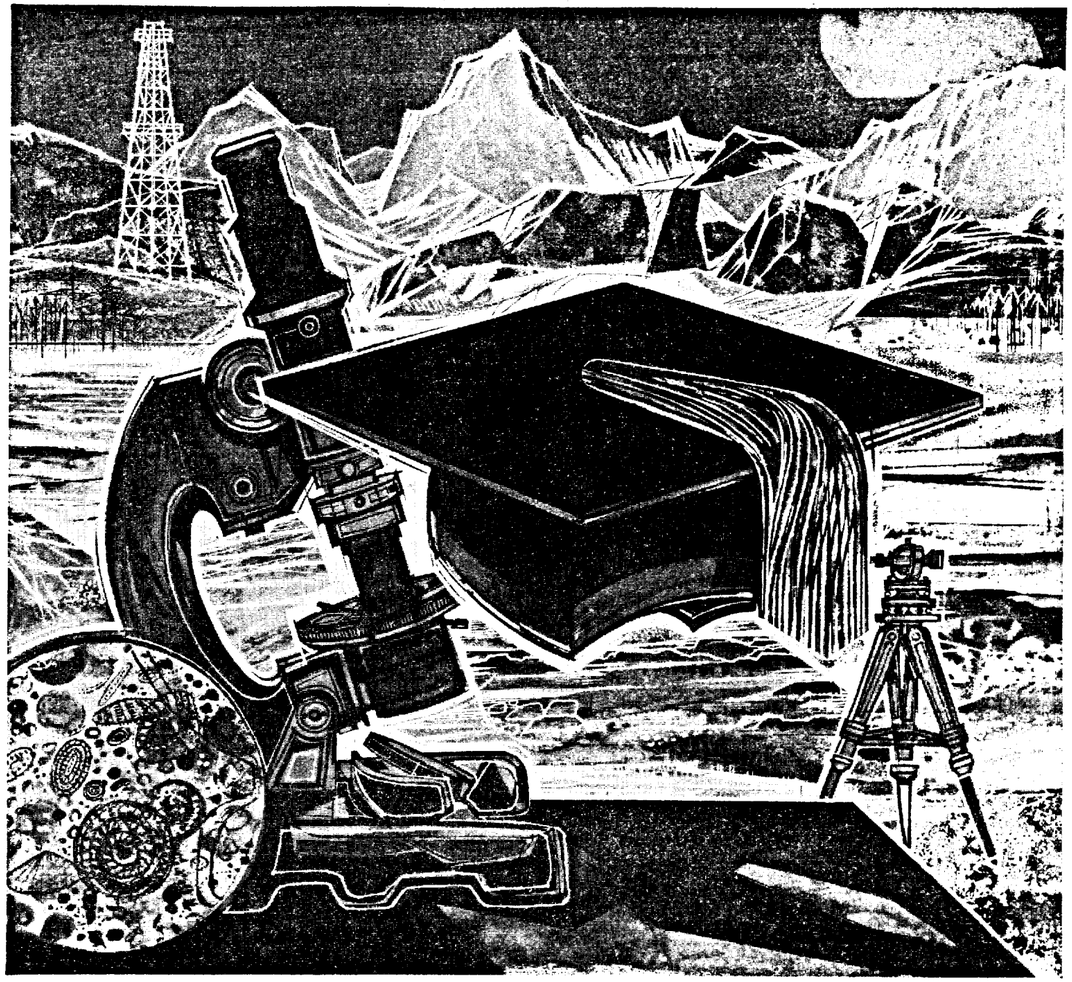
FROM OUR CORRESPONDENT IN ANKARA

WHEN Turkey holds its next general elections—possibly before the end of this year—it will provide an interesting test of how far, in an under-developed country striving for quick material progress, the principles of economic stability can be reconciled with the political requirements of a fierce electoral struggle. The country has greatly benefited from twenty months of the "stabilisation programme" recommended by western monetary experts in August, 1958. Exports have risen; inflation has been held at bay. But general elections seem likely to be held before they are constitutionally due in October, 1961; and if all the manifold promises now being made by Turkish statesmen to their electors are translated into fact, Turkey can hardly fail to have a relapse into its recent painful maladies.

"Stabilisation" in Turkey's case consisted primarily of a *de facto* devaluation of the currency, a sharp limitation of the previous deluge of bank credit, and the removal of some direct controls over the economy. This medicine was alleviated by a congenial draught of $376 million paid by the West into Turkish coffers. The effects have been salutary. Exports in 1959 were 30 per cent higher than in 1958, and most Turkish staple products, except chrome (which is in a bad way), have been selling well. The circulation of banknotes is down, the black market is little heard of, gold and real estate prices have declined, shortages have vanished in a profusion of goods on the market, and a general health and normality is temporarily suffusing the Turkish economy. The Turks have so far repaid their foreign debts on the nail. The most serious fly in the ointment is the constant rise in the cost of living—about 40 per cent since August 1958.

The Turkish leaders, who swallowed western advice with reluctance in 1958, though not the financial assistance that went with it, have now realised the advantages of a programme which restores both internal health and external confidence. But "stabilisation" is a poor election slogan, especially for a prime minister like Mr Menderes, whose aim has been to achieve as much material progress as possible in the shortest possible time. There are already signs that the ruling Democrat party is feeling strongly tempted to cast stabilisation to the winds, at least until—as it hopes—its lease of power has been renewed.

The 1960 budget, which is 22.3 per cent higher than last year's with no visible increase in real revenue, can hardly have been balanced, despite statements to the contrary by the minister of finance. Speeches by Mr Menderes in various parts of Turkey have promised the electors a large number of material blessings—water systems, electric light, roads, dams, and sugar factories—some of which can with difficulty be reconciled with the programme which Turkey engaged itself to carry out. Just lately meetings between the prime minister and business circles in Istanbul have inspired reports that credit ceilings, a key feature of the stabilisation programme, may shortly be relaxed.



To be fair, some experts now feel that some easing of the extreme tightness of money in the Turkish economy, especially in the private sector, would be beneficial and compatible with economic stability. What really worry the international experts are the vast plans for development in all directions which the Turkish leaders seem determined to pursue. The Turkish government's reluctance to commit itself to any kind of rational programme of priority investments is perhaps endemic in the Turkish character. But it is gratifying to note that two distinguished Dutch economists, Professor Tinbergen, of Rotterdam, and Dr Koopman, of The Hague, have arrived in Ankara, by private arrangement with the Turkish government (which will be their employers), to advise on a long-term programme for Turkish development.

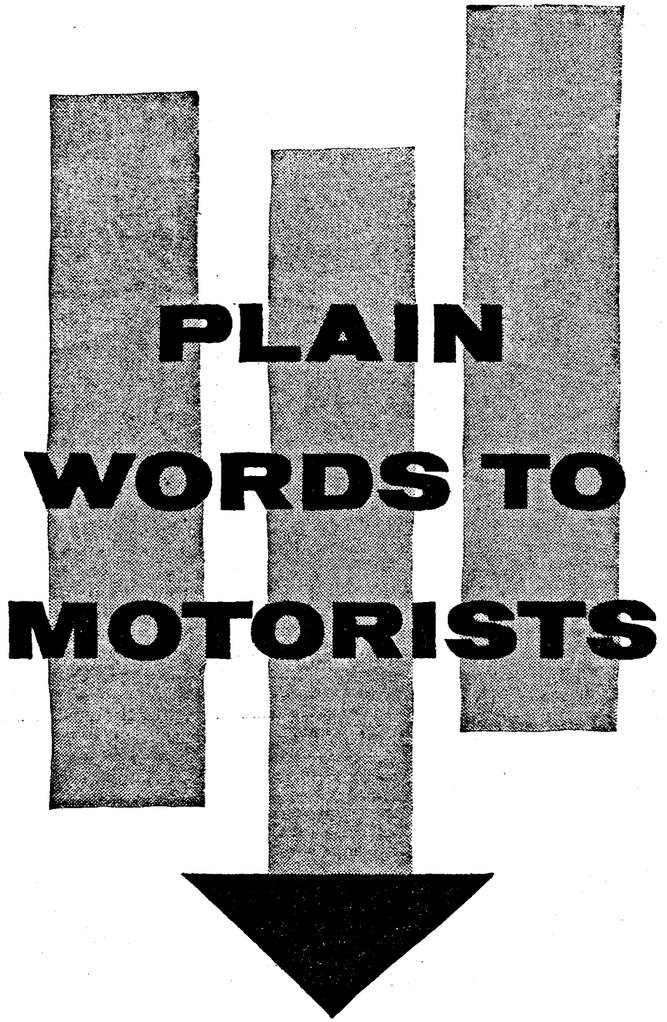
Some of the Turkish projects may be merely electoral, though there is no particular reason for thinking so. The new road bridge over the Bosphorus will cost about $50 million; Turkey's first shipyard near Istanbul, probably to be built by the Japanese, $20 million. A second steel industry to reinforce the existing one at Karabuk is to be set up on the Black Sea coast at Eregli; it will cost $200 million. The Turks are going ahead with television, tourism, city planning, electrification, irrigation, afforestation, water systems, and a hundred other things, including more shadowy projects such as a cadastral air survey of Turkey ($50 million) or the extension of Turkey's domestic airlines to the international field.

For a country of limited resources, some of these projects are more desirable than others. It is clearly Turkey's need to produce for export in order to try to balance its trade at a level of imports sufficient to cope with a rapidly increasing population; it is for the planners to decide which projects should have priority to achieve that end. To do all these things at once, as the Turks appear to intend, will require as many billions of dollars as there are stars in the Great Spiral Nebula of Andromeda. Yet if the Turks insist on a bridge over the Bosphorus or a television network in Turkey, who is to say them nay? And what person who has seen the poverty of Anatolia can challenge Mr Menderes's principle of "Water in every village"?

WHEN President Eisenhower visited Turkey last December he promised that American aid would continue. But a mere $80 million each year of economic aid, plus $40 million of agricultural surpluses, will scarcely suffice. The Development Loan Fund may contribute handsomely towards the new steel industry. The Turks have their eyes on a possible loan from the common market, of which they expect to become members. Italy last year gave them a bilateral credit of $60 million, mainly for tourism, transport and electric power, and there is now talk of a second. Meanwhile west Germany has just accorded Turkey a 50 million dollar credit which has all the appearance of being bilateral, despite previous German statements that multilateral credits for Turkey were more desirable. The Turks want bilateral credits; they have little use for multilateral arrangements for aid, which usually involve some sort of conditions.

Though the stabilisation programme has caused a welcome lessening of Turkish trade with the Communist bloc, the Russians are constantly at Turkey's elbow with offers of large long-term credits at low rates of interest. So far, not much has come of this, though the Turks, not unjustifiably perhaps, make powerful play with the Russian offers *pour encourager les autres*. Up to now,

Mortar boards, a shortage of



BRAINS ARE ONE THING. Trained minds are another. Brains abound, but industry has a responsibility for providing facilities to train them.

This is why The British Petroleum Company has evolved a far-sighted training scheme. The Company has each year, both in Britain and overseas, some 2,000 salaried young men in undergraduate courses at universities or in student or craft apprenticeships at technical colleges or in its own training centres and workshops.

In addition to its extensive training activities in this country, BP is at the moment training apprentices in Aden and West Africa, plant operators in Canada, marketing specialists in Australia; to quote but four examples of a worldwide operation.

BP thinks it particularly important to train today the minds of tomorrow's team. BP believes in 'hats off to tomorrow.'

BP BRITISH PETROLEUM

Motorists expect to be free to choose the quality and brand of the products they require. Over the years, by exercising this right, motorists have shown their overwhelming preference for the brands of lubricating oil manufactured by the independent oil companies.

This right of free choice is now being restricted by the major petrol companies. Tenants of many filling stations are forbidden to stock and sell oils made by the "independents". At other filling stations an attempt is being made to enforce a ban on the sale of "independent" oils on the forecourt and from the equipment in the service bay.

To protect your right to freedom of choice, you should always order the make of oil you require by name. This insistence will support British motor traders in the fight against monopoly.

Issued by the **MOTOR ACCESSORIES MANUFACTURERS ASSOCIATION LTD.** whose principal object is:—*"To promote, by exchange of information and by concerted action, the unrestricted sale and display of accessories, tyres, batteries, oils and other products distributed by Members of the Association to the motor and allied trades".*

94 GLOUCESTER PLACE · LONDON · W.I.

the Russians have provided a large sheet glass factory near Istanbul, and nearly $7 million worth of equipment for textile factories. They are reported to have offered to finance a vast water supply scheme for Ankara, at a cost of $50 million. The Russians may have something more up their sleeve for Mr Menderes when he visits Moscow in July.

The Turks seem to find it hard to realise both the limitations of their own resources and the fact that their prime need, with a population increasing at the annual rate of 3 per cent, is to improve their industrial and agricultural production. It is to be hoped that despite electoral temptations the Turkish government can settle down, with the beneficent advice of Professor Tinbergen and Dr Koopman, to work out a rational plan for doing first things first in Turkey.

Mao Heeds Moscow

FROM OUR CORRESPONDENT IN HONGKONG

In the casual and inadvertent fashion in which news is sometimes allowed to flutter out of communist China to Hongkong's frustrated bird-watchers, the interesting information has been released in the current issue of the authoritative party organ, *Planning and Statistics*, that Peking has accepted Soviet advice for a re-writing of China's second five-year-plan (1958-62).

Details of a basic re-drafting and consolidation of industrial and agricultural expansion during the remaining three years of the plan are directly attributed in a lengthy article to "reports by Soviet experts in Peking." It is instructive to note that this Soviet-directed overhaul of the Chinese economy represents a general application and nation-wide extension of the same principles that have governed the reorganisation of the communes. Briefly, bureaucratic excesses are being reformed, administration is streamlined and decentralised, techniques are to be improved and precipitate planning is curbed.

By implication, the Soviet experts pass severe criticism on the earlier Chinese methods. They advise a restriction on the authority of centralised organisations like the State Council and the National Planning Commission over "key industrial enterprises," and a systematic transfer of power over small and medium enterprises to local bodies—in the same way as centralised control of the communes has now been divided among "three levels": production brigades, the teams comprising those brigades and the original but now diffused central authority.

"Generally speaking," the Soviet experts submit, "the central authority should not try to control too wide a range (of the national economy) but should try to do a better job of managing key enterprises."

The joint report recommends also a nation-wide programme for the gradual mechanisation of farming, giving greater importance to steady continuity than to headlong leaps and bounds. "The nation's agricultural industry should be mechanised on a small scale over a four-year period, on a medium scale over seven years and on a big scale within 10 years."

The Soviet planners advise that capital construction should now be devoted to the expansion of industrial bases in central China (around Wuhan) and northern China (around Paotow in Inner Mongolia), the development of coalfields and hydro-electric power stations south of the Yangtse-kiang, and the opening up of oilfields with effective communications and transportation in the north-west. "In other words," they argue, "China, while strengthening existing key industrial bases in the north-eastern and eastern regions, must now spread heavy industry through the north-west and south-west."

A significant warning is added that China must begin to place less reliance on technical aid from the Soviet Union and fraternal countries in eastern Europe for the development of metallurgical, machine-building, fuel and electric power industries. "Stronger reserves of raw materials must be built up," the report continues. "Except for the local development of small and medium enterprises, construction of key industries must be preceded by geological surveys and efficient plans for specific accomplishment."

The customary comradely tributes are paid to the genius of Chairman Mao and the inspired leadership of the glorious Chinese Communist Party, but, in view of the Chinese party's internal criticism of the original excesses perpetrated under the communes, the Soviet experts are perhaps lacking in tact in quoting Lenin: "A balance which is regularly maintained indicates that it has been well planned."

A South African's Anguish

For South Africa to see peace, the impossible must happen: the whites must make up their minds to learn to live with the Africans. This governs any answer to the question: what is going to happen to the Union? On it also depends whether the three-weeks-old "revolution" has brought the country any nearer to a solution of its problems. There follow extracts from a letter written last week by a young graduate of a South African university, now taking a post-graduate course. They are highly evocative of an individual South African's feelings in the face of crisis. She wrote to a relative:

I ASSURE you that South African whites are not as blind as you appear to think. A lot of people now think seriously of emigrating—the Canadian diplomatic representative reports a wave of inquiries. I went and took passport photographs. . . . This country is as near to revolution as could be. And the worst of it is, now, that newspapers are so stringently censored, because of the emergency regulations, that we do not know what is happening. One hears rumours that half Alexandra township is burning, there is shooting in Meadowlands, a large crowd is prevented from marching on Marshall Square, big trouble is expected in Bloemfontein, in Durban.

And these rumours we cannot get confirmed or denied. We know, although newspapers say that things are returning to normal, that they are not, because the same issue will report that further units of the Active Citizens Force have been called up and more areas proclaimed as coming under the emergency regulations: I have heard rumours that news is not only being censored, but is actually being issued to the press by the police. I know from (a friend) that (an editor) was threatened with arrest, unless he gave the police some information. . . .

It is a peculiar feeling. We were having a lecture . . . and in the middle some of the blokes in the class had to leave because they're in the ACF and had been called to a meeting . . . a certain young gentleman of your acquaintance was, I know, thinking of going to the protectorates as well, to avoid being called up. . . .

The government are trying desperately to do something and one doesn't know exactly what, as we have almost no news about South Africa. . . . I'm scared. We're living in the middle of history and a damn awful feeling it is too. Where we go from here is anyone's guess. We'll just continue thinking twice before we go out at night, apply for a passport and pray that if an explosion comes we'll get out alive. . . .

The worst of all, of course, is the moral conflict. I don't know whether to be glad or sorry at the success of the African demonstration of strength and solidarity. And the feeling of "we're-all-white-men-together" is hard to escape when you know that, whatever your sympathies, your white skin brands you as an enemy.

Hongkong's bird-watchers, recording with rapture this rare passage of a genuine red-rumped Moscow stormy petrel through China, recall the indiscreet comment of Mr Ho Yin, head of the communist-biased chamber of commerce in Macao, and one of the strange company of Macao capitalists who retain strong and profitable affiliations with China. Mr Ho is reputed to have observed in relaxed conversation at the time of the politburo showdown over the communes: "What Peking really wants is the autocracy of a capitalist monster like Bedaux to organise China's manpower with efficiency as well as ruthlessness; combined with the craft and cunning of a traitor to the workers, like the American union leader Walter Reuther, to trick China's peasants and workers into the belief that their welfare comes ahead of the Chinese government's ambitions; and the corrupt services of half-a-dozen trained costing accountants from a sink of iniquity like Columbia University, to put the party's amateur industrial planning on a reactionary but professional basis."

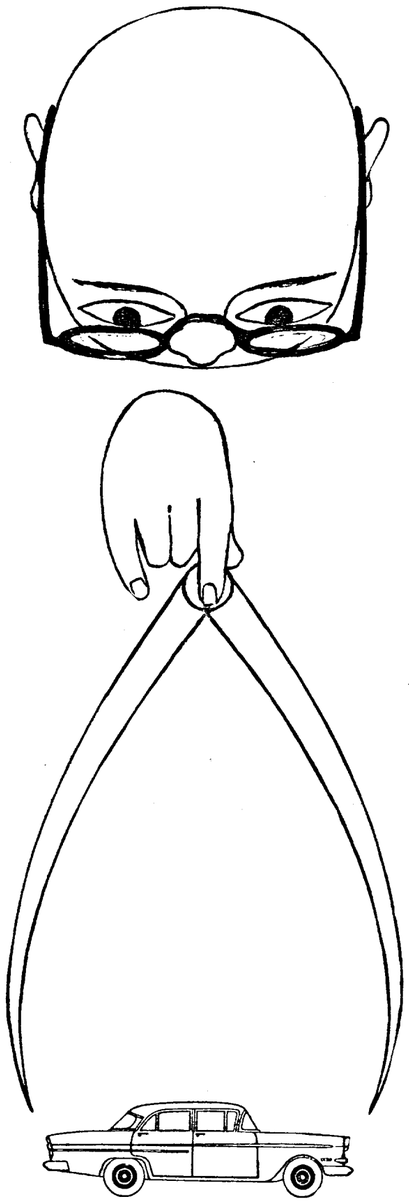
INDONESIAN PROSPECTS—I

Learning the Hard Way

FROM A CORRESPONDENT LATELY IN INDONESIA

For more than two years the population of the entire Indonesian archipelago has been living under an officially proclaimed state of war. Actually, while armed rebels no longer control any large region, there are still important areas of insecurity in northern and southern Sumatra, western Java and central Celebes. The sporadic raids and occasional ambushes of military patrols that mark the rebel guerrilla operations in these areas are, however, generally discounted as the work of "bandits." Yet the suppression of banditry is a minor part of the tasks assigned the military. They issue regulations on railway, shipping and construction operations; they enforce fixed prices; they determine whom business men may, indeed must, employ; and they tell business men where and from whom to buy and where and to whom to sell. With such manifold responsibilities, the soldiers are numerous and conspicuous everywhere. The incessant outpouring of stern "do's" and "don'ts" by the military, whose word is law, has fostered an unwonted sense of repression and a furtive atmosphere. In these circumstances, the strafing of the presidential palaces on March 9th shocked an officialdom evidently already on tenterhooks and heightened popular awareness of the widespread opposition to the regime. Was this spectacular gesture of protest a portent of mass insubordination? Or did it signify only that for one member of the armed forces the prevailing tension had reached breaking point?

There are some indications that mass insubordination was the answer. Indonesia today seems far from the ideal of social transformation that animated the struggle for independence. The leaders of the struggle still speak of replacing self-interest by human brotherhood and primary responsibility to the community; but their performance has fallen short of their promise. Transforming society on a new model has been a disillusioning process. Indonesia has been learning, the hard way, some of the lessons taught elsewhere by long experience in responsible self-government.



Again, it should not be overlooked that the present government consists preponderantly of "old guard revolutionaries." Fifteen years older than they were when they sparked the movement towards independence and social reform, they have inevitably lost much of the *élan* that carried them to their early victories. In effect, they have become partisans of the *status quo*. More and more their inclination is to keep down opposition, rather than to grapple imaginatively with emergent problems. Within the past few weeks, President Sukarno has even dissolved the elected parliament, the sole remaining source of independent criticism; and he has since replaced it by a largely nominated body and left Indonesia for a world tour. Newspapers that reported the plain truth of his arbitrary, self-serving action, were called up on the carpet. For the press is tightly muzzled, not only by direct editorial and news control but also by strict newsprint rationing. Radio is a mouthpiece of an administration that is preoccupied with phrase-making ("guided democracy"; "food and clothing for everyone") and the organisation of circuses (Mr Khrushchev's visit; the Pan-Asian games) rather than with mastering the arts of government. The impression spreads that, though there are in the top national councils a number of dedicated public servants, these are the exceptions.

The transformation of an enterprising, democratic revolutionary movement into a police state dominated by an "old guard" intent primarily on self-preservation does not mean that the programme of social reform has been abandoned. Nor does it mean that no progress in that direction has been achieved. In education, the accomplishments of the regime are outstanding. Since 1945 illiteracy has been reduced from an estimated 90 per cent to between 30 and 40 per cent. The number of primary schools has increased ten-fold and of attending pupils, five-fold. Four teachers' institutes have been established; and the two national universities (one of which, Gadja Mada, was founded by the revolutionary government) are respectable institutions of higher learning as well of professional training. Lately, however, the rate of progress in education has perceptibly slowed down. Moreover, the advances have been quantitative, rather than qualitative, although a promising experiment, which began before the war, has been the creation of schools embodying the traditional peasant principles of neighbourhood solidarity and mutual help. These schools, organised on a voluntary basis, have helped to develop a moral foundation for democracy and local arts and crafts. Though the movement is not government-sponsored, the authorities encouraged it.

A migration programme from over-populated Java to other islands, notably Borneo, that are in need of population, was formulated many years ago. In its application, however, the results have been negligible. Some 5,000 to 15,000 Javanese have been transferred annually to outlying islands, but because of the excess of births over deaths in Java, the balance may even have been negative. The congestion in Jakarta, mainly because of Parkinson's Law run wild, is more and more appalling. The four- to five-fold estimated increase in the capital's population since independence has not been accompanied by a corresponding growth of housing or public utilities. Inadequate water supply and sewage disposal have caused distress. The road leading to the Pan-Asian games stadium, now under construction on the outskirts of the city, is lined with straw-matting hovels, usually tin-can roofed, lacking pure water or sanitation. In these respects, the big hotels in the major cities of Java are scarcely better off. These establishments, formerly Dutch-owned, have been taken over, like all other Dutch property, by a government syndicate. The most important of these syndicates is known as BAPPIT. Under government management, the plumbing has been neglected. For example, the biggest hotel in Semarang recently had no running water, either for lavatory taps or for water closets. In the latter respect one of the two principal hotels in Jakarta was no better off, though the wash basin taps did function there—at certain times. On a motor trip the length of Java, the only hotel with plumbing facilities in working order was in Jakarta. Similarly, the fine system of arterial highways left by the Dutch has fallen into disrepair over many long stretches, especially in central Java. This neglect, however, is now tardily being remedied.

(To be concluded.)

PARKONOMICS*

* **PARKONOMICS,** *a branch of* ERGONOMICS: *the science of designing objects with particular reference to the needs and physical characteristics of their users:* **'human engineering'.**

"... over there in that space."

You try it forwards and the back sticks out. There's a gale of horns, and half the cars in town stream by. You try it backwards. The wheel feels like lead ... you can't see your own tail ... back a bit, sir, back (how long *is* the car anyway?) ... *c-r-rump* (that'll take a bit of straightening). This is a common case of Parkomania, a malady which afflicts both sexes.

The remedy is **PARKONOMICS** — the science of providing maximum ease and manœuvrability with minimum loss of time and temper. Ordinary drivers become good, and good drivers better, in a car designed with Parkonomics in mind. And that means in a Vauxhall.

A Vauxhall gives you space. Good leg-room, good head-room. Wide comfortable seats, an enormous boot. You'll be surprised at the manœuvrability it gives you too, helped by the deep panoramic windows, the four wing tips all visible from the driver's seat, the compact overall dimensions, small turning circle and re-circulating ball steering. (Did you know, by the way, that Vauxhall steering is *easier* to turn as the lock increases?).

A boffin's word, **PARKONOMICS,** but it sums up thoughtful engineering ... a philosophy of design ... a science that is important to *you.* A tremendous lot of it goes into Vauxhall cars — which is why so much pleasure comes out of them. Why not visit your Vauxhall dealer, get behind the wheel, and go for a trial run? The best way to discover a new world is to drive there.

British Banking in Asia

These are the territories served by **THE CHARTERED BANK** and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. An effective credit information service and skilled assistance and advice are available to United Kingdom merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK

(Incorporated by Royal Charter, 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

Offices in the United Kingdom at Manchester and Liverpool.
Agencies at New York and Hamburg.

THE EASTERN BANK LIMITED

Head Office: 2 & 3 Crosby Square, London, E.C.3.
Branches in India at Bombay, Calcutta and Madras

Associated Banks: Allahabad Bank Ltd. (Incorporated in India)
The Irano British Bank (Incorporated in Iran)

CAMPBELL DISCOUNT COMPANY LIMITED

INDUSTRIAL BANKERS

Paid up Capital £544,000 · Assets exceed £3,000,000

Directors: J. B. Campbell. J. W. W. Huntrods. P. H. Russell Smith, A.C.A. P. J. Cannon. G. Keighley.

Campbell Discount Co. Ltd. announce that they are able safely and profitably to employ a growing volume of money in satisfying the increasing demand for the Company's services. They, therefore, invite substantial deposits on the terms indicated below. The Company's banking business is conducted in conformity with the strictest canons of banking liquidity, and the proportion of liquid assets to deposits is maintained at 10 per cent, or 30 per cent of funds at less than one month's maturity, whichever is the greater. The Company is one of the most substantial independent industrial banking houses in the United Kingdom, and is conducting a diversified business over an area stretching from Newcastle-on-Tyne to the south coast.

Funds may be deposited on the following terms:

Money at 1 month's call, 5% per annum, maximum £10,000
Money at 3 months' call, 5½% per annum, maximum £50,000
Money at 6 months' call, 6% per annum, maximum £100,000

You are invited to write to The Manager, Banking Dept., Campbell Discount Co. Ltd., who will be pleased to send you an Audited Balance Sheet and booklet No. C 1660 explaining our mode of operation.

THE BUSINESS WORLD

Plain or Filter?

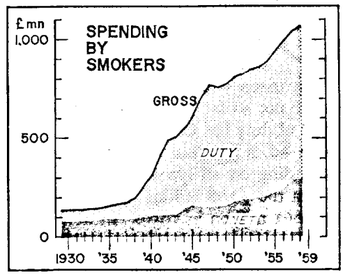
DUTY on tobacco in Britain is now equivalent to a purchase tax of 425 per cent. Successive increases in that duty may have limited the growth of smoking here in comparison with smoking in some other countries, but they have not so far put a stop to growth. Since 1942 the basic rate of duty has been raised twelve times, from 8s. 2d. a lb to 64s. 6d. a lb. But in only two of those 36 years has retail spending on all types of tobacco goods failed to go on up: from the £108 million spent in 1924 it has risen tenfold, to £1,061 million in 1959. In only eight of those years did the amount of smoking done, as measured by the weight of tobacco sold over the counter, falter—and six of those years were during or just after the last war when punitive increases in duty were accompanied by import restrictions.

Will there ever come a time when the Chancellor finds that he has finally wounded this golden goose, which now produces for him the equivalent of a third of the revenue he gets from income tax? Before the budget, the tobacco industry was looking forward to another increase of perhaps one or two per cent in the amount of tobacco smoked this year, about as much as it has been getting year in, year out in the last decade. The budget has now made smoking five per cent dearer. But in 1956, when the duty was last raised, and by roughly the same amount, smokers were prepared to pay about six per cent more to enjoy just over one per cent more smoking. And in 1958, after manufacturers had put up most of their prices by the equivalent of a penny for twenty cigarettes, smokers paid out about five per cent more for just under two per cent more tobacco. Mr Amory's own calculations appear, on closer examination, to reckon on some further rise this year. He counts on earning £39 million in the present fiscal year from the increase in duty alone and expects in all £40.3 million more than last year from smoking. But duty is levied when leaf is cleared from bond and, since there were more working days last year than in this, he must be bargaining for an increase of perhaps one per cent in smoking during 1960.

A more certain prediction is that higher prices will intensify competition. So far, the tobacco manufacturers have not been engaged in a "tobacco war" approaching the bitterness of the one in the early thirties. Even so, for the last five years the market for tobacco goods in Britain has been in a greater state of flux than since 1934. At the beginning of 1955, as soon as manufacturers were assured of adequate quantities of the leaf they needed for the particular blends that British smokers prefer, supplies of the leading brands were freed of restriction by quota for the first time in fifteen years. The smoker was thus able to buy what he wanted instead of merely what he could get. Since then, sales of the many "less popular" brands, which had been bolstered by the system of control, have virtually melted away; at the other end of the trade, the handful of leading brands have been locked in a tight race for supremacy. But at the same time many smokers have shown increasing interest in the economy that filter and roll-your-own cigarettes offer.

This search for economy has been largely confined to cigarettes, which including tobacco for hand-rolling now account for about 92 per cent of all the tobacco products bought in Britain. The long downward trend in pipe smoking has gone on uninterrupted. Nor does it seem likely to be arrested in the immediate future: pipe smoking has become more and more an older man's habit and, at 5s. to 5s. 9d. an ounce now, is not a cheap indulgence either. Cigar smoking, however, has enjoyed a remarkable boom: consumption, in weight of tobacco, has risen by more than 50 per cent in the last five years. But cigars and snuff, which still retains some popularity, account for less than one per cent of tobacco consumption.

AMONG cigarettes, over the five years of freedom, filter brands have absorbed more than the whole of the increase in total cigarette sales, cutting into the market for plain brands as sales of the "less popular" brands have fallen. In absolute terms, sales of the leading plain brands were about the same in aggregate last year as in 1955. Filter sales have grown from about two per cent of the total to about twelve per cent, a sixfold increase. Sales of hand-rolling tobacco have risen less spectacularly, by about 16 per cent.



Even so, the rise in sales of filter cigarettes in Britain has not yet been so rapid, or gone so far, as in some other countries. In the United States filter sales rose from less than one per cent of the total in 1951 to about twelve per cent in 1954; assisted by such inducements as menthol flavours and now also rum, maple and vanilla (which, as ingredients, may not be added to tobacco in this country), they rose to just about half of the market last year. But these comparisons can be misleading. The American market for filter cigarettes has been dominated almost entirely by concern about the possible effects of smoking on health: some American filter brands cost more than the plain equivalent and all are king-size. In Britain this pattern is reversed. Reports of statistical correlations between lung cancer and heavy smoking seem hardly to perturb the British smoker. The much higher cost of tobacco, after duty has been added, enables manufacturers in this country

to retail filter brands, which take on average about a fifth less tobacco at much lower prices. But the absence of a price advantage appears to have set, so far, a limit on the market for king-size cigarettes in Britain. Though sales are rising steeply (mostly among young smokers), they still account for not much more than one per cent of the total cigarette market.

THE upshot of all these competing developments has been to reduce perceptibly the degree of concentration in this industry. In total, sales of cigarettes by the near autonomous and strongly competing branches of Imperial Tobacco have fallen both relatively and in absolute volume. In the early fifties, when quotas were still on, the company had about four-fifths of the market; today it probably has something like two-thirds. This is mainly the result of the great success Gallaher has made of "Senior Service" and possibly also of "Park Drive." This company's turnover doubled between 1953 and 1955 and doubled again by 1958.

The reduction in Imperial Tobacco's share of the market also reflects the fact that it has not so far been able to become so dominant in the filter market as in the trade for plain cigarettes. Even so, it still has probably a little over half of all filter sales. But Carreras/Rothmans ("Guards," "Rothmans King Size," and "Stuyvesant") and Wix ("Kensitas," heavily promoted by coupon trading) each have bigger shares of filter sales than they have of plain. Gallaher has now introduced "Nelson," the filter equivalent of "Senior Service" in the middle price band of 3s. 3d. to 3s. 10d., where over half of all filter sales are made. "Nelson" may become a strong competitor in this crucial part of the filter market, where previously Gallaher had not made much of an impact and where the branches of Imperial Tobacco have made most of theirs.

But concentration in tobacco is still a good deal greater than in most other industries. With Imperial Tobacco retaining about two-thirds of the cigarette trade and Gallaher accounting now for perhaps another quarter, there is not much left for the other firms—perhaps six per cent or so. Carreras/Rothmans and Wix, in that order, have nearly all of that; Godfrey Phillips and the few other firms still in business are fighting to retain even a finger-hold. Among brands, too, a few leading sellers dominate the trade. The three most popular, "Woodbine," "Player's," and "Senior Service," in close order, account for 60-65 per cent of all sales, plain and filter, with "Weights," "Park Drive," and "Capstan" (more successful in the north than in the south) taking perhaps another fifth. "Bachelor" and "Kensitas" probably have nearly half of the filter-tipped trade. Over 85 per cent of the whole market is shared by the eight top brands, out of up to 200 now on sale.

Immediate prospects for Imperial Tobacco and Gallaher hinge primarily upon the fight for supremacy in the 4s. 1d. class of plain cigarettes between "Player's" and "Senior Service"; and, in the middle priced filter market, between "Bachelor" and perhaps "Bristol" on the Imperial side, "Nelson" on Gallaher's, and "Kensitas" from Wix, plus some of the new brands that are now being got ready. Much will depend upon the future trend of business in filter cigarettes generally. The budget price increase may act as a further boost. But if sales of filters over the whole country rose eventually to 20-25 per cent of all sales, their level now in London and the South, the prizes would be glittering.

BUT the race is expensive both in promotion costs and in the investment needed to hold unit manufacturing costs down. The biggest element in cost, duty apart, is the tobacco itself. Leaf prices are not likely to fall so long as the United States Government supports its tobacco farmers. Problems of finance can also be complicated by actions of the British Government. The tobacco industry earns about £770 million a year for the Exchequer and about £290 million for its own trade. As duty is paid before manufacture and retailers pay their accounts after sale, seven to nine weeks later, manufacturers have about £125 million continuously "on loan," interest free, to the Government, and another substantial, though smaller, sum on loan to the trade. An increase in the tobacco duty raises the amount "on loan" to the Government, while the abolition of individual resale price maintenance, if the Government were so to decree, could create problems in the collection of trade debts. The manufacturers dislike this possibility; but they also argue that the element of duty in retail prices is so high that the opportunity for competitive price-cutting would be limited.

The forthcoming report of the Monopolies Commission on the tobacco industry may throw some light on this and on the way that trade discounts are given. What it can hardly aver, even given all Imperial Tobacco's power, is that competition is lacking. Its report may reveal for the first time quite how much of a holding Imperial Tobacco has in Gallaher, and exactly how those shares are held. Imperial Tobacco and Gallaher compete in every sense, and so brands owned by the same group, such as those sold by John Player and Sons and W. D. and H. O. Wills certainly compete for public custom. Rivalry between the big manufacturers and attempts by the smaller ones to establish a niche in the filter cigarette market does not point to a rapid growth in the profits of the industry as a whole. In an industry which depends on a small margin of profit on a massive volume of turnover, one company can only add greatly to its profits at the expense of another. That Gallaher in recent years has done. But clearly Imperial Tobacco, spending heavily on promotion and installing more up-to-date machinery, is fighting back. Heavyweights may move slowly but they can pack quite a punch. And in the bantamweight class, Carreras/Rothmans, especially since it concentrated production at the modern factory at Basildon, and Wix are sturdy contenders. If the shares of trade were to become stabilised at their present levels—and here much depends on the efforts exerted by Imperial Tobacco in the next two or three years—investors might have to reconsider their preferences, which at the moment put a higher yield on "Imps" than on the other leading manufacturers.

TOBACCO EARNINGS AND YIELDS

GALLAHER, whose financial year ends on December 31st, has just published its preliminary results. In the accompanying table, they are compared with those of Imperial Tobacco and Carreras. It shows that Gallaher's gross profits, having risen by 18 per cent in 1958, went up by another 22½ per cent last year. The profits of Imps on the other hand fell in 1958-59 by 11 per cent, having risen by nearly 9 per cent the year before. In the same period, Carreras's profits on an annual basis fell by 15 per cent, having risen by 5 per cent the year before, but in the eight months to October 31st it has to be noted that Carreras was in the throes of a reorganisation.

Year to	Gallaher December 31		Imp. Tobacco October 31		Carreras October 31	
	1958	1959	1958	1959	1958	1959*

Restrictions Off the Register

TWO years ago this month the Restrictive Trade Practices Court held its first session. It was not an auspicious beginning: the respondents had already abandoned their agreements before coming to court; the Court declined to declare that they had been contrary to the public interest, and adjourned the hearing after having decided nothing. Perplexed observers—including this newspaper—were left to wonder if "No defence" was to be the best defence under the 1956 Act. Much has happened since then, leaving little room for doubt. Eight cases have been heard in full by the Court, and in seven of these the agreements in question have been declared contrary to the public interest and terminated; in the latest case, involving an agreement between producers of phenol, judgment to this effect came this week. The impact of the adverse judgments on other agreements has on the face of it been considerable: of the 2,240 agreements on the Register of Restrictive Trading Agreements on January 1st, 770 had apparently been abandoned or modified so as to remove their objectionable provisions. Businessmen and lawyers now have some idea of the Court's views on both economics and law, and a few precedents have been set. Two questions must now be asked: First, how much progress has really been made under the Act toward a more competitive economy, and how far have the implicit goals of the Act—lower prices and increased economic efficiency—been realised? Secondly, how effective is Britain's second major enactment in this field (the first having created the Monopolies Commission) likely to be in the future, now that businessmen have gained some experience of the way that the Act affects their collective agreements?

No one is officially empowered to investigate the economic consequences of this Act, but one of the few academic economists studying these problems, Mr J. B. Heath, of Manchester University, has recently produced some extremely interesting analyses of its effects*. Mr Heath has concluded that the effect of the Act on the general level of prices has so far been very small. Of the 437 agreements abandoned by June 30, 1959, he was able to analyse 380 that involved the setting or recommending of minimum, maximum or standard prices: these covered perhaps seven per cent of the value of manufacturing output and perhaps three per cent of gross domestic product. Agreements between distributors (covering £350 million worth of sales), and in textiles (£348 million), and food, drink and tobacco (£281 million) predominate by value of sales; in terms of the factory value of output the groups most affected were engineering, shipbuilding and electrical goods, closely followed by textiles.

Whether prices have actually fallen in these groups is another matter. Many of the agreements were undoubtedly moribund when abandoned, and others have been replaced by new market patterns such as price leadership; Mr Heath has estimated, however, that over half of the agreements involved were effective, and that their removal has increased competition. But if prices of the consumer goods de-restricted had fallen by the generous margin of ten per cent, the index of retail prices would have been reduced by 0.6 per cent, to date, at most. To date, the visible effect of the Act on retail prices to date has been almost nil; and against this must be set the Act's strengthening of individual price maintenance, and the Court's favourable decision on the agreement about water-tube boiler making.

THERE are, however, many operative agreements on the Register, and it is reasonable to assume that since these have not been abandoned they may be of a more effective variety than those given up. Important arrangements still exist in the motor trade, steel, light engineering and electrical equipment: some of these will certainly be defended, and the impact of these cases—one way or the other—on Britain's economy may be as great as that of the Lancashire judgment. But another recent development is distinctly ominous; this is the "open-price" or "price information" agreement and it could completely frustrate the present Act's attempts to control price-fixing, since it is not even necessary to register it.

It has often been cynically said that enough company lawyers, given the chance, can always find a way around legal barriers; "open-price" agreements, in fact, drive an enormous hole straight through the present Act, and it is rather surprising that they have not appeared sooner. They are well known on the Continent (e.g., in the European Coal and Steel Community), and they first reached the Supreme Court in

* "Freer Prices—What Progress?" in *The Broker*, February, 1960; "The Restrictive Practices Court on Competition and Price Restriction," *The Manchester School*, January, 1960; and an address given in Leeds on March 27th, on "Open-Price" Agreements.

the United States in 1921. It is thought that there are now about 150 of these agreements in operation or planned in Britain; some trade associations have modified previously registered agreements, while others more wisely have let existing arrangements lapse completely and formed " open-price " agreements to replace them, thus avoiding the tiresome task of registration entirely. A large number are being planned by the British Electrical and Allied Manufacturers' Association—which itself was never a party to restrictive arrangements—on behalf of member firms in various branches of the electrical industry.

Under " open-price " agreements, members notify a central agency, usually a trade association, of their prices, and perhaps of the terms and conditions of sale, costs, the state of demand, orders or the level of output ; these figures are compiled and then disseminated by the association among the trade. The names of sellers (and sometimes of buyers) are generally divulged ; in some cases information for " inter-firm comparisons " between members is provided. In " bid filing " systems, firms may notify the central agency of the prices they have put in on tenders—after a contract has been placed—and these prices are then distributed without identification to all members, whether they tendered or not. The Federation of British Industries has recently given this type of agreement its blessing ; the British Institute of Management certainly approves of " inter-firm comparison "; and the Board of Trade, which would like trade associations to take over the job of collecting many statistics, seems indirectly to have approved these agreements.

None of these new agreements involves an explicit restriction of any kind ; no action is required or even recommended to be taken on receipt of the information, and firms may do as they please. A minimum-price agreement may be replaced by an agreement to exchange actual prices ; a quota scheme by a notification of turnover or of the volume of sales ; a contract allocation scheme by a bid filing system ; a collective price-maintenance agreement by an exchange of price lists. They do not even imply connivance, and BEAMA, for instance, is insisting that no indication of possible future action is to be provided by firms. But it is too early to say what the economic consequences will be in Britain ; as usual, American experience provides little guidance.

WHAT is more important is that no means exist for finding about " open-price " schemes or their effects. To the extent that they are replacing restrictive arrangements previously subject to the Act, suspicion attaches to them: but they are not registerable or open to control. As the law now stands, the best restrictive agreement may be no restrictive agreement at all. Certainly collusion is facilitated, if not encouraged, by the exchange of information, and one authority has described such data as " signals for concerted action." Agreements to exchange costs can easily become implicit agreements about prices (through what the Americans call " conspicuous parallelism "), and any collusion which does occur will be much more difficult to detect. It would seem quixotic for businessmen to go to the trouble and expense of collecting and disseminating such statistics simply in the public interest, or to please economists and journalists.

Some modification of the existing law would be needed to take in agreements such as these. The Restrictive Practices Court has so far shown itself to be fairly stringent in using the seven possible justifications of restrictive agreements under the 1956 Act in deciding whether any agreement is against the public interest (though it seemed more lenient in applying the argument about damaging chances to export in the water-tube boiler makers' decision than in other cases). The present British mixture of three judges and four lay specialists compares favourably both with the unjudicial procedures of the US Federal Trade Commission and with the ignorance of economics displayed by some American judges. The Court would seem perfectly capable of judging whether a given " open-price " scheme was being operated in a manner contrary to the public interest. But " open-price " agreements are not subject to registration, and it would be difficult indeed to assess them under the provisions of the present Act. It would probably be unfair, indeed, to presume that they are against the public interest until they are proved otherwise, as one does with the agreements registered as restrictive under this Act.

IT would seem more promising to give the Registrar wider discretionary powers than he now has ; something similar is now done in Sweden and west Germany. At present he must bring all registered agreements before the Court. An alternative would be to require all collective trade agreements of any kind to be registered, but to allow the Registrar discretion to bring before the Court only those agreements which he thought appeared to be operated against the public interest. Explicitly restrictive agreements—of which 1,400 or so still remain active on the register—could continue to make their mandatory appearance in court, but the Registrar might be given powers, in addition, to put any others—including " open-price " schemes—to the same test. He might, indeed, possibly devise some model and acceptable form of " open-price " agreement—specifying, for instance, that certain information, if collected, should be made public or that collection is done by an independent agency.

This would mean giving the Registrar a bigger staff (at present about 110) and more money (£192,000 this year) as well as a freer hand ; he may need these anyway, to police the abandonment of agreements now on the register after they are declared illegal. Compulsory registration of all types of trade agreements, and wider discretion in evaluating the more sophisticated types, might eventually establish a more neutral position—and hence perhaps one more acceptable to industry —for a " Registrar of Trading Agreements " (less of a public trade prosecutor than of a Registrar of Friendly Companies, perhaps?). He could investigate and control all co-operative business agreements, and discourage restrictive ones from being formed, without necessarily being an official opponent of businessmen, as he is today. (The Government, if it were to accept any such course, might match this watch on business behaviour with an equally vigilant and powerful Registrar of Trades Unions.) There is a case for waiting until the effect of " open-price " agreements is more fully known, before moving to control them ; there is perhaps a better case for bringing them more clearly into the light of day before they have become widespread.

• BANQUETS • SALES CONVENTIONS • COMPANY MEETINGS •

"Congratulations on your company's very successful year!"

"Thanks, it really was quite outstanding. We included private trade shows at the Connaught Rooms in our sales drive and the results far exceeded our expectations. In addition I and my co-directors held a series of receptions there which resulted in a lot of new business and saved us all—especially the sales side—a great deal of time and effort.

In the Princes Restaurant here we can have one of the best lunches in London and they can show us the rooms afterwards. You won't find a better place for your show."

The Connaught Rooms were the first to install permanent closed circuit television and a simultaneous multi-lingual translation system. Other facilities include film projection and tape recorders. There are twenty-six rooms available. The finest food and wine are served with an excellence which comes from years of experience.

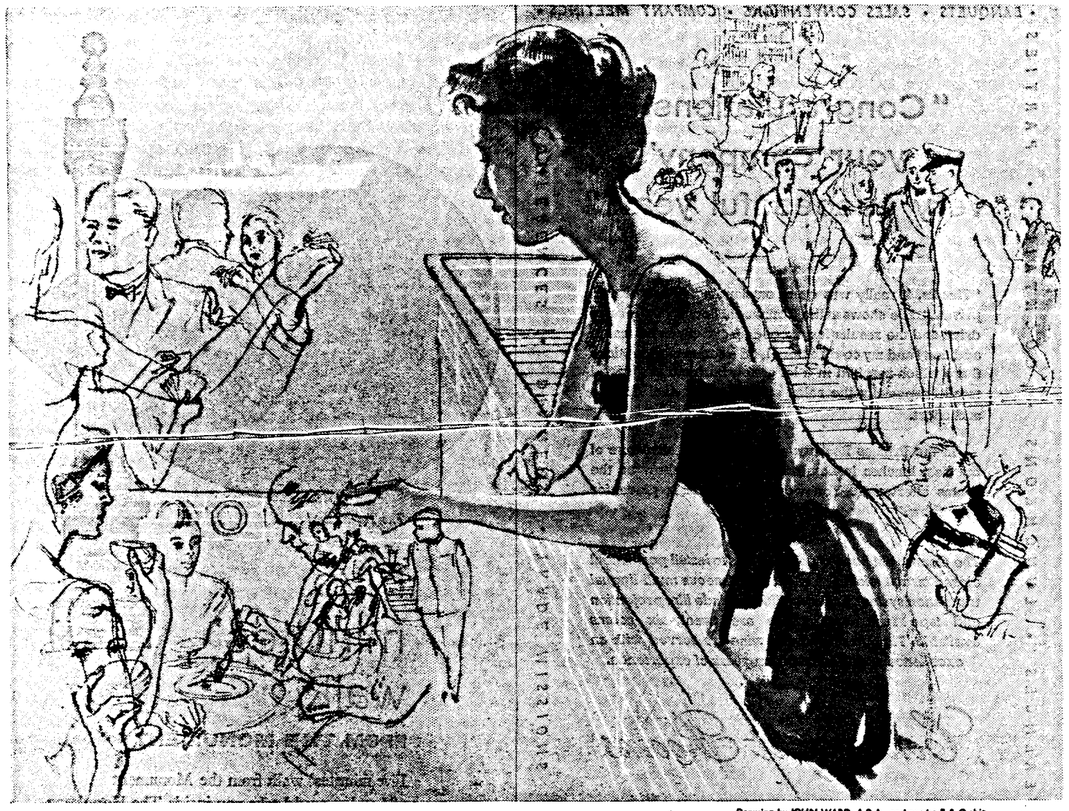
The Taj Mahal

Five minutes' walk



FROM THE MONUMENT

Five minutes' walk from the Monument of London could take you inside The Hongkong and Shanghai Banking Corporation . . . and, *for business purposes,* inside India.
The same walk could take you inside the other territories where we are established.
We can provide you with up-to-date credit information and advise you on many other aspects of business with the Far East.
As the largest British bank established by the Far East for the Far East, with branches in 20 countries and a network of agencies in all other principal trading centres, we are in a unique position to help you.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

HEAD OFFICE: HONG KONG
LONDON OFFICE: 9 GRACECHURCH STREET EC3

Branches throughout the Far East; also in New York, Hamburg and Paris. Offices of our Subsidiary in San Francisco and Los Angeles.

Drawing by JOHN WARD, A.R.A., on board a P & O ship

Why do more and more busy people travel to Australia by P & O?

Good company . . . good food . . . good health . . . *good business*. Time to catch up . . . time to read . . . time to *think!* These are some of the many reasons that make more and more busy people choose P & O to Australia.

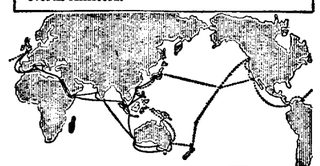
The voyage to Australia by P & O is an investment. An investment that can pay big dividends in increased personal efficiency, restored health and new business contacts.

Good Company Journalists . . . Soldiers . . . Industrialists . . . Scientists . . . Dons . . . there's always someone interesting to talk to on a P & O ship. So many pleasant meeting places too! Quiet lounges and cafes . . . comfortable bars . . . sunlit decks.

Good Food Exquisite continental cuisine . . . or the diet of an ascetic—P & O serves both with equal assurance. The widest possible choice of fine foods make the trip to Australia gastronomically memorable.

Good Health Day after glorious day of sunshine and sea breezes . . . deep relaxation. You stride off the ship a new man. Tanned, fit, refreshed—you're ready for anything.

Good Business More and more busy people are going to Australia by P & O. So it's probable that you'll meet someone in your own line of business. And it's *certain* you'll meet someone who can give you valuable information . . . tips on the market . . . contacts. A P & O voyage to Australia is always a first-class business investment.



DON'T FORGET YOUR WIFE!

What's good for you is good for your wife and family too! They'll enjoy a P & O voyage—even if they follow you later. There are nurseries and trained children's hostesses on every ship. Incidentally more and more men are taking their wives with them on normal business trips.

P & O FIRST CLASS TO AUSTRALIA IS AN INVESTMENT

Air-and-Sea If you're in a hurry, you have the best of both worlds by flying part-way, sailing the rest. Or flying out, sailing home. Whatever combination of air and sea travel suits you best can easily be arranged with your travel agent.

Pacific Outlets P & O is not only a great Commonwealth lifeline, with all the traditions of the British Mercantile Marine, but a magnificent outlet to the Pacific too. In conjunction with Orient Line, under the name Orient & Pacific Lines, services extend from Australia to the Orient and the West Coast of North America.

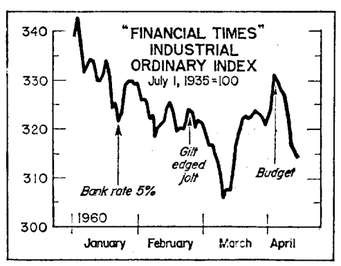
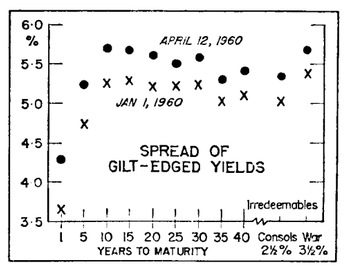
BUSINESS NOTES

IN THE MARKETS



Hazards of Witchcraft



MONETARY policy, Professor Galbraith regretted in *The Affluent Society*, is unfortunately weakened because it can have no resort to witchcraft. Since the beginning of last week it has almost looked as if it can. A budget milder in its net fiscal imposition than most experts had forecast has sent share prices slithering down 5 per cent in eight days; by Tuesday night *The Economist* ordinary indicator at 351.4, was within 8½ points of its previous 1960 low point on March 1st. All this has been the effect of the Chancellor's short and sharp warning of the likelihood of new credit restrictions soon. The market's agony of uncertainty has grown worse day by day; on Tuesday afternoon, following a 5.9 drop in the *Financial Times* index on Monday, strong rumours circulated of the "imminence" of restrictions on hire purchase and of special deposits.

Gilt-edged, meanwhile, enjoyed notable support either side of the week-end. The reminder by Mr W. F. Andrews of Unilever of the strong pull exerted by high yields was a contributory factor, though it should be remembered that ever since the election downward movements in gilt-edged have quickly met a resistance point. Equally significantly, and not unpredictably, influences that in former days would have affected gilt-edged much more strongly than equities, such as the rise in Bank rate, tougher open market operations and the threat of credit restrictions, have in the new circumstances hit equities the harder. On Tuesday gilt-edged and sterling were adverseley affected by the sudden leap in the American Treasury bill rate—from 2.7 to 3.6 per cent. This is still a full point below London, and the margin is not wholly offset by the cost of forward exchange cover, but London has suddenly lost the special attraction for short-term funds that has been bringing foreign money in during recent weeks.

The aim of the current official exercise is to restrain businessmen's optimism. At the moment, Throgmorton Street is doing that, and while it continues to do so, the authorities may feel the less pressure to implement their threat. Indeed, there is the distinct danger that the inhibiting effect of the action when taken may be offset by the relief of the ending of the uncertainty (if uncertainty is thereby ended). Witchcraft is no child's game.

There is a particular danger that a relaxed mood might follow from the imposition of either of the restrictions that the authorities are said to have in mind—hire purchase controls and special deposits from the banks to the Bank of England. Hire purchase demand, as Whitehall has predicted, is likely to rise less this year than last, as repayments mount; mild statutory controls on new contracts would make little sense, especially now that the finance houses have been forced by hard experience to tighten up for their own good. Special deposits could presumably be used to keep bank advances in check, but they would have little effect on the market for credit as a whole, which is the important thing. The great re-expansion of bank advances since mid-1958 has made the banks especially vulnerable to liquidity pressures exerted through the gilt-edged market. Scrutiny of advances was tightened after the drop in gilt-edged prices in February, and it is because of this that some bankers think there is a chance of seeing some slackening in the mid-April figures of advances.

GROWTH VERSUS INCOME

In Favour of Gilt-edged

IMMEDIATELY after the election, and the opening of a wide gap between yields on fixed interest securities and the attenuated dividend yields on equity shares, it was clear that investment in equities represented a choice of future growth at the sacrifice of immediate income. Before the yield curves "crossed," and money placed in equities yielded more than in fixed-interest securities, a general faith in the equity principle was sufficient argument in their favour. For the past six months, this general faith has had to be supported by calculation. The big institutions have been doing their calculations, on various notional assumptions of future growth in equity income (on the lines used in these columns last October and November). The gross funds in particular—which do not pay tax on income and are therefore especially interested in it—have been drawn to the attractions of fixed-interest stocks at current yields. They have been buying in a quiet way for many months; the effect in the market has been offset by the big sales by the banks, which have led to a marked hump in yields of short-medium dated securities.

Last week Mr W. F. Andrews, who manages the pension funds of Unilever—now at the impressive figure of £121 million—spelled out these considerations in public, and caught investors' attention by saying that War Loan at its present price, to yield nearly 5¼ per cent gross, was "ideal" for pension funds. Subsequently, commentators in a number of places turned some quick somersaults and decided that present yields might make gilt-edged attractive after all. Mr Andrews, who was speaking in a personal capacity, pointed out that:

> the power of compound interest is so potent that the interest margin that can be earned on fixed interest securities over and above the normal pension requirements should, I believe, more than take care of an inflation rate of 2 to 3 per cent per annum.

Mr Andrews does not personally regard equities as "the universal 100 per cent panacea" for inflation, and he is not enthusiastic about them for a pension fund when yields on top grade shares are 3-3½ per cent and even less while good debentures and preference shares are yielding 5¼ to 6¼ per cent. At this time of high yields, he suggests, it would not be unreasonable to aim at placing current money as follows:

15-20 per cent in gilt-edged
35-40 per cent in debentures.
5-10 per cent in preference shares
30-35 per cent in equities.

The industrial prior charge stocks offer a useful margin above gilt-edged yields, but under the weight of institutional buying this has narrowed considerably in the past year; to this extent gilt-edged are now relatively more attractive.

Another reappraisal that favours gilt-edged has come recently from a leading firm of stockbrokers. They have brought up to date some calculations on the course of an investment in equities in 1919,

which, with income reinvested, would now be worth ten times as much as an investment in 2½ per cent Consols. But they go on to show from the same figures that in sixteen out of the forty-one years gilt-edged appreciated more or depreciated less than equities; and that anyone who switched from Consols into equities in January, 1929, would have had to wait 23 years before overtaking the capital value of the gilt-edged fund. Moreover, when, as now, the dividend yield on equities is considerably below that assured by Consols, any setback in equities would greatly increase the time needed to make up for lost income.

RESEARCH AND DEVELOPMENT

Industry Spends More

BETWEEN 1955 and 1958 the amount of expenditure on research and development for which British manufacturing industry paid out of its own pocket approximately doubled, according to an estimate published by the Department of Scientific and Industrial Research this week. The department reckons that in all, manufacturing industry was responsible for the spending of perhaps £300 million on research and development during 1958, against a figure of roughly £190 million in 1955. In 1955, it thinks, nearly two-thirds of this expenditure was paid for by the government through defence contracts. By 1958 this proportion had probably come down to less than half; so the remaining expenditure on "civil" research and development in manufacturing industry may have increased from some £60-£80 million to perhaps rather more than £150 million.

Those figures indicate orders of magnitude, no more; the estimates of total expenditure in the two years were made in rather different ways, both admitting considerable "imperfections in the statistics," and the estimates of how much government and private business paid for may be shakier. The department made its estimate for last year by applying figures of expenditure per qualified scientist or engineer concerned in this work in different industries, which it obtained from a small survey, to figures of qualified employment on such work obtained by the Ministry of Labour from a much bigger sample. Annual expenditure on research and development per qualified person appeared to average nearly £11,000 right across manufacturing industries in 1958 (£31,000 a year in aircraft, and just under £8,000 a year in all other industries); and the Ministry of Labour reckons that there were 26,225 qualified people on research and development in these industries. The Ministry obtained information about the proportion of this work done under defence contracts from some of the companies replying; it published an estimate that about a quarter of the qualified people working on research and development in industry and government research establishments, in 1958, were on defence work, against about 40 per cent three years before.

If one sets total expenditure in this field against the net output of manufacturing industry, it amounts to 4.2 per cent for 1958, having been 3.1 per cent in 1955 (manufacturing output rose less than one per cent between the two years). A more logical comparison, perhaps, might be with capital investment, since research is a form of pre-investment. In 1955 research and development expenditure may have equalled perhaps 15 per cent of privately financed fixed investment in manufacturing industries other than aircraft (inclusion of which would distort the figuring). By 1958 their investment in industrial research equalled perhaps a quarter of the amount these industries invested in fixed capital assets.

STEEL

Should Prices be Cut?

ONLY a few steel products have been affected by the variations in prices announced last week by the Iron and Steel Board; these included both increases and decreases, and on balance had no appreciable affect upon the general level of steel prices. In stainless steel, black bars go up, on the average of the whole tonnage concerned, by £13 a ton; plates come down £13 a ton; and cold rolled strip comes down by £13 (though the thinnest and most expensive variety concerned comes down from £1,574 a ton to £1,083 a ton). There are a few changes in alloy steels and in cold rolled carbon steel strip; and extras have been revised for non-alloy bright bars and for heavy rails.

This small change in prices happens to be the first since the National Institute of Economic and Social Research suggested that steel ought to give a lead in the reduction of manufacturing prices across the economy. Steel prices are "administered." In practice, that means that the Iron and Steel Board has been deputed by the Ministry of Power to set maximum prices for steel products; using a formula approved by the board, the industry's trade "conferences" recommend that these maxima shall be the prices actually charged—and they are. In discharging this task (which is not one of its automatic statutory duties, but one the Government has chosen to give it) the board inherited the philosophy that has informed price fixing in steel these many years, not only in Britain but in some other countries—that stability suits both producers and customers better than constant fluctuation. Its own extremely refined pricing formula bases the prices for each product upon estimates of the costs of making it at a wholly up-to-date plant, with depreciation and profit margins reckoned on current replacement costs for such a plant as well as running costs. If steel has to be sold at an administered price instead of according to the market, such a basis is logically unassailable; it offers producers the incentive to keep up with the best modern techniques, and should also find them the money to invest in these.

There are perhaps only two chinks in this internal logic of the industry which might admit the argument of the National Institute—which was put forward as a matter of convenience, in the context of the whole economy. One is that theoretical estimates of the costs obtainable at a modern plant for any product always seem to come down when experience of operating one actually becomes available (as experience at Shepcote Lane may have affected some of the prices for stainless steel changed last week); mainly, perhaps, because in practice capacity nearly always turns out to be larger than in theory. The second is that in the current and curious circumstances of a denationalised steel industry with so large and growing a public stake of capital, prices that ensure the capital for modernisation may not seem to be quite so necessary. It is true that most of the modernisation of existing plants has to be provided from the retained profits of the steel companies or from the new capital that their profit and dividend records make it possible for them to attract. But if there is a reasonable presumption nowadays that for any really large-scale new plants—which contribute to modernisation as well as to sheer expansion—the money can be found from the Government, need quite so much of this possible development be covered in current prices?

BUILDING SOCIETIES

Higher Rates in Prospect

THERE is little doubt that in a month's time the Building Societies Association will recommend its members to raise their rates. Since the middle of last year, some societies have followed the association's recommendation and paid 3½ per cent, net, on shares while others have left their rate unchanged at 3½ per cent, net. They now all seem likely to fall in line, at 3½ per cent, net. The reasons why the doubts recently expressed by many societies on the wisdom of reducing rates last summer have turned into a positive desire for an increase are:

1. The net inflow of funds tailed away in March.
2. The budget made national savings and unit trusts more competitive.
3. The increase in profits tax, which the societies much to their dislike have to pay, will reduce margins.
4. As the average holding of shares and deposits seems to have been increasing, it is likely that the composite rate of income tax paid by the societies will go up, from 5s. 1½d. in the £ to possibly 5s. 4½d. in the £. This, too, will reduce margins.
5. Management expenses are rising and the implementation of the new act will push them up a little more.

THE MOVEMENT'S GROWTH

Shares withdrawn	285	327	360

Source:—1957 and 1958 Chief Registrar's report; 1959 estimates.

As several important societies are anxious to bolster reserves so as to preserve trustee status, they are arguing that a deliberate attempt should be made to widen margins. If they are persuasive enough the mortgage rate is likely to go up to 6¼ per cent: if not, it will be 6 per cent. At whatever point the rate is fixed, there now seems to be a general desire among members of the association to conform to the recommended rate.

The tendency towards conformity within the movement has been reinforced by the provisions of the new bill. It had its second reading in the House of Lords this week, when it was revealed that the Government intends to confine the new investment of the liquid balances of societies to short-dated gilt-edged stocks and local authority mortgages and not to extend the list to include equities. This provision in the bill will bring to an end the statutory connection between the two types of investment powers, those of the societies and those of trustees. The decision not to give building societies the power to invest in equities is a wise one and, during the debate, Lord Hailsham said that a number of leading figures in the movement had indicated that they, like the Government, did not consider equities as suitable for short-term investment.

In general, the bill has been welcomed by those societies that really are mutual funds. The mushroom societies are not pleased, but their spokesmen have kept quiet. Some criticisms of the bill have, however, been made. Mr Algernon Denham, the chairman of the Halifax, has made it clear that he is not altogether happy about the drafting of the clauses restricting loans to corporate bodies and, like others in the movement, he has wondered whether there should be some machinery for appeal against decisions taken by the Chief Registrar. Some of the small societies are not pleased that directors under the new bill are prohibited from making valuations for mortgage purposes and some big as well as small societies are wondering whether the right to inspect the register of members should be more tightly defined.

BULLION MARKET

More Gold for London

LAST year's turnover in the London gold market is estimated by Samuel Montagu & Co. in its latest Bullion Review to have increased by 50 per cent over that for 1958. This growth of business was helped by the move to external convertibility of sterling, which prevented Continental bankers any longer from using cheap sterling to quote slightly better prices than London. On level terms London has shown that it can win the great bulk of the business.

Turnover was also increased by the flow of funds from the United States to Europe. This supplied European central banks with dollars which they appear to have preferred to convert into gold through the London market even when this meant paying a somewhat higher price than if the conversion had been done through a direct deal with the US Treasury. Samuel Montagu points out that the US Treasury's effective selling price to other central banks is $35.08½ per fine ounce, but that "even when the London price has been above this, certain European official buyers have preferred to take gold in London instead of New York, doubtless having in mind the eventual transfer of the metal to their own vaults and also the fact that in the event of their wishing to resell the gold they can usually do so in the London market on more favourable terms than if the gold is held in New York."

The greater part of the offtake from the London gold market last year consisted of purchases by central banks. Indeed the striking feature of the gold markets in the last few years has been the decline in the importance of the private operator compared to official institutions. Demand for gold from the Middle East last year was appreciably lower than in 1958, mainly because of the more effective action taken by the Government of India to prevent smuggling of gold from the Persian Gulf ports. Hoarding demand in Europe has been considerably reduced as a result of improved political and economic conditions, and the vivid evidence from the stock exchanges that there are more lucrative ways of investing money than holding it in gold bars and coins. The demand for coins, however, persists and at the close of the year the premium on coins over their bullion value was 13 per cent for old sovereigns, 13½ per cent for the new Queen Elizabeth II sovereigns, and as much as 39¼ per cent for the old 20 mark pieces.

Used Cars at Easter

USED car prices have risen less this spring than they did a year ago. More new cars have come on to the market throughout the winter, which has meant a corresponding increase in the supply of used cars to the market; so prices have kept down in spite of the high level of demand. Following the seasonal fall last autumn there was little further decline in prices during the winter. In February a seasonal recovery began.

Southern Counties Car Auctions Ltd. reports that the prices of older cars have fallen considerably during the winter. Most cars over ten years old now fetch little, unless they are in exceptionally good condition, and cars five years old or over have also fallen in price proportionately more than newer ones. This is to be expected as new cars become freely available and easier hire purchase has encouraged buyers to take more expensive cars. The new small cars—especially the Ford Anglia—still fetch list price or more as a corollary of delivery delays for them, but most other new cars are now freely available.

Future trends in the market are at present dominated by the possibility that the Government might re-impose hire purchase controls. If it does not, some downward tendency might still be expected as the supply of new cars goes on rising, though the public continues to spend more on motoring.

This table, based on figures supplied by Wm. Glass, Ltd. shows the average price obtainable for a year-old car during the past 12 months, expressed as percentage of its original cost including purchase tax.

INVESTMENT REAPPRAISAL

Money Out of Africa

THE year of change in Africa is bound to have important effects in world investment markets, and the first of these are already in evidence. When a major section of the share markets comes under a permanent cloud, the whole market feels the effect. At first the effect may be a depressing one, but ultimately it is likely to be the opposite: however much investors may lose in their African investments, repatriation of any proceeds for alternative investment adds to demand for other shares. In London this secondary effect is likely to be less important than it has been in Brussels, where Congo securities have provided a big share of investment outlets. But one would guess that over the next year a good deal of money may come back into London from Africa.

No figures are available, and banks so far have seen relatively few abnormal transfers of funds. A substantial volume of selling of South African shares by investors in Britain and on the Continent has taken place in the past three weeks. This has been absorbed mainly by South African institutions, especially insurance funds, which have no alternative to investment within the Union. It is believed that some of the proceeds of foreign sales may have been left on deposit in South African banks, and sales in the London stock exchange account that began on the day of the Sharpeville shootings became due for settlement only last Monday. Even so, gold and external assets of the South African Reserve Bank dropped by £8 million in the last week of March.

The South African authorities have little cause for immediate concern. The bulk of foreign investment in the Union, as was pointed out in these columns last week, is not in liquid form, and presumably the deterrent to sales of the portfolio assets becomes progressively greater as prices fall. South Africa's external reserves, now standing at £152 million, are almost twice as large as they were two years ago; and the country's quota of $150 million with the International Monetary Fund is untouched.

LONDON CREDIT RATING

The third column shows, very roughly, the London market's comparative confidence in these Commonwealth governments, confidence being inversely expressed in the yield.

	Price Jan. 1, 1960	Price April 12, 1960	Gross redemption yield per cent April 12 £ s. d.
Nigeria 3% 1975-77	63½	59½	7 6 0
Ceylon 4% 1973-75.....	73¾	70½	7 5 0
S. Africa 3½% 1965-67 ..	85¾	79	7 4 0
Federation of Rhodesia 6% 1978-81	96¼xd	88	7 3 0
Kenya 5% 1978-82.....	86	77	7 1 0
Trinidad 3% 1967-71	74	69½	6 19 0
Tanganyika 5¼% 1978-82	96	87	6 17 0
New Zealand 6% 1976-80	107⅝	103¼	5 14 0
Australia 6% 1974-76 ...	107½	103	5 12 0
UK Funding 5½% 1982-84	103½xd	101 3/8	5 9 6

Political developments in Africa this year have gravely impaired the London market for Commonwealth loans, and in particular have ended the former special favour enjoyed by the white administrations of southern Africa. In February last year, just before the Nyasaland riots, it was still possible to come to the London market with a loan for the Rhodesian Federation. This now stands at 88, eleven points below its issue price. Investors' confidence in Kenya has also fallen sharply since the London conference two months ago; some money has been pulled out of the country, but here even more than in South Africa assets are tied up in real estate.

Formula One in the Ditch

THE ultimatum presented by British firms interested in motor racing to the governing body of the sport in Paris concerning next year's *Grand Prix* race Formula was the climax to a long period of unpalatable decisions made by the old gentlemen of the *Federation International d'Automobile* (which controls world motor competitions), headed by their aged president M. Perouse. The pronouncements of the federation's *Commission Sportive International* have proved unsatisfactory alike to drivers, promoters of races and manufacturers of racing cars. The ban on British participation in *Grand Prix* racing in 1961, announced through the Society of Motor Manufacturers and Traders, was in the nature of a protest against muddled thinking and the stubborn enforcement of rules that the objectors consider stupid.

This commission of the FIA has never recovered from the freak accident at Le Mans five years ago, when some 80 spectators and a French driver were killed. Ever since it has been seeking to introduce measures to ensure safer motor racing. Unfortunately it is so out of touch with modern motor racing that the changes it has proposed are likely, in the view of many British experts, to have the reverse effect. When it announced the 1961 Formula last autumn it called for a maximum engine size of 1,500 cc, a minimum weight of 1,100 lb and electric starters on the cars. Undoubtedly it considered the existing 2,500 cc *Grand Prix* racing cars too fast: this new ruling was intended to produce slower, safer cars which, if a driver stalled at the start, would not require mechanics on the track to restart it or get it off the course.

British objections have come in the first place from drivers such as Moss and Brooks, who say that such underpowered cars will increase the dangers they face, because adequate power is needed to get a driver out of awkward predicaments and safely past slower cars. They also regard the presence of batteries on a racing car as certain to increase the risk of fire in the event of any accident. British companies used to sponsoring racing cars and race-promoters are against the 1961 Formula for more commercial reasons. The makers object to the prohibitive cost of building teams of cars completely different from those they have raced for the past seven seasons, because Britain has no ready-to-use 1,500 cc racing engine likely to give the power of engines available to other nations. Promoters of races argue that the public will only turn up if fast and powerful cars are to be seen. As far as safety is concerned they feel adequate steps have already been taken to ensure the security of spectators since the Le Mans disaster.

THE idea of racing *Grand Prix* cars to a mechanical formula laid down by a ruling body governing the sport originated in 1906; at first the formula was changed annually to encourage initiative in design. Later, as the cost of building teams of racing cars of the highest class became astronomical, the formula was changed only every three years or after even longer intervals. The existing formula dates from 1955. What the leading supporters of *Grand Prix* racing in this country, such as the leading petrol and oil interests and the few British manufacturers concerned, want is that the existing ruling remain in force, modified only to the extent that grades of fuel obtainable from the ordinary pump should be specified. Those who are behind the ultimatum fear less interesting and more dangerous racing under the 1961 formula.

The FIA is not under fire on the *Grand Prix* issue alone. In seeking to reduce the speed of sports racing cars it has introduced a rule calling for high windscreens, which the foremost racing drivers have called suicidal, since oil mist and rubber dust defeat the efforts of the wipers to clean the glass. There is an added vexation on the part of those affected by the FIA rulings because countries which no longer promote motor races are permitted to vote on such decisions.

It remains to be seen what the reaction to the stand Britain has made against the new *Grand Prix* formula will be. If the FIA refuses to capitulate, Britain, now the most influential motor racing nation, will undoubtedly run its own 2,500 cc races. The FIA events could become moribund; Ferrari is not in favour of the 1,500 cc minimum weight ruling though it may accept the formula, and the only concern likely to support it seriously may be Porsche. The axis of motor racing politics may shift from Paris for the first time in its long history.

THE PRESS

Colourful Estate

JUST as Hollywood attempted to answer the challenge of television's small screen by expanding through more Technicolor and the CinemaScope lens, Fleet Street is now hoping to keep on withstanding the same adversary with an electronic bulwark called the insetter, which will enable national newspapers to carry full colour pictures — and advertisements — this autumn. The colour pages are printed, by the gravure process, on reels of newsprint which are then carefully rewound by the specialist printers who have to do the job. The reels can then be fed, together with blank newsprint, into the ordinary rotary presses of the newspaper plant for the normal letterpress printing of the day's edition.

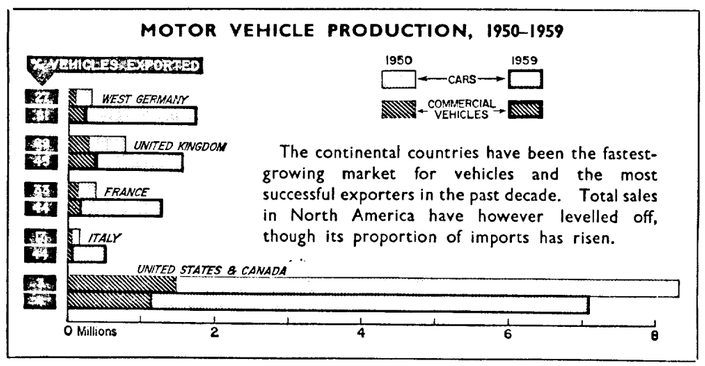
It is the insetter device that has the job of correcting paper tension and high-speed "wobble" so that the colour pictures are held in register with the black and white matter being printed over them. The same electronic eye can also accurately insert whole pre-printed pages at the folding stage, so that a bigger issue can be produced. It has already been used for this second, less sophisticated job, by the *Bristol Evening Post*. First used for colour on the Continent by the *Paris-Journal*, *Le Dauphine* and the Axel Springer works in Hamburg, it successfully produced a colour issue of *Sporting Life* at the end of March.

Only two British firms make the insetter, and therein lies the first obstacle in the race between the nationals for high-quality gravure colour. Multi-colour letterpress printing is already used by the Liverpool *Daily Echo* and *Evening Post*—which have ordered insetters—and by *Reynolds News*. The Liverpool and Bristol orders went to Strachan and Henshaw, of Bristol, but most of the insetter business is probably being done by J. Crosfield, of London. Odhams Press has produced specimens of the *Daily Herald*, with colour spreads, on insetters provided by each of the two firms, but it is understood that their order for £150,000 worth of insetters for 36 machines has gone to Crosfields. Sun Printers and Bemrose of Liverpool have pre-printed rolls for the *Daily Express* and it is thought in Fleet Street that the Scottish *Daily Express* will be the first paper to come out in colour. All the national newspapers have some colour plans: Crosfields seem to have acquired the headache of deciding who is going to get delivery of the complex equipment first.

The Price of A Page

PRINTING trade unions will want special pay for work with colour, and the companies concerned keep saying that negotiations have come to an end or are going smoothly. Since this is the printing industry it seems a safe bet that negotiations will be prolonged. This makes costing difficult, but although the process is expensive it should be covered by the expected advertisement charges: the *Daily Express* is expected to charge £12,000 for a full page in colour. That would be more than twice the price of a black-and-white page, but American market surveys have suggested that a colour advertisement has more than twice the "pulling power" of its colourless counterpart. Britain's unique mass-circulation national newspapers should make this argument even more effective.

All this will probably happen only about a dozen times a year in each newspaper. That is because there are only four or five gravure printing houses able to produce the colour reels and, because of the shortage of retouching artists and the pressure of demand from women's magazines, they may take a month to six weeks to deliver enough for one issue. Odhams is said to be expanding its own gravure capacity to meet this, and the *Daily Express* is ordering reels from two gravure houses (Bemrose and Sun), but the net result is unlikely to offer very many colour issues of any one paper in a year. Those who breakfast behind newsprint will probably not be ungrateful.



WORLD FINANCE

Working Well

IN his annual address to the Economic and Social Council of the United Nations Dr Per Jacobsson, managing director of the International Monetary Fund, this year sounds a cheerful note. In a number of countries, increases in the cost of living have been moderate for well over a year; other countries, notably in Latin America, have introduced stabilisation programmes. Dr Jacobsson points in particular to the progress achieved by Argentina, Chile, Colombia and Peru. The IMF has played its part through granting credits and stand-by facilities—which, as Dr Jacobsson notes, "acts in many ways as a form of [international] credit creation." The increase in quotas for the Fund has gone through smoothly and some countries have recently been given special increases. Venezuela, which has received a stand-by credit of $100 million, will be able to use this in full when it has authorised an increase in its quota from $15 million (based on the pre-oil economy) to $150 million; Australia has increased its quota from $300 million to $400 million.

Dr Jacobsson emphasises that the move to external convertibility by fourteen European countries at the end of 1958 has turned out to be much more significant than some people thought at the time. "It created a feeling, which soon spread, that the steps taken would not be reversed," and it led naturally to a widespread dismantling of discriminatory trade restrictions. All this was helped by the outflow of funds from the United States, which Dr Jacobsson appropriately describes as "a useful redistribution" of the world's monetary reserves. He reminds his audience that the United States still has a surplus of exports over imports and that this has been increasing in recent months.

At the Fund's annual meeting last September Dr Jacobsson caused a stir by saying that in all likelihood world inflation was over. He now has no hesitation in repeating the contention, pointing to the limited extent of the rise in raw material prices in the recent world business upturn, to the fall in food prices, to the increasing competition in supply of manufactured as well as primary goods and to the efforts made by many countries to reduce budget deficits. In these circumstances, he says, inflation in one country entails special risks —which itself is a reason why such inflation may be checked. "To learn to live without inflation" has become one of the most important tasks in economic life.

MOTORS

Pressed Steel Follows Suit

THE Pressed Steel Company has been the first of the motor industry's big suppliers to announce its own expansion plans to keep up with the needs of its expanding customers. As a manufacturer of car bodies and body pressings, the company works in close collaboration with the car assemblers and adjusts its capacity in direct proportion to that of its customers.

Its present plans will add more than a third to the factory space available for car body production, and probably rather more than this to the company's capacity to build bodies.

About 3 million square feet of factory space is now used for car body production; 1¼ million will be added. Of the extra facilities, 250,000 square feet will be built at the Linwood factory, near Paisley in Lanarkshire, which Pressed Steel has leased from the Ministry of Supply since 1947. The company bought this to make railway wagons, but with the rundown in demand for rolling stock another 500,000 square feet more was bought in 1958 and converted for car body production. By 1961, the total area used at Linwood for body output will be 750,000 square feet, though so far only bodies for the Swedish Volvo car have begun to be built at Linwood. Pressed Steel decided last autumn that it would transfer some work from its existing factories at Oxford and Swindon to Scotland, and carry the finished bodies or pressings down to the midlands for final assembly. Truck cabs will also be made at Linwood—if all goes well, for the BMC factory at Bathgate, construction of which is now planned to begin in May. If Rootes goes ahead with its plans to build a car factory near Linwood and orders bodies from Pressed Steel, Linwood would have to be enlarged further. The Swindon factory will be enlarged by 800,000-900,000 square feet, though detailed plans have not been settled; and a tool shop will be built at Jarrow, to make press tools for Pressed Steel's own factories and for sale to other companies. This will begin with a floor area of 100,000 square feet, which it is later

MEASURING EFFICIENCY

Productivity or Progress?

WHEN people or governments talk about productivity and vaunt the achievements they can measure by it, as has often been pointed out, they usually mean labour productivity—output per man-year or per man-hour. For comparisons between nations, such a measurement in terms of one factor of production alone may simply reflect differing relative prices for the various factors such as man-hours and machine-hours; it may still be economical to use the cheaper factors "less efficiently." Though most American industries, for example, can show far higher productivity per worker than most European ones, the high cost of labour there, relative to that of machines, often means that they cannot compete on final price. Equally, within a nation, a spectacular increase in labour productivity might in some cases imply merely a wasteful investment of a more expensive factor, capital. And when figures of productivity are bandied about in wage bargaining it is stupid to imply that increases in efficiency derive simply from labour—from which less and less actual effort may be demanded.

In the current *Economic Journal* Messrs. W. B. Reddaway and A. D. Smith present a new assessment of productivity in British manufacturing industry that takes account not only of the labour but of the capital put in. Indices of output and of employment are easily come by: not so one of capital employed. Messrs. Reddaway and Smith, however, have constructed figures of the changes in capital employed from 1948 to 1954, as distinct from its absolute level, by working from the annual figures of gross capital formation. They weight the contribution of labour and capital to the net output of manufacturing industry in accordance with the wage bill and an assumed rate of return on new capital introduced into the business (taken as 15 per cent gross of tax but excluding depreciation on written-down fixed capital at replacement costs, plus stocks).

Their first results (the study is being continued in greater detail) are shown in the table. This shows changes in labour productivity from 1948 to 1954 in the 14 "industrial orders" of manufacturing, in capital productivity, and in "progress"—a measure of the improvement of output after allowing for the extra labour and capital put in. This is a measure of additional efficiency in using the factors employed, subsuming improvements in technique, organisation, management (which may occur whether or not more labour is being taken on or more capital is being invested). In spite of the reservations with which such figuring must be employed, this first attempt at an assessment of "total productivity" does offer some interesting implications.

It suggests, first, that while productivity per unit of capital rises much less than productivity per man, in most industries it has at least not fallen: the capital-output ratio seems to have remained relatively stable, though one is tending to use more of this factor and less of labour in the production processes. Allowance for extra capital put in, moreover, does not wipe out the gain measured by labour productivity, though for all manufacturing industries, over the six years, "progress" shows a rise of 13.2 per cent as against an increase of 18.3 per cent in labour productivity. (From this figuring, incidentally, labour productivity emerges as still a fairly good measure of relative efficiency as between industries.) Efficiency in using both labour and capital, looks to have improved fairly rapidly during the reconversion from war to peace, from 1948 to 1951; much less rapidly since, at about 1 per cent annually, which the authors think a better guide to what could be expected as a long-term trend. Finally, as other measurements have, these figures suggest that high (or low) changes in efficiency tend to be associated with high (or low) changes in output: and a contraction in output in a particular industry seems likely to be accompanied by a fall in efficiency in some "real sense."

LABOUR PRODUCTIVITY, CAPITAL PRODUCTIVITY AND PROGRESS

	Net output	Labour	Net fixed capital and stocks	Labour productivity	Capital productivity	Per cent "progress"* over the period: Total 1948–1954	Annual compound rates: 1948–1954	1948–1951	1951–1954

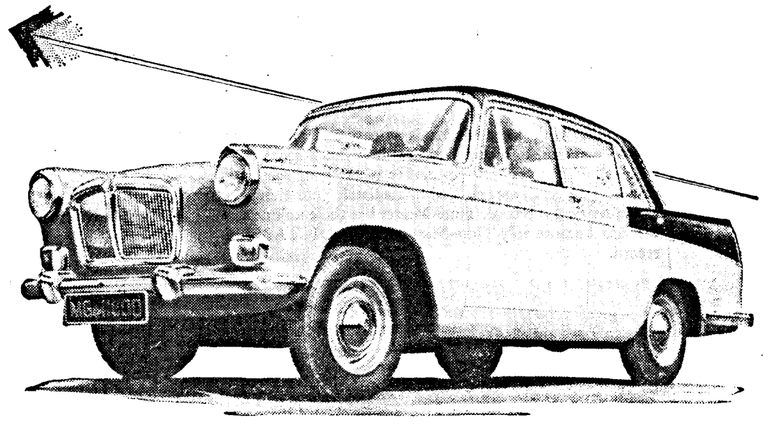
* The increase in actual output over and above the increase that could have been expected from extra capital and labour put into the processes of production.

Haig in every Home

–and Handy Sizes for Picnics, Parties, and Travelling



Don't be vague—ask for **Haig**

HAIG 'GOLD LABEL' BOTTLE 37/6

do look now—its pedigree is showing!

Choosing a car in a showroom is rather like picking a winner in a parade ring. They may all look pretty good, but it is not until they go into action that breeding begins to show. It shows when an M.G. Magnette is going fast over an open road. It shows in the surprising vigour of its acceleration, in the ease and urbanity with which it maintains its seventy-miles-an-hour cruising speed. It shows in resolute road-holding, precision steering and masterly braking. For pedigree performance at a rational price, the M.G. Magnette is quite outstanding.

MAGNETTE MARK III *Safety fast!*

Price £714.0.0 plus £298.12.6 P.T. Duotone colours extra. Also MGA 1600 open two seater, prices from £663.0.0. plus £277.7.6 P.T. Twelve Months' Warranty and backed by B.M.C. Service—the most comprehensive in Europe.

Overseas Business: Nuffield Exports Limited, Cowley, Oxford, and 41 Piccadilly, London, W.1

COMPANY MEETINGS

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE SOCIETY

MUTUALIZATION PROJECT OUTLINED

NEW BUSINESS AGAIN A RECORD

INTRODUCTION OF EXCEPTIONALLY ATTRACTIVE POLICIES

The One Hundred and Thirty-sixth Annual General Meeting of the Clerical, Medical and General Life Assurance Society was held on April 13th at the Society's Chief Office, 15 St James's Square, London, S.W.1.

Sir John Hathorn Hall, GCMG, DSO, OBE, MC, the chairman, presided and, in moving the adoption of the report and accounts, said:

Since the last Annual General Meeting the Board has been joined by Lord Hazlerigg, the Chairman of The Lands Improvement Company, the company through which the Society provides loan capital for agricultural development. Lord Hazlerigg's knowledge of agriculture and landed property and his general business experience cannot fail to be a source of strength to the Board.

PROJECTED MUTUALIZATION

As a consequence of the proposed merger, announced in the Press, between Northern Assurance Company Limited and The Employers' Liability Assurance Corporation Limited (the proprietors of the whole of the Society's paid-up capital), it is the intention that the Society should separate from the Employers' Group and become a wholly independent Mutual Society, with all profits accruing to its policyholders. This project, which has the concurrence of the Proprietors, is dependent upon the passage of special legislation authorising the Society to acquire and cancel its own shares, at present in the beneficial ownership of Employers, and thereafter to operate as a mutual life office. The contemplated financial settlement with Employers governing the acquisition of the Society's shares is based upon an independent valuation of the shareholders' interest carried out by two actuaries specially appointed for that purpose by the President of the Institute of Actuaries.

The legislative and constitutional processes affecting the future of the Society have already been put in train and a further and fuller announcement will be made for the information of policyholders as soon as practicable. Meanwhile it can be said that, whereas the proposed mutualization of the Society, if approved by Parliament, may be expected to operate to the advantage of policyholders, there can be few members of the Management and Staff who will not regret on all personal grounds the ending of the Society's forty years of friendly and fruitful association with Employers.

NEW BUSINESS

The Society took full advantage of the improved economic and financial conditions prevailing in 1959 and the general increase of business activity to achieve yet another record figure of new business. New sums assured in 1959, after deduction of reassurances, amounted to £13,300,000, representing an increase of £2,300,000 over 1958. Additional deferred annuities of £660,000, as against the previous year's figure of £490,000, were underwritten by means of pension contracts, which thus resumed their upward curve, which had been checked in 1958 owing to public uncertainty as to the Government's precise intentions regarding State Pensions. New annual and single premiums increased from £613,000 to £849,000. All these figures speak eloquently for themselves.

INVESTMENTS

Our earlier investments in ordinary shares are producing very satisfactory additions to our income—the feature which, for investors such as Life Offices, is the most important. New investments in equities now show only a modest initial dividend yield, and it is clear that current market prices are based, in part, on the assumption of considerable future increases in dividends. We believe that, for carefully selected equities, the prospects of such increases are not exaggerated, and we have continued to add to our equity portfolio, and also to that of property investments with an equity element. The appreciation in the capital value of existing holdings is, of course, very substantial but, as I have said, we are primarily concerned with present and future yields. In 1959, the gross yield on our Life Assurance Fund increased from £6 6s. 4d. per cent to £6 15s. 10d. per cent and the net yield from £4 12s. 7d. per cent to £4 19s. 8d. per cent.

BONUS PROSPECTS

Our next quinquennial valuation is due to be made as at December 31st next. During 1959 we raised our Intermediate Bonus rate by 10 per cent, and the hopes of the Directors which were reflected in that increase are in no way diminished. There seems indeed every prospect that the Board will be in a position to declare an excellent rate of bonus next year.

PROGRESS OF FUNDS

There was an increase of £3,114,000 in the combined Life Assurance and Annuity Funds, from £32,431,000 to £35,545,000. We regard this increase of nearly 10 per cent as probably the best single measure of the Society's progress.

NEW FORMS OF POLICY

Towards the end of 1959, we altered the form of two classes of policy and started to write business under a third, and we are now able to offer exceptionally attractive terms for all three. Obviously I cannot give full details here, but the main features can be briefly stated and will, I think, be of interest.

For new Term Assurances, we have reduced the premiums for policies of more than £1,000 and introduced, for most policies where the original term of assurance is six years or more, an option of conversion to Whole Life or Endowment Assurances.

We have developed our Supplementary Units Scheme which consisted, essentially, of a Convertible Term Assurance issued in conjunction with a Basic Policy, by simplifying the contract for new proposals, with substantial reductions in premiums. This "Family Capital Cover" policy forms a most attractive and elastic means for carrying out a progressive assurance programme as income increases.

Finally, we have started to write Family Income Cover, at highly competitive rates.

These three policies should, between them, meet almost all cases where substantial cover from the outset, and maximum elasticity for later development, are the main requirements.

The report and accounts were adopted.

JEYES' SANITARY COMPOUNDS COMPANY

(Manufacturers of Ibcol, Jeyes Fluid, Jeypine, Jeyes Toilet Papers, Sanilav, Miraglo, etc.)

MR T. BLUNDELL BROWN ON A SATISFACTORY TRADING ACHIEVEMENT

The seventy-fifth Annual General Meeting of Jeyes' Sanitary Compounds Company Limited was held on April 7th in London, Mr T. Blundell Brown, the Chairman, presiding.

In the course of his statement circulated with the Report and Accounts Mr Blundell Brown said that he was able to report a year's satisfactory trading.

The Trading Profit at £345,525 showed an increase of £92,618 over that of 1958, representing an increase of no less than 36 per cent and this satisfactory achievement was due to three main factors, viz:—increased sales, improved operating efficiency and buying advantages.

The liquid position on December 31, 1958, showed an excess of current assets over current liabilities of £607,746 and this figure at the end of 1959 had increased to £705,447 despite net capital expenditure during the year of £85,000. Estimated capital expenditure during the current year on buildings and plant is likely to be about £180,000 which it will be possible to finance out of our liquid resources.

Arising from the re-valuation of fixed assets and the issue of shares at a premium the Capital Reserves of the Company were increased from £202,933 to £281,471. It was proposed to capitalise £218,500 of these reserves by the issue of 874,000 new Ordinary Shares of 5s. each credited as fully paid in the proportion of one Ordinary Share for every two Ordinary Shares of 5s. held. It was also intended to raise the authorised capital to £800,000 by the creation of 800,000 additional Ordinary Shares of 5s. each.

Mr Blundell Brown commented on the closer link which had been formed by an inter-change of shares with Peter Dixon & Son Limited who had for many years been one of the Company's principal suppliers of paper, and also drew attention to the Company's vigorous development programme exemplified by the new, fully medicated, foil-wrapped TRUST toilet roll which had already made a big impact on the public. Other products were also being developed, and he therefore looked forward to the future with confidence.

The Report and the Accounts were adopted and at a subsequent Extraordinary General Meeting the proposed scrip issue was approved.

ALFRED HERBERT LIMITED

(Manufacturers and Distributors of Machine Tools)

IMPROVED ORDER POSITION

Conflict of Interests in Europe

Colonel C. W. Clark answers Machine Tool Industry's Critics

The sixty-seventh Annual General Meeting of Alfred Herbert Limited will be held on 9th May in Coventry.

The following are extracts from the circulated statement by the Chairman, Colonel C. W. Clark, DSO, OBE, MC:

In my statement to the Shareholders a year ago I referred to the reduced turnover of the Company and also to the modest improvement in new orders which was already apparent. As the year advanced the intake of orders accelerated and for the last few months has been at a very satisfactory level. It is gratifying to note that this increased business comes from most countries of the free world in addition to our large home market.

In all the circumstances the results justify the dividend of 5 per cent free of tax, which, with the interim dividend of 2 per cent paid on 10th September, 1959, makes 7 per cent free of tax, for the year against 6 per cent free of tax, for the previous year.

In deciding on this increase the Directors had in mind the substantial reserves already provided from the profits of earlier years, and, of course, the improved order position.

Stocks are now much less and there is a growing backlog of orders for certain types and sizes of machine tools.

Quality Comes First

There is plenty of keen competition in our industry and I am in no doubt that the success which our products and those of the companies associated with us are achieving in so many markets is due principally to the policy of maintaining the highest standard of design and workmanship. This involves considerable expense, but machine tools should rightly be regarded, not as end products in themselves, but rather as the means of producing an immense variety of goods whose manufacturing cost will be affected adversely if the machines used are unreliable or wasteful of labour.

As machine tool makers, we are in the position of using large numbers of machine tools of our own manufacture or made by the companies for whom we act as distributors, which means that our manufacturing plants constitute most valuable testing grounds. We use more than 3,000 machine tools in our various works.

Ill-Conceived Criticism

There has, in recent months, been a certain amount of criticism of our industry, and I need therefore make no apology for saying something more in explanation of what machine tools are and how diverse their nature.

Critics in the Press and the House of Commons show little real knowledge of the complexity of production technique covered by the term "machine tools," which embraces more than 1,000 types and sizes of machines for the cutting, abrading, or forming of a wide variety of materials.

The many different processes performed by these machines, which can weigh anything from a hundred pounds to several hundred tons, make the term "machine tool" no more descriptive than, say, the word "vehicle," which can cover anything from a Centurion tank to a baby's pram.

Much of this criticism stems from those erstwhile nationalisers who miss no opportunity of denigrating the British Machine Tool Industry in the hope of reviving some interest in their discredited projects for public ownership.

The Industry need not fear a fair assessment of its contribution to our national prosperity and safety. The deep-rooted skill and ingenuity are still there, as is evidenced by the success achieved in overseas markets, where our British machines must meet the full blast of foreign competition.

Rising Costs.—There is, however, a very serious threat to the improved demand for our products in the continually increasing cost of labour. Already price offsets technical superiority in some of our important markets and it should surely be apparent to workers and their leaders alike that unjustifiable wage demands can lead to distress and disappointment in the future.

I am whole-heartedly in favour of a constantly improving standard of living for all our people, but how few seem to realise that this can only be achieved if higher earnings are balanced by increased availability of the goods and services resulting from our efforts.

Research.—The extension of our Research and Development Section is under construction at the present time, and when fully equipped will be quite exceptional in the scope of its activities.

In the past the Company has pioneered many fundamental improvements which have since been adopted by makers of similar machines in a number of countries. The increased facilities which will shortly be available should ensure that we maintain our leading position.

Manufacturing Agreements.—We have entered into an arrangement with the Pratt & Whitney Company of Hartford, Connecticut, U.S.A., for the manufacture of the Keller Diesinking Machine. A joint Company, Pratt Whitney and Herbert Limited, has been formed to facilitate this important development. The first machine weighing approximately 22 tons will shortly be completed in our Lutterworth Works.

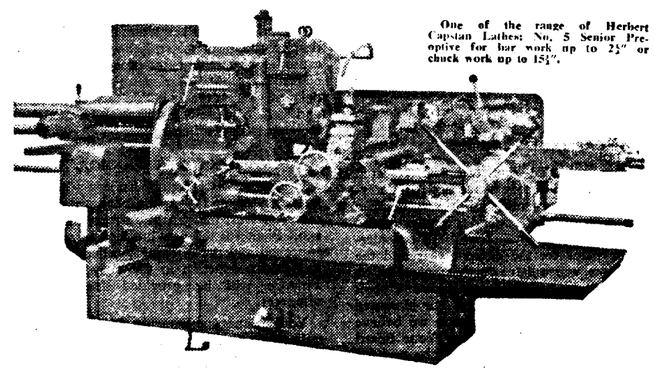
An additional model of the very successful DeVlieg Jigmils is also nearing completion, while the well-known Landis Tangential Dieheads will go into production in the near future.

Subsidiary Companies.—The Holbrook Machine Tool Company Limited is now enjoying an improved demand for the high precision lathes which have a well established reputation in the world markets, and profits are deemed satisfactory.

The last year was a difficult one for The Sigma Instrument Company Limited, due principally to the high cost of certain contracts for inspection equipment of revolutionary design, which, while unprofitable to the Company, solved some very awkward problems for the ultimate users.

Future prospects are considered to be much brighter.

The "Six" and the "Seven"



The conflict of interests of the European Economic Community (Common Market) on the one hand and the European Free Trade Area on the other has naturally caused us some concern in view of our substantial trade with all the free countries of Europe. Unless some way can be found of enabling the two groups to work together for the furtherance of mutual trading, it seems inevitable that some form of political schism will develop which could have far reaching effects on the prosperity and even the safety of Europe.

There are no signs that our Company's trade with the Common Market countries is in any immediate danger, but we shall watch developments carefully and may if necessary consider the advisability of extending manufacture, possibly in France, where our Associate Company has for many years been building machines on a modest scale.

In the meantime, Great Britain's part in the European Free Trade Area is an effective safeguard to our trade with the other countries in that group.

Continual Developments

The past year has seen several newly designed machines added to our range of manufactures and I am pleased to record that they have met with immediate success. We are constantly looking for opportunities for broadening our manufacturing and trading activities by acquiring new interests and selling agencies. Shareholders will be aware that we have ample resources for such developments.

One of the range of Herbert Capstan Lathes: No. 5 Senior Preoptive for bar work up to 2½" or chuck work up to 15½".

POLLARD BALL AND ROLLER BEARING CO

EXPANSION IN ALL DEPARTMENTS CONTINUES

SCRIP ISSUE APPROVED

The annual general meeting of Pollard Ball and Roller Bearing Company Limited was held on April 12th in London, Mr F. C. T. Lane, FCA (the chairman), presiding.

The following is an extract from his circulated statement:

The profit for the financial year 1959 again marks the continuing growth of our Company and shows a substantial improvement over that of the previous year. This trend was indicated by the issue to you of the interim report in respect of the six months' trading to the end of June, and the second half of the year lived up to the experience of the earlier period. The result for the year is a net profit subject to taxation of £514,950 (after making provision for all charges including depreciation) as compared with £371,121 for the year 1958.

It has been the practice hitherto to indicate the progress of the gross volume of trade by means of a comparative index table of sales and as it seems to have met with approval it is proposed to continue this form of information. Taking 1953 as equal to a unit of £100 the corresponding figures for the succeeding years are:

1954	£131
1955	£198
1956	£222
1957	£300
1958	£392
1959	£461

EXPORT SALES DOUBLED

Last year, I referred to our resolve to make an intensive effort to stimulate our trade in the export markets, to which end our sales manager and others made extensive tours abroad. I am pleased to record that our direct export sales have approximately doubled for 1959 and the continuing enquiries from those markets give us encouragement for the years ahead. In order to regulate our growing trade in France, we have formed a subsidiary company, Société Anonyme Pollard-Roulements, with offices and warehouse in Paris.

The home trade has shown a satisfactory increase; the sales for the months so far expired of the year now current being in excess of those of the corresponding period of last year and our daily intake is lending encouraging support. Your Board anticipate that this trend will continue.

CAPITAL EXPENDITURE

We have extended our technical research facilities, office and factory space both at Ferrybridge and Northampton, and it will be seen from our accounts that expenditure of a capital nature during the past year has been considerable. Our plans for the current year and the year to follow will call for further spending on capital account for building extensions and plant in order that we may take care of our increased production and to budget for what we believe will be our needs for the future. Your Board feels that this expenditure may well be met for the time being from our internal resources and bank facilities.

Canadian Pollard Bearings Ltd., has made good progress during the year, having substantially increased its sales and the number of its customers. We have opened a branch office and warehouse in Montreal to facilitate its overall trade. A small profit has been earned and we retain our confidence in a satisfactory future for this unit of our organisation.

The manufacture and distribution of "Philidas" self-locking nuts have continued to expand satisfactorily and this Division is making a substantial contribution to the profit of the group which we confidently expect to go on increasing.

THE FUTURE

Now a word as to the future. Our trade continues to show healthy signs of technical development and expansion in all departments and we are continuing our policy of securing, as far as may be, the best machines for our purposes and look forward with confidence to ensuring that the names "Pollard" and "Philidas" are synonymous with quality products and service. The year 1960 has opened well and appears favourable to our Company. It is hoped that no untoward events, over which we have no control, will mar the outlook.

On your behalf I would again like to pay a tribute to our management, staff and all employees at home and abroad for their excellent efforts during the past year and especially to record our appreciation of the happy and cordial relations that exist between them.

The report and accounts were adopted and a final dividend of 20 per cent declared, making with the interim already paid a dividend of 25 per cent less tax for the year. At the subsequent extraordinary general meeting the proposed 1 for 4 scrip issue and alteration to the Articles of Association were approved.

A. & S. HENRY & COMPANY LIMITED

(Manufacturers and Merchants)

PROGRESS ACHIEVED UNDER DIVERSIFICATION POLICY

STATEMENT BY THE CHAIRMAN, MR FRANK STOCKDALE, ON THE AFFAIRS OF THE COMPANY

The seventy-first Annual General Meeting of A. & S. Henry & Company, Limited, was held on April 13th in Manchester. The following is the statement made by the Chairman, Mr Frank Stockdale, as circulated to the stockholders with the Report and Accounts for the year ended December 31, 1959:

Trading profit has increased from £727,693 to £898,800 which your Directors consider satisfactory.

Turnover of the Group has been well maintained although costs have again increased. Extra production and increased sales are essential to the expansion of our profits. As I have previously mentioned, dealing with a wide range of raw materials, we have to meet changing conditions both at home and abroad and we endeavour to meet them as they come.

The new acquisitions obtained over a period of years have undoubtedly done much to implement the profits of the group. Our Mail Order interests have well maintained their position despite the printers' strike, which last autumn caused considerable extra expense and some loss of trading profit. Our seasonal catalogues were delayed. Great credit is due to the management and staffs of these Subsidiaries who met the dislocation with great energy.

FACTORY EXPANSION

Our Paper Sack factory has again had a satisfactory year and your Board have decided to carry on with the expansion forecast some time ago. Plans for the new building have now been approved and the machinery ordered. We hope to be in production in the early part of 1961. Finance will be provided from our own resources.

Your Managing Director, Mr Frank S. Winterbottom, visited India during the year, where trade was more favourable and profits improved. I visited South Africa where the factory in Durban, in spite of great competition, has increased its earnings. Our labour relations there remain excellent.

Profits have been achieved without spectacular progress and are the result of the diversification of our group interests. I look forward to continued progress under this policy.

Your Directors regret to report the death of Mr E. Ronald Crammond who has been a member of the Board for almost 11 years. Mr Crammond resigned as Deputy Chairman in May, 1959 and Mr Frank S. Winterbottom, our Managing Director, took over additionally the post of Deputy Chairman. The Board have appointed Mr G. O. Shelmerdine, who has long been associated with Lancashire trade, to fill the vacancy and his appointment will come up for confirmation at the Annual General Meeting.

INCREASED DIVIDENDS AND RESERVES

In view of the excellent results your Board recommend a final dividend of 21 per cent, making, with the interim dividend of 4 per cent already paid, 25 per cent for the year. After allowing for the above dividend the Group Revenue Reserves will stand at £2,125,943, an increase of £190,135.

Your Board have also decided to recommend a Tax Free dividend of 5 per cent (absorbing £90,000) out of a capital profit of £94,000 as a result of the sale of some small part of our property which we considered redundant. Our Capital Reserve now becomes £177,294.

On behalf of Stockholders, my colleagues and myself I pay special tribute to the excellent service rendered by all who work for the Company. Our prosperity largely depends on good team work. The full time working Directors and Managers, ably led by our Deputy Chairman and Managing Director, Mr Frank S. Winterbottom are, I know, fully cognizant of this. The good results are a great tribute to them.

The Report and Accounts were adopted.

Mr G. O. Shelmerdine, having been appointed to the Board during the year was re-elected a director. Mr Frank Stockdale and Mr Leonard C. Keary who retired by rotation were also re-elected directors. The auditors, Messrs Peat, Marwick, Mitchell & Co., Chartered Accountants, continue in office in accordance with the provisions of the Companies Act, 1948.

THE EAST ASIATIC COMPANY LIMITED

(Aktieselskabet Det Ostasiatiske Kompagni)

COPENHAGEN, DENMARK

The following is a summary of the Annual Report for the financial year 1959, presented by the Board of The East Asiatic Company Limited at the Company's Annual General Meeting in Copenhagen on April 2nd, 1960:

The turnover in commodities and the price development in 1959 favoured the industrialised countries, while prices of most raw materials stagnated. Despite great deflections in the various territories the curve of the standard of living is distinctly rising all over the world, which is reflected in an increasing demand both for consumer goods and for material for the building up of industry, and the attendant demand for carrying capacity both by land and by sea, and the development of power resources is expanding.

The East Asiatic Company has since the war taken up new fields of activity within commerce and industry.

Shipping Department: An improvement in the freight market for dry cargo tonnage set in towards the end of the year, while the market for tanker tonnage is still uncertain. On the routes served by the Company's ships the rates for cargoes influenced by tramprates could be increased somewhat, and the demand for tonnage was satisfactory in the circumstances.

Trading Departments: The world trade presented a rather complex picture during the past year, as the economic conditions in several European countries and on the North American continent were approaching a boom in striking contrast to the difficulties experienced in other countries.

Through an expansion of fields of operation and intensified efforts both in the home and overseas territories the trading departments of the Head Office—import, export and wood departments—made progress both in respect of turnover and earnings.

The Company's Overseas Branches and Associated Companies: Detailed summaries of the Company's multifarious activities have from time to time been made available to the shareholders, and with reference to these summaries it may be briefly stated that the past year can be characterised as having fulfilled all reasonable expectations.

Participation in other Companies: With the addition of new investments these interests are entered in the Balance Sheet at kr.90,710,992.42, against which there is a Security Fund amounting to kr.6,361,175.22.

The participation in Nordic Tankships I/S (Partnership) amounts to kr.25,040,551.01.

RESULTS

The total result of the year under review is as follows:

	Kr.	Kr.
From Shipping		39,237,787.85
From Trade		11,675,885.89
Overseas Branches		55,495,318.60
Dividends from Investments in other Companies including profits from participation in Nordic Tankships I/S (Partnership)		10,170,435.65
		116,579,427.99
Less Interest and Financing Expenses		5,256,220.24
		111,323,207.75
From which is to be deducted: Administration Expenses at Head Office and Overseas Branches	57,316,737.21	
Allocation for Taxes	7,352,251.03	
		64,668,988.24
		46,654,219.51
Less Depreciation		25,573,255.69
		21,080,963.82
Balance brought forward from last year		8,594,892.64
At disposal		Kr.29,675,856.46

which it is proposed to apply in accordance with the appended accounts as follows: to pay to the shareholders a dividend of 15 per cent, to distribute an amount of kr.4,087,812.04 to the Board, Managing Directors and Employees as bonus, to allocate kr.3,000,000.00 to the Extra Reserve Fund, kr.3,000,000.00 to the Pension Fund, kr.1,000,000.00 to the Insurance Fund, kr.1,000,000.00 to the Extra Depreciation Fund for Buildings and Furniture, besides kr.500,000.00 to the Benevolent Fund, leaving kr.9,588,044.42 to be carried forward to next year.

THE BRADFORD DYERS' ASSOCIATION LIMITED

FUTURE OF LANCASHIRE TEXTILE INDUSTRY

NEED FOR RATIONALISATION

MR JAMES EWING'S VIEWS

The sixty-second Annual General Meeting of The Bradford Dyers' Association Limited was held at the Midland Hotel, Bradford, on April 11th.

Mr James Ewing (Chairman), who presided, in the course of his speech, said: In the statement, which accompanied the audited Balance Sheet and Accounts and the Report of the Directors, I dealt with the accounts of the Parent Company and with the progress of the Subsidiary Companies. I know only too well that the results of the past two years have not been as satisfactory as your Board would wish, nor does it afford me any gratification to tell you that this depression is shared by many other Companies in the Finishing section. At no time in our history have we given better service to the textile industry than we are doing now, and but for the ploughing back of a substantial part of our profits in the past decade we should not have been able to meet the ever changing demands arising because of the increasing proportion of man-made fibres and because of the new processes applicable to Cotton, now a fashion fabric.

TECHNICAL PROGRESS

Our technical progress has kept pace with these new developments and we can claim with complete confidence that BDA finishes are equal to the best produced anywhere. With our widespread interests abroad we are able to draw upon the latest foreign as well as home information in keeping abreast of modern needs. Nearly 60 per cent of our capital is invested in Commission Dyeing and Finishing and Printing in the United Kingdom. As the figures I have quoted in my statement clearly indicate, supply in these service industries is very much in excess of demand and as a consequence we are having to face severe competition with excessive debasement of prices.

The volume shown in the Cotton Board returns of cotton and man-made fibre fabrics available to the Piece Dyeing section of the industry has shown a downward trend since 1951, which was the peak postwar year. Taking the yardage in 1951 as an index figure of 100, the 1959 yardage was 76, a drop of 24 per cent. In the same period the volume for the machine printing section fell from 100 to 56 and the volume for the Bleaching section from 100 to 80. Total cloth production in this period has fallen from 100 to 65, a decrease of 35 per cent. Imports have been increasing meanwhile, particularly in the past four years.

INVESTMENT POLICY

Faced with this situation, your Board has been progressively offsetting the deteriorating situation in textiles by concentrating its domestic producing units and by outside investments both in textiles and in other industries.

During the past ten years the Association, from its own resources without the assistance of additional funds from the public in the shape of new issues or loan stock, has financed investments in subsidiary companies to the extent of £1,067,000 and in trade investments £1,282,000, a total of £2,349,000. A substantial amount of the First Mortgage Debenture Stock has also been redeemed. That has been the deliberate policy of your Board to counteract the inevitable reduction in British textiles. The soundness of such a policy is amply confirmed by the trade figures.

Of the total of £2,349,000, £1,473,000 represents investments in the textile industries of Australia and Canada. The return from the Australian investment down to date has been quite satisfactory. In Canada we had to face minor losses in the early stages until we consolidated our activities. These losses have all been wiped out and now the investment is showing a satisfactory return on the capital invested.

But for the unfortunate incidents in 1956, our Egyptian investment would have been giving us a handsome return from an enterprise which was initiated by us. The cause of the setback there was obviously something over which we had no control.

Our enterprises outside textiles in the United Kingdom have not yet reached the stage of making any real contribution to the profits of the

Association. As we recognised from the beginning, they are in growth industries and require further development, and before long the policy of the Board will be more than justified by results. That was the only policy to pursue, having regard to the general trends in the British textile industry in which most of our capital was originally employed.

In the same period nearly £4 million has been expended on new plant and buildings to keep the Association abreast of technical developments and to ensure efficiency.

NEED FOR COMPACT AND EFFICIENT UNITS

Having said this, what other steps must be taken to bring the Finishing Industry back to a healthy and profitable state? Our sectional interest is closely bound up with the Spinning, Weaving and Merchanting sections, and there must be some integration of the production and merchanting functions. This will involve serious consideration of the future structure of the Lancashire textile industry, which has been built on horizontalism. The first requirement undoubtedly is to create, sectionally, compact and efficient production units by cutting out excess capacity which has resulted from a continuing contraction of demand due to increasing imports and serious losses of exports. The first step has been taken by the passing of the Cotton Industry Act, 1959, for the reorganisation of the cotton and man-made fibres industry with Government financial aid by means of schemes for the elimination of redundant plant and for re-equipment.

I share fully the views expressed by the President (Mr Philip Lees) of the Federation of Master Cotton Spinners Limited in his recent address. The Government's financial contribution to the industry, under the Cotton Industry Act, 1959, "will be wasted unless arrangements to limit duty-free Commonwealth imports are continued." The British cotton and man-made fibres industry is unique in operating against a background of international surplus capacity. It is exposed to competition from any direction, and it is vital that this should be recognised by the Government before it is too late.

BRIGHTER FUTURE ENVISAGED

It would appear from the trend of the past few years that we shall have to be content with a textile industry producing 80 per cent of the United Kingdom's domestic requirements. Exports will be increasingly confined to high quality goods, in which this country can be supreme. But we must be armed with some background of protection in our home market. It is against the national interest to allow conditions in the domestic textile industry to continue to deteriorate.

In conclusion I would like to repeat what I said last year, that the United Kingdom textile industry had reached bottom and that, if those engaged in the industry and the Government would play their parts in re-creating an industry of the size required to produce efficiently the reduced volume, the future was not gloomy. The Manufacturing sections have now, with Government aid, reduced their excess capacity and the trading results of those sections, as I predicted, are improving. The Finishing sections should follow a similar pattern as soon as Government sanction to their proposals is forthcoming. Then if the industry as a whole will face rationalisation as well as reorganisation, its future will be brighter than it has been for years.

The Report and Accounts were adopted.

SWAN, HUNTER & WIGHAM RICHARDSON, LIMITED

MAINTAINING COMPANY'S POSITION IN VANGUARD OF WORLD SHIPBUILDERS

MR JOHN HUNTER ON ENCOURAGING BENEFITS FROM NEW PLANT

The fifty-seventh Annual General Meeting of Swan, Hunter & Wigham Richardson, Limited will be held on May 4th at the Royal Station Hotel, Newcastle upon Tyne.

In his address, which has been circulated with the report and accounts, the Chairman, Mr John Hunter, BSc, JP, after reviewing the financial results for the year, continued:

Capital expenditure of the Group during the year is reflected in a net addition to fixed assets of £2,034,107, making the total cost £19,791,106. After deducting depreciation, the fixed assets appear in the consolidated balance sheet at £12,681,458. Our expenditure since 1946 on modernisation and re-equipment of our Tyne and Clyde establishments total approximately £13 million to the end of 1959.

Apart from our Wallsend Shipyard, the major part of our schemes of reorganisation as envisaged at present are almost complete. At Wallsend Shipyard, however, the No. 1 berth remains to be modernised. This berth is not served by large capacity cranes and consequently it is not possible to use it for the construction of ships by up-to-date, competitive methods.

It is interesting to note that it was from this berth that the famous "Mauretania" was launched in 1906 and the berth was in fact constructed specially for this purpose. In the light of our commitments both actual and prospective and in order to widen the scope and flexibility of our activities, your directors have decided to proceed with the reconstruction of this berth, and of an extension to our plate preparation facilities.

An order for two 60-ton cranes to service the berth has been placed. The work of providing the necessary crane track and piling to the berth will be carried out pending delivery of the cranes. By so doing it will become possible to build on No. 1 berth a ship approximating to an 80,000 ton tanker while a ship to the order of a 65,000 ton tanker could be built simultaneously on No. 2 berth and vice versa.

We will also be able, by combining Nos. 1 and 2 berths, to build, should occasion arise, passenger ships as large as any afloat to-day or tankers of up to 100,000 ton deadweight or over.

The estimated cost of this work is approximately £1 million which will be incurred over the next two years. With the completion of this scheme the shipyards, engine works and ship-repairing facilities throughout the Group will be fully up to date and your company in the vanguard of shipbuilders throughout the world.

It is, however, proper to observe that if we are to remain amongst the leaders in our particular field, further capital expenditure of a somewhat lesser nature will be necessary from time to time in future years.

During the year the parent company as a member of a consortium of shipbuilders, acquired one-sixth of the Ordinary share capital of Brown Brothers & Co. Ltd., the well-known manufacturers of stabilisers, steering gear, etc. The cost of these shares is included in trade investments.

Net current assets in the consolidated balance sheet amount to £7,646,403, including bank balances and cash in hand of £2,857,676. Group work in progress at December 31, 1959, amounted to £18,307,409, against which instalments of £19,389,676 had been received.

In view of the continued downward trend in the value of British Government securities, your directors decided during the year to realise a substantial part of the Group's holdings, and, under expert advice, the proceeds were invested in first-class equities.

It will be observed from the notes accompanying the accounts that quoted investments, other than British Government securities, costing £569,018 had a market value of £897,912 at December 31, 1959.

PRODUCTION

During 1959 the shipbuilding units of the Group launched two oil tankers, four cargo ships, one ore carrier, one frigate and the Fao-Amaya Jetty representing a total of 98,189 gross tons, which compares with the total for the previous year of 122,500 gross tons.

The output of the engine works of the Group declined slightly in 1959. In terms of indicated horse power the output of main engines, boilers, &c. for the year was 139,900 IHP as against 149,600 IHP for 1958. In 1959 there were supplied for land and marine work 317 oil burning installations as against 322 in 1958.

The dry docks departments of the Group during 1959 repaired in dry dock or afloat a total of 525 ships with an aggregate gross tonnage of 3,957,000 tons compared with 4,182,000 tons in the previous year.

Work continues on the construction of the cruiser "Lion" which is expected to be completed this year and we also have under construction a frigate and a guided missile ship for the Admiralty.

At our Neptune Works work in progress includes the 20,000-ton passenger liner under construction for Companhia Nacional de Navegacao, Lisbon.

The position of the Hopemount Shipping Co. Ltd. remains much the same as last year with its three ships continuing to trade but with earnings restricted by present low freight levels.

GENERAL

With the continuing recession in shipping freights during the past year and with a large, though reducing, volume of tonnage laid up throughout the world, conditions in the ship-repairing industry have been very difficult and it has only been possible to obtain a reduced volume of work at highly competitive prices and our earnings from this source have consequently been much reduced.

With the slight improvement in freights towards the end of last year the position at the present time shows some improvement though it is impossible to tell whether or not this will be maintained.

Our shipbuilding and marine engineering works have continued to operate at a high level of capacity and during the year we obtained contracts for 6 new cargo ships of about 62,000 tons total deadweight. Our present order book should enable activity at this level to continue up to the end of 1961 with a number of contracts for completion in following years.

While the demand for new ships continues at a very low ebb, it is still necessary to look to the future with caution but the results now being obtained from our new equipment are encouraging and at least three of the contracts obtained recently have been secured in direct competition with continental yards, though profit margins are necessarily lower than those which have obtained in recent years.

I have, however, no hesitation in repeating what I said last year, that your companies are well placed to obtain a good share of available contracts and when times improve they should benefit to the full.

During the past year our nuclear team has continued design studies on the propulsion of ships by nuclear power and is at present engaged in assisting the Nuclear Power Group (A.E.I.—John Thompson and The Nuclear Power Plant Company) in preparing the tender which they are submitting to the Ministry of Transport for a boiling water reactor propulsion unit for a merchant ship.

It is hoped that the experience so gained will ensure that we will be at no disadvantage in tendering for the building of such a vessel should such an enquiry be received.

WESLEYAN AND GENERAL ASSURANCE SOCIETY

RECORD PROGRESS

The 119th Annual General Meeting was held on April 5, 1960.

The Chairman, Mr A. H. Sayer, MC, JP, said: It is gratifying to me to be able to inform you that the Society has had a record year for new business.

The year 1959 was a year of prosperity for the people of this country and the margin for personal savings increased. It is clear that there is a resurgence of the old virtue of thrift and more people are recognising the great advantage of regular saving through life assurance, with the resultant relief of income tax and the material assistance to the widow or other dependants should the death of the policyholder occur. In a period of inflation ordinary shares have their attraction as an avenue for savings but share prices have their "downs" as well as "ups." Policyholders *know* what they will receive when their policies mature and, if their policies participate in profits, they will have substantial bonuses added. In the period during which insurance offices have been able to invest policyholders' money so advantageously, bonuses have been increasing year by year.

Ordinary Department.—The total New Sums Assured under policies issued in 1959 amounted to the record total of £6,024,604 compared with £4,900,861 in 1958. The number of policies issued increased by 8 per cent, a feature which may be taken to indicate a growing circle of members.

Industrial Department.—The number of policies issued in 1959 was 83,207 compared with 78,735 in 1958, and I may add for your information that there are in this Department alone no fewer than 2,088,000 policies in force. The total New Sums Assured amounted to the record total of £5,424,812 compared with £4,557,398, and the new premium income was £291,403 compared with £246,624.

Total Assets.—The Assets on December 31st last amounted to £38,491,000 compared with £36,546,000 a year previously.

£1,863,000 has been added to the holdings of Ordinary Shares, which now represent 12 per cent of the Assets. The effect of the higher dividends received and of the opportunity to invest advantageously in fixed interest securities, has been to increase the gross rate of interest earned on the Total Funds from £5 0s. 6d. per cent in 1958 to £5 4s. 10d. per cent in 1959.

Investments Reserve.—The market value of stock exchange securities exceeds the book value. Nevertheless the Directors are of opinion that it is a wise precaution to augment the Investments Reserve at a time when such a high proportion of new investments is in the form of Ordinary Shares. Accordingly £200,000 has been added to the Investments Reserve bringing it up to £2,750,000.

In the Ordinary Department the Directors have declared a Reversionary Bonus of 42s. per £100 sum assured, compared with 40s. last year. This is a modest increase under present conditions but the Directors are of opinion that there is every likelihood that for several years to come this rate of bonus will be maintained and perhaps increased.

In the Industrial Department £200,000 has been transferred for the benefit of the policyholders in this Department compared with £180,000 a year ago. The outlook is favourable and the Directors are optimistic that it will be possible greatly to improve bonuses on Industrial Department policies in the near future.

House Purchase.—The Society has a flourishing House Purchase Department equal in magnitude to a medium sized Building Society. Even last year £1,120,000 was advanced to House Purchasers, while since 1925 over 22,000 families have been assisted to buy their houses. Many W. & G. borrowers are today paying no more than 4 per cent or 4½ per cent interest.

Electronic Computer.—It may interest you to know that the Society is abreast of the times in the application of modern methods in the office. For nearly forty years punched-card machinery has been in use and now an order has been placed for an electronic computer of suitable scope and design. This opens up the possibility of great advances in accounting and actuarial work and generally in dealing with the two million policies on the books.

In conclusion may I say that the Society has had a successful year from all points of view and the outlook for the future is most promising. I fully expect to be able to report more progress in a year's time.

THE MONOTYPE CORPORATION LIMITED

EXPANDING ACTIVITY AT HOME AND OVERSEAS

The fifty-second Annual General Meeting of The Monotype Corporation Limited was held on April 12th in London.

Brigadier Sir George Harvie-Watt, Bart, TD, QC, the Chairman, presided and, in the course of his speech, said:

The result of the year's trading is satisfactory. The improved trend in profits reported last year has continued.

The increased turnover has resulted from expanding activity in both the Home and Export markets. This has been made possible by the excellence and reliability of our machines, and the enviable reputation which your Company enjoys in regard to after-sales service.

This year's taxation charge of £324,192 amounts to 51 per cent of the net profits and after deduction of the tax charge, and taking into account the tax written back, there remains a net balance available in the Parent Company accounts of £311,154 compared with £196,311 last year. In view of the good results, your Directors feel justified in proposing a Final dividend of 5 per cent making 9 per cent for the year compared with 8 per cent for the previous year. After appropriating £200,000 to General Reserve, there remains a balance of £114,280 in the Books of the Parent Company, which we propose be carried forward.

The liquid position of the Group remains strong, with net current assets amounting to £1,956,902, after taking into consideration provision for future Taxation and Minority Interests —an increase of £218,163 on the previous year.

During the year your Directors carried out a revaluation of the Fixed Assets of the Company in the United Kingdom. The resulting surplus amounted to £965,826 which sum has been placed to Capital Reserve.

We are now obtaining benefit from some of our improvements to well-established equipment and the growing commercial acceptance of our "Monophoto" Filmsetter. There is an increasing awareness of the usefulness of this machine. Users of our "Monophoto" Filmsetter have now available 35 series of type faces. Many other faces are in course of preparation.

In regard to the Home Market, business done during the year was satisfactory, in spite of the difficulties which confronted the trade as a result of the Printing Trade dispute which led to a stoppage of nearly seven weeks, and to wage increases, including the 3½ per cent increase in wages in the Engineering Industry.

So far as the Export Market is concerned, we have improved our position, particularly on the continent of Europe where the demand for our machines has increased both in the West and in the East. Business in other Export markets has remained firm and we improved on our turnover for the previous year. Our Export Trade continues to account for nearly 70 per cent of all business.

The improvement in trading this year so far has been maintained and, subject to there being no major upheavals in the economic and political world, the outlook for 1960 is encouraging. We feel that your Company, with its tradition of engineering skill and its ability to meet the particular requirements of its customers, can face the future with reasonable confidence.

The report and accounts were adopted.

FRANCIS SUMNER (HOLDINGS) LTD.

ENCOURAGING PROSPECTS

The fortieth Annual General Meeting of Francis Sumner (Holdings) Limited will be held on May 3rd in Manchester.

The following is an extract from the circulated review of the chairman, Mr C. L. Walker, FCA:

The year under review is the third year of the company in its new form as an Industrial Holding Company, and the results generally are satisfactory. After making all deductions, including taxation, the profit available for the Group is £203,143. The Directors recommend a final dividend of 12½ per cent on the increased capital which, together with the interim dividend of 7½ per cent already paid, absorbs £133,715.

With one exception all the major operating companies had a good year. The exception is Masteradio which incurred a loss of £54,477. Since the end of the year we have commenced negotiations, which are now well advanced, to sell the company.

Our principal manufacturing interests are the Louis Flower Group (making Ladies' Dressing Gowns and Housecoats), Marshall Weatherproof and M. Adler (making Gentlemen's and Ladies' Weatherproofs and Raincoats) and the Bender Group (making Ladies' Dresses). In each case the demand for our garments continues to increase, and the profits for the current year should exceed those for 1959.

During the year under review, we have increased our holding in Brough, Nicholson and Hall Ltd. so that we now own all the Ordinary Capital. The order book is in a healthy condition and we are confident that this improvement in their trading situation will be maintained and reflected in their profits for 1960.

The other major operating companies who were in the Group at January 1, 1959, are Fleet Electrics (Retail) Ltd. and View Rentals (City) Ltd. which companies operate a chain of shops selling and renting Radios, Televisions and Electrical Goods. The Rental Trade has become much more competitive in the last year, but our shops are well established and we confidently hope for an increase in profits in the current year.

Woodward & Co. (Whitefield) Ltd. and Mountain Mills Co. Ltd. both had successful years.

In February 1959 we increased our holding in Hide and Co. Ltd. and your directors are confident that this investment will prove to be a most valuable asset in future years.

After commenting on the acquisition during the year of Reliance T.V. Service Ltd., A. W. Hewetson Ltd. and Buttons Ltd., the chairman continued:

The Balance Sheet reveals a much stronger position which reflects the Board's policy that in further expansion regard must be had to building up a sound asset position in addition to high revenue producing investments. The Net Assets of the Group are now over two million pounds as compared with some £500,000 (excluding "Cost of Control") at December 31, 1958.

The prospects for the future are encouraging. Provided that there is no general recession in our national economy nor any dislocation arising from artificial controls, we anticipate that most of our operating companies will show increased profits. We shall continue our policy of widening our interests, as and when suitable opportunities occur, with a view of strengthening still further the Group's earning capacity as well as its asset position. Proposals will, therefore, be put before you for an increase in Capital so that we may be ready to give effect to our policy.

CALEDONIAN INSURANCE COMPANY

The One Hundred and Fifty-fifth Annual General Meeting of the Caledonian Insurance Company will be held in Edinburgh on May 10, 1960.

The following is an extract from the Statement by the Chairman, Mr W. H. McGregor:

Life Department.—I am very pleased to report another good year. After deducting Reassurances, new Sums Assured, including Group business, amounted to £8,268,865, a record for the Company, and Annuities for £510,379 per annum were issued as against Sums Assured of £6,888,819 and Annuities for £532,787 per annum a year ago.

Our income shows a very satisfactory increase. Life premium income increased by £109,688 to £1,367,710 and our Annuity premium income by £101,397 to £941,522. The interest income, after deduction of tax, at £820,496 increased by £118,778.

As regards outgo, claims by death and maturity at £844,843 were less by £89,405 than the amount paid in 1958 and surrenders at £210,056, were also less by £26,588. Annuities paid increased by £29,832 to £114,106 and expenses of management, including commission, for Life and Annuity business amounted to £291,437 as compared with £254,854 a year ago.

Our Life Assurance and Annuity Fund now stands at £17,677,866, an increase for the year of £1,565,897.

December 31, 1959, marked the end of another triennium. As has already been announced, Reversionary Bonuses have been declared for the three years ended December 31, 1959; ordinary participating Whole Life and Endowment Assurances receiving 63s. per cent per annum calculated on the Sum Assured—the highest Bonus ever declared in the history of the Company.

The Actuarial Valuation, the results of which are set out in the Report, discloses a sound financial position. After allocating £140,000 to additional reserves we are carrying forward £163,698 as against £146,208 when our last triennial Valuation was made as at December 31, 1956.

Fire Department.—The premium income for 1959 was £2,533,342, an increase of £182,589 on our 1958 figure.

The underwriting results in the Home Department were not quite so favourable as last year, but I am pleased to say that our results Overseas were very satisfactory on the whole.

We have been able to transfer a sum of £126,162 to the Profit and Loss Account.

Accident Department.—The premium income for 1959 was £5,116,814, a slight decrease compared with the 1958 figure, due principally to the cancellation of certain Overseas Motor business.

There was an improvement in the results of all sections of our Home business. The Overseas results in all Departments showed a considerable improvement over those for last year.

We have been able to make a transfer to the Profit and Loss Account of the sum of £76,389.

Marine Department.—The sum of £70,000 has been transferred from the Account to the Profit and Loss Account.

The Fund at £961,225 represents 163 per cent of the Premium Income.

Total Premium Income.—The total Premium Income for all Departments was £10,531,818 compared with £10,180,294 for 1958.

COMPANY AFFAIRS

Bowater Paper

CONSUMPTION of newsprint and paper continued to improve in the second half of last year with the result that by the end of the year all the Bowater mills in North America had resumed normal operation. Bowater also brought the fourth newsprint machine at Tennessee into production during the year. Hence the gross profits of the North American subsidiary went up from $30.4 million to the record level of $33.8 million. The recovery in consumption in this country was not quite so rapid, but the volume and range of packaging papers continued to expand at a rate which, the Bowater directors say, offset the reduction in profit margins resulting from the intensive competition that has prevailed. In all, the trading profits of the Bowater group advanced from £18,145,000 to £20,070,000 and the net income of the parent company went up from £2,334,000 to £3,449,000. Moreover, in the last six months of 1959 the group earned a gross profit of £11 million, compared with £9 million in the first half of 1959 and £9·3 million in the second half of 1958.

The improvement in trading conditions, reflected in these results, has taken place at a more rapid pace than the directors had earlier anticipated it would, and though there is still some excess capacity in the industry, the directors say that they now consider prospects to be more favourable than has been the case in the past year or so. Accordingly, having earlier raised the interim dividend from 4½ to 5 per cent, they have raised the final payment from 8 to 10 per cent. In all, the ordinary dividend has gone up from 12½ to 15 per cent and, as the directors had indicated last December, there is to be a scrip issue. One new share will be issued as scrip for every five held. That in itself is modest enough to encourage some investors to hope that this year's dividend will go up. At 72s. the £1 shares yield 4¼ per cent on the 15 per cent dividend.

BICC

THE breaking up of price agreements in the cable industry last April led to a period of intense competition and a marked reduction in prices. Indeed, in his interim statement last November the chairman, Mr W. H. McFadzean said that prices for low voltage mains cables and general wiring cables were then unprofitable. These products however do not represent a substantial proportion of BICC's turnover and Mr McFadzean then indicated that there would be little change in the company's profits in 1959. The preliminary statement now shows that in the year to December 31st last BICC's consolidated trading profit rose from £8,808,610 to £9,011,003 while its sales rose by £18 million to £128 million. These figures, however, include the sales and profits of Telegraph Construction and Maintenance for the whole of 1959 and of Scottish Cables for nine months. Profit margins have declined, falling from 8.5 per cent in the last half of 1958 to 7.6 per cent in the first half of 1959 and to 6.5 per cent in the second half of that year. As expected the ordinary dividend has been left unchanged at 13½ per cent. It is covered almost 2¼ times, thanks in part to the sharp rise in investment income from £358,850 to £676,548. At 56s. 6d. the £1 shares yield 4¼ per cent, just as they did a year ago.

Rio Tinto

INVESTORS were confidently expecting Rio Tinto to report an advance in its gross profits, for they knew that in 1959 not only had higher dividends been received from the company's Rhodesian copper investments, but that the year's income included earnings from the Mary Kathleen mine in Australia, which came into production late in 1958. They have not been disappointed, for the consolidated gross profit has risen from £3,157,000 to £3,914,000. Of this, investment income contributed £2,086,000, against £1,455,000. In view of these results shareholders may be disappointed that the dividend is left effectively unchanged at 20 per cent, as the profits tax interim paid last June is best regarded as part of the total dividend paid for 1958. But there were big claims on profits other than those of the ordinary shareholders; minority interests have taken £732,000, against £284,000, and a new appropriation to development expenditure reserve and to capital reserve (for exchange losses) amounted to £648,000.

The group's share of the profits of Rio Tinto of Canada went up from £722,000 to £1,068,000, but of this sum £670,000 has been written off intangible assets. These profits are not in any case available for dividends until a substantial part of the prior charges, issued to finance the development of the uranium mines, has been paid off. The Canadian uranium industry received a sharp jolt last November, when it was agreed with the American government to spread out uranium deliveries until 1966 but no further. The adverse effects of this change in the prospects for uranium may be offset in part by the decision by Rio Tinto to amalgamate its four uranium producing companies and to take steps to try to diversify their operations still more. For the immediate future shareholders may gain some comfort from Sir Ronald Prain's recent comments on the outlook for copper producers and from the fact that the earnings of Rio Tinto's latest acquisition in Southern Rhodesia, Cam and Motor Gold Mining, will be included in the 1960 accounts. At 38s. 1½d. the 10s. shares yield about 5¼ per cent.

Thomson Newspapers

WHEN Mr Roy Thomson acquired Kemsley Newspapers and merged that company with Scottish Television to form Thomson Newspapers, he estimated that the gross profits of Scottish TV would be about £1½ million in 1959; on the assumption that Kemsley Newspapers' profits would be little changed the gross profits of the group would be about £3 million and net profits about £1½ million. In the event Thomson Newspapers did rather better than this. Net profit last year came to £2,156,571, but this included a surplus of £548,913 arising from the sale of investments and the maturity of sinking fund policies. Net profit from trading was £1,607,658, after tax of £1,495,568 so that gross profit amounted to £3,103,226. Of the net profit, £346,610 represents pre-acquisition profits of Scottish TV and is not available for distribution. In this period of development, as Mr Thomson has characterised it, the growth in profits is likely to come from commercial television. But, looking further ahead, what Mr Thomson does to the group newspapers and printing works will become increasingly important. He is not likely to be satisfied with the circulation and profits of some of the newspapers he already owns and he may be tempted to acquire others.

The public interest in this group, which Mr Thomson and his associates control through their holdings of deferred ordinary shares, is in the preferred ordinary shares. A final dividend of 15 per cent has duly been declared and a total payment of 30 per cent has already been promised this year. This dividend can only rise above this level after a non-cumulative dividend of 15 per cent has been paid on the deferred shares and then only to the extent of one-quarter of the surplus profit. The public's stake in the equity is thus limited and the size of the preferred dividend depends very much on Mr Thomson's attitude towards the deferred payment. The preferred are now quoted at 28s. 6d., to yield 4¼ per cent on a 30 per cent dividend. They can hardly be called growth stocks, though the company itself may grow.

British Motor and Pressed Steel

THE directors of British Motor have maintained the interim ordinary dividend at 7½ per cent but this time it is payable on the capital as increased by a 30 per cent scrip issue. Effectively, then, the dividend has been raised by just under 1¼ per

cent. The market had set its sights on a 10 per cent interim and after the payment was announced the shares were marked down by 2s. 1½d. to 20s. 4½d. Sir Leonard Lord, the chairman, has already forecast an increase in profits over the next two years and investors must now wonder what the final dividend will be. In the past, the interim dividend has usually been half the final dividend. On that basis the final dividend would be 15 per cent, making a total of 22½ per cent. That would be well within the scope of BMC even though the expansion programme, costing £49 million, is to be self-financed. On that assumption the 5s. shares would yield 5¼ per cent at 20s. 4½d.

One of BMC's major suppliers, Pressed Steel, has also raised its ordinary dividend from 25 to 30 per cent. Last year the gross profit from the sales of car bodies, refrigerators and other steel pressings, rose by 11 per cent, from £4,360,377 to £4,829,085, and net profits by 22 per cent from £2,017,598 to £2,461,598. Thus the increased dividend is covered over three times. Since the publication of the results the 5s. shares have fallen by 5s. 9d. to 36s. 9d., to yield 4.1 per cent. The fall in price occurred because Pressed Steel is to make a rights issue on terms to be announced later. The issue is to finance further expansion designed to meet the growing demands of the motor industry. Pressed Steel is to extend its plant at Swindon and is to set up a body plant in its Glasgow factory. Its plans also include the building of a factory at Jarrow, designed to add to its production of pressed tools.

Simon-Carves and Henry Simon

When the proposed merger between Simon-Carves and Henry Simon was announced last month the directors of the two companies said that in future their policy would be to distribute a higher proportion of the combined profits than either company had distributed separately in the past. The terms of the merger will be announced soon, but both companies have in a sense already implemented the agreement on dividends by substantially raising the payments for 1959. Simon-Carves has raised its ordinary dividend from 25 to 35 per cent but it is not repeating last year's special tax-free distribution of 7½ per cent. Its trading profits advanced last year from £1,461,814 to £1,607,202 and its net earnings rose from £686,301 to £826,357. The latest dividend is covered 2.4 times by earnings, compared with a cover of 3.2 times on the smaller dividend the year before.

The Henry Simon dividend has been raised from 20 to 35 per cent but last year's special distribution of 10 per cent from capital profits has not been repeated. Its trading profit went up from £1,206,321 to £1,274,935 and its net earnings rose from £571,999 to £666,987. The latest dividend is covered over twice by earnings, against three times in 1958.

One important feature of the merger agreement involves the distribution to shareholders of surplus cash held by the two companies. This accounts to some extent for the relatively low yield offered by the 5s. shares of both companies. At 48s. 9d. Simon-Carves 5s. shares return 3.6 per cent, and at 48s. 6d. the Henry Simon 5s. shares yield 3.6 per cent. These yields are well below those offered by shares in many other heavy engineering and electrical companies.

Timothy Whites and Taylors

The 5s. shares of Timothy Whites and Taylors have enjoyed a big rise in recent weeks in anticipation of the profit statement and of the results of the revaluation of its properties, which include 930 chemists and hardware stores. After the results were published the shares fell back by 2s. 3d. to 43s.—a reflection more perhaps of the uncertain tone of equities in general than of particular disappointment with the company's achievements.

Trading profits in the 54 weeks ended on January 16th rose from £1,859,573 to £2,073,351 and the net profits from £602,841 to £694,491. At the time of the interim dividend last October the directors forecast a total dividend of 25 per cent, against 20 per cent, but now they have set it at 27½ per cent. The revaluation of properties has thrown up a surplus of £4,183,431 over the book value of £5,593,369. Of this surplus £705,735 is to be used in writing off goodwill and a 100 per cent scrip issue is to be made as well. At the current level the 5s. shares yield about 3¼ per cent; that puts a discount on future growth but it compares with a yield of 2.3 per cent offered by Boots Pure Drug.

Hudson's Bay

An increase of only just over one per cent in Hudson's Bay's trading profits for the year to January 31st certainly came as something of a disappointment to shareholders, for the company did not appear to have gained much from the recovery in the Canadian economy. The full accounts show that although total sales reached the record level of £79.9 million only the Northern stores and furs (something of a misnomer since over 90 per cent of that business is in merchandise) reported an increase in profits. Higher wages and other costs ate into the profits of the retail stores; sales went up, but profits from this biggest section of the company's business fell from £3,185,000 to £3,140,000. This represented a cut in margins from 6.4 to just under 6.1 per cent. These profits are struck after charging depreciation of £1,040,000 (against £984,000) on buildings and equipment in retail stores. The bigger depreciation charge is the product of a continuing high rate of capital expenditure. Last year £2,102,000 was spent on buildings and sites, including the first half of the new Saskatoon store as well as two more "parkades" which have proved popular with Canadian shoppers. The extensive modernisation and expansion programme has left its mark in the balance sheet: cash and holdings of Treasury bills fell last year from £2,312,000 to £1,266,000 and bank overdrafts and short term loans rose from £2,494,000 to £4,355,000. Hudson's Bay, in fact, looks as if it is in need of new capital.

With production of crude oil in Canada at only about 50 per cent of capacity there was a further slight fall in royalties received by Hudson's Bay, from £469,000 to £451,000. A maiden dividend has still to be paid by Hudson's Bay Oil and Gas, in which Hudson's Bay has a 22.6 per cent interest. The net income of this oil and gas concern rose from $1,316,000 to $2,821,000 (equivalent to 16 cents per share) last year, largely as a result of sharply increased sales of natural gas following the opening of the pipe lines to Eastern Canada. With land sales nearly completed shareholders will have to look more and more to this company for the replacement of the income from the land account. With unchanged dividends of 24 per cent from trading and a tax free 5 per cent from land sales the £1 shares at £9 7/8 xd offer a gross yield of 3½ per cent; this is in line with the return on leading stores in this country. With Hudson's Bay Oil and Gas at $25 (London) "Bays" holding, however, is worth about 75s. per Hudson's Bay share.

Alfred Herbert

In 1958-59 Alfred Herbert's trading profits fell by 18½ per cent, from £2.9 million to £2.4 million. But because business took a distinct turn for the better in the latter months of the financial year the directors raised the tax-free ordinary dividend from 6 to 7 per cent. In his statement the chairman, Mr C. W. Clark, says that the improvement has been maintained. Stocks, he reports, have fallen and there is a growing backlog of orders for certain types of machine tools, especially for the heavier products. The group's balance sheet shows that liquid balances amount to about £8.8 million. Capital commitments amount to only £158,000.

Alfred Herbert, which now claims to be the biggest machine tool organisation in the world, seems to have benefited more than most other machine tool manufacturers from the recent revival in orders, which have been running, Mr Clark says, at a very satisfactory level in the last few months. On the 7 per cent tax-free dividend, which is covered 1½ times by earnings, its £1 shares at 55s. 3d. yield just over 4 per cent.

American Metal Climax

This company, offspring of the merger between American Metal and Climax Molybdenum in 1957, has its eggs in many baskets. In North America and Mexico it produces molybdenum, tungsten, uranium, potash, oil, lead and zinc and refines domestic and imported copper; farther afield, its chief interests are its controlling stake in Rhodesian Selection Trust, and a substantial holding in Roan Antelope (in the RST stable), Tsumeb Corporation and O'okiep Copper Company. The company's fortunes showed a striking recovery in 1959. Operating income almost doubled, from $19.1 million to $37.7 million, dividend income rose by a third, from $6.5 million to $8.6 million, and it made a net profit of $3.6 million from the sale of its holdings in British Aluminium and two other companies. Net income increased sharply by 70 per cent, from $18¼ million to $30.8 million, equivalent to $2.15 per common share; excluding capital gains, net income was equivalent to $1.94 per share, which compares with $1.27 in 1958 and $1.95 in 1957.

This improvement reflected higher earnings in nearly all divisions—and a bit of luck in two of them. The protracted strikes in United States copper mines and smelters had almost no effect on the company's domestic supply, and with more foreign copper available it was able to take advantage of the shortage (and higher prices) by selling a record tonnage. And the American steel strike was partly a blessing in disguise. Production of alloy steel (and therefore demand for molybdenum) suffered less than that of carbon steel, and when the strike was settled the company became virtually the sole supplier of molybdenum because production as a by-product of copper (the second largest source of molybdenum in the United States) was still restricted by the other strikes. For 1959 as a whole US production of alloy steel rose by a third, and with the substantial increase in foreign demand Amax sales of molybdenum rose by 55 per cent to $59.8 million.

David Brown

Anyone who thought that the recovery in the David Brown Corporation's earnings in 1958 meant that the group was back on the road of expansion were no doubt disappointed by last year's trading results. Gross profits (including a special receipt of £100,000 from a subsidiary) in 1959 slumped from £703,336 to £167,598; and after a substantially lower tax charge of £90,512 (against £469,002) net earnings declined from £234,334 to £77,086. In his statement with the full report and accounts the chairman, Mr David Brown, points out that earnings in 1959 were severely hit by the costly reorganisation and rationalisation of the tractor and agricultural machinery divisions. Just how the machine tool division fared is not made clear, but, although David Brown makes one of the widest range of machine tools in the country and is the biggest exporter of turbine gear machinery, if its earnings followed the same pattern as others in the machine tool industry they could hardly have been substantial.

Mr Brown is confident that the current year will be a better one. On the general engineering side the group's order book is particularly good and the value of orders on hand is £2 million more than at the same time a year ago; orders from the booming commercial vehicle makers are coming in at a fast rate and the foundry division is now working to full capacity. But the extent of any recovery made by David Brown will depend to no small measure on the success of its recent internal reorganisation policies and of the growth of its overseas interests.

London Stock Exchange

FIRST DEALINGS:	Mar. 21	April 4	April 25
LAST DEALINGS:	April 1	April 22	May 6
ACCOUNT DAY:	April 12	May 3	May 17

Uncertainty about impending credit restrictions continued to overshadow industrial equities. In contrast to the industrial market gilt-edged stocks enjoyed a good deal of two-way business, especially on Monday, and long, medium and undated stocks improved all round; but on Tuesday the sharp rise in the United States treasury bill rate put most gilt-edged prices back. Even so, over the four days of trading to Tuesday's close many gilt-edged stocks were able to show net gains. In undated stocks, for example, 3½ per cent War Loan put on ⅜ to 62⅞.

Industrial equities drifted lower and on Monday the *Financial Times* index dropped 5.9 points to 317.2 and then lost another 2.5 points on Tuesday. Over the four days' trading to Tuesday's close, *The Economist* indicator fell 14½ points to 351.4. In early dealings on Tuesday the sharp decline in the industrial equity market was arrested and a certain amount of selective demand gave the market a steadier appearance; but just before the close prices began to slide again. Steels staged a small rally on Tuesday but failed to recoup Monday's losses. Steel of Wales fell 2s. to 43s. 6d. and United Steel 3s. 3d. to 78s. 6d. Among American favourites Unilever Ltd. came back 2s. 6d. to 146s., the NV shares lost 3s. at 182s. and EMI closed 3s. down at 50s. 3d.

Gold shares were mixed and most of the leaders lost further ground after the weekend. Free State Geduld fell 1s. 9d. to 132s. 6d. and Western Holdings closed 5s. lower at 128s. 9d.

EXCHEQUER RETURNS

For the 9 days ended April 9, 1960, there was an "above line" deficit (after allowing for sinking funds) of £26,097,000 compared with a deficit of £18,696,000 in the previous 5 days and a surplus of £5,454,000 in the corresponding period of last year. There was a net expenditure "below-line" of £19,911,000, leaving a total cumulative deficit to date of £46,008,000 compared with £28,030,000 in 1958–59.

THE MONEY MARKET

At last Friday's Treasury bill tender the discount market cut its bid by only 2d. to £98 16s. 9d. and its allotment rose from 41 per cent to 42 per cent. The average rate of discount rose by just under 7d. to £4 12s. 11.83d. Total applications for the £260 million bills offered and allotted fell from £449 million to £422 million. This week's tender is for £280 million bills to replace maturities of £270 million.

In New York there has been a sharp rise in the United States Treasury bill rate following the poor reception last week of the Treasury's issue of 25-year 4¼ per cent bonds. The rate on three months bills rose from 2.731 per cent to 3.622 per cent and on six months bills from 2.927 per cent to 3.854 per cent.

Money has been in short supply in Lombard Street and the authorities have intervened each day to give varying amounts of help. This has been sufficient to keep houses from borrowing at the Bank, although full privilege facilities have been used. Rates for overnight money have generally held steady at 4⅛–4¼ per cent. Business in bills has been on a small scale.

STATISTICIAN
OR
INDUSTRIAL ENGINEER

Mullard

We require a man to join an established team of Statisticians in our Statistical Methods Department.

THE FACTORY AT BLACKBURN is engaged in the mass production of radio and television valves, valve components and fine tungsten and molybdenum wires.

THE DUTIES INVOLVE the application of statistical methods to production problems, including quality control in its broadest aspects, industrial experimentation and operational research.

The successful candidate will receive any necessary training within the Department and within the Company, and the opportunity of attending external short-term post-graduate courses.

After training he will have a considerable degree of freedom in using initiative.

WE WOULD STRESS that this is not a backroom job, but a practical production one, bringing contacts at all levels in the factory.

APPLICATIONS are invited from graduates with relevant experience or from statisticians who feel that they meet the high personal requirements of this post.
The starting salary will be commensurate with these requirements.

Applications, giving brief details of age, qualifications and experience, should be forwarded to the

PLANT PERSONNEL OFFICER, MULLARD BLACKBURN WORKS, LTD.,
Philips Road, Blackburn, Lancashire, quoting ref. V 99

"Mullard" is the Trade Mark of Mullard Limited

GRADUATE IN ECONOMICS wanted as Research Assistant for general duties in Economics Department. Work involves collection and presentation of statistics and some editorial work in connection with a trade journal. Commencing salary £550-£650.—Please write to the Secretary, International Wool Secretariat, Dorland House, 18-20 Regent Street, London, S.W.1, marking the envelope "Confidential [illegible]."

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for appointment from October 1, 1960, or as soon as possible thereafter, to a Rees Jeffreys Research Fellowship in Transport. The Fellow appointed will be required to pursue with a view to publication research within the field of the Fellowship, which is defined as the economics, administration, organisation and regulation of transport (which includes air and sea transport as well as inland transport). Salary within the range £2,000-£2,950 a year, with superannuation benefits and family allowances; tenure for three years in the first instance, but with the possibility of renewal for maximum of seven years in all. Provision has been made for any necessary travel expenses of the Research Fellow and for research assistance.

Further particulars should be obtained from the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2, by whom applications should be received not later than May 14, 1960.

ASSISTANT ESTIMATOR

required by the United Kingdom Atomic Energy Authority, Production Group Headquarters, Risley, Warrington, Lancashire, in the Commercial Directorate, Economics Section.

To be a member of a team responsible for the economic analysis of processes, the assessment of commercial soundness of capital expenditure proposals, and the costs of products for sale within and outside the Authority, in the fields of fuel element and chemical plants.

Duties will include the collection, and maintenance in a systematic and auditable form, of estimating data relating to fuel element manufacture and chemical plant operation and its application to flowsheets and production specifications in order to prepare estimates of works operating costs.

QUALIFICATIONS AND EXPERIENCE

Applicants must have served a recognised engineering apprenticeship and should have had several years' experience *in estimating, buying, design, construction, maintenance or* operation in the chemical engineering field.

Possession of a Higher National Certificate or equivalent and a knowledge of the procedures used for the preparation of operating costs may be an advantage.

Salary within range £1,105—£1,340 p.a. Contributory Superannuation. Staff Housing Scheme.

Send postcard to Staff Officer at above address, quoting reference P.139/J.20.

Closing Date: May 2, 1960.

CAREERS FOR

YOUNG ENGINEERS, SCIENTISTS AND MATHEMATICIANS

Increasing commitments have once again provided us with the opportunity to offer a number of qualified young men and women a career in a Company utilising and breaking new ground in advanced engineering techniques.

We have vacancies for graduates in departments responsible for the assessment of missile equipment and performance, and for the extensive mathematical and computing services necessary to carry this out.

These positions command progressive salaries as well as the amenities provided by a large organisation. *Assistance with housing and removal expenses may be given.*

If you are interested in any of the posts described, or in other aspects of design, development and manufacture of Guided Weapons, please write in confidence to Dr. D. A. Layne, C/O Dept., C.P.S., Marconi House, Strand, W.C.2, quoting reference E/1396F.

WE REQUIRE:

1. ENGINEERS AND PHYSICISTS with the ability to study and improve missile performance with the aid of electronic computers.

2. ELECTRONIC ENGINEERS to design and further develop additional computing and simulating equipment.

3. MATHEMATICIANS to programme and operate a D.E.U.C.E. computer installation or apply mathematical analysis to the solution of engineering problems.

ENGLISH ELECTRIC AVIATION LIMITED

GUIDED WEAPONS DIVISION STEVENAGE, HERTS. LUTON, BEDS.

Vacancy for Top Job in Systems Selling

Systems expert required to handle the organisation and sales of excellent time and money saving range of revolutionary forms. Large national concern offers scope and limitless opportunity to right man whose background training experience and connection is in the systems field, and whose contacts are at top level. Write, stating age, experience details of systems handled, curriculum vitae, to Personnel Manager, quoting SMD.—Box 1312.

FREE DIE LA RUE UNION

FORMICA LIMITED

have just engaged an Economist

to take charge of business forecasting and intelligence in their rapidly expanding Market Research Department.

We now seek a man primarily for research into new products and new applications of existing products.

He should have a good degree, some knowledge of Industrial Market Research, and be capable of readily assimilating technical data. He should also have done some top level interviewing and be able to speak and write lucidly. Age 25-28, salary from £1,000, excellent superannuation scheme.

Apply,

CHIEF PERSONNEL OFFICER,
FORMICA LTD.,
84-86 REGENT STREET, LONDON, W.1.

EXPERIMENTAL OFFICER or ASST. E.O. required at Building Research Station (D.S.I.R.), Garston, Watford, for administrative and information work servicing the Directors' Office, Building Research Board, and some related committees. Duties include some of Station's international commitments, exhibitions, visitors, press and broadcasting contacts. A general scientific background, pass degree in maths., scientific subject or economics required as well as interest in admin. work and ability to write clearly. Age at least 26 for E.O. Salary according to age and experience (men) £882 10s. (age 18) — £670 (age 26 or over) — £830 for A.E.O. or in range £954 — £1,196 for E.O.—Forms from Ministry of Labour, Technical and Scientific Register (K), 26 King Street, London, S.W.1, quoting A.183/OA. April 30.

AMERICAN ORGANISATION in London offers responsible executive post to man with good knowledge of investments and experience of portfolio management or trust administration; good salary and prospects for public school man preferably 35-40.—Applications in confidence, but with full details education and experience, to Box E.T. 991, c/o 191 Gresham House, E.C.2.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

A Research Assistant is required to work on a long-term study of students' academic progress and post-university experience of students at British universities. Applicants should have good degrees, preferably but not necessarily in sociology or another social science. Research experience in the collection and organisation of survey material would be an advantage. Salary in the range £450—£800 a year. In assessing the starting salary due consideration will be given to age, experience and, particularly in the case of recent graduates, to subject and class of degree.

Applications, with the names of two referees, should be received not later than April 30, 1960, by the Secretary to the Social Research Division, London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2, from whom further particulars may be obtained.

THE UNIVERSITY OF MANCHESTER
EXTRA-MURAL DEPARTMENT

Applications are invited for the post of ADMINISTRATIVE ASSISTANT (male) in the Department of EXTRA-MURAL STUDIES. The person appointed will be expected to assist in the management and administration of courses in the field of social and economic studies and should have a good honours degree in an appropriate subject (e.g. history, economics, sociology). Previous experience of administrative work is not essential, and applications would be considered from persons intending to graduate this year. Initial salary (at present under review) not less than £700 per annum. Membership of F.S.S.U. and Children's Allowance Scheme. Duties to begin on October 1, 1960, or such earlier date as may be arranged.—Applications should be sent not later than April 23, 1960, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of TEMPORARY ASSISTANT LECTURER IN GOVERNMENT (with special reference either to Western Europe excluding the United Kingdom, or to an "underdeveloped" area outside Europe) for a period of two years from September 1, 1960. Salary scale (at present under review) £700-£850 per annum. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than Monday, May 9, 1960, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF HONG KONG
READERSHIP OR SENIOR LECTURESHIP IN STATISTICS

Applications are invited for the above-mentioned post. Applicants should have the appropriate qualifications and experience needed to take charge of the newly-established Statistics Unit.

Annual salary (superannuable) is: Readership—£2,500 (man) or £1,900 (woman); Senior Lectureship—£2,000 x £75—£2,300 (man) or £1,500 x £60—£1,740 (woman). There is also an expatriation allowance of £300/£250 a year if applicable. The equivalent of income tax in the Colony is comparatively low.

Expatriate staff and their families are provided with furnished accommodation at a reasonable rental, and with first-class sea passages on first appointment and leaves.

Further particulars and information as to the method of application should be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Hong Kong and London, on May 31, 1960.

ASSISTANT TO MARKET INVESTIGATOR

A University Graduate (preferably Economics) who has recently graduated is required for a responsible position in the Sales Department.

The work entails imaginative and detailed study of trends in the motor industry, home and overseas; the preparation of short and long term sales forecasts together with an analysis of the markets for the Company's products.

The Company is engaged primarily on the design and manufacture of Disc and Drum Brakes and Suspension Systems for road vehicles and tractors.

The applicant concerned must be prepared to travel in the United Kingdom and overseas.

Write, giving details of experience and qualifications, to Personnel Manager, Girling Limited, Kings Road, Tyseley, Birmingham, 11.

EAST ANGLIAN REGIONAL HOSPITAL BOARD

Applications are invited for post of WORK STUDY OFFICER in the grade of Assistant Secretary to assist the Secretary of the Board in Organisation and Methods and Work Study activities. The officer will be required to work in collaboration with the officers of Hospital Management Committees. Duties will include investigations within the Board's area on all aspects of hospital work. Applicants must have passed Work Study examinations, obtain the Work Study certificate where appropriate. Salary £1,500 x £50 (3) x £60 (2)—£1,800.

Applications, stating age, education, qualifications, and brief details of present and previous appointments, with names of three referees, to Secretary of Board, H. Chesterton Road, Cambridge, by April 30, 1960.

WORKERS' EDUCATIONAL ASSOCIATION—Yorkshire (North) District (South). Applications are invited for the post of Organising Tutor in North-West Lindsey in the County of Lincoln. Applicants should be Honours graduates with qualifications in the Social Sciences or in other relevant subjects appropriate to adult education. Salary scale £650 x £25 to £1,200. Closing date May 2. Duties: Application forms and further details from District Secretary, W.E.A., 26 Campo Lane, Sheffield, 1.

SILSOE COLLEGE, SILSOE, BEDFORD, intends shortly to introduce courses in Agricultural Works Study, and invites applications from suitably qualified persons for the post of SENIOR LECTURER IN WORKS STUDY. The salary will be on the scale £1,200 x £50 — £1,750 per annum. The starting point to be determined according to qualifications and experience. Superannuation under the Federated Superannuation Scheme for Universities. Applicants must be graduates of a British University with a strong and practical experience of the application of Works Study. Agricultural experience is not essential, but a keen interest in agricultural problems is very desirable. Further details may be obtained from the Principal, to whom application should be sent, together with the names of two referees, not later than May 14th.

BUSINESS AND PERSONAL

SECRETARIAL TRAINING, especially for university graduates and older students, six-month and nine-month courses.—Write Organising Secretary, Domus, 158 Holland Park Avenue, W.11. PARk 4054.

CALTEX

Caltex . . . serving the petroleum needs of 77 Countries in Europe, Africa, Asia and Australasia

. . . in Great Britain, look for the familiar REGENT *sign!*

SECOND CLASS POSTAGE FOR *THE ECONOMIST* PAID AT NEW YORK, N.Y.
Published weekly every Saturday, fifty-two times a year in London, England.

ALUMINEX – over 9,000 feet of it—in the Pannier Market, Plymouth, Devon. *Architect:* Walls & Pearn, A.A.R.I.B.A. Plymouth.

ALUMINEX is like windows only bigger and often it's in the roof and it's very quick to put up

"Yes, but what exactly is ALUMINEX*?"*

"Brilliant patent glazing system made by Williams & Williams."

"I imagine the child means 'skylights' when she says 'often in the roof'?"

"Skylights yes, but it is also used to make whole walls of glass."

"What makes it so quick to put up?"

"It's light—aluminium you know. It's easy to assemble. It's an all-metal system—the glass is held in the glazing bars by special spring clips."

"Anything else?"

"ALUMINEX is weatherproof, resists corrosion, no painting, use it for anything."

"Anything? Bet they don't use it for atomic power stations!"

"You'd lose your bet—they use miles of it. And in other power stations, factories, hospitals. Sometimes they make vast sections of ALUMINEX open and close like giant windows."

"What happens if a classic product of our modern educational system heaves a brick through them?"

"Somebody calls a copper I expect."

"No. I mean what happens to the ALUMINEX PATENT GLAZING *by Williams & Williams?"*

"Oh that. Replace the glass in minutes. Look Fishbone—I'm busy. Go home, there's a good chap."

forward looking building products WILLIAMS & WILLIAMS

Williams & Williams make steel windows of every description, ALOMEGA and other aluminium windows, ROFTEN movable steel partitioning, ALUMINEX patent glazing, WALLSPAN curtain walling and many other products, all of which can be seen at our permanent exhibition at 36, High Holborn, London, W.C.1

AIR FRESHER THAN SPRINGTIME BENEATH THE POLAR ICE CAP

When the United States Navy's nuclear-powered submarine Skate made its historic cruise across the top of the world, her officers and crew breathed air fresh and pure. To provide unfailing, vital ventilation exhaust and air pressure for ballast blowing, the U.S.S. Skate . . . as well as nearly all other U.S. nuclear-powered subs, including those under construction . . . are equipped with Spiraxial® compressors manufactured by Roots-Connersville, a division of Dresser Industries, Inc.

Other Roots-Connersville products—blowers, compressors, exhausters and vacuum pumps, gas pumps and rotary gas meters—are installed throughout the world. Available in many hundreds of different types and sizes, Roots equipment is serving the chemical process industries, paper mills, wastes treatment plants, metals production and fabrication, mining, petroleum refining, gas production and distribution. Also, Roots units function as important auxiliaries in a wide variety of specialized machinery requiring air or vacuum services.

If your business requires the movement, compression or metering of air or gas, write for details of Roots' specialized equipment and services, proved by over 100 years of dependable performance.

who

has a press shop as big as St Paul's?

The Pressed Steel Company. Inside their giant factories they have giant presses busily turning sheet steel into car bodies, railway wagons and Prestcold refrigerators.

PS means Pressed Steel, and the Pressed Steel Company mean business, expanding business. This Spring they open Europe's most automated refrigerator factory at Jersey Marine, near Swansea.

Direct contact deaerator for 220,000 lb/hr.

Industrial Deaerators

The recirculating deaerator developed by Hick Hargreaves provides a simple and dependable means of preventing corrosion by reducing the oxygen content of the feed water. Effective deaeration is assured under all conditions of flow, no matter how wide or rapid the fluctuations in the feed rate, whilst the absence of floats and spray valves ensures great reliability. Three types are available. The Straight Spray Type is suitable for handling feed water from 130°F (55°C) to 200°F (95°C) and requires no heating steam for its operation. The Direct Contact Heating Deaerator accomplishes the dual purpose of deaerating and heating cold water up to a maximum outlet temperature of 180°F (82°C).

The pressure type deaerator is capable of operation with outlet temperatures up to 240°F (115°C).

Standard designs for all types are available with capacities from 20,000 lb/hour (10,000 kgs/hour) to 450,000 lb/hour (200,000 kgs/hour).

The Moral of Blue Streak

WHEN Members of Parliament debate next week the Government's decision to abandon the Blue Streak intermediate range ballistic missile, they ought to be quite clear what is the real issue which confronts the country. The real issue is not the one on which the motion before the House concentrates: whether the Government has wasted the £65 million so far spent on the missile, or whether the decision could and should have been made a year earlier. Probably the Government did persevere with the project for too long; if so, it deserved castigation in the past, but deserves some congratulation for belated wisdom in the present. The only issue that really matters now is whether Britain ought to continue to try to have an independent deterrent under its own control, now that Blue Streak has been abandoned. The Government does not welcome discussion of this issue because, at bottom, its only reason for still trying to cling to an independent British deterrent is that it does not trust the Americans and our other allies. But it is the subject that should have priority in debate.

How important it is to have basic policy thrashed out now is shown by the words in which Mr Watkinson made his announcement last week:

> Our strategic nuclear force is an effective and significant contribution to the deterrent power of the free world. The Government do not intend to give up this independent contribution, and, therefore, some other vehicle will be needed . . . to carry British manufactured warheads.

It is the logic, or rather the total lack of logic, in this statement which calls for criticism. Blue Streak is being abandoned because it is now known that the Russians are so accurate in their rocketry that they could destroy it before it could be got off its fixed launching pads. If the theory of the independent deterrent is that Britain should be in a position where it might sometimes be able to threaten to fire first, this would not matter; for firing first, Blue Streak would do. But it is now known that Blue Streak is not a weapon of a type that would enable us to threaten: "If you hit us, we will hit you back whether any ally fights beside us or not." What Mr Watkinson is saying, in basic English, therefore is: "Blue Streak will not give us an independent power of retaliation, there is nothing really to take its place, but we must have independence, so somehow or other we will buy or make something that will do the trick."

Does this make any sense whatever? That is what Parliament ought to try to find out. Neither of the developing American weapons which Mr Watkinson mentioned as available for Britain to buy looks any more promising than Blue Streak did when its development started (the costings and future of that missile are discussed in a Business Note on page 351). The Sky Bolt missile, which can be fired from V-bombers, would be useful only on the assumption that even by 1965 British airports will be less vulnerable to Russian rockets than fixed missile bases are now. Polaris, which can be fired from atomic submarines, would be more mobile. But the combination of atomic submarines and Polaris is hideously expensive; and long before we possessed that combination, technical advances on the Russian side might well render it as much a blue duck as Blue Streak. Before the Government sinks many more million pounds on these marginally more favoured missiles, it should be asked exactly what advantage we gain from this holy grail quest for an independent deterrent at all.

In what conceivable circumstances would independent British control of our

own missiles save us, where joint reliance with our allies on a collective deterrent would not? It seems entirely obvious that the only real reason why Britain would not be singled out for Pearl Harbour treatment by Russia is that we can say: "If you hit us, our big brothers Nato and the American strategic air command will hit you." This in fact is what our treaties do say. What deters the Russians is not the V-bombers or the British H-bomb alone, but the Nato framework in which they would, with many other weapons, be used. The Russians know perfectly well that since they could destroy Britain long before Britain could destroy Russia, we could not go it alone in a nuclear war; indeed the Suez episode showed that we could not go it alone even in conventional war, if the rest of western opinion did not march resolutely on our side. Without a shot fired, technology and the small size of this island have made Britain—on its own—defenceless.

This is not to say, as the anti-bomb campaigners say, that Britain should abandon its nuclear weapons altogether; since we know how to make H-bombs, there may well be a case for continuing to make them for a collective western stockpile. Nor is it to say that we can straight away cut down our defence bill. Effective interdependence with our allies would certainly be cheaper than effective independent deterrence (if that were possible, which it is not); but whether it would cost us a penny less than the £1,500 million a year that we have recently been spending on ineffective national defence and Nato is a much more open question. The answer can be determined only by the needs of true collective defence, and here technological advance may not work on our side.

There is an evident danger that if and when America can rely on the deterrent power of intercontinental missiles for its own immunity, it might become less ready to take risks for the safety of Europe than when it depends on European bases. This is something that British policy should seek to guard against at any cost. One obvious moral is that every possible measure to fortify the American alliance must be relentlessly pursued. But a second way to mitigate the danger would be to throw British technology behind the deterrent power of Europe as a strong military entity in itself. For some years past it has seemed an obvious course for Britain to co-operate with our allies in mounting the deterrent on the Continent—where it could be mobile and where the shorter range to Russia would make the use of existing missiles (or those that are near-certainties) far more practicable than present dreams about Polaris. As the article that follows indicates, the problem that Britain faces is exactly parallel with the problem with which General de Gaulle is now grappling at Camp David. If Britain does not at the eleventh hour take the lead in developing a collective deterrent on the Continent, it may come about anyhow—and then the day may come when Europe has a valid deterrent and America has a valid deterrent, and Britain enjoys splendid isolation with a fleet of ageing V-bombers and a wastepaper basketful of plans. This might delight the unilateral disarmers; but it would be an extraordinary denouement for Conservative defence policy.

At present, so important are British conventional forces and nuclear know-how to our allies that there is no reason why a British approach to Europe should be rebuffed. Even the firmest Continental believers in keeping Britain out of the Common Market consider Britain's contribution to collective defence indispensable. But the fact must be faced that a policy of basing our security entirely on our alliances, of which Nato is the heart, would have far-reaching political implications. Hitherto—except at one dramatic moment in 1940 when Mr Churchill proposed a full Anglo-French union—arguments of defence policy have usually been regarded as arguments against mixing up our politics too closely with those of foreigners. Let there be no mistake that, in the thermonuclear age, arguments of defence policy have swung right over to the other side; they now provide some of the most convincing propositions in favour of merging national sovereignty and advancing towards political integration.

Does the British Government recognise this? On the face of Mr Watkinson's statement last week, it does not. That statement must increase the apprehension that Britain is being drawn after the will o' wisp of nuclear sovereignty, as it once pursued the will o' wisp of independent power politics to the humiliations of Suez. The deduction seems to be that it trusts neither the Americans nor the other Nato allies to stand by Britain at need. In that case plans to acquire Sky Bolt or Polaris or anything else are just a counsel of despair.

Generals at Camp David

General de Gaulle's shopping list in the United States is a long one. Some of the goods are almost certainly out of stock

GENERAL DE GAULLE'S arrival in Washington opens the last major round of pre-summit conversations. But the summit may not even be the greatest of his, or General Eisenhower's, preoccupations at Camp David this weekend. If they wish, they can comfortably, and profitably, spend more time on France's nuclear and missile shopping list, the economic division of western Europe and, once again, Algeria. Three months ago this agenda of priorities would have seemed entirely fanciful. The summit was then being given pride of place in the natural order of things. Mr Khrushchev was still assumed to be in deadly earnest over Berlin; there was little or no talk then of concentrating on disarmament at the summit simply, as Mr Walter Lippmann has suggested, to provide a bone for famished diplomats to gnaw at.

Three months ago the West was still concerned to bring a semblance of coherence and agreement into its attitudes towards the Soviet Union. The question of a joint policy on Berlin, left unanswered in Paris in December, had to be resolved. General de Gaulle's desire to visit Washington encouraged the belief that this confrontation might be decisive in framing United States policy before the meeting with Mr Khrushchev at the conference table. The general's impending arrival, no less than Dr Adenauer's, gave comfort to the American advocates of a hard line towards the Russians. Now all is, or seems to be, transformed.

The four western foreign ministers, after meeting in Washington last week, dispersed with a sense of togetherness that brought a ring of surprised sincerity into their fraternal affirmations. Nothing was reduced to a half sheet of notepaper, but the impression was left that, while the British and Americans accepted the Franco-German starting point for the discussion of west Berlin at the summit, both General de Gaulle and Dr Adenauer are now readier than they were to agree to fall back on the final western offer to Mr Gromyko at the foreign ministers' conference at Geneva last summer. Presumably Mr Khrushchev will consider it in his interest to precipitate this western retreat as early as possible. It is at this point that the West may find itself in Paris in its familiar quandary over Berlin—and it is this danger that still needs to be discussed at Camp David.

DR ADENAUER, although agreeing with Mr Eisenhower that Berlin should be taken up at the summit, remains adamant that no western concessions at all can be considered. Until Mr Khrushchev arrived in Paris last month this was known to be General de Gaulle's opinion as well. Nothing that transpired at Rambouillet to alter the general's assessment of Mr Khrushchev's strategy has been made public. Even so, the impression has got abroad that Mr Khrushchev no longer accords the Berlin question the same priority that he did in November, 1958. This may be true in itself; there are sound reasons why Mr Khrushchev might prefer to discover the identity of Mr Eisenhower's successor before determining the exact form of coexistence that he considers it most profitable for the Soviet Union to pursue. But this is not the basis on which the West can safely conduct its Berlin policy until either time or Mr Khrushchev creates a new, and potentially more unfavourable, situation. It remains to be seen whether the effect of General de Gaulle's arguments at Camp David will be to encourage Mr Eisenhower to accept the present semblance of western unity and travel to Paris hoping that Mr Khrushchev will let him off lightly; or whether Mr Eisenhower is really determined to get to grips with the Berlin problem before his presidency expires.

General de Gaulle has already ruled out in Ottawa the possibility of serious negotiation about German unity at the summit. If, by playing down the German issue, he means to avoid discussion of an interim arrangement on Berlin, he is plainly at odds with Mr Dillon, who declared on Wednesday both that Germany was the key problem and that the United States was ready to negotiate a temporary Berlin settlement. This can be cleared up at Camp David.

The terms the general requires from Mr Khrushchev are the easing of tension and the lifting of any threat "in connection . . . with the problems of the German people." Mr Khrushchev may reply that since his talks at Camp David there has been, in fact, no overt Russian threat; what he now seems to be chiefly concerned about is not to be made a fool of. General de Gaulle can afford to take Mr Khrushchev at his word. If he has any doubts of the strength of the American stand on Berlin, his interest now is to get the United States committed at the summit in such a way that Mr Eisenhower will not be left too much room for manœuvre when he goes to Moscow in June.

For the rest, General de Gaulle wants a beginning to be made at the summit on nuclear disarmament, and he obviously means to evoke (as M. Edgar Faure did in 1955) the organisation of economic aid to underdeveloped countries. Neither of these will be plain sailing in Washington. It is not easy to conceive of the Americans (or the Russians either) agreeing to forego such political advantages as their direct allocation of economic aid now gives them, although some token international organisation, and equally token contributions to it, may eventually become possible. The general's ideas on nuclear disarmament, particularly the progressive elimination of the "nuclear vehicles" (missiles and aircraft), have already been canvassed by M. Moch without arousing manifest attention by either side in the present state of the detente. Although General de Gaulle is not without supporters (as our Ottawa correspondent reports on page 339) it seems too early to take up the idea of controlling airfields and missile sites. It has been difficult enough for the Eisenhower administration to make its collective way to the brink of banning tests, and Mr Khrushchev, too, may prefer some experience of the successful working of this type of control before submitting to the supervision of his nuclear striking force.

If the satisfactorily controlled suspension of nuclear tests fails at the summit, no bolder leap is likely to succeed. Since the general has insisted that France will not accede to such a ban—a statement that he has repeated in Westminster Hall and Ottawa—he is likely to win little response from either Mr Eisenhower or Mr Herter, who have committed their political reputations to the attempt to secure just such an arrangement with the Russians. Mr Khrushchev's complacency in the face of the two French tests so far this year does not suggest that General de Gaulle's isolation spells any immediate difficulty for anyone except himself. But the necessity of including France (and the French Community) and China in any monitoring system must be given increasingly higher priority in American calculations after the November elections. The discussions at Camp David now should at least survey the debatable land.

If United States policy comes to fear an incomplete monitoring system more than it does the sharing of nuclear secrets with France, General de Gaulle may hope to have his way in the end. The British abandonment of Blue Streak has encouraged those Americans who are opposed to giving any assistance to the general in building up his own independent deterrent. But if Mr Watkinson means to present a shopping list for missiles in Washington, how can General de Gaulle be turned away empty-handed? Whatever the British and European impulses towards building a joint European deterrent, the gap until such a missile system could be created can be bridged only by American help.

IT would be idle to contemplate a frank exchange between Mr Eisenhower and General de Gaulle that excluded at least some limited and veiled discussion of the future of Nato and Algeria alike. It is not clear whether the familiar records (which the interpreters, at least, should now know by heart) will be played again, or whether either side is anxious to inject some urgency this time. Mr Eisenhower has good reason to

inquire exactly what General de Gaulle's present plans for Algeria are, and somewhere in the State Department there must be a voluminous file on the means of internationalising the dispute if all else fails. For the present, the general may not worry unduly about this. Short of a disastrous worsening of the Algerian situation the Americans are likely to do nothing until after November, and the general may reflect that he is, after all, the first Frenchman to arrive in Washington since the end of the war with something in the bank. Even so, as long as Algeria remains unresolved there is always a short American answer to the general's plans for a three-power western directorate girdling the globe. On that, there is not much satisfaction that he can expect.

In London and Ottawa General de Gaulle has been at some pains to emphasise the essential unity of the western nations, without suggesting any particular urgency in negotiating on their outstanding problems. In Washington he may enjoy the personal success and recognition that Roosevelt denied him: it is no more than his due. But a journey to Washington that does not come down to the essentials of politics is not worth making. It is on the alleviation of the persistent and deep-seated discords that have bedevilled Franco-American relations that General de Gaulle's mission depends and must eventually be judged.

Up the World Government Path

Not many people have noticed how very far the Western disarmament proposals really go; and those who have noticed have, for interesting reasons, not drawn attention to it

IN the month of March of the year of grace nineteen hundred and sixty, the governments of the United States, the United Kingdom, Canada, France and Italy jointly proclaimed their readiness to abdicate their sovereign authority, and invited all other principalities and powers to join with them in accepting the rule of a universal world authority that should bring lasting peace to a troubled earth. (Reader, read on. This is not one of *The Economist's* occasional fantasy pieces. Just the facts.) It was understood that their proposals were generally approved by the governments of Australia, Belgium, Denmark, Greece, Holland, New Zealand, Norway, Portugal, Turkey, and quite a few others. The full text of these somewhat historic propositions was duly published by various newspapers and numerous commentaries were also printed. The net reaction of a public which is supposedly rather keen on lasting peace was resounding apathy.

Perhaps this is not so odd as it sounds. The five governments' shattering suggestion was made in the context of the long-drawn-out discussion about disarmament, which only a few persevering spirits have managed to follow through all its convolutions. And it was not, to put it mildly, spelt out very clearly for the lay reader's eye. But it nevertheless amounted to nothing short of a proposal for a world government.

In their joint disarmament plan of March 16th, the five powers proposed the creation not only of a new international disarmament organisation (IDO), whose task would be to watch over the process of general disarmament, but also (paragraph I.F.7) a separate "organisation, to be an organ of, or linked to, the United Nations," charged with "preventing aggression and preserving world peace and security, as national armaments are reduced." This peace-keeping organisation, which may as well be dubbed the PKO for short, would be initially established during the second phase of the five-power plan (paragraph II.J), and during the third and final phase its "build-up of international law enforcement capability to preserve world peace" would be completed.

It may be argued that this PKO would not constitute a world government, as its functions would be limited to those that the preservation of peace necessitates, and it would be given no powers to interfere in any other political field. Formally, that is correct. But form is not substance. In substantial fact, the PKO would inevitably find itself both involved in enforcing its own political decisions upon sovereign states, and (if the assumptions of the plan were realised) powerful enough to do so. Would that not make it a world government in all but name?

As regards its military power, there can be little room for dispute. If the PKO is to be equipped with enough military strength to enable it to prevent even the largest of national states from committing aggression, it must obviously be militarily stronger than any possible combination of nations. In the generally disarmed world under consideration, this would not necessarily mean that the PKO would have vast armies, air forces, fleets and nuclear armouries; it might require only a few quite small "conventional" establishments, distributed so that they could deal quickly with inflamed frontier disputes and so forth, and backed by a relatively modest —but unrivalled—nuclear striking power. But it would have to be irresistible, or it would fall short of its stated purpose.

The proposition that the PKO would inevitably be drawn into political controversies is only a little more complex. One need not postulate the capture of the PKO by some guileful group of megalomaniacs intent on setting up a world dictatorship. It might be controlled, under the most elaborate system of safeguards, by the most dedicated and cautious team of Hammarskjöld-figures imaginable, and still find itself getting involved in matters that at first sight had nothing to do with its formal functions.

FOR the plain fact is that keeping world peace is not just a simple matter of occasionally calling upon an aggressor to refrain from trespassing across one of the frontiers that slice with such misleading simplicity across the map of our world. Let it first be remembered that a United Nations committee has spent several years trying to agree on a definition of "aggression," and has given up in despair. Let it be further noted that indirect aggression is today (not for the first time) fashionable. It is not done to issue a blunt declaration of war and send in the army (or the gunboats). It is more usual to set up a puppet rival government in some corner of the victim state's territory over which its legal government has failed to

establish control, and then to respond to its appeal for aid; or to send in "volunteers"—properly organised, if need be, with tank divisions, lieutenant-generals, family allowances and periodical home leave, but not to be confused at any price with the regular army formations that simultaneously vanish from their home stations; or to declare that one is intervening in order to prevent somebody else endangering the peace; or to say that the other fellow's maps are wrong and that the place your troops have seized actually lies within your own frontiers; or to give enthusiastic but formally discreet support to a guerrilla rising just across the line.

If the PKO were to let such complications deter it from taking any action, it would not be doing its job. If it were not deterred, it would be forced to take a political decision each time. If it relied on the United Nations to hand decisions down for it, it would find itself just as hampered as the UN has been by voting procedures and delaying tactics. If it were organised to take quick decisions for itself, they would have to be based on some set of principles. That in turn means that the PKO would have to think out a political programme in advance of the crises that might come its way; and it would soon find itself assuming an openly governmental character.

Its foremost problem would be to decide whether it should automatically act to preserve the status quo through the world, regardless of circumstances. If so, it would in some cases be doing the job of the Holy Alliance far more effectively than anything Metternich ever conceived. It would, for instance, be obliged to help Herr Ulbricht to suppress any German rising against his regime, for it would be impossible to prove that such a rising was not encouraged from west Germany, whose mere existence is an encouragement to sedition in the Democratic Republic. It would have to force Tunisia to evict the Algerian rebel leaders and to stop providing their forces with lines of communication and supply. It would have to guarantee the Trujillo regime in the Dominican Republic against any form of action that Cuba or other Caribbean countries might take to bring about the downfall of that petty dictatorship. It would have to underwrite in perpetuity the existing bisection of Vietnam, Korea, Germany—and China. It would have to defend any African colonies—mainly, one imagines, Portugal's—that might still exist after it had got itself organised. It would have to stream like a thundercloud against the "wind of change."

The alternative, while less unthinkable, would be far more complicated. If the PKO took it upon itself to decide when and where the forces of change required the alteration of frontiers or regimes, it would be in the world government business with a vengeance. In Korea, for instance, it might find itself obliged to depose both governments and impose its own rule until the Koreans had established a sufficiently popular one to avert the threat of further conflict. Can one then visualise the same principle being applied to China?

IT is hardly surprising that the five powers have been reticent about this aspect of their new proposals. What is more surprising is that the Russians as yet have not concentrated their attack upon it—or not, at any rate, at Geneva; the Soviet press was not slow to point out to its readers that the western disarmament plan concealed an imperialist plot. Moscow must be aware that, in this age of nationalism, it could win support from many other governments if it came out as the sworn foe of any notion of world government—especially if this notion took the form of a guarantee of the status quo. But it hesitates to make this move. Can it be that, abhorrent though the whole thing seems to most of the politicians for whom it implies dethronement from their national dunghills, even the Russians suspect that among the masses of the world's peoples there may be a growing readiness to accept world government if that is the only real alternative to war?

Holes to Fill

The dental profession is in a bad way, and the nation's teeth in an even worse one

"EVEN the fact that Englishmen have bad teeth can tell one something about the realities of English life," wrote George Orwell in 1941. The realities in this case are harsh. Teeth are one of those things that decay as civilisations (and sugary diets) prosper. With the exception of New Zealanders, the modern Briton is believed to have the worst teeth in the world. As many as forty per cent of the population now wear dentures of some kind, and by the time the present generation of children has grown up the proportion is likely to be much higher. Research has shown that the average five-year-old today has twice as many decayed teeth as his counterpart ten years ago, and that not one child in a hundred now reaches the age of 11 with perfect teeth. A recent survey in Staffordshire reported that only half the children there even have a toothbrush. In a country which prides itself on the availability and excellence of its medical care, these figures are a national disgrace.

There are three main reasons why the British have such bad teeth, compared even with other prosperous countries. The first is the public's surprising indifference to dental care—indifference that the millions of pounds now spent on other beauty aids like deodorants, cosmetics, soaps and perfumes, seem to have done little to alter. The public, especially in the north of England, still tends to take the view that false teeth are a perfectly good substitute for real ones and that the best answer to bad toothache is to extract the lot and use dentures (the latter at a total cost of £8 10s. the set, but half of it paid by the state). Parents often resent having to take their children to the dentist at all; one father's reason for this, "that in his family there was a tradition of giving the children a set of false

teeth for their 21st birthday," is reported to be surprisingly typical. Attitudes towards dentists are not only regional (varying between the North, which shuns them, and the South, which tolerates them), but also depend on social class. While most boarding schools are able to insist on one, if not more, visits to the dentist a year and on frequent tooth cleaning, state schools have no such powers. It seems a fair assumption that nearly the whole of that tenth of children who never clean their teeth in any way are in the state education system.

The second factor making for bad teeth is the British diet. With its high content of sugar, biscuits, sweets and pulpy bread, it is notoriously liable to lead to tooth decay. In particular the close correlation between bad teeth and sweet-eating (a British speciality, average expenditure 1s. 10d. per head a week) is beyond doubt. During the war children's teeth became much healthier; they continued to be so until 1953, when the ending of sweet rationing started the present steady decline. Comparison over a longer period is even more painful. Of a sample of teeth of Neolithic Age men whose skulls have been dug up in Britain and examined by experts, 8 per cent have been found defective; of a sample of Bronze Age teeth 3½ per cent; of a sample of seventeenth century teeth (when sugar was still a luxury) about 20 per cent; and of a sample of postwar teeth 48½ per cent. Meanwhile, techniques like water fluoridation, which could offset the bad dental effects of the modern diet, have proceeded in England at only a snail's pace. In spite of convincing proof from America and elsewhere that a minute quantity of fluorine in water helps to protect children's teeth and has no harmful effect, the conservatism of some dentists—coupled with the vigorous campaigning of purist bodies like the Housewives' League—have stopped all large-scale fluoridation schemes here. Only three local authorities have so far tried them—all with success.

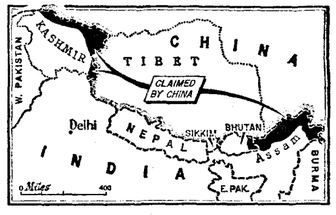
THE other main reason for the bad state of children's—and adults'—teeth is the chronic shortage of dentists. The British Dental Association, to which the majority of dentists belong, estimates that there are about 16,000 active and retired practitioners in this country, about 1 to every 3,270 of the population; in Canada the ratio is 1 to 2,790, in Norway 1 to 2,000 and in the United States (the world's most teeth-conscious country, where toothpaste consumption per person is double its level here) 1 to 1,667. In the near future British dental manpower is likely to decline further; the flow of newly qualified dentists into the profession is insufficient to offset the fact that a considerable number of dentists are now approaching retiring age. There seem to be two reasons for the shortage. The first is the extraordinarily low proportion of women dentists in this country—only 8½ per cent in England, according to the latest available figures, compared with 25 per cent in Sweden and 80 per cent in Finland. Yet dentistry is ideal work for women since it requires care and sympathy (especially for children), and can also profitably be done part-time.

Appointments, Business and Personal notices, and other Classified Advertisements: pages 370, 381/2 and 383

The second factor is that young men appear to be deterred from becoming dentists by the pay. At first glance this is extremely surprising. The recent Royal Commission on Doctors' and Dentists' Pay showed that, at least in the early stage of his career, a dentist is the best paid of all professional men. Such is the shortage of qualified dental assistants that an able young man who is prepared to work long hours can expect to earn up to £2,000 a year in his first year after becoming qualified; median salaries of 30 to 35 year-old dentists, at £2,270, are still higher than doctors'; while the top ten per cent of dentists, who earn over £3,870 per annum at 30, do about one-third better than any other equivalent professional group. But then comes the rub. Dentists are paid by results, and the results fall off with age. Long hours of standing, combined with considerable concentration, take their toll. After the age of 42 dentists' earnings begin to fall steadily; at 60 they are only half of what they were twenty years earlier. There is thus an onset of professional discontent just when a dentist reaches the age when he helps his son to decide what career to take up. Recent sharp increases in dental productivity (as a result of faster drills) have only accentuated this curious pattern of earnings, which will remain so long as dentistry is paid as piecework.

THE blackest spot of British dentistry is the school dental service. Even before the war, the schools had far too few dentists; but when the health service started in 1948 dental earnings in general practice were so high that there was a mass emigration from the schools. The school dentists who remained, whose salary scale even now rises only to £1,700 a year, were underpaid both in relation to the rest of the profession and to the hours they worked. As a result, the service virtually broke down; preventive dentistry in schools almost disappeared; and some children, who were swamped among 30,000 other names on a single school dentist's list, were never seen at all. Things have improved slightly since the late forties, but school dentistry is still often makeshift. It is conducted predominantly by older men whose productivity is falling and who are thus attracted by the safe salary.

One thing that could improve the school dental service would be the recruitment of more women dentists; another, which is now being put on trial, is the training of ancillary workers who would be able to do routine work on children's teeth, after a shortened training course. Sixty such workers are now being trained under the supervision of the Ministry of Health and the General Dental Council. This is a small start, but no more than that. The dental profession is still rather bull-headedly opposed to any dilution of professional skill (dentists are always ready with a story of newly-qualified men from the Commonwealth making thousands of pounds a year by putting in bad fillings). With more reason, the profession feels that if extra Government money is to be spent on dentistry, a good deal of it should go towards providing more places in the dental colleges and on fundamental dental research. The MacNair committee on the recruitment of dentists accepted this view in its report in 1956, but as yet the Government has done little to put the committee's recommendations into practice. Its tardiness reflects the general disinclination to spend money on hospital building that has been one of the least satisfactory aspects of Government investment policy since the war.



NOTES OF THE WEEK

CHINA AND INDIA

A Chill at Delhi

THE working part of Mr Chou En-lai's tour of south Asia began at Delhi on Tuesday. Before leaving Peking he had told the People's National Congress that "no matter what complex questions may have been left over from history," China and its neighbours could solve them by obeying the five principles of peaceful co-existence. His first stop, at Rangoon last weekend, gave him a further opportunity to proclaim China's peaceful intentions. There it was easy for him to be a good fellow—China and Burma patched up their border quarrels at Peking in February—but from the moment he set foot on Indian soil at Palam airport, it was clear that things were going to be different at Delhi.

Having put aside those fulsome phrases of welcome ordinarily required by oriental hospitality, Mr Nehru read a carefully prepared and stiffly worded statement in which he blamed the Chinese for the present state of tension between the two countries. He allowed it to be understood that the boundary problems which Mr Chou had come to settle were not even going to be dis-

cussed until good faith had been restored and the Chinese had returned to the observance of the five principles which they and the Indians had once signed together. The ten-mile route from the airport to Delhi was deserted, except for the 5,000 policemen who were posted along the way. There were signs that when Mr Chou unpacked his maps and documents he would have difficulty getting any Indians to look at them. The chilly reception he was getting from officials and the public alike might even lead him to wish he had brought along a few comforting books to read during the six days.

By now, the Indians have staked their national prestige on their own border claims. The kind of give and take that enabled General Ne Win to reach a preliminary settlement of Burma's frontier problems is denied to Mr Nehru, who insists that he intends to give nothing away. The only way out of the present deadlock is for Mr Chou to take the unlikely course of giving up all his claims. Failing this, the Chinese can only go away muttering about unreasonable Indians. Mr Nehru, having taken up the stance that public opinion at home expected of him, can only hope that China's other neighbours will applaud the unyielding position which the smaller countries cannot afford to take, while he, perhaps, can. But can he? Merely to rebuke the Chinese will leave him with a source of friction and uncertainty on his borders—wherever they may turn out to be. For his part, Mr Chou will surely be glad to move on northwards to Nepal on April 25th.

SOUTH KOREA

Embarrassing Allies

REPRESSION is no more acceptable from a home-grown government than under foreign rule. By ignoring this simple truth, President Syngman Rhee, of South Korea, has turned the clock back more than forty years. The thousands who braved the fire of his police and army in this week's riots are reported to have kept up their morale with shouts of "Remember the spirit of 1919." The tragic irony of this situation ought not to be lost on President Rhee, for he was the leader of the Korean revolt of 1919 against Japanese rule, which the Japanese suppressed with a ruthlessness that seems now to serve him as a model.

Yet he now confesses himself perplexed, grieved and incredulous at the behaviour of the Korean people. As though to dissociate himself from the actions of his own ministers, he has accepted the cabinet's resignation.

The present riots, which broke out simultaneously in Seoul and other cities and were probably, therefore, concerted, were in protest against "dictatorial government" and against the brutalities and unfair practices that marked the south Korean presidential elections last month. The character of President Rhee's regime has been known for many years; but memories of the Korean war, and awareness of south Korea's exposed position as the non-communist half of a divided country, have acted as a brake on comment. Now the American State Department and the Secretary of State himself have broken a long silence. In expressing his government's "profound and growing concern," Mr Herter has, in effect, served notice on the smaller allies of the United States that to enjoy American economic and military aid is not to be immune to criticism from Washington. There are suggestions now that President Eisenhower may not feel able to go through with his recently formed intention of visiting South Korea in June.

This is the second time in a month that the State Department has commented tartly on the domestic affairs of another country; the first was after the Sharpeville massacre. If this is the beginning of a new policy, the Dominican Republic may not have to wait its turn much longer.

CENTRAL AFRICA

Untimely Sir Edgar

SIR EDGAR WHITEHEAD, Prime Minister of Southern Rhodesia, is coming to London on Saturday on a singularly ill-timed mission. He will ask for the excision from his colony's constitution, which is embodied in the curiously named Southern Rhodesia Annexation (Order in Council) 1923, of those half-dozen clauses which reserve a power of veto to the imperial government if local legislation should be deemed discriminatory against African interests. Sir Edgar contends that as Southern Rhodesia was on the point of getting Dominion status when it entered the Federation, it has a moral right to the removal of these clauses. He claims that they cause ridiculous administrative hold-ups. In reality, his dislike of them has developed since he was stung by British criticism of the repressive legislation which he passed during and after the emergency declared in Southern Rhodesia at the time of last year's riots in Nyasaland. In the ferment of anti-British feeling in Southern Rhodesia he has now found it useful to threaten that, unless he gets what he wants, Southern Rhodesia will secede from the Federation.

The mainly emotional nature of this mission is shown by the fact that Britain has never made any use of its powers to veto Southern Rhodesian legislation. Much as some people here would like to use them, it would be impossible to dust off and use these powers without turning Southern Rhodesia upside down. The Land Apportionment Act, for example, is almost certainly a contravention of what the constitution lays down on native reserves; it is also the most potent stimulus to dangerous agrarian unrest in Southern Rhodesia, but Sir Edgar will not have noticed that.

What Sir Edgar should notice, however, is that in the present state of the African imbroglio, his threats to leave the Federation (which, incidentally, he has no legal right to implement) will not worry anyone in Britain. They are beside the point. What

he should be worrying about is whether any basis can be found on which the three states of Central Africa can in their own interests remain associated, and whether he can contribute personally to saving what little of Federation can now be preserved. His present line is making a break-up the more certain. But Dr Banda and Mr Kenneth Kaunda, the Nationalist leader from Northern Rhodesia, should soon be back from the United States. Would it not be a helpful (however difficult) thing if, in preparation for the Monckton Report and the constitutional review, Sir Edgar could essay some personal contact with them? Then his visit could be useful.

SOUTH AFRICA

Agreement to Parley

From the announcement by Mr Hammarskjöld that Mr Louw, the South African minister of external affairs, will discuss with him in London the Security Council's resolution expressing concern about South African policy, it appears that South African anxiety about the state of the Union's relations with the rest of the world is very real. The talks with Mr Hammarskjöld will follow the Commonwealth prime ministers' conference at which, formally or informally, South Africa's racial policy will also be raised. It is, therefore, all the more unfortunate that Dr Verwoerd will not be present in person to conduct the talks and measure the strength of world feeling about South Africa; as one of the most isolated and provincially minded members of his government, he might have benefited. It is not, however, easy to see what fruit can come of the talks, for in the past week it has been made abundantly plain that repression is to be the order of the day. The failure of the call for a strike among Africans will further convince the government that repression is the only policy—which proves that "it was all the work of agitators." In a much-discussed pronouncement, Mr Sauer, the minister of lands, has said that "set policy" will remain unchanged, but will be applied in a new way; how apartheid, under existing laws, can be applied kindly is a conundrum to be unravelled. The overriding fact is that not only the Africans but the press and white public opinion have been stifled, the law made a rubber stamp, and day-to-day government handed over to the police and the army. The question is how soon South Africa can emerge as some form of a political state again.

UNIVERSITIES

Split on Means Test?

It was generally expected that the Anderson committee's report on awards to universities and comparable institutions would appear this week. When it did not do so, it was rumoured that the committee could not agree on whether to abolish the means test, whereby anybody who wins a scholarship from the state or a local authority must produce a statement of his parents' income—and, if this exceeds a certain minimum, has his award trimmed accordingly. A split on this issue seems likely enough. The subject bristles with difficulties and anomalies.

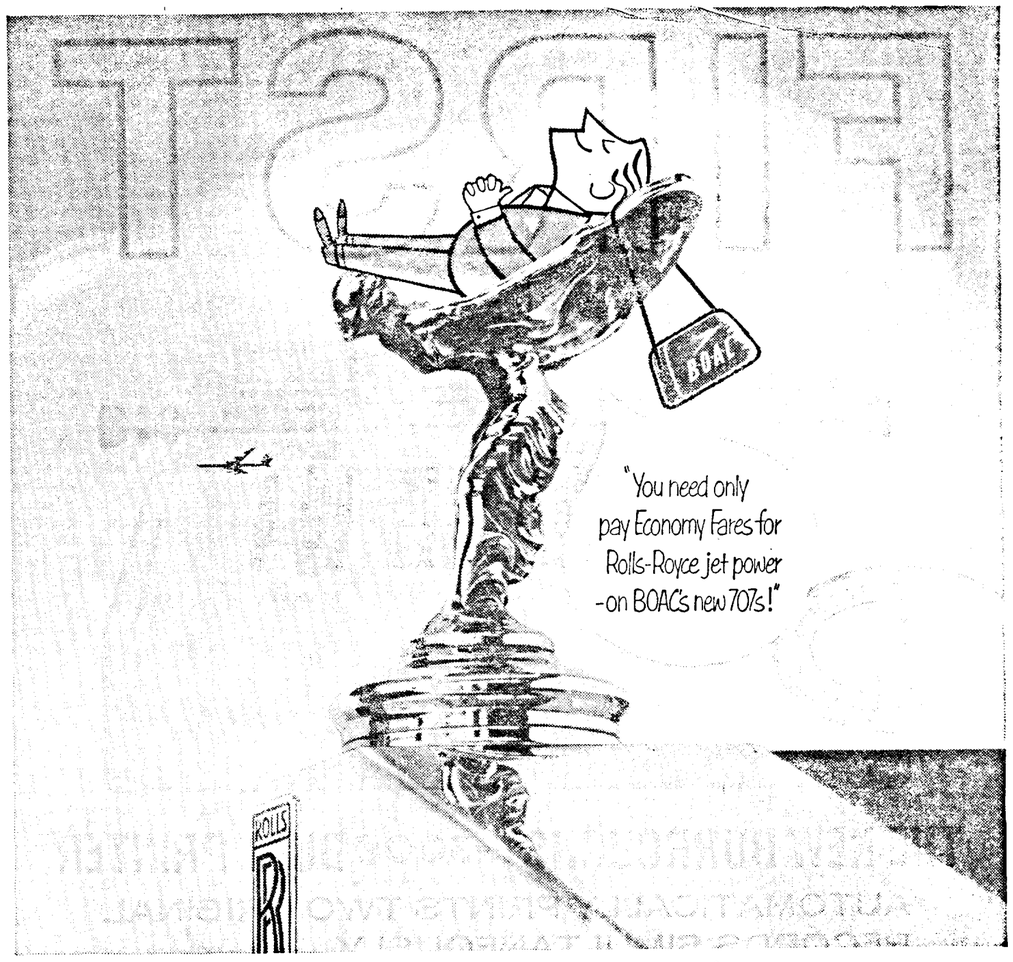
Despite several recent amendments to the means test scheme, the present system still bears hardly on some parents: especially on the middle-class salary earner, who lacks capital, who has the inevitable overheads of keeping up the appearances that go with his salary, and has been unlucky enough to produce two or more clever children at regular intervals of two to three years. Unless there is a rich relative in the background, some middle-class award-winners have to accept the alternative of going into industry from school—often, nowadays, with a promise that the firm will pay to put them through the Dip.Tech. by a sandwich course at a College of Advanced Technology. In fact, they will then probably emerge better off than a young man with a second in history at Oxford. Such impoverished students are the guts of the rising CATs, but that does not dispose of a parental sense of injustice.

To abolish the means test would, however, cost over £3 million a year; and in principle, if means tests for other social services are right, the parental contribution should remain—unless one accepts the argument that these awards should be regarded as "earnings" by the young people themselves. On balance, the wisest course for the Anderson committee would be to make yet another—but this time, please, definitive—set of suggestions for adapting the means test more fairly to especially difficult circumstances.

EDUCATION

Curtain on Crowther

The Easter conferences of the teachers have been crowned by an important statement of educational policy—Sir David Eccles has thrown the Crowther report overboard. In his address to the National Union of Teachers he blithely cast away even the half-promises he gave to the House of Commons to press on with part-time further education and to reconsider the question of the school-leaving age in five years' time. Getting enough teachers to reduce class sizes is all that remains of his previous speech on the Crowther report—and he no longer conceals a robust Tory distaste for compulsory education beyond 15. This speech is the more remarkable in that it followed the endorsement by the conference, under the guidance of a wise and thoughtful speech by Sir Ronald Gould, of the Crowther report's insistence on a phased educational timetable geared to the raising of the leaving age. This disposes of the Government's excuse that "all the teachers" were against the Crowther report, although the National Association of Schoolmasters turned it down.



Sir David made good tactical use of the widespread feelings of teachers that the reduction of class sizes is very important to them; what they fail to appreciate is that, with the Crowther timetable out of the way, the Government may presently start to drag its feet on the reduction of class sizes. The teachers lay themselves open to this finessing by the single-minded way in which they see educational expansion as a royal road for raising the basic pay of women primary teachers and creating the unified professional closed shop which would further increase their bargaining power. As, however, the NAS's sentiments on raising primary school salaries appear to coincide now with the NUT line on the Burnham scale there seems reason to think that a marriage between these bodies may after all be arranged. Evidently the NAS recognises that unity in the profession is like peace in marriage life—doing what the woman wants. Easter has been a time of victory for the educational vested interests.

INDIA

Compassionate Bankers

It would be easy to dismiss the short trip to Pakistan and India undertaken by Herr Hermann Abs, Sir Oliver Franks and Mr Allan Sproul as a too general reconnoitring of familiar ground. Their letter to Mr Eugene Black, president of the World Bank, about the tasks of economic development in the two countries is not a formal report—a bundle of impressions is how they describe it, and most of their impressions have been impressed on less exalted visitors forcibly and frequently before. The capacity of senior officials and prominent businessmen is praised; the scarcity of managerial talent away from the centre is deplored. The rates of development that both countries are contemplating are seen to be the barest minimum—and yet the commitment of resources to achieve even these advances is sufficient to stagger any hard-faced banker.

The keynote of these bankers' conclusions is their broad acceptance, from their distinctly differing standpoints, of the view that outside aid must consist substantially of grants or loans not made on strictly commercial terms. That economists have long held this view should not minimise the importance of bankers being persuaded of it too. The totals of outside aid envisaged for Pakistan and India for their next five-year plan periods are put at £3,000 million, and the three bankers usefully draw attention to questions about the scale, character and organisation of such formidable assistance. First, this is an indefinite commitment and

THE NEW BURROUGHS F-5000 DUAL PRINTER

AUTOMATICALLY PRINTS TWO ORIGINAL RECORDS SIMULTANEOUSLY...

Burroughs' new Series F-5000 offers the advantages of fully automatic accounting combined with **two printing heads that provide twice the printing productivity! This machine is the only fully automatic accounting machine specifically designed to handle all accounting jobs requiring simultaneous, original print on two or more records. The F-5000 is equally effective on accounting jobs that call for single head printing, because the printing heads can be used individually, thus reducing carriage movement. And yet, the F-5000 is so simple to operate that** any clerk can learn its operations in a few minutes and become expert within a few hours.

This new machine is just one more example of how Burroughs' continuing research programme and world-wide manufacturing facilities make it possible for Burroughs to offer machines that meet the individual requirements of businesses everywhere. For complete information contact your nearest Burroughs office or Burroughs Adding Machine Limited, Avon House, 356/366 Oxford Street, London, W.1. Tel. Hyde Park 9861.

NEW DIMENSIONS IN ELECTRONICS AND DATA PROCESSING SYSTEMS

no Marshall Plan concept for a fixed term. Secondly, much of the aid must be government to government assistance—with problems at both ends, since the providers have their own electorate to satisfy and the receivers must temper their ambitions and even their attitudes accordingly. The emphasis on improvements in agriculture and local food supplies, the reminder that low rates of interest do not march very sensibly with a high scarcity of capital, and the argument for encouraging more private investment are welcome footnotes to a compassionate and unbanker-like view of the problems of India and Pakistan.

TURKEY

The Muzzle

TURKISH political life has long been out of sorts, with increasingly violent bouts of fever. But on Monday Mr Menderes's government chose to administer a medicine more likely to prove an irritant than a sedative. A parliamentary commission, made up entirely of members of the ruling Democrat party, was appointed to investigate the allegedly "destructive, illegitimate and illegal activities" of the opposition People's Republican party. It has started by banning all party political activity for three months. It has also banned all press reporting of the, at times, very violent debate in the Assembly on Monday as well as of its own future proceedings. Copies of the opposition newspaper, *Ulus*, containing accounts of the speech made in the

Requiem for OEEC

WHEN the "Dillon committee" of 13 governments met in Paris in January to discuss the problems of European and world trade it was, not surprisingly, torn by the basic differences between the Six and Seven. On the one hand the members of the British-led Free Trade Association—the Seven—wanted to discuss the division within western Europe, and a European free trade area to close the split. On the other the European Community (the Six) wanted the European problem to be submerged in worldwide talks; and they were backed by the United States government, whose new acquaintance with balance-of-payments problems has given it a new interest in a broad freeing of world trade. The problems were handed on to a new committee of 20 governments with an ambiguous mandate embracing (again) the problems of both European and world trade; this has met once, with slim results.

The same problems and divergences also found reflection in a discussion on organisation and procedures. Since the birth of the Community of Six, the Organisation for European Economic Co-operation, which for ten years had been the principal organ of economic co-operation for all western Europe, has been left on the shelf. Its purpose has disappeared and its staff has become correspondingly discouraged as its main task, the expansion and freeing of trade in Europe, has been taken over by the Six and the Seven. At the Dillon meeting in January the Seven still hoped that this organ of "big Europe" could be restored and made the vehicle of a free trade area or "bridge" between the Six and Seven. The French, by contrast, were anxious to kill off this last symbol of a larger Europe so that their community could forge ahead free from obstruction by the slower European brethren.

HERE, once again, they were in part supported by the United States. America's commercial interest in broader world arrangements encouraged it to support, if not the abolition, then at least the enlargement of OEEC into a looser grouping which it could join itself. So a second committee was formed of four men, a Frenchman, an American, an Englishman, and a Greek. These four were to speak for themselves but would, in a sense, represent the views of four groups—the Six, the Seven, the United States and the remaining European countries. The task was to seek a common position on the vexed question: should OEEC be killed, cured, or enlarged?

These four men have now published their report. They deserve praise for the fact that they have indeed managed to find a certain amount of common ground. They have agreed that a reconstituted organisation shall be enlarged to include the United States and Canada, and they have even found certain jobs for it to do. They have established unanimity that economic policies should be co-ordinated to attain rapid economic growth. The need for a greater co-ordination of aid to the undeveloped countries is widely accepted. So these jobs are given priority. The four do not suggest that they should be carried too far. In the economic policy field, for example, they do not suggest anything more than a reinforcement of the process of consultation and recommendation followed by OEEC in the past. But there are some new ideas. The suggestion, put forward elsewhere by the Greek member, Mr Zolotas, for a joint system of export credit insurance, has a mention. And a proposal is made for bringing the new nine-power Development Assistance Group which met in Washington last month under the organisation's wing.

It is suggested, too, that certain of the unobtrusive functional arms of OEEC—the European Monetary Agreement (which succeeded the European Payments Union), the European Nuclear Energy Agency, and the quiet work on capital movements and services, should carry on.

THE plight of the four wise men is only exposed when they come to the crucial question, trade. It is true that the four were not asked to solve it. That task they confessedly leave to governments. But their careful euphemisms betray the basic differences that lie beneath, and which in fact mean that they are unable to make any suggestions of importance at all. In one pathetic piece of diplomatic language they submit that "one might be tempted" to drop all the rules and procedures for trade co-operation which OEEC has developed in its twelve years of life since "active co-operation in the field of trade, limited to the eighteen European members of OEEC, runs up against the well-known objections which led the governments to give us our task on January 14." (Those objections are presumably French and American.) The report, it is true, then goes on to water down this mournful notion and say that there should be further trade liberalisation and that OEEC's procedures have a part to play. But there is no specific talk of tariff reductions, and much talk of Gatt. Convertibility has made OEEC's liberalisation code out of date, it is pointed out; but it is not made clear what is to replace it. Only by tortuous implication does it emerge that the organisation might possibly be called on in the question of the Six and Seven.

THIS vagueness on a matter which was the lifeblood of OEEC—trade—is not the only way in which the new, as yet hypothetical, organisation seems diminished in stature. The new body, it is true, will not be purely consultative, as the Americans at first proposed; it will continue to have powers of decision. But these, it is thought, will be less used than in the past. In one matter the four actually hope to strengthen the organisation: the secretary-general should be made chairman of the council at official level and of the executive; these are the bodies that are to carry on the work of the organisation from day to day. But nothing demonstrates more plainly the change in the status of the organisation which the wise men are describing than the new suggested name: "Organisation for Economic Co-operation and Development." The new jobs for the organisation outside Europe may be important. It remains true that the dream of OEEC as the expression of a united free Europe has passed away.

The report has still to be accepted by governments. But it is difficult to see what alternative is open to even the most stalwart advocate of the old OEEC. The four have, after all, not attacked the idea of a larger Europe. They have merely passed it by. And in that they have done no more than recognise the French veto. The wise men have done their work in a constructive spirit. All the same we are witnessing one more act in the slow, dragging funeral that began when the free trade area talks broke down in 1958.

Assembly by Mr Inönü, the PRP leader, were seized by the police.

Political tension has been rising steadily in Turkey. In the short term this is largely because of persistent rumours that the government intended to hold elections this spring instead of next year. (These rumours are now superseded by reports that the government intends after all to wait until next year at least.) A political tour of Anatolia by Mr Inönü early this month, during which the government ordered army units to prevent him from reaching a party congress in Kayseri, greatly exacerbated feeling on both sides.

In the long term, however, the heat and extreme bitterness of Turkish politics in recent years is due partly to a natural Turkish inexperience of democratic ways, and partly to the Opposition's growing conviction that Mr Menderes does not intend to play the democratic game fairly. In these circumstances, the muzzling of the Opposition's legitimate activity, even temporarily, will simply confirm its worst fears and therefore its more violent tendencies. The fact that the government party, too, must wear a muzzle is unlikely to help much. Possibly the opposition has overstepped the mark. But if that is so there should be open and judicial ways of dealing with it ; the findings of a commission composed entirely of its political opponents and working in secret will not carry much weight, either inside or outside Turkey.

SHIPPING BOYCOTTS

Swinging on the Pendulum

A BOYCOTT is never a tidy weapon ; its blows fall even more at random when the process snowballs, and there is a boycott against a boycott against a boycott. At the base of this ladder of shipping boycotts is the Arab blacklist of ships that have traded with Israel and the Egyptian refusal to allow ships carrying Israeli goods through the Suez canal. About two weeks ago, Finnish and Swedish dockers anounced that, out of sympathy for the inconveniences suffered by Scandinavian seamen, they would refuse to handle the cargo of United Arab Republic ships. This, which by itself is a fairly abstract gesture—the UAR has only one shipping line, and that one calls seldom at Scandinavian ports—was followed by the decision of American dockers to boycott and picket the Egyptian passenger-cargo vessel, *Cleopatra,* at New York. In retaliation Syrian dockers are leading a boycott of American ships which, if it spreads, will cause a tangle of trade and shipping in the eastern Mediterranean.

For Israel, the hope in all this is that when the pyramid of boycotts subsides, the original blockade of the canal will be swept away with the others. The argument that, on the contrary, the publicity will make it all the more impossible for President Nasser to allow any concessions, makes very little impression on Israelis who have already waited without much faith but with some persistence to see whether it pays to lie low and leave it to Dag. Mr Hammarskjöld worked out a formula that President Nasser is believed to have accepted. But, possibly because of some failure of communications, the *Astypalea,* a Greek freighter that was sent to test the bargain, was detained at Port Said from last December until April 8th, when its cargo was finally unloaded and confiscated. Commenting on this, the secretary-general admitted to setbacks but not to discouragement ; the Israelis, who see their hopes of Asian trade drift away, are less optimistic and have become less patient.

Fresh attempts by the Arabs to promote the anti-Israeli campaign have done little more than show up the deep cracks in their own front. Proposals for a Palestine entity, the training of a Palestinian army, and the diversion of the Jordan are all painful to one or other of the Arab states. In contrast the boycott and blockade swing along by their own momentum and it needs a steady hand from outside to check the pendulum. Western governments, living with the ghosts of past blunders, are inhibited from attempting anything—and indeed diplomatic pressure probably would do no good. The economic pressure started by the American and Scandinavian unions is bound to knock into a lot of obstacles ; yet, just possibly, it might have some effect.

SOVIET UNION

Summit Preview

IN the week that precedes Mr Khrushchev's second journey to Paris—this time for the summit meeting—outsiders will get a useful preview of Russian intentions. The Supreme Soviet (the parliament of the Soviet Union) has been summoned for May 5th; the date indicates that, once again, the Supreme Soviet is to serve as a platform for one of Mr Khrushchev's major pronouncements on foreign policy. He will have plenty to talk about. A description of his Asian journey, a balance-sheet of the French tour and a progress report on the disarmament negotiations in Geneva will serve to introduce Mr Khrushchev's hopes and proposals for the impending meeting at the highest level.

The agenda of this special session has not yet been made known. The last meeting of the Supreme Soviet lasted only two days—the 14th and 15th of January—and was called specially to enable Mr Khrushchev to announce a cut in Soviet land forces. This time other items may be included. Officially, any reform or personal change in higher administration requires parliamentary approval. Further reshuffles at the top are not to be ruled out. Still, it is safe to assume that Mr Khrushchev will be the chief performer and that foreign affairs will be his main theme. What he expects by now from the summit conference is not at all clear; the statesmen's successive journeys, including his own, have not done much more than whittle down what can reasonably be expected.

HORSE RACING

Self Help

THE levy proposed by the Peppiatt Committee of between £1 million and £1,500,000 from the profits of off-course bookmakers, to aid British horse racing, has been approved by the spokesmen of the bookmakers themselves. The money would go to increasing breeders' prizes and races' prize-money, to improving racecourse amenities and reducing admission charges. At present, breeders are obliged to sell too many of their horses abroad, to the detriment of British bloodstock. Racehorse owners' costs have doubled since prewar days, and their numbers have been considerably reduced. The prizes they compete for are already much less valuable than in France or the United States and France has recently announced a 25 per cent increase in all prize-money. Racecourse owners cannot afford to improve their property ; of the country's seventy courses, only five have been rebuilt since the first world war. Trainers' fees and employees' wages are unduly low. Many people in the industry live largely by placing bets on the basis of their inside information.

This is essentially a scheme for self help. The Government enters into it only because legislation is required to make the levy compulsory (a voluntary scheme for on-course bookies has already been tried and found inadequate) and because the scheme has been made possible by the requirement of registration for all bookies laid down in the new Betting Bill, which will provide the necessary check. Administration will be by the industry itself. Bookies are to contribute according to their means.

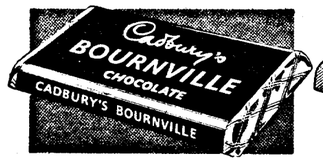
The Stewards of the Jockey Club, although generally welcoming the scheme, claim that the industry needs a larger levy, of at least £3 million a year. Judgment on this claim should be reserved ; once the levy principle is established, it would be sensible to leave the actual amount subject to periodic review. The outside commentator need make only two points. First, the levy should not be allowed to stand in the way of any Exchequer scheme to extract more tax revenue from bookies ; now that they are to be registered it is feasible, as well as sensible, to impose a special tax upon them. Nor, secondly, should the levy be used to subsidise small, uneconomic and unnecessary courses which occupy valuable building land in urban areas. A rationalisation (which means a reduction) in the number of Britain's under-utilised racecourses is an obvious way in which horse-racing can help to put its finances in order.

Cadburys

prices down! values up!

on chocolate bars and blocks...

Cadbury's believe in passing on to you the benefits of lower costs. Some ingredients used in a number of Cadbury lines have recently gone down in price. So here's good news of lower prices in some cases, and more chocolate for your money in others!

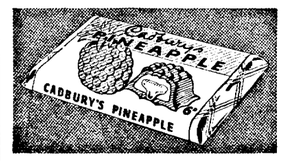


These prices down on ½ lb. & ¼ lb. blocks

Cadbury's Dairy Milk Chocolate
½ lb. size ~~2/3~~ ..... now only **2/2**
¼ lb. size ~~1/1~~ ..... now only **1/1**

Milk Fruit and Nut
½ lb. size ~~2/6~~ ..... now only **2/4**
¼ lb. size ~~1/3~~ ..... now only **1/2**

Bournville
½ lb. size ~~2/4~~ ..... now only **2/-**
¼ lb. size ~~1/1~~ ..... now only **1/-**



Mild Dessert
½ lb. size ~~1/5~~ ..... now only **1/4**

These 6d weights up

More for your money in 6d size Cadbury's Dairy Milk Chocolate, Fruit & Nut, Bournville, and Bournville Fruit & Nut; also 1/- size Cadbury's Milk Fruit & Nut and Wholenut.

And weights up for these filled blocks — Cadbury's Caramello, Peppermint, Coffee, Pineapple, Marzipan, Strawberry, Turkish Delight.

Quality unchanged

LONDON POLICE

A College for Constables

At present the vast majority of recruits to London's police enter it through a thirteen week course at Hendon, followed by a year and a half as probationary members of the force. The Commissioner of Metropolitan Police hopes that in future half of them may enter after a three year course at the police's own boarding college there, which cadets will be able to join between the ages of 16 and 18½—and at which they will also get ordinary education to GCE level. This new training scheme, which will make a modest beginning early in October, will, when fully in operation, turn out 500 trained policemen every year, half the annual recruitment to the force. Cadets under training will be paid a small salary, from which deductions will be made for board and lodging.

The scheme inevitably revives memories of Lord Trenchard's "police Sandhurst" of prewar years, also situated at Hendon, which closed down at the outbreak of war. In fact, the two have little in common. Lord Trenchard's scheme was designed to supply an officer élite: graduates started their professional careers as junior station inspectors, which aroused some rancour against these "college boys" among the ordinary flatfoots of the beat. The present scheme should avoid this; those who have passed through it will start off as constables at nineteen, and follow the normal line of promotion. An able man can expect to be a sergeant within five to eight years, and an inspector within nine to twelve. But the output of 500 a year means that nothing like all will attain officer rank.

In essence the scheme continues and expands the present cadet courses which have been in operation since 1951. The wastage rate of those trained under the present scheme is tiny compared with that of direct recruits, many of whom leave after one or two years. The ending of national service will ensure that the Force is no longer used as a bolt hole for shirkers. One has only one caveat: if London's police are to become increasingly a body of men who have been educated apart from the rest of the public, care must be taken to see that the education at Hendon is very liberal indeed.

MALAYA

End of the Emergency

Morally, the Federation of Malaya beat the communist insurgents some years ago, but the tenacity of the guerrillas kept fragments of the revolt going long after it had any value to either Russia or China; though no doubt it was looked on as good character training. But it has now been announced by the new Yang di-Pertuan Agong that the emergency is formally to end in July, the last areas in the Federation then becoming "white." Thus independence has, nearly three years later, been crowned by internal pacification. There is, however, no intention to rely wholly on normal processes of law to keep things that way. The constitution is to be amended to give the government the power of preventive detention without trial—and thus what was always supposed to be the most detested feature of colonial rule becomes a permanent institution of another independent Commonwealth state. It is a pity, but British liberals are getting hardened to it.

The scar of the communist insurrection in Malaya is, however, still fresh, the threat of communism in south-east Asia is not far off, and the language of the new provisions in the constitution is undoubtedly one that communists will understand. Malaya is a plural society, and the experiment under which the three races live together is still new. The Chinese community is getting stronger, and qualifying for the vote in ever larger numbers, while Malay progress is still slow. Tension between the races is therefore latent, and the government evidently feels that it cannot entirely disarm. What effect this will have on the appeal of communist propaganda remains to be seen.

Meanwhile the Federation intends to capitalise on its success and stand forward as an exponent of racial harmony in partnership with New Zealand; Tengku Abdul Rahman, the prime minister, intends to bring up South Africa's racial policy at the Commonwealth premiers' conference. He will be listened to with respect. The British in particular will have to remember the importance of the treaty with Malaya whereby a portion of the Commonwealth strategic reserve is stationed there. With the emergency formally ended, the importance of keeping on good terms with Malaya increases. This is yet another indication—which the South Africans should note—that South African internal policy can, in fact, clash with other Commonwealth interests, and, ironically enough, where these closely touch the struggle against communism.

EURATOM

Loophole to the East

When Mr Khrushchev returned home from Paris he left behind him an innocuous-looking agreement, which could have disruptive effects in the European household at Brussels. The French Commissariat for Atomic Energy and the Russian authority for the peaceful use of atomic energy (Glavatom) have agreed on a far-reaching co-operation, starting with the exchange of non-secret information and going on to an exchange of visits by scientists and joint research. In themselves these arrangements seem sensible enough. The snag is that under the Euratom treaty the commission of Euratom is supposed either to conclude, or to empower the member governments to conclude, all agreements with outside countries which affect either party's sovereign powers.

The Economist

APRIL 21, 1860

UNIVERSITIES AND POLITICS

No doubt the characteristic result of all University culture is to widen men's intellectual tastes and range of view, and, therefore, to sharpen their antagonism to any one-sided influence, whether intellectual or practical, which threatens an arbitrary limit to those tastes, or inculcates an intellectual obedience which they cannot endure. . . . But, apart from this universal influence of University culture, there is no doubt, as Mr Gladstone himself more than intimates, a special tendency in Universities identified with the Established Church to cherish a type of culture which, though not subservient to any kind of narrow intellectual despotism, is yet indifferent to the wants of the people and to the practical desire for popular self-government. Men of unpractical culture constantly spring up from our Universities who would resent any kind of attempt to impose intellectual servitude, and who yet cannot understand the passion for political liberty, because they do not themselves care in the least to influence the nation's actions and to share the public responsibilities of the State. Such men of culture our Universities,—all Universities,—produce in abundance; but they are in a special way the offspring of such Universities as Oxford and Cambridge, where certain fundamental dogmatic principles and assumptions are woven into the whole system of society, and, if canvassed at all, canvassed only by the exceptional sceptic,—not asserted and maintained with the earnest and anxious diligence of an unpopular sect, or of a party in conflict with large bodies of Englishmen. . . . Hence, we believe, it is that while Oxford and Cambridge have turned out minds more perfectly trained and disciplined than any Universities in Europe,—they have given birth to less political freedom, energy, and zeal than almost any Universities in Europe. In such a man as the late Sir Robert Peel, or as Mr Gladstone himself, where the highest culture of Oxford is engrafted on something of the indomitable energy and individuality of Lancashire, we have by no means typical specimens of the political results which the University training tends to produce. But, in general, we believe it will be found that while the older Universities are far more perfect as instruments of intellectual discipline,—the younger, both English and Scotch, contain . . . far more active and original political elements,—far more energetic interest in the principles of politics,—and, in short, far more independent political life. . . . It is on this account that we heartily rejoice in the intention of the Legislature to enfranchise these Universities by the Reform Bill.

Whether the Franco-Russian agreement breaks the letter of the treaty is a question for the lawyers. The French government merely informed the commission of its Russian contract without asking any sort of permission to negotiate. The French argue that Glavatom is in fact a private body, separate from the state. But whatever the precise legal position, the French action hardly seems to conform with the spirit of the treaty which sought to set up in the six countries a single atomic energy community, committed to act as one in external relations.

The incident brings out into the open what is perhaps the gravest weakness of Euratom. In 1956, when the twin European treaties for an atomic and an economic community were no more than paper plans, the French were interested in Euratom first and were prepared to accept the common market as the price for it. The French saw Euratom as a means of harnessing German energies and skills to their own atomic programme, and of making sure that Germany did not become a nuclear power in its own right. Time, however, has lessened this enthusiasm. Until now France has obeyed the letter of the Euratom treaty. But General de Gaulle's government has obviously been more interested in pushing forward France's national atomic efforts—military and civil—than in making Euratom a success.

With economic interest in nuclear power flagging and the French holding back, the Euratom commission has had an uphill task. The Franco-Russian agreement also suggests that it may have made mistakes. For some time M. Hirsch, Euratom's president, has been sympathetic towards the idea of direct contacts with Russia, to complement the close ties Euratom has with the United States and Britain. He has been held back, however, by people who hold more cautious views. The new French agreement with Russia rubs in the fact that the new European communities may soon have to look again at their relations with the eastern block; it may no longer be possible to act as if that other part of Europe were not there.

PHILIPPINES

Filipinos First and Last?

ECONOMIC independence is a goal that appeals to all former colonies. In the Philippines, it has given birth to the slogan "Filipino first," in whose name about half a dozen anti-alien bills have come before the Philippine Congress. Two of them are most likely to worry British business interests: a bill that would compel foreign insurance companies to double their deposits in the Philippines, and another that would increase the assets that must be held by foreign banks, and prevent them from accepting local deposits after five years.

The insurance bill, which has passed its second reading in the House of Representatives, is a curious measure; its "Filipino first" basis is that it would bring foreign insurance companies into line with Philippine ones to "afford better protection to policy-holders and creditors in the Philippines of foreign insurance companies." The objective sounds commendable, but is difficult to reconcile with the fact that no foreign insurance company is known to have defaulted, while several Philippine ones have. The banking bill, which is still before Congress, is in danger of being "improved" by provisions that Filipinos must provide two-thirds of the members of the boards of foreign banks and 60 per cent of their capital. This process, as one would expect, is called "Philippinisation." Other bills would, in effect, nationalise certain sectors of trade.

The Philippine aim is to break away from American economic domination. American interests are, however, safeguarded until 1974 under the Laurel-Langley agreements; and the Filipinos will not be serving their own interests if they discourage non-American sources of economic activity.

"THE BEST POLITICAL BIOGRAPHY we have had for many a long year . . . extremely fair and balanced."

HEINEMANN, 50s.

LETTERS

The Commonwealth

SIR—To suggest that the Commonwealth is capable of sailing in convoy clearly presupposes a common destination. You, in fact, lay stress on this point by asking whether South African membership of the club is any longer to be "reconciled with the common purpose of the other members?" But nowhere do you state what this common purpose is; nor do I think you would find it possible to do so except in terms so vague as to be useless as a guide to any practical course of action.

An analysis of what the Commonwealth is and what it means would probably have to be treated as a special branch of modern metaphysics; its result could hardly be very rewarding. One is on safer ground when listing the Commonwealth's real achievements—you have mentioned some of the important ones—and pointing to its present capabilities. At the same time, one needs to be reminded of its limitations. However grand it may sound to say that the task of the Commonwealth is "to solve the problem" of racial disharmony (with particular reference to Africa), a brief examination of this proposition would suffice to show that it is impracticable.

The facts are that none of the Commonwealth African powers, Ghana, Britain or South Africa, is prepared to share ultimate responsibility in its particular sphere with other Commonwealth members. No machinery for this exists anyway. Nor would it be correct to say that the policy of these powers is influenced by the opinion of other Commonwealth members, except on grounds of expediency. This is surely because there is no common aim and no generally accepted set of standards; white nationalism is balanced by equally intransigent black nationalism. To some, the record of the British Empire and what it stood for is wholly good; to others, almost wholly bad. The word "democracy" means to some the rule of the majority regardless of its state of literacy; to others, it means the rule of the majority in some specially privileged sector of the population. And again to others, it means the rule of the majority in a homogeneous society. Some elevate "civilisation" and material welfare as a goal—others, "self-determination," whatever that may mean, and whatever the price.

You imply that South Africa's continued membership of the Commonwealth may cause its early disintegration. If so, it would be a great pity, though possibly only because it would destroy an institution which,

on its past results, has proved capable of mutual assistance and incapable of internal interference. On the other hand, to eject South Africa would pre-suppose a community of purpose which simply does not exist and any continuation of the Commonwealth on this false premise would be bound, in time, to lead to an even more painful disruption.

It is Britain's duty now to try to bring about a state of affairs in Africa from which racial harmony can emerge without violence, and without the major retreat of European civilisation which seems likely in the Congo. If we succeed, it could have a profound influence for good throughout Africa and anywhere else in the world where a racial problem exists. But before starting out, it is essential that we should make up our minds on our objectives and the standards we require before we can claim to have achieved them.

We cannot expect these objectives to be approved by all or any of the other Commonwealth members, each of which has a different and probably irreconcilable viewpoint. But we can be comforted that the very act of taking a firm line and guaranteeing justice to European, Asian and African alike will check the velocity of the wind of change, which could otherwise easily be encouraged to hurricane strength if we are irresponsible enough to run before it, whatever its direction.—Yours faithfully,
Cobham P. F. D. WALLIS

Kenya

SIR—May I be allowed to give certain results of what you describe as Mr Macleod's "miraculous timing" in handling African affairs, and at the same time put one very important question, the answer to which neither Mr Macleod nor you, Sir, have so far attempted to give.

Mr Macleod may well have timed the actions he has taken on Kenya most perfectly from the point of view of the British political scene, but the effects of it in the country for which he is responsible have been to slump local share values to an even greater degree than the South African stock market has been affected by the recent disasters. Moreover, his refusal to give any written safeguards or—far more important—financial ones, has virtually halted all farm development or investment in Kenya, on which the economy at present depends. It may be questioned if clever political timing in his own country justifies a colonial secretary in disregarding the effect on the colonies for which he is responsible. I am not qualified to speak on the wisdom of the release of Dr Banda; nevertheless the doctor's first action has been to express his determination to break the Central African Federation, which is generally thought to be the only economic hope for its peoples.

The question I would like to put to *The Economist* is this; it is apparently the general belief in England that powerful white minorities in East and Central Africa are unjust to the African majority, despite the inevitable restraints that their civilised background, and the fact that they are a minority, must impose upon them. How therefore can it be thought that an African Government drawing its support from a peasantry outnumbering the immigrant community by a hundred to one as in East Africa, and lacking both these restraints, would behave even reasonably to a small minority of another race? Incidentally the returning African delegates to Lancaster House have stressed that they do not recognise European land rights in Kenya.—Yours faithfully,
L. R. MACONOCHIE WELWOOD
Kipkabus, Kenya

Insurance Premiums

SIR—My insurance broker has recently tried to obtain for me from different British insurance companies proposals for a deferred annuity policy, with supplementary life cover during the period prior to the first payment of the annuity. Being a diabetic in my early forties, I had expected to pay an excess premium for the life cover but had also rather naively expected to be offered a larger than usual annuity payment.

However, after being medically examined, I find that, whilst I should have to pay a 30 per cent loading on the life insurance premium, the annuity payments to me after age 65 would be only those payable to a man with a normal, and presumably longer, expectation of life. It therefore follows that current mortality statistics on which British life insurance proposals are allegedly based must show diabetics to be in greater mortal danger than usual until they are 65 whereupon, probably owing to an excess of gratitude at having survived so long, their expectation of life instantly returns to normal. My broker tells me that this actuarial phenomenon is unquestionably accepted by all the major life assurance companies in Britain.

American insurance companies, however, must be more backward. In the USA, my life cover premium would only be loaded to the extent of 20 per cent and the annuity payments would be correspondingly increased. Unfortunately, for a British subject to take out a life policy in America can lead to the illegal transfer of capital and this the British Treasury will not permit.—Yours faithfully, W. A. TURNER
Royston

Higher Prices

SIR—The recent agreement introducing the 42-hour week in the engineering industry must have increased production costs, but was it not correct to assume that the final concession on the part of the employers represented what they could afford out of the return from a higher rate of output, without increasing selling prices?

Since the agreement many businessmen must have had my experience of circular letters giving notice of advances in price, sufficient not only to cover the effective increase in the wages bill, but to yield a margin either for unspecified reasons or for "other material price rises and increased rates."

Action of this kind flouts the Government's plea for price stability and shows no evidence of any attempt to offset the wage increase by past or future economies.

Furthermore, the success of firms in obtaining these increases in selling prices surely demonstrates the continued existence of strong monopolistic elements in the economy.—Yours faithfully,
Sutton Coldfield ALAN BENNETT

Discounts

SIR—Your article on this subject gives one cause to reflect on the little service that is rendered by the retail sellers of such goods as refrigerators, television sets and motor cars. These outlets do little if anything to sell such goods, most buyers deciding from advertisements and reputation. If manufacturers maintained communal showrooms then surely prices could be reduced by the elimination of wholesale and retail mark-ups? With the loss of such easily won profit margins retailers would become more interested in providing service facilities.—Yours faithfully, GEORGE NUGGLETON
Hurst Green, Surrey

Education for Management

SIR—There were one or two inaccuracies in your recent Note.

The working party was not set up last year, but in November, 1954. The National Certificate in Commerce is not newer than the intermediate certificate. It dates back to the 1930s. The qualifications for entry are English and at least two other subjects at GCE "O" level.—Yours faithfully, S. GAINSBOROUGH
Technical College, Bolton

Monetary Witchcraft

SIR—Your reference to Mr Amory's use of psychological economics in the recent Budget is most apt. Indeed, the chancellor's intentions are clearly designed to effect a frame of mind. In the same article, however, you advocate the use of monetary weapons. Here, too, psychological economics plays an integral role.

In times of intense economic activity the raising of Bank rate and government manipulation of the gilt-edged market are of little effect by themselves. Businessmen armed with confidence and assured of domestic markets will with difficulty be persuaded to cut back production plans. Conversely, in times of slump the lowering of interest rates will not stimulate activity, since it is confidence that is lacking. By its use of monetary weapons the government can indicate what course it desires to be followed but it cannot necessarily enforce it. More effective will be direct investment or disinvestment by the government itself.—Yours faithfully, BARRY AINLEY
London, SW5

BOOKS

Comparative Democracy

Elections Abroad
Edited by D. E. Butler.
Macmillan. 280 pages. 25s.

In his introduction to this valuable and instructive book Mr David Butler carries one stage further his agile transition from founding the Nuffield College school of election studies to becoming its most perceptive critic. Broadly speaking, the Nuffield formula in studying British elections consists of first debunking very impressively the value of what goes on during the actual campaign and then supplying descriptions of the rituals that have just been dismissed as unimportant. To do it justice Nuffield College has also been a pioneer in the use of statistics to analyse and quantify political change; but here again it soon came to a dead end in Britain because of the inadequacy for academic purposes of the British methods of vote-counting and tabulating results. Because results are not available at the level of a ward or polling station, Mr Butler could never, from the voting figures alone, make the equivalent discovery in Britain to that of his opposite number in Washington, Mr Richard Scammon: that the Negro voters in Baltimore moved as a block from the Democratic to the Republican camp when the Republican Governor of Maryland implemented the Supreme Court's decision against racial segregation in the schools.

The bulk of this book demonstrates successfully that the narrative method hitherto favoured by the Nuffield school can win itself a new lease of life by extension abroad; Mr Butler's introduction is, one hopes, a memorandum addressed to himself about the new methods he ought to be pioneering if Britain's contribution to election studies is not soon to seem sadly old-fashioned. The virtues of the narrative method are those of high-grade journalism, completed at leisure. Although it may not be very convincing about why there are particular changes in party strengths or even why particular individuals find themselves in Parliament, it supplies a great deal of interesting incidental information about the structure of parties, the ritual of campaigning and the general behaviour of a country in its political context. This information is less generally familiar about France, Poland, Ireland and South Africa, the four countries whose elections in 1957-58 are described by Mr Butler's authors, than it is about Britain. Anthropologists, after all, treat ritual seriously, and if Nuffield does no more than pile up studies of this sort from more and more countries it will at least have advanced the study of comparative political behaviour.

In a sense none of this book's four samples (chosen because the authors happened to be in these countries at election time) is a particularly brilliant advertisement for democracy at work. In three of the four countries—Poland, South Africa and France—elections were held under conditions of dictatorship or near-dictatorship. In all three the authoritarian regime was confirmed in office, while in Ireland, the only one of these cases in which a fully free election in the western sense took place, the proceedings leave the impression of being the most trivial of the four and the result, which caused a change of government, the least significant. Yet the idea of free elections must still be secretly cherished by the countries where they are a tradition—France, South Africa and Ireland—or otherwise it would be difficult to explain the large turnouts at the conclusion of apparently apathetic campaigns. Poland, the one country that has seldom had a genuinely free election, showed easily the most visible enthusiasm for a resemblance, however tentative, to the democratic experience of which it had been starved.

The name of Mr Philip Williams at the head of the veritable task force that chronicled the last French referendum and the Fifth Republic's first election guarantees the quality of the study. But the admiring reader cannot help a nagging doubt about whether French politics even in 1958 are so utterly devoid of intellectual content as Mr Williams's team, more perhaps by constant implication than direct assertion, makes out. Has not the Namierising of present-day politics been carried too far? Politicians and journalists ought to be able to look to the universities—especially to a worldly college like Nuffield—for serious research and thought about such apparently abstract topics as the relationship of ideas and personality in politics. Ideas have a life of their own and so does the force of logic. British political comment has now gone so far in the direction of cynicism that it tends to ignore all ideological considerations.

This is closely related to one of the major shortcomings of the present Nuffield approach. It is now fashionable to accept the view that the voter reacts to partisan claims according to a "blur image" of the party. But this really explains nothing. A "blur image" is presumably like a Rorschach blot—it looks a vague mess to the untrained eye but when precisely analysed yields precise explanations. We really still have only the most impressionistic notions of why people switch their support from one side to another or indeed, except where there are very obvious sociological factors, why so many more voters remain loyal to their party. Much more work is needed in adapting to electoral studies such instruments as motivational research.

Further, even at the level of personality, the conclusion that the actual campaign makes little difference ought surely to force the psephologist backwards in time to the selection of the candidates. Some small start in this direction is made in "Elections Abroad" by Mr Blondel and Mr Merlin Thomas, who contribute two detailed accounts of elections in the French provinces. But what is really needed is a blow-by-blow reconstruction, such as the *New Yorker* used occasionally to publish about political incidents, of the steps by which a constituency party came to select a candidate. Fortunately, Mr Butler shows himself aware of these needs and one can only hope that his strangely defeatist observation—that "each scholar must pursue the line of research for which he is best equipped and, if these studies follow the descriptive track, it is because of the stable in which they were foaled"—is not his or Nuffield College's last word.

Lowdown on Tories

Lord Derby: "King of Lancashire"

By Randolph S. Churchill.
Heinemann. 654 pages. 50s.

This book, like most political or official biographies these days, is much too big, but some of it is so vastly interesting, and so well told, that it was very well worth writing, and is very well worth reading. It is a string of sausages rather than a well-cooked dish, but there is a whole meal of fresh and savoury meat in some of the sausages.

The seventeenth Lord Derby, who was born in 1865 and died as recently as 1948, was really two men. He was the great local noble, who was called King of Lancashire, and to whom a presentation bearing more than 83,000 Lancastrian signatures was made on his seventieth birthday; "he loved Lancashire folk and they loved him in return." He was also—because he ruled over so many Lancastrian votes, and because it was his patrician and political duty, as he saw it, always to be at hand to mediate in the affairs of his fellow Tories (and so, of course, of the nation)—the would-be catalyst at every crisis (and there were plenty) in the Conservative party during the tremendous twelve years from 1912 to 1924.

Lord Derby was, essentially, a mixer and a fixer. But he was that rarest kind of fixer, an entirely honest and ungrasping one—if often a very ineffective one, who in the end bent to the wind he thought he was directing. He was at his best, perhaps, when ambassador in Paris; but in politics he was, at the pinch, not only a bluff, good, dutiful man, but also a bluffer.

Mr Churchill does all he can, with guide-book detail and rolling rhetoric, for the lordly broad-acred, busily lord-mayoral, popularly sporting and public-spirited King of Lancashire—without ever really getting inside the northern skin. But how fascinatingly and, for history, how valuably he has got inside the skins of the Tory politicians whose linen is so unfailingly washed, if not aired and dried, in the sheer prodigious spate of Lord Derby's forty letters a day for more than a generation. As a journalist, Mr Churchill's loudest boast is to have had the lowdown on what happened (and had to happen) behind the scenes when Mr Macmillan, and not Mr Butler, succeeded Sir Anthony Eden as Prime Minister. In this book he stakes out his claim, as a historian, to the same sort of territory.

Here is the lowdown on the Tories—when the Free Fooders fought and held the Tariff Reformers in 1912 (Lord Derby's only personal success, incidentally, in the political arena); during the shabby comings and goings of the politicians during the first world war (when Lord Derby, after his devoted work as recruiting sergeant, stoutly, and privately, backed the "brasshats" and then fell in behind the "frocks"); in the cloak-and-spectacles transactions with the Irish before the Settlement; and, above all, when the Tories went through those curious convulsions after the war which gave them, first, Bonar Law as leader again and then, in spite of feuds and plots that might make Mr Gaitskell's position now seem a bed of roses, settled the leadership in the end so firmly on Mr Baldwin. This is the stuff of political history and Lord Derby's life and letters are only the peg to hang it on.

This book, in fact, is political gossip raised by its author's flair for the practice and principles of politics, and by painstaking (too painstaking) documentation, to the rung of real history. It sprawls, is sometimes slipshod, and glitters a bit too much perhaps with idiosyncratic prejudices—how Mr Churchill, for instance, dislikes *The Time* whoever owns or edits it, and whether its leaders match its news dispatches (as they did, to what he calls the paper's "eternal infamy," during the Greek troubles in 1944-45) or whether they do not (as sometimes in the first world war and before the second). But Mr Churchill has staked out a high claim.

To what? Moving dimly in the wings of this political drama (often melodrama) is the biggest figure of all. Is it simply filial restraint that has kept back Winston Churchill (even when Lord Derby, who was as easily affronted as he could be mollified, clashed with him)? Or is room being left, with the claim now staked, for the biggest biography—and biggest lowdown—yet? It would be, as this book often is, in the Churchill tradition.

Cloth and Crisis

Commercial Crisis and Change in England, 1600-1642

By B. E. Supple.
Cambridge University Press. 308 pages. 42s.

"Divide our commodities into 10 parts and 9 arise from the sheep's back," said Sir Edward Coke in the parliament of 1621, expressing graphically the importance to the economy of the cloth trade, then suffering from a severe depression. In recent years there has been much detailed research into the problems of the cloth trade, which handled the bulk of English exports in the Tudor and early Stuart periods. Under the Tudors the industry experienced booms and slumps; under the early Stuarts it suffered crisis and contraction. Mr Supple, whose book is based upon a research thesis, has analysed in great detail the course of trade, the response of the government to depression and the controversies between contemporary economists. Detailed as Mr Supple's book is, it does not add to or alter existing views. "The overall decline in the traditional manufacture," he writes, "is now a commonplace of economic history"; and, as he admits, "any book such as the present one must lean heavily on an established body of secondary literature."

Professor Fisher has called the sixteenth and seventeenth centuries the "dark ages of English economic history." He himself has done most to illuminate the commercial scene in articles that demonstrate the correlation between economic troughs and government intervention, and which emphasise the importance of high production costs in accounting for the sales resistance met by English cloth exporters in the early Stuart period. Elsewhere the nefarious activities of Alderman Cockayne, whose attempts to capture the monopoly of export from the Merchant Adventurers helped to trigger off the depression of 1620 to 1624, have been fully, if laboriously, exposed. Mr Supple has carefully stitched together the recent work on these problems, together with additional *petit point* detail based on a close reading of the sources. In a full examination of the depression of 1621 he places the main emphasis on currency devaluation in Poland and Germany, which resulted in English cloth being priced out of the market. Here he follows closely the work of Mr Gould; and he also agrees with Mr Gould in linking the ideas of Mun, the economist, with the 1621 crisis.

Mr Supple carries his survey forward to the crisis of 1629, which made East Anglia a distressed area largely as a result of the dislocation of trade caused by the wars with France and Spain. The trade in white broadcloth declined, and success was enjoyed only by those dealing in the new high quality cloth made from imported Spanish merino wool and in the cheap new draperies, together with the beginnings of a re-export trade. Here Mr Supple fills out

The City – is it human?

The esoteric atmosphere surrounding the Square Mile of London E.C.—the idea that the City is run by businessmen, not by people—is a sort of self-protective smokescreen, formed only during the last hundred years or so.

Before the invention of words like "contango" (1853) and "stag" (1845), everybody knew how Business worked, with the traditional exception of small children, lunatics, scholars, rustics, soldiers, women and the landed gentry. Afterwards, the mists closed in, as banking, broking and financing became ever more holy and remote . . . and ever bigger.

But now the trend is changing once more. Big Business has become so big that we are all, consciously, a part of it, while it is increasingly aware of us. It is *our* custom that makes one product overtake another, *our* money that the City is anxious to invest. The very banks ply for hire, advertising in terms most human and appealing. And indeed the City itself is peopled by people whose aims and ambitions are discoverable if you know how to look for them.

This is where 'Mammon' comes in. Each week, in *The Observer*, he takes something important that is happening in British big business and shows what it means . . . Here is a new kind of business reporting, quite unlike the flat statements of the Chairman's Speech or the jargon of the City Column.

Mammon's subjects range far—from steel to hamburgers, from what you always wanted to know to what you may have been only vaguely aware of. Who are the people behind the Soup War? . . . the Toothpaste Derby? Is British Industry going American? Is it going anywhere at all? Mammon in *The Observer* is answering questions like these. Read him next week. **J.B.L.**

[ADVT.]

the details of an article by Professor Fisher. Mr Supple's book is a useful co-ordination of much specialist work ; but his pages are overloaded with economic jargon. The specialist reader, for whom the book is primarily intended, may well prefer the original articles, written with greater freshness.

D-Day Witness

The Longest Day

By Cornelius Ryan.
Gollancz. 256 pages. 21s.

It has become fashionable to apply the journalist's technique of the eye-witness story to an historical occasion. This form of historical reportage has obvious limitations. Memory can easily play false, making events blacker or whiter than they were, and the author denies himself the corrective of comment. Everything depends upon his skill as a cross-examiner of the witnesses, be these men or written records, and upon his ability to check and to re-check one story against another. In his account of D-Day Mr Ryan succeeds in this admirably, as much because of his impartiality as his diligence. But like others using this method he is tied to the material in his filing cabinet, and it is a fault of the technique rather than of Mr Ryan's narrative powers that his account of the near-disaster at the Omaha beach is so much fuller and more alive than his description of the recovery that occurred later in the day. It was what happened when they hit the beach that burnt itself into the combatants' memories and not what happened later.

The technique, too, is only really successful when it is applied to a coherent episode taking place over a short period of time—as, to take some recent examples, in the descriptions of the assassination of Lincoln, the sinking of the *Titanic* and the Appomattox campaign. D-Day, as Mr David Howarth, as well as Mr Ryan, has shown, fits the bill and it is a tribute to the manner with which they have both used their material to confess that after reading their books one wants to know what happened to all these men on D+1, D+2 and throughout the rest of the campaign in north-western Europe. Nevertheless, it is fragments of history that are being displayed, and brightly coloured though these are they do not make up a complete mosaic.

The prime merit of this technique is vividness and vitality. This Mr Ryan's evocation certainly has. He has not allowed the material he has so assiduously collected to become his absolute master ; he has, for example, been able to isolate and to clarify, without stepping outside his role as a recorder, the dilatory way in which the German High Command reacted to the landings. Rommel was on his way to spend his leave in Germany ; vital pieces of intelligence were not passed on at the right time to the right men ; Hitler was not awakened until ten o'clock ; and the order releasing the Panzer troops was not given until the afternoon. But the most moving quality of Mr Ryan's book is to reveal what it was like to be there on that day in June. In their own individual way men met danger. Many of the American paratroopers had their heads shaved, wearing a tuft of hair in the fashion of Iroquois Indians; the British paratroopers, no doubt, had a "short back and sides" cut, sergeant-major fashion. But, whatever their national or individual idiosyncrasies, they were alike in brave endeavour. To them this book is a handsome memorial.

The War Goes On

Why They Collaborated

By Eugene Kinkead.
Longmans. 223 pages. 21s.

"For you the war is over"—this classic greeting of guards to their captives used to epitomise the situation of prisoners of war, who in former times had patiently to await the conclusion of a conflict, subject of course, as in the last war, to the risk of physical atrocities. But war in a conflict with Communism does not end on the battlefield ; it can end only with the conquest of men's minds.

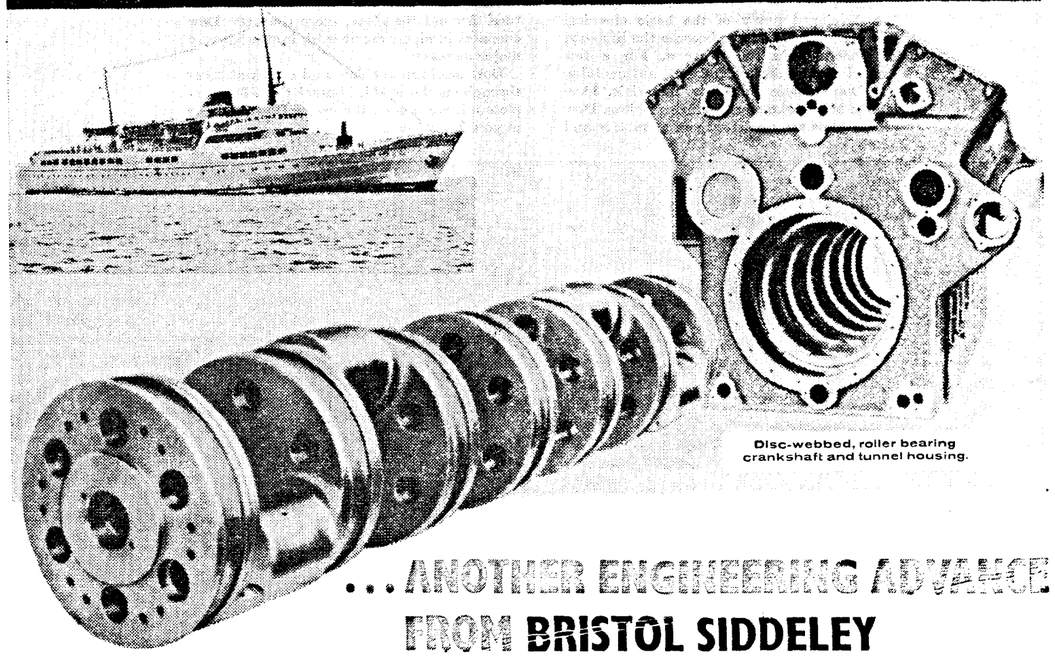
It is in the light of this change in the significance of captivity that we should read Mr Kinkead's account of how American POWs in Korea comported themselves in Communist hands. His book is not without blemish ; just because the studies on which it is based are unique, there are no comparable data from previous conflicts against which it can be set, and the evaluation, though relying on the meticulous analyses of the experience of returning prisoners, is filtered through the cliché-ridden reportage of sometimes anonymous army spokesmen. Nevertheless the results are sensational. To summarise, one-third of the American prisoners captured in Korea "collaborated," while 38 per cent died in captivity. Even more significant is Mr Kinkead's account of why this happened ; that popular bogy, "brainwashing," is not the answer. For the most part, prisoners found themselves "collaborating" simply because they allowed themselves to converse, however innocently, under interrogation ; while wholesale deaths were not in the main due to Communist atrocities, but to the breakdown of discipline among the prisoners themselves. In corroboration, the author notes that a corps d'élite, the US Marines, produced proportionately fewer prisoners than the US Army, with a statistically better record for non-collaboration and survival. Even more impressive was the record of British officers and senior NCOs and Turkish prisoners, of all ranks, among whom collaboration and, it would appear, casualties in prison were virtually non-existent.

Two significant and at first sight conventional conclusions are drawn: first, that a POW must obstinately withhold all information except name, rank and number ; second, that discipline with an appropriate relationship between officers and men is vital for an army. Yet we are bound to ask whether the disciplinary prescriptions reaffirmed by Mr Kinkead are enough. The fact that, in the last war, German prisoners in Russia collaborated points to a vital political factor—the need for faith in one's ideology, for, *pace* Cromwell, "we would rather have a plain russet-coated Captain that knows what he fights for and loves what he knows."

OTHER BOOKS

THE TRUTH ABOUT THE NAGY AFFAIR. Published for the Congress for Cultural Freedom by *Secker & Warburg.* 215 pages. 35s.

It is not yet—and perhaps never will be—possible to know the whole truth about Imre Nagy. This book, however, which has been produced by some of Mr Nagy's friends and former colleagues now living outside Hungary, attempts as far as it can to put straight a record that the Communists have grossly distorted. The bulk of the book is taken up with an extremely detailed analysis of the communiqué on the trial of Mr Nagy and his associates that was published by the Hungarian ministry of justice on June 17, 1958. This allows the authors to refute, point by point and, moreover, principally on the basis of communist, not western, material, the false version of the Hungarian October revolt that the Communists now try to propagate. No doubt the book will be largely read either by those who already accept its conclusions or by those whose mind is irrevocably closed against them. All the same, the authors' intentions deserve every respect and their meticulous and conscientious labours provide present and future students with a valuable source of material.



A HISTORY OF THE ASSOCIATION OF ENGINEERING AND SHIPBUILDING DRAUGHTSMEN. By J. E. Mortimer. *MacGibbon & Kee.* 500 pages. 37s. 6d.

This is a large and worthy book, and one of considerable interest to the specialist in trade union affairs. The AESD is a militant and successful white-collar union, which has grown in membership from 8,000 in 1923 to 57,000 today without any of that protection from government policy on which most "staff associations" depend. The union now organises three out of every four engineering draughtsmen and, even more significantly, is now one of the country's largest publishers of technological books. No one who reads these pages can doubt that over the last thirty years the union has served its members well—though it has been helped in this by a labour market in which good scientific draughtsmen have been all the while in exceptionally short supply.

THE UNIVERSITY TEACHING OF SOCIAL SCIENCES. By André Molitor. *UNESCO.* 192 pages. 14s.

Any satisfactory discussion of the teaching of a subject depends on some agreement about the exact nature of the subject and the purpose of education in general. This book suffers from indecision on both these points. Practitioners of the social sciences have not yet gained for all of their subjects the status they would wish. Despite its inclusion in the category, public administration is certainly not regarded universally as a "scientific" subject—particularly in Britain, where the development of administrative theory has been so largely pragmatic. The variety of its teaching reflects the uncertainty of its position. Thus at Cornell compulsory courses in public administration include personnel management, managerial economics, business law; at the London School of Economics, economic and social history since 1815, and political and social theory.

Maybach marine diesel engines—from 400 to 1,700 hp—can achieve 16,000 hours between major overhauls...

...ANOTHER ENGINEERING ADVANCE FROM BRISTOL SIDDELEY

Bristol Siddeley Engines Limited produce Maybach* marine diesel engines. Covering a range from 400 to 1,700 hp, they are amazingly reliable—have proved that they can achieve major overhaul lives of between 12,000 and 16,000 hours!

The *proven* basic design features of the whole range (straight 4 to 16-cylinder V) are the same, and each unit can be turbo-charged, or turbo-charged and intercooled. The range operates between 1,200 and 1,450 rpm and *combines the best qualities of high, medium and low-speed diesel engines:* light weight and compactness, excellent thermal efficiency and extremely long life.

Advanced design features

Pressure-oil cooling on the pistons gives very efficient heat dissipation and reduces liner and gas ring wear to a minimum. The roller bearing, disc-webbed crankshaft is very rigid and withdrawal is not normally necessary before 12,000 hours running. So low is big end bearing wear that in some cases the protective lead flash has been found intact after 15,000 hours running!

Since the majority of the components, in all models, are identical, spares stocks are considerably reduced. Furthermore, each unit is so light and compact that it can be repaired by replacement, and because great thought has been given to accessibility and component removal, much more semi-skilled labour can be used. Again, because of the small size of the engines, the naval architect has much wider design scope—especially with diesel/electric propulsion installations.

World-wide application

Bristol Siddeley Maybach marine diesel engines are suitable for all types of ships, from fishing vessels, large ferries and coastal vessels to ocean-going merchantmen. Maybach diesels are in service all over the world and have built up an unrivalled record for reliable and economic operation.

Bristol Siddeley Maybach diesel engines up to 3,000 hp for high-speed craft.

A range of engines for high-speed craft is also available. Rated at 400 to 3,000 hp and operating up to 1,800 rpm, these engines are specially designed for fast naval craft, police and customs launches and fast passenger boats.

For further information please write to: Maybach Sales Manager, Bristol Siddeley Engines Limited, PO Box 17, Coventry, England.

DOW CHEMICALS *at work around the world*

Around the clock and around the world, creative chemistry at Dow is at work producing new and better chemical products for the growing industries of the world.

With the magic of creative chemistry, Dow has developed many of the basic chemical raw materials that have become the lifeblood of modern industrial progress. For a few examples: refrigerators, TV sets, automobiles, use Dow plastic moulding materials. Dow latexes help make more enduring paints. Dow plastic films are used for more attractive and convenient packaging. Dow chemical intermediates make better pharmaceutical, detergent, and cosmetic products. Dow process chemicals make possible more efficient ore recovery and higher quality paper manufacture. Around the globe, more than 600 Dow chemical products are at work in nearly every major industry.

Dow has branch offices and representatives throughout the world. Contact them for complete information on the use of Dow products in your operations.

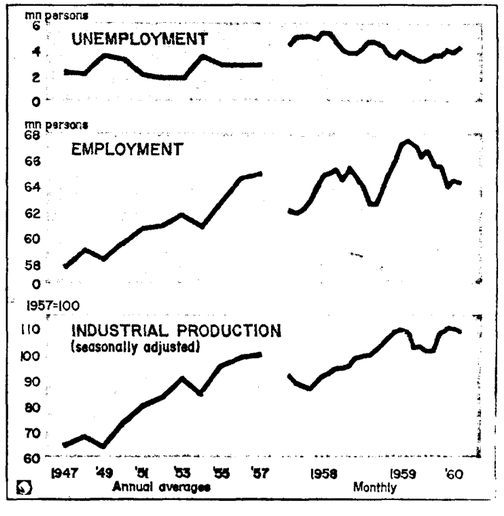
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Leaden Start for the Golden Sixties

WASHINGTON, DC

If anyone in booming Europe is interested, the United States has been going through some rather trying days economically. If a statistically-minded economist from Mars had arrived in mid-April and examined the figures for March, he would have concluded without hesitation that a recession had begun. He would have seen industrial production declining slightly for two successive months, unemployment up sharply, to 5.4 per cent of the labour force, personal incomes ceasing to rise, steel output dropping rather precipitously to less than 80 per cent of capacity, manufacturers' backlogs of orders declining, housing starts down 15 per cent from a year earlier. What else could he conclude ?



But our Martian, by definition, would not know two things. He would not have shivered through the worst March weather in 20 years (with the snow and cold at their peak in the week when the sample of employment was taken). Nor, even more important, would he know of the 116-day steel strike last year, which has given the experts wholly new insights into what a really prolonged shutdown in a basic industry can do. A wide range of otherwise revealing indicators—new orders, business stocks, steel operating rates, bank loans—have become almost impossible to interpret in normal terms because of this influence, which is only now perhaps beginning to wear off. Always before, a dip in the operating rate of the steel industry from 95 per cent of capacity to 79 per cent in six or seven weeks would have been a clear signal of recession ; this time there can be no such certainty because of the weirdly distorting effects of movements in steel stocks after the strike. To add to the general confusion, the government will shortly publish the glad tidings that the gross national product in the first quarter rose strikingly from the final quarter of 1959 to achieve, or nearly to achieve, the magic figure of a half-trillion dollars. The main reason, of course, was the tremendous pace at which stocks were built up after the steel strike ; these have now become a somewhat depressing influence, but the figure is still impressive. To have a recession begin in the same quarter as an unusually rapid advance in output would be unusual, to say the least.

The generally bewildering performance of the statistics has found its reflection in Wall Street, particularly in the money market. Government securities have gone through gyrations unequalled in memory ; the Treasury bill rate, for example, rose by nearly a full percentage point in a single week after having declined by two full percentage points since late December. The stock market has resolved the confusion by refusing to move at all, or nearly so ; despite the usual brave front of conviction, the professionals are in fact as confused as the economists, who are more frank in admitting it.

Oddly enough, out of the babble of voices there emerge almost none who believe that an actual recession has begun. Our Martian would be nearly alone in his conclusions, though he might find some sympathy in the board rooms of the steel companies. The explanation for the lack of outright pessimism is that there is every reason to expect an expansion of demand from some very important sources as the year proceeds.

One is personal consumption. Retail sales, in effect, have not kept up with purchasing power so far this year ; they have expanded less than the level of incomes would suggest that they should have done, even though incomes have been sluggish for the past few months. One of the causes is believed to be the bad weather in March and another the late Easter. The latest figures for sales of automobiles and in department stores, covering late March and early April, have shown what a little sunshine can do, and even the stock market took some heart. A second source of expanding demand is capital investment by businessmen. The latest official survey projects a record rate of spending by the final quarter of this year, with an uptrend throughout the year, and the rate of activity in many machinery plants is already showing a strength not shared by the consumer goods industries. Third, there is a reasonable prospect that house building will be moving upward as the year progresses, after its sharp slump beginning in January. The general change in tone—with the expectations of a boom reduced sharply—has produced a magic transformation in the mortgage market, and fears that there will be a dangerous shortage of credit have diminished greatly. Interest rates on mortgages are still high enough to price some marginal buyers out of the housing market, but at least money will be available.

On the opposite side is, of course, the fact that there will be little or no help from now on to be obtained from the building up of stocks. However, the ratios between stocks and sales are such that there seems little reason to expect any actual liquidation

of stocks. Also on the side of caution is the ever-present threat of a decline in the rate of expansion of hire-purchase credit. People might be spending up to their incomes, but if they did not go sufficiently into debt the effect would be the same as if their incomes had fallen.

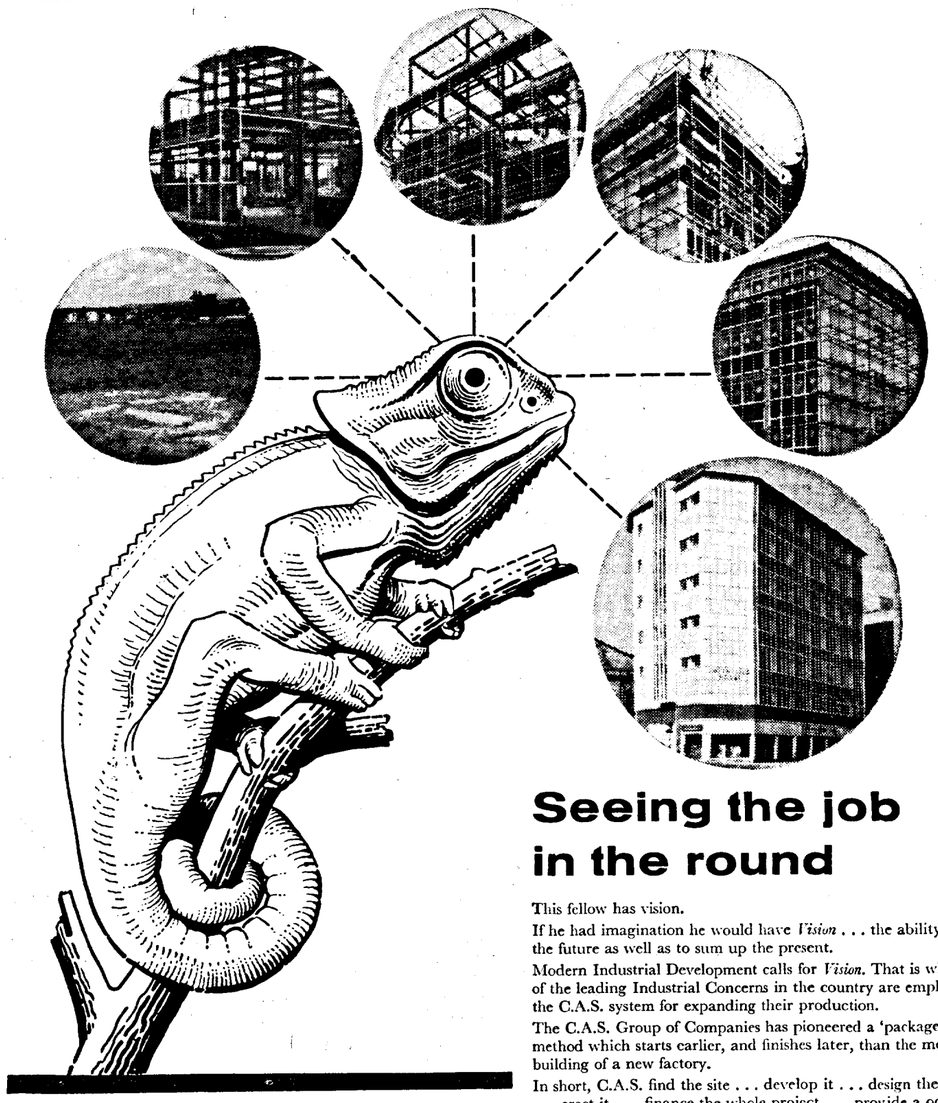
Putting the pieces of the puzzle together, the men in the government have concluded hesitantly that the odds favour a very gentle advance in the economy for the rest of the year. Some of them are now ready to admit privately that the forecast of a gross national product of $510 billion for 1960 as a whole will probably not be achieved. It is quite plausible, for example, to project a very slow rise in GNP—in which services play a substantial part—accompanied by a completely flat performance from the industrial production index. (This projection, incidentally, would leave an uncomfortably high level of unemployment on election day.) A number of private forecasters have reached somewhat the same conclusion, while admitting that this is scarcely a time for certitude.

The big question, then, is what happens after 1960. Does the very gentleness of the advance that now seems likely for this year—and particularly the absence of a boom-oriented building up of stocks—help to guarantee the economy against a recession in 1961, when the next one would be due under the postwar time schedule? Or does it indicate quite the opposite—that in fact the American economy, with the age of inflation at last over, has entered a period where it will be more and more difficult to find the effective demand needed to achieve full employment? There are even beginning to be whispers of that once-popular, and since discredited, word "maturity." Those who are so minded can point out that each postwar recession has been a little worse than the one before and that each recovery has left the economy with a higher level of unemployment; that there appears to be a gradual widening of the margin between capacity and output in those industries for which measurements are made; that high and rising imports and the "export of jobs" through foreign investment are scarcely bullish for employment; in short, that the economy has, after all, been spurred by artificial stimulants for the last twenty years and that the real test is only now beginning. The typical conclusion of those who feel this way is that the solution is a big burst of federal spending which, they claim, is needed anyway on social and security grounds.

Perhaps the sunshine and a few months of good statistics will stop this kind of talk. Certainly there has been no convincing evidence yet that the conservatives now in power are wrong in their view that a boom moderated is a boom prolonged. The nineteen-sixties may yet be golden after all—but it would be nice if they would begin to look less like lead.

Old Folks—New Issue

With the Civil Rights Bill almost, and Easter entirely, behind it Congress is realising that it has only ten weeks in which to finish its year's work before the presidential nominating conventions in July. While there is little that must be done, apart from dealing with appropriations and a few tax matters, there is plenty that members want to do in order to have something to show to the voters in November. Since Mr Lyndon Johnson, the Democratic leader in the Senate, needs liberal support if he is to win the presidential nomination and since he is being backed by Mr Sam Rayburn, the Democratic leader in the House of Representatives, both these hard-driving men may give their liberal followers their heads on some of the Bills dealing with housing, depressed areas, social security and education which are coming up for consideration. In the past the Democratic leaders have usually concentrated on obtaining measures which the President could sign, arguing that even a compromise Bill looks better on the record than no legislation at all. This year, however, they may be almost as ready as are the progressives to court presidential vetoes, since these would be a particularly serious embarrassment to Mr Nixon, the presumed Republican nominee, who looks more favourably on liberal legislation than does the President.



Efforts are, however, being made to work out an acceptable compromise on the provision of medical care for the aged, although so far all the Democratic proposals are for the compulsory system which the President rejects. The great economic hardship which illness brings to the rapidly-increasing number of old people with limited incomes has long been recognised, but in the past few weeks it has grown into such a burning political issue that it is no longer practical for Congress to avoid the question during the present session, as the leaders of both parties had hoped to do. This change is mainly the result of pressure from the elderly voters themselves, largely organised by the trade unions who are well aware of the inadequacies of both the government's pension scheme and of those which have been won from employers in recent years.

The flood of letters which has been pouring into Congressmen's trays has been on behalf of the Forand Bill, which would provide insurance against hospital and surgical expenses for all old age pensioners, financed by an increase in the social security tax. This Bill has already been rejected by the House Ways and Means Committee and the Democratic leaders are now working on a modified version. Meanwhile eight liberal Republican Senators have got in first with a Bill providing for voluntary health insurance through private companies, to be subsidised generously by grants from federal and state governments for those old people who cannot afford the premiums. This Bill is too extravagant for the Administration although these are the lines on which it too is at last working at top speed. The main question now is whether something will come out of all this which the President can bring himself to accept.

Model-Ts in Space

In recent weeks the American tortoise has been racing into space ahead of the Russian hare. Although the American successes began early in March with the Pioneer V which will, it is hoped, still be sending back signals when it is 50 million miles from the earth, the real triumphs have been not with the Cadillac-type publicity-gathering satellites in which the Russians specialise, but with Model-T specimens which bring space into daily life as the original Ford did the automobile. These are the Tiros—launched on April 1st, but with nothing foolish about it—which photographs the earth's cloud covering and which will mean greatly improved weather forecasting, and the Transit, last week's replacement for the stars as a navigational aid.

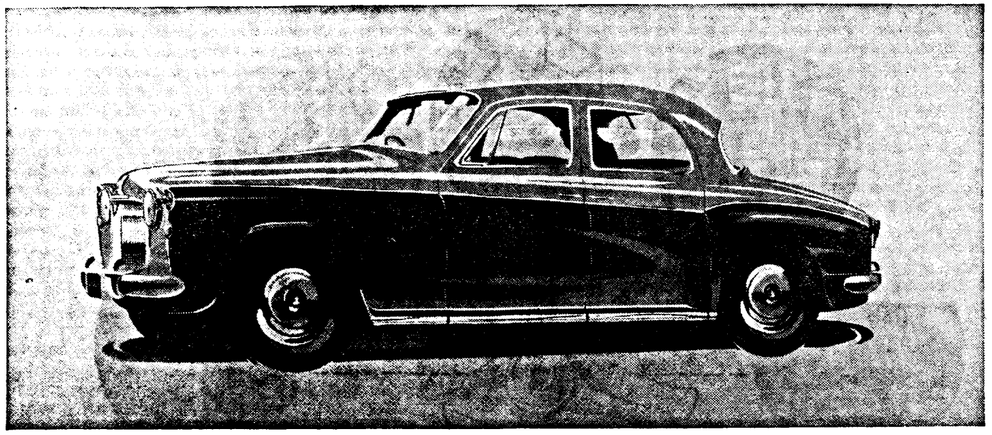
When the full Transit system becomes operational, in about two years' time, four of these satellites will be evenly spaced around the globe putting out wireless signals which will enable ships and aircraft to plot their courses more accurately than at present and in any kind of weather, day and night. Vessels of all countries on the sea or in the air will be able to use the system, but special instruments will make even more accurate calculations available only to the American Polaris-firing submarines which need to know their positions exactly if the missiles are to hit their targets. The final version of the Tiros, which will contain infra-red detectors, will also have a military use, for it will record atomic bomb explosions and ballistic missile launchings. The detail of its photographs is such that they may even provide information about defence and atomic installations in other countries, as well as about the hurricanes which so far they have specialised in discovering. Before long, satellites which can definitely provide this information seem certain to be put in orbit. So the era of spies in the sky

Seeing the job in the round

This fellow has vision.

If he had imagination he would have *Vision* . . . the ability to visualise the future as well as to sum up the present.

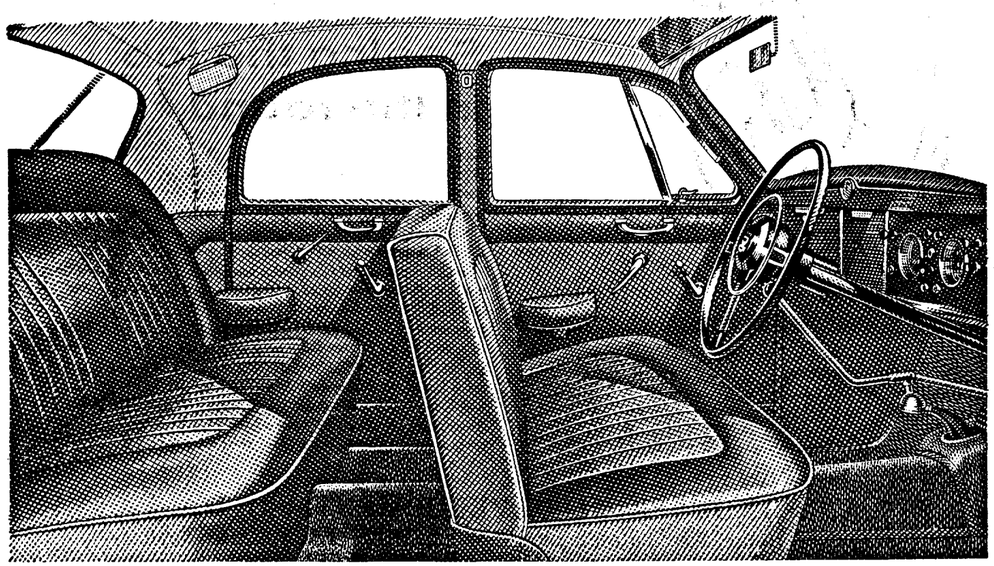
Modern Industrial Development calls for *Vision*. That is why so many of the leading Industrial Concerns in the country are employing the C.A.S. system for expanding their production.



The C.A.S. Group of Companies has pioneered a 'packaged deal' method which starts earlier, and finishes later, than the mere building of a new factory.

In short, C.A.S. find the site . . . develop it . . . design the building . . . erect it . . . finance the whole project . . . provide a 99 year lease.

DUNLOP, JACOBS, CYANAMID, PERMALI and S.P.D. (Unilevers) are a few of the firms which have launched major projects through C.A.S. Each job was completed on time, and at a fixed price.



An enquiry in confidence to our Managing Director could lead to your problem of expansion being tackled in the same way.

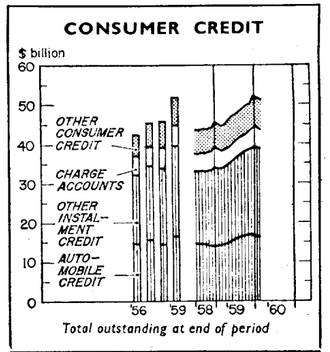
C.A.S. (INDUSTRIAL DEVELOPMENTS) LTD.,
St. James' House, Kensington Square, London, W.8. Tel: WEStern 8060.

The new **ROVER** *80*

This—a more powerful successor to the Rover 60—has the new Rover 4-cylinder, 2¼-litre engine. All-round performance has been substantially improved. Like its predecessor, the '80' is a remarkably capable, even-tempered car with a strong appeal for those who seek really comfortable, reliable family motoring. Front wheel disc brakes and overdrive are standard equipment. Price £1365.7.6 (inc. P.T.).

THE ROVER COMPANY LIMITED, SOLIHULL, WARWICKSHIRE AND DEVONSHIRE HOUSE, LONDON W.1

is beginning and the question of international agreement on the control of outer space becomes urgent.



The civilian space agency's recent record of success was broken by the failure once again to recover the capsule ejected by the latest Discoverer satellite. This was not very encouraging for the men engaged in Project Mercury, who are supposed to be launched into space—and recovered by similar methods—before the year is out. Visionary as this plan may seem to the layman, it is surely much less so than Project Ozma, under which a radio telescope is being focused on two stars, believed to have planets capable of sustaining life, in the hope of picking up signals which will prove that there actually are intelligent beings there.

Hire-purchase American-style

NEW YORK

EUROPEANS who like to "buy now and pay later" will soon be able to enjoy the services of an American finance company, jointly owned by two giant concerns, the CIT Financial Corporation and the American Express Company, the travel agency so well known for its travellers' cheques. The new organisation will provide consumer and industrial credit abroad and will have an initial capital of $5 million, supplied equally by the two participants. The American Express already does banking business abroad which has taken it into the lending field, both to industries and to individuals. Moreover, its 400 foreign branches will give the new combine a valuable network of local financial contacts, and in some cases office space; however, it appears that their banking facilities are not to be used. The main responsibility for managing the new operation will be assumed by CIT.

With a net worth of $300 million, CIT is the largest "independent" finance company in the United States, outflanked only by the General Motors Corporation's own financial subsidiary. In the course of the last year, CIT's lending operations registered a record volume of nearly $5 billion, while the amount of loans outstanding at the end of the year approached $2 billion. In contrast to British practice, an American finance company cannot accept deposits, nor can banks be among its stockholders. For the money which it re-lends to others, CIT depends on long-term debt to the tune of some $900 million and short-term borrowings (at the end of 1959) of an additional $766 million. At the present time, CIT's only foreign operations are in Canada. In the nineteen-twenties the company established outposts in several foreign countries—the United Dominion Trust Ltd. in Britain, for example—largely for the purpose of financing sales of American cars abroad. But when the depression came, it withdrew behind its domestic frontiers.

Its decision to go exploring again reflects the general optimism that Americans feel about the "growth" prospects of western Europe. More particularly, this move is part of a general drive by the company to find new outlets for its massive lending operations. The financing of sales of motor cars, by buying purchasers' instalment contracts from dealers, which has been the backbone of CIT's business, does not offer the opportunities that it once did, now that commercial banks are taking an active part in this business. CIT still draws 40 per cent of its profits from automobile financing, but the company's share of the total has dropped, and the progressive reduction in profit margins has made some of its other activities look relatively more attractive. Moreover, the Ford Motor Company decided last summer to revive its own credit and financing organisation; with the General Motors Acceptance Corporation already doing the major share of the business and the possibility that the Chrysler Corporation may follow Ford's lead, CIT has to look to other fields if it wants to expand further.

CIT is already the largest factoring organisation in the United States, providing short-term financing for manufacturers of textiles, furniture, shoes, toys and plastics, and it is lending money on a growing scale for the purchase of industrial equipment, ranging from dentist's drills to farm and heavy road-building machinery. Moreover, the company has made an important break with tradition by branching out into direct loans to consumers—for home improvements, for education bills, for the purchase of caravans, boats and swimming pools. Other subsidiaries of CIT offer automobile, health and life insurance and in 1958 the firm became a leading manufacturer of X-ray equipment.

The new foreign company—as yet unnamed but to have headquarters in Switzerland—is expected to begin operations in Britain and Germany before the end of the year. Automobile financing will again be the backbone of the business, but loans for industrial equipment are likely to play a large part. CIT insists that there is not a wide gap between the interest rates charged in Britain and Germany on the one hand and the United States on the other, but it admits that in Germany, in particular, the rates can vary widely from one company to another. At home CIT does not lend sums that are smaller than $300 and on consumer goods the maximum length of the loan is three years. The rates at which it lends can vary from 6 to 12 per cent. The growing number of Americans with business interests in Europe is certainly one of the attractions of the venture, but the new company does not intend to specialise in its own nationals.

Marching on Georgia

FROM A CORRESPONDENT RECENTLY IN ATLANTA

Now that Virginia, the historic leader of the South, has given up the battle to keep Negro children completely out of its white schools, politicians still deeper in the South are being brought face to face with the same problem. Georgia is next in line. In 1959 the Atlanta School Board was ordered by a federal court to produce a plan for admitting Negro students to its tax-supported white schools; it complied last December. Under a Georgian law adopted to make resistance to such orders easier, state funds must be cut off from any white school which accepts coloured pupils. The federal judge therefore deferred setting a date for Atlanta to put its plan into effect, in order to give the Georgia Legislature time to change the law at this year's session.

The Legislature met and adjourned without doing so; it merely named a commission to take testimony all over the state and to report back by May 1st. Again the judge has announced that he will delay a decision, this time until the commission makes its report. Although Georgians in general are split about equally on the advisability of shutting the schools to avoid racial integration, Atlanta is overwhelmingly for keeping them open, judging from the commission's hearings.

The pressures on the Governor and on the State Legislature underline the unrepresentative nature of government in the southern states. Atlanta is the political capital of Georgia; it is also the economic and financial capital of the whole Southeast, in which the

number of industrial plants has increased by about a third since the war. This has raised income a head in the area from less than 60 to more than 70 per cent of the national average. The metropolitan area of Atlanta—a prime example of today's exploding cities—now contains more than a fifth of the total population of the state. Georgia's agricultural areas have been losing people steadily. But because Georgia's county unit method of calculating votes continues to give the rural districts power quite out of proportion to their population, Atlanta is probably the outstanding example of an urban centre which is under-represented grossly in the State Legislature. There, what Atlanta wants is of little political importance.

ATLANTA'S own government, on the other hand, shows the influences of two forces unusual in the South: big business and voting Negroes. The administration of Mayor Hartsfield, who is now 70 years old and has been in office for 23 of them, reflects the fact that, with 125,000 whites and 29,000 Negroes registered to vote, the minority wields real political power. In the midst of the Negro "sit-ins" at lunch counters the Mayor noted that in Atlanta the Negro has no need to march in protest—"he can walk, instead of march, right into the City Hall and talk over his problems with city officials." There is provision for inter-racial discussion of problems under both private and public auspices. The Atlanta newspapers, the *Journal* and the *Constitution*, are outstanding proponents of the moderate view on racial problems and the columns and leaders of Mr Ralph McGill are known all over the country.

Yet even in this relatively benign atmosphere there are tensions, partly as a result of the constant migration to Atlanta of white families from low-income rural counties. In the elections in 1957 Mayor Hartsfield carried the city's white districts by a narrower margin than he did in earlier years, and an anti-Negro Independent did well against him. There is much speculation about what will happen if he stands again in 1961.

The grievances of the Negro minority in Georgia and the South were set out recently in a full-page paid advertisement in both the Atlanta newspapers, under the heading "An Appeal for Human Rights," and over the signatures of office-holding Negro students from the student bodies of each of the six institutions of the Atlanta University Centre. The inequities of which they complained included those in education, jobs, housing, voting, hospitals, law

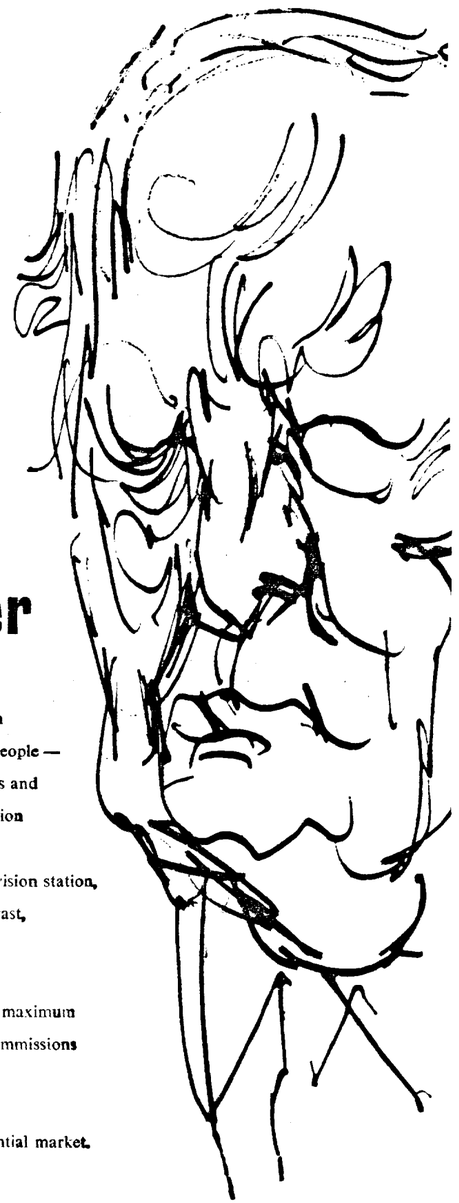
Minnesota's Beneficiation

FROM A CORRESPONDENT IN MINNEAPOLIS

WHEN last July Minnesota celebrated the 75th birthday of its iron ore industry, which has supplied 2,419 million tons of ores and concentrates to the steel mills of America, two shadows hung over the festivities: growing competition from foreign iron ore and the threatened exhaustion of the three great iron ore ranges of northern Minnesota. After the war high output of iron ore—the state's record of 78.5 million tons in 1951 was up to 80.1 million tons two years later—meant that Minnesota's direct-shipping ores were being depleted rapidly. Estimated reserves of these high-grade varieties, which are scooped out of the earth and sent directly by freighters to steel mills on the lower Great Lakes, declined steadily from 968 million tons in 1948 to 678 million in 1958. During the same period, as American steel producers developed new reserves abroad, imports of iron ore and concentrates increased from 6.4 per cent of United States consumption to 30 per cent.

The principal foreign sources of iron ore are Canada and Venezuela, with large reserves of high-grade ore also in Brazil, Peru, Chile and Liberia. The iron content of the Labrador-Quebec and Venezuelan reserves is estimated, respectively, at 54 and 58 per cent, compared with the average of 50 per cent of iron in direct-shipping ores from Minnesota's Mesabi Range. The foreign mines also appear to have the advantage of lower direct operating costs, but Minnesotan ores are closer to the blast furnaces. However, the opening of the St Lawrence Seaway is likely to bring more iron ore from Labrador and Venezuela into Minnesota's historic middle-western markets. Nevertheless, experts forecast that the Lake Superior mining region will remain the most important single source of iron ore for the ever-expanding American steel industry for many years.

HOW long this period will last in practice depends largely on the utilisation of taconite; it is estimated that there are 6 to 10 billion tons of this magnetic iron ore deposited in Minnesota with a potential yield of 2 or 3 billion tons of iron concentrate. In the early nineteen-forties representatives of mining districts, to forestall a string of ghost towns being left as the veins of high-grade iron ore were emptied, induced the State Legislature to provide tax incentives which encouraged research and capital investment into methods of processing taconite, hitherto unusable. As a result, ways were found of crushing the low-iron-content rock and moulding it into pellets containing 60 to 65 per cent of iron. A pair of mining corporations invested half a billion dollars in plants capable of producing more than 12 million tons of this concentrate annually and one of them is now planning to double its taconite capacity. In 1958 nearly 20 per cent of Minnesota's total shipments of iron ore—only 43 million tons in that recession year—were taconite concentrates.



Taconite operations have had a very satisfactory effect on employment in Minnesota, since to process a ton of taconite requires more than double the man-hours that are needed for a ton of direct-shipping ore. And because taconite plants can be operated all the year round, with the pellets being stockpiled during the winter for shipment in the spring when the ice retreats from the Great Lakes, the seasonal variations in employment in mining have become much less severe.

In general, mining in Minnesota is increasingly a processing industry as well as an extractive one, as a result of the changing quality of ore reserves and of the growing resort to "beneficiation." This is any process intended to remove impurities or moisture from low-grade material in order to increase its iron content; taconite concentration is perhaps the best known process, but there are others. Minnesota's 80 beneficiation plants processed 55 per cent of the ore shipped in 1958. In 1959 the State Legislature granted tax incentives, similar to those which had been so successful for taconite, to encourage commercial utilisation of a powdery, non-magnetic, low-grade ore which overlies the Iron Ranges in billions of unmarketable tons. Researchers are seeking a cheap heating process which will magnetise this soft ore—euphemistically branded "semi-taconite"—and thus permit the use of existing magnetic equipment.

enforcement, and in admission to cinemas, concerts and restaurants. The petition ended:

> We must say in all candour that we plan to use every legal and non-violent means at our disposal to secure full citizenship rights as members of this great democracy of ours.

The appeals of the Negro minority are reinforced by powerful pressures from the managers of the modern business firms now operating in Georgia. They seek early and orderly compliance with the decision of the Supreme Court that racial segregation in the tax-supported schools is unconstitutional. They have a pressing incentive. Complex industrial processes can be carried on only with staffs of skilled specialists and management must be able to assure these men that the schools which their children attend will remain open. Such manpower is so scarce that firms are quite prepared to move elsewhere if this is necessary to keep it. The harm done to recruitment of such skilled men by the closing of schools has been made abundantly clear by experience at Little Rock in Arkansas. The managers of industry are determined "not to see Atlanta make a fool of herself in public."

Little by little, the part played by industrialists, railway executives and financiers in weaning Virginia away from a policy of massive resistance is becoming known. In Georgia similar groups of businessmen are trying, mostly in private, to secure a policy of local option, so that Atlanta can keep its schools open whatever the rest of the state decides to do. The eagerness of all the southern states to attract more industry gives the views of these men unusual political weight. As Mayor Hartsfield notes, "many southern politicians are now the prisoners of their own prior actions. All our educated politicians are out on a limb wondering how to get back." Unobtrusively, Atlanta's industrialists are providing a helping hand.

Democratic Mountaineers

THERE could be no less typical state than West Virginia whose Democratic voters, in deciding on May 10th whether they prefer Senator Kennedy or Senator Humphrey, are expected also to decide the presidential fate of one or the other of these potential Democratic nominees. Except in its industrial northern section the mountain state is almost entirely a depressed area, dependent on coal mines which employ only one-fifth as many people as they did a decade ago. With 10 per cent of the labour force out of work—twice the national average—and all of the industrial centres classified as areas of substantial labour surplus, West Virginia is ripe for another New Deal. While both the candidates are liberals Senator Humphrey is the more progressive in economic matters and, unlike Senator Kennedy, has practical experience of poverty which must make his approach more sympathetic. He has probably gained more from the well-publicised fact that lack of funds has forced him to halve his headquarters staff than has Senator Kennedy from the personal appearance on his platform of Mr Franklin D. Roosevelt, Jr.

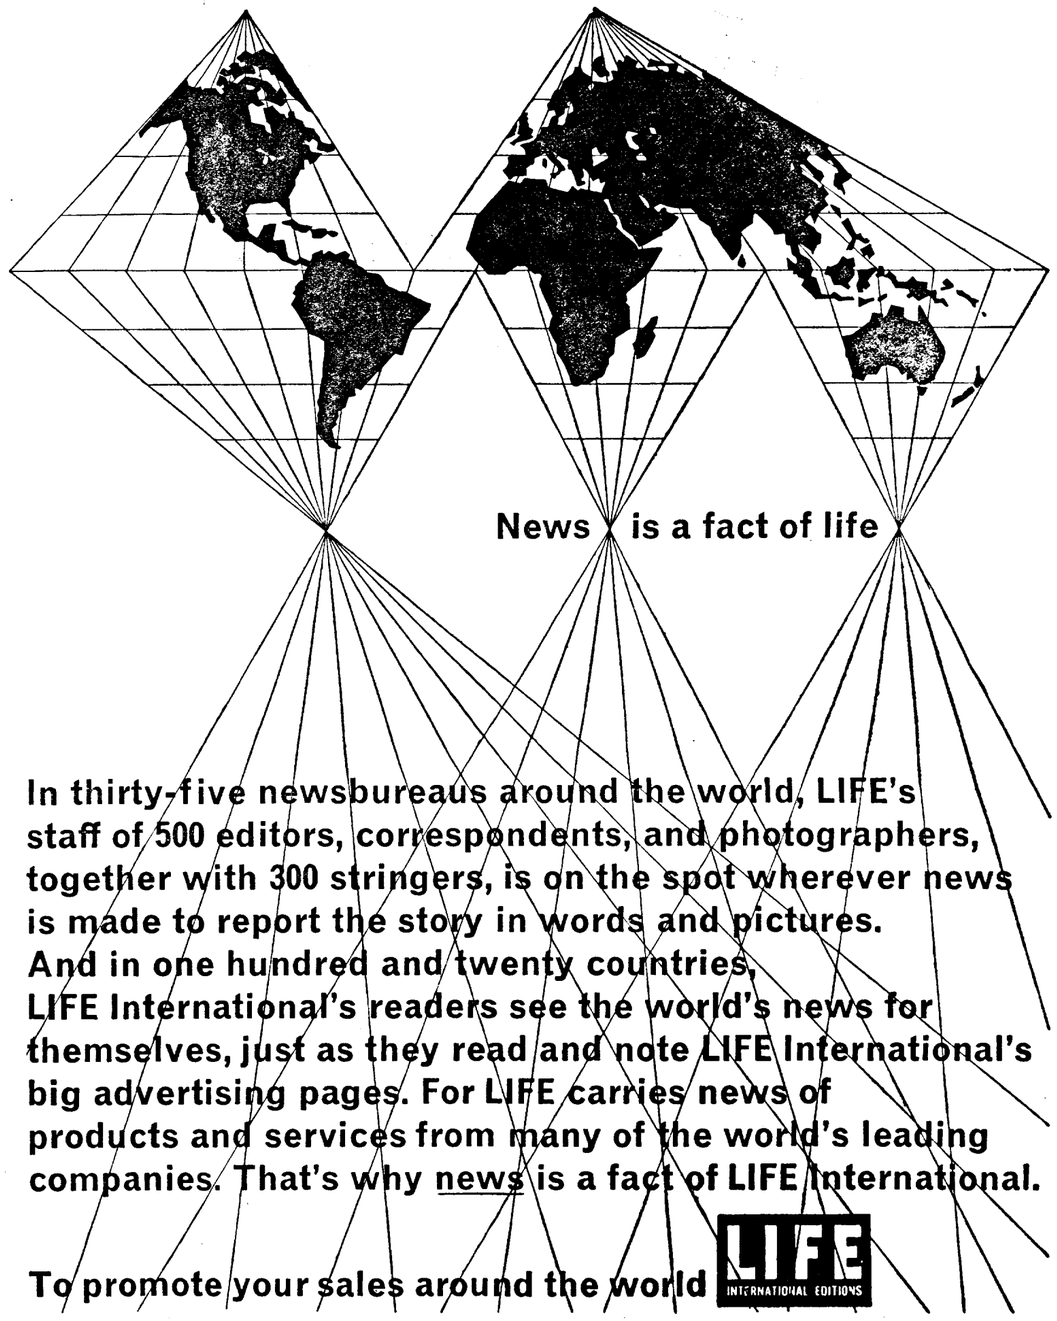
Certainly Mr Humphrey has been helped by the news, leaked from the headquarters of the supposedly-neutral mineworkers' union, that Mr John L. Lewis, whose retirement has not lessened his influence over the coal miners, opposes Senator Kennedy because of his record on labour legislation. Mr Lewis, however, is not particularly fond of Mr Humphrey. Nor are many of the other prominent people who are backing him, such as Senator Robert Byrd, one of the state's leading Democrats. He openly favours the candidacy of Senator Lyndon Johnson and his only interest in Mr Humphrey is to "stop Kennedy" from getting the nomination. To do this he has called for a coalition in support of Mr Humphrey of all those favouring the other Democratic hopefuls who have not entered the West Virginian contest. There is little doubt that Mr Humphrey is indeed receiving a good deal of such support; it can be given to him safely at this point since whatever happens in West Virginia it is unlikely that he will be nominated by the national convention. It is not surprising that Senator Kennedy is becoming bitter about this "ganging up" against him.

He is also becoming bitter, perhaps because he is a little desperate, about the question of his Roman Catholicism as an issue in the election. It is he, and no one else, who has brought this into the open; Senator Humphrey is most anxious that no one should have any excuse for charging him with bigotry. But Mr Kennedy's private polls of West Virginian voters, only 5 per cent of whom are Catholic, have discovered a surprising number in the southern Bible Belt who are against him simply because of his religion; moreover, a number of ministers have been warning their congregations against him. He is applauded whenever he says that his religious beliefs are personal and nothing to do with his campaign. Nevertheless, it begins to look as if his effort to prove in West Virginia that he can appeal to Protestant as well as Catholic voters may be a failure

SHORTER NOTES

The Treasury sold only $370 million worth of its new 25-year, 4¼ per cent bond instead of at least $500 million worth as had been hoped; but it had the consolation that this effort, intended only to test the market, has proved wrong those members of Congress who contended that a substantial amount of long-term money could be borrowed at 4¼ per cent and that therefore there was no need to change the legislation which prevents the Treasury from issuing long-term obligations at a higher rate of interest.

* * *



After pressure from State Department and foreign aid officials, the Chinese Nationalist government has banned the export of reprints of foreign language books from Formosa. Thus, it is hoped, it has stopped a growing trade which was depriving American publishers of their domestic market and American authors of their royalties. The Chinese pirates originally started these reprints, mainly of text-books by a photo off-set process, for the benefit of Formosan students, but they have built up a profitable undercover export business to the United States, mainly to university towns, since these editions often sell at as little as one-fifth of American prices. A full set of the "Encyclopaedia Britannica" was obtainable for $50 to $60, compared with $414.50 in the United States, and "Gray's Anatomy" for $2.50 instead of $17.50.

* * *

The attempt to repeal the Connally reservation this year has failed. This reservation is the condition exacted by the Senate for permitting the United States to use the World Court; the United States thus preserved the right to decide whether the Court has jurisdiction over cases involving it. The Foreign Relations Committee decided not to vote on the reservation in this election year when it became clear that, after all the isolationist sentiment which has been whipped up, the two-thirds vote needed in the Senate for repeal would not be forthcoming. The work of the Court has been hampered greatly because so many other countries follow the American example.

* * *

The New York State Legislature has passed a "four-drink Bill" to deal with the car driver who is not yet legally drunk—with 0.15 per cent or more of alcohol in his blood—but who drives while his "ability to operate is impaired by alcohol." Any driver now found with 0.10 per cent of alcohol in his blood will be guilty of a traffic violation and liable to have his licence suspended.

International BTD-20

wins International acclaim!

Throughout the world, cost-conscious contractors acclaim the BTD-20—the *only* crawler of its size with six-speed, *full-reverse* transmission. The BTD-20 'dozes with 28,300 pounds of push, in first gear, or with 21,000 pounds in second gear, and backs out as fast as 8.4 m.p.h.—moving hundreds more yards daily! With its full range of job-matched equipment, the BTD-20 is providing the BIG power that gets BIGGER profits from the BIGGEST projects. Your International Construction Equipment Dealer will give you full details of the mighty BTD-20.

THE WORLD OVERSEAS

In the Land of Old Gaul

FROM OUR CORRESPONDENT IN OTTAWA

THE conflict between sentiment and practical realism that so often has characterised Canada's relations with France was pleasantly absent from General de Gaulle's visit to Ottawa this week. In both public speeches and private talks the mutual understanding of the two countries' positions appeared more genuine and better based than it has usually been.

This marked contrast with General de Gaulle's last visit during the war is the result of important changes of outlook in both countries. Although Canada's close ties with France as its "second mother country" have always been a compulsory oratorical theme, the oratory has not always been true. It used to be said that the French-speaking third of the Canadian population, with its centre of gravity in the solid Frenchness of Quebec, bore its true allegiance to the French monarchs under whose banners the early French settlers came to Stadacona (now Quebec city) and Hochelaga (where nearly a century later French missionaries founded Ville Marie, later to be known as Mount Royal or Montreal). The corollary, it used to be said, was that they disapproved of everything that had happened in France since those days. France had become laicised, while Quebec remained under the dominance of its bishops and parish clergy. France had become republican, while Quebec retained its instinct for a monarch. Paradoxical as it sounds, Quebec at its most anti-English still retained a deeper respect for the crown than many English-speaking Canadians.

The sum of all these deep-seated traditions has not always been logical in terms of contemporary politics. It produced a strong Pétainist sentiment among the French-speaking people of Quebec. Their sense of the continuity of authority gave General de Gaulle in their eyes a certain revolutionary tinge, alien to the Quebec tradition. Of course, leaders like Mr St Laurent, Cardinal Villeneuve and General Vanier, whose catholicism was both more devoted and more understanding than that of the common people, warmly supported the cause of General de Gaulle and the Free French. But it was still true at the end of the war that highly intelligent Frenchmen would visit Quebec and Montreal and move on to Toronto to tell English-speaking Canadians that there was "*aucun rapport—mais, vous savez, aucun*" between Quebec and the new France.

A profound difference in attitude is now apparent in Quebec, partly because of major developments in its own thinking and partly because of the change in General de Gaulle's role. The Fourth Republic embodied almost every possible contrast to the disciplined hierarchical society which still lingers as the ideal of many influential Quebec leaders. In transforming it into the Fifth Republic the general has transformed their image of him. He now appears as the champion of legitimism, restoring the kind of society they can admire. While this factor may impress relatively limited circles, it corresponds to the shift in the popular outlook of Quebec, which, since the war, has become significantly more attuned to the modern world. It can now see General de Gaulle as the man who is leading France forward to achieve scientific and economic competence in the same way as Quebec itself now seeks to attain mastery of North American technology.

For the Canadian government at Ottawa the contrast with twenty years ago is rather different. Ottawa was always nearer to London than to Washington in its understanding of General de Gaulle's awkwardness and alleged arrogance. The sympathy of the general's references in his speeches in Ottawa to Mackenzie King shows his awareness of this. Moreover, neither the sentiment about the French part in early Canadian history, nor the frequent irritations felt by Canada at France's current role in European economic affairs, can submerge the ardent hope that French capability may be brought nearer to the strength that sentiment desires. The general is recognised as the sole pillar of this hope.

In recent dealings on world affairs Canada has rather surprisingly found France to be the closest of all the western powers to its own position on disarmament. This, together with the prospects for the summit meeting and attitudes to Soviet Russia, formed the substance of the first private talk between General de Gaulle and Mr Diefenbaker, and the two men appeared to get on very well with each other.

OTTAWA has never quite understood why it was so lightly forgiven for its vote in the United Nations against the first French atomic bomb test. But this stand, which the French delegation at the United Nations bitterly resented, never produced official representations from Paris, and disagreement is now submerged by the French readiness to accept any degree of nuclear disarmament accepted by the other great powers. By contrast, the subsequent Canadian vote supporting France on the Algerian question at the United Nations brought great good will. While the United States ambassador in Paris was summoned to be told of French displeasure at his abstention, official channels purred with French gratification at Canada's vote.

Along with this, Canadian observers have sensed a considerable growth in the importance which Paris now attaches to Canadian policy. This was implicit in General de Gaulle's statement about visiting Canada between London and Washington and thus completing the chain of western unity. It may result from a new appreciation that on certain matters Canada enjoys very close consultation with both London and Washington—sometimes even the sort of consultation which Paris felt itself to be denied. If this is a correct interpretation, it may augur well for Nato. The most obvious potential disagreement between Canada and France is about General de Gaulle's idea for a dominant committee of "great powers only" as against the Canadian insistence on the full consultation of all Nato's members. But the atmosphere during this week's visit has certainly tended to soften differences.

The visit here, like that to London, was essentially formal and ceremonial. But Canada manages a formal ceremony neither with the *éclat* and polish of London nor with the massive informality of Washington and New York. The charm of Canada's most imposing ceremonies is fidelity to the proper forms combined with a somewhat amateurish execution which makes them all the more natural, sincere and touching. General de Gaulle gave every sign of feeling this. His oratory was superb. He seemed to have infected his environment to such an extent that even Mr Diefenbaker's French, usually execrable, became fluent and conveyed a hint of real feeling.

One Month After Sharpeville

FROM OUR CORRESPONDENT IN SOUTH AFRICA

THE morning after the attempted assassination of Dr Verwoerd a minister of the Dutch Reformed Church told his congregation that every Afrikaner in the land, every man worthy of the designation white, had been wounded in that dastardly episode. He went on to call upon the Afrikaner people to go united into the laager and defend themselves against their enemies. In a leading Nationalist newspaper three days later, the political columnist wrote: "Dr Verwoerd's wounds were washed away in the tears of his people, and in their prayers his wounded body was carried to the Throne of Mercy." God had spared the prime minister's life, wrote one Nationalist commentator after another, because He had a plan for him in Africa.

South Africans had been living in a state of emergency for nearly a fortnight when the senseless and deplorable attempt was made on Dr Verwoerd's life, and their frayed nerves could take very little more. They were deeply thankful, therefore, that in the anxious days that followed Mr Paul Sauer, the senior cabinet minister, acted with judgment and restraint. Even so, the wilder spirits in the Nationalist party are blaming the English-language press for the calamities of recent weeks, and are calling for an internal press censorship and control over outgoing reports.

For weeks now police and Citizen Force units have been on day and night duty in and around the large urban areas, and there seems little prospect of these precautions being relaxed in the immediate future. For the mass of Africans in urban areas life in their townships is slowly returning to something like normal, with periodic large-scale police raids as reminders of the recent crisis. But with the leaders of the two proscribed African organisations either in jail or gone underground, and the bulk of the Africans uncommunicative or inarticulate, it is difficult to know what is going on in the minds of the African people.

The re-enforcement of the hated pass laws took place with tact and with more consideration for the individual than had seemed possible a fortnight ago, and the police are now being allowed considerable discretion in implementing the law. It is impossible to estimate how many passes or reference books were actually destroyed during the anti-pass campaign, but the number may not have been as large as the organisers had hoped. Although the government has said that the pass laws will not be changed radically, the whole cumbersome system is clearly being reviewed with a view to introducing modifications that will emphasise its positive rather than its negative aspect. The liquor laws, too, may possibly be amended. It is being realised that as long as the police are compelled to carry out regular liquor raids at all times of the day or night, tension between them and the Africans will remain high, and periodic outbursts of violence inevitable.

Although there is evidence of fresh and even agonised thinking on the colour issue in the Nationalist camp, the diehards who believe in inflexibility and in more and more separation are still dominant in the party. And as long as the prime minister is out of action, little change can reasonably be expected. Afrikaner intellectuals and some members of the Dutch Reformed Churches, however, are deeply disturbed and are agitating insistently for modifications of apartheid. On the same day as the Johannesburg parson called upon white men to unite, the acting moderator of the Dutch Reformed Church in the Transvaal asked a radio audience to face squarely the fact of world opprobrium, and to try to prove by deeds that non-whites would be dealt with fairly and tolerantly. And from the Afrikaans university of Stellenbosch a breeze of change is blowing which cannot fail to influence the climate of opinion in which Nationalist doctrine is shaped.

But talk of coalition has ceased entirely in the Nationalist camp since the attempt on the prime minister's life. Dr Verwoerd was known to be vigorously opposed to the idea—which came primarily from the Cape and certain Afrikaner business interests—and such doubts and murmurings as there undoubtedly were against him in the party because of the disastrous consequences of some aspects of his policy have been stilled. A move against the leader in the foreseeable future would be sacrilege; this is the measure of the effect of the attempted assassination on the political situation.

Significantly enough, however, the demand for some form of coalition or political realignment is now gathering momentum in the non-Nationalist camp and looks like growing more insistent. Businessmen and industrialists in particular and United party reactionaries are calling for a closing of the political ranks and a fresh approach to problems of colour. Since the Sharpeville shootings the value of mining and industrial shares on the Johannesburg Stock Exchange has fallen by £300 million—sufficient to have paid three times over for the complete implementation of the Tomlinson proposals for the development of the Reserves. And, of course, to this has to be added the effect on business generally, which has been considerable in some areas, as well as the direct cost of the emergency and the dislocation it is causing.

The United party has clearly begun to feel these pressures and its leader, Sir de Villiers Graaff, has been trying to ward them off (from inside as well as outside his own party) in the realisation that any compromise with Nationalism on colour would be no real contribution to the solution of the country's problems. He has therefore begun to edge forward cautiously to a slightly more realistic colour programme. He has proposed directly-elected senators to represent the African and Coloured peoples; but this suggestion is hardly calculated to catch the imagination of anyone to the left of the United party or to appeal to the reactionary element within the party itself. It would leave most non-whites cold.

The tragedy of the political situation remains what it was a month ago: the majority of white opinion, both Afrikaans and English, is incapable of realising the urgent necessity of acting with realism and courage while there is still time. If Dr Verwoerd held a general election tomorrow he would probably sweep the country. Certainly few of the Progressives, if any, would be returned, and not a few of the marginal seats held by the United party would be in danger.

As for the non-whites, it is inconceivable that when they can again put forward their demands they will aim any lower than they have been doing for years; that is, they will want a legitimate share in the government of the country as the essential preliminary to the eradication of all their present disabilities. Yet in the white camp only the Progressive party is prepared openly to advocate the abolition of the colour bar and the substitution of individual fitness as the test of a man's ability to share in government. And, as might be expected, a movement has now made its appearance in the African political camp which professes not to be interested in this kind of multi-racial democracy, but demands the lion's share for itself. So where do the two sides meet?

While outside observers are asking how much more evidence white South Africa needs before it realises how late it is, it remains true that the Union can never revert to the kind of "normality" it knew before the shootings at Sharpeville. The only hope is that economic realities, greater white flexibility, non-white pressure and unrelenting world opinion (provided it does not overplay its hand and drive all the whites into one camp) will between them produce more realism and a greater sense of urgency. The danger seems to be that the longer white South Africa waits to make concessions, the more difficult will it be to make them and the stiffer will be the demands.

Christian Democrat Choice

FROM OUR ROME CORRESPONDENT

BY the time this is published Signor Fanfani will probably know whether he can count on the united backing of the Christian Democrat party for a left-centre coalition government dependent on the good will of the Nenni Socialists. It is the most decisive week in Italian affairs since the general election of 1948. The country has reached a point—thanks mainly to new economic factors determined by the gradual awakening of the South—at which it seems to be faced with the choice between a form of democratic socialism, not necessarily doctrinaire but openly and sincerely professed, and a clerical variant of fascism. These alternatives have emerged with unexpected clarity from the last eight weeks of painful political travail.

When Signor Segni threw up the negotiations for a left-centre coalition for reasons that he was unable to make clear, the suspicion arose in all the other parties that the Christian Democrats were congenitally unable to take the leftward plunge. This doubt encouraged the neo-fascists to stake a claim on government. They blackmailed the Christian Democrats by threatening to withdraw from the twenty-eight important municipal councils (one of them at Rome) in which they are partners with the Christian Democrats, and from the regional government of Sicily, where they had helped the Christian Democrats to get rid of the Milazzo administration. Signor Tambroni was momentarily tempted to take the risk of leading a government dependent on fascist support, but the party jibbed; and within twenty-four hours the Tambroni cabinet fell apart. The party executive reaffirmed the declaration of faith made by the last congress, that the Christian Democrats are a popular democratic anti-fascist party, faithful to the ideals of the Resistance. After that there was virtually no alternative but to send for Signor Fanfani, the moral victor of the party congress last October.

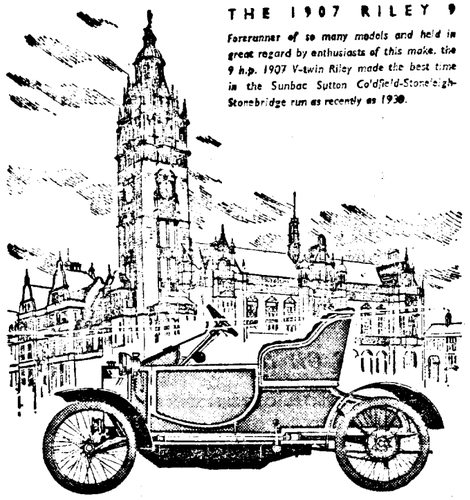
That Signor Fanfani will succeed in giving Italy a relatively stable left-of-centre government is by no means a foregone conclusion. The pressure groups have been momentarily beaten, but the interests at stake are enormous and there is every reason to expect that the people concerned—a part of the country's big business, a part of its landowning class, a part of the ecclesiastical hierarchy—will fight back. Catholic Action has already begun a counter-attack. But Signor Fanfani's first battle is being fought this week inside his own party where he has to neutralise, or at least isolate, the opposition of the landowning interest represented by Signor Bonomi with his eighty deputies and four million votes, and of Signor Andreotti's right wing faction with its forty odd deputies. Much will depend on whether Signor Fanfani is able to obtain the support of his former antagonist, Signor Scelba, whose influence in the party is circumscribed but important. The chances of a reconciliation are good. Signor Scelba is above all things an anti-fascist. For his part Signor Fanfani has probably learned a good deal during the fourteen months in the wilderness when he had a chance to reassess the personal value of many friends and enemies.

The fascist challenge has a catalysing effect. It has brought the left-centre parties, notably the Socialists and Social Democrats, closer together. It is reuniting the Christian Democrat party's own left wing which was itself quite bitterly divided between Signor Fanfani's group, the extreme left, and the trade unionists. It is also affecting the Church hierarchy. That Signor Fanfani felt strong enough to accept the new charge is partly due to a change of attitude on the part of the Episcopal Conference. Much as the bishops dislike a socialist, or even a social democratic, solution to the crisis, they have taken fright at the prospect of the reactions that a fascist denouement was likely to provoke. The conference, which Pope John made responsible for the conduct of Church affairs in Italy (formerly handled directly by Pius XII), has ordered the clergy to tread warily and not to interfere in the citizen's freedom of choice.

If Signor Fanfani succeeds in getting over this first series of hurdles there is a sporting chance that the party will back him up against outside pressures, in which case Italy should be in for a period of relative calm during which the government and Parliament can get on with the urgent social and economic tasks that face them. But if he fails, the future is dim. Local elections are due in the early summer and an extraordinary general election is beginning to seem necessary if the present crisis of government goes on. But the great Catholic party is in no state to face either of these tests. Rumour has it that less than half of the Christian Democrat Party's 1,300,000 registered members have renewed their subscription cards this year. The proportion of voters in the party is ten to one subscribing member. There may be a great and unpredictable shift in the electorate should the party again refuse to make a choice.

Reflections on a Leader's Return

FROM A SPECIAL CORRESPONDENT IN CAIRO



PRESIDENT NASSER returned to Cairo last Saturday in the torrid, dust-laden atmosphere of a "khamseen" day. Undeterred by its discomforts a multitude gathered along his route to chant with disciplined enthusiasm their greetings to their leader, while everywhere a looser, livelier throng milled about the place in gay preparation for the Easter and Shem el-Nessim holidays which kept Egypt noisily idle until Tuesday morning.

Being young and sound in wind and limb, the president sets a cracking pace in this political tour business that few of the world's peregrinating presidents can match. It seems that 30,000 miles of hill, dale and plain from the swelter of Madras to the high cool of Peshawar are as nothing to him; at least not when he has a message for his people. He came straight from his plane to spend another hour and a half in a car crawl through the mass of people and under triumphal arches and finished up with a speech to the nation. It was not so much a political speech as a *message*.

In the words of a distinguished Egyptian journalist, politics are dead in the Southern Region of the United Arab Republic. There are, of course, many columns of political articles and great speechifying; but there is a stultifying lack of dialectics in it all which relieves most common people of the duty of reading the newspapers. (Someone with misplaced devotion to the president makes sure his every word is preserved for print.) Nothing seems to be happening and the Egyptian is inclined to make great moan at this. It is not that he knows of anything better that he particularly wants; he just likes change now and again.

This is a psychological problem of some importance to President Nasser in trying to build the new Egypt. Lots of things have happened and are happening in the country. The returning Englishman or woman, if not too busy toasting absent friends or too warped by the wrestle of desequestration, can remark many changes, ranging from locally manufactured health salts to a fine new bridge. Well-trained statisticians chart with impressive figures progress in steel and cotton cloth, cultivated *feddans* and fertilisers, while economists for and against current economic policies argue passionately about the meaning one can or cannot really put on the figures. But there is a limit to the pleasure that the lay public can get from reports of progress. President Nasser needs to be inspiring, if only because the people cannot stay excited about a four per cent increase in the export of manufactured goods, no matter how important that might be.

His inspirational method is not that of a hot-gospeller sweeping souls to revolutionary salvation. Over the years he has unrelentingly hammered his purpose into the minds of the people:

THE 1907 RILEY 9

Forerunner of so many models and held in great regard by enthusiasts of this make, the 9 h.p. 1907 V-twin Riley made the best time in the Sunbac Sutton Coldfield-Stoneleigh-Stonebridge run as recently as 1930.

1907 ... a year which saw some increase in local government authority and the origins of many of today's most vital social services ... services now administered from buildings like Sheffield's Town Hall ... Sheffield, where today motoring enthusiasts enjoy from a number of Kenning depots a particular and personal service that would have delighted even the fastidious Riley enthusiast of 1907.

The most effective method of power transmission is the Fenner V-belt drive

- Separate V-Belts have a resiliency far superior to any form of flat belting.
- The wedge action of the V-Belts in the grooves actually improves with length of service.
- Neither tension nor alignment have to be maintained precisely to get good working results.
- If a V-Belt should break, the remainder will keep the drive working until replacement is convenient.
- ALL your drives using the same belt size are covered for spares by a stock of no more than are used for one drive.

Fenner

Remember that all V-Belts give long loyal service, but more Fenner belts reach pension age than any others. Catalogue 100/19 lists thousands of recommended standard drives. Send for it today.

LARGEST MAKERS OF V-BELT DRIVES IN THE COMMONWEALTH

Egypt must march boldly into the modern world. It is noticeable in little things that the message has got through. Everywhere in the towns young men are abandoning the *galabiya* in favour of European trousers and shirts, and the tarbush will soon date a man as irrevocably as a Victorian wing-collar. These are small things, but they reflect the will to change which is part of the dynamism of today's Egypt. There must, after all, be a mental as well as an economic period of take-off.

In the haunts of Cairo's high society the message is gloomily coloured by talk about the paving of the road to hell. The steady encroachment of public funds and control on private business has sometimes been encouraged less by the requirements of the state than by the ubiquitous interest of officials in enlarging their field of activity. There are, it is true, a lot of people now bustling about in commerce and industry who were not there before, but by and large the business community thinks it would be better all

The Australian Scene

FROM OUR CORRESPONDENT IN CANBERRA

A Domestic Matter

ONE man who is disappointed that the prime minister of South Africa is unable to come to London for the Commonwealth conference is the prime minister of Australia. In public Mr Menzies has not allowed one spark of moral indignation to appear in his utterances about events in South Africa. The most that he has said about apartheid is that

> we may as individuals, with the very limited information available to us, think those policies disputable.

But by this restraint he had hoped to be able to speak with more influence to Dr Verwoerd behind closed doors.

Mr Menzies took his stand on three arguments. The first was that it would be wrong to "encourage differences in the Commonwealth at a time when mutual understanding was never more important"; and moreover, to drive South Africa out of the Commonwealth might not be at all in the interests of Africans. Mr Menzies seems to feel that a moderation of policies, a change of government, may well be on the way in South Africa, and that it would be a pity to take any irrevocable step in the meantime.

Secondly, he argued that for Australia the well-worn doctrine that one should not interfere in the domestic affairs of another country—least of all a sister Commonwealth nation——has a particular significance. Any public and official judgment of South Africa's treatment of its natives would invite attempts by other countries to interfere in Australia's policies towards its aboriginal population and towards the peoples of Papua and New Guinea. (Not that Australia has a guilty conscience in this regard.) Thirdly, Mr Menzies said that one cannot know enough about circumstances and policies in South Africa to sit in judgment, and that he will be "vastly interested" to hear more about them when he gets to London.

These arguments would not have satisfied those, even in his own party, who believe that a policy enforceable only by bloodshed and violence cannot be right, and that the long-term interests of the Commonwealth would be better served by public disavowal than by stifling criticism for the sake of keeping South Africa in the club. But the Opposition foolishly worded its motion about South Africa in such a way that it aroused party loyalties; and Mr Menzies countered it very neatly with a resolution of his own which deplored without condemning, which sympathised with the bereaved without attacking the bereavers, which hoped for a restoration of law and order without hoping for a change in the laws—and which helped the time allotted for the debate to go by without a division.

Cold Comfort

This successful manœuvre was not achieved without a price. One or two South African papers interpreted it as support. There was probably some loss of the good will that Australia has been so carefully cultivating in south-east Asia. And the prime minister and his government certainly lost popularity at home.

This was one of the factors that contributed to the big swing against the government in the by-election held on April 9th at Latrobe, the Victorian seat which Mr R. G. Casey, the former minister for external affairs, resigned after the announcement that he was to become a peer. Some loss of votes was to be expected, this being a by-election, the electorate having increased its industrial population, and the former member having been a world figure. But a loss of 20 per cent in first preferences was more than had been feared, and on the first count the Liberal candidate was nearly a thousand votes behind the candidate of the Australian Labour party. What saved him was the redistribution of votes cast for the Democratic Labour party. As in the general election of 1958, this anti-communist, largely Roman Catholic, breakaway party asked its supporters to give their second preferences to the Liberal, and 87 per cent of them did so. In the final result, therefore, the Liberal had a majority of nearly 4,500 over his Labour opponent.

The DLP increased its percentage of the poll from 9.5 in 1958 to 12.5—just when some commentators were describing it as a spent force. It is true that the DLP is particularly strong in Victoria, where a left wing ALP executive nourishes it by tolerating "unity tickets" (now banned by the Federal Labour party), showing Labour and Communist candidates side by side on "how-to-vote" cards in trade union elections. But the Latrobe result certainly does not suggest that the DLP is petering out elsewhere. It is thus less disappointing for Mr Menzies than it is for the new leader of the Opposition, Mr Calwell who, as a Roman Catholic himself, hopes that while denouncing the DLP's policies he can somehow win away its votes.

A Foot on the Brake

One unalloyed satisfaction for the government is the refusal of the Commonwealth arbitration commission either to grant any increase in the basic wage, or to restore automatic quarterly adjustments in accordance with the cost of living.

This same commission had already endangered the economy by granting within the last eight months increases of 15s. in the basic wage and of 28 per cent in the margin for skill payable to metal workers —an increase which quickly spread throughout the economy. So this time the government in great alarm briefed counsel to plead the national interest in stability, and the prime minister publicly told the commission what it ought to do.

The commission had been half expected to demonstrate its independence by granting a small increase. It is a relief that it has not done so. But it certainly does not cut a very dignified figure, and faith that it settles wages according to some absolute justice and infallible wisdom is rather shaken. The Opposition accuses the government of interfering with its impartial processes—a charge that has deeply shocked the treasurer, Mr Holt. But the Australian Council of Trade Unions (the ACTU corresponds to the British TUC), led by a president, Mr Albert Monk, who understands what is at stake, has so far made no complaint, although it has called a meeting to discuss the decision.

Meanwhile a rising flow of imports has begun its counter-inflationary work. The March figure, at £88 million, reflects only the liberal granting of import licences that has been pursued for some time, and not, as yet, the almost complete abolition of licensing that took place in February. With the raising of Australia's quota in the IMF from $300 million to $400 million there is less reason than ever to fear a disastrous run on reserves.

round if they were free to bustle a bit more for their own profit. They would also like to spend some of their profits on pleasure in Europe. The Egyptian government might find it money well spent to waste a million of foreign earnings just to lift the feeling of claustrophobia ever so slightly from the well-to-do.

The reflection forced most strongly on the mind of the foreign observer when the president returned from eighteen days in the Indian sub-continent was the sense of establishment. Behind the stage management that went to his reception, mainly in the matter of truck loads of people brought in from the countryside, most Egyptians were glad to see him home. Egypt seems to doze while he is away, possibly because it is known that nothing important can happen until he gets back. It appears evident that he has so outlived the Egyptian desire for change that even critics of the regime do not expect it. The desire is now usually expressed as a hope for improvement within the existing order. Perhaps there is a slight analogy in the impatience which was shown by the British people at the Labour government's slowness in relaxing wartime controls. The Egyptian people appear to feel that their fidelity to the revolution is sufficiently proven to justify a relaxation of revolutionary controls.

One would like to think that the high moral tone of the president's home-coming speech will be reflected in policy now that he is down to business again. It had a pacific, Ghandi-like quality which, if translated into diplomacy and propaganda, could take the truculent temper out of Middle Eastern non-alignment. There was also a relaxed confidence in it which seemed appropriate to the mood required in domestic government. There is little doubt that the Egyptian people, who are by nature obedient but cannot do a mental goose-step, would like to see that mood burgeon in the first hot sun of this summer.

INDONESIAN PROSPECTS—II

Blessings of Neutrality

FROM A CORRESPONDENT LATELY IN INDONESIA

SCEPTICISM of the Indonesian government's competence to cope with its problems rests above all on the economic deterioration visible everywhere. The peasant economy, with its isolated local markets, is, of course, virtually immune to civil turbulence and bureaucratic blundering. But industry and commerce are more vulnerable. The unreliability of railways, shipping, and postal services is a growing handicap. Twice in 1959 train speeds had to be reduced because of the condition of the track and equipment. Last autumn congestion in the port of Djakarta reached such a pass that demurrage rules had to be radically revised and greater penalties imposed for failure to remove incoming shipments promptly. Even so, a huge volume of goods piled up unprotected on the wharves, causing heavy losses.

There is widespread and bitter criticism of the regime for failing to ensure a reasonably stable monetary and fiscal system and respect for property and employment. One ground for complaint is in the orders discharging Dutch and Chinese employees; it has been hard to find replacements, particularly of professional and technical staffs, and where replacements have been found, they have usually been inexperienced Indonesians. The virtual confiscation of all Dutch-owned property, in 1958 and earlier, is another cause of lack of confidence; a further cause has been the seizure of all assets of Nationalist Chinese (Formosan) nationals in 1958; and the prohibition of retail shopkeeping in rural areas by aliens—mainly Chinese—after December 31, 1959, has had a serious impact on business confidence and investment programmes. Many urban Chinese merchants, though born in Indonesia, as were their fathers and grandfathers before them, are the victims of a xenophobic campaign recalling the treatment of Jews in Nazi Germany.

An even greater factor in unsettling business confidence and disorganising trade has been monetary and fiscal irresponsibility. For years the government has been financing budgetary deficits through bank loans and "printing press" money. In an attempt to halt the inevitable currency depreciation, a decree of August 24, 1959, marked down the exchange value of the rupiah by about 19 per cent. The new official exchange rate (taking account of the 20 per cent tax imposed) was fixed at 36 to the United States dollar or approximately 100 to the pound sterling. The decree also cancelled 90 per cent of the face value of outstanding banknotes of the largest two denominations (Rp500 and Rp1,000) and required holders of bank deposits in excess of Rp25,000 to accept non-transferable government bonds in lieu of 90 per cent of their deposits. These operations reduced the money supply by half (from Rp32.2 billion to Rp16.0 billion). At the same time some taxes were increased, notably corporation and sales taxes. But the drastic depletion of working capital so hampered production and trade that the government was compelled to reverse its course. On the one hand, it authorised substantial increases in credit advances by the banks and, on the other, granted greatly increased subsidies to various lines of trade. Government spending, however, far from being cut, has consistently increased, and revenue has not increased enough to counterbalance these debits. Falling back on the printing press, the government was faced, by January 1, 1960, with a money supply that was back to the mid-August level, after doubling in a little more than four months. Since then, it has continued to rise, though more slowly.

The rigid price control system and vigorous campaign against "hoarding" instituted after the August decree, have kept prices within bounds. (This is the consensus of informed opinion; no adequate price index is available.) But the incompatibilities between wage regulations and raw material and product price regulations have made business management a nightmare. Chinese and other businessmen are withdrawing capital from Indonesia as fast as they can, by every device at hand. The stampede to get liquid funds out of the reach of the government has caused a free-for-all black market in exchange rates. So urgent is the demand for dollars, for example, that while the official exchange rate remains pegged at 36 to 1, eager bidders are paying as much as 400, or even 600, rupiahs per dollar. In the domestic market some things are unbelievably cheap, mostly the subsidised necessaries; others are outrageously high, mostly articles that emigrants or tourists might want to use or take out of the country.

Despite the trend towards endemic disinvestment the Indonesian keeps going by living on accumulated capital—the expropriated Dutch and Chinese capital—and by foreign aid. The first expedient cannot, however, last indefinitely. But in seeking foreign aid, the present administration has shown exceptional ingenuity. It is adept at "working both sides of the street." Since 1949 Indonesia has received from abroad grants or credits equivalent to some £300 million. Of this total, slightly more than two-thirds came from Nato countries; the Soviet Union contributed the bulk of the remaining 30 per cent. If the visible results of this foreign munificence are meagre, the government may well answer that, by preference, the funds have been deliberately used for investment in human resources. That could be a sound investment policy. But it may be doubted whether human resources have been wisely used. In any case, the Indonesian government has clearly profited handsomely from free world-communist block competition, however the Indonesian people may have fared. Hence adherence to the proclaimed neutrality policy seems certain. The question remains: how long can the regime's viability continue to be served by an ambiguous policy abroad and a confusion of cross-purposes in domestic affairs?

Aircraft on the Never-Never

SOME years ago, Vickers-Armstrongs made history as the first British aircraft manufacturer to break into the American civil market, by selling 60 Viscounts to Capital Airlines. Vickers is again making history—this time much against its will—by becoming the first aircraft manufacturer to foreclose a mortgage on one of its customers. Capital has paid about half the £24 million purchase price of its Viscount fleet. It began to fall behind with monthly repayments as long ago as mid-1958, but kept up some form of token contribution until February this year, when even these ceased. It is clear from the airline's cash resources that there is little chance of payments being resumed and Vickers (which has a mortgage not only on Capital's Viscounts but also on the whole of its flying equipment, including some DC-3s, DC-4s and old Constellations) has taken the first steps to get possession of this fleet. In the normal course, Vickers would then sell these aircraft for what they would fetch and return to the airline any balance above the £12 million owing jointly to itself and Rolls-Royce, which supplied the Viscount engines.

But there is not the least chance of this. Capital Airlines is the fifth largest domestic carrier in the United States, running a number of key trunk routes between Chicago, New York and Florida. It is improbable, to say the least, that these services would be allowed to come to an abrupt end while the airline's fleet was sold up. It would not even be necessary for the American licensing authority, the Civil Aeronautics Board, to intervene openly and stop the sale. The most likely course is that someone, probably a shareholder, will have Capital made bankrupt and get the bankruptcy court to appoint a trustee with instructions to put its business in order again. Vickers will not get its aeroplanes and it will not get its money either until the trustee can find some profits out of which to start payments again.

All that Vickers will have achieved is the removal of the airline's present management and its replacement by nominees of the bankruptcy court who—it must be hoped—will be able to get Capital into a better shape. The airline's troubles were brought to a head by its inability to raise money to finance a new series of aircraft purchases, in this case Lockheed Electras and small Convair 880 jets, to modernise its fleet further. The whole sorry story reveals the biggest difficulty in the buying and selling of civil aircraft—that most airlines need credit to buy new aircraft; if they cannot get this from their governments, the security they can offer, such as a chattel mortgage on machines bought, when put to the test is not worth the paper that it is written on.

Airlines need credit because the average rate of earnings in civil air transport is too low for them either to accumulate reserves or to attract the private investor. They get credit because aircraft manufacturers must sell to live. It is a poor airline that cannot find some manufacturer, somewhere, prepared to supply aircraft on terms that the airline can afford to offer. There are few big airlines that prefer to make their own arrangements for raising money. In the United States it has become notably easier for airlines to borrow money both from banks and insurance companies in the last year or so. Pan American, in particular, was able to finance its huge jet fleets by a revolving credit secured on very cheap terms. But the institutions do expect an airline to show a reasonable rate of earnings before they will lend; if it cannot do this, they will not deal, as Capital has recently found.

OUTSIDE the United States, institutional lenders take a much colder view of airline prospects. This drives the airline to ask the manufacturer for credit; and since this can be paid back only by earnings on the new aircraft, it has usually to be stretched out over the working life of the aircraft. Since a modern airliner may cost between £1 and £3 million, the manufacturers in their turn have had to go to the Export-Import Bank in the United States and the Export Credit Guarantees Department in this country. Rumours of a credit race between these two national institutions rarely seem to have much foundation; they work more closely together than manufacturers like to believe. The Ex-Im Bank has made loans to 24 different airlines to cover the purchase of American aircraft; under normal conditions it lends up to 60 per cent of the purchase price over a period of five years, expecting (but not insisting) that the customer will have paid 20 per cent at the time the aircraft is delivered, and that the manufacturer will lend the remaining 20 per cent himself. But when Air France wanted to buy Boeing jets, and asked the Ex-Im Bank for a loan, it was pointed out to the bank that an aircraft as big and expensive (£3 million) as this could not be written down over five years. The bank allowed itself to be persuaded that in the case of the Boeing and the equivalent Douglas DC-8 jet, credit terms could be extended to seven years. But it sets a term of five years for other aircraft, including the Lockheed turbo-prop Electra.

In Britain, ECGD has also become heavily committed in the aircraft business—and is currently anxious about what is

going to happen over Capital Airlines. It guarantees up to 90 per cent of the price outstanding at the time of delivery, which in practice means something between 60 and 80 per cent of the purchase price. Its terms, like those of the Ex-Im Bank, are for five years except in the case of big aircraft—that is, any British-built equivalents of aircraft that would get seven years' credit in the United States. Presumably ECGD would have its own curious rule-of-thumb system for deciding what aircraft meet this ambiguous definition: there are in fact no British-built equivalents for either of the big American jets. But buyers of Comets, Vickers VC-10s, de Havilland 121s and Britannias—though not Vanguards—may well find that they can get seven years' credit out of ECGD.

This credit can be costly, adding anything from 7 to 12 per cent to the purchase price of the aircraft. The ECGD charges, which include an insurance premium, sometimes work out more expensively than those offered by the Ex-Im Bank, but until recently ECGD would guarantee a bigger proportion of the price; so the cost worked out much the same in either country. Recently, however, the Ex-Im Bank has begun to lend a larger proportion of the purchase price. Small institutions, such as Air Finance, are more expensive still since they will not lend without an ECGD guarantee either.

There has never been an open refusal by ECGD to guarantee any aircraft sale; but the department has been able to insist on conditions that have put deals of this kind out of court. This has led several airlines to see whether barter deals might not provide a convenient alternative to credit. Such deals are considered perfectly respectable by ECGD, and it would be prepared to take part in them but negotiations have invariably broken down over the question of prices for the goods bartered. Cork, cotton and machine tools have all been discussed at one time or another; the difficulty is that brokers usually want a large discount which neither the airline, nor the aircraft manufacturer, nor the supplier of the goods will accept.

Recently, a new difficulty has appeared. Both the American and the British credit institutions assume that the airline will have paid a certain deposit by the time the aircraft are ready for delivery—anything from 20 per cent downwards, or as one maker puts it "anything we can get." And airlines have always relied in the past on raising the cash for this deposit through the sale of their old aircraft. Since the debut of the jets, the bottom has fallen out of the secondhand market, especially for the old propeller-driven aircraft that the jets replace. Prices for the most efficient piston-engined machines, such as the DC-4 and DC-6 series, remain fairly firm considering their age, but the bigger, and noticeably less efficient piston-engined airliners may be lucky to sell for scrap.

A few aircraft brokers are taking advantage of exceptionally low secondhand prices to buy and re-condition these aircraft for charter. What troubles the airlines, however, is that the lack of a developed secondhand aircraft market such as exists in the motor industry makes it impossible to guess what their fleets will realise until the time comes to sell them. This makes negotiations to buy new aircraft extraordinarily difficult. It has led to pressure on aircraft manufacturers to take these old fleets in part-exchange for new aircraft. The first manufacturer to offer trade-in terms was Lockheed, at a time when the company was concerned about the slow sales of its Electra. But the practice is no longer confined to weak sellers. United Airlines in America is reputed to have insisted on trade-in terms for 20 assorted Douglas aircraft before placing an order through Douglas for 20 French-built Caravelles. In this country, Vickers-Armstrongs is certainly prepared to accept old Viscounts from customers for new Vickers aircraft; this may be one way of solving its present troubles with Capital.

EVEN when an airline has been turned down as uncreditworthy by all the usual sources of finance, it is still possible for it to acquire new aircraft—though these may not necessarily be the aircraft of its first choice, since only the weak sellers of the industry may be prepared to co-operate. Some airlines may be short of cash, but have other saleable commodities at their disposal such, for example, as traffic rights. Middle East Airlines has recently completed a deal with the British Overseas Airways Corporation which, when stripped of its diplomatic wrappings, means quite simply that BOAC has agreed to supply Middle East Airlines with Comets in return for certain valuable traffic rights which MEA possesses by virtue of being based at one of the world's main air junctions. Other small airlines can sometimes find a manufacturer who is willing to finance the sale of a limited number of machines out of his own funds in order to keep a production line going. Certain Comet sales have been financed in this way entirely by de Havilland without the help of credit institutions. But the difficulty in all such cases is that even where the maker has a mortgage on the aircraft, this mortgage has little practical meaning since the chance of reclaiming the aircraft is slight. Because of this the leasing of aircraft is becoming increasingly popular, not only as a means of supplying machines to small airlines, but as a means of achieving major sales without recourse to borrowing.

Most airlines, if they are efficiently run, earn enough to pay substantial monthly rentals on their fleets, even if their earnings would never allow them to accumulate enough cash to buy these outright. The possibilities of leasing aircraft to them rather than making a direct sale first became apparent when American Airlines decided two years ago to lease the engines for its new fleet from Pratt and Whitney, the manufacturers, instead of buying them. In this way the airline by-passed the banks (which in turn became so alarmed at the prospect of losing business that when Pan American and other American airlines wanted to borrow to pay for their jets, they got much better terms than they had expected). Several small American airlines have since leased aircraft, sometimes at two or three removes from the factory. Northeast, as one example, has recently leased aircraft from Trans-World Airlines which leases them in turn from the Hughes Tool Company, which bought them from the makers. Eagle Aircraft in this country is operating Britannias leased from a Cuban airline that bought them from Bristol.

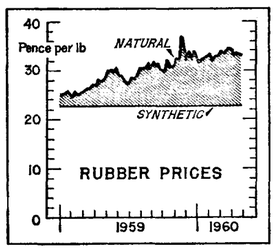
The present investment allowances make the leasing of aircraft particularly attractive to British manufacturers, and considerably more profitable than trying to sell aircraft on credit. It appears to give the manufacturer better legal protection than the now worthless chattel mortgage and it is less frightening to a small expanding airline than the heavy burden of debt incurred in buying a new, modern aircraft. As aircraft become more expensive, and move further out of the reach of even medium-sized operators, this type of agreement is likely to become common throughout the business.

Not Enough Rubber

There are two things wrong with natural rubber, an American tyre manufacturer said recently: its price is unstable, and there is not enough of it. Neither fault can be remedied soon

AT a time when commodity prices are not exactly booming, many rubber growers are quietly tapping a fortune from their trees. The threat of a burdensome surplus of natural rubber vanished long ago; nowadays consumers cannot get enough at a price they would consider competitive with the synthetic product. So far this year the price of top grade sheet rubber in London averages the princely sum of 33½d. a lb cif, showing a premium of about 1s. a lb over synthetic rubber. That average is 4d. a lb higher than the 1959 average of 29½d. a lb which was in turn 6d. a lb above the 1958 average. At anything like recent prices a moderately efficient estate in Malaya can make a decent living, and estates with a large proportion of mature high-yielding trees are on velvet.

Net profits of Linggi Plantations, one of the stars of the Guthrie group, soared from £161,000 to £304,000 in the year to October 31st, reflecting better returns not only from rubber but also from its big stake in Oil Palms of Malaya as well, and the tax-free dividend has been raised from 16⅔ to 25 per cent. When London Asiatic recently offered to buy Lanadron Rubber it revealed that its profits in the calendar year 1959, before tax but after providing £170,000 for replanting (as in 1958), were about £750,000, twice as high as in 1958. Lanadron's profits before tax, after providing £51,800 for replanting (against £67,600 before), were estimated at £240,000, 2½ times the 1958 profit.



While rubber has gradually been losing its old "boom and bust" reputation, the newly independent Federation of Malaya has been acquiring a reputation for political stability. Prematurely—perhaps: but when management and investors now look around South-east Asia they feel that Malaya promises to be a better risk than the rest. These twin changes have brought a spate of bids and amalgamations, of which London Asiatic's bid for Lanadron is one of several recent examples. As estates have merged themselves into stronger groups, spreading costs of administration, their shares have become at once more marketable and more attractive to investors. The upshot is that the rubber share market, traditionally fair game for the speculator, now has more solid support, and yields have fallen accordingly.

Lately the stream of bidders has been joined by some wealthy Chinese in Singapore, anxious for a safer haven for their capital in the Federation. Rubber Estates of Malaya recently sold three divisions covering 2,753 planted acres (nearly half of it under seedling rubber trees over thirty years old) to Chinese buyers for £341,250, equal to £124 per planted acre. Shareholders have already received a dividend of 17½ per cent, 10 per cent more than in the previous year, and are now awaiting some return of capital. This explains why the shares, now standing at 46s. 3d., over three times their level of a year ago, yield less than the shares of far more up-to-date estates.

FEW people expected natural rubber prices to remain so high. The squeeze on supplies in the autumn has largely worked itself out. Consumers are switching to synthetic rubber as fast as they can, and over 100,000 tons of natural rubber have been sold from government stocks—mainly American and British—in the past six months. Yet forward rubber prices are still only about 2½d. a lb below last November's peak. Stocks in Malaya are still small, and with production now seasonally low there are no signs of a sharp break in the market.

But barring such unpredictable events as a sudden upsurge in Russian buying, rubber prices seem bound to fall later on. Total consumption of rubber in the free world will probably rise by about 100,000 tons to a new peak of 3,320,000 tons this year, and the cheaper synthetic rubber may capture the whole of that increase, and possibly more. Consumption of natural rubber may be no higher than (if as high) last year's figure of 1,672,000 tons, and could for the first time take second place to synthetic. The difference between free world consumption and total "consumption" of natural rubber depends on how much the Communist countries buy, particularly Russia and China. These countries altogether are reckoned to have imported 442,000 tons last year, not very far short of the 555,000 tons used in the United States.

At the turn of the year Russian buyers ostentatiously withdrew from the market, saying that prices were too high, and that their government too was going to release rubber from its reserves. Yet recently Russia has bought 6,000 to 7,000 tons from the British Government's stock, which hardly suggests that it has a lot of rubber to spare. China, despite its quarrels with Indonesia and Singapore, continues to buy from both. At a guess, the Communist countries may import at least 400,000 tons this year. If this reckoning proves right, con-

sumption of natural rubber in the free world this year, plus the Communist countries' imports, would amount to about 2,070,000 tons, virtually the same as last year's output. A fall in prices would probably reduce smallholders' output to some extent, but this might be largely offset by increasing production from estates.

With world production and consumption of natural rubber apparently in broad balance, most of the rubber being sold by governments can in effect be used to rebuild commercial stocks. The American and British governments have sensibly decided to regulate their sales according to price, Britain turning off the tap when prices drop below 25¼d. a lb, and selling without restriction at 30½d. or more. About 90,000 tons have already been sold for delivery this year, and even if sales are restricted later the total could reach 150,000 tons.

Over the next five years, at least, the natural rubber industry ought to make good money. Leaving aside world slump or political crisis, total consumption of rubber in the free world should grow, to perhaps four million tons in 1965, about 750,000 tons more than in 1959. In that time, world output of natural rubber can hardly rise by more than 250,000 tons to say 2.3 million tons—and the Communist countries will presumably want some of that. Consumers will not be able to supplement their supplies from the British stockpile for very long ; by 1961 the whole stock of 100,000 tons will have been sold. But the American government is believed to hold about 1¼ million tons, and though it has decided to sell only 470,000 tons, it may revise its ideas.

Whatever the gap in the free world's needs may prove to be, it will have to be filled by synthetic rubber. In the United States, where synthetic rubber already accounts for two-thirds of total consumption, manufacturers are planning to rely on synthetic rubber for over 70 per cent of their requirements by 1965, and the share of synthetic in the rest of the free world's consumption will have to rise even more sharply from the 1959 average of nearly 30 per cent.

The cost of building plants to produce synthetic rubber and the difficulties of switching to more synthetic in the manufacture of rubber products will keep competition within bounds. The new polyisoprene rubber now going into commercial production is claimed to be identical to the natural product, and thus it could break the monopoly that natural rubber holds in the manufacture of heavy duty tyres. But by the time polyisoprene is widely available, its price may be no cheaper than natural rubber. Unhappily for consumers in the United States and Europe, it does not follow that the price of natural rubber will necessarily become more stable as their dependence on it declines. The Communist and other less advanced countries whose purchases are apt to fluctuate sharply will then become more influential in the market.

Progressive estates in Malaya are trying to serve their short and long term interests at the same time. By vigorous programmes of replanting they are reducing their costs—which are well below those of synthetic rubber manufacturers—increasing the supply and increasing their profits. They know that high prices work against their future interest by stimulating the production of synthetic rubber. But expanding output in Malaya and in smaller producing countries can do little to relieve the shortage as long as output in Indonesia, still the biggest producer, marks time. Only an international marketing scheme could ration supplies to consumers at a stable price fully competitive with synthetic rubber, and no one could be wildly enthusiastic about that.

BUSINESS NOTES

IN THE MARKETS

Still Waiting

EQUITY prices continue their downward drift. On the eve of the holiday they marked up their first gains since the budget, but this week have fallen again, in narrow markets. Gilt-edged, meanwhile, continue to attract modest demand, especially for maturities at the shorter end of the medium range. Low coupon issues, such as Savings 2½ per cent 1964-67 have been especially popular. Yields on short-medium dated stocks had been humped up by the banks' sales; now the widespread expectation of special deposits has made further sales seem less likely. While no one knows just what effects special deposits are likely to have, almost everyone is agreed that they are likely to be used in such a way as to stop the banks selling gilt-edged. This is the logic that underlies the strange phenomenon of a firm gilt-edged market under the shadow of the Chancellor's threat of renewed credit restrictions. On Thursday the authorities felt able to bring forward a £10 million issue for Essex County Council; the terms —5½ per cent coupon at 98½ yielding £5 13s. 3d. to the final redemption date in 1977—were exactly in line with the market.

Gilt-edged are also benefiting from the stultifying effect of uncertainty on equities. The market has been uncertain so long now that official action when it comes may have to be really tough if it is to outweigh in its psychological impact the lifting of uncertainty. By no means everybody is convinced that a call of, say, 2 per cent to special deposits would come into that category of toughness. By now the markets have discounted quite a lot. It is by no means inconceivable that a gentle call of special deposits alone, which everyone expects would affect only bank advances and leave all the familiar credit loopholes open, would be followed by a recovery in both gilt-edged and equities. If the market resumed its buoyancy, the dampening effect of the official action would be lost, and the authorities might feel impelled to reach for weightier bludgeons such as controls on hire purchase. Such might be the Alice in Wonderland limit to which policy could be driven if the further use of interest rates and stock market correctives were abandoned.

Naturally bank shares and finance houses have lost their lustre ; but as the table on page 353 shows, while investors who bought at the end of 1959 have suffered substantial losses those who bought two years ago still have a book profit of near 100 per cent. On Tuesday this week sharp rises in Philips Lamp and Unilever NV took place in response to foreign buying, but these were largely lost on the following day. South African gold shares have been subdued.

Wall Street Jitters

A correspondent cables from Wall Street :

STOCK prices broke sharply at mid-week to interrupt the mild and intermittent raily which by Monday had carried Dow Jones average of industrials from below 600 in early March to 631 ; at Wednesday's close the index had dropped back to 619. Investors have for the most part been cold shouldering "cyclical" and blue-chip issues in favour of a fairly small group of stocks believed to be good for a rise irrespective of which way the market turns. This concentration of buying has brought sharp price advances to these issues. Nothing has developed within the economy to add substance to the bearish sentiments that abound—indeed better news on the pace of new car sales and encouraging reports from the department stores sparked a brief flurry of optimism last week. But while investors are maintaining a wait-and-see attitude towards business, many company reports for the first quarter of this year are underlining the fact that although sales were better than a year ago profits were slimmer.

To prevent a recurrence of the kind of unbridled and uninformed speculation that plagued the government bond market in 1958, the Treasury has asked the banks to see that purchasers of long term government issues put up a five per cent cash margin in addition to full collateral ; dealers and those buying short term issues can continue to make their purchases without this margin requirement. While purchasers of stocks are currently required to pay cash to the tune of 90 per cent no similar restriction has previously been in force for the purchase of bonds. Prices moved down somewhat on the announcement, but most dealers in "governments" thought the move would not have much impact. Meanwhile the market seems to be uncertain about both the economic outlook and the proper level of interest rates. The poor reception given to the Treasury's new 4¼ per cent bond has left little doubt that the slide in rates since the beginning of the year had gone too far—largely on the erroneous anticipation of easy money ahead. Interest rates have turned upward again, though the three months' Treasury bill rate has come back a little, to 3.3 per cent, after last week's leap to 3.6 per cent.

BLUE STREAK

Twixt Heaven and Hell

THE Blue Streak rocket, 70 ft. of eggshell thin metal wrapped around electronic intestines of indescribable complexity, hangs at this moment in a limbo between order and cancellation. Work on it as a military project has stopped; estimates are now being prepared to discover which would be the least wasteful course, outright cancellation of the rocket, or its adaptation to a different role.

The bill for Blue Streak is made up as follows: up to the present time, £65 million has been spent on developing the rocket, part-building several test missiles, establishing a £20 million rocket engine test site at the ironically named Spadeadam Waste in Cumberland and preparing Britain's share in the test range at Woomera and its associated tracking stations. To prove the rocket, and carry out the preliminary test firings planned for the turn of 1960-61, would have required another £45 million. From this point on, expenditure would have begun to mount astronomically. Another £500 million would probably have been needed to burrow out the underground launching sites, with all their associated services and fuel storage, to carry out live firing trials with warheads, and finally, when scientists handed over to the military, to train RAF crews with live rockets. Probably the biggest item of all would have been, not the development of the missile, but the construction of its launching sites. This cost must have done much to tip the balance against Blue Streak.

If all work stops now, the Government may have to pay up to £40 million to the contractors, de Havilland, Rolls-Royce, Sperry and their associates, in compensation for cancelled orders, bringing the total bill to more than £100 million. This might mean the same sum in money, though not the same expenditure of resources, as would be required to carry on the programme of work planned for the current financial year, which includes the completion of the first test rockets and their firing at Woomera.

The word "waste" is perhaps bandied about here a bit too loosely. Defence, during peacetime and an era of rapidly advancing competitive technology, must consist of a constant series of such apparent wastes—which are cheaper than getting unprepared into a war, and even possibly cheaper (German and Japanese papers please correct) than losing one.

Into Orbit?

THESE figures suggest an alternative to outright cancellation, and the writing off of £100 million to misdirected enthusiasm. This would be the continued development of Blue Streak not as a weapon, but in the much easier role of space rocket. Since a space rocket only goes up, not down, it escapes the perils of re-entering the atmosphere and saves the heavy development cost of trying to bring a nose cone down to earth more or less undamaged. The preliminary firing trials planned for the turn of the year plus a change in the guidance system might in fact be all that remains to complete the development of Blue Streak in this role. The rocket would then need the addition of two extra stages made up of the Black Knight rocket already used for preliminary trials, to give a composite space rocket capable of placing a half-ton satellite into orbit. The bill for doing this is tentatively estimated as the £65 million already spent on Blue Streak, plus a further £45 million needed to finish current work and carry out firing trials, plus about £25 million (scientists say £10 to £15 million but government departments have learnt from experience to double such figures) to complete the modification of Black Knight and put a satellite into orbit. In very round figures, this might mean the expenditure of £135 million for a space programme based on Blue Streak, as against a total bill of £100 million or so if all work is halted now—representing £65 million worth of work done, and up to £40 million in compensation that the contractors may find more commercial ways to invest. The Government has in fact asked for a detailed estimate from the contractors of how much a space programme of this kind, unbacked by military rocket building, might cost.

Is space exploration worth this expenditure—roughly double what has been spent already ? Many scientists would argue it is not, though history and political expediency could be against them. Space exploration by Britain might yield two forms of dividend. One is an increase in pure knowledge which is something no scientist can afford to despise. The other could be an increase in practical knowledge, using satellites for weather forecasting, for communications links and for military reconnaissance. Scientists would agree that it is necessary for Britain to know about such things, without accepting it as necessary for this country to build its own rockets to put satellites into orbit. But if the Ministry of Defence wishes to save its face, and avoid the accusation of having poured £100 million down the drain on Blue Streak with nothing but scrap metal to show at the end, it may twist the Treasury's tail into agreeing to a "modest" £135 million space programme in place of a £600 million Blue Streak missile programme. In such an event, compensation payments to contractors might not exceed £4 instead of £40 million. But much depends on the estimates they send in of the cost of a space—without a missile—programme.

INDUSTRIAL DIVIDENDS

Thursday's Three

ON Thursday three important dividend announcements were made by leading companies in this country. The most depressing of them came from **Babcock and Wilcox**, the boilermakers. The news from this company was even worse than expected although at the time the directors cut the interim ordinary dividend from 6 to 4½ per cent they said that profits were falling. The directors have now reduced the final dividend from 7 to 4½ per cent, cutting the total payment from 13 to 9 per cent. After all charges except tax, the consolidated trading profit slumped last year from £3,277,626 to £523,154. This must largely represent the

cost of designing, developing and manufacturing nuclear and large boiler plant; the effort and cost of doing so, the directors have already implicitly admitted, was greater than they had anticipated and it has affected and delayed production. On Thursday the £1 shares fell by 4s. 3d. to 36s. 10½d.

Following the dividend increases announced by "Shell" Transport and British Petroleum, **Burmah Oil** has raised its tax free dividend from the equivalent of 1s. 4½d. (or 6⅝ per cent) to 1s. 9d. (or 8¾ per cent). This was well up to market expectations. Trading profits for 1959 were only slightly higher at £6.9 million and the charge for depreciation rose sharply from £1.2 million to £2 million. This was more than offset, however, by a bigger investment income of £12.7 million (against £10.9 million), so that total profits before tax were £1.1 million higher at £17.6 million. The increase in income reflects Burmah's bigger holding in Shell and the higher BP dividend in 1958. The increased dividends recently announced by these companies will be taken into account by Burmah Oil this year. At 46s. 9d. the £1 shares, which fell by 1s. on this news, yield 6.1 per cent on the increased dividend.

As expected, **Vickers** has left its ordinary dividend unchanged at 10 per cent. Its results last year did not make a brave showing. Sales came down from £176,850,000 to £155,542,000 and gross profits, after a slightly higher charge for depreciation, fell from £15,150,634 to £14,050,798. The latter figure, however, includes an exceptional credit of £1,200,000 arising from contracts relating to earlier years. Against these profits £5 million, twice as much as in 1958, has been charged to aircraft development expenditure and though the tax provision has come down by nearly £2 million the net profit of the group has fallen from £6,592,257 to £4,933,865. There was a recovery in profits and in margins in the second half of last year but Vickers' orders on hand are still falling. At the end of 1958, they amounted to £312 million, in the middle of last year to £295 million and at the end of it to £288 million.

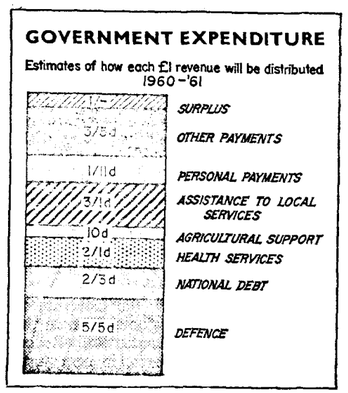
AEI, REYROLLE, PARSONS

Something Less than Kin

LAST year's agreement between the nuclear engineering consortium headed by Associated Electrical Industries and the Nuclear Power Plant Company, of which Parsons and Reyrolle are leading members, provided for co-operation all the way—joint research, design, tendering and construction of nuclear power stations, though contracts already under way are being completed by the separate consortiums. The discussions between Reyrolle and Parsons that have been going on since January equally envisaged a complete merger. The arrangement between the three companies that was announced last weekend amounts to a good deal less than either—but is apparently aimed at gaining some of the advantages of both.

The Reyrolle-Parsons merger is off; according to Mr H. H. Mullens, chairman of Reyrolle, financial complications attaching to Reyrolle's existing holding of 40 per cent of the Parsons equity made it impossible to reach an agreed formula. On the other hand, the two companies intend to become even more closely, if informally, associated, and Mr Mullens is to seal the friendship by becoming chairman of Parsons also. But half of Reyrolle's holding in Parsons is to be acquired by AEI on a share exchange basis—1,800,000 shares in Parsons for 1,525,000 ordinary shares, valued at just under £4 million, in AEI; Reyrolle thus receives (and intends to retain) a 3½ per cent interest in the AEI equity for 20 per cent in Parsons. And this financial link is to be complemented by a joint programme of research and the exchange of technical information and experience in the field of generating plant and associated equipment. But co-operation in research in this case is not to extend to design or tendering; the three companies, Lord Chandos has said, will continue to trade in competition. This straight exchange of shares will not need the approval of shareholders, though for Reyrolle it represents quite a substantial shift in its holdings; but the new AEI shares to be issued to Reyrolle will nearly exhaust the group's unissued capital, and shareholders will be asked to approve an increase of £3 million in its authorised capital.

Research in the heavy electrical industry needs to be on a large scale and is extremely costly: AEI alone is currently spending about £7½ million a year on it, and any chance to economise by cutting out duplicated studies will be welcome in view of the somewhat squeezed profit margins in this business. The companies agree, moreover, that there is a considerable area for background research in this field, particularly on turbine characteristics and behaviour, where joint study may offer results that can be of common value to different design teams, though each may make use of them in its own way. Some of the big electrical groups on the Continent, within the Common Market, are already working together in this and other ways.



In the export market, where demand is still overwhelmingly for coal, oil or hydro-electric stations, Britain's recent concentration on the nuclear side of generation has to some extent left the running in operating conditions and performance of these "conventional" stations to be made abroad. At home, the concentration of heavy investment into ever fewer and bigger stations makes it increasingly questionable whether future demand can be neatly parcelled out to keep half a dozen turbine builders, let alone nine boilermakers fully employed. Inevitably it will be asked whether these latest arrangements between AEI, Reyrolle and Parsons may prove simply a transitional stage in the further concentration of the heavy electrical industry; be that as it may, managerial logic seems to emerge from them.

SAHARAN OIL

Nationalised Marketing

APPROVAL was finally announced this week by the French Government for the *Union Generale des Pétroles*, the nationalised company that is to transport, refine, and distribute Saharan oil in France—apart from such amounts of it as the Government obliges the other major oil companies to refine and distribute through their French subsidiaries. The new UGP will be owned by the *Regie Autonome des Pétroles*, the *SN Repal*, and other state-controlled companies concerned with oil in French Africa. It is to take a controlling interest in the transport, refining, and distributing assets Caltex owns in France; the proposal is that, theoretically at least, it shall compete commercially with the existing distributors of petroleum products without any discrimination in its favour.

The Government statement setting out the principles that UGP will be organised to serve recognises that "a sufficient share" of the French market must be left to the existing companies, which had equipped France with a modern refining and distribution system before oil was ever discovered in the French Sahara. But it adds that a reasonable share of France's supplies should be reserved "for each of the sectors of franc zone production" regardless of the pattern of traditional imports. Its acceptance of the fact that "franc zone petrol" must largely be consumed within that zone may suggest that France's hopes to gain Saharan oil a

preferential place not only in France but throughout the common market have at least abated (though significantly the question of tariffs on refined petroleum products was left out of the agreed "List G" schedules of the proposed external tariff). But the final emergence of UGP must give the oil business furiously to think. Is this the beginning of a French ENI—with the difference that unlike ENI it begins with the advantage of having actually found oil?

PETROL

A Price Cut

MAJOR oil companies distributing petroleum products in Britain last week announced cuts of a halfpenny a gallon in the price of super and premium grades of motor spirit, and of derv fuel (for diesel-engined road vehicles) and gas oil. This brings prices down to the lowest level for four years. Standard grades of petrol—though of late the market for these appears to have been much softer than the market for premium grades—have not been cut.

The companies explained the changes as being mainly the result of a further dip in tanker freights—the quarterly Average Freight Rate Assessment upon which the major companies reckon their own tanker accounting showed rates 7-9 per cent lower at the end of March than at the beginning of the year—and of some cuts in fob prices for products in sources of world exports such as the Caribbean. Britain imports little refined petrol (its imports being more significant in fuel oil, for which demand remains very strong and advertised prices at least are not being cut); but the level of product prices in the United States and the Caribbean retains much of its considerable effect upon the level of product prices in Europe. This is particularly true in European markets such as Britain, where no disorderly intruders have arrived to disturb the sedate "quality competition" of the majors. This price cut is also a reminder that the majors have no desire to encourage any.

RAILWAYS

What Kind of Inquiry?

IT is now quite clear that the Government changed its mind over the kind of outside review of the Transport Commission it wanted—or could expect in the time it set—between the Prime Minister's original statement last month and Mr Marples' announcement two weeks ago of the names of the persons who are to conduct it. This much was openly admitted by Mr John Hay, Parliamentary Secretary to the Ministry of Transport, just before the House of Commons rose for the Easter recess. But it still is not at all clear whether this change

How Special Deposits Would Work

WHATEVER the merits of the untried device of "special deposits," it is now widely believed that the authorities intend to use it quite soon—possibly after next week's publication of the April 20th bank statements. What would special deposits mean? The scheme was first made public at the time of the ending of the credit squeeze in July, 1958, when it was put forward by the Governor of the Bank of England in response to the Chancellor's invitation for a provisional alternative to the unpopular system of curbing advances through official "requests." But the special deposits scheme was not drawn up hastily; it was mentioned by the Bank to the Radcliffe committee in a memorandum in November, 1957.

The scheme was originally discussed with the clearing banks and the Scottish banks, though the Governor said that it might be "more widely applied" in the light of experience. Such wider application would be in line with the wishes of the Radcliffe committee, which stressed the "single market" for credit, but it would involve great administrative difficulties—and it might then no longer be possible to make the scheme technically a voluntary one, or even perhaps to operate it under the (never yet used) power of direction to "banks" given by the Bank of England Act, 1946.

The clearing banks and the Scottish banks would be treated as two separate groups; the call of special deposits would be the same for each bank within each group, but could differ between the two groups—and conceivably one group (Scotland in present circumstances?) could be exempted completely. Each bank would have to pay over, within a specified period, the stipulated percentage of its gross deposits at its last make-up date; and its special deposits would be adjusted in line with changes in its deposits at ensuing monthly make-ups. The special deposits would not rank as liquid assets of the banks, though the Bank of England might sanction a partial release for a short time to a bank under special pressure. The clearing banks would be expected to keep above the conventional (and now officially stamped) minimum of 30 per cent of deposits in liquid assets; special arrangements would have to be made for the Scottish banks, which do not work to any open liquidity convention. A general difficulty is that at present commercial bills rank as liquid assets, and the authorities might feel obliged to take steps to prevent a switch to such financing as an alternative to advances.

At a time when the average liquidity ratio was, say, at 33 per cent, a call of 2 per cent would reduce this to 31 per cent—and might bring individual banks below 30 per cent. These banks might then have to make immediate sales of bonds. At mid-March, which is normally the month when bank liquidity is at its tightest, the clearing banks showed an average ratio of 31.4 per cent, and one bank, the Midland, had a bare 30.1 per cent. But in general, the aim of the scheme would presumably be to discourage bank sales of gilt-edged, which have a damping effect in the market that the authorities for some reason regard as peculiarly undesirable. The only real argument for special deposits is that they could be used to coerce the banks to curb their advances, rather than induce them to do so by putting pressure on the gilt-edged market; for this reason, the device of special deposits suffers from the weakness that it exerts no general pressure on the market for credit as a whole.

A call of special deposits would reduce to the same extent the capacity of the banks to hold money market assets, but it does not follow that rates for Treasury bills and call money would rise accordingly. For the supply of Treasury bills to the market would presumably be reduced to the extent of the call, being replaced by an equivalent increase in Treasury bills held by the Bank of England. There would then be no net strain on the banks' cash. Bank earnings would not necessarily suffer from the exchange of call money and Treasury bills for special deposits, since these will earn interest at the current average tender rate on Treasury bills (adjusted weekly). Bank earnings would of course be hit by the check to advances—but possibly by less than would be the case if that check were imposed through tough action in the gilt-edged market.

of mind involved anything more than the question of the membership. According to Mr Hay, the original intention was for a planning board, with a rather wider (and weightier ?) membership including representatives of the commission, to "carry out the planning of the future of the railways." Instead, the present advisory group of four industrialists will have the seemingly narrower task of working out how the general principles of reorganisation laid down by the Government can in practice be applied.

Presumably, these general principles still include, apart from the more technical question of how the Transport Commission ought best to be organised, other issues mentioned by Mr Macmillan. There was little mention in the Minister's or Mr Hay's speeches of the questions whether the railways should be relieved of their remaining public obligations and what should be done about unremunerative rail services and the commission's capital structure. Moreover, Mr Marples had revealed earlier on in the same debate that the advisory group's terms of reference might be broadened if it found them "inhibiting": he also announced that its report would not be published. Labour members had little difficulty in making a big point of the one crucial weakness in the idea of making parts of the railway system self-accounting: a revived clearing house system with a large staff would be needed to allocate charges and revenue and, even then, much of the allocation would have to be informed guesswork. The one piece of hard new information was given by Mr Hay. The commission has now borrowed from the Government £276 million to meet its deficits and £326 million for modernisation; this suggests that £85 million was advanced during 1959 for deficit financing and £113 million for capital investment.

AIR NAVIGATION

Defeat for Decca

FEW people can have been surprised when the International Civil Aviation Organisation—a body that rarely finds itself in the news—voted before Easter against the use of the elaborate Decca navigation aid and for the adoption of the much simpler VOR radio beacon as the standard international short-range navigation aid for the next fifteen years. The majority was two to one and followed a similar recommendation by ICAO's technical committee, which had gone into the matter some months earlier.

The decision cannot really be described as biased. The arguments for and against British Decca and American VOR have become so overlain by political issues that the main object of a standard radio aid gets pushed into the background. The real need is for a simple apparatus that best combines the airlines' need for efficient navigation with the countries' need for cheap installation, and in most parts of the world VOR is the best compromise. To some countries, notably Britain, VOR may look obsolete, but there are not enough of even these simple, primitive radio beacons on many air routes, even in so crowded a zone as Europe. And most pilots will agree that VOR, combined with some system for measuring distance of the aircraft from the beacon, is as good a method of navigation as they need most of the time.

Where such equipment becomes inadequate is in intensely crowded regions of air traffic, such as those found over Southern England, Western Europe and some parts of the North Atlantic. The Decca system, much more elaborate and much more expensive than VOR, is a considerable improvement in these crowded zones, allowing aircraft to fly closer together and cutting down traffic delays. There are some grounds for the British complaint that American tests of the Decca equipment under these conditions were not fairly carried out; but it is impossible to assert that in its present form Decca is the perfect answer to all navigation difficulties.

AIR AGREEMENTS

Pact with France

THE harsh realities of the aircraft market, military and civil, have forced the British and the French aircraft industries to drop their prickly mutual hostility and contemplate a degree of co-operation that would have been inconceivable a year ago. The Minister of Aviation seems to have had a much more cordial reception during his recent tour of France than he expected and to have come home feeling that there was a good chance of working together on some of the more expensive projects such as supersonic airliners, vertical take-off aircraft, automatic landing aids and ventures into space.

It is significant, however, that in none of the projects mentioned are the British and French industries directly in competition; as experience with the Caravelle has shown, Continental competition can cut heavily into potential British exports. There are already plans in hand in Europe's aircraft factories for a successor to the Caravelle to compete with the de Havilland 121 in the mid-1960s. The inspiration for this comes at the moment from Fiat, the only aircraft manufacturer on the Continent which is backed by really substantial resources. Fiat which is at present building tail sections of the Caravelle is trying to work out a common project with the nationalised French company, Sud Aviation, and with the reviving German manufacturers, which would take the form of a medium-range jet with extremely short take-off. This kind of performance would depend on fitting the aircraft with two main engines and two auxiliary "short-life" engines used only during take-off, both types to be supplied by Rolls-Royce. If the proposal seems unconventional, it is as well to remember that the Caravelle too once looked odd to British eyes.

STEEL

Integrated Expansion

TOGETHER with the £10 million programme of converting Steel Peech and Tozer's Templeborough works to electric steelmaking that was announced in December, the plans to increase Appleby-Frodingham's iron, steel, and rolling mill capacity and Samuel Fox's steel capacity announced this week—to cost another £32½ million—largely unfold United Steel's present intentions of reconstructing and expanding its massive steel business. The salient points of the new projects are:

At **Appleby-Frodingham,** to increase ore preparation capacity and blast furnace auxiliary plant to supply the sinter to raise production of pig iron at the four blast furnaces from 1,560,000 tons to 1,950,000 tons a year by the end of 1964; and to convert five more of the plant's open-hearth furnaces—making eight in all—to the company's own Ajax process, which uses large volumes of oxygen to smelt a charge consisting almost entirely of hot metal into steel with up to 60 per cent more output than openhearth furnaces provide; and to convert one further furnace into a hot metal mixer to feed the Ajaxes. The extra steel produced—say 400,000 tons a year—will be rolled down into 300,000 tons of finished steel products —mainly as the products of a new rod and bar mill.

In United Steel's **Ore mining branch,** extraction of home ore will be raised from 6,190,000 tons to 7,700,000 tons a year; and from its **Coke and Chemicals company** United Steel will increase capacity to deliver 320,000 tons more coke a year to Appleby-Frodingham's sinter plants.

At **Samuel Fox** in Sheffield, redevelopment of existing steel furnaces and rolling capacity will raise output from 400,000 tons to 500,000 tons of its alloy and stainless steel a year.

The integration of this advance on several fronts will include the transformation of Appleby-Frodingham from an ordinary open-hearth works, consuming large tonnages of scrap, to a hot metal works using very little; its own process scrap will now "circulate" to the electric furnaces to be installed at Steel Peech and Tozer, as perhaps the cheapest modern process for a cold metal shop. Extra coke oven gas supplies made available at United Steel's Brookhouse and Orgreave plants will be piped through existing pipelines to Steel Peech and Tozer and Samuel Fox. The whole reorganisation plan is scheduled to be completed by late 1964; while United Steel will be able to finance part of this £42½ million from retained profits, it says bluntly that in due course it will be coming to the market for additional finance.

The Harvest of Profits

THE majority of the 413 companies whose accounts appeared in the first quarter of this year closed their books at September 30th or December 31st. Their trading profits rose by £45¾ million to £587½ million, an increase of 8½ per cent compared with 3¾ per cent in the previous quarter and 4¼ per cent in the quarter before that. As the calendar year wore on and the effects of the 1958 recession wore off, the recovery in industrial earnings gathered way. The major influences in the past quarter's figures were the profits of the iron and steel companies (up by 4½ per cent), tobacco (down by 5 per cent, reflecting the experience of Imperial Tobacco), motors, cycles and aircraft (up by 18¾ per cent, largely reflecting the results of Ford Motor), shops and stores (up by 11¾ per cent, reflecting the better trading of the department stores) and shipping (down by 21½ per cent, almost entirely as a reflection of the experience of P and O).

Following the 9d. reduction in the standard rate of income tax a year ago, many companies made big tax write-backs last year, so that non-recurring credits rose by £10 million to £22¾ million. Including these credits, total income rose by about £57 million. The fall of £6 million in tax provisions, following the introduction in 1958 of a flat rate profits tax as well as last year's income tax reduction, helped partly to offset the increase of £13 million in depreciation, so that net equity earnings went up by £46¾ million to £241½ million. After deducting non-recurring credits, this represented a return of 9.8 per cent on net capital employed attributable to the ordinary shares and compares with a return of 8.5 per cent in the previous year. This improvement is partly, but not wholly, due to lower taxes. Net ordinary dividends rose by £27 million to £96 million, of which some part represents the payment of profits tax interims and the reduction in income tax, but the major part must stem from more generous dividend policies. For all the companies, greater generosity finds its mark in a slight reduction in the earnings cover for ordinary dividends from 2.5 to 2.3 times.

ADVANCES in profits have been well spread throughout the industrial groups and are accompanied by an improvement in the rate of return on capital employed. Apart from shipping and tobacco, the only group to report a fall in profits is cotton (down by 16¾ per cent), but this reflects a past from which the dismantling scheme was born and not the industry's current prosperity. These industries show a fall in the return on capital employed: tobacco, slightly down from 11.1 to 11.0 per cent; shipping, sharply down from 3.7 to 1.2 per cent, for many of the ships earning low freight rates were built in the 1950s at a very high cost; and cotton, down from 5.2 to 4.7 per cent. The cover on the ordinary dividends paid by these groups also fell: in tobacco from 2.7 to 2.2 times; in cotton from 1.7 to 1.4 times; and in shipping the fall was so great, from 1.7 times, that dividends were not covered by earnings.

The biggest increase in profits has been reported by the wool companies, where profits have risen by as much as 83 per cent and the return on capital has shot up from 3.9 to 9.3 per cent; this was accompanied by an improvement in dividend cover from 1.4 to 1.8 times. The other important groups that achieved a better than average increase in profits are shown in the accompanying table:—

Industrial group	Profit increase	Capital return previous year	Capital return latest year
	%	%	%
Rubber	57	6·2	10·8
Misc. manufacturing	33	8·2	11·8
Other textiles	24	2·3	3·8
Chemicals	23	7·9	11·2
Motors, etc.	18¾	11·4	14·5
Building	18	8·1	10·3
Clothing	16	6·4	9·1
Engineering	15½	8·8	9·4
Shops and stores	11¾	17·3	17·4
Breweries	11¼	7·6	8·7

In practically all of these groups the changes in the earnings cover, either up or down, were slight. The exception was motors, where the earnings cover came down from 4.7 to 3.2 times, reflecting the more liberal Ford dividend; but this cover is among the highest in all the industrial groups, equalling that shown by the food companies and falling not far short of the cover of 3.6 times shown by the iron and steel companies.

The most heartening aspect of these statistics for investors looking at a stock market overshadowed by fears of credit restrictions is that capital resources throughout most of British industry are now earning a higher return. Another rise in profits appears likely this year and the returns on capital should go up as well. Companies that found it possible to raise their 1959 dividends should not therefore be reluctant to raise them again in 1960. But that in itself is not enough to set equity prices galloping ahead again, for many are still carrying the handicap of low yields.

CYCLES

One Final Merger

RALEIGH INDUSTRIES appears to have done rather well out of the price that Tube Investments is prepared to pay for the 50-55 per cent of the declining British bicycle business that Raleigh probably still commands. The TI offer—one-third of a TI ordinary share plus 27s. 3d. in cash for every Raleigh ordinary—represented at the time of the offer, with TI standing at 79s. 3d., a price of about 53s. 8d. Raleigh shares, on persistent rumours of such a bid and in spite of Sir Ivan Stedeford's specific denial four months ago, had been marked up to 50s. 3¾d. by last weekend, but that was their highest price since the cycle recession set in during 1955-56. It is not surprising that the offer has been recommended by the Raleigh board to its shareholders; on full acceptance, TI would have to issue 1,351,130 new ordinary shares and pay over £5½ million in cash. The total price offered for Raleigh comes up to nearly £10.9 million.

Acceptance would probably give TI more than 80 per cent of bicycle production in Britain—in a merger of a kind that would almost certainly not be allowed in America under the anti-trust laws. The two firms together account for perhaps 90 per cent of British cycle exports and 70 per cent of home sales; they are the only makers of mopeds (power-assisted bicycles). This merger follows earlier decisions to work together in Ireland and South Africa and could be regarded as the final stage in concentration of a shrinking industry, in which total production last year was 45 per cent lower than in 1951. TI formed its British Cycle Corporation out of Hercules and three other subsidiaries in 1956; Raleigh bought the name and goodwill of BSA bicycles in 1957. There remains a fringe of specialist makers mainly supplying the enthusiastic end of the cycle market; sales of the expensive models that these make have indeed stood up better to recession in the cycle business than those of most of the cycles that TI or Raleigh make. Last year did see an encouraging turn in home sales from the very depressed levels of 1958, though cycle exports continued to decline; but it would take an optimist to forecast any expansive future for the industry. Sales of mopeds rose sharply (rescuing Raleigh's profits), and output reached 10,000 a month during last summer; but neither company expects this initial rate of increase to be sustained. Both Raleigh and the TI cycle factories are at present working well below capacity; the merger should allow some further rationalisation into fewer works, perhaps some savings in distribution costs, and some possible advantages from integration. It has also been interpreted in some quarters as a further outlet for TI's steel tubes; in fact, Raleigh seems already to have been buying its tubes from TI.

This dual role in the British cycle market is perhaps the underlying explanation of the TI bid. To the extent that the price offered Raleigh is generous, it cannot be considered much of a bargain for TI shareholders. But dominance of a shrinking market by a big competitor (also losing sales) who naturally bears the brunt of the decline would hold no attractions for TI either—as the second largest producer, and more particularly as the biggest supplier of materials to the whole business. The share of the market it now aspires to, and the relative insulation from competition of the few remaining specialist makers, means that any further decline in sales must be overwhelmingly at the merged group's expense; but equally TI may hope that in full control of the popular market it can better withstand or check that secular decline. This stakes a good deal on the ability of its management to take over yet further responsibilities—and it has to be remembered that, with its links with Reynolds Metals in British Aluminium, TI has now become a very big business indeed. The group will have to service as well as to manage a much enlarged capital; the bid follows a large rights issue, and presumably fresh capital will still be required for its new aluminium interests. This is a good deal to digest, even for experts in large-scale organisation; the market's reaction was to mark TI down 1s. 6d. to 74s. 4½d., reducing the price offered Raleigh to 48s. 9d. a share.

CHANNEL TUNNEL

Pie Under the Sea

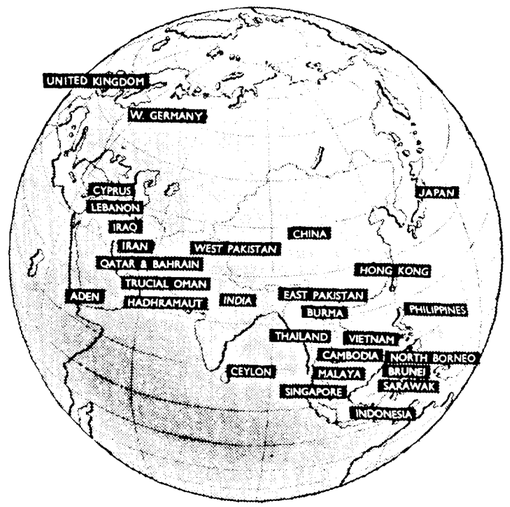
Now it is out: a tunnel under the Channel can be had for about £110 million, less than twice the cost of not having a Blue Streak rocket—and there is every chance that the tunnel would take longer to become obsolete. The report published by the Channel Tunnel Study Group took 2½ years to prepare, and cost nearly half a million pounds. It concludes that for technical and economic reasons, the best current design for an undersea route from Britain to the Continent would be two one-way rail tunnels, 21 feet 4 inches in internal diameter, accompanied by a service tunnel half that size, bored through the gently sloping lower chalk from Sangatte to the area between Folkestone and Dover: a distance of 32 miles between portals, 23 of them under the sea.

This would cost less than a road tunnel (£129 million to £152 million) earn more, be free of ventilation problems, and carry more vehicles, goods and people across in a shorter time. They reject the idea of a bridge, at £181 million. By 1980, at a "conservative estimate," the study group reckons that the tunnel would carry 4.8 million passengers, 1.1 million accompanied vehicles and 1.6 million tons of goods across the Channel. In 1965 it would attract 90 per cent of total Channel traffic in vehicles and deprive shipowners of 60 per cent and air carriers of 16 per cent of their passengers, who would pay 32s. for the trip, 5 per cent less than the ferry charge in 1958. Accompanied cars would pay £5 16s. single (30 per cent less than the ferry charge) and goods would be charged 42s. per ton (half the ferry charge).

Such a system of tunnels would be designed to carry 1,800 vehicles and 4,200 passengers in each direction every hour. That is 70 per cent more than the peak volume of traffic forecast for 1980 and more than a road tunnel could manage. Nonstop trains could get from London to Paris in 4 hours and 20 minutes and the tunnelers hope that customs officials could be persuaded to go too. Three-quarters of the revenue would come from people and cars, the rest from general merchandise.

The Price of a Slice

It is this last figure which presents the first stumbling-block. The number of airplanes owned by an airline such as Silver City can be varied and ships not wanted in one part of the world may sometimes be diverted to another (though Channel ferries are not). The tunnel, and the capital invested in it, cannot miraculously be shrunk in the winter months when traffic will surely fall off sharply: this would be a means of transport with a big dug-in peak load problem.



Other stumbling-blocks are more serious. Of the £110 million estimated cost of the tunnel, £80 million would be for the actual holes under the sea. The railway installations between terminals, the terminals, and the rolling stock would be paid for by the British and French railways, please (that is to say, by their respective taxpayers). If interest (£14 million during the period of construction) and £6 million in working capital, issue expenses, compensation to the original Channel Tunnel companies and the expenses of the study group are added, there remains £100 million to be found. This would have to come from private sources—£20 million of equities and £80 million in bonds.

The study group thinks, indeed, that it might be forthcoming provided the British and French Governments would make a present of the concessions, agree to conditions of a right of purchase, exempt the company from French registration, turnover and profit taxes and all taxes on company profits in Great Britain, and insure the private financiers against the risk that the job might cost more than their own consultants estimate.

The two nationalised railway companies would operate the tunnel crossing, paying the owners tolls (on scales varying according to the amount of traffic but with a

British Banking in Asia

These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. An effective credit information service and skilled assistance and advice are available to United Kingdom merchants and manufacturers seeking new business connexions in Asian markets.

Enduring as a Swedish Ball Bearing

"For well over half a century, ball bearings made of Swedish steel have been turning the wheels of world industry and transport. This classic Swedish product has won the respect of technical men everywhere for enduring quality. The year-in, year-out endurance of Swedish business machines has won the confidence of business men everywhere. That's why you'll find these machines in offices wherever you travel. Facit of Sweden, one of the world's leading manufacturers of business machines, offers truly international sales and service.

If you want to know more about FACIT and the outstandingly successful Swedish business machine industry, your local FACIT agent will gladly send you a free copy of our brochure 'Why are so many world-known business machines built by Swedes?' — or you may write directly to Atvidabergs Industrier, Stockholm 7, Sweden."

Gunnar Ericsson, President of the Facit Group

minimum set to cover service of the bonds). The governments would be required to insure the company against acts of God or man preventing the tunnel from being completed or rendering it unusable. They would also have to find a way of making sure that American investors got a higher return on the company's bonds than European investors would get. Their only other duty would be to guarantee the railways' obligations, and interest on the £80 million of bonds. These factors apart, the tunnel can be described as purely a private enterprise proposition (of a kind that Colvilles or Cunard might envy).

It may well be worth while to seek a way of altering the unfortunate fact that, in the words of the study group, "the movement of persons and goods between the United Kingdom and the Continent has not increased as fast as the movement between the countries of the Continent, particularly in the postwar period." But the idea of a tunnel as the best way of doing so will be hotly argued.

BRITISH OVERSEAS TRADE

Better Than It Looks

HAPPILY, the British trade balance in March was not as bad as it looks. According to the recorded figures, exports rose by over £12 million to £308 million fob, and re-exports were £4½ million higher at £13.8 million. But these gains were outweighed by the rise in imports, which jumped by £29 million to a record £393½ million cif, and the apparent trade deficit deteriorated by £12½ million, to £71½ million in March. The seasonally adjusted figures, however, put this depressing picture in a moderately encouraging light. On this basis, the Board of Trade calculates that imports fell to £360 million in March, from £386 million in February. Exports also fell, though much less sharply, from £307 million to £298 million, and re-exports were £1 million higher at £10 million. On that reckoning the apparent deficit was only £52 million, or £18 million smaller than in February.

UNITED KINGDOM TRADE
(Recorded values, £ million per month)

	Exports f.o.b.	Imports c.i.f.	Re-exports f.o.b.
1959	277·1	332·5	10·9
1st qtr...	263·4	313·6	11·1
2nd " ..	281·8	327·8	10·7
3rd " ..	263·2	327·9	9·9
4th " ..	300·2	360·7	11·7
1960 1st qtr. .	306·7	375·0	11·7
January ..	316·3	367·0	12·0
February .	295·8	364·4	9·4
March ...	308·1	393·5	13·8

If one is to trust these seasonal corrections, the rise in imports appears to be slowing down. In the first three months the adjusted average value of imports was £372 million a month, three per cent more than the average for the fourth quarter of 1959, whereas between the third and fourth quarters imports rose by eight per cent. British exports, on the same basis, averaged £304 million a month in the first quarter, 3½ per cent more than in the fourth quarter of 1959, whereas between the third and fourth quarters they rose by 5½ per cent. This apparent slackening in the growth of exports as well could be taken as a sign of the pressure of home demand, though statisticians would no doubt say that a change of two percentage points could be explained by random fluctuations. How this month's figures are interpreted depends more than usually on one's visceral feelings about the British economy this year.

CAR EXPORTS

Ups and Downs

BRITISH car exports put up a mixed performance in the opening months of this year. Sales to the United States, Britain's biggest market, fell; those to the smaller, traditional markets in Europe and the Commonwealth tended to rise. This was the reverse of what happened during most of last year. In January and February British sales in the United States were in fact 9 per cent lower than a year before, and the British share of sales of imported cars in the United States was down from 30 to 25 per cent. Volkswagen sold 64 per cent more cars than in January and February, 1959, and Renault 27 per cent more: but sales of all other makes fell by 12 per cent.

In Canada, by contrast, British sales were 22 per cent up on a year before, and the British share of the whole Canadian market for cars rose from 10½ per cent to 13½ per cent. In South Africa, too, British sales rose by 33 per cent, giving British cars 40 per cent of this market compared with 35 per cent a year before. In Europe exports have also improved to some of the bigger markets; in Belgium they rose by 70 per cent in the first quarter compared with twelve months before.

Prospects for exports in the rest of the year are dominated by the situation in North America. It is now clear that the American "compact" cars do compete with imported cars. American dealers now hold stocks of imported cars estimated at 100,000, or over two months' supply; unless sales pick up soon, orders will fall and some of the importing agencies may begin to lose dealers. Dealers who sell cars resembling the "compacts" are suffering most; Simca and Hillman showed the biggest falls, though the offer of automatic transmission may help sales of the latter. In Canada stocks of cars have also been rising, apparently in anticipation of a good selling season this summer. Sales to other markets are unlikely to grow enough to offset any drop in North American sales. British firms will find it difficult to avoid becoming more dependent on the home market, though some, such as BMC, do not wish to sell more than half their output at home.

France exported nearly twice as many cars in January and February as it did a year before, and in February its exports exceeded the British total for the first time. New registrations in France, however, were down by 20 per cent over this period; with a softening home market, French manufacturers now find exports a matter of necessity. A large part of France's increased exports is now coming to Britain, whose total imports of cars in January and February were no less than five and a half times those a year before—totalling 13,566, equivalent to over 10 per cent of total deliveries to the home market during the two months. Renaults and Fiats account for most of the increase. Although easier delivery of British cars may soon hit sales of imported cars, imports now appear to form a larger proportion of the British market than they do of the American.

EXPORT CREDITS

Profit and Loss

THE Export Credits Guarantee Department increased its business further in the last financial year—the portion of United Kingdom exports insured with it rose from 16.0 to 18.4 per cent—and the department managed at the same time to increase its surplus (the word profit, apparently, is not quite the thing). Thanks to a fall in claims, the "revenue balance" on section 1 business rose from £2.5 million to £4.4 million, raising the cumulative reserve to £19.9 million. Even the section 2 "national interest" business finished up on the right side, with a surplus of £200,000 bringing the reserve to £3 million. Mr L. J. Menzies, the secretary of ECGD, points out in his annual statement that these reserves of £23 million are not excessive against the department's liabilities on medium term business, which in some individual markets exceeds £30 million.

The department's commitments on medium term credit at the end of March were £234.5 million, three times as large as five years before; short-term liabilities in the same period rose much less sharply, from £270.8 million to £356.4 million. ECGD is still at risk for £8½ million on Turkish business, though if Turkey adheres to the negotiated debt agreement there should be a steady flow of recoveries on the large claims already paid. The department's latest headache, probably involving something approaching £6 million, is the default by Capital Airlines on payments for its Viscount aircraft. It is established experience among credit insurers that for purely commercial risks the United States and Canada are among the worst markets, simply because so many more concerns go bankrupt

there ; but the Capital default is unusually large and is unlikely to help those who are constantly pressing ECGD to extend its terms for aircraft even beyond the exceptional seven years.

Further minor improvements are being offered in ECGD facilities. The most important of these is for engineering items, which in appropriate cases will be eligible for "whole turnover" cover (at lower rates than for specific cover) even when credits go beyond three years. The criterion will be simply that the business "shows in the course of a year a recurrent pattern of like exports over an appropriate range of markets and buyers." Improvements are also made in cover for external trade of UK merchants, for services rendered by British firms, for stocks and for processing. The department is also studying the problems of underwriting business in international consortiums—though it points out that it can never underwrite the UK participant in a loosely drawn agreement.

CZECH BONDS

A Poor Offer

CZECHOSLOVAKIA has now made a formal offer to purchase the three bond issues on which it defaulted at the end of last year. The offer is £75 per £100 nominal for the 1922 State Loan and the 1922 City of Prague Loan, and £55 per £100 nominal for the Skoda Works First Mortgage Debentures. About £200,000 was outstanding on the loans, and over £600,000 on the debentures. The Council of Foreign Bondholders has expressed its "deep regret" that Czechoslovakia has "wantonly destroyed its credit and inflicted injustifiable loss on its bondholders." An offer at artificially depressed prices is the oldest trick in the repertoire of defaulting governments.

Nevertheless, the British Government has negotiated a new three-year trade agreement with Czechoslovakia. It will issue licences for the import of Czech goods up to a value of £7.3 million a year, against £8 million previously. The reduction is said to reflect the recent liberalisation of imports. Czechoslovakia intends to buy about £5.3 million worth of British goods this year (against £5.5 million before), including machinery, chemicals, cars and textiles. Details of the quotas are published in the *Board of Trade Journal* this week.

WORLD BANK

Focus on Africa

INTERNATIONAL lending by the World Bank continues at a high rate ; in the nine months to end-March new loan commitments totalled $560 million. Not much short of one half of these loans went to African countries, and in his annual statement to the UN Economic and Social Council, Mr Eugene Black, president of the World Bank, recently gave an impressive account of the Bank's backing of a wide variety of projects. He points especially to the recent loans to the Congo, to which the Belgian government has given its guarantee despite the imminence of independence, and to loans in Southern Rhodesia to aid African agriculture. The Bank hitherto has concentrated on the large basic projects, but Mr Black says that he has more "grass roots" loans in mind. The Bank is also considering an irrigation project in the Sudan ; and Mr Black mentions the Volta river project in Ghana.

It is natural that the centre of gravity of the Bank's efforts should shift, and this movement must be expected to go further. It is clear, Mr Black says, that other sources of finance, particularly the private investment market, will reduce European demands on the Bank : is this a warning to Italy and Austria that they cannot expect much more ? Another facet of Europe's growing financial strength is that in 1959 it took over the role of the United States as market for the Bank's bond issues; in the past two years indeed the Bank's largest source of funds has been Germany.

Mr Black gives impressive evidence of the revival of private investment. Since the end of the war, no less than $3 billion of foreign bonds have been sold in world markets, excluding issues of Canada or of dependent territories in their metropolitan country. In January, 1946, eight European countries now belonging to the Bank (i.e. excluding iron curtain countries) were in default on their public bonds ; today there is only one, Greece. Even in Latin America, where there were eleven defaulters, there is only one small dispute outstanding today. But there are limits to what can be done by private lenders, or by a public lender operating on commercial lines, such as the Bank itself. In the three years 1956-58 the public debt of the Bank's member countries in Asia, the Middle East and Africa almost doubled. The resulting strain on their capacity for debt service underlines the need for the International Development Association, due to come into operation later this year, and for supplementary special aid from other sources.

EUROPEAN TRADE

FBI Accepts the Trade Split

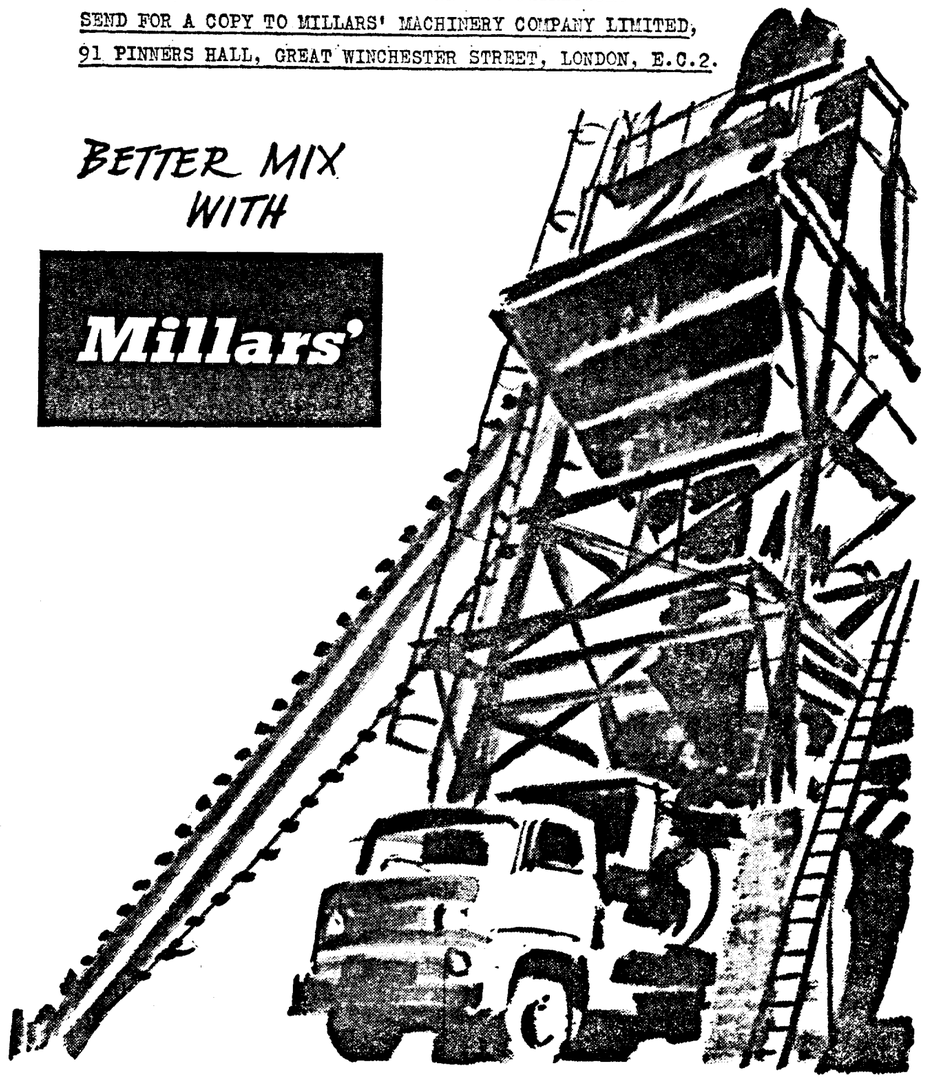
THE fact of a trade rift in Europe must for the present be accepted by British industry, however much it may rue it. The common market is now hardly likely to delay starting to build its external tariff beyond this year, and the free trade area of the outer seven will become a reality this summer. Any agreement between the two can only come, basically, from political decisions; meanwhile, British industry would be best advised to get the free trade scheme into effective operation as quickly as possible, not only for its own merits, but also to improve the negotiating position of the seven with the six. Such were the central points of Mr W. H. McFadzean's presidential address to the Federation of British Industries last week.

The FBI's president may be optimistic about the value of the free trade area as a bargaining counter with the six, but his argument that the division of Europe into two trade blocs is for the time being inevitable is the only realistic view that can now be taken. Mr McFadzean reckons that the prospective tariff changes will worsen Britain's trading position for about 10 per cent of this country's total exports—largely in sales to Germany and the Benelux countries where tariffs will rise—and improve our chances slightly for some 14 per cent of our present exports—those to France, Italy, Austria and Scandinavia. This should be taken, he argues, as a spur to intensify our export efforts, to retain as much as we can of Britain's markets in the six and to expand those in the seven. Mr McFadzean would like to see, too, more smaller companies joining in the export effort.

POLYPROPYLENE

Elusive Fibre

POLYPROPYLENE fibre, one of the lightest of man-made yarns, has an uncertain future in Britain. It is being made and sold in Italy by a subsidiary of Montecatini, which organisation claims the patent for the process. It is expected that 300 to 400 million lb. of polypropylene a year will be manufactured in America by 1965, and that a quarter of this production will go to fibres. But some of the American producing companies have no licence from Montecatini, and claim that they have developed techniques which do not infringe the Italian company's patents. The whole patents position regarding this fibre looks like a paradise for the lawyers.



In Britain the plastic polymer, from which the fibre can be extruded, is made under licence from Montecatini by Shell and ICI. It is believed that these companies are negotiating for licences from Italy to produce the fibre. But Courtaulds has been making a polypropylene fibre for more than a year, and this company has no arrangements with Montecatini.

Courtaulds will not say where it gets the polymer it uses in this production, nor how much fibre is being extruded. But the company does say that it sees a future for polypropylene fibre in industrial rather than domestic textiles. This may be due to the difficulty of dyeing the material: both in Britain and Italy colour is introduced during the extrusion process.

BECAUSE convertibility has worked so smoothly, the provisions for clearing and credit in the European Monetary Agreement have hardly been used. The agreement was reviewed following the move to convertibility in December, 1958, and two changes of substance have been made. The first is a revision of contributions, originally calculated in 1955. The United Kingdom's contribution is reduced from $86.6 million to $60.6 million; on the other hand, Italy's contribution has gone up from $15 million to $25 million and those of France and Germany each from $42 to $50 million. These sensible changes have been made to apply retrospectively and calls on contributions already made have been adjusted accordingly. An incidental result of this has been a repayment of £1 million in gold to the United Kingdom. The second change is the addition of a new article enabling the European Fund to obtain special credits from the contracting parties. The object is to enable the Fund to accept special means of finance contributed voluntarily by members rather than having to rely exclusively on existing assets and on calling up contributions under Article 4 of the Agreement.

Skill Devalued

COMPARISONS made by the Ministry of Labour last week in response to a Parliamentary question show, for four trades, how much the gap between wage-rates for skilled and unskilled work has narrowed since 1914, in spite of the recovery of differentials for skill during the interwar period. On one basis of comparison the engineering industry seems to have done badly: rates for its skilled workers are barely five times what they were in 1914 while in building and rail and road transport they are six times as high. The comparisons, however, relate only to standard time rates of pay and do not take into account any overtime or bonus payments.

OILS AND FATS

Copra Pays the Penalty

MANUFACTURERS of margarine and other fats have a variety of materials to choose from. Once it becomes clear that one oil or fat is likely to be short for some time they can substitute others, thus helping to stabilise their costs and—ultimately—to bring the wayward commodity back into line. Copra is now paying the penalty of becoming too dear. Philippines copra for prompt shipment has dropped by $55 to about $210 a ton cif in the last three months, or by 20 per cent, and copra already afloat is at a discount. Present prices are about $30 a ton cheaper than in December, before they rallied sharply on fears that production had suffered severely from the typhoons. The damage proved as usual to be exaggerated, and it is said that supplies will certainly be larger in the second half of this year than in the first half.

But consumers claim that copra is still dear, and so they continue to buy sparingly. They have increased usage before, only to find prices moving against them because copra again became short. Like the man from Missouri, they now "want to be shown" that supplies of copra really are plentiful before they start to use more. Meanwhile the exporting countries can perhaps take some comfort from the thought that the sale of coconut oil from the United States strategic stock, while not exactly helping their market, has not disrupted it. The American government has been a firm seller, refusing bids that it considered too low.

SHORTER NOTES

International Computers and Tabulators has signed an agreement with Siemag Feinmechanische Werke GmbH Eiserfeld involving an exchange of shares and an arrangement to manufacture ICT products in Germany. Object of the agreement is to give ICT a base inside the Common Market.

★

The London clearing banks have arranged, for the first time, a careers convention, at which they will explain to headmasters and careers masters from 60 schools the opportunities and scope available in a banking career.

★

For the second year in succession General Mining is raising its dividend. For 1959 the payment is raised from 30 per cent to 35 per cent. Net income for the year has risen from £1,726,825 to £1,916,008.

★

The merger offers to the shareholders of Northern Assurance and Employers' Liability Assurance have been accepted in respect of more than 90 per cent of the capital of each company. The offers will become effective when a quotation has been granted for the new shares of Northern and Employers Assurance, which are to be issued in exchange.

★

While the Home and Colonial Stores dividend is maintained at 10 per cent an additional 2½ per cent bonus is to be paid for the year ending January 2, 1960. Group profits increased from £3,701,919 to £4,041,405.

★

The profits for 1959 of Radiation soared from £1,020,912 to £2,822,624 and the ordinary dividend is effectively doubled from 6 per cent to 12 per cent, which includes a 2 per cent bonus.

★

Group trading profits of Spillers for the year to January 31, 1960, rose from £4,610,000 to £4,941,000. As forecast at the time of the 50 per cent scrip issue, the ordinary dividend is raised from the equivalent of 6⅔ per cent to 9⅛ per cent.

COMPANY MEETINGS

CO-OPERATIVE INSURANCE SOCIETY LIMITED

MR S. LEONARD KASSELL'S REVIEW

Mr S. Leonard Kassell, Chairman, at the ninety-second Annual General Meeting held on April 20, 1960, said:

My duty as Chairman is to give to the Shareholders, and more particularly since we are a Co-operative organisation, to the policyholders, a general survey of the Society's progress during 1959, which could not be obtained from a study of the published accounts.

In an Insurance Society transacting all classes of business it is not to be expected that all Departments will be uniformly successful each year, but taking results as a whole, your Directors feel that they can be very well satisfied with the overall result of the past year's operations despite the marginal results in the Motor Department, to which I will refer in more detail later.

Our total premium income in 1959 was £51,855,863, an increase of £4,153,202 over that for 1958.

The premiums paid in Ordinary and Industrial Sections of the Life Department which totalled £37,037,730, were in respect of nearly 11 million premium paying life policies which were in force. These policies provide not only valuable life cover but in most cases also constitute an important form of saving which almost certainly would never be made if it were not for the need for paying premiums at regular intervals in which the policyholders are assisted by the regular calls of our full-time agency staff.

As is now well known, the CIS has for some years invested in Ordinary Shares so as to ensure that its policyholders have an interest in the capital assets of this country and a share in the profits of the many and various firms in which they earn their livings. We also invest large amounts in soundly constructed properties in first-class positions throughout the country. Some of these properties are occupied by Retail Co-operative Societies.

It will be understood from the preceding comments that the CIS gives an opportunity through life assurance for Co-operators to participate in investment in Ordinary shares and also to make capital available for the development of the Co-operative Movement, a proposal which has been under discussion in recent months.

From the institutional investor's point of view, by which I mean the point of view of the CIS Board as the custodian of the savings of our policyholders, the year 1959 was in general a profitable one since long-term rates of interest have remained high on fixed interest securities. Dividend rates on Ordinary Shares have been maintained or increased in practically all cases and this is one of the factors which has resulted in a substantial increase in the market value of our holdings of Ordinary Shares.

As I mentioned last year, it is not the desire of the Board to invest an undue proportion of the Society's funds in House Purchase Mortgages, particularly at a time when so many other attractive long-term investment opportunities exist. It was decided, therefore, to adopt more stringent methods of selection by increasing the amount of deposit which a borrower must make when purchasing a house. This has had the desired effect despite the fact that we followed the Building Societies Association by reducing the rate from 6 per cent to 5½ per cent for new mortgages granted after July 1, 1959. It is not the present intention of the Board to change its policy in respect of house purchase loans.

The total amount outstanding under house purchase loans at the year-end was £41,457,199 secured upon 44,855 properties. The average house purchase mortgage outstanding was £924.

Investments in British Government and British Government Guaranteed Securities amounted to £50,528,765 as at December 31, 1959, being 21.52 per cent of our total assets.

We have continued our policy of investing in fixed interest stocks and Ordinary shares of public companies and, as I have already indicated, the investment in ordinary shares has been of great advantage to our policyholders in general and more particularly to our Life policyholders.

Our investments in freehold and leasehold properties show a substantial further growth and many of these investments have been made on terms which ensure that the Society has a share in any subsequent improvement in the value of the properties. In this connection you will be interested to know that as one way of achieving this we have arranged to take up debenture stock in certain property companies together with a proportion of the equity capital.

ADMINISTRATION

In 1959 our overall commission and expense ratio was 24.24 per cent as against 24.21 per cent in 1958.

In the Industrial Section the expense and commission ratio was 27.31 per cent as against 27.44 per cent for 1958.

Whilst dealing with the matter of administration I am glad to be able to report that work on our new 25-floor, 365 ft high Head Office building in Manchester has commenced.

We are planning not only for the most advantageous use of the space but also for the utmost comfort and convenience of our staff and we believe that the completed building will provide amenities greatly in advance of those laid down in the Gowers Report or envisaged in the present Bill before Parliament.

LIFE DEPARTMENT

The new sums assured in the Life Department last year totalled £90,909,013, of which £41,562,657 was in the Ordinary Life Section and £49,346,356 in the Industrial Life Section.

The average sum assured in the Ordinary Section was £738. Over £28 million of the new sums assured in that Section was in respect of policies for sums assured of £1,000 or more.

I mentioned in my Report last year that we had reduced the rates of premium in the Ordinary Section for Temporary Decreasing Assurance and Family Income Benefits and I am glad to say that this has resulted in a considerable increase in this class of business which provides most valuable protection particularly for the family man.

Last year I announced an increase in the reversionary bonus in the Ordinary Section from 40s. per cent to 42s. per cent. This year I am glad to be able to announce a further increase from 42s. per cent to 44s. per cent.

In the Industrial Section the average sum assured was £59 15s. 0d., being £1 10s. 0d. greater than the average for 1958.

MARINE, AVIATION AND TRANSIT INSURANCE ACCOUNT

The account in respect of these classes of business, which was shown separately for the first time last year, has made satisfactory progress. The increase of £36,361 in premiums reflects mainly an expansion in the amount of Marine business although the increasing use of air travel has resulted in an additional volume of this class of business being written. Though the prescribed form of Revenue Accounts is such that each underwriting year's results can only be ascertained after the expiry of three years, there is every indication that this extension of service will prove a useful addition to our operations.

FIRE DEPARTMENT

The year 1959 was one in which fire wastage in the United Kingdom was greater than ever before but despite this general experience, which was reflected in our claims ratio, the Fire Account showed a surplus of £346,536, which whilst being £86,238 less than for the previous year, must be regarded in the circumstances as being very satisfactory.

Last year was also notable for the fact that for the first time the net premium income of the Department at £2,153,433 exceeded two million pounds. The net premium income has in fact doubled during the past ten years, which is a very encouraging rate of growth and one which we hope and expect will continue.

MOTOR DEPARTMENT

The premium income of the Motor Department continues to grow very rapidly and in 1959 it reached a figure of £8,870,831. When it is recalled that in the year 1956 the income was only £4,694,548 it will be seen that the income has nearly doubled in the short space of three years. It is gratifying to know that our policies are commending themselves to an increasing number of vehicle owners, but it needs no imagination to appreciate the problems such a rapid growth brings in its wake especially in a business in which difficulties are further increased by frequent revisions of premiums and changes in underwriting practices.

Unfortunately the difficulty of running this account at a profit does not diminish. Early in the year it became apparent that the premium concessions we were granting to a large body of policyholders could not be continued without the certainty of a substantial underwriting loss on the year and we had no alternative but to start cancelling all concessions as the policies became due for renewal. This would, however, have been an insufficient remedial measure for our large motor cycle account and we found it necessary to introduce higher premiums, especially for the larger machines, on 1st August last. Despite these measures the premium income by itself fell short of the claims and the cost of procuring and administering the business by the sum of £10,806.

Interest earnings on the funds amounted to £130,240, so that despite an underwriting loss we are able to show a small surplus of £119,434 on the account. In these days of widespread losses on Motor insurance, at home and abroad, we must be thankful to show a surplus, however small, but it does indicate quite clearly that further premium increases will be unavoidable.

The CIS alone was called upon to handle nearly 130,000 claims in 1959—nearly 500 each working day. Is it any wonder that, with claims arising faster than the numbers of vehicles for which premiums are paid, and with claims themselves becoming more costly to settle, premiums keep on rising?

ACCIDENT DEPARTMENT

The premium income for the Personal Accident Account was £180,994, an increase of £20,685 over that for the year 1958. The surplus was £47,664, which indicates that claims in 1959 were heavier than in the preceding year. Nevertheless, the surplus is satisfactory, £46,225 having been transferred to Profit and Loss Account, the balance of £1,439 being added to the fund's internal reserve.

In the General Insurance Account the premium income increased by £265,142, to £1,984,846. This increase included a substantial volume of long-term business, and it has been necessary to increase the reserves by £126,086. There remains a surplus of £398,350, which has been transferred to Profit and Loss Account.

In my report on the accounts for 1958 I mentioned that we were experiencing large increases in the cost of Burglary and Cash in Transit claims. I am sorry to have to record that 1959 produced even heavier claims than 1958 in relation to Co-operative Societies' risks. The premiums we receive for this section of our business are still insufficient to meet claims, and further adjustments will be required. On the other hand, the claims cost of Retail Co-operative Societies' Employers' Liability risks has fallen during the last year or two, and an examination of the 1959 results has indicated that we can reduce premiums in some cases. It is our intention that Retail Co-operative Societies in England, Scotland and Wales, holding Employers' (Common Law) Liability policies rated on their annual sales, shall receive the benefit of a reduction in premium rates in respect of sales on or after June 24, 1960. Whilst this adjustment is likely to reduce both the premium income and the surplus of the General Insurance Account, I am sure that this assistance to Co-operative Societies will be generally welcome.

PROFIT AND LOSS ACCOUNT

The sum of £800,000 has been transferred to the Profit and Loss Account from the Departmental Revenue Accounts, of which £200,000 has been added to the General Reserve Fund.

DISTRIBUTION OF PROFITS

After making this transfer and providing adequate reserves for contingencies we are able to distribute the sum of £8,981,974 as a result of our operations for the year 1959. The whole of this amount will be distributed for the benefit of the Society's policyholders; £8,356,412 will go to our Ordinary Life and Industrial Life policyholders and the balance of £625,562 will be payable to Co-operative Societies as a dividend on the Fire, Accident and Motor and Collective Life premiums paid to the CIS during the year. The rate of dividend on Fire and General premiums has been maintained at 3s. 6d. in £1 of premium and this should be ample evidence to the Societies and their members of the advantage of insuring with their own Insurance Society.

TAXATION

The amount of tax payable by the Society in respect of our transactions for the year was £1,578,862. Of this total £180,543 has been reserved for taxation on the profits of the Fire and General Departments; £101,703 charged to the Industrial Life Account and the balance was paid during the year by deduction from interest earnings.

CONCLUSION

The Report and Accounts which I have been reviewing are in effect a brief summary of the work carried on during 1959 by all grades of the staff and the Board realises that without their loyalty and support progress would not have been made. I wish to take this opportunity, therefore, of expressing our appreciation of the co-operation of the staff during 1959 and to express the hope and belief that it will continue to be forthcoming in 1960 and future years.

I also wish to thank the Retail Co-operative Societies for their loyal support which has been to our mutual advantage.

I look forward with confidence to another year of sound progress and I hope that the Report presented this time next year will be no less satisfactory than the one it has been my pleasure to submit to you in respect of the year 1959.

The Report and Accounts were adopted.

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

A SUCCESSFUL TRIENNIUM

REVIEW OF OPERATIONS FOR THE YEAR 1959

VISCOUNT HARCOURT'S STATEMENT

The One Hundred and Twenty-third Annual General Meeting of Legal & General Assurance Society Limited will be held on May 11th at Aldwych House, Aldwych, in London.

The following is an extract from the circulated statement by the Right Honourable Viscount Harcourt, KCMG, OBE, DL, the chairman:

REPORT AND ACCOUNTS FOR 1959 AND TRIENNIAL VALUATION

Circulated with this statement will be found the directors' report and accounts for the year 1959 and a statement on the assets and liabilities, incorporating the valuation report of the Society's actuary. You may remember that, in my statement last year, I explained that it had been decided to carry out a full actuarial investigation of the life assurance and other long-term funds every three years instead of, as hitherto, every five years. The valuation report now submitted to you is the first relating to such a three-yearly period.

LIFE ASSURANCE AND ANNUITY FUND

For many years now the Society has been able to announce that it has written a record amount of new life assurance business. The year 1959 was no exception; when the total was £221,396,177 net of reassurances, an increase of £37,506,518 over 1958.

These figures include an increasing volume of life business written by our Southern African and Australian branches.

PENSION BUSINESS

In my review of our operations for the year 1958, I referred at some length to the problems which would be created for both employers and the Society in connection with its large pension business by the passing into law of the National Insurance Bill then before Parliament. The Bill has since been enacted as the National Insurance Act, 1959, and we now face a situation in which it is proposed to bring into effect, from April, 1961, the graduated benefits and contributions therein provided.

This already short time factor has been rendered even more onerous by the Act leaving a great deal to be laid down by regulations, and although the first of these appeared in draft form in August, 1959, they were not laid before Parliament until the middle of November. Others of considerable importance are still either in draft or only now before the National Insurance Advisory Committee. There is clearly too little time for employers and life assurance offices to cope with the immense amount of work in relation to insured schemes arising out of the Act.

RATE OF INTEREST

The gross rate of interest earned in 1959 on the life assurance and annuity fund, excluding the amount invested in the purchase of reversionary interests, was £5 10s. 1d. per cent or 6s. 2d. per cent more than the figure for 1958 of £5 3s. 11d. The increase in the net rate of interest was 13s. 6d. per cent (£5 3s. 10d. in 1959 compared with £4 10s. 4d. in 1958).

EXPENSES OF MANAGEMENT

It is the practice to quote in this statement each year the ratio which the expenses of management, including commission, of the Society's life assurance and annuity business bears to the premium income, excluding from the latter figure the considerations paid for immediate annuity contracts. This ratio for the worldwide business of the Society has increased from 11.77 per cent in 1958 to 12.29 per cent in 1959, although that relating to business within the United Kingdom has remained almost exactly the same, at just under 10 per cent.

FIRE INSURANCE ACCOUNT

In the Society's fire insurance account the premium income, net of reinsurances, increased by £136,500 to £2,885,266.

After provision for unexpired liabilities and the retention in the account of an amount of £465,150 additional to normal reserves, there was an underwriting surplus of £334,774 which has been transferred to the profit and loss account.

ACCIDENT INSURANCE ACCOUNT

In the Accident Insurance Account the net premium income increased by £466,127 to £2,953,448.

After provision for unexpired liabilities and the retention in the account of an amount of £268,758 additional to normal reserves, there was an underwriting surplus of £223,951 which has been transferred to the profit and loss account.

MARINE ACCOUNT

Marine underwriting continues to be difficult. The underwriting year 1956, now closed, has resulted in a loss of £21,929 and the 1957 account shows little evidence of improvement in the position. Premium income for 1959 was £802,265 compared with £813,631 in 1958 which indicates the continuance of the conservative underwriting policy mentioned last year.

In the circumstances it has been decided to continue to strengthen the fund and therefore no transfer from the account is being made this year.

ASSETS

The total assets of the Society increased during the year by £41,822,509 to a total at December 31, 1959, of £397,590,789.

In the life department balance-sheet it will be seen that the investment assets are represented as to £165,072,000 by Stock Exchange investments, as to £97,675,000 by freehold and leasehold properties, including ground rents and rent charges, and as to £89,971,000 by mortgages and other loans.

TRIENNIAL VALUATION

I have already drawn your attention to the separate statement dealing with the valuation of the Society's assets and liabilities which contains a valuation report by the actuary on the long-term business of the Society and a statement by your directors regarding the disposal of available surplus.

The surplus which emerges in the life and annuity account is £7,643,336, and out of this £1,656,368 has been earmarked for bonuses for with-profit policy-holders. The surplus in the sinking fund account is £253,222 and that in the permanent sickness account is £88,274.

The transfer from the life account to the profit and loss account is £2,100,000, and there are further transfers of £125,000 from the sinking fund account and £45,000 from the permanent sickness account.

BONUS DECLARATION

The rates of bonus which have been announced by the directors following the triennial valuation of the actuary must, I think, be considered satisfactory. In the case of the new series of participating individual policies in the United Kingdom, the rate of bonus has been increased from 45s. per cent declared three years ago to 50s. per cent per annum compound. Comparable increases are being declared for most other groups of participating policies.

PROFIT AND LOSS ACCOUNT

In the allocation of the surplus disclosed by the valuation, £2,270,000 has been transferred to the profit and loss account from the life and other long-term accounts. In addition £558,725 has been transferred from the fire and accident insurance accounts and interest and dividends totalling £378,613 have been credited.

The directors now have pleasure in recommending to shareholders the payment of a final dividend for the year 1959 of 7s. 6d. per share which, with the interim dividend of 2s. per share paid on January 1, 1960, makes a total of 9s. 6d. per share. This compares with a dividend of 5s. per share paid in each of the last three years.

At this point I should repeat that the cost of the bonuses recently declared is £1,656,368, in addition to the cost of providing the contractual benefits which accrue to with-profit group pension policyholders in the terms of their policies. Three years ago the cost of bonuses for the then recently introduced series of with-profit policies was only £219,961. This marked increase in the amount of surplus required to be allocated to policyholders leads me once more to draw the attention of shareholders to the fact that, whilst total surpluses disclosed at triennial valuations should tend to increase with the growth of the life funds, the provision of bonuses for a growing volume of with-profit business will absorb an increasing proportion of such surpluses, thus reducing the proportion available for future dividends.

In the light of the excellent results I have been able to report to you, I am sure the shareholders will wish to join with me in an expression of gratitude and thanks to Mr Cahill, our general manager, and to all his officials and staff, both at home and overseas. Their hard work and enthusiasm are the basis of the success of the Society.

BENTALLS LIMITED AND SUBSIDIARY COMPANIES

KINGSTON-UPON-THAMES—EALING BROADWAY—WORTHING, SUSSEX

JAS. WILLIAMSON & SON

A JOINT VENTURE IN ROTOVINYLS

LORD PEEL'S STATEMENT

The twenty-ninth annual general meeting of Jas. Williamson & Son Limited, was held on April 20th at Lune Mills, Lancaster, The Right Honourable The Earl Peel (Chairman of the Company) presiding.

The following is the statement by the chairman circulated with the report and accounts for the year ended December 24, 1959:

Last year I started by saying that 1958 might be considered to mark the end of a three-year period of relative recession and yet, as you will see from the Accounts for 1959, the net profit before taxation has fallen from £746,647 to £622,082. Four factors have mainly contributed to this: poor trading conditions during the first quarter of the year; severe price competition at the cheaper end of our trade; rising costs of manufacture; and the changing pattern of business on our coated fabrics side.

Business during the first three months of 1959 was extremely slack, particularly in the home market where the hold-up of orders by trade buyers unwilling to take in stocks before the Budget on which they might lose money if purchase tax were reduced was far greater than usual. We always expect to lose some business on this account, but our experience in 1959 was that its impact was between two and three times greater than it had been during each of the three preceding years. I regret that the Government does not seem to appreciate the effect upon industry of changes in purchase tax. Much is written about stock losses on the part of retailers, but the effect of the hold-up on productive industry is no less serious.

FLOORCOVERING TURNOVER AND SALES

Printed felt base floorcovering has been for many years and still is a substantial part of our business. We have maintained our turnover in 1959, but severe price competition at the lower end of the trade has made the business less remunerative.

In linoleum we have increased our sales despite competition from other forms of floorcovering. The rising cost of manufacture brought about by the increase in price of some of our raw materials and further wage increases during the year has, however, been absorbed by the industry in reduced profit margins in order to avoid raising prices to the consumer.

On the coated fabric side there has over the past few years been a decline in sales of table oilcloth due to the introduction of enamelled and other hard surfaces especially for kitchen use. We are, therefore, developing table and counter toppings on other lines. Table oilcloth still meets a large demand and our turnover is substantial, but it is no longer the predominant part of our coated fabric business that it once was. Our sales of leathercloth, wall-covering and other types of coated fabric have expanded successfully, and the quality of our Lionide leathercloth has enabled us to enter a number of new fields.

THE NEW VENTURE

You may have seen the announcements in the Press of our new joint venture with Sandura Company of America for the marketing of rotogravure printed vinyl products in this country, the British Commonwealth and Europe. Rotovinyls, as they are called for short, are little known as yet in this country. In America they have taken a large and rapidly growing share of the hard surface floor-covering industry during the past few years. Sandura Company were the first to introduce them, and their products Sandran and Crown Vinyl made by an exclusive process which provides new scope for colour and design, together with longer wear, are widely recognised for their styling and quality as leaders in the field.

At the end of the Accounts you will see that two pages have been devoted this year to a fuller description of our products which, in past years, have merely been listed.

RESULT OF YEAR'S WORKING

In the Accounts, it will be observed that, although our profits have been reduced, the sum available for appropriation is greater than in 1958. This is brought about as follows. Taxation, based on profits, totals £284,722 against £432,974 in the previous year, a fall of £148,252. Initial Tax Allowances on capital expenditure are reduced in the 1959 Finance Act when Investment Allowances are claimed, and as it has been our practice to place to reserve each year a sum equal to the Initial Tax Allowance this had the effect of releasing from the Initial Tax Reserve a sum of £8,000 in this year's Accounts compared with an addition to this Reserve in the previous year of £29,000. The provision for Income Tax in 1958 was calculated at the standard rate then operative of 8s. 6d. in the £, but, as a result of the reduction in the standard rate to 7s. 9d. in the £ after the Accounts had been prepared, this proved to be an over-provision of £36,754 (including other taxation adjustments).

One of our Subsidiary Companies, The Leather Cloth Company Limited, has not traded during the past three years. The Parent Company purchased all the shares in 1955, and later acquired all the assets and liabilities so that the Subsidiary's only asset was the amount owed to it by the Parent Company. In order to show the true position in the Parent Company's Balance Sheet of the investment in this wholly-owned subsidiary, the Directors have revalued the shares of The Leather Cloth Company Limited in a sum equivalent to the nominal value, namely £270,200. The surplus arising from this revaluation has been added to Capital Reserve, in accordance with Note 1 on page 10. The net dividend from a subsidiary of £13,096 shown in the Profit and Loss Account arises from the distribution of the remaining balance in this Subsidiary's Profit and Loss Account.

DIVIDEND RECOMMENDATION

The Net Profit available for appropriation thus becomes £459,820, against £381,389, from which is to be deducted the Special Interim Dividend paid in April and the Interim Dividend paid in October, leaving £372,317 for disposal and, after placing £195,000 to reserves, your Directors recommend the payment of a Final Dividend of 8 per cent on the £1,996,272 Ordinary and £665,424 "A" Ordinary Stock which, if approved by the Annual General Meeting, will be paid on April 30, 1960.

Once again we have maintained good labour relations during the year and I would like to thank all employees for the good work which they have done, and perhaps I might make special mention of the members of our Joint Consultative Committees who do so much to ensure the smooth running of the Factory.

We were particularly pleased this year when one of our Staff, Mr W. Osliffe, who had recently retired from the position of Manager in our Roller Cutting Department, was awarded the MBE in the New Year Honours for his services to Industry, and I am sure it would be your wish that I should congratulate him on behalf of all our members.

THE NEW ACCOUNTING PERIOD

We have been unfortunate in starting our new accounting period with a fire which destroyed the top floor of one of our buildings, affecting the production of our felt based materials. This is bound to have an adverse effect on our profits for the first quarter. The work of reconstruction is proceeding rapidly and we hope to resume our interrupted processes shortly. In the meantime, I would like to thank those Companies, some of which are our competitors, which have generously come to our aid by carrying out these processes for us in order that we might maintain our production.

The report and accounts were adopted and the dividend, as recommended, was approved.

The retiring directors, Mr G. G. Parkinson and Mr T. H. Bell, FCA, were re-elected, and the remuneration of the auditors, Messrs Viney, Price and Goodyear, having been fixed, the proceedings terminated.

Gestetner

LIMITED

TOTTENHAM, LONDON, N.17

The Company sells the world-famous Gestetner Duplicator and accessories, the electronic Gestefax and the Gestelith office offset duplicator. It has branches throughout the United Kingdom and subsidiary companies or representatives in all parts of the British Commonwealth, in the Americas, the Far East, and many countries in Europe. Extensive servicing facilities are available throughout the organisation.

BROWN BROTHERS LTD.

RECORD SALES ACHIEVED

The sixty-third Annual General Meeting of Brown Brothers Ltd. was held on April 13th, in London, Sir Richard Yeabsley, CBE, JP, FCA, the Chairman, presiding.

The following is an extract from his circulated statement:

I am pleased to report again that the sales of the Company and its Subsidiaries have exceeded those of the previous year. The trading profit of the Group for the year 1959 amounts to £1,173,313 (£1,136,397 for the previous year). The net profit of the Group after charging taxation is £453,755 (£397,791).

Of this Group net profit £50,884 has been retained in the Subsidiary Companies, leaving a net profit for the year of £402,871 (£333,287) to be dealt with in the Profit and Loss Appropriation account of the parent company.

It is recommended that £200,000 (£150,000) should be transferred to General Reserve.

The Directors propose a final payment of 13 per cent less tax on the issued Ordinary capital which, with the interim distribution of 4½ per cent less tax already made, makes a total of 17½ per cent less tax for the year (15 per cent less tax in respect of the year 1958).

The unappropriated profit carried forward is increased by £12,257 to £377,791.

TRADING CONDITIONS

I have already referred to the record sales of the year, but in this regard it must be remembered that we have been operating in a year remarkable for general expansion in the Home Market.

As the number of cars and commercial vehicles on our roads increases, so must we expect the demands on the service sections of the automotive industry to increase. It is our function to provide the replacements, the accessories, the tools and the equipment to the Motor Trader and Service Dealer throughout the country.

The tendency for the sale of cycles and cycle accessories to fall, so marked in 1958, has been checked, and a small improvement in turnover can be reported.

I am glad to say that during the whole of the year under review sales in our Radio departments have continued at record levels. In the field of Electrical domestic appliances also we have continued to enjoy a high level of turnover.

I am sure you will be pleased to know that sales in the first two months of 1960 have again been encouraging.

ADDITIONAL CAPITAL

The continuing expansion of our business requires Capital. As already announced, it is our intention to make an issue of 326,880 new Ordinary shares of £1 each and to offer these to shareholders at 45s. per share in the proportion of one new Ordinary share for each six Ordinary shares held. It is hoped that the appropriate documents in respect of this issue will be despatched to shareholders on April 22nd.

Provided there is no appreciable change in trading conditions, your Directors anticipate that the dividend for 1960, on the increased Capital, will be maintained at the 1959 rate.

The report was adopted.

VINE PRODUCTS

A SUCCESSFUL YEAR

The Thirty-fourth Annual General Meeting of Vine Products, Limited, will be held on May 5th at Surbiton, Surrey.

The following is an extract from the circulated statement by the Chairman, Sir Ronald Howe, CVO, MC:

First I must say how much I appreciate the confidence shown by your Board in appointing me Chairman of your Company, and I am very glad to report an increase in the net profits, before tax, in 1959 of £232,599, that is, over 38 per cent more than in 1958. In view of these excellent results, we propose to increase the dividend to 27½ per cent.

V.P. Group Wine Sales.—1959 was a successful year for all members of the group. Total British wine sales reached a postwar peak and you will, I know, be pleased to hear that your Company has more than maintained its predominant share of this total. In fact, a fifth of all wines consumed in this country are produced by your Company.

Sales under the "V.P." trade mark continued to be the largest of any individual brand of wine in the United Kingdom.

The Group's total figure was materially assisted by sales of "Cherry B," a special cherry wine in small bottles, launched by BritviC in the Spring of 1959: this line has had a remarkable success and is now well established.

British Wines sold by our Subsidiary Companies in 1959 showed an overall increase and sales by them of Commonwealth and Foreign wines and spirits continued to make progress.

The Parent Company has now added Cyprus Wines to its own Commonwealth range, which started in 1958, and we hope that the whole range will become a valuable asset to your Company's business.

BRITVIC—POSITION GREATLY STRENGTHENED

Last year BritviC Fruit Juices maintained their pre-eminent position in the trade. BritviC's position has been greatly strengthened by the success of "Cherry B." Sales this year indicate its increasing popularity and a sister product, "Blackcurrant B," has been introduced in February of this year. So far the signs are encouraging.

Canned Fruits.—The exclusive marketing of BritviC Canned Fruits has now been transferred to a well-known firm of city merchants, John Dorell & Company, and we no longer have a direct financial interest, but we have the benefit of keeping the name "BritviC" well to the fore.

Works Development.—To meet our growing production commitments, plans are in hand to increase our plant and to erect additional buildings beside our Winery.

The Revenue Reserves have increased by £251,229. The liquid position of your Company has benefited considerably by this increase in reserves, the balance of current assets over current liabilities having increased by £439,326.

Future Prospects.—As to the future, while we have every confidence in the continuing expansion of our trade and present indications so far this year are promising, I must emphasise that competition in the British Wine Trade, and in the Wine Trade as a whole, has intensified and this could well affect profit margins in the future.

"Our eggs are in many baskets—a protection from economic zigzags"

Record Profits Attained

Mr. W. Lionel Fraser's Review

The Sixty-Third Annual General Meeting of Thomas Tilling Limited will be held on 12th May, 1960, at the Washington Hotel, Curzon Street, London, W.1.

The following is an extract from the review by the Chairman, Mr. W. Lionel Fraser, C.M.G., which has been circulated with the Report and Accounts for 1959:—

A question often asked me is: "Is diversification a good thing?" Although many have followed our lead, I can only properly speak of our own case, where I say unhesitatingly that having our eggs in many baskets has proved itself to be an excellent thing. This dates back very many years, for let it be said we were an embryonic Family of Firms long before our transport assets were sold in 1948, possessing as we then did, considerable outside investments.

If our holdings are now even more varied, it is precisely because we believe thereby we shall protect ourselves from the zigzags that recur in the economy, and because, in all modesty, we consider ourselves well qualified to co-ordinate and fashion our different interests. We cannot expect, in the event of a general setback, to escape its effects altogether, but if we are careful in the selection of our member companies, as well as judicious in our supervision of them, we can surely hope that as our future unfolds, the zigs will not seriously unbalance the zags.

All my colleagues share my confidence in the future of Thomas Tilling Limited. We have had a good past year, and on present showing, 1960 looks like being no laggard. There should be better ones ahead. I believe the coming era will be a period of broadening prosperity for this country and the whole world, but it will mean buckling-to.

THOMAS TILLING LIMITED

A FAMILY OF FIRMS

THE SCOTTISH UNION AND NATIONAL INSURANCE COMPANY

MOMENTOUS YEAR

PROGRESS IN LIFE, FIRE, ACCIDENT AND MARINE BUSINESS

MR JAMES A. LUMSDEN'S REVIEW

The following is a summary of the Statement by the Chairman, Mr James A. Lumsden, MBE, circulated with the Report and Accounts of the Scottish Union and National Insurance Company for the year 1959:

The year was a momentous one for the Company. Following an offer by the Norwich Union Fire Insurance Society Ltd. for the Company's shares, the Society has acquired more than 99 per cent of the issued share capital. To establish a close liaison at Board level Sir Robert Bignold, DL, President of the Norwich Union Insurance Societies, and Mr Basil Robarts, FIA, General Manager of the Norwich Union Life Society, were appointed Directors of the Company whilst Mr Lumsden and Mr P. J. Oliphant were appointed to the Board of the Norwich Union Fire Society Ltd. Sir Robert Bignold has also been appointed President of the Company.

The new life business completed (after deduction of reassurances) was £8,931,028, an increase of more than £500,000 compared with 1958. The rate of interim bonus payable on participating policies was increased during the year from 47s. per cent to 50s. per cent.

Referring to the new State Pensions Scheme Mr Lumsden stated that each private pension scheme insured with the Company was being examined to assist employers in reaching a decision on whether they should contract out of the State Scheme. A joint pension Consultant service with the Norwich Union has been formed.

The net premium income in the Fire Department totalled £5,664,196, an increase of £49,948 compared with 1958. Claims experience generally in the United Kingdom was much heavier than for many years, and this resulted in a greatly reduced underwriting profit from the home operations. Although there had again been underwriting losses in the USA and Canada there had been an improvement in these territories. In most other overseas countries the results were satisfactory. An underwriting profit of £12,370 was realised compared with a loss of £95,075 in 1958.

In the Accident and General Department, net premiums increased by £260,296 to £2,894,976, and the loss ratio was 56.13 per cent compared with 56.73 per cent in 1958. Motor business, except in Canada, was again unprofitable with a claims ratio of 60.81 per cent. The Accident Account as a whole, however, produced a trading profit of £84,822, but with the allocation of 50 per cent of the premiums to the provision for unexpired risks there was an underwriting loss of £45,392, which was met by a transfer from the Profit and Loss Account, compared with an underwriting loss of £82,248 in 1958.

The net premium income in the Marine department increased by £106,506 to £1,769,291 and, as claims paid increased by only £40,159 there was a slight improvement in the trading. Marine underwriting continued to be difficult but, with the general improvement in world trade resulting in an increase in the volume of business, the future seemed to hold out better prospects. No transfer was made to the Profit and Loss Account.

In the Profit and Loss Account gross interest, dividends and rents at £517,675 showed a gratifying increase over the previous year. After charging UK and Overseas taxes amounting to £52,430 there was a net group profit of £254,868. The dividend paid on February 10, 1960, after deduction of Income Tax, absorbed £147,000 and the balance of £758,614 which is carried forward is substantially greater than in 1958.

The Chairman concluded his Statement by thanking all members of local boards and agents for their support during the year, and also extended sincere thanks to the management, officials and staff for their excellent work.

NATION LIFE AND GENERAL ASSURANCE COMPANY

The thirty-fifth annual ordinary general meeting of Nation Life and General Assurance Company Limited was held on April 20th at Teddington, Mr H. Cox (the chairman) presiding.

The following is an extract from his circulated statement:

The Income of the Company has increased by £16,943, again, an increase above our average. The Life Funds have increased by £65,000 and the Assets have increased by £106,000.

The Company's Income for 1959 totalled over £365,000 and the Premium Income for our two Life Branches amounted to £304,000. The Interest Income, which shows an increase of some £6,400, amounted to £61,757, and the Interest Yield on the Industrial Assurance Fund was £5 9s. 10d. compared with £5 5s. 3d. last year.

Our sums assured in the Ordinary Branch show a substantial increase. We have succeeded in attracting the attention of Insurance Brokers, and this interest is continuing. A substantial business is being built up in our Ordinary Life Branch.

The Directors recommend a final Dividend of 6d. per 5s. Stock Unit, free of Tax, making a total Dividend of 10d. per 5s. Stock Unit, free of Tax for the year ended December 31, 1959. The Directors further recommend an Interim Dividend of 4d. per 5s. Stock Unit, free of Tax, for the year ending December 31, 1960, on the increased issued capital.

A Dividend of 2½ per cent has been declared by our Subsidiary, The Tabulating and Mechanical Accounting Service. I am satisfied that our Subsidiary Company will be of great benefit to our Stockholders.

The report was adopted.

In replying to a vote of thanks the Chairman, Mr H. Cox, stated that the recent Rights Issue was a great success, and announced that the new business to date for the Ordinary Branch had already exceeded the New Business received in that Branch for the whole of last year. He further announced that preliminary steps had been taken to commence Fire and General Departments.

HENEKEYS LIMITED

DIVIDEND CRITICS ANSWERED

The fortieth annual general meeting of Henekeys Limited was held on April 12th in London, Sir Bernard D. F. Docker, KBE, JP, (the chairman), presiding.

The following is an extract from his circulated statement:

I am pleased to report a profit before tax of £172,892, an increase of £13,800, which becomes £16,800 after tax largely due to the lower rates of Income Tax and Profits Tax. I consider this satisfactory.

We have not increased the Ordinary Dividend, and I have seen this commented on unfavourably in some quarters; I must remind anyone who may have forgotten that Shareholders received last year a free issue of £270,000 Second Preference Stock bearing 7 per cent interest, and this interest is equivalent to just over 5 per cent increase in the Ordinary Dividend.

Since the end of our financial year our takings show a further rise over 1958/59—this increase is largely in the "Off-sale" departments of our Head Office and Branches, and our policy of opening up Off-licences in all Branches where it is practicable is serving us well. Such Off-licences have been opened during or since the end of the year at Camberwell, Hastings and Wandsworth Branches.

We also extended our City Grill Room which continues as a popular luncheon room.

I am glad to tell you that we have secured on reasonable terms, the Freehold of our Twickenham Branch, the Lease of which was due to expire in 1972. We have also negotiated a further long Lease on our Hastings property.

The report was adopted.

APPOINTMENTS

UNIVERSITY OF OTAGO
Dunedin, New Zealand
SENIOR LECTURER OR LECTURER IN STATISTICS

Applications are invited for this position. Salary range: Senior Lecturer £1,750-£2,000; Lecturer £1,250-£1,700 per annum.
Further particulars are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1, or from the Registrar, University of Otago, Dunedin, New Zealand.
Applications close in New Zealand and London on *June* 15, 1960.

THE UNIVERSITY OF HULL

Applications are invited for the appointment of Research Assistant in the Department of Social Studies tenable from October 1, 1960. Candidates must have reached a good Honours standard in Sociology and should preferably have had some research experience. Salary scale £650 x £50—£900 p.a. with F.S.S.U. and children's allowances. Further particulars may be obtained from the undersigned to whom applications (five copies) should be sent not later than May 14, 1960.

W. D. CRAIG,
April 14, 1960. Registrar.

UNIVERSITY OF OTAGO
Dunedin, New Zealand
DONALD REID CHAIR OF ECONOMICS

Applications are invited for the Donald Reid Chair of Economics. The salary is £2,800 per annum.
Further particulars are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1, or from the Registrar, University of Otago, Dunedin, New Zealand.
Applications close in New Zealand and London on *June* 15, 1960.

For further appointments and other classified advertisements see pages 381, 382 and 383

UNIVERSITY OF HONG KONG
READERSHIP OR SENIOR LECTURESHIP IN STATISTICS

Applications are invited for the above-mentioned post. Applicants should have the appropriate qualifications and experience needed to take charge of the newly established Statistics Unit.
Annual salary (superannuable) is: Readership—£2,500 (man) or £1,900 (woman); Senior Lectureship—£2,000 x £75—£2,300 (man) or £1,500 x £60—£1,740 (woman). There is also an expatriation allowance of £300-£250 a year if applicable. The equivalent of income tax in the Colony is comparatively low.
Expatriate staff and their families are provided with furnished accommodation at a reasonable rental, and with first-class sea passages on first appointment and leaves.
Further particulars and information as to the method of application should be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.
Applications close, in Hong Kong and London, on May 31, 1960.

COMPANY AFFAIRS

Dunlop Rubber

With its 1959 results Dunlop Rubber should have done much to erase investors' memories of 1956 when, with profits sharply down, the ordinary dividend was cut from 14 per cent to 10 per cent. The chairman's forecast with the interim statement last October must have led investors to expect only a slight increase in profits and probably an unchanged equivalent dividend after the one-for-four scrip issue. In the event, the group's trading profits last year rose by 14 per cent from £19,761,000 to £22,474,000 and the ordinary dividend has been stepped up from the equivalent of 13 per cent to 15 per cent. Partly as a result of the boom in the motor industry in this country Dunlop's sales continued to rise and in the last half of 1959 they were 5 per cent higher at £134 million than they were in the first half. Over the same half-yearly periods trading profits rose by 13 per cent, even though tyre prices were cut by 7½ per cent last August and the price of natural rubber continued to rise. There has thus been a significant improvement in profit margins from 8.3 to 8.9 per cent; for the full year the margin works out at 8.6 per cent, against

SALES AND PROFITS

(£ million)

Six months ended	June 30, 1958	Dec. 31, 1958	June 30, 1959	Dec. 31, 1959
Sales	120	123	127	134
Gross profit	9·63	10·13	10·52	11·95
Net profit	2·64	3·16	3·15	4·02
	%	%	%	%
Gross profit/sales	8·0	8·2	8·3	8·9
Net profit/sales	2·2	2·6	2·5	3·0

8.1 per cent in 1958. It is the trend of these statistics (rather than their height) which may give investors greater confidence, for in the past few years Dunlop's profits have failed to go up as quickly as sales.

Until the full report is published it can only be surmised that the greater part of this increase in profit came from Dunlop's overseas activities, which last year contributed something over two-thirds of total profits. In the United Kingdom there was certainly no let-up in the "increasing severe competition" to which the directors referred last year and which led to last August's cut in tyre prices. Clearly Dunlop's vigorous overseas expansion is paying off and it is from the factories in various parts of the world together with new products such as disc brakes and pneumatic suspension systems that further increases in profits seem likely to stem. At 25s. 7½d. the 10s. shares still yield almost 6 per cent—a far higher return than can be obtained from any other leading industrial company except Imperial Tobacco.

Wood Hall Trust

In his circular to shareholders on the link up between Wood Hall Trust and Samuel Montagu, Mr Michael Richards, the chairman of Wood Hall and the seller of 350,000 Wood Hall shares to Samuel Montagu, obviously tries to remove various doubts that shareholders have held (and may still hold) on the merits of this deal. Mr Richards estimates that group profits before tax in the year to June 30th should be not less than £800,000. This figure excludes profits from Hart Son and Company, the merchant bankers, which it is proposed to sell to Samuel Montagu for an independently agreed price of £600,000. A tax free dividend of £100,000 from this company is to be paid to Wood Hall before the sale is completed, and this will bring group profits up to not less than £963,265. This compares with a profit before tax for the previous year of £774,052, of which Hart Son and Company contributed £221,367. From the increased profit the directors hope to pay a tax free dividend of 20 per cent equivalent to 32½ per cent gross (against 25 per cent gross).

Mr Richards reveals that negotiations are in progress for the acquisition of further subsidiaries, which he says should more than offset the loss of Hart's profits. He also assures shareholders that, although he is to be appointed a managing director of Samuel Montagu, he will continue to give as much time and attention to the affairs of Wood Hall Trust as he has in the past. Since Mr Richards took over Wood Hall in 1952, it has made great strides and shareholders may well wonder if they are not being asked to pay rather a heavy price for Samuel Montagu's backing (considerable though its value is). Not only are they to lose Hart Son and Company but they will lose virtual as opposed to formal control of Wood Hall Trust if Samuel Montagu exercises the valuable options that are to be granted to it. Some dissenting voices may be heard before the necessary resolutions are passed on May 6th if shareholders are not attracted away by other matters on that day. The 5s. shares have had a good rise since the scheme was first announced and at 37s. 6d. yield 4¼ per cent, on the forecast dividend.

Waterlow & Sons

The last few days have been bewildering ones for Waterlow shareholders as moves and counter moves have taken place almost daily in Waterlow's hard fought struggle with Purnell. The last shots now seem to have been fired, for Purnell declared its offers unconditional and has extended those of the preferred and deferred ordinary shares to April 26th, which had already been set as the closing date for the preference offer. Purnell has not disclosed the size of its holdings in Waterlow except to say that they are substantial in each class. They are presumably sufficiently large to block Waterlow's capital reorganisation scheme. This was put forward by Mr P. A. Waterlow, the chairman, as a reply to Purnell's decision to include the 4 per cent preference shares in its bid. Waterlow proposed that the dividend rate on the preference shares (for which Purnell had offered 20s. in cash) should be raised from 4 per cent to 6 per cent and that 2s. 6d. should be added to the nominal value on repayment. Similarly an increase of from 6½ per cent to 7½ per cent was proposed for the preferred ordinary (for whom Purnell had made a bid equivalent to 22s. per share) with 3s. 6d. added to the nominal value on repayment. In addition it was proposed that both preference and preferred ordinary shareholders would receive one £1 deferred share for every 18 shares held. In return for these benefits these shareholders were asked to surrender their voting rights, which amounted to 1,080,000 of total votes of 1,770,000. Despite Purnell's declaration Mr Waterlow is going ahead with this scheme, since he believes that Purnell's "substantial holdings" are small in relation to total votes.

It seems likely however that the decisions of the deferred shareholders will still decide the day, for news of a prospective interim dividend of 10 per cent, a revaluation of the company's properties (which threw up a considerable surplus and gave each share a net asset value of 103s.) and a capital profit of £450,000 on sales of property has failed to hold the price of the deferred shares at a sufficiently high level to make the Purnell offer seem unattractive. In the last fortnight the shares have slumped by 9s. to 46s. to stand in line with the value of the Purnell offer. Throughout this struggle Purnell has held the initiative. Waterlow has been forced back on the defensive. Usually in past battles of this kind it has been the aggressor who has won, for the defenders are often open to criticism that if they can afford to be generous under pressure they could have treated shareholders more liberally in the past.

Insurance Results

In 1959 **Prudential Assurance** passed a new mile-stone, when its total assets passed beyond the £1,000 million mark. Over the year its assets rose from £965 million to £1,035 million. Three quarters of this increase was in ordinary shares (which rose from £208 million to £247 million) and in properties. As in 1958 a further £10 million has been invested in both fixed interest securities and mortgages. There was little change in Prudential's gilt-edged portfolio.

Total income last year fell only just short of £200 million, at a new peak of

Continued on page 373

Capital Intensity at ICI

As a producer of all kinds of chemicals in volume, Imperial Chemicals Industries is an enormous employer of capital; for every person ICI employs there are three who own some of its stock. Of 341,757 people who owned stock at the end of last year, 309,791 were ordinary stockholders (12,909 more than at the end of 1958). Of these 67.7 per cent owned £500 or less, their total holdings representing 16.5 per cent of the ordinary capital. Right at the other end of the scale, 15.4 per cent of the ordinary capital was held by 28 insurance companies, pensions funds and other institutions. For the small man as well as the big institution, ICI is an inevitable choice and once the stock is bought it is unlikely to be sold in a hurry. Thus in a year of stock exchange boom, when the price of ICI went up from 38s. to 60s. 6d., it is not all that surprising that the turnover in the stock was relatively small. Over the year, 91,907 transfers were received, representing a total nominal value of £22,715,108 or about 9 per cent of the ordinary capital.

Since the end of the year, the directors have reported a remarkable expansion in profits and have raised the ordinary dividend from 8 to 11¼ per cent. So far this year, the price of the ordinary stock has been as high as 62s. 6d. Now at 56s. 9d. xd, the stock offers a dividend yield of almost 4 per cent and an earnings yield 2.2 times as great at 8¾ per cent.

How quickly ICI's profits respond to working full out was revealed in last year's results. Sales rose by 10 per cent from £462¾ million to £508½ million. Included in these totals, exports rose by 19 per cent to the record total of £87½ million; here, the principal yeast was the export of plastics and "Terylene," and a subsidiary ingredient was the recovery in exports of alkali and dyestuffs. Profits after depreciation but before tax rose by no less than 55 per cent, from £51½ million to £79¾ million and the consolidated net income after tax went up by 77 per cent, from £23 million to £40¾ million. With some restraint, the directors describe this as a "welcome improvement" in which profits have "only resumed what may be regarded as a more appropriate relationship to capital in view of the heavy volume of capital investment in recent years." In 1958, the revaluation of fixed assets was the principal but not the only reason the rate of return on capital funds fell from 11 to 8 per cent. Last year the rate of return improved to 11.7 per cent, the highest since 1955. Over the last four completed half years the rate of profit return on sales has run: 10.5 per cent, 8.6 per cent, 13.9 per cent and 14.7 per cent.

These bigger margins were achieved in a year in which ICI reduced the prices of its main products on an average by 2½ per cent. The number of employees fell from 112,108 to 109,596, and the value of stocks rose by only £2 million to £115¾ million. The explanation is a more intensive and more efficient use of capital. The directors emphasise this in their report:

> The increase in the aggregate value of sales was because of higher volume, and not because of higher prices. The capital invested in the company is large in relation to its turnover, and an increase in general activity is quickly translated into lower costs of production, particularly where there are plants previously not working to capacity, as in 1958, which can be brought into full production. Furthermore, improved efficiency in the technical operation of plants was secured, and this was most marked in those recently built plants which are turning out some of the newer products.

Sales of "Terylene" polyester fibre were a record and the plant was operating to capacity, reflecting the more favourable conditions in the textile trade at home and the continued growth of exports; by the end of the year part of the extensions designed to increase capacity to 50 million pounds of "Terylene" had come into production. The paints division had another successful year and new machinery which came into production early in the year enabled an increasing demand for leathercloth products to be met. Sales of the major products of the plastics and metals divisions increased substantially. Indeed, the only division where there was much of a reduction in sales was the Nobel explosive division, which was affected by the decline in orders from the coal industry.

Last year's growth in sales and profits would have been impossible without heavy spending on capital account earlier on. The directors' report indicates that the rate of spending has recently been reduced and that there had been a change in the nature of that spending. Last year ICI spent £32.2 million on construction projects in this country, compared with £45.3 million in 1958 and £50.6 million in 1957. The directors sanctioned the spending of £22 million on new projects and the total of outstanding commitments was reduced from £49.8 million to £39.6 million. The rate of capital expenditure early this year will be less than it was in 1959, though the directors expect this trend to be reversed towards the close of the year. Capital expediture of this order can easily be financed by retained profits, which last year amounted to £52 million, including £10 million of tax reserves. In explaining the change in the nature of capital spending, the directors remind shareholders that the effort between 1945 and 1957 was directed towards installing new plants and enlarging older ones. Since the end of 1957, they add:

> The emphasis has been on increasing the capacity of existing plants by improving efficiencies, on carrying out modifications with a relatively low expenditure of capital, and on consolidating the expansion which had taken place over the previous twelve years, and of planning future increases in capacity so that the best can be made of the skills available within the organisation.

This policy of ICI has a double lesson for shareholders. First, ICI is unlikely to come to the market for new money—unless, for example, it develops a new product for a mass market that requires a big plant. Secondly, the ICI board can afford to be more generous with dividend payments. That is especially so if prices remain stable and they do not have to make each year bigger and bigger appropriations out of taxed profits to cover the cost of capital replacement. Thus if, before 1957, the payment of about a third of ICI's net income out in dividend was appropriate, the payment of about half that income would not be inappropriate now. The 1959 dividend was covered nearly 2¾ times by earnings and if ICI's profits rise this year—as rise they surely will though, because there is less slack to be taken up, less spectacularly than they did in 1959—there is no reason why the dividend should not keep pace.

* On capital as increased by 50 per cent scrip issue and loan stock conversions. † After revaluation.

Continued from page 371

£197 million. Of this sum investment income accounted for £55 million (against £49 million). Premium income in the ordinary branch rose from £61½ million to £66¼ million, of which £19 million came from overseas. The industrial branch operates only in this country and its premium income rose by £2¾ million to £57¾ million. Premiums from fire, accident and life assurance (including the unconsolidated American subsidiary) totalled £20½ million (against £18¾ million).

Shareholders in **Legal and General** are reminded by the chairman, Lord Harcourt, in his annual statement that while future triennial valuations should reveal larger surpluses with the growth of life funds an increasing proportion of these surpluses will be absorbed by bonuses to holders of with-profit policies rather than to shareholders. This statement reflects the growth of the with-profits business, which Legal and General entered much later than most other insurance companies. The 1959 valuation produced a surplus of £7,643,000 (against £3,140,000 in 1956); of this sum £2,100,000 (against £2,140,000) was allocated to the profit and loss account.

INSURANCE DIVIDENDS

	1958 %	1959 %	Price	Yield %

Royal	78 1/3	93 1/3	131/9	3·5

* On capital as increased by rights issues. † Tax free. § Similar dividend declared for 1960.

In Legal and General's continued expansion is the key to future dividends. In 1959 total assets rose by £42 million to £398 million. Legal and General has invested very heavily in property and at £107 million its property investments made up over one quarter of total assets. Its holdings of ordinary shares amounted to £40 million.

Many insurance companies have announced bigger dividends this year, as the accompanying table shows. Among them **London and Manchester** has raised its tax-free dividend from 4s. 1½d. to 4s. 9d. on its 5s. shares. In addition a 100 per cent scrip issue is to be made. The directors expect to have available for distribution in 1960 a similar amount as in 1959 plus the interest earned on the proposed additional capital. Thus, if interest is calculated at 6 per cent gross (or 4.16 per cent net) the indicated dividend is the equivalent of just over 99 per cent tax free, or 49.58 per cent on the doubled capital. In other words the dividend may be at least 2s. 6d. per share.

British Drug Houses

When the directors of British Drug Houses successfully fended off the take-over bid by Fisons last month, they forecast that consolidated profits for 1959 would show a rise from £551,597 to not less than £600,000. In fact the preliminary statement shows that they have risen by 17½ per cent to £647,495. The creation of its own wholesale department in the London area and the expansion of its chemical laboratories at Poole contributed to this advance in profits and the directors expect further increases in profits from these sources in the next few years. Earnings in 1959 cover the doubled dividend of 24 per cent 1¾ times. For the current year the directors hope to pay the equivalent rate on the capital as increased by the 50 per cent scrip issue and they hope to raise that payment for 1961. By then the results of the tests on the new oral contraceptive on which British Drug Houses has been working will be known. Laboratory tests on this contraceptive pill have fulfilled many hopes. Shareholders will no doubt hope that clinical tests will produce as favourable a result. In the last few weeks they have seen their shares fall from 30s. during the take over struggle to 25s. 6d. At this price they yield 4.8 per cent.

Thomas Tilling

In 1959 total income from the many and varied companies which make up Thomas Tilling's family of firms soared from £3,399,995 to £4,638,706, more than making good the 1958 setback in profits which had been its first since the company assumed its new form. New shareholders —and they are numerous following the splitting of the £1 shares into 4s. units— will be impressed by the wealth of information contained in the report. The proportion of the equity held in each company by the group is given, as well as the proportion of assets invested in each company and in particular trades. What shareholders might also like to know is the relative contribution to the total profits made by each of these companies.

Earnings from Cornhill Insurance, which represents 10.7 per cent of Tilling's assets, provide about 15 per cent of total income. Tilling's major investment in a single company is in James A. Jobling, makers of Pyrex glassware, which reported record profits last year following the substantial fall in 1958. In a group as wide and varied as Thomas Tilling not all its members flourish at the same time, and among others Heinemann, the publishers, has reported lower profits, largely as a result of the printing strike.

For the future Mr Lionel Fraser, the chairman, looks forward to further expansion and says that there is no lack of applicants to join the Tilling family. This year shareholders will receive a bigger dividend. A further one for ten scrip issue is proposed and the directors intend at least to maintain the current rate of dividend on the enlarged capital. A similar forecast was made at this time last year, but in fact the dividend for 1959 was raised from the equivalent of just over 12 per cent to 17 per cent. The market is hoping for something more than 17 per cent on the increased capital, for on that basis the 4s. units at 23s. 1½d. yield only 3¾ per cent.

London Stock Exchange

FIRST DEALINGS:	Mar. 21	April 4	April 25	
LAST DEALINGS:	April 1	April 22	May 6	
ACCOUNT DAY:	April 12	May 3	May 17	

The Chancellor's reference in his Budget speech to the possibility of credit restrictions continues to be the main factor restraining activity in the stock markets. This coupled with the Easter holiday has brought about a sharp drop in the number of bargains marked. On Thursday of last week, when some small buying and bear covering gave the *Financial Times* Index its only rise since the Budget, only 9,813 bargains were recorded, the lowest figure since Christmas Eve, 1958. In the four days' business to the close on Wednesday gilt-edged stocks have been generally quiet, but there has been some small investment buying mainly of the shorter medium-dated stocks. Conversion 3½ per cent 1969 rose from 84 11/16 per cent to 85¼ and Savings 2½ per cent 1964-67 gained ¼ to 82. Little interest has been shown in undated stocks and War Loan 3½ per cent was unchanged at 62 15/16 per cent.

Apart from last Thursday industrial equities have generally eased, but in a number of cases losses have not wiped out entirely Thursday's small gains. Thus over the week to Wednesday *The Economist* indicator rose fractionally from 351.2 to 351.4. Steel shares over the week were a little up on balance although the gains were not always held. Stewarts and Lloyds gained 9d. to 48s. 6d. after touching 49s. 3d. and United Steel gained 6d. to 77s. 6d., having touched 79s. 3d. before the holiday. Substantial gains on American and Continental favourites in Tuesday were not held later, but nevertheless over the four days' trading Unilever NV gained 8s. to 190s., having touched 195s. 7½d. on Tuesday. Philips Lamps, which on Tuesday jumped to a new peak of 182s. 6d., made a net gain over the period of 4s. 9d. to 178s. 9d. The revival of the rumours of a take over of Ford Motors by its American parent caused a sharp rise in the shares to 106s. 1½d. A denial from the United States after Easter left them still 3s. 1½d. higher on balance at 101s. 6d. On news of its take-over bid for Raleigh Tube Investments lost all but 3d. of last Thursday's gain and closed on Wednesday at 77s. Raleigh gained 6d. to 50s. 6d. Shipping shares made good advances on the reported comments of a better outlook for the industry, Peninsular and Oriental rose from 39s. 10½d. to 41s. 6d. while Furness Withy gained 9d. to 43s. 6d.

The gold share market has been helped by the lack of response to the strike call in South Africa and to news of consultations with the United Nations. In a restricted market Free State Geduld gained 2s. 6d. to 135s. while among finance houses General Mining rose from 92s. 6d. to 100s. on the increased dividend. With a large seller in the market Shell Transport have weakened further from 150s. to 146s. 9d., but there has been little change in the prices of other oil shares.

Industrial Profits and Assets

The tables below continue the analysis of company balance sheets and profit and loss accounts which was introduced in *The Economist* of January 22, 1949; the figures are discussed on an earlier page in this issue.

Comparative analysis of 413 profit and loss accounts published January - March, 1960 (£'000)

Money and Exchanges

THE MONEY MARKET

THERE was no change in the discount market's bid of £98 16s. 9d. at the Treasury bill tender on the Thursday before Easter and its allotment was lowered slightly from 42 per cent to 41 per cent. The average discount rate rose by about 1½d. to £ 4 13s. 1.10d. For the £280 million of bills on offer applications rose by £32 million to £454 million, but only £260 million bills were eventually allotted.

In contrast to the steadiness of the bill rate in London, Treasury bill rates in New York (where tenderers outside the money market are much more important) have fallen back after last week's sharp rise. The rate on three months bills fell from 3.622 per cent to 3.306 per cent and on six months bills from 3.854 per cent to 3.705 per cent.

Money was in generally short supply in Lombard Street on Wednesday of last week and a small amount of help was given by the authorities. Subsequently conditions were more comfortable and rates on overnight money came down to the basic rate of 3½ per cent, with some balances unlent. On Wednesday this week, however, fresh funds were again scarce.

Abridged Particulars

E. Alec Colman Investments Limited

(Incorporated under the Companies Act, 1948)

SHARE CAPITAL

Authorised	Issued and Fully Paid
£1,000,000 in 5,000,000 Ordinary Shares of 4s. each	£400,000

ELECTRIC AND GENERAL INDUSTRIAL TRUSTS LIMITED

OFFER FOR SALE

500,000 Ordinary Shares of 4/- each fully paid at 12/- per Share payable in full on application

Lists will Open and Close on Tuesday, 26th April, 1960. The Offer for Sale shows (inter alia) that:—

1. The Company was incorporated in 1960 by E. Alec Colman with a view to consolidating some of his property interests and of acquiring additional property interests. The Company with its wholly owned subsidiaries owns freehold and leasehold properties in and around London, which are valued at £1,593,550, of which £964,700 is represented by freeholds and £628,850 by leaseholds.

2. In addition to Maisonettes, Shops and Offices, the Subsidiaries own 424 flats, the great majority of which are of modern construction; 9 per cent. are let on controlled tenancies; 17 per cent. have leases with less than 12 months to run; a further 49 per cent. have leases with less than 3 years to run; a further 20 per cent. have leases with less than 5 years to run, and the remaining 5 per cent. with over 5 years to run. It is estimated that the net income over the period of the next 3 years, when present tenancies fall in, will increase by at least £30,000 per annum.

3. On the basis of a net profit of £84,000, subject to taxation, it would be the Directors' intention to pay an interim dividend of 5 per cent. less tax in November, 1960, and to recommend a final dividend of 10 per cent. (15 per cent. in all) less tax in June, 1961, on the £400,000 issued Ordinary Share Capital in respect of the period ending 30th April, 1961, which would give a yield of 5 per cent. at the offer price of 12s. per share.

Copies of the full Offer for Sale (on the terms of which alone Applications will be considered) and Forms of Application can be obtained from:—

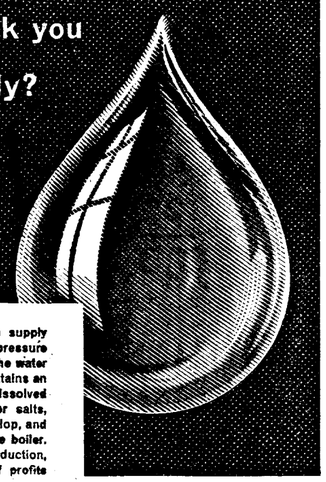
. . . there's an able branch manager at the bank we use. And behind him is a district head office which has a finger on all our local problems, as well as on the broader issues of the outside world. So we are very well served at both branch and head office levels . . .



our bank's Martins

Martins Bank Limited Head Office: 4 Water Street, Liverpool 2

Did you know that this

drop of water

could sink you financially?

A boiler is designed to supply pure steam at a given pressure and temperature. But if the water used for the purpose contains an excessive amount of undissolved solids, harmful gases or salts, serious trouble may develop, and everything be up with the boiler. The results—delayed production, extra costs and loss of profits could be disastrous.

Vulcan know

The prevention of scale formation and corrosion in a steam raising plant depends upon the correct treatment of the water. And the expert who knows all about that—as about so many other things—is the Vulcan Engineer Surveyor.

Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection *and* protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

Vulcan are specialists

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery, with reports of accidents and safety hints. Write to Dept. 17.

(British Institute of Management and Ministry of Education Scheme)

Applications are invited for the Sandwich Course commencing on 2nd May, 1960.

The Course consists of two periods of attendance at the College, each of twelve weeks' duration, separated by a period of approximately nine months in Commercial and or Managerial work.

Minimum age for entry—24 years.

Tuition fee—£8 for each period of attendance at the College.

Application forms and further particulars obtainable from Dr. D. P. Evans, Principal.

EMLYN STEPHENS,
Director of Education,
County Hall,
Cardiff.

UNIVERSITY OF DURHAM

KING'S COLLEGE, NEWCASTLE UPON TYNE, 1

DEPARTMENT OF SOCIAL STUDIES

The Council of King's College invite applications for the post of Lecturer in Social Studies. Candidates should be prepared to lecture in Social Economics and Social Administration. The commencing salary will be determined at a suitable point on the scale £900 x £50 - £1,350 - Bar - £75—£1,650 in accordance with the qualifications and experience of successful applicant. Family Allowance and F.S.S.U. Benefits are also payable. The successful applicant will be expected to take up duty on October 1, 1960.

Twelve copies of applications, together with the names and addresses of three persons to whom reference may be made, should be submitted not later than May 14, 1960, to the Registrar of King's College, from whom further particulars may be obtained.

INTERNATIONAL LABOUR OFFICE

The I.L.O. invites applications from STATISTICIANS for a twelve months' technical assistance assignment in the Philippines. Duties include advising Government on a labour statistics programme and lecturing at University on associated topics.

University training in statistics required, and several years' experience in statistical work. Fully fluent English. Sound knowledge of sampling theory and practice related to census experience desirable.

Salary $5,125 p.a. plus generous allowances (all tax-free). For further information and application forms write urgently to Ministry of Labour, 26-28 King Street, London, S.W.1, quoting ID/176/ILO/PHI.

FACTORY MANAGEMENT EXECUTIVE

Gentleman trained and experienced in the maintenance of large factories and Labour Control, will shortly be required as Assistant to Works Superintendent controlling Group of Factories in North of England City.

Candidates for this position, who should be in age group 33 to 40, are asked to include in their applications full details of training, past experience, also of position held, and should at present be in receipt of not less than £1,500 per annum.

The position is superannuable.

Letters received will be treated with the utmost confidence. Write Box 3344.

NATIONAL SAVINGS COMMITTEE'S DISTRICT COMMISSIONERS to fill more responsible posts for men or women at least 21 on March 1, 1960, preferably with university education, organising ability, knowledge of economics, and experience in public speaking and with voluntary workers. Final year students may apply. Men's starting salary (London) from £2,250 to £2,600. Maximum £3,200. Then scale under review. Promotion prospects.—Write Civil Service Commission, Basil den Gardens, London, W.1, for application form, quoting 184/60/2. Closing date May 12, 1960.

GOVERNMENT OF WESTERN NIGERIA

NEWCASTLE UPON TYNE EDUCATION COMMITTEE

RUTHERFORD COLLEGE OF TECHNOLOGY

(Selected for development into a College of Advanced Technology)

DEPARTMENT OF INDUSTRIAL ADMINISTRATION AND GENERAL STUDIES

The Governors invite applications for the following posts, duties to commence September 1, 1960, or as soon after as possible, which arise in connection with the formation of this new department in a rapidly expanding College. The work of the Department will be concerned with courses leading to the new Diploma in Management Studies, with the management and liberal content of Diploma in Technology and Higher National Diploma courses and in providing special courses of an advanced nature for business and professional executives. The pursuit of research will be encouraged and every opportunity given to teaching staff to engage in such projects.

(i) HEAD OF DEPARTMENT, GRADE IV—Candidates should possess high academic and professional qualifications, have had good teaching with, preferably, some administrative experience and be capable of initiating and directing research in one or more aspects of management.

(ii) SENIOR LECTURER—The duties will be concerned wholly with Management Studies and candidates, who should be well qualified academically and professionally, will be expected to have had considerable personal experience of management functions as well as sound teaching experience.

(iii) LECTURERS (2 posts)—Candidates should possess good academic qualifications and some teaching experience and be prepared to undertake work concerned with one or more of the following: Communications, Finance, Costing and Management Accounting, Personnel Management and Human Relations, Marketing, Business Law, Applied Economics, Work Study.

(iv) ASSISTANT LECTURERS, GRADE B (2 posts)—Candidates should be academically qualified and have an interest in one or more of the subjects outlined in (iii) above.

Salary according to the Burnham Technical Report: Head of Department Grade IV £1,850 by £50 to £2,100; Senior Lecturer £1,550 by £50 to £1,750; Lecturer £1,370 by £35 (final £40) to £1,550; Assistant Lecturer Grade B £770 by £27 10s. 0d. (final £37 10s. 0d.) to £1,150 with appropriate allowances for graduate, training and industrial experience.

Further particulars and forms of application (returnable within 14 days) may be obtained from the Principal, Rutherford College of Technology, Northumberland Road, Newcastle upon Tyne, 1.

INDUSTRIAL MARKET RESEARCH

West London engineering company requires ECONOMIST to take control of established Market Investigation Department within a few months of the appointment. Work includes analysis of demand for the company's products in relation to trends in the national economy and export markets, as basis for short and long term sales forecasts. Applicants should preferably have first or upper second class honours degree, with statistics as subsidiary subject, and post-graduate experience of market research. Age 28 to 38 years. Write in full to Box No. 1313.

EAST KILBRIDE DEVELOPMENT CORPORATION

Industrial Development and Public Relations Officer

Applications are invited for appointment to the above post. Salary scale, £1,657-£1,885 per annum, with placing according to experience and qualifications. Medical examinations and superannuation agreement. Appointment subject to Corporation Conditions of Service. A house or flat will be made available as required.

The selected candidate will be required (a) to maintain contact with potential industrial, commercial and shopping interests; (b) to maintain advertising and press relations; (c) to undertake social relations work as necessary (d) to carry out administrative duties relative to each of the foregoing, including the writing of reports. Candidates might (but need not necessarily) be University graduates, preferably in economics, and should have substantial experience in at least one of the above fields. Qualifications and or experience in town planning research work would be an advantage, though not essential.

Application forms may be obtained from the General Manager, Torrance House, East Kilbride, to whom completed forms should be returned not later than May 4, 1960.

Canvassing, directly or indirectly, of the Members of the Corporation will constitute an absolute disqualification.

THE UNIVERSITY OF HULL

A temporary Assistant Lecturer or Lecturer in Sociology or Social Anthropology is required with effect from October 1, 1960, for one year in the first instance, with the possibility of a permanent appointment thereafter. Salary scale: Assistant Lecturer £700 to £850 Lecturer £900 to £1,650 per annum; with F.S.S.U. and children's allowances. Further particulars may be obtained from the undersigned to whom applications (five copies) should be sent not later than May 14, 1960.

W. P. CRAIG,
Registrar.

April 14, 1960.

UNIVERSITY OF BIRMINGHAM

FACULTY OF COMMERCE AND SOCIAL SCIENCE

Applications are invited for an ASSISTANT LECTURESHIP (£700 x £50 to £850) or LECTURESHIP (£900 x £50 to £1,350 x £75 to £1,650) in STATISTICS, preferably from those who are interested in the application of statistical techniques in sociology (including demography). Present salaries are under review and are likely shortly to be increased. Duties to begin on October 1, 1960, or as soon thereafter as possible. Applications will be welcomed from mathematical statisticians whose main interest lies in the development of techniques for use in this field as well as from social scientists.

Applications (two copies), with the names of three referees, should be sent by May 7, 1960, to the Registrar, The University, Birmingham, 15, from whom further particulars can be obtained.

Bowaters

There is a vacancy within the new Common Market subsidiary, Bowater Europe S.A. for a **SENIOR ACCOUNTANT,** ultimately to take overall responsibility for accounting control in that group of Companies, and to be resident either in Brussels or Paris.

Applications are invited from Chartered Accountants, aged 30 to 40 years, with a sound knowledge of standard costing and budgetary control techniques, who are experienced in multi-unit operation. An ability to speak French fluently is essential, and a further European language would be an advantage.

Please write, in strict confidence, giving full details of education, qualifications and experience, present salary and age, to the Chief Personnel Officer, The Bowater Paper Corporation Limited, Bowater House, Knightsbridge, London, S.W.1.

GENERAL MANAGER (PLASTICS)

An expanding Plastics Company in the West Country, manufacturing a range of reinforced plastic products is seeking a General Manager. The man appointed will assume overall direction of the design, production and commercial/sales functions and will report direct to the Board. Candidates must have had senior executive experience in the plastics industry and should preferably have an engineering background. Terms of employment are excellent and a salary commensurate with the senior and developing nature of the post will be paid. Please apply to Box 1315.

ROYAL ARSENAL CO-OPERATIVE SOCIETY LIMITED

APPOINTMENT OF SECRETARY

For reasons of health the present Secretary will be retiring in October next. The General Committee of the Society invites applications for consideration when the selection of his successor is made.

The Society has 370,000 members. Share and loan capital, reserves and other funds, exceed £12,000,000. Re-invested capital is £6,000,000. Four subsidiaries, and two large housing estates, are owned and controlled by the Society. The Society employs over 9,000 in a great variety of retailing, wholesaling, manufacturing and service undertakings. The aggregate turnover is £28,000,000 per annum. Management is vested in a full-time General Committee, and the Secretary is an officer appointed by rule by a General Meeting of members on the recommendation of the Committee.

The office calls for personality and leadership and the ability to advise on constitutional and legal procedure and on financial policy. Candidates must be fully qualified and experienced in Accountancy, Taxation and Secretarial Practice. There is a large office staff at headquarters and in branch offices.

Trading departments are the responsibility of the General Manager.

The commencing salary will be £3,000 per annum, and the Secretary must be a contributing member of the Officers' Retirement Fund (The Superannuation transfer clause is not applicable).

Applications must be sent to the SECRETARY, ROYAL ARSENAL CO-OPERATIVE SOCIETY, LTD., 147 POWIS STREET, WOOLWICH, LONDON, S.E.18, before Saturday, May 7th. The envelope must be endorsed "Secretaryship."

Canvassing of members of the Committee in connection with this appointment will be a disqualification.

The application must contain full particulars of personal details, education and training, employment and appointments held. Any other relevant details of Co-operative background, public work or special undertaking, may be included.

Short listed candidates will be interviewed by the General Committee at Woolwich on Tuesday, May 17th, and the selected candidate will be recommended for appointment to the General Meeting on June 1st. The new Secretary will be required to assume his duties on August 2nd.

THE UNIVERSITY OF SHEFFIELD

Applications are invited from graduates of any University for two DOUGLAS KNOOP RESEARCH FELLOWSHIPS tenable from October 1, 1960. One Fellow will be required to undertake research in ECONOMICS, and the other in ECONOMIC HISTORY, in the University of Sheffield. The value of the Fellowships will be £675 a year and they will normally be tenable for three years. Applicants should be available for interview in Great Britain. Applicants who expect to graduate in 1960 will be considered. Applications (4 copies) indicating the line of research proposed and including the names and addresses of three referees should reach the Registrar (from whom further particulars may be obtained) by May 16, 1960.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for the position of Research Officer in the Research Techniques Division. Duties: to participate in studies of research methods in the social sciences. Qualifications: applicants should have studied in the social sciences, should have a knowledge of basic statistical methods and should hold an honours degree. Research experience desirable. Salary: £650-£900 a year plus £60 a year London Allowance, the starting point depending on ability and experience.—Applications, with the names of two referees, should be sent to the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2.

LCC COLLEGE FOR DISTRIBUTIVE TRADES

HEAD OF DEPARTMENT OF ADVERTISING required, July 1st or as soon after as possible, with appropriate qualifications and experience; a new appointment in an expanding field with much scope for development; limited amount of consultancy work encouraged. Burnham (F.E.) Salary Scale (Grade II; men) £1,600 x £50 to £1,800 plus London allowance £38 or £51. Slightly lower scale for women until 1961.

Application forms from Secretary at College, 107 Charing Cross Road, W.C.2, to be returned by May 9th. (944.)

CITY OF PORTSMOUTH COLLEGE OF TECHNOLOGY

Principal: W. Davey, B.Sc., Ph.D., F.R.I.C.

Applications are invited for the following full-time appointments:—

(i) SENIOR LECTURER to take charge of professional courses in Financial and Cost Accountancy and to assist with the teaching of Accountancy and Business Administration to full-time degree and Diploma students. Burnham Scale:—Men: £1,550 x £50—£1,750.

Women: £1,200 x £40—£1,400 (plus equal pay increment).

(ii) LECTURER in Economics for Advanced and Final Degree Courses. Qualifications in International Economics, Monetary Theory or Transport are desirable. Burnham Scale:—Men: £1,370 x £35—£1,550.

Women: £1,100 x £28—£1,240 (plus equal pay increment).

Full details and form of application obtainable from the Registrar.

AGRICULTURAL ECONOMISTS, one main grade, one Assistant, one main grade or Assistant, in Ministry of Agriculture, Fisheries and Food. Pensionable posts in London for men and women. Age on April 1, 1960, at least 26 main grade; at least 21 and normally under 28 Assistant. 1st or 2nd Class honours degree in economics, agriculture, horticulture or closely related subject; or equivalent professional qualification. At least three years' appropriate post-graduate or other experience essential for main grade. Knowledge of statistical methods or practical experience of agriculture or horticulture an advantage. Final year students may apply. Duties include investigation of changes in financial conditions of agriculture and factors affecting agricultural output, analysis of farm accounting data, and preparation of material for farm and horticultural management advisory work. Men's London salary scales: (main grade) £1,233-£1,665; Assistant £558-£1,100. Starting salary above minimum possible in both cases. Promotion prospects.—Write Civil Service Commission, Burlington Gardens, London, W.1, for application form quoting S127/60. Closing date May 18, 1960.

ALUMINEX—over 9,000 feet of it—in the Pannier Market, Plymouth, Devon.
Architect: Walls & Pearn, A/A.R.I.B.A. Plymouth.

ALUMINEX is like windows only bigger and often it's in the roof and it's very quick to put up

"Yes, but what exactly is ALUMINEX*?"*

"Brilliant patent glazing system made by Williams & Williams."

"I imagine the child means 'skylights' when she says 'often in the roof'?"

"Skylights yes, but it is also used to make whole walls of glass."

"What makes it so quick to put up?"

"It's light—aluminium you know. It's easy to assemble. It's an all-metal system—the glass is held in the glazing bars by special spring clips."

"Anything else?"

"ALUMINEX is [illegible] roof, resists corrosion, no painting, use it for ai[illegible]

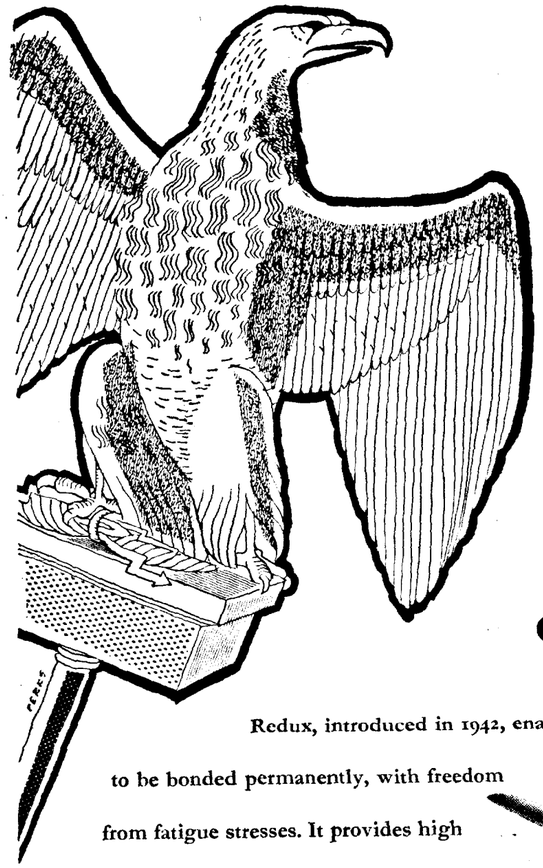
"Anything? Bet they don't use it for atomic power stations!"

"You'd lose your bet—they use miles of it. And in other power stations, factories, hospitals. Sometimes they make vast sections of ALUMINEX open and close like giant windows."

"What happens if a classic product of our modern educational system heaves a brick through them?"

"Somebody calls a copper I expect."

"No, I mean what happens to the ALUMINEX PATENT GLAZING *by Williams & Williams?"*



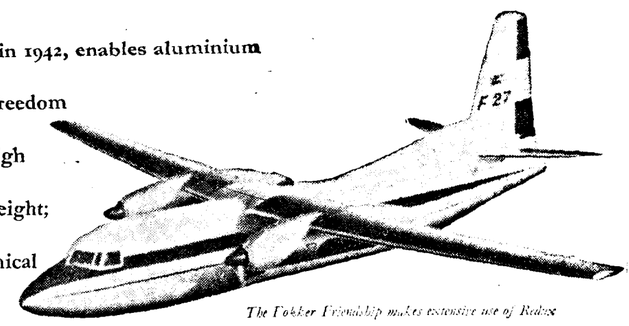
"Oh that. Replace the glass in minutes. Look Fishbone—I'm busy. Go home, there's a good chap."

forward looking building products **WILLIAMS & WILLIAMS**

Williams & Williams make steel windows of every description, ALOMEGA and other aluminium windows, ROFTEN movable steel partitioning, ALUMINEX patent glazing, WALLSPAN curtain walling and many other products, all of which can be seen at our permanent exhibition at 36, High Holborn, London, W.C.1

WILLIAMS & WILLIAMS, RELIANCE WORKS, CHESTER | WILLIAMS HOUSE, 37-39 HIGH HOLBORN, LONDON, W.C.1

SECOND CLASS POSTAGE FOR *THE ECONOMIST* PAID AT NEW YORK, N.Y.
Published weekly every Saturday, fifty two times a year in London, England.



ANNUS MIRABILIS

Aluminium was a precious metal when Napoleon III used it for the eagles on regimental standards. In 1886, two scientists—Hall in the U.S.A. and Héroult in France—evolved a method of extracting aluminium from its oxides. The availability of a metal both light and strong led to the development of the high speed petrol engine, which made possible mechanical flight.

Great minds...

Redux, introduced in 1942, enables aluminium to be bonded permanently, with freedom from fatigue stresses. It provides high strength with considerable saving in weight; it gives greater safety and more economical operation. Today, over 70 types of aircraft—from guided missiles to jet airliners—depend on Redux.

The Fokker Friendship makes extensive use of Redux

Redux adhesives for metal aircraft structures

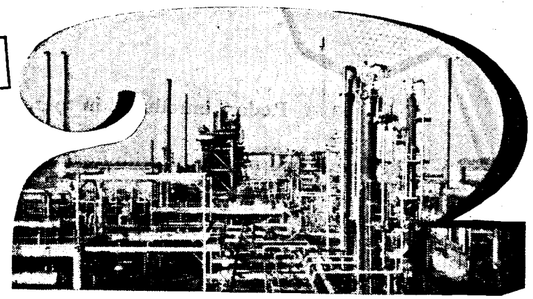
ICI

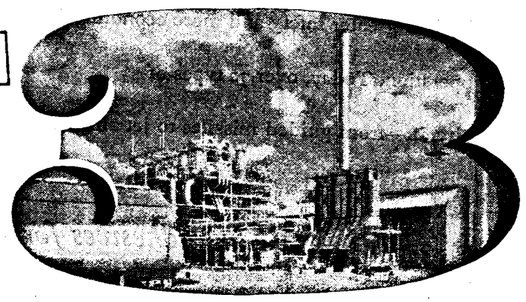
KELLOGG

KELLOGG BUILDS FOR I-C-I EXPANSION



1951

The recent completion of the third olefine plant at Wilton has made these works the largest petroleum chemical venture outside the United States. With a current output of 110,000 tons per year of high-purity ethylene, and a potential output of 140,000 tons, ICI Wilton is a magnificent example of engineering co-operation.



1956

The first plant was commissioned in 1951, and was the first full-scale adoption of the then novel process of oil pyrolosis developed in the Kellogg Laboratories. Its success led to the addition of No. 2 plant in 1956, and then to this latest extension, representing a 60% increase in olefine capacity, in 1959.

1959

Co-operation between client and contractor is the keynote of K.I.C.'s contribution to chemical engineering. The Wilton Olefine Plant is the largest in the world based on liquid feedstock: K.I.C. is proud to have been associated with its development.

Now, Botts is in Shuqra

(Something to do with the water supply)

A local leader, finding his water unpalatable, has asked Botts how it should be freshened, then delivered (under appropriate pressure) to the palace kitchen and bath.

Harold D. D. Botts was the right man to ask. He is a consulting engineer, an engineer in private practice. He and his partners handle the engineering design not only of water supply and sewage disposal projects but also of highways, hydroelectric projects, and great industrial schemes. They also do the mechanical, electrical, and structural design for their fellow professionals, the architects – for a fee, of course.

Most important to manufacturers of material and equipment, Botts and his fellow consulting engineers specify the products to be used on the projects they design.

Botts is a hard man to catch. But wherever he is, on whatever project, you can be sure he has his current copy of CONSULTING ENGINEER magazine. To advertise in his publication is to reach this man who writes the specifications.

Where accurate weighing is vital—

more and more manufacturers now rely on

ELLIOTT-AUTOMATION

From the Elliott control panel of this impressive new plant at Caldon Low Quarry, a single operator has simple and complete control over the whole operation of manufacturing coated macadam — with absolute accuracy to any specification.

One major industry after another is turning to automation to solve its weighing, counting and blending problems. And way ahead in the planning and production of new systems to meet their needs is Elliott.

The equipment shown here, at the stone-coating plant at Caldon Low Quarry, Staffordshire, is but one of Elliott's many recent achievements. Many more systems are at present under production. A completely automatic furnace-charging installation in a Zinc Smelting Plant, for instance. Automatic handling and blending of ingredients for bread-making for a group of Bakeries. A check-weight system for Can Handling and Counting. An electro-pneumatic constant weight feeder. And a system of belt-weighing totalising instrumentation.

Elliott equipment like this eliminates errors, reduces labour costs, gives greater speed and efficiency. No doubt about it—if accurate weighing is important to you, it will pay you to consult Elliott.

Geographical surgery for Europe's new artery

The seven mile road tunnel being driven through Mont Blanc, Europe's highest mountain, will shorten the motorist's journey from Paris to Rome by 124 miles. It will be the world's longest road tunnel, providing an Alpine link—open all the year round—between France and Italy. No longer will the snow-bound roads of the mountain passes be a barrier to European communications and trade.

The Mont Blanc tunnel will take three years to complete and will cost an estimated £11,700,000. About four miles of the tunnel are being driven from the Italian side and the contractors, Società Italiana per Condotte d'Acqua, are using Atlas Copco equipment exclusively. Atlas Copco compressors, rock drills and Sandvik Coromant drill steels have been chosen for this project, regarded as a major contribution towards the unity of Western Europe.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

Commonwealth Status for Britain?

THE ties between the Commonwealth and Europe are written in the blood of two wars. Yet, in peacetime, Britain's clinching argument for making no commitments in Europe has persistently been the Commonwealth. The meeting next week in London of nine Commonwealth heads of Government and ministers can either make history or be a calamity.

The triumph of the conference would be to evoke, first, the statement of a positive European policy for Britain from that noted European, the British Prime Minister ; and, secondly, from the other Commonwealth leaders, an equally positive and sympathetic understanding of the project. The danger this year, in spite of all the heaped feelings about South Africa, is not really that the conference will be acrimonious ; it is that it may be just anodyne.

The delegates will be for virtue: they will back Mr Macmillan's diplomacy of détente (Mr Nehru is learning that it takes two to be uncommitted) ; they will be all for the financing of economic growth. They will be against sin: there will be frank talk in private at any rate about South Africa's apartheid, and about the motes in other members' eyes in matters of racial policy and political freedom (Sir Roy Welensky, with others, will be edified by this). But there will be only muted talk yet about drastic or divisive steps ; the rule will formally be respected that all members' affairs are their own. Indeed the immediate question is whether this applies to Britain as well as to the rest.

For Britain the logic of twentieth century facts is now very plain. They point, in defence even more than in trade and economic policy, to one inescapable political conclusion: that is, the closest collective and permanent arrangements (within the indispensable transatlantic alliance) with the rest of western Europe. The politicians are still muddledly in two minds ; but more business men and industrialists and Britons at large than ever before see or sense the need to go forward as far as possible. The calamity will be if this Commonwealth meeting, coming at the high moment of indecision, gives again the old stale excuse for holding back from the attempt.

The truth is that the winds of change are blowing as hard in Europe as in Africa and Asia. What has to be asked is whether the Commonwealth is on history's side. It may seem a perverse question. The Commonwealth is history itself ; it has been made, and is still being made, by the movement of the old British dependencies into independence and into free and equal association, whatever the colour of their skins or system of rule ; all have room to grow as they will. All ? The question remains: is Britain itself free, as the rest are free, to make its new terms, politically, economically and militarily, with the twentieth-century world in which no country—and no Commonwealth—can stand alone or aloof from its neighbours ?

This conference can be a precious opportunity to find out directly from the responsible leaders of the Commonwealth what they frankly think about the new world symphony which British statesmen ought now to be composing and performing. All their countries, too, have to live and trade, increasingly, with Europe ; all share with Europe and with the United States the common interest in economic expansion and the protection of peace. For far too long the implied veto of the Commonwealth on a new European policy for Britain has been registered, not from the Commonwealth capitals, but in indirect speech by politicians and civil servants in London. What is wanted is the authentic Com-

monwealth voice. It is hard to believe that this voice would be anything like a negative veto—if anything like a positive British policy, whether for Europe or the wider Atlantic world, existed and could be proclaimed next week.

It would be ridiculous to pretend that the great practical difficulties of "triangulating" British, European and Commonwealth interests in an arrangement permitting Britain to be committedly, and politically, European can be dispelled by simple Commonwealth affirmation; the last word will be the Europeans' (theirs is the real veto). But it is the first step that counts; as always, the economic problems will never be solved until there is the political will to solve them. That is the challenge to this gathering in May.

Real Engineering and Unreal

Some challenge should be offered to the assumption that the way to stay a great power is to concentrate scientific resources on new things that will not pay

OFTEN in the fifties impious voices have suggested, as sometimes they did in the thirties, that if disarmament should ever actually arrive, the highly developed countries would find it something of an embarrassment to know what to do with a large slice of their economic resources and a huge slice of their technological effort. These voices have been roundly condemned, by all right-thinking men, as heresy. It is not, however, an exclusively anti-capitalistic heresy, if one can judge from a Soviet suggestion this week that the economic effects of disarming need study: Russia, with even more of its economic and technological resources concentrated on armaments than the West has, might find disarmament more embarrassing than we capitalists would. But, economically, the arguments are, at least in principle, not merely heretical but wrong. The subtraction of armament production from a highly industrialised economy would imply a substantial shift in its industrial and technological shape; but there is not the slightest reason to suppose that the resources freed could not readily be consumed within or outside these highly developed economies. Nor is it at all clear why the scientific effort made redundant should not be fully utilised by other sectors of industrial technique, less concentrated and less specialised in their demand than defence.

What makes these arguments politically important just now—in the West and particularly in Britain—is the tendency to behave as if they were true. Disarmament has not happened yet, and very likely will not soon. But shifts in defence policy, rendering obsolete some weapons and the industrial resources organised to supply them, are already beginning to multiply demands for the invention of "demands" that these resources, unaltered, can fill. The heretics' fantasies seldom got beyond the idea that disarmed countries might find it convenient to continue weapons production at full blast, secretly shipping the weapons off and throwing them in the sea. Britain (reserving the seabed for radioactive waste from uneconomic power stations) is on the verge of deciding to go on making the weapons and throwing them into space.

This and allied ideas are in part simply a matter of vested interests—political, industrial and, to single out the greatest vested interest built up in our time, scientific. The demand, crudely put, is that the resources assembled for one purpose, even though that purpose is no longer necessary, must be allowed to go on doing what they are doing—and that some purpose must be found or invented for doing it. These industrial and scientific interests are perhaps not the heaviest weights in British industry. But they are the heaviest weights in British research, through the sheer weight of expenditure that defence research still commands. Moreover, they are the sectors of British industry most closely married with the Government departments that dispense public money; and they are also the sectors of British industry most thickly bedecked with the laurels of glamour that science correspondents can bestow. More important still, the kind of appeal they can make is one that is perhaps particularly suited to the elements of unprincipled empiricism and hankering after national prestige that are so far the hallmarks of this particular Tory government.

Nobody would suggest that the problems of shifting the aims of industries whose earlier job is fading away, or of making good use of what are usually called "irreplaceable scientific teams" (i.e. groups of men who have done a lot of thinking about things that no longer matter), are simple. They are no simpler than the question of deciding where, in the civil field, the investment of extra research resources might pay the best dividends, or what is the scale of research and development that it may be worth while devoting to particular industries and sectors of the economy. This may well become the key question of our time; it is one that so far we have devised virtually no rational ways to answer. It is by no means certain that the pattern of decision by private enterprise upon which industry has largely been built up so far offers the ideal answer (since research, so far in history, has been more an appendage of defence and learning than of private industry). It is tempting, indeed, for the technocrats to argue that other patterns are necessary.

WHAT is alarming about the posing of this problem by shifts in defence technique is that in Britain it now seems to fit in with a national mood of prestigious irresponsibility. If one looks detachedly at the areas of technology in which Britain has been most proud of its progress since the war, it is easy to find the trail of this attitude at almost every point. The heady excitement of building our own atomic piles and our own bombs and developing our own deterrent leaves in its wake the commitment to vast expenditure and effort in building power stations which, even at prices on which contractors lose money, will produce very expensive

base load electricity. Production facilities for ever more complex metals are laid down for such developments, or for aircraft developed at public expense, which form an impressive figure on the export account until it is noticed that the purchasers do not actually pay. If the election commitment to Cunard cannot be accused of over-stress on technical advance, it is heavily loaded with the other element—prestige. In one week, the "important" industrial questions offered to the public may be whether Britain should cast away money with satellites into space, develop a Channel Tunnel that nobody suggests would pay as a private commercial enterprise, or go in with France to find the public money to develop a supersonic airliner.

It is usual to answer this by saying that Britain is a very rich society now; that its citizens have now enough income to make investment in space circuses as sensible a choice as the purchase of motor cars which are nice to polish but too dangerous actually to drive on the roads; and that vast incidental benefits to civil industry flow irresistibly from these ventures that must always be pushed just beyond the extremes of dry-as-dust profitability. *Is it? Are they?* It is unnecessary to adduce the usual arguments about benefits that could be gained by applying such resources to medical research, or in assistance to underdeveloped countries. More selfishly: the houses outside which the parked cars spawn are generally inconvenient, often smaller than one's grandfathers occupied, and aesthetically revolting.

And are these incidental benefits of extreme and unprofitable engineering so great? Over the fifties, have the most marked improvements in what one is tempted to call real engineering been achieved in the United States, Russia, and Britain? It seems very possible that they have come in countries less obsessed with prestige and less saddled with defence—from Germany and Switzerland, for example. The United States and Britain vie with each other in thinking up such gems as design studies for nuclear-powered submarines that could carry oil under the North Pole from Alaska, berthing no doubt in harbours excavated by hydrogen bombs. Little oil has been discovered in Alaska and far too much elsewhere; nuclear propulsion offers shipping mainly the power to travel endlessly without ever arriving, which may be happy but is the precise antithesis of transport as man needs it; it is not yet clear whether nuclear excavation would be murderous or just murderously expensive.

To the lobbyists, the publicists, and some of the politicians, none of this seems to matter. Meanwhile, in Sweden and Japan, men make themselves able to build ships about twice as fast as Britain can, at about half the building costs in American yards; Germany develops the most efficient and comprehensive machine tool industry in the world; Swiss engineers build tools and precision equipment that Britain would not think it worth trying to rival; Japan develops the high-quality cameras that Britain cannot quite manage. The very steelworks that Britain puts in the wrong place may rely on techniques developed in Austria. Real and major advances are steadily occurring, in large corners of British industry and small; but these get less of the publicity and none of the subsidies.

There is nothing automatic about staying rich. Cannot Britain, these days, take an interest in anything new that has a chance of paying?

The Soviet Side of the Hill

Mr Khrushchev has good reason to avoid a total deadlock at the summit

APART from a few headline writers, nearly everyone, including President Eisenhower, seems to be sensibly calm about Mr Khrushchev's speech at Baku on Monday. True, his speech could hardly be called an encouraging portent for the summit conference that opens in Paris on May 16th. He used a harder tone than in recent months when he once more gave warning that failure to agree on Berlin would lead Russia to withdraw, by the device of a separate peace treaty with the east German government, its recognition of western rights in the city; and he chose to attack Mr Herter by name. But a Damoclean sword has to be polished up to eye-catching brightness from time to time if it is not to be forgotten about altogether; and Mr Khrushchev may well have judged that this was one of the times, in view of the recent western tendency to assume that Berlin need hardly bother the summit conferers at all. (Our Washington correspondent's comments are on page 417.) His speeches have to be read against the record of his past policy and of the evolution of Soviet society, if one is to try to ascertain the real limits within which he is likely to operate at the Paris talks.

In general, the Soviet public has lately been given a very rosy picture of the international scene. It is told that Mr Khrushchev's strivings for "peaceful co-existence" were rewarded during his American journey by the birth of the "spirit of Camp David." Despite the efforts of the "warmongers"—the west Germans are presented as the main villains—this spirit is reported to be spreading. Even the French tour, for all its meagre results, is hailed as a major contribution to peace. Logically, the Russians are entitled to expect that all these preliminary successes of Mr Khrushchev's diplomacy ought to be crowned by triumph at the summit.

In addition to these psychological considerations, the Soviet leadership has more permanent reasons for seeking an agreement. The essence of Soviet co-existentialism (together with the aversion to nuclear war) is the belief in the inevitable victory of communism. The undeveloped countries are expected to fall one after another like ripe plums into the basket, tilting the balance to the communist side. The balance, Moscow believes, will be tilted anyway because of the superior rate of economic growth of the Soviet block. To such secular visions of the future must be added the practical needs of the day. The Soviet rulers now have to take the Soviet people into account. They are lavish with pledges. In 1959 Mr Khrushchev announced that the housing shortage, Russia's

biggest outstanding deficiency, would be eliminated in 10 to 12 years; now there is talk of achieving this in seven. To fulfill such promises, a slashing cut in the arms bill would be most useful. The Russian leaders have the feeling that they could gain on two fronts at once: by meeting the growing demands of the masses at home, they would make the Soviet Union more prosperous and, therefore, more attractive to the uncommitted outside world.

LAURELS from Paris could also be used to silence domestic critics. Mr Khrushchev has not inherited Stalin's omnipotence. Below the surface of undiluted praise, signs of dissatisfaction can be discerned. Army commanders, disturbed by the projected reduction of their vast land legions, together with the 250,000 officers who will be turned off in the process, are now swelling the ranks of the discontented—hitherto filled mainly by members of the stalinist establishment hostile to Mr Khrushchev's innovations. There are also men in Moscow, and in other communist capitals, who share Peking's scarcely concealed view that the Soviet leader is too soft in his dealings with the West. Nothing could do more to vindicate his policy and consolidate his position than an arrangement at the summit, enabling him to expand popular economic measures at home.

Mr Khrushchev's need to bring a spectacular agreement back from Paris should not, however, be exaggerated. The treatment of his talks with General de Gaulle shows that a mere stalemate can be presented as a triumph. A few minor deals at the summit, coupled with a general agreement to disagree but to go on discussing the major points of contention, can perfectly well be described by the Soviet press as a great victory earned by Mr Khrushchev's devotion to peace. Again, while the arms burden remains heavy, the general trend in military strategy has at least enabled the Soviet leadership to release some manpower for civilian use. The Soviet economy is apparently growing faster than planned. The Russian successes in space exploration have also cured Soviet leaders of any inferiority complexes. Mr Khrushchev could play a waiting game without undue fears.

Disarmament, of all the items on the summit agenda, should be the best test of the Soviet leader's intentions. If Mr Khrushchev is keen to get a quick, tangible achievement, he will make further concessions about control and inspection and urge the West to sign a disarmament agreement there and then. If he judges that the moment is not ripe, he can agree to send the matter back to the experts in Geneva with recommendations and a blessing. But he is likely to insist on a preliminary agreement to prohibit nuclear weapon tests. Last month, in Paris, he publicly expressed the hope that such a deal would be signed soon and that France, too, would abide by it. He implied that it was up to General de Gaulle's allies to overcome French objections.

Negotiations on Berlin will depend on the general mood of the conference. Should Mr Khrushchev consider that the western allies are hardening their position, then more may be heard of his threat of a separate treaty with the German Democratic Republic, which, in his contention, would render void all Russia's obligations to its former allies. But to use the threat is one thing, actually to carry it out is another, for that would destroy the climate of "co-existence." The indications are still that Mr Khrushchev would prefer to keep his threat in suspense. Given a degree of co-operation on other items and a certain amount of western flexibility on this one, he seems likely to try to patch up an interim agreement on Berlin, to reach a compromise which might respect the basic interests of the western powers.

Under the head of east-west relations the summit agenda will embrace such familiar topics as expansion of trade and cultural exchanges. But the western spokesmen are expected to try to concentrate the discussions on the negative aspects of co-existence—restraint of "subversive activities," non-interference or, at least, the limiting of intervention in the danger spots of the world. But the compilation of such an international code of good behaviour may prove more difficult than is assumed. What was implicitly accepted as true for the Middle East yesterday will have to be taken as valid in Africa today, and even in Latin America tomorrow: a club's rules are binding on members only. A request to the Russians to limit the supplies of arms to a given area, or to restrain their propaganda there, cannot be coupled with a denial of Soviet interest in that sphere.

YET, even if the western powers were to acknowledge Russia's obvious influence in the uncommitted third of the world, and even if they seriously tried to come to terms with Moscow, Mr Khrushchev would still be faced with internal pressures from the communist block. There is no doubt that, seen from Peking, his foreign policy looks a very pallid pink. He is plainly trying to exercise a restraining influence on the young giant by his side. Conscious as he is of the importance of the neutral camp, he will certainly go on damping Peking's nationalist fervour and, as Russia is the main supplier of the Chinese industrial revolution, his words will carry weight. Yet, if China shows its revolutionary zeal, whether in Algeria or elsewhere, Mr Khrushchev will not be able to oppose it publicly. Whatever his intentions, he is the prisoner of his bolshevik heritage, which he cannot disown. At most, the international code of conduct can be only a tacit or "gentlemen's" agreement, permanently under strain but perpetuated through a continuous process of give-and-take.

It would be unwise to expect much from the Paris summit. Most of the signs, however, seem to point to a temporary prolongation of the existing détente. Moscow's general strategy, based on the assumption that time is the ally of communism, coincides with tactical considerations. The Paris gathering need not be a meeting to end all meetings; and the senior partner of the western alliance, the President of the United States, will be paying a return visit to Russia in June. Mr Eisenhower's successor will not be in control before next year. Mr Khrushchev may now feel like a sturdy mountaineer, ready to clamber from summit to summit, and hoping that he, or his successors, will ultimately come out on the roof of the world. Next Thursday, before the Supreme Soviet, he may give some more clues about his present route to the top.

Italy's Blind Alley

Italy's prolonged political crisis has demonstrated how much the Christian Democrats need to strike out on a new path

LAST Monday Italy celebrated the fifteenth anniversary of its liberation from Fascism. For many thoughtful Italians, however, it must have been a hollow celebration. For over two months now the country has been without an effective government. On Friday last week Signor Fanfani, who had been trying to form a centre-left coalition, was forced to abandon what seems to be the most promising way out of the present impasse. The young republic which rose, surrounded by such sanguine hopes, from the ruins of Fascism, has run itself into a blind alley.

The crisis began on February 24th with Signor Segni's resignation; he had been deprived, suddenly and rather inexplicably, of the Liberals' support and did not wish to remain in office by courtesy of the extreme Right. But last Saturday President Gronchi proposed a solution that would also result in a cabinet dependent on the extreme Right. He rejected Signor Tambroni's resignation, offered nearly a fortnight before, and invited him to seek a vote of confidence in the senate. Signor Tambroni had been forced by his own party to throw in his hand when it became clear that he would have to depend on the 24 MSI (neo-fascist) votes in the chamber. Thus the wheel has come full circle; and it is an ironic comment on the present confusion and deadlock of Italian politics that a president noted for his strong left-of-centre views should now be congratulated by the neo-fascists for his "wise, democratic and constitutional decision."

But although the part to be played on the political stage by the extreme Right happens to have figured prominently in the present crisis, it is in fact only incidental. The real trouble is—and has been for some years—that the structure of Italian politics has become too rigid to provide the country with a government that is both stable and active in a progressive sense. Just twelve years ago, in the first elections to be held under Italy's new republican constitution, the Christian Democrats, under the leadership of De Gasperi, emerged as the dominant party. They have remained so ever since, although in the two subsequent elections they lost the absolute majority that they enjoyed in 1948.

Signor De Gasperi believed that Italian governments should remain poised in the centre between the two substantial groups of extremists on either wing, and in order to help strike this delicate balance he brought the three small centre lay parties into his government in order to counterbalance the clerical trends within his own party. The *quadripartito* worked with a fair, if varying, degree of success until the 1953 elections, a year before De Gasperi died. Since then, however, the Christian Democrats' attempts to give Italy strong and stable government, either by reproducing De Gasperi's centre formula, or by evolving new variations on it, or by going it alone, have had at best an undistinguished, and at worst an unhappy outcome.

Itself lacking unity of purpose, the Christian Democrat party has failed to impose it on its coalition partners, whether they looked slightly to the left or to the right. No outstanding leader has appeared to provide the cohesive force that De Gasperi's personality once gave; and the compulsion to close the ranks against the communist menace has grown weaker as the signs of international détente have multiplied. The fate of Italian governments depends far less on an adverse vote by the opposition in parliament than on the backstage manœuvres of the different factions within the dominant party. Their common Catholicism keeps the Christian Democrat politicians together in their huge, heterogenous party; it does not prevent them from stabbing each other in the back.

UNTIL now, the 270 Christian Democrats have always maintained that their freedom of manœuvre inside parliament is extremely limited, since nearly half the votes in a chamber of nearly 600 are either untouchable because they belong to the two extremes (140 Communists and 24 MSI), or highly dubious because they belong to parties contaminated by the extremes—that is, to the Nenni Socialists (84) or the Monarchists (25). Yet it has long been clear that if the Christian Democrats want to be an effective force in Italian politics (and if they want their country to play an effective role abroad), they cannot go on indefinitely devoting most of their energies to nice calculations about how far they must shift to the left or the right in order to stay in power. In effect this means that they must make up their minds to come to terms with the moderate left; it is in this direction that solutions of the country's social and economic problems that are acceptable to the greater part of the Italian people are most likely to be found.

APRIL 28, 1860

THE HOUSE AND THE REFORM BILL

¶ The Reform Bill is not to be referred to a Select Committee. It remains a simple unbalanced lowering of the franchise, without a single security against the domination of numbers. It is *proceeding* to an unopposed second reading, and will then be passed on to what for such a subject may be called the mob of the Committee of the whole House. With *solid guarantees against* the overwhelming influence of numbers, it might have been made a sound and statesmanlike measure; without such guarantees, it is a concession to unsound *principles* of the most dangerous kind. . . . Meanwhile, the glorious inheritance we have received from our fathers, the wealth and strength of the *present*, the hopes of the future, are placed in jeopardy by a spontaneous and self-imposed sacrifice, which will transfer political power from its actual possessors to numerous and unknown classes. What, then, is to be done? First, and above all, to arouse the House of Commons to a determination to do its duty. Let us understand its true position, for its responsibility is very great. If, through faction or cowardice, without compulsion and in rebellion against its own conscience, *it suffers a national institution* for which the annals of the world offer no parallel, to be subverted,—if it makes the democratic principle of this Bill a turning-point which shall separate the England of the future from the England of the past,—history will point to the House of Commons of 1860 as composed of men who risked themselves and their country because they had not the manliness and energy to extricate themselves from conventional trammels. They will be associated with the *triflers* of Versailles, who thought only of the frivolities of a Court whilst the revolution was storming at its gates; but with this difference:—these poor courtiers knew no better; but members of Parliament are fully aware of the wants of the crisis and of the real import of the measure which they are asked to pass.

There is in fact a growing feeling among the Christian Democrats, and in the country as a whole, that sooner or later a shift to the Left—that is an understanding with the Nenni Socialists—is inevitable. Although the Christian Democrat congress at Florence last October rebuffed Signor Fanfani's bid to regain the party secretaryship, it emerged pretty clearly that the rank and file are more inclined to look leftwards than are many of the party leaders. Even the Roman Catholic hierarchy is no longer speaking with one voice about the dangers of having anything to do with the Left. Although Catholic Action, controlled by Cardinal Siri, has fulminated strongly against any co-operation with the Socialists, other influential dignitaries of the church are inclined to believe that the Fanfani experiment should be tried. The Pope himself is unwilling that the Vatican should become involved in Italian affairs ; this is so different from his predecessor's attitude that, if he could make his views really effective, there could be a notable increase in the flexibility of Christian Democrat politics.

Signor Nenni is clearly more prepared than ever before to come some way to meet the Christian Democrats, although it is not clear exactly how far his left wing would let him go. And in the present long-drawn out crisis the Christian Democrats have got closer than ever before to a centre-left government in which a coalition of Christian Democrats, Social Democrats, and Republicans could count at least on the benevolent abstention of the Nenni Socialists. The first attempt at such a government, made by Signor Segni, was abandoned for no very clear reason. Signor Fanfani also tried and also threw in his hand, not because of any difficulty with his prospective coalition partners or with Signor Nenni, but because he realised that a minority in his own party were determined to sabotage his experiment ; it is unlikely that he regards this setback as the end of the matter. Some of the motives which impel some Christian Democrats to oppose any step which might lead to Socialist participation in government are selfish and personal. But the fear that to co-operate with the Socialists will inevitably enable the Communists to place their foot in the door that leads to political power is real and legitimate. Since he broke his unity-of-action pact with the Communists in 1956, Signor Nenni has moved steadily away from them ; apparently, however, he has never been able (even if he himself wanted) to break the remaining links between the two parties.

BUT the best way of drawing the Socialists into the democratic camp is surely to make them feel they have a real stake there. The Communists at least seem to realise this ; at at any rate if they believed that Socialist co-operation with the Christian Democrats would eventually help them to get a grip on political power, it is curious that they should be so strongly and bitterly opposed to it. In fact (as the party congress in Rome last February clearly demonstrated) the Communists fear, above all, political isolation ; they fear that now, with Italy's new-found prosperity, the democratic parties might make real headway in removing the social and economic abuses and inequalities (above all in the South) which still cause about a quarter of the electorate to vote communist. One thing is certain ; a continuation of the present state of affairs will benefit nobody as much as them.

Yet the end of the present crisis in Rome is nowhere yet in sight. Even if Signor Tambroni wins the senate's approval (the vote had not been taken at the time of going to press) he may have to seek another vote of confidence in the chamber. And even if he gets over both these parliamentary hurdles and manages to retain a sufficient complement of ministers, this will largely be due to his pledge that his is only a caretaker interim cabinet. When the autumn comes, if not before, Signor Fanfani may get yet another chance.

The Party That Never Was

An analysis of the Co-operative Party whose recent conference resolution in favour of nuclear disarmament could embarrass Mr Gaitskell very gravely indeed

THE Co-operative party, whose annual conference at Easter plagued Mr Gaitskell with a resolution in favour of unilateral nuclear disarmament, is the largest and unquestionably the oddest British political party. It has no fewer than 10.6 million affiliated members (at ¼d. per member per year)—of whom, at a conservative estimate, 90 per cent are unaware of their membership.

Most of the "party members" are simply housewives who shop at the co-op to earn their divvy. Any co-operative society can affiliate all its registered customers to the party, without their having any option to contract out ; of the 847 societies (with a total membership of 11.7 million) 644 have in fact affiliated, although only 275 have got round to the minimum task of setting up local party organisations. The society with 500 members which, according to an indignant letter to the press, affiliated to the party in 1947 by a vote of fourteen members to four is not unrepresentative. The average attendance at business meetings has been calculated at 0.5 per cent of the membership—which opens the way to *coups d'état* such as that brought off by Huddersfield Conservatives in 1951 when they packed a meeting and took the society out of the Co-operative party (to which it returned in the following year).

The Leeds Co-operative Society, which is the largest one on the outside, has nearly always been vociferously run by the city's Tories. But, in general, the tiny tail of zealots which wags the party dog is very left wing. The size of this tail can perhaps best be gauged by looking at the individual, as opposed to the affiliated, membership of the party. There are only 25,000 individual dues-paying members of the Co-operative party (one quarter of one per cent of the total membership).

But its lopsided membership is not the only peculiarity of this party which is not a party. In the first place, its executive, the National Committee, is a committee of another organisation, the Co-operative Union, and is responsible to that organisation's executive and its annual congress rather than to its own. In the second place, its parliamentary candidates and MPs, of whom there are now sixteen, are subject to the discipline of another party, the Labour party. (Their relationships with the latter are lucidly outlined in a two-shilling pamphlet recently published by the Hansard Society.) These extraordinary constitutional provisions have been designed mainly to prevent the small left-wing group—which inevitably through its sheer assiduity gravitates to the top of the Co-operative party—from causing too much embarrassment to commercial co-operative trading and right-wing Labour politics. Whether these provisions will suffice to avoid acute embarrassment to Mr Gaitskell this year is a moot point, but the ground over which the battle will be fought can best be understood by compiling a "glossary of Co-operative organisations." There are six main organisations to be explained:

(1) **The Co-operative Union,** whose Congress at Whitsun will consider (and may still reverse) the party's views against the H-bomb, is, rather like the Trades Union Congress, a loose co-ordinating body of all the completely autonomous societies. The Leeds Tories and other political minorities are represented at its congress. Although, for the most part, the same organisations are represented at both party conference and union congress, the delegates tend to be different ; those at the congress are generally more interested in the trading aspects of co-operation and those at the party conference in the political aspects of it. This helps to make the union a slightly more right-wing body, and the principle of its being the master is emphasised by the extraordinary arrangement whereby the union elects 27 of the 35 members of the National Committee of the party.

A resolution passed by the party may not even be put to the Congress without the approval of the union's Central Executive Committee. There seems little doubt that the CEC will feel obliged to place the embarrassing resolution on unilateral disarmament on the agenda this Whitsun; but it may try to whip up votes against it. In the past the Co-operative Congress has only twice thrown out the party's views on a major topic—over the party's wish to join in the Popular Front before the war, and in 1957 over a new policy draft which, by encouraging municipal participation in business enterprises, appeared to threaten the societies' trading interests.

(2) **The Co-operative Parliamentary Group** consists of the sixteen Labour MPs who bear the "Labour and Co-operative" label. Under the Hastings Agreement of 1946 between Labour and the Co-ops, which superseded the Cheltenham Agreement of 1927, these MPs accept the Labour whip on all issues. This sometimes causes conflicts of loyalty. The chief such issue so far was German participation in Nato, which the Co-operative Parliamentary Group supported, despite condemnatory resolutions from both the party conference and the union congress. This led to much argument, which may well be repeated over the H-bomb this year.

(3) **The Co-operative Parliamentary Committee** is set up by the Co-operative Union to keep an eye on the details of legislation—on such matters as weights and measures, and particular clauses of the Finance Bill—which directly affect the Co-ops' trading activities. It works harmoniously with the Co-operative MPs as a research staff.

(4) **The National Council of Labour** is the policy-making body which is meant to bring together the three main wings of the Labour movement—the Parliamentary party, the TUC and the Co-operative Union. Argument at this summit level is avoided by a simple expedient. The council does not meet. Irritated delegates at this Easter's Co-operative party conference passed a resolution demanding that the National Council meet once a month, but it is unlikely to be obeyed.

(5) **The London Political Committee** is much the most powerful constituent body in the Co-operative party. Because it is financed by a levy of 2½ per cent of the London Co-operative Society's profits, it has an annual income of £50,000, which is double that of the national party to which it belongs. In contrast to the rudimentary organisation of most of the local co-operative political organisations, the London Committee has a full-time secretary (Mr Frank Beswick, the former Opposition Front Bench spokesman on civil aviation), three full-time organisers, an office staff and a monthly publication (*Pioneer*). It was Mr Beswick who moved the Llandudno resolution on unilateral disarmament, having got the support of branch meetings of the London Co-operative party in November.

(6) **The London Co-operative Society,** which is the largest retail organisation in Britain (although it is not the only co-operative system in the metropolitan area—there are also the Royal Arsenal and the Suburban Co-operative Societies) differs from most other co-ops in that it has a rudimentary party system—and party battle—of its own; it is at present in the throes of an election campaign. The London Co-operative Management Organisation at present has 14 of the 15 seats on the society's Management Committee, with the Communists holding the remaining one. The society holds an excessive number of elections—a third of the management and political committees and delegates to the union congress are elected at various times every year. About 8,000 of the 1.3 million eligible voters (i.e., 0.6 per cent of them) usually take part in the polls.

In the current management election five Communists are fighting, as usual, against the five retiring LCMO members; but, most unusually, an independent with a chance of success has appeared as well. Mr Donald Chesworth, a Labour member of the LCC, is fighting as an Independent in protest against the society's refusal to be bound by certain resolutions (which he himself proposed to specially requisitioned meetings) calling upon the society to ban South African goods from its counters. His other main plank is support for the sweeping reforms of the co-ops' outdated trading methods, which were proposed in 1958 by the independent commission headed by Mr Gaitskell—but which since then have been smothered by those with vested interests in the old ways of the movement.

THE 1958 agreement with the Labour party sealed the partial victory of the Co-operative party in a battle for survival. The Co-operative party is not affiliated to the Labour party at the national level—and the size of its block vote would make it a great embarrassment if it were. (The Royal Arsenal Society is, exceptionally, affiliated to both parties, but its membership of the Labour party is scaled down for voting purposes from 370,000 to 30,000 ; in return, it is guaranteed the seat on the Labour National Executive reserved for Co-operative and Socialist Societies and for some years past filled by Mr Arthur Skeffington.) What the Labour party wanted in 1958 was the affiliation of local co-ops with the constituency parties, as recommended by the Wilson Report on organisation. This would in effect have dismantled the Co-operative party's present separate structure.

Under the Cheltenham and Hastings agreements the Co-operative party had the right to its own panel of parliamentary candidates, members of which could be put up to Labour party management committees by the delegates from the local Co-operative party organisation. The Co-operative party reached the peak of its political strength with 23 MPs in the 1945 Parliament ; it fell to 19 in 1955 and 16 last October. However, the trade unions have continually complained that the Co-operative party's financial strength, and its willingness to finance a large portion of an election campaign as well as employ its own agents, enables it to carpet-bag safe seats that

should have been union pocket boroughs. Also the unions think that the co-ops nominate too many intellectuals.

The row between the unions and the co-ops came to a head in 1957 at the Wednesbury by-election when Mr John Stonehouse, a Co-operative lecturer, was chosen as Labour candidate instead of Mr Ray Gunter, president of the Transport and Salaried Staffs Association, for whom the seat had been intended by Transport House. Transport House abruptly denounced the national agreement with the Co-operative party on the eve of Mr Stonehouse's poll, and intimated that at the next general election the number of safe seats allotted to the Co-ops should be reduced to six and that these should be filled by senior directors of the movement. This suggestion was rejected out of hand by the Co-operative party.

Finally, in the face-saving agreement of 1958, the number of Co-operative party candidates in the forthcoming election was limited to thirty, the number which had already been adopted. Since it costs the Co-operative party £17,000 to run 30 candidates and maintain 20 MPs, there is not likely to be much pressure to exceed this limit. But in any case the agreement provides that the limit may be renegotiated after every election. The Co-operative party made two minor concessions for this virtual victory—its candidates' label was changed from "Co-operative and Labour" to "Labour and Co-operative," and in future local co-ops were to be represented as one unit on local Labour parties, some of which have a limit on the number of delegates from a single organisation.

Now the situation which the right-wing leadership of the Labour party had doubtless foreseen when it tried to suppress the Co-operative party's independent façade has occurred. By capturing what can still be called, though with tongue firmly planted in cheek, the largest political party in Britain, the unilateral disarmers have gained a much more embarrassing victory than if they had merely sufficiently infiltrated the co-operative movement to control a few more delegates within local Labour parties.

New Start for Korea

President Rhee's removal gives south Korea the chance of a saner policy

THE cheers and sighs of relief of the south Koreans must give way now to sober thoughts about the future. Dr Syngman Rhee's retirement to the House of Pear Blossoms and the macabre end of his vice-president, Mr Li Ki Poong, and his wife, have left a vacuum, but they have also created an opportunity. By assuming the powers of the presidency at the assembly's request, the foreign minister, Mr Huh Chung, has temporarily filled the vacuum; and his reference to the urgent need for a Korean-Japanese settlement showed at once that he is aware of the opportunity. One of the serious drawbacks of President Rhee's uncompromising attachment to the past was his refusal to normalise south Korea's relations with Japan. This refusal diminished, in the eyes of Americans, such advantages as they may have thought they gained by his equally uncompromising stand against communism at home and abroad.

Some outstanding causes of Korean-Japanese friction are material: these include south Korea's extended fishing limit, known as the "Rhee line," and Japan's exclusion—because Tokyo has no diplomatic relations with Seoul—from the encouragements offered to foreign investors under south Korea's new foreign investment law. Other causes of friction are sentimental: they include south Korea's refusal to accept the ashes of 20,000 Koreans who died in Japan's service during the war until Japan pays compensation to the dead men's kin. These, and the vexed problem of whether Korean nationals in Japan should be repatriated to north or south Korea, have been under discussion between the south Koreans and Japanese in Tokyo for some months; progress is likely to be faster on all issues now that Dr Rhee is out of office. If Mr Huh Chung makes some headway on the Japanese question, he will have done well. He told the press that he expected the new president and vice-president to be elected within three months, and although he has preserved his personal reputation in the debacle of the past fortnight, his association with Dr Rhee will probably keep him out of the next government.

The south Koreans who died under police fire will not have sacrificed themselves in vain if civil liberties and parliamentary legality are now attained. Mr Huh has already promised a reform of the police, and Dr Chang, the leader of the struggling Democratic opposition, has spoken optimistically of the new outlook. Various constitutional proposals are being aired in Seoul, but the one for which the strongest case exists is the restoration of the office of prime minister, which Dr Rhee had gradually reduced to insignificance and finally abolished. The new prime minister will need to cast fresh eyes on his country's problems as a whole.

The first of these is surely to achieve as large a measure of economic viability as is consistent with south Korea's readiness to resist any renewed aggression from the north. Over the past two years, south Korea's forces have been reduced, but at some 550,000 they are still monstrously large. With continued American and United Nations guarantees, it must seriously be wondered whether they cannot be reduced still further; President Rhee never abandoned his dream of reconquering north Korea and opposed reductions in his defence establishment. With modernised equipment, a smaller force may be sufficient to deter aggression from communist north Korea; even a much larger one would be insufficient if the Chinese decided to send fresh "volunteers." South Korea's crushing unemployment problem may act as a brake on demobilisation in the near future; Japanese investment, whatever unwelcome memories it may revive, would be one of the best ways of finding jobs for the workless.

One of the most hopeful aspects of the crisis has been the apparent absence of the "communists" whom Dr Rhee and his ambassador in Washington had blamed for the challenge to their regime. The Koreans overthrew it because it was a hated autocracy, not because the communists put them up to it. If the Korean communists fail to profit from President Rhee's downfall, south Korea will have shown itself basically more secure than many people have supposed.

NOTES OF THE WEEK

LABOUR PARTY

Shopping Labour?

THIS week the principles of British loyalty to Nato and of maintenance of any sort of western deterrent were condemned by a handful of socialist shop assistants, most of whom had virtually self-selected themselves as "representatives" of their fellow workers by their earnest willingness to spend part of their annual holiday discussing union and political affairs in Blackpool in April. In consequence, at this year's Labour party conference, the 320,000 votes of the shop-workers' union (the sixth largest union in the country) will be thrown in favour of any pacifist anti-H-bomb resolution that comes along.

At the Labour conference the shop-workers' views will almost certainly be supported by some 750,000 votes exercised by zealots in the constituency Labour parties, and by the million votes which the maverick Mr Cousins will cast in the name of his transport workers' union. (All this is quite apart from the effects of the pacifist motion passed by the Co-operative party—for that group's extraordinary constitution, see page 400.) The Labour movement is thus thrown back on the sort of torturing mathematical calculations which so often beset it at this time of the year. Briefly, if the annual conferences of any one of four big unions—the engineers, railwaymen, municipal and general workers, or the miners—go the same way as the shop-workers' conference did, there will appear to be a majority against the Nato alliance within the Labour party. Rather than bow to an anti-Nato motion at his party conference, Mr Gaitskell would certainly resign.

Of course, Labour leaders have often faced this kind of crisis before; and always they have wriggled away from it by some backstage manœuvre. But two points stand out. First, it is obviously only a question of time before, one year, such manœuvres fail to work; Labour's present demoralisation—and its growing (but surely mistaken) feeling that resignation of the present leader would not be unmitigated catastrophe—slightly increases that danger for 1960. Secondly, it is the necessity for this manœuvring before every annual conference that does most to prevent Labour from having a forward-looking policy; the sensible men in the movement are always having to run hard every year to prevent being pushed into accepting minority policies sponsored by chance groups of nationalising or pacifist stalwarts. If these chance groups even approximately mirrored the views of a majority of the twelve million Labour voters in the country, there would be a democratic justification for this strange system; but everybody knows that they do not. Why on earth, when he was trying to amend the constitution of the party, did Mr Gaitskell concentrate his energies on the utterly unimportant Clause Four, instead of fighting to the death to root out these all-important constitutional absurdities about conference voting powers and "conference's sovereignty in determining party policy"?

DEFENCE DEBATE

Lines of Retreat

IN its efforts to check the challenge from its nuclear pacifists this year Labour has one advantage: it can adopt the Liberals' (and *The Economist's*) policy of calling for reliance on a collective western deterrent instead of an independent British nuclear force, and can then shout loudly (but inaccurately) to its nuclear disarmers that this is a partly pacifist thing for it to do. An important feature of Wednesday's defence debate was that Mr George Brown, Labour's shadow defence minister and for long its stoutest advocate of an independent British deterrent, intimated that he was at last ready to countenance such a change of policy. In consequence Mr Harold Wilson, deputising as Labour's parliamentary leader for the first time (nominally because he is the senior privy councillor in the shadow cabinet during Mr Gaitskell's absence), was able to play the role which he likes and fills best: he cracked a few jokes, claimed that Labour was united, and successfully avoided making it clear whether he has any personal views at all.

The most important feature of Wednesday's debate, however, was that the Government, too, showed some signs of edging away from the policy of the independent deterrent. Mr Watkinson now talks of it as Britain's "independent contribution to the deterrent power of the West," which is not at all the same thing. He emphasised that the Government has "only recently settled a production programme for British-made nuclear warheads of advance design for some years ahead," but this programme could well continue as a perfectly sensible contribution to collective western defence. The real question is whether Britain is still going to squander money and resources in an attempt to keep under its private control a strictly independent means of launching these British-made warheads. Here Mr Sandys made the significant admission that the abandonment of Blue Streak will enable the Government to "wait a while" before deciding what new weapons they will adopt. By far the best speech in the debate was made by the Conservatives' former defence minister, Mr Head. He believed that what Britain would be able to afford in such missiles as Skybolt and Polaris would not, by the mid-sixties, be a significent addition to what would by then be a superfluity of deterrence by missiles; he feared that if the Government embarks on these very expensive projects like Polaris, the expenditure on them might push out what is required to make our conventional forces effective. It is becoming increasingly clear that Mr Head's voice is the voice of logic, and indicates the direction in which all parties will eventually find it wise to go.

LAW OF THE SEA

Shorn of Illusions

THE law of the sea conference has failed: we must not waste too many tears on it. The achievement of a two-thirds majority for the American-Canadian compromise would have been a considerable diplomatic achievement; even the majority that was produced was enough to show even more conclusively than in 1958 where the balance of world opinion lies. But would the attainment of the magic number of 55 have given the maritime powers more than an illusory triumph? The Soviet block would have denounced any arrangement that did not allow it a twelve-mile territorial sea. There would have been no question of enforcing the conference's decision against the Russians, any more than there was of physically upholding the three-mile limit in the past. With this example before them, Iceland and other coastal fishing states would have seen no reason to delay longer in reasserting their fishing claims as soon as their internal politics demanded it.

This is not to say that Mr Hare was at Geneva on a fool's errand. Britain's legal position in Faroese waters and even inside the Icelandic twelve-mile limit—if the British trawler owners meant to insist on their rights—would have been strengthened immeasurably. States like Norway, that have hesitated to extend their limits, would have been content with the ten-year phase-out under the American-Canadian resolution. But this has not happened. It seems a debatable point whether the maritime powers could just have carried the day by allowing a flat twelve-mile fishing limit, without any phase-out. In two years' time, if claims to the continental shelf go on, this may seem entirely realistic.

The immediate need is to try to reach local agreements in whatever areas these can be secured. The 54 nations who voted for the compromise can get together in a formal treaty, if they see fit. An arrangement between the Americans and Canadians on their own terms would set the pace for others. The British government must now look at the Faroes and Norway again. But Iceland is the rub, and the Icelanders' attitude is not encouraging just now. In the long run, agreement on joint freezing and marketing arrangements may help to do the trick: putting the fishery cruisers in again will not.

INDIA AND CHINA

The High Hills

MR CHOU EN-LAI's tour of south Asia has proved more educational than profitable. His six-day visit to Delhi, neatly sandwiched between three days at Rangoon and three at Katmandu, should have taught him that at least one of China's neighbours believes there is more to the five principles of peaceful co-existence than merely doing what Peking says.

In the days following his chilly reception at Delhi, he had discussions with so many high Indian government officials, notably the minister of defence, Mr Krishna Menon, that the public began to fear something was being given away behind the closed doors. There was no cause for worry. The Chinese prime minister was hardly off the ground on his way to Katmandu before Mr Nehru hastened to explain. At the airport, and later the same morning in parliament, he said that the discussions had led to some relaxation of tension but to no approach towards a settlement. Mr Chou, as expected, had offered to modify Peking's claims in the east only in exchange for Indian recognition of China's occupation of territory north and east of its new Aksai Chin mountain road in Kashmir. The two governments agreed to hold further discussions later this summer; but Mr Nehru made it clear that he had little hope of successful negotiations.

Mr Chou went to Katmandu to sign a treaty of peace and friendship. The details had been worked out when Mr Koirala, the Nepalese prime minister, visited Peking recently. The official greetings at Katmandu were warmer than those at Delhi, but there were demonstrators carrying banners protesting against China's claim to the whole of Mount Everest. The Nepalese government could hardly dispose of its share in this highest of all monuments without running into trouble at home. The Chinese, aware of this, may be able to turn some of their less spectacular claims into real estate in exchange for allowing the Nepalese to keep a share in the natural world's "summit." Any gains the Chinese may achieve at the expense of the Nepalese would not, however, make up for Mr Chou's failure to soften up the Indians. On the contrary, heavy-handed pressure on their small neighbours would remove any doubts the Indians may still have about the righteousness of their cause.

CHINA

Grabbing With Both Hands

MR KHRUSHCHEV has his homely proverbs, and China's leaders relieve the tedium of their interminable pronouncements with images like "the hundred flowers" or "the forward leap." The latest, attributed to Mr Mao Tse-tung in person, is "grab with both hands," a phrase that covers last November's exhortation to the nation to prepare for the exertions of 1960 while simultaneously overfulfilling the targets of 1959. The plan for 1960 is now available, at least in outline, and it is a help, when studying it, to jot down on any handy notepaper Mr Chou En-lai's fascinating graduated definition of the forward leap. As the Chinese premier puts it, in industrial production a "leap forward" is an increase of more than 20 per cent; a "big leap forward" is more than 25 per cent; and more than 30 per cent qualifies as an "exceptionally great leap forward." Less is expected of agriculture, which qualifies for the three varieties of leap with increases of only 10, 15 and 20 per cent respectively.

By these definitions, 1960 is to be a "big leap forward" in industry—though heavy industry is to register an "exceptionally great" one—and merely a "leap forward" in agriculture. Thus output of pig iron is to rise by 34 per cent, that of steel by 38 per cent to 18.4 million tons—a figure which, if reached, will exceed Japan's output and approach Britain's. Coal output is to rise by 22 per cent, electric power by 34 to 40 and cement by 30 per cent. More modest targets have been set for light industry, in accordance with normal communist practice.

As for agriculture, its gross product is scheduled to increase by 12.5, compared with last year's actual increase of 16.7 per cent. The cotton target—a 10 per cent increase—is particularly modest, since it barely meets Mr Chou's lowest category of leaps.

On the whole, the targets sound more realistic than those of previous years. This suggests a healthy reluctance to repeat the gross statistical errors of 1958.

TRADE UNIONS

Deakinism Revived?

IS the wind of change blowing through Congress House? On Wednesday the general council of the Trades Union Congress, with Mr Cousins and four other members dissenting, at last told the communist-dominated Electrical Trades Union that it must take steps before May 18th to lay its affairs open to judicial inquiry, or else be suspended from congress. This followed an even more important development on Monday: the stunning attack launched by Mr Bill Carron, president of the Amalgamated Engineering Union, on communist shop stewards in his union, whom he called "werewolves rushing madly towards industrial ruin and howling delightedly at the foam upon their muzzles which they accept as their guiding light." We have not heard language like that since Arthur Deakin's day, a fact which abhorrers of mixed metaphors may have welcomed, but which well-wishers of the British economy and of the trade union movement have had reason to rue.

Mr. Carron's address could be a real turning point. During the general election, trade union leaders were left in no doubt of the growing revulsion not only among the general public, but also among increasing numbers of their own members (and of their wives), against some of the methods of calling and enforcing wildcat strikes employed by some left wing groups of shop stewards. Nevertheless, until this week, most union leaders still seemed to accept the myth which has grown up in the movement since Deakin's death: that while communist influence in the unions could sometimes be stealthily aborted, it was tactless and "provocative" to speak out too openly against it. Two things may now have turned the tide back towards Arthur Deakin's way.

Seeds of Change

FIRST, the failure of last month's "near-general-strike" in public utilities, which had been planned by some elements in the national committee of shop stewards, may be having more important consequences than anybody foresaw at the time. This stewards' plot was always a quarter-baked affair; but the significant thing was that as soon as one right wing union leader (Mr Matthews of the General and Municipal Workers) "provocatively" revealed that it existed, the stewards gave up any hope of persuading the workers to obey their call. Secondly—and possibly even more important in influencing the AEU's leadership—the treatment of some subordinate union officials by some groups of stewards has become increasingly intolerable. Where, as in the motor industry, workers conscripted into a wildcat strike belong to a dozen or more different unions, the local committee of shop stewards has always been able to render powerless the peace-seeking intervention of a single union's area or branch official; but recently some of these stewards have gone further and have handed out to these officials the sort of treatment which they have hitherto reserved for humbler dissenters who have got in their way.

Head down into his own union's communist clique, and providing food for thought to those who say that lurid accounts of union malpractices are "uninformed,"

NATIONAL AND GRINDLAYS BANK LIMITED

Amalgamating
NATIONAL BANK OF INDIA LIMITED (*Established 1863*) AND GRINDLAYS BANK LIMITED (*Established 1828*)

PLAYER'S
No3
EXTRA QUALITY

People who can buy Player's No.3 – by the hundred

Player's No. 3 are top-class, but very *unpompous* about it all. (Rather like the people who smoke them.) These discreetly expensive cigarettes—they are 4/6 for 20—in their plain white and brown packets, put on no airs for the very adequate reason that they do *deserve* to be smoked. Their tobacco is quite excellent.

Mr Carron therefore proclaimed on Monday:

> We can do without thugism and anarchy. We must insist upon democratic election which is free from falsification or intimidation, and the right of an elected official to carry out his duties without lies or victimisation.

Once words like that have been spoken, it should be difficult for other union leaders to avoid rallying to the flag of one side or the other in what seems to be virtually a declaration of war. If Deakinism is revived, the right-wing reformers might find to their surprise that they eventually actually enjoy it: it would offer them the almost forgotten luxury of evincing a moral indignation which they really feel.

THE "NEW DAILY"

Shoestring Pioneer

HOLLOWAY seems an unlikely place to print a national daily newspaper; but the *New Daily*, which was launched this week, is an unlikely venture. There is every reason to wish that it could succeed. An important blow would be struck for the free development of minority ideas if it could disprove the assumption that a national daily requires many millions of pounds in initial capital, more than a million in initial circulation, and complete subservience to all the restrictive practices in the newspaper trade. The *New Daily* proclaims itself "independent of combines and trade unions"; it says that its 12,000 financial guarantors—though they are considered morally rather than legally bound—have promised sufficient to keep it going for three years, and that with a 50,000 circulation it would break even. So far its coverage, though brief, has been adequate; its reliance on the wire services for foreign news would not look strange to the readers of most American papers. It has managed to fill daily about seven of its sixteen small-size pages with paid advertising, some from little-known advertisers who presumably support its views, but much from nationally-known names.

The open union shop is no novelty even in newspaper printing. Mr Martell, the paper's founder, claims that by eliminating feather-bedding, and by working to capacity rather than to rule, he can pay more than union wage rates to his much-smaller-than-usual working force. He is unconcerned with the affiliations of any of the decidedly multi-national and multi-racial staff who produce the *New Daily's* grey pages—along with handbills, posters, and the publications of the People's League for the Defence of Freedom. So far, the printing unions, though cool and suspicious of Mr Martell's past record, have not really attempted to take positive action against him. The Newspaper Proprietors' Association—presumably one of his main targets—has declined to comment. The distributors, though slightly baffled by the initial fluctuations in demand and supply, have agreed to handle the *New Daily* in the normal way (nor does it seem likely that it can be kept off the newspaper trains, which are sometimes thought of as NPA carriers). If costing has been accurate (but has it?), and the guarantors' morals stand firm (but will they?), and advertisements continue to come in at their present apparent rate, the infant might survive.

The interesting thing about this shoestring venture is that it has been launched from the right wing of politics. Previously, people who have felt sufficiently strongly moved by minority views to risk their money in ventures of this kind have more usually come from the left. There is no doubt about the main emotion that has stirred most of the paper's twelve thousand by-no-means-wealthy guarantors. To about the same extent as left-wing papers are stridently anti-capitalist, the *New Daily* seems dominated by the sound of anti-union axe-grinding. The Left itself is to blame if more and more people find this an exciting noise.

SOUTH AFRICA

How Much Leverage?

THE insistence of several members of the South African government, in the debate on its referendum bill, that while they would abolish the monarchy, their policy was "to stay in the Commonwealth as long as humanly possible," is another indication that Afrikanerdom shrinks from facing the world alone. Shrewd exploitation of this fear of isolation may prove a means of inducing South Africa, even now, to think again about its racial policy. It would therefore be as mistaken to insist that South Africa cannot be asked to leave the Commonwealth as to demand that it should be thrown out at once without being given a chance to mend its ways. But in bringing pressure to bear, Britain cannot do more than force the pace. On Tuesday, Mr Macmillan reminded the House of Commons and the world at large that though by tradition the British prime minister presides at a Commonwealth meeting, the conference makes its own rules and decides its agenda. The Malayan prime minister, Tunku Abdul Rahman, has accepted the same basic fact of Commonwealth collaboration; while he intends to request that South Africa's racial policy be raised formally, he will accept a majority vote against this—and raise the subject informally instead.

Formally or informally, South Africa's racial policy will be discussed by the prime ministers. But quite apart from this, Mr Louw is bound to know that his country's conduct is a main preoccupation of the conference. Indeed, he may in fact be courting straight speaking; this is suggested by his readiness to face the international press. The crux is not merely to ensure that his ordeal is all that he is probably anticipating, but to make it as fruitful as possible in terms of the reports that he carries back to Dr Verwoerd. Commonwealth pressures might yet prove almost as flexible an instrument of correction as the sjambok; but they will need to be wielded with a steady hand to be effective.

KENYA

Brinkmanship

IF Mr Tom Mboya is not the out-and-out extremist which most Kenya settlers and government officials think him, he is certainly giving a convincing imitation of one. He has called, in his capacity as a trade union leader, for a civil disobedience campaign if Jomo Kenyatta is not released in three months. He must know that the British Government dare not bow to this threat. What then is he after? The simplest explanation is that he is outbidding all his rivals for mass (or mob) support. His object seems to be to create a situation which would force Mr Ngala and Dr Kiano out of office within a few months of their having taken it, under the bargain reached informally with Mr Macleod at the London conference in March. If he could do this, and especially if in so doing he put them in a bad light, he might be able to claim that he was still boss in Kenya. He would thus pay them back for allowing Mr Gichuru, instead of himself, to become president of the new Kenya African National Union.

The price of this would be to bring into the arena the still bigger boss, Jomo Kenyatta. How far the "cult of Kenyatta" as an African father-figure is Mr Mboya's own monster, how far it is spontaneous is a matter for guesswork; and so is an answer to the question of how widespread it is. But in trying to outshout the more violent voices that undoubtedly do still sound to the left of him, Mr Mboya risks bringing Kenya to the same condition of internal dissolution that threatens to make a mockery of the independence of the Belgian Congo.

Does he want this? Or the terror-ridden life of an impoverished Kenya riddled with some new kind of Mau Mau? It is not part of his character; he knows that he could never ride such a tiger. (Neither could Kenyatta for that matter.) But he is on explosive ground. Unemployment is rising in Nairobi as the Kikuyu (who are no longer held back by the emergency regulations) pour into it, and as the economy slows down because the European farmers are holding back their own development plans. Mr Mboya, and any Africans he is seeking to attract, ought to ask themselves which they want at the turn of the year: elections which will infallibly bring in an African government—or civil strife which will delay it and support the settler view that Kenya Africans are incapable of self-government?

SIERRA LEONE

Small Nation's Debut

By next week the constitutional conference on Sierra Leone's future should have ended with agreement, amity, and a date for independence. But three problems have emerged in these talks—and all of them have so far been approached slightly hamhandedly by Britain, perhaps because Sierra Leone is small and well behaved. The Sierra Leonians have (but carefully unofficially) asked that December 7 of this year should be their date for independence ; the British think this precipitate. So it is if the shortage of trained administrators in Sierra Leone is considered, and the fact that hardly a single Sierra Leonian is yet under training in any British Embassy as a diplomat. But African states have emerged notwithstanding such unpreparedness ; and one of the things that matters in fixing a date is that one of these states—Guinea—is Sierra Leone's vocal, left-wing and active neighbour. It would be absurd to insist on any considerable delay that would risk undermining Sierra Leone's present moderate and pro-Western leadership under Sir Milton Margai.

The second problem is defence. The RAF want a staging post at Lungi airport, which is half-way between Britain and South Africa. The Navy may not want to use Freetown's incomparable harbour, but they do not want to see it in unfriendly hands. So Britain is negotiating a defence treaty. A treaty, however, must be negotiated between equals, or in an atmosphere of equality, which requires more delicacy than was at first shown.

The third problem is economic support. Sierra Leone (like every African state, but even more than most) needs development capital—and it needs £3 million now. It cannot afford to lose Colonial Development and Welfare money ; it needs more technical aid ; it needs to be able to pay the salaries to keep its British officials on a new footing. But, as usual, the prospect of the end of Colonial Office tutelage has found the Commonwealth Relations Office with no ideas to offer, except for a plummy establishment for a United Kingdom High Commissioner. By its unreadiness to face the new situations that are regularly presented by the accession of new states like Sierra Leone, the CRO is not upholding the Commonwealth. It is undermining it. How many more times must this be said for Lord Home's department to do some rethinking?

UNIVERSITIES

After Norwich and York

It is good news that the Government has given a green light to the sponsoring committees for the proposed university colleges of Norwich and York. The University Grants Committee will now be able to use its general discretion to work out ways and means for appointing academic planning boards and principals to get work started in both cities. Nobody, however, should assume that these plans promise any very early alleviation of the bottleneck in university entrance. The University College of East Sussex now has a principal (Mr John Fulton), a registrar, an academic planning board, a site donated by the Brighton Council, and an architect—Mr Basil Spence (just promoted RA). It hopes to have its first students in hired accommodation in the autumn of 1961, the first of its own buildings ready by the autumn of 1962, and thinks that it may have a thousand students in residence by the mid-sixties. On this timetable, York and Norwich would still have only a few hundreds of students then —which means that the expansion of existing universities must make the major contribution to the planned increase in the university student population from 110,000 to 175,000 during this decade.

It would be wise to step on the accelerator a bit in new areas, and for the country to set itself a target: if all the plans now under contemplation went full speed ahead, by 1970 there could be six or more new universities with 10,000 students between them. The sponsoring committee for Gloucester-cum-Cheltenham has already approached the UGC, and committees for Kent (for a college at Canterbury) and Essex (for Chelmsford or Colchester) are being formed. The Government requires evidence of vigorous local initiative from the relevant local councils and businesses (the Rowntree Trust has pushed the York scheme), as well as a site of 200 or so acres before it will weigh in with the big money. It is the more important that other local areas should show their civic pride—which takes its highest form in a local university. The suggestion that Stevenage New Town should join the university movement is a bit far-fetched—it should provide itself with adequate schools first—but the spirit is the right one and should be saluted. A dozen new university colleges would not be too many.

PARLIAMENTARY QUESTIONS

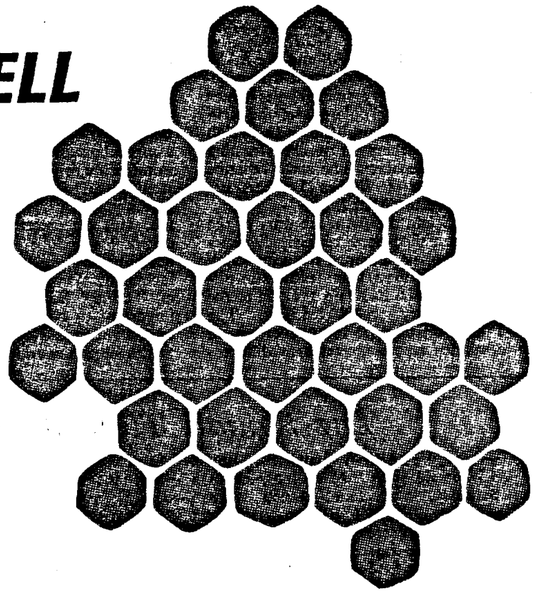
Restrictive Practice

In the four days before Easter, eight written answers to Parliamentary Questions in the House of Commons recorded only that the questioner would be replied to in writing. Sometimes the reason for this practice is that the answer is not yet available or that it is of local interest only. But sometimes it is because the reply "involves a detailed tabular statement," which it is apparently felt that Hansard need not be bothered to print. Into this last category came important figures (not so very numerous) about wage differentials that had to be dug out and were summarised in last week's issue of *The Economist* (page 363). The press can usually get a copy of the minister's letter if it bothers to follow the matter up, but private researchers may not always have that advantage—and sometimes it is not clear whether figures will be important until one has seen them. There is here a growing practice of concealment, and it ought to be stopped.

GERMANY

"Brown" Study

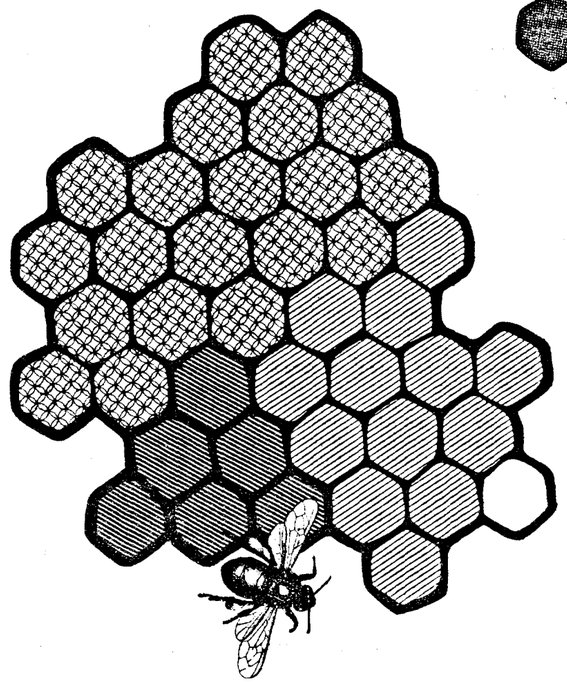
Only by the skin of their teeth were the Christian Democrats able to open their annual party conference on Wednesday without having to include Herr Oberländer in the courtesies paid to the cabinet ministers present. The night before Dr Adenauer had at last persuaded his obstinate minister that for the country's and the party's sake he must go. Last week, in reply to a public observation by the Chancellor that his minister for refugees had been indeed "deep brown" even though he could not be suspected of having instigated or taken part in nazi atrocities in Poland, Herr Oberländer had tightened the grip of his prodigiously prehensile toes and let it be known that he would stay in office after all, pending parliamentary inquiry into his nazi past. If he persisted in this line, the Chancellor told him on Tuesday night, he must go at once, and without a pension. He resigned, and will get his pension.



Herr Oberländer has been promised a parliamentary inquiry in accordance with his rights as a deputy. But he will first have to find fifteen other deputies to support his request for such an investigation. That may now be difficult. Never widely popular or respected, he has alienated most of his few remaining sympathisers by his desperate bid for whitewash and security. It would be too much to expect Dr Adenauer to admit that he is partly responsible for the affair, having made the appointment and set something of a fashion for thick skins and tenacity in office himself. Nor could the Christian Democratic Union's conference be expected to point this out to him. A cartoon in Wednesday's *Die Welt* entitled "Karlsruhe FC" depicted a football eleven posing for their photograph. All eleven players and manager had the same familiar face.

EDUCATION

A Unified Profession?



The National Union of Teachers is now actively engaged in pursuing what it calls "professional unity," and it is receiving some encouragement from the present Minister of Education. Its path has been smoothed by Sir David Eccles's refusal to give the National Association of Schoolmasters, an all-male association representing male primary and secondary modern teachers, a seat on the Burnham committee panel—although the Association of Assistant

The world of SHELL

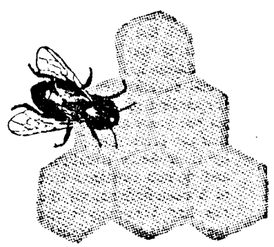
THE MONEY THAT CAME IN

Proceeds from sales of oil and chemicals throughout the world, together with other receipts. £2,631 million

. . . AND WHERE IT WENT TO

Operating and other expenses, including oil purchases, royalties paid to producer countries, equipment, materials, salaries and wages. £1,307 million

Taxes to governments. £861 million



Capital expenditure and working capital. £396 million

Distributed as dividends to shareholders. £67 million

A YEAR'S FIGURES OF GREAT INDUSTRY The year 1959 was one of continued expansion of activity for the Royal Dutch/Shell Group of companies, which has upwards of half a million shareholders. Group net income for the year was £176 million, which represents a return of 9% on the £2,020 million total capital invested to earn this sum.

This is a summary, expressed in money terms, of the year's operations worldwide of the Royal Dutch/Shell Group of companies. Proceeds from sales of oil and chemicals throughout the world, together with other receipts, came to £2,631 million. About half, £1,307 million, was taken up by operating costs and other expenses, including oil purchases, royalties paid to producer countries, equipment, materials, salaries and wages. £861 million went in taxes to governments, wherever Group companies operate.

An amount of £396 million went to maintain the business and to provide the facilities to meet increasing demand. This is the measure of Group capital expenditure and working capital needs for the production, transport, manufacturing and marketing of oil and chemicals. Dividends distributed to shareholders amounted to £67 million.

. . . this was the world of SHELL in 1959

Masters, which represents grammar school teachers, has four. The NUT's objective is to swallow both the NAS and the AAM, but it has begun by opening take-over negotiations with the very small bodies which look after the special interests of the technical college teachers, the youth club leaders, the teachers in teacher training colleges and the like. The small separate National Union of Women Teachers has already agreed to disband.

The NAS and the AAM are wary of the NUT because the latter is very largely under the control of its feminine majority—and, in particular, of the women teachers in primary schools, who make up 110,000 of the 145,000 primary school teachers. The NUT therefore tends to favour increases in basic salaries before increases in differentials; and it specifically rejects the demand of the NAS that there should be family allowances for school teachers, as there are for university teachers.

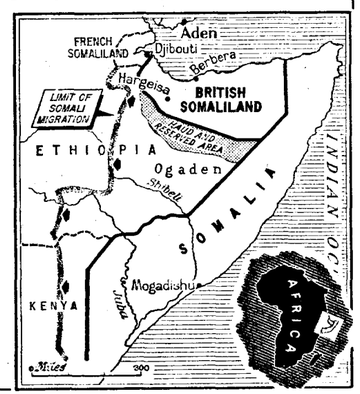
The NAS will therefore be wary of any take-over. Should the public be wary too? Behind the NUT's plan lurks a demand for a profession as closed to the "untrained" as medicine or the law; in effect, the NUT would like to be not only the BMA of teaching, but its General Medical Council too, with the power to withdraw teachers' certificates and so their livelihood. The other bodies are also rather inclined to favour the closed shop and the proscription of "unqualified practitioners," so it is important to be quite firm in stating the opposition case.

Teaching is not doctoring, where life and health are at risk. It is something that almost all men and women can do to some extent, and to which gifted outsiders can sometimes contribute valuable pioneering ideas. It is a technique at most, not a "body of science and learning" in the traditional professional sense. Teachers should be trained, but the trained should not be the only people with a right to teach. Far too little is known about teacher "training" for specious comparisons with other professions to be made. The analogy is rather nearer, in fact, to journalism, management or art. Teaching should remain one of the "open" professions, even though—in the state system at least—those who have entered it through doors other than the official one are always likely to be only rare exceptions.

The Somali Time Bomb

EVEN by African standards, British Somaliland is pushing the pace. On Saturday, the four elected Somali ministers arrive in London to discuss with Mr Macleod just how quickly a dependent territory can catapult into independence. The Somalis have already made their own views plain. On April 6th, the protectorate's legislative council called for independence and union with Somalia when this Italian trust territory becomes independent on July 1st. A few days later in Mogadishu the two territories agreed on the formation of a new unitary state, the Somali republic, with president, national assembly and capital at Mogadishu. But first the protectorate will have to be independent, if only to allow the decision to unite to be taken by a sovereign parliament. Thus, if the date set by the Somalis is to be kept, the British will have to hand over within the next two months.

The protectorate is ill-prepared for independence. The four ministers are only now having their first taste of government; three years ago the legislative council did not even exist. If, as is bound to happen, most of the British expatriate officials decide to pack their bags, there are no trained Somalis to take their place.



In the last couple of years the political timetable has jumped ahead and some foundation has been laid for economic and social advancement. But a firm date for the ending of the Italian trusteeship was set ten years ago. Misled by the illusion that the protectorate Somalis were isolated by their fierce tribalism and their bleak and nomad existence from the infections of African nationalism, the British authorities had resolutely turned deaf ears to the ticking of the Somali time bomb.

With Somalia exploding into independence next door, any thought of a prolonged delay for the protectorate is unrealistic. By default, it is now too late to prepare the ground. On the other hand the sheer hard work that will be needed if Somaliland is to keep the July deadline is enough to make Whitehall plead for a respite, however short. But the Somali leaders, committed to immediate independence, are unlikely to be moved by the physical obstacles in its way. A short delay would make the parting tidier, but that is all; probably, it is not worth the loss in goodwill.

The Mogadishu announcement has been taken badly by countries which see it as a serpentine first step towards Greater Somalia. Mr Macmillan may have dispelled suspicions of British motives when he stated in parliament on April 11th that the Government does not, and will not, encourage any Somali claims affecting the territorial integrity of French Somaliland, Ethiopia or Kenya. But on the eve of independence, it is up to the Somalis themselves to behave responsibly towards their neighbours. The protectorate, which depends on Ethiopia for its grazing, loses after independence the right to have British liaison officers accompanying the tribes in the Haud. It would at least be a step in the right direction if official contact between the two sides could be established by setting up an Ethiopian consulate at Hargeisa.

In this union of an Italian and British territory are the fruits of the problem sown by the European grabbers in the late nineteenth century scramble for Africa. The two parts of Somalia have been pulled in different directions; to join them will not be painless. What, for instance, will be the new Somalia's relation to the Commonwealth? Probably the Somalis would be wise to feel their way slowly until they see how the various benefits that each territory might have been entitled to separately—pensions from the British and Italian governments, imperial preferences, association with the common market—work out when the two are one. In February, the Government, looking ahead to the protectorate's independence, promised continued financial help within the limits of present aid (which, in all, came last year to rather under £1¼ million). If Somaliland could be certain that it would receive a reasonable sum from Britain for a guaranteed number of years, the teasing question of Commonwealth membership would probably be set on one side.

How long will the Somali republic need money from outside? The custom has been to think of the two Somalilands as unviable states dependent for as far as the eye could see on remittances. So far as the protectorate itself is concerned, this is probably true; for the trust territory it may be an exaggeration, encouraged perhaps by local interests. Above all, Somalia needs money and technical help to develop its water resources. It has two rivers: the Shibeli is being used to its limit by the banana planters; the Juba, with an average water supply five times as high (and about seven times as great as the Jordan) is still almost untouched. If the river were controlled, and to an unbiased eye there is no reason why it should not be, the future for a United Somalia would look less unrelievedly gloomy than the prophets have forecast.

LETTERS

South Africa

SIR—You have recently seemed to advocate, however obscurely, the ejection of the Union of South Africa from the Commonwealth. Such an emotion is a natural enough reaction to anything as cruel, crude and stupid as the Afrikaaner Nationalists' regime, but I believe it is an emotion which should be resisted. To allow extreme nationalist policies in the Union to affect Commonwealth history in this way would be a contradiction of the Commonwealth's past and an injury to its future.

Ejection implies that the Commonwealth is or ought to be an association of states observing certain rules of conduct. It is not in fact anything of the sort and the attempt to make it so would probably disrupt it. The only thing that all members of the Commonwealth share is the accident of having been at one time under British rule; the introduction of a criterion of good behaviour would create not a link but a strain, for it would invite complaints and disputes as one member or another came up for judgment by its fellows.

There is a second and equally important objection to your view. You would, as I understand you, cast out the Union because its minority government is vicious and so bad company. Let us purge our ranks, you say. But what about all the South Africans who are not rabid Nationalists? Is this the moment to expel them from our society of nations? One day the Union will have a different and better government than it has now. On that day it will require all the support that Commonwealth membership can give. The Commonwealth will irreparably maim its structure and its repute if meanwhile its contribution in this tragic act has been a gesture of pharisaical priggishness.—Yours faithfully,

Aspley Guise PETER CALVOCORESSI

Air Navigation

SIR—The vote at the International Civil Aviation Organisation was to make Distance Measuring Equipment (DME) a standard and so to extend the life of VOR (very-high frequency omni-range), and was approved by the narrow margin of one, a majority of two thirds being required.

It is not true that Decca is "much more expensive" than VOR/DME. A reference to the paper issued by the Ministry of Transport and Civil Aviation in 1959 shows a big saving in cost of both installation and maintenance of Decca over VOR/DME for the coverage of similar areas.

The intensely crowded regions of air traffic to which you refer presumably are just those areas that are of greatest concern to air operators. An area coverage system with pictorial presentation capable of laying down parallel tracks is considered by many to provide the only practical way of keeping the rapidly increasing weight of traffic, including jet operations in the upper air space, moving safely and efficiently.

Although Decca was not mentioned by name, it is the only such system available, even though it may not as you say "provide the perfect answer to all navigational difficulties." VOR/DME certainly does not.—Yours faithfully, E. R. LEWIS

Decca House, SE11

Corporal Punishment

SIR—The Home Secretary has asked his Advisory Council on the Treatment of Offenders, of which I am Chairman, to consider whether there are grounds for re-introducing any form of corporal punishment as a judicial penalty in respect of any categories of offences and of offenders. Much has been said and written about this controversial subject, but in order that we can ourselves consider the arguments which weigh with the public on one side of the controversy or the other the Council are anxious to hear directly from persons and organisations who have already formed their own views on it. We have already invited evidence from a number of the organisations likely to be most closely interested, but we think that there may be other organisations, as well as private individuals, whose views would be of some help to us in reaching our conclusions. If any of your readers would like to help the Council in this way, I should be grateful if they would send a brief statement of their views to the Secretary, Advisory Council on the Treatment of Offenders, Home Office, Whitehall, London, SW1.—Yours faithfully,

PATRICK BARRY

Royal Courts of Justice, WC2

The French Elections

SIR—In his sympathetic comment on "Elections Abroad," your reviewer wondered whether, in general, the "Namierising" of political discussion has not gone too far (I am inclined to agree); and whether, in this particular book, my co-authors of the French section and I have not underplayed, "more by constant implication than by direct assertion," the "ideological content" of the 1958 French election campaign.

May I therefore directly assert that, in our view, its ideological content was virtually nil. Nearly all parties and candidates did their best to blur what they stood for, and the more successfully they achieved this purpose, the better they fared at the polls.—Yours truly,

PHILIP WILLIAMS

Nuffield College, Oxford

Middle Eastern Targets

SIR—For all its judicious qualifications and sound scepticism, your recent article attaches too much importance to a possible four-power agreement on a common policy of self-restraint in the Middle East.

It could be argued that, at the present juncture, both the western powers and the Soviet Union have—for very different reasons—a common interest in avoiding a direct trial of strength in the Middle East. But does it follow that any genuine agreement could be based on this ephemeral coincidence? And assuming that some such agreement, tacit or otherwise, will be reached at the Summit—can there be any doubt that Russia will break it as soon as a volte-face becomes expedient?

It seems pretty clear that the so-called common interest of the great powers not to precipitate a Middle Eastern explosion does not depend on solemn undertakings but on the maintenance of the balance of mutual risks. So long as the Russians will have reasons to fear that in an explosion they too may get painfully burnt fingers, there is a chance of maintaining the present situation. (As it is, the salient feature of this situation is the uneven but steady gravitation of the Arab world towards Moscow.) In the circumstances, any agreement with Mr Khrushchev on a common policy in the Middle East is bound to be as reliable as the notorious agreements which Russia signed with the Baltic states shortly before invading them.

I am, of course, aware that this approach calls into question the whole concept of "self-enforcing agreements." Surely, when a certain state of affairs is determined by self-enforcing factors, then agreements are superfluous; where it is not so determined, agreements are pointless.

The Russians have certainly asserted their claim to become once more a power in the Middle East and, as your article suggests, this claim cannot be ignored. It is, however, somewhat unrealistic to imply that anything could be solved by acknowledging the validity of the Soviet claim or by pointing out to Mr. Khrushchev that there is some flimsy identity of interests between the great powers. Mr Khrushchev would be only too pleased to be presented with an opportunity to display gratuitous reasonableness at the summit and to sign declarations which mean but little. Why oblige?

I am not suggesting that the West should not take notice of Russia's attempts to have a say in Middle Eastern affairs, but the only effective way to deal with this claim is to countercheck Russia's influence and activities in every sphere by every possible means. After years of British blunders, misplaced sentimentalism and misdirected real-politik in the Arab world, this is not an easy task for the West, but at least it is preferable to the present trend of accepting almost fatalistically the logic of Russia's intervention in the Middle East.—Yours faithfully,

London, NW3 LIONEL BLOCH

BOOKS

Sunday Observance

The Observer and J. L. Garvin 1908-1914

By Alfred M. Gollin.
Oxford University Press. 458 pages. 45s.

THIS book by a Californian historian describes the first seven years as editor of *The Observer* of J. L. Garvin, who joined it when in Lord Northcliffe's phrase it was "derelict in the Fleet ditch," selling well under 5,000 copies every Sunday, and built it up into a principal organ of extreme conservatism, selling over 60,000 copies by the summer of 1911. As a lapsed Roman Catholic and a lapsed home ruler, Garvin had a full share of a convert's fervour for new creeds, and by furious pen-driving soon thrust himself into the position of a leading prophet for the opposition. He got on to good terms with Balfour, and so offered Northcliffe a chance of real political influence; and he attained a remarkable hold on Northcliffe himself. In fact, Dr Gollin claims,

> Nowhere in the history of journalism can one find a more clear-cut case of an editor first modifying and then controlling the attitude and outlook, not simply of his proprietor but of the entire newspaper system controlled by that proprietor.

Nor was Garvin a sycophant, as so many of Northcliffe's other employees were. He treated his owner as his equal, with a friendly manliness of tone suitable for one near-genius, Irish born and self-made, to use to another; it must have sounded unfamiliar at Carmelite House. No doubt his lack of malleability—he was always rather hammer than anvil—was among the reasons why Northcliffe chose Geoffrey Dawson instead to edit *The Times* in 1912. By this date, in any case, that variable peer had tired of *The Observer*; W. W. Astor had bought it from him the year before. Astor shared Garvin's theoretical enthusiasm for social reforms, though neither was able to promote any.

Yet Garvin was feverishly active; and his activities were not of a reforming kind. He was never one for hiding his light under a bushel: "I know more of foreign affairs as a whole than anybody in this country except Chirol," he once wrote, just at the moment when Eyre Crowe was preparing his masterly memorandum on the relations between England and Germany on which Garvin was shortly to exercise a comparatively inexpert influence. For among the editor's powerful friends was Admiral Fisher; and Fisher, to serve his own and the country's ends against Lord Charles Beresford and the cabinet at once, primed Garvin with data about the navy estimates of 1908 and 1909 for use in campaigns in *The Observer*. All this material was at least confidential; some of it was highly secret; but it suited Fisher to send it and Garvin to use it, and the result was the building of eight new *Dreadnoughts*. Garvin, of course, kept all Fisher's letters marked *Secret to be burnt*, so Dr Gollin has been able to recount this interesting intrigue.

Nothing else in the book is of comparable importance, though there are some new touches about the tariff reform campaign that nearly tore the ill-named unionist party asunder. Garvin's strong loyalty to Joseph Chamberlain and his son is brought out; when Austen renounced the conservative leadership, Garvin described it to Astor as "the saddest day I have known in politics." Throughout the bitter wrangles over the budget that the House of Lords rejected, and the Parliament Act that had to follow to curb their powers, and the equally unavoidable Irish Home Rule Bill, Garvin pursued a steady course of "no surrender," if any course pursued by so excitable an author can be called steady. In an age of passionate unreason in politics, here was a political writer worthy of his time.

He would have enjoyed this book, which quotes his articles seldom, but has evidently been affected by his manner of writing. *Punch* remarked of his style, "what others could say in one column—he swelled into five"; Dr Gollin follows him faithfully. The book is cram-full of needless details, among which the reader has to make for himself the judgments the author ought to have made for him about what is important and what can be skipped. It is beautifully produced and well illustrated; now and again the author turns a nice epigram, and his book would have been better reading at half its present length. Room might have been found for the discussion of some questions of wider interest, for newspaper history needs to be handled as a part of general history, as well as in its own right.

The special case of the naval scare apart, how important were newspapers in deciding policies? Did they matter as much as their editors thought, or were the decisions made in circles where their influence was small? Balfour notoriously never read them. Who in any case did read them, carefully enough to be affected by them? Could it even have been that neither the editors nor the politicians but the electorate decided how the country should be governed?

Self-Sketch

The Private Papers of Hore-Belisha

By R. J. Minney.
Collins. 320 pages. 30s.

MR MINNEY has made a brave attempt to put Hore-Belisha back on the map; but in spite of his finished handling of the papers and records, he still leaves us with a mystery and without an explanation of Hore-Belisha's complete eclipse. To a large extent, the author has succeeded in using Hore-Belisha's own diaries and letters to tell his story and to present his view of events during the critical years 1937-40. The diaries are almost entirely free from comment and any expression of feeling; and seem to have been written in much the same way as his speeches were prepared, each phrase carefully judged according to how it would sound and read. The result reads very well indeed, but it is important to remember that you are getting a sketch by the artist and not a photograph. Hore-Belisha had a singular capacity for presenting his own case in a favourable light; he rejected the inconvenient detail, whether fact or opinion, and it seems probable that he failed to realise the extent to which he was taking a partial view. This was all related to his passion for advantageous personal publicity, which he pursued with success but which reacted strongly against him later.

Hore-Belisha looked upon himself as a great reforming influence on the army. He rated himself highly, linking his own name with those of Haldane and Cardwell and there were others who encouraged this assessment of his position. His greatest contributions were, however, in securing those broad policy decisions which were necessary to adjust military planning to the continental threat and to enable the military machine to be geared into action before the emergency actually arose. The decisions were not his, nor was the planning. He did not create—he pushed things about and incidentally pushed a few people out.

This book, as it claims, provides a portrait of a brilliant and controversial figure in the background of one of the critical periods in our history. It adds little to what we know of the period or people, though it reminds us of some of the settings of the scenes by now almost forgotten. Few people will find much satisfaction in reviving memories of the prewar Sandys affair or feel very convinced that Hore-Belisha's fall was the simple result of counter-intrigue by the Blimps. This was accepted in many quarters at the time, as illustrations and quotations in the book clearly show, but Hore-Belisha himself behaved with great restraint and never directly indicated one single reason for his going or made accusations against the generals. Here again, at a critical stage, the "Private Papers" throw very little fresh light on what took place, and the reason is probably that Hore-Belisha was only vaguely aware of the extent of the resistance he had built up against himself. He had

a small intimate circle of devoted friends, and there were many others who were prepared to praise him as long as he kept in the limelight; but he did not inspire that loyalty which is essential for successful leadership. His methods, as many examples in the book indicate, were too frequently challenges to existing loyalties and brought no substantial support to him; and when the time came, there were few to rally round him. And now, in spite of his numerous monuments, few remember him.

Chinese Myth and Reality

The Economic Development of Communist China 1949-1958

By T. J. Hughes and D. E. T. Luard.
Published for Royal Institute of International Affairs by *Oxford University Press.* 231 pages. 22s. 6d.

A MAJOR difficulty in assessing the pace of economic development of Communist China arises through doubts about the accuracy of the official statistics. These doubts, as they affect current statistics, have not been dispelled by the corrections that the Government has felt obliged to make in the past, and they have recently been confirmed by the critical study to which the figures were subjected by Choh-Ming Li in his "Economic Development of Communist China." The present authors are obviously under no illusions. They provide an abundance of figures; but they confess that they have had no means of verifying them, and having presented some impressive evidence of progress, they are inclined to sweep it aside with a comment of devastating scepticism. For example, after quoting the official claims made for the Great Leap Forward in industrial production in 1958 (when the output of machine tools is said to have been three times, and that of coal and steel twice, the output of 1957), they add blandly:

> Many of these claims are extremely difficult to credit. There are, indeed, some signs that during 1958 the statistical procedures employed in China underwent a significant relaxation.

This book, however, contains more than a collection of statistical myths. The authors have provided an informative account of the various stages in the development of China's present economic system. All the chief aspects of policy and administration are described—the changing planning techniques, the treatment of private enterprise, the location of industry, the organisation of labour, Soviet aid, foreign trade and the reorganisation of agriculture. The chapters on this last topic are the most interesting in the book, for they bring out clearly the skill and ruthlessness with which the Government moved from a policy of fostering peasant proprietorship and of re-dividing the land in the interests of the poorer peasants, through various stages of co-operative organisation, to thoroughgoing agricultural collectivism. One of the chief impressions given of the regime is of its

The Observer
AND J. L. GARVIN
1908-1914
A Study in a Great Editorship
ALFRED M. GOLLIN *Through The Observer,* Garvin wielded massive political influence. This history of the paper in the years preceding the first world war throws new light on the politics of the time. Its 'characters' include Asquith, Balfour, Carson, Joseph and Austen Chamberlain, Churchill, Fisher, Grey, Bonar Law, Lloyd George, Milner, F. E. Smith. The author has drawn upon a wealth of previously unpublished papers.

readiness to experiment, its willingness to shift from one expedient to another as circumstances dictate:

> It seems that . . . the Chinese Government, rather than determining their policies in order to conform with ideological precept, set up the new social forms in response to immediate practical requirements, and only later devised the ideological arguments to justify them.

The authors show that, despite all that has been done to bring order to a country that for forty years had suffered continuously from civil or foreign war, and despite the economic progress so far achieved, China has a long path to tread before it can escape from the miseries of Asian poverty. Its ambitious aim is to reach the present absolute level of British industrial production by 1973; this is the ideal prospect of a country with a population twelve times that of the United Kingdom and still growing at a formidable rate.

Guide to America's Elections

Polls Apart

By Denys Smith.
Cohen and West. 160 pages. 13s. 6d.

THE American and the British languages are sufficiently similar to trap the unwary, but it is generally acknowledged that the American political system is an almost insoluble mystery to the uninitiated. Mr Smith's brief and timely book has the great virtue for British readers that he compares American electoral ways at each stage with British parliamentary practice. It is also as lively as one would expect from a journalist as experienced as Mr Smith (he is the Washington correspondent of the *Daily Telegraph*). By not taking too narrow a view of electoral mechanics he manages to introduce a great deal of useful history and background, about the trade union movement for example. Inevitably some of this material has a rather potted air and some inaccuracies have crept in: Wilson was first elected President in 1912, not 1916, and it is not true that organised labour as a body does not endorse presidential candidates.

What is more serious is that in his efforts to be strictly non-partisan Mr Smith is sometimes misleadingly bland; the "modern Republicans" are hardly as influential as he suggests. Finally he exhibits a rather surprising insensitivity at times. All he can find to say about that great milestone of human rights—the Supreme Court's ruling on racial desegregation in the schools—is that it overturned judicial precedents of many years' standing, and restored emotionalism to the civil rights issue, from which it had been vanishing. The same objection can be taken to the cynical remark that "Fortunately for the rest of the world the United States vigorously puts colonial principles into practice. She has picked up 'the white man's burden' and rechristened it 'mutual aid.'"

Editorial Overmatter

Critic's London Diary

By Kingsley Martin.
Secker and Warburg. 325 pages. 30s.

THE envy of every weekly editor for a generation has been the sheer readability of the *New Statesman and Nation*; for this the personal pen and editorial blue pencil of Mr Kingsley Martin have been responsible. Critic's Diary, the oldest and best weekly column in the British press, has always been Mr Martin's "overflow" from the "didactic leading articles and editorial comments" in which, week in and week out for thirty years, he has so famously wrestled with himself, socialist against liberal, pacifist against militant radical—Kingsley against Martin (as someone once said)—to the great boon and success of his paper.

Mr Martin combines the two first gifts of a journalist—a wide and restless curiosity and the art of writing always with effect and simply—with a delight in thinking aloud on anything that comes his way. Here in this modest sample from the steady spate of readable words in Critic's Diary is a model for the columnists and gossips: how to seem always knowing without winking or nodding, preening or screaming; how to seem always civilised and fair without ever really waiving prejudice and without laying down the law (that was left for the didactic leaders). The only pity is that the sample has been arranged under subject headings; this makes the sentimental bits, for instance, and the marginal scribblings stick out too much. In real life Critic comes to us every week with a grasshopper's gait jumping from unlike to unlike with his own special sleight of pen.

Dearest of Wives

Mrs Fitzherbert

By Anita Leslie.
Hutchinson. 240 pages. 25s.

MRS FITZHERBERT glides in and out of the textbooks, little more than a romantic rumour brightening parliamentary discussion of the Prince of Wales's debts. Caroline of Brunswick gets more attention; for even the most innocent examinee has to learn that George made two parliamentary attempts to discard her. Yet Maria Fitzherbert put up with him, on and off, for twenty-four years; whereas his married life with Caroline began with his appeal for brandy when he first saw her, and ended, for practical purposes, with his alcoholic collapse on their wedding night.

Poor Caroline had no choice: she was detailed for a dynastic duty. But Mrs Fitzherbert's acceptance of George, described earlier by his tutor as likely to become the most polished gentleman or the most accomplished blackguard in Europe, is intelligible only in the light of her judgment many years later—"he liked to excite compassion . . . always wished everyone to think him dangerously ill, when little was the matter with him." She spoke from experience; for in 1784 she had agreed to a betrothal, solemnised with a ring borrowed from the irresponsible Georgiana Devonshire, only because he had stabbed himself, dramatically enough to draw blood; and although she fled abroad at once, relays of couriers pursued her with threats of further suicide. Convinced that he would never leave her in peace, and addressed in a forty-page love-letter as "dearest of wives," this attractive young widowed daughter of an ancient Roman Catholic family entered into a secret Anglican marriage—ecclesiastically valid for her, but prohibited for him by the Royal Marriage Act of 1772 and the anti-Catholic Act of Settlement of 1701.

But marriage calmed her conscience, though she maintained a separate establishment to satisfy convention: this, added to the magnificence of their joint entertainments and the Prince's exotic architectural experiments, greatly increased his debts. His attempt to get "public assistance" led to parliamentary debates in which Fox, misled by him, denied the marriage story but failed to win financial sympathy—and George had to restore confidence in his future by wedding a protestant princess and acquiring an heir. But after Princess Charlotte's birth in 1796, he curtly dismissed Caroline and returned to Maria, preceded by a warm front of lachrymose self-pity and a will in her favour as long as his love-letters and similar in tone.

Their reunion in 1800 was celebrated by a public wedding breakfast. The years that followed were undoubtedly happy—partly because she discouraged his excessive eating and drinking, though not his costly efforts to improve the look of Brighton. But her position was undermined by the jealous ambition of Lady Hertford, his mistress from 1808, and rendered untenable after 1810 by the attitude of the Ministers on whom as Regent he had to depend. Publicly slighted by him, she made, in a letter as plain spoken as it was dignified, "her final curtsey to the gentleman who had sworn to love her into eternity." They never spoke again; they cut each other in the grand manner when they unavoidably met in public.

Nevertheless occasional letters passed; she had difficulty in holding him to his financial undertakings. Her ward, Minney Seymour, remained a link; "Prinny's" feeling for her was almost paternal, and Miss Leslie thinks he may have been her father. She has little doubt that Maryanne Smythe, ostensibly Maria's niece, was their daughter. But Maria left few clues. Her bonfire of correspondence when she left George endangered her house; and on her death in 1837 her executors destroyed anything they thought compromising. Fortunately they missed a large box, inherited by Minney's daughter, Miss Leslie's great-grandmother; though even she mutilated its contents out of deference to Queen Victoria's distaste for the subject. But enough remained in that box and in others to test Miss Leslie's skill as a biographer; and she emerges triumphantly. So does Mrs Fitzherbert. She was a very much better partner than George deserved. Possibly, beneath his grossly self-indulgent egotism, he had always realised this; for he died with her last letter under his pillow and her miniature round his neck.

Following the Clue

English Genealogy

By Anthony Richard Wagner.
Oxford University Press. 397 pages. 55s.

THE trouble about genealogy is that it is hardly a subject. It is a passion and a technique. A large, and perhaps a growing, part of the educated world is at least ready to take hold of a twig or twinethread to uphold the past of their own family; and there are professional experts, among whom Dr Wagner, Richmond Herald, is among the foremost, and the most scholarly, to assist them. The technique is that of using records and other evidence to work out particular cases, and this particularity is the mark of the art. There are no professors of genealogy, since it is not a single discipline: genealogists are either amateurs like bird-watchers, at their best when following a single line, or students of history, sociology or eugenics, to whom it is a subsidiary technique, or professionals who have the merits and defects of that status, among which are a strong sense of competition, which keeps them on their toes, and a natural reluctance to disclose all the tricks of their trade.

Dr Wagner is a bold man to choose so vague, diverse and undulating a subject; his book is inevitably rather scrappy, but no one could make a better job of it. He starts with the origins of English families in the middle ages, a highly technical and difficult section. Then comes a section on the growth, decline and mobility of various classes, excellently done and illustrated from his own genealogical material, but depending for the most part on secondary sources. Then a section on the rise and fall of families and on immigrants into this country (Dr Wagner deals throughout with England in the strict sense: the Welsh and the Scots in England are immigrants) and emigrants from it. This section is mostly illustrative, and demonstrates one clear gap: no adequate work seems to have been done by statisticians or actuaries on the probability of names or families surviving. The last section is a most entertaining account of the development of genealogical technique; and here, on his home ground, Dr Wagner is at his best.

Those who regard this as a dry-as-dust subject will hardly be converted by Dr Wagner; but the many who see some glamour in it will find this an admirable bedside book.

Are We Persuaded?

Persuasion

By Herbert I. Abelson.
Crosby Lockwood. 127 pages. 27s.

IN little more than a hundred sparsely covered pages Dr Abelson has provided the British reader with a comprehensive, lucid and up-to-date account of the best of the research work carried out by American social psychologists into the determinants of effective persuasion in propaganda, politics and advertising. The five main chapters follow a constant form of presentation: a list of four or five questions; the answer to each question is then given; each answer is followed by the findings of relevant research studies; and each set of findings is rounded off with a discussion that brings together the implications of the research material and where appropriate indicates its weaknesses.

The questions asked go right to the heart of the matter. For example: Are more people persuaded by hearing both sides of an argument or one side only? Do you tell your audience what to think, or do you present the evidence but let them draw their own conclusions? How important are such groups as neighbours, family, fellow workers in moulding opinions? Does repeating a message make it more effective? Is opinion change at its highest point right after the persuasive communication has ended? What characteristics of people make them more easily influenced by propaganda? Does a man have to believe in the persuader before he believes in his message? Some of the research findings are likely to surprise those of our native propagandists who for so long have been content to accept as infallible the myths originated more than a generation ago by the practitioners of psychological warfare and by the colourful forerunners of contemporary advertising.

The final chapter discusses briefly, but with illumination, the increasingly familiar experience that experimental research (using para-laboratory methods) usually indicates larger and more clear-cut attitude and opinion changes than are found by the use of mass sample surveys.

Lastly, there is an excellent bibliography that includes references to the very useful journal articles by Hovland and James and their colleagues at Yale.

Differences in language and customs, however small or subtle, can be important to people in Britain doing business with America.

As a U.S. bank with branches in London, Chase Manhattan knows the differences and similarities, can do much to make your dealings with the States more pleasant and more profitable. Chase Manhattan knows, too, the differences in customs and trade practices *within* the states... for its network of correspondent banks is the largest in America.

In fact, almost anywhere you do business, Chase Manhattan's network of more than 51,000 correspondent banks and branches around the world can get up-to-the-minute information for you, and provide you with every type of modern banking service—promptly, efficiently, and on a personal, *localized* basis that practically puts you on-the-scene yourself.

Why don't you talk to the people at Chase Manhattan... in either of the London branches.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Patchwork at Foggy Bottom

WASHINGTON, DC.

If the State Department wants a substitute for the too-aggressive eagles which Congressmen do not consider suitable for its new office building, the obvious alternative decoration is a statue of Sisyphus. But Sisyphus only had to roll his stone towards one summit; it now looks as if the department, which has spent the last half-year pushing its ideas on Berlin manfully uphill against the gravitational pull of Dr Adenauer, will have to go on doing so even after next month's conference in Paris. It is generally conceded in Washington that the most that is likely to happen on the Paris summit is that the question of Berlin will be dropped back into the laps of the foreign ministers, in the hope that some kind of agreement about the city's future can be signed on another summit next year. Thus the British aim of coming to a negotiated settlement quickly, and the German aim of not coming to one at all, have been reconciled in a manner typical of the State Department under Mr Christian Herter. The objective—an interim agreement defining western rights in Berlin—remains the same, but it now lies on top of the next range of mountains.

This does not necessarily imply any inconsistency on the Americans' part. The inhabitants of Foggy Bottom, the State Department's home, have always made it clear that the kind of interim agreement which they wanted was one in which the West would have to make only a minimal number of concessions. The widespread belief that Mr Khrushchev would go to some lengths to avoid having to sign a separate peace with the East Germans has encouraged the hope that he might eventually agree to swallow the meagre concessions at which Mr Gromyko sniffed so disdainfully last summer. But it is now acknowledged that there are risks in putting a man as impetuous as Mr Khrushchev into such a dilemma. He clearly went home from America in the autumn convinced that President Eisenhower had agreed to a compromise over Berlin. If he now concludes that the West is trying to evade this undertaking, he may invoke the clause agreed at Camp David which said that negotiations could not go on "indefinitely," call in his treaty draftsmen, and damn the consequences. After his speech at Baku on Monday, neither the State Department nor the experts on the Senate's Foreign Relations Committee seem to feel entirely easy about this possibility. It is fair to conclude that the Department's deep-freeze contains some extra tit-bits designed to make an interim agreement more appetising to Mr Khrushchev.

The same pattern can be detected in the Administration's current difficulties over a ban on nuclear tests. Once again, having set out to meet the Russians half-way, the State Department is under considerable pressure from those who want it to edge back to where it started from. Ever since Mr Macmillan persuaded the President to accept the idea of a temporary moratorium on small underground tests, even though the moratorium could not be policed, the critics—notably Mr Arthur Krock in the *New York Times*—have directed a brisk fire against the proposal. Last week the Joint Atomic Energy Committee of Congress summoned a procession of scientists to testify (in an awe-inspiring variety of accents) that big underground explosions, let alone little ones, could be muffled so successfully in artificial caverns that the Russians could, if they chose, cheat their way to nuclear superiority.

Fortunately for those who believe that the seismographers can find ways of discovering what is going on inside these caverns, and that the risk of the Russians' cheating is small enough to be acceptable, a treaty on nuclear testing will not have to be approved by the atomic energy group. It will go to the Senate by way of the Foreign Relations Committee, all but three or four of whose members are thought to be sympathetic to the State Department's policy. But the opposition of the nuclear experts in Congress will undoubtedly give new heart to the recalcitrants in the Administration who want either a fool-proof treaty or no treaty at all, and make it more difficult to win the majority of two-thirds in the Senate which is required for ratification.

These difficulties are easier to understand in the light of the very special problems which have faced Mr Herter in the year of office which he has just completed. He has had the task of supervising the major change in American foreign policy which Mr Eisenhower inaugurated last summer when he decided to negotiate with Mr Khrushchev. This task had to be shouldered under the coldly sceptical gaze of the dissidents, who included, in addition to Mr Dean Acheson and other Democratic survivors of the *ancien régime*, a major segment of the Administration and—to begin with, at any rate—part of Mr Herter's own department. To complicate matters further, the change in course was decided upon so suddenly and so late in the Administration's life that neither the President nor Mr Herter has had an opportunity to work out all its implications. The result is that American foreign policy is now a patchwork of old and new pieces, sometimes clashing in design and colour, the durability of which is not enhanced by the fingers which can be seen plucking at the stitches.

One of the most noticeable contrasts is the one between the two halves of policy towards Europe. It is odd to see the United States stretching out one hand towards a compromise with Mr Khrushchev while using the other hand to strengthen those powers which are most suspicious of such a compromise. The Americans' enthusiasm for marrying off France and Germany, which had its origin in the period when it was thought that the only way to deal with the Russians was to bare a united set of teeth in their face, remains as strong as ever even though a different approach to the Soviet Union is now being tried.

The part of best man to France and Germany involves other complications. It has led, paradoxically, to a weakening of the military links of the North Atlantic Treaty Organisation, the other great bequest that Mr Herter inherited from his predecessors. It also consorts oddly with the adventurous support for liberalism in Africa and Asia which is one of Mr Herter's most distinctive contributions to the new foreign policy, and which is currently making the Korean President Rhee look nostalgically at his mementoes of Mr Dulles. Dr Adenauer is unlikely to be any more enthusiastic about the present approach than was General de Gaulle when it led the Americans to withhold their support from his Algerian policy in the United Nations last year. To these observations, the State Department's gallant reply is that it prefers strong allies, even if they are sometimes strong in dissent, to feeble yes-men.

There is another inconsistency, to which Mr Joseph Alsop has perceptively drawn attention, between the State Department's response to social revolutions in Latin America and to similar phenomena in the Middle East. So far Mr Herter and his subordinate for inter-American affairs, Mr Roy Rubottom, have managed to resist the demands of those who want the United States to take punitive action against Dr Castro's regime in Cuba. But this is one of those fields in which pockets of embattled resistance to Mr Herter's policy can still be discerned within his own department; the price of his victory, which may not be a permanent one, is his toleration of a petty slanging-match with Dr Castro. All the charges which the United States has levelled recently against the Cuban government in public—its discouragement of newspaper criticism, its failure to hold elections, its rough and ready way with land reform—could equally well be levelled against Messrs Nasser or Qasim. In the Middle East, after some early misgivings, the Americans have steeled themselves to wait in silent forbearance for better days; towards Cuba they have adopted an ineffective mixture of the waiting without the silence.

This can be attributed in part to the influence in Congress of the great business corporations whose interests have been damaged in Cuba. But it also has its roots in the ancient idea, never quite removed by the "good neighbour" approach of the nineteen-thirties, that Latin America is somehow the private preserve of the United States. This strand of tradition, intertwined with the newer recognition that there is no part of the world free from the competition of communism, has produced a technique precisely the opposite of President Theodore Roosevelt's famous prescription: the United States is speaking loudly while sitting on the big stick. To judge from Mr Herter's performance, he would have sought to amend this in time. The pity is that probably he came to office too late to disentangle the old from the new and to renovate the whole fabric of his country's foreign policy.

Democrats at Disneyland

With the spring Democrats have been bursting out all over. Senators Kennedy and Humphrey are arguing hard for the favours of Democratic voters in West Virginia. Senator Symington, the third declared contender for the presidential nomination, is busy demonstrating that he is interested in social welfare and agriculture as well as in defence. Senator Lyndon Baines Johnson, who refuses to admit that he is a candidate for fear of weakening his grip on the Senate, has been touring the mountain states with the slogan "LBJ All the Way" and a retinue of Ladies for Lyndon in smart red-white-and-blue uniforms. Finally, another promising but undeclared candidate, Mr Adlai Stevenson, is back on the political stage with fresh impressiveness after his recent rustication in Latin America.

Senator Kennedy, however, has the advantage that plans for the nominating convention itself are being made along lines as favourable to him as can be managed by his friend, Mr Paul Butler, the chairman of the Democratic National Committee. Last week the arrangements sub-committee met in Los Angeles to study how to find beds for 7,000 delegates and reporters, and their friends and families, on July 11th, how to get them to the sports arena where the convention will be held and how to ensure that they will not be suffocated when they get there. The committee members can hardly be blamed for relaxing at Mr Walt Disney's amusement park even though they did not find enough time—or perhaps enough agreement—to appoint either the convention chairman or the keynote speaker.

However, the third key post, that of chairman of the platform committee, was filled with Representative Chester Bowles of Connecticut, Senator Kennedy's adviser on foreign affairs, a well-known, popular and constructive liberal. He is also the uncooperative presidential favourite of some influential Democrats. His chance of the nomination, almost non-existent at present, will not be hurt by the hearings which he will now be holding all over the country to determine what should go into the platform on which the Democratic nominee will, in theory, be fighting his presidential campaign. If that candidate is Senator Kennedy, then the platform may be one on which he really can fight; Mr Bowles will certainly do his best to see that it is.

In particular Mr Bowles's draft is likely to contain a fairly strong section on civil rights for Negroes and this may mean a bitter argument at the convention itself. This in turn almost certainly means that the credentials committee will be kept busy, which is perhaps why it is to have two chairmen for the first time. For the defence of reactionary southern states against the possibility of a liberal presidential candidate and a liberal platform is to send delegates to the convention who may refuse to support the choice of the Democratic majority when the election comes. Mr Butler has already invited loyal Democrats in states where this is done to send rival delegations to Los Angeles—and the credentials committee will have to choose between them.

Capital in a Spin

There is a tendency in Washington to lay part of the blame for the plight of Capital Airlines on the unprofitability of its fleet of Viscount aircraft and on the impatience of the Vickers-Armstrongs company to be paid for them. But no one doubts that bad management of the airline itself is the main trouble. To remedy this is the chief purpose of both the Civil Aeronautics Board and of Vickers; together they put Capital into its present slow, but possibly final, spin, the one by refusing to recommend an immediate subsidy, the other by opening foreclosure proceedings on the airline's equipment. Vickers wants an official receiver to run the airline; the CAB wants to decide, after what will certainly be lengthy hearings, whether Capital should be married to some other airline—but there will be no suitors under present conditions—whether its operations should be suspended wholly or partially, or whether some or all of its routes should be transferred to other operators.

Certainly there are other airlines which would like some of these routes. The fifth largest airline in the country, Capital has 7,000 miles of them connecting 77 cities, all in the east or midwest. But they are nearly all short, unconnected runs and cannot be served economically by the large, fast, jet aircraft which passengers now prefer and which competing airlines, with long-distance services as well, can offer between the most profitable cities on Capital's routes—Washington-Chicago, Chicago-New York, etc. This was why Capital bought Viscounts originally, but in recent months they have been flying only half full in spite of their small size. Most airlines have been doing poorly this winter, as the result of bad weather and worse crashes, but Capital lost $5.4 million in the first quarter of 1960. This finally frustrated the company's hopes both of carrying through a financial reorganisation and of buying up-to-date aircraft—and so Vickers went to court to collect its $33.8 million.

The managers of Capital claim that the fault is the CAB's, since it does not allow them to abandon money-losing services or to raise fares. The CAB replies that it was Capital which asked for these routes in the first place, that a few years ago it was expanding faster than other airlines—too fast, perhaps—and that then its return on its investment was also above average. Yet Capital is the only airline which is now pleading for a subsidy. It is suggested that the company's debt-carrying arrangements have been extravagant and its passenger relations poor. Particularly criticised is its

These are some of the contributions from one of the fastest developing countries in the world, yielding its wealth from mines, planned agriculture and the manufacture of indigenous raw materials.

Such are the first fruits of the partnership between the developed skills of the European and the African eager to learn, surely one of the most exciting sociological adventures the world has ever known. And, the pace of development quickens as the number of educated Africans increases.

Indeed, the contribution of the Federation of Rhodesia and Nyasaland to your well-being has only just begun.

LIFE'S GETTING SIMPLER EVERY DAY...

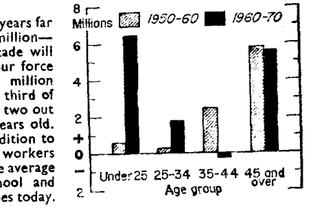
Every discovery makes life simpler for somebody. I.C.I.'s discovery of polythene, for example, has made life easier for housewives by providing them with light, strong, colourful 'Alkathene' kitchenware — from beakers and baby-baths to baskets and brooms. 'Alkathene' has also laid the bogey of the winter "freeze-up", for domestic cold-water pipes of 'Alkathene', instead of bursting, simply expand. In the form of packaging film, 'Alkathene' is protecting and preserving foodstuffs, keeping them field- or factory-fresh. Discovery — and development — are I.C.I.'s business. In spending £15 million a year on the search for and development of labour-saving materials like 'Alkathene', I.C.I. is doing its best to iron out some of life's complications.

IMPERIAL CHEMICAL INDUSTRIES LTD., LONDON, S.W.1

ICI

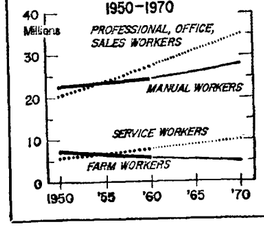
refusal to provide more than a small proportion of the low-cost and very popular coach services. This certainly seems to be one reason why it failed to make money on the route into Florida from northern industrial cities which it was given in 1958 in answer to its plea for a profitable long haul. It is not surprising that the CAB feels that an investigation and probably a reorganisation must come before Congress can be asked to subsidise Capital.

No Flag for Panama



PRESIDENT EISENHOWER'S recent announcement of a programme for improving relations between the United States and Panama was presumably timed to check the anti-American demonstrations expected during the first week in May; this begins with Labour Day and ends with a hotly-contested presidential election and during it riot-prone students return to college. But it is doubtful whether the programme will halt what the Panamanian Ambassador has called the "crucial" deterioration in relations between the two countries. For it contains only economic benefits and what the Panamanians want is the purely psychological benefit of being allowed to fly their flag over the Canal Zone as a visible symbol of their titular sovereignty in an area which the United States controls by treaty.

Most of the President's new programme consists in fact of concessions which a modern welfare state could hardly deny to its employees: increases in pay and pensions and better houses for Panamanian workers in the zone and more opportunities for them to train for skilled trades, all of which will put them on a footing more nearly equal that of their prosperous American neighbours. More and cheaper water will also be provided for cities in the republic and American government agencies in the zone are being told to employ more Panamanians in jobs previously reserved for citizens of the United States. The American employees of these agencies, who have a strong lobby in Washington, will certainly object to this. Their objections also had to be overcome before other welcome concessions could be made recently to Panamanian businessmen. Under these the American authorities will no longer import luxury goods into the zone to sell to residents at duty-free prices and any essential goods imported from third countries will be bought through Panamanian suppliers.



MANPOWER IN THE 1960s

During the coming ten years far more workers—13.5 million—than in any previous decade will enter the American labour force which will contain 87 million people by 1970. Over a third of these will be women and two out of five will be over 45 years old. But nearly half of the addition to the labour force will be workers under 25, even though the average youth will stay at school and college longer than he does today.

CHANGES IN THE NUMBER OF WORKERS IN EACH AGE GROUP

EMPLOYMENT BY OCCUPATION 1950–1970

This extra education will be needed because the biggest increases in opportunities for employment will be in professional and technical jobs; the demand for engineers and scientists will be particularly great. There will be openings for more skilled craftsmen in the manual occupations but there will be little change in the number of unskilled jobs.

These estimates are taken from "Manpower, Challenge of the 1960s" published by the US Department of Labour.

It is the Army, which runs the Canal Zone, which opposes any showing of the Panamanian flag, arguing that this would encourage Panamanians to try to take over altogether the canal which they regard, with justification, as their country's greatest asset. To an outsider—and to President Eisenhower too, to judge from his press conferences—such an argument seems petty. But it is taken seriously enough in Congress for legislators to have made it clear—by stipulating, for example, that Canal Zone funds may not be used for flagpoles for Panamanian flags—that they must be consulted before any such attempt is made to conciliate the nationalists in Panama.

Black Workers and Red Faces

FROM A SPECIAL CORRESPONDENT

NEXT month will be held the first meeting of a new national Negro labour council, to be headed by Mr Philip Randolph, the distinguished president of the Brotherhood of Sleeping Car Porters; this is one of the smallest unions affiliated to the American Federation of Labour and Congress of Industrial Organisations, the joint body set up in 1955 when the two main trade union groups amalgamated. Thus an attack from inside the federation is being joined to the one from outside which has been conducted for more than two years by the National Association for the Advancement of Coloured People. The precise objectives of the new Negro labour group are not yet clear, nor is it certain how it will function. But its purpose is to exert pressure upon the leaders of the AFL-CIO and its affiliates so that Negroes will be given a better standing. However, there are some fears within the Negro community that the council may fall into the hands of men who are more interested in making jobs for themselves than in the rights of Negroes.

The formation of the council is only the most recent sign of deterioration in what were once fairly cordial relationships between the trade unions and the Negro community. Even though, over a period of many years, almost all the unions have got rid of any official restrictions on the admission of Negro members, coloured workers are still unofficially excluded from some unions and segregated from white workers in others, either in separate branches or in separate jobs. This is more true of the old AFL craft unions than of the industrial unions which were affiliated with the CIO before the merger of the two groups, but discriminatory practices against Negroes are to be found also in CIO unions.

An attempt to settle the problem of the status of the Negro worker was made at the time of the merger by the establishment of a civil rights department. But because the unions affiliated with the AFL-CIO have a high degree of autonomy, the department's only authority was its right to recommend action to the executive council of the federation if an affiliated union refused to meet the standards set by the federation's constitution. Ultimately, the only effective sanction available to the council in such cases is to expel the offending union, and this drastic step is most unlikely to be taken at present.

The recent speeding up in the struggle of Negroes for what they believe to be their rights was quickly reflected within the AFL-CIO, often to the great discomfiture of those of its leaders who genuinely believed in equality and who were conducting what they thought was as rapid a transformation as was practical. The NAACP grew impatient with what it described as purely "public relations" gestures on the part of the AFL-CIO which responded by attacking the "demagoguery" of the NAACP officials. The NAACP has charged, for example, that Negroes are kept in segregated branches by the Brotherhood of Railway Clerks, whose president is a member of the committee which runs the civil rights department. The same charge, in varying degrees, has

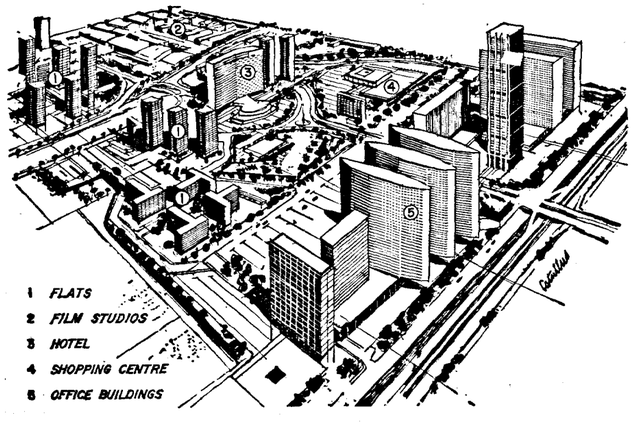
been levelled against a dozen other unions in the federation, many of them either in the building trades or in the railway industry. The NAACP has demanded that the AFL-CIO abolish all segregated branches, eliminate the keeping of separate rosters of seniority for the two races, force the admission of Negroes to those unions which exclude them, whether formally or informally, and co-operate with state and municipal committees which try to establish fair practices and eliminate discrimination in employment. The bitterness between officials of the two organisations has been exacerbated by inflammatory articles in the Negro press and something of a climax was reached at the AFL-CIO convention last autumn, when Mr Meany, the president of the federation, engaged in a violent public exchange with Mr Randolph.

Since then the NAACP has prepared an analysis of the discrimination against Negroes in apprenticeship schemes for training craftsmen which has, it is alleged, resulted in Negroes being under-represented in 32 skilled occupations and in their being forced mainly into unskilled, dirty and arduous jobs. Although the NAACP blames both business managements and the government as well as the unions for this situation, its much-publicised report has been interpreted as another of its attacks upon the AFL-CIO. At a recent meeting attended by both white and Negro representatives from a number of unions, the issue was debated by the labour secretary of the NAACP and a spokesman of the federation. Whatever the merits of the arguments presented, the reactions of listeners depended upon whether their skins were black or white. This sharp division along colour lines was most disturbing to those white union leaders who believe that the federation is moving as quickly as it can towards opening all unions to Negroes.

Movies Move Out

FROM A CORRESPONDENT IN LOS ANGELES

THE first of May is the day of decision for Century City, the $500 million real estate development planned on the 260 acres now occupied by the film studios of the Twentieth Century-Fox Company in West Los Angeles. This is the day on which Mr William Zeckendorf, one of America's biggest property tycoons, is due to make the second payment of $3.2 million on the total purchase price of $56 million. If the deal goes forward—and he has given definite assurances that it will—there will be further payments of $7 million every two years for ten years.



Twentieth Century-Fox must hope that no last minute hitch will develop since Century City would provide the company with a steady and substantial income over the next decade, apart from anything it may earn by making films. Moreover, its overhead costs will be greatly reduced by the sale of the property. The development will include a skyscraper hotel, office buildings, luxury flats, a shopping centre and 80 acres of film studios which Twentieth Century-Fox will rent back for its own use. Whatever happens the land seems sure to be developed in some such way before long because of its position hemmed in by the teeming suburbs of Los Angeles.

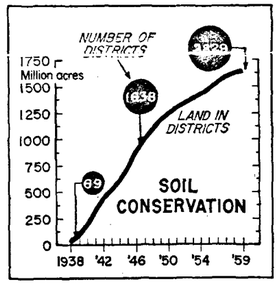
Twentieth Century-Fox is not the only company in Hollywood which now finds itself land-rich. When the moving-picture industry established itself in Los Angeles—to take advantage of the sunshine for outdoor filming—before and immediately after the first world war, it acquired property for studios in what were then rural areas. As the City of Los Angeles has expanded its limits, these properties have become priceless assets. Set in the middle of heavily built-up communities they are practically the only undeveloped land left, apart from a few golf courses and country clubs. Moreover, in this day of fewer movies, improved techniques for indoor filming and a preference for producing on location, film companies no longer need so much studio space. Beset by financial difficulties as a result of competition from television, rising costs and the legally enforced separation of film production and distribution, they are restoring their fortunes by making capital out of their land.

Some studio properties have been sold or leased to the rising television film producers. The Republic Pictures company, for example, no longer makes cinema films and its main activity is now in the real estate business. The Universal Pictures company sold its property in North Hollywood outright to the Music Corporation of America, the diversified giant of the American entertainment world, for $11.25 million and leased back enough studio space to continue making films there. Before these transactions, both Republic and Universal were losing money; since then they have been earning profits again.

Until recently, however, these transactions have all been within the entertainment business except where drilling rights have been granted to oil companies. Here again studio properties are practically the only accessible land for firms which want to try and tap new sources of petroleum within the city limits and some, at least, have actually yielded oil. Twentieth Century-Fox has been receiving royalties, amounting now to hundreds of thousands of dollars a year, on oil and natural gas production since 1955. Incidentally, oil and mineral rights are not included in the sale to Mr Zeckendorf's firm, Webb and Knapp, Inc.

When the deal for Century City was explained to the film company's shareholders, the management stated that its properties in West Los Angeles were "becoming too valuable to continue much longer to be used for motion picture studio purposes." For the time being, the company will go on making films on the 80 acres which it is leasing back but sooner or later it may pull right out, removing to the Fox ranch some miles north of Hollywood, and collecting another $5 million from Webb and Knapp to cover the cost. Undoubtedly, there is plenty of cheaper land suitable for film production to be found outside Hollywood, which in consequence may eventually find that the ghosts of old moving pictures are the only links it has left with the film industry.

It is still far too early to assess whether the new Negro labour council will in fact succeed in developing wider opportunities for Negro workers. Nevertheless its very existence will certainly make the AFL-CIO leaders even more aware of the pressing insistence of the Negroes on their full rights. Already, there are rumours of a shake-up within the civil rights department and Mr Meany announced a few weeks ago that, if the Washington branch of the electricians' union does not permit Negroes to do construction work in the capital, he himself will recruit non-union workers for the job. But he has not yet done so; nor has the government yet followed up the warning given recently to firms working on federal buildings that they would be violating the non-discrimination clause which is included in government contracts if they did not employ qualified Negroes, whether or not they were members of the building unions.



This situation in the national capital, where nearly half of the population is coloured, has become a symbol of the struggle between the two groups. The local electricians' union has thus far refused to permit Negroes to work on jobs in its jurisdiction; since it supplies the craftsmen in the Washington area, employers claim that they cannot employ Negroes for fear of a strike. Mr Meany and other officials of the AFL-CIO have done their best to get this attitude changed but without success and they have very little power to force the branch to admit Negroes. Their embarrassment became even greater when it was pointed out by the NAACP that only a handful of Negroes had worked on the building of the new AFL-CIO headquarters in Washington.

Conserving America

FROM A CORRESPONDENT IN COLORADO

WITH the end of April comes the twenty-fifth birthday of the Soil Conservation Service of the Department of Agriculture, one of those New Deal programmes which have knit themselves into the permanent fabric of American government and life. In the nineteen-thirties, depression, drought, dust storms and rivers clogged with rich topsoil moving inexorably out to sea, all combined to make Americans realise that farmers were mining and thus exhausting, instead of exploiting and developing, the resources on which so much of the country's past prosperity had depended. Thus conservation of the soil became a national policy and a legislative programme.

Now, although the task is far from finished, there are some 2,900 soil-conservation districts run under state law by the farmers who belong to them, with technical aid provided by the federal Soil Conservation Service. About 90 per cent of the country's privately-owned arable and forest land is covered by these districts which have some 2 million members—and a lively and aggressive national organisation of their own. About 1.3 million individual conservation plans have been prepared and are being applied to nearly 20 per cent of all these lands, but there are still many farms and woodlands which need such care and are not receiving it. Under the soil conservation programmes farmers are encouraged to plant trees and grass to prevent their topsoil blowing away in time of drought, to terrace the hillsides and to plough around (contour farming) instead of up and down them to keep the soil from being washed away by rain storms, to build drains and dams against floods, and to dig ponds and wells to improve water supplies.

All these individual schemes are in addition to other broader programmes, both those supervised by the SCS itself—for example, it has several hundred projects for flood control, water-storage and so on, covering small watersheds which may embrace from a few dozen to several thousand farms—and the special co-operative project for farmers and ranchers on the Great Plains. There, in the central belt between the mountains and the Mississippi River, the extraordinary climatic problems of high winds, extremes of heat and cold and long cycles of recurrent drought make farming especially risky. In 1956 when the last great drought ended, Congress authorised outlays of $150 million over a ten-year period to help farmers to "drought-proof" their land by following the usual conservation practices and especially by concentrating on grass, feed crops and livestock instead of wheat and "row-crops" which expose the soil to blowing. Then, too, the Forest Service, the Bureau of Land Management, the Bureau of Reclamation and other such federal agencies all have various programmes of their own all over the country. Finally, there are the Soil Bank and Conservation Reserve projects of the Department of Agriculture but these, although under the guise of conservation, have really been designed to take land out of production and so to reduce the agricultural surpluses.

It would seem that every acre of the United States must have been studied from a conservation angle by now, but this is far from being the case, partly because this mass of schemes is in some respects duplicatory, if not actually at cross purposes. One expert estimate is that another $20 billion would be required if America were to be completely conserved. And new problems keep cropping up—for example, the growing pollution of water by radioactive waste, pesticides and detergents. Two special Senate committees have been collecting for some time a formidable array of facts which make it clear that the task of cleaning up and conserving the natural resources of the continent has barely begun and that ever-increasing vigilance will be required if it is to be able to support the 100,000,000 additional Americans who will be wanting to live there by the year 2,000. Even by 1980, according to the SCS, another 250 million acres will be needed to meet the demand for farm products—at present yields an acre. Yields are, of course, constantly improving; nevertheless every acre will have to produce far more than at present and none must be allowed to wash or blow away if the coming millions are to be fed.

Business Undaunted

NEW YORK

BUSINESSMEN, it seems, are giving the American economy the benefit of the doubt. Undeterred by current misgivings as to its state of health, and the abrupt loss of confidence on Wall Street, they plan to spend this year a record $38 billion on new plant and equipment—a substantial increase, of 16 per cent, over the actual amount spent last year. These heartening facts were disclosed this week by the McGraw-Hill Department of Economics, which has been keeping tabs on plans for capital expenditure for the past thirteen years.

A part of this larger outlay represents, without doubt, a carry-forward from last year when the steel strike frustrated the intentions of some industrialists. This is clear from the fact that the iron and steel industry anticipates an increase of 58 per cent in capital spending this year and the motor industry one of 66 per cent against a figure of 26 per cent for manufacturing as a whole. At the same time it is interesting to note that, even with the steel strike, business spent slightly more in 1959 than it had planned to do—according to the finding of the McGraw-Hill survey of a

year ago. But while firms are contemplating a record level of capital investment, they are much more concerned with improving efficiency and with introducing new products than with expanding their facilities. While manufacturers intend to devote two-thirds of their total outlay to modernisation, they expect only a fairly modest increase—5 per cent—in plant capacity.

The McGraw-Hill survey was very timely this year and the results were awaited with considerable interest. Firms were asked their plans in late March and early April, when the disappointing performance of the economy in the first quarter of the year had had its full effect on business morale. Yet, instead of revising their 1960 plans downward, as might have been expected, businessmen were in a rather more expansive mood than they were last autumn when questioned on their intentions for this year. Moreover, the results of the latest McGraw-Hill survey compare favourably with those of a similar investigation conducted two months earlier by the Department of Commerce ; the former showed a 16 per cent increase for 1960 and the latter 14 per cent. In the past, these two surveys have not been strictly comparable, but this year the McGraw-Hill figures have undergone some changes to make this possible. Finally, past experience suggests that capital spending may well exceed stated intentions ; the surveys have tended to be conservative both on the upswing and on the downturn.

Dancing Out of Step?

In America when people think of dancing class they think of Mr Arthur Murray who has been teaching ballroom dancing for fifty years and has a weekly television programme so popular that other advertisers now sponsor it. Mr Murray and his wife own dance studios in New York and Miami Beach, with some 450 others licensed to use the Murray name and method in return for about 10 per cent of the receipts. This is said to bring Mr Murray about $45 million a year and the extent to which dancing has become big business is shown by the fact that some $2 million was spent on lessons last year in Washington, DC, alone. Admittedly few of the residents in the national capital live there permanently and a higher proportion than elsewhere are unmarried and/or lonely. They are therefore attracted particularly by a recreation which develops the personality and cultivates friends—according to the dancing salesmen—in addition to providing enjoyable exercise. It is interesting that nowadays there are more men than women taking dancing lessons ; in one Washington school 65 per cent of the pupils are male when not long ago 70 per cent were female.

But against this background and in such a competitive business—there are over 100 dance studios in the Washington area—various undesirable commercial practices seem to have developed. That, at least, is the contention of the Federal Trade Commission which is charging Mr Murray with allowing misleading and deceptive promotional schemes to be used throughout his organisation, in order to inveigle pupils on to the dance floor and then to keep them whirling so fast that they find themselves in the bankruptcy court before they recover their senses. Some have even, it seems, been giddy enough to sign up for more than one lifetime membership at $12,000 a time. Specifically the FTC alleges that people who come to collect free lessons which they have won by giving correct answers to telephone or television quizzes—called "decoy" or "bait" quizzes by the FTC—find that they are obliged to pay for several extra lessons, that the teacher spends the time pressing them to sign up for a whole course and that they are misled about the real cost of a course until they are committed to it. Mr Murray, while admitting that some of his affiliates may have stepped on an occasional toe in this way, maintains that the healthy state of his business, with 50 per cent of the new pupils recommended by the old ones, makes the FTC's accusations look ridiculous.

SHORTER NOTES

Only 311 of the 2,319 American newspaper publishers who were questioned bothered to reply to a survey conducted by Mr Edward Bernays on their views about which is the best daily newspaper in the country. But those who did reply put the *New York Times* first, the *St Louis Post-Dispatch* second and the *Christian Science Monitor* third, as they had been placed by a similar survey in 1952. This year the *Washington Post* ranked fourth instead of eighth and the *New York Herald Tribune* tenth instead of sixth. It is a little surprising that the excellent *Wall Street Journal* is not mentioned.

* * *

In 1959 the income of the average American family went up by 4 per cent in terms of dollars, to $6,520 and by 3 per cent in terms of purchasing power. The average annual increase over the past twelve years has been only 1¾ per cent. Nevertheless, 14 per cent of the 55,600,000 families in the country still had annual incomes of less than $2,000.

* * *

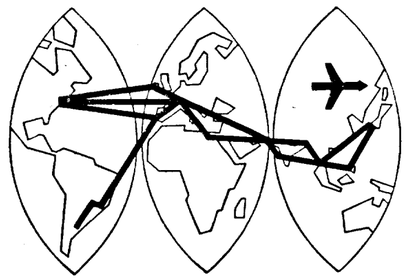
For the birds: one-ounce battery-operated radios, emitting a steady cry, are to be fitted to ruffed grouse to determine the movements of these game birds. The experiment is being financed by the National Science Foundation. Meanwhile, in Washington, DC, the pigeon population has fallen since the regulations were changed, last November, to allow property owners to destroy such pests. One commercial firm is charging clients $25 to $300 a month for roof-top traps.

* * *

The New York State Legislature has approved a Bill to permit foreign banks to open fully-fledged branches in the state and to accept deposits at them. Up to now they have been able only to operate agencies, which were not allowed to accept deposits. But this new privilege, which was strongly supported by the State Department, is confined to the banks of countries which extend similar rights to American banks. This excludes Canada, although Canadian banks in New York lead other foreign institutions in terms of their resources and activities.

* * *

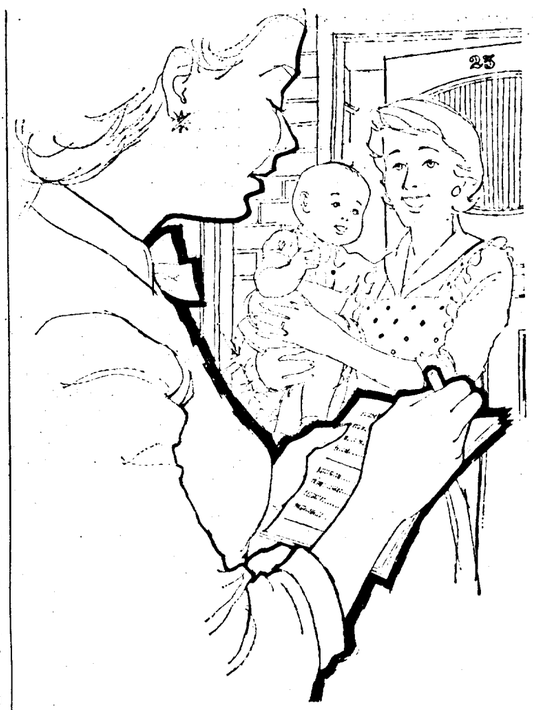
The last two regularly scheduled steam locomotives on a major American railway recently gave a farewell performance for the benefit of 2,500 saddened devotees. But, as with opera singers, one farewell leads to another ; so many more enthusiasts wanted a final ride that another trip had to be arranged.



SWISSAIR Jets to the Middle East

From July SWISSAIR Caravelles will fly from the U.K. to the Middle East, serving Ankara, Cairo, Istanbul and Tel Aviv. These Rolls-Royce powered 515 m.p.h. jetliners cut flying times to almost half.

Also frequent DC-6B services to Baghdad, Beirut, Cairo, Damascus, Dhahran, Istanbul and Teheran. All Caravelle and DC-6B services offer first and tourist class.



Whenever you fly Swissair you can rely on magnificent hospitality, cuisine and personal attention in the finest Swiss tradition.

See your Travel Agent.

THE WORLD OVERSEAS

A Saudi Revolution

BY OUR SPECIAL CORRESPONDENT

King Saud

Amir Faisal

KING SAUD of Saudi Arabia has chosen to join sides with the forces of revolution he feels he cannot beat. By doing so he is making a bid for the kind of popular support which the deposed monarchs of the Middle East never enjoyed and he is doing it against formidable opposition in his own family. His chief opponent is his brother, Amir Faisal, who is also his prime minister, foreign minister, minister of finance, minister of the interior, minister of commerce—and crown prince.

By the time old King Abd al-Aziz Ibn Saud died, in 1953, Saudis and foreigners alike had stopped asking what the tribes would do when the old man died. It was clear that the tribes were not in a position to do anything, but there was some question as to what Amir Faisal might be up to. He, too, did nothing and his supporters—the Hejazi merchants and those few Saudis who regarded themselves as liberals—said that he was biding his time. King Saud, they said, was sure to make a fool of himself sooner or later, and then Amir Faisal could take over and lead the country towards its rightful place among the nations of the world.

Two years ago King Saud obliged. He was caught trying to buy Syrian politicians who, after years of receiving Saudi money, ungratefully claimed that they were being hired to kill President Nasser and stop union with Egypt. Meanwhile the ample oil revenues of Saudi Arabia had been overspent on conspicuous waste. It was not true that all Saudis owned Cadillacs or that the government was years in debt to the oil company, but the treasury was empty and the country was headed for financial disaster.

More because King Saud had blackened their faces before the throne of Arab nationalism in Cairo than because of the financial crisis at home, a group of Saudi princelings then asked Amir Faisal to save the country and the family's position in it. At first he refused, but when he discovered they were proposing to elect one of themselves king in place of Saud he changed his mind and went to work. Since then the finances have been set straight—to the howls of the merchants—and the country has not been actively involved in the intricacies of Arab politics. From the beginning Amir Faisal has insisted—in public at least and perhaps too strongly for his own good—that King Saud was the real ruler of the country and that whatever happened was due to his wisdom and influence.

While the crown prince was tidying up the government's affairs at Riyadh, the king set out to win friends and influence the non-voting populace. The royal caravan trooped from one end of the country to the other handing out modest sums of money and a larger amount of good will. The distant oases were easily won over to the king, but the towns remained largely in Faisal's camp and, since the towns are far more important, there seemed little purpose to the king's efforts. Then, on January 23rd, press censorship was lifted by Amir Faisal. Saudis soon began to see in print the sort of things which formerly they hardly dared to speak about.

Among the first demands made in the free press was one for constitutional reform. It was suggested that the existing, powerless and appointed consultative council should be disbanded and a new one elected and given legislative powers "so the people may feel they are exercising their rights as other peoples do." Such a move, it was claimed, would promote stability in the country and increase the people's attachment to the throne. The sides were forming—these suggestions were coming from the king's men. Amir Faisal's supporters rushed to the defence of the old order. Elections, they said, would be premature and should not be held for at least ten years, when education and experience would have developed the necessary feelings of responsibility. It was easy enough for the other side to remind these conservatives that many African and Asian countries, some of them less advanced politically and socially than Saudi Arabia, already had elections, labour unions and other democratic institutions.

As things stand now, it is hard to believe that Saudi Arabia can ever get around to having a government with a cabinet responsible to an elected legislative body. It is hard to imagine a cabinet without princes as ministers, although the king is said to have agreed that this is what should eventually happen. In the struggle for power the king has struck a masterly blow by marshalling the forces of change on his side. Amir Faisal, manœuvred into the company of a few old reactionaries and bigoted religious leaders, cannot cry aloud for long against more popular sentiments. The whole herd of princelings, uncles, brothers and cousins is in complete confusion. One group, led by Amir Fahad ibn Abd al-Aziz, has cast its lot with Amir Faisal, another, led by Amir Talal ibn Abd el-Aziz, wavers from side to side in a desperate effort to save something from what it feels sure will be the ruins.

King Saud has managed to set the stage for change in Saudi Arabia. It remains to be seen how the drama develops. The greatest danger is that the movement will get out of hand. Once released, the forces of change may sweep everything before them and Saudi Arabia's revolution may become no more gradual than previous ones in the Arab world. If the king and those who are advising him can control it, then there is hope that it will continue to move smoothly towards a reasonable and attainable goal.

The Tunis Barometer Falls

FROM OUR PARIS CORRESPONDENT

PRESIDENT BOURGUIBA'S speeches are a good barometer of the Algerian political climate. When the weather is good and hopes of a peaceful settlement are high, the Tunisian president is full of praise for General de Gaulle and revives his old dream of a Maghreb federation linked with France. When the weather is foul and the needle settled on permanent war, he refers to threats of a French invasion of Tunisian territory and appeals for help to the outside world. To judge by President Bourguiba's pronouncement on Sunday the atmosphere must now be particularly stormy. Not only did he warn Paris that French settlers in Tunisia would be the first victims of a French military intrusion; he also concluded that the western world has proved incapable

of bringing the Algerian war to an end and that Tunisia must now revise its general policy to take this failure into account.

These words sound harsh coming from M. Bourguiba the "westerner." They must, however, be taken with a grain of salt. The warning to France was clearly intended to prevent frontier incidents. The warning to Washington was timed to coincide with General de Gaulle's visit in the hope that President Eisenhower would bring pressure to bear on him. Yet, when allowance is made for this and for oratorical emphasis, President Bourguiba has reason for his despondency.

No Tunisian leader can dissociate himself from the cause of the Algerian insurgents. This is not just because the Algerian troops on Tunisian soil—estimated at some 10,000—are said to be stronger than the Tunisian army. The real reason is that any Arab leader who now tries to disown the Algerian struggle would run the risk of being swept aside by the nationalist tide. M. Bourguiba could, and did, counsel moderation and advise the insurgents to come to terms with the French on the basis of self-determination. When General de Gaulle, however, told French officers in Algeria in February that the prospect was one of lasting war and that their main duty was to take away the arms the rebels had refused to lay down, the Tunisian leader had to change his line. He could not tell the insurgents to surrender.

SOME of the French officers in Algeria might be tempted to interpret the general's orders literally. There is no doubt that the Algerian insurgents do have weapons, camps and supply bases in Tunisia (as well as in Morocco). The electrified line on the French side of the frontier has made the crossing much more difficult; it has not stopped the Algerians altogether. To French officers, who deny the national and popular character of the rising and yet have proved unable to put it down in over five years of fighting, the existence of a sanctuary beyond their reach must look like the main cause of this failure. Not all of them share the notorious wish "to sleep in Bourguiba's bed with my boots on." Most of them, however, favour frequent and rapid attacks beyond the frontier. The French government has once again officially denied any intention of exercising the "right of pursuit." On the other hand, M. Messmer, the minister of defence, only recently invoked the "right of reprisals." Presumably there is a legal difference, but local military commanders are not always bothered by such niceties.

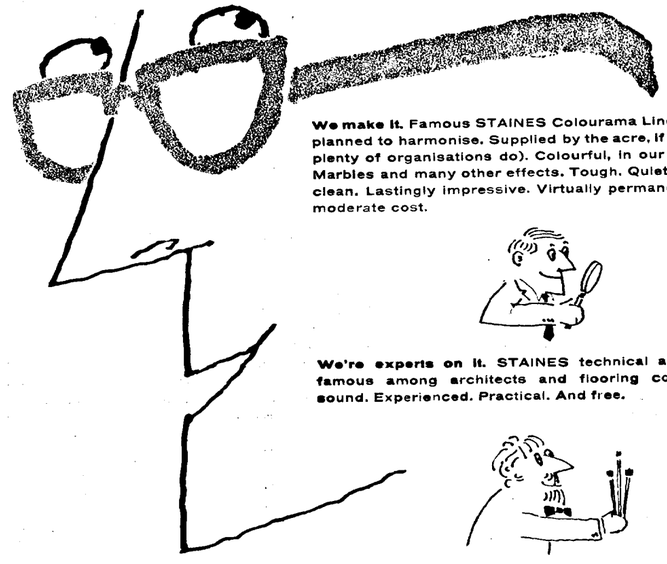
The leaders of the Algerian insurrection may well share the desire of French extremists to extend the conflict. Now that the chances of a negotiated solution seem to have vanished, their commanders must think in terms of military aid and the politicians must look for international backing. Earlier this month, the Algerian government-in-exile proclaimed that it welcomed volunteers, particularly technicians, whatever their country of origin. In the latest issue of *El Moudjahid* M. Ferhat Abbas writes ironically of American advice to the rebels "to get killed with western weapons rather than defend ourselves with eastern ones." A powerful Algerian delegation—headed by MM. Krim Belkacem, Boussouf and Ahmed Francis—will soon leave for Peking. Mr Khrushchev may hesitate to give help while he is still wooing France for other reasons. Mao Tse-tung would have no such scruples. And the uneasy way in which Mr Mikoyan answered questions on Algeria earlier this month in Baghdad suggests that Moscow could hardly veto any initiative Peking likes to take.

The time of illusions is over. President Bourguiba, like the Algerian moderates, must now admit that the pessimists were right and ponder anxiously over the consequences of continued war. If the Algerian struggle persists indefinitely the foundations of his foreign policy are likely to collapse. He had tied his fortune to the western block and opposed President Nasser's neutralism. Events may force him to change his tune. If the Algerians finally decide to play the Chinese card, it may then be too late to resort to American good offices. M. Bourguiba has uttered his warning because he fears this prospect. When the cheers for General de Gaulle die down, Washington will have to answer some pertinent, if awkward, questions about its North African policy. The State Department cannot run its gaullist and Arab horses in the same harness.

The prospect of a long war has consequences in France as well. The opponents of any negotiation with the Algerian rebels lay low for a time after the failure of the settlers' rising in Algiers in January. General de Gaulle armed himself with full powers from the Assembly. The government got rid of M. Soustelle, who had asked for indulgence toward the plotters. Then General de Gaulle made his trip to Algeria, hopes of negotiation dwindled, and the French extremists raised their heads again. On one point M. Soustelle agrees with the Moslem insurgents. He, too, believes that there is no alternative for Algeria but independence or integration into France (by which he means army rule). He considers that General de Gaulle's intermediate solution of home rule is, at best, an illusion and he has said so publicly in both France and America. The neo-gaullist UNR, after weeks of bargaining, has finally decided to exclude him from the party on the ground of disobedience to the general. The immediate effect will be the departure of a few deputies from the party, but more important is the fact that the supporters of "French Algeria" will now have a leader, should General de Gaulle try to take new steps towards a negotiated settlement. M. Soustelle is looking to the future—with one eye on the army.

One significant feature of the war has been that, despite communist strength, the national servicemen have gone to Algeria without much protest. After a brief period of troubles in 1956, the transfer of troops has worked smoothly. It seems, however, that in recent months the number of objectors has risen. Two weeklies—*L'Express* and *France Observateur*—that reported this phenomenon and tried to explain its causes were seized last week. An even greater threat to individual freedom is contained in a new decree extending the competence of military tribunals to all matters connected with Algerian affairs, going back to 1954. Journalists who have dared to raise such issues as torture will be under a permanent danger of military jurisdiction. The Algerian disease continues its infectious progress throughout the French political body.

Finnish Parties Dig In

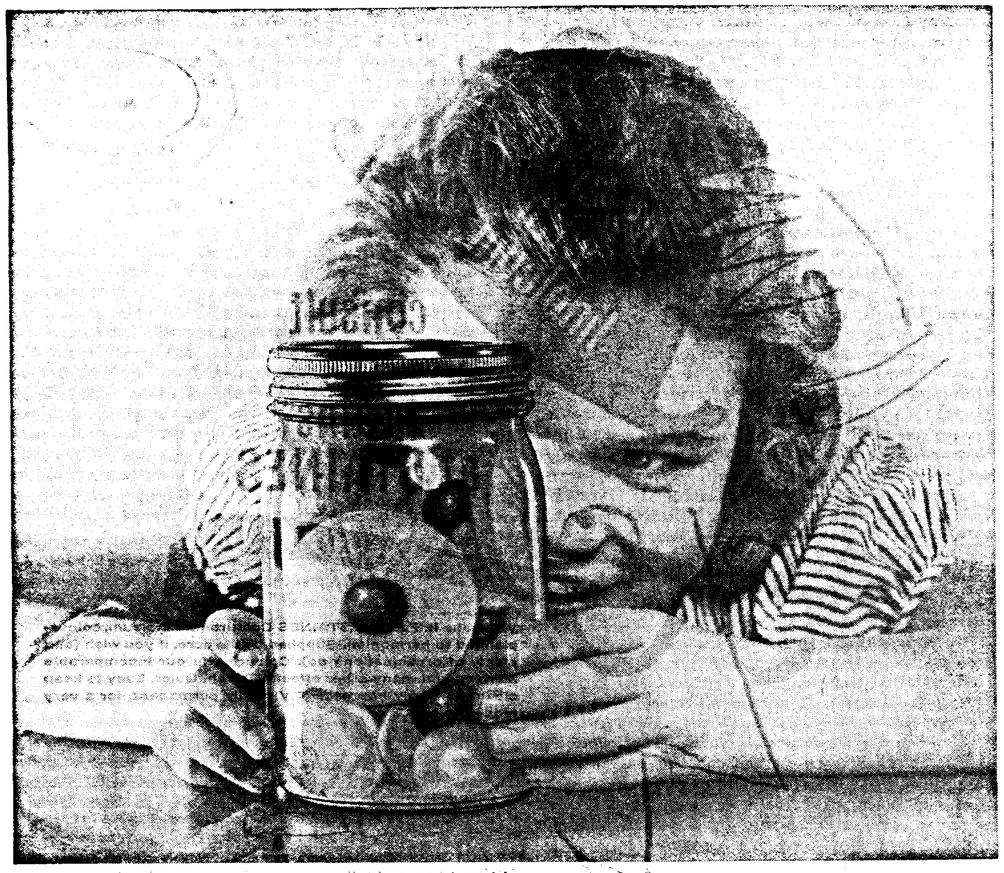


FROM A CORRESPONDENT

WHEN the Finnish parliament met after the Easter holidays, most members foresaw a lengthy postponement of the negotiations between the governing Agrarian party and the Social Democrats that had been widely hoped for. On Easter Sunday the Social Democratic convention had re-elected as party chairman the 79-year-old Dr Väinö Tanner, whom the Russians continue to regard as their foremost enemy in Finland and who, together with Mr Väinö Leskinen—also re-elected to the party executive—was singled out in a celebrated speech by Mr Khrushchev last year.

The Agrarian party press had made the mistake of urging the Social Democrats not to re-elect Dr Tanner, saying publicly that the election of some other chairman could make a coalition possible. This naturally annoyed the delegates at the convention, and the Agrarians' hopes of a change in the party leadership were disappointed. But the veteran chairman's re-election also betrayed a dangerous degree of disunity within the party. He had

consult the brains at STAINES



We make it. Famous STAINES Colourama Linoleum, colour-planned to harmonise. Supplied by the acre, if you wish (and plenty of organisations do). Colourful, in our incomparable Marbles and many other effects. Tough. Quiet. Easy to keep clean. Lastingly impressive. Virtually permanent, for a very moderate cost.

We're experts on it. STAINES technical advice is justly famous among architects and flooring contractors. It's sound. Experienced. Practical. And free.

We're artists in it. The STAINES Colourama team is young, keen. Humming with fresh, imaginative ideas. Ideas as bright, and as subtle, as the Colourama range itself (and that's the widest there is). Ideas right for today's decorating trends.

STAINES COLOURAMA LINOLEUM made by the Barry and Staines Group

You can see what you're getting in glass

She can tell at a glance (and you can, too) that the fruit in that jar will taste good.

Glass never affects what's in it. There's nothing to equal it for keeping good things at their best. It makes the purest, most hygienic containers of all — containers liked by the public, and so by manufacturers too.

Manufacturers go for glass

Independent research shows that shoppers prefer things in glass. No wonder manufacturers are packing more and more in it. They get the service they need from United Glass Ltd., who provide them with first-class containers backed by the research and design facilities of the United Glass Packaging Advisory Bureau. Come and see how we can help with *your* packaging.

announced in January that he meant to retire; but although it seemed high time for a younger man to fill the post, the convention, unable to agree on a successor, had to ask him to remain in office. The name of Mr Olavi Lindblom disappeared abruptly from the list of candidates, and in the end Dr Tanner's only public challenger was Mr Rafael Paasio, nominated by the small Swedish-speaking group in the party, which stuck to the instructions already given it at local meetings.

The present Agrarian minority government was regarded as a temporary one when it was formed in January, 1959. Its formation followed the crisis in Soviet-Finnish relations which ended with the resignation of the coalition headed by a Social Democrat, Mr Fagerholm. The new cabinet took as its task the regaining of the confidence of Finland's big, but sensitive, neighbour. Once this had been done, it was said, the broadening of the basis of the government could be discussed. But as soon as the inevitable difficult questions were brought forward, the parties preferred to withdraw from the conference room. Finally only the Agrarians and the Social Democrats were left, trying to surmount the insurmountable obstacles to co-operation raised by each in turn.

The Social Democrats openly resent the control of foreign policy, especially of relations with Russia, by the government party and in particular by President Kekkonen (who is himself an Agrarian), and the circle of those closest to him. It is equally obvious that the Agrarians are unwilling to form another coalition with the party led by Dr Tanner, fearing that the crisis of 1958-59 may be repeated whenever *Pravda* finds the activity of the present Social Democratic leaders irritating. Finland's need today is for political figures who can command widespread confidence both at home and abroad. The Social Democratic convention may have had this thought in mind when it elected as chairman of the party council—a post previously held by the party chairman—a 53-year-old lawyer, Dr Tauno Suontausta, of whom more may be heard in future. It also contributed to the growing debate about the next presidential election by expressing the view that the president of the republic should be directly elected, not chosen by 300 vote-

Making Money from Postage Stamps

BY A CORRESPONDENT

A NEW postage stamp normally takes slightly longer to produce than a baby, the process is nearly as complicated, and the cost about the same. But it is generally a more profitable investment. Stamps in fact are one of governments' best money spinners. This is true in all parts of the world, and nowhere truer than in the British Commonwealth.

A new issue of stamps starts life, of course, long before it reaches the printers, and there is often disagreement between the parents on family planning. Some parents like to have a new philatelic baby every year, to commemorate something or other, or simply to raise money. Others like to space their children on a more calculating and more conservative basis. The Colonial Office in particular exercises considerable restraint over its overseas territories in this respect in its efforts not to kill the goose that lays these golden eggs by over-production. Ghana has had almost as many new stamps in its three years of independence as the Gold Coast had in eighty years.

When a decision has been taken to have a new issue of stamps it still takes a long time to settle questions of motif and design. The designs of Colonial issues are in many cases done in London on the basis of ideas and photographs and sketches sent from abroad, but sometimes they are produced locally, by competitions or by the engagement of local artists. Nowadays colonial stamps are of varied and distinctive pictorial design, but this is a fairly recent development; up to the end of the reign of George V the majority used standard plates of the Sovereign's head. Such stereotyped issues were at least quick and cheap to produce. Cheapest and quickest of all, perhaps, was the first Gibraltar issue in 1885, when new stamps were run off from existing Bermuda plates and overprinted. These were on sale two weeks after they were ordered. The total cost was less than £50, and in six months the colony made a profit of £5,000.

New issues of stamps for colonial territories, and for many other countries as well, are handled by the Crown Agents, who usually put them out to tender among what are called "security printers"—firms that specialise in things like stamps and banknotes. The stamp business is very largely in the hands of four London firms: De la Rue and Company, Bradbury, Wilkinson and Company, Waterlow and Sons, and Harrison and Sons; the last-named started printing stamps only in 1928, and is thus a comparative newcomer.

Many methods have been used to print stamps in the last hundred years but nowadays they are mostly produced either by the recess or the photogravure process. The letterpress method is now rather passé, and less and less use is being made of lithography. Photogravure is by far the cheapest of these processes, and works out on an average at a capital cost of about £75 for each plate, or half the cost of the recess process. This covers the whole procedure of preparation from the bromides and trial drawings to the colour proofs and the plates from which the stamps are finally printed.

The cost of printing depends partly on the quantities required, partly on the number of colours used in the design. Average figures are 3s. 6d. a thousand for stamps of one colour to twice this amount for two colours, but they may vary from as little as ninepence a thousand where the numbers run into tens of millions to £2 a thousand for a small quantity of a multiple-coloured design. About 30 per cent has to be added to an average bill for the cost of the paper, and standard charges of 8d. a thousand are made for inspection and 5d. a thousand for numbering the sheets.

For a normal complete set of 12 to 14 values, the total cost of producing and printing an average first issue of (say) 15 million stamps is about £6,000. In the first year, even a medium-sized colony will reckon to sell about £100,000 worth of stamps, of which as much as a third may be taken by stamp dealers, who buy mainly direct from the Crown Agents in London. Thereafter sales to the trade and to philatelists tend to fall off and the revenue depends mainly on purchases of stamps for postal use.

As an example, the Gibraltar government has in six years made a net profit of well over £400,000 from its current issue of stamps. The initial outlay was less than £1,500, and the cost of the various printings has been about £10,000. Gibraltar is small, but it consumes as many postage stamps as colonial territories many hundred times its size.

Although the profit on stamps increases in a steep curve where the numbers sold run into tens and even hundreds of millions a year, as in Britain, it is in the very small islands of the colonial empire that it tends to play the largest part in the economy. Places like St Helena and the Seychelles probably depend as much on philatelists as on letter writers for their postal revenue, and in Tristan da Cunha a major part of the administration's budget comes from this source.

It can of course be overplayed. If a country produces too many stamps too often, even the voracious appetites of collectors and stamp dealers will become satiated and no one will buy them. But equally, as a source of revenue it can be underplayed, and there are people who think that in this respect the United Kingdom, by its refusal to issue pictorial stamps and more frequent commemorative sets, is the most negligent of all.

trading members of an electoral college. In Finland as elsewhere, presidential elections have come to affect political life for years before polling day. Although this will not come until 1962, some parties are expected to nominate their candidates this summer.

Dissolution of parliament and a fresh general election were also demanded by the Social Democratic delegates; but some observers doubt whether the party is itself really ready for the polls, while if both the communists and the conservatives gained seats in any early general elections, as seems likely, their consequently increased demands for more say in policy-making would merely heighten the present confusion. The Social Democrats now hold only 37 seats in a parliament of 200, and have no prospect of carrying through their own programme in the near future. Their wiser course for the months ahead might be to devote themselves to thinking out their future leadership, to encouraging the industrialisation that alone will win over thousands of small farmers who today vote either Agrarian or communist, and to wrestling with the problem of unity in the trade union movement, where the aligning of their left-wing dissidents with the communists presents them with their most dangerous and urgent problems.

Holland Warns the Seven

BY OUR SPECIAL CORRESPONDENT

WHEN things were going badly in the frustrating negotiations for a European free trade area, one of the standard comforts for British ministers was a talk with the Dutch. While no member of the European community of the Six has been so loyal to all the best things it stands for, none has been so consistently devoted to keeping it open to the outside world. Only the French have been as single-minded as the Dutch, but in an opposite sense. Many negotiations within the community have taken the form of a tussle between the two, with the Dutch struggling to preserve the vision of a larger Europe.

What the Dutch have to say today is, therefore, revealing; they are friends of the Seven speaking from the camp of the Six. It was because Holland is in a sense a bridgehead that the Dutch foreign minister, Mr Luns, was made chairman of the new twenty-nation committee set up in Paris in January to deal with the problems of European and world trade. Last week, in Paris, he had talks with ministers of the Seven, including Mr Maudling.

Mr Luns did not give them much good cheer. A year ago, in the period after the free trade area negotiations broke down, the Dutch were still anxious to persuade the British to join the common market. Since then they have had to lower their sights. Giving up, in a sense, the idea of a European solution which would merge the common market in something different and bigger, they have settled down to working within the common market and improving it as best they can. The Dutch still sympathise with the idea of British membership of the community as an ultimate objective, but they are not now looking that far ahead.

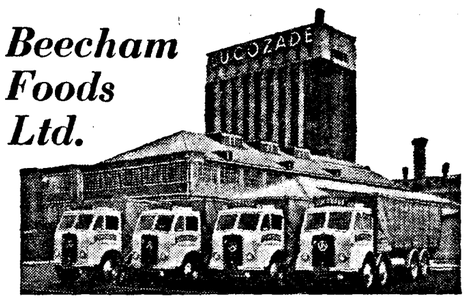
They have spent the winter battling over the common market's plan to speed up both its own internal tariff cuts and the establishment of the single common tariff on outside trade. As ardent supporters of Community Europe the Dutch could not oppose acceleration, just as in 1957 they could not reject the treaty of Rome itself; but they wanted to avoid all steps towards the common tariff that would raise tariffs against the outside world. By making use of the power of veto which the French have used so effectively in an opposite direction, they could extract a price for their acquiescence. That price was the commission's proposal to reduce the accelerated common tariff by 20 per cent.

The Dutch want some sort of negotiation with the Seven of the European Free Trade Association to start before the speed-up takes effect; they want the provisions for agriculture to be accelerated, too. But they attach most importance to this definite concession—the proposed 20 per cent cut in the outer tariff ring. For Holland, the main drawback of the common market was the rise which it meant in tariffs on trade from outside. This cut of a fifth—applied to raw materials and the controversial List "G" as well as to manufactures—would bring the common market tariff almost down to the level of the Benelux tariff as it is today.

The Dutch have therefore been trying to persuade the Seven not to do anything to jeopardise this precious concession. What they want from the Seven is not blanket proposals designed to slow down or prevent the speedy emergence of the common market, but a readiness to offer tariff concessions in order to help this to happen in a liberal way. The French have not accepted the proposed cut in the common outer tariff unconditionally; in their view, something must be offered in return by countries outside. The Dutch feel that M. Jeanneney, the French minister of industry, is a courageous liberal-minded man. But to push through the major slash in French tariffs which has been proposed he has to fight against officials and industrialists for whom any reduction in protection is anathema. Given an offer of a fair-sized cut in the high British industrial tariff, the Dutch feel that three things might be achieved: the proposed 20 per cent all-round cut could be consolidated; the application of some items in the common tariff—which involve tariff increases—might be delayed; and there might be special negotiations on further sensitive items. What they are afraid of is that the acceleration may take place in the end without any liberal mitigation at all.

The Dutch fears today are inspired by more than immediate tactical needs. By skilful manœuvre they have succeeded in moving the Six in a liberal direction. If the British respond, the Dutch feel that this movement can be carried on. Then if, one day, there is a broader European agreement—be it an enlarged common market or some other form of customs union—it can be a more liberal arrangement with low external tariffs. But if the process of competitive liberalisation does not go forward this year, any future arrangement for all free Europe, the Dutch say, would tend to be an unholy alliance between British and French industrial protectionism.

The Dutch have two objectives: to unite Europe closely politically and to keep it open to the outside world. They have two corresponding fears: that the Europe that eventually emerges will be protectionist and that its political nature will be shaped not by a spirit of unity but by an uneasy marriage of nationalisms.



Malayan Round-Up

BY A CORRESPONDENT LATELY IN MALAYA

NEXT week the prime minister of the Federation of Malaya, Tunku Abdul Rahman, is coming to London for the Commonwealth prime ministers' conference. It will be his first visit to Britain since 1957, when he persuaded the British Government that his country was ready for independence. His confidence seems to have been justified; today Malaya seems to be such a model of quiet and efficiency by comparison with the rest of that turbulent and politically unsettled region that foreign investors are clamouring to put their money into its industries.

On the international stage, Tunku Abdul Rahman has clearly shown that he believes the new federation has as much right to make itself heard as anyone else. He has announced his intention of speaking up plainly about South Africa's racial policies at the Commonwealth conference. He is a persistent advocate of a new regional grouping—the "South-east Asia Friendship and Economic Treaty"—but cannot as yet claim any enthusiastic response. Above all, Tunku Abdul Rahman has never minced his words

Beecham Foods Ltd.

prefer ATKINSON

It is only to be expected that with the proved economy of the Atkinson Chassis, more and more operators are standardising on Atkinson. The above illustration shows a further four new Atkinson eight-wheelers powered by the 6 LX Gardner engine, recently delivered to Beecham Foods Ltd., the proprietors of the sparkling glucose drink—Lucozade.

Operators are invited to contact us for the facts and figures relating to the Proved Economy of the Atkinson Chassis.

GATEWAY TO THE WESTERN U.S.A.

Many of the world's leading shipping lines and their shipper customers now use the modern, economical facilities of the Port of Long Beach. Tonnage and ship arrivals are at the highest point in our history. A continuous expansion program is providing new piers, berths and transit sheds which will be available in the near future. We invite inquiries from shipping lines, importers and exporters regarding present facilities and those under construction.

SHIPPING LINES, IMPORTERS, EXPORTERS:
Please write (on your letterhead) for complete details and for "Harbor Highlights," the Port's free, quarterly news magazine.

THE PORT OF LONG BEACH OFFERS:
1. Fast access by truck via non-stop "freeways" to Los Angeles and other Western U.S.A. cities.
2. Modern piers, transit sheds and warehouses.
3. Excellent stevedoring services for all general and bulk cargoes, grain and steel scrap.
4. 10 to 20 minute run from berth to open sea.
5. Dockside rail trackage connecting with major transcontinental railroads.
6. Radar-radio ship pilotage.

QUALITY IN STORE

First produced fifty years ago, but as modern as modern methods can make them, "Fiberite" Cases show that only by attention to detail can fibreboard packing become "Fiberite" packing.

Your goods have arrived. And thanks to "Fiberite" Cases they have arrived factory fresh. Whether in city supermarket or village store, this is the end of the line. Now your goods see the light—on the shelves, in the window.

The busy retailer appreciates the value of tough and sturdy packaging in ensuring safe delivery of the goods he sells. The reputation of any manufacturer rests secure at a time like this when the quality of the goods is matched by the quality of the packing. No wonder "FIBERITE" Cases carry such a tremendous volume of products that are household names!

towards his neighbour, Singapore, which has been frequently told that as far as the Malayan government is concerned a territorial union is not on the cards; to the Malayan government Singapore, with its mainly Chinese population, including a good many communists, does not appear a desirable partner.

Tunku Abdul Rahman's greatest achievement at home has probably been the defeat of the Malayan communists; earlier this month it was announced that the 12-year-old Emergency is to be officially ended next July. Ever since he became chief minister in 1955 he has insisted that the highest priority should be given to the defeat of the communist rebels. The relentless pursuit of communist groups in the jungle by Commonwealth and Malayan forces, together with energetic campaigns in towns and villages to prevent food from reaching the enemy, has led over the last three years to a rapid disintegration of the communist organisation. During 1958 and 1959 hundreds of communists, including many leaders, accepted the government's amnesty terms. Today fewer than 250 terrorists, out of a total force once estimated at 11,000, remain inside Malaya, near the northern frontier with Siam. The presence, however, of another 500 Malayan rebels across the frontier inside Siam may create a tricky border problem for Malaya. It is because of the threat of subversion from this and other sources that the government has introduced the preventive detention legislation now being hotly debated in parliament.

Although every effort has been made to inject a sense of "nationhood" into the people of Malaya, the danger of communal strife between Malays, Chinese and Indians still exists below the surface. Tunku Abdul Rahman has tried to remove one possible source of racial tension by appointing a high-level committee to review education policy, part of which is much disliked by the Chinese and the Indians on the grounds that it could lead to the disappearance of their respective languages and cultures.

Another possible source of racial dissension (and communist subversion) lies in the poverty and backwardness of the rural population. Tunku Abdul Rahman has set up a ministry of rural development, with himself at its head, and his deputy prime minister, the very able Tun Abdul Razak, in charge of the actual planning. Together with a new Land Development Authority, the new ministry is launching a massive campaign against rural poverty. It will co-ordinate the existing machinery and resources which have been going their own way or pulling against one another.

MALAYA's first five-year plan has not been as successful as was hoped, mainly because of the halt in capital investment caused by the world recession. There have, however, been some achievements. In particular, a gigantic rubber replanting programme is well under way; the output of rubber is rising steadily and producers are facing the competition from synthetic rubber with greater confidence. The control and direction of rubber research is being reorganised—a step that has long been advocated—and several million dollars are being spent on it. The production of tin is picking up again, although it may be some time before all mines and dredges are in full production. One depressing feature of the social and economic planning in Malaya today is the inadequacy of the medical and health services. Hospitals are outdated and lack modern equipment; there is a shortage of good doctors and nurses. Malnutrition is still responsible for the greatest number of diseases; according to one report, probably three-quarters of the children in the rural areas show symptoms of it.

With the end of the Emergency, millions of dollars can now be put to more progressive uses in the new five-year plan that is being drawn up. But one problem, incapable of quick solution, is bound to hamper economic planning and administration for years to come. Malayanisation has been carried out with such speed that there are not enough qualified and experienced Malayans to replace the departing British. Some of the most important government departments—agriculture, medicine, education, for instance—are gravely lacking in experienced staff. The cabinet has been considering the possibility of retaining British administrators on a contract basis, but for political reasons it seems unlikely that this solution will be adopted.

On the domestic political front, Tunku Abdul Rahman's Alliance party has to contend with the growing strength of the socialist groups; it is also anxious about the religious fanaticism which is encouraged by the Pan-Malayan Islamic party, and which showed itself to be a considerable force in the general elections last year. All the parties are working hard to capture the loyalty of the rural population. In this struggle the Alliance party government, with its rural development programme, is much better placed than any of its rivals. If it can carry out this programme successfully, it should have little need to worry over the results of the elections due in 1964.

Within his own party, Tunku Abdul Rahman is forced to keep a very firm grip on the reins linking the three communal organisations which form the "Alliance." The party is still torn by the political, economic, social, educational and cultural aspirations of each community and every so often troubles develop over such communal problems as citizenship, Chinese education and special privileges for the Malays. Only Tunku Abdul Rahman holds the three organisations together; he has shown trick horsemanship of superb quality in his firm and tactful handling of them.

Novelties in Soviet Fiction

"LAST year our magazines did not have a wealth of important works of prose devoted to current life, to descriptions of men living through this seven year plan, their work, conditions, thoughts and moods." In such terms Mr Tvardovsky, editor of the literary magazine *Novy Mir*, implicitly admitted in 1959 that, despite the writers' congress and Mr Khrushchev's encouragements, Russian novelists preferred to avoid Soviet reality, possibly from fear of being accused of a predilection for its less attractive aspects. He could repeat the same judgment during his recent visit to London. The admission is, in itself, an advance. There are other signs that writers, who had picked up some courage after Stalin's death only to be reminded of their party duties after the Hungarian insurrection, are once again venturing into formerly forbidden paths. Three recent novels show more concern for truth than for the party line.

"Stronger than the Atom," a novel published in the magazine *Znamya*, is by G. Berezko, who has written several books all with army life as their background. Until now the armed forces had to be shown as happy, heroic and glittering. Not so in this book, or at least in its first part. The barracks are grim. The sergeant is a typical stickler for discipline unable to understand the mood of the younger servicemen. The author shows a soldier frightened of parachute-jumping and, instead of attacking his cowardice, tries to explain his fear. The central figure in the novel is a hero of the last war, now general of a division. Traditionally, in Soviet writing, such figures had to be beyond reproach. The general, however, is shown as a martinet and a bully.

Officers' wives are not spared either. And there is an interesting description of the coffee-house in the garrison town, in which only officers are allowed. There are, naturally, civilian customers as well, including some shady characters throwing their money about.

M. Bubyennov's "The Steppe of the Eagle," serialised in *Oktyabr*, is set in the virgin lands. One learns that whole gangs of hooligans are working there and going from place to place. The chairman of the state farm was sent to these distant parts because he was no longer of any use in the town; he is a bungler as well as a bully. The young pioneers are faced with appallingly

hard conditions of life and work. It may be recalled that when two years ago another Soviet novelist, Mr Pogodin, tried to describe the unprepossessing human side of Mr Khrushchev's favourite scheme of land reclamation, he was violently attacked and had to stop writing for a time.

Another subject to which published works in Russia give little attention is the differences in standards of life between social groups, and particularly between industrial workers and the professional class. "August Again," a recent novel, shows the contrast between the relatively easy life of an intellectual, who has a telephone and can spare a separate room for his son, and the harder lot of a worker, who cannot marry for lack of anywhere to live.

These novels are not masterpieces; indeed, they have not here been considered on their literary merits. But they deal with subjects which once were taboo and they offer an improved mirror of Russian life. These innovations in the Soviet novel also raise the hope that the post-Stalinist thaw, interrupted for a couple of years, may be again at work.

Far Eastern Friends

THE south Korean crisis raises questions about the credentials and stability of other Far Eastern regimes linked with the western system of defensive alliances and arrangements. When Nuri es-Said's Iraq was overthrown in July, 1958, the Baghdad Pact lost is name and headquarters. How far do defence and security in the Far East depend on regimes that are either unpopular or inherently unstable for other reasons?

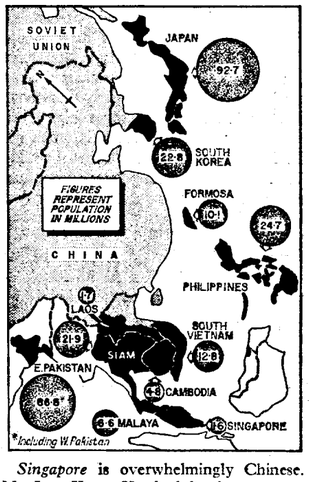
Britain is directly concerned with the security of the area because of its membership of the south-east Asia defence treaty (Seato), of which the Asian members are Pakistan, Siam and the Philippines; its association with United Nations resolutions concerning Korea; and the naval base at Singapore and the Anglo-Malayan defence agreement of 1958. Britain's co-chairmanship of the 1954 Geneva conference has left it with residual responsibility for seeing that the Indo-China agreements of that year are observed; and the Seato treaty specifically extends a pledge of protection to south Vietnam, Cambodia and Laos. Nor can Britain disinterest itself in its ally's allies, Japan and Formosa, with both of which the United States has security treaties.

The following is a brief guide to the stability of these allies and associates:

Japan, industrialised and literate, is unique among Asian countries. Its post-war governments, while based on free elections and respecting basic civil liberties, have been right-wing ones mainly because of strong traditional conservatism and the disunity of the left. Over-population, sporadic resurgence of jingo militarism, and reaction away from American influence and towards neutralism present long-term dangers.

Formosa, with its outposts on the "offshore islands," involves the most direct military risks, but there is no immediate threat to internal stability; land reform and the booming economy have made the Nationalist regime acceptable to most Formosans. Formosan separatist feelings, however, remain dormant only as long as President Chiang Kai-shek, now 73, can maintain the fiction of a future return to the Chinese mainland. Latent anti-American feeling erupted in riots in May, 1957, in which the United States embassy was burnt down. Marshal Chiang was re-elected for six years last month after the constitution had been amended by his tightly controlled legislature to permit him a third term.

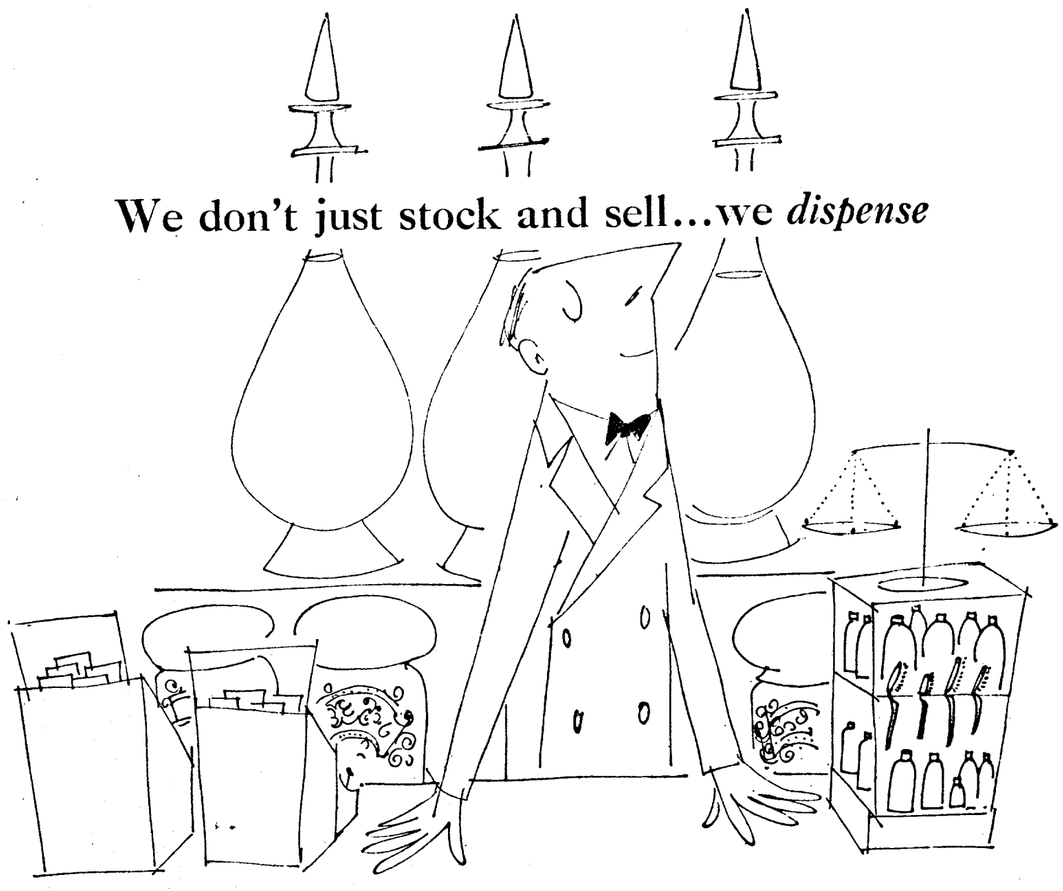
The Philippines have taken their political institutions from the American model. Recent elections have been much more democratic than those of the early years after independence. The Hukbalahap (communist) rural insurrection of 1948 was extinguished by 1954, though communist subversion continues. Worse problems are political corruption and landlordism, though the latter is being tackled.



South Vietnam is also outwardly a republic based on the American model, but in practice opposition to the rule of President Diem (and his remarkable family) is effectively smothered. At elections last August all but two of the 123 seats in the assembly were duly won by parties supporting the president. He has successfully resettled a million refugees from the communist north, but the economy and the armed forces both depend heavily on American aid.

Laos is more directly under threat from communist north Vietnam, and its army and administration are wholly dependent on American aid. The right-wing victory in this week's elections may prove misleading, as communist terrorism is gaining ground, although the attention paid to this remote country by the United Nations since last summer's alarms mitigated the risk of an open military conflict.

Cambodia is now the most stable of the three non-communist parts of the former French Indo-China. Formally committed, like Laos, to a neutral policy, it has been more careful in observing it, and is not faced with armed communist dissidents on its own soil. It is dominated politically by the ex-king, Prince Sihanouk, whether he is in office or out (he is now out).



Siam, like Cambodia, has a traditional respect for royal authority—it is the only country in south-east Asia that was never a European colony—and a relative lack of interest in democracy that make it more stable than its successive coups d'état by rival generals would suggest. Under the present interim constitution, Marshal Sarit Thanarat, who seized power from another marshal in 1958, has absolute powers. A large Chinese minority and a submerged communist problem; but no land, food or over-population problems. Seato's headquarters are in Bangkok.

Malaya's Chinese are almost as numerous as, and generally more advanced than, the Malays themselves. The prime minister, Tunku Abdul Rahman, heads the Alliance party which, uniting Malays, Chinese and Indians, won the pre-independence elections and gained the glory of leading the federation to sovereignty in 1957. But the Chinese are still largely disenfranchised in an otherwise democratic system; and, though the communist guerrillas have been almost all disposed of, the pull of Peking is inevitably strong.

Singapore is overwhelmingly Chinese. Mr Lee Kuan Yew's left-wing government, elected last year, has discouraged western business interests. Mr Lee's problem is to maintain a viable state in conditions of near-independence; welfare legislation is the best way, but a costly one, of taking the wind out of communist sails.

Pakistan has been governed, with dictatorial powers, by President Ayub Khan and his fellow army officers since their coup d'état in October, 1958, overthrew a pseudo-parliamentary regime heavy with corruption, landlordism, and irresponsible place-seeking and never tested by fully democratic elections. The military government's vigorous cleaning up has won it much popular support. It bans all party politics, but has launched a programme of what is called "basic democracy" through local councils.

We could just sell industrial lubricants, then wash our hands of them.

In fact, we think it more professional to provide a good, thorough, all-round copper-bottomed industrial lubrication service. This means we market a complete range of oils and greases, look after them, give advice to our customers, and endlessly anticipate new needs in industries all over the world.

Let's take an example. The pioneers of the first nuclear power stations reported that conventional lubricants turned solid when exposed to radiation. So our people worked with their opposite numbers in the nuclear business, and produced Shell Atomic Power Lubricants. These could work happily even in the core of a pile, and only needed changing every two years.

The civil use of nuclear energy is just one rather more spectacular example out of many. Closer to you, Shell industrial lubricants smoothed the way for the sheet steel in your car, helped to fire your china, to make your clothes, your children's toys . . . the list is endless because everything's to order with us, and we dispense with such distinction.

YOU CAN BE SURE OF SHELL

Under the Christmas card snow may run rich veins of mineral wealth. If they do, CEMENTATION engineers can move in and start sinking shafts at top speed. CEMENTATION has a long experience of mining engineering from first survey to final sinkings in coal, copper, iron, zinc, tin and gold. CEMENTATION's shaft-sinking organisation is one of the largest in the world and its knowledge of deep workings unrivalled. Yet mining is only one facet of the CEMENTATION Group, which also deals with civil engineering, building, and specialist engineering in all their many phases. Its extensive range of interests, covered by 70 companies, equips CEMENTATION to handle projects of any size, in whole or in part—anywhere in the world.

THE BUSINESS WORLD

The Soft Option

On Thursday the Chancellor of the Exchequer and the Bank of England announced the further credit restraints with which the markets had been effectively threatened in the budget speech. From the Whitehall end, restrictions are being reintroduced on terms of hire purchase contracts. From Threadneedle Street, the first call is being made of special deposits, under the scheme announced in mid-1958 when official "requests" on bank advances were lifted.

The hire purchase controls come into effect immediately, under the regulations that lapsed but were not abolished eighteen months ago. Now minimum deposits of 20 per cent must be paid down on cars and most household equipment, and 10 per cent on furniture and miscellaneous other items. At the same time, the maximum period of repayment is generally being limited to two years, though four years is being allowed on one or two items of home equipment. To plug loopholes, supporting restrictions are being imposed on hiring agreements. (What of personal loans, now being offered by finance houses and by the Coal Board as well as banks?) Capital goods in general are excluded from control.

The finance houses undoubtedly abused their brief period of freedom, and the competitive easing of terms went irresponsibly far. But the Government has now gone further than simply imposing such minimum terms as prudent lenders would themselves regard as appropriate; and it has once again got involved in the pettifogging business of drawing lines between articles subject to different degrees of restriction. In general the restrictions are not severe, but the two-year limit on repayment could have a significant effect on the purchase of cars. The aim of the exercise is to ease the pressure on the booming industries of the Midlands and London. Was there no other way of doing so? Hire purchase is an easy control to put on; there is not much more to be said for it.

The call to special deposits is a very gentle one. The eleven clearing banks are being asked for 1 per cent of their gross deposits (excluding deposits at Indian branches of Lloyds and the Irish branches of the National) and Scottish banks for ½ per cent, the payments to be made by June 15th —the next clearing bank make-up but one. None of the banks should be unduly troubled. Scotland has received milder treatment partly in recognition of the slower pace of its economy (in this way at least it is lucky to have its own banks); apparently the authorities are satisfied that no difficulties will be caused by those banks' lack of any open liquidity conventions.

The Bank of England has quite deliberately inaugurated special deposits with hardly more than a nominal call. It has two considerations in mind. First, it feels that a new scheme needs to be run in gently. Secondly, it is conscious that the scheme is undertaken by the banks on a voluntary basis. It is too early to say whether special deposits are likely to be temporary; quite possibly they have become a permanent part of the British banking mechanism.

It is clear, moreover, that special deposits are now to be used in the soft rather than the tough way. The banks have not been told specifically that they should not sell gilt-edged. But they know that the object of the operation is to curb advances; and they may infer that if they attempted to "evade" the control by selling gilt-edged, the Bank would counter by a further call to special deposits. And in such a rat race, as it is called, there could be only one winner. At the same time, banks that were felt to be playing the game would find no serious obstacles to moderate sales of stock.

What emerges is this. Advances are to be held (the Bank is not thinking yet of forcing a reduction). Although the special deposits device is a general control in form, it is in fact being used as an advances control. At the same time, the gilt-edged market is to be protected as far as possible. For the time being, at least, the Bank appears to have ruled out the idea of using pressure on the gilt-edged market as an instrument of restraint; the jolt of February 24th, it is now reaffirmed, was not intended as a policy measure. Thus a cloud lifts from gilt-edged—and from equities, which since the beginning of the year have been highly vulnerable to gilt-edged yields. Yet one of the major objectives of policy

THE NEW HIRE PURCHASE RULES

Minimum deposit of 20 per cent:
radio and television, gramophones, space heating equipment, washing machines, vacuum cleaners, refrigerators, cameras, binoculars, cars and light vans, motor-cycles.

Minimum deposit of 10 per cent:
furniture, floor coverings, watches, jewellery, pedal cycles, caravans, cookers, wash-boilers and water-heaters.

Maximum period of repayment: 24 months on all items except cookers, wash boilers and waterheaters (48 months).

Hiring: advance payment of 3 months' charges now required on cars, light vans, and durable consumer goods.

since the beginning of the year (which until Thursday seemed to be very effectively fulfilled) has been to check overbuoyancy on the stock exchange, and thereby to squeeze out speculative ventures in building and other spheres. If equities now started rising again—and while the hire purchase restrictions may give them pause, special deposits as introduced are a trivial influence—the authorities would presumably have to take new action. If it became clear that banking business was being diverted to other channels, as it has been in the past, special liquidity controls might have to be extended to other credit institutions, which would need legislation.

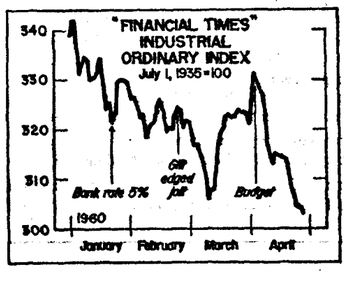
Is this prospect really necessary? At a time when the economy was in roaring inflation, and crisis measures were necessary, one might understand the logic of a stiff call to special deposits combined with a rise in Bank rate. To-day there is no such crisis. On the contrary, the need is for flexible measures acting mainly on business psychology. If ever there were a situation capable of being handled through the normal working of the financial markets one would have thought this, at the moment, was it. Yet a Conservative government, advised by the Bank of England, has rejected that solution and preferred specific controls that happen not to be labelled socialist. The City, of course, welcomes the soft option ; it may regret it in the end.

The need of the economy now is still a modest and carefully controlled check. The foreign balance is still causing concern, but it seems that the outcome in the first quarter was better than expected. Unemployment is down to 1.7 per cent, but there are industrial as well as geographical patches of less than full employment.

Directly and indirectly, demand for motor vehicles must still be supplying most of the steam in Britain's somewhat uneven boom. In the first quarter of this year motor output was no less than 50 per cent higher than a year before (when hire purchase was already free, though the market was expecting the cuts in purchase tax). Motor demands upon sheet and other kinds of steel are a potent element in the increases of a quarter to a third in current output that the steel industry has recently been chalking up and radiate outward through widening circles of Britain's intermediate engineering. They are responsible for some of what is genuinely new in the steel industry's larger investment programme, such as extra capacity for the Steel Company of Wales, and for some of the very big schemes being hastened such as the new strip mills in Wales and Scotland. The motor industry's own plans for expansion must have generated most of the increase in orders upon the machine tool industry and some other manufacturers of capital goods.

The motor industry is not simply a supplier of durable consumption, since cars as well as commercial vehicles make up a substantial share of business investment, but both kinds of sales are sometimes financed by the same form of " consumer " credit. It is a very substantial exporter, too ; most recently, its sales overseas seem to have encountered difficulties, particularly in North America. With the rate of increase in hire purchase debt falling off, and the build-up of demand upon the capital goods industries taking some time to develop, the authorities have clearly been counting upon some easing of strain upon total resources in the economy as the year wears on.

Apart from the industries in or facing recession, such as coal and shipbuilding, there remains a considerable section of heavy engineering where business is perhaps better than a year ago but by no means booming. There are certain capital-intensive industries, huge capital spenders, such as oil and chemicals, no longer increasing their long-run rate of spending. The steel companies are, though their plant suppliers tend to write down much of the forecast 50 per cent increase in expenditure this year as the bunching of orders that the steelmakers had held up preceding the election. Builders of heavy plant could handle a good deal more orders than they have without much strain on their capacity, their suppliers of ancillaries, or their shortened delivery dates. Plainly there is no need for any measures that would reduce what impetus there is in the current investment planning of heavy industry.



At last the City has been put out of its misery. Thursday's announcement came after the stock exchange close. The uncertainty induced by the Chancellor's budget statement had become progressively more unnerving ; by Monday the *Financial Times* ordinary index had dipped below its low point in early March. On the long-run chart the 1960 dip no longer looks so negligible. It remains to be seen whether the restraints now announced are effective. Psychologically,

they have to counter the feeling of relief that " we know where we are."

At first the gilt-edged market seemed unworried, and possibly relieved, by the prospect of special deposits. But this week, following the publication of the bank statements, nervousness spread to gilt-edged, and although there was little selling, the market was dull. No one was surprised on Wednesday when the Essex loan for £10 million was left 87 per cent with the underwriters ; its terms were altogether too finely drawn for success in what was bound to be a difficult week.

Advances of the eleven clearing banks on an unadjusted basis rose by £98 million in the five weeks to mid-April. Most banks showed a significant slowing down in the rate of increase, but the effect was offset by increases of £33.7 million by the National Provincial and £22.3 million by the Westminster. Both these banks tend to be particularly affected by specially volatile accounts of some big companies. The more accurate figure of advances, net of all transit items, rose by £88 million, and excluding State boards by £83 million. This represents much the same weekly rate of increase as in February-March. All the banks have certainly tightened their scrutiny of advances, though they are still concentrating mainly on the big accounts, on long-term projects, on hire purchase, and on semi-speculative finance rather than on the small borrower. Almost certainly, some borrowers were prompted by the very threat of tighter credit to make greater use of their existing overdraft limits. It would in fact have been surprising if the slight brake on advances policy applied by the banks two months ago had already shown up in the figures.

LONDON CLEARING BANKS

* Excluding all transit items. † Percentage of gross deposits.

The big rise in advances forced the banks to make further substantial liquidations of investments. These reached £61 million, which is rather higher than appeared from the gilt-edged market ; evidently the sales went smoothly. Despite these heavy sales of bonds, bank liquidity remained tight. The average ratio is 31.4 per cent. The National Provincial and the District are at a bare 30 per cent, and the Midland and Lloyds are below 31 per cent. But even these banks should have no great difficulties in finding 1 per cent by mid-June.

Surplus Oil and the Majors

At the end of last year, disregarding proposals from the major oil companies already marketing petroleum products in its country—Shell and Stanvac—the government of Thailand initialled the heads of an agreement with Standard of Indiana. Under this agreement the American " big independent " will build a refinery in Thailand, operate it at a guaranteed charge over a number of years with profits going to reimburse the original investment, and then hand it over to state ownership. In return, Standard of Indiana would be guaranteed, for ten years or possibly for longer, a monopoly for its oil in the Thai market. Established marketeers would be prohibited from importing any crude or products of their own into Thailand and would thus have to purchase all their supplies from the new refinery. Whatever oil might be found inside the country during the period, Standard of Indiana would be guaranteed the right to import 23,000 barrels a day—say 1,000,000 tons a year, over 80 per cent of the refinery's theoretical throughput—of the crude that it may be producing from, say, Iran or the Kuwait Neutral Zone by the time the refinery is built. Repatriation of the profits and the original investment (some $33 million) in this interesting venture into private-monopoly-cum-nationalisation would be guaranteed, according to this agreement, by the International Co-operation Administration of the United States Government.

As drafted, this deal would be peculiarly provoking to the major oil companies bound to be injured by it ; they can recall sourly that one purpose of the Mutual Security Act under which the ICA investment guarantee programme was authorised was stated to be " to foster private initiative and competition . . . and . . . to discourage monopolistic practices." But its wider significance is very likely symptomatic. It exemplifies the lengths to which some of the relative newcomers to the world oil business outside the United States are prepared to go in order to pre-empt marketing outlets for the oil for which they have abundant and still growing capacity to produce but practically no customers. Investment to elbow a way into markets may be largely confined to these Johnny-come-latelys ; investment to reinforce a grip on markets already held, regardless of the adequacy of direct return, is not. In annual statements this week (of which the financial implications are analysed on page 481), Shell said, ". . . substantial expenditure must be undertaken in order to safeguard existing outlets and trade " ; and BP noted that " the growing insistence of consuming markets to have local refineries is one factor involving large expenditure."

Emphasis on securing markets to dispose of one's crude—or, conversely, on developing local production in markets where one's position is secure—is the logical keynote of investment policy during a world surplus of oil. That surplus has been with us since shortly after the Suez incident. It is intensifying because the flurry of additional exploration undertaken after Suez, in order to reduce Western dependence on any one major source of oil, is now paying off—abundantly,

and more quickly than anyone foresaw ; because world demand for oil, though it goes on rising, is not rising at the rate it was up to few years ago ; and most of all because the world's largest consumer, the United States, is at present out of the market for extra supplies of crude from lower-cost foreign sources old or new—the new ones including some sources explored and brought towards production with the specific purpose of supplying what had been confidently forecast as its mounting needs to import during the sixties.

This partial insulation of American from world demand has concentrated the gravitational pressure of a surplus of oil on crude prices outside the United States. Venezuela, where America's " big independents " have a large excess capacity of newly productive wells shut in, has been losing in many markets to Middle East crudes carried in tankers at the current rock-bottom prices ; realised prices are well below posted levels, and with its heavy rate of taxes and recently hoisted labour costs producers there are cutting their operations back further. In the Middle East, again, discounts on posted prices today are of the same order as they were a year ago. Then, the companies cut posted prices to less artificial levels relative to the marginal prices they could realise on actual sales. Now, any such adjustment seems likely to be delayed longer ; royalties are usually set to give on posted prices, regardless of what the producing company actually gets for the oil and the majors cling to the principle of 50-50, however often in practice it may be breached by others nowadays. Any further cuts in the sheikhs' rates of income, at a time when it will be hard to offset these with increases in the offtake of oil, would provoke fresh difficulties. Companies such as BP hope that the increasing supplies from new sources will come into the supply pattern in a steady and not disruptive manner. Forced development can disregard the interests of established supply sources which continue to be needed for the fulfilment of the total requirements and for many of which the maintenance of oil revenue is essential for their social and economic development, itself indispensable for progress and stability. The sheikhs would no doubt agree with whatever they guess this means.

This downward pressure on crude prices intensifies the value of access to markets for petroleum products—particularly fairly secure markets where product prices are not too subject to erosion from the competition of distress selling. In Britain, there are no independent refineries and the majors have bought up all the storage facilities. The resultant stable structure of prices for most products—even though some are being sold at whacking discounts to secure individual business—presumably still offers respectable margins on refining and marketing. So far, prospective intruders such as Tidewater, Total and ENI are merely sniffing at this market (and breathing down the majors' necks), cogitating the large investment that any serious entry here would require. In West European markets such as Germany and Scandinavia, by contrast, independent competition is forcing down retail prices of gasoline along with the prices negotiated on other products ; margins on refining and marketing, in many cases, must be negative where they are related to posted price levels.

" There is a lot of oil around the world today," said a spokesman of one of our major oil companies this week, " and some of it is in rather desperate hands." There are two separate kinds of new hands in the world oil trade today. The big independents, firmly based in the American oil industry, have expended a considerable amount of capital on muscling into Venezuela and the Middle East, at a time when their ventures looked perfectly reasonable commercial propositions to help to supply a swelling flow of American imports. They have the oil now, and will have more in future ; being shut out of the market they had in mind, they are going to fight for others. The other newcomers—sharing with these a buccaneering zest which faintly shocks the majors in their dignified middle age but cannot frighten the consumer anything like as much as all that—are the nationalised oilmen.

Phenomena such as ENI followed by France's UGP, behind which the majors can see a motley rank of national companies gathering in oil producing and consuming nations, are nationalised industries which are not conveniently supine or pitiably insolvent. Nor do they stay within their own national confines. They can bring into play, moreover, powerful extra-economic weapons, such as the privileged position France is forcing the majors to concede to Saharan oil and the " national energy policies " in certain consuming countries. One other set of hands on oil—powerful, unrelenting, but for the present within its own terms not acting desperately—is the Russian, which is tipping oil into the West at an increasing rate, but for the moment seems less anxious to push prices yet lower than some of the new commercial competitors are.

UNDER growing pressure, and in circumstances of surplus which Shell, for example, reckons may last five or ten years, the major companies retain huge strength and great staying power. They are not prepared to be driven out of the markets they hold, where the weapons are financial ; their liquid resources—consider Shell's £400 million—are immense. Nor are they short of political weight, though they may seem temporarily unsure of the way to throw this about with new contenders and a new set of rules.

Elsewhere, the majors' capital investment is clearly being trimmed, except where particularly favourable returns offer themselves, or where particular effort is required to defend a market. This is not yet showing itself in the rates of spending, which in some cases still reflect the fervent plans projected after the fright of Suez. British Petroleum, for example, had to pay out £24 millions on tankers last year, more than the year before: Shell still has 1.8 million tons dw of tankers on order for delivery over the next few years. Their spread into petrochemicals—which in 1959 took more than a quarter of Shell's capital expenditure, accounted for little more than one per cent of processed tonnage, provided 9 per cent of its revenue and 5 per cent of its profits—requires expensive investment and takes time to render its returns ; but when it delivers it is profitable. Moreover, it does not depend on the price of oil. But the rate of increase in capital expenditures by the oil industry—which over the postwar period cannot have been an insignificant element in world economic growth—has clearly moderated ; in many regions, expenditure may begin to diminish. The established structure of the world oil industry, as well as the transient structure of oil prices, will continue to come under strain ; but so far as the strains remain commercial, it can call upon great reserves of resilience.

Avoidance and Evasion

ONE emerges from a study of the eighty pages of this year's Finance Bill with the feelings of a naked man who has wormed his way through a thick barbed wire entanglement. Here in one set piece is a major exercise by the Revenue to catch up with the taxpayer, with the Chancellor's minor tax changes lost in the first few pages. The House of Commons, which is the guardian of the taxpayer, is in for a heavy stint ; even so, a good part of this huge bill is only too likely to sweep through with the most cursory consideration. This is doubly undesirable because the keynote of this year's finance bill is the Revenue's campaign against tax avoidance. No taxation without parliamentary consent is a constitutional principle of the first importance ; the fact that it gives shelter to some who studiously arrange their affairs in order to avoid tax is not to be taken in any way as a qualification of the protection that it gives to all taxpayers. Social morality does not come into the argument. A man is either taxed under the law or he is not ; it is no part of his duty to pay a penny more than he need.

These propositions are surely self-evident, but the nature of this bill requires them to be kept always in mind. Because a hundred highly skilled avoiders have been making rings round the Revenue for several years, the general body of taxpayers has been paying somewhat more than it otherwise would, but that, too, raises no moral issue. But when an unknown but certainly far larger number of people conducting a cash business regularly dip their hands into the till, they also have the effect of making the ordinary taxpayer pay more ; but the difference is that they are guilty of a crime. There is a grave danger that well publicised cases of avoidance, which are as natural an object of jealousy as a take-over bid, will divert public attention from the widening area of tax evasion. Peculation at the expense of the public is an entirely different thing from a refusal to devote a bigger share of one's income to the public purse without the legal necessity first being made clear.

That said, it is something of a relief to disentangle Clause 26 of the bill and find it at any rate less unacceptable than might have been feared from the Chancellor's outline four weeks ago of his intentions to deal with " manipulating stocks and shares with the object of depriving the revenue of its proper tax." His predicament is familiar enough. Ever since 1955, efforts have been made to dislodge the inventors of new schemes of avoidance ; they have failed abysmally and have even provoked new ingenuity—there is talk of five arrangements having come to the attention of the Revenue in recent times involving losses running to some millions of pounds. So the Revenue and the Law Officers of the Crown have convinced themselves that a general power is the only way of circumventing the loss of revenue from this type of avoidance. It is aimed at transactions in securities from which a tax advantage is obtained but in circumstances of a limited kind. Thus the clause applies to a distribution of profits or assets to persons who (i) get an abnormal amount of dividend ; (ii) can obtain tax relief by setting off the fall in the value of securities after the dividend is paid against other income ; and (iii) get tax-free sums that emerge as assets instead of dividends. It applies also to all sales and purchases followed by corresponding purchases or sales which fall within i) and ii).

In these cases the Inland Revenue may give a direction to the taxpayer providing for a new or revised assessment, or the return of a tax repayment that has already been made to him, or the recomputation of the liability " as may be requisite for counteracting the tax advantage obtained." The taxpayer can appeal to the Special Commissioners on the ground that the section is being wrongly or excessively applied to him, and either side can take the case for re-hearing to a tribunal appointed by the Lord Chancellor. This is a welcome improvement in the range of appeal which shows that past budget criticism has made a distinct mark.

YET it is impossible, even given the limited drawing of the clause and the widened opportunities for appeal, to be wholly convinced about it. This implies no disrespect of the Lord Chancellor, or the members that he will appoint to the appeals tribunal ; but they will have a code of extraordinary complexity to administer and a feasible solution dealing fairly by both sides will depend on the quality of the three men who will serve. How tight is the exclusion of *bona fide* transactions not having " as their main object or one of their main objects " the obtaining of tax advantages ? The powers of direction are wide within the field that the clause defines, and they permit the undoing even of repayments already made. So the one that gets away can be recaught when the authorities have had the opportunity to mull over the file, perhaps long after the taxpayer thinks the case is closed. And what, again, is he to make of definitions of an " abnormal amount received by way of dividend " in terms that it " substantially " exceeds in the case of a dividend at a fixed rate what would have accrued from day to day while he held the securities or that it " substantially " exceeds a " normal " return on the price he paid for the securities ? There seems still much too much room for administrative discretion here, even after one gives full weight to the protestations of the Chancellor and his colleagues that only case-hardened avoiders are intended to be caught.

On Clauses 19 and 20 it is possible to take a different view. These are intended to catch both income dressed up as capital and the manufacture of artificial losses by dealings in the shares of companies dealing in securities, land or buildings (including building companies not carrying on trade) ; and they do it by the simple yet ingenious device of treating the substance of the business as trading stock ; if this is not so, the price received by the seller is income and taxable. One cannot raise any protest to this action against a kind of avoidance that has become notorious, particularly in the property market. But here it is done by legal definition and can be objectively considered before it passes into the statute, and so is totally different in essence from what clause 26 proposes.

Nor is it possible to quarrel at all seriously with the means that have been found to deal with compensation for loss of office, whether strictly so called or more often merely dressed up deferred remuneration, and with voluntary payments to an

employee after he has left employment, which now go tax free whatever their amount. Certain terminal payments will continue to be exempt: on death in service; to compensate for injury; lump sums under approved pension schemes; and grants to the armed forces. On other payments, the first £5,000 will go tax free (so sweeping in a large number of unobjectionable payments); and for voluntary payments an amount comparable with what would be paid under an approved pension scheme (so giving fair treatment for past service without fulsome treatment for loss of future prospects) will be allowed. And the taxpayer will be able to spread any excess over these tax-free payments in effect over six years or for an even longer period for which he is being literally compensated for loss of office. To avoid any suggestion of retrospective action, cases will be excluded where the office ended before April 6th, or are governed by a binding contract made before that date. The question mark about these new conditions, which must be generally welcomed, is how they affect the position of plaintiffs in compensation cases governed by the Gourley decision. This ought to be made quite explicit before the clause is passed.

A MODERN code for penalties was long overdue, as the Hinchy case showed last February. Part III of the bill gets rid of the harshness of the old system and of the unchallengeable element of administrative discretion that made it even tolerable. The High Court is to have the power to mitigate the penalties and these are not to be used as a means of exacting tax over six years old and therefore out of date. Negligence in making returns is liable to a maximum penalty of £50 plus the amount of any tax lost. Fraud invites a penalty of up to £50 plus twice the tax lost. With the new right of appeal by way of the special commissioners to the Courts, both on questions of law and on the amount of the penalty, the errant or fraudulent taxpayer will in future be treated with all the fairness that he deserves and the new system (as those with bad consciences may note) is to apply to past years.

In so broadly setting down the consequences of these important clauses in the bill, niceties of language have had to go overboard; this may offend the tax expert, but it is not intended to do violence to a bill which, apart from the remaining major question marks about clause 26, represents a reasonable attempt by the Revenue to get on level terms with some of their more awkward customers. There are plenty of other questions that a wet towel study of its 73 clauses and seven schedules will surely reveal. How, for instance, the restriction of relief for hobby farming can be achieved without doing some violence in hard cases, and not only in farming, is difficult to judge; how does one demonstrate, whether farmer or any other trader, that the trade "is being carried on at any time so as to afford a reasonable expectation of profit"? How long is a reasonable period of expectation, and does it differ for different trades? Again, the taxing of what are called post-cessation receipts (following the Howard and Cheney cases) appears to make no allowance for the smoothing out of fluctuating incomes under this heading.

But the general intention of the Revenue to do a major clearing up, although acceptable and indeed well performed, ought not to have been the end-all of the Chancellor's fiscal exercises this year. The sheer burden of detail is immense—for instance, there is a simple relief for capital allowances for certain machinery used in the insurance business and in estate management that occupies four pages and thirteen subclauses; such gritty chores all too easily distract Parliament and the taxpayer from the reforms of substance that are still untouched. A list of these overdue reforms was given at the foot of page 179 of *The Economist* of April 9th, and we propose to repeat it at least once a year until the Chancellor or his successors have taken notice. And no better way has yet been discovered of getting rid of inequities, anomalies, abuses, tricks and avoidance, fiddling and mountainous frauds than by reducing the impact of taxation on income. When that happens, finance bills will be much shorter and the tax system much the better.

BUSINESS NOTES

STERLING AREA

Commonwealth Economics

A FALL in sterling in the exchange market, from $2.81 against the dollar to $2.80⅛, provides a cautionary signal for Commonwealth economic talks being held in London. So far sterling has held up much better than Britain's current balance of payments; buoyant earnings of overseas sterling countries have been a welcome cushion. The movement this week has been due in part to the usual end of the month balancing operations, but these do not normally interrupt a market trend. Sentiment during the past week or so has been unfavourable to sterling, mainly because of the uncertainty caused by the threat of credit restriction in Britain. The measures should be a bull point for sterling, but the uncertainty created by reiterated warnings had apparently itself acquired a depressing effect.

The Commonwealth Prime Ministers do not normally spend much of their time on economic affairs and, during their coming meeting, they are only likely to broach two problems where economics impinge on political and diplomatic issues. They are aid for the underdeveloped countries and the United Kingdom's commercial relations with Europe. But the Prime Ministers' Conference this year is being preceded, coincidentally, by the annual meeting of the Commonwealth Economic Consultative Committee. This is attended by high officials from Commonwealth countries, and normally prepares the ground for the meeting of Commonwealth finance ministers held later in the year. The consultative committee has been going through the full agenda of a Commonwealth Economic Conference, discussing domestic policies, balances of payments and the new techniques that are now being evolved for collective assistance to underdeveloped countries.

Among the specific problems that have emerged while the committee has been meeting is that of the strain on South African reserves caused by recent withdrawals of capital from the Union. The main brunt of the one-sided selling of South African securities has so far been taken by South African sterling reserves; total external assets of the Reserve Bank fell by £14 million in the month following the Sharpeville riots on March 21st. The South African authorities apply exchange control on their own residents, and there is a limit of £10,000 to the amount of capital that a South African resident can withdraw from the country. Where there are free markets such as those in Johannesburg, London and New York, between which unhampered arbitrage is possible, it is however difficult to apply exchange control with the rigour the deteriorating situation may soon require.

RAILWAY FARES

Not Much Help

THE niggardly sum the railways expect to get from the new fares increases should surprise no one. It merely underlines just how little room for manœuvre they have nowadays in face of competition from road services. The Transport Commission reckons that higher passenger fares should fetch an additional £4½ million a year, higher charges for certain parcels and small goods consignments another £2 million a year, and the London Transport increases a further £2½ million a year: in all, about £9 million more revenue in a full year. This, however, will pay for less than half the 5 per cent interim wage award, let alone the full cost of the Guillebaud proposals which the commission and the unions are still discussing. It is true that the higher passenger fares introduced last November are bringing in about £8-9 million more a year, and the revival in freight traffic that began last summer is still going on. But all these improvements are adding pennies in comparison with what the commission is still losing.

Nevertheless, the changes are useful as far as they go: mostly they continue the process of bringing the structure of charges more into line with the structure of costs. The higher passenger fares will mean that the passenger services generally will be contributing a bit more towards their proper share of railway overheads, and thus provide a bit more room for competition in freight charges. These charges generally have been falling rather than rising: only the costly parcels and "smalls" services have been paying more. This time, however, the commission has not been quite so bold on the passenger side. The ordinary fare is to rise by ½d. a mile to 2½d. a mile, second class, and the increases in early morning and season fares are, on average, proportionately about the same. These commuter services provide about a fifth of total passenger revenue but a great deal more of the loss, though they are perhaps the one major service where railways still have something like a monopoly and where public pressures are most vocal. The spread of passenger fare charges between the highest and the lowest, per mile is, however, much narrower than it used to be. And at 2½d. a mile the new ordinary fare and the cheaper off-peak or seasonal rates are still exceedingly good value when it is remembered that the penny a mile fare of the "Parliamentary train" disappeared only just over four decades ago.

The "rationalisation" of fares policy has been carried another step further this time, too, by giving the regions some say in how the farthing increase in the ordinary fare shall be applied in their areas. This has nothing to do with the Stedeford committee. Last November the assistant general manager of the eastern region of British Railways remarked in an address to the Institute of Transport: "Increasingly, the local managers are being held responsible for the costs they incur and a logical next step would seem to be to give them the further responsibility of fixing (passenger) fares."

MOTORS

Apex of Expansion

OUTPUT of cars and commercial vehicles in March again reached new record levels. Car production was at a rate of 32,000 a week, which is 8 per cent above the previous record reached in January and 40 per cent higher than a year ago. Reasonable freedom from labour trouble and full production of the new models that have been introduced in the past year account for the high level of output—a year ago the introduction of new models, especially at BMC, was holding down current output.

But exports were 15 per cent lower than they had been in January—13,125 a week compared with 15,560. Part of this fall came in shipments to the United States and Canada, suggesting that the mounting stocks there are now restraining shipments to these markets. This fall in shipments left 18,900 cars a week for the home market, which explains why delivery delays have shortened. About a quarter of sales are made on hire purchase; the new restrictions will affect cars more than most other goods, because long repayment periods are most common with them. Continuance, or possibly an increase in this rate of delivery, combined with this slight but probably significant check to home demand, should mean that the home market may be over-supplied with new cars, except for a few models, for the first time since the war. True demand for cars may then be measured; some people, though none in the management of the motor industry, wonder whether this will prove to be as large as the industry's capacity to supply.

Commercial vehicle output rose nearly as much as that of cars compared with January; it was moreover 60 per cent higher than a year ago. Exports were 25 per cent higher, though they had fallen back by 20 per cent from their level in January and February. Most of this increase in output of commercial vehicles has gone onto the home market, which took 75 per cent more commercial vehicles than it did a year ago. Investment in road vehicles is clearly proceeding apace; the effects of abolishing purchase tax on commercial vehicles last year have been gathering strength. The hire purchase restrictions should check this expansion.

The optimism that this industry has been feeling about its future, at least up to now, was well illustrated by the remarks of Sir Patrick Hennessy, chairman of Ford, at the company's annual meeting last week. He disclosed that the current Ford expansion plan involves spending £70 million, not £50 million as previously announced. Nearly half of this will go on the new plant at Hailwood on Merseyside—which implies £30 million or more, against previous estimates of £25 million—and the rest will be spent in the south of England, at existing Ford plants. Capacity for small cars will be doubled, to meet demand for the Anglia and any other small cars that Ford may introduce, but details of the nature of this £35-£40 million investment, one presumes mainly around Dagenham, have not yet been released. Apart from these expansion plans—which involve spending as much in the next two or three years as in the last six—Sir Patrick revealed that Ford intends to spend another £70 million by 1963 on re-tooling for new models, a new office block and an engineering and research building. So large an expenditure suggests that the company may be planning to replace all its existing, older models than the Anglia by 1963, though Ford says none should be expected this year.

THE ECONOMY

Income Growth

LATEST official quarterly estimates of national income, published in the current issue of *Economic Trends*, are still dogged by an unexplained discrepancy (which is as wide as ever) between the evidence of growth from figures of income and that from figures of expenditure. The first method shows an increase in the gross domestic product of 6½ per cent between the first quarters of 1958 and 1959; the second one of only 5 per cent. These comparisons are in money terms; in real terms the alternative estimates of growth are about 6 and 4½ per cent.

INCOME ESTIMATES

(£ million; seasonally adjusted)

	Income from employment	Gross trading profits of companies	Gross trading surpluses of public enterprises	Income from rent and self employment	Total domestic incomes
1957 quarterly rate	3,228	805	112	662	4,807
1958—1st qtr.	3,318	772	125	696	4,911
2nd qtr.	3,333	750	132	708	4,923
3rd qtr.	3,347	761	116	710	4,934
4th qtr.	3,392	779	118	716	5,005
1959—1st qtr.	3,404	761	130	728	5,023
2nd qtr.	3,454	837	137	743	5,171
3rd qtr.	3,475	852	132	755	5,214
4th qtr.	3,531	920	145	761	5,357

The estimates from the income side are thought to be somewhat firmer than the others and the Central Statistical Office has given a better indication of their movements by providing them for the first time adjusted for seasonal variations. The total of domestic incomes shown in the table below differs only from the gross domestic product in that no provision is made for stock appreciation.

The table shows that company profits rose sharply in the second quarter of last year and likewise again in the last quarter by which time they were 13 per cent higher than a year earlier. The wage and salary bill went up 1½ per cent in the second quarter, at a slower rate in the third quarter, and then more substantially again in the closing months of the year. Allowing for seasonal variations, domestic incomes are estimated to have been 2½ per cent higher in the fourth quarter than they were in the third quarter, with wages and salaries 1½ per cent higher and gross profits and other trading incomes 5 per cent higher.

AIRLINE RESULTS

Much Better than Last Year

ONE after the other, the big international airlines have reported profits on their 1959 operations; now British European Airways announces a net profit for the financial year 1959-60 of roughly £2 million, a much bigger figure than seemed possible a few weeks ago. It is the biggest profit yet earned by the corporation during six years in which it has operated without a subsidy, and follows a year in which it managed to break even only by a hair's breadth margin of £200,000. The traffic figures produced by BEA show that the key to its good financial showing lies in a big increase in traffic, 17 per cent more passengers, nearly a third more freight, for a relatively small (6 per cent) increase in capacity.

This year the corporation is reversing the procedure. It is putting on as much as 26 per cent extra capacity and although traffic is expanding rapidly, it is still touch and go whether this will catch up with the number of extra aircraft that BEA is putting into service. Calculations about the rate of bookings is complicated by what appears to be a marked swing against the type of packaged holiday that has until recently formed the backbone of the summer tourist business by air out of this country. For this swing, BEA itself is no doubt partly responsible because it is now offering to ordinary passengers many of the fare concessions that were previously available only to travel agents prepared to wrap them up in packaged holidays.

Preliminary estimates for BOAC's results were expected to be published after this issue of *The Economist* went to press, but the indications were that the corporation's total deficit last year would be about a fifth of the whopping £5½ million above-the-line loss made in the previous year. This time the loss seems due wholly to the operations of the BOAC associate companies, the corporation has pulled itself up by its boot-straps and broken even on its own operations, which had previously shown substantial losses too. Until the full accounts appear later this summer, it will not be possible to say whether BOAC has also managed to solve the problem of its below-the-line deficit—i.e. the drastic writing down that had to take place last year in the value of its aircraft fleet.

OVERSEAS TRADE

Brisk Business with Europe

THE picture of British overseas trade in the first quarter of this year shows that imports remain too high, and exports not quite high enough, for comfort. British trade with Western Europe and North America continues to grow faster than trade with the sterling area, though exports to sterling markets are now catching up. Between the first quarters of 1959 and 1960 imports rose by as much as £61 million, or 20 per cent, to £375 million a month. More customs working days for imports in the latter quarter explains about four per cent of that increase, and higher prices another two per cent. In March alone import prices fell on average by one per cent, owing largely to a seasonal fall in food items, and with export prices unchanged the terms of trade moved in Britain's favour by one point to 89, the most favourable ratio for nine months.

UK TRADE IN FIRST QUARTER, 1960

£ million per month: per cent change on year ago in italics

	Imports	Exports
North America	68 +37	50 +26
Latin America	26 *n.c.*	15 *+19*
Western Europe	106 +29	87 +19
Common Market	57 *+33*	44 *+18*
Free Trade Association	37 +26	33 +20
Eastern Europe	9 +35	7 +43
Other non-sterling	32 + 9	28 + 6
Total non-sterling	240 +25	187 +19
Sterling area	134 +12	119 +12
Australia	19 — 8	21 +18
New Zealand	21 *+18*	8 *+12*
India	13 +19	13 + 5
South Africa	8 +22	14 *+15*
All countries	375 +20	307 +16

Industry's need of more materials, to support both higher output and higher stocks, again accounts for the bulk of the rise in imports; the bill for industrial materials went up by £42 million, or 36 per cent, to £159 million a month in the first quarter, and finished manufactures (capital and consumer goods) went up by £15 million, or by well over one-half, to £42 million. Imports of crude and refined oil rose in volume by 12 and 40 per cent respectively, but lower prices happily cushioned the bill, imports of crude oil going up by only two per cent in value to £27 million a month, and refined oil increasing by 27 per cent to £14 million. Arrivals of foods, beverages and tobacco, at £130 million, were barely higher than a year ago.

British exports, at £307 million a month in the first quarter, were £43 million, or 16 per cent, higher than in the first quarter of last year, before the recovery began. Western Europe and the sterling area contributed almost equally to the improvement. Shipments to members of the common market, whose tariffs at present discriminate only marginally against outsiders, increased by 18 per cent to £44 million, with shipments to Germany, Britain's second biggest foreign market, showing an outstanding rise of 26 per cent to £14 million a month. Shipments to Britain's partners in the Free Trade Association also rose sharply, by 20 per cent to £33 million, mainly owing to increases of roughly one quarter in shipments to Sweden and Norway. Exports to the sterling area, which in 1959 as a whole fell by four per cent, showed another recovery in the first quarter, rising to £119 million a month, which was £13 million, or 12 per cent, more than a year ago. Shipments to nearly all markets were up, particularly to Australia, South Africa, India and New Zealand.

MERCHANT BANKS

Coming to Market

ONE by one the City's established merchant banks are putting their shares on the market. Last year Schroder followed the lead given by Hambros, and now comes Brown Shipley. This house dates back to 1810 and has had a full share of blue City blood; Montagu Norman started (but did not particularly enjoy) his career there. Today the main emphasis in the business is still international. Brown Shipley retains close relations with Brown Brothers in the United States and has a big acceptance business. Its other speciality is foreign exchange; it provides the most important London market in foreign notes. The firm also runs an investment trust, through a separately incorporated company.

Under the arrangements for marketing, shares in the two companies are to be acquired by Brown Shipley Holdings Ltd. This has an issued paid-up ordinary capital of £1,600,000, and application has been made for quotation of the whole ordinary capital on the London Stock Exchange. At the same time, an offer for sale is being made of 292,800 ordinary shares of £1 each in the holding company, of which 230,000 are new shares and the remainder are shares purchased from existing holders under the terms of the reconstruction; Cazenove & Company are handling the offer and are purchasing the shares in the first instance. The offer price is 52s.

CAMPBELL DISCOUNT COMPANY LIMITED

MEMBERS:
FINANCE HOUSES ASSOCIATION

Directors:—
J. B. Campbell. J. W. W. Huntrods,
P. H. Russell Smith ACA, P. J. Cannon, G. Keighley.

Summarised Consolidated Balance Sheet as at 31st December, 1959

	£
Paid up Capital & Surplus	622,131
Reserve for Future Tax	48,618
	670,749
Deferred Finance Charges	407,475
	1,078,224
Deposits	1,386,217
Bank & Acceptance Credits	1,543,439
Other Liabilities	137,431
	£4,145,311

	£
Fixed Assets	35,107
Freehold and Leasehold Property at book value	9,675
	44,782
Subsidiary (Cost of Control)	97,322

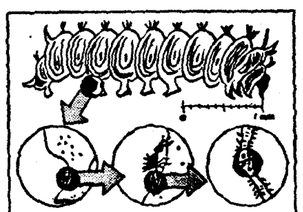
In New Zealand
he's a national institution...
and so are we!



Exports of New Zealand butter and cheese are responsible for something like one-quarter of the total export income of the entire country – which makes the dairy farmer a figure of truly national importance. It is not surprising therefore, that he should so often turn to us, the National Bank, for the banking service he requires. For we, too, are a national institution, both in name and character. We provide at more than 150 branches and agencies throughout the North and South Islands an expert and comprehensive banking service for all who live, trade or travel in New Zealand. It follows that, whenever you need information about New Zealand's national life, you should get in touch first with the *National* Bank of New Zealand.

The National Bank
OF NEW ZEALAND LIMITED

Head Office: 8 Moorgate, London, E.C.2. (MONarch 6311)
West End Branch: 14 Charles II Street, London, W.1. (TRAfalgar 6791)

Nature Watching in SCHWEPPSHIRE

Notice the spotting effect typical of the "spot effect" of the spot, in the "granulated sugar" or unreproductive phase. These spots, of no distinctive colour, are not concentric round any one point, and their edges are "only very slightly raised" (Kipps and Kennedy).

No. 3 ECOLOGY WATCHING. It is a mistake to believe that naturalists do not like Nature, or appreciate the general scene. On the contrary general-scene study is part of the recognition of the plant-animal network, the factual evidence of the cross-relations between sub-soil and super-soil, the fauna of flora, and the counterbalance of interdependent ecological aggregates into one symbiotically definable affinity i.e. there is a link.

In this typical cliff-head community or "nasty drop" situation (seen here in the Outer Schwebrides) the naturalist realises from the typical bird-weed arrangement that what he is actually looking at will actually in fact be there. Except for the four birds simply standing on top (a-typical and not in fact supposed to be there), each species is definitely related to its niche; and just when we start unconsciously looking out for one of the trumpet noses there it is—a pigeon-breasted gullbeak, rare visitor from Nova Schwemlya, obviously very near the end of its range. All this is precisely where one would expect to find what in fact the Watcher is now watching: evidence of "baws" or joint rot on the false knee of the parasite which infests the fourth segment of the caterpillar of the Tingle Fern.

Written by Stephen Potter; designed by George Him

SCHWEPPERVESCENCE LASTS THE WHOLE DRINK THROUGH

Net tangible assets of the group amounted to £1,800,463 at end-December. Profits before tax are given at £407,787 for 1959, somewhat below the levels of 1958 and 1957—but before then the best figure was £256,814, in 1956. Profits for the year ending March 31, 1961, are forecast at approximately £400,000 before tax. "In this event" the directors intend to pay an interim dividend of 4 per cent in December and a final of 6 per cent in June, 1961; this would give a yield of about 3⅜ per cent.

HIRE PURCHASE

International Competition

COMPETITION in hire purchase is spreading internationally. While finance houses in London are awaiting the opening of business by CIT and American Express—a formidable combination—two British finance houses have announced their own plans to acquire interests on the Continent. Bowmaker (in which Lloyds Bank has a 25 per cent interest) and Lloyds and Scottish Finance (owned jointly by Lloyds and the National Commercial Bank of Scotland) are to set up a joint holding company in Europe with an initial capital of about 24 million Swiss francs (about £2 million). The company will acquire interests in existing finance houses in the more highly developed European countries; plainly this is less hazardous than forming an entirely new company to compete on unfamiliar ground.

Many of the big United Kingdom hire purchase houses have interests in Commonwealth countries, and at the end of last year United Dominions Trust made arrangements with leading Continental finance houses to act as each other's correspondents for import and export business. But the Bowmaker-Lloyds and Scottish venture is the first plunge into direct competition in Europe—where the hire purchase habit has only recently started to grow. Banks as well as finance houses may be glad to note that the Bank of England has given exchange control permission in principle. It now appears that the test applied by the authorities to applications for overseas investment is simply that of financial soundness, though the investor may be required to use "switch" currency, at a very small premium.

RADIO HAZARDS

The New Death Rays

RADIO engineers have constantly been thwarted in their efforts to improve communications by the fact that, while the earth is round, concentrated radio beams move in a straight line. A radio signal transmitted from any one point will all too soon vanish over the horizon heading for outer space; round-the-world radio communication has been made possible only because a small part of these signals is deflected back to earth again by various layers of the upper atmosphere. To obtain the maximum range and strength for their signals, certain specialised types of transmitter, notably those for the new "forward scatter" Nato radio links and for long-range radar, send out a near-horizontal beam which skims the ground until the curvature of the earth causes the horizon to fall away beneath it. And in so doing they have introduced a new hazard that has much in common with the old idea of a death ray.

Such transmitters emit a signal of high field strength, powerful enough to cook any one or any animal in its path. This is similar to the radio-frequency heating used in some ovens and, in a milder form, by doctors giving radio-diathermy treatment; it heats the body right through and does not merely toast the outside. There has been a sharp difference of opinion between the Ministry of Defence and radio engineers about how far the danger extended in front of the transmitter. Just before Easter, the Post Office presented a recommendation to Parliament that the safe limit for exposure was one-hundredth of a watt per square centimetre, indicating a danger area of not much less than half a mile. This is closer to the figure suggested originally by radio engineers than to the 50 yards or so proposed by the Ministry of Defence. The hazard disappears, in the view of the Post Office, once the signal is more than ten feet above the ground—provided there are no houses, double-deck buses or aircraft in its path. The obvious alternative to a long, unsightly security fence straggling for a half-mile or so in front of these transmitters, covered with Danger and Keep Out notices, is to site these transmitters either on hills or facing out to sea. This is presumably why Mr Ward said tartly in the House of Commons on Wednesday that the area to be fenced around the stations now being built in this country would be no more than 100 yards in front of the transmitter.

Eating More Sugar

THE world's appetite for sugar is growing faster than that for all other foods. A weighty study* published by the International Sugar Council shows that in the ten years ending 1958, world consumption rose by about 16½ million metric tons—or 60 per cent—to about 44½ million tons, an average rate of increase of five per cent a year. Production has expanded so fast that it has comfortably offset the increase in population. During the same decade average consumption per head went up from 11.8 kilos (slightly below the prewar average) to 15½ kilos. Though the price of sugar varies enormously, owing mainly to government imposts of one kind and another, its "real" price has gone down in most countries.

Taking 50 countries that account for nearly three-quarters of world consumption, the price of sugar, relative to other foods, was 11 per cent cheaper on average in 1957 than in 1938—22 per cent cheaper in 38 countries, and 21 per cent dearer in eleven countries.

As demand for sugar responds to changes in income, especially in poorer countries, it is in those countries that the fastest growth in consumption has occurred. Before the war half the world's people ate only 10 per cent of its sugar, and four-fifths of the world ate only two-fifths of the total supply; by 1957 half the world's people were eating 14½ per cent of all the sugar consumed, and four-fifths of the people were eating half of it. In rich countries consumption per head rises slowly with increasing incomes, and may even decline; any increase is usually the result of eating more sugar-containing foods.

Clearly the world as a whole will go on eating more sugar, and the study bravely attempts to calculate how much more. Applying its calculated elasticities of demand to an annual rise in real income per head of 3.1 per cent (the average for 42 countries between 1951 and 1956), and assuming a rise in population of 1.45 per cent a year and no change in price, the study estimates that by 1965 world consumption will have grown to between 56 and 58 million tons.

**Trends and Forces in World Sugar Consumption*, by A. Viton and F. Pignalosa, of the Food & Agriculture Organisation.

WORLD OUTPUT AND CONSUMPTION

	1937/38–1938/39	1948/49–1949/50	1956/57–1957/58
World output, million tons	26·25	28·9	42·8

UNILEVER

Lord Heyworth on Growth

LORD HEYWORTH has taken his last bow as chairman of Unilever. He is very much a Unilever man. As the diarchy grew he moved up the ranks of management. He became chairman in the middle of the war and his term of office has been notable for the skill and manner in which he directed the massive postwar development and growth of the company. Happily and appropriately he chose capital investment as the theme of his last speech to shareholders: it is something he has had as much to do with as any man in British business. A summary of his speech, which, not unnaturally, contained some echoes of the evidence he gave to the Radcliffe committee, would not do it justice. Its pleasant flavour, though not all of its meat, can be tasted in some quotations:

Growth

> Even to hold our present position, we should have to grow by about 3 per cent a year. But it is not only going to be a bigger market but a different one. . . . Capital is the food of productive enterprise, and if you want a busi-

Safety in the Home

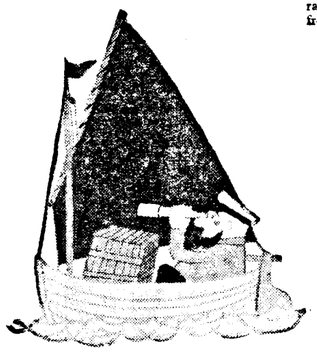
IT is a well-known fact that the average home compares in danger with a minefield; its occupants exposed day and night to the hazards of fire, electrocution, scalding, explosions, gassing, trip-wires, poison, tetanus, subsidence and falling downstairs and breaking their necks. The old scourges of the plague and the white death have given way to new, man-made dangers which take their regular toll of life each year; it is a matter of public concern that manufacturers should not add to the risk by making faulty new apparatus. The committee that was set up last summer under the chairmanship of Mr Justice Molony to examine the case for consumer protection in all its aspects was asked after the recent damning report on oil heaters whether it could make some quick, interim comments on safety. This week it did so.

The committee's main findings were that accidents at home happen mainly through carelessness and amateur botching of equipment; but that where design is genuinely at fault, as it was in the case of drip-feed radiant oil heaters, the government has insufficient powers to act quickly to prevent tragedy. Drip-feed radiant oil heaters of dangerous design can still be bought and sold freely; no-one has power to keep them off the market. The committee therefore suggested that some minister, probably the Home Secretary, ought to be given general powers to ban the sale of dangerous apparatus as soon as any danger comes to light. He could do this by issuing regulations which laid down requirements to which apparatus would conform before it could be marketed.

Probably because the report was a hurried one, the committee has been disappointingly vague about the exercise of these very considerable powers, or about the advice the Home Secretary should be able to consult as to when they ought to be used. The Home Secretary has a Poisons Board of experts from government departments and professional bodies to advise him when a compound should be put on the Poisons Register; it might not be so easy to constitute the equivalent Safety Board.

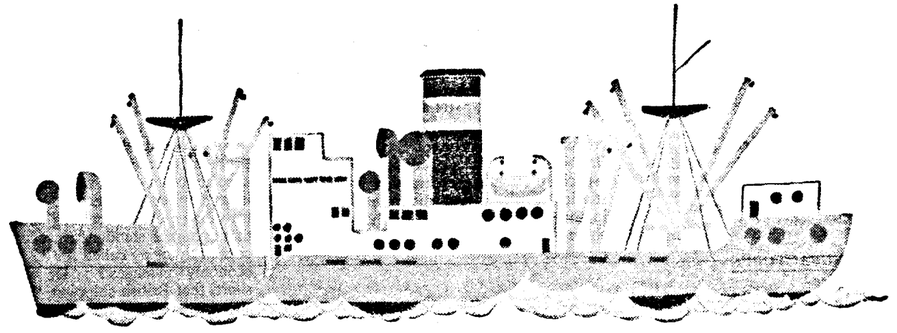
But the committee is obviously anxious to prevent a repetition of the clumsy pavane now being performed by Mr Nabarro, the Home Secretary, the British Standards Institution, the manufacturers of oil heaters and others in an effort to keep dangerous oil heaters off the market. This involves the BSI in drafting a standard for safe construction, Mr Nabarro in putting through a private member's bill saying that no heater shall be sold unless it conforms to the standard, and the Home Secretary in getting the industry to agree "voluntarily" to take back the large stocks of potentially dangerous heaters on retailers' shelves. Public opinion may not always feel so strongly about household dangers as it does about oil heaters now, in which case it might be difficult to get action taken at all.

Moreover, the committee does not seem to think that anyone has emerged with much credit from this business which was, after all, the first case in years of a dangerous design coming into widespread use before its risk was discovered. By the middle of 1957, so many fires were being reported that it should have been plain that something must be wrong with the basic design of at least some of the oil heaters on the market, yet no action was taken for a further two years. And now that the danger of draughts has been recognised, complacency seems to be setting in again; "we think that having come this far there may be a risk that it will be assumed that recent action has covered all the reasonably remediable hazards of the paraffin heater."



IT is this possibility of "future fresh hazards . . . in established goods or that new consumer goods may present unpredictable dangers" that has troubled the committee and caused it to demand such drastic powers for the Home Secretary. With the exception of the drip-feed radiant oil heaters, it found little evidence of dangerous goods in the shops. Of appliances that became dangerous with mis-use, there were plenty; the committee never even mentioned the fact that many household gadgets become dangerous with age. Electric wires on imported goods which used colours different from the established British colour code were a potential death trap even to the experienced amateur; some electrical equipment was said to be marketed with edges sharp enough to cut the insulation around their wires, but the committee said evidence on this was "imprecise."

The committee deplored the lack of standardisation among electric points which makes it necessary for the amateur to change plugs each time he changes house; the British Electrical and Allied Manufacturers' Association pointed out in its evidence to the committee that if more points were installed when houses were built, there would be less need for the long trailing flexes that are responsible for a number of accidents in the home. The committee was not happy about standards for fireguards, or for flame-resisting fabrics; its tone indicated that it may have some sharp things to say about BSI standards when it comes to submit its main report two years from now. It has contented itself in this interim report with drawing attention to the danger of lulling the public into a false sense of security; both fireguards and flame-resisting fabrics may prevent a terrible death, but not a nasty burn.



These are minor points compared with the committee's main recommendations. But they are enough to suggest that the main report—when it comes—is not necessarily going to please those who campaign most strongly for some highly organised, or nationalised, form of consumer protection. It rejects both seals of approval—"unregistered seals and symbols must be viewed with caution unless the standing of the issuing authority is unimpeachable"—and independent testing in advance as a means of protecting the public from dangerous goods. And if this interim report can be taken as a guide, its thinking would seem to lie in a diametrically opposite direction to the conclusions of the Political and Economic Planning* survey of present forms of consumer protection that few drastic changes are required in the law, but that "a national body concentrating on matters affecting consumers appears to be needed by common consent." The Molony committee seems to have come down on the side of the law, not of the do-gooders.

* *Consumer Protection and Enlightenment.* Political and Economic Planning. 3s. 6d.

SMALL EXPORTERS In the first three years of his ECGD policy, a manufacturer of insecticides built up one market from £200 to £5,500, raised his total export turnover from £2,500 to £15,000.

LARGE EXPORTERS In ten years of exporting under ECGD cover, a famous firm of tool makers raised its annual export turnover from £35,000 to £589,000.

Going up! In today's fiercely competitive export markets, business done under the security of ECGD cover is increasing. Total shipments of ECGD policy-holders increased by over 20% during 1959—at a time when uninsured exports rose by only 1%. With payments guaranteed, ECGD exporters are in the position to grant competitive credit terms and are filling their books with fresh orders. They're the men most likely to succeed. *Have a talk with your ECGD man.*

EXPORT AND EXPAND THROUGH E·C·G·D

ECGD is a Government Department set up to help exporters. Its services are fully explained in the booklet 'Payment Secured'. Write for a free copy.

ness to grow, you must feed it. . . . Growth in business is like growth in nature: the word implies that you shed what you no longer need.

Investment

We invest money where we hope to make money. . . . Taking account of proper replacement of fixed assets, of our social responsibilities, and of our competitive power, our broad aim should be to keep the figure of return on capital employed rising rather than falling. . . . To keep this figure rising calls for a nice balance between initiative and control. Generally speaking it is for the central management of our business to set the broad pattern of development, and for our companies to grasp opportunities as they come along. . . . We are not an investment trust, concerned to find capital and leave management to others. . . . We don't always expect to see a quick return on our capital. We are in business for a long time, and where we go, we mean to stay. . . . Everything depends, in the last resort, on how accurately we foretell the future, and although our range of advisory and service departments is wide, we have no Crystal Ball Division. . . . Some decisions are more a matter of faith—of confidence in one's own judgment—than of rational calculation. . . . We are sometimes wrong.

Finance

We usually expect to live well within our income and finance new growth out of our profits. . . . If we go to the market for money, we must pay the market rate, and there may be times when that does not suit us. But with strong resources of our own we can choose for ourselves the moment that does suit us. . . . If we, as management, keep a large proportion of the shareholders' money, we must also deliver the goods. . . . So long as the business does grow, and so long as the dividend shows a steady rise, I doubt whether any shareholder in Unilever feels aggrieved by the amount of profit we put back into the business. If he were that sort of shareholder, he wouldn't be in our sort of Company.

Devaluation admittedly helps to explain the big increase, absolutely and relatively, in French exports last year. But Italy, Holland and Belgium, again starting from a much lower base, managed to increase their exports by upwards of $245 million, which

EXPORTS OF MANUFACTURES IN $ MILLION

compares with a rise of $339 million in British exports. Britain, admittedly, suffered especially from the contraction in overseas sterling markets, and the recent recovery in those markets offers some hope that its share of world exports this year may increase.

TRADE IN MANUFACTURES

Britain's Share Drops

World trade in manufactures recovered strongly last year. Shipments from the main manufacturing countries, covering nine-tenths of the free world's exports, are put at a record of $45,367 million, eight per cent more than in 1958 and six per cent above the previous peak in 1957. Shipments by the United States, the biggest exporter, fell only slightly last year to $9,660 million, following a big fall in 1958. West Germany remained the second largest; its exports rose sharply by 11¼ per cent to $8,677 million and its share of trade increased from 18¼ to 19 per cent. Britain's exports of manufactures rose by 4½ per cent to $7,864 million, and its share declined further, from 17.9 to 17.3 per cent.

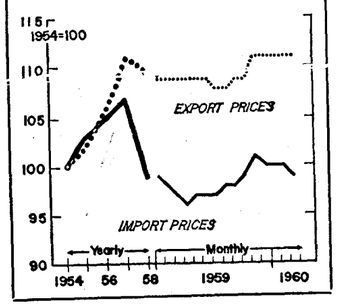
The Board of Trade Journal now leaves it to the reader to work out for himself the shares of individual countries, shown in italics in the table. It is right to direct first attention to the absolute increase in British exports, but the share of the market is still something to note when Britain's balance of payments could be much stronger and when ground is still being lost to European competitors.

SHIPPING

The Devil on the Deep

"Merchant adventurers in transport are fewer than they used to be, and the position of British shipping in their company is becoming somewhat lonely. The question is whether British shipping can continue as an adventurer"... in face of encroachments by (as yet other) governments. Sir Donald Anderson, chairman of P & O and erstwhile president of the Chamber of Shipping, has spoken on this refrain before. But in his address to this week's congress of the Institute of Transport he was able to expound his views on the problems of his industry, and some possible cures, rather more extensively.

Many of shipping's present difficulties, he readily grants, are due to the current slump—similar to many others the industry has seen, and weathered, before. Oil tankers are suffering almost entirely from a straightforward surplus of tonnage. His answer, which no one in principle would quarrel with, is equally simple: it is "to scupper about a quarter of them."



Tramps, which "are not much owned by the modern state because it believes that ships ought to have the air of a Rolls-Royce, or at least of an Austin Princess," are also beset largely by ordinary commercial factors. The growth of specialised freight carriers is one of these, with the result that there is less traffic for the more traditional, multi-purpose tramp. Another, and perhaps a more temporary factor, is the recent invasion of the grain trade by oil tankers, which lose less money that way than by staying laid-up.

Sir Donald's main concern, however, is for cargo and passenger liners. It is here that today's "merchant adventurer" is more directly plagued by the various kinds of Government interference, and these he thinks will last much longer than any slump. Flag discrimination is a more pernicious kind of state protection even than subsidies, both because it reduces the pool of cargo for which all ships can compete and because it is possibly more difficult to check or wipe out. Cargo liners, in addition, face growing active curiosity from governments (and why not?) about the conference system whereby freight rates are fixed. Passenger liners, for their part, have to meet subsidised competition not only at sea but from the air as well. But to say that "air can cash in on speed, its one outstanding asset, whilst it is enabled to contract out of cost, its one outstanding handicap," is perhaps a slight over-simplification.

Sir Donald allows that the first basic problem of the passenger line is how to keep its costs down when what it provides is largely personal service. But is all "the travelling public becoming so sophisticated that a higher standard (in ocean travel) is constantly being called for"? What about economy passages? He concludes, in short, that British shipping, "over a gradually increasing field, will be forced into choosing between the need for support from its own Government, together with the implications of that course, and a contraction

THE TERMS OF TRADE

Import prices fell in March because food was seasonally cheaper; since export prices did not change the terms of trade improved to the most favourable ratio since last June.

of its business." Such a choice may in fact exist. Whether the British taxpayer would voluntarily choose to get into this latest kind of direct, and no doubt endless, competition with other taxpayers is doubtful; but politicians will no doubt add it to their list.

TYRES

Charity or Competition?

The low-priced tyres that most manufacturers have announced this week in some sizes for cars that are no longer being made are described by their makers as a means of aiding the owner of the older car. While they certainly will do so by saving him 15 per cent of the cost of a new tyre, competition between tyre makers for the replacement market, and between them and the retreaders, seems to be the chief factors behind this price cut. Last August the tyre makers, led as this time by Dunlop, cut all their prices by 7½ per cent, but raised them by 2½ per cent in January. Competition from the smaller companies led up to this move: they had been increasing the discounts they gave to dealers to get a bigger share of the replacement market, which has traditionally been the chief source of the tyre maker's profits though it only takes about one-third of car tyre output. But half the home replacement market is held by the retreaders, and this would offer the tyre makers a chance of expanding their sales if they cut their prices enough to compete. Retreads sell for about 65 per cent of the price of a normal tyre; at 85 per cent of its price these new tyres way well become competitive.

A shortage of covers suitable for retreading in the most popular sizes, which are those available in the cheap price range, is given by the tyre makers as one reason for making these tyres—to aid the motorists unable to afford their standard product and unable to find retreads. This shortage has certainly given tyre makers an opportunity to increase their share of the replacement market; there is an unsatisfied demand for cheap tyres. Dunlop owns two big retreading companies, Regent and Tyresoles; it may feel that if these cannot satisfy demand it should step in itself and perhaps gain some advantage over its rivals in the process. But if replacement sales of new tyres do rise, they will eventually provide more covers for the tire retreaders and balance up the competitive position.

Tyre makers appear to be cutting their profit margins somewhat in introducing these tyres, which shows how anxious they are to increase their individual shares of the replacement market. Dunlop, the originator of this move, is making the tyres in the moulds of its old standard range of tyres, which are presumably fully depreciated, and several other companies are doing likewise. Reducing the quality of the rubber mix is probably the chief means of cutting costs, though it will shorten tread life; for companies such as Firestone that are making

the tyres in their standard moulds it is presumably the only way to cut costs. The new casings are the standard four-ply quality: motorists may indeed welcome the unusual circumstances that allow them to benefit from perceptible competition in the tyre business.

ENGINEERING PRICES

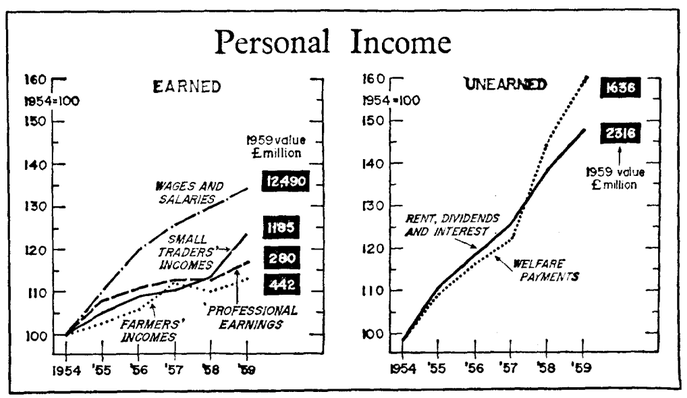
Creeping Up

Quite timidly, some engineering manufacturers are tugging at the sleeves of their customers and asking for more: those who can afford to are making demands. Since the beginning of this month about five per cent has been added to the prices asked for most iron castings, although producers of the heavier castings have been slowest to follow the general trend and are not sure that customers, in some fairly competitive areas, will fall for it. The 42-hour week has quickly been translated into an increase in overtime working and accounts, manufacturers say, for an increase in labour costs of the order of six per cent.

Where labour is a major factor in costs, this takes up about half the increases in prices. Light castings—rainwater goods produced by members of the British Ironfounders Association—are made with a high degree of mechanisation, and prices have been increased by about 2½ per cent. The cost of scrap iron has gone up slightly and is expected to increase further: for the rest manufacturers demonstrate their long memories and point to increases in costs absorbed last year and the year before. To be fair, BIA prices have not been increased since August, 1957.

The 42-hour week has affected the formula worked out by the British Electrical and Allied Manufacturers' Association as a basis for the rise and fall clause in long-term contracts. But BEAMA reports a slight fall across the range of prices of electrical engineering goods: transformer and switchgear manufacturers are in no position to ask for more, and few others have done so. The exception is in cables, other than mains cables, where British Insulated Callender's Cables put up prices by about five per cent on April 4th and, the system of price leadership working smoothly, the others followed suit in the same week. This may not be the last round of increases: it is part of the cable industry's recovery from the rock bottom reached by sharp price-cutting last year.

Aluminium products have cost more since the beginning of the year, because the price of virgin aluminium rose then. But steel is not getting any dearer, and manufacturers will have to rely on the Amalgamated Engineering Union to give them reason for the more general series of price increases that is rumoured in the near future.



SHARE INDICES

A New Indicator

This week *The Times* introduced a new series of share price indicators, prepared with the help and advice of Professor M. G. Kendall, professor of statistics at the London School of Economics, and computed daily. A new daily index of ordinary share prices is welcome, serving as a check on others which have been established much longer and which may not give a full impression of the market's real movements. The detailed indices show movements in the prices of large companies, smaller companies, capital goods, consumer goods, commodity shares, gold mining shares and industrial prior charges.

Interest will centre on the industrial share index of 150 stocks, which combines the large and smaller companies' indices. The base date for the indices is July 2, 1959. The choice of a base date is always difficult; this one has the convenience of falling in the middle of the year but it also has the disadvantage of reflecting prices midway through a boom rather than of any decisive moment in that boom. Movements before

Personal Income

that date have not been published, so that it will be some time before useful comparisons emerge between *The Times* series and the *Financial Times* and *The Economist* indicators.

Technically, *The Times* indices are constructed in a similar way to the weekly indicator of *The Economist* covering active stocks. The choice of stocks in that indicator and in *The Times* large company index is not markedly different. Both use arithmetic averages and price-relatives; the *Financial Times* ordinary share index, first compiled in 1935, uses the then fashionable geometric mean. *The Economist* indicator, however, is unweighted and, indeed, because it is rebased every year the stocks are brought back to an equal weight annually. *The Times* indices are weighted by market capitalisation at the base date: thus ICI will have a bigger influence on the final result than, say, Babcock and Wilcox. Deliberately, precise continuity in *The Economist* indicator has been sacrified to keep its content abreast of current market interest and a small number of shares within it have been changed each year. The aim of *The Times* indices seems to be strictly continuous and thus, as it grows old, it may have to beware of falling a little behind the times.

LONDON COPPER

A Nervous Market

THE London copper market is nervous. Members of the Exchange who have its reputation at heart are feeling rather shame-faced about the sharp fluctuations in prices this week, and some speculators are ruefully licking burned fingers. On Monday, following a rise of £6 last week, copper for three months' delivery rose by another £4 to £254 10s. a ton, and the premium for cash metal widened by over £4 to nearly £25 a ton. Copper then cost about as much as the peak prices paid during the American copper strikes that largely ended over two months ago. On Tuesday the market dropped more sharply than it had risen, and by Thursday three months' metal closed at £245 a ton, with the premium for cash metal narrowing to only £11. It is not easy to asses the relative importance of the factors affecting the market, but the broad picture is clear.

Contrary to most expectations, supplies are still tight. Consumption is high; consumers here and on the Continent are having to supplement the supplies they obtain under long-term contracts by buying through the market, and Eastern European and other countries are also buying. Metal Exchange stocks are low; at the end of last week they dropped further to only 1,675 tons. Accentuating this general stringency are three other factors. The main one is technical: people here, on the Continent and in New York who sold short after the American strikes ended are having to cover their commitments—and paying a pretty price for their mistakes. Then there is the fear, varying in intensity with the news from Chile, of a strike in at least two mines there; and the fact that the American export regulations prevent American copper from being delivered on the London market. Surprising as it may seem, some speculators apparently overlooked this point.

CHEMICALS

The Lure of Europe

AMERICAN chemical companies have shown themselves peculiarly susceptible to the traditional appeal of Europe to the American—perhaps a sign of industrial maturity; two of them are now engaged in extending their European interests. The Oronite Chemical Corporation, a subsidiary of Standard Oil of California, is reported to be discussing with British Petroleum plans for building new plants in Britain and West Germany, while Dow Chemicals has recently announced plans for new plants in several European countries. The proposed BP-Oronite plant is believed to be for the manufacture of aromatic chemicals from oil; they are used in the production of synthetic detergents, plastics and fibres. Oronite is already linked with BP through its one-third interest in Grange Chemicals; British Hydrocarbon Chemicals, the other shareholder, is a joint subsidiary of BP and Distillers. BP itself has other petrochemical interests in West Germany; it has a half share in plants producing ethylene and related chemicals operated by the German company Ordölchemie GmbH.

Dow had interests in Britain before it decided to establish a subsidiary earlier this year to strengthen its position here. It has a 45 per cent interest with Distillers in the Distrene polystyrene plant in South Wales, for which it supplied know-how from its American experience, and it is in partnership with Rio Tinto for the production of thorium; it makes Lurex metallic yarn at its own factory at Windsor, and Dowpon weedkiller in Dow Agrochemical's factory at King's Lynn. Like most American companies, Dow wants to expand in the common market as well as in the free trade area; last week it announced that it and the Netherlands State coal mines are planning to form a company, in which they will each have equal interests, to produce phenol. The agreement requires parliamentary approval; if given, construction of the plant will begin this summer. Part of the output will be used by the state mines—which are chemical producers as well—to make caprolactam, which they supply to the Dutch nylon producer AKU; the rest will be marketed by Dow. Dow itself will build a styrene-butadiene—a synthetic rubber—plant at Rotterdam as well. In France it is building plant to make polystyrene and polyvinyl chloride with Péchiney; in Italy it has formed a wholly-owned subsidiary to produce polystyrene and other chemicals. Clearly Dow, like other American chemical companies, wants to share in the prosperity of the European chemical industries—and hopes that the common market will increase their rate of growth.

SHORTER NOTES

Nine of the leading British steel companies have joined the British Steel Corporation, one of the wholly-owned subsidiaries of the British Iron and Steel Federation which is concerned with the importing of the industry's raw materials on a collective basis, in the formation of British Ore Investments Overseas. This will have a share capital of £5 million, 20 per cent being held by the importing corporation and the rest divided among the ore-consuming companies. It will take over all BISC's interests in overseas-mining company ventures, such as the Conakry company that mines ores in Guinea and the MIFERMA group which is engaged in developing an orefield in Mauretania, French West Africa.

*

In a note on Henry Simon (Holdings) which appeared in the issue of April 16th it was wrongly stated that the special distribution of 10 per cent paid to shareholders in Henry Simon (Holdings) in 1958 was not repeated for the year ended December 31, 1959. In fact, Henry Simon paid a special capital distribution of 7½ per cent on March 31, 1959, and a similar capital distribution of 10 per cent on March 31, 1960.

*

Henry Ansbacher and Company claims to have received from Waterlow shareholders sufficient acceptances of the offer from Parnell and Sons to give Parnell control of Waterlow.

AUSTIN CROSSES EUROPE

FRITZ ZURBRUGG'S usual run is from Rotterdam to Zurich. That's 450 miles. 450 gruelling miles of highway . . . of bouncing, jolting cobblestones and long wide concrete autobahn. 450 miles of daylight and darkness, of morning fog and harsh afternoon sun. 450 miles of guiding his 7-ton Austin lorry and its trailer—a total gross load of around 20 tons— across Europe.

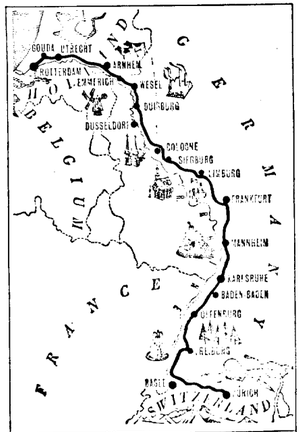
24 YEARS ON THE ROAD

Zurbrugg knows this journey well. He knows the customs men—Dutch, German, Swiss—who check his papers and his load at each frontier. He knows the German 'Gasthaus' where he can get a meal or some sleep along the route. And —after 24 years as a driver—he knows the road . . . his constant companion and, sometimes, his enemy.

A GEOGRAPHY OF EUROPE

This is a long-distance run that packs in half the geography of Europe. Plenty for Zurbrugg's eye to rest on as he drives along. The flat, green country of *Holland* where the electric trains run on wires alongside the broad concrete road and men are at work with scythes on the canal banks and grazing cattle stretch as far as the eye can see. The *German Ruhr* at night when the moon hangs over a bare landscape of towering chimneys and meadowland and the broad quiet barge-laden Rhine . . . and a factory made of glass glows from within like a vast luminous insect. The dark forests and rolling hills of *Central and Southern Germany* through which the great autobahn has been driven across huge bridges and flyovers. The first *Swiss* villages—with their 'overhang' roofs and elaborate timbering—alongside the Rhine, whose lead-coloured water steams with early morning mist as though it were boiling . . .

THE DEATH RUN



All this is familiar to Zurbrugg. More too. He knows the danger areas of the route. The long dangerous incline to the Wuppertal bridge, where the lorries that descend must travel even more slowly than those that climb. And the 'Todestrecke' or 'death run' between Frankfurt and Mannheim, where the road is so long and so straight that drivers fall asleep at the wheel . . .

A PLEASURE TO DRIVE

But Zurbrugg thinks he has an advantage over many other drivers. He drives an Austin. "I can handle this 7-tonner like a far smaller vehicle" he says. "It corners beautifully and it's a pleasure to drive. And it has a wonderful engine."

Fritz Zurbrugg's employers, Bischofberger A. G. of Zurich have 3 Austin trucks in operation at the moment. They are constantly in use on routes inside Switzerland and on trans-European routes. Recently one of them clocked 150,000 miles in a single year.

If you would like more information about the Austin 7-tonner—or any other vehicle in the wide Austin range—your Austin dealer will be happy to supply it.

THIS IS THE ROUTE followed by the Bischofberger lorries. Rotterdam . . . Arnhem . . . across the German frontier to Kleve and Moers . . . down the main southern autobahn past Frankfurt and Mannheim . . . to Baden-Baden . . .by-pass Basle and cross the Swiss frontier at Waldshut . . . and into Zurich.

LARGE SCALE CAPITAL EXPENDITURE AN ESSENTIAL FEATURE OF BUSINESS

SIR NEVILLE GASS ON ENCOURAGING LONG TERM PROSPECTS

The Fifty-first Annual General Meeting of The British Petroleum Company Limited will be held on May 19th at Britannic House, Finsbury Circus, London, E.C.

The following is the statement by Sir Neville Gass, KBE, MC, the chairman, which has been circulated to stockholders with the report and accounts for the year ended December 31, 1959:

Before commenting on the results, there are special features of the year 1959 to be mentioned.

The 50th Anniversary of the Company's formation was in April, 1959, when we were greatly honoured to receive a message of congratulations and good wishes from Her Majesty the Queen in reply to our loyal greetings. In September, when the Company's first 50,000 ton tanker, then the largest to be built in a British shipyard, was launched at the Clydebank yard of John Brown and Co., we were further honoured by Her Majesty Queen Elizabeth the Queen Mother, who graciously performed the ceremony and named the vessel *British Queen*.

Your Company owes its origin to Mr William Knox D'Arcy whose oil concession in Iran, obtained in 1901, led after seven years of arduous pioneering and repeated disappointments to oil being struck there in 1908. The development of this first discovery of Middle East oil was the Company's immediate task on its formation in 1909. D'Arcy devoted a personal fortune to the search for oil in Iran. As he had previously been for many years in Australia, where he was associated with a successful gold mining venture, the Company has a special historical link with Australia. We were therefore particularly glad that in June of our Jubilee Year Dame Pattie Menzies honoured us by launching and naming our tanker *British Trust* at Lithgow's yard, and that the Prime Minister of Australia was able to accompany her.

In April of last year I visited Iran. Later in the year I went to the USA, Canada and Trinidad, and early in 1960 to Libya, Algiers and the Sahara, and to a number of countries in West Africa. I am very glad to have had the opportunity of seeing the growth of the operations in which we are interested in all these territories and of meeting the people conducting them. In Nigeria, where we are joint participants in the search for oil, the considerable obstacles of working in a most difficult swampy terrain have been vigorously tackled and overcome to the great credit of the operating staff, and the long effort to discover oil has achieved a substantial success.

THE YEAR'S RESULTS

Our results for the year 1959 can be summarised by saying that the Group's sales of crude oil and refined products totalled 65 million tons, and the Group's net income was just over £63 million.

When referring in April last year to the prospects for 1959. I said to stockholders that in the prevailing difficult market conditions we were expecting only a slight increase in sales tonnage, but saw no grounds for anticipating an increase in trading margins. For the first six months of the year, as shown in the Group Income Statement for the half-year issued in September, the sales tonnage was practically the same as in the first six months of 1958. The year's increase of some 3 million tons was thus secured mainly in the second half-year. This is an encouraging feature, as also is the growth of nearly 10 per cent in the inland trade in products of our marketing associates, to which later reference is made.

The Group's income, before taxation, was £131 million. This was less by £7 million than in 1958, although the sales tonnage increased—a reflection of the depression in prices caused by the strongly competitive market conditions, which showed no improvement as the year progressed. Due to the reduction in the charge for taxation, the Group's net income, at £63 million, was practically the same as in 1958 and after allowing for the recommended dividend, there has been retained in the business a total of £97 million—£68 million from the revenue of the Consolidated Companies, £17 million from the non-Consolidated Companies, and £12 million in Capital Reserve.

ESSENTIAL CAPITAL EXPENDITURE

The total capital expenditure of our Group in 1959, including the expenditure by non-consolidated subsidiaries and our proportion of expenditure by our allied companies, amounted to £141 million, an increase of £3 million compared with the previous year. An analysis of the capital expenditure is contained in the Accounts and Finance section of this statement.

The expenditure on capital account in any year contains a large element in respect of schemes sanctioned in earlier years, since major projects require two or three years' construction effort apart from the preceding periods for assessment and detailed preparation. In present conditions the urgency of the need for new projects is being very carefully assessed and we have achieved some slowing down in the rate of expenditure by deferring schemes or by spreading the period for completion of previously authorised programmes. In the latter connection special reference should be made to the tanker building programme. The large number of ships ordered by tanker operators under the influence of the earlier high freight rates and over-optimism as to forward needs has resulted in a world surplus of tanker tonnage to an extent which will take some time to remedy. We have in consequence progressively extended the period of delivery of vessels on order for us and do not now expect our programme to be completed until 1966, and I wish to make special mention of the co-operation received from the shipbuilders concerned.

Capital expenditure on a major scale is an unavoidable feature of the business. The growing insistence of consuming markets to have local refineries is one factor involving large expenditure, even though in some of these schemes it has been possible to formulate joint projects with other concerns, in preference to the duplication of individual units. New developments, such as petroleum chemicals, new plant to meet the rising quality standards of products, and additions to equipment to keep pace with expanding consumption represent in the aggregate, for a business of our size, a very large amount of money.

We must, therefore, be prepared to continue to find large sums for capital expenditure, since to attempt to stand still would result in going backwards. This would be detrimental to our competitive position as a major British interest in the international oil industry, and also inconsistent with the development responsibilities inherent in the extent of the resources of crude oil to which we have entitlement.

The amounts retained in the business provide the major part of our requirements for capital expenditure. Some assistance is obtained locally from non-consolidated subsidiaries and associates. To supplement the Group central resources we secured early this year the availability of a further £12 million through the Clyde Charter Company Limited on arrangements similar to those made early in 1959, and negotiations are in progress for the issue in Switzerland of a further 60 million Swiss francs (£5 million) of Loan Stock; in both these cases we had, in making the original arrangement, expressed the desire that they should be followed by further similar amounts as they now are.

We are asking the Debenture stockholders to agree to amendments in the Trust Deeds constituting our Debenture Stocks as it has been found that provisions relative to UK incorporated subsidiaries could seriously hamper certain of our overseas operations, particularly in the cases of subsidiaries which are not wholly owned. If the amendments are agreed, a partly owned UK subsidiary which now can borrow from, or issue further share capital to, the parent company only, will not be subject to that restriction. Also, any wholly owned UK subsidiaries will be able to borrow from, or issue share capital to, another wholly owned UK subsidiary. These changes will permit greater flexibility and will be advantageous to the Company without being in any way detrimental to the interests of the Debenture holders.

In connection with our arrangements with Sinclair Oil Corporation of USA, the development of the business of Sinclair and BP Sales Inc. has been retarded by the restriction on imports into the USA, but that company has secured business with a number of import quota holders. Though on a relatively small scale, this marks the beginning of results from the association, which we are sure will prove of long-term benefit to Sinclair and ourselves. Sinclair and BP Explorations Inc. is undertaking exploration activities as mentioned in that section of the statement.

INDUSTRY'S GENERAL POSITION

Turning to the general position of the industry, 1959 showed an appreciable recovery in the rate of expansion of demand, but the industry is likely to have to face the difficulties due to the over-abundance of available supply for a further considerable period. Various factors are tending to concentrate the difficulties in the Eastern Hemisphere, where we are mainly concerned, rather than in the Western Hemisphere. Much of the oil shut out from the USA by the import restrictions there is in the hands of US concerns who had developed production in Venezuela and elsewhere for the specific purpose of supplementing US domestic resources for the US market. Being now left without that outlet they are looking for other outlets in competition with existing supplies from Eastern Hemisphere production. In South America, to which we and other Eastern Hemisphere producers have supplied very considerable quantities, greater activity to foster indigenous production has had the effect of reducing import needs.

The present year has witnessed the start of substantial exports of oil from the Sahara with the completion of the first pipeline to the Mediterranean, and the quantities will be further increased later in the year with the commissioning of the second pipeline. Pending experience of sustained production operations on a large scale in the Sahara there is not yet the same firm basis as in other areas for assessing future production potential but there is no doubt that from there, and later from Libya, very substantial quantities of oil will be available for export and being favourably placed in relation to the highly important European market, will find an outlet there which would otherwise have been supplied from other producing areas. There is the further factor of the growth of exports of oil from Russia, particularly into Western Europe and other near-by areas.

In all these circumstances it should not be expected that the growth of Middle East production will continue at the same high rate as during the last decade. With the increase in the number of sources from which oil is now available, it is inevitable that the previously developed sources will not continue to meet the same proportion of the total demand in those consuming areas which are most liable to be affected by supplies from new sources on geographical considerations. It is to be hoped that the increasing supplies from new sources will come into the supply pattern in a steady and not disruptive manner. Forced development can disregard the interests of established supply sources which continue to be needed for the fulfilment of the total requirements and for many of which the maintenance of oil revenue is essential for their social and economic development, itself indispensable for progress and stability.

In our case the total sums included in our 1959 Accounts for payment to the Middle East countries under fifty-fifty agreements amount to £115 million, and, as in 1958, these sums greatly exceed the Group's net profit for the year, £63 million.

In the year 1960 we are expecting an increase in our sales but, again, it would be imprudent, market conditions in the Eastern Hemisphere being what they are, to expect any material increase in the trading margins, though we are paying particular attention to economy in operation in all sides of the business in order to mitigate the effects of the depression in selling prices.

The difficulties of the present situation, though not likely to disappear in the immediate future, should not be allowed to obscure the encouraging longer term prospects of the oil industry. The growth of population, expansion in world economy, industrialisation and improvement in living standards, particularly in under-developed countries, will be accompanied by a continuing increase in the demand for energy in which oil has a major role to play. Thus the recently published report of the OEEC Energy Advisory Commission forecasts for Western Europe a 1965 demand for oil products equivalent to 200/240 million tons of crude oil compared with about 157 million tons in 1959. The total demand for oil in all countries of the free world in 1965 is currently estimated to increase above that in 1959 by more than 300 million tons, or, say 35 per cent. The oil industry, granted freedom of international trade, should therefore continue to enjoy confidence as a growth industry and we are well placed to participate in this growth.

ACCOUNTS AND FINANCE

The Accounts of the Company consist, as in recent years, of three sections:

(1) The Balance Sheet of The British Petroleum Company Limited and the Consolidated Balance Sheet and Profit and Loss Account of The British Petroleum Company Limited and Subsidiary Companies, excluding those referred to in note 12 on page 11.

(2) The Accounts of The Tanker Insurance Company Limited which are not incorporated in the Consolidated Accounts.

(3) A Group Income Statement showing the income of The British Petroleum Company Limited and all Subsidiary Companies (excluding The Tanker Insurance Company Limited).

The main Subsidiary and Allied Companies are listed on pages 16, 17 and 18.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

Trading profit in the Consolidated Profit and Loss Account after provision for depreciation and amounts written off is £116,306,309 for 1959 compared with £123,822,128 for 1958. Depreciation and amounts written off total £30,694,068 compared with £33,139,526 for the year 1958.

The total taxation charge is £63,028,710, which compares with a figure for 1958 of £70,452,428. Due to the benefit of Investment Allowances and a recovery against this year's expenditure out of taxed income of other years not previously distributed to the Parent Company, the United Kingdom taxation position shows a credit of £15,044,979, whilst the overseas taxation liability is £78,073,689. Of the overseas taxation £76,306,020 arises in Iran, Iraq, Kuwait and Qatar, in which territories payments in the nature of royalties of £38,356,502 have also been made and are taken into account prior to arriving at the trading profit mentioned above. The total for the Middle East countries from the Group in 1959 is, therefore, £114,662,522, which compares with £118,783,215 in 1958.

The Consolidated net profit amounts to £62,149,090 compared with £61,922,563 for 1958 and of the Consolidated net profit £56,716,714 is dealt with in the Accounts of The British Petroleum Company Limited.

In the Accounts of The British Petroleum Company Limited your Directors have placed £1 million to Debenture Stock Reserve and allocated £30 million to General Reserve, leaving, with the £4,962,794 brought forward from last year, £30,477,417 available for distribution.

The Preference Dividends, net, amount to £666,174 and the Interim Dividend of 8d. per £1 Ordinary stock unit, free of income tax, was £7,008,161. Your Directors have recommended a Final Dividend on the Ordinary Stock of 1s. 6d. per £1 unit of stock, free of income tax, making a total for the year of 2s. 2d. per £1 unit of stock, free of income tax.

This leaves £7,034,721 of unappropriated income to be carried forward in the Accounts of The British Petroleum Company Limited which, together with the unappropriated income of Subsidiary Companies, makes a total carry forward of £26,271,221 compared with £19,256,549 in the previous year.

CONSOLIDATED BALANCE SHEET

The issued Ordinary Stock of The British Petroleum Company Limited was increased in August by 7,843,480 stock units of £1 each which were issued to the holders of £19,608,700 of the 6 per cent Convertible Debenture Stock 1976/80 who exercised their conversion rights. The premium of £11,765,220 on the Ordinary Stock issued has been credited to Share Premium Account.

The Capital Reserve has been increased by additions during the year of £11,772,800. These additions are made up of £2,500,000, being the third of 10 equal annual instalments received from the Government of Iran under the terms of the 1954 agreement, and £9,272,800, being sums payable by the companies with whom we are associated in the operations in Iran.

The Revenue Reserves have been increased this year by a total of £37,504,303. This increase consists of £30 million allocated to General Reserve in The British Petroleum Company Limited and £7,504,303 retained income in the Consolidated Companies. The General Reserve of BP Tanker Company Limited, £15 million, has been transferred, by way of inter company dividend, into the General Reserve of the Parent Company; this transfer does not affect the total Revenue Reserves.

The total capital expenditure of the Group during 1959, including non-Consolidated Sub-

sidiary Companies and our proportion of the expenditure by Allied Companies, was made up as follows:

	1959 £	1958 £
Exploration and production	34,750,000	39,000,000
Refineries	39,750,000	40,000,000
Tankers (before deducting sales under tanker finance arrangements)	24,000,000	23,750,000
Distribution and marketing facilities, etc.	42,250,000	34,750,000
	£140,750,000	£137,500,000

The amounts retained in the business to meet new capital expenditure and to provide working capital were:

	1959 £	1958 £
Consolidated Companies:		
Capital and revenue reserves	49,500,000	52,000,000
Depreciation and amounts written off	30,500,000	33,000,000
	80,000,000	85,000,000
Non-Consolidated Companies:		
Depreciation and profits retained	17,000,000	16,500,000
	£97,000,000	£101,500,000

During 1959 we received £21 million under tanker finance arrangements and £11 million from the Canadian and Swiss loans mentioned last year.

GROUP INCOME STATEMENT

The Group Income Statement for the year which appears on page 14 shows the summarised trading figures of The British Petroleum Company Limited and all Subsidiary Companies (excluding The Tanker Insurance Company Limited). The net income is £63,358,000 (compared with £62,952,000 for 1958) of which £62,149,000 is dealt with in the Consolidated Profit and Loss Account and £1,209,000 relates to the non-Consolidated Subsidiary Companies.

PRODUCTION AND EXPLORATION

The following table shows the BP Group's percentage shareholding in companies producing crude oil in various parts of the world and the total production by each company in 1959:

Company	BP Group share-holding Per cent	Total crude oil production 1959 Tons	1958 Tons
IRAN			
Iranian Oil Exploration and Producing Company (through Iranian Oil Participants Ltd.)	40	44,677,000	39,780,000
IRAQ			
Iraq Petroleum Company, Ltd.	23¾	27,330,000	22,633,000
Basrah Petroleum Company Ltd.	23¾	12,297,000	11,019,000
Mosul Petroleum Company Ltd.	23¾	1,271,000	1,280,000
KUWAIT			
Kuwait Oil Company Ltd.	50	68,437,000	69,117,000
QATAR			
Qatar Petroleum Company Ltd.	23¾	7,867,000	8,092,000
EGYPT			
The Anglo-Egyptian Oilfields Ltd.	31	510,000	*
TRINIDAD			
Trinidad Petroleum Development Company Ltd.	77	862,000	726,000
Trinidad Northern Areas Ltd.	33⅓	528,000	277,000
NIGERIA			
The Shell-BP Petroleum Development Company of Nigeria Ltd.	50	551,000	257,000
UNITED KINGDOM			
BP Exploration Company Ltd.	100	83,000	80,000
Scottish Oils Ltd. (Shale Oil)	100	60,000	63,000
CANADA			
Triad Oil Co. Ltd.	51½	123,000	104,000

Gewerkschaft Norddeutschland	100	6,000	4,900
SICILY			
Compagnia Idrocarburi della Sicilia D'Arcy S.p.A.	100	155	4,300

* Under sequestration in 1958.

Middle East.—In Iran, following the completion of the pipeline from Gach Saran to Ganaveh, the twenty-two miles of underwater line between the mainland and the Persian Gulf island of Kharg was successfully pulled in December. This is the longest 30 inch pipeline to have been laid in this manner anywhere in the world. The new loading terminal on Kharg Island, to which the pipeline will be connected, is expected to be completed by mid-1960. During the year the exploration wells at Ahwar and Binak both found oil and production tests are in progress. Exploration wells were begun at Mand, some 50 miles south-east of Bushire, and early in 1960 at Suru in the Bandar Abbas area.

In Kuwait development of the Raudhatain field continued throughout the year and it was brought into production in March, 1960. At Minagish a further appraisal well is being drilled. In the latter part of the year a marine seismic survey was carried out in the area covered by the present agreement.

In southern Iraq the island loading terminal under construction is scheduled for completion in 1961. Production from the Bai Hassan field located west of the main Kirkuk field is due to begin shortly, and exploration work in other areas continues.

Production in Qatar proceeded satisfactorily during the year.

Abu Dhabi Marine Areas Limited, in which we have a two-thirds interest, has now completed three offshore wells. The results have not been uniform, but have been sufficiently encouraging for the preparation of facilities for regular production, and it is hoped this stage will be reached by about mid-1962.

United Kingdom.—During the year 83,000 tons of oil were produced in the United Kingdom. Part of this oil was drawn from several small new producing areas including Bothamsall in Nottinghamshire, Gainsborough and Corringham in Lincolnshire, and Kimmeridge in Dorset. The ultimate potential of these discoveries has still to be assessed. Our exploration activities have continued but no other significant oil or gas production has been proved. Likewise our work on behalf of the Gas Council has not resulted in any commercial gas discovery.

Shale oil production in Scotland at 60,000 tons was 3,000 tons lower than in 1958. The shale field operated throughout the year on the restricted basis referred to in my last year's statement. Considerable economies were thereby effected but losses continue to be incurred.

Europe.—In France, in association with French interests, further test drilling was continued in the Rhône Valley and a seismic survey was carried out in south-west France, but by the end of the year, owing to the disappointing results obtained, it was decided to suspend our exploration activities in continental France.

In Austria a first test well was completed as a dry hole in the joint venture with Austrian interests.

In Sicily the experimental production of the heavy asphaltic oil discovered at Vittoria led us to conclude that this field could not be developed profitably and our operations were consequently closed down and the venture abandoned.

In Malta the test well near Valletta was drilled to a depth of 9,736 feet. Results obtained did not encourage further exploration and we decided to terminate our concession.

In Switzerland seismic work was carried out in the Canton of Fribourg, and a test location has been selected for drilling in 1960.

West Africa.—In Nigeria development of the Bomu, Oloibiri and Afam fields continued and a new field at Ebubu was brought into production. With output increased to 551,000 tons, Nigeria can now be regarded as an established oil-producing country. On completion late last year of the Bomu-Afam pipeline, all four fields are now linked by pipeline with Port Harcourt from where all export shipments are made. The pipeline is being extended southwards to Bonny Island at the mouth of the Bonny River where an ocean terminal is being built. During the year 34 exploration wells were drilled, of which seven have produced oil on test. One of these successful exploration wells, at Ughelli, was the first significant oil discovery made in the Western Region of Nigeria.

In Senegal and Gambia drilling and geophysical surveys continued throughout the year in conjunction with French interests, but no oil or gas production was proved.

North Africa.—In the Algerian Sahara seismic and geological work continued in the permit areas held by our associated company, Société des Pétroles de Valence. These areas were extended during the year and now cover a total of 19,000 sq. kms. Drilling of the first deep test began in November, 1959, at El Arich el Megta, in the Djorf-el-Atfal permit.

In Libya the scale of our geological and geophysical operations was substantially increased towards the end of the year. A fourth test well is now drilling. Two further areas covering 63,000 sq. kms. were granted to us in Cyrenaica.

In Egypt the property of The Anglo-Egyptian Oilfields, Ltd., was desequestrated in April, 1959.

East Africa.—Shallow drilling for geological information, and further geological and geophysical survey work, continued in Kenya, Tanganyika and on the island of Pemba (Zanzibar Protectorate). A geophysical survey was carried out in British Somaliland.

Australasia.—In Papua two deviated holes were drilled from Puri No. 1, the well which on test flowed oil initially but shortly afterwards went to water. Inadequate reservoir conditions were found in the deviated holes, neither of which gave any significant flow of oil or gas. In September a deep test was started at Bwata, 15 miles to the north-west of Puri; a considerable flow of gas was obtained from it, but no crude oil was produced. The well eventually reached water-bearing limestones and was suspended early this year. Preparations are in hand for drilling a further structure at Iehi.

In Australia a test well at Innamincka in South Australia in which we participated through Frome-Broken Hill was carried to 12,637 feet, but without finding significant oil or gas production. A well was completed at Port Campbell in Victoria which on test yielded a small flow of gas; further seismic work is being undertaken before deciding whether to explore the extent of this gas accumulation by further drilling.

In the North Island of New Zealand the first well, in Taranaki, discovered wet gas at great depth. A second test well is being prepared in the Gisborne district.

Canada.—In Canada, Triad Oil Co. Ltd., in which we hold a 51.5 per cent interest, produced 123,000 tons of crude oil. The restrictions imposed on production continued to curtail offtakes from the producing wells. Both through our interest in Triad Oil and through wholly owned subsidiaries, we have continued to acquire interests in new areas and during 1959 a total of 25 wells was drilled, of which seven were completed as oil wells. While further progress has thus been made, the results so far obtained since we began our participation in the search for oil in Canada in 1954 have been on a relatively modest scale.

Alaska.—During the year the Company formed a wholly owned subsidiary, BP Exploration Co. (Alaska) Inc., to investigate the oil prospects of Alaska, and rights have been acquired in several areas of that State.

Caribbean.—In Trinidad, production once again showed an appreciable increase, both from the Trinidad Petroleum Development land areas and the Trinidad Northern Areas Soldado marine field. The first well drilled under a T.P.D. marine licence also proved oil and tests were in progress at the end of the year to evaluate its potential.

South and Central America.—In association with Sinclair prospects in Columbia were further investigated and work is continuing in the area. A geological survey has been carried out in British Honduras.

REFINING

The following table shows the BP Group's percentage shareholding in companies with refineries and the total throughput in each refinery in 1959 compared with the previous year:

Company	Refinery location	BP Group share-holding Per cent	Total throughput 1959 Tons	1958 Tons
UNITED KINGDOM				
BP Refinery (Kent) Ltd.	Isle of Grain	100	7,138,000	5,815,000
BP Refinery (Llandarcy) Ltd.	Llandarcy	100	2,824,000	2,782,000
BP Refinery (Grangemouth) Ltd.	Grangemouth	100	2,431,000	2,053,000
Scottish Oils Ltd.	Pumpherston	100	140,000	143,000

LEBANON				
Iraq Petroleum Company, Ltd.	Tripoli	23¾	181,000	305,000

In 1959 the total quantity of crude oil refined for us in the above refineries, as well as that refined under certain processing arrangements, was just under 39 million tons.

Following the expansion of the Kent refinery there was an increase of over 1.3 million tons in throughput, and 160,000 tons of aviation gasoline were produced during the year. We now have under construction at Kent a plant for the production of a range of special boiling point spirits which is expected to be ready for commissioning towards the end of this year. An agreement was reached whereby the South Eastern Gas Board will be supplied with refinery gas later in 1960.

The construction of the pipeline from the new Angle Bay Terminal at Milford Haven to Llandarcy refinery has been completed. The jetty and tankage are expected to be ready in the autumn of this year, work having been delayed by unfavourable weather conditions.

The Irish Refining Co. Ltd.'s new plant at Whitegate in Eire was commissioned last May and during the year 129,000 tons of crude oil were processed on our behalf.

Construction of the new refinery at Dinslaken in the Ruhr has proceeded satisfactorily and it is expected that the refinery will be commissioned in the early part of the summer. A dewaxing unit is being installed at the Oelwerke Julius Schindler refinery at Hamburg. A plant is under construction at Lavera refinery for the treatment of cracked gasolines returned from the nearby petroleum chemical plant of Naphtachimie S.A. At the Venice refinery a new hydronner was successfully commissioned in August, and engineering work is being carried out on a new catalytic reformer which should be completed during 1961.

At the Kuwait refinery a small catalytic reformer for the production of high grade motor spirit for the local market has been in operation since June. At the Abadan refinery in Iran where our share of the throughput was 5,325,000 tons it has been decided to install a catalytic reformer for the production of high octane motor spirit with a capacity of 20,000 barrels per day. At Kwinana in Western Australia the new catalytic reformer, commissioned in February, has operated satisfactorily.

At our Aden refinery, operations which had proceeded well in 1959, ceased early in February last as the result of a strike which we hope will soon end. The resultant loss of refined products has been made good from other refineries.

We expect to commission the new refinery at Montreal during the second quarter of 1960.

We are participating in a refinery to be built in New Zealand. Following the development of production in Nigeria, the erection of a refinery there is under active consideration. In Turkey the new 3,200,000 tons per annum refinery in which we are interested along with other oil companies is now under construction. Sites have been chosen for other new refineries, in which we shall hold a part interest, at Algiers, Durban and Mombasa, and development work is proceeding in connection with these projects. We are considering participation in a refinery to be erected at Strasbourg and are also planning a refinery in Northern Ireland.

PETROLEUM CHEMICALS

The Group's operations in the petroleum chemical field were again appreciably increased in size and scope during 1959.

In the UK, BP is associated through British Hydrocarbon Chemicals with Forth Chemicals and Grange Chemicals at Grangemouth. All three companies operated satisfactorily during 1959, achieving in many cases production well in excess of design. Plants for the manufacture of high density polyethylene, cumene, phenol and acetone were brought on stream, thus adding to the growing list of chemicals produced by these companies. Good progress was made in the construction of the third ethylene plant and we hope to commission it in mid-1960. When this takes place, combined feedstock requirements of the three cracking plants at BHC will be nearly 1 million tons per annum.

In France Naphtachimie S.A., in which we have a substantial holding through our French associate, had a satisfactory year, chemical production and sales being a record. Construction of new plants progressed steadily throughout 1959. New plants for propylene oxide and

propylene glycols were successfully commissioned and it is expected that a new cracker and a second ethylene oxide plant will be commissioned in mid-1960.

In Germany, Erdölchemie G.m.b.H., in which we have a 50 per cent interest through our German associate, has completed the first stage of its construction. This includes plants for the manufacture of ethylene oxide, ethylene glycols and propylene oxide. Construction of the second stage plants, which will approximately treble the capacity for ethylene and ethylene derivatives, was almost completed during 1959.

SEA TRANSPORT

At the end of 1959 Group tankers totalled 144 ships of 2,644,000 d.w. tons compared with 157 ships of 2,600,000 d.w. tons at the end of 1958. Included as Group tankers are the fleets of the BP Tanker Company, the BP Clyde Tanker Company and Tanker Charter Company, the Clyde Charter Company and Société Maritime des Pétroles B.P.

During 1959, 25 older and smaller vessels of 340,000 d.w. tons were disposed of, mostly for scrapping, and 12 vessels of 384,000 d.w. tons were added including nine of 279,000 d.w. tons to the Tanker Charter and Clyde Tanker Companies.

We had at the end of the year 36 tankers ranging from 15,000 to 65,000 d.w. tons under construction or on order, and as mentioned earlier we have made arrangements with some shipbuilders, subsequent to those referred to last year, to spread deliveries still further in a number of cases. The number on order for Société Maritimes des Pétroles BP, not included in the latter figure, has been reduced from three to two.

Associated fleets (in which we have a 50 per cent interest) continue to give excellent service. Including new building programmes they comprise:—

The Lowland Tanker Co. Ltd.
- Ten 16,000 ton tankers in service.
- Five 19,000 ton tankers on order for delivery 1960/61.

Nordic Tankships I/S of Copenhagen.
- Two 35,000 ton tankers in service.

Warwick Tanker Co. Ltd.
- Two 35,000 ton tankers, for which the first is in commission and the second recently launched.

The Group also has about 2,800,000 d.w. tons of tanker shipping on charter which is slightly less than a year ago.

Since the last report world tanker tonnage has continued to exceed requirements and freight rates have remained depressed. We, like others, still have tonnage laid up and from time to time have slowed down or routed some of the larger vessels to and from the Persian Gulf via the Cape of Good Hope to meet seasonal fluctuations in requirements.

Of our Group total of 2,644,000 d.w. tons, 1,260,000 d.w. tons (48 per cent) consists of vessels of 28,000 tons or over and we are very satisfied with the economy of operation of these larger ships.

DISTRIBUTION AND SALES

Whilst our total sales of crude oil and finished products at approximately 65 million tons showed an increase of over 4 per cent compared with 1958 inland sales of products through our associated marketing companies increased by nearly 10 per cent, thus confirming the trend to cover a greater proportion of our total product sales through our own direct marketing organisations.

Throughout our marketing areas our position has in general been satisfactorily maintained. In the United Kingdom our associated marketing company, Shell-Mex and BP Limited, increased its trade by some 14 per cent compared with the previous year. In Australia, New Zealand and in the Southern and Eastern African territories good progress was made. Two events deserve special mention, the desequestration of our associated marketing company in Egypt in April, 1959, and the introduction of a full range of BP products in South Africa, Rhodesia and Portuguese East Africa through BP Southern Africa (Proprietary) Limited.

In those areas where we have only recently started marketing, progress has been satisfactory. In Canada our immediate objective to create an outlet for products from our new Montreal refinery is being pursued according to plan. In Italy we started to trade under the BP colours early in 1959, and the development of our retail network is proceeding well. In West Africa we have again had an active and encouraging year.

In Iraq, in accordance with the agreement made in 1951, the Khanaqin Oil Company ceased to operate the Government's refineries at Alwand and Basrah, and also to act as marketing agent for main products. Under the name of BP (Iraq Agencies) Ltd., the Company continues to market special products and to operate the Air BP organisation.

The difficult period through which the world shipping industry has been passing has had a depressing effect on the demand for bunkers, but our International Bunkering Service has, despite increased competition, generally maintained its position in this very important section of our business, and is now operating at 197 ports on world shipping trade routes.

We have continued to expand Air BP, extending our aviation services into Spain, Turkey and West Africa, and for the first time into the Western Hemisphere at Dorval Airport, Montreal. Air BP has made considerable efforts to cater for the rapidly growing market for jet fuels and has obtained a substantial share of that market.

In the field of lubricants we have had a successful year, and demand for our BP Energol Visco-Static motor oil has continued to grow. A new lubricant under the name of BP Energol Tractor Oil Universal, designed to meet the requirements of engines, hydraulic systems and transmissions of every major tractor manufacturer in Europe, has been developed and put on the market.

Our recently developed branded product for two-stroke engines, BP Zoom, has been introduced into new markets and has enjoyed a rapid growth in sales.

Prices in general have reacted to the increasing competition and particularly in those areas where products from the Soviet zone and independent European refineries have sought their principal outlet. The main impact of these forces has been felt in the fuel oil trade, resulting in our share of that trade in Scandinavia, Germany and Belgium suffering setbacks.

In today's highly competitive marketing conditions Sales Promotion activities are increasingly important. The BP Touring Service again met with a very good reception in 1959 and we are planning to improve and expand this scheme. BP's successes in the field of motor racing have again been numerous, and BP is proud to have supplied the fuel and lubricants used by Mr Donald Campbell in his boat 'Bluebird' when setting up a new world water speed record.

RESEARCH

During 1959 we have increased our research work at Sunbury and elsewhere including activity in the fields of petroleum chemicals and Operational Research. Satisfactory progress has been made in work designed to improve methods of exploration and crude oil production, to discover new refinery processes, and to enhance the qualities of products. The work being carried out in the technical centres attached to the Group's refineries both in this country and abroad continued to give encouraging results.

The use of Operational Research methods including linear programming techniques for the control of refineries has been further developed.

The large number of British and foreign patent applications filed during the past year is a measure of the progress made in the introduction of new processes and the improvement of product quality. Plants based on a process discovered and developed at the Sunbury Research Centre, for refining by-product gasoline from petroleum chemical plants, are now under construction in the UK, Germany and France.

Exploration Research has been particularly concerned with improvement in instruments both for seismic surveying and for the electrical logging of boreholes. Intensive studies continue on reservoir engineering, and on the latest methods of secondary recovery, particularly underground combustion and the injection of miscible fluids.

The facilities at the Research Centre have been increased by the addition of a new building to house the Technical Development Division. A new pilot plant laboratory is under construction.

A full scale boiler which will be entirely devoted to experimental work has been commissioned on a research site adjacent to our Kent refinery. This boiler has been designed to give the utmost flexibility of operation and represents the most advanced equipment available for the study of problems associated with the burning of fuel oils.

PERSONNEL

I conclude by paying a tribute to the staff of our Company and the fact that it is customary does not make the tribute less sincere, or less well earned. BP is an international concern and in the past few years I have been privileged to travel to many of our centres of operation and see our staff at work; I have always been most impressed by their enthusiasm and interest in the Company's progress.

Many of them have to work under very difficult physical conditions, but we try to do all that we reasonably can to ameliorate those conditions. There are, however, other and more subtle difficulties. There is, for instance, such a difference between working in the Persian Gulf, Alaska or Canada, Libya or West Africa that, in transferring people, considerable problems of psychological and social adjustment arise. It has been a source of great gratification to me, in my travels, to see how well and cheerfully our staff succeed in adapting themselves to these difficult circumstances.

It is not just a formality, therefore, that I should thank our employees all over the world, both ashore and afloat for their loyalty and support.

UNILEVER LIMITED

CAPITAL PROJECTS SHAPE THE FUTURE OF THINGS TO COME

PROCESS OF ADAPTATION AN ESSENTIAL PART OF GROWTH

COPING WITH A HEALTHY APPETITE

OVER £337M. EXPENDED IN PAST DECADE ON NEW DEVELOPMENT

LORD HEYWORTH ON ASPECTS OF A HIGHLY DIVERSIFIED BUSINESS

The Annual General Meeting of the Members of Unilever Limited was held on Tuesday, April 26th, at The Hall of the Chartered Insurance Institute, 20 Aldermanbury, London, E.C.2. Lord Heyworth presided. Addressing the Meeting the Chairman said:

CAPITAL INVESTMENT

The Past and the Future.—The Report and Accounts of our Company—or of any other Company, for that matter—are a record of the past. They tell you how much we have sold. They tell you how much profit we have made. They tell you what we own—our assets—which themselves represent decisions taken in the past about developing the various sides of the business.

Unless you are economic historians, news of our past is not likely to be all you want to know. What is likely to interest you far more is to get some idea of what our future is likely to be. That is what is going to decide the value of your investment in Unilever. And if the Report and Accounts convince you that we have done fairly well in the recent past, then there is some hope that we may do no worse in the immediate future.

But how about the more distant future? How is our business going to respond to the challenge of that? What kind of a business is it going to be in five or ten years' time? Amongst all the figures which we set before you, the most direct answer to those questions comes under the heading "Capital Projects." There you really can make out the shape of things to come.

GROWTH AND CHANGE

That is why I want to talk about Capital Expenditure this morning, because the investment of capital is what determines the physical shape and size of the business, and without capital investment the business cannot grow. By "growing," here, I don't mean simply getting bigger and bigger, though of course that comes into it, because the world's population is rising and becoming more prosperous, and a bigger market needs a bigger business to serve it properly. Even to hold our present position, we should have to grow by about 3 per cent a year. But it is not only going to be a bigger market, but a different one. The goods in it are going to be different: the people in it are going to live in a different way, and the businesses that wish to prosper in it are going to have to adapt themselves to its needs. This process of adaptation seems to me an essential part of growth, and I shall hope to bring it forcibly before your minds this morning. I want to give you some idea of how we are using our capital to make Unilever ready for tomorrow when it comes.

Capital is the food of productive enterprise, and if you want a business to grow, you must feed it. The things we list under Capital Projects show you the bill of fare which—we hope—is going to build the Unilever of the future—not of this year or of next year, but of 1965 and 1970. Capital Projects are chiefly buildings and equipment—the "fixed assets" of the business—and they are the larger part of the meal. But there is a sauce to this dish, and that costs a great deal of money, too. It is the working capital which we must have to make our fixed assets productive. Since 1950, we have fed Unilever with about £337 million for fixed assets and £176 million for working capital, and its appetite doesn't look like getting any smaller in the years to come.

THE PATTERN OF DEVELOPMENT

Let us see how this £337 million has been laid out, so that we shall see how the business has been developing over the last ten years. I have some charts here, and from the first of them you can see how our new investment has been spread about the world:

CHART I
UNILEVER CAPITAL EXPENDITURE BY AREAS, 1950-1959

United Kingdom	29 per cent
The Netherlands	5 " "
Other European countries	24 " "
Middle East, Australasia, Africa (except UAC)	13 " "
North and South America	13 " "
United Africa Group territories	12 " "
The Orient	4 " "
Total capital expenditure (£337 m.)	100 per cent

Geographically, you see, we have been concentrating heavily on developments in the United Kingdom and Western Europe, but we have not neglected the other Continents.

Now let me turn to the figures for the United Kingdom and the Netherlands over the same period. These are two of the places where we are in the habit of trying out new developments—new products, new business activities—on a large scale, and so capital expenditure here is a reasonably good guide to the kind of thing which we expect, eventually, to be important in our operations throughout the world. Here is my second chart:

CHART II
UNITED KINGDOM AND THE NETHERLANDS CAPITAL EXPENDITURE, 1950-59

Food	37 per cent
Oil Milling and Animal Feedingstuffs	28 " "
Washing products	20 " "
Edible fats	11 " "
Other activities	4 " "
Total (£113 million)	100 per cent

In looking at both these charts, you have to bear in mind that at the beginning of the period—the early 'fifties'—we were still making good wartime damage and neglect. That goes a long way to explain why so much capital has gone into oil milling, because many of our oil mills were in places that got badly bombed. But in the later years we had finished doing that and we have been able to concentrate on really new developments. You will notice how much we have been putting into food, which means mainly things like frozen foods, ice cream, soups, meat processing and so on.

The nature of capital development—the things we put money into—varies a lot from one side of the business to another. In making and marketing washing products, for example, 90 per cent of the value of the capital employed is committed to production: 10 per cent to distribution. In ice cream, on the other hand, which is growing in importance all over the world, production takes only 43 per cent and distribution takes 57. The reason will be clear to you if you recall how often you see Walls' vans on the roads and their cabinets in the shops.

These two charts give you some idea of how we are spreading our capital about the world and the products we are putting it into. Now let me try to give you an idea of the sort of reasoning that lies behind our policy.

RETURN ON CAPITAL

We invest money where we hope to make money. What this means is that in choosing between one possibility and another we look very carefully at the return we are likely to get on the money we lay out. To ignore that principle would be wasteful, and we require all our management to take account of it, but in practice it cannot always be applied simply and directly.

For one thing, we are to some extent prisoners of the past. What we shall do to-morrow is partly dictated by what we did last week, in the sense that our existing assets must be kept in good order, brought up to date and expanded, because it is only from what we have already that we can make the profits which will enable us to do what we want to do in the future. So that new possibilities, however exciting they may be, sometimes have to take second place.

Then again, we have our responsibilities to the people we employ. They need canteens, medical attention and welfare services generally. Things like these, if they are done properly, are a good investment, and that is how we look upon them. But in making provision for them, financial return on the capital employed is not our first consideration.

Most important of all, we must do our best never to fall behind our competitors. We must put money into research and into the development of new products and processes, even though we can't pick winners all the time and some of our capital will be lost. What we can do, and must do, is to give ourselves every chance to find better products to put into the shops, so that the eventual return on our total capital is safeguarded.

To get a proper return on our money, then, is the main thing, though not the only thing we have to look at in forming our investment policy. Taking account of proper replacement of fixed

assets, of our social responsibilities, and of our competitive power, our broad aim should be to keep the figure of return on capital employed rising rather than falling. That, as you can see from my third Chart, is what we generally managed to do during the nineteen-fifties:

CHART III

RETURN ON CAPITAL EMPLOYED 1950-1959

1950	1951	1952	1953	1954
per cent	per cent	per cent	per cent	per cent
7·4	5·5	5·3	7·5	8·2
1955	**1956**	**1957**	**1958**	**1959**
per cent	per cent	per cent	per cent	per cent
9·8	10·2	8·2	9·0	10·3

To keep this figure rising calls for a nice balance between initiative and control. Generally speaking, it is for the central management of our business to set the broad pattern of development, and for our companies to grasp opportunities as they come along. We welcome initiative from the operating companies. They can see what they would like to do: they are well placed to say whether they think they can do it. But it is up to the central management to balance one project against another and to make capital available for the likeliest.

THE LONG VIEW

We don't always expect to see a quick return on our capital. We are in business for a long time, and where we go, we mean to stay. If we have to spend a long time and a lot of money in building our enterprise up, we will do it, provided we are reasonably sure that the return, in the long run, will match the effort. An extreme example is our plantations business in the Belgian Congo. In 1913, Sir William Lever said of it: "we have got hold of something we can employ all our talents and energy upon for the next quarter of a century and still find plenty to do." His estimate was not far wrong, and we backed our faith in the Congo with many millions of pounds before any profit began to flow from it.

We shouldn't often go in for a project quite so long-drawn-out as that, although plantation work, even in the ordinary way of business, is not to be hurried. Depending on the crop, we need anything from three to seven years to bring a plantation into bearing, and after that there will be another five or six years before it is mature enough to show much return on our money. On other sides of our business, we do not expect to have to wait a dozen years for our profits, but periods of two or three years are common. It is what you have to expect if you want to do big things, and for a worthwhile project we are prepared to face it.

NEW INVESTMENT

In any place where we intend to venture considerable sums, we take a pretty close look at the general economic and social background first. Is the population going up? Is the general standard of living rising? Have any strong competitors dug themselves in before us? Can we get materials to build a factory, labour to work in it, transport to carry our goods away? Can we get materials to make products to our standard of quality? Is the Government fairly stable? What kind of a view does it take of foreign investors? Shall we be able to get our profits out if we want to (often we prefer to leave them there for the development of the business)?

These are a few of the questions which we ask when we are deciding whether or not to put money into, say, a soap factory in Ghana or Burma. It is very important that we should get the right answers, because once we have turned a million or more of money into bricks, mortar, and equipment we are committed pretty heavily to local circumstances. It is no good thinking you can get the capital out again if your business goes wrong—you can't. Fixed assets are what they say they are—fixed—and that is the beginning and end of it. Everything depends, in the last resort, on how accurately we foretell the future, and although our range of advisory and service departments is wide, we have no Crystal Ball Division.

Some decisions are more a matter of faith—of confidence in one's own judgment—than of rational calculation. Take Malaya, for example, where we have been investing capital since 1948. Conditions there, from one point of view, have promised well—a rising population, prosperity, plenty of labour, and so on—but who, 12 years ago, would have been prepared to bet on the political situation, with terrorists loose all over the place and no certainty that they would be suppressed? We took the risk, and since then we have put about £1,200,000 into factory plant and staff housing, which would certainly have been a total write-off if things had gone the wrong way. On that foundation, we are now proposing new plant for synthetic detergents, costing £175,000, and developments on the plantations side of our business which will run to about £1 million. When we started investing in Malaya, nobody could be sure that any of this would be possible. We might have been throwing money away. We could only weigh up the attractive marketing opportunity against the heavy political risk—and trust our forecast of the outcome.

More recently, we have taken a decision of the same sort in Morocco. We are going to put about half a million pounds into a detergent factory at Casablanca, which is a pretty substantial earnest of our faith in Morocco's future.

ADAPTABILITY

Now let me turn from the spread of our capital expenditure about the world to the way we spread it among different enterprises—in other words, "diversification." We hear a good deal about diversification and what a good thing it is, but we do not hear so much about how it is done. We have a highly diversified business ourselves, and we believe strongly that we are unlikely to survive, let alone grow, in a rapidly changing world, unless we take a pretty flexible view of the kind of activity we are prepared, from time to time, to engage in. But that is very far from saying that we take an unlimited view of our capabilities. We are not an investment trust, concerned to find capital and leave management to others. We normally go into businesses we can run ourselves, and there are many things we should never think of going into, just as there are others that we take to very readily. Our aim is to employ our existing resources more fully, or extend them along their natural lines of development.

Many of our existing resources are designed to promote the activity we are most skilled in, which is making and marketing consumer goods in everyday use in the households of the world, and especially goods sold retail through grocers' shops or their equivalent. That gives us a wide field of choice, but it is narrow enough to be manageable. It is not a principle which can be applied to every side of our business—our trade in chemicals is an obvious exception to it—but it is one that is likely to govern a good deal of our future expansion.

Not that we intend to be thrust into any kind of logical strait-jacket by this kind of reasoning. If we see profitable opportunities which do not fit it, we don't necessarily ignore them. Sometimes we have had to set up activities, such as our paper business in Germany or our chemical interests, to serve other operations of our own. They have turned out to be profitable undertakings in their own right, and we have developed them, even though they are far removed from our staple trade in consumer goods.

We can say with some confidence that we are unlikely to take on a new proposition unless we can see a pretty wide prospect ahead of it. This is because a new proposition, on anything like a large scale, usually needs a fairly formidable array of supporting services, either completely new or developed from what we have already. This is what our two headquarters companies are in business to provide, but unless services of this kind can be widely employed, they eat their heads off in upkeep. Take, for instance, our businesses in frozen foods and ice cream. To support them properly, we have had to develop our knowledge and experience of refrigeration, which we gained originally in the margarine business. But it would hardly have been worthwhile doing that unless there had been wide scope for ice cream and frozen food, and you will see from our list of capital projects that we are, in fact, developing them throughout the world.

Finally, before we go into anything new, we must be sure that we can back it with proper research. It is no use finding a good new product, away ahead of competition, if you cannot stay that way. That is why we have 3,500 people employed in research and development to-day against 2,250 in 1957, when I last spoke to you of these matters. Here again, the principle of using our resources as widely as possible applies. We have to keep up with the technology of any industry we take a hand in, but that is expensive, and unless the knowledge can be widely applied it is not worth our while to lay out the capital to acquire it.

As well as watching for new openings, we must always be ready to withdraw from activities which, for one reason or another, no longer fit into the pattern of our business, or which no longer give us an adequate return. Within the last few years, we have sold De-No-Fa in Norway and the Anglo-French Phosphates Company, and in the United Africa group we are changing over from a trading and produce-buyer concern to a merchandising and industrial business. Growth in business is like growth in nature: the word implies that you shed what you no longer need.

Bearing these considerations in mind, we think that in our main line of business—consumer goods—the future lies with things that save the housewife work and brighten the drabness of everyday life. This means different things in different places. In underdeveloped countries, it may mean washing powders rather than hard soap, but in Europe, where powders have long been familiar and women are giving up washing their things by hand, it may mean powders specially made to use in washing machines. On the food side of our business, we expect to develop along the lines of prepared and semi-prepared foods, all of which both save the housewife work and liven up her family's meals.

None of the newer products are cheap. Even in the United Kingdom and The Netherlands, a good many of them are still on the fringe of the luxury class. But they offer the prosperous housewife advantages which, we think, she will cheerfully pay for, and so we back them. We are sometimes wrong. We were not particularly clear-sighted, for example, in judging the possibilities of frozen foods in Australia. But the general rule remains sound, and we are always looking for products which give the housewife something extra to offer her family or which take work off her hands—or, if possible, do both—in the belief that she will usually pay for these services as readily as for the intrinsic quality of the product. We are offering to work for her in our factory—to do things she would otherwise have to do at home—it is, in fact, service as well as quality that we are selling her.

You will notice that our general approach to the picking of new products is made in an optimistic frame of mind. In societies like our own, we think people are likely to grow more prosperous rather than less. In societies at present less highly developed, we think things are likely to get better rather than worse. We are not at all ashamed of liking the prospect. Some people, who have spent years in castigating the evils of poverty, now seem disconcerted by prosperity, and they make very sour noises about it. We can't follow their logic. We like to see people well off, and, although we realise that mass prosperity brings new and unfamiliar problems, we would much rather face those than poverty's ancient curse.

FINDING THE MONEY

Passing now to the methods by which our growth is financed, I do not intend to give a general lecture on this subject, which has many aspects—fiscal, social and economic, with which I shall not attempt to deal. All I want to do at the moment is to state the reasons governing our choice and to discuss them in the light of your interest as shareholders in our business.

We usually expect to live well within our income and finance new growth out of our profits. During the "fifties" from year to year, we were paying out about twenty per cent of our net profits to the ordinary shareholders and altogether, since the War, much the greater part of our new capital has come from inside the business.

Are we right? Some people say we ought to rely far more heavily on the market for capital, and pay out more of our profits to the shareholders. That way, they say, we should have to look even more carefully at the return offered by new projects, because we should have to balance it against the cost of raising the money. At the same time, we should be giving the ordinary shareholders a more rapidly rising income, which is what they expect.

Is that what people expect when they invest in Unilever? If they have studied the Company's policy at all carefully, I suggest that they expect a management which is more concerned with the long run than with the short and which seeks to make to-day's prosperity a foundation for to-morrow's growth. So long as the business does grow, and so long as the dividend shows a steady rise, I doubt whether any shareholder in Unilever feels aggrieved by the amount of profit we put back into the business. If he were that sort of shareholder, he wouldn't be in our sort of Company.

But if we, as management, keep a large proportion of the shareholders' money, we must also deliver the goods. We must see that the business does grow and that the shareholders get the kind of return on their money which the Company's record gives them a right to expect. That does not mean that we shall always be able to show the return we are showing to-day—about ten per cent on capital employed. Profits in business generally may become harder to earn, and if that does happen Unilever is not likely to escape. But so long as our policy gives us a return on our capital employed which is not seriously out of line with the performance of business generally, then I do not think we can be said to be treating our shareholders badly.

Ever since the War, we have considered that we look after our shareholders best if we finance ourselves mostly from our own profits. For years, there was no argument about it. In England, the Capital Issues Committee, on the one hand, and taxation on distributed profits, on the other, made the prospect of raising capital on the market both difficult and unattractive. In the Netherlands, too, official permission was required in order to raise any worthwhile sum on the market, and for many years the rates of dividend were subject to statutory limitations. These things are behind us now, but there are two other good reasons for raising capital "inside" which are never likely to grow weaker, even though neither puts an absolute bar on the possibility of our going to the market.

The most obvious thing about our need for capital is that we need a great deal. That, in itself, is the first reason why we find so much ourselves. From 1950 to 1959 we were investing new capital, on an average, at a rate of about £30 million a year, and we should have been hard put to it to find anything like that from outside the business. And, as I said to start with, our appetite for money isn't likely to grow any smaller in the future.

Then, suppose we were forced into the money market at an awkward moment. Suppose, for instance, we had wanted to raise money in the United Kingdom during the credit squeeze. If we had been allowed to have it, look what we should have had to pay for it. Things are easier now, but the principle will always apply that if we go to the market for money, we must pay the market rate, and there may be times when that does not suit us. But with strong resources of our own, we can choose for ourselves the moment that does suit us, which was what we did about ten years ago, when we went to the market for debentures.

A good opportunity, of that sort, might arise again, and I certainly don't want to imply that we shall never want to look for money outside our own business. What I do say is that in the recent past the pressure to find money within the business has been overwhelming, and in the future it is likely to remain strong, at least for most of what we need. And I think there can be no question that, by using our own resources, we have built up strength and diversity. If there are shocks coming—and we can hardly hope that nothing will ever go wrong again—we ought to be able to withstand them. More than that, we ought to be able to risk large sums of money in exploiting new possibilities of growth. For this last purpose, we think it most important to have large funds of our own, because we cannot always be certain of being able to raise money on the market when opportunities present themselves.

However you look at it, I think we may claim that the resources which we have built up have helped to protect the long-term interest of Unilever and of everyone connected with it. The housewife, at her shopping, can buy goods which have been developed to meet her changing needs. The people who work for us have a good assurance of a stable livelihood, even if times turn rougher than they are at present. And those who put money into our shares have a pretty solid backing for their investment.

The Chairman concluded by moving the adoption of the Report and Accounts for the year 1959. Mr George Cole, Vice-Chairman, seconded the motion and it was carried unanimously.

The proposed final dividend of 2s. 11.3d. per £1 of Ordinary Stock and a dividend of 6 per cent on the Deferred Stock payable on May 10, 1960, were approved.

The retiring Directors, with the exception of Lord Heyworth who has reached retirement age, were re-appointed.

The remuneration of the Auditors, Messrs Cooper Brothers & Co and Messrs Price Waterhouse & Co, who had been re-appointed under the provisions of the Companies Act 1948, was fixed.

TRIBUTES TO LORD HEYWORTH ON HIS RETIREMENT

At the conclusion of the Annual General Meeting, tributes were paid to Lord Heyworth after forty-eight years with the business.

Mr W. Eyre, a Stockholder, said: Before we leave this Meeting, I think we must accord a hearty vote of thanks to Lord Heyworth and to the Board of Directors, the Managers and to the Staff.

Those of us who have read the Report cannot fail to have been impressed with the best record achieved in the Company's history. Although this report is a record of the past, it is, I am sure, a projection of the prosperity of the Company in the future.

I am sure it is with very mixed feelings that Lord Heyworth is retiring today, but I am also sure that he will look back on the wonderful record of the years that he has served the Company. To the new Chairman, Mr George Cole, I express our confidence that he will follow in the footsteps of Lord Heyworth.

Years ago, when dealing with investments, we asked ourselves: "Is the 'stable' of the Company good?" That is one of the first questions we asked. I think that in the management of Unilever we have a very good "stable" indeed. (Loud applause.)

MR GEORGE COLE'S REMARKS

Mr George Cole, the new Chairman, on behalf of the Board of Directors, said: Lord Heyworth retires from the service of the Company, which he entered forty-eight years ago, and from the Chairmanship of the Board, which he has held since 1942.

In the Directors' Report, his colleagues have recorded their appreciation of his leadership, and this, I assure you, is no mere polite formality, but a tribute from the heart. The admiration and affection which are felt for Lord Heyworth by those who have had the good fortune to work closely with him are echoed everywhere in the widespread world of Unilever. It is a remarkable achievement for one man so to have impressed his personality on a business of these dimensions, and this is particularly so when he is one who has never sought the limelight or ever indulged in the slightest degree of self-advertisement.

So far as the Stockholders are concerned, they have seen how under Lord Heyworth their business has steadily expanded and grown stronger, in much the way he has described in his speech this morning. But it is not just the Company's material prosperity which has grown under his leadership; its reputation over the world has grown too, and today Stockholders and Staff alike may well take pride in that reputation. For this, Lord Heyworth is, in a large measure, personally responsible.

With his characteristic modesty, he has often pointed out that the success of Unilever is not the success of one man, but the success of a team: that, of course, may be so, but a team's performance depends to a great extent upon the way the Captain leads it. We have been fortunate indeed to have had such a Captain as

Lord Heyworth, who has led us with wisdom, with firmness, with humanity and, thank heaven, with a sense of humour. But, perhaps, as a Board we all owe more than we can express to his remarkable rock-like quality when difficulties have broken upon us and, above all, to his courage. We thank him and we wish him well. (Loud applause.)

LORD HEYWORTH'S RESPONSE

Lord Heyworth, responding to the vote of thanks, said: The record of Unilever is something that I shall always treasure. I leave it at this stage without regret because it is the method in Unilever that the business is run by a full Executive Board and they are made to work pretty hard, and if they are not worn out by the time they reach 65, they ought to be. (Laughter.)

I would like to thank the Stockholders generally for the support I have always received at these Meetings. This is the nineteenth time I have been before you as Chairman, and although sometimes the fare we have had to present to you was not too good, never did we meet with hostility in this room.

I much appreciate the vote of thanks to the Directors, Staff and everyone concerned. Unilever is a team operation; there are many people all over the world who take pride in the figures that we present before you.

In your new Chairman, Mr Cole, you have a man who understands Unilever thoroughly; he has not spared himself going round to see what it is all about, and has the ability to stimulate people. The selection of Mr Cole to succeed myself was the unanimous choice of his colleagues on the Board. I know that he can rely on, just as I have done, and be helped by, the support which Stockholders traditionally give to the Chairman of Unilever Ltd. Thank you very much indeed. (Applause.)

Unilever N.V.—The Annual General Meeting of the Members of Unilever N.V. was held on Tuesday April 26th at Burgemeester s'Jacobplein, Rotterdam. Mr F. J. Tempel presided and made a speech in similar terms to that delivered by Lord Heyworth at the Annual General Meeting of Unilever Limited, reported above.

The Report and Accounts for the year 1959 were adopted. The proposed final dividend of 13 per cent on the Ordinary capital (being the equivalent of the final dividend for the same year to be paid by Unilever Limited on its Ordinary Stock, calculated in accordance with the provisions of the Equalisation Agreement) was approved; the retiring Directors, with the exception of Lord Heyworth, and the Auditors, Messrs Price Waterhouse & Co and Messrs Cooper Brothers & Co, were re-appointed.

OTTOMAN BANK

REVIEW OF WIDESPREAD INTERESTS

LORD LATYMER'S SPEECH

The ninety-third annual general meeting of the Ottoman Bank was held on April 27th at Winchester House, Old Broad Street, London, E.C.2.

The Right Honourable Lord Latymer, the Chairman, presided and in the course of his speech said:

First of all there are two matters I think I should mention.

As regards the loss of our business in Egypt, following the Suez event, our claim was duly lodged with the Foreign Compensation Commission in accordance with the terms of the Anglo-Egyptian Agreement of 1959. I will not be in a position to give any information concerning this claim until the Commission has given its decision in the matter.

During the past year questions have been put to me concerning the circumstances in which your Committee decided to sell the Bank's holding in the Banque de Syrie et du Liban. The considerations which had to be taken into account were as follows:

Towards the end of 1956 our business in Egypt was placed under sequestration and was later Egyptianised by the Egyptian Authorities. We thus lost a business which was one of the most important sections of our undertaking.

To re-establish our business at a satisfactory level and find employment for valuable staff who thus became available through being no longer needed in Egypt, we sought a new field of activity and we have found it in East Africa and Rhodesia where, as you know, we have in just over two years established an important network of branches.

Such an extension naturally employed a considerable amount of money and we were assisted in finding this finance by the opportunity which occurred in 1958 of selling our shares in the Banque de Syrie et du Liban.

I mentioned in my speech last year that the shares of the Banque de Syrie et du Liban had been disposed of to some companies in the Banque de Paris et des Pays Bas group. In fact these shares were exchanged for shares of companies in that group.

The exchange was made on the basis of the market value of the shares at the time of the transaction.

We have since realised about a half of this holding and have benefited both from the rise in the market price during 1959 of the shares we had acquired and from a bonus issue which was made in the course of the year.

We consider that this operation has been a very favourable one for the Ottoman Bank.

TURKEY

In Turkey 1959 was a year of particular importance in view of the stabilisation measures introduced by the Government. Short-term commercial debts were the object of a consolidation agreement in May, 1959. The steps needed to carry this into effect were fixed by agreements reached with the creditor countries; the settlements provided therein are being regularly carried out. The system of foreign exchange premiums instituted on August 4, 1958, was modified, and exports have since attracted a general premium of Ltqs. 6.20 per dollar with the exception of exports of tobacco and opium for which a premium of Ltqs. 2.80 per dollar was applied. Very recently, however, steps have been taken to raise the premium for tobacco also to Ltqs. 6.20.

The Turkish Government has pursued a policy of gradually freeing imports from restrictions, and published in February and in August, 1959, its second and third Import Quota Lists. Recently, in February, 1960, it published a fourth List of Imports.

Steps for monetary stabilisation have in no way checked the rhythm of the country's economic development.

Turkey's foreign trade figures during the year are as follows, based upon the official rate excluding foreign exchange premiums: Imports Ltqs. 1,239,400,000 against Ltqs. 882,300,000 in 1958. Export Ltqs. 994,300,000 against Ltqs. 692,400,000 in 1958. The trade deficit has thus passed from Ltqs. 189,900,000 to 245,100,000.

The budget adopted by the Grand National Assembly for the year 1960-61 totals Ltqs. 4.638 million for ordinary expenses and Ltqs. 2.643 million for public works. The figures for the previous year were respectively Ltqs. 4.062 million and Ltqs. 1.918 million.

SUDAN

An occurrence of major importance for Sudan during the year was the Agreement which was reached with Egypt for division of the Nile Waters and for compensation payable in respect of Sudanese territory which would be inundated when the Aswan High Dam project is effected.

The trade figures showed a much healthier position than in 1958 when there was an adverse balance of £S.16 million. 1959 shows a favourable balance of £S.9,700,000. The exports totalled £S.66,800,000 and reflect the successful cotton sales, which, at competitive prices, disposed of not only the entire 1959 crop of 700,000 bales but of the unsold residue of the 1957 and 1958 crops amounting to some 250,000 bales. Prospects for the 1960 season are equally good.

The new Government-owned Bank of the Sudan, following the law promulgated last year, opened for business a few weeks ago and has assumed the duties of a Central Bank.

JORDAN

In spite of certain trade restrictions, including the prohibition of olive oil exports following a poor crop and the continued suspension of trade with Iraq, the imports and exports of Jordan showed increases in 1959 to JD.40,400,000 and JD.4,200,000 respectively; the 1958 totals were JD.33,900,000 and JD.3,600,000.

The returns from Jordan's only port—Akaba, on the Red Sea—are encouraging. 369 vessels called during the year and cargo handled amounted to nearly 600,000 tons. The port now enjoys adequate facilities for the volume of traffic using it.

The average total of currency, notes and coin, in circulation, showed during 1959 little change from the 1958 average figure of JD.16,500,000.

IRAQ

It has recently been announced in Iraq that a new four-year ID.400 million development plan is being considered.

The trade figures—which exclude oil exports—amounted to ID.11,500,000 for exports against ID.14,200,000 in 1958 and ID.116,500,000 for imports against ID.109,800,000 in 1958. Trade agreements were signed with several other countries including Italy, Eastern and Western Germany, and Denmark, during the year.

The Chairman then reviewed the Bank's interests in Cyprus and Qatar and continued:

I know that you will wish me to give you some news of our branches in East and Central Africa, territories in which we are newcomers. The extension of our sphere of activities in this direction is recent indeed: it is scarcely two years since we opened in Nairobi, Kenya. Since that day, however, development has been rapid.

In Kenya we now have branches at Nairobi and Mombasa, with offices at Eastleigh RAF Station and at Kahawa. In Tanganyika we are established at Dar-es-Salaam, Kigoma and Moshi and in Uganda we have, in this present year, opened a branch at Kampala. In Rhodesia our main office is at Salisbury and a branch at Bulawayo was opened to the public on June 29th, 1959.

I am able to report encouragingly about the progress of these various branches and I think I should say how much we owe to the Management and Staff there. I am glad to say a proportion of Africans have been locally recruited. The establishment of our business in the face of keen competition reflects great credit on all its members.

MOROCCO

In Morocco our Casablanca branch has worked well under conditions which may well be considered satisfactory.

LONDON AND PARIS, ETC.

During the year our Paris and London Offices as well as our Marseilles Office maintained their traditional activity. The business of our Geneva Branch showed favourable development.

BALANCE SHEET ITEMS

The total of the Balance Sheet is £101,037,419 compared with £95,642,976 at the end of 1958, an increase of over £5 million.

The position is again very liquid with Cash, Money at Call and Notice and Bills Receivable totalling more than 50 per cent of the Current, Deposit and Other Accounts. The proportion of Investments is almost unchanged at just below 16½ per cent, whilst the ratio of Advances to Deposits is up from 35½ per cent to 38½ per cent.

The total amount of profit available, including the balance of £30,333 brought forward, is £474,936, compared with £380,333 last year. After appropriating £200,000 to Reserve for Contingencies (against £150,000 last year), the balance remaining is £274,936 and the Committee proposes that the dividend be increased this year from 8s. to 10s. per share. This will absorb £250,000 and leave £24,936 to be carried forward to 1960.

The Report was adopted.

UNION CORPORATION, LIMITED

(Incorporated in the Union of South Africa.)

London Office: PRINCES HOUSE, 95, GRESHAM STREET, LONDON, E.C.2.

ABRIDGED REPORTS of Gold Mining Companies, each Incorporated in the Union of South Africa, for year ended 31st December, 1959

(Copies of the full Reports and Accounts can be obtained on application at the London Transfer Office, Princes House, 95, Gresham Street, E.C.2)

EAST GEDULD MINES, LIMITED

	£	Per ton milled s. d.
Working Revenue	6,177,378	74 9
Working Costs	2,847,741	34 6
Working Profit	3,329,637	40 3
Add: Income from Investments and Sundry Revenue	148,730

Dividends Nos. 38 and 39 of 1s. 4d. and 1s. 7d. per share respectively		656,250
Unappropriated profit carried forward to 1960		£280,948

Tonnage milled increased from 891,000 tons to 1,135,000 tons but the average yield decreased from 5·22 dwt. to 4·90 dwt. Of the 8,005 ft. sampled on the Kimberley Reef, 45% was payable, averaging 270 inch/dwt. Of the 11,380 ft. sampled on the Main Reef, 32% was payable, averaging 215 inch/dwt. The ore reserve was re-estimated at the year-end and showed an increase of 100,008 tons to 5,400,000 tons, assaying 5·1 dwt. over an estimated stoping width of 47 inches.

BRACKEN MINES, LIMITED

Extracted from the first Annual Report for the period from the incorporation of the Company to 31st December, 1959.

CAPITAL: Of the authorised capital of 14,000,000 shares of 10s. each, 12,520,000 shares had been issued by the end of the year, 1,520,000 being fully paid and 11,000,000 1s. paid. The balance of 1,480,000 shares were subscribed, fully paid, but were not allotted until 1960.

SHAFT SINKING: At 26th February, 1960, No. 1A Shaft had been sunk to a depth of 110 ft. and full scale shaft sinking was due to begin in April of this year. The concrete collar for No. 1 Shaft had been completed and a start made on initial sinking.

GENERAL: By the end of February, workshop accommodation for fitters, boilermakers and electricians had been provided and work on the stores buildings and offices was nearing completion. Change houses and shaft offices were under construction. One 40 drill compressor had been brought into commission and work on the erection of additional compressors was well advanced.

EXPENDITURE: Expenditure by the Company to 31st December, 1959, on property, shafts, plant and equipment and general expenditure was £706,822. Trade investments amounted to £194,091. The Company acquired one-third of the issued capital of Evander Township, Limited.

ST. HELENA GOLD MINES, LIMITED

	£	Per ton milled s. d.
Working Revenue	6,985,075	77 2
Working Costs	3,854,793	42 7
Working Profit	3,130,282	34 7
Add: Sundry Revenue and Income from Investments	46,445	
		£3,176,727

Dividends Nos. 7 and 8 of 1s. 3d. and 1s. 9d. per share respectively	1,443,750	
		2,921,585
Unappropriated profit carried forward to 1960		£999,262

Tonnage milled increased from 1,468,000 tons to 1,810,000 tons and the average yield from 5·85 dwt. to 6·17 dwt. Of the 21,770 ft. sampled on the Basal Reef, 58% was payable, averaging 769 inch/dwt. (250 inch/dwt. above the comparable figure for the previous year). The ore reserve was re-estimated at the year-end and showed an increase of 600,000 tons to 4,000,000 tons assaying 7·5 dwt. over an estimated stoping width of 55 inches. The No. 7 Shaft reached a depth of 3,247 ft. at the end of the year. Earlier in the year the No. 18 Level crosscut reached the shaft site at a depth of 4,013 ft. It is intended to sink the shaft past this point to an approximate depth of 5,500 ft.

Unappropriated profit carried forward to 1960		£685,183

Tonnage milled increased from 2,360,000 tons to 2,555,000 tons but the average yield decreased from 4·25 dwt. to 4·21 dwt. Of the 13,035 feet sampled on the Main Reef, 56% was payable, averaging 277 inch/dwt. Of the 7,390 feet sampled on the Kimberley Reef, 57% was payable, averaging 334 inch/dwt. The ore reserve was re-estimated at the year-end and showed a decrease of 1,000,000 tons to 12,500,000 tons, assaying 4·5 dwt. over an estimated stoping width of 48 inches.

Tonnage milled decreased from 913,000 tons to 891,000 tons but the average yield increased from 3·68 dwt. to 3·75 dwt. Of the 9,430 ft. sampled on the Main Reef 28% was payable, averaging 296 inch/dwt. Of the 2,775 ft. sampled on the Kimberley Reef, 2% was payable, averaging 307 inch/dwt. The ore reserve was re-estimated at the year-end and showed a decrease of 50,000 tons to 250,000 tons, assaying 3·9 dwt. over an estimated stoping width of 50 inches.

In terms of an Order of Court dated 16th June, 1959, the authorised and issued capital was reduced to £69,150, divided into 5,532,000 fully paid shares of 3d. each and the Directors were authorised to return capital up to an amount of 7s. 6d. to members in such instalments and at such times as they in their discretion may decide. An instalment of 1s. 3d. was returned to members in August, 1959.

During 1959, the first full year of production, 908,000 tons were milled, yielding 5·18 dwt. per ton. The development footage sampled in the lease area and lease extension area was 23,995 ft., of which 79% was payable averaging 517 inch dwt. The ore reserve as calculated at 31st December, 1959, was 1,600,000 tons, an increase of 400,000 tons over the previous year. The average value was 6·8 dwt. per ton with an estimated stoping width of 60 inches. A further 200,000 tons at approximately the same value and width have been disclosed in the lease extension area. Additions to the plant are in progress which will raise the milling capacity to 90,000 tons per month.

LESLIE GOLD MINES, LIMITED

Extracted from the first Annual Report for the period from the incorporation of the Company to 31st December, 1959.

CAPITAL: Of the authorised capital of 16,000,000 shares of 10s. each, 14,520,000 shares had been issued by the end of the year, 1,520,000 being fully paid and 13,000,000 1s. paid. The balance of 1,480,000 were subscribed, fully paid, but were not allotted until 1960.

SHAFT SINKING: At 26th February, 1960, No. 1A Shaft had been sunk to a depth of 108 ft. and full scale shaft sinking was due to begin in April of this year. Since the publication of the Prospectus it had been decided that No. 1A Shaft should be sunk to a depth of 2,050 ft. only and immediately equipped for rock hoisting thus enabling development from this shaft to be started earlier than had previously been envisaged.

GENERAL: By the end of February, workshop accommodation for fitters, boilermakers and electricians had been provided and work on the stores buildings and offices was nearing completion. Change houses and shaft offices were under construction. One 35 drill compressor had been brought into commission and work on the erection of additional compressors was proceeding.

EXPENDITURE: Expenditure by the Company to 31st December, 1959, on property, shafts, plant and equipment and general expenditure was £917,290. Trade investments amounted to £194,091. The Company acquired one-third of the issued capital of Evander Township, Limited.

In the case of each of the above Companies, discounts have been applied to development values to conform with adjustments necessary in estimating ore reserves.

GEDULD PROPRIETARY MINES, LIMITED

(Incorporated in the Union of South Africa)

CIRCULAR TO MEMBERS

You will be aware that the remaining profitable life of the Geduld Mine is now very short and that your Company's major asset is its shareholding in East Geduld Mines, which, at 3,308,425 units of stock, amounts to over two units for each share of your Company's issued capital. Moreover, while East Geduld Mines still has a substantial profitable life ahead of it, dividends from that source too will naturally decline over a period.

Your Company has, however, numerous other assets including the modest but long-standing holdings in The Grootvlei Proprietary Mines and South African Pulp and Paper Industries, together with a large area of freehold measuring nearly 13 square miles and adjoining the industrial town of Springs. Although a large part of this land is occupied by surface works and slimes dams of your own and adjoining mines, the property is of some potential value situated as it is astride the main railway line to Lourenco Marques, with power and water already available, and with the industrial undertakings of South African Pulp and Paper Industries (including that Company's Newsprint mill) and Union Corrugated Cases already established. Nevertheless it may not be possible for your Company to reap the full benefit of the freehold property for many years to come and it is clear that this and your Company's other assets could not be realised readily for the purpose of winding up.

Your Directors have for some time past examined the possibility of distributing to members portion of the current assets of the Company when mining ceases. However, they have come to the conclusion that the conflicting tax provisions of the three countries in which the bulk of the Company's members and holders of Share Warrants to Bearer reside, namely, South Africa, the United Kingdom and France, make this impossible without creating inequalities between members and causing a substantial number to suffer a heavy burden of taxation on their capital. The Directors have accordingly decided against recommending such a course and have instead been following a policy designed to consolidate the Company's future by adding to its investments when suitable opportunities occur. Members will recall that references have been made to this at recent Annual General Meetings.

In terms of this policy opportunities have been taken to acquire holdings in Winkelhaak Mines, Bracken Mines and Leslie Gold Mines in the Kinross area at favourable prices. The Company has also acquired holdings of shares in other Gold Mining and Finance Companies.

This policy will involve the investment, as suitable opportunities offer, of all the Company's surplus funds together with portion of its annual profits, and for this reason it is intended that, for the time being, your Company's dividend declarations shall be at a rate per share approximately equivalent to (and not less than) twice the dividend per unit of stock received from East Geduld Mines. For example, the distributions made by East Geduld Mines in respect of 1959 totalled 3s. 8d. per unit and accordingly the corresponding payment by Geduld would have been 7s. 4d. per share under the above plan as against 9s. 9d. per share actually declared. It should be realised, however, that dividends at the rate declared last year could not in any case be maintained after the closure of the Geduld mine itself, which contributed last year 3s. 6d. per share to net earnings.

Consideration will later be given to supplementing distributions out of the income from the new investments when the scale of such income is adequate.

ATLAS COPCO AB
(Compressed Air Engineers)

CONTINUANCE OF ECONOMIC RECOVERY

The Annual General Meeting of Atlas Copco AB was held on April 19th in Stockholm. Mr Marcus Wallenberg presided. The following is an extract from the circulated statement:

The disposable profit according to the consolidated balance sheet for the Atlas Copco Group of companies amounts to SwKr54,605.000 (£3,765,800). The economic recession which had been felt by the company during the latter part of 1957 reached its lowest point in 1958. However, before the end of that year there were definite signs of recovery. This improvement continued on an increased scale during 1959, which is shown in the financial results for the year. Trading conditions improved noticeably in practically all markets where the company is represented.

During the year metal prices were maintained at a higher average level than in 1958 and were above all more stable. These factors resulted in a substantial increase in the sales of mining equipment. Among contractors and industry generally the widespread economic expansion was responsible for an increased willingness to invest in new equipment which was reflected in our sales of both portable and stationary compressors and pneumatic tools.

EXPANSION OF ORDERS

In 1959 the total value of incoming orders amounted to SwKr203 million (£14 million) compared with SwKr152 million (£10,500.000) in 1958. Although it has not been possible to increase deliveries at the same pace, the figure for invoiced deliveries rose from SwKr150 million (£10,300,000) in 1958 to SwKr186 million (£12,800,000) in 1959.

Of course this has meant an increase in unfulfilled orders. Nearly 70 per cent of our total deliveries were for export. These figures refer to sales and deliveries from the parent company to subsidiaries and agents. The total value of invoiced sales by the Group in 1959 was SwKr380 million (£26,200,000) compared with SwKr334 million (£23 million) in 1958.

At the main Sickla Works production was 10 per cent higher than in 1958. The output of our other Swedish manufacturing companies has also been increasing. Simultaneously with the continued work on the development of light rock drills, increased efforts have been made in the design of heavy rock drills and ancillary rigs. A heavy stoper designed particularly for the export market has been successfully tested during the year, and double telescopic feeds have been introduced for delivery on both home and export markets.

The net profit of the parent company for the year was SwKr8,124,408 (£560,304). The Board recommends a dividend of SwKr2.50 per share (10 per cent, as last year) together with a bonus dividend of SwKr0.50 per share.

To bring the company's share capital into line with the size of its assets and operations and to retain accumulated earnings in the company, the Board of Directors and the Managing Director propose that an amount of SwKr14 million (£964,519) be transferred to share capital, which is thus increased from SwKr49 million (£3,375,818) to SwKr63 million (£4,340,337), by issuing for each seven old shares two new shares which will be entitled to dividends for the financial year 1960.

The report was adopted.

RUGBY PORTLAND CEMENT

RECORD GROUP PROFITS

SIR HALFORD REDDISH ON PUBLIC OWNERSHIP

The Annual General Meeting of The Rugby Portland Cement Co. Ltd. will be held on May 27th. The following are extracts from the speech of Sir Halford Reddish, the Chairman:

When I addressed you a year ago I said that 1958 had been in many ways an extraordinary year and might well prove to have been a turning-point in our post-war history. So indeed it was, for an even more remarkable year of progress in several directions followed: a year of high wages, virtually full employment, a stable price level and a strong £; of increasing production and rising exports; a year of lessening international tension thanks to the initiative of our own Prime Minister; and we had the defeat of the Socialist party in the General Election which did so much to restore confidence at home and abroad. As the economy responded to the expansion of credit and the reduction of taxation, 1959 became a year of boom conditions particularly for the consumer goods industries.

Although the effects of this more optimistic outlook did not spread to any noticeable extent to the capital goods industries until the latter part of the year, the cement industry nevertheless experienced a sustained demand in the home market, total deliveries for the year just exceeding those of the previous record year of 1956. Export demand was however substantially less than in 1956 with prices in many markets at an unremunerative level.

Our own figures in the home market followed the general pattern and our total Group deliveries also established a new high level. In the result, our Group profit is a record for the fourteenth successive year.

DIVIDEND AND SCRIP ISSUE

We propose that the dividend on the Ordinary shares shall be at the same rate as last year, namely 1s. 3d. a share. It will of course be paid on a larger capital, in view of the 'rights' issue of a year ago. We also propose that part of the share premium account shall be capitalised with a view to a scrip issue to the holders of the Ordinary shares of 1 million Ordinary shares in the ratio of one new share for each seven now held.

A dividend of 1s. 3d. a share on our Ordinary shares is in reality one of 5.4 per cent on the book value of the equity capital employed in the business. If the present value of the assets were substituted the real return would be about 3.1 per cent.

On the 'A' shares we propose a dividend of 2s. 0d. a share against 1s. 6d. a year ago. The amount now carried forward to the credit of the 'A' shares is £267,964 (gross) or rather more than 5s. 4d. a share. It is in the nature of a dividend equalisation reserve.

Our subsidiary companies at home and abroad have all played their part in securing the record results for 1959.

With the change of government in Western Australia a year ago there is a much more hopeful atmosphere in that State: and the present Government is making strenuous efforts to publicise the undoubted advantages which the State can offer to many manufacturing industries. I believe that as far as our own subsidiary company is concerned we shall be able to look forward to a steadily expanding market.

In Trinidad, home consumption again increased so that we were able to follow last year's price reduction (the equivalent of 4s. 0d. a ton) with a further reduction on January 1, 1960 of the equivalent of 5s. 0d. a ton, in spite of increasing costs.

PRICE REDUCTION
